RE: Freedom of Information Act (FOIA) Request #14-F-00471: Request a copy of each response to a Question for the Record (QFR) provided to Congress by the CPCS (Date Range for Record Search: From 01/01/2009 To 06/17/2014)

Thank you for your Freedom of Information Act (FOIA) request seeking information from the U.S. Consumer Product Safety Commission ("Commission"). The information from the Commission files responsive to your request has been placed on the enclosed CD.

This completes the processing of your request. The cost to the Commission to prepare this information was $45.00. In this case, we have decided to waive the charges. Should you have any questions, contact us by letter, facsimile (301) 504-0127, telephone (301) 504-7923, or e-mail addressed to cpsc-foia@cpsc.gov.

Sincerely,

Alberta E. Mills

SUBCOMMITTEE ON INVESTIGATIONS AND OVERSIGHT HEARING ON THE CONSUMER PRODUCT SAFETY IMPROVEMENT ACT AND SMALL BUSINESS

Thursday, May 14, 2009

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON SMALL BUSINESS,
Washington, DC.

The Committee met, pursuant to call, at 10:00 a.m., in Room 2360 Rayburn House Office Building, Hon. Jason Altmire [chairman of the Subcommittee] presiding.

Present: Representatives Altmire, Ellsworth and Fallin.

Also Present: Representatives Dahlkemper and Thompson.

Chairman ALTMIRE. Thank you all for being here. And as we discussed, there are going to be votes called on the House Floor probably in 20 minutes or a half hour, so we're going to try to get through Ms. Nord's testimony, first, before we have those votes. And I will now call the meeting to order.

This Subcommittee hearing is now called to order. When it comes to protecting our children Americans take every possible precaution. We strap our kids into car seats when we're driving. We insist on training wheels when they're learning to ride a bike. We vaccinate them against chicken pox, polio, and countless other illnesses. In other words, we do everything we can to make sure our children are safe. That's why it's so distressing when threats to their health go undetected, particularly when those threats come from inside our own homes.

In 2007, excessive lead levels were detected in a wide variety of children's toys. Up until that point, those products which ranged from Thomas the Tank Engine toys to Winnie the Pooh playset were assumed to be safe. But when it turned out they were not, the Consumer Product Safety Commission launched a massive recall. All tolled 17 million products were collected and entrepreneurs played a critical role in getting them off the shelves. Needless to say, these small business owners wanted to protect their customers. However, what they didn't want—and what they couldn't afford—were the economic consequences of doing so and in the end they suffered heavy losses and economic consequences they could not afford.

To help ensure this type of massive recall never happens again, President Bush signed the Consumer Product Safety Improvements Act into law in August 2008. While the law was intended to protect

our children, it has done less to accomplish that than to hurt small businesses all across our country. In today's hearing, we are going to examine the impact of that law on entrepreneurs and discuss ways to ease that regulatory burden.

Now recalls are never easy. Small firms already operate on tight profit margins and additional outlays for destroying products and reimbursing retailers can often be devastating. Under the new law, small businesses are required to conduct costly product testing and use pricey new tracking labels. These requirements are well intended and good in concept, but their utility has yet to be seen. And what's more, they are extremely expensive for small businesses to comply with.

Even the Consumer Product Safety Commission has admitted that the cost to small business might be crippling. In fact, the Commission estimates entrepreneurs will end up paying billions of dollars just to comply with the new regulations. For small manufacturers, product testing alone can cost hundreds, if not thousands of dollars, per item. The process of testing the 233 various components in a child's bicycle, one bicycle, might run close to $14,000 for one.

Manufacturers are nnt alone in shouldering these costs. Small retainers—from toy stores to clothing shops—have also been affected. They are now saddled with countless items that they can't sell and according to the Toy Industry Association, the new law has led to inventory losses which will reach close to $600 million.

At a time when with the retail and the manufacturing industries are struggling these outlays might very well be the straw that breaks the camel's back. Obviously, we need to protect our children. We all support that. But we need to do it in a way that makes sensc and doesn't cripple our small businesses.

Fortunately, the Consumer Product Safety Commission, we believe, does have the authority to be flexible with these small firms. This is critical, particularly when it comes to product testing. For instance, it allows the rubber for a toy doll to be pretested at the rubber plant rather than the doll factor. This would go a long way. This kind of component analysis could reduce costs without compromising safety.

Protecting our children is all of our top priority. It is extremely important to consumers to have confidence in the products they buy, and the Consumer Product Safety Act was intended to provide that confidence. But rather than streamlining and improving the process, it's added a crippling new level of complexity. As small firms continue to grapple with obstacles like restricted lending and tightening credit, we shouldn't be creating more roadblocks for those same small businesses.

I'd like to thank all of today's witnesses in advance for their testimony and when—unless—Mr. Thompson, do you have an opening statement? I will, without objection, allow Ranking Member Fallin the opportunity to provide her opening statement when she arrives.

So at this point I will turn to the witnesses and our first witness, thank you for being here is the Honorable Nancy A. Nord. She's the Acting Chairwoman of the United States Consumer Product Safety Commission. She was appointed by President Bush for a term that expires in October 2012. Ms. Nord formerly served as General

Counsel of the White House Council on Environmental Quality and is counsel to the House Commerce Committee. Thank you for being here, Ms. Nord, and welcome.

STATEMENT OF NANCY A. NORD, ACTING CHAIRMAN, U.S. CONSUMER PRODUCT SAFETY COMMISSION

Ms. NORD. Thank you, Mr. Chairman, for calling this important hearing. I'm delighted to be here to talk with you about the efforts that my Agency has made to implement the CPSIA. My written statement provides an overview of the Agency and the details of the Agency's activities in implementing the new statute. So therefore, what I'd like to do with my time that I have with you is to first of all tell you what we did to inform the public about the new law. Second, what we learned along the way. And third, what we see as the issues going forward, especially as they impact small businesses.

First, what we did. I first have to say that the CPSC staff has just been tremendous since the Act was signed into law last August and I can't praise their work highly enough. But they were operating in an extremely difficult environment right from the start. The Act was a very significant rewrite of our statutes and it required that we begin promulgating regulations very quickly. The first rule had to be finally promulgated within 30 days of enactment. So we really had to begin our implementation with absolutely no time to train our employees into the nuances of the new statute.

Even though the Act doubled the workload of the Agency, we began with no additional funds, no new resources for a period lasting over seven months which was the critical first period of implementation of the Act. We also already had a very full safety agenda that had been planned for this coming year. So the new Act's requirements were layered on top of that important safety agenda.

We took very seriously our obligation to educate stakeholders about the requirements of the new law. In the first month alone, we began a series of public meetings first providing an overview of the Act with later ones addressing specific topics that had fast-approaching deadlines, the testing and certification requirements, the phthalates ban, the lead ban, altering vehicles, books, apparel, to give you just some examples.

We developed a special website dedicated to the Act which includes automatic updates to the public. We developed a plain English summary of the law's most relevant provisions and posted that summary on the website. We began what is now a list of over 100 plain English answers to Frequently Asked Questions.

We've also issued guidance documents on numerous topics. Some of those that are particularly targeted to small businesses, resellers, and home crafters. Our small business guide got 365,000 hits on our website the first month that it was put up. Okay, so what have we learned? As we worked to educate both consumers and businesses, it became apparent that many—is this on?

It became apparent that many of those impacted—somebody does not want me to talk. It became very apparent that many small businesses, in particular, were not well aware of the requirements of the law, the implications for the businesses, or the fast-ap-

proaching deadlines. And throughout the fall and the winter, as we heard more and more from small business people and learned about the problems that they were encountering with the law, the staff really did search for ways to provide some relief for them. But we were hamstrung by the law's sweeping reach and the inflexibility of the law.

Just to give you a couple of examples, first of all when the House passed HR 4040 which is your version of the bill, you had a small business exemption in your legislation that allowed us to push back dates. That provision was taken out in the conference. Hence, we lost our ability to be flexible with respect to small business implementation.

Perhaps the most onerous impact on small businesses, resellers, and thrift stores is caused by the lead and phthalates ban being retroactively applied to inventory. What I mean by that is that the law impacts not only products manufactured after the effective date, but it impacts products sold after the effective date. And this retroactive effect makes illegal on February 10 of 2009, inventories sitting in warehouses, products sitting on store shelves, that were perfectly legal when they were made and that nobody has alleged to be unsafe.

The staff tried to address the retroactive effect of the law with respect to phthalates where the law, we thought, gave us a little bit of wiggle room, but we were overturned by the Courts just before the effective date of the law. The law also gives us very little ability to grant exclusions from its provisions, even for products that are scientists do not believe present risks of injury.

Because we don't have the ability under the law to craft common sense solutions to the problems that we are now seeing, the Commission has used stays of enforcement as pressure valves to provide some relief for certain products and for the testing and certification requirements of the law.

But we know that these stays of enforcement are now solutions. Instead, they are time outs for everyone. Businesses, consumers, the CBSC and also for Congress, and these time outs are meant to allow the CBSC and the Congress to address the growing list of unintended consequences that we are seeing coming out of this law. But it is important to remember the stays of enforcement are not solutions, permanent solutions to problems. Even if a provision, if the enforcement is stayed, the underlying liability stays in effect.

Okay, so what do we see going forward? Having met every single deadline that was in the statute over the last, over the first six months of implementation, having advanced over 40 rulemaking activities to date, we do know that much work lies ahead of us. And let me just give you a bit of a flavor of some of the problems that we see on the horizon as they impact small businesses.

The first is August 14th of 2009 when the issue of retroactivity will occur again as even lower limits on lead content go into effect pulling into the law's reach, even more children's products. And this is where you're going to see the impact on books and bicycles. Permanent tracking label requirements also go into effect on August 14th which will have a particularly hard impact on home crafters. Next February, small businesses will be facing testing and certification requirements when the stay of enforcement ends.

What can be done to improve the situation to still protest consumers which is what the law was intended to do and the mission of our Agency, and yet help small business owners survive under the law? Attached to my written statement is a list of legislative recommendations from the CPSC career staff that would go a long way towards helping small business people while maintaining the health and safety standards and enforcement activities that are at the core of our safety mission.

Thank you for holding this hearing today. This is the very first hearing on the Act's implementation and I want to have a dialogue with the Congress so that we can work together to address the law's real-world problems by finding common sense solutions.

Thank you so much.

[The prepared statement of Ms. Nord is included in the appendix.]

Chairman ALTMIRE. Thank you, Chairwoman Nord, and we know that you, like every Member of Congress have been inundated with questions about this and impact statements and we're very happy to have you here to have this discussion.

At this point I would yield to the Ranking Member, Ms. Fallin, from Oklahoma, for her opening statement, following which we'll do the questions.

Ms. FALLIN. Let me just say thank you to our Chairman Altmire for holding this hearing and working with us on the issue that's very important to our small businesses around the United States. And Chairwoman Nord, I appreciate your comments today. I appreciate the awareness that you have of the situation facing so many of our businesses throughout our nation and the challenges that this Congress have given you with the law itself and some of the recommendations that you've made to try to resolve this issue. And hopefully, within this panel and this group and our legislative body, we'll be able to draft some legislation. That's my hope, Mr. Chairman, that we'll be able to address these issues.

We have called this hearing, of course, to examine the Consumer Product Safety Improvement Act on small business and it is a very important issue for all our manufacturers, distributors, and sellers of goods aimed at children under the age of 12. The federal law and regulations adopted last year were meant to ensure that our children were safe from toys that they play with and clothes that they wear, however, there are unintended consequences that this well-meaning legislation that do severely impact many of our small businesses that produce children's products, not only overseas in factories, but also right here in the United States.

I'd like to extend a personal thank you to all of our witnesses that have joined us here today on our Subcommittee and to welcome you and we look forward to hearing all of your testimony and your personal experience with how this all has affected your small business and manufacturing and especially to give a welcome to David McCubbin who is from my home state, my home town, a long-time personal friend of mine and he is the owner and operator of McCubbin Hosiery in Oklahoma City.

In 2007, toy manufacturers had to recall over one million toys that violate the standards concerning lead-based paint. The toys re-

called included well-known children's products associated with things like Thomas the Tank Engine, Barbie Doll, Dora the Explorer, and obviously parents were rightfully outraged about the danger to their children and prompted Congress to pass a Consumer Product Safety Act in 2008. Most of the lead in these cited toys came from overseas toy manufacturers and although the law harshly affects many of the American businesses that also produce toys, the CPSIA prohibits the sale and distribution of a product for children under the age of 12 if it contains more than 600 parts per million, as we've talked about, of lead in February of 2009. And of course, that will drop to 300 parts August 14th. And to ensure this compliance the Act requires the manufacturers to certify their products meet these standards through independent lab testing.

Given the many concerns of small businesses across the country and their ability to meet these strict requirements in a short time frame, the Commission did ease the enforcement of the regulations for one year, but it ended February 10th—it will end February 10, 2010. This stay, as you mentioned, is intended to ease some of the problems facing our small businesses, but it is by no means a cure-all. We do need a resolution to this and though the Consumer Product Safety Commission may not take punitive action against anyone selling the product with more than 600 parts of lead, others may choose to enforce the law, as you also stated. So there's still liability to many of our manufacturers and small businesses. An example of that is that a State Attorney General may take legal action of they find a business has produced, distributed, or sold a product for a child that exceeds the lead limit. So small businesses and owners are thus forced to incur large costs of testing their products or risk punishment in the future if their products do not conform to these standards and that has been exacerbated for small business retailers who, unlike manufacturers, are not yet required to certify lead content of products. So the retailers who do note test for lead are still subject to these restrictions on selling a product containing lead, even though they lack the ability and resources to determine if their products contain it.

So cost of testing is going to be upwards of tens of thousands of dollars for small retailers and just to make sure that only a few of their products don't fall below the minimum requirements. And of course, at a time when our economy is suffering and a recession is here and people watching their bottom line trying to make a profit, keep their employees employed, this is certainly not good news for small businesses. So I think it is very imperative that we look at federal law changes to ensure that we do have a healthy environment for our children and their products and their toys, but also to have a regulatory structure that can co-exist and does not have unduly burdensome regulations upon our small businesses and especially our manufacturers.

So I look forward today to having our witnesses and their testimony and hearing their recommendations, Mr. Chairman, that they have. Thank you so much and once again, I look forward to working with you on legislation and I'll yield back my time.

Chairman ALTMIRE. Thank you, Ms. Fallin. We should be able to get through the four of our questions. We each have five minutes before the vote is called, which is good. I want to note the presence

of Congressman Ellsworth from Indiana and Congressman Thompson from Pennsylvania. I thank each of you for being here as well.

I just first wanted to ask your opinion as someone who is literally at the tip of the sphere on this issue something that we've all heard so much about. And you think about this and work on this every day. Is it your opinion that the impact that this law has had on small businesses, the issue that we're talking about today, is this an unintended consequence of the law that was passed or is this what we were trying to achieve in passing the law?

Ms. NORD. I cannot for a moment believe that Congress intended to make billions of dollars worth of products that were sitting on store shelves, sitting in warehouses, on container ships illegal even though nobody is alleging that they are unsafe.

The biggest problem I think for small retailers and for resellers of products is the retroactive effect of the law that sweeps into its effect, products that were manufactured well before the effective date and were manufactured to meet the laws as they existed at that point.

Chairman ALTMIRE. And we believe that the law specifically gives the Commission the authority to exclude products from the lead limits that clearly do not pose lead ingestion risks. So do you agree with that, and if so, why hasn't the Commission taken specific action to exclude more products?

Ms. NORD. I wish that the law did give us that flexibility. I think that flexibility is needed. Unfortunately, the law was written in a very deliberate way not to give us that flexibility. We brought this to the attention of Committee staff during the conference drafting process and were told very specifically that that flexibility was not intended.

The way the law is written, we do not have the flexibility to exclude many products that our health scientists really feel do not pose a risk of injury, but which may have lead above 300 parts per million content.

Chairman ALTMIRE. The small businesses, as we all know, bear disproportionate share of federal regulatory burdens to begin with, before discussing this law and they don't have the compliance resources of their larger counterparts and I was wanting your opinion, Chairwoman, on this law. Is it placing small businesses at a disadvantage compared to their larger competitors? And if so, is the Commission doing anything to level the playing field, given what you have to work with the letter of the law?

Ms. NORD. I do think that this law is putting small businesses at a disadvantage. I have had informal conversations with many, many companies around the country. I do hear from large businesses, that they are changing their ways to try to accommodate the law. I am hearing from large retailers that they are sending back product early to make sure that everything on store shelves complies with the law. So those bigger companies are working to accommodate themselves to the law, but there are some things in the law that have a particularly adverse impact to small businesses, the retroactivity provision that I just mentioned, the fact that we cannot really do risk assessments and tailor our regulatory approaches to look at real risks. I think that impacts small businesses as well. There are a number of other things that are set out

in my written testimony, but yes, I do think we need to figure out a way to make sure that this law fulfills its objective to help consumers without undue adverse impact on small businesses.

Chairman ALTMIRE. Thank you. I will not turn over to Ms. Fallin.

Ms. FALLIN. I appreciate your comments about the lack of flexibility to exclude products. Does the Commission have the sufficient authority under the law to exempt producers of textiles and textile products from the lead testing requirements in the Act? It's your opinion that you do not?

Ms. NORD. Well, what we have done with respect to a category of products that includes natural textiles like wool and virgin wool and cotton and that kind of thing is we have rather pushed the limits of the law and said we are going to exclude them from the testing requirements. So that's natural fabrics.

We've also included certain kinds of other products that by definition don't and cannot have lead, but that's really as far as we can go.

Ms. FALLIN. Okay, and how does the stay of enforcement on testing and certification requirements help the retail and wholesale industries since they are so liable under this Act, if they do have goods that exceed the lead limits and are subject to the enforcement actions say of Attorney Generals?

Ms. NORD. Well, as I mentioned stays of enforcement are not the optimal way to regulate or to enforce laws, but it was really the only technique that we had available to us. We were hearing from many, many small businesses that they just were not ready to start issuing certifications, especially certifications based on the testing requirement of the law. That is a very stringent requirement. It is going to be very expensive. And it was just very clear that people were not ready to meet the requirements and the time lines in the law. So we did a stay of enforcement, but we made very clear that we don't have the authority to stay the underlying requirement of the law. So they are still liable, potentially, if they sell something that has more than 600 parts per million of lead in it.

Ms. FALLIN. Madam Chairman, according to the authors of the legislation, the authors believe that the Commission has sufficient authority to rectify the concerns of small businesses. What is the legal basis for the Commission to arrive at a different conclusion than this?

Ms. NORD. I've heard that said. What isn't said is any examples of where in the law we have that flexibility. Instead, we can point to many examples where we explicitly don't have the flexibility. And again, as we worked through the drafting process during conference, it was made quite clear that flexibility was not what was being granted to the Commission. I can go through and give you any number of examples of where the Commission's authorities have been cabined so tightly that we really cannot respond to the real world situations that are coming up. And I think that is unfortunate. It is impacting small businesses much more adversely than others and it really doesn't advance product safety.

Ms. FALLIN. Would you please provide the Committee examples in writing where these restrictions keep you from doing that?

Ms. NORD. I would be delighted to do that.

Ms. FALLIN. That would be great for us to have it in this Committee. Thank you.

Thank you, Mr. Chairman.

Chairman ALTMIRE. Mr. Ellsworth.

Mr. ELLSWORTH. Thank you, Mr. Chairman, for holding this extremely important hearing. And I thank Ms. Nord for being with us here today. If my information is correct and we're talking about unintended consequences, if my information is correct, all but one Member of the House of Representatives voted for this legislation, so I would have to assume that minus Dr. Paul, we all didn't have the intended consequence of hamstringing small businesses and large businesses as a matter of fact. I know that it wasn't directly after this vote that I went home and met with folks in my District from shoe distributors that were concerned that children were going to be chewing on their parents' shoes, from a sporting goods company that made foosball tables that the little men on the foosball table were afraid a two-year-old was going to crawl up there and chew on the foosball men, and many other examples of that. That's not the intended consequence of this legislation, like you said. Everyone wants to protect our children, but we have hamstringed many businesses.

One of the things that concerns me, Ms. Nord, is what you said earlier, and it seems to be rampant here is that we implemented this legislation and gave you no time to train and I applaud you for doing the plain English explanation because that's another thing I hear a lot about is that when people deal with the Federal Government, our regulations, it is less than understandable terms, so I appreciate that.

I'd like you, at some point to look at House Bill 1465. We filed that in March and look at that, if you would and see if that answers some of the questions and concerns. We filed that with the help of the NFIB to address some of these concerns and I would encourage the Members of the Committee, if they haven't looked at that already to look at that. It has not received a hearing, but we hope to forward that.

What are some of the things again, in plain English, if I can speak plain English, that you're hearing from small businesses and large businesses, just bullet point the biggest concerns and how we might rectify that. If it's top three, top five, whatever you think you can do.

Ms. NORD. The top thing that we hear is the rather perverse effect of the retroactivity provisions which renders existing inventory illegal. And we are then forcing people to either destroy inventory, test and determine what its contents are, or violate the law. And I think that is just—you shouldn't be putting business people in that position.

Secondly, the law does not really give us the flexibility to respond to real-world situations and real-world problems that we are hearing. Our flexibility was removed. We asked, for example, certification and testing authority, but what we got was something so constricted that we really don't have the ability to move within the provisions of the law to structure something that makes sense for business sellers and small business people in this country.

So more flexibility needs to be given.

I think if you address those two things, as well as several of the other things that are in my written statement, you can have a law that really carries forward the principles that you wanted when you passed the CBSIA and that the Agency wants. Our mission is to protect consumers. That's what we're about, but we don't want to be putting people out of business for selling water wings with excess amounts of lead when we all know that nobody is getting lead poisoning from swimming in a pool with water wings. Or bicycle tire valvesthat have excess amounts of lead, excess above the law limits, but where nobody is getting lead poisoning by filling their bicycle tires with air. These things are preposterous. The law shouldn't operate in that way. And I think if Congress would give us back the flexibility that was removed from the expert Agency here, we could craft this in a way that makes some sense. I'd like to work with you on your legislation.

Mr. ELLSWORTH. That would be great. And could you touch, briefly, I know they're getting down to that where we can run over there in a few minutes, they might hold it open just a little bit longer than 15 minutes. I've seen that done.

Touch on the secondhand shops, I guess the chain, when we're going to secondhand shops, flea markets, if you could touch on that and the implications there as it goes down the chain what your views are on that?

Ms. NORD. The secondhand shops, charity shops, provide such a value to our society, especially right now. And they have been impacted by this law in a rather unique way and again it's because of the retroactive effect, making it illegal to sell things that don't meet the lead limits as opposed to manufacturing products after the effective date that don't meet the lead limits.

So you've got charities and thrift shops that bring in unique products. They don't have any way of knowing if those products have lead or phthalates. We've given some guidance, but it has to necessarily be general guidance. So they are in the really unfortunate position of either having to decline to sell these things, remove them from inventory and destroy them, or take their chances and possibly break the law. And we're talking about useful products. We're talking about children's clothing.

Nobody has ever brought to my attention a child being poisoned by wearing a pair of kid's dungarees with a metal zipper or wearing a shirt with a pearlized button. These things may have more than 300 parts per million of lead. They don't necessarily pose a risk of injury. And we have put resellers at legal risk because of the retroactive effects of the law. I think that's wrong.

Chairman ALTMIRE. Let me cut it right there, so we can give Mr. Thompson from Pennsylvania the opportunity.

Mr. Thompson.

Mr. THOMPSON. Well, first of all, thanks, Chairman Altmire, Ranking Member Fallin for putting this into the Subcommittee for this very, very important discussion and Chairwoman Nord, we really appreciate your being here, your testifying and frankly, your remarks reflecting on kind of a common sense attitude with this. I find that refreshing for this town.

I do have—you talk within your top five issues that were brought to you and one of those was existing inventory in terms of problems

faced by small businesses. The folks I've been hearing from, however, in fact is that a problem that's being raised by a number of small businesses, in fact, many on the next panel, I believe, that the biggest problem involved the testing of components that have no lead in them, or affixing permanent labels to children's headbands and hosiery.

How would you respond to those businesses, any thoughts on that issue? The inventory, obviously, is significant, but frankly, this is a problem going forward as well.

Ms. NORD. Yes, I think component testing could be a very, very useful tool for us and for small businesses. The problem is that the way the law is written, the testing requirement falls on the producer of the children's product, not on people that make the component parts because buttons, by their nature are not necessarily children's products. When you put them on a child's dress, then they become a child's product. So the person who makes the dress is the person who is under the law required to do the testing.So I think that's one area where we could do some fine tuning of the law to clarify how we're doing to deal with component testing.

The other issue is permanent tracking labels. The law does require that they go on all children's products on August 14th. Now the law was written in a very interesting way because it interjected a bit of ambiguity into it because it says that they need to be put onto to the extent practicable. The Agency had a hearing yesterday. We are in the process of developing guidance. I know it's somewhat late, but we are doing the best we can to get it out, but again, we want to be reasonable here. I want to be focussing with respect to the tracking labels on products that are dangerous; that we've had a history of recalling, like baby cribs. We're frankly not real interested in kids' headbands or stockings, but the law doesn't allow us to make those cuts and that's really what we need.

Mr. THOMPSON. Thanks very much. I yield back the balance of my time, Mr. Chairman. Thank you.

Chairman ALTMIRE. Thank you. I recognize the gentle woman from Pennsylvania, Ms. Dahlkemper.

Ms. DAHLKEMPER. Thank you, Chairman. In the interest of time and the fact that votes are being called I have a statement that I would just ask that there be unanimous consent to place in the record, along with a letter that I have written to Chairman Waxman and the Honorable Joe Barton.

Chairman ALTMIRE. Without objection, thank you.

Thank you, Ms. Nord, for being here.

Ms. NORD. Thank you.

Chairman ALTMIRE. We are going to adjourn for a vote. We have a series of five votes, so we're going to recess the Committee until 11:30 a.m.

Thank you.

[Off the record.]

Chairman ALTMIRE. We will reconvene the hearing. I ask the witnesses for the second panel to come forward. To explain the voting system, you will each have five minutes to give your remarks. As indicated by the lights that are in front of you, when you see the yellow light come on, you will have one minute, so please start to summarize your remarks at that point and the red lights means

you have exceeded your time, please wrap up your thought at that moment and then we will move to questioning after all of you, as a group, have spoken.

So I will introduce the first witness, Ms. Laurel Schreiber, who is my constituent and friend. Ms. Schreiber is owner of Lucy's Pocket in Allison Park, Pennsylvania. Lucy's Pocket sells a variety of children's clothing, as well as embroidered baby items such as bibs and blankets. Ms. Schreiber sells her products both online and in her store. Welcome, Ms. Schreiber. Please turn your microphone on.

STATEMENT OF LAUREL SCHREIBER

Ms. SCHREIBER. Thank you for the opportunity to speak before you today about the effects of the CPSIA on business. My name is Laurel Schreiber and I have a small home-based business called Lucy's Pocket. I sell monogrammed gifts for children through my website.

As the CPSIA now stands, I as well as thousands of crafters, seamstresses, artists and others who market safe, hand-made items for children under the age of 12 will be put out of business. As small business owners, we are looking to you to make legislative changes that will allow those of us who have been creating safe items to continue doing so.

As it relates to my business, there are two major and substantial problems with the CPSIA as written: the redundant testing requirements and the comprehensive labeling mandates. All of the items I sew onto, or make myself, are made from commercially-available textiles, ribbons, threads, and other materials. They come from wholesale suppliers as well as retail stores. A majority of the items I purchase from wholesale suppliers have General Certificates of Conformity which attest that the items have been tested for lead and/or phthalates and have passed those tests. I also purchase items from large retail stores who are unable to provide GCCs, altbough they have tested their products prior to placing them on their sbelves.

Due to the CPSIA, I will have toe test each individual item prior to selling it. And though an enforcement stay for testing has been issued for textiles, there is no guarantee it will not be rescinded at a later date. The enforcement stay does not include items with buttons, snaps, zippers, or other non-textile parts.

In order to have my one-of-a-kind items tested, I will need to create two identical items, the wet method used to test for lead destroys the original. From the testing companies I have contacted, the cost to me is about $75 per component. A component includes the fabric, and thread and any other material that makes up that product.

I have brought several examples of my work to show you how this expensive redundant testing will put me and those like me completely out of business for good.

One of the most popular items is an appliqued bib and bloomer set. The basic set contains at a minimum 12 components. The components include four threads, two dyed fabrics, a two-part Velcro closure, elastic, poly cotton fabric, 100 percent terry cotton fabric, and 100 percent cotton binding.

To test those 12 components will cost me $900 to prove that the bib and bloomer set don't contain lead. If I use a plastic-backed bib purchased from a retail store then I will need to add an extra $375 to prove that it doesn't contain illegal phthalates. So testing for that set will range from $900 to $1275. It sells for $20.

I also create monogrammed hairbows. They consist of a metal clip, two types of thread, and ribbon. I have GCCs on file showing that the importer has tested the clip and it is free from the lead level. It will cost $300 to test that bow which sells for $5.

I create monogrammed headbands which we had talked about earlier. The headband is made of plastic so it had to be tested for phthalates as well as the other components for lead. As with my other items, I have GCCs on file from the importer showing the headband does not contain the illegal phthalates. To test the components of the headband, plus the phthalates, will cost $675. It sells for $9.

Because each of my items is unique, I'm unable to batch test. Redundant testing is not necessary. The air in my house, the sewing table I work at is not lead infused. It's not lead filled. Items coming out of my home will not be contaminated with lead. I say material coming in will go out as a safe product.

If the redundant testing requirements will put me out of business, the labeling mandates would. As of this August, each and every item going out of my studio must contain a permanent label that contains information like the source, date of manufacture, and batch. For a business that creates one of a kind items and less thao 5,000 or so a year, this is an unnecessary hardship. Permanent labels are not technically feasible for many of my items. And procuring permanent labeling supplies is an incredibly expensive proposition.

My business is a way if I were to find out there were problem issue, I could pick up the phone and call my customers.

I and many others like me started creating hand-made items as an antidote to mass-produced, possibly unsafe toys and clothing originating from China. Many of us have young children. We are very aware of the dangers of lead poisoning, but we use safe materials and we create safe products. We're willing to alter our methods to ensure compliance, but with the way the law is written we'll be forced to shut down completely.

We're asking for common sense of the law. We've written letters and faxes, made calls. We're safe. We just want to be legal. But the unintended consequences of the CPSIA are showing that this would be absolutely impossible. I'll have to close my doors and once I close I'll not be supporting my suppliers or other businesses and they may not be affected hugely by my loss, but there are a lot of businesses like me. So once you start multiplying the effects it becomes fairly apparent that CPSIA is going to absolutely kill the hand-made industry and the ramifications are going to be beyond definition.

[The prepared statement of Ms. Schreiber is included in the appendix.]

Chairman ALTMIRE. Perfect timing. Thank you, Ms. Schreiber.

The next witness will be introduced by Representative Thompson.

Mr. THOMPSON. Thank you, Chairman. Actually weeks after I came to Congress I had a meeting in my District Office in Bellefonte, Pennsylvania and the woman that I met with described her entrepreneurial aspirations in really a unique and innovative start-up company she created. And while her company was growing there was an unfortunate setback that had her doubting the future of her business. And it was brought to my attention that the Consumer Product Safety Improvement Act which passed unanimously in the 110th Congress as a result of lead contaminants in children's toys had unintended regulatory consequences that placed undue restraints on everything from product development to expansion.

And my constituent went on to explain that if thee materials she used to make her products were not tested by a third-party laboratory, she could be in violation of the law and this testing would have grave financial ramifications on her product line.

This seems to be counter-productive, mainly because her source material was purchased from retail outlets that already certified the goods. My constituent explained as a mother, she wanted our children to be safe and she did everything to ensure that with her business.

I'm certainly confused as to how this law, and in turn, regulation set into place by the Consumer Product Safety Commission could place such a burden and disincentive on a budding entrepreneur and Mr. Chairman, I really appreciate your assistance in having Suzi Lang, owner of Starbright Baby teething giraffes join us today, one of my constituents. Suzi Lang is a former kindergarten through 12th grade art teacher, also trained as a graphic designer, a photographer, and she produces she's stuffed teething and toddler giraffes that are sold online and wholesaled to baby boutiques in both the United States and Canada.

Welcome, Ms. Lang, and we look forward to your testimony.

STATEMENT OF SUZI LANG

Ms. LANG. Thank you very much for having me here today. As the mother of a 2-year-old, I admire Congress' efforts to draft a law that protects children from excessive amounts of lead in toys. Unfortunately, the law, as it is currently written, will heavily danger small businesses and entrepreneur who make and sell items for children in this country. I do not believe the law is fatally flawed, however, I think the injection of some common sense provisions would more effectively ensure safe products for children and prevent irreparable damage to small business.

The reason I am going my testimony is because that I, along with several business owners, are afraid for what the CPSIA means for our business and the important amount of income it brings into our families. Specifically, my business consists of fabricating and selling these soft little teeth giraffes for babies. I'm not affiliated with any groups. I'm here on behalf of my own business, however, I'm using the resources that I have to advocate for small businesses, many of whom rely on this income to sustain their families.

A few of the major problems that this law presents to my business are unit testing, the tracking and labeling requirement and the fallacy of assuming that everything is toxic until proven safe.

Unit testing is cost prohibitive for many small businesses, including my own. I make very small batches of these giraffes, usually about ten per fabric choice. I also make one-of-a-kind and custom items for my customers, using their own fabric or fabric from my collection. My giraffes would be required by this law, as of February 10, 2010, to be tested for both lead and phthalates. I contacted a research, a lab close to my home in Harrisburg to quote for lead and phthalate testing. For the lead testing I was quote $50 per component and for each giraffe there are four to five components. Cumulatively the total cost for testing one fabric line of giraffes would be anywhere from $1800 to $2200. That's also adding in the $400 per component for the phthalate testing. My giraffes usually sell for about $14 to $18 each, depending on the kind of fabric that I use and the added cost of testing would add another $180 to $225 per giraffe. For a one-of-a-kind item, the price would have an additional $1800 to $2200 price tag tacked on to a $14 charge. This is extremely cost prohibitive for my customers.

Considering that the law specifies that if I change any component, it would need to be tested again. I created 36 different patterns of giraffes in 2008. So the total cost of lead and phthalate testing would be $64,000 to $81,000. I actually only made $4500 gross last year. The deficit the testing would create would more than put me out of business. It would bankrupt my family.

Another aspect of the law that affects my business is the tracking and labeling. The law says that it is to be to the extent practicable, but I question how this could be done by any home craft seller or small business. Each lot needs a new tag and it would force me to have to make my own labels because I would never be able to meet the minimum for the label companies that I use to print the labels that I have now. Because my giraffes are only ten or fewer or sometimes only one, it would never be practical.

The most disheartening thing for me as a small business is the assumption that the law is everything bad and dangerous until proven safe. Especially since many of the materials I use are proven to have no phthalates, no lead, fabric is all I'm using, quilt fabric, cotton fabric. Many small businesses do not purchase their fabric wholesale, but instead buy it from local fabric or quilting shops. In this setting I can buy one yard of fabric from my local shop, make my giraffes, have to have them all lead and phthalate tested and my neighbor can go buy the very next yard off the bolt of fabric, make baby bibs, try to sell them, and she would also have to lead and phthalate test the very same fabric from this very same bolt which is not very—pretty much nonsense.

The most problematic thing for me is to have to phthalate test this item since it's a teething item. It's required under the law to be phthalate tested, but it's entirely made out of cotton fabric. When I contacted the lab to get quotes, they asked me how they would have to be able to do this since the CPSIA said to grind the toy to get a sample to test, but there's no grinding on a fabric giraffe. I don't think he would survive.

There are so many unintended consequences of this law that thousands of small businesses and crafters will be put out of business in this already tough economic climate.

Thank you very much.

[The prepared statement of Ms. Lang is included in the appendix.]

Chairman ALTMIRE. Thank you, Ms. Lang.

Ms. Susan Baustian is Director of the franchise Once Upon A Child located in Minneapolis, Minnesota. Once Upon A Child are independently-owned resale businesses that purchase and sell used and new children's clothing and merchandise. Franchised in 1993, these stores have become a rapidly-growing component of the Winmark Corporation family of brands.

Welcome, Ms. Baustian.

STATEMENT OF SUSAN BAUSTIAN

Ms. BAUSTIAN. Thank you, Chairman Altmire for having me to testify today.

My name is Susan Baustian and I am the Director of Once Upon A Child Stores for Winmark Corporation. Today I'm speaking on behalf of our hundreds of stores in what we call the industry of gently-used products.

Winmark Corporation owns two franchises that have been in business for over 20 years; Once Upon A Child, a store selling used children's goods and Play It Again Sports, they sell new and used sporting goods, that have been significantly impacted by this bill. Although our company headquarters are based in Minnesota, we have over 520 franchises across the country. What that amounts to is over 500 store owners worrying about whether or not they comply with the law, 5000 employees scrambling to figure out how to comply and over 200 vendors feeling they do not have the resources to test their products to ensure that they comply with these new standards. Last year alone, our two brands serviced over 7 million parents that are now confused as to what is safe or not for their children.

The ill-executed implementation of this legislation has brought fear into the industry, and that fear, especially in economic times like these, can bring a half to successful and productive businesses. Our franchises have a lot on the line that is driving this fear. Most of them have business loans where their homes on the line. They have a family in which their business provides for, and they have a strong sense of giving back to the community in that they are being at the forefront of recycling. They buy and sell product that children no longer use or have outgrown. They are fearful that the CPSIA will force them to give up their American dream which is owning their own business.

I think what is really unfortunate about this debate over the CPSIA has lead to finger pointing on an issue that we really all agree, that we want to ensure the safety and protection of our children.

Our store owners have dedicated their lives to providing safe, fun, and educational products for children of all ages, and are now

having to rethink how they can continue to offer these products without violating the law.

We want to work with the Consumer Product Safety Commission to comply with this law, but the guidance issued thus far has been difficult to understand for many of our store owners. We do not want to have to shut our doors over legislation that we all agree could help children if implemented in an effective and productive way, but we need the help of the CPSC and Congress to clarify what is required for our store owners.

The CPSC has come out and stated that resellers such as Once Upon A Child and Play It Again Sports, as well as Goodwill, Salvation Army, ARC, Church organizations, garage sellers, consignment stores, anybody that has a small business that does resell items, do not have to test products, but our businesses are still liable if those products with banned substances are sold.

The CPSC recently produced a Handbook for Resale Stores and Product Resellers with the purpose being and I quote, "to help identify the types of products that are affected and to understand how to comply with the law, so you can keep unsafe products out of the hands of consumers." Unlike the information that the CPSC supplies regarding recalls which is a very specific list by brand and model number, the handbook is too general to effectively determine which products are safe to buy and sell.

For example, on page seven of the handbook, it indicates and I quote that "items made of wood (without paint, surface coating or hardware) are OK to sell." It also indicates that and I quote again, "clothes with rhinestones, metal or vinyl/plastic snaps, zippers, grommets, closures or appliques are best for us to test. We can either contact the manufacturer or we should choose to not sell them." Unlike retailers of new products, our franchisees across the country really have no idea how to determine if the painted blocks, toy trucks, dolls, stuffed giraffe, or anything else that they're bringing in and they're buying and reselling contains lead paint or are made up of dangerous lead components or toxic plastics.

It will be a violation of the Act to sell an item that is known to have more than the acceptable limit. This violation can be a fine of $5000 for each violation, and that fine increases to $100,000 on August 14. Being that the handbook gives us only guidance on determining which items are safe, the only way to be certain would be to test the product. However, being each piece that is bought and sold is unique, it would be very costly to do that. With a house on the line, a family to care for, and a potential liability to deal with, fear has really taken over for many of our retailers.

Last year alone, Once Upon A Child paid families $45 million for children's items that we purchased for resale which generated $120 million in sales for our franchisees. For families, the money that they receive from selling these children's items can be used to supplement the parents' income or maybe used to buy items for their children that they may otherwise can't afford. For business owners, this income helped provide for their family. But now, many business owners and parents are worried they won't know when a snap or zipper contains lead, and like toys, they have no way to test these items.

If there's really one thing that's become clear through this process is that we as an industry need more guidance and we need more time to sift through inventory, understand the new regulations and find cheaper, more efficient ways of testing products. For my industry, it's critical that we are able to understand how we can better sort through the inventory and confidently buy and sell children's items without fear of selling something that is unsafe for a child or facing consequences of violating the Act.

We need to know specifically what items are deemed unsafe for our children. I thank you for calling this hearing today on the impact of this bill.

[The prepared statement of Ms. Baustian is included in the appendix.]

Chairman ALTMIRE. Thank you. Mr. Anthony Vittone is Vice President and General Counsel of Swimways Corporation in Virginia Beach, Virginia. Swimways Corporation manufacturers leisure and recreational water products. The Swimways brand has been around for over 35 years and can be found at major retailers and individual pool dealers alike.

Welcome, Mr. Vittone.

STATEMENT OF ANTHONY VITTONE

Mr. VITTONE. Mr. Chairman, Ranking Member Fallin, Members of the Committee, thank you for holding this hearing and giving me the opportunity to talk with you about the issues small businesses are facing as a result last year of the passage of the Consumer Product Safety Improvement Act.

My name is Anthony Vittone. And I am the Vice President and General Counsel of Swimways. Swimways is a small, privately-held, family-owned company headquartered in Virginia Beach where we employ about 70 hardworking Americans.

Swimways designs and makes pool toys for the water. We offer 120 different products to customers ranging from nine months through adulthood. The Swimways brand of products is sold in 40,000 storefronts with major retailers and individual pool dealers alike.

For the past 15 years, Swimways has enjoyed an average rate of growth of 15 percent a year until 2008. Unfortunately, we took a step backwards last year and that was directly attributable to two factors, the state of the economy and the passage of the CPSIA.

The CPSIA, together with the economy, created a perfect economic storm for us. Swimways' main issue with the CPSIA involves the phthalate restrictions. While we would agree that there are issues with other provisions in the Act, I plan to focus my testimony today on four issues regarding the CPSIA and the new phthalate restrictions.

The first issue that we have is the timing of the phthalate ban was in our opinion the single biggest disaster in the CPSIA. When the European Union and the State of California passed a similar phthalate ban, they gave manufacturers and retailers 13 months and 15 months, respectively, to move through their inventories. Conversely, the CPSIA, as written, only gave manufacturers and retailers five months.

For any consumer product company this would be wholly inadequate. For a seasonal company, like Swimways, the time frame was essentially nonexistent. I am sure that the Members will understand that there are not a lot of pool toys being sold in the fall and the winter. People buy pool toys when it's hot.

Furthermore, whatever time was granted in the CPSIA was completely wasted by the back and forth interpretation of the Act's retroactivity on existing inventory. The industry relied on the CPSC's General Counsel's opinion that the new regulations would only apply for inventory manufactured after February 10th. When the New York Court in February overruled that interpretation, the retailers went into a complete panic. They had four days to review their inventory to determine which products were compliant with the CPSIA and remove that merchandise from the shelves. As a result of the severely compressed time line, broad-brush reactionary decisions were made and manufacturers like Swimways were expected to absorb the cost.

The same product, if sold by a retailer on February 9, 2009, was perfectly acceptable and safe by Government and industry standards. The next day, that same product became a toxic and dangerous weapon of mass destruction.

Our second issue with the phthalates restrictions is the CPSIA included a specific legislative exemption for embedded lead. However, no such exemption was given for the significantly more benign phthalates. Swimways makes a number of products where there is no ability to access the phthalates unless the customer essentially destroys the product. These products present no risk to the consumer and should be available for sale.

Third, both the CPSIA and the California legislation permit the use of three phthalates DINP, DIDP, and DNOP, depending on the age grade of the product. The California legislation only prohibits these three phthalates for child care articles and toys that are capable of going in the mouth if they are intended for children three and under while the CPSIA forbids them for children up to 12 years.

We manufacture a product called the Rainbow Reef fish. These are battery-powered fish that swim in a swimming pool. We've sold over 7 million units of this product. Prior to 2009 the fins of these fish were made with phthalates. Even those this Rainbow Reef fish is age graded five plus, there are nearly 15,000 units of this product that are now useless and will have to be destroyed. The only reason is because those fins are capable of going into a child's mouth. They're not going to come off, but they're capable of being chewed on.

Adding further confusion to the marketplace is the exemption for sporting goods in the CPSIA. It is not clear what the definition of sporting good is and what the definition of toy is. The CPSIA has offered limited guidance, but more detailed criteria are needed. In our experience retailers are not willing to take a chance of using a broad-brush approach if it's for a kid, it's a toy.

We manufacture another product called the Spring Jam basketball and have sold over 750,000 units of this product since 2005. A large retailer had approximately 10,000 units of this product on their store shelves and they immediately removed them on Feb-

ruary 10th. We reviewed the item with them, argued that it was a sporting good, offered to sort through the inventory because some of the inventory was 2009 inventory and was phthalate-free. They destroyed it all, all 10,000 units, even though less than 15 percent of that inventory of those 10,000 units had phthalates in them. All of them were put into the shredder.

Under the California Act, these goods would have been compliant. If there had been an embedded phthalate exemption, these goods would have been compliant. Had the CPSIA allowed more time to move through existing inventory, this problem would not have occurred. The retailer is now insisting on $100,000 credit for the destruction of the Spring Jam inventory and other retailers have destroyed other lots of the same.

I'll wrap up. I'm already over, but suffice it to say, Mr. Chairman, Swimways Corporation has incurred about $1 million in expenses as a result of this legislation. We ask for your help. Thank you.

[The prepared statement of Mr. Vittone is included in the appendix.]

Chairman ALTMIRE. Thank you and for the video record of the proceedings for our colleagues who can't be here, can you hold that basketball up again, just for the camera?

Mr. VITTONE. Sure.

Chairman ALTMIRE. And that's what you were talking about with the 10,000 units?

Mr. VITTONE. Yes, 10,000 units of this.

Chairman ALTMIRE. Thank you. I would yield now to the Ranking Member to introduce our final witness.

Ms. FALLIN. Thank you, Mr. Chairman. It's my pleasure to introduce a gentleman from my home state, David McCubbin, who is the President of McCubbin Hosiery in Oklahoma City. He's been President of that company since 1982, but it is a family-owned business. It's been in business for 57 years, so that's a long time. They design, market, and distribute children's and ladies' hosiery and their products are sold in a number of national and regional retail outlets including Nordstrom's, Dillard's, Stride Rite, K-Mart, Payless Shoe Source and many other small, independent retailers. Mr. McCubbin started emailing me as a fellow parent, both of our children go to school together, and said Mary, you've got to help me on this. This is really hurting my business and I'm scared to death about the laws that have been passed here in Congress. Help us out.

We were able to do something, David. It's fun when you can complain to your Congressman and we can actually have you up here and hear from you and try to resolve the issues. So thank you all for coming and David, we're pleased to have you here.

STATEMENT OF DAVID McCUBBIN

Mr. MCCUBBIN. I want to thank you for inviting me to address this Committee. The Consumer Product Safety Improvement Act of 2008, well intentioned to enhance the level of safety in the products Americans purchase for our children has had massive consequences. The legislation's broad scope has impacted thousands of

products for which the measured concerns are not material. Your willingness to review the implications for small businesses, in particular, is very much appreciated.

I was specifically asked to comment in regard to the impact of the law on our business today, the implications we anticipate in upcoming year, and recommendations I would have regarding the CPSIA.

Thus far we have been most impacted by the lead content testing requirements. Initially, we were told by industry experts, both in the U.S. and internationally, that there was no reliable lead content test for textiles engineering a scramble to execute any test that would work or be considered reliable. Reputable testing labs throughout the U.S. and Asia differed on their interpretations of what should be tested, consequently we tested all yarns and every sock at considerable expense. A sudden overwhelming demand in the testing labs resulted in delayed shipments, increased transportation costs, and strained relations with customers and suppliers.

The implications for the upcoming years, staying on Section 101 which is the lead content limits, this section classifies children's products containing more than the allowable limit of lead as banned, hazardous substances. This is a worthy and reasonable proposition, however, it has been laid upon the apparel industry in such blanket fashion without regard to any historical evidence or suggested likelihood that harmful amounts of lead are found in the products. In short, we are asked to search at considerable expense for something that does not exist, nor has been alleged to exist. We anticipate this redundant testing will cost in excess of half a million dollars to our company in the first 12 months.

Section 102, General Conformity Certification, also known as GCCs. This section of the law has been interpreted to mandate that every time we make a shipment, each article contained therein must be accompanied by a GCC identifying each rule, ban, standard or regulation applicable to the product and certifying each product complies with our regnlations. Ensuring accuracy and availability for the GCC for every incoming order from our factories and matching that information to the GCC for every item on every order shipped to our customers will result in the creation of tens of thousands of certificates annually. This is a daunting prospect for any small business.

Section 103 on tracking labels. The apparent intent of this section provides for the identification of the specific manufacturing facility for every given item, and to maintain transparency through to the end-consumer. While this goal appears innocuous, we believe actually it will be harmful for our business. Most hosiery is exempt from the care labeling rules enforced by the Federal Trade Commission due to utility or appearance be substantially impaired by a permanently attached label.

My recommendations are as follows regarding Section 101 on the lead contents, I believe based on the evidence a move should be made to exclude textile products from lead testing requirements. At the CPSC's public hearing in January credible and overwhelming evidence was presented demonstrating statistically negligible levels of lead existed in textiles.

Our industry has done its due diligence on lead and textiles. The only possible outcome is higher cost to the consumer. We can't make the product any safer.

Section 102 on the GCCs, allowing this document to be prepared on an annual basis for each style in a company's offering would vastly simplify compliance with the law.

Regarding Section 103 on the tracking labels, the CPSC should follow precedence established by the FTC with regard to consumer labeling laws. We move that all hosiery items be excluded from tracking label requirements. Socks are a low-risk item. The country of origin and the company's RN number are already on the packaging of the item. There's no need for any additional information.

Small businesses applaud the efforts of the United States Congress to ensure the safety of all citizens. In this instance of the CPSIA, however, unclear and belated interpretation is causing unintended punitive consequences for our business and thousands like us. Children's products existing in commerce for years should be judged based on the history of the consumer safety. Where there is no history of problems, common sense exclusions from the regulations should apply.

Your willingness to review the implications for small businesses, in particular, is very much appreciated. My comments today are very consistent with the sentiments expressed last week by the distinguished Chairwoman of the House Small Business Committee, the Honorable Representative Nydia Velasquez. All too often, federal agencies overlook the unintended impact that regulations have on small businesses, she said, to create an environment that fosters entrepreneurship, the regulatory system must be responsive to small business needs.

I hope you agree my testimony underscores her message. Thank you.

[The prepared statement of Mr. McCubbin is included in the appendix.]

Chairman ALTMIRE. Thank you. We'll now move to the questioning. Each Member will have five minutes to question the witnesses. I will begin with Ms. Lang. Thank you for being here again.

I know you talked about in your testimony that your business makes very small batches of the particular product line that you sell and with this limited quantity, testing each line is obviously very expensive and if you could rely on tests conducted by your component suppliers, rather than by you, would that provide significant relief and can you give me an example of the cost reduction that you would see?

Ms. LANG. If I could rely on component testing and just getting GCCs from my suppliers, that would significantly reduce the cost of testing for my product. I wouldn't need to send it for the three-party wet lab lead testing and the phthalate testing. I am unsure, however, if since fabric is an item that is not intended always for a teething item, I'm not sure if that would be tested for phthalates, however, since there aren't any in fabric, it's not a plastic, if there could be an exemption for items that aren't plastic, written into the law or exempted by the CPSC would be wonderful.

Chairman ALTMIRE. Thank you. Ms. Schreiber, the product testing requirements of the law are obviously some of the most burdensome for small businesses and the tests can be very expensive. Can you quantify for us how much exactly would it cost you to test your products?

Ms. SCHREIBER. If just this set would cost up to $1200, with what I make it would be conservatively in the hundreds of thousands of dollars. I mean because I use, everything I use is made once. It's a one-off item. Everything is personalized. So therefore, everything I make would have to be tested. So it would actually boggle the mind how much it would cost to test.

Chairman ALTMIRE. So it's an amount that you couldn't even consider.

Ms. SCHREIBER. I couldn't quantify it. I wouldn't be able to. It would be 75 times the number of threads I have in my house, the number of ribbons I have, the number of products I have, the number of products that make up the products I get from my wholesalers.

Chairman ALTMIRE. Would anybody else on the panel like to comment on that issue? Okay.

Ms. Baustian, secondhand stores like Once Upon A Child are generally selling items manufactured years earlier, long before the new law was even considered by Congress and I know the Consumer Product Safety Commission guidance has been vague to resellers. Do you feel that there's any economically feasible way for resellers to determine which products could be legally sold, lawfully sold?

Ms. BAUSTIAN. Economically, I believe there is not. For us to test the product, if we so chose that, you can purchase an XRF technology type gun. The cost of that for an individual owner would be around $20,000. Let alone the labor included to be able to test each of the components of each of the unique items that they are purchasing for resale in their store.

Chairman ALTMIRE. Thank you. For Mr. Vittone and Ms. Schreiber, overly burdensome regulations can place small businesses on an uneven playing field. Small businesses simply don't have the compliance resources that their larger competitors do. So could each of you talk about how this, from a business perspective, these regulations have put you at a competitive disadvantage?

We'll start with Mr. Vittone.

Mr. VITTONE. Sure. Thank you. I would say they do put us at a competitive disadvantage, not just with our other competitors, but also with the retailers that we sell to. We sell to large box retailers and when a large box retailer tells us that they just shredded 10,000 units of our product and wants $100,000 credit, we don't have much choice but to comply. We have to sell to that retailer next year if we want to stay in business.

So it puts us at a competitive disadvantage not just to them, but those resources take us away from growing our business and hopefully selling more product the next year.

Ms. SCHREIBER. And for me, the competition I have, it would really fall under who is going to try and be legal under the law and who is not. Many of my competitors probably feel the same way that I do, that we are making safe products. We want to be legal.

There's also many people that believe it doesn't apply to them. They're not going to follow the letter of the law. So at that point the competitive difference goes from zero to 60 because I'm done. I'm closing my doors. I'm selling off my sewing machines and they're continuing to make what they already have on the assumption that they're never going to catch me. So I don't know if that clarifies.

Chairman ALTMIRE. It does. Thank you very much.

Ms. Fallin?

Ms. FALLIN. Thank you, Mr. Chairman. I just have a question for any of you to answer and maybe I'll start with Mr. McCubbin. How does the stay of the enforcement and the testing and certification requirements on the retail and wholesale industry, how does that affect you since you still could be liable under the Act by like Attorney Generals. Does the stay really help or are you still worried about the liability under some other area of enforcement?

Mr. MCCUBBIN. Honestly, I'm not that worried because our products are so low risk and there are no lead in our products so I'm not that worried and I'm not testing currently. However, a lot of my—like Towle and Associates, they sell children's clothes. Well, they're still having to test and they are concerned. They've got lead in the zippers and he can change a button, he can have new buttons flown over from Asia and he can change, but the zippers, he's going to have to cut them out and that ruins the product. So our business is okay, until the stay goes away. And then that's when our costs would be just on the lead half a million dollars.

Ms. FALLIN. Okay.

Mr. VITTONE. Speaking on behalf of Swimways, we appreciate Chairman Nord's efforts. She has done as best she can to reduce the effects of this legislation, but the stay really hasn't affected us, frankly. We've gone ahead and moved forward with compliance. We're really more trying to deal with the aftermath of what to do with the products that we have sold to our retailers that are still on their shelves or that is still in our warehouse or in the warehouses of our manufacturers overseas.

Ms. FALLIN. Anybody else want to add anything?

Ms. BAUSTIAN. Certainly from a resell standpoint for us it doesn't really affect us because either way we will have to comply on the sales side that all items are deemed safe. So our owners certainly are very concerned, but have no way to really ensure that they're doing that.

Ms. LANG. The stay has kept me in business. I was going to shut down on February 10th of this year. It kept me in business until February 10th of next year. If it expires, I'm out of business. The thing that concerns me the most is that since it is a one-year stay, I'm not putting the money into my business that I would if I knew that I was going to be able to continue to grow my business. I'm not probably making the efforts that I would as far as on the wholesale side of selling my product and growing my business. But I would if I knew that I was going to be able to keep operating.

Ms. SCHREIBER. And I think I'm in a sort of a similar situation as Mr. McCubbin, because I work mostly in textiles. I've had to discontinue some products because those wholesalers won't provide me with a GCC because it's a bib that doesn't contain lead, so

they're not going to test for it because it doesn't contain lead. So I've dropped them because I want to have prove products. So it's affected me a little bit, but again, if it's not sort of re-upped, I'm done.

Ms. FALLIN. So all of you are saying basically that if nothing changes in the law and the stay and the one-year moratorium runs out, that there's a possibility that you could shut down your business.

Ms. LANG. It's not only a possibility, it's a given.

Ms. FALLIN. You will.

Ms. LANG. I can't afford $84,000 in testing when I make $4500 a year.

Ms. FALLIN. And I thought, Mr. Chairman, the other comment that she just made was that she could be investing more money and adding to her product line and creating more opportunities and buying more products, but she's decided to hold back and that's what we see a lot in our economy right now, especially during this recession time. People who have money are scared to invest, and so here we have one more thing that's causing concern for investment.

I have another question for Mr. Vittone.

Mr. VITTONE. Yes.

Ms. FALLIN. You said you took a step back because of this Act. In taking a step back, what did you do?

Mr. VITTONE. What I meant was is that we had a rate of growth about 15 percent a year for the last 10 years and we went backwards last year and our profitability for 2008 was reduced by about 46 percent as a result of all of the inventory and the chargebacks from the retailers. So it was a significant impact last year.

Ms. FALLIN. And you talked about the one company with the hoop that you showed them a minute ago about how they destroyed their products, are they coming back after you to get a credit?

Mr. VITTONE. Yes, $100,000.

Ms. FALLIN. $100,000, and so—

Mr. VITTONE. They want credit not only for the price they paid for the inventory, but also for the destruction to it.

Ms. FALLIN. Are you in a legal matter with them on that?

Mr. VITTONE. No, no. Like I mentioned, we're in discussions with them on how to resolve it.

Ms. FALLIN. That's tough.

Mr. VITTONE. Yes.

Ms. FALLIN. Well, thank you all so much for coming today. We sure appreciate you.

Thank you, Mr. Chairman.

Chairman ALTMIRE. Mr. Thompson.

Mr. THOMPSON. Thank you, Chairman. First question I have for Ms. Schreiber, if one of the problems that the CPSIA tried to resolve was lead in toys from overseas manufacturing, does it make sense to you that most of the laboratories that can your testing are overseas?

Ms. SCHREIBER. It doesn't. That's a little ironic, isn't it? And that's where some of the most cost-effective testing goes to. But I have people that order things for a specific occasion and with my time frame to get things done, between family issues and every-

thing else, and then you're tacking on another two weeks to get it shipped to China to have them test it, when maybe the clip originated from China six months ago and I have testing that says it's good, so I'm sending it back and it's sort of an Alice fell down the rabbit hole sort of situation, really.

I won't be sending it to China, but I quite frankly won't be sending it anywhere because I can't afford it.

Mr. THOMPSON. It's unaffordable to do it. Thank you.

Ms. Lang, the Food and Drug Administration has manufacturing guidelines that accepts certain food additives and chemicals to be generally recognized as safe. Would a similar generally recognized as not having any lead content standard be useful to your business in the implementation of the CPSIA?

Ms. LANG. I think it would probably be useful if it were written into the law or if it were—the thing that I'm afraid of is that the 50 State Attorney Generals are each deputized to go after businesses. I sell in every state and so I would hate to not know if I am going—if somebody is going to come after me for my product.

I would need something more cut and dry, I think. I think it would need to be more set in stone than just a wavy guideline.

Mr. THOMPSON. Okay, thank you.

Mr. McCubbin, in your opinion, has the Commission provided sufficient guidance to the industry on how to implement this CPSIA?

Mr. MCCUBBIN. No, it has not. I think that's a lot of the problem is the confusion that all companies have as to what the guidelines are. And our customers, as Ms. Fallin mentioned, you've got Dillard's. You've got Nordstrom. You've got Kohl's. We've got K-Mark. We've got Payless. They all interpret it differently and so as I said, we're going forth with that the stay is good for the socks, but let's just say K-Mart says no, but it's the law and you have to abide by the law, forget the stay. So we'd have to test the products for K-Mart. It's very confusing.

Mr. THOMPSON. Mr. McCubbin, how will your firm ensure the suppliers meet the certification requirements of the Act?

Mr. MCCUBBIN. Is that addressed to me?

Mr. THOMPSON. Yes, please.

Mr. MCCUBBIN. Say that again, please, I'm sorry.

Mr. THOMPSON. How will your firm ensure that its suppliers meet the certification requirements of the Act?

Mr. MCCUBBIN. We actually have the products tested over in Asia. After they're made, they have to be sent off and as I said you might have a children's tight that six different colors in it at $40 a color, it gets tested for $240. The whole section of tights for K-Mart, I got 49 now, do a quick math on that, that's very expensive, just for that one run. So they'll tell us that it's passed. They'll send us the certificate and we're trusting it's accurate.

Mr. THOMPSON. Seems like this Act has been a good economic stimulus for China.

Mr. MCCUBBIN. It's been good for the testing labs, I'll say that.

Mr. THOMPSON. Mr. Vittone, do you have an estimate, in terms of numbers, do you have an estimate of the total number of employee hours devoted to the implementation of this, rather than

more productive work associated with growing the Swimways business?

Mr. VITTONE. It would be hard to count them all up, but it's been thousands upon thousands of hours, just spent on complying with this Act. It touches everybody in the company, so everybody has to deal with it from the art department to the product development department to the finance department to sales, everybody has been having to work to comply with this Act and with the tracking labels and that brings in IT and then all of our manufacturers in China. It's hard to put a number on it.

Mr. THOMPSON. It's pretty fair to say though it's had a pretty significant negative impact on productivity?

Mr. VITTONE. Absolutely.

Mr. THOMPSON. And efficiency.

Mr. VITTONE. One of the points of my written testimony is that all of the time that was spent on complying with this could have been spent on us growing our business.

Mr. THOMPSON. Very good. Mr. Chairman, I think I'm out of time.

Chairman ALTMIRE. Thank you. Thanks to everybody. Thank you for the audience for sticking it out through the long vote series.

Before we adjourn, I just want to make a point about what we've done here today. You heard the Chairwoman say that this is the first hearing that's been held on this issue in Congress and this came about because each one of you took the time to contact your representative as thousands like you have done, all 435 of us have heard from small businesses and you're the reason that this happened. You're the reason that we held this hearing. This is just the first step. We're going to adjourn the hearing now, but we're going to continue to work to try to find a solution to this problem, but I just want to thank you for taking the time, making the trip, all the expenses and the time commitment that that entails. You made a big difference with your advocacy, both today and leading up to today. So be proud of what you've done and we're going to try to carry forward and get a solution to this problem.

So with that, I ask unanimous consent that Members will have five days to submit statements and supporting materials to the record. Without objection, so ordered. This hearing is now adjourned.

[Whereupon, at 1:01 p.m., the hearing was concluded.]

JASON ALTMIRE, Pennsylvania
Chairman

MARY FALLIN, Oklahoma
Ranking Member

Congress of the United States

Committee on Small Business

Subcommittee on Investigations and Oversight

2361 Rayburn House Office Building

Washington, DC 20515-0515

STATEMENT
Of the Honorable Jason Altmire, Chair
Subcommittee on Investigations and Oversight
United States Representatives, Committee on Small Business
"The Consumer Product Safety Improvement Act and Small Business"
Wednesday, July May 14, 2009

When it comes to protecting our children, Americans take every precaution. We strap our kids into car seats when we're driving. We insist on training wheels when they're learning to ride a bike. We vaccinate them against chicken pox, polio and countless other illnesses. In other words, we do everything we can to make sure our children are safe. That's why it's so distressing when threats to their health go undetected. Particularly when those threats come from within our very own homes.

In 2007, excessive lead levels were detected in a wide variety of children's toys. Up until that point, those products--which ranged from toy cars to Winnie the Pooh playsets-- were assumed to be safe. When it turned out they were not, the Consumer Product Safety Commission launched a massive recall. All told, 17 million products were collected, and entrepreneurs played a critical role in getting them off the shelves. Needless to say, these small business owners wanted to protect their customers. However, what they *didn't* want--and what they *couldn't* afford-- were the economic consequences of doing so and in the end they suffered heavy losses that they could ill afford.

To help ensure this type of massive recall never happens again, President Bush signed the Consumer Product Safety Improvements Act, or CPSIA, into law in August, 2008. While that law was intended to protect our children, it has done less to accomplish that than it has to hurt small firms all across the country. In today's hearing, we are going to examine the impact of the CPSIA on entrepreneurs, and discuss ways to ease their regulatory burden.

Recalls are never easy for entrepreneurs. Small firms already operate on tight profit margins, and additional outlays for destroying products or reimbursing retailers can be devastating.

Under the CPSIA, small businesses are required to conduct costly product testing, and use pricey new tracking labels. These requirements are well intended and good in concept, but their actual utility has yet to be seen. What is more, they are extremely expensive for small firms to comply with.

Even the CPSC admits that the cost to small businesses will be crippling. In fact, the commission estimates entrepreneurs will end up paying billions of dollars just to comply with the new regulations. For small manufactures, product testing alone can cost hundreds -- if not thousands of dollars -- per item. The process of testing the 233 various components in a child's bicycle, for example, runs close to $14,000.

Manufacturers are not alone in shouldering these costs. Small retailers--from toy stores to clothing shops-- have also been affected. They are now saddled with countless items that they can't sell. According to the Toy Industry Association, CPSIA-inventory losses will reach close to $600 million.

At a time when both the retail and manufacturing industries are struggling, these outlays could be the straw that breaks the camel's back. Obviously, we need to protect our children. But we need to do so in a way that doesn't handicap small businesses.

Fortunately, the CPSC *does* have the authority to be flexible with small firms. This is critical, particularly when it comes to product testing. For instance, allowing the rubber for a toy doll to be pre-tested at the rubber plant--rather than at the doll factory--would go a long way. This kind of component analysis could reduce costs without compromising safety.

Protecting our children is a top priority. It is extremely important for consumers to have confidence in the products they buy, and the CPSIA was intended to provide that confidence. But rather than streamlining and improving the process, it has added a crippling new level of complexity. As small firms continue to grapple with obstacles like restricted lending and tightening credit, we shouldn't be creating more roadblocks for them.

Opening Statement for Hearing on
"The Consumer Product Safety Improvement Act and Small Business."
Mary Fallin
Ranking Member
Subcommittee on Investigations and Oversight
Committee on Small Business
United States House of Representatives
Washington, DC
March 25, 2009

Good morning. Thank you, Chairman Altmire for calling this timely hearing to examine the impact of the Consumer Product Safety Improvement Act on small businesses. This is an important issue that affects manufacturers, distributors and sellers of goods aimed at children under the age of 12. Federal law and regulations adopted last year were meant to ensure that our children are safe from the toys they play with and clothes they wear every day. However, the unintended consequences of this well-meaning legislation may severely hurt many of our small businesses, including small businesses that produce children products, not in overseas factories but right here in the United States.

I'd like to extend a special thanks to each of our witnesses who have taken the time to provide this subcommittee with their testimony. Welcome to the Small Business Subcommittee on Investigations and Oversight. I am sure we will find your expertise on small business and manufacturing extremely helpful. I would especially like to welcome David McCubbin, the owner and operator of McCubbin Hosiery from Oklahoma City.

In 2007, toy manufacturers had to recall over a million toys that violated standards concerning lead-based paint. The toys recalled included well-known children's products associated with Thomas the Tank Engine, Barbie Doll, and Dora the Explorer. Obviously, parents were rightfully outraged about the danger to their children, prompting Congress to pass the Consumer Product Safety Improvement Act or CPSIA, in 2008.

Most of the lead in these cited toys came from overseas toy manufacturers, though the law harshly affects many American businesses. The CPSIA prohibits the sale or distribution of a product for children under the age of 12 if it contains more than 600 parts per million of lead after February

10, 2009 and that will drop to 300 parts per million on August 14 of this year. To ensure this compliance, the Act requires manufacturers certify their products meet those standards through independent lab testing.

Given the many concerns of small business across the country and their ability to meet these strict requirements in such a short time frame, the Commission eased enforcement of the regulations for one year, ending February 10, 2010. Though this stay was intended to resolve the CPSIA problems facing small businesses, it is by no means a cure-all. Though the CPSC may not take punitive action against anyone selling a product with more than 600 ppm of lead, others may choose to enforce the law. For example, a state attorney general may be able to take legal action if they find a business has produced, distributed, or sold a product for a child that exceeds the set lead limit.

Small business owners are thus forced to incur the large cost of testing their products or risk punishment in the future if their products do not conform to CPSC standards. The problem is exacerbated for small retailers, who, unlike manufacturers, are not yet required to certify lead content of products. The retailers who do not test for lead are still subject to these restrictions on selling a product containing lead, even though they lack the ability and resources to determine if their products may even contain lead. The cost of testing may be upwards of tens of thousands of dollars for small retailers, just to make sure only a few of their products fall below the maximum requirements. In a time where our economy is going through enough turbulence, this added stress and cost on small businesses may put many more small retailers and manufacturers out of business forever.

With the passage of the CPSIA last year, we in Congress created unforeseen consequences that could significantly harm the backbone of our economy, small business.
It is imperative we look to changes in federal law to ensure a healthy environment for our children can coexist with a regulatory structure that does not unduly burden our American small businesses.

Without permanent changes to the CPSIA, small businesses will remain encumbered with objectives that they may not be able to meet. I look forward to hearing first hand from our witnesses about the state of this law, and to listen to any recommendations you may have. Mr. Chairman, I look forward to working with you on this important issue. Again, I thank each of you for being here today and I yield back the balance of my time.

U.S. Consumer Product Safety Commission

TESTIMONY OF
THE HONORABLE NANCY A. NORD

Testimony of the Honorable Nancy A. Nord
Acting Chairman, U.S. Consumer Product Safety Commission

Hearing on
"The Consumer Product Safety Improvement Act and Small Business"

Committee on Small Business
U.S. House of Representatives
May 14, 2009

Good morning, Mr. Chairman, and thank you for this opportunity today to report to the committee on the progress of the U.S. Consumer Product Safety Commission (CPSC) in implementing the Consumer Product Safety Improvement Act (CPSIA) and to discuss the significant impact of this new law on the nation's small businesses.

The Mission of the CPSC

By way of introduction, the CPSC is a small, independent and bipartisan federal commission charged with protecting the public from unreasonable risks of injury and death associated with thousands of consumer products. With a national workforce of approximately 450 individuals, the CPSC is tasked by its governing statutes with three main missions:

1. To identify existing and emerging product hazards that create an unreasonable risk of injury or death and to address those hazards by developing mandatory safety standards when consensus standards fail to do so;
2. To investigate and respond to product-related incidents and conduct recalls of defective and unsafe products; and
3. To alert and educate consumers about product-related safety issues.

Since its establishment in 1973, CPSC's work has contributed substantially to the decline in the rates of death and injury related to the use of consumer products. These reductions include:

- An 84 percent reduction in crib-related deaths;
- An 83 percent reduction in poisoning deaths of children from drugs and household chemicals;
- A 74 percent reduction in product-related electrocutions;
- A 43 percent reduction in consumer-related residential fire deaths; and
- A 41 percent reduction in consumer-related carbon monoxide deaths.

While we are proud of these and the agency's many other achievements over the years, consumer product safety is never a completed task but always an ongoing process of research, standards development, enforcement and public education. Ever more technologically complex products, expanding retail sales over the Internet, and the increasing significance of imported products are examples of the many dynamics that continuously challenge the agency.

The Consumer Product Safety Improvement Act

In response to the dramatic changes in the marketplace since the CPSC was last reauthorized in 1991, Congress enacted the Consumer Product Safety Improvement Act ("CPSIA") in August of 2008 to modernize and strengthen the agency's authorities. The CPSIA is the most far-reaching and comprehensive overhaul of the agency's statutes since its establishment in 1973, and implementing the new law over these past nine months has been a tremendous challenge to the staff as we redirected our available resources to meet the aggressive and ambitious timetable that Congress mandated.

This challenge was exacerbated by a serious lack of funding to implement the CPSIA along with new Congressional directives on nanotechnology and CPSC staffing in China, as well as two other recently enacted laws, the Children's Gasoline Burn Prevention Act and the Virginia Graeme Baker Pool and Spa Safety Act. This last act sets Congressionally-mandated safety standards for swimming pools and brings the approximately 300,000 public swimming pools under the jurisdiction of the CPSC.

Because a reasonable implementation program for these new laws and directives could not be absorbed within CPSC's original fiscal year 2009 budget request without serious disruption

of mission critical activities, my colleague Commissioner Thomas Moore and I submitted an emergency budget request to Congress immediately following passage of the CPSIA. That request was in the amount of $29,048,000.

While Congress subsequently approved $25,404,000 for the agency, regretfully that approval occurred in March of 2009 after the first seven critical months of CPSIA implementation had passed. During that critical period much of CPSC's on-going safety work was adversely impacted as the agency had to delay or defer projects in other important product safety areas, such as rulemaking activities on portable generators and standards work on electrical, fire, mechanical and chemical hazards.

Since the time that the CPSIA was first being considered in Congress in 2007, I have fully supported the goal of modernizing the agency and, in fact, originally suggested a number of improvements that found their way into the final legislation. These improvements include enhanced tools for enforcement and greater ability to deal with imported products.

While I appreciate these new tools, there were certain provisions of the legislation that have proved to be especially problematic to implement, both for the agency and for the regulated community. Of special concern are those provisions regarding retroactivity and the ability of the Commission to make decisions about the safety of products based on scientific risk assessments.

CPSIA Implementation

This is the CPSC's first Congressional hearing since passage of the CPSIA, and I am pleased to have this opportunity today to discuss the consequences of these provisions with the committee. They have had a particularly severe impact on many of the nation's small businesses.

In implementing the CPSIA over these past nine months, the agency has been truly prolific in its output. The Commission has initiated and advanced over 40 rulemaking activities required by the Act and published enforcement guidelines and policies to enhance compliance with the new law.

We are especially committed to educating both consumers and businesses as to the requirements of the new law and therefore have developed a special website dedicated to the CPSIA, issued various guidances, and responded to questions from the public numbering in the thousands. The staff has held public meetings to elicit comments and respond to

questions about how the new law impacts or regulates all-terrain vehicles, books, apparel, bicycles, phthalates, lead, X-ray fluorescence technology, testing and certification, and tracking labels.

Because it is important that our overseas trading partners also understand the new law, I have taken CPSC technical experts to both China and Vietnam to hold training sessions and to discuss implementation of both existing agreements and the new requirements of the CPSIA. We have worked closely with foreign government officials and product manufacturers to help them understand their requirements under the Act.

While the CPSIA mandated a number of ambitious deadlines, during the first six months of implementation the agency met each mandated deadline. For example, the Commission, within 30 days of enactment, approved final requirements for accreditation of third-party conformity assessment bodies and began rolling out testing requirements for various children's products, including full-size and non-full-size cribs, pacifiers, small parts, lead paint and lead in children's metal jewelry; on a schedule as set out in the law. In addition we have issued Final Rules on:

- labeling requirements for toy and game advertisements;
- all-terrain vehicle mandatory safety standards;
- certification and electronic certificates; and
- procedures and requirements for manufacturers seeking an exclusion from the law's lead mandate.

Furthermore, since enactment of the CPSIA, the Commission has issued:

- an advance notice of proposed rulemaking on crib durability;
- a notice of proposed rulemaking for mandatory recall notices;
- guidance regarding which children's products are subject to the ban on phthalates;
- a request for comments and information on tracking labels for children's products;
- a proposed interpretative rule providing guidance on inaccessibility for lead in children's products;
- a notice of proposed rulemaking and an interim final rule on exemptions for certain electronic devices containing lead;
- a notice of proposed rulemaking on proposed determinations regarding lead content limits on certain materials or products;
- instructions on general certification of conformity; and

- data collection procedures to establish the mandated Chronic Hazard Advisory Panel that will study the effect's on children's health of certain phthalates as used in children's toys and child care articles.

As we have worked through this process, we have encountered a number of problems where the law does not give us the flexibility to respond to unanticipated but real world problems that have been presented. In these instances we have had to resort to issuing stays of enforcement in order to avoid disruptions of the market that would be counter to the purposes of the new law. Among others, we have issued:

- a stay of enforcement of certain testing and certification requirements;
- a stay of enforcement of lead content limits for certain youth motorized recreational vehicles, and
- a stay of enforcement of lead content limits for children's bicycles.

We anticipate issuing additional stays of enforcement as specific problems present themselves even though we recognize that this is not the optimal way to address these problems. Nevertheless, it is the only means we have to avoid the damaging consequences that would result from application of the law as written.

Impact of the Law on Small Businesses

I know that the Committee members have heard from their constituents who have been negatively impacted by various provisions of the CPSIA, and I can assure you that the Commission has heard from them as well. Small business men and women, charity volunteers, arts and crafts people who work at home, thrift and consignment shop owners and customers, ATV sellers and enthusiasts, and many other individuals have been in contact with us regarding the often unexpected consequences of the new law. Many of their problems have resulted from the retroactivity of the lead provisions in the law and the lack of flexibility provided to the Commission to regulate based on thoughtful risk assessments. The problems that have been reported to us have been further exacerbated by the nation's economic downturn. While the agency does not have the capability to compute the economic toll that the new law has taken, we are aware of estimates that place the cost of compliance in the billions of dollars.

The Commission has attempted to ease the burden on these individuals by developing common sense enforcement policies (including stays of enforcement) to the extent that the law allows, issuing comprehensive guidance, identifying certain materials that do not need to

be tested, finalizing exemptions for electronics and inaccessible parts, and putting in place a formal process for exclusions. While the Commission has placed a high priority on processing exclusion requests as quickly as possible, the new law is very restrictive on this point. We have not yet been able to identify any products that would meet the law's requirements for exclusions, and the Commission lacks the authority to change the essential requirements of the underlying statute. Only Congress can do that.

To assist small businesses, in January the CPSC issued a guide to the new law aimed specifically at small businesses. Recently, we published an updated guide for resellers of children's products, including thrift and consignment stores. Both guides are designed to help small businesses, including sellers of used products, in identifying products that may violate the new law or are otherwise unsafe and try to dispel confusion regarding the requirements of the CPSIA.

New Lead Requirements: The CPSC has a long history regulating lead starting with a ban issued on lead-based paint in 1977 under the Consumer Product Safety Act. In more recent years, the CPSC has identified and taken action on a range of different products that presented a potential lead health risk from sources other than paint. Those products have included imported vinyl mini-blinds, crayons and chalk, figurines used as game pieces, toys and children's metal jewelry.

New limits for lead content in children's products and the amount of lead in paint used on those products are set out in Section 101 of the CPSIA. The Act reduces the current lead in paint limit from 600 ppm to 90 ppm for products sold or otherwise distributed in commerce after August 14, 2009.

With regard to lead content, the limits are phased in over the course of three years. As of February 10, 2009, products designed or intended primarily for children 12 years of age and younger may not be sold or otherwise distributed in commerce if they contain more than 600 ppm of lead. As of August 14, 2009, this limit is reduced to 300 ppm of lead, and the limit goes down further to 100 ppm as of August 10, 2011, unless the Commission determines that that limit is not technologically feasible.

New Phthalates Requirements: Turning to phthalates, the CPSC has traditionally had regulatory authority over phthalates under the Federal Hazardous Substances Act (FHSA), and since the early 1980's, the CPSC has researched, and monitored phthalates used in children's products under the agency's jurisdiction. The agency conducted comprehensive behavioral observations and laboratory analysis on phthalates in toys and other products that small children could be expected to mouth in 2000 and 2001.

The CPSIA has permanently prohibited three phthalates, DEHP, DBP and BBP, in concentrations of more than 0.1 percent in children's toys or child care articles. However, since these three phthalates are generally not used in toys or child care articles, the impact of this permanent ban is negligible. Three additional phthalates, DINP, DIDP and DnOP, have been prohibited pending further study and review by a Chronic Hazards Advisory Panel of outside experts convened by the Commission. These interim prohibitions, which took effect on February 10, 2009, apply to any child care article or toy that can be placed in a child's mouth or brought to the mouth and kept in the mouth so that it can be sucked or chewed and that contains a concentration of more than 0.1 percent of these particular phthalates.

Section 108 of the CPSIA applies the prohibition on phthalates to all parts of a children's toy or child care article, not just the plastic parts likely to contain phthlates, and the law does not provide for an exception or exemption for inaccessibility for phthalates as is the case for lead in children's products under Section 101. In addition, because there is no screening test for phthalates (like there is for lead) and because the test requires destruction of the product sample, the test is expensive, especially for a small business or a crafter.

Impact of Requirements: The CPSIA's bans on lead and phthalates are retroactive, rendering illegal inventory on store shelves and in warehouses that was perfectly legal and considered safe when manufactured. This sweeping retroactive application of the lead and phthalates provisions has caused most of the problems that you are hearing from your small businesses, since these businesses may very well have violative product but have no way to make that determination without incurring significant testing costs. The CPSC has never in its history been presented with such a broad based principle of retroactivity. In the 35 year history of the agency, it has been well understood that regulations apply on a prospective basis. The economic damage being done to many small businesses testifies to the wisdom of applying requirements prospectively.

Additionally, CPSIA's lead and phthalates provisions have effectively eliminated the concepts of risk and exposure which had been at the core of U.S. safety laws. For lead and phthalates, the new law revokes the Commission's historic ability to make decisions based on risk and exposure and very tightly restricts the Commissions ability to grant exclusions, even in those situations where the CPSC's health scientists do not believe that there is a safety problem.

Off-road ATVs and motorized bikes designed for children 12 years of age and younger are examples of this new policy. These are products that contain lead above the prescribed limits of the law, although no one has ever seriously suggested that their normal use would expose

children to danger of lead poisoning. In addition, lead is needed to maintain the structural integrity of the metal used in the product. We are seeing the same issue with respect to children's bicycles.

The law as written virtually denies the Commission the ability to grant an exclusion for these products so we are now having to resort to the device of enforcement stays to address the inflexibility of the law. I would strongly urge the Congress to revisit the language for exclusions and retroactivity and return to the agency its discretionary authority to make risk-based assessments on a prospective basis.

I would also like to call your attention to Section 218 of the CPSIA that gives state attorneys general the authority to enforce certain federal product safety laws, including those regarding the limits on lead and phthalates. This state authority to enforce CPSC's statutes compromises the ability of our agency's Office of Compliance to engage in reasonable enforcement discretion. For example, the CPSC is powerless to require state attorneys general to join in the agency's stay of enforcement of certain testing and certification requirements. That is regrettable because, as discussed above, enforcement discretion is an important tool that is needed to reach thoughtful and effective outcomes that enhance consumer safety. While we are reaching out to state attorneys general to educate them about our enforcement policies and try to engage them as our partners in safety, the law does limit our ability to exercise enforcement discretion.

Recommendations for Improvements

On March 4, 2009, Congressman John D. Dingell, chairman emeritus of the House Committee on Energy and Commerce, wrote to the Commission and posed ten questions having to do with CPSIA implementation. Congressman Dingell, one of the authors of the original Consumer Product Safety Act, expressed his concern that the CPSIA "includes unrealistic deadlines for rulemakings and compliance, as well as too little implementation discretion for the CPSC, both of which are exacerbated by the CPSC's lack of adequate resources, both in terms of funding and staff." I would like to submit for the record Congressman Dingell's letter and the responses of career agency staff to his questions, which are attached to this statement.

In those responses, staff noted that the deadlines in the CPSIA have proven to be impracticable to meet and are presenting significant problems for the agency to solve. Staff requests that the CPSC be allowed to use risk assessment methodology to establish priorities for common sense exemptions and be given the discretion to move CPSIA effective dates.

With regard to small business relief, I endorse the staff recommendation that the agency be allowed to develop a robust component certification program so that companies would not need to test a product if the components of that product had already been tested and shown to be compliant. Additionally, Congress could choose to apply the new lead and phthalate limits prospectively to ease the impact on inventory existing prior to the effective dates. If the Congress chose to apply the law prospectively, the Commission still retains the ability to removed unsafe products from the store shelves so consumer safety would not be impacted.

The staff response further states that "the CPSIA forsakes the core strengths of the CPSC's original statutory framework which has from the beginning allowed the Commission to prioritize its regulation of consumer products by an overall assessment of all the risks at stake, the magnitude of those risks, and the actual consequences of the hazard."

CPSC staff concluded with three recommendations:

1. "Limit the applicability of new requirements to products manufactured after the effective date, except in circumstances where the Commission decides that exposure to a product presents a health and safety risk to children;
2. Lower the age limit used in the definition of children's products to better reflect exposure and give the CPSC discretion to set a higher age for certain materials or classes of products that pose a risk to older children or to younger ones in the same household; and
3. Allow the CPSC to address certification, tracking labels and other issues on a product class or other logical basis, using risk-assessment methodologies to establish need, priorities, and a phase-in schedule."

I concur with these recommendations. They would go a long way toward helping the agency help your small business constituents and do so without reducing the health and safety standards and enforcement activities that are the core of CPSC's safety mission.

Mr. Chairman, I want to thank you again for holding this important hearing today. The U.S. Consumer Product Safety Commission is a small agency, even with our new funding, and we have a large and important mission to accomplish on behalf of the American public. I am committed to that mission and to efficiently, effectively and aggressively implementing the nation's laws that are designed to provide for the health and safety of consumers. We appreciate your support for CPSC's mission of protecting our nation's families, and particularly our nation's children. I look forward to answering your questions.

March 20, 2009

The Honorable John D. Dingell
U.S. House of Representatives
2328 Rayburn House Office Building
Washington, DC 20515

Dear Representative Dingell:

Thank you for your letter of March 4, 2009, regarding the U.S. Consumer Product Safety Commission's (CPSC) implementation of the Consumer Product Safety Improvement Act of 2008. Recognizing and respecting the knowledge that the CPSC career staff has acquired in implementing this new law, I asked them to prepare answers to the important questions that you asked in your letter. Their responses are enclosed.

Since its passage last August, the CPSC staff has been working tirelessly to implement this comprehensive legislation in the most efficient and effective manner possible given the limits of our resources and the time constraints mandated in the law. As you will note in their responses, they have identified some proposed refinements to the law based on their front-line experience with it.

We share your commitment to better protection of our nation's consumers, and we very much appreciate your long-standing advocacy and support of the CPSC. After reviewing the staff's responses, please let me know if you have additional questions or comments.

Sincerely,

Nancy A. Nord
Acting Chairman

Enclosure

Date: March 20, 2009

TO : Acting Chairman Nancy Nord
Commissioner Thomas Moore

FROM : General Counsel CAF
Assistant Executive Director for Compliance
Assistant Executive Director for Hazard Identification and Reduction
Assistant Executive Director for Financial Management, Planning and Evaluation CEQ

SUBJECT : Responses to Letter from the Honorable John D. Dingell

Chairman Nord has asked us to respond to the questions recently received from Representative Dingell. The following responses have been prepared by career staff at the U.S. Consumer Product Safety Commission (CPSC).

1. To what extent has robust implementation of the Act been hampered by CPSC's lack of resources? What levels of funding and staffing does CPSC believe necessary for proper implementation of the Act?

The CPSC has made implementation of the Consumer Product Safety Improvement Act (CPSIA) our highest priority. Since August 2008, the agency has initiated and advanced over 20 rulemaking activities required by the CPSIA which is an unprecedented number for this agency or any other of this size, published enforcement guidance and policies to enhance compliance with the new law, conducted numerous meetings with stakeholders, developed a special website dedicated to the CPSIA, responded to questions from the public numbering in the thousands, and generally focused the agency's limited scientific, legal, technical, educational, training and administrative resources on CPSIA implementation requirements.

Because requested funding for implementation of the new law was not forthcoming during the critical first six months when many of the CPSIA requirements needed to be initiated or completed, implementation of the CPSIA has impacted our ongoing safety mission by delaying and deferring work in many other areas. While work has been deferred or delayed on these activities -- such as rulemaking activities on portable generators and voluntary standards work on electrical, fire, mechanical, chemical and children's hazards -- some of CPSC's ongoing safety work such as hazardous product investigations and recalls could not be deferred. This has limited our ability to advise you on how to fully reallocate existing staff resources to implementation of the CPSIA.

Moreover, issues related to the accreditations of laboratories and the increasing number of requests for exclusions from the Act's provisions have caused unanticipated additional demands on staff resources, at the same time that the staff has been implementing the Virginia Graeme

Baker Pool and Spa Safety Act (which became effective in December 2008), and the Children's Gasoline Burn Prevention Act (which became effective in January 2009). This has severely overstretched the agency staff and has begun resulting in delays in implementation that will continue until we are able to fully hire and otherwise maximize the resources that have just been provided to the agency for the second half of fiscal year 2009.

Three examples of the burden and complexity presented by the work on these issues are: (1) the continuing need to process and review applications for laboratory accreditation, including applications from government and proprietary firewalled laboratories, a process initiated by the CPSIA and one that the agency is handling for the first time in its history; (2) the need for further refinement of guidance on the scope of the phthalates ban and, in particular, defining a testing method and dealing with compliance questions regarding the chemistry and carbon chain branching that determines whether a product contains a banned phthalate; and (3) the engineering issues raised by the Pool and Spa Safety Act and the need to reconcile state regulations on health and safety issues such as water quality with the need to replace drain covers as required by that Act. The Commission staff cannot address these and similar matters all at once, yet delay has serious economic impacts on the affected parties which no one anticipated would happen at the same time as the current economic downturn.

As we implement each new requirement, we are seeing unanticipated issues arise, and we are learning more of the far-reaching effects of the CPSIA and there will undoubtedly be more to learn. In August 2008 following passage of the Act, staff estimated that it would require a full annual increase of $21.1 million and 59 FTEs to begin implementing the new legislation in Fiscal Year 2009. That same month, the Commission submitted an amendment in this amount to the then-pending President's Budget Request through the Office of Management and Budget, as well as directly to Congress. In November 2008 a revised amendment was provided to Congress to reflect CPSC's requirements for only the second half of the fiscal year. Through the first six months of implementing the CPSIA, none of this additional funding was received by the Commission.

The funding amount in the Commission's revised amendment has just been approved by Congress. While we will use these funds to immediately and aggressively hire and train new staff, the six-month delay in funding will cause continued deferrals until such time that the agency fully absorbs the new appropriation. For Fiscal Year 2010 the Commission has requested additional funding to continue implementation of the CPSIA.

2. Given the paramount importance of ensuring children's safety and the overall mission of the CPSC, to what extent are the deadlines in the Act practicable for CPSC and industry to meet acting with all deliberate speed? If these deadlines are not practicable, what revision does CPSC suggest?

Mandated Deadlines: Effect on Safety Priorities and Staff Workloads

In the CPSIA, Congress set an aggressive regulatory agenda for the CPSC over the course of the first two to three years after enactment. The work required by the CPSIA is in addition to the

Commission's ongoing regulatory activity in a variety of areas, including upholstered furniture, portable generators and other important standards development activities, as well as our ongoing compliance work in evaluating and recalling products that present hazards to consumers. As with any regulatory agency, CPSC's safety work must be prioritized to deal with the most significant risks; however, the deadlines mandated in the CPSIA have jeopardized our ability to meet Commission priorities and proven to be too much for a relatively small agency to handle all at once. Timely implementation is important, but the flexibility to prioritize our work to deal with the most serious risks is equally important to maximize effectiveness and do the greatest good with the resources that we have been given.

While the CPSIA mandates more than 40 separate action items for the Commission to undertake, that number understates the agency workload that results from each of those mandates. For example, there is no requirement to adopt an interpretative rule defining "child care article" and "toy" under section 108. Yet the Commission has been inundated with thousands of product specific inquiries about what types of products fall within those definitions, from shoes to sporting goods to electronic games. An interpretive rule is our recommended way to address this issue and adds to our rulemaking burden.

The action item count also does not include acting on requests for exemptions from the lead limits provision, nor does the list contemplate making "determinations" on classes of materials or products not covered by the ban on lead in children's products. Because the statute did not permit the agency to exempt products from the scope of the definition of children's product, the staff has been engaged in a process of narrowing the scope of materials likely to include lead in order to provide relief to small businesses and home crafters faced with crippling costs of testing and certification requirements. Many of those businesses are now asking the Commission to begin the same process of exemption of materials with regard to phthalates. As another example, consideration of component testing is not a part of the list of rulemaking activities in the CPSIA, yet it is a challenging issue to consider in implementing its requirements.

There are other activities required of the Commission in the CPSIA that require resources and time that are not evident in the list of required rulemakings. The resource needs have been enormous, ranging from projects so basic as educating headquarters and compliance field staff on the scope of the new regulatory requirements of the Act to the more complex work of updating the Commission's regulations to permit the use of its new authorities with regard to refusing admission of imports. Updating our regulations and coordinating with Customs and Border Protection to allow for a process for a hearing upon refusal of admission requires significant agency resources, as does developing a process for bonding shipments to cover the cost of destruction and related import activities.

Suffice it to say that each of the various initiatives in the Act -- whether it be the lead and phthalates limits, the testing and certification regime, the import provisions, or the new database and information technology upgrades -- will require significantly more time to implement than anyone originally anticipated. Having all of that done simultaneously would have taxed the agency even if we had been given additional funding from the start. Moreover, the agency has significant ongoing work that remains, as well as two other new statutes that it must implement

this year, the Virginia Graeme Baker Pool and Spa Safety Act and the Children's Gasoline Burn Prevention Act.

The deadlines have proven to be impracticable for our staff to meet and are presenting significant problems for the agency to solve. The Commission staff must have some relief from the deadlines imposed.

Practical Solutions: Prioritizing Workload Based on Risk or Extending Deadlines

The following suggestions, ideally in combination, would help ameliorate the issues discussed above.

- Use of Risk Assessment to Establish Priorities

Use of risk assessment methodology would allow the Commission to establish priorities, provide for common sense exemptions, and set CPSIA implementation deadlines. Congress took this approach, to some degree, when setting the initial testing and certification deadlines. Using recall frequency and, to a lesser degree, the severity of possible injuries, Congress determined that cribs, pacifiers, small parts, lead in paint, and lead in children's metal jewelry would lead the children's product testing and certification effort.

However, by this June the Commission must accredit laboratories for third-party testing to all other children's product safety rules, which includes any new or previously existing rule applicable to a product intended for children 12 years of age or younger. The agency will be pushed to meet that deadline as the staff will need to issue accreditation procedures, and all related testing procedures, for the many rules applicable to children's products at that time, including the enormously complex requirements of the ASTM F963-07 Toy Safety Standard. All of this will take place simultaneously with work we are doing to open CPSC's new laboratory facilities.

Examples of Inefficiencies: Furthermore, inefficiencies have been created given the tight timeframes of the Act. For example, under section 102 of the CPSIA, the Commission is required to publish accreditation procedures for laboratories testing baby walkers, bouncers and jumpers by March 12, 2009. However, the existing regulations for baby walkers and bouncers are outdated. The Commission through its enforcement actions has been requiring compliance to the voluntary standard rather than the outdated regulations, and for the most part industry is complying with the voluntary standard. It is inefficient for the staff to accredit laboratories to test to outdated regulations.

The baby walker standard will be one of the first two rules the Commission handles under the series of new consumer product standards required for durable infant products under CPSIA section 104, and therefore, the most efficient (and common sense) resource allocation would be to accredit laboratories for testing when we announce the new baby walker standard in February 2010. Because the statute was written without such flexibility, we must develop an approach to deal with the outdated baby bouncer, walker, and jumper standard, which may include withdrawing the outdated standard to avoid accrediting laboratories to standards no one follows

and to clarify that there is no need for industry to take a step backwards to test to standards that will be updated in a matter of months.

From our standpoint, an ideal solution to these challenges faced by our staff would be for Congress to let the Commission decide what level of testing is required for which products, allowing the Commission to prioritize based on risk and tackle any problems that need to be addressed in the most efficient manner. Alternatively, Congress could continue to require certification and third-party testing for all children's products but allow the Commission to prioritize as to when the testing to each children's product safety rule will begin, so that it can roll those out on a timetable that is based on its discretion and expertise. To do this right, we need to:

- provide our stakeholders with a list of all standards that are applicable to a children's product;
- identify which children's products need to comply with which standards;
- define the test methods for each standard and whether they make sense for all of the different products covered;
- accredit the laboratories for testing to each standard; and
- develop a process for inspecting certificates.

All of that takes time and the ten months the CPSIA gave us to accomplish this task has not proven to be workable.

The wholesale release of "all other" children's product standards in June 2009 may further stress manufacturers, importers, and retailers while providing marginal improvement in children's safety for many of the products. A methodical, pragmatic approach to the release, based on priorities determined by CPSC staff, would facilitate a smoother rollout while addressing first the products presenting the greater risk to children. This allows CPSC staff the flexibility to prioritize tasks, manage our workload, and assure greater safety without an unnecessarily burdensome impact on product sellers.

- Extend Deadlines

Another alternative is to move certain of the dates for implementation in the CPSIA to allow the Commission the time to provide additional implementation guidance. The most challenging deadlines for compliance were those that went into effect on February 10, 2009, requiring retroactive compliance to the new lead and phthalate content limits. The breadth of products covered by the definition of children's products covered by the lead limit, *i.e.*, any product designed or intended primarily for a child 12 years of age or younger, implicated numerous industries that had not understood that their products would be subject to the new lead provisions.

The question asks us to comment on the impact of the deadlines on industry. Whether it be makers of books, bikes, or baseball bats, every industry needed more time to determine which, if any, of its products were covered under the definition of children's product, test those products for compliance, and develop new methods of manufacture to eliminate the lead if it was present

in the product. The scope of products covered by the new regulation and the amount of inventory implicated went well beyond what many may have contemplated. Our information is incomplete but we are told that millions of products wait in storage warehouses for return and destruction. Retailers have indicated that most of these products do not contain accessible lead, and a real question exists in our staff's mind as to whether they contain accessible lead in a sufficient amount to be anything other than a *de minimis* risk but simply were unable to meet the standards that took effect in February. It will be even more difficult for these products to meet the stricter standards to come. These challenges faced by industry have a direct impact on CPSC staff resources and our ability to meet deadlines given the need to respond to their inquiries.

Another approach to the deadlines is to allow the Commission more discretion to move an effective date for a given product or class of products in certain circumstances. The CPSIA does not permit the Commission to delay the effective date of any of the new standards to deal with a problem such as the lead in bike tire valves where the risk to a child is exceedingly small but still measurable, and the economic impact is substantial. In cases such as these, some reasonable amount of time should be allowed to reengineer the product to develop an alternative that can meet the new lead limits.

3. Does CPSC have quantitative data concerning any negative impact of the Act (i.e., the lead and phthalate limits and testing requirements) on small manufacturers of children's products, and if so, would CPSC please provide them? What information does CPSC have on any such negative impact of a more anecdotal nature?

CPSC staff does not have data on the total value of impacted inventories, lost sales, disposal costs, and other costs likely to be incurred by small manufacturers because of the CPSIA; however, information of an anecdotal nature, that has not been verified by CPSC staff, puts the impact in the billions of dollars range.

Industry Estimates

For example, the Motorcycle Industry Council reported in a February 26, 2009, press release that the new lead rules would result in an annual impact of $1 billion on their industry. In a request for a moratorium on the retroactive application of the lead ban, the American Chamber of Commerce in Hong Kong estimated that the impact on their members producing children's wearing apparel would run in excess of $300 million. In a letter to the CPSC, counsel to a major mass retailer stated that a client estimated their cost to test inventory at $1.4 million and projected inventory losses of $30 million. Another client estimated the value of their unsalable inventory at $7 million. It was also reported in a March 5, 2009, article in the Wall Street Journal, that the Toy Industry Association estimated inventory losses valued in the range of $600 million.

CPSC Testing Estimates

CPSC staff has estimated that the cost for third-party testing of product for lead and phthalates would range from several hundred dollars to several thousand dollars per product tested.

depending on the number of product components requiring testing. Based on information obtained from testing laboratory price lists and quotes, the cost to test for the lead content of a substrate appears to range between about $50 and $100 per tested component. In a recent public meeting, industry representatives stated that testing of the 233 various components of a bicycle, valued at $50, cost one of their members approximately $14,000. Less information is available about the cost of testing products for phthalates, but the limited information obtained from price quotes and laboratory presentations to CPSC staff suggests the best estimate for the cost of phthalate testing at this time ranges from $300 to $500 per tested component. The cost to test for phthalates appears to vary widely from market to market. In a recent CPSC public meeting on phthalates, one participant told of receiving quotes for the testing of a product ranging from $7,000 in Asia to $22,000 in the United States. Because these tests tend to be destructive, manufacturers also bear the expense of lost material, labor, and overhead associated with production of the products tested.

Economies of scale provide an advantage to larger volume manufacturers, relative to their smaller volume counterparts, as they can absorb these testing costs over a larger production volume. Spread over this larger volume, the incremental increase to the cost of each product is much smaller for the large manufacturer versus the much smaller manufacturer. In short, the heavier burden falls to the smaller volume business. When the Commission establishes random sampling requirements (as part of the required rulemaking on periodic testing in Section 102(b)), testing costs will increase over current levels for manufacturers of all sizes.

The exclusion of most fabric from the third-party testing requirements will provide only limited relief for apparel manufacturers, including small manufacturers. In a public meeting with CPSC staff, several apparel retailers reported finding virtually no lead in fabric, but they did find lead in about 2% of the tests on hard items, such as buttons, zippers, snaps, and fasteners. Since most apparel items have some non-fabric items, there will still be testing requirements for most apparel items. Moreover, under the new restrictions the presence of lead in fasteners used on clothing has had a negative impact on the second-hand market for children's clothing in the United States.

Although testing children's products, as applicable, for lead and phthalates has received the most attention, many products will be subject to additional third-party testing requirements. For example, cribs must be tested for compliance to the crib safety standards at 16 CFR part 1508. Toys are also subject to testing for compliance to applicable provisions of the Toy Safety Standard, including testing for additional heavy metals, such as arsenic, cadmium and chromium. We have no quotes for these tests; however, it is probable that the major factor in the cost of the tests will be the labor time required to conduct the tests. Once again, given the destructive nature of the testing, the manufacturer will also bear the expense of lost material, labor, and overhead.

It is important to keep in mind the wide expanse of goods falling under the definition of "children's products" and subject therefore to third-party testing requirements. Beyond toys and durable infant and toddler products, items such as books, bicycles, clothing, youth-sized motorized off-road vehicles, school supplies, and Scout equipment and accessories are subject to lead and/or phthalates testing. Likewise, all products for children 12 years of age or younger that are made by crafts people, stay-at-home moms or dads, charitable church groups and the like,

must meet the new limits and be tested for compliance or their products are banned. This has completely upset the business model for many of those small businesses and charitable organizations. Because of the retroactive nature of the regulations, many retailers began turning back product with more than 600 ppm well in advance of February 10, 2009, in order to ensure their shelves were free of non-compliant product. As a result, many small manufacturers, who failed to recognize the true scope of the law or were unprepared for the retailers' reaction to the CPSIA, now find they have inventory they cannot sell.

Retailers Accelerating Deadlines

Retailers continue to move well ahead of the deadlines established in the CPSIA. For example, it is staff's understanding that Wal-Mart stopped receiving product with more than 300 ppm lead in January 2009. These actions have stranded inventory that may be compliant today but will be banned in August as the lead limit drops to 300 ppm. In addition to the risk that these products may become obsolete and will need to be reworked or destroyed, manufacturers of all sizes are incurring expenses to hold this inventory while they decide how to move their product. The cost to carry this inventory varies by business, but typically runs about 25% of the on-hand inventory value.

As retailers pull product from their shelves, many consumers have also been negatively impacted. For example, CPSC staff have received numerous emails from consumers stating they could no longer purchase parts for their child's youth model motorcycle because of retailer concerns over the lead content of the parts. More than one consumer has noted the possibility of consumers' purchasing vehicles sized for older children or adults if they could no longer service their current motorcycle or ATV. This reaction potentially places these children in a situation of increased risk of injury or death.

Solution: Risk-based Assessments That Consider Age and Exposure

It may be too late to mitigate the significant economic impact of the February 10, 2009, ban on children's products containing more than 600 ppm total lead content, by weight, for any part of the product. However, some relief could be provided to deal with the impact on thrift shops and second-hand sales, and Congress still has time to act to prevent the even greater impact that will occur when the lead limit drops to 300 ppm in August 2009. For example, toxic substances limits are better regulated based on the possibility of exposure in relation to age. Foreseeable use data, combined with mouthing and ingestion data at various ages, would define the group at risk for any given product.

This approach would exclude items such as bikes and ballpoint pens from the discussion and we could focus on items like metal jewelry and other objects likely to be mouthed or ingested. By granting the CPSC the flexibility to determine the relevant hazards, flexibility in determining exemptions based on assessment of risks, and the discretion to adjust the age limit for certain groups of products where the exposure is low, resources can be properly focused on areas of greater risk, yielding maximum reductions in consumer risk of death and injury.

4. Does the CPSC have any suggestions for how to mitigate any such economic impact of the Act on small manufacturers of children's products (e.g., component testing for lead and phthalate content) that, in accordance with the intent of the Act and the CPSC's mission, will not compromise the health and safety of children using them?

In light of the concerns expressed by small business owners and employees, CPSC staff has been considering what relief might be provided for them without compromising safety. The first challenge was to define what is meant by "small business" in the context of the manufacture of children's products.

For example, with regard to children's apparel, there are not good statistics differentiating those firms that make all apparel versus those firms that make apparel intended only for children 12 years of age or younger. With regard to toys, the analysis of those businesses that are focused on the manufacturing of products solely for children is more reliable. Bureau of the Census (2006) data shows that there are 776 firms that manufacture dolls, toys, and games (NAICS 33993); 403 of those firms (51.9%) have fewer than 5 employees, 632 (81.4%) have fewer than 20 employees, and 963 (98.3%) have fewer than 500 employees which is the standard definition of a small business. Only 13 of the firms (1.7%) that produce toys would not be considered small businesses by the Small Business Administration. All (or almost all) of these firms are likely to produce children's products and all are affected by the current economic downturn.

Another group significantly impacted by the CPSIA is small crafters of products for children, many of whom work out of their homes. Based on a 2000 survey conducted by the Craft Organization Directors Association, there were an estimated 106,000 to 126,000 craftspeople in the United States. Additionally:

- The average gross sales revenue was $76,000 per craftsperson.
- The median household income of craftspeople was $50,000 per year, with about half coming from craft activities.
- 64% of craftspeople worked alone, 18% work with a partner or family member, and only 16% had paid employees.

Component Certification

The cost of testing and certification is a huge burden on these small businesses and a robust component certification program would be extremely helpful. However, any component testing rule would have to apply across the board to all businesses, small and large, and to our global trading partners in compliance with international trade laws. Furthermore, we have to design a program we are confident will avoid the switch of components during manufacture which is the very problem that Congress was intending to fix by requiring testing of children's products in the CPSIA. Component testing presents real challenges since many of the components used in children's products are not children's products on their own and do not require third party testing. Snaps could be used on a hand knitted sweater that were not produced primarily for use in children's products, and we cannot be sure given the expense of testing, that a market will develop for certified compliant materials for use by crafters.

Potential Solutions

Recognizing that the Commission always has the ability to take action to address unsafe products in the marketplace, Congress could take many different approaches to mitigate the effects on small businesses. Congress could apply the new lead and phthalates limits prospectively to mitigate the impact on inventory existing prior to enactment. It could allow for a more flexible exception process based on balancing of risks against the burdens of the costs of testing and certification but that could overburden staff. Another option would be to allow the Commission the flexibility to decide what children's products require testing and certification.

5. What information has CPSC received about the impact of the Act on the availability of second-hand products for children, especially clothing? It is my understanding that many second-hand stores now refuse to sell children's products. Does CPSC have any suggestions for how to mitigate any negative effects of the Act on second-hand stores for children's products, especially in light of the economic downturn and the consequent increased need for low-cost sources of children's clothing?

CPSC staff has only limited, anecdotal information concerning the impacts of the Act on second-hand stores. Major resellers such as Goodwill Industries and the Salvation Army have estimated impacts, including both lost sales and disposal costs, totaling hundreds of millions of dollars. Many smaller resellers have indicated that under present circumstances, they cannot afford to continue selling children's toys or apparel, which account for much of their revenues. Even church bazaars and neighborhood yard sales are adversely affected.

The major problem for second-hand stores and other resellers is that the CPSIA prohibits the sale, distribution or export after February 10, 2009, of any children's products exceeding the applicable lead or phthalate limits regardless of when they were made. Second-hand stores are typically selling items that were manufactured years earlier. Thus, a large percentage of a reseller's current inventory of children's products may have been manufactured long before the stringent new limits took effect, and it may now be impossible to dispose of such items lawfully except by destruction (which itself may be costly, particularly for non-profit organizations). To make matters more difficult, there is often no cost-effective way to determine which products can lawfully be sold and which cannot.

Unlike other retailers, resellers generally have little or no control over the compliance of the goods that they obtain. Most are donated. Even where they have regular donors, resellers cannot practically establish specifications for children's products as major retailers can for their regular suppliers. Testing everything they receive is not a practical solution either. Like small, home-based manufacturers, resellers cannot spread testing costs across many units of the same type; at any given time, they would usually have on hand no more than a few items of the same type. The standard tests for lead and phthalate content are destructive, so if one tests a single item to determine whether it can be sold, one no longer can sell that item.

Screening devices, such as x-ray fluorescence (XRF) machines, can help in weeding out children's products that have excess lead, without destroying products that comply, but the new technology is still expensive. No such screening device yet exists for identifying phthalates. Even if such technology can be developed quickly, it remains a disproportionate burden to test every unique item in inventory. Some internet resellers and auctioneers do not even have access to the products that are offered for sale by third parties on their website and so could not feasibly test them by any method.

The second-hand store problem will get worse for several years before it may ultimately get better. The lead content limits will drop to 300 parts per million in August 2009 and to 100 ppm in August 2011 (unless the Commission determines that such limit is not technologically feasible for a class of products). Products manufactured after these dates will be in use for some years before they are donated to second-hand stores. So, it will probably take many years before children's products that comply with these stringent limits make up a sizable majority of the products for sale at second-hand stores.

Potential Solutions

Under the circumstances, merely postponing the effective date of the lead or phthalate limits for everyone, while this would help alleviate some problems we are seeing, would not be very helpful to resellers because it would allow products with excess lead and phthalates to continue being made, and thus add to the number of noncompliant products that may eventually find their way to resellers and so postpone the day of reckoning.

The most effective way to help resellers is to address the issue of retroactivity, requiring that manufacturers meet the statutory limits for products manufactured after the effective date but that retailers and resellers be allowed to continue sale. If this suggestion were adopted, it would be important to note that resellers could not sell recalled products and that the Commission retains its authority to stop sale of any product if it finds an exposure that presents an unreasonable health and safety risk to children.

A law like the CPSIA that outlaws sales of previously lawful products will, by its nature, hurt retailers more than manufacturers and hurt resellers even more than other retailers (given the fact that products are typically in consumers' hands for several years at least before they reach second-hand stores). While dealing with retroactivity across the board would be the most effective way to deal with the inequities presented by the current law, other suggestions include such things as establishing a separate rule for resellers. For example, the ban on selling children's products with excess lead or phthalate content could take effect at a later date for second-hand sellers than for retailers generally. Or, resellers (or some subset of them, such as individual consumers or non-profit resellers) could even be exempted entirely from the provision that makes it a prohibited act to sell products containing more than trace amounts of lead or phthalates. Children's products that would have been banned under prior law should not be exempted in any case, and there may be categories of products, for example, children's metal jewelry, that should be handled more strictly. While consumers are accustomed to the notion that used goods are sold "as is," it might be appropriate to require a label or other type of

warning at the point of sale if resellers are allowed to continue to sell older children's products that do not comply with the new limits.

Lest there be any question, CPSC staff does not favor exempting second-hand sellers from the prohibition against selling recalled products (including children's products that are recalled for excess lead paint, or excess lead or phthalate content). The staff believes that resellers can reasonably be expected to keep abreast of CPSC recalls by signing up to receive CPSC's recall press releases and to remove any recalled products from their shelves. Similarly, where Congress has unambiguously directed application of new regulatory requirements to a discrete class of used children's products, such as cribs, CPSC staff believes that resellers no less than others must take steps to comply, even if that means deciding not to sell the products in question.

The Commission has adopted an enforcement policy on lead limits and has issued other guidance to second-hand stores to address many of the recurring issues. In the staff's view, however, the core problem is caused by the retroactive nature of the law and is beyond the agency's authority to solve.

6. Does CPSC believe that the age limit contained in the Act's definition of "children's products" (i.e., 12 years and under) is appropriate? If not, what should the age limit be? Further, should CPSC have discretion to lower the age limit for certain groups of children's products for which the risk of harm from lead or phthalate exposure is remote (e.g., snaps or zippers on children's clothing)?

The term "children's product" has significance for several different provisions of the CPSIA. It specifies which products are subject to the lead content limits. Indirectly, it plays a role in defining which products are subject to the phthalate limits. It governs the scope of products that require certification based on third-party testing and those that will require tracking labels "to the extent practicable."

CPSC staff believes that for purposes of defining which products are subject to lead limits, the boundary age could reasonably be lower than 12, at least in most cases. The Senate bill (S. 2045) deemed age 7 a satisfactory upper limit. CPSC staff understands that the conferees ended up agreeing to age 12 primarily because of the so-called "common toy box problem" – *i.e.*, the concern that a product intended primarily for older children might nonetheless be available to younger ones in the same home. This choice had the effect, however, of applying the lead limits to a much larger population of products, including many that are not toys and even including outdoor products such as dirt bikes or ATVs that would rarely be accessible to younger children under any circumstances.

CPSC's Regulations Established Age Limits by Product Class

CPSC's own regulations have used a variety of different ages to define what group of children's products will be subject to a standard or ban, and these precedents may be useful to consider. For example, the small parts ban applies to products that are intended for children under 3. Toys that are intended for ages 3 through 5 are allowed to have small parts, provided that they have

cautionary labels to warn that they are not suitable for youngsters under 3. In general, toys that are intended for children 6 and older do not require cautionary labeling except in a few specific cases such as balloons and small balls. The lead paint ban (16 CFR part 1303) applies to children's products without a specific age definition. Despite this broad applicability, the scope of the lead paint ban has rarely if ever, generated controversy. This is probably so because it is limited to children's products that have paint or similar surface coatings, and such products are much fewer in number and more easily identified than children's products generally.

Both the likelihood of exposure and the route of exposure are factors to consider in deciding what products should be subject to lead limits. Lead presents an acute hazard when direct ingestion is possible. For this reason, CPSC staff has long treated children's metal jewelry as warranting special concern. In other applications, brass and many other metals often have some lead content, particularly to improve workability, corrosion resistance and other properties. Where such objects can be mouthed but not swallowed, they generally pose a lesser risk, and objects that can be licked but not mouthed pose still less risk. There are some products where mouthing or licking is unlikely but where some lead exposure may result from touching and inadvertent transfer of lead from hand to mouth. A child's exposure to lead from zippers and snaps will depend on the type of garment and the child's age, among many other factors.

Practical Solution: Commission Discretion

One way to address these issues would be to give the Commission more discretion to grant exclusions from the lead or phthalate limits. Under the law as currently written, a material having more than 600 parts per million lead cannot be excluded unless touching the product will not result in the absorption of *any* lead. Taken as a whole, the language of section 101 appears to rule out treating even very low levels of absorbable lead as negligible. Congress could modify this exclusion criterion to allow *de minimis* levels of absorption or to change the focus to preventing any significant increase in blood-lead levels of a child, particularly for children who are of the age of the intended user.

Giving the CPSC discretion to lower the age limit for certain classes of products might be more efficient than dealing with many requests for exclusion, which is a resource-intensive process. Another resource conserving approach would be for Congress to lower the age limit across the board and give the CPSC discretion to set a higher age for certain materials or classes of products that pose a risk to older children or to younger ones in the same household.

7. Although some youth all-terrain vehicles (ATVs) and youth motorcycles are intended for use by children under 12 years of age, does CPSC believe it is necessary that these products be tested for lead and phthalate content? Similarly, does CPSC believe that these products present a risk to children for the absorption of phthalates or lead?

CPSC staff is aware that many different parts of youth ATVs and youth motorcycles have lead content, some of which may exceed the 600 or 300 ppm level. Some of these parts are inaccessible, and some parts may qualify for the higher limits applicable to certain electronic components. Other parts, however, appear to be accessible and may not qualify for any

exclusion under section 101 of the CPSIA. These youth vehicles may also have some phthalate content, but they do not appear to be covered by the section 108 bans, which are limited to certain toys and child care articles.

The possibility that children will suffer significant lead exposures from these classes of vehicles appears to be remote at best. First, the vehicles are generally stored outside the home, where younger children would rarely be allowed unsupervised access. The vehicles are generally designed for children of at least 6 years of age and older. These children are far less likely to ingest or mouth components of a motorized vehicle – even those that are physically exposed – than something that fits readily in the mouth, such as a jewelry chain or charm. Children may still be exposed to some lead as a result of touching seats, handle bar grips or other places and then inadvertently transferring some of the lead to their mouths from their hands, either directly or indirectly, as for example while eating. For most children, however, this type of exposure is not likely to result in significant absorption of lead. This is particularly true where children are wearing appropriate protective riding gear, such as gloves and helmets.

Broadening the Exemptions for Metals

In section 101(b)(4), Congress recognized that it might not be technologically feasible for certain electronic devices to meet the lead limits applicable to children's products generally and gave the CPSC authority to adopt other requirements for such devices. The Commission has exercised this authority on an interim basis and established higher limits for certain electronic components where it concluded that such parts cannot be made inaccessible and it is not technologically feasible to substitute other materials at this time. These include metals such as steel, aluminum and copper alloys as used in electronic devices. In adopting these alternative limits, the Commission made reference to exemptions recognized elsewhere, such as the European Union directive 2002/95/EC known as RoHS. It is worth noting that in Europe, the RoHS exemptions are equally applicable to non-electronic uses of these metals, but the staff believes that section 101 gives us no flexibility to apply the same exemptions outside the realm of electronics. This means that children's products containing these metals and metal alloys manufactured for the U.S. market cannot employ recycled metal to the same extent as they can in Europe; rather, the manufacturers for the U.S. market must obtain supplies of primary metal, forcing vastly higher energy consumption and higher costs, or they must quickly switch to substitutes whose properties are poorly understood and may even pose more significant safety risks to children.

Under the current law, CPSC staff believes that an exclusion for youth ATVs would be very difficult to justify. Some have argued that if youth-sized ATVs cannot be sold for an extended period of time, owing to lead limits, then more children may end up riding adult-sized ATVs. A child using an adult ATV as a substitute would face a far graver and more immediate risk than that of the possible lead exposure from the youth ATVs.

Potential Solutions

The ATV situation is illustrative of a number of product classes that may not qualify for an exclusion. Congress could moderate this situation in several different ways. These include one or more of the following (not in priority order): (1) postponing the deadline for sales (not

manufacture) of children's products containing lead above the new limits; (2) lowering the age limit for children's products (as discussed in the response to question 6); (3) exempting some or all children's products that are usually not kept in the house, such as bicycles and ATVs; (4) giving the CPSC greater discretion to exclude from compliance with the lead limits any materials or products that pose a negligible risk to children (as discussed in the response to question 6); or (5) allowing materials that are eligible for special treatment when used in electronic devices to receive similar treatment in other children's products when the justification is equally compelling.

8. In light of recent court decisions that the lead and phthalate content restrictions are retroactively applicable, does CPSC have concerns about the effect on the environment of the disposal of inventories of non-compliant children's products?

This issue lies within the authority and expertise of the Environmental Protection Agency (EPA).

9. I understand that, since early December 2008, CPSC has had access to a large number of lead content results for finished "ordinary books" (i.e., books published in cardboard or paper by conventional methods and intended to be read by or to children age 12 and under) and their component materials (i.e., paper, paperboard, ink, adhesives, laminates, and bindings). Has CPSC staff reviewed those test results? What do those test results indicate about such ordinary books and component materials in connection with the statutory lead limits prescribed in section 101(a) of the Act? Does CPSC have any recommendations regarding how to mitigate the burdens that testing and certification requirements of the Act, and especially the retroactive applicability of those requirements to inventory, could otherwise impose on publishers, printers, and retail sellers of such ordinary books, as well as on libraries schools, charities and other secondhand distributors of such ordinary books, including those published before 1985?

Lead Testing and Printing Ink: The Publishing Industry's Challenge

Given the breadth of the definition of children's product in the CPSIA, the Commission received thousands of questions over the past six months regarding the scope of applicability of the retroactive lead limits and the required third–party testing of such products. At the same time, retailers began demanding certificates of compliance for products likely to be on their store shelves on February 10, 2009. The publishing industry claimed to have been unaware that the definition of children's product would encompass books until retailers started asking for certificates of compliance and we posted a response to one of the frequently asked questions regarding the application of the CPSIA to books intended or designed primarily for children. Because of the variety of colors of inks used in making children's books printed on paper and cardboard, the requirement of testing for compliance to the new lead limits proved costly and onerous. Some retailers were demanding separate certificates of compliance for each book title.

The issue of lead in printing ink and other products used to make a book is not new. Indeed, in 2007 the publishing industry issued a statement on lead in books to respond to any concerns

raised about books related to that year's toy recalls for excessive lead in paint. (See American Booksellers Association statement of November 29, 2007, Bookselling this Week: Getting the Lead Out: Consumers Question Books Made in China, found on March 15, 2009 at http://news.bookweb.org/news/5695.html.) The Commission has occasionally recalled such products for excess lead; for example, a recall was conducted in February 2008 for excess lead in paint on the colored spiral metal bindings of several sketchbooks. In July of 2004, the Commission issued a warning regarding the hazards of lead in candy wrappers that contain lead or bearing lead-containing ink.

The "Ordinary Book" Exemption

The Commission staff wanted to provide some relief to the book publishing industry given the extraordinary impact of third-party testing for lead and because the publishing industry maintained that the Commission had never considered ordinary children's books to be a health hazard. However, given the requirements of the CPSIA, the staff felt that they needed some representative data upon which to base a decision to exempt children's books from the requirements. The number of requests for relief from the retroactive effect of the CPSIA was so high that the staff felt that in fairness, any determination that the law did not apply to a material or class of products should be based on science and supported by test results.

It is not the case (noted in your question) that the Commission staff has had access to a "large number of tests on finished 'ordinary books'," but rather we have had access to a very limited data set on which the publishers have based their request for an industry-wide exemption from testing to the new lead content limits. The publishing industry association provided the staff with 152 separate entries representing testing done on approximately 157 books conducted anywhere from 2004 to 2009. The books tested range from the ordinary books to books with handles, stickers, kits or other accessories. The staff reviewed those test results, and initially concluded that many of the tests were done for European standards and/or did not test for total lead content as required by Section 101 of the CPSIA. The staff of the CPSC asked the industry to provide more data for total lead content and demonstrate that the data submitted was representative of all of the millions of ordinary books sold to children 12 years of age or younger.

The additional data submitted suggests that modern book publishing using offset lithography does not result in books with lead levels in excess of the 300 ppm limit that goes into effect in August of 2009. However, the Commission staff has not had the time or resources to look at the issue completely or comprehensively and has been hopeful that more data would be submitted by industry particularly with respect to books published in the 1960s and 70s. The Commission staff has been assured that the publishers now all use inks that result in children's books that fall below the statutory limits for lead. While the staff does not have a statistically valid basis for a wholesale exclusion of children's books at this time, its determination to exclude them from testing and certification does not mean that any children's book can exceed the lead limit. All children's books must meet the lead limit.

Making a determination that ordinary books cannot and will not exceed the lead limits appeared to be the only means of providing immediate relief. Such an exemption from testing also should

provide relief from the retroactive application of the standard to all books in schools and libraries that are provided to children for their use. In the meantime, the publishing industry was given a conditional enforcement waiver on the testing and certification requirements for lead, pending staff's review of the data and any additional data that may be submitted. That exemption was limited to books manufactured after 1985 because the publishing industry has not provided any test data on books published in the 60s and 70s. Instead, the industry has pointed to the fact that lead was removed from printing operations in this country due to federal statutory restrictions on worker exposure to lead in printing operations which went into effect in the late 70s. The very limited testing the Commission staff has done indicates that the lead content of these older books can occasionally exceed the 300 ppm limit that goes into effect in August 2009 but that data may not be representative. At this time the Commission staff has not had the time or resources to prove that books made more than twenty years ago do not exceed the lead limits as staff has needed to focus its resources on its investigations of deaths and injuries to children and other emerging risks and health hazards.

Library Books and Used Book Resellers

The retroactivity of the lead provision is particularly problematic in the area of books and other printed materials. We have done very limited testing of books from the 60s and 70s. It suggests that the lead content hovers around the 300 ppm mark. Anecdotal evidence received by the agency suggests that on occasion books from this earlier period may contain lead in excess of the lead limits in their binding materials. The only way to determine the total lead content in these books is to test them.

Under the CPSIA, however, sellers of used children's books, including used book stores and thrift shops, are not required to test or certify that children's books meet the new lead or phthalates limits. The CPSIA does not require resellers to test children's products in inventory for compliance with the lead limit before they are sold. However, resellers cannot sell children's books intended primarily for use by children that exceed the lead limit.

The Commission had hoped that an exemption for "ordinary books" plus its announced enforcement policy for lead would alleviate this situation. Based on information received from the trade associations with information regarding books in libraries and schools, the Commission staff understands that most textbooks in schools are less than ten years old. Likewise, the information received suggests that most library books lent to children are recycled approximately every 18 lending cycles or three years. Thus, it appears that few of the books being provided to children in their schools and from libraries would be more than 20 years old.

Potential Solutions

Staff has considered children's behaviors with books and concluded that after about 19 months of age, children may occasionally put part of a book in their mouths, but they typically are taught to care for their books so that they can continue to be used for reading and learning. This information suggests that any exposure to lead from contact with books diminishes as children age. We believe an exemption is the only way to provide relief under the CPSIA. Congress could limit the testing of books to only those picture books provided to children much younger

than 12 since this is the population of children that would be most likely to interact with their books in a way that could expose them to inks with higher lead content. Lowering the age limit would be extremely helpful to staff in dealing with books and many other products by narrowing the scope of products covered. Lowering the age limit would also provide relief to schools who face retroactive application of the lead provisions not just with regard to books but also the wide variety of other educational materials they provide to school-aged children.

The CPSIA establishes that any children's product no matter when it was made is a banned hazardous product if it exceeds the lead limits and the law does not have an exemption procedure other than one based on scientific proof that there will not be absorption of any lead. One solution would be for Congress to create a waiver process allowing the Commission to "grandfather" in products made prior to the date of enactment if the Commission concludes those products present only a *de minimis* exposure level and, therefore, a negligible risk. This could be used to solve the problem of used books as well as other products commonly sold second-hand such as used clothing or youth bicycles. It creates an administrative burden that the Commission may not be able to handle without some delay, but it would provide relief without having to undo the retroactive effect of the law altogether.

10. In general, does CPSC believe that the Act was written with too little implementation discretion for the Commission? If this is the case, for which issues (e.g., third party testing requirements) does CPSC require more discretion?

The CPSIA provides too little implementation discretion for the agency. One of the major problems with implementation has been the statute's reach across a variety of industry sectors quickly and simultaneously by virtue of its broad definition of "children's product." The lead limits reach literally every product intended or designed for a child 12 or younger. The breadth of the statute's reach has made it difficult for the Commission to address industry specific concerns in the few areas where the agency has discretion. The Commission needs room to address toy industry concerns separately from those of the apparel industry, from those of the publishing industry, and separately again from those of industries that make outdoor products for children such as motorized recreational products, playground equipment and bikes.

The lead limits and testing and certification provisions could be implemented much more smoothly if the Commission had the discretion to roll out those requirements on a product class basis. The same will soon be true for tracking labels where each industry has specific concerns about how additional labeling requirements will work given existing and multiple other labeling requirements. Congress can direct the agency as to how to determine priorities and work to a specific schedule as evidenced by section 104 which gave some flexibility to the Commission in pursuing the congressional mandates for new durable infant product standards. A similar approach to implementing all of the Act's new rules and requirements would ease the implementation burden. Indeed, the stay of enforcement of certification and testing was the agency's only means to get the breathing room it needed to deal with the various unanticipated issues that arose given the breadth of the industries affected.

Some have argued that the Commission should have a more relaxed approach to exclusions from the lead limits. However, the lead provision of the CPSIA restricts the agency's discretion at a variety of points in the statute. It allows for exemptions in three limited circumstances described in section 101(b). That section allows exclusions for inaccessible component parts of children's products and also allows the Commission to exempt electronic devices where lead is necessary for their functionality and cannot be made inaccessible. Beyond those exclusions, however, the statute leaves very little flexibility. Section 101(b)(1) of the CPSIA provides that the Commission may, by regulation, exclude a specific product or material that exceeds the lead limits established for children's products under § 101(a) of the CPSIA if the Commission, after notice and a hearing, determines on the basis of the best-available, objective, peer-reviewed, scientific evidence that lead in such product or material will "neither result in the absorption of any lead into the human body," given reasonably foreseeable use and abuse of such product, including swallowing, mouthing, breaking or other children's activities or the aging of the product, "nor have any other adverse impact on public health or safety." (Emphasis added.)

The clear language of the statute is rigid; an assessment of whether there is absorption of "any lead" cannot be based on a risk based assessment because that language does not appear to allow any amount of lead, no matter how insignificant, to be absorbed in the human body. While the courts have occasionally upheld agencies applying a *de minimis* standard and exempting trivial risks from regulation, that has been permitted only when Congress has not unambiguously denied agencies that authority.[1] Here the act specifically limits the exclusion to an application supported by peer reviewed science supporting a demonstration that there cannot be absorption of *any* lead. Moreover, section 101(e) appears to restrict the agency's ability to use enforcement discretion while exclusion requests are pending, by stating that a pendency of a rulemaking to consider a request for exclusion "shall not delay the effect of any provision or limit . . . nor shall it stay general enforcement" of the lead limits.

Those who argue that common sense exclusions are permitted by the CPSIA would have to ignore sections 101(b)(1) and 101(e). Yet as the unanticipated consequences of the retroactive effect of the law have demonstrated, some ability to provide for *de minimis* exclusions would be helpful in implementing of the Act. The effort to deal with the *de minimis* risks given the speculative yet conceivable routes of exposure presented by certain products such as bike tire valve stems distracts attention from more serious health and safety problems that the agency must address. Recently proposed legislation banning BPA recognizes the need for such flexibility to provide relief when a manufacturer cannot comply because it is not technologically feasible to do so in the timeframes permitted. Yet such a waiver or exemption process could prove to be too resource intensive and divert agency resources to handling thousands of exemption requests when staff should instead be dealing with other risks that deserve attention such as identifying emerging hazards.

The CPSIA forsakes the core strengths of the CPSC's original statutory framework which has from the beginning allowed the Commission to prioritize its regulation of consumer products by an overall assessment of all the risks at stake, the magnitude of those risks and the actual consequences of the hazard. Congress should permit the agency to exempt certain products from the limits established by the CPSIA, to ease the burdens of testing and certification on products unlikely to present more than a negligible health risk, and to regulate on a timetable influenced by the seriousness of the actual risks not artificial deadlines. A more flexible exception process would avoid regulation of *de minimis* problems both prospectively and retroactively.

Moreover, this would allow the CPSC to consider the impacts of the regulatory requirements of the CPSIA, like the balance between the adverse effects on second-hand sales of children's clothing or bicycles and the potential risks from exposure in such products, which is especially important during the current economic crisis. It should also allow the Commission to balance risks such as balancing the risk of possible lead exposure to a child riding a youth-sized ATV against the risk to the child from riding a larger and more powerful adult ATV. Given that exceptions would be made on a notice and comment basis, the underlying analysis and support for any exceptions will be public allowing for transparency and accountability. Finally, relaxing certain deadlines in the Act will allow for better priority setting which will allow Commission resources to be put towards the most serious health risks first.

* * *

CONCLUSION

The staff has set forth in its answers to specific questions above numerous approaches to dealing with the issues raised. In our view, we have been confronted with three major issues in implementing the CPSIA: (1) the retroactive application of requirements to inventory; (2) the broad reach of the legislative mandates given that "children's product" is defined as a product for children 12 years of age or younger; and (3) the impact of the new testing and certification requirements for all consumer products and the third-party testing requirements for children's products. You have asked us to consider possible solutions to the problems raised in the letter, and make our best recommendation as to productive solutions recognizing that these are ultimately policy decisions for others to make. We concluded that the following three changes would resolve many of the major difficulties identified above:

- Limit the applicability of new requirements to products manufactured after the effective date, except in circumstances where the Commission decides that exposure to a product presents a health and safety risk to children.

- Lower the age limit used in the definition of children's products to better reflect exposure and give the CPSC discretion to set a higher age for certain materials or classes of products that pose a risk to older children or to younger ones in the same household.

- Allow the CPSC to address certification, tracking labels and other issues on a product class or other logical basis, using risk-assessment methodologies to establish need, priorities and a phase-in schedule.

As discussed above, there are many ways to address the challenges of implementation and meet the important goals of the statute. Regardless of the path chosen, some legislative changes would be helpful to allow the agency to set risk-based priorities given the finite resources available to the Commission.

The Honorable Thomas Hill Moore
Commissioner
U.S. Consumer Product Safety Commission
4330 East West Highway
Bethesda, MD 20814

Dear Acting Chairman Nord and Commissioner Moore:

As an author of the original Consumer Product Safety Act in 1972 and a long-standing advocate for better protections for our Nation's consumers, I wholeheartedly support a stronger regulatory framework to ensure the safety of children's products. Nevertheless, I share the reasoned concerns of my colleagues, House Committee on Energy and Commerce Chairman Waxman, Subcommittee on Commerce, Trade, and Consumer Protection Chairman Rush, Senate Committee on Commerce, Science, and Transportation Chairman Rockefeller, and Subcommittee on Consumer Protection, Insurance, and Automotive Safety Chairman Pryor, about the implementation of the Consumer Product Safety Improvement Act (PL 110-314, "the Act"). In particular, I am troubled that the Act includes unrealistic deadlines for rulemakings and compliance, as well as too little implementation discretion for the Consumer Product Safety Commission (CPSC), both of which are exacerbated by CPSC's lack of adequate resources, both in terms of funding and staff.

In describing the implementation of the Act, Acting Chairman Nord's January 30, 2009, letter to the Congress maintains, "the timelines in the law are proving to be unrealistic, and [CPSC] will not be able to continue at this pace without a real risk of promulgating regulations that have not been thoroughly considered." Moreover, the letter states, "Although [CPSC] staff has been directed to move as quickly as possible to complete its work, short-circuiting the rulemaking process gives short shrift to the analytical discipline contemplated by the statute." In light of these statements, I would appreciate your candid responses to the following questions, which will assist me and my colleagues in our consideration of common-sense and workable solutions to some of the more pressing problems that have arisen during the Act's implementation:

1. To what extent has robust implementation of the Act been hampered by CPSC's lack of resources? What levels of funding and staffing does CPSC believe necessary for proper implementation of the Act?

2. Given the paramount importance of ensuring children's safety and the overall mission of CPSC, to what extent are the deadlines in the Act practicable for CPSC and industry to meet acting with all deliberate speed? If these deadlines are not practicable, what revisions to them does CPSC suggest?

3. Does CPSC have quantitative data concerning any negative impact of the Act (*i.e.*, the lead and phthalate limits and testing requirements) on small manufacturers of children's products, and if so, would CPSC please provide them? What information does CPSC have on any such negative impact of a more anecdotal nature?

4. Does CPSC have any suggestion for how to mitigate any such economic impact of the Act on small manufacturers of children's products (*e.g.*, component testing for lead and phthalate content) that, in accordance with the intent of the Act and the CPSC's mission, will not compromise the health and safety of children using them?

5. What information has CPSC received about the impact of the Act on the availability of second-hand products for children, especially clothing? It is my understanding that many second-hand stores now refuse to sell children's products. Does CPSC have any suggestions for how to mitigate any negative effects of the Act on second-hand stores for children's products, especially in light of the recent economic downturn and the consequent increased need for low-cost sources of children's clothing?

6. Does CPSC believe that the age limit contained in the Act's definition of "children's products" (*i.e.*, 12 years and under) is appropriate? If not, what should the age limit be? Further, should CPSC have the discretion to lower the age limit for certain groups of children's products for which the risk of harm from lead or phthalate exposure is remote to non-existent (*e.g.*, snaps or zippers on children's clothing)?

7. Although some youth all-terrain vehicles (ATVs) and youth motorcycles are intended for use by children under 12 years of age, does CPSC believe it is necessary that these products be tested for lead and phthalate content? Similarly, does CPSC believe that these products present a risk to children for the absorption of phthalates or lead?

8. In light of recent court decisions that the lead and phthalate content restrictions are retroactively applicable, does CPSC have concerns about the effect on the environment of the disposal of inventories of non-compliant children's products?

9. I understand that, since early December 2008, CPSC has had access to a large number of lead content test results for finished "ordinary books" (*i.e.*, books published in cardboard or paper by conventional methods and intended to be read by or to children age 12 or under) and their component materials (*i.e.*, paper, paperboard, ink, adhesives, laminates, and bindings). Have CPSC staff reviewed those test results? What do those test results indicate about such ordinary books and component materials in connection with the statutory lead limits prescribed in Section 101(a) of the Act? Does CPSC have any recommendations regarding how to mitigate the burdens that the testing and certification requirements of the Act, and especially the retroactive applicability of those requirements to inventory, could otherwise impose on publishers, printers, and retail sellers of such ordinary books, as well as on libraries, schools, charities and other second-hand distributors of such ordinary books, including those published before 1985?

10. In general, does CPSC believe that the Act was written with too little implementation discretion for the Commission? If this is the case, for which issues (*e.g.*, third party testing requirements) does CPSC require more discretion?

Please provide your responses to my office by **no later than the close of business on Friday, March 13, 2009**. I intend to work with my colleagues in the House and Senate to resolve these issues, as well as call on Chairman Waxman and Chairman Rush to hold hearings on problems arising from Act's implementation. Your responses to these questions will be invaluable in preparing Members of Congress for a frank discussion about several of the Act's apparent shortcomings. Should you have any questions, please feel free to contact me or Andrew Woelfling on my staff at 202-225-4071.

With every good wish,

Sincerely yours,

TESTIMONY

Laurel Schreiber, Lucy's Pocket

House Small Business Committee; Subcommittee on Investigations and Oversight

May 14, 2009

Unintended Consequences of the CPSIA as it Relates to Small Business.

Mr. Chairman and members of the Committee, thank you for the opportunity to speak to you today about the effects of the CPSIA on small businesses. My name is Laurel Schreiber and have a small home-based business called Lucy's Pocket. I sell monogrammed gifts for children through my web site, on eBay, and at etsy.com

As the CPSIA now stands I - as well as thousands of crafters, seamstresses, artists and others that market safe, handmade items to children under the age of 12 - will be put out of business. It is only through congressional intervention that we will be able to continue building our businesses. As a small business owner I am looking to you to take the lead and re-establish legislation that will allow those of us that have been creating safe items to continue creating them.

As it relates to my business, there are two major and substantial problems with the CPSIA as written:

- **redundant testing requirements**
- **comprehensive labeling requirements**

All of the items I sew onto - or make myself - are made from commercially available textiles, ribbons, threads and other materials. They come from wholesale suppliers as well as retail

stores. A majority of the items I purchase from wholesale suppliers have **General Certificates of Conformity** (GCC) which attest that the items have been tested for lead and/ or phthalates and have passed those tests. I also purchase items from large retail stores that have also tested the products but are unable to provide GCCs.

As the CPSIA now stands, I will have to test each individual item prior to selling it. And though an enforcement stay has been issued for textiles, there is no guarantee it will not be rescinded at some later date. The enforcement stay does not include items with buttons, snaps, zippers or other non-textile parts.

Because I sell one of a kind items, I will need to create two identical items—the wet method used to test for lead destroys the original item. From the testing companies I have contacted - many of whom are located overseas - the cost to me is about $75 per component. (A component includes fabric and thread and any other material that makes up the product.)

I have brought four samples of my work to illustrate the ramifications and the unintended consequences that the law will have on my business.

One of my most popular items is an appliqued bib and bloomer set. The set contains (at a minimum) 12 components

- four threads
- two dyed fabrics
- a two part Velcro closure on the bib
- elastic
- 100% poly cotton fabric
- 100% terry fabric
- 100% cotton binding

To test those 12 components it will cost me $900 to prove that the bib and bloomer set does not contain lead. If I use a plastic-backed bib purchased from a retail store then I will need to add an extra $375 for phthalate testing. Testing costs for a two piece set will range from $900 to $1275. It sells for $20.

I also create monogrammed hairbows - they consist of a metal clip, two types of thread, and ribbon. I have GCCs on file from the importer showing that the clip meets the lead guidelines. Because it contains metal, it does not qualify for the enforcement stay. It will cost at least $300 to test each bow. It sells for $5

My third example is a monogrammed bow holder. It consists of one metal ring, 3 types of grosgrain ribbons, thread, and hot glue. It hangs on a wall in a child's room. It is not a toy. Because there is a metal ring it will not currently qualify for the enforcement stay. It will cost $450 to test. It sells for $12.

Finally, I create monogrammed headbands. The headband is made of plastic so it must also be tested for phthalates. As with my other items, I have GCCs on file from the importer showing that the headband does not contain the illegal phthalates. To test the four components of the headband (ribbon, 2 types of thread, headband) plus phthalates will cost $675. It sells for $9.

Redundant testing is unnecessary. The air in my house, the sewing table I work at is not lead infused nor lead filled. Items coming out of my home will not be contaminated with lead.

Sadly, if the redundant testing requirements do not put me out of business—then the **comprehensive labeling mandates** certainly will.

As of this August each and every item going out of my workroom must contain a permanent label that contains information such as the source of the product, the date of manufacture and batch or run number. For a business that creates one of a kind items –and less than 5000 or so a year --

this is an unnecessary hardship. Permanent labels are not technically feasible for many of my items and procuring permanent labeling supplies is an expensive proposition -- and one without a value add to my customers and which does nothing to increase the safety of the product.

I, and many others like me, started creating handmade items as an antidote to mass produced, possibly unsafe toys and clothing originating from China. Many of us have young children - we are very aware of safety concerns relating to lead. But, we use safe products and we create safe items. We are willing to change the methods we use to insure compliance but with the way the law is written we are simply unable to continue building our businesses.

I am asking for consideration. I have written letters, sent faxes, made calls. I want to be safe. I want to be legal. But the unintended consequences of the CPSIA are showing that this will be impossible. I will have to close my doors. And, once I close I will not be supporting my suppliers or other local businesses- - all of which qualify as **small businesses.** And they may not be affected hugely by me - but there are a lot of businesses like me out there. So once you start multiplying the effects it becomes overwhelming and will ultimately affect tens of thousands of small businesses across the country.

It saddens me, terrifies me, and disheartens me that my ability to build a business creating safe items for children can be taken away by the **unintended effects of the CPSIA**.

I thank the committee for listening to how the CPSIA affects me—and others like me. I'm happy to answer your questions.

CPSIA and my Small Business
Suzanne Lang
Starbright Baby Teething Giraffes
www.starbrightbabyonline.com

As a mother of a 2-year-old, I admire Congress' efforts to draft a law that protects children from excessive amounts of lead in toys. Unfortunately the law, as it currently is written, will heavily damage the small Businesses and entrepreneurs who make and sell items for children in this country. I do not believe the law is fatally flawed; however, I think the injection of some common sense provisions would more effectively ensure safe products for children and prevent irreparable damage to small businesses.

The reason that I am giving my testimony is because I, along with several other small business owners, am afraid for what the current draft of the CPSIA means for my business and the important amount of income it brings to our family. Specifically, my business consists of fabricating and selling soft stuffed teething giraffes. My husband is a Ph.D. student, and after being laid off this spring, my primary focus is caring for my child as well as working on growing my business. Furthermore, I do not have a large amount of money and I am not affiliated with any lobbying groups. However, I am using the resources that I can to advocate for small businesses, many of whom rely on this income to sustain their families.

A few of the major problems that this law presents to my business are 1) unit testing, 2) the tracking and labeling requirement, and 3) the fallacy of assuming everything is toxic until proven safe.

Unit testing is cost prohibitive for many small businesses, including my own. I make very small batches of usually 10 or fewer giraffes per fabric choice. I also make one of a kind items and custom items using my customer's own fabric, or fabric taken from my collection. My giraffes would be required by this law as of February 10th, 2010 to be tested for both lead and phthalates. I contacted Elemental Research, LLC (4601

Devonshire Rd, Harrisburg, PA, 17109; Phone 717-540-0212; www.ElementalResearchLab.com) to quote lead and phthalate testing for my business. For lead testing, I was quoted $50 per component. There are 4-5 components per giraffe. For phthalate testing, I was quoted $400 per component. Cumulatively, the total cost for testing one fabric line of giraffes would be anywhere from $1,800 to $2,250. The giraffes sell for $14-$18 each depending on the fabric. The added cost of testing would add an additional $180-$225 per giraffe (based on 10 giraffes per fabric line) For a custom one of a kind item, the price would have an additional $1,800-$2,250 tacked onto the $14 I charge for customs. Obviously, this is extremely cost prohibitive for the customer.

Considering that the law specifies that if I change any component, the unit would need to be tested again. I created 36 different fabric patterns of giraffes in 2008 (not counting custom giraffes). The total cost of lead and phthalate testing my items would have been $64,800-$81,000. I made $4,500 gross last year. The deficit the testing creates would more than put me out of business, it would bankrupt my family.

Another aspect of the law that directly affects my business is the tracking and labeling requirement. According to the CPSC website FAQ (http://www.cpsc.gov/about/cpsia/faq/103faq.html), "Section 103 of the CPSIA provides that the tracking label must contain information that will enable the manufacturer to ascertain the location and date of production of the product and cohort information (including the batch, run number, or other identifying characteristic) and any other information determined by the manufacturer to facilitate ascertaining the specific source of the product by reference to those marks."

Even though the law says "to the extent practicable," I question how this could be accomplished by a home craft seller or small business such as mine. Keeping in mind that each lot requires new testing, then each lot requires a different label. That would mean that for each giraffe fabric style that I create, including custom work, would require a different label to attach. Consequently, that would force me to start making my own labels because it would be cost prohibitive for me to meet the quantity minimums of a

label printer when my lots are 10 or fewer giraffes. My labels would need to say something to the effect of: "Made by Starbright Baby at Boalsburg, PA July 4, 2009 Batch 15 Run 1, Teething Giraffe Pattern Toy 1." Thus, I would have to change the date, the batch, the run and the name of the toy on each lot I made. It is possible to buy printer-friendly fabric labels; however, after a few washes the ink is gone or faded making it difficult to ascertain what the label originally said. Another way to make the labels would be with a permanent fabric pen and fabric. However, manually creating each label would likely take longer than fabricating the giraffe itself. This labeling standard will be crippling for small business in added cost and time.

The most disheartening thing for me as a small business owner is the assumption of the law that everything is bad and dangerous until proven safe especially since fabric and many natural materials (now exempt but set to expire on Feb 10, 2010) are lead free or have infinitesimally small lead levels; well within the acceptable range. The fabric exemption should be made permanent. Many small businesses do not purchase their fabric wholesale but instead buy from local fabric or quilting shops. In this setting, I can buy one yard of fabric off the bolt to make giraffes that I have to lead and phthalate test. My neighbor could then buy the very next yard on the bolt to make bibs for her small business and she too would have submit for lead and phthalate testing. The upshot is that provides work for a few laboratories but at the expense of many more small business owners.

Another aspect of the testing that is problematic is the broad definition of what needs to be tested for phthalates. According to the CPSC guide for Small Businesses, all "Child Care Articles" need to be tested for phthalates. "A 'child care article' is a product that a child 3 years of age or younger would use for sleeping, feeding, sucking or teething. Bibs, child placemats, child utensils, feeding bottles, cribs, booster seats, pacifiers and teethers are child care articles that are covered by the law and might contain phthalates." (http://www.cpsc.gov/ABOUT/Cpsia/smbus/cpsiasbguide.pdf) As it is written, the law would currently require me to test my teething giraffes for phthalates. The problem is that my teethers are made from cotton fabric, cotton thread, stuffed with PLA fiber made from corn, and a cotton label. According to Test Method: CPSC-CH-C1001-09.1

(http://www.cpsc.gov/about/cpsia/phthalatesop.pdf) the lab is to "grind" the toy to get a sample to test. Being that the giraffes are cotton fabric, it will prove to be difficult to "grind" off anything. When I spoke to Elemental Research Lab about phthalate testing on my item, they were unsure if they could effectively test my giraffes. Interestingly phthalates are found only in plastic. So requiring testing on cloth items, even if they are intended to go in the mouth of a child under 3, does not make sense.

There are many unintended consequences of this law. If it is kept as-written, thousands of small businesses and crafters will be put out of business in this already tough economic climate. The only products consumers will have to choose from are mass produced items from huge corporations; many from the same companies that imported the lead tainted toys that prompted Congress to take action on this issue. In effect, the companies that irresponsibly imported tainted toys will be rewarded with a larger market share.

The unintended consequences of this law are not just for small businesses. Although these consequences do not directly affect my business, they affect me as a parent and are concerning.

Books: No child has ever proven harmed by a book yet countless books will go into trash/landfills for no reason. Pre-1985 books are not old enough to be vintage or collectible, but so many not reprinted, virtually destroying history and culture.
Libraries: If this law holds, children under 12 will not be able to use libraries. Libraries will have to test books or remove them from the shelves.
Schools and Homeschoolers: Almost everything in a building housing the under 12 crowd will need to be tested or thrown out. Imagine the needless expense for school systems already strapped for resources to teach our children.
Low Income Families: (like mine) in these hard economic times who depend on resale shops and garage sales to provide for their families.
Charities: Project Linus and other hospital charities plus shelters that accept donations will have a difficult time keeping up their good works.

Resale Shops: like Goodwill etc. are all devastatingly affected. Many resellers are pulling children's items from their shelves.

Although recent rules released by the CPSC state that charities and resale shops are exempt from testing, they are still liable if anything is sold that is above the lead and phthalate levels. Many will chose to not carry the items rather than take the risk of running afoul of the law.

There are some very simple ways that this law can be amended to be more practical for all businesses involved in making items for children under 12. (Handmade Toy Alliance http://sites.google.com/site/handmadetoyalliance/Home/our-proposal-to-modify-the-cpsia).

- Component-based testing so that suppliers of our raw materials could provide the children's product manufacturer with certification of compliance within the law, which would eliminate the need for redundant and costly unit-based testing. Safety would be improved by driving compliance upstream in the supply chain, catching non-compliant materials prior to distribution, practically eliminating the chance that any given finished unit would be non-compliant.
- Exemptions from testing for materials known by science not to pose a lead or phthalate contamination hazard such as fabrics, certified organic materials, and many natural materials such as wood, paper and bamboo. Manufacturers would be spared the costs of testing these materials and testing labs and the CPSC could better focus their efforts on high-risk materials such as metals and paints.
- Harmonization with European Standards. Accepting the stringent EU standards in the United States as sufficient for the requirements of CPSIA would save countless US businesses that import from or export to the EU from the costs of performing multiple tests. US and EU regulators would be able to work together to oversee the global marketplace.

- Exempt permanent batch labeling of products for hand crafted and micro businesses that have small batch runs. While permanent labeling may be efficient with large runs of plastic products, it would be extremely difficult and cost prohibitive for small batches made from wood or fabric.. The US Small Business Adiuinistration Office of Advocacy has backed the Handmade Toy Aalliance position on tracking labels, citing the Regulatory Flexibility Act, a federal law designed to protect small businesses.
- Revisit the retroactivity of the CPSIA based on a risk-based approach.

I applaud Congress for trying to pass legislation that will keep our children safe from dangerous toys. I want safe toys in the hands of my little boy just as much as any parent would. I don't think that the CPSIA as-written will help make that happen. The suggested changes mentioned in this document along with the problems highlighted for small businesses, I hope that Congress, the Small Business Committee, and the Subcommittee on Investigations and Oversight can amend the CPSIA in order to keep our children safe and keep our small businesses in business and strong.

U.S. House of Representatives Committee on Small Business
Testimony before Subcommittee on Oversight and Investigation

Susan Baustian, Winmark Corporation
Thursday, May 14, 2009

Thank you, Congressman Altmier, for inviting me to testify today, and to all the Committee members for taking the time to talk about this very important—and very timely—issue. I thank my fellow panelists for their thoughts and comments on the impact of the Consumer Product Safety Improvement Act on small businesses across the country, and thank acting Chairwoman Nord for her willingness to answer today's critical questions.

My name is Susan Baustian, and I am the Director of Once Upon A Child stores for Winmark Corporation. Today, I am speaking on behalf of our hundreds of stores in, as we call it, the industry of "gently used" products.

My company, Winmark Corporation, owns two franchises that have been in business for over 20 years, Once Upon A Child (a store selling used children's goods) and Play it Again Sports (selling new and used sporting goods), and have been significantly impacted by this bill. Although our company headquarters is in Minnesota, we have over 520 franchises across the country. What that amounts to are 500 store owners worrying about whether or not they comply with the law, 5000 employees scrambling to figure out how to comply, and 200 vendors feeling they do not have the resources it takes to test their products to ensure that they comply with these new standards. Last year alone, our two brands serviced over 7 million parents that are now confused as to what is safe or not for their children.

The ill-executed implementation of this legislation has brought fear into the industry, and that fear—especially in economic times like these—can bring a halt to successful and productive businesses. Our franchisees have a lot on the line that is driving this fear. Most of them have business loans where their homes have been used as collateral. They have a family in which their business provides for, and they all have a strong sense of giving back to the community by being at the forefront of recycling – they buy & re-sell product that children no longer use or have outgrown. They are fearful that the CPSIA will force them to give up their American dream – owning their own business.

I think what is really unfortunate is that this debate over the CPSIA has lead to finger pointing on an issue on which we all agree: ensuring the safety and protection of children.

Our store owners have dedicated their lives to providing safe, fun, and educational products for children of all ages, and now are having to rethink how they can continue to offer these products without violating this law.

We want to work *with* the Consumer Product Safety Commission to comply with this law, but the guidance issued thus far has been difficult to understand for many of our store owners. We do not want to have to shut our doors over legislation that we all agree *could* help children if implemented in an effective and productive way, but we need the help of the CPSC and Congress to clarify what is required of our store owners.

The Consumer Product Safety Commission has come out and stated that resellers such as Once Upon A Child and Play It Again Sports—as well as Goodwill, the Salvation Army, ARC, Church organizations, Garage sellers, consignment stores, sellers on ebay and any other small business reseller—do not have to test products, but our businesses are still liable if those products with banned substances are sold.

The CPSC recently produced a Handbook for Resale Stores and Product Resellers with the purpose being, "to help identify the types of products that are affected and to understand how to comply with the law, so you can keep unsafe products out of the hands of consumers." Unlike the information that the CPSC supplies regarding recalls—a very specific list by brand & model number—the handbook is too general to effectively determine which products are safe to buy & sell.

For example, Page 7 of the handbook indicates that "items made of wood (without paint, surface coating or hardware) are OK to sell." It also indicates that "Clothes with rhinestones, metal or vinyl/plastic snaps, zippers, grommets, closures or appliqués are best to test, contact the manufacturer or not sell." Unlike retailers of new products, our franchisees across the country have no idea how to determine if the painted blocks, toy trucks, dolls or even clothing they are buying and reselling contain lead paint or are made up of dangerous lead components or toxic plastics.

It will be a violation of the Act to sell an item that is known to have more than the acceptable limit. This violation can be a fine of $5000 for each violation, which increases to $100,000 on August 14, 2009. Being that the handbook gives us only guidance on determining which items are safe, the only way to be certain would be to test the product. However, each piece that is bought & sold is unique, and it would be too costly to test each item. With a house on the line, a family to care for, and a potential liability to deal with, fear has taken hold for many of these resellers.

Last year, Once Upon A Child paid families $45 million for children's items that we purchased for re-sale, generating $120 million in sales for our franchisees. Of that, $23 million worth of clothing items were purchased, generating $68 million in sales for our franchisees. For families, the money they receive from selling children's items can be used to supplement a parent's income, or may be used to buy items for their children that they otherwise couldn't afford. For business owners, this income helped proved for their family. But now, many business owners and parents are worried they won't know when a snap or zipper contains lead, and like toys, they have no way to test these items.

The guidance issued on the sale of books has been equally frustrating. Last year, our stores paid families $500,000 for books that we purchased for re-sale. This generated $1.5 million in sales for our franchisees. I understand that there are certain bathtub books that may contain excessive amounts of phthalates [THAL-ates] and I would hope our industry will move away from selling these products, but most books—even if they contain trace levels of lead—are innocuous and should not be banned under this legislation. The American Library Association has done a tremendous job sorting through fact and fiction on the production of books in this country, and I commend their efforts to publicize what the industry has done since the 1970s to stop using metal-based paint in their books. But their work was not enough to get books excluded from the Act, and now we are all faced with how to sort through the books on our shelves. The clarification that books printed after 1985 will be considered "safe" was helpful, but it was not enough to ease the fear and frustration with the law.

It is because of the obstacles our business owners and families face that we need the Consumer Product Safety Commission to clarify the law so that parents aren't afraid to sell their children's items, or buy used clothing for fear that it might be banned by this legislation.

If there is one thing that has become clear through this process it is that we, as an industry, need more guidance and need more time to sift through our inventory, understand the new regulations, and find cheaper, more efficient ways of testing products. For my industry, it is critical that we are able to understand how we can better sort through our inventory and confidently buy & sell children's items without fear of selling something that is unsafe for a child, or facing consequences for violating the Act.

Changes like this do not happen overnight, and we need the help of the Consumer Product Safety Commission, as well as members of Congress, to ensure that we can continue to provide families with a resource to provide products at a value by being at the forefront of recycling. We need to know specifically what items are deemed unsafe for our children.

I thank you for calling this hearing on the impact of this law on small businesses, and particularly the thrift industry, and look forward to answering any questions you may have.

GP 2573639 v1

Hearing Before the

House Small Business Committee,
Subcommittee on Investigations and Oversight

Entitled

"The Consumer Product Safety Improvement Act and Small Business"

Written Testimony of:

Anthony F. Vittone, Esq.
Vice President & General Counsel
Swimways Corp.

May 14, 2009

Mr. Chairman, Ranking Member Fallin and Members of the Committee: Thank you for holding this hearing and giving me the opportunity to talk with you about the issues small businesses have faced and continue to face as a result of the passage last year of the Consumer Product Safety Improvement Act of 2008.

Swimways Overview

My name is Anthony Vittone, and I am the Vice President & General Counsel of Swimways Corp. Swimways is a small, privately held, family owned company. We are headquartered in Virginia Beach, Virginia where we employ approximately 70 hardworking Americans. In addition, we provide seasonal and temporary employment to an additional 25 employees throughout the year. Our offices consist of manufacturing facilities for our rotational molding equipment, inventory space and office space.

Even if you do not know Swimways by name, I suspect you know our products. In the water products category, Swimways offers 120 different products to customers ranging from 9 months through adulthood. Swimways' brands include many products that consumers ask for by name, including Spring Float®, Toypedo®, Subskate™, Rainbow Reef®, Swim Sweaters™, and the Safe-T-Seal™ swim teaching system just to name a few. The Swimways brand of products has been around for over 40 years and is sold in 40,000 storefronts with major retailers and individual pool dealers alike.

Swimways prides itself on continuing to bring innovation and design to the marketplace. Constant market research and product development allows us to provide the features that have made us a leader in the industry. Our goal is to continue to

provide customers with the most entertaining and fun products, featuring only the very best value, quality, style and innovation.

For the past 15 years Swimways has enjoyed an average rate of growth of 15% a year – until 2008 when we took a step backwards. Unfortunately, this step backwards is directly attributable to two factors: (1) The state of the economy; and (2) the passage of the CPSIA.

CPSIA Introduction

The CPSIA, together with the economy, has essentially created a 'perfect economic storm'. Like most consumer product companies, Swimways is already experiencing a reduction in sales as a result of the state of the national economy. Individual consumers are buying less; therefore, the retailers we sell to are buying less. At the end of 2008 and beginning of 2009, orders from major retailers for the 2009 summer season were being cancelled or reduced. As a result of the CPSIA, inventory had to be scrapped and orders cancelled.

Swimways' main issue with the CPSIA involves the phthalate provisions. I understand that other toy companies and consumer product companies may have problems with the other provisions, such as the new requirements on lead or tracking labels. While we do not believe those provisions were very well thought through, the primary impact on Swimways involves the new restrictions on the use of phthalates.

I will not revisit in detail the need for these phthalate provisions since Congress has decided that some legislation was needed. However, it is worth pointing out that up until the passage of this Act, the Consumer Product Safety Commission has

consistently opined that oral exposure to DINP phthalates is not likely to present a health hazard to children. In light of the CPSC's conclusions, we would submit that some reasonable accommodations to the businesses that make these products would not be disastrous to Congressional intent.

Phthalate Timing

The timing of the phthalate ban was, in our opinion, the single biggest disaster in the CPSIA.

The European Union began the phthalate craze by passing European Directive 2005/84/EC. The EU passed this law in December 2005 and gave manufacturers and retailers until January 2007 to move through their inventory (i.e., 13 months).

The State of California kicked off the phthalate issue in the United States by passing the so called "California Toxic Toys bill". This bill was signed by the Governor of California in October 2007 and gave manufacturers and retailers until January 1, 2009 (i.e., 15 months) to clear through their inventories.

Conversely, the CPSIA was signed into law in August 2008, but as written it only gave manufacturers and retailers 5 months to clear through their inventory. For any consumer product company, this would be wholly inadequate. For a seasonal company like Swimways, this timeframe was essentially non-existent. I am sure the Members will understand – there are not a lot of pool toys being sold in the United States in the fall and winter. People only buy pool toys when it is warm enough to go to the swimming pool or a natural body of water; that occurs in the summer long after the time period for the CPSIA had long since run out.

Furthermore, whatever time was granted in the CPSIA was completely wasted by the back and forth interpretation of the Act's retroactivity on existing inventory. In November, the General Counsel of the CPSC in a well meaning opinion threw a life-line to the industry by indicating that the phthalate restrictions would only apply prospectively. Ms. Falvey's rationale was reasonable and supported under the law. Manufacturers and retailers breathed a collective sigh of relief and relied on this position. However, the U.S. District Court for the Southern District of New York's reversal of that decision, just 4 days before the enactment was to take place, created a firestorm of irrational behavior in the toy industry. Manufacturers struggled with what to do with their inventories and existing orders for their goods. Retailers scrambled to pull merchandise off their shelves calling Swimways for guidance, chargebacks, destruction orders, re-shipping mandates, etc.

The same product if sold on February 9, 2009 was perfectly acceptable and deemed safe by government and industry standards. The next day that same product became a toxic and dangerous 'weapon of mass destruction.' I would ask Congress to consider this simple question: If the use of phthalates is such a hazard to American children, why has Congress not ordered the CPSC to do an industry-wide recall of all products that contain phthalates, regardless of when they were sold from the beginning of time?

Congress wants children's consumer products to be made without phthalates. That is an understandable objective, but that guideline could have been adopted without further burdening an industry already struggling with the retraction of the American

economy. Swimways urges Congress to amend the CPSIA to make the phthalate restrictions prospective and apply to goods manufactured after February 10, 2009.

Imbedded Phthalates

The CPSIA includes a specific legislative exemption for imbedded lead. However, no such exemption was given for the significantly more benign phthalates. As the Members know, under standard statutory construction, the courts will interpret the CPSIA to mean that Congress intended no imbedded phthalate exemption to exist.

Swimways manufactures products which only contain phthalates on the plastic that surrounds the wires in the battery compartment for the product. The only way to access the phthalates is to take the product completely apart. We offer inflatable products which contains phthalates in the PVC, but the PVC is completely covered with fabric. Again, there is no ability to access the phthalates unless the customer essentially destroys the product. These products present no risk to the consumer and should be available for sale. We request that an imbedded phthalate exception be added to the CPSIA.

Age Requirement for P6 v P3 Compliance

Both the CPSIA and the California legislation prohibit 3 phthalates (DEHP, DBP and BBP) from being used in the manufacturing process of all toys and childcare articles. However, the two legislations differ on their treatment of the other 3 phthalates (DINP, DIDP, DnOP) with significant consequences.

The California legislation only prohibits the second 3 phthalates for childcare articles and toys intended for children 3 and under. The federal legislation forbids them for children up to age 12 and under if they are able to be put in the mouth. I am sure the Members would agree that a 10 year old child has long since passed the period when they are putting things in their mouth out of curiosity and sucking on them to relieve teething or coax themselves to sleep. Yet, this small and presumably inadvertent change in the law has made it unlawful for Swimways to sell a large quantity of goods that should be available for sale.

Swimways manufactures a product called the Rainbow Reef fish, which are battery powered to swim like a fish in a swimming pool.

We have sold over 7,000,000 units of this product. Prior to 2009, the fins of these swimming fish were made with phthalates. Even though Rainbow Reef fish are age graded for children 5+, there are nearly 15,000 units of this product that are now useless because the fins 'can be placed in the child's mouth.'

That is not the intent of the product and I will go out on a limb to say that that is not what happens with the product. We have no reports of children sucking on the fins to relieve teething or to help a child go to sleep. The CPSIA should be amended to

allow products not intended for children 3 and under to be manufactured using certain phthalates.

Sporting Goods v. Toys

Adding further confusion to the marketplace is the exemption of sporting goods from the CPSIA. It is not clear what is defined as a sporting good and what is defined as a toy. The CPSC has offered limited guidance but more detailed criteria are needed. In our experience, retailers are not willing to take a chance and are using a broad brush approach – 'if it's for a kid, it's a toy.'

A Representative Example: Spring Jam Basketball

Soon after the New York Court's ruling in February, retailers went into a complete panic. They had 4 days to review their inventory, determine which products were compliant with the CPSIA and remove the merchandise from the shelves. As a result of the severely compressed timeline, broad-brush reactionary decisions were made and manufacturers, like Swimways, were expected to absorb the cost.

Another product we manufacture is called the Spring Jam Basketball. This product is essentially an inflatable floating basketball goal covered in fabric and includes a basketball. We have sold over 750,000 units of this product since 2005. A picture of the product is included below:

In February, a large retailer had approximately 10,000 units of this product in their stores and distribution centers. This inventory was a mixture of products from 2008 that contained the DINP phthalate and 2009 product that is phthalate free. Nevertheless, the retailer immediately removed all of the Spring Jam inventory from their shelves.

We reviewed the item and explored with the retailer whether the product was a sporting good or a toy. We offered to send a team to sort through and separate the 2008 non-compliant inventory from the 2009 phthalate free product.

None of these efforts helped. It eventually came to light that the retailer had destroyed the goods shortly after the February 10th deadline. What was even more tragic was that less than 15% of the 10,000 units contained phthalates. But under the hysteria of February and the compressed timeline, the retailer chose not to sort through the products and merely trashed all of the goods. I would make the following observations:

- Under the California Act, these goods would have been compliant.

- If there had been an imbedded phthalate exception in the CPSIA, these goods would have been compliant.
- Had the CPSIA allowed for a greater timeframe to move through existing inventory, this problem would not have occurred.

The retailer is now insisting on a $100,000 credit for the destruction of the Spring Jam inventory. This is one example with Spring Jam Basketball. Other retailers have destroyed other units of this product. Regrettably, by the destruction of these products, the landfills have been filled but the cause of consumer safety has not been advanced.

Effect of Phthalates on Swimways

The effect of the CPSIA and its phthalate restrictions for Swimways has been profound.

(1) A large portion of the inventory in our VA Beach warehouse (approximately 37,000 units) was rendered obsolete and had to be written off. This write-off resulted in a 47% reduction in our profitability for 2008.

(2) Swimways was required to spend additional resources to rework other inventory in order to make it compliant with the CPSIA's phthalate requirements.

(3) We received significant chargebacks, returns, destruction charges, re-delivery expenses from retailers that insisted that we credit them for Swimways inventory that was rendered obsolete by the CPSIA.

(4) Orders were cancelled because we could not fulfill the purchase orders with compliant goods (even though non-compliant goods existed in our warehouse).

(5) We will have destruction costs for inventory that will have to be trashed.

The collective financial expense of the CPSIA for Swimways has exceeded $1,000,000.

In addition to these direct financial hits, Swimways has seen other indirect effects. Hiring at Swimways has been put on hold. Our bank that finances our operations is currently reevaluating its relationship with us because we have not hit our profitability covenant for 2008. Resources that would be spent in growing our business had to be used on compliance with the CPSIA. Personnel have been redirected from the core business to dealing with the aftermath of the CPSIA. Finally, the manpower by Swimways personnel to sort through and comply with the Act and various interpretations and deadlines of the Act reduces our ability to focus on growing the business.

The toy industry is overwhelmingly made up of small businesses like Swimways. The Toy Industry Association has estimated that the cost of this legislation to the toy industry has been $2,000,000,000. We all need some relief from this Act and we trust that Congress will respond.

Thank you for your time and attention to these matters.

Testimony for U.S. House of Representatives Committee on Small Business,
Subcommittee on Investigations and Oversight
The Consumer Product Safety Improvement Act and Small Business
May 14, 2009

Presented by: David McCubbin, Partner; McCubbin Hosiery LLC; Oklahoma City, OK;
405-236-8351; dmccubbin@mccubbin.com
At the request of The Honorable Mary Fallin, Oklahoma's 5th District

First, please accept my sincere gratitude for inviting me to address this committee. The Consumer Product Safety Improvement Act of 2008 (CPSIA), well intentioned to enhance the level of safety in the products Americans purchase for our children, has had massive consequences. The legislation's broad scope has impacted thousands of products for which the measured concerns are not material. Your willingness to review the implications for small businesses in particular is very much appreciated. Indeed my comments today are very consistent with the sentiments expressed last week by the distinguished Chairwoman of the House Small Business Committee, the Honorable Representative Nydia Velázquez. In her letter to the Director of Office of Management and Business, Peter Orszag, last week she wrote, "All too often federal agencies overlook the unintended impact their regulations have on small businesses. To create an environment that fosters entrepreneurship, the regulatory system must be responsive to small business needs." I hope you agree my testimony underscores that message. It is an honor to be included in your esteemed roster of witnesses.

Our company, McCubbin Hosiery, is a family business started by my grandfather 57 years ago. We design, market, and distribute children's and ladies hosiery. Our products are sold in a number of national and regional retail outlets. Our customer base includes Nordstrom, Dillard's, Stride Rite, Kmart, and Payless ShoeSource, as well as hundreds of small independent retailers. McCubbin Hosiery has weathered changing consumer trends, economic volatility, and numerous changes to federal, state and local laws throughout the many years. The CPSIA has the potential to be more devastating to legions of small and medium sized American companies than the challenges we have endured over our past five decades.

I was specifically asked to comment regarding the impact of the law on our business to date; the implications we anticipate in the coming year; and recommendations I would make regarding the CPSIA. Therefore, I will focus on the three aspects of this law we expect affect us most:

Section 101 - Lead content limits; lack of demonstrated necessity for testing textile products
Section 102 - General Conformity Certification; impractical expectation of one certificate per style per shipment on a replenishment/high SKU count business
Section 103 - Tracking label requirements; contrary to rulings of other federal agencies, and potential disclosure of confidential information

IMPACT TO DATE

Since the act's passage many of the problems we have encountered are due to ambiguities and differing interpretations of this law. The Consumer Product Safety Commission (CPSC) is facing a daunting task answering the deluge of questions from companies doing business across the supply chain. While we appreciate the enormity of the task they are being asked to coordinate we await guidance and rulings that are not keeping pace with deadlines. Retailers very quickly responded to the legislation's implications immediately pushing back on suppliers. Without clear and uniform standards retailers expect suppliers to conform with numerous and individualized requirements formulated from their own interpretation of the CPSIA. We have received dozens of different forms, letters, and guides from our customers asking us to demonstrate our compliance with the laws according to how each retailer has interpreted the legislation. This lack of standardization and fear based on what may happen if they, the retailers, are found to be non-compliant has forced us to undertake a number of different testing and certification measures as we try to respond on-the-fly. The resulting confusion on the part of our staff and our suppliers has caused delays and expenses beyond our budget expectations.

With any legislation as sweeping as CPSIA it is imperative each party has sufficient time to review and digest the changes. Parts of the CPSIA provided only 90 days from publication to implementation; simply not enough time to make intelligent decisions.

Thus far we have been most impacted by the lead content testing requirements.

- We were told early on by industry experts both in the United States and internationally that there are no reliable lead content tests for textiles engendering a scramble to execute any test that would work and could be considered "reasonable".
- Reputable testing labs throughout Asia and the United States differed on their interpretations of what specifically should be tested. Consequently, for a period of about three months we tested all yarns used in every sock at tremendous expense.
- The overwhelming demand on lab time at our origin locations resulted in delayed shipments, increased transportation costs to expedite goods, and strained relations with both customers and suppliers.

The CPSC's decision to issue a one year stay from the lead content testing and certification requirements was tremendously welcomed by the industry; however, according to the retailing community the stay changes nothing. There remains no standard and retailers continue to ask us to test. More definitive relief must be communicated from CPSC to retailers on this issue.

The Hosiery Association, The Hosiery Technology Center and industry executives met with 22 Congressional Offices in March to ask for a decision on excluding unembellished hosiery from lead content testing due to the exhaustive analysis which has been exercised at the request of the CPSC. To date, we have not received a response to our request. Consequently, we continue to spend unbudgeted dollars testing for lead that is not in our products to begin with. We believe this exclusion and other common-sense refinements will enable the CPSC to better serve the public interest.

IMPLICATIONS IN THE COMING YEAR

Section 101 - Lead Content Limits –

This section classifies children's products containing more than the allowable limit of lead as banned hazardous substances. This is a worthy and reasonable proposition. However, it has been laid upon the apparel industry, in blanket fashion, without regard to any historical evidence or suggested likelihood that harmful amounts of lead are found in the products. In short, we are being asked to search, at considerable expense, for something that does not exist nor has been alleged to exist. We anticipate this redundant testing will cost us in excess of $500,000 in the first 12 months.

Further, the current understanding of the law allows for application of this standard to goods already in stock at the retailer's locations as of the effective date. This interpretation would open an avenue for retailers to destroy or return this stock and demand reparations due to non-compliance. Returns of this magnitude could be ruinous to both small and large business owners. In our case, this would all be for products that have never been shown to pose a danger in the first place.

Lead is known to be harmful when ingested or inhaled; neither of which is a concern when discussing hosiery (or textiles in general). In January the CPSC held a public meeting for the Apparel industry to share its findings surrounding lead testing. Attendees included representatives from: The American Apparel and Footwear Association; Wal-Mart; JC Penney; The Children's Place; the National Cotton Council; the Hosiery Technology Center; and the Retail Industry Leader's Association. The presenters offered the results of their exhaustive textile testing over the preceding months. The overwhelming evidence presented demonstrated zero failures of textile items tested. Further, the Hosiery Technology Center's comprehensive testing consistently demonstrates, across the spectrum of hosiery content from diverse origins, lead content test results of less than 63ppm.[i] Simply stated, it has not been demonstrated that lead content in hosiery products poses any manner of safety concern. Yet this law mandates the industry establish an on-going testing process for a non-existent concern. The financial burden is both immediate and ongoing; it unnecessarily impacts business, and ultimately the consumer.

1) Due to retroactive application of the standard if we are unable to prove the goods we have already shipped comply with the lead content limits retailers will return the goods from their floors and their warehouse. Across the industry the consequence to the supplier community will be so devastating many will be forced shutter their doors. Understand the inventory, perfectly good in every respect and completely safe, would be instantly relegated unmarketable. It is doubtful any suppliers have built into their budgets the anticipation of taking back a season's inventory from every one of their retail outlets. Also bear in mind retailers will suffer from bare shelves; their customers denied access to products until the pipeline is recharged.

2) As currently interpreted, testing is required on each color of yarn used in each style of sock each and every time we purchase the item (even if purchased from the same yarn supplier in the same colors previously used and successfully tested). In a replenishment-driven industry such as

hosiery this expense may add 20% to the base cost of the product; again testing for a condition that frankly does not exist.

Section 102 – General Conformity Certification

This section of the law has been interpreted to mandate that every time we make a shipment each article contained therein must be accompanied by a General Conformity Certificate (GCC) identifying each "rule, ban, standard, or regulation applicable to the product" and certifying each product complies with all regulations. This certification is independent of testing. Even if none of the products in the shipment require testing, a GCC must be available.
Our active customer list contains over 7,000 unique entries. Each of our retail customers strives to keep as little inventory as possible; they want to replenish it as often as they can. This results in multiple shipments to them throughout the year. Conversely, manufacturers demand orders in large quantities as infrequently as possible. Distributors like us are caught in the middle of these two opposing forces.
Keeping this balance means we ship small orders to individual store locations across the US on a weekly basis; and we buy from our suppliers in bulk, tens of thousands of pieces at a time. Further, as we are a fashion driven enterprise our active item list could total as many as 3,000 different products at any given time. Ensuring accuracy and availability of a GCC for every incoming order, and matching that information to a GCC for every item on every order shipped to our customers will result in creation of tens of thousands of certificates annually. This is a daunting prospect for any small business.

Section 103 – Tracking labels

The apparent intent of this section provides for the identification of the specific manufacturing facility for every given item, and to maintain transparency through to the end-consumer. While this goal appears innocuous we believe it would actually be harmful for our business.
The relatively short window leading up to this requirement and the other changes mandated by CPSIA in the interim have resulted in some confusion regarding the final requirement. We have seen opinions from the CPSC that marking only the packaging of items will not meet the requirement of the law as packaging does not allow for "permanent" marking. However, the nature of our products does not allow for sewn in or printed on labeling. As you may know, most hosiery is exempt from the Care Labeling Rules enforced by the Federal Trade Commission (FTC) due to the "utility or appearance" being "substantially impaired by a permanently attached label". We believe it is reasonable to expect the CPSC to come to a similar conclusion, regarding tracking labels, however, even with the deadline looming we can not be certain of that.

As we experienced last year with the uncertainty surrounding the lead content testing, retailers are pressing suppliers for an immediate resolution to the tracking label demand. We are hopeful the outcome of the CPSC's May 12th public hearing regarding this requirement will resolve the concerns and answer the questions we all seem to have. Until there is consideration how permanent tracking labeling for hosiery can (or should) be executed we cannot predict the financial impact.

RECCOMENDATIONS

I respectfully submit the following recommendations to help alleviate the unintended and damaging consequences of the CPSIA on our country's Small Businesses. I will limit my comments to the three areas discussed above.

Section 101 - Lead Content Limits

I believe based on the evidence presented above, a move should be made to exclude textile products from lead content testing requirements. At the CPSC's public hearing on textiles in January credible and overwhelming evidence was presented demonstrating statistically negligible levels of lead exist in textiles. Over the course of thousands of tests performed by different companies on different fiber contents from diverse countries none were found to exceed the lowest limit established in CPSIA.

Section 102 – GCC

Allowing this document to be prepared on an annual basis for each style (and each supplier of said style) in a company's offering would vastly simplify compliance with this law without changing the intent. Retailers would still be confident their suppliers are sending them goods that are in full compliance with all standards and regulations under this system. Suppliers would still be responsible for certifying their adherence to the law. And, ultimately the consumer will purchase items with the full confidence the products are safe and risk free. As a matter of practice, when changes are made to the source content of the product or to the manufacturing facility used the products should be recertified.

Section 103 – Tracking labels

The CPSC should follow the precedence established by the FTC with regard to consumer labeling laws allowing legally required labels for hosiery to be included on the packaging only. In September 2008 the FTC confirmed their earlier position in a letter to the Hosiery Association; they stated, "attaching a label to a hosiery item such as a sock or stocking would result in an uncomfortable, unattractive or damaged article". They confirmed labeling of such articles is impractical because the items don't have waistbands, are too fragile, or are sold in pairs.
Further, the tracking information should be acceptably presented in a manner that allows the importer or domestic manufacturer to internally identify the specific factory or mill used without revealing confidential sourcing information.

SUMMARY

Small businesses applaud the efforts of the United States Congress to ensure the safety of all citizens. In the instance of the CPSIA, however, unclear and belated interpretation is causing unintended, punitive consequences for our business and thousands like us. Children's products existing in commerce for years should be judged based on their history of consumer safety. The CPSC has expressed severe doubt about their ability to implement the "vast expansion" of

oversight called for in this law given the "extremely short deadline".[2] Where there is no history of problems, common sense exclusions from the regulations should apply. These exclusions will allow the CPSC to focus their enforcement efforts in areas that yield the greatest return for the public good. When the CPSC is expected to enforce these limits on every children's product in the country, whether or not it poses a viable threat to safety, their enforcement ability is diluted to the point that the overall marketplace ultimately becomes less safe. There is, as detailed above, sufficient evidence to withdraw the lead content testing requirement from all textile articles.

Retroactive application of these safety standards could ruin hundreds of small businesses that have acted responsibly throughout their history of manufacturing and distributing products with no suspicion of deleterious lead content. Importers and wholesalers will be forced to prove the innocence of their products despite the reality there is no evidence these goods have ever posed a safety threat. And, ultimately, it is the American consumer who will pay the price through higher prices and the limited selections manufacturers will be forced to pass along due to increased production costs.

Let me assure you we intend to fully comply with this legislation. But, we are imploring you to do all in your power to ensure the laws are clear, effective, and do not cause an unreasonable burden to commerce. You can astutely enhance the provisions of the CPSIA to address the economic concerns of thousands of reputable small business owners without endangering the safety of our children.

KD Statement

Thank you, Chairman Altmire, for holding this important hearing. In 2007, more than 17 million toy units were recalled by the Consumer Product Safety Commission (CPSC) on account of excessive lead levels. The issue became a major public health concern and led to the passage of the Consumer Product Safety Improvement Act. Unfortunately, in the rush to pass a strong bill to safeguard our children, Congress has created unintended, negative consequences on businesses.

One of the areas that concern me with this Act is the application of lead limits for manufacturers and sellers of all-terrain-vehicles (ATVs) and motorbikes for children. It is now illegal to sell off-road machines designed for children 12 and younger if their parts exceed lead limits, which is unfortunately very common. Although the ATV and motorbike industries have petitioned the CPSC for an exemption to this lead requirement, their request has not been granted. I recently wrote a letter to

Energy and Commerce Chairman Henry Waxman and Ranking Member Joe Barton asking them to review this issue. At a time when our economy is struggling, I am concerned that without this needed exemption, ATV and motorbike manufacturers will lose an important segment of their market.

Let me be clear: I strongly favor limits on lead and phthalates on products sold to children. In fact, I will soon be introducing a companion bill to Senator Gillibrand to examine lead, phthalates and other chemicals in cosmetics sold to children. However, I think that the CPSC should be more flexible with the application of the Consumer Product Safety Improvement Act. When the CPSC can reasonably assess that the risk posed by a product is very minimal, exemptions can be made.

COMMITTEE ON AGRICULTURE
COMMITTEE ON SMALL BUSINESS
COMMITTEE ON SCIENCE AND TECHNOLOGY

Congress of the United States of America
House of Representatives
Washington, D.C. 20515

March 24, 2009

The Honorable Henry A. Waxman
Chairman
Committee on Energy and Commerce
2125 Rayburn House Office Building
Washington, DC 20515

The Honorable Joe Barton
Ranking Member
Committee on Energy and Commerce
2125 Rayburn House Office Building
Washington, DC 20515

Dear Chairman Waxman and Ranking Member Barton:

I am writing to you concerning an issue about the application of the Consumer Product Safety Improvement Act of 2008, P.L. 110-314 (the Act).

Certainly the Act was an important advance in product safety law; however, I have received a number of complaints about how it works in practice with regard to the youth motorbike and ATV industry. Industry advocates have appareutly filed a petition with the Consumer Product Safety Commission, seeking an exemption from coverage under the Act. While they await a ruling, they have also argued that a potential $1 billion industry is being threatened.

I am respectfully requesting that your committee evaluate the application of the Act to Youth motorbikes and ATV's and determine if the Act can be better tailored to advance the important interests of childrens' safety.

Sincerely,

Kathy Dahlkemper

The Honorable Jason Altmire
Chairman
Subcommittee on Investigations and Oversight
Committee on Small Business
U.S. House of the Representatives
2360 Rayburn House Office Building
Washington, DC 20515

The Honorable Mary Fallin
Ranking Member
Subcommittee on Investigations and Oversight
Committee on Small Business
U.S. House of the Representatives
B363 Rayburn House Office Building
Washington, DC 20515

Dear Chairman Altmire and Ranking Member Fallin,

On behalf of the National Federation of Independent Business (NFIB), the nation's leading small business advocacy organization, I want to thank you for holding today's hearing on the Consumer Product Safety Improvement Act of 2008 (CPSIA) and how the Consumer Product Safety Commission can reduce regulatory burdens on America's small businesses.

According to the NFIB 2008 Small Business Problems and Priorities publication, small business owners agreed that "Coping with Government Regulation" is one of their most formidable business problems, ranking it sixth out of 75 small business problems they face. Small businesses lack specialized regulatory compliance staff. Therefore, compliance falls on the owner, in addition to their other responsibilities.

While our members understand that the intent of the 2008 law is to protect children, small businesses are concerned that the law's lead testing policy could cause serious economic hardships for many law-abiding small businesses that manufacture and sell safe children's products. During a time of economic uncertainty, new costs and mandates inhibit economic growth and may force small businesses to raise prices, cut jobs or shut their doors. Given that the maximum penalties for noncompliance are $100,000 and $15 million, we believe a delay in implementation and enforcement of this law is reasonable request to ensure that the impacts on small business are thoroughly examined.

NFIB is pleased that the CPSC has acted to clarify the compliance requirements for resellers of children's products, thrifts and consignment stores. Additionally, we are pleased the Commission is taking initial steps to help the small business community. For example, the publication of a small business guide is helpful to the small business community and we encourage the Commission to continue to update these compliance guides as new information becomes available.

NFIB is optimistic regarding the stays of enforcement the Commission has put into effect. For example, the Commission issued a stay of enforcement for children's off-road motorcycles, all-terrain vehicles and snowmobiles. This stay is effective until May 1, 2011. These are good examples of products that pose an insignificant threat of lead poisoning to children and should be exempt from the CPSIA. NFIB is concerned, however, that small business may still face costly lawsuits. These independent actions signify the Commission's commitment to protect and recognize small business as our nation's job creators. While these actions are a good start, we are hopeful that Congress and the Commission can begin to work together to address additional burdens that may be fixed through the regulatory and legislative process.

NFIB urges Congress to act on legislation that will alleviate the burdens the CPSIA has imposed on small business. In particular, NFIB strongly supports allowing for "component part testing" which is necessary to prevent duplicative and expensive testing. Small manufacturers would be permitted to use the testing and certification that are obtained by their component suppliers (if all components are certified, the final product is certified). NFIB also supports the following legislative proposals: H.R. 968, H.R. 1027, H.R. 1046, H.R. 1465, H.R. 1510, H.R. 1692, H.R. 1815, S. 374, S. 389 and S. 608.

Thank you again for holding this hearing. I look forward to working with you on this issue as the 111th Congress continues.

Sincerely,

Susan Eckerly

Statement of Sean Hilbert
President
Cobra Motorcycle Manufacturing

U.S. House of Representatives Subcommittee on Investigations and Oversight of the Committee on Small Business

Hearing on
"How the Consumer Product Safety Improvement Act Impacts Small Businesses"

May 14, 2009

Chairman Altmire, Ranking Member Fallin and members of the Subcommittee, thank you for the opportunity to provide comment on the Consumer Product Safety Improvement Act of 2008 (CPSIA).

Founded in 1993, Cobra Motorcycle Manufacturing is the world's premier manufacturer of youth competition motorcycles and all-terrain vehicles (ATVs). Cobra moved to Michigan in 2006 with the aid of a Michigan Mega Grant through the Michigan Economic Development Corporation (MEDC). We proudly design, develop, and manufacture our products in the USA using over 150 local companies to supply services, components, and raw materials. Additionally, Cobra has grown considerably over the past five years, and we currently export our products to fourteen countries. For the sake of our employees, suppliers, and customers, we urge Congress to amend the CPSIA to exclude products like ours that pose absolutely no lead risk to children.

As you know, the CPSIA was signed into law on August 14, 2008 and went into effect February 10, 2009. It subjects any consumer product that is designed or intended primarily for a youth age 12 years or under to the new limits on lead content (Section 101). While the CPSIA was passed with laudable intent, it has created, according to House and Senate bipartisan letters dated April 2 to the Consumer Product Safety Commission (CPSC), "a well-documented safety hazard for children, a severe and unwarranted disruption to families who recreate together, and a deleterious effect on youth amateur racing. Additionally, the inclusion of OHVs has created an economic disaster for an industry which is already reeling from the recession, is facing countless lay-offs and is estimated to be losing three million dollars per day due the Act."

If large companies like Honda are being dramatically affected by the CPSIA, then small businesses are experiencing hemorrhages that are unrecoverable. In the case of Cobra, the most damaging part of this law is the cost of compliance. We

240 Uran Street
Hillsdale, Michigan 49242

Phone: 517-437-9100
Fax: 517-437-9101

are facing a price tag of nearly half of one year's revenue to comply, and that is estimating initial testing costs only. This equates to adding roughly $2,000 to the price of a $3,500 unit and doubling the cost of spare parts, which the market will simply not bear. Furthermore, the administration of continually testing approximately 4,000 separate components is a task we have not even begun to get our arms around. As with other small companies, we fear that the burden of compliance will simply cause us to close our doors. This means, in the case of Cobra, I must lay off 35 full-time and 4 part-time employees from our factory located in Michigan, which has the unfortunate distinction of already having the highest unemployment in the Union.

In an effort to alleviate some of the devastating effects of the CPSIA, the youth-model motorcycle and ATV industry sought an exclusion from the Lead Content Limits under Section 101. While the CPSC voted unanimously to deny the request for exclusion they ultimately voted on May 1, 2009, to support a stay of enforcement of Section 101 of the CPSIA regarding youth-model off-highway motorcycles and ATVs. The stay of enforcement is effective from May 12, 2009 through May 1, 2011.

Acting Chairman Nancy Nord stated on April 3, 2009, that she could not support an exclusion "because the clear language of the law requires this result, not because it advances consumer safety." In fact, Acting Chairman Nord said that the "application of the lead content mandates of the CPSIA to the products made by the petitioners may have the perverse effect of actually endangering children by forcing youth-sized vehicles off the market and resulting in children riding the far more dangerous adult-sized ATVs."

While the CPSC Commissioners' vote to stay enforcement of the law, this does not solve the real issue, which is the law itself. Despite the stay, it is unclear whether state attorneys general will also decline to enforce the CPSIA. The sale of youth-model motorcycles and ATVs is still technically illegal. Even though a stay means that small business owners will not be subject to fines or penalties imposed by the CPSC, state attorneys general can still prosecute violators if they chose to do so. Youth-model motorcycles and ATVs should be exempt from the law, and Congress needs to act to make that happen.

The most sensible way forward for Congress to help small companies like Cobra is to have the law repealed or to somehow exclude youth-model motorcycles and ATVs from the law. H.R. 1587, introduced by Rep. Denny Rehberg (R-MT), will do just this and I urge any Representative that has not yet cosponsored this bill to please do so. By cosponsoring H.R. 1587, you will send a clear message of your support for small businesses and youth safety.

240 Uran Street

Phone: 517•437•9100
Fax: 517•437•9101

Finally, it is my sincere hope that this Subcommittee continues to engage the public in their deliberations regarding the CPSIA's impact to small businesses. Cobra and many dealers, who are also small businesses, stand ready to serve as a resource for you and your staff as you further consider the impacts of the CPSIA.

Again, I wish to thank the Chairman, the Ranking Member and the Subcommittee for holding this hearing on "How the Consumer Product Safety Improvement Act Impacts Small Businesses."

Regards,

H. Sean Hilbert

The Honorable Jason Altmire
Chair, Subcommittee on Investigations and Oversight
House Small Business Committee
2361 Rayburn House Office Building
Washington, DC 20515

Dear Chairman Altmire and members of the Subcommittee:

Thank you for your interest in the implementation of the Consumer Product Safety Improvement Act (CPSIA). The undersigned consumer, public health, and scientific groups fully support aggressive efforts to engage and educate all parties involved in the CPSIA, including small and large businesses, microbusinesses, retailers, and consumers.

In August 2008, this law was passed with overwhelming bipartisan support in Congress, signed by President Bush and enthusiastically backed by consumers, public interest organizations and business representatives. The CPSIA provides much-needed tools for the Consumer Product Safety Commission (CPSC) to guide businesses in producing safe and effective products for their customers.

However, since the CPSIA's passage, the agency's leadership has floundered in ensuring a smooth implementation process, to the detriment of businesses and consumers. Indeed, after months of urging from members of Congress as well as from health, science and consumer groups, the CPSC has begun to develop common sense rules that will ensure the safety of our children while addressing small business concerns, mostly related to testing and certification requirements.

Business concerns that emerged due to the lack of CPSC guidance soon developed into a full-blown demand for major changes to the law. However, the CPSIA does not need to be changed to address these concerns. Congress has included language in the CPSIA that already empowers the agency to provide exclusions for certain materials. The CPSC has the power **right now** to exempt certain materials from testing and certification requirements, to relieve those manufacturers who are in no danger of violating the new standards.

Changing the law would hurt consumers by removing the critical safety protections it provides. It will also hurt businesses by diminishing consumer confidence – and therefore sales – at a time when business can least afford it.

Further, in the last two months, the CPSC has received resources that will help with implementation without need for changing the law. Congress and President Obama have increased funding for the agency. In addition, the President recently nominated a new chair and an additional commissioner. These new resources should enable the agency to implement the CPSIA effectively.

We urge you to resist calls to reopen the CPSIA and instead, to focus on the prompt, clear and sensible implementation of the law. The new CPSC Chair, once confirmed, should be allowed to put in place her vision for the agency's new direction. We look forward to working with you and the new CPSC leadership in ensuring that businesses and consumers all benefit from the CPSIA and its new protections.

Erik Lieberman

House Small Business Committee

Re: Written Testimony for the May 14, 2009 House Small Business Subcommittee on Investigations and Oversight Hearing "The Consumer Product Safety Improvement Act and Small Business"

Dear Mr. Lieberman,

On behalf of the Handmade Toy Alliance, an alliance now numbering 335 toy stores, toymakers and children's product manufacturers from across the country who want to preserve unique handmade toys, clothes, and children's goods in the USA, we respectfully submit the following testimony for the House Small Business Committee's Hearing on the CPSIA.

Please add this letter and the two pages which follow into the official record of this subcommittee hearing.

We appreciate your assistance in this matter. Please contact us if we can be of any assistance.

Sincerely,

Stacee Wion
Co-owner, SpielWerk Toys
stacee@spielwerktoys.com

Dear Erik Lieberman and House Small Business Committee:

We are a small brick-and-mortar toy shop located in Portland, Oregon. Our business is currently approaching 3 years in it's operation, while our second shop was opened just this last December.

Our founding concept is that play is the work of childhood, and that essentially, toys are the tools of childhood. Our goal is to make traditional, safe, and high quality toys available to Portland families.

In order to find the safest toys on the market, in some cases we had to look far. Many of our toys are imported from Germany, France, Poland and the like, as these countries continue to support their long-standing traditions of making simple, healthy, traditional toys. We have always trusted these varieties for the strict safety standards they adhere to, set forth by the European Union.

In stating this, you might be wondering how this information pertains to the new law put forth by the CPSIA. Well, here is what is happening:

Toys marked with a "CE" stamping (signifying that they meet EU safety standards) are inherently compliant to the new CPSIA standards by the very fact that their testing is more exhaustive and stringent, yet currently we are requiring these small manufacturers to not only pay for their own testing, but also become compliant with our new CPSIA standards, which not only requires more expensive testing, but also requires very complicated (and again, expensive) batch labeling (which the CPSIA currently does not have guidelines for) for each individual item. Essentially, we are asking them to do everything twice and create a US only tracking system that does not yet exist.

The consequences of this incessant testing are many. Most European exporters still able to afford the cost of small-scale, traditional manufacturing can hardly afford to test once, let alone twice. What we as a US retailer of these toys are experiencing, is an immense loss of product, incredibly higher prices, far longer backorders, and a huge overlapping problem with our competitors as we are now all fighting for the same reduced pool of product. Currently I am experiencing a 30% reduction in CE stamped product, which makes up 80% of my total inventory.

There is a lot of uncertainty at this time. Especially in these extremely challenging economic times, being faced this struggle to retain product and keep our niche in the local marketplace is especially detrimental. We cannot survive this crunch on the traditional toy industry—there are not enough domestic traditional toy makers around to keep us supplied.

And on the subject of domestic product, another more spoken about fault to this new law is the crunch on small domestic toymakers. I do not feel I need to say as much here, as it's opposition to this law has certainly gained momentum. What I would like to add, is that another of our founding goals was to eventually manufacture toys on a small scale, to contribute our concepts to the traditional toy market while also supporting our local crafting community. At this time, due to the extremely high costs involved with testing handmade goods, I cannot embark on this endeavor, nor can I legally support those who currently

make handcrafted items with the hopes of selling through our store.

I urge you please to amend this law. The integrity of the toys we sell have always been the driving concept to our business, it is also the reason why we support small toy manufacturers. Please do not let the poor ethics of the few affect the many. And please, please do not let it happen that we homogenize and water down the unique qualities of our toys as these are the most important tools of childhood.

We request that you:

1. Grant exemption to all "CE" certified products for children,
2. Grant exemptions to all natural products, both raw and compounds made up of natural and certifiably safe materials,
3. Allow "component-based testing" on all products for children putting the costly and timely burden of testing on the manufacturers of toy components (i.e. finishes, fasteners, and processed component materials),
4. Compile and publish clear and simple guidelines for all testing requirements for both retailers, distributors and manufacturers of children's goods,
5. Create small children's toy manufacturers access to financial assistance toward becoming compliant based on the size of their company and production.

I thank you very much for your time and consideration. Please do contact me with any questions or need for further testimony.

Respectfully,
Stacee Wion

Save Small Businesses from the CPSIA

The Problem

The Consumer Product Safety Improvement Act (CPSIA) is overly broad in its focus and puts unrealistic testing costs on small businesses that were already providing safe products. The result is a decreased capacity to protect consumers, and severe financial hardship for small business.

What should Congress do?

The CPSC has indicated that they are unable to fix the unintended consequences of the CPSIA without a technical amendment from Congress. We are seeking:

1. ***Component-based testing*** so that suppliers of our raw materials could provide the children's product manufacturer with certification of compliance within the law, which would eliminate the need for redundant and costly unit-based testing. Safety would be improved by driving compliance upstream in the supply chain, catching non-compliant materials prior to distribution, practically eliminating the chance that any given finished unit would be non-compliant.

2. ***Exemptions from testing*** for materials known by science not to pose a lead or phthalate contamination hazard, such as fabrics, certified organic materials, and many natural materials such as wood, paper and bamboo. Manufacturers would be spared the costs of testing these materials, and testing labs and the CPSC could better focus their efforts on high-risk materials such as metals and paints.

3. ***Harmonization with European Standards.*** Accepting the stringent EU standards in the United States as sufficient for the requirements of CPSIA would save countless US businesses that import from or export to the EU from the costs of performing multiple tests. US and EU regulators would be able to work together to oversee the global marketplace.

4. ***Exempt permanent batch labeling*** of products for hand crafted and micro businesses that have small batch runs. While permanent labeling may be efficient with large runs of plastic products, it would be extremely difficult and cost prohibitive for small batches made from wood or fabric.

5. ***Revisit the retroactivity*** of the CPSIA based on a risk-based approach.

The Result

Fixing the CPSIA ***now before any more*** law-abiding and well-intentioned small companies are forced out of business will preserve the integrity of the original legislation, prevent political backlash, and refocuses the efforts of the CPSC to fulfill the law's original purpose. To date, some businesses have discontinued their children's lines or have closed altogether. Libraries are sequestering children's books printed prior to 1985. Thrift stores have removed children's products from their shelves. Several European toy manufacturers have pulled out of the US market. ATV and motor bike manufacturers and storefronts have removed inventory intended for children 12 and under, including replacement parts. Without common sense changes to the CPSIA, the tragic result will in fact not be increased product safety, but the closing of small businesses that were already providing safe products.

About the Handmade Toy Alliance

The Handmade Toy Alliance (www.handmadetoyalliance.org) represents small toymakers, children's product manufacturers, and independent retailers whose businesses cannot survive without repairing the CPSIA. We believe that these changes will not only help our businesses, but many other companies large and small who have been caught in a snarl of unintended consequences, affecting everything from apparel to educational materials for children with disabilities. We need common sense reform to preserve the heart and soul of American toys and children's products.

Risk Based Assessment Amendment to the CPSIA

Since it was passed into law in August, 2008, numerous industries have felt the impact of the unintended consequences of the Consumer Product Safety Improvement Act (CPSIA). Books, ATVs, thrift stores, school supplies, handmade toys, and clothing have all been negatively affected in ways which do not improve product safety or protect American jobs.

At the Handmade Toy Alliance, we have identified five key changes to the enforcement strategy of CPSIA which would dramatically reduce these negative impacts for our members. These include exclusions from testing for natural materials, component-based testing, and harmonization with EU standards.

However, it is now clear to us that a more fundamental change in the approach of the CPSIA is required in order to ensure the long term viability and diversity of children's products in the USA. Specifically, the Consumer Product Safety Commission (CPSC) should be given the discretion to implement the requirements of the CPSIA such as third party testing, age ranges of covered products, labeling requirements, and applicability of total lead content limits according to a risk-based approach.

This risk-based approach has been used effectively since 1986 in the State of California's landmark Proposition 65 law, giving the state the flexibility to identify and control substances that may pose hazards to children. The CPSC has also relied on this approach since its inception and has used risk analysis to target its research and enforcement initiatives. Under the CPSIA, however, the CPSC must now dedicate overwhelming time and effort to managing compliance for whole categories of products with little history of or cause for concern.

We propose that a technical amendment be created for the CPSIA that would allow the use of risk assessment to establish priorities, provide for common sense exemptions and set implementation deadlines. Under the law as currently written, a product intended for children ages 12 and under must be certified to be under 300 ppm by August of 2009 by a third party laboratory. A product can not be excluded if touching it would result in the absorption of "any lead", even if said contact contains *de minimis* risk or negligible risk of toxicity to the child. The wording of the CPSIA prevents the CPSC to do what they do best – assess risk.

Adding an amendment that outlines solely the regulatory discretion of the CPSC to assess risk while keeping intact the overall provisions of the law would allow for common sense exemptions that both the Commission would like to make and Congress intended to be included. The clear language of the statute as written is rigid. Safety in products is a priority, but without a risk based approach, this well intended children's safety law is irrevocably flawed. Using a scientifically based assessment of risk, the CPSIA will be strengthened, and the Commission can grant much needed and common sense, exemptions to small businesses that are creating safe products. This amendment will allow the CPSC to immediately address the products that pose the greatest risk to children while providing clear guidance to industry for the compliance of all products.

RE: The Consumer Product Safety Improvement Act and Small Business

Statement of
Michael E. Warring
American Educational Resources LLC
401 West Hickory Street
PO Box 2121
Fort Collins, CO 80522
Chippewa Falls, Wisconsin 54729
970-484-7445

STATEMENT OF MICHAEL E. WARRING
President, American Educational Products LLC
Fort Collins, Colorado and Chippewa Falls Wisconsin

Good afternoon, Mr. Chairman and distinguished Members of the Subcommittee. As the President of a small 70 employee company serving the educational manipulatives business, I am deeply troubled by the devastating impact of the Consumer Product Safety Improvement Act (CPSIA) on any small business serving the children's products market. As written, and currently implemented, this law will put the lives and well being of small businesses and their employees providing children's products at risk. Ironically, CPSIA will do more harm to children than it will ever prevent, as children begin to use products not designed for their bodies and capabilities, as their 'hands on' options in school programs (before, during and after hours) are significantly reduced, as their parents avenues of meeting their children's needs through thrift stores become limited and as their parents lose their livelihoods when small businesses serving these needs disappear.

This law in effect, makes every children's product dangerous in terms of lead, lead in paint and phthalates until proven otherwise. It applies this standard retroactively, currently and continuously. In other words, existing inventory must be tested, all future production runs must be tested, and conceivably, periodic testing must be done on previously tested inventory. As final nails in the coffin of small business, CPSIA imposes product tracking requirements on all children's products regardless of probable risk or limited annual volumes, as well as generating a documentation requirement that will easily consume one business day per year per product sold. For any single children's product not generating $20,000 a year or more in product margin, that product will disappear from the market, forever.

Others testifying before you will likely speak or write in generalities around the very real issues of CPSIA: burdensome compliance costs, increased and unmanageable regulatory and complexity issues, and an absurdly uncontrollable liability risk. I will endeavor to lay out a specific example of a product line from my business and how CPSIA will increase my cost on that product line. I will then extend that same set of concerns and costs to the totality of products that my business brings to market and quantify just what investment in testing dollars and additional employment I will need to make (assuming I could) to maintain my products in the market. Next, I will quantify what I can actually do and how that will change the dynamics of American Educational Products (AMEP). Finally, I will provide a real world example of a byproduct that this legislation has introduced to the children's products marketplace that I cannot overcome – fear.

The nature of AMEP's products is one of 'hands on' use by students and teachers to deliver educational content in a form that better engages the student. Products can be as simple as a ring used in a ring toss exercise up to the complexity of a completely self contained botany lab. 99% of our sales go to distribution companies or teacher stores (70% of that goes to 20 large distributors) who then market to teachers or schools. We do not do much in the way of direct sales, we are business to business. The group of products I will use for this presentation will be our inflatable line – products that you can find on our web site (www.amep.com) under 'Clever Catch', 'Tumble N. Teach', 'Toss N Talk, and 'Bio2'. The easiest of these to visualize is the 'Clever Catch'. Think of a 24 inch diameter beach ball that has been divided into sections through color changes, geometric patterns, that sort of process. Each small divided area contains a question number and a question. The students toss the ball around and wherever their left thumb lands they read

the question number and the question, then they answer the question. We currently have 74 titles ranging from addition/subtraction all the way up to physics, crossing all curriculum areas. Each of these 77 titles comes from the same manufacturer, using the same materials and color dyes. We purchase them in lots as small as 500 units all of the way up to 3,000 units depending on the annual demand. In 2008, we sold 40,300 clever catches or about 523 of each title on average. Our total revenue on these units was around $215,000 or about $2,800 per title. Now let's analyze what CPSIA does to this product line.

On average, each of these titles consists of a plastic valve, a non-latex vinyl ball, an average of six different colors, a vinyl patch kit and a multicolor teacher's guide packaged in plastic bag with a pre-punched header card. All of the dyes used throughout the line are the same, all of the valves are the same, and all of the vinyl balls are of the same base material, as are the patch kits and teacher's guides. CPSIA requires that I test each component of each title separately. An average ball therefore consists of a valve, a ball, six different colors, a patch kit and a teacher's guide or about ten components needing tested. On average, testing currently runs around $200 per component tested assuming one is only testing for lead, lead in paint and phthalates. There are additional costs to testing for choking and ASTM issues also mandated by CPSIA; however I am not going to consider those tests in this writing. On average then, I can expect to spend $2,000 per title (ten components at $200 per component). I need to test existing iaventory, I need to test each title each time I have a production run completed and there is still a yet to be defined 'periodic' testing requirement. In the prior paragraph I pointed out that we geaerate an average of $2,800 a year in ANNUAL REVENUE on each title. On average then, I really

cannot continue carrying any of these titles, as the product margin generated annually won't pay for one test run on average, never mind a potential future periodic requirement. I cannot spread the cost over a bigger production run because the balls have a shelf life in which time they must be inflated, about three years. There are some titles that sell less than 500 units in three years. Please note that we are THE manufacturer of these titles. Our sales volumes are THE worldwide annual sales volumes. The market will not grow to accommodate the financial ramifications of the legislation's requirements.

Now let's take the same group of 77 titles and test it differently. Component level testing might allow me to submit samples of all titles to be tested at one time and test each of the related components as one component. I would pay for one valve test ($200) rather than 77 valve tests ($15,400). The same would apply to colors, the ball itself, patch kits and teacher's guides. Assuming that we use about 60 different colors across the entire line, my total test cost for my existing inventory would be $12,800 rather than the $154,000 in the previous scenario. In reality, we may run production on 20 titles a year, so we're really comparing an ongoing cost of $40,000 (20 titles per production run at $2,000 per title) versus the $12,800, annually. That sounds much better - and it is - but in truth the testing cost for 20 titles each production run will consume more than two thirds of the product's annual product margin each year, leaving me one third of the annual product margin to address warehousing, marketing, development and administrative costs – administrative costs BEFORE CPSIA. Those costs have now increased significantly as well, as I will now detail.

CPSIA requires that each consumer product (not just children's products) have a 'General Certificate of Compliance' (GCC) made available to all parties in the supply

chain including the final consumer. Basically, the certificate requires that the manufacturer (or importer) certify that the product meets all regulations and standards applicable to the product, an ever changing target. That same certification will eventually also require that third party testing documents are made available for every test that is required. Finally, this certificate must be updated each time a production run is completed, as production dates and the new testing documents must be made available. As currently written, CPSIA requires that AMEP certify compliance with limits on lead in paint, lead in substrate, six different phthalates, soluble heavy metals not including lead, and ASTM F963 standards including physical, mechanical, flammability and choking requirements. Each requirement must be listed and certified individually, dates and sources of testing must be provided, as well as dates of manufacture. Finally, beginning this August, we must provide rather specific, production lot based permanent labeling on the product for tracking purposes. This is the mandatory administrative burden that has been placed on every producer of a consumer good in the United States by enactment of CPSIA.

I can only guess at the actual cost of administering these requirements. It is my belief that for AMEP this will be one business day per year per product to administrate the GCC, the labeling and the testing requirements. I appreciate that this estimate may sound excessive but the creation of the certificate itself is the easy part. It is the servicing of the certificate that will consume the bulk of our time. Staying with Clever Catches, AMEP sold this line to 456 different customers in 2008, almost all of which are distribution companies. Each year, these companies will require that we provide them GCC's for every product we sell to them. They will also require that I update the information I have provided them anytime any information changes. I can make this information available on

line. I can publish it all on DVD's and mail them out, I can do whatever I want to help my customer help themselves, but in the majority of the cases, my customers will demand that I provide JUST their information to them and in many cases using THEIR forms. It is a nonnegotiable price of getting their business. I think that it will take us 77 days a year to do that for the 77 clever catches. That is six customers a day in terms of providing recurring and revised documents, that is management of testing on two production runs a year (if I'm allowed component level testing), that is managing the digital and paper files to have documents available to anyone in the supply chain, so on so forth.

In total, AMEP sold about 5,700 different products to 2,800 customers using 500 different vendors in 2008. In a good year with our current products, we ship $12,000,000 to $15,000,000 in product. Our products must have low price points (our final user is a teacher, after all) and we are a low margin business. On average then, we sell $2,100 to $2,600 ANNUALLY for each product we bring to market. On average, most products offer more complexity than the Clever Catch and will have a higher testing cost. When one includes the ASTM testing that is now mandatory, I am being quite conservative in suggesting that the annual cost to test my inventory ONE TIME is equivalent to my ANNUAL REVENUES. Unfortunately, I will have to test my product more than one time a year in at least half of the cases due to multi-year production runs. In addition, I need to hire or dedicate staff hours in the neighborhood of 5,700 person-days annually to administrate the process. At 260 work days per year, I need to add 22 people to my 70 member organization, or find the equivalent in available hours from the existing group or invest in software that might reduce the load to half this number. The reason I need to do this is because federal law now says that it is illegal to sell my product unless I do so, even

though previous CPSC risk assessment methodologies would show that there is no inherent risk to children from most of this product. One day these products were safe, the next day they were 'deadly' unless I can prove otherwise, constantly.

In reality, some of my product is 'exempt' from these requirements – for instance, rock identification kits. Unfortunately, the burden is on me to prove this exemption on an annual basis to up to 2,800 customers. I will have to respond to my customer's demands for GCC's on the product, I will have to ward off the doubts and very real fear (or risk adversity) that a person could pay a $100,000 fine and/or go to prison for up to five years if AMEP is wrong in its' statements. Within the last month, AMEP lost a quote worth more than $5,000 and containing 80 hours of labor for a product that consists of three rocks in labeled plastic bag to be used to teach geology. We lost this quote because the end user was concerned about rocks 'being dangerous' to children. Those students will now be learning geology using posters. This event cemented for me that AMEP will be subject to 'death by a thousand paper cuts' because we cannot comply with CPSIA and even if we could, we could not overcome the irrational fear it has produced. I will end up closing one of two facilities, I will end up laying off half the work force and I will end up dropping the 90 or 95% of our products that do not provide sufficient product margin to pay for testing one to three times a year, never mind the increased administrative time, annually. Once we do that, we will be less desirable as a supplier to our distributors. We will eventually have to look at selling more volume directly. At some point, we become little more than a business being run out of a garage by half a dozen employees. It is just a question of how long it takes.

I have written to (and visited with) most of the Congressional Representatives or their staff serving the two House Districts and the two states in which AMEP has facilities. I have written to Secretary Arne Duncan and the President's office. I have communicated with these party's myriad times – and do so again now. I have offered to provide any level of information, anytime, anywhere on this topic. I am pleading with you to apply the necessary energy and political willpower to bring about change on CPSIA. There are businesses out there that consist of an individual working out of their garage addressing very real and needed niches of children's products that will no longer be able to do. There are companies like AMEP that will die a slower death, but will ultimately be shuttered. CPSIA, while well intentioned, is not based on the science of risk assessment but is instead an over reaction to 'fix' a system that was not broken – recalls were invoked and executed, fines were levied, practices were changed by the culpable parties. It was written based on a perception that all children's products are produced and sold in quantities that allow companies like Hasbro, Wal-Mart and Target tu support the cost of testing and excessive administrative requirements. I have tried to demonstrate that this is not the case in reality. If I can offer any additional information that will compel action on the matter, please let me know. I will do whatever I can to prevent further harm to our nation's youth from this misguided response called CPSIA to a nonexistent threat. In assisting, you will uot only be better protecting our nation's children but also protecting that part of America's small business community that serves the children's market. Thank you for providing the forum and taking the time to consider my views on this matter.

The effects of CPSIA on my resale store:

I am the owner/operator of From My Room in Naperville, Illinois. We opened in November 2006 as a consignment resale store for kids and moms-to-be. We were welcomed by the community and are told on a regular basis that we provide a great community service. Those selling their items are glad to get some cash for them and those buying them are glad to get clothing, toys, books and other items at amazingly low prices. Many people tell me they simply don't have the money to buy new, even at WalMart and don't know where they would buy things if not for my store.

Enter the CPSIA.

This law was thrust upon us with virtually no notice. If I obey the law as it is written, I will no longer be able to sell clothing, toys, books or other items designed for children 12 and under. If I were to follow this law, I would now be out of business. What I have done is to take very few toys but am still taking clothing because people need to buy it. Other neighborhood resale stores are ignoring CPSIA and continuing to sell toys which has hurt my business because I have lost customers to them. I have begun to replace my toy and equipment section with adult clothing to try and offset the loss from other items. This will take some time because people know me as a kids resale store and don't think to come here for teen or adult clothing. In response to the negative publicity surrounding CPSIA , many of my customers now fear buying anything used. And the ones that want to buy toys are disappointed that I have very few to sell. While toys may not seem like a necessity, people with limited incomes want to give their kids some happiness at a low price.

I also have supported local craftspeople by allowing them to sell things in my store. Due to the increased regulations of CPSIA I will no longer be able to do that since they cannot afford the new testing requirements.

So sales are down, when they should be up in response to a poor economy.

When the stay on enforcement runs out in February 2010, I will be out of business unless this law is changed. I have no way to tell which items exceed the lead limits proscribed in the CPSIA so I will be unable to accept any children's items that are more than a few months old. My customers will have greater difficulty finding what they need for their kids.

This effort to protect kids will result in many kids not having the clothes and shoes that they need. Doesn't this have value? The vast majority of children's items do not exceed the limits but all must be refused. Who is harmed by this law? I am harmed. My family is harmed. My consignors are harmed. My customers are harmed. The community is harmed. Who benefits from this? I truly can't think of anyone except perhaps the testing companies. I urge you to consider the harm this law is doing and work to put a stay on the entire law until it can be reviewed and rewritten to provide common sense application and phase-in time. This law was not a partisan issue when it was passed and should not become one now.

If I can help in any way, let me know. Thank you for your attention to this matter.

My name is Melanie Tommey and I am the owner of Mel's Country Crafts in Sand Springs, OK. Let me first state, that I understand the reason the CPSIA was passed by Congress, and I completely support the idea of keeping our children safe from lead and phthalate contamination. However, this law actually does far more than that, and will, if left unchanged, actually do more harm than good, to people's lives and the US economy as a whole, and without actually improving product safety.

I have had my business since 1999. I have steadily worked over the years to expand and grow my business, and last fall, upon learning that I was to be laid off from my primary job, I purchased a home embroidery machine. My goal for 2009 was to expand into embroidered items, such as t-shirts, baby bibs and blankets, towels, etc. I sell my items at the Made In Oklahoma Craft Mall in Tulsa, and I participate in several craft shows each year. I make quality handcrafted items at an affordable price.

The CPSIA will impact my plans. I purchased thousands of dollars worth of supplies for my 2009 goals before I had even heard of this new law. I did not learn of the details until December, after my father saw a brief item on the news. Upon reading the law, I was alarmed at the scope of it and the severe restrictions it places on small businesses such as mine, as well as so many others. I also noted that there is a funding provision to grow the CPSC, and provides for the hiring of 500 inspectors, as well as allowing state's attorney generals to enforce it. The law even mentions yard sales and thrift stores!

To give you a scale of my business, last year, as a part time venture, I only had $3200 in sales, before expenses. This year, since I'm now taking it full time due to my previous lay-off, I hope to have sales of at least $15,000 before expenses. But if I have to try to comply with CPSIA, I cannot do that, and would have to stop offering all children's products, write off the supplies as a loss on my tax return next year, and then try to explain to potential customers why I can't make them a baby blanket or bib. And since the majority of this country still has no idea about the CPSIA, nor it's far-reaching consequences, they generally look at me like I've come from another planet when I inform them about the law. Their response, is usually one of surprise and disbelief...and then they state "that's stupid, Congress wouldn't do that". I tell them it's already happened. Also, I assure you, if I do comply and don't sell, others will ignore the law and sell, so by being honest, I'm also penalized by loss of revenue.

Let me address a few of my concerns. There are too many items swept up in this law that do not pose a risk, because they are made from inherently lead free materials. My t-shirts, baby blankets and 100% cotton baby bibs with Velcro closure, fall into this category. In all of the years the CPSC has been issuing product recalls due to lead contamination, I've never heard of a child being lead poisoned by a t-shirt, their blanket or their bib. And if I embroider on it, using 100% polyester thread, it doesn't suddenly become dangerous.

My first concern is the testing requirements. From what I've seen about testing costs, these average about $75 to $100 for each part of the product. A blue 100% cotton bib with Velcro closure that uses 4 different colors of thread in the embroidery design, would cost approximately $500 to test... all for an item that I would most likely sell for about $5.00. And that's just the lead testing...since this is an "instrument of feeding" for a child under 4, it would also have to be tested for phthlates, a chemical used in certain plastic products. That testing is far more expensive and would be an additional $1500. So I would have to pay a total of $2,000 to test each batch of bibs. I'm certain that I will not find a consumer who would pay $2000 for a simple embroidered baby bib. The way CPSIA is written, as soon as I embroider on that bib, I become a manufacturer, therefore I am responsible for the testing and the certification to prove it is safe to sell. If I do not do this, and I am caught, I am then faced with a fine of at least $100,000. It wouldn't be because the bib was unsafe...only that I didn't pay to prove it to the government. Under this law, I can have a safe lead free item, but if it's not certified, I've violated the law. This is a technical violation and does nothing to ensure safety. In the state of Oklahoma, if I provide tobacco or alcohol to a minor, I'm only fined $100 for the tobacco and $500 on the alcohol violation. It seems a far greater crime to me to provide alcohol to a minor over selling an untested baby bib.

My next concern, is the labeling provision, which is a quagmire of confusing and again, expensive requirements, which would place a huge burden on crafters and small businesses like myself. My items have the labels they came with that the original manufacturer placed on them. But other than a temporary price tag, I don't add any type of label to that. I don't track my inventory with SKU numbers and bar codes. I typically keep a written record, and then enter it into an excel spreadsheet. I make things as I need them, or as people order them, and do not keep a large inventory on hand of finished products. Often my items are one of a kind or personalized. If I have to add labels to my items, that is also cost prohibitive and I cannot do it.

I am asking Congress to make amendments to this law. I suggest that the law be changed to certain items for children 5 years of age or younger, since many studies have shown that most children stop mouthing everything they touch by the age of 3. It should only apply to products and materials that are LIKELY to include lead and/or phthalates. Inherently lead free products and materials should be automatically exempted.

This change alone, would frankly give relief to many of the organizations, industries and individuals that are appealing for changes to this law. Then, for those items that are for 5 and under, component testing must be the order of the day. It is overkill to have a manufacturer test a zipper or a snap, then to expect that same zipper or snap to be tested again when it's actually used in a garment or other product.

My third concern is with the fact that it grants power to each state's Attorney General. Therefore, this law could actually be interpreted and enforced in 50 different ways, and it would depend upon the state you are in, or where you sell your products. Some Attorney Generals have stated they intend to vigorously enforce this law, in spite of what the CPSC even recommends. Businesses and consumers alike should be very worried about this turn of events.

In summary, as a small business owner, who has now taken her business full time, this law could severely hamper my ability to operate. I'm somewhat fortunate in that children's products are only a part of my business, but at a time, when I need to try to make every possible product to earn every possible dollar that I can so that I don't file bankruptcy or lose my house, CPSIA could indeed cause that to happen. The assumption of risks, where there are none, and the prohibitive testing and compliance costs, will only kill small business in America. And in the end, children will not be any safer than they were before. They, and their parents, will just have less choice as consumers, and small businesses like myself could be closed, file bankruptcy and do further economic damage to our already fragile economy.

Thank you for your time and consideration of this very important matter.

Erik Lieberman
House Small Business Committee

Re: Written Testimony for the May 14, 2009 House Small Business Subcommittee on Investigations and Oversight Hearing "The Consumer Product Safety Improvement Act and Small Business"

Dear Mr. Lieberman,

Please add the following testimony to the Congressional Record for the May 14, 2009 Hearing of the House Small Business Subcommittee on Investigations and Oversight regarding the CPSIA.

My husband and I own a small independent toy and baby goods store in St. Paul, MN. In our eleven years of business, we feel that we have earned the trust of our customers and our community by offering high-quality products made by other small businesses. Whenever possible, we have sought to provide alternatives to products made in China and have helped promote awareness of quality American and European-made products.

After the CPSIA, however, our task has become much more difficult. Because the CPSIA's testing standards are not aligned with European Union standards, we have lost access to many of our small European manufacturers. Many of these companies have already tested their products to EU standards, but simply cannot afford to retest their entire line to CPSIA rules. With the larger companies who have remained available to us, prices have increased dramatically in the past nine months, making it very difficult for us to compete in the current economy.

We are also very concerned about the dozens of small American companies we buy from. Many have attempted to test their products but have found that third party labs are charging exorbitant prices. One of our suppliers, Camden Rose of Ann Arbor, Michigan, was quoted $4,000 to test a single wooden rattle, of which they manufacture only a few hundred per year.

Although many provisions of the CPSIA have been stayed by the CPSC, we are still feeling the effects of those provisions which have not been stayed, in particular the testing requirements for painted products. We are simply unable to buy anything with paint on it unless it has been made by a company large enough to absorb testing costs. We have discontinued dozens of products from wooden German baby rattles to Amish-made wagons

because of this one rule alone. In many cases, we have actually been forced to buy more from products made in China because non-Chinese alternatives are no longer compliant.

We are very concerned that we will be losing dozens more suppliers if the CPSIA isn't fixed before the CPSC's stay of enforcement expires. The CPSC has made it clear that they lack the authority within the law to offer enough flexibility to protect small businesses.

We strongly support the goals of the Handmade Toy Alliance, which we feel would protect small business without creating loopholes for large overseas manufacturers. These goals include:

- Exemptions from testing for natural materials and materials known by the science not to contain lead or phthalates.
- The allowance of component-based testing, which would allow small manufacturers to test their component parts instead of each finished product.
- Harmonization of US product safety standards with EU standards.
- Exemptions from batch-labeling requirements for small manufacturers.

We feel that these changes, if enacted, would preserve hundreds of unique small businesses and would allow us to continue to offer unique quality products for our customers.

We strongly urge all members of Congress to reexamine the CPSIA and act now to improve the law and save small businesses.

Sincerely,

Millie Adelsheim and Dan Marshall

STATEMENT FOR THE RECORD

BY

PRINTING INDUSTRIES OF AMERICA, INC.

BEFORE THE

HOUSE COMMITTEE ON SMALL BUSINESS
SUBCOMMITTEE ON INVESTIGATIONS AND OVERSIGHT

"The Consumer Product Safety Improvement Act and Small Business"

May 14, 2009

Printing Industries of America, Inc. is pleased to present this statement for the record before the House Committee on Small Business Subcommittee on Investigations and Oversight, and thanks Chairman Altmire for holding a hearing to examine the important topic of the Consumer Product Safety Improvement Act's (CPSIA) effect on small businesses.

Printing Industries of America, the world's largest graphic arts trade association, represents an industry with more than $174.5 billion in revenue and 1.05 million employees. Book printing specifically employs nearly 50,000 workers and totals more than $7 billion in shipments.

The CPSIA, intended to keep children's products safe from dangerous chemicals, will also apply to ordinary children's books and other printed material, adversely impacting the printing industry despite Congressional intent. Although the deadline to comply with testing and certification requirements of the CPSIA has been delayed for one year, this has not provided necessary, practical relief in the marketplace. Despite the one-year stay, retailers, vendors, and other print customers continue to request that printers test and certify products at this time, well in advance of the February 10, 2010 deadline.

Economic Impact of CPSIA on Small Printers

The CPSIA is economically devastating to the printing industry, especially small printing companies. Consider the following:

- With tests costing approximately $300 to $500 per product, and in some cases up to $1,000 or more for specialty books, without an exemption, the testing costs for printers will be astronomical. Since many printers publish hundreds of titles, they may have to test each separate book, even if the raw materials were identical across an entire line of books. The cost to test for total lead content and phthalates in products could escalate into millions of dollars per printer.

- Currently labs are experiencing a four-to-six-week backlog for results, and as the testing and certification deadline approaches, this delay is likely to increase significantly. Printers cannot afford and are not equipped to store books at warehouses as they wait for lab results.

- Printers and publishers may have to test products both immediately to meet the demands of customers in order to be in compliance and again later in the year when the CPSC announces laboratory accreditation standards. Essentially, the testing costs and delays will be doubled.

- Printing Industries is aware of one instance in which a printer submitted a Section 15(b) report as required by statute for a packaging component that failed to meet the CPSIA phthalate limits. Upon reviewing the case, the CPSC's Office of Compliance notified the printer that the product, "when used as intended as part of a toy product, would not exceed the phthalate limits when tested based on the entire weight of the toy product." This surprising determination by the CPSC's Office of Compliance unfortunately came too late, as the printer had already purchased $90,000 of new inventory to replace a product that testing had shown failed to meet the CPSIA's phthalate limits. This example highlights the economic impact the lack of clear guidance has caused to the industry.

Product Safety Testing & Data

Printing Industries of America, along with the Association of American Publishers (AAP) and other organizations and companies, has been collecting testing data on industry raw materials and finished products. As of April 17, 2009, the printing and publishing industry has submitted over 100 ink, toner, and coating test results, over 50 adhesive and wire test results, and over 255 finished product test results, including over 40 results for other printed material, all without a single negative test result. All 400 tests showed that the raw materials used in and the products manufactured by the industry inherently contain lead and phthalates below the CPSIA limits. This data includes test results on more than 10 books printed before 1985, including books from the 1950s, 1960s, and 1970s. In short, ordinary children's books and other printed material (such as flashcards or paper bookmarks) are child-safe.

Industry Request for Determination by CPSIA

The printing and publishing industry has been fully committed to pursuing the appropriate administrative channels within the CPSC in order to achieve a determination that children's

books and other printed material be exempt from the Act's testing and certification requirements, as well as from the Act's lead content limits. Industry representatives have submitted the necessary scientific data to support this request and continue to work diligently so the manufacturing, sales, and consumer use of this proven class of child-safe products remain viable.

Thank you for the opportunity to comment on this important topic.

May 13, 2009

My name is Jill Chuckas and I own a small hand crafted children's accessories business called Crafty Baby (www.craftybaby.com). In December, when I learned that the CPSIA would indeed affect my business, I joined and quickly took on a leadership role within the Handmade Toy Alliance. Currently, I am on the executive board and hold the position of Secretary. Our grass roots alliance of 334 businesses, represent children's product artisans and manufacturers and retailers of children's products throughout the country.

As a hand crafted artist, I am involved in every aspect of my business – from production to sales, advertising and marketing to accounts receivable. When the toy recalls began, my business increased. People were seeking out hand crafted and made in the US products in droves. When Congress first spoke of this "toy safety" legislation, I applauded their efforts along with the rest of the country. In December of 2008, though, I read the fine print. I, along with many others, quickly realized that this law, meant to regulate the companies that had betrayed the countries trust, would effectively put me out of business in less than a year. Not because my products are unsafe, but because I simply can not afford the cost prohibitive, redundant testing protocol that this law stipulates.

For example, I create a soft clutch ball for children ages 4 months and up. Like most small scale manufacturers and artists, I work in small batches – usually about 10 in a production run. The way the law is currently written, as of August of this year, I would need to send one clutch ball of each run in to a third party accredited laboratory to test for lead and phthalates - a component in plastics. There that are no plastics on or in the clutch ball, but because it is intended for children under 3, it would need to be evaluated for this toxin as well. The test is destructive, so I would not get my clutch ball back. And, they would break it down into components – 5 for this product - and perform the tests – to the tune of an average price of $75 per component for lead and $250 per component for phthalates. That totals $1500 to test 1 clutch ball that retails for $16.50.

Once I receive the test results, I would need to permanently mark each clutch ball with a distinguishing label listing place of manufacture, company information, date of manufacture and identifying numbers for the batch – different labels for every batch, or run, of 10 clutch balls. The tracking on this alone is burdensome in and of itself, and would only prove to increase administrative costs without any safety enhancements. For one of a kind artists, this process would be impossible.

Rather than increasing safety, we would be putting artists and small production businesses out of business. The very people that we as a country have turned to for quality children's products would no longer be available. Instead, we need to put risk assessment back into the CPSIA. A technical amendment, focusing on the issue of risk in products for children, is a logical solution to the problems with the CPSIA. This simple change would ensure that the safety aspects which are essential to our country's children continue to be enforced, but would allow small businesses producing safe products the ability to continue to do what they do best.

Thank you for the committee's willingness to open the CPSIA up for discussion in the House of Representatives. If subsequent hearings are scheduled, I would be happy to come to Washington to discuss these issues further. Please feel free to contact me directly at your convenience.

Best Regards,

Jill Chuckas
Owner, Designer

[illegible]

Statement from American Apparel & Footwear Association to the Subcommittee on Investigations and Oversight: "How the Consumer Product Safety Improvement Act Impacts Small Businesses"

May 14, 2009

The American Apparel & Footwear Association (AAFA) is the national trade association that represents the apparel and footwear industry, including many small businesses. Our members (which include manufacturers, retailers, distributors, importers, suppliers and service providers, including many small businesses) thank you for holding this hearing to explore how the Consumer Product Safety Improvement Act (CPSIA) impacts small businesses." Implementation of the CPSIA is an extremely important topic and a Congressional hearing to discuss the impact of the legislation on businesses is long overdue.

AAFA's members are committed to supplying and selling safe and compliant consumer products. Our members strongly support the goals of the CPSIA and believe the landmark legislation was an important contribution in efforts to strengthen product safety laws and enforcement to ensure only safe and compliant products are sold to our nation's children. Out of the 6,445,908,000 apparel and footwear items sold in the United States last year, only 0.0082% were recalled. While we believe any recalls are unacceptable, we are proud that this recall rate is so low.

However, while well-intentioned, this legislation contains several provisions that impose new and burdensome requirements that have caused considerable disruption to businesses without adding significant improvements to overall product safety. AAFA respectfully submits the following concerns our members have faced since the implementation of the CPSIA for public record. We further hope that Congress can work together with the Consumer Product Safety Commission (CPSC) to effectively carry out the mandates of the CPSIA while addressing these concerns.

Testing

The CPSIA's extensive third party testing requirement for all children's products is redundant, overly burdensome, and extremely harmful to businesses. Currently, the CPSIA requires products to be tested as finished products rather than at the component level. Under this scenario, the cost of testing exponentially increases as a company has to repeatedly test the same components applied on different products. Product-based testing is particularly problematic for the apparel and footwear industry that not only sells different products, but different styles of products. Further, testing the final product does not actually make a safer product. Our members believe that testing should be done at the beginning of the supply chain when components are sourced so that product safety can be engineered into an article. Thus, if a manufacturer discovers a product defect, resolving the issue is far less problematic.

Understanding the costs associated with the new testing regime mandated by the CPSIA, the CPSC issued a temporary stay of testing and certification for many standards. However, our industry still has to have all children's products with surface coatings (including screen prints, paint, heat transfers, etc.) tested for lead in paint by a third party testing facility. And unless the rules are changed, all children's standards will have to be tested at the product level, when the stay is lifted on February 10, 2010.

Lead Standards: Retroactivity and Risk

The retroactive nature of the lead standard that came into effect on February 10, 2009 has created considerable havoc for companies. Companies who manufactured inherently safe products that were compliant with all pre-existing product safety standards now have to figure out at how to apply new standards to inventory in warehouses and on store shelves. This has resulted in significant business disruption, financial losses and disposal/destruction costs for products that may not comply with the new standards but also do not present a demonstrable risk to children's health. To complicate the matter further, because the lead limit retroactively drops to 300ppm in August, 2009, products that are considered "safe" today under the new CPSIA limits are arbitrarily declared "unsafe" once the new standard kicks in.

While the CPSC issued a stay of testing and certification for the lead standard, the stay offers limited relief to companies because the products still have to be compliant with the underlying standard. This creates a bit of a "Catch-22" since the only way a company can be fully sure whether the product is compliant is to test. Moreover, retailer customers, concerned about the ramifications of selling a non-compliant product, expect vendors to certify that their products meet the new standard. In fact, many retailers are requiring manufacturers be compliant with stricter limits and at earlier dates than what is legally required. When a company can not retroactively test or certify a product because the costs are unsustainable, or because it is simply impossible to do so, the products are returned and often destroyed even if the products do not actually present a product safety concern.

Unfortunately, the CPSIA does not appear to allow the CPSC to regulate according to risk. The new lead standard applies broadly to all children's products. Therefore, many non-compliant materials and products have been destroyed at great economic cost even though health and safety concerns are negligible if at all present. For example, materials found in a shoe, particularly one manufactured for an older child, are far less likely to be mouthed than materials in a piece of jewelry. However, the lead standard applies equally to all children's products – regardless of risk and behavior sciences. While the CPSIA does permit the CPSC to exempt certain products from the lead standard, the language is so tight that the CPSC has not yet even been able to issue a ruling exempting inherently lead-free products (such as fabrics and textiles) let alone products that may contain lead but do not present a risk of lead absorption.

Guidance and Regulations

Due to tight deadlines and insufficient resources, the CPSC has not been able to publish sufficient comprehensive guidance to help businesses interpret the vague regulatory language and carry out the new requirements. Even though President Obama has planned to increase the CPSC budget, the tight CPSIA deadlines provide little implement relief. Consequently, companies have acted on different, and sometimes conflicting, views on how to comply. For example, the CPSIA lead standard applies to "any part of the product." In other words – every component on the product must be compliant. However, the definition of component remains

vague. Is a zipper a component? Or does a company have to take apart the zipper and test the individual teeth, slide, pull, stopper, fabric, etc.? Other key terms remain undefined like "practicable" and "reasonable testing program" even though these definitions are critical in determining compliance.

Companies similarly are extremely confused about the new tracking label requirement that comes into effect on August 14 – three months from today. Stakeholders still do not have clear answers to basic questions like:

- What does "to the extent practicable" mean?
- What information satisfies the "location" requirement?
- What exactly is the date of production? Can a range be used? How specific does the range need to be?
- How does one account for a product that is manufactured in multiple locations by multiple entities? Some products are manufactured in one factory, shipped, then processed further in another facility. Who needs to label these products?
- What is "cohort information"? How precise does this information need to be?
- What exactly is a "product"? Are multi-item sets considered a single product?

We can draw upon our experience to make several observations how we can go forward with the CPSIA in ways that will benefit small businesses. Where possible, the Commission should immediately use whatever regulatory flexibility exists in the CPSIA. But when that is not possible, Congress must act urgently to make necessary changes through the legislative process.

First, Congress must eliminate the retroactive application of product safety standards, including those that apply for lead, lead in paint, and phthalates.

Second, the CPSC must move quickly to approve pending determinations that a range of products – including textiles -- do not contain lead. Congress must also modify the law to make sure the CPSC has authority to make commonsense determinations for products that may have lead in excess of the standard but have a *de minimis* risk of lead absorption.

Third, the CPSC and Congress need to revise the testing mandates, which are currently costing the industry millions of dollars without any appreciable gain in product safety or public health. The current system created by the CPSIA features redundant and excessive testing and creates severe testing backlogs at the limited number of accredited facilities. With a "test everything" mentality, we no longer have a system that focuses on risk and potential hazards. Instead, the CPSIA treats every article and component equally, regardless of risk. As a result, product safety suffers. We should immediately move to a component-level testing program for only those materials that present risk. Moreover, companies should be able to rely upon the validated certifications of their suppliers – a system that is already operating well with the Flammable Fabrics Act. Finally, the Commission should ensure that more labs and testing protocols have a chance to be accredited and accepted.

Fourth, we should delay the effective dates of these new standards until after full regulations are developed and published. Federal safety standards, labeling regulations, and certification and documentation rules under the CPSIA should be created and enforced ONLY after the CPSC has issued comprehensive regulations and educated all stakeholders on the new requirements. We can start by delaying the tracking label regulations that take effect on August 14, 2009.

This is a complex law that will become progressively harder to comply with unless urgent reforms are taken now. We have already seen companies in our industry go out of business, lay off workers, and incur other significant costs with no discernible benefit to public health and safety. Many are still grappling with basic questions or making multi-million dollar decisions based on their best guesses. The current piecemeal system is intolerable and has left our nation's product safety system in a state of considerable confusion and uncertainty. With little direction, retailers have been left to create their own contradictory programs that have added additional costs to manufacturers with no gain in product safety or public health. We can't let this situation persist.

Thank you again for holding this extremely important hearing to discuss the impact of the CPSIA. While it was absolutely necessary for Congress to reform consumer product safety regulations last year, the new requirements have caused a devastating economic impact to the apparel and footwear industry. Going forward, Congress must work with the CPSC to address implementation concerns and establish a strong, risk-based regulatory regime that does not unduly burden compliant companies, including the many small businesses in our industry.

Terrapin Toys™
makers of Mary's Softdough

May 13, 2009

I am writing in regards to the Consumer Products Safety Improvement Act of 2008 (CPSIA). I am the owner of a small toy company in Eugene Oregon called Terrapin Toys. We manufacture a kid's product called Mary's Softdough. I have been in business for 20 years and this is one of the biggest challenges I have had. I agree that toy safety should be a high priority but I believe the new Consumer Products Safety Improvement Act of 2008 (CPSIA) went too far and needs to be modified to consider all aspects of toy manufacturing. It is placing a financial burden on small business while not addressing the safety issue. In this economic times we are struggling to stay in business and the new regulations have added over $5,000 in testing cost alone not to mention the cost to implement the labeling and tracking requirements. I have also spent countless hours on researching and working to try to comply with the new regulations. This is all time and money that I am taking away from my company, while not providing any benefits. I have never had a product recall and because we manufacture all our products locally we have control of the production. Nothing in this new law would improve the safety of our products.
I am writing to ask that you support new reform regulation.

1. Allow small manufacturers to use the testing and certification that their component suppliers have done to certify that the components do not contain an impermissible amount of lead
2. Exempt thrift stores, yard sales, consignments shops and other re-sellers
3. Prevent retro-active enforcement of the act
4. Provide a Good-Faith Exemption
5. Require the CPSC to provide small businesses with a compliance guide (this last one would really help to clarify what is needed)

Again, I really feel that we all need to do something about toy safety but not at the cost of small business. Most toy companies, from toy stores to manufactures, are committed to having safe, fun toys for kids. Please make it a priority to create reasonable regulation for our kids while keeping small companies in business.

Thank You

Mary Newell

WRITTEN TESTIMONY OF STEVE BURNSIDE,

OWNER, DSD KAWASAKI,

PARKERSBURG, WEST VIRGINIA

House Committee on Small Business

Subcommittee on Investigations and Oversight

Hearing: "The Consumer Product Safety Improvement Act and Small Business"

May 14, 2009

Chairman Altmire and members of the Subcommittee on Investigations and Oversight of the Committee on Small Business, thank you for the opportunity to submit testimony regarding the significant impact that the Consumer Product Safety Improvement Act's lead content provisions have had on motorcycle and ATV dealers.

I represent a small town community: Parkersburg, West Virginia, where I own a little motorcycle and ATV dealership. Some people may not understand that, in our world, this off-road segment of motorcycles and ATVs is used by everybody for farming, fishing, hunting; it's just fun. That's the biggest segment of our business by far and away.

This past couple of years in this downturned economy, we have suffered some losses already that have been tough to overcome. Since the economy took a turn for the worse in the Fall of 2008, we had been waiting for this Spring – our main selling and riding season – to be our salvation.

People are not spending money like they did; what money they do have they are spending on the kids, especially in our segment. But now they can't because of the new law passed by Congress.

Since the CPSIA lead ban on youth motorcycles and ATVs, we have had somewhere from twenty-five to thirty-five percent of our business jerked out from underneath us. But that is not the end of the losses. Many of the people that come to my business will not purchase vehicles for themselves because they cannot buy the proper age-size for their kids. They are just getting out of the game entirely because it is a family sport.

The ones that we really are concerned about are those who are going to put kids on the wrong size product. We do the right thing and tell parents they cannot and should not buy adult vehicles for their kids, but it is a tough spot to be in because we are hungry for sales.

We have embraced families ever since we started our business in 2003. I have had everybody from toddlers to teenagers in my shop and they are not chewing, eating or licking the bike, or anything that will cause them to ingest lead. And even the toddlers, they want to be on the seat and holding the handlebars. That's what they want to do -- "Mom and Dad get me up on there," when they're not trying to climb on there themselves. Lead consumption from motorcycles and ATVs is not an issue - we've never seen it be an issue and we don't feel like it's necessary to treat it as an issue.

Last month, the CPSC issued a stay of enforcement of the lead content provisions for ATVs and motorcycles to try to get dealers to start selling again and keep kids off of adult size vehicles. But the stay does not solve the problem. The reality is that this stay of enforcement is simply inadequate to protect dealers, like me, who wish to sell these products.

First, the stay requires manufacturers to provide unnecessary and burdensome information about parts of these vehicles. But the CPSC staff has already found these parts present no health hazard to children. And the manufacturers have already explained functional alternatives to the lead are not available.

In addition, the stay does not prevent state Attorneys General from taking enforcement action against companies who distribute or dealers who sell these products. Youth ATVs and motorcycles sold under the stay are still a "banned hazardous product" in the hands of customers. The stay does not protect dealers from private lawsuits based upon the legal status of these vehicles as "banned" products either. Dealers and other small businesses should not have to face these risks because the CPSC provided inadequate relief and Congress has not yet taken action to fix the law.

Finally, the stay is only temporary, with a stated duration of two years. There is nothing to prevent a Commission with new and different members, like those nominated by the President last week, from revoking it at any time, leaving manufacturers and dealers subject to enforcement for products sold under the stay.

Since the stay does not provide the necessary relief to manufacturers or dealers, some manufacturers and dealers simply will not sell youth model ATVs and motorcycles, resulting in more lost sales and more children 12 and under riding larger, faster, adult-size vehicles where they are at risk of serious injury. Those that do sell face serious business and legal risks.

The CPSC should have granted the industry's petition to exclude ATVs and motorcycles from the CPSIA lead content limits. The petition was based upon science showing that the small amounts of lead contained in metal parts of these vehicles do not present any health hazard to children who use them. Yet, the Commissioners said that they had no authority to grant the petition because of the way the CPSIA exclusion provision is written by Congress.

Now, the only way to obtain complete and permanent relief for manufacturers, dealers and riders from this ban is for Congress to take action. The CPSIA must be amended to grant an exemption for youth ATVs and motorcycles which contain small amounts of lead that present no health risk to children. This is the approach taken by H.R. 1587, a bill introduced by Congressman Denny Rehberg with 38 bi-partisan co-sponsors. A separate bill introduced by Congressman Joe Barton, H.R. 1815, takes an alternative approach by revising the CPSIA exclusion provision to give the CPSC authority to grant exemptions in situations, such as youth ATVs and off-highway motorcycles, where small amounts of lead in components present no health hazard to children.

I urge Congress to provide manufacturers, dealers and riders with a permanent end to the ban on youth model ATVs and motorcycles by adopting such an amendment to the CPSIA.

Thank you for giving me the opportunity to present how CPSIA is impacting my industry and my livelihood.

TESTIMONY OF

TOY INDUSTRY ASSOCIATION (TIA)

SUBMITTED TO

HOUSE SMALL BUSINESS COMMITTEE,
SUBCOMMITTEE ON INVESTIGATIONS AND OVERSIGHT

"THE CONSUMER PRODUCT SAFETY IMPROVEMENT ACT AND SMALL BUSINESS"

MAY 14, 2009

www.toyassociation.org

Suite 500 New York, NY 10017 Tel 212 675 1141 Fax 212 633 1797

Toy Industry Association, Inc.

www.toyassociation.org

The following testimony on the Consumer Product Safety Improvement Act of 2008 (CPSIA), is submitted on behalf of Toy Industry Association (TIA). TIA is a not-for-profit trade association composed of more than five hundred (500) members, both large and small in size, located throughout North America. Roughly 75% of membership consists of small businesses.

TIA and its members have long been leaders in toy safety. In this role, we develop safety standards for toys, working with industry, government, consumer organizations, and medical experts. The U.S.'s risk-based standards are widely used as models around the globe. We also serve to educate industry on these standards so that they comply and educate parents and caregivers on choosing appropriate toys and ensuring safe play.

TIA hopes that this testimony submitted for the record will help serve our goal of ensuring that the dramatic new requirements for marking an enormous array of vastly different children's toys and/or packaging mandated by the CPSIA is implemented in a thoughtful and orderly fashion. TIA requests the Committee note these challenges, as outlined in testimony by many small businesses appearing before it today. Further, we hope these comments will help the Committee recognize that flexible, practical and a common sense solution, grounded in sound hazard analysis is required and that this may have to be an evolving process for the Commission. This is why TIA supported the National Association of Manufacturers (NAM) Request for a Stay of Enforcement and

1115 Broadway Suite 509 New York NY 10010 • Tel 212 675.1141 Fax 212 633 1429 info@toyassociation.org

why TIA believes that great care must be employed, so as not to unduly burden small manufacturers and importers when imposing such regulatory requirements.

Our own extensive survey of members after chaotic implementation of CPSIA requirements in the marketplace demonstrated problems faced by many small businesses. As passed, the new CPSIA requirements appear to have resulted in a $2 billion negative impact within our industry alone, at the crux of the current economic crisis. We hope that Congress will recognize that the majority of small businesses could use relief from imposition of costly and burdensome requirements in a haphazard manner.

TIA has submitted extensive comments to CPSC in an effort to ensure the realistic and reasonable implementation of many of the CPSIA requirements. We were pleased that the CPSC adopted many of our collaborative recommendations on reduction of costly paint testing by allowing composite testing. Unfortunately this has been the rare exception rather than the rule.

1115 Broadway Suite 400 New York NY 10010 • Tel 212.675.1141 Fax 212.633.1429 info@toyassociation.org

CPSIA IMPLEMENTATION ISSUES

Highly publicized recalls involving only a small fraction of total products made in China in 2007 focused attention on the CPSC's resources, including its legal regulatory authority. In the 110th Congress, legislation (H.R. 4040 and S. 2663) to strengthen the Commission was passed and a conference agreement (H.Rept. 110-787) was reached by both chambers, and CPSIA (CPSIA/P.L.110-314) was signed into law by then President George W. Bush on August 14, 2008. The goal of the legislation is laudable as is the mission of the agency to better protect consumers against defective and unsafe products. The CPSC's statutory original purposes are to (1) protect the public against unreasonable risks of injury associated with consumer products; (2) assist consumers in evaluating the comparative safety of consumer products; (3) develop uniform safety standards for consumer products and minimize conflicting state and local regulations; and (4) promote research and investigation into the causes and prevention of product-related deaths, illnesses, and injuries. The new CPSIA provisions:

• Bans lead beyond a minute amount in products intended for children under 12 years of age.

• Prohibits use of dangerous phthalates in children's toys and child care articles.

• Mandates pre-market testing by certified laboratories of children's products for lead and for compliance with a wide range of safety standards.

1115 Broadway Suite 100 New York NY 10010 • Tel 212.675.1141 Fax 212.633.1429 info@toyassociation.org

Toy Industry Association, Inc.
www.toyassociation.org

• Requires manufacturers to place distinguishing marks on products and packaging to aid in recalls of products.

• Requires CPSC to provide consumers with a user-friendly database on deaths and serious injuries caused by consumer products.

• Strengthens protections against import and export of dangerous products, prohibits the sale and export of recalled products, improves public notice for recalls, and enhances tools for removing recalled products from store shelves.

• Bans 3-wheel all terrain vehicles (ATVs) and strengthens regulation of other ATVs, especially those intended for use by youth.

• Ensures that CPSC effectively shares information with State public health agencies.

• Bans industry-sponsored travel by CPSC Commissioners and staff, and authorizes a travel budget to address problems raised by the increasingly global market for consumer products.

• Restores the five-Member Commission, authorizes significant budget increases, and provides expedited rulemaking.

• Enhances national product safety enforcement by authorizing injunctive enforcement of federal law by State Attorneys General, preserving State common law causes of action and California's Prop 65 warning requirements.

House Committee on Small Business
Subcommittee on Investigations and Oversight
May 12, 2009

Re: The Consumer Product Safety Improvement Act and Small Business

Statement of
Richard M. Woldenberg
Learning Resources, Inc.
380 North Fairway Drive
Vernon Hills, Illinois 60061

STATEMENT OF RICHARD M. WOLDENBERG
Chairman, Learning Resources, Inc.
Vernon Hills, Illinois

Mr. Chairman and Members of the Subcommittee, thank you for the opportunity to provide testimony on the impact of the Consumer Product Safety Improvement Act (CPSIA) on small businesses. My name is Richard Woldenberg and I am Chairman of Learning Resources, Inc. of Vernon Hills, Illinois, a manufacturer and distributor of educational materials and educational toys. We employ 150 people and sell our products in over 80 countries.

As a manager of a small business, I am concerned about the impact of the CPSIA on small businesses serving the children's products market. We have begun to see the destructive economic impact of this precautionary law on small business without providing significant offsetting consumer safety benefits. The CPSIA has the potential to make running an American small business so difficult that many businesses will elect to close or exit segments of the children's product market. In addition, the specialty markets that we serve, like the school market and specialty retail, will become greatly weakened.

The most significant problems caused by the CPSIA for the small business community are (a) burdensome compliance costs, (b) increased regulatory and business complexity, and (c) virtually uncontrollable liability risk. These issues are particularly severe for small businesses, as they have so little infrastructure to manage these challenges, and are often ill-prepared to surmount the complexities created by the law or bear the risk to their invested capital.

I. **Burdensome Compliance Costs:**

A. Retroactive Effect. The first heavy financial blow dealt by the CPSIA was the retroactive application of the new safety standards to existing inventory. By allowing only six months to sell-off merchandise that was "safe" one day and "unsafe" the next, Congress imposed

terrible losses on many small businesses and incited a trade war between retailers and manufacturers over who would be "stuck" with the un-saleable inventory. [Notably, the advanced notice of the retroactive effect of the phthalates ban was even worse – just two business days (see http://cpsc.gov/about/cpsia/nrdcopinion.pdf).] The short sell-off period for the newly illicit inventory is FAR SHORTER than was offered by the Eighteenth Amendment and Volstead Act in 1919 when alcohol was banned in the Prohibition, the culmination of a nearly 100 year anti-alcohol campaign. Retroactivity has virtually no precedence in CPSC history. Industry-wide losses are estimated at billions of dollars. See http://online.wsj.com/article/SB123872361943185291.html. No reparations have been offered to small businesses harmed by this dramatic change in law. New inventory losses may occur on August 14, 2009 as the law requires a further drop in the lead and lead-in-paint standards which will also be given retroactive effect.

B. Testing Costs. The precautionary regulatory approach of the CPSIA imposes testing costs on small business out of proportion to its stated objective of improved safety. The new law attempts to resolve perceived "gaps" in regulation by considering every product intended for children "hazardous" until proven otherwise. Under the CPSIA, the definition of a "children's product" subject to regulation was widened to encompass ALL products designed or intended primarily for a child 12 years of age or younger (15 U.S.C. §2052(a)(2)). Thus, the new restrictions encompass library books, ballpoint pens, dissection specimens, shoes, sweaters, ATVs, used children's bicycles, etc. The CPSIA requires that manufacturers test all "children's products" for compliance using a certified independent laboratory prior to importation or sale (15 USC §2063(2)). The heavy testing burden will crush small businesses of all types. For instance, we have submitted written quotes to Congressional leaders for as much as $24,050 to test a single telescope under the CPSIA. Even allowing for new test specifications recently announced

by the CPSC, the cost for a typical complete suite of CPSIA tests is likely to exceed $1,500 per average product. At our company, we have about 2,000 catalog items. Even with all conceivable efficiencies, the prospective testing cost for our inventory is staggering.

The testing regime under the CPSIA was not designed with small businesses in mind. The low sales volume typical of small business products makes the cost of testing prohibitive and creates an unfair competitive advantage for businesses serving mass markets. Because small businesses bear disproportionately higher production costs from testing, many items will become uncompetitive in specialty markets. The structural advantage of mass markets under the CPSIA will depress the competitiveness and viability of niche markets and niche companies.

The solution to the testing dilemma is not clear cut without a major change in law. The CPSIA eliminates risk assessment as the basis for safety administration and as a result, each product must be individually tested. Small businesses do not have the option to use supply chain management techniques or testing focused on specific risks to achieve safety goals. Repetitive testing of like products for like risks will raise costs significantly for little safety payoff. Even component-level testing offers only limited relief, mainly for the simplest products with few components (assuming component suppliers will cooperate and provide the expensive test reports at all). Notably, Customs inspection of test reports at the time of importation will likely create delays for companies relying on bundles of component test reports. It won't take long for component testing to be exposed as unworkable for imported children's products. This will adversely affect many small importers.

C. Tracking Label Costs. CPSIA tracking label requirements will drive up costs for small businesses. The tracking label provision (15 USC §2063(a)) requires that every item be marked with source and production lot data ostensibly to improve recall effectiveness. The cost of tracking labels is FAR in excess of purported benefits. For instance, we estimate that our

company will spend more than 50,000 times the expected cost of recalls EVERY YEAR to apply tracking labels to our products (based on our 25-year recall rate of 0.00001%). In fact, far less than 1% of all children's products are EVER recalled. With the market comprised of many millions of items, the tracking labels requirement punishes the many for the sins of the few.

In light of the purpose of the new law, the tracking labels provision seems particularly misconceived. The CPSIA is intended to reduce recalls of children's products significantly – so why are tracking labels still necessary? As Wayne Gretzky once explained: "I skate to where the puck is going to be, not where the puck has been." The expected lower rate of recalls will only magnify the damage inflicted on small businesses by the tracking label requirement. We also expect certain high quality factories to stop serving small business customers to avoid the challenge and expense of tracking labels on small production runs of children's products. The loss of these manufacturing resources may curtail many small business activities.

D. No Way to Avoid the New Burdens. Obtaining an exception to the law will be nearly impossible for small businesses. The CPSIA (essentially) prohibits exceptions allowing the sale of materials or items that exceed the new standards (see http://cpsc.gov/about/cpsia/101lead.pdf). Thus, the sale of materials or products with phthalates and/or lead in excess of standards is now a *per se* violation of the CPSIA, whether or not there is any evidence of risk or danger associated with the use of such materials or products. While the recent exercise of "enforcement discretion" by the CPSC in granting a two year enforcement stay on ATVs is a possible sign of broader relief to come, it was notably preceded by a lengthy campaign by the ATV industry for relief. The exemption process (http://cpsc.gov/library/foia/foia09/brief/leadexclusion.pdf) is so expensive that few if any small businesses can entertain it. The ATV industry effort to obtain relief under the CPSIA for its narrow class of goods may exceed $5-10 million in cost over more than four years. For small businesses, this exemption door is effectively closed.

E. Reduced Incentive to Innovate. The increased cost to bring a product to market will make many viable - and valuable – products uneconomic. To cover the cost of developing, testing and safety-managing new products, the prospective sales of new items will need to be much higher than before. This means that low volume items can't be produced profitably and new market entrants may find themselves priced out of the market. The blizzard of new legal requirements will reduce the number of new children's product business start-ups. We think that increasingly companies will be forced to abandon specialty and niche markets to concentrate on the mass market. Over time, only high volume items will be cost-effective enough to survive the Darwinian action of the market under the CPSIA. This will hurt many important, but small, markets like educational products for the blind or the deaf. Our company, with its 2,000 catalog items, is probably now a dinosaur under the CPSIA – the law provides a strong incentive to reduce our product line to 50-150 items, a manageable undertaking under the new rules, and focus on high volume customers only. The efficiencies of selling only in large runs to large customers will drive many enterprises to abandon business models involving large product lines.

II. **Regulatory and Business Complexity:**

The complexity of compliance with the CPSIA is excessive for most businesses, large or small, but is particularly unmanageable for small businesses. Even for the tiniest companies, specialized systems will be needed to manage the chore of continually changing lot markings and retaining the data necessary to make tracking labels useful. For most small businesses, specialized staff and expensive specialized software will be necessary to administer the labeling process. The scale of the chore is mindboggling. We estimate for our company that we will face as much as 30,000 label changes per annum. In our group of companies, annual label changes may exceed 75,000 (about 1,500 changes per week). In addition, supply chains will need new manufacturing protocols by product type, material type, packaging type, component type,

assembly strategy, factory location, and so on. Many items produced by small businesses will be challenging to label properly (e.g., items with multiple production dates, multiple sources, many components, small parts, designed for aesthetics or special functionality, etc.). Many small businesses will be defeated by such a tedious bureaucratic undertaking, all to improve on recalls that may never occur.

Small businesses don't have the resources to manage compliance with ultra-complex laws, and will throw up their hands in frustration. Our company has already lost customers for our entire category on the grounds that selling toys is too confusing or too much of a "hassle". This is our new market reality. We know of businesses that employ retail managers who earn $8.50 per hour. Other stores might have an owner/manager supported by 4-5 hourly workers, often local high school kids. Small businesses like these cannot manage demanding legal compliance schemes among their other burdens. It is unrealistic to assume that a precautionary law will not adversely affect the economics of small businesses ill-equipped to deal with it.

Administering the law is made more difficult by the emerging gap between the law itself and the implementation of the CPSIA by the CPSC. Unfortunately, implementation of the law has become so pockmarked by CPSC exceptions, FAQs, clarifications, letter opinions and stays that the CPSIA itself no longer describes the way it is being enforced. As a consequence, well-intentioned companies may implement the law against themselves at great expense. The apparent insistence of Congress that the CPSC interpret the law with "common sense", rather than amend the law itself to conform to common sense, will hurt small companies ill-equipped to navigate these complicated legal waters.

III. **Significant Liability Risk:**

A knowing violation of the CPSA, FHSA and other applicable consumer rules enforced by the CPSC can result in civil or even criminal liability under the CPSIA (15 USC §2069-70).

Small businesses know about the potential for liability under the CPSIA and are shying away from behavior they consider "risky". This is why some thrift stores have begun to discontinue the sale of children's merchandise. See www.boston.com/community/moms/articles/2009/02/27/lead_law_puts_thrift_stores_in_lurch. Risk of liability will cause small business markets to shrink.

Even following the implementation rules of the CPSC is no assurance of avoiding liability under the new law. The CPSIA provides that the State Attorneys General may independently enforce the new law (15 USC §2073). In other words, the actions and views of the CPSC are not enforceable against the State Attorneys General who may enforce their own interpretations of the law. Small businesses have no capacity to monitor the activities of 50 different State Attorneys General and the CPSC, or maintain relations with each of them. This rule introduces uncontrollable random risk and political risk to small American businesses.

Because all violations of the CPSA and FHSA must be self-reported to the CPSC within 24 hours (15 USC §2064(b)), the CPSIA renders all violations of the law an "emergency", irrespective of risk of injury (if any). The significance of the violation is not a consideration in the self-reporting requirement. As a manufacturer with a product of about 2,000 items, we are fearful of being in a constant state of crisis under this provision. The odds of regularly uncovering technical violations (missing warning label on our website, etc.) is high with so many products in our product line. Each such incidence might constitute a "knowing violation" giving rise to criminal liability unless immediately acted upon. The wear and tear, not to mention the expense, of constant crisis will be a major problem under the new regulatory scheme.

The prospect of liability (civil and criminal) under the CPSIA is driving a refocus of children's product businesses away from product development, marketing, sales and infrastructure investment toward bureaucratic excellence. The diversion of resources toward

unproductive, liability-minimizing activities certainly violates the Pareto Principle (80/20), which dictates that a properly organized business will allocate its resources to the activity which produces the greatest economic return. The precautionary CPSIA creates inefficient incentives which favor heavy investment in unproductive, non-revenue producing overhead – and passing along these inefficiencies in the form of higher prices to an unsuspecting public. The illusion of improved safety cannot overcome the reality of dollars that won't go as far, buy as much or provide as high as standard of living as prior generations enjoyed.

Recommendations and Conclusion:

The dangers of a precautionary approach to legislation are clearly demonstrated by the impact of the CPSIA on the small business community serving children's markets. The solution to the dilemma is to restore the authority of the CPSC to administer safety using risk assessment as its guiding principle. This will allow the agency to refocus its attention on risks that present a danger of actual injury, and avoid wasting resources on pens, library books, bicycles, educational materials, sweaters and shoes, unless they present a quantifiable risk of injury. For the small business community, a more rational system of regulation, with fewer hair trigger liability rules, will also allow productive commerce to resume. Reasonable protection for thrift stores in this proposed common sense safety regime would naturally follow.

To ensure better compliance in the future, the reconstituted CPSC should put more resources into market education and a commercial liaison function. The CPSC in its early days had more "outreach" resources to help companies solve their safety issues without threat or coercion. Improved industrial relations will return a higher dividend than implementation of a penal, restrictive regulatory scheme. I urge the Subcommittee to carefully consider these issues and to encourage the House Committee on Energy and Commerce to reopen this problematic law and fix it once and for all.

Thank you for considering my views on this important subject.

CONSUMER PRODUCT SAFETY COMMISSION OVERSIGHT: CURRENT ISSUES AND A VISION FOR THE FUTURE

THURSDAY, SEPTEMBER 10, 2009

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON COMMERCE, TRADE,
AND CONSUMER PROTECTION,
COMMITTEE ON ENERGY AND COMMERCE,
Washington, DC.

The subcommittee met, pursuant to call, at 10:10 a.m., in Room 2322 of the Rayburn House Office Building, Hon. Bobby Rush [Chairman of the Subcommittee] presiding.

Members present: Representatives Rush, Schakowsky, Sarbanes, Sutton, Stupak, Green, Barrow, Castor, Braley, DeGette, Dingell, Waxman (ex officio), Radanovich, Whitfield, Pitts, Gingrey, Scalise, and Barton (ex officio).

Staff present: Michelle Ash, Chief Counsel; Anna Laitin, Professional Staff Member; Tim Robinson, Counsel; Angelle Kwemo, Counsel; Will Casey, Special Assistant; Miriam Edelman, Special Assistant; Jeff Wease, Deputy Information Officer; Lindsay Vidal, Press Assistant; Brian McCullough, Minority Senior Professional Staff Member; Shannon Weinberg, Minority Counsel; Will Carty, Minority Professional Staff Member; and Sam Costello, Minority Legislative Analyst.

OPENING STATEMENT OF HON. BOBBY L. RUSH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Mr. RUSH. The subcommittee will come to order. Good morning, members and also the commissioner and all of the other folk who are gathered in the room. This subcommittee is called to order now for the purposes of an Oversight Hearing on Current Issues and a Vision for the Future for the Consumer Product Safety Commission, and I welcome everyone to this hearing. The Chair now without any other delays, the Chair recognizes himself for 5 minutes for the purposes of an opening statement.

The Consumer Product Safety Improvement Act was one of the premier accomplishments of the 110th Congress. The law created basic safety standards for keeping toxic lead and phthalates out of children's products, engaging Consumer Product Safety Commission vital new resources and authority, and establishing a product testing system that would ensure product safety.

I would like to welcome Chairman Inez Tenenbaum, who is the ninth Chairman of the Consumer Product Safety Commission. She

hails from the great State of South Carolina. Chairman Tenenbaum is nationally known and is an advocate for children and families. She served with distinction as the State of South Carolina's Superintendent of Education for two terms. I am looking forward to seeing and hearing from Chairman Tenenbaum as she steers the process of implementing the CPSIA. Under her leadership, the needed implementation will go far more smoother than other previous chairmen and the CPSC will work effectively utilizing the increased resources that are now at its disposal. This is why I am so pleased to welcome Chairman Tenenbaum today and to hear from her about the Commission's new direction and its future vision.

It is mentionable that the Chairman now has a full complement of commissioners, something which it lacked for far too long under the previous administration. I think that the President has chosen well in nominating Robert S. Adler and Anne Northup as commissioners. Commissioner Adler has a deep history of experience as a former advisor to two CPSC commissioners, Commissioners Pittle and Steorts.

Commissioner Northup is the former Congresswoman from Kentucky's third district and the mother of six, who served for 9 years in the House of Representatives. As a congresswoman, Commissioner Northup founded the House Reading Caucus and co-chaired the Congressional Coalition on Adoption which further shows her own personal commitment to helping and defending children.

Madam Chair, when you took the helm you showed great courage, sound judgment and a purpose for rulemaking over our safety. One of the first agenda items that you scheduled was whether to include crystal and glass beads in children's jewelry from the lead content restrictions in Section 101(a) of the CPSIA. You applied the facts as you found them to the CPSI lead limits and to the real world facts and foreseeable possibilities. For example, you talked and wrote about how children handled and played with this jewelry by mouthing, ingesting and swallowing the beads and how any amount of lead constituted too much lead in these beads. You are willing to grapple with thorny issues and the business of our Pacific Rim trading products who today manufacture as much as 85 percent of our toys and 95 percent of our solvents, and almost 60 percent of our electrical products, shows your leadership and your vision. Unfortunately, more than 85 percent of our country's recalled products are also imported.

Chairman Tenenbaum, I will ask you questions this morning based on remarks you have made in your public statements on some substantive areas that pose special safety and recalled challenges and how you will go about implementing the CPSIA. I am also very interested in hearing how you see the CPSIA's transitioning from the Nord-era to Tenenbaum-time. We will look for a shiny, new product safety product testing facility with more employees and more appropriated dollars.

And as I close, I want you to comment as succinctly as you can about the CPSC's timeline for adopting new rules under CPSIA, about some of the things that the GAO advised us and other improvements that you will make at the agency. I look forward to

hearing your testimony and I thank you again for visiting with us today.

Mr. RUSH. The Chair now recognizes the ranking member, Mr. Radanovich for 5 minutes.

OPENING STATEMENT OF HON. GEORGE RADANOVICH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Mr. RADANOVICH. Thank you, Chairman Rush, for calling this important hearing today.

The CPSC is a small but important agency whose mission is implementing and enforcing our nation's Federal Consumer Protection Safety Laws. The Commission and its staff work hard to ensure consumer products are safer when they reach the homes of our constituents.

We all remember the increase in commission-mandated recalls in 2007. Weekly headlines detailed various toy dangers, most of which were due to manufacturers' failure to comply with existing standards, for instance, lead paint. To their credit, the Commission's staff was able to affect more recalls in 2007 than in any other year in the CPSC history and despite the Commission's diligence, some observers claim the increase in recalls was evidence that reform was necessary and spurred the enactment of the Consumer Product Safety Improvement Act, also known as CPSIA.

CPSIA instituted the most sweeping changes to the Commission's regulatory environment since it was created. Among the changes, the law imposes many new requirements on businesses in the name of providing greater assurances that consumer products reaching our ports and placed on our store shelves are safer. While no one disagrees with creating safer products and it is good for public policy, we don't all agree on how to get there. The law has had consequences detrimental to many hardworking Americans. Put simply, the law is not working the way that many of us thought that it should work.

In April, hundreds of business owners that want to abide by the law came to Washington and voiced their concerns. The new law is crippling many honest businesses, particularly small businesses with burdensome and costly testing requirements for children's products, many of which the evidence shows are completely safe, and despite the Commission's stays of enforcement protecting many manufacturers are still being required to prove that their products are CPSIA compliant. As a result, testing for perfectly safe products is costing businesses millions of dollars, inventory losses for safe but technically noncompliant products is estimated in the billions and there is no discernible improvement in child safety.

Many small and home-based businesses are already hurting from the economic recession. On top of the decrease in consumer spending, manufacturers and retailers are now faced with the new cost of complying with CPSIA and if they can comply at all. Many of these same small and medium-size businesses will also suffer punitive effects of the cap and trade legislation passed by the House and the healthcare legislation this committee reported out last month.

We committed nearly $1 trillion in stimulus spending for various industries, bailed out the auto industry, bailed out financial firms, bailed out homeowners and helped purchase new cars for some consumers, but where is the relief for small businesses who we now burden with this regulation. These small businesses are beginning to think that Congress is waging war against them. Providing sensible regulatory relief to those affected by CPSIA would be a no-cost stimulus for the very businesses we are counting on to create new jobs and to bring us out of an economic recession, and it is the right thing to do.

The biggest problem with CPSIA I see is that it doesn't distinguish between risky and safe products. The law strips the Commission of discretion in granting CPSIA exemptions for children's products. The Commission confirmed this interpretation of the law when it voted to deny exemption petitions because the law simply does not permit exemptions if any lead can possibly be absorbed, even if the staff believes the products are not harmful. This standard is more stringent than the FDA's limits for milk and for water, the water our children drink.

The law is not only impacting businesses, it is also straining the Commission's resources as they process the thousands of comments, petitions, rulemakings and other CPSIA-related actions. The Commission has done the best it can with the resources that the appropriators granted to increase its staff in order to meet the stringent deadlines required by law, but it has not received everything we authorized and therefore, needs relief from these tight timelines.

I commend the Commission for finding creative ways to provide some relief to businesses with a few commonsense exemptions and stays of enforcement. Unfortunately, some of these actions are only temporary and they don't address the bulk of the problems, but the highlight of the recognition that compliance with the law as written is impossible for many businesses, and it won't improve safety. I am disappointed that we will not hear from any witnesses from the many businesses adversely affected by the new law, but I look forward to a robust conversation with the new Chairman on these matters.

Mr. Chairman, I appreciate your desire to conduct this oversight hearing into the Commission's priorities under a new administration. It is clear that the top priority for all of us should be to fix the law that we wrote so that it works for everybody. A one-size-fits-all approach is not working and will not improve safety. The time has come for us to work together and fix the problem by restoring flexibility for the Commission to determine what presents a real risk to children's safety, and appropriately target those risks and I stand ready to work with you on this, Mr. Chairman, and I welcome Chairman Tenenbaum to the committee. Thank you.

Mr. RUSH. Thank you. The Chair now recognizes the Chairman of the full committee, Mr. Waxman, for 5 minutes for the purposes of opening statement.

OPENING STATEMENT OF HON. HENRY A. WAXMAN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Mr. WAXMAN. Thank you very much, Mr. Chairman, for holding this important oversight hearing and I want to welcome Chairman Tenenbaum to this hearing today, as well.

Last year Congress enacted the truly historic legislation on product safety. Our product safety system—and especially our toy safety system—was terribly broken. We saw record recalls and the total loss of consumer confidence in the safety of products, and children were killed and horribly injured by defective and dangerous products, and the stories were shocking. The situation was unacceptable to the American people and Congress responded. Following a lengthy and careful process, we enacted legislation that is strong, well-designed and effective.

The law bans lead in children's products, a step that is decades overdue. There is no safe level of lead and no reason that children should be exposed to lead in their toys. The law establishes a safety net for product safety that many consumers already assumed was in place. For the first time under this law, manufacturers need to demonstrate their products are safe before they can be sold. The law bans phthalates in certain children's products in recognizing science that shows these chemicals to be dangerous, especially to the youngest and most vulnerable children.

And finally, the law addresses systemic problems at CPSC to provide them with stronger legal authorities to carry out their mission and additional funding for the agency, and we restored the Commission to its full size of five commissioners. This is a key step that enables the Commission to carry out its critical mission after years of neglect and dysfunction. So in short, the law is a good, strong one and it vastly improves our children's health and safety.

Now that we are a year away from the recalls, the most dramatic stories have left the front pages, some suggest that we don't really need such a strong law but the fact remains that the system we had in place was a failure. This law was necessary. To retreat now from the proven consumer protections achieved under this law would be a huge mistake. There is no question however, that implementation has at times been uneven. Since the law went into affect, there has been unnecessary and widespread confusion among businesses and consumers, and I am committed to working with the Commission and with interested members of Congress and to you particularly, Mr. Chairman, to assure that moving forward, implementation of the law is clear and comprehensible.

And that is why I am very pleased that Ms. Tenenbaum is here and we will hear from her about her plans for the Commission and for the law. I have great confidence in the Chairman together with the other four commissioners that they will restore the agency to one capable of carrying out this law and its entire mission effectively and efficiently. I look forward to hearing the Chairman's testimony and I look forward to engaging in a productive relationship with leadership that is truly committed to protecting all consumers, especially our children.

Thank you, Mr. Chairman.

Mr. RUSH. The Chair now recognizes the ranking member of the full committee, the gentleman from Texas, Mr. Barton, for 5 minutes.

OPENING STATEMENT OF HON. JOE BARTON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF TEXAS

Mr. BARTON. Thank you, Mr. Chairman, and thank you, Chairwoman, for being here.

I voted for the bill last year. I was on the conference committee along with Chairman Waxman and Mr. Dingell and Mrs. Schakowsky and others so I am a supporter of the bill. Having said that, I listened with some astonishment to what our distinguished Chairman, Mr. Waxman, just said. I interpret what he said to mean that it's just a problem with implementation. It is not a problem with implementation.

As you have said, Madam Chairwoman, the law doesn't give you the flexibility to do some of the things that you have been encouraged to do to implement the law. We need to change the law. We need to perfect it. We need to modify it. We need to give some flexibility and some discretion to your agency to implement this law.

I and Mr. Radanovich and others have repeatedly asked Chairman Waxman to hold a markup or work with us on a bipartisan basis to come up with a bill to fine tune the law that we passed last year. We started making those requests informally in January. Today is a hearing which is a good step, but that is all this is. It is a hearing. We need to do more, in my opinion, than hold a hearing. I have got right here—I would say that is 200 letters, maybe 150 of small businesses around this country that have written to myself and to the Chairman and other members of the committee to do something to fine-tune the law.

Mr. Radanovich is going to ask unanimous consent at some point in time to put those letters in the hearing record. We have products before us. The dress that is in front of Mr. Radanovich can't be tested because if you test it, it destroys it. These products are going to be pulled off the shelves because the cost of the test is more than the value of the products that are sold. There should be some commonsense implementation, some commonsense refinement. We are not trying to change the lead standard. We are not trying to backpedal on the intent of the law, but when you can't sell an all-terrain vehicle because of concern that a child is going to ingest the tailpipe or something like that, there needs to be some discretion given to the regulatory agency to use a commonsense approach to implementing the regulations.

So, Mr. Chairman, I am glad that you are holding this hearing. I am going to submit my formal statement for the record. I hope it doesn't—I know you are a White Sox fan and not a Cubs fan, but I hope it doesn't take the Cubs winning the pennant before we decide to act to change this bill. You know, we need—and the good news is that what we have done, it is not that difficult, and that it can be done in a bipartisan basis, and it can be moved out of committee, and it can be moved to the House and the other body for the President to sign in the next 2 to 3 months. I mean, this is not a huge mountain that we are trying to overcome and there is not—if we get past the insistence that it is a perfect bill and it

is like the Ten Commandments, you can't change a letter even in any of the Ten Commandments, we can get this done, and I hope that is what this hearing is about is finding a way to get it done.

With that, Mr. Chairman, I yield back.

Mr. RUSH. The Chair wants to thank the ranking member and wants to ensure the ranking member that we will get something done before the Aggies win the BCS.

Mr. BARTON. It could happen, Chairman.

Mr. RUSH. The Chair now recognizes the Chairman Emeritus of the full committee, my friend from Michigan, Mr. Dingell, for 5 minutes.

OPENING STATEMENT OF HON. JOHN D. DINGELL, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MICHIGAN

Mr. DINGELL. Mr. Chairman, I commend you for holding today's hearing. It is an important one. I would like to extend my warm regards and welcome to Chairman Tenenbaum and I would like to thank her for appearing before us today to discuss issues facing her agency and her vision of the agency's future.

I want to make it very clear, Mr. Chairman, this hearing is needed. It is oversights in the way that it should be conducted and again I commend you for it.

A long time ago, a dear friend of mine by the name of John Moss, then a member of this committee, and I in this room held a series of hearings which led to the enactment of legislation creating the consumer product safety which he and I and other members were co-sponsoring. Last year, my dear friend, the ranking Republican member of this committee, and I got together with other members of this committee including you, Mr. Chairman, all in a sense of concern about the fact the Consumer Product Safety Commission was not able to do its job because of budget cuts, personnel cuts, demoralization, the inadequacy of researchers and personnel to do its job. And from that came the successor Act to the original Consumer Product Safety Act which was passed in '72, and which returned it somewhat, and the Commission somewhat, to the state that it had had at the time that we offered the first legislation.

Now, I want to make it very clear that as the original author or the remaining original author of the Consumer Product Safety Act and the author of last year's legislation, I feel very strongly about the needs for strong protection for the nation's consumers. And I feel very keenly that the Consumer Product Safety Commission who has not been able to do its job because of the deregulatory attitude and a skimpy attitude with regard to funding in the nation's regulatory agencies. And so with my colleagues on this committee, I wholeheartedly supported a restoration of a good regulatory framework to ensure the safety of consumer products distributed in the commerce of the United States, particularly those meant for use by children. And that is the feeling which I shared with my colleagues on this committee and we tried to see to it not only did they get the authorities and use the authorities which they had at the CPSC but also that they got the researchers which had been permitted to shrivel in a most lamentable fashion. Indeed, to laughable proportions compared with those of other federal regu-

latory agencies so that the agency was in effect completely neutered and incapable of doing its business but we thought we had corrected that, and I would note that until recently CPSC might well have been described as a moribund agency, hampered by inadequate funding and all too limited statutory mandates.

For these reasons, we did what we did in terms of the Consumer Product Safety Improvement Act, CPSIA, which I have alluded to earlier which was ultimately signed into law by President Bush last August. CPSIA is meant to bolster the agency and to enhance its authorities in order to improve CPSC's ability to carry out its fundamental purpose, again the protection of consumer health and safety.

It should be noted though that a funny thing happened on the way to the forum. Our dear colleagues on the other end of the building called the United States Senate got into the act and with profound ignorance of the way the law worked or the intention of this committee and the authors of the legislation, proceeded to do extensive redrafting and it created difficulties which we were unable to cure in the conference between the House and the Senate. We had abundant outside assistance which confused the issues further, from consumer representatives and enthusiasts who did not know how government works or how government should work, and we had considerable messing around from both the Senate and from this body which has created confusions which remain today.

Now, I remain concerned about the difficulties that have been encountered in the implementation of the CPSIA as improved by the United States Senate. I would remind all persons that legislation passed this committee unanimously in a bipartisan fashion and again I commend my friend, the ranking minority member, for his leadership in this matter and his cooperation and assistance. And it passed the House unanimously and then it came back from the Senate and all of a sudden we had a lot of negative votes because people were honestly concerned about the confusion that had been inflicted by the United States Senate through it's own amendment process and through the process which we sought advice in the country. In any event, there appears now to be problems and I am hopeful, Mr. Chairman, that we will be able through this process to ferret them out and to correct them, and indeed to find out what they might be and how they are impacting upon the American people, upon consumers and upon businesses.

In January on the 30th, in a letter to the committee, former CPSC Chairman Nord wrote, "The timelines in the law are proving to be unrealistic," which in fact, they are, and then "[CPSC] will not be able to continue at this pace without real risk of promulgating regulations that have not been thoroughly considered." Moreover, Chairman Nord stated, "Although CPSC staff has been directed to move as quickly as possible to complete its work, short circuiting the rulemaking process gives short shrift to the analytical discipline contemplated by the statute."

In brief, Mr. Chairman and Madam Chairman, I intend to use my time today to discuss with you whether you share this view and more specifically whether you believe that CPSIA contains realistic deadlines for rulemakings and compliance as well as too little implementation discretion to CPSC. These problems have triggered a

number of meetings between members of the House and Senate in which it discussed that perhaps maybe the House and the Senate should pressure CPSC to come to conclusions which may or may not be supported by the law. And I wish to state with great clarity that it is not my intention to undo anything that has been achieved via CPSIA but rather to discover what action by this committee as a part of its oversight may be necessary to correct any shortcomings that have been inflicted on the law and on the people of the United States by the actions of our dear friends in the Senate who have confused in a splendid fashion an otherwise excellent statute.

I want to thank you, Mr. Chairman, and thank you, Madam Chairman, for coming before the committee today and I look forward to a frank and productive discussion about the matters currently confronting the CPSC as well as the future of the agency in the hope that perhaps our current efforts may achieve without the assistance of our dear friends and colleagues in the Senate the kind of confusion that has been inflicted upon your agency in the time since we passed CPSIA. I thank you, Mr. Chairman.

Mr. RUSH. The Chair thanks the Chairman Emeritus and now the Chair recognizes the gentleman from Kentucky for 2 minutes for the purposes of opening statements.

OPENING STATEMENT OF HON. ED WHITFIELD, A REPRESENTATIVE IN CONGRESS FROM THE COMMONWEALTH OF KENTUCKY

Mr. WHITFIELD. Thank you, Chairman, for having this hearing today.

I also was a conferee on this legislation that met with the Senate to adopt this legislation and it passed overwhelmingly in the House and also in this committee as former Chairman Dingell said. I think we also have a responsibility to protect our children and this legislation does precisely that but it also has had unintended consequences and many members have already discussed that today. The timelines are in question, the exemption authority that was taken away really from the consumer protection Commission. The sad thing is now the standard is so strict that the CPSC does not have the flexibility to exempt seemingly obvious products that do not contain a lead or other chemically hazardous materials and so we have a lot of small business people today spending thousands of dollars to prove that their product is safe, knowing full well that it is safe.

And so it seems to me that it is not right that Congress passes a law so stringent that the Commission with the authority to enforce these laws does not have any flexibility. And I think we have an obligation to the people of the United States, particularly at this time of an economic downturn that we do not want to make it more difficult for small business people to stay in business, and we need to do everything that we can do to correct the problems that are in the legislation that was passed overwhelmingly by the House and Senate.

Now, I yield back the balance of my time.

Mr. RUSH. The Chair thanks the gentleman. The Chair now recognizes my friend, the Vice Chair of the subcommittee, the gentlelady from Illinois, Ms. Schakowsky, for 2 minutes.

OPENING STATEMENT OF HON. JANICE D. SCHAKOWSKY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Ms. SCHAKOWSKY. I thank you, Chairman Rush, and I want to welcome Chairman Tenenbaum. We had the pleasure of meeting each other recently. I appreciate very much your reaching out to me and hearing about your commitment to make the Consumer Product Safety Commission and agency that will truly live up to its name and I look forward to working with you.

I too wanted to talk about the Consumer Product Safety Improvement Act. There were many, many important provisions in the bill which I think everybody would agree to. Some that I worked on, including mandatory infant and toddler durable product standards and testing, and the Danny Keysar Child Product Safety Notification Act, and the first mandatory safety standards for children's toys are going to help grandmothers like me feel confident when I buy supplies or gifts for my grandkids that those things are going to be safe.

And I know that there have been problems with implementation of the new law, particularly under the previous leadership at the CPSC. I personally think that the law can be successfully implemented and I just wanted to point out some flexibility that I do see in the law. The law includes language that empowers the CPSC to exempt certain materials from the testing and certification requirements, and to relieve those manufacturers of products that are in no danger of violating the new standards, and I know that the CPSC has begun to apply some of those exclusions and so I think there are opportunities within the existing bill to deal with complications. For example, I know that the CPSC has exempted from the lead testing requirements components that can't be accessed by a child, components of electronic devices, the inside, intended for children, a stay of enforcement of the lead and phthalates testing rules for a year or so. A number of things have been done and I think we should first before we change the law, look at those and see if they can provide the kind of relief to issues that have been raised today.

I thank you, Mr. Chairman, and I yield back.

Mr. RUSH. The Chair thanks the gentlelady. The Chair now recognizes the gentleman from Louisiana, Mr. Scalise, for 2 minutes for the purposes of opening statements.

OPENING STATEMENT OF HON. STEVE SCALISE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF LOUISIANA

Mr. SCALISE. Thank you, Mr. Chairman. I want to thank you and Ranking Member Radanovich for having this hearing and I would like to congratulate Chairwoman Tenenbaum on her confirmation and welcome her before our subcommittee.

The Consumer Product Safety Commission has a very important job. It protects consumers and families from products that may

pose a hazard or injure children. We must ensure that the CPSC effectively carries out this mission and has the tools to do so. As the father of two young children, I want to be assured that the CPSC does its job and that the toys all children are playing with are safe.

One particular issue before the CPSC that has affected my district as well as many across this country is Chinese drywall. After Florida, Louisiana has had the most cases in the Nation of toxic drywall. The Louisiana Department of Health and Hospitals has received over 800 complaints about Chinese drywall and it is estimated that the amount of Chinese drywall brought into Louisiana after Hurricanes Katrina and Rita could potentially affect approximately 7,000 homes. My office has received numerous complaints from constituents affected by Chinese drywall. One man who called lost his home to Hurricane Katrina and had to relocate his family to another town, only to find out that the home he moved into was built with Chinese drywall. Another constituent realized he had Chinese drywall in his home when his wife, who was four months pregnant, wasn't gaining any weight. Her doctor told her to move out of the home and now she and her husband are living in separate towns while their home is repaired.

During these economic times, many of our constituents cannot afford to purchase another home or rent a second one while repairs are being made. It is clear that Chinese drywall is wreaking havoc in homes, charring electrical wires, corroding metal and causing serious health problems. We must determine the origin and scope of the toxic drywall and we must take action against those who introduced the drywall into American markets. It is also important that we continue to testing in order to realize the potential health problems that Chinese drywall can cause.

Chairwoman Tenenbaum, in your testimony you mentioned that the CPSC is committed to finding answers and solutions for all the homeowners impacted by this issue. I want to know what those answers are and solutions you have found. The citizens of Louisiana and elsewhere in the country who have been impacted by Chinese drywall deserve clear answers and solutions. Those affected in my State have already been through so much and now 4 years after Katrina many once again have to rebuild their homes. This is unacceptable and we must ensure that no one has to encounter these problems in the future.

I look forward to your testimony and I yield back.

Mr. RUSH. The Chair recognizes now the gentlelady from Florida, Ms. Castor, for 2 minutes for the purposes of opening statements.

OPENING STATEMENT OF HON. KATHY CASTOR, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF FLORIDA

Ms. CASTOR. Thank you, Mr. Chairman, very much for calling this important oversight hearing of the Consumer Product Safety Commission.

Welcome to Chairman Tenenbaum. I am pleased that we have this opportunity to discuss the Consumer Product Safety Act with you. You have outstanding experience and your background as a teacher and the State School Superintendent for the State of South Carolina demonstrates your commitment to families and consumer

issues and you are off to a great start, and in many ways, this hearing is going to be very different then if we had proceeded with the one scheduled a few months ago. At that time, many concerns were expressed to me about the CPSIA implementation, many of them stemming from the lack of information and what to expect from the Consumer Product Safety Commission. Rumors were flying that children's bookstores would be forced to closed or thrift stores would not be able to sell toys at all, but under your leadership in the last few months many of these concerns have been addressed, and I thank you for that.

I appreciate that the assignment that was given to the Consumer Product Safety Commission was not an easy one. The new Consumer Product Safety Improvement Act was a fundamental shift from a reactive product safety regime to a proactive approach. Before parents just had to hope that toys they were buying for their kids were safe and watch for product recalls, and all too often the prevailing consumer safety policy with regard to toys was caveat emptor and this resulted in a disastrous 2007 Christmas shopping season when popular toy trains had friendly, inviting faces painted on them with Chinese lead paint, and one popular toy called Aqua Dots allowed children to arrange brightly colored beads into designs and then bind them together with water. Unfortunately, the beads gave off the so-called—the drug GHB when swallowed, so Congress gave the CPSC a big responsibility last year and there have been some bumps in the road.

For too long there has been a lack of guidance from the agency for retailers and manufacturers and some of the deadlines for guidance came and went without the required guidance but I am extremely encouraged by the actions taken by the Commission in recent months. The quality and quantity of the proposed rules that have come out just since your swearing in is truly encouraging and like my colleague from Louisiana, I do hope you will address the important Florida issue important to many other States and that is the unsafe Chinese drywall that has been used in the construction of homes. It is making many families in Florida sick. Families should not have to worry that the building materials in their walls emit corrosive, toxic gases into their home so I look forward to hearing more from you about what the Commission is doing about toxic drywall and what we can do to help on that issue.

Thank you being here. I yield back my time, Mr. Chairman.

Mr. RUSH. The Chair recognizes the gentleman from Pennsylvania, Mr. Pitts, for 2 minutes.

OPENING STATEMENT OF HON. JOSEPH R. PITTS, A REPRESENTATIVE IN CONGRESS FROM THE COMMONWEALTH OF PENNSYLVANIA

Mr. PITTS. Thank you, Mr. Chairman. Thank you for holding this important hearing on the issues and the future of the Consumer Product Safety Commission.

I think we all agree that protecting consumers, especially children from unsafe products is a worthy goal of government regulation. In 2008, the House Representatives passed the Consumer Product Safety Improvement Act with the goal of improving the safety of products that children and parents use everyday. How-

ever, the implementation of this law has given me cause for concern. We have observed a number of unforeseen and negative consequences arise and that are now putting undo pressure on businesses and manufacturers here in the United States. These consequences are increasingly problematic, especially during tough economic times when we desperately need the jobs provided by businesses and manufacturers.

I received countless e-mails and phone calls and letters from businesses expressing the difficult and damaging affects this law is having on them. The CPSC needs the proper resources and the time and the flexibility to carry out the implementation of this law in a reasonable and thoughtful manner. I have grandchildren and I want to be sure their toys are safe. I don't want to weaken laws that ensure the products on the market are safe for all consumers but we need to do this in a way that is realistic, clear and fair and that is why I have joined many of my colleagues in co-sponsoring H.R. 1815. I believe this bill institutes the needed flexibility the Commission needs in order to respond to the concerns of businesses and industry.

I welcome Chairman Tenenbaum. I look forward to hearing your testimony and appreciate you coming here today, and I yield back.

Mr. RUSH. The Chair recognizes the gentleman from Iowa, Mr. Braley, for 2 minutes.

OPENING STATEMENT OF HON. BRUCE L. BRALEY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IOWA

Mr. BRALEY. Thank you, Mr. Chairman, and, Chairman Tenenbaum, I think the most important component of your very impressive resume is your experience as an elementary school teacher because elementary school teachers use commonsense in enforcing the law of their classroom everyday. My mother has been teaching in Iowa for over 50 years and at the age of 80 she is still subbing so I have great respect for elementary school teachers.

But I want to focus on a couple of things that have not really been discussed here this morning and one is the point that you raised in your opening statement about the need for increased port monitoring. But underneath that there is a subtext that we rarely talk about and that is the incredible impact of foreign manufactured goods on the safety of consumers in this country. We have seen an incredible shift in consumer products that were manufactured in the United States that are now being made overseas. Most States have product liability laws that limit recovery in the chain for distribution to the manufacturer of those products if the manufacturer is subject to the jurisdiction of the courts and has not been declared insolvent. Anyone who ever tries to hold a Chinese manufacturer accountable to the jurisdiction of the courts in the State will tell you it is an immense challenge. In fact, many of these factories in China are de facto agents of the Chinese government and so the whole concept of accountability in U.S. courts is an enormous impediment to consumer safety. That is why the role of your agency is so critical and that is why the lack of enforcement on defective foreign products is one of the biggest challenges U.S. consumers face so I applaud your efforts to focus on this. We need to realize that many U.S. consumers are not being protected for the

injuries and deaths caused by foreign manufactured products and come up with a joint strategy to address those concerns.

On the issue of Chinese drywall, I inspected homes in Boynton Beach, Florida with defective Chinese drywall and came back here and was sick for the next 6 weeks. I saw with my own eyes the corrosive effect on metal that this drywall is having. I smelled the odors in these homes. It is an enormous crisis and it is just the tip of the iceberg of what is wrong with import monitoring in this country. We have a lot to do to improve the enforcement of the quality of goods coming into this country and I pledge my commitment to work with you and your office to make sure that we are doing a better job of protecting U.S. consumers.

And I yield back my time.

Mr. RUSH. The gentleman from Georgia, Mr. Barrow, is recognized for 2 minutes.

Mr. BARROW. I thank the Chairman.

In the interest of Chairman Tenenbaum's time, I will refrain from offering an opening statement but I cannot refrain from taking this opportunity to personally welcome you and congratulate you on your appointment. Our paths first met 5 years ago when I was seeking election to the House and our guest today was seeking election to the other body and all I can say is that the other body's great loss is the Consumer Product Safety Commission's great gain. You are certainly one of the best things to have come from South Carolina in a long, long time and on behalf of your kinfolk in Savannah, I personally congratulate you and welcome you to the committee and thank you for your service to our country.

With that, I yield back.

Mr. RUSH. The Chair now recognizes the gentlelady from Ohio, Ms. Sutton, for 2 minutes.

OPENING STATEMENT OF HON. BETTY SUTTON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OHIO

Ms. SUTTON. Thank you, Chairman Rush, and thank you for holding today's important hearing on the Consumer Product Safety Commission.

I am pleased to welcome you, Chairman Tenenbaum. Congratulations on your confirmation. You have such an important role and responsibility as the head of the agency charged with protecting the public, especially children from unsafe and dangerous products and with your appointment I am starting to feel better already. I wish you the best of luck.

Consumer product safety is not an area that we can afford to ignore and last year I was proud when we passed the Consumer Product Safety Improvement Act. That law created basic safety standards for keeping toxic lead out of children's products. Manufacturers must affirmatively demonstrate that those products are safe. The Act also provides vital new resources and authority including the Import Safety Initiative which puts inspectors at key U.S. ports, because as we have heard here today, in recent years the relationship, and I know you are well aware of this, the relationship between our Nation's import safety crisis and our Nation's trade policy has become painfully obvious. As imports have continued to grow, 80 percent of all toys sold in the U.S. are imported

from China alone. Some manufacturers have shown a remarkable failure to adhere to basic safety standards. It is a national shame and embarrassment when companies and importers pay more attention to their costs then our safety and the safety of our children and our families. Product safety must be the primary focus. In 2007 and 2008, more than 37 million toys were recalled in the U.S. This year there have been 23 toy recalls issued affecting over 4 million toys and every single recalled toy was manufactured in China.

We have also seen reports of serious health problems in residents of homes containing imported Chinese drywall and in response I am pleased that the CPSC established a drywall task force working with other agencies to investigate the hazards of imported drywall. And I am very interested to see the results of the task force studies and see what we can do to ensure that things being imported into this country are safe for consumers in the United States.

I yield back.

Mr. RUSH. The Chair now recognizes the gentlelady from Colorado, Ms. DeGette, for 2 minutes.

OPENING STATEMENT OF HON. DIANA DEGETTE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF COLORADO

Ms. DEGETTE. Thank you very much, Mr. Chairman.

I want to add my welcome to our new Commissioner and say hallelujah, we are glad you are here.

I have been working on this legislation for a long time. I was on the conference committee that after we passed the Act to try to bring it to the floor and I was really happy to work with my friends on the other side of the aisle, in particular Ranking Member Barton to come up with these compromises.

What I am now interested in is how the Consumer Product Safety Commission is going to implement these far-ranging provisions of the legislation. Some issues have come up as we are all aware since the enactment of the bill and one of the things I am interested to know, and I think Chairman Dingell and Chairman Waxman and others are interested as well, is can we fix these issues administratively? Do we need to amend the bill? What do we need to do, in particular, with ATVs and other consumer products?

I think though that the change that both the legislation and the new administration have brought to the agency are exciting. I think that we are going to be able to do a lot for the consumers of America and I am really proud to be a part of this process.

With that, Mr. Chairman, I will yield back.

Mr. RUSH. The Chair thanks the gentlelady.

It is now my pleasure and my privilege to recognize the Chairman of the U.S. Consumer Product Safety Commission and to extend to her the customary 5 minutes for the purposes of her opening statement but prior to her opening statement I would ask that she understand that it is now the practice of this subcommittee that you be sworn in before you issue your opening statement, and so would you stand and please raise your right hand.

[Witness sworn.]

Mr. RUSH. Her credentials have been well-established earlier in this hearing and now it is my pleasure to recognize you for 5 minutes for the purposes of opening statement.

TESTIMONY OF INEZ MOORE TENENBAUM, CHAIRMAN, CONSUMER PRODUCT SAFETY COMMISSION

Ms. TENENBAUM. Good morning, Chairman Rush, Ranking Member Radanovich and members of the Subcommittee on Commerce, Trade and Consumer Protection. I am pleased to be here today to talk about the current actions that we are taking at the U.S. Consumer Product Safety Commission to protect the safety of children and consumers as well as give you my vision of this agency.

Let me begin by saying that I am deeply honored to have the privilege of serving as Chairman at such an important time in the Commission's history. In my first two months leading the CPSC I have focused on three key goals, transparency and openness in those we service, a renewed focus on education and advocacy for all Americans, and firm but fair enforcement of the product safety laws and regulations. My top priority since assuming the Chair of the Commission has been meeting the statutory deadlines for rules and reports required by the CPSIA. Through the hard work of the CPSC staff, and I must say I have never met more dedicated, hard-working people then those people who serve at the Commission, I am pleased to announce that 12 substantive rules and policy guidance documents have been released since I was sworn in on June 23, 2009. In each of these proceedings I have directed the Commission staff to work closely with all impacted stakeholders to ensure that the rules that we implement remain true to the statutory intent of the CPSIA while minimizing undue burdens on small businesses and other stakeholders. As we move forward, I assure you this subcommittee that we will continue to solicit feedback from all involved parties and work to implement commonsense rules that are squarely focused on maximizing product safety and reducing administrative burdens.

Another key priority of mine is the rebuilding and revitalization of the CPSC's internal business processes. The Commission's information technology systems are truly the lifeblood of this agency. Sadly, these systems were neglected for far too long. Early today the Commission released a plan to Congress outlining phase one of our business process modernization initiative which is the implementation of a searchable product information database. By leveraging technology, the CPSC can take a proactive approach to protect public health and safety, and recognize emerging hazards more effectively.

Consumer education is another key mission and component of my tenure at the agency. Through network television appearances and newspaper interviews I have worked to reach millions of families with information about dangerous cribs, bassinets and window blinds, products that have killed young children. Last month the GAO released a report noting that the Commission could do a better job of reaching out to poor and minority communities that often do not receive critical consumer product safety information and, Chairman Rush, I know that this is a key priority of yours and I want to assure you that it is also a key priority of mine. To that

end, I have directed the Commission staff to expand our education and consumer outreach efforts to underserved Americans.

Later this month, the CPSC also plans to launch a social networking, social engagement program that will establish the CPSC's presence on various new media sites including Facebook, Twitter and YouTube. Through these efforts we can educate a greater number of consumers and save lives.

Increased oversight of the products coming through our ports is another key priority. The GAO recently released a study that audited and analyzed the agency's effort to police imports and prevent the entry of unsafe products into the U.S. market. I agree with all of these recommendations and I have directed the Commission staff to update agreements with the Customs and Border Protection to allow better information-sharing.

It is also critical for this agency to respond diligently to new and emerging product safety issues such as problems now being reported with certain types of imported drywall. The CPSC is vigorously pursuing its investigation of imported drywall that has been linked to the corrosion of metal components and possible health impacts by homeowners in a number of States, and I understand the personal hardships that this issue has caused impacted homeowners and want to assure the members of this subcommittee that effective and efficient completion of this investigation is a key priority of the CPSC and our Federal and State partners.

Finally, I want to say a few words about the importance of pool and spa safety. Ensuring the compliance with the Virginia Graeme Baker Pool and Spa Safety Act is a critical priority of mine. I am happy to share good news with the Congress today about what we found in the last few months. We have sent our field investigators out to inspect over 1200 pools and spas in 38 States as a part of a recently launched enforcement initiative and we have found that 80 to 90 percent of the pools and spas inspected were found to be compliant. This is very good news and means that the children will be safe when they go swimming. We are also working with the States Attorneys General to find out why the other 10 percent are not in compliance.

Chairman Rush and Ranking Member Radanovich, thank you again for allowing me the opportunity to update the subcommittee on my vision for the future of the Consumer Product Safety Commission. I believe that CPSC stands for safety, especially the safety of children, so with your support I intend to continue the transformation of this agency from what some have described as a teething tiger into the world's leading lion in consumer protection. Thank you and I look forward to answering your questions.

[The prepared statement of Ms. Tenenbaum follows:]

Statement of
Inez Tenenbaum
Chairman
U.S. Consumer Product Safety Commission

Before the Subcommittee on Commerce, Trade, and Consumer Protection

"The Consumer Product Safety Commission: Current Issues and a Vision for the Future"

September 10, 2009

Good morning, Chairman Rush, Ranking Member Radanovich, and Members of the Subcommittee on Commerce, Trade, and Consumer Protection. I am pleased to be here today to inform you of the actions we are taking at the U.S. Consumer Product Safety Commission (CPSC) to protect the safety of children and consumers, as well as my vision for the future of this agency.

Let me begin by saying that I am deeply honored to have the privilege of serving as Chairman at such an important juncture in the Commission's history. I am also pleased to report to the Subcommittee that CPSC is an agency on the rise.

My desire to serve as Chairman was deeply influenced by my previous work as an elementary school teacher, a researcher dealing with consumer product safety issues in the South Carolina House of Representatives, and my service as South Carolina's State Superintendent of Education from 1999 to 2007.

In all of these positions, I focused on doing my utmost to protect the health and safety of children and families - and have made this approach a key focus of the CPSC's move to modernize and address new regulatory challenges.

It is no secret that the Consumer Product Safety Commission has faced numerous impediments in recent years. In 1981, the Commission had nearly 900 full-time employees. By 2008, that number had dropped to below 400. Similarly, years of budget cuts severely impacted the Commission's ability to modernize or, in some cases, even maintain its basic infrastructure.

Last year, this Subcommittee and the Congress as a whole recognized the need to reinvigorate the Consumer Product Safety Commission by passing the Consumer Product Safety Improvement Act of 2008 (CPSIA). Among other things, the CPSIA gave the Commission substantial new enforcement authority, authorized increased staffing, increased public disclosure of emerging product safety issues, and provided new mandatory standards for children's toys and juvenile products.

Mr. Chairman, I applaud your leadership and that of other members of this Subcommittee in crafting the CPSIA. The CPSIA recognizes many of the challenges this agency has faced over the years – and demands that we rebuild the Commission to adapt to an era of consumer products that come from all over the world, and the need to take proactive measures to protect consumers from new and emerging hazards.

In my first two months leading the CPSC, I have focused on three key goals: transparency and openness to those we serve; a renewed focus on education and advocacy to all American consumers; and fair, but firm enforcement of the product safety laws we oversee.

Today, I hope to provide a clear assessment of what the Commission has accomplished so far and my vision for the future.

Implementation of the CPSIA

My top priority since assuming the Chair of the Commission has been meeting the statutory deadlines for rules and reports required by the CPSIA. Through the hard work of CPSC staff, I am pleased to announce that 12 substantive rules and policy guidance documents have been released since I was sworn in on June 23, 2009, including the following items:

- Proposed Rule for Registration of Durable Infant and Toddler Products: On June 29, 2009, the Commission issued proposed rules for consumer registration of durable infant and toddler products, as required by the Danny Keysar Child Product Safety Notification Act, Section 104(b) of the CPSIA.

- Tracking Label Guidance: On July 20, 2009, the Commission issued policy guidance for the tracking label requirement contained in Section 103 of the CPSIA. The policy guidance announced the Commission's interpretation of key features of the tracking label provision, and explained how the Commission would approach enforcement.

- Mandatory Toy Standards: On July 21, 2009, the Commission issued a Notice of Consultation, pursuant to Section 106(b) of the CPSIA, to solicit input from all stakeholders on the effectiveness of the current mandatory toy standard (ASTM F963), and possible ways in which this standard could be improved to further reduce the risk of injuries from toys.

- Lead Inaccessibility Rule: On August 10, 2009, the Commission issued a final rule explaining under what circumstances children's products may contain parts that exceed the Congressionally-mandated lead limits, and describing when those internal lead parts are inaccessible to children.

- Audits for Third-Party Testing Labs: On August 13, 2009, the Commission issued a proposed rule specifying audit requirements for third-party testing labs pursuant to Section 102 of the CPSIA.

- Phthalates Testing Guidance: On August 17, 2009, the Commission issued testing guidance for children's toys and child care articles. This testing guidance only requires testing on component parts likely to contain phthalates, and not the entire article. Comments received on this guidance will also be integrated into a Notice of Proposed Rulemaking on the issue.

- Lead Testing Component Exemptions: On August 26, 2009, the Commission issued a final rule on lead level determinations that exempts certain component parts, including dyed and undyed textiles, polyester, cotton and papers, inks and inaccessible bindings in books from third-party testing requirements.

- Civil Penalties Interpretative Rule: On September 1, 2009, the Commission issued an interim final rule providing notice of the increase in civil fines pursuant to Section 115 of the CPSIA, and provided guidance on how the Commission will now negotiate civil penalties.

- Durable Nursery Goods Rulemaking: On September 3, 2009, the Commission issued proposed rules for infant walkers and bath seats pursuant to the Danny Keysar Child Product Safety Notification Act, Section 104(b) of the CPSIA. Both proposed rules strengthen the existing voluntary standards for those products. In February 2010, the Commission will issue proposed rules for bassinets and toddler beds.

In each of these rulemaking proceedings, I have directed Commission staff to work closely with all impacted stakeholders to ensure that the rules we implement remain true to the statutory intent of the CPSIA, while also minimizing undue burdens on small businesses and other stakeholders.

In the near future, the Commission will publish additional rules clarifying the third-party testing process and the testing of component parts. As we move forward, I assure the Subcommittee that we will continue to solicit feedback from all involved parties, and work to implement common-sense rules that are squarely focused on maximizing product safety and reducing administrative burdens.

Rebuilding the CPSC's Internal Business Processes

The Commission's information technology systems are truly the lifeblood of this agency. Sadly, these systems were neglected for far too long. The result is a patchwork of systems that make it very difficult for CPSC staff to "connect the dots" between different incidents, identify patterns of defects, and respond quickly to emerging hazards. This has led to a situation where the Commission is constantly in the position of reacting to events – rather than receiving new hazard information and proactively targeting harmful products before they flow into the stream of commerce.

Congress recognized the critical need for infrastructure modernization in the CPSIA, and directed the Commission to upgrade its infrastructure and create a product incident database that is easily searchable by the public. In response to that mandate, the agency is developing a single, integrated web-based environment, the Risk Management System (RMS), and an associated public database that will allow access to consumer product safety information.

Earlier today, the Commission submitted a plan to Congress detailing Phase I of the modernization initiative, which is implementation of the searchable product information database required by Section 212 of the CPSIA by March 11, 2011. As detailed in the report, the new web portal will be specifically designed to be easily accessible and usable by all Americans. Furthermore, the Commission plans a major public awareness

campaign as the database is rolled out to ensure that all Americans are aware of the database, and its utility in ensuring the safety of consumers.

However, this initial phase of the RMS is only one component of the Commission's overall effort to improve its infrastructure. CPSC continues to look at its business processes in order to identify improvements that will provide the agency with the tools necessary for identification of emerging hazards, such as using predictive data-mining technologies to analyze the increasing amount of information the agency receives, and identifying emerging hazards in real-time.

It is impossible to understate the absolutely essential nature of these improvements and their ability to transform the way this agency receives, reviews, and acts on new and emerging threats. By forming partnerships with industry and government entities to expand import surveillance and data exchanges, greater consumer involvement through user-friendly reporting and search tools, and the use of new advanced information-management technologies, CPSC can take the truly proactive approaches necessary to protect public health and safety.

Consumer Education

Notice of recalls and other hazards are only effective when all impacted consumers actually hear about them and respond to our alerts. Through network television appearances and newspaper interviews, I have worked to reach millions of families with information about dangerous cribs, bassinets, and window blinds. These are products that have killed young children, and we are working tirelessly to inform parents and caregivers about recalled products that need to be removed from homes or repaired to keep kids safe.

Last month, the Government Accountability Office (GAO) released a report noting that the Commission could do a better job of reaching out to poor and minority communities that often do not receive critical consumer product safety information.

Chairman Rush, I know this is a key priority of yours and I want to assure you that it is also a key priority of mine. To that end, I have directed Commission staff to expand our education and consumer outreach efforts to underserved Americans.

One example of this is the Commission's effort to communicate with populations that are sometimes difficult to reach through traditional media. We are planning a "Minority Outreach Day" to increase awareness of product safety in certain targeted markets. We also have a successful grassroots program called the Neighborhood Safety Networks that has 5600 members who are community leaders and who pass on vital safety information to their constituents. These members include tribal leaders, fire chiefs, health care workers, and child safety advocates. We plan to expand this program and target our materials to specific hard-to-reach populations that the Neighborhood Safety Network aims to serve.

Later this month, CPSC also plans to launch a social networking, social engagement program that will establish CPSC's presence on various new media sites, including Facebook, Twitter, and YouTube. This is an exciting new effort that once launched will reach a great number of consumers who may not know about us right now, but will know about us soon.

Increased Port Monitoring

From 1998 to 2007, the value of consumer products imported into the United States increased over 100 percent. During that time period, imports from China nearly quadrupled – and now constitute over 40 percent of all imported consumer goods.

Pursuant to Section 225 of the CPSIA, the GAO recently released a study that audited and analyzed the agency's efforts to police imports, and prevent the entry of unsafe products into the U.S. market. In the report, the GAO found that increased agency staffing at ports, combined with revised information sharing agreements with U.S. Customs and Border Protection (CBP) would allow the agency to better detect faulty products before they enter the country – not after they enter the stream of commerce.

I agree with these recommendations, and have directed Commission staff to update agreements with CBP to allow better information sharing. This information sharing would include use of CBP's Automated Targeting System (ATS), which contains advance manifest information for shipments entering the United States.

To access the ATS information, the Commission is in the process of hiring an employee that will be resident in CBP's Commercial Targeting Analysis Center (CTAC) when it becomes operational on October 1, 2009. This employee will be able to provide CPSC with real-time advance cargo manifest information, and allow other CPSC staff to make cargo risk assessments as shipments arrive, not after they leave port areas.

Foreign Outreach

Since assuming the Chair of the Commission, I have made a number of efforts to reach out to foreign governments and manufacturers to inform them of new Commission regulations, and to emphasize this agency's commitment to ensuring the safety of imported consumer products.

In late July and early August, I traveled to Asia to meet with industry and government leaders in Hong Kong and Vietnam to discuss the CPSC's new priorities. I also gave a keynote speech at the APEC Conference in Singapore, where I stressed the importance of foreign manufacturer compliance with the CPSIA, the importance of foreign economies building safety into their products, and the relationship between trade and safety.

The Commission is also continuing its efforts to strengthen and deepen our work with the Chinese government and Chinese manufacturers. On October 21-26, 2009, the 3rd Biennial United States – China Consumer Product Safety Summit between the CPSC and

its Chinese counterpart agency, the General Administration of Quality Supervision, Inspection, and Quarantine (AQSIQ) will be held in Wuxi, Jinhua, and Beijing, China.

The goal of the 2009 Summit is to bring dialogue between the two agencies to a new level, emphasizing the need for commitment to a more comprehensive approach to product safety. With input from U.S. and Chinese stakeholders, CPSC and AQSIQ will identify and discuss measures to ensure that U.S. importers and Chinese suppliers establish a systemic approach to preventing and detecting safety hazards in consumer products – from product design, through the manufacturing process, and to ultimate use of the product by the consumer.

In addition to overarching policy discussions, the Summit agenda will include topical discussions of product safety issues, with toys, lead in children's products, all terrain vehicles (ATVs), lighters, and fireworks representing specific product areas where we hope to make systemic advances.

In the coming months, we will continue our outreach efforts with representatives from other foreign governments to ensure that all manufacturers importing products into the United States are aware of the existing CPSC regulations, as well as new requirements that will soon be promulgated pursuant to the CPSIA. We will also be working closely with the U.S. Department of State, pursuant to new authorities under the CPSIA, to develop an information sharing agreement with foreign governments as we investigate mutual product safety concerns, and begin to pursue joint enforcement activities.

Chinese Drywall Investigation

CPSC continues to vigorously pursue its investigation of imported drywall that has been linked to corrosion of metal components and possible health impacts by homeowners in a number of states. We are fully committed to finding answers and solutions for all the homeowners who are impacted by this serious situation – and the agency is pouring a record amount of money and manpower toward the goal of helping affected families.

As of September 4, 2009, the Commission had received 1192 incident reports relating to drywall in 24 states and the District of Columbia. The majority of these reports continue to be from Florida, Louisiana and Virginia.

In order to provide a comprehensive response to this issue, the Commission has formed an internal drywall task force that works with other federal and state agencies, including the Environmental Protection Agency (EPA), the Centers for Disease Control (CDC), the Department of Housing and Urban Development (HUD), Immigration and Customs Enforcement (ICE), and several state health departments.

In the last month, the CPSC drywall task force has:

- Made an investigative visit to China to meet with government and industry officials, and collected information and samples relevant to the Chinese drywall manufacturing process;

- Conducted principal air sampling field work in 50 homes to determine the air emissions in homes with suspect drywall;

- Sent over 100 letters to drywall importers, distributors, and builders to determine how much drywall may be at issue and in what homes it may have been used;

- Contacted over 500 consumers to request that they update the information provided in initial drywall incident reports; and

- Coordinated a rapid response to allegations of radioactive phosphogypsum in Chinese drywall. Upon learning of the allegations, we commissioned a study with our state and federal partners, validated the science with an interagency technical committee, and publicized results that the samples tested did not pose a radiological hazard.

Later this fall, the federal drywall task force plans to release initial indoor air sampling test results, drywall elemental analysis results, chamber study results, and a preliminary health assessment – and will continue to diligently work on efforts to reach further conclusions on the exact source of contamination in the affected homes. The Commission is also studying the remediation activities of certain builders in an effort to assist its federal and state partners in developing a remediation protocol for impacted homes. Further detail on the federal testing efforts and associated activities is available in our September Drywall Investigation Status Report.

I understand the personal hardship that this issue has caused impacted homeowners, and want to reassure members of the Subcommittee that effective and efficient completion of this investigation is a key priority for the CPSC and our federal and state partners.

Pool and Spa Safety

In 2007, Congress passed the Virginia Graeme Baker Pool and Spa Safety Act in response to a series of horrible child injuries and fatalities involving drain entrapments and drownings in pools and spas. CPSC has worked with the Baker family and Taylor family and is pouring its heart and energy into effectively implementing and enforcing this safety law – this is our way of honoring the children who have died or been seriously injured in pools and spas.

Ensuring compliance with this law is a critical priority for me. In the last several months, CPSC has ramped up its outreach and education efforts to ensure that public swimming pool and spa operators are compliant with the law. In July, I conducted an

extensive interview with NBC's *Today Show* to re-state the need for compliance, and warn public pool operators that they should close their facility if they are not in compliance with the law. In addition, CPSC investigators have inspected over 1200 pools and spas in 38 states as part of a recently launched enforcement initiative.

The good news is that CPSC's public outreach and education efforts seem to be having a positive impact in this area. Recent inspections show that most public pools and spas have installed or have plans to install the new, compliant drains covers and safety equipment in the near future. Let me state again, contrary to some reports, there are many more public pools and spas that have been made safer because of this important law.

As we approach the end of the summer swimming season, CPSC will continue to work with state Attorneys General, state health departments, and consumer groups to ensure that public pools are in compliance with this important law – and will not hesitate to take action against those that are not.

*****

Chairman Rush and Ranking Member Radanovich, thank you again for allowing me the opportunity to update the Subcommittee on my vision for the future of the Consumer Product Safety Commission. I believe that CPSC Stands For Safety, especially the safety of children.

With your support, I intend to continue the transformation of this agency from what some have described as a "teething tiger" to the world's leading lion of consumer protection.

I now look forward to answering your questions.

Mr. RUSH. The Chair thanks the Chairman.

Before we engage in the questioning from the members of the subcommittee, the Chair requests unanimous consent that letters from five consumer groups and a letter that was sent to me through the offices of Congressman Schauer of Michigan, that these letters be entered into the record. Without any objections or hearing no objections, so ordered.

[The information appears at the conclusion of the record.]

Mr. RUSH. Do you want to report unanimous consent requests at this time?

Mr. RADANOVICH. I would. Thank you, Mr. Chairman. I have got a couple of unanimous consent requests, statements on behalf of Congressman Gingrey and Burgess and also letters from constituents, over 100 here of constituent companies, small businesses that are impacted by the effects of CPSIA, of this legislation. I would ask that all three of these items be accepted into the record.

Mr. RUSH. Hearing no objections, so ordered.

[The information appears at the conclusion of the hearing.]

Mr. RUSH. The Chair recognizes himself for 5 minutes for the purposes of questioning the witness.

Madam Chairman, last year the CPSC requested $8 million for fiscal year 2009 as part of its performance budget statement to the Congress and that request has funded 444 full-time employees which is an increase of 24 over the full-time employee staffing level for '08, and my question is how many of these additional employees have been hired by the agency? Do you seem to need additional employees and are any of those funds still going to CPSC's enhancements in import safety and product testing capabilities? What proportion of the FTE's and of your budget will go to each category and what other roles do you anticipate the needs FTE will play under your administration?

Ms. TENENBAUM. Thank you, Mr. Chairman. The CPSC has a staffing level of 530 FTEs. We are currently at 458 employees at the agency. We have 18 pending hires that have accepted offers for employment and we have 36 full-time employees that we have hired since January, 2009. We have 29 vacancies where interviews are currently underway and 27 other positions are in the stages of the recruitment process. We hope by October to reach the ceiling of 530 employees so that we will be fully staffed and we will be putting additional staff in port security and surveillance as well as compliance, and throughout the agency to see that we implement the CPSIA and other statutes. I can give you the breakdown for every division and how many will be added to those divisions. I can send it over but I did not bring it with me today.

Mr. RUSH. Would you please supply that?

Ms. TENENBAUM. We will get that to you but we are hoping by October we will meet the ceiling of 530 which is the maximum FTEs that we are supposed to have.

Mr. RUSH. Can you—the GAO's report on improving safety for minority children and families as you indicated was a major concern of mine and I know from your previous statements that you have committed to reversing or to improving the patterns of safety for minority children and families. Can you expound a little bit more on some of your priorities in that particular area, please?

Ms. TENENBAUM. Well, we found that overall the Commission needs to improve our ability to educate consumers. There is nothing more disheartening and sad than to find out that products that were recalled several years ago are resulting in injury and deaths, and we have found that recently we had to go back and reissue press releases, and we did this recently on bassinets but so that is why we want to step it up. We have a CPSC 2.0 where we are going to be using new media as others are to get the messages out. We also want to focus in the minority outreach of looking at how we can enhance our ability to talk directly with minority organizations. We welcomed the recommendation of the GAO and information that we hope, we think we nced to have and the other thing is just the information efforts, not only to consumers as a whole but targeting minorities. We believe that a child's economic background should not affect the risk of injury. Now, we will be leading a minority outreach day to increase awareness in product safety in targeted markets which will be a media event and working with organizations, and then we also work with the Neighborhood Safety Network members, and these are several hundred organizations where we can get information to them and they disseminate it to other minority organizations. We are going to report to you at the end of October on the GAO report so we will address that in detail in our report to you in October.

Mr. RUSH. My time has expired. I want to thank you for your responses to my questions.

The Chair recognizes Mr. Radanovich for 5 minutes.

Mr. RADANOVICH. Thank you, Mr. Chairman, and welcome, Chairman Tenenbaum, to the committee and I enjoyed our getting a chance to know each other and appreciate your outreach and welcome you to the Commission.

I want to just highlight a couple—I have got a couple of items in the committee room here to kind of highlight some of the problems that CPSIA seems to have with small business and there is a couple of products over there that cost $65, a microscope for $60 and testing for those products for the microscope is $3,678 for—that was for one of 24 samples that were submitted, and the other one was $5,973. But I think the item that represents problems with small business the most is this Native American ceremonial costume that was created in the Southwest somewhere. Recently my family and I came across the country, California to Washington, D.C. in a cross-country trip this August and there were a lot of vendors at the reservations and such that were making a living by selling similar costumes like this, and many of these have beads or special designs that make each one of them individual. None of them are made the same and this poses a real problem because under CPSIA this would have to be—one costume at a time would have to be tested and you would be destroying the costume at the time that it is testing so it is really a small batch run product problem with CPSIA, and I think this item highlights the problem the most. Now, products like this were especially with crystal beads and such that folks had a problem with and they submitted a request to exclude crystal and glass beads from the lead provisions in CPSIA and it was denied, and I want to read if I can your comment on the denial of the request. It said, "In making a determina-

tion, I was mindful that the statute does not use the term harmful amount which would allow staff to utilize a risk-based approach. Thus, while Commission staff recognized that most crystal and glass beads do not appear to pose a serious health risk to children, the request for the exclusion must be denied."

So I guess I have a couple of questions that kind of revolve around this problem of small batch testing and the crystal and glass bead exclusion from the lead provisions. Do you think the Commission has the flexibility to exempt safe products that don't meet the exemption standard or is it virtually impossible under the standard of any lead absorption for most products and materials?

Ms. TENENBAUM. I appreciate your question, Ranking Member Radanovich, because I think there has been some interpretation of my comments that have muddied the waters around this issue so I appreciate the opportunity to comment. You did read the section of my comments that have people wondering were the crystals—did they pose no hazard at all to children. And I met with the staff yesterday to make sure that I understand and it was really, I guess, poorly worded that part of my statement and what the staff meant when they—and I was taking it from their memorandum, was that under the Federal Hazardous Substance Act which was the old Act. The Act that we enforced and continue to but before it was amended by the CPSIA, that CPSC had to determine whether a product can contain lead and it resulted in substantial illness or injury. So before you could regulate the lead content, you had to prove that there was substantial illness or injury. When you passed the CPSIA, we were not required to prove that standard, in fact, Congress struggled over where to set the lead limits and you determined that there was no safe level of lead based on testimony and, you know, Congress did.

Mr. RADANOVICH. Which did not allow you to do any risk-based assessment of any of the products?

Ms. TENENBAUM. Well, going back to the lead crystals, Congress has set the threshold after August 14 of this year to be 300 parts per million. These lead crystal beads were 900 parts per million up to 23,000 parts per million per bead so I think it was poorly worded.

Mr. RADANOVICH. But during the conversation too, it was known that the lead in those beads were not in a form that was going to cause a problem even if they were ingested and I think that is where the devil is in the detail of a lot of this. Some of those beads would have to be crushed up into powder and then swallowed in order to have the adverse affect of the lead which makes me think that the Commission needs some type of some ability to test things on a risk-based assessment. And I guess what I think I would like to get an answer from is do you think that products that are excluded such as crystal present an unreasonable risk of injury or are unsafe and do you need flexibility to grant permission exemptions to permit safe products that can't meet the statutory limit?

Ms. TENENBAUM. Well, in the lead we showed that there was some leaching but it did not rise to the level with one bead to oppose to be listed under the Federal Hazardous Substance Act.

Mr. RADANOVICH. But then that doesn't give you—but you don't have any flexibility to exempt that?

Ms. TENENBAUM. But what if the child swallowed 50 small beads, we could not determine whether or not one, you know, one bead. It was determined we would not put one bead on the Federal Hazardous Substance Act but what if a child swallowed multiple beads and it would have raised the blood level.

Mr. RADANOVICH. And if I may get you to answer this one last question though, do you need flexibility to grant exemptions to permit safe products that can't meet the statutory limit?

Ms. TENENBAUM. Well, it goes to the heart of the matter on what is a safe level for lead and Congress struggled with it.

Mr. RADANOVICH. But do you feel you need that flexibility so that you can exempt safe products?

Ms. TENENBAUM. I feel it would be premature for me to answer that question at this time because these beads went all the way up to 23,000 parts per million.

Mr. RADANOVICH. Well, let us just in all products, do you need in any case do you feel that you need the flexibility to grant exemptions for safe products?

Ms. TENENBAUM. I believe that we have to look at products on a case-by-case basis and with good science wedded with a good statute determine whether or not it is at risk.

Mr. RUSH. The gentleman's time has expired.

Ms. TENENBAUM. So I think it is premature for me to say when Congress struggled with this very issue it was the heart of the CPSIA lead limits and Congress collectively decided and overwhelmingly passed a statute that said we will have any lead—we will not allow a product that had any lead.

Mr. RADANOVICH. Even if those products are safe.

Mr. RUSH. The Chair has been very lenient with the gentleman.

Mr. RADANOVICH. Thank you, Mr. Chairman.

Ms. TENENBAUM. Thank you. That's the heart of the matter really.

Mr. RUSH. The Chair now recognizes the Chairman Emeritus for 5 minutes for questioning the witness.

Mr. DINGELL. Mr. Chairman, I thank you.

On March 4, 2009, I sent a letter to CPSC with 10 detailed questions concerning implementation of the Consumer Product Safety Improvement Act, the CPSIA. I would ask unanimous consent that that be inserted in the record at this time, Mr. Chairman.

Mr. RUSH. Hearing no objection, so ordered.

[The information appears at the conclusion of the hearing.]

Mr. DINGELL. At the request or rather at the instruction of former Chairman Nord, CPSC prepared responses to the questions which I ask unanimous consent be inserted into the record at this point.

Mr. RUSH. Hearing no objections, so ordered.

[The information appears at the conclusion of the hearing.]

Mr. DINGELL. Those responses indicated support for amendment of the statute, "in order to allow CPSC to set risk-based priorities given the finite resources available to it." I would appreciate now your candid responses to the following questions in order to ascertain whether you support such course of action or how we should address the problems that the Commission has with the implementation of that statute. As my time is limited, Madam Chairman, I

ask that you respond to these questions with a yes or no. I will note that I will submit these and other questions for the record in order to allow you to provide more detailed answer.

First question, given widespread concern about the practicality of retroactively applying CPSIA's requirement to existing inventory, do you believe that the applicability of such requirements should instead be limited to products manufactured after the effective date of the statute except in circumstances where the Commission decides that the exposure to a product presents a health and safety risk to children, yes or no?

Ms. TENENBAUM. Well, I would have to say no. The Federal Court decided in the phthalate case that we could not exempt products that were manufactured before the statute was passed.

Mr. DINGELL. Thank you, Madam Chairman.

Next question, I am concerned that the age limit for children's products defined in CPSIA unnecessarily subject certain products such as bicycles or books or magazines to more rigorous standards than otherwise necessary. Do you believe the age limit used in the definition of children's products should be lowered to better reflect exposure, yes or no?

Ms. TENENBAUM. No, because you often have a home where multiple children are at all ages using the same product.

Mr. DINGELL. Now, do you believe that CPSC should be given the discretion to set a further age or rather to set a higher age for certain materials or classes of products that pose a risk to older children or to younger ones in the same household, yes or no?

Ms. TENENBAUM. I think I answered that in number two that we need to.

Mr. DINGELL. Do you mean the same no answer, Madam Chairman?

Ms. TENENBAUM. Right, no.

Mr. DINGELL. Thank you. I hope you understand this is not an attempt on my part to be discourteous but I have a lot to get in here and I am much concerned about that the fact the time is running very fast.

I am also concerned that the blanket applicability to products of certification tracking label requirements would be unduly cumbersome, both from the standpoint of CPSC and consumer product manufacturers. Should CPSC be allowed to address certification tracking labels and other issues on a product class or other logical basis using risk assessment methodologies to establish needs, priorities and a phase-in schedule, yes or no?

Ms. TENENBAUM. It depends on the individual product. We have to look at it product hy product.

Mr. DINGELL. I am going to ask that you will have time to respond further to these questions and I will be submitting additional questions to you as Chairman of the Commission.

Do you believe the implementation of CPSIA has overstretched CPSC's staff and resources, yes or no?

Ms. TENENBAUM. It has but they are hardworking and our staff is working until midnight many nights. Many worked the 4th of July. They are working many weekends to work out to get these rules finished so that you can have it.

Mr. DINGELL. Madam Chairman, thank you. I have a couple more questions here.

Put differently, does CPSC have adequate resources with which to implement CPSIA as well as to carry out its other mandates, yes or no?

Ms. TENENBAUM. No.

Mr. DINGELL. I am sorry?

Ms. TENENBAUM. No, we don't have adequate resources but we are working hard to do the best we can.

Mr. DINGELL. If not, what amount of funding would you suggest be given to CPSC to allow it to perform its functions satisfactorily?

Ms. TENENBAUM. Well, we are not—we submitted our budget to OMB and we cannot discuss it until September the 14th, I understand, publicly.

Mr. DINGELL. Well, we do need the answer to that question for us to see that you can function. This committee has legislative jurisdiction over these matters and OMB lacks that jurisdiction.

Ms. TENENBAUM. Well, we can give it to you on September the 14th.

Mr. DINGELL. Remember that difficult fact so I am asking that you submit that to us for the record.

Ms. TENENBAUM. Thank you.

Mr. DINGELL. Madam Chairman, in conclusion, do you believe that the problems encountered in implementing CPSIA can be remedied solely via administrative action by CPSC, yes or no?

Ms. TENENBAUM. I would say most of them can by administrative action.

Mr. DINGELL. Most, so that means some cannot?

Ms. TENENBAUM. There will be some areas where we still have not come up with a solution.

Mr. DINGELL. I will be asking further information so as you can identify that. Now, if not, do you support targeted amendments to CPSIA to address the concerns which have arisen during the Act's implementation, yes or no?

Ms. TENENBAUM. It is premature for me to answer that. We are working with all of the industries that are affected and trying to untangle the knots that they have with their products and we are making great progress in resolving many of these issues.

Mr. DINGELL. So you are telling me that such cut and bite amendments carefully targeted to CPSIA may be required?

Ms. TENENBAUM. I said it is premature for me to answer that.

Mr. DINGELL. I said may, I didn't say will be.

Ms. TENENBAUM. May be required, may.

Mr. DINGELL. OK, now, if they are required will you first tell the committee whether they are required or not and second of all, will you work with us if such are required?

Ms. TENENBAUM. Absolutely, 100 percent.

Mr. DINGELL. OK, now, when will you know whether these amendments, carefully targeted will be required?

Ms. TENENBAUM. Well, there is one rule that we are working on and once it—it is called the—it contains the component part testing rule that many of these issues dealing with handcrafters and other products will be—will find out that under the component part they will not have to test. For example, a shirt that falls under deter-

minations rule, it is cotton so you don't have to test a cotton shirt but the buttons, if you have the button manufacturer certify to you that the button does not contain lead then the whole product would not have to be tested and we feel like that is going to untangle a lot of knots.

Mr. DINGELL. All right, let me try to just—do you have problems in involving a rule with regard to bicycles, off-road vehicles and things of that kind, right?

Ms. TENENBAUM. Well, I met recently.

Mr. DINGELL. Just yes or no.

Ms. TENENBAUM. We are—if you will let me explain on the ATVs, we met with the industry.

Mr. DINGELL. My time is about gone and the Chairman is kindly permitting me.

Ms. TENENBAUM. There are issues that we are working with administratively with both industries.

Mr. DINGELL. Say it again.

Ms. TENENBAUM. It has a stay right now on both the bikes and the ATVs and we are working with them on how they can make the lead inaccessible in the parts that the rider comes in contact with, like the handlebars. You know, I looked at my bicycle. It has rubber around it so I don't come in contact with that.

Mr. DINGELL. So you have a problem that you can't solve very quickly, can you?

Ms. TENENBAUM. Yes, we can once we determine that they can make those parts inaccessible.

Mr. DINGELL. Now, you have got a fine problem on motorcycles?

Ms. TENENBAUM. Motorcycles has the issue of lead in the handlebars. There might be lead in the vinyl seats but the motorcycle might not be a children's product.

Mr. DINGELL. OK and you have got a similar problem on all terrain vehicles and snowmobiles and such?

Ms. TENENBAUM. There are issues there in implementation and we are working with the industry and met with them last week.

Mr. DINGELL. And you have got a problem with regard to lead in publications, periodicals, books, children and adult books, is that right?

Ms. TENENBAUM. Well, no we don't.

Mr. DINGELL. No you don't?

Ms. TENENBAUM. This is a book.

Mr. DINGELL. Why is it that the book publishers are calling and telling me so?

Ms. TENENBAUM. Because, you know, it would be nice if we could and I want to—offering to meet publicly with affected industries which we are doing, holding public hearings which I want to do. We are resolving many of these issues. The ordinary book like this book will contain no lead. It is pictures. It is printed with a four-color process. This book complies and the reason we have it covered is because——

Mr. DINGELL. But you have books out there that do not comply, is that right?

Ms. TENENBAUM. The only books that don't comply are books that are published prior to 1985 which we don't consider children's books. These are vintage books that will be considered adult vin-

tage books even if they are for children and those books the only ones that don't comply are those that have illustrations using color.

Mr. DINGELL. Madam Chairman, I see that my time has been exceeded.

Ms. TENENBAUM. Now, the other thing about the books.

Mr. DINGELL. What I want you to understand is that this committee wants to see to it that you have a statute that you can properly administer without a lot of toe-dancing and improper pressure placed upon you to resolve questions in a way which are inconsistent with the statute.

Mr. Chairman, I will ask unanimous consent that I be permitted to submit a further letter and information to the record and responses by the Chairman to get to the bottom of these questions that I am trying to answer.

Mr. RUSH. Hearing no objection, so ordered and the Chair wants the Chairman Emeritus to know that you are in the thereabout area of 5 minutes.

Mr. DINGELL. You have been excessively kind and courteous. I give you my respect and thanks.

Mr. RUSH. Well, the Chair has a deep-seeded love for the Chairman Emeritus.

The Chair now recognizes the gentleman from Louisiana, Mr. Scalise, for 2 minutes.

Mr. SCALISE. Thank you, Mr. Chairman.

Madam Chair, on the question of Chinese drywall, looking through your opening statements there are a few questions, one that you had cited that your office has 1,192 incident reports on this issue. Do you know how many of those are from Louisiana?

Ms. TENENBAUM. Well, most of the drywall problems are from Florida, Louisiana and Virginia and so a great number of those are from Louisiana, and we realize that this is a serious problem for your constituents.

Mr. SCALISE. And of course with all of the rebuilding that occurred after Hurricanes Katrina and Rita, our offices all throughout our delegation continue to receive more complaints and serious problems and I know some of my other colleagues from other States have expressed similar things they are experiencing in their State but just, I guess, because of the high number of homes that have been rebuilt and obviously some of this toxic Chinese drywall was used in many of these homes, we continue to receive higher numbers. Have you talked to our State's Department of Health and Hospitals to see if—I don't know if maybe some people might have reported incidents to them that didn't find their way to your office to make sure that the numbers and the incidents that have been reported are accurately being delivered over to your office in the cases where the State knows about an incident in our State?

Ms. TENENBAUM. We are working with our State partners, with your State health departments and we are also working with our Federal partners, the CDC, HUD, EPA and the White House Domestic Policy Council to get as much information as possible.

Mr. SCALISE. OK, I understand your task force on this issue is going to be issuing a report it says sometime in the fall. Do you know roughly when that report will be issued?

Ms. TENENBAUM. We are trying to issue this in late October and the report will have the EPA pilot study of six homes, the indoor test study, the EPA's elemental analysis of drywall which breaks down all the account compounds in the drywall. We also have been working on a phase two chamber test with the Lawrence Berkeley National Laboratory and a 50-home indoor air quality test program that is conducted by a private company, the Environmental Health and Engineering Company.

Mr. SCALISE. Is that report going to look into how this tainted drywall actually came into our country? What steps were maybe—what things were missed that allowed it to come in?

Ms. TENENBAUM. Well, we sent a team over to China and our team from the CPSC visited six mines and received samples to come back and we are using them in the testing. We are tracking distribution of drywall in the United States and what we have done is written letters to numerous importers, builders, companies that sell drywall. One of the issues that I have found is that the drywall standards only address the structural integrity and did not address what goes in the content.

Mr. SCALISE. The toxic levels, potentially.

Ms. TENENBAUM. So that is one of the things that I want to do is to create a standard for drywall so we would have a universal standard of products that can go into drywall.

Mr. SCALISE. And I would look forward to working with you on that. And final question, you had mentioned in your testimony that over 500 consumers were asked by your office to update their information on their incident reports. What types of things did they, you know, was it maybe that they didn't fill out all the things you wanted or there was additional information you wanted? What types of things did those?

Ms. TENENBAUM. Do you mean on the drywall?

Mr. SCALISE. Yes.

Ms. TENENBAUM. Well, they have just had new information about how it is affecting them physically. There are two tracks in this. One is to look at is this drywall—are these problems of drywall causing these health problems, these respiratory problems? And then is the drywall corroding electrical wires and so we are looking at that and they probably—I can get you a summary of what the complaints were or what the information is.

Mr. SCALISE. Sure, I appreciate that.

And thank you, Mr. Chairman, for your latitude.

Mr. RUSH. The Chair would like to announce that there are votes occurring on the floor and I am not sure exactly how much time is left but it is the Chairman's intention to go vote and allow members to go and vote and then to return for the continuance of this hearing. So we will be coming back but the Chair wants to recognize the gentlelady from Florida for her 2 minutes prior to us going to vote.

Ms. CASTOR. Thank you, Mr. Chairman.

I will stick on Chinese drywall and I appreciate the seriousness with which the Consumer Product Safety Commission has undertaken the investigation and as you know, importation of Chinese drywall spiked dramatically a few years ago. In 2005, we imported $3.6 billion worth. In 2006, that spiked to over $32 billion worth

before dropping back down to $6 billion. When that kind of massive spike occurs in trade for product that could potentially cause problems, does that raise a red flag for the CPSC that maybe we should take a closer look? And during your investigation have you considered an interim ban on Chinese drywall? And finally, there have been a number of proposals in the Congress and I would ask you to please review those and get back to us on what you recommend. Will you wait for the results of the investigation and tell me again what the timeframe is for that?

Ms. TENENBAUM. OK, thank you for those questions and we understand from Florida that you are getting many constituent letters and that you are very concerned about the quality of life for the people who live in your district and we are too. We want you to know that.

There are 6.9 million piece of drywall imported from China in 2006, there were—so 6.9 million pieces coming from all over the country. We have not been—from different sources with different manufacturers and which poses a different issue for the CPSC. It is not like you find one product that doesn't comply and can ban all products. There were some pieces of drywall from China that did comply and didn't have this problem and other pieces did. The report that we will give you in late October will be studies of in-home, the chamber test as well as we take the drywall out of the home and take it to a chamber so we can test the emissions from that drywall. There will be in-air quality tests, in-home air quality tests and there will be elemental tests where the EPA is breaking down the elements to tell us what is in there that is causing the corrosion and the respiratory problems. So we hope that this yields more information on the drywall. Practically speaking about a ban on drywall is very—the market has taken care of that because very few people want Chinese drywall and therefore we see very little coming into the country at this point. And so that is where but the overwhelming amount of drywall had been coming from China and now we get notification from the ports if drywall is sent to the port but very little is coming in at this time. We have met with our counterpart, the Chinese counterpart, AQSIQ. China has sent experts in to visit homes. They sent two of their drywall experts to look at—to go into these homes that were contaminated. As I said, we sent a team to China. Senator Bill Nelson from Florida went and met with the AQSIQ several weeks ago. He told them that President Obama was going to, he hoped, mention that when he met with President Hu in China. And so it is—we are really putting a great deal of our resources and attention on this, probably more than any other issue we are working on at this time is focusing on drywall so that we can find an answer to it, and so after we find an answer to on into rulemaking so that we can not have this situation happen again.

Mr. RUSH. The committee stands in recess and there are approximately four votes on the floor which are the final votes for the week but we will reconvene 15 minutes after the last vote and the Chair really wants to thank Chairman Tenenbaum for her contribution to this. Thank you.

Ms. TENENBAUM. Thank you.

[Recess.]

Mr. RUSH. Committee will again come to order. I will once again repeat to you, Madam Chair, for your graciousness and for the time that you are spending with us this afternoon. I don't see any other members here so I am going to recognize myself for one additional question and I think the ranking member has one additional question and then we will-if there are no other members we will just adjourn and go that way.

Every year for many years we have seen numerous bills that have addressed specific product safety issues. These bills have continued to be introduced even after the passage of last year's product safety reform. Just this year there are bills in Congress to permit sales to children to stop the sale of dangerous toy cigarette lighters and even to address additional national health threats, such as the beforehand reported upon Chinese drywall. The question is why are we seeing these bills? Why is the Commission not addressing these issues as they arise under its own authority and on its own initiative? And the second question is, do you agree that the consistent introduction of these bills is evidence that the Commission is not fully and properly carrying out its mission and how do you see us moving forward? Is the introduction of these bills, are they any kind of indication of a need or specific focus of the Commission or are they just members introducing bills?

Ms. TENENBAUM. Thank you, Mr. Chairman, and what you are asking me is how can the CPSC be proactive in spotting hazards so that Congress does not have to introduce bills, and do we have the administrative and regulatory structure where we can handle them without legislation. I appreciate this question because it is a good one.

First of all, as I have looked back in the history of the CPSC the leadership makes a tremendous difference because, you know, this Commission relies on voluntary standards, and it is a question of when you see a voluntary standard not working to protect the health and safety of individuals whether you move right in and go ahead and promulgate a mandatory rule. One of the things that I have observed as the Chairman for less than 3 months is that we need to review our existing emerging hazards and early warning identification system and we really need to bolster this system with technology and resources, and our new technology database will give us more information then ever before so that we can spot these issues earlier. We need to initiate more investigations and increase our investigations and be much more proactive about them.

There are also scientific research organizations where if we had the resources, we could engage them or even they could use private resources to do analysis and testing if we asked them to. We have a deference toward voluntary standards. In fact, the law was passed in 1981 requiring deference to voluntary standards unless they are proved ineffective in addressing the hazards. I have already noticed in my short tenure that there is one particular product that I have seen that there are no standards for yet we have already determined 60 people have been killed by this product and we are going ahead and announced proposed rulemaking, ANPR, so that we will begin working on a standard and not just wait until the industry comes up with a voluntary standard.

So all of these are ways that the CSPC will be more proactive and we also want to harness the new media opportunities that we have. Our new brand is CPSC 2.0 with the blog, the Facebook, the YouTube, Twitter, Recall Widget so consumers have up-to-date information. It is really going to be interesting with the new—we have the tracking labels which we went back to the statute and wrote a tracking label guidance but industry is looking at a futuristic tracking label so you could look at this bar code that would be universal throughout the world and pull it up on say your Blackberry or iPhone and find out everything about this product right there in the store or, you know, when you by looking at the bar code, and so very few people are using it. It is very futuristic but that is the kind of technology that will enable us to be more proactive.

Mr. RUSH. The Chair recognizes the ranking member, Mr. Radanovich.

Mr. RADANOVICH. Thank you, Mr. Chairman. I appreciate that.

Madam Chair, I want to know what the purpose of a testing and certification stay of enforcement is and what happens when the stay expires in February? Do you think that the Commission will be ready to implement the laws as written?

Ms. TENENBAUM. Thank you, Ranking Member Radanovich.

First of all, we call that the 15-month rule and that we were required by statute to have that month which will be what is reasonable testing and it will have the component part testing in that rule, and it is due to be promulgated in November, and so under the statute we will be working trying to get that out because I guess what I wanted to say here this morning and what we have prepared to try to leave in your minds is that we are working hard to implement the CPSIA. We are finding out that with every rule that we put out like the lead determinations which probably would have exempted the blouse that you showed us from any testing, the component testing which will exempt so many products from the manufacturing having to retest again on items, all of these are helping us resolve a lot of these questions and untie a lot of these knots. And so we will be having that rule shortly and I think that it will help tremendously with a lot of the complaints that you are receiving from industry.

Mr. RADANOVICH. Do you think that you will be able to implement and enforce the law as written by then in February?

Ms. TENENBAUM. Well, we think that after the stay of enforcement expires, we will have all the rules in place and the stay was necessary the leadership at the Commission felt at that time because there was so much rulemaking to do. We had not even approved all the third-party laboratories. The law says that manufacturers and private labelers have to have their children's products tested by a third-party laboratory.

Mr. RADANOVICH. Right, right.

Ms. TENENBAUM. And we had to approve all these laboratories and so to date we have approved 190 laboratories in 27 countries. So now industry has a place to go to get their products tested. So we think that when the stay expires, that we will have these rules in place and that we will be able to untie a lot of these problems

that industry has. That is why I said it was premature today then for me to——

Mr. RADANOVICH. Forgive me though, I am sorry. I just don't have enough time here.

Ms. TENENBAUM. I know. I am taking your time.

Mr. RADANOVICH. But do you think that—will you be able to grant exemptions under CPSIA during—after that stay or do you think that you will have to post another stay?

Ms. TENENBAUM. We are hoping that we won't have to post another stay.

Mr. RADANOVICH. If you do, won't that be evidence of the need for statutory change in CPSIA in order for you to get all this done and be able to grant exemptions?

Ms. TENENBAUM. Well, we believe that if we in good faith implement all the regulations that CPSIA requires that most of these issues can be resolved administratively.

Mr. RADANOVICH. All right.

Thank you, Mr. Chairman.

Ms. TENENBAUM. Either through the product not containing lead or not being a product that will ever contain lead like cotton or paper or certain kinds of ink used in printing.

Mr. RADANOVICH. Thank you, Mr. Chairman.

Mr. RUSH. Madam Chairman, we certainly appreciate your time.

We have been joined by Mr. Sarbanes from Maryland and the Chair now recognizes Mr. Sarbanes for 2 minutes for questioning.

Mr. SARBANES. Thank you very much, Mr. Chairman. I appreciate the opportunity. Thanks for holding this hearing. I want to welcome you, Ms. Tenenbaum, to your new role and I am very, very close friends with a fellow named Brad Parham from South Carolina who I think you know and I look forward to getting to know you in your new position.

I just wanted to pass along a concern. I have a number of bulk vendors and there is a number of bulk vendors in Maryland and you are, I think, aware of this provision under CPSIA Section 103(a) regarding the tracking of products and I guess they have expressed concern about that being impractical with respect to some of these smaller items that come packaged in bulk and then are distributed across the country to vending machines and so forth. And to the Commission's credit and to your credit and evidence of you moving quickly in the job to try to address these areas of concern, on July 20 there was a statement of policy issued by your office that for certain category of products, 103, by your interpretation would not apply, and they have just expressed some concern. I wanted to relay and get your comment on about the fact that that doesn't necessarily prevent action at the State level by State Attorneys General acting with respect to the statute, nor does it necessarily mean that future Commissions couldn't reverse its position on that, and I just wanted to get your perspective on how this statement of policy you see working going forward.

Ms. TENENBAUM. Well, this is a good example of us using commonsense to enforce the law is our definition of tracking labels. The law requires manufacturers of children's products to have a tracking label to the extent practical on each product and the packaging. And so we looked at—we told the industry it is not one size-

fits-all, that you must be able to ascertain and by ascertain we have to look at your product to see can we find the name, location and date of production, and can we find who manufactured it and track it down if it needed to be recalled. Regarding—so we got a great deal of praise from a number of industries because we used a commonsense approach to the tracking label. Regarding the Attorneys General, we have regular telephone conferences with them. I will be speaking to the Attorneys General. We want to enrich our relationships with them because we see the fact that this is such a small agency that we don't have the resources to enforce all of the consumer product safety laws without the assistance of our State partners, our local Consumer Product Safety Commissions, the Attorneys General and our local health departments. So we don't—have not found any cases where the Attorneys General have gotten out in front of enforcement ahead of the CPSC and we are encouraging them to let us get our rulemaking finished and work through a lot of these issues administratively so we don't encourage them to bring enforcement injunctions because under the law that is what the Attorneys General can do. They can see injunctive relief.

Mr. SARBANES. So I assume that your ongoing conversation collaboration with them is to sort of cultivate this commonsense approach at all levels?

Ms. TENENBAUM. We are working with them and we certainly want everyone to have a commonsense approach. We hope no one gets out in front of us before we get all the rules in place which we hope will give relief to so many of these industries you are hearing from now. That is our goal to protect the safety of children, to keep intact the integrity of the statute and to work out the best way we can these issues that you are hearing from industry.

Mr. SARBANES. Thank you.

Mr. RUSH. The Chair now recognizes Mr. Stupak for 2 minutes for the purposes of questioning the Chairman.

Mr. STUPAK. Thank you, Mr. Chairman, and I was down in another hearing in telecommunications so that is why I was not here but I am very interested.

Congratulations on your appointment. I look forward to working with you especially in my role as Chairman of Oversight and Investigations.

Let me ask you about the Consumer Product Safety Improvement Act of 2008, and in my Northern Michigan district, ATVs and motorcycles are a way of life for many of us and it is very important to our outdoor tourism and our economy. In the Consumer Product Safety Improvement Act of 2008, purposefully included a provision to regulate youth ATVs and motorcycles, however it was an unintended consequence of the CPSIA that the equipment is also subject to provisions regulating the amount of lead contained in motorcycle and ATV parts. On April 3, 2009, the CPSC voted to delay enforcement of a lead-ban on youth ATV and motorcycles for one year. It was not the intent of Congress to regulate lead content in youth ATV or motorcycles.

So my question would be does the Commission have reports of injury or death caused by lead poisonings, I mean by the use of youth ATVs or motorcycles?

Ms. TENENBAUM. We have over 900 deaths per year from ATVs so the industry has told me.

Mr. STUPAK. Correct, but I mean from lead.

Ms. TENENBAUM. No.

Mr. STUPAK. Nothing from lead.

Ms. TENENBAUM. I don't have any data on that.

Mr. STUPAK. OK, is the Commission testing the youth ATV or motorcycles to determine possible exposure to lead?

Ms. TENENBAUM. We have just met with the ATV industry. The leaders of the industry came over and met with me last week and what they have reported to us is that they could make any lead that would be exposed to a rider inaccessible. They feel like they could make the handlebars inaccessible from lead by putting covers on them.

Mr. STUPAK. Sure.

Ms. TENENBAUM. And handbrakes and also the seat would not contain lead so they have—the stay helped them come up with this and so that would—they are getting back with us to show us how they can do that, and then the other parts of the ATV might be considered inaccessible depending on what technology they can provide to make the tire stem, the brass in it inaccessible, the battery cables inaccessible.

Mr. STUPAK. Well, I understand all this inaccessible.

Ms. TENENBAUM. So based on inaccessibility, that really would solve the issue, we think. We are working with them to clear that up so that they won't have to.

Mr. STUPAK. Well, I am glad you are working with them but if we have no death or injuries from lead exposure, why do we have to go through all these gyrations? Isn't it your responsibility to make sure that the law is properly implemented especially since the intent of Congress was not to ban these vehicles?

Ms. TENENBAUM. We have had plenty of cases of deaths to children from lead exposure and hand-to-mouth.

Mr. STUPAK. But from ATVs and motorcycles?

Ms. TENENBAUM. Well, a child could ingest lead and that is what the statute requires is any lead can't be.

Mr. STUPAK. Right, yes, I agree but with any law there is a practical application, correct?

Ms. TENENBAUM. No question about it and that is why the industry is coming back to us with practical solutions and we think this will take care of any problem they have and they won't have to be regulated.

Mr. STUPAK. All right, let me ask you about this one. This is a recent GAO report, August, 2009, concluded that the CPSC's presence at U.S. ports is limited and in order to identify potentially unsafe products like drugs, inferior steel from China, you must work closely with U.S. Customs and Border Patrol Protection. The report also found that CPSC's activities at U.S. ports could be strengthened by better targeting incoming shipments for inspection and by improving CPSC coordination with the Customs and Border Patrol. As the Chairman of Oversight and Investigations I have spent a lot of years on this especially drugs coming in from other countries, not properly marked, handled properly and we know that FDA's efforts are lacking and place American lives at risk but this GAO re-

port concluded that the FDA has more staff, has more surveillance technology, has more data on incoming shipments in our ports then CPSC who also has the responsibility so that was not a good news report by the GAO. So are you developing any plan to coordinate your port surveillance with other agencies to improve CPSC surveillance at our ports?

Ms. TENENBAUM. We are and I reviewed the report and agree with those findings and will be getting back with Congress in October with our formal response to the report but starting October 1 as a result of that report, CPSC will have access to the Customs Import Safety Center which is called Commercial Targeting and Analysis Center. We will be able to place one full-time employee at that Center to get information that we need in surveying the imports coming into the country.

Mr. STUPAK. OK, currently Custom and Border Patrol doesn't have any authority to deny shipments at a port whether it is steel or whether it is drugs. That is, if a substandard shipment comes into the United States they may flag it but they can't block its entrance into the United States. What does CPSC intend to do when it finds a substandard or hazardous product at a port—right now we just stack them up in warehouses. Do you have any other ideas?

Ms. TENENBAUM. We destroy them. We destroy the product. We have the authority to destroy it and Customs has the authority to flag it. They stopped several products from coming in recently so here is what if you look at our—we have nine people in 300 ports and we also have field staff, 100 field staff but we have nine people at the ports. We—this is a bigger area then just what the GAO reports because the FDA—you are required to send a manifest to the FDA 30 days ahead of time.

Mr. STUPAK. Correct.

Ms. TENENBAUM. We are only required to receive the third-party testing results 24 hours ahead of time under the CPSIA but this would be something that we need to have information earlier. We need through this manifest, this Commercial Targeting Analysis System, those are the manifests and we with the proper technology which we are submitting to Congress in our new technology plan can look and mine this data so we will know what is coming into the port and then if we find products that don't conform under the statute, the manufacturer or importer is required to take those products and remove them from the United States. If they don't have the funds and they have to post a bond, if they don't have the funds, we can destroy them. A lot of times we don't have the amount of funds it requires to destroy them and we might need to start increasing the bond to cover the cost of destroying the product but that is what we do with them.

Mr. STUPAK. OK, so this is new authority underneath the 2008 law then?

Ms. TENENBAUM. No, we have always had the authority to stop—well, no, this is new authority because the third-party laboratories certificate is new under the CPSIA.

Mr. STUPAK. Thank you, Mr. Chairman.

Mr. RUSH. This concludes the questioning of the witness and the Chair wants to recognize Mr. Radanovich who has a unanimous consent request.

Mr. RADANOVICH. Thank you, Mr. Chairman. I do have another unanimous consent request from one other member however I would just like to make it a blanket unanimous consent request that if other members wish to submit statements they be allowed to do so.

Mr. RUSH. All right, well, for the record, the record will remain open for two weeks and members may submit questions to the witness or any other documentation that they want to submit to the record. They bave two weeks from today's date in order to submit those questions. The record will remain open for two weeks.

Ms. TENENBAUM. Thank you.

Mr. RUSH. Thank you so much, Madam Chairman, and we look forward to working closely with you as we move forward protecting America's children and families. I want to thank you so very much for your participation.

Ms. TENENBAUM. Thank you. I appreciate the opportunity to meet with all of you and I hope to in the next few weeks meet with many of you individually for your personal questions.

Mr. RUSH. Thank you. Thank you so very much.

The committee is now adjourned.

[Whereupon, at 1:00 p.m., the subcommittee was adjourned.]

[Material submitted for inclusion in the record follows:]

Congressman Gene Green
House Committee on Energy and Commerce
Subcommittee on Commerce, Trade and Consumer Protection
Hearing on "The Consumer Product Safety Commission: Current Issues and a Vision for the Future"
September 10, 2009

Mr. Chairman, thank you for holding this hearing, and I would like to welcome the new Consumer Product Safety Commission Chairwoman Tenenbaum before our Subcommittee for the first time.

You came to the Commission at one of the most critical points in hits history as you implement the Consumer Product Safety Improvement Act of 2008 – I was an original cosponsor of that legislation, authored by Chairman Rush.

For too long we watched as the budget and staff continued to shrink at the CPSC, and no action was taken to strengthen the Commission.

The Consumer Product Safety Council holds one of the most important responsibilities in our government – ensuring the products children and families use everyday are safe.

Like many of my constituents, and Colleagues here in Congress, I have four grandchildren and knowing their safety could be compromised by the lack of authority and funding for the Consumer Product Safety Commission, prompted Congress to act, and in a bipartisan manner. The Consumer Product Safety Improvement Act conference report passed Congress by a vote of 424-1.

Unfortunately, there have been many difficulties and delays in implementing the Act – while there was not a significant outcry from our district, we did hear from a lot of small, and second-hand retailers at the beginning of the year that had serious concerns about testing requirements for children's toys due to lack of guidance from the CPSC.

The stay on enforcement of these provisions, while I believe was necessary due to lack of guidance by the Commission, was troubling nonetheless because it gave the public no more confidence that the Commission was able to enforce consumer protections.

Since then however, I am pleased at the progress Chairwoman Tenenbaum has made in her time at the Commission in issuing 12 rules and policy guidance documents – these actions are a significant step in the right direction for the Commission and in implementing the CPSIA.

Mr. Chairman, thank you again for holding this important hearing to hear from Chairwoman Tenenbaum her plans and direction for the agency.

I'd like to welcome the Chairwoman and I look forward to your testimony on the Commission's current and future work and the direction you plan to take the agency.

Thank you and I yield back my time.

Statement of the Honorable Cliff Stearns
CTCP Subcommittee Hearing – September 10, 2009
"CPSC Oversight: Current Issues and a Vision for the Future"
321 words

Thank you, Mr. Chairman.

Thank you for holding this important hearing. I would like to begin by welcoming our distinguished witness – Chairman Inez Tenenbaum. I look forward to working with you in your capacity as Chairman of the Consumer Product Safety Commission (CPSC).

We are here today to discuss the current issues the CPSC is facing, and in my mind the biggest issue and highest priority for the Commission is the ongoing implementation of the Consumer Product Safety Improvement Act (CPSIA) as passed by Congress in August of 2008. I, along with all of my colleagues on this committee, are steadfastly committed to ensuring the products and toys our children use are safe – nothing is more important than the wellbeing of our children.

Unfortunately, however, the reality of implementing the CPSIA has proven difficult and is wreaking economic havoc and confusion amongst a broad spectrum of industries and small businesses. This is particularly worrisome given the current financial crisis and severe economic strains that American small businesses and families are up against.

Since the time this law came into effect, I have heard directly from small business owners, charity organizations, and even public libraries in my district - all of who are suffering at the hands of the CPSIA, which is a well-intentioned but unflexible law.

I am therefore supportive of simple legislative fixes to the CPSIA, such as H.R. 1815, of which I am an original cosponsor, that can bring relief to small businesses and industries without the risk of endangering or compromising the safety of our children.

I look forward to working with my colleagues and Chairman Tenenbaum on improving the safety of the products our children use, but I believe we also should work together on achieving a commonsense legislative fix that will untie the hands of the CPSC so that the Commission can continue to be an effective and robust agency in all areas of consumer protection.

STATEMENT OF
CONGRESSMAN MICHAEL C. BURGESS, M.D.

BEFORE THE

SUBCOMMITTEE ON COMMERCE, TRADE AND CONSUMER PROTECTION
COMMITTEE ON ENERGY AND COMMERCE

SEPTEMBER 10, 2009 HEARING
""Consumer Product Safety Commission Oversight: Current Issues and a Vision for the Future"

Thank you Chairman Rush and to the fellow Members of this Subcommittee. As an alumnus of this subcommittee, I know and appreciate the critical work you are undertaking, and I appreciate this opportunity to talk about an issue which remains extremely important to me.

But first, I would like to congratulate you Ms. Tennebaum on your confirmation as the Chairman of the CPSC. I have watched all 101 minutes of your Senate confirmation hearing and, having also read several of your recent speeches, I think you appreciate the challenge of helming a small agency with a monumental task

And let's be frank. It is the flaws with the CPSIA we should be discussing because that is what the CPSC is drinking from the fire-hose to implement. That hearing was noticed last December when I was still on this subcommittee but got cancelled with no new hearing date set. Now, nine months and countless problems later, here we are, allegedly, discussing oversight issues at the CPSC when everyone in this room knows its all about the CPSIA.

Undoubtedly, Congress has given the CPSC more then it handle. In the 110th, we gave the CPSC, an agency with a 70 million dollar budget in FY'09, at least two major bills. The CPSIA is the focus of so many Members, as it rightly should, but we also

handed you the Virginia Graeme Baker Pool and Spa Safety Act, no small task in-and-of-itself.

So Congress is partly to blame.

But I am concerned with hearing how you will implement the CPSIA.

In September of 2008, the CPSC General Counsel listed 42 required actions pursuant to the CPSIA. In the ensuing twelve months, we've gotten dribbles-and-drabs of action, but nothing in reliable streams. We got a stay in enforcement in testing and labels as well as a stay in enforcement for ATVs. Last month, we have a final rule as it relates to materials which have no business being tested for lead like gemstone and wooden jewelry. We also finally got some recognition from the CPSC about whether books should be exempt from lead requirements, ***but the fact that we even had to have a conversation about a piece of legislation which was aimed at prevent lead poisoning in toys was expansively interpreted to include library books is ridiculous.***

These are some of the questions which remain unanswered and what I want to know is whether all these problems in implementation are the fault of the CPSC or the Congress. And if it's not the fault of the CPSC, then how can Congress fix it. Did we poorly draft the bill? What of the 42 required actions in the CPSIA should not occur?

For instance, last month, the CPSIA statutorily mandated the lead standard be dropped from 0.06 percent to 0.009 percent yet we have delayed testing for meeting the higher lead standard – though we have not delayed culpability. How can this make sense? Does it make sense to you?

And you stated in your Singapore speech last month that there are only a mere 170 laboratories which can test all these products covered by the CPSIA – foreign and domestic – when will the testing meet the supply chain?

This bill remains for me the standard as to why we should not rush large, comprehensive legislation through Congress without adequate vetting, testing, input from expert and thorough analysis. This bill has done more damage then good, causing confusion to parents whose sole goal is to protect their children and seriously harming businesses like the ATV industry which will lose more then a billion dollars as a direct result of this bill.

We must fix this problem and we must learn from this problem.

Thank you.

Chairman Rush, I want to thank you for calling this hearing today regarding challenges facing the Consumer Product Safety Commission with implementing the Consumer Product Safety Improvement Act (CPSIA). I would also like to take the time to welcome our distinguished guest, the newly confirmed Chair of the CPSC, Ms. Inez Tenenbaum.

Mr. Chairman, in 2007, this Subcommittee – along with parents throughout the country – was up in

arms over the safety of toys and products for children containing lead that were coming in to this country – and rightfully so. In 2008 alone, an estimated 563 products were recalled, mostly on account of lead poisoning hazards, especially in children's toys.

To respond to this outcry, Congress overwhelmingly passed CPSIA last year with the intention of improving the safety of the products that get into children's hands. While I support the intent of CPSIA, I – along with close to 600

constituents who have called or written me on this legislation – have strong concerns with the unintended consequences that have arisen due to this law.

Mr. Chairman, the first of these has to do with provisions in CPSIA that have actually made all-terrain vehicles (ATV's) less safe for children to operate. Some parts of youth ATV's unavoidably contain small quantities of lead in excess of the new limits under CPSIA. As a result, youth ATV's are being removed from showrooms, leaving parents

potentially buying bigger, adult ATV's for their children that could contain a much more hazardous lead content than the small ATV's.

Furthermore, I am concerned that CPSIA may also unintentionally create an unfair competitive advantage for larger companies since they can better shoulder the added costs of further testing their products. I fear that this law puts an unneeded burden on small toy-makers that will inevitably cause them to close their doors, and cost us more jobs when we can ill afford to do so.

As a father, a grandfather, a physician, and a consumer, I recognize the important need and responsibility to safeguard the products that our children play with and enjoy. We all share the common goal of ensuring the safety of our children. As we move forward, I hope that we can have a future hearing on this issue so that we may also hear from industry stakeholders.

I look forward to the testimony of the Chairwoman, and I yield back the balance of my time.

Rep. Bobby Rush, Chairman
Committee on Energy & Commerce
Subcommittee on Commerce, Trade,
and Consumer Protection
2125 Rayburn House Office Building
Washington, D.C. 20515

Rep. George Radanovich, Ranking Member
Committee on Energy & Commerce
Subcommittee on Commerce, Trade,
and Consumer Protection
2125 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairman Rush and Ranking Member Radanovich:

As you know, in 2008 Congress overwhelmingly passed, and former President Bush signed, a groundbreaking law: the Consumer Product Safety Improvement Act (CPSIA). This legislation was crafted to address the tens of millions of unsafe products that had infiltrated the marketplace – especially children's products – and to breathe new life into the beleaguered Consumer Product Safety Commission (CPSC). Faced with an unprecedented number of children's product recalls, it was clear that there were gaping holes in our country's safety net, and that industry was doing a poor job of policing itself. Now that the CPSIA has equipped the CPSC with the authority it needs, the agency should be given the opportunity to fully execute the law.

With strong bipartisan support from lawmakers, the CPSIA was designed to make consumer products safer by requiring that toys and infant products be tested before they are sold, and by effectively banning the use of lead and phthalates in children's products. The law also paves the way for the first comprehensive publicly-accessible database of consumer complaints about unsafe products. It authorizes badly-needed funding so that CPSC has the resources it needs to protect the public, increases the level of civil penalties that the CPSC can assess against violators of the law, and protects whistleblowers who report product safety defects.

Since the law was enacted, the CPSIA has been criticized by some members of industry, particularly about the law's impact on small businesses. The truth is that the law includes language empowering the CPSC to exempt certain materials from the testing and certification requirements, and to relieve those manufacturers of products that are in no danger of violating the new standards.

In fact, the CPSC has already begun to apply these exclusions. Since the law's enactment, the CPSC has exempted from regulation the following children's products: those made from wool, cotton, yarn, dyed or undyed textiles (cotton, wool, hemp, nylon, etc.), including children's fabric products, such as baby blankets, and non-metallic thread and trim; certain educational toys such as chemistry sets; and children's books printed after 1985 that are conventionally printed and intended to be read, as opposed to used for play. The CPSC has also exempted from the CPSIA's lead testing requirements components parts that cannot be accessed by a child, and components of electronic devices intended for children. In addition, the CPSC issued a stay of enforcement of its lead and phthalates testing rules for an entire year in order to give companies

more time to come up to speed on the new rules, and it has created materials to guide small businesses with compliance with the law. **The focus should be on allowing the agency to continue to apply the exclusions already permitted under the law in a common sense way that doesn't jeopardize public health or safety.**

We are encouraged by recent developments at CPSC. Inez Tenenbaum has been installed as the head of the agency, and two new Commissioners have begun to work for a safer marketplace. Staffing levels have increased to 460 full time employees, and the Commission continues to move forward with implementation of the new law in accordance with its defined schedule. The industry had its chance to police itself to ensure the safety of children's products with a disastrous and sometimes deadly result. Now the CPSC must be allowed to lead the way.

Consumer, Scientific and Public Health Groups Support CPSC Efforts to Implement New Product Safety Law and Protect Consumers from Unsafe Products

Groups Urge House Subcommittee to Highlight These Efforts

Inez Tenenbaum, the new chairman of the Consumer Product Safety Commission, is the invited witness for a hearing, entitled "Consumer Product Safety Commission Oversight: Current Issues and a Vision for the Future." to be held on Thursday, September 10, 2009, by the Subcommittee on Commerce, Trade, and Consumer Protection of the U.S. House of Representatives Energy and Commerce Committee.

As Ms. Tenenbaum prepares to testify before Congress for the first time since her confirmation, our coalition of consumer, scientific and public health groups is encouraged by the significant steps taken over the last year to improve the safety of consumer products, and we now urge the subcommittee to focus on the critical issues that will further advance the agency's mission to safeguard consumer products.

First, it is important to highlight the risks to consumers in the global marketplace before passage of the Consumer Product Safety Improvement Act (CPSIA): too many dangerous products were on store shelves, some seriously harming, and even killing, their customers; the CPSC had neither the funds nor the regulatory authority to effectively solve these problems; and there were gaping holes in existing laws that needed to be closed to protect consumers. The CPSIA was passed almost unanimously in Congress to solve the problems plaguing the marketplace.

Second, we look forward to a dialogue about how the CPSIA and CPSC's efforts are restoring consumer confidence in the marketplace. Consumers lost confidence in our product safety net

because of the many recalls of children's products and the numerous deaths and injuries posed by those products. When fully implemented, the CPSIA will restore consumer confidence by improving product safety, by requiring that they be tested for safety before they are sold -- an action that most consumers assumed was already occurring. In addition, the CPSIA turned voluntary standards for toys and other juvenile products into mandatory requirements which will help to ensure that those products meet safety standards.

Finally, we look forward to hearing how the Commission is implementing the new law including the status of the many regulations that the agency is promulgating. We hope the Chair will share her vision for the future of product safety, including details about her effective and much needed core priorities establishing transparency, enforcement and education and advocacy as the agency's primary goals.

We look forward to a productive dialogue about how the CPSC will continue to fulfill its mission and protect consumers from the hazards posed by unsafe products.

Myths and Facts on CPSIA Implementation

In August 2008, the Consumer Product Safety Improvement Act was passed with overwhelming bipartisan support in Congress, signed by President Bush and enthusiastically backed by consumers, public interest organizations and industry representatives. In a publicly released statement, the Toy Industry Association (TIA) applauded the president's signing of the bill. Its president Carter Keithley said at the time: "With the health and safety of children our primary concern, the toy industry supports the creation of a uniform national standard for product safety and testing, upon which consumers across the nation can rely."

As TIA's Keithley stated, the new law added safety and testing requirements for consumer products, and children's products in particular, including the gradual elimination of lead and a ban of phthalates in toys and children's articles.

Myth: CPSIA deadlines were unrealistic and too short for businesses to comply.

Fact: CPSIA has built-in time for compliance and CPSC has repeatedly stayed enforcement of key provisions.

The law granted a six-month period for industry to ready their goods in compliance with the new ban on toxic chemicals in children's products. Compliance with the new lead standards and phthalates ban would begin on February 10, 2009. On the day President Bush signed the law, the Toy Industry Association said in a statement "Toy manufacmrers and major retailers are already moving to conform to the legislation...."

Many other provisions, including tracking labels, lower lead limits and more didn't go into effect until a year after the bill was signed.

Myth: CPSIA provisions don't keep children safe, they simply make it harder to do business.

Fact: Implementation of CPSIA has reduced lead in children's products; removed dangerous phthalates from many toddler toys and ensured the children's products, including cribs, strollers and high chairs are tested for safety before they are sold.

Myth: Lead in toys isn't a problem anyway – the amount is so small it won't really hurt children.

Fact: According to the American Academy of Pediatrics, there is no safe level of lead exposure.

"Lead is potent neurotoxin that causes permanent, irreversible brain damage. Children and their developing brains are at special risks for the harm caused by lead, and those effects often have repercussions throughout the lifespan. There is no known "safe" level of lead for children. No study has determined a blood lead level that does not impair child cognition. Since any

measurable lead level causes lasting harm, prevention of exposure is the only treatment. Lead exposure is an important, unnecessary, and preventable poisoning."

Lead poisoning is also cumulative, so the amount from a toy or lunchbox will add to lead the child has been exposed to in the environment, increasing the negative effects.

Myth: CPSIA has to be changed through additional legislation to address business concerns about expensive testing and exemptions of certain products.

Fact: CPSIA contains within its language the flexibility CPSC needs to address concerns and exempt products that don't pose a risk to children.

Business concerns that emerged due to the lack of CPSC guidance have developed into a full-blown demand for major changes to the law. However, the CPSIA does not need to be changed to address these concerns. Congress has included language in the CPSIA that already empowers the agency to provide exclusions for certain materials. The CPSC has the power **right now** to exempt certain materials from testing and certification requirements, to relieve those manufacturers who are in no danger of violating the new standards.

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law. Our family business makes educational products for schools and has an exemplary 25-year safety record because of our hard work to assure high quality and compliance with law. Yet the innumerable, onerous provisions of the CPSIA have had a devastating impact on our ability to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are shooing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

The deck is stacked against small business under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to large businesses who seek to test their own products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

Richard Woldenberg,
Chairman
Learning Resources Inc.

Washington, DC 20515

Dear Chairmen and Ranking Members:

We write on behalf of the all-terrain vehicle (ATV) industry in regard to the Committee's upcoming hearing on September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission, is due to testify regarding implementation of the Consumer Product Safety Improvement Act (CPSIA).

We applaud the Committee's interest in keeping abreast of the status of CPSIA implementation. However, we are disappointed that businesses such as ours, who have suffered the unintended consequences of the new law, have not been invited to testify before the Committee regarding its impact on our ability to conduct business.

The unintended consequences of the CPSIA on the ATV industry and consumers have been enormous. ATV riding is an outdoor recreation activity for the entire family. Yet due to the lead provisions contained in the CPSIA, since February 10, 2009 the law has effectively banned the sale of smaller, speed-limited ATVs designed specifically for children. In addition, many consumers who previously purchased such vehicles have been unable to get them serviced or repaired.

The CPSC's own studies show that almost 90% of youth injuries and fatalities occur on adult-sized ATVs, and the Commission recognized this fact when issuing a stay of enforcement in May 2009. The Commission stated that without the availability of youth models "children 12 and younger . . . would likely face a more serious and immediate risk of injury or death" than any theoretical risk from lead exposure.

Unfortunately, CPSC's stay of enforcement is not a permanent solution nor has it been effective in keeping youth sized ATVs on the market. Due to the uncertainties and potential risks of selling under the stay, many manufacturers and dealers are not selling Y-6+ or other youth model off-highway vehicles. In fact, at least half of the legacy manufacturers have stopped selling Y-6+ youth models for these reasons.

We appreciate your consideration of this matter and look forward to engaging in a substantive dialogue with the Committee about fixing the unintended consequences of the CPSIA and ensuring the safety of youth operators. It is now clear that amendment of the CPSIA's lead content provisions is necessary to keep properly sized, speed-limited vehicles available for children.

Sincerely,

Ed Krenik

Washington, DC 20515

Dear Chairmen and Ranking Members:

I write in regard to the Committee's hearing scheduled for September 10, 2009. At this hearing, Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), will testify regarding implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am President of the Coalition for Safe and Affordable Childrenswear, a group of nearly 130 small children's clothing manufacturers in the New York area. Our member companies are all family owned businesses that have been making safe children's products for years. Many of our companies are being run by the second and in some cases the fourth generations of the company founders. Product safety has always been and will continue to be a priority for our companies.

We welcomed the CPSIA when it was passed, however its overly broad definition of children's products, unrealistic implementation timelines, and the lack of clear guidance from the CPSC has caused very considerable confusion in the marketplace. We are struggling to implement the numerous provisions of the CPSIA without the benefit of the required direction and clarifications by the CPSC. Because the CPSIA prohibits the CPSC from using risk assessment in enforcing the law, we remain obligated to conduct costly and time-consuming tests to repeatedly prove that our safe products conform to the lead standards. Put simply, these and other burdensome provisions of the CPSIA threaten our ability to remain in business and provide jobs and do nothing to improve product safety.

While we are pleased that the Committee is holding the September 9th hearing to learn more about the challenges involved in CPSIA implementation, we are disappointed that businesses such as ours will not be afforded the opportunity to testify before the Committee to discuss the unintended consequences of the Act.

We would welcome the opportunity to discuss this important issue with you and Members of the Committee. It is our view that the only way to resolve many of these issues is to amend the law to provide for a common sense, risk-based approach. As you know, there have been more than 10 bills introduced in Congress to amend the CPSIA. We strongly urge you to begin the legislative process and provide the appropriate relief.

We appreciate your consideration of this matter. We are available to discuss any of these issues with your staff.

Sincerely,

Steven Levy
President
Coalition for Safe and Affordable Childrenswear

ETA Cuisenaire

September 4, 2009

Dear Chairmen and Ranking Members:

This letter is in response to the Committee hearing set for Sept. 10, 2009, where the Hon. Inez Enenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

As the President of ETA/Cuisenaire, an educational publisher of hands-on learning materials and books, I am writing to express my extreme disappointment that none of the small businesses severely impacted by the new law have been included in the scheduled testimony before this Committee. This law has taken a devastating toll on small businesses like ours, and as such, the small business community has been aggressively calling for hearings since the passage of the CPSIA in order to make our concerns known. Now, when a hearing has finally been set, we are excluded. Why? Throughout its history, ETA/Cuisenaire has always worked hard to comply with safety laws and assure our products meet the highest standards. Now, the numerous, unyielding strict new rules of the CPSIA have caused major difficulties for us and our ability to continue to conduct business. The Consumer Product Safety Committee needs to hear our issues. This situation cannot be addressed in a vacuum. The small businesses who are out in the trenches day-in and day-out, trying to do the best they can, while producing the highest-quality products and providing a livelihood for dedicated employees, are the ones whose voices need to be heard. Especially today, when our economy is already facing serious deficits, roadblocks like the CPSIA do not need to be thrown into the paths of dedicated small businesses like ours.

The overly broad definition of "children's products" unfortunately includes many products that could not even possibly harm children from lead or phthalates. The CPSIA's rules are so strict that they even prohibit risk assessment, with no flexibility to exercise good, sound judgment. This has resulted in unrealistic, impractical regulations. And, equally unfortunate, the exemption process under this new law is restrictive and prohibitive.

The severe penalties under the law will only lead to massive lay-offs and to small companies closing down and leaving the market, in spite of years of excellent service and products that the marketplace sorely needs. How does this equal compliance? The deck is clearly stacked against us, while the new law offers rewards to large companies who can afford to test their own products.

It is imperative that the perspective of small businesses be heard so that a true understanding of the implications of the CPSIA be known and can be addressed accordingly.

I appreciate your consideration and look forward to future open hearings where all sides of the table can present their issues.

Sincerely,

Dennis K. Goldman

Classroom Products CPW Warehouse™

September 4, 2009

Dear Chairmen and Ranking Members:

As the President of CPW, a supplier of educational and classroom materials, I am writing to express my displeasure and disappointment that none of the small businesses severely impacted by the new Consumer Product Safety Improvement Act (CPSIA) have been included to voice their concerns in the Committee hearing set for Sept. 10, 2009, where the Hon. Inez Enenbaum, Chairman of the U.S. Consumer Product Safety Commission is scheduled to testify.

The small business community has been aggressively calling for hearings since the passage of the CPSIA in order to make our concerns known. Small businesses like ours have been severely impacted by the punitive effects of this new law. Our company has consistently been extremely conscientious about assuring we always comply with safety laws and assure our products meet the highest standards. Now, the numerous, unyielding strict new rules of the CPSIA have caused major difficulties for us and our ability to continue to conduct business. CPW is dedicated to doing the best that it can for its customers every day. The Consumer Product Safety Committee needs to hear the issues of real companies.

How can a company operate when the term "children's products" could mean just about anything based on how it is used? The CPSIA's rules are unrealistic. The exemption process is prohibitive, the rules are inflexible to any logical risk assessment, and the regulations make going out of business the most logical choice.

The landscape, a short time from now, is not difficult to envision. The severe penalties under the law will leave only large companies that were all able to survive the huge cost of testing already safe products and the small companies will simply collapse; leaving a gaping hole of products that the marketplace needs.

We need our chance to come before the Commission and let them hear how CPSIA is really impacting the marketplace. It is imperative that the perspective of small businesses be heard so that a true understanding of its implications be known and can be addressed accordingly. I strongly believe that the perspective of businesses like ours is essential to a complete picture of the real issues CPSIA brings to today's marketplace.

Thank you for your consideration of this important matter.

Sincerely,

William A. Chiasson

RE: House Subcommittee on Commerce, Trade, and Consumer Protection Hearing – Scheduled for Thursday, September 10, 2009

Dear Chairmen and Ranking Members:

I am writing in regard to the subcommittee CPSIA hearing scheduled for Sept 10, 2009. I have read that Chairman Tenenbaum was the one person invited to testify. While I am happy to hear that the subcommittee is finally holding a hearing, Ms. Tenenbaum is not representative of businesses or consumers. Inviting one person to testify at a hearing that impacts the livelihoods of so many Americans is the opposite of an open and transparent government that the current administration has claimed they would provide.

While the CPSC has attempted to make common sense interpretations without an amendment they are still unable to apply risk analysis. Many but not all of the materials we use are exempted because they are organic yet I still have many unanswered questions regarding CPSIA and as a result, this slows the growth of the business and the people we employ. I understand the CPSC is working on handbooks to help businesses. "Handbook" sounds nice for a press release and justification for "work" at the CPSC but handbooks are not going to help our businesses, we need real solutions in the real world of making real and safe products.

The recent allowance of Mattel to do their own testing, not requiring them to use 3rd party labs is incomprehensible. After reviewing the history of the recalls – it is my understanding that they were the primary source of the problem and violated existing laws due to poor supply chain management. I don't understand how it is justified that Mattel can test their own products while the rest of us are forced to pay a premium and wait in a certified lab when there are viable alternatives to 3rd party certified labs and applying risk analysis.

It would be greatly appreciated if you could put the barriers down regarding the CPSIA, start working with our businesses, and allow us to testify.

Sincerely,

Jennifer Murphy
President

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

As someone who runs a small business impacted by this new law I am disappointed that no representatives from the business community (particularly small businesses) have been invited to testify before the Committee. The business community has raised many legitimate and serious objections to this law and its implementation. To exclude our experiences over the past 13 months and our point of view is wrong.

The provisions of the CPSIA have severely impacted our small business in spite of the fact that prior to it we had a compliant safety record for nearly 50 years. It is important that the Committee hear the issues created by this law from a business perspective of real companies.

I strongly urge the Committee to reconsider its decision and allow the perspective of small businesses to be heard. Thank you for your consideration of this important matter.

Dear Chairmen and Ranking Members:

I apologize for not writing a longer letter, but as the owner of the biggest little toy store in Lake County, California, my wife and I are kept very busy, so I'm going to keep this brief. The new child protection laws have been a nightmare for our business. It has left us in a state of constant panic that we could be sued and have to declare hankruptcy. We, like almost everyone in the toy industry, take child safety very seriously, but to change the laws in such a way as to make almost all of my inventory unsellable is seriously flawed. And, when you have hearings into the implementation of the laws to not invite those most impacted is seriously wrong. If you are our elected representatives, please take the time to listen to our opinion and not just those you have appointed. One of the things I have learned is that most employees will only tell you what you want to hear. Please open up this hearing to representatives from small business and manufacturing.

Sincerely,

Jason Curtis

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA). I believe that additional input from small businesses throughout this country not only deserve to be heard but MUST be heard for the committee to make sound judgments and decisions regarding the Consumer Products Safety Improvement Act of 2008. Some of the issues that are impacting my business are as follows:

1. The CPSC granted relief to companies to acquire Certificates of Conformity from the original deadline of 2/10/2009 too 2/10/2010 which was needed. But they did not grant relief on companies having to prove that the products they are selling are safe. If I'm a reseller and the manufacturers don't supply me a certificate of conformity on 2/10/2009 how do I know they are safe? The law is requiring me as a reseller to prove the item is safe or not sell it. This makes no sense whatsoever.

2. One of my manufacturers makes scales/balances that have been a staple of the education market for over fifty years. One of the accessories that are supplied with the balance is a weight set made from brass. Because brass contains lead as apart of the manufacturing process, this manufacturer has stopped shipping me product until an alternative weight set can be manufactured.
   That may take 4-6 months to complete the production cycle. In the first month I lost $54,000 in sales and have lost some customers because I could not ship what they were asking me to ship. They went somewhere else to get there product.
   The irony of this situation is that brass is becoming a taboo raw material in the toy industry because it contains lead in its makeup although it is not proven that any child has ever contracted any illness due to touching brass. Yet children drink water from brass plumbing fixtures every day of their lives.

3. For catalog sales, we must select products for new catalogs 6 to 8 months in advance to get the catalog to market on time. Any product that you advertise for sale and are no longer available due to testing not being done or a product that was dropped from manufacture due to the testing requirements being too costly to continue production, ends up being a hole in our catalog that is no longer producing sales. Wasted space in a catalog costs catalog sales company's money. That space can't be filled until the next catalog is created. In our case a year later. We lose sales of that catalog space for a whole year. Lost sales equates to lost jobs. This makes absolutely no sense in our current economy.

4. My company prides itself on the ability to serve its customers better than our competitors by offering competitive pricing, fast service and having the product the customer ordered ready to ship without backordering.
   Our backorder levels have increased by over $260,000 this year from last year due to manufacturers not being able to deliver and prove that their products meet or exceed the CPSIA test requirements. It's not that the product won't meet the requirements, it's that the testing labs are so backed up that they can't get the tests performed or that the increased cost of the testing added to the current cost of manufacturing and marketing the product, prices the product above what the consumer is willing to pay. When products leave the marketplace so do the jobs that the sale of the product supported.
   In any case my service levels are being disrupted and those customers are taking their business somewhere else. This is ruining the reputation of my company which we have worked for over 65 years to build.

5. Looking at just these few issues, adding the effect of them up is costing this country JOBS. In a time when the economy is already suffering, our knee-jerk reaction to a few highly publicized incidents that were corrected by the toy industry are now leading to changes that are causing the industry to fill our landfills with products that can't be sold and won't be recycled because the recycled materials would contain the same lead and phthalates that were in the original product.
   This is not a "green" initiative. I urge the Congress to re-think this law. Set deadlines that can be achieved by the toy industry when it re-implements and talk to ALL Segments of the toy industry to get input before making decisions.

6. When developing new products for children 12 years or younger, companies must now include into the R&D costs the new requirements for testing to prove the end product will meet the new safety standards for lead and phthalates. Not only must these companies pay for this testing in the initial development of the product, but each time companies outsource the manufacturing to another company the testing must be completed again. I bring this up not for just the initial added cost but for what it will actually do to limit open competition in the marketplace. Some companies will not bid these manufacturing runs, staying with their initial provider to avoid paying again for product testing. This limits open competition and encourages inflated costs.

I believe that everyone in the toy industry wants to sell safe products. I also believe that some standards are necessary and should be enforced to assure that we are all making products safely. But how you have implemented those standards has impacted the toy industry severely in the form of lost jobs, lost products that are safe but too expensive to produce with the new testing costs, have caused our landfills to be filled with products that were purchased before the law was enacted and because of the very vague definition of what is a toy, products that you did not intend to be part of this law have disappeared from fear that a child could somehow have access to it.

Sincerely,

Jack Marshall

Dear Chairmen & Ranking Members:

Since the Consumer Product Safety Act, there has been nothing but confusion and hardship for everyone involved. The law is overly broad and does little to really protect the consumer while creating an unreasonable burden on business.

I now understand that you are having a hearing, but only calling the Honorable Inez Tenenbaum to testify. You need to expand the list of people testifying. This is a very serious issue for everyone in this business and has the potential to put many companies out of business.

In our company, we face tremendous write-offs with merchandise that was perfectly legal to sell a year ago and now is not. There should be some grandfather clause for product manufactured before this new law. None of the product has lead in it, but the cost to test and now follow the manufacturing batch is more than the potential sales for many products. A year or even two years is not enough and as with many items, we might have considerably more in inventory.

Please expand the hearing so you are able to hear more sales of what you have created.

Sincerely,

NASCO

September 8, 2009

Dear Sir,

The CPSIA has caused us to spend many thousands of dollars in an effort to become compliant. In these economic times it is unfortunate that we could have spent the money making new products and creating many new jobs. We converted over forty different materials, spent over 1600 hours, bought new equipment to the tune of $35,000.00 and in the end children are no safer then they were before. The idea that children 12-5 need this level of protection is ridicules. At the age of 12 children can baby sit infants but they are covered by this law?

I believe when this law was written you had the best of intentions, but I do not believe you understood the ramifications. I do not want children to be exposed to anything harmful that we can control. No one in their right mind was that, but this law goes too far.

Best regards,

Dennis C. Van De Hey

September 8, 2009

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

It is disappointing that no small businesses have been invited to share their experiences in testimony before the Committee regarding the new law. The business community's call for hearings since the passage of the CPSIA appears to have been ignored. Our business makes and distributes educational products for schools, always with concern for the safety of our employees and the teachers and children that use them. The CPSIA requirements have had a devastating impact on our ability and the ability of our suppliers to conduct business. These issues need to be explored by the Committee and the best way to do that is to hear from the thousands of companies affected.

The severe penalties imposed by the law are driving companies and innovators out of the market at a time when we need creativity to shine, to create employment and provide teaching tools that will move our kids ahead in Science, Mathematics, the Arts, Social Development and Reading.

I strongly believe that the perspective of businesses is essential to understand the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009, in which the Honorable Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. As a Sales and Marketing Director for a large direct mail catalog company in the school supply market, I wanted to share how Nasco and myself have been significantly impacted by CPSIA:

1) When Nasco sent out the first request for product safety information to our vendors in the fall of 2008, I personally received at least 100 phone calls and e-mails from vendors asking questions about the forms and information we needed. I spent at least 40 hours (the five days after the initial contact) responding to questions and concerns. Some vendors had no idea what CPSIA was or what their responsibility was relating to this new law. This process continues today.

2) I have spent countless hours attending meetings, trainings and researching issues related to CPSIA. This has prevented me from completing other important tasks that are critical for my position, such as visiting with customers, certain catalog initiatives, etc. This "distraction" probably cost us business in the long run.

3) I have spent countless hours dealing with the fallout of CPSIA. For our Early Learning catalog, we have replaced at least 100 items that were dropped by vendors due to CPSIA issues. This has affected our art department as well, with many hours setting up new part numbers, writing new copy, new photography, etc. I have also spent additional time contacting vendors after our February 2009 catalog meetings and asking them to complete and submit the safety paperwork.

4) Overall, I would describe the situation as a very challenging for myself, Nasco, our sister companies and vendors. It has been a very difficult time for everyone.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA). Many issues have arisen as unintentional repercussions of this act that need to be brought to light.

Competitive edge: it seems apparent that this Improvement Act was put in place to slow manufacturing in China (and elsewhere) under the guise of child protection. Consideration was not made to distributors in the United States to allow existing inventory (including raw materials) to be sold moving it from saleable product to landfill in a short period of time. This pushed businesses in the U.S. to look for alternative vendors and sell at a lower margin when possible or to simply cancel orders losing income and profitability.

Product selection: we select products for our catalogs six to eight months in advance. Because companies were scrambling to have products tested where possible or were discontinuing products we were not able to fill our catalogs with as much product as in the past. Our catalogs are produced once a year and this limited selection will cost us sales.

Science: where is the Science behind the decisions made for this Improvement Act? Lead intake from these products is miniscule compared to everyday exposures and the harmful effects of phthalates (if any) are really an unknown. This puts us in a situation causing thousands of hours of extra labor and lost sales for an unknown. This really isn't about children's safety.

Service: Nasco has prided itself on quality and service since 1941. We have over $260,000 in backorders due exclusively to lack of CPSIA documentation and have lost an immeasurable amount of sales due to discontinued products. Most products were discontinued not because lead or phthalate levels were high but because the cost of testing pushed companies to discontinue products.

Labeling: products now need to be labeled with a traceable date. Many products are too small for this and the added expense for other products creates unnecessary costs in the extremely rare chance of a recall.

Bottom line: we all want to sell products that are safe for everyone. A reasonable approach needs to be taken regarding the definition of "toy" vs a "teaching tool". Not only will school systems see a shortage of available teaching aids but due to the financial burden many companies face because of the expense of testing or of holding noncompliant inventory, businesses will fail, jobs will be lost, and tons of product will have to be destroyed creating an ecological nightmare. I appreciate your time in this matter and I hope you can understand the full impact of this "Improvement" Act as it now stands.

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law and our requests have drastically increased earlier this year when many unintended consequences became obvious for all to see. Our privately-owned business makes many educational products for schools and has an exemplary 25-year safety record because of our hard work to assure high quality and compliance with law. The innumerable, onerous provisions of the CPSIA have had a devastating impact on our ability to conduct business. We are now forced to consider dropping many products in our line because of the direct consequences of the CPSIA. This is a very regrettable situation as no one else is producing these kinds of product that make a genuine positive impact in the schooling of our children and especially special need children. These issues must be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are endless. At its core, the CPSIA overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and

380 N. Fairway Drive • Vernon Hills, IL 60061
847.573.8400 • 800.222.3909 • fax 847.573.8425

unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive. The severe penalties under the law are not scaring companies into compliance – they are shooing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

The deck is stacked against small businesses under the CPSIA. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to large businesses who seek to test their own products. I have also seen that the CPSC has given itself an award for the outstanding work it has done in implementing the CPSC. How can that be possible in light of the overwhelming evidence to the contrary?

I passionately believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation.

Thank you for your consideration of this important matter.

Dear Chairmen and Ranking Members,

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA). I am extremely disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. You are ignoring the business segment most adversely affected by this legislation. I have children at home, so I know the value of product safety, but I also feel that the laws that were in place previous to the CPSIA did an admirable job protecting my kids. The undue pressures you have put on many, many small businesses will not make the products we use any safer, it will only put financial strain on the these companies and the people that work there. I ask that you reconsider your position and allow small companies to represent themselves at the Sept. 10 hearing as they are the ones most devastated by this legislation. Thank you for your consideration of this important matter.

Sincerely, Eric J. Toriumi

Dear Chairmen and Ranking Members:
I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am both a small business owner and a parent, of course I want to know that the products intended for their use are safe; however, I am disappointed that the consequences for small businesses that CPSIA presents have not been addressed. This oversight of policy will affect the economy and limit consumer's choices. Small business owners should be invited to share their experiences before the Committee.

My small family business makes science and education toys and activity kits. We work to assure high quality and compliance with law. However, the innumereble, onerous provisions of the CPSIA have had a devastating impact on our ability to con-

duct business. It is both expensive and confusing. We are concerned that we may be missing a crucial part of compliance and our customers worry that they don't understand their part in the convoluted chain of responsible and prosecutable parties. We deal with many small specialty stores who support small businesses like ours and contribute greatly to their communities in this era of "big box" dominance. We may soon need to cease operations, furthering the dominance of a few large manufacturers and limiting consumer choice. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The confusion doesn't seem to be limited to those trying to comply with the law. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations.

These unworkable regulations will have untold ripple effects through the economy and society. CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products! As a parent of young children, this suggestion baffles and angers me. I and many of my peers rely on resale not only for economic reasons, but to keep toys and baby items that are generally used for a limited window of time out of landfills. This suggestion undercuts both economic and environmental concerns of many people.

Small business has little chance to survive under this law. Ironically, we struggle to determine how to "ascertain" co-hort information on products and spend exorbitant amounts to test products, but the new law provides yet another advantage to large businesses: in-house testing. Again, both as a business owner and a consumer, this is outrageous! I strive to support small local businesses in all of my consumer life. I do not want to be left with only the options provided by big corporations—they do not support my values or provide me with the choices I want for myself and my children.

I enjoy operating my own business and am deeply concerned and saddened by the possibility that I may need to end this phase of my working life because a law that should be protecting my children is unintentionally only protecting big business. I strongly believe that the perspective of business people and consumers like me is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

House Energy and Commerce Committee
2322A Rayburn House Office Building
Washington, DC 20515

Dear Chairmen and Ranking Members:

I am writing to you as a concerned Small Business owner and operator. In many respects, I feel that we are under appreciated, and ignored, by policy-makers in Washington. The Committee hearing set for September 10, 2009 illustrates this perfectly. The Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA) and that she is currently the only witness scheduled.

I find it hard to believe that no Small Businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the impact this new law has had on business. This law is doing damage to real people and real companies, every day. It is destroying livelihoods and creating administrative burdens for law-abiding companies with excellent safety records. These new costs prevent companies from investing in job-creating new products and new lines.

Why, I wonder to myself, will you not listen to Small Business on this? Why are we once again being shut out of the process?

As you no doubt know by now, the problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. That's just plain bad public policy. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The deck is stacked against Small Business under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to Large Businesses who seek to test their own products. Small Businesses are shutting down, and cutting products (i.e. jobs) while Large Business is permitted to test their own

620 Lakeview Parkway • Vernon Hills, IL 60061 • Phone: (847) 816-5060 • Fax: (847) 816-5051
Email: daigger@daigger.com Website: www.daigger.com

products? It is ironic that toy recalls by Large Business was partially the impetus behind this law being hastily passed in the first place and now they are allowed to test themselves.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. This law is a boomerang and it is, sooner or later, going to head straight back at your Committee. Take the time to hear us out and perhaps you can avoid some of the damage being done in the real World

Thank you for your consideration of this important matter.

Very truly yours,

James R. Woldenberg

Dear Chairmen and Ranking Members:

I am writing in response to the notice that there is a Committee hearing scheduled on Sept. 10, 2009, with only one witness on the docket to testify, Inez Tenenbaum. I am very angry that this hearing will not have any testimony from small businesses directly affected by the CPSIA law. I am very disappointed that not one voice will be heard from the thousands of small businesses who have already closed their doors and who will be forced to close if the Committee and the CPSC doesn't consider the real impact of CPSIA on small businesses. This is unacceptable

Our businesses community has been requesting hearings since this law was passed over a year ago to find these hearings scheduled, postponed, and cancelled over and over again. It is essential that the Committee hear the reality of this poorly written law on children's product industry from manufacturers, retailers, and resellers who are struggling to comply with the law but also have been requesting risk based assessments for children's products.

My store represents over 80 small businesses who will be forced to close their doors once the CPSIA stay is lifted in February and cannot afford to have their hand made products tested. We have already lost a handful of suppliers who cannot modify their business model to accept the costs and time involved with the tracking label provision of the law. This includes hand knit baby sweaters, felted wool hats, and other products made from the exempted product list. These perfectly safe products are now off the market and these small businesses are no longer able to legally sell their products simply due to confusion and lack of instruction for implementation of the regulations. In addition, the recent announcement that Mattel now has authority to regulate their own products and has received exemption from the stringent regulations of the law is beyond frustrating for many law abiding businesses.

I strongly feel the Committee needs to hear from voices beyond the representation of the CPSC and listen to the consumers, manufacturers, and resellers who can speak to how the implementation and reality of CPSIA has already closed businesses and will continue to devastate the US economy more than removing a few products off the shelf.

Dear Chairmen and Ranking Members:

I learned today that the Committee has set a hearing on the CPSIA for September 10, 2009, in which the only witness scheduled to testify is CPSC Chairman Tenenbaum.

Chairman Tenenbaum's testimony is certainly very important for you to hear. However, CPSIA's far reaching implications for the business community dictate that other testimony must also be heard.

Manufacturers, importers, retailers, distributors, and consumers (including schools, libraries, churches, etc.) of children's products are struggling to comply with this law while realizing little, if anything, in the way of improved

product safety. Among the affected groups, small business is arguably the most severely impacted.

Small businesses have a vital stake in ensuring that children's products are safe and appropriate, and also fill important niches in the market by providing innovative, educational and functional products for children which would not otherwise be available. Many of these products do not lend themselves to mass markets or mass production on a scale that is even remotely possible under the scenario imposed by CPSIA.

However well-intentioned the CPSIA act was when passed, the unintended consequences and problems implementing the act are, by now, well documented. Many issues with the law need to be addressed both for the sake of the small business community and also in the interest of children, who stand to lose access to products that meet their educational, physical and special needs.

Testimony of small business is essential to your hearing. I am writing to request that you invite small business testimony which has been offered to the committee.

Sincerely,

John Haug

Dear Chairmen and Ranking Members:

It has been brought to my attention that a Committee hearing has been set for September 10, 2009 concerning the implementation of the Consumer Product Safety Improvement Act (CPSIA). It has also been brought to my attention that ONLY one witness, Hon. Inez Tenenbaum, will be called to discuss CPSIA.

I find it difficult to understand how the business communities impacted by this law will not be given the opportunity to share their concerns with this Committee.

The provisions of this law are far reaching and impact products incapable of harming children from lead or phthalates. In addition, passing of this law will give an unfair advantage to larger companies who have the means to absorb these excessive costs driven by the exemption procedures.

Without the testimony of small businesses impacted by this law, how does this committee expect to arrive at a fair decision? The spirit of this law is to protect individuals from things which can bring harm, however the law is now written in a way that impacts those things which bring no harm...how is this fair?

Without the perspective of small businesses you will never arrive at a complete picture of the problems caused by the CPSIA and its implementation. Without a complete picture you will never arrive at a fair and equitable decision. Please include small business representation in your committee hearings. Thank you for your consideration of this important matter.

Sincerely,

Re: Format of the House Subcommittee on Commerce, Trade, and Consumer Protection Hearing, "Consumer Product Safety Commission Oversight: Current Issues and a Vision for the Future", scheduled for Thursday, September 10

Dear Chairmen and Ranking Members:

We are writing in regard to the subcommittee hearing set for September 10, 2009, the first Commerce Committee hearing on consumer product safety since the CPSIA was passed over a year ago. We are very disappointed to learn that the committee will not be taking this opportunity to hear from any small businesses affected by the CPSIA. Indeed, we have learned that CPSC Chair Tenenbaum will be the only person invited to testify.

While we have full faith in the abilities of Ms. Tenenbaum and believe she is working to apply common sense interpretations to the CPSIA, we do not believe that the she can represent the full scope of the CPSIA's impact on responsible American small businesses. Nor do we believe that the unintended consequences of the CPSIA can be solved through the CPSC's rulemaking. A technical correction is required, and we would like the opportunity to tell your committee why.

Our businesses have been burdened by a law designed to fix a problem created by irresponsible multi-national corporations such as Mattel. The small manufacturers, crafters, and retailers represented by our alliance have impeccable safety records, yet we are burdened by excessive compliance costs while Mattel has once again been trusted to police itself.

Now is the time for Congress to hear the voices of small businesses. Now is the time to show that laws can be written for the common good, not just for the interests of large, well-connected corporations such as Mattel. Now is the time to invite small businesses, including a representative of our alliance, to speak truth to Congress about how the CPSIA is devastating our businesses and our livelihoods.

As parents, consumers and small business owners, we all believe that children's products should be free of toxins and safe for our children. We are in business due to our sincere desire to put forth quality products. Unfortunately, the CPSIA has made this endeavor much more difficult than it should be.

Please, help us fix the CPSIA. Help us continue to provide unique clothes and playthings for America's children. Please, invite us to testify.

Respectfully,

The Handmade Toy Alliance

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am highly disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law. I am speaking on behalf of over 500 franchise business owners who own resale businesses – Once Upon A Child® and Play It Again Sports®.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC has no flexibility to exercise judgment and as a result, have issued highly impractical guidelines. The CPSC has stated that resale stores such as ours, as well as Goodwill, the Salvation Army, ARC, Church organizations, Garage sellers & consignment stores are not required to test products, but we are liable if those products with banned substances are sold. The CPSC has attempted to provide more detailed guidance, of which, informs resale stores not to sell items such a jeans that have zippers or snaps. They are simply advising resale stores to consider no longer doing business in children's products.

WINMARK
CREATE · SUPPORT · FINANCE BUSINESS

Last year alone, our brands serviced over 7 million parents. These parents are thrilled that they have a value-oriented business to turn to in this turbulent economy, but are very confused as to what is safe for their children to play with – or even wear.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

Susan Baustian

Dear Chairmen and Ranking Members:

I am writing about Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. It is impossible for small businesses to understand the regulations because they seem to change daily. In the last 10 months, CPSC has e-mailed me 103 messages on CPSIA regulations. The most recent message contains 6 updates in 18 pages. To describe CPSIA as overwhelming is a huge understatement. While the regulations become more fine tuned and complex, it is not obvious how many of the recommended procedures and tracking mechanisms will reduce injury or death to children. What is clear is that compliance is very expensive for small businesses.

In the School Supplies industry, we have provided safe products for children's classrooms for decades. Many of us are former teachers who started businesses to make a difference in the classroom. Child safety and development are paramount to us. It would be especially insightful for the Committee to hear from Rick Woldenberg from Learning Resources. Rick has been following CPSIA legislation for over a year and can clearly explain the unfair burdens the legislation places on small businesses. Please open the September 10, 2009 Committee meeting to all the stakeholders.

Sincerely,

James H. Rice

Beacon-Ridge
Making life a brighter experience!

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Honorable Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

Our family business makes educational products for schools and has an exemplary 10-year safety record because of our hard work to assure high quality and compliance with law. The provisions of the CPSIA have had a devastating impact on our ability to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain. I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are shooing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

The deck is stacked against small business under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to large businesses who seek to test their own products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

Lana Sheets

Dear Chairmen and Ranking Members: I am writing about the Committee hearing set for September 10, 2009.
The Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very confused about why we (small business owners) have not been allowed to express the damage being inflicted on us by this new law. It is unfathomable that we are not being allowed to present our side of this issue.

We have continually requested a venue to present the hardships that have been generated from the poorly thought out implementation of the CPSIA ruling. We have NOT been heard, nor addressed. In fact, it's been 11 months and this is the 1st hearing.
The effects of this law has caused severe financial problems in my small business. I have been forced to file personal bankruptcy because I can't afford the "testing" and lost a very large contract for our elementary science kits. These are expressly designed to be used with a parent present, yet there is no exemption for such items.

Your committee needs to hear the people being hurt by this law. My products have no lead and are not going to be eaten by a 3rd grader! You have been overly broad in your assesment of risks.
You can't scare people into compliance with the penalties. The result will be no market choice, because small businesses will stop marketing their products due to the high cost of testing.

Thank you for your attention to this,

Sincerely,
Teresa Wirtz,
Small Business Owner

"Dear Chairmen and Ranking Members:

I am writing to you with grave concern over the financial stability of my company and, more importantly, my industry and the tens of thousands of individuals employed in the Toy Industry. We expect about half of the Toy Industry will either stop doing business or will reduce the number of employees (we've already had to lay off two employees). This drastic measure is the direct result of current legislation and the ill (albeit - unintended consequences) affects of the Consumer Product Safety Improvement Act (CPSIA). I've copied, below, a letter from a trusted colleague. I believe it is self explanatory and accurately reflects my company's opinion…

WALTHERS

September 4, 2009

The Honorable Henry Waxman
Chairman

House Energy and Commerce Committee
2125 Rayburn House Office Building
Washington, DC 20515

Dear Mr. Chairman:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

It is critical that small businesses be given a voice in the discussion of how to implement this law. We are a family business selling toys and hobby products for over 77 years. We have an unblemished safety record over all of these years. This law has already created huge additional expenses caused by unnecessary testing, excessive paperwork, and the destruction of products that are NOT dangerous to children.

The innumerable, onerous provisions of the CPSIA have had a devastating impact on our ability to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are forcing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

J. Philip Walthers

WALTHERS

September 4, 2009

The Honorable Bobby Rush
Subcommittee Chairman

House Energy and Commerce Committee
2125 Rayburn House Office Building
Washington, DC 20515

Dear Mr. Chairman:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

It is critical that small businesses be given a voice in the discussion of how to implement this law. We are a family business selling toys and hobby products for over 77 years. We have an unblemished safety record over all of these years. This law has already created huge additional expenses caused by unnecessary testing, excessive paperwork, and the destruction of products that are NOT dangerous to children.

The innumerable, onerous provisions of the CPSIA have had a devastating impact on our ability to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are forcing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

J. Philip Walthers
President

Dear Chairmen and Ranking Members:

We are extremely disappointed to learn that the House Commerce Committee will not be inviting any small business representatives to testify at the upcoming hearing on consumer product safety set for September 10, 2009.

As the owners of a specialty toy and baby store, we are seeing many of our small suppliers exit the market, reduce their offerings, or raise their prices as a result of the CPSIA. We do not believe that the costs they are bearing have improved product safety, but we certainly believe that the CPSIA has bolstered the fortunes of large companies like Wal-Mart and Mattel.

It is time for you to listen to the small businesses who are being unnecessarily hurt by the CPSIA. Please invite small businesses to tell you their stories.

Thanks and best wishes,

Dan Marshall and Millie Adelsheim

Dear Chairmen and Ranking Members:

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law. Our family business makes educational products for schools and has an exemplary 25-year safety record because of our hard work to assure high quality and compliance with law. Yet the innumerable, onerous provisions of the CPSIA have had a devastating impact on our ability to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

I own two struggling toy stores. In February, I requested the assistance of the CPSC, the Small Business Administration and my local representatives to help me even understand the letter or spirit of the law. Not only did the law require legal expertise, but expertise in organic chemistry, statistics and various other physical and chemical sciences. Even reading the CPSC's vague advice provided no meaningful help.

It still seems that to follow the law that a small store must undergo several million dollars worth of independent testing and have thousands of files of printed paperwork on file. And it's unclear whom has the right to demand this information. And as rulings have yet to be made, we can only guess if we are doing the right thing.

We are calling this bill the WalMart and Mattel support bill. Only WalMart as a retailer can afford to keep these records and develop custom computer systems to track this information. Only Mattel (which seems to have some sort of special exemption can seem to continue manufacturing toys. The result will be much like the marketplace in Russia....one company-one choice.

We hear how small businesses are the nation's backbone and the government is now guaranteeing that only the largest of the large businesses can survive in the toy industry. It is not the small businesses who have had the problem with safety...the small business rides on it's reputation. People die in large box stores, and people will still shop in them.

We stand behind the intent of the law, but the implementation will neither enhance safety of our children, nor support their development. The big box stores of the world are looking at children as numbers. We know their names. Who's more likely to consider safety?

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am extremely disappointed and surprised that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The small business owner who has worked diligently for many years to produce safe toys and has conformed to all the testing requirements, both voluntary and mandatory, through third party labs has been thrown in to a turmoil. The law has had so many interpretations over the last months that no one is able to determine how and what needs to be done.

In our small companies products are made in small quantities and therefore many common components are used in order to keep product costs down. Under the new law we now have to treat these common components as entirely different entities for **each** toy they are a part of. We have to test some of our components 25 and 30 times, at cost of several hundred dollars **each** time, even though they have already been documented as safe by an independent testing lab. This is just one of several issues in this law that could be made simpler and less expensive

without being any less safe. Most of these problems have to do with a lack of knowledge and understanding of actual manufacturing processes and need to be addressed to prevent small businesses from failing.

Small business in the children's industry has been actively calling for hearings since the passage of the CPSIA because of the issues that threaten our very existence and the availability of important playthings for our children. Issues that, if addressed, could allow us to survive this unbelievably difficult time and continue to make toys that would be as safe as the Congress intended. Companies in the small business segment have an excellent record of safety and are asking to be heard so we can continue to make excellent products. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The deck is stacked against small business under the new law. Ironically, while we are left to puzzle over how to "ascertain" co-hort information on products, the new law awards a freebie to large businesses who seek to test their own products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Hello

I hope that you still make an effort to talk to some of us who work in the trenches, before making anymore misguided rulings regarding child and toy safety. As a small toy shop owner, I have been so discouraged by the lack of response from my congressmen and senators. NO ONE IS LISTENING!

May I give you just a couple of examples of bad things that have happened as a result of this law. A wooden wagon maker in Berlin Ohio... a group of Amish folks... have been forced to pay ridiculous amounts of money to have each of the components of their individual styles tested... this is something they cannot afford to do... they have simply cut back on the number of items available, raised their prices, and have probably had to reduce their small work force. WHAT ARE YOU PEOPLE THINKING? BRIO wooden trains, from Sweden are not available in the U.S. this year, because, they do not want to spend the additional money for testing of each SKU (as required by the law) when they already meet the standards of the EU. We have seen the same thing with a number of other companies.

AND YET one of the biggest culprits in causing this overreaction Mattel, has been allowed to do their own testing and in their own labs... while small companies like the Berlin Ohio people have to pay to the point of going out of business.

PLEASE reconsider the age of childhood as noted in the law. 12 year old children are not the same as infants, toddlers and pre-school ages.... This law uses a Sherman Tank to take care of what could have been done with a broom. Stop acting based on the rantings of a few well-intentioned, but over zealous people. Moderation , Moderation ... deep breath.... think about what you are doing and fix this thing!

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law. My children's clothing business has been put under real stress due to the unforeseen effects of this law, and these issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are shooing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

The deck is stacked against small business under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law

awards a freebie to large businesses who seek to test their own products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no small businesses – like our family-run business - impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law. Before CPSIA, our family business used to make wooden doll cradles and high chairs as well as other wooden toys. We also made baby diaper cakes using various items from a variety of vendors – and we sewed the baby blankets for the baby diaper cakes ourselves. This business was growing and we were hoping to hire a worker or two to help us out.

Due to the innumerable, onerous provisions of the CPSIA, we have ceased all production and only do resell at this time. The CPSIA has had a devastating impact on our ability to conduct business – people want our homemade wooden toys, but we cannot test each and every one of our toys and baby diaper cakes. In our business model, we do a lot of specialty orders for the toys and diaper cakes, so doing a large production run does not make business sense. We follow Just-in-Time (JIT) business practices for the production part of our business. We even use milk paint instead of acrylic as it is 'suppose' to be safer for children – but it's more dangerous for my husband who paints our wooden toys.

NOTE: These are **Made in the USA** toys!

Issues like ours need to be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are shooing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

The deck is stacked against small business under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to large businesses who seek to test their own products.

I strongly believe that the perspective of businesses like our company, LuvUPumkin.com, is essential for a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Dear Chairmen and Ranking Members,

I'm sincerely disappointed that during the upcoming hearings, scheduled on 9/10/09, you have only asked one representative to speak on behalf of everyone affected by the new CPSIA law, and the small business owners are not being included. The small business owners have been at the forefront of the debate against this new law and its ramifications, yet we're being ignored and not given the voice we've fought so hard for you to hear.

This new law threatens to put me and thousands of other small businesses out of work. As if our current economy isn't already suffering enough. It is requiring testing and labeling on items I know to be non-toxic. Forgive me if I'm a little rusty with my science, but last I checked, combining a non-toxic item with a non-toxic item does not a lead product make.

I make some one-of-a-kind items; have you thought about how this new law affects unique creations? It would be impossible to ever buy or sell anything personalized or custom in nature.

While the law affects anyone who manufactures items for the under 12 set, it is hitting the small businesses the hardest while big toy companies hide behind their lawyers and are granted exemptions. By excluding the small businesses, you're essentially reaffirming what we've suspected all along; this is all a ploy for big box to put mom and pop out of business.

In order to ensure a more complete and accurate representation of the law's effects, small businesses need to be heard and included. Please re-evaluate and let the majority, who is affected, not be left by the wayside while decisions are made without their voice being heard. We need to be heard. This affects us too.

Sincerely,
Holly Medell

Dear Chairmen and Ranking Members:

It came to my attention today that the committee has scheduled a hearing on September 10, 2009 regarding implementation of the Consumer Product Safety Improvement Act (CPSIA). Initially, I was elated that the Committee is finally going to hold this much needed hearing.

Since I first became familiar with this law last year, my small company has expended enormous personal efforts and financial resources to comply with the CPSIA. I have written numerous letters to legislators and CPSC personnel, pleading with them that it is not economically feasible for me to fully comply with the retroactive treatment of inventory. I will be happy to expound on that. You would just not believe the position that you have put me in by rushing this law into effect.

I am one of the good guys. I follow not only the law but also the moral code. I have small children. I want products to be safe like most people do. However, the draconian CPSIA placed me in a position to either allow our multi-generational family business die as a company or to compromise my own principles.

My pleas to the CPSC consistently told me effectively "our job is not to interpret or modify the law, just to enforce it – take it up with your representative or congressman." Yet my pleas to individual legislators consistently referred me to the CPSC – a useless cycle. So I have been hoping and praying (and expecting, actually) that the committee would eventually take this issue up – and, once and for all, make things right.

You can imagine how devastated I am to learn that, during the hearing next week, no voice is being given to the interested parties on either side of the issue(s). It is my understanding that testimony will be given only by the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety.

I urge you to call as a witness Rick Woldenberg, Chairman of Learning Resources, Inc.Vernon Hills, Illinois 847-573-8420 so that he can provide an accurate perspective of the business community to this issue that is important to all of us.

Sincerely,

Jack Summerselt

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

The people who should be testifying at this meeting are the businesses that are being hurt or even closing because of CPSIA – home crafters, resellers, charities, low income families and many, many small and medium businesses, not Hon. Inez Tenenbaum. It would really be different if CPSIA was really helping kids, but it's not.

One of the companies that brought lead laden toys to our American children in 2007 was Mattel, but now Mattel is able to use its own testing lab. If they had been testing their items like they should have been, there would have been no problem with lead in the toys. Mattel just needed to follow the laws in 2007 that were all ready on the books.

This law has many different parts to it, such as the testing and labeling. I am a home crafter of doll clothes, sewn, knitted, and crocheted for dolls for children over the age of three. My doll clothes sell for $8 - $10 each on ebay. If I had to have them tested at $70 each, I certainly could not afford to sell. The small amount of money that I was making was being put away for my grandchildren's college.

During this recession, my grandchildren are shopping at resell shops to be able to have new clothes for the school year. But this law states that coats, jeans, and shirts must be tested if they have buttons, snaps, and zippers. These items would be very hard to find without buttons, snaps and zippers. You are punishing the poor and low income with this law.

I hope that you will consider and listen to the many businesses, crafters, children, charities and grandmas that CPSIA is hurting.

Thank you so much for taking the time to read my letter.

Sincerely,

Barbara Raubuch
Grandma

To Sen. Waxman:

As the founder of Free-Range Kids, I strongly believe in keeping kids safe. I also think there is such a thing as "overkill." Or "oversafe," if you will. I hope you will allow more than one person to present to you at your hearings. My followers (1 million and counting) also wonder why we are keeping kids "safe" from things that help much more than hurt them, such as books, which few children eat.
Thank you.
Yours,

Lenore Skenazy

Dear Chairmen and Ranking Members, I am writing in regard to the Committee hearing set for September 10th, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U S Consumer Product Safety Commission (CPSC), is scheduled to testify about the CPSIA law.

I find it outrageous that you are only listening to one witness. Since thousands of small businesses and families have been and continue to be detrimentally affected by this law, I find it reprehensible that you do not have a representative from either of these groups present to testify. I am the Vice President of the National Association of Resale and Thrift Shops and own The Kids Closet, a store that is now down 25% in sales due to the loss of products covered under this law. Although I'm sure none of you feel the effects of a bad economy personally, believe me, plenty of the rest of the country does. This is very poor timing to try to make things safer. If you really want to improve safety for children, go after the big manufacturers who shipped all the lead-laced stuff in from China in the first place. And why was this law made retroactive? Even car manufacturers get years to improve safety and they kill lots more people.

This law makes it impossible to sell items that are perfectly safe but that we have no documentation to prove such.

I really believe that to get a good perspective of all the effects of any change, you need more than one point of view. You can't read the label from inside the bottle.

If you want, I would be happy to come testify. Just ask me.

Sincerely,

Kitty Boyce

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety 'mprovement Act (CPSIA).

I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law.

Our small business makes educational products for schools and toy stores and has an exemplary 10-year safety record because of our hard work to assure high quality and compliance with law. Yet the innumerable, onerous provisions of the CPSIA have had a devastating impact on our ability to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are myriad. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are shooing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products

September 8, 2009

The deck is stacked against small business under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to large businesses who seek to test their own products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

Julien MAYOT, CEO

Dear Chairmen and Ranking Members:

I am the president of School Aids, a Baton Rouge based retail and catalog school supply business. We have 76 employees. I was stunned by the Consumer Product Safety Improvement Act (CPSIA). This law has caused massive confusion for thousands of small businesses, causing some to have large inventory write-offs, file for bankruptcy, and go out of business. This is affecting me, and my employees. This law has serious negative impact on small businesses in the United States without having much measurable improvement on safety.

Therefore I was disappointed to learn that no small businesses would be invited to testify at the September 10 Committee hearing regarding the CPSIA. I am writing to ask that you allow for our input.

Thank you for your consideration.

Dear Chairmen and Ranking Members:

I am writing today in regards to the September 10, 2009 Committee hearing on the CPSIA. It is disappointing that it appears there will be no representation from business owners such as I, whose businesses are suffering from unintended consequences of the law.

Vernier Software & Technology is a small to medium-sized company that makes products for science education. We are confident that our products are safe. We have been manufacturing sensor technology for over 28 years, and safety is a priority to us. We adhere to environmental and material usage directives that are accepted in countries throughout the world. Yet due to the CPSIA, we have discontinued the marketing and sales of our products for use by students under age 13. This is not only a blow to us as a company, but to science education in this country.

Due to broadly-written definitions in the law, we are not even certain whether it applies to us. Should science education probeware that connects to a computer (e.g., a temperature probe or light sensor used in a science experiment), be lumped into the same category as toys and child care products? We need clarification and communication.

I applaud your work to keep our country's children safe. Yet there are consequences of this law that need to be understood and addressed. I appreciate your time and consideration of allowing small business to have a voice at the hearing.

Sincerely,

David Vernier

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

The last year has been especially difficult on small businesses like those of our members, 50% of who have gross sales of under $3 million. Since Congress passed the Consumer Product Safety Improvement Act of 2008 – a law which we have supported from the beginning – the juvenile products industry has spent at least $45 million on increased testing and compliance costs and we've lost more than $138 million in destroyed or returned inventory. Implementation of this well-intentioned but poorly-conceived law during the current recession has been a nightmare. One estimate shows the combined effects on the juvenile products industry of the CPSIA and the recession to be greater than $430 million and rising.

Many small businesses in the juvenile products industry came to DC earlier this year to meet with our Senators and Members of Congress about the CPSIA. We were mostly told to wait for the Obama administration's appointees to take charge at CPSC and things would get better. Now, all five Commissioners have been confirmed and the chairman has been on the job since late June. We still need help. Our biggest fear is that the new folks in charge will tell Congress that the worst has passed and everything will be fine. I am writing to tell you that is not the case.

Juvenile Products Manufacturers Association, Inc.
15000 Commerce Parkway, Suite C • Mt. Laurel, NJ 08054 • 856.638.0420 • 856.439.0525
E-mail: jpma@ahint.com • Website: www.jpma.org

We believe Congress needs to amend the CPSIA this year. Everyone seems to admit there have been unintended consequences – but no one can agree on whether and how to address them. We are not asking to repeal the law in its entirety because we know that is not politically feasible or, frankly, desirable. There are some good things in there already. But I hope you can work towards making a few changes to make things better for small businesses and better for the agency staff who are struggling to implement the CPSIA. Common-sense reforms in areas such as tracking labels, science- and risk-based regulations, certification, retroactivity, and component part testing would help turn a well-intentioned law into a well-made law.

Small businesses impacted by the new law, such as those small businesses represented by JPMA, must be included in Thursday's hearing and must be invited to share their experiences in testimony before the Committee. Many of the small family businesses we represent have built their reputations on the safety and enjoyment of their products, and have spent multiple generations assuring high quality products that comply with all laws and regulations. Yet the innumerable, onerous provisions of the CPSIA have had a devastating impact on the ability of many of our members to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain. Small businesses like JPMA members in all 50 states are counting on you.

Thank you for your consideration.

With best wishes,

Sincerely,

Robert Waller

Dear Honorable Henry Waxman,

I am extremely upset by the effects of the Consumer Product Safety Improvement Act of 2008 on small business and Native Americans. I'm the owner of a fledgling toy business. It's been my dream of twenty-five years, and just as I am in the process of achieving it, the over-reaching effects of the CPSIA are threatening it. As an American citizen and a dyed-in-the-wool Democrat, I'd like to believe that the negative fallout on such businesses as mine was unintentional, but I wonder when I see how that Mattel gets to test its own toys!

I'm just as concerned for the Native American cultures as for my own welfare. This law has put them at risk, along with every other ethnic culture whose children depend on custom clothing to participate in cultural events.

Traditional powwow, ceremonial and burial clothing for Native Americans is an important part of cultural activities. Every outfit made is intentionally one-of-a-kind, to reflect the family, clan and tribal heritage of the wearer. Clothing is an integral part of most cultural activities, and is a continuation of the ancient tradition of tribal members dressing in an identifiable manner.

Without community members and commercial regalia makers helping to dress our children, many children of busy working parents will be left sitting on the sidelines at cultural events. Many people who have previously made regalia for children have already stopped making it due to this law. So this legislation is already preventing Native American children from participating in cultural activities, thus hindering families and tribes from passing on their traditions to their children.

The Consumer Product Safety Improvement Act of 2008 requirements of expensive 3rd party testing and tracking of every "SKU" made for children under age 13 is financially infeasible for small businesses and custom clothing makers. The end result will be Native American Cultural Genocide on the level not seen since the days when children were forced to attend Indian Boarding Schools and punished for speaking their native tongues.

Unless this legislation is amended to allow raw material manufacturers to certify their products are safe to use in products for children, those of you who refuse to amend this flawed piece of legislation will be PERSONALLY RESPONSIBLE for destroying the very heart and soul of native cultures, and the very FUTURE OF NATIVE AMERICA.

I implore you to open the upcoming hearing to include testimony by representatives of the small business community. As a member of the Handmade Toy Association, I'm proud that its leaders have diligently studied all of the issues surrounding the CPSIA and have commonsense suggestions for improving this act. I implore you to hear them testify.

Sincerely,

Linda Moore Kurth

Sept. 7, 2009

The Honorable Henry Waxman
The Honorable Bobby Rush
The Honorable Joe Barton
The Honorable George Radanovich

Dear Honorable Congressmen,

The war being waged on small business and Native Americans by the Democratic Party, via the Consumer Product Safety Improvement Act of 2008 is ***extremely*** distressing. Once again we're victims of a Congress who has legislated Indians into forced assimilation, albeit as collateral damage caused by unintended consequences this time. In any case, the CPSIA is legislative ***NATIVE AMERICAN CULTURAL GENOCIDE.***

I'm Janet Littlecrow, partner in Littlecrow Trading Post LLC with my husband James. I'm a lifelong DEMOCRAT who is ***furious*** that members of my own party are ***IGNORING MY CONCERNS,*** and I grow more inclined to raise a stink daily. Ask Cindy Sheehan if one tough woman can make a difference.

My husband and I run an internet-based business in rural Oklahoma, producing traditional clothing and powwow dance regalia for Native Americans throughout the U.S. & Canada. Our inventory is handmade and "one of a kind", representing the dancer's family, clan and tribal heritage. Testing each "SKU" is cost-prohibitive. Destructive testing can't be done on a beaded buckskin dress, feather dance bustle or beaded feather fan. Our items don't need cradle-to-grave tracking like a commercial aircraft altimeter, and don't get recalled.

Clothing is an integral part of most cultural activities, and is a continuation of the ancient tradition of tribal members dressing in an identifiable manner. We can adapt some items to use plain fabrics, yarn and ribbon, without snaps, buttons and zippers. However, beaded buckskin dresses, leggings and beaded moccasins are mainstays of Native American attire. Jingle dresses use hundreds of tin cones on a dress. Dyed deer tail lines the outside of a porcupine hair roach headdress. Quillwork was used for decoration before beads; maybe I should start hunting porcupine since beads are glass and are not exempt. Do I need to start cooking up deer brains to brain-tan deerskins like in the old days, since commercially-tanned skins aren't "natural"? Should I start using duck poop for blue dye, buffalo gallstones for yellow dye, bloodroot for red dye again? I can go on…

Many regalia makers have stopped making children's items because of the CPSIA. ***This law is already forcing assimilation on Native American children, by restricting their participation in powwows & cultural events.*** Cultural diversity is the strength of this country. The children of other ethic cultures depend on custom clothing to participate in cultural events also. This law has the potential to light a firestorm.

Certification should be done at the raw materials level. There are simple solutions to FIX THE PROBLEMS!

PARTISAN POLITICS ARE UGLY FROM EITHER SIDE OF THE FENCE!

Dear Chairmen and Ranking Members:

I am deeply chagrinned to learn that **not even one** of the thousands of small businesses being discriminated against by CPSIA legislation have been invited to testify at the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

Your decision not to include the voice of small business at your hearing supports the idea that CPSIA is a holocaust against small business in that, apparently and as far as I can see, **the small business victim – the most disadvantaged under this new law – is being eliminated from both the dialogue at your hearings and from competing fairly in the marketplace.** I have deep concerns about this practice being permitted by public servants charged with listening to our will and performing their duties to us in a manner that supports our expressed concerns, true will and best interests.

As a small business owner devastated by CPSIA, I have come to the harsh understanding that "intent" of a law does not mean the same as "letter" of the law. After reading a feature about the First Lady's "organic" garden (attached) and another (also attached), more recent feature about Mattel being given a "pass" while the rest of the peons in our industry continue to suffer in playing by the rules set down by the CPSIA (confusing as they are!), I'm officially exhausted by the entire nightmare, for which I now hold you and your Committee 100% responsible.

Mr. Chairman, you and your associates have not only gotten my attention as a business woman, you have also gotten my dander up, as a citizen and parent. This law has officially replaced "Mother Approved" with "Big Brother Approved," effectively undermining parental authority across this great nation. From a small business perspective, your committee has established CPSIA "at our expense," not "on our behalf." The discrimination, hypocrisy, lack of representation and apparent disregard for getting this law "right" on behalf of OUR children and the small, family-owned business victims that serve / support them (one and the same interest) is as obvious as the nose on your face.

What ever happened to **equal representation**? Small business is the backbone of the American economy. Unless the intent is to foster a new kind of backbone that serves another type of economic model, I can see no reason why this committee would, in all good conscience, fail to include our voice at your hearings? I strongly urge you to invite small business to testify at this and every future hearing you may hold regarding a law that so deeply impacts the "little guy."

Sincerely,

Tristan Benz

Is The White House's Organic Garden Toxic To Kids?

Jeff Stier , 07.23.09, 01:24 PM EDT
http://www.forbes.com/2009/07/23/white-house-garden-opinions-contributors-jeff-stier.html
No, according to toxicologists. It ought to be, according to environmentalists.

Michelle Obama's "organic" White House garden was designed to promote a green agenda. In order to provide safe food to children in the community, the First Lady wouldn't use chemical pesticides or fertilizers. Green groups cheered. In an ironic twist, all of that has now backfired.

The garden was created using a "green" approach, based on the belief that exposure to even minute levels of synthetic chemicals and contaminants such as lead is dangerous. Indeed, when environmental activist groups lobbied for a drastic consumer product safety law known as the Consumer Product Safety Improvement Act (CPSIA), they repeated the frightening but unscientific mantra that "there is no safe level of exposure" to the synthetic chemicals and contaminants they sought to ban.

The law passed, but it won't make anyone safer; the idea that the level of exposure doesn't matter flouts every known precept of toxicology. CPSIA is putting the squeeze on already threatened small businesses, forcing them to discard products with the tiniest trace of forbidden substances--and it turns out the White House is getting a taste of the same medicine.

Earlier this month, The New York Times reported that the National Park Service found lead in the White House garden soil. In fact, tests found somewhere between 450% and 900% of the normal amount of lead in U.S. soil. The White House did not dispute the findings but defended the lead in the garden, calling it "completely safe." They are right. Though lead at higher levels can be dangerous, the garden, like the products banned by CPSIA, is well within safety limits. But the White House's defense rings of self-serving hypocrisy. Where were the White House reassurances when environmentalists were pushing CPSIA restrictions on other fronts?

Greenpeace, the Environmental Working Group, and others who were behind CPSIA--along with their allies in Congress and in the administration--manipulate the fears of concerned parents by contradicting established rules of toxicology, claiming that all lead needs to be eliminated. Aside from causing needless panic, their agenda could end up taking an expensive toll on industry and driving up prices for consumers.

The consequences of environmentalist fear-mongering are already spreading quickly. Bisphenol-A (BPA) and phthalates in plastics have been thoroughly demonized by junk-science reports--so much so that people forget these chemicals have never been shown to be harmful to humans. Likewise, the organic approach endorsed by the White House unjustly contests the proven safety of properly applied chemical pesticides and fertilizers.
Now that they've seen the light, will the White House join thousands of small businesses and consumers calling for the repeal of the CPSIA? The Bush Food and Drug

Administration found BPA to be safe, but the Obama FDA called for a do-over. Will their findings be consistent with the White House's newfound appreciation for basic tenets of toxicology? Will the new regime at the EPA halt its trumped-up health claims and halt their unprecedented attack on America's producers?

If so, something truly beneficial will have grown out of the White House's "organic" garden after all.

Jeff Stier is an associate director of the *American Council on Science and Health*.

Mattel gets a CPSIA waiver
posted at 9:30 am on August 28, 2009 by Ed Morrissey
http://hotair.com/archives/2009/08/28/mattel-gets-a-cpsia-waiver/

After consumers discovered an influx of lead-tainted toys imported by Mattel and other companies, Congress acted to strengthen protections through the Consumer Protection Safety Improvement Act (CPSIA). The legislation created almost impossible hurdles for small manufacturers and resellers for testing products, while earlier this month the CPSC announced it would send inspectors fanning out across the USA to enforce the laws in thrift shops. Now one of the companies that created the problem in the first place has gotten a waiver from the CPSIA's requirements for third-party testing:

> Toy-makers, clothing manufacturers and other companies selling products for young children are submitting samples to independent laboratories for safety tests. But the nation's largest toy maker, Mattel, isn't being required to do the same.
> The Consumer Product Safety Commission recently, and quietly, granted Mattel's request to use its own labs for testing that is required under a law Congress passed last summer in the wake of a rash of recalls of toys contaminated by lead. Six of those toys were produced by Mattel Inc., and its subsidiary Fisher-Price. ...
> Mattel is getting a competitive advantage, Green said, because smaller companies must pay independent labs to do the tests. Testing costs can run from several hundred dollars to many thousands, depending on the test and the toy or product.

Mattel had to recall more than 2 million toys from the market after inspectors discovered lead in the imported products. Now they claim that their "firewalled" labs will protect consumers and block out "corporate influence". Where are the labs that Mattel will use? Mexico, Malaysia, Indonesia, and China — and China is where the dangerous toys originated.

Mattel gets to test its own products. People like Suzi Lang have to pay laboratories to certify their hand-made products contain no lead or phthalates, which she already knows because she handpicks her materials. Thrift stores have to either test products for resale or confirm that they have not been recalled, on an individual basis. But the company that caused the biggest problem that led to the CPSIA gets a waiver. How convenient ... and unjust.

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. I know that the business community has been actively calling for hearings since the passage of the CPSIA because of the disastrous effects of the new law. The changes are affecting innovative people who are creating the best products possible. They are safe, used throughout the country, and many products are made in the USA. I am aware of many who have created small business that make products for home and school that are seriously affected at the huge costs involved in meeting the new laws. The problems in the first place stemmed from mismanagement of Chinese factories by one of the largest toy companies who should have had quality assurance and on-going staff supervision in China. As a result of their oversights as to safety the repercussions are instead affecting the small mom and pop businesses who can no longer afford to compete. This is unfair and out of proportion to the problem that caused this change in the first place.

Then you are not allowing the small companies who are greatly affected by the new laws to share their real and serious concerns and that is totally unfair and causing further alienation. These issues need to be explored by the full Committee based on the testimony of real companies and the people involved who are suffering real pain. The problems caused by the law are myriad.

The overly broad definition of "children's products" swept in many products that are incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations.

In addition, the exemption process under the law is both very limited and very expensive. The severe penalties under the law are not scaring companies into compliance – they are forcing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products. The deck is stacked against small business under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to large businesses who seek to test their own products.

I strongly believe that the perspective of businesses that are small, innovative and constitute the cross section of America are essential to a complete picture of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter and opening the doors to a full and complete understanding of the current state of the toy and educational product market. It is too important to this country to let it be destroyed by laws that are not flexible in standards or methods. Hope you will hear the full "Toy Story" and not throw out the baby with the bathwater or even listen to its cries. At least listen and act from having a clear understanding of what is being asked of those without deep pockets. This country needs all of the innovation, productivity and production it can muster and it needs it now.

Sincerely,
Stevanne Auerbach
Dr. Stevanne Auerbach, PhD./Dr Toy™

Sept. 6, 2009

To Chairman Waxman and other members of the Congressional committee reviewing the pending requirements of CPSIA.

My company -Timeless Toys Inc., Hayward, CA is a very small company. We employ three people and our sales volume is less than $500, 00 per annum. There must be well over 500 similar and smaller sized companies in the Toy Industry today. We are the innovators and creators of new products as well as classic products. We have always complied with all of the voluntary toy safety standards and our own in house quality control systems have always resulted in safe, well designed, quality products. We have never had a recall or any safety issue in all the years I have been in business.

I actually assisted in the creation of the Voluntary Toy Safety Law back in the 1980's when I was CEO of a Toy company with revenues of $250 Million. As Dr. Stevanne Auerbach pointed out in her comprehensive letter on the subject; we do not have the resources of the dominant large companies in the industry and it is the largest one who actually caused the major problem.

The new requirements are especially onerous and costly to the smaller companies. Most of us are struggling to keep our doors open in the present economic climate and the new requirements make our situation even more tenuous. The CPSIA law of 2008 was made in an atmosphere of hysteria caused by the larger companies and a few others who were not in compliance. No analysis was made as to the impact the requirements would have on small companies. Please extend the compliance date to allow more input and arguments from smaller companies before a final compliance date is set. We are still not certain as of this writing of exactly what the acceptable labeling requirements are! These new requirements are causing our suppliers problems as well and they are also confused as to what is required. The law as it is now written should be rescinded and other alternatives should be reviewed.

I will be glad to provide more information if needed or requested.
Sincerely yours,

Harold A. Nizamian

"Three Bags Full"
Children's Consignment Sale

ATTN: House Subcommittee on Commerce, Trade, and Consumer Protection

To Whom It May Concern:

My name is DeAnn Nightingale and I organize and operate a small children's consignment sale within Central Ohio every spring and fall.

This small business, Three Bags Full Children's Consignment Sale, represents thousands of families from throughout the Central Ohio community. The recent CPSIA law has been confusing and unclear to the community of consumers, and the retail small business community.

It is unsatisfactory that such a poorly written law was put into effect without proper foresight and without proper collaborating with the community of consumers and small business owners. The media attention to the CPSIA, the greatly inappropriate number of individuals handling the CPSIA and the poorly thought out execution of this law should be indicators to you that this is of the utmost important to small businesses and the general consumer.

Your scheduled hearing on September 10 is overdue. You have scheduled to call one witness, someone representing the CPSC, and no one from the small business community or the crafters community or the general consumer that is affected by this law. That is unacceptable.

May I remind you that you are elected officials and work for the general public. It is your duty to effectively and adequately explore all ramifications of the CPSIA and make due changes as necessary. Do not punish the community of consumers, small businesses and the crafting industry because of excessive lead paint found in toys from China. Thoroughly research what is due diligence, responsibility and appropriateness in legislation to keep excessive lead paint toys and other products from entering the market. To do so, calling more than one witness is absolutely necessary. All sides should be able to discuss and explore their situation so that responsible and insightful change can take place.

Sincerely,

DeAnn Nightingale, sale organizers

The Honorable Bobby Rush, Subcommittee Chairman
House Energy and Commerce Committee
2125 Rayburn House Office Building,, Washington, DC 20515

The Honorable Joe Barton, Ranking Member
The Honorable George Radanovich, Subcommittee Ranking Member
House Energy and Commerce Committee
2322A Rayburn House Office Building, Washington, DC 20515

Dear Chairmen and Ranking Members:

We have just learned that only one speaker -- the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify at the Committee hearing being held on September 10, 2009 on the implementation of the Consumer Product Safety Improvement Act (CPSIA). We are very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the harsh effects of the new law.

NSSEA represents 1,500 companies in the children's product marketplace. These educational product manufacturers and retailers care deeply about the safety of children; however, we have grave concerns about the insurmountable burden the CPSIA places on small businesses in the educational products marketplace. It is our hope that your Committee hearing will lead to prompt action to correct the excessive reach of this law and its devastating consequences on the small businesses within the educational products industry.

Here are some specific areas of concern:

1) The definition of children's product is too broad.
The CPSIA imposes a regulatory burden on the children's product industry unrelated to risk. Many of these items, have never presented any risk of injury and therefore will have no effect on improving safety. Both the lead and phthalates bans need to be carefully constrained to avoid unnecessary harm to commerce. The safety concerns covered by the CPSIA mainly pertain to products aimed at young children. We recommend the age limit for the definition of "children's products" be reduced to eight years and that the CPSC have the discretion to lower the age limit for certain groups of products for which the risk of harm from lead or phthalate exposure is remote to non-existent (for example, children's books, even those published prior to 1985, ATVs and bicycles).

2) The deadlines are not practicable and the economic impact is severe.
The children's product industry is not prepared for the sudden imposition of heavy regulatory burdens. Children's products are typically priced low in a very competitive marketplace. The overhead and infrastructure needed to comply with the CPSIA are unreasonable for small manufacturers, single location stores or even small retail chains and will accelerate mass consolidation in the channel. These changes will lead to businesses closing and continued job elimination.

3) The penalties are excessive.
The economic impact is overwhelming. In an effort to address every possible danger, the new law exposes businesses to excessive testing costs and record-keeping expenses and enforces its new rules with penalties of up to $100,000 per violation. We urge you to sharply restrict the use of heavy penalties in the CPSIA particularly for inadvertent violations and for small businesses. The current law provides broad discretion to the CPSC to impose excessive fines, criminal charges and even asset forfeiture. Our members care deeply about safety and have a proven record of providing safe products.

4) Commission needs more leeway to make risk-based decisions for banned products containing lead.
The mere presence of lead in many materials does not mean there is a risk of injury. For example, older children are far less susceptible to lead poisoning and engage in less of the mouthing behavior that can cause lead ingestion. Further, small amounts of lead bound in plastic or other materials may never be biologically available to a child, and lead transfer from certain types of products is highly unlikely given the nature of certain products (examples classroom items, bicycle valves, ATVs, motorbikes). The Commission should have the discretion to set limits on the lead ban that take these factors into account, including excluding certain age groups, products, and materials based on a risk based analysis. This would result in the high level of consumer protection anticipated by the Congress without imposing the kinds of costs for testing and compliance that are putting our members and many other consumer product firms in jeopardy.

On behalf of the members of the National School Supply and Equipment Association, we urge Congress to give business a seat at the table in its efforts to implement reasonable and common sense amendments to the CPSIA to fix its many serious flaws. As the impact of the CPSIA has already caused damage to many companies, there is a great deal of urgency to listen to the businesses in this marketplace in order to act both sensibly and quickly.

Cordially,

Tim Holt

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that there will be only one person testifying at this hearing, when this law negatively affects thousands and thousands of small businesses. This law not only makes it difficult to do business, it makes it almost impossible for a small business like mine. I make and sell Teething Giraffes. My Giraffes are made from 100% cotton, natural fiber stuffing and thread. However, according to the CPSIA I have to have my item tested for lead and phthalates, where no lead or phthalate ever existed.

This law unfairly targets small businesses like mine who make safe, but small batches of children's items. I think it only fitting that we have a seat at the table.

In this rough economic time, putting thousands and thousands of small businesses out of business isn't the prudent course to take. Please listen to our concerns.

House Committee on Commerce, Trade and Consumer Protection

RE: HEARING titled "Consumer Product Safety Commission Oversight: Current Issues and a Vision for the Future."

My name is Kate Maxin, and I am the manager of TFH USA located near Pittsburgh, PA. TFH USA is part of an international company founded in England in the early 1980's by a British Schoolmaster, who felt that there were insufficient quality products for children with Special Needs. The company has grown over the years, and TFH USA has been established since July 1991. We began with two employees and sales of $300,000 per year. Eighteen years later we have 8 employees and sales just slightly over two million dollars.

Due to our understanding of the disabilities of our end-user, our products have ALWAYS been designed and manufactured with quality foremost. We have always used paint without lead and without small parts. Many of our toys are manufactured by our sister company in England, and they conform to the European Safety Standard –CE. The items manufactured in the U.S. are done by small local companies, manufacturing to our high standards. Our line has been rounded out by offering a few general, developmental-type toys from well-known toy distributors in the U.S. and in England. Our toy line has been awarded the "Symbol of Excellence" by Exceptional Parent Magazine in 2005, 2006 and 2007.

Because of the size of this segment of the toy industry, many of our products have annual sales of less than 100 units, some as few as 10. But we continue to manufacture even low-volume products because of our desire to serve the growing community of children and adults with various forms of disabilities.

To test every product to the CPSIA standards would devastate our company and we would not survive. To follow your guidelines for the February 10th deadline for existing inventory would not be physically or financially possible. Small companies, like ourselves, that have always strived to offer quality, safe products are being unfairly penalized along with the very large toy manufacturers, who have gone offshore to produce their products in order to enhance their profitability.

It has come to my attention that a meeting is to be held with **ONE WITNESS ONLY**. I disagree with the Subcommittee on this decision. The business community (particularly Small Business) raised many legitimate and serious objections to this law and its implementation. To exclude the business community from this hearing is to distort the truth and to keep inconvenient views off the record. I have written to my congressman numerous times and am angry at their responses.

I am pleading with you for your assistance to help us to survive this regulation. Our company's passion for providing products for children and adults with special needs would not be able to overcome this onerous legislation. For reference, our websites are www.tfhusa.com and www.adultsensoryactivities.com

Yours most sincerely
For TFH USA LTD

Kate Maxin
General Manager

CC: Arlen Specter, Robert Casey, and Jason Altmire

Have a sensory experience!

To whom it may concern:
The new consumer product safety law is a senseless one. We do not need to protect our children from books and socks! Please hold a hearing on this law in which all sides are heard from.
Sincerely,

Dear Chairmen and Ranking Members:

As a small business owner, I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

It is quite difficult to understand why no one from any of the hundreds of businesses affected by this law will be allowed to testify. As it is, there is little problem in implementation of the law *per se*, as long as the members are not concerned with the devastating consequences.

My friends in the toy industry, along with contacts we have in other aspects of children's products tell me of their concerns:

The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. Frankly, this was an incredibly foolish aspect of the law. How this could have been vetted is truly a mystery, and would not serve as a confidence builder to a public noticeably wary about pending health care legislation.

The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. If "no level of lead is safe," then how can safe levels be specified in the law? Ms. Tenebaum may be able to elaborate on this and other difficulties, but what about those directly affected?

Regrettably, especially in light of the Mattel decision, whereby this company can now test its own products in its own labs, cynics who note that regulation always favors big companies have been proven right. This is made more irksome inasmuch as Mattel was the poster child for bad toys, which caused this law to be passed in the first place!

Egos notwithstanding, this law has to be modified, and there is no better way to determine how, than by hearing from those affected. I would submit that although the CPSC is "affected," their problems pale in comparison to those of business owners.

Very truly yours,
INTERSCAN CORPORATION

Michael D. Shaw
Executive Vice President
mds1@gasdetection.com

Why is there only going to be one witness on this important matter? Our livelihoods are at stake!

We have been in business since 1972 and have always been concerned with safety. We have been providing products from many of the same suppliers going back as far as 1972. They have stood the test of time and meet the intent of the CPSIA but not the record keeping requirements. We don't understand the results being caused. Companies that meet European standards have decided to stop providing to this country. American companies are going out of business. Companies like us are looking to outsourcing causing people to lose their jobs and so forth.

PLEASE HELP!

Dear Chairmen and Ranking Members:

I am writing to express our views regarding the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

My family- owned business develops and manufactures educational and arts and crafts products in the United States and Canada. We have been doing this for over forty years. Our record and reputation for quality and safety are extremely high. Because of this, I am disappointed that no small businesses impacted by the new law have been called on to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA. The over- reaching provisions of the CPSIA have had a devastating impact on our ability to run our business, let alone develop and market new products. Let us, the companies who this hurts so badly, have equal time to testify and tell you what is really happening here.

The vast majority of products made for children are not harmful. Taking them off the market or never being able to introduce them to the educational systems because of the high costs of testing and all that goes along with the new laws is more harmful.

American companies are choosing to shut down rather than have to deal with these new laws. Some European exporters to America are choosing not to sell their products to us; not because their products are unsafe, but rather because these laws make it impossible to work here and far too expensive to be even remotely profitable. What a shame! Our children suffer in the end. Even second hand stores are shying away from selling children's products. Crafters who make one of kind products are rethinking their artwork and as a result, we will see less made for children under 12.

By giving small and mid size companies equal time will help to clarify all of the problems caused by the CPSIA and its implementation. Thank you for your consideration of this important matter.

Sincerely,

Carolyn

Carolyn Voisin

To Whom It May Concern,

This email is in regard to the Committee hearing on 9/10/09. As an employee of Learning Resources, I am greatly disappointed that small businesses (who will be impacted by this law) have not been invited to give testimony to the committee. I take great pride in our company's product not only in its service to children but its safety. I feel that without letting the small businesses present their history and examples it will deprive our children of these wonderful products. I would kindly ask that you reconsider this position. Thank you very much for your time and consideration.

Thank You,
Jeff Kaiser

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

The last year has been especially difficult on small businesses like those of our members, 50% of who have gross sales of under $3 million. Since Congress passed the Consumer Product Safety Improvement Act of 2008 – a law which we have supported from the beginning – the juvenile products industry has spent at least $45 million on increased testing and compliance costs and we've lost more than $138 million in destroyed or returned inventory. Implementation of this well-intentioned but poorly-conceived law during the current recession has been a nightmare. One estimate shows the combined effects on the juvenile products industry of the CPSIA and the recession to be greater than $430 million and rising.

Many small businesses in the juvenile products industry came to DC earlier this year to meet with our Senators and Members of Congress about the CPSIA. We were mostly told to wait for the Obama administration's appointees to take charge at CPSC and things would get better. Now, all five Commissioners have been confirmed and the chairman has been on the job since late June. We still need help. Our biggest fear is that the new folks in charge will tell Congress that the worst has passed and everything will be fine. I am writing to tell you that is not the case.

Juvenile Products Manufacturers Association, Inc.
15000 Commerce Parkway, Suite C • Mt. Laurel, NJ 08054 • 856.638.0420 • 856.439.0525
E-mail: jpma@ahint.com • Website: www.jpma.org

We believe Congress needs to amend the CPSIA this year. Everyone seems to admit there have been unintended consequences – but no one can agree on whether and how to address them. We are not asking to repeal the law in its entirety because we know that is not politically feasible or, frankly, desirable. There are some good things in there already. But I hope you can work towards making a few changes to make things better for small businesses and better for the agency staff who are struggling to implement the CPSIA. Common-sense reforms in areas such as tracking labels, science- and risk-based regulations, certification, retroactivity, and component part testing would help turn a well-intentioned law into a well-made law.

To outline some of our organization's most pressing concerns, the Commission seems unable to define child care articles under section 108 as only those products that are likely to result in ingestion of hazardous amounts of phthalates or define such products that facilitate sleep, feeding, sucking or teething as products reasonably intended to be mouthed. This lack of clarity in policy continues, despite Congressional admonition that restrictions on interim banned phthalates only apply to product that can be mouthed, sucked and chewed. This has resulted in needless testing and restriction of perfectly safe products. Similarly, the Commission has indicated that Congress did not provide it with authority to exclude products that may functionally or inherently contain lead but that do not expose children to it and present no health risk. Corrosion resistant brass and structurally tough metals used in frames of protective products for children, in nuts, bolts and other fasteners (that secure products and keep dangerous small parts inaccessible to children) need to be strong to keep children safe. As a practical matter this needs to be done to assure that structurally sound safety related infant products (strollers, highchairs, carriers, etc) remain affordable and accessible to the public.

Small businesses impacted by the new law, such as those small businesses represented by JPMA, must be included in Thursday's hearing and must be invited to share their experiences in testimony before the Committee. Many of the small family businesses we represent have built their reputations on the safety and enjoyment of their products, and have spent multiple generations assuring high quality products that comply with all laws and regulations. Yet the innumerable, onerous provisions of the CPSIA have had a devastating impact on the ability of many of our members to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain. Small businesses like JPMA members in all 50 states are counting on you.

Thank you for your consideration.

Sincerely,

Robert Waller

"Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no small businesses impacted by the new law have been invited to share their experiences in testimony before the Committee. The business community has been actively calling for hearings since the passage of the CPSIA because of the draconian effects of the new law. Our business makes toys products have an exemplary 57-year safety record because of our hard work to assure high quality and compliance with law. Yet the innumerable, onerous provisions of the CPSIA have had a devastating impact on our ability to conduct business. These issues need to be explored by the Committee based on the testimony of real companies suffering real pain.

The problems caused by the law are countless. The overly broad definition of "children's products" swept in many products incapable of harming children from lead or phthalates. The CPSC itself has been hobbled by the CPSIA's strict new rules that prohibit risk assessment. The agency has no flexibility to exercise judgment and as a result, have issued impractical guidance and unworkable regulations. In addition, the exemption process under the law is both very limited and very expensive.

The severe penalties under the law are not scaring companies into compliance – they are shooing companies out of the market. Even the CPSC's own guidance to resale shops advises stores to consider the option to stop doing business in children's products.

I strongly believe that the perspective of businesses like our company is essential to a complete picture of the problems caused by the CPSIA and its implementation.

Thank you for your consideration of this important matter.

Sincerely,

Dear Chairmen and Ranking Members:

I am writing regarding the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I would like to express my concern that no small business representatives are scheduled to testify about the impact the new law will have on their businesses. It is incredulous to me, in fact, that only one person is being allowed to testify. Is this hearing simply an attempt to say that a meeting has been held or is it an honest attempt to hear how companies are being affected? If the latter is the goal, then certainly more voices need to be heard. It seems only logical to me that that would be the case.

My company's president has been most involved in expressing the challenges this new law will have our small business. Obviously, as an employee, I am concerned as well for my job security. As our company manufactures educational materials, this law impacts us greatly. We have always had the end user's safety in mind as we have developed our product lines. Without these materials, how are children to receive the education that you and I had growing up? Certainly as danger to our children has been identified by products on the market, they have been evaluated and made safe or been discontinued. The restrictions being applied by this law are extraordinary and in many cases, ridiculous. We need to make our children safe while maintaining a sense of reality and sensibility.

To the point, no one wants children harmed by lead or phthalates. The CPSIA has yet to accurately define many of the products caught up in the generalities defining the amounts of lead and phthalates allowed in products. Furthermore, who can identify the true definition of "child's products"? The generality of both is beyond definition, but has brought much of the industry to a virtual standstill. The penalties are impractical and, frankly, silly. How can these be fairly enforced? Who will be able to make judgments? The expense to companies for testing is beyond comprehension. Products will be forced off the market that are important to our children's education due to the lack of clarity in the law. Do we really want that? Again, how will this impact our country's consumerism, which is the basis of our market place? How many companies will be forced to close? How many of those will just throw up their hands and quit? How many people will be out of work as a result?

May I again express how important it is to hear from actual members of this huge industry, which is being so adversely affected by this new law? Please allow that to happen. As I am sure you are aware, there are many business owners or leaders who would jump at the opportunity to express their concerns to the Committee.

Thank you for your time and attention to this most critical issue.

Sincerely,

Dear Chairmen and Ranking Members,

With your permission,
I would respectfully like to recount for you a brief and recent history of mine and, further, to state for the record how I, James Mentzer (NYS small business owner), am directly and negatively impacted by the fast, and largely unchallenged, implementation of the CPSIA as it stands today. The intent of my letter is to lend a voice to the growing chorus of similarly affected businessmen and businesswomen who, as a direct result of this legislation are staring, as I am, at a forced withdrawal from the "toy and game" industry that we so love.
I would also like this letter to reflect my private concerns, as both a parent and as a citizen of this great country, about the unintentional consequences that will inevitably follow this legislation. I strongly believe that these have the potential to be so far reaching, within not only our industry but also every one of our communities at large, that I feel it only prudent that all sides of the CPSIA discussion be given a chance to be heard.

It seems to me that the potential loss of so many businesses' involved entirely in the pursuit of happier and healthier children, families, educators, etc. and coming as it does, at a time when our country so desperately needs a strong and vibrant business community, seems to me a tragedy in the making and one that dictates a closer examination before full implementation.

For my own story let me take you, respectfully, to the year 2005 and have you know this was the year that my wife and I began a 2 ½ year journey that saw us leave the comforts of our country (USA) for the challenges of Guyana SA. The purpose of our 'move' was to effectuate the adoption of our son, Christopher, from that country and to maintain his safety, during this period. I would just tell you that, while there, my wife and I were forced to sell our 2 homes in America and give up our successful construction business as well, in order to complete this 'journey' of ours but were, in return, rewarded with a son for whom no sacrifice would be unworthy.

As it came to pass, we eventually returned to our lives here in the 'states, richer for our experience but unfortunately right 'smack dab' in the middle of our country's current financial crisis. Thus, the construction industry was closed to us as a means to make a living and we were forced to do like so many Americans had before us and, hopefully, will be able to do again. That is to say, we went into a new line of business and let our passion become our guide. The trip to Guyana, aside from rewarding my wife and I with the light of our lives, was one that saw us frequenting the orphanages of that country in order to fill our time as productively as we thought able. While so doing, we were able to discover a whole lot about the needs of children and more importantly, for us, the universality of these needs. As a result of this new

understanding I was able to innovate a system for empowering these children and that system, "Goal Bands", became the basis of our new business venture and the circumstance that compels me to write this letter.

The long and short of my story, and the reason for this petition, is that I am now a "toy and game" small business owner and have on my hands a wonderfully successful little educational game product that can quite literally change the world, or so I am told by an increasing number of parents, educators, healthcare professionals, and the like.

This was how my version of the American dream was playing itself out until the specter of the current CPSIA legislation made itself felt to my own small business undertaking.

Esteemed members, it is not my intent in writing this letter to you to overwhelm you with my personal 'take' on this particular legislation. Nor will I cite what I feel to be the specific negative effects it holds for my company or, for that matter our whole country. I would only ask, respectfully, that the "toy and game" businesses' of America be given an opportunity to address your committee in order to provide you with the proper balance necessary to make this legislation the success that we all want it to be.

Sincerely,

James Mentzer, President

Dear Chairmen and Ranking Members:

I am writing on behalf of my customers, my company, and my employees in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am a small business owner, a catalog retailer in business for 27 years, employing 50-100 people seasonally, and am very disappointed that no small businesses, countless of which are impacted by this law, have been invited to tell of their experiences in testimony before the Committee. As I am sure you know, the business community has been vocal in its efforts to call for hearings since the passage of the CPSIA due to this law's unimaginable effects on its members.

My company has always gone the extra mile to ensure that the products we sell are safe, of high-quality, and of course, compliant with law. We are known in the children's product industry as having integrity and commitment to the safety of our customers. However, the countless burdensome provisions of the CPSIA have had such an impact on us that business has become difficult to conduct. There is no chance we will have a profitable 2009, and this is largely due to the myriad problems caused by this law. As you know, many small businesses have shut down because of these problems, and many more will do so unless our concerns are addressed. Just as tragically and ironically, with all of the expense and hoop-jumping that the law has forced businesses to undergo, the result is that there is little more assurance of safety for our children than the laws that were previously in effect. Simply, compliance with existing laws is what was needed, but inspection was lacking. Instead of tackling that issue, CPSIA was legislated in knee-jerk fashion, creating problems that are so far-reaching that it is mind-boggling. To start with, the law's interpretations are all over the map, and there is little consensus even at the CPSC! How are we to conduct business in this environment?!

To put it mildly, this is insanity, and a sad day in our country's history for businesses who strive to offer safe and high-quality items for children. Families will find themselves with far fewer choices of items to buy for their family, children will be arguably no safer than they were 2 years ago with then-existing laws, businesses will continue to collapse, and good and committed employees will be jobless. In a country that has grown strong on the backs of small business, you need to know that the deck is stacked against them under the new law. Ironically, while crafters are left to puzzle over how to "ascertain" co-hort information on their products, the new law awards a freebie to large businesses who seek to test their own products. This is a truly remarkable time for America, not only because such a near-worthless law has been put into effect, but also because it is so destructive. You owe it to all Americans to have a complete picture of problems caused by the CPSIA and its implementation. I am extremely disappointed that small businesses have not been invited to share their experiences with the committee. Thank you for your consideration of this important matter.

Sincerely,

Ann Ruethling

Washington, DC 20515

Dear Chairmen and Ranking Members:

With regards to the CPSIA legislation, I would like to write to let you know my disappointment in the law as it currently stands. The law is intended for the safety of our children. However, why must we give big business a blank check to bend and break the law, still producing products that contain levels of contamination unsafe for our children, just because they have the funds to write off the "error." Quite frankly, while The CPSIA is intended for good, it is serving to cripple small businesses, "stay-at-home mom" crafters, artisans, and those looking to save by shopping second-hand. And yet companies like Mattel, one of the worst offenders, are allowed to police themselves by using testing methods of their choice. Meanwhile the lady who makes hair bows for toddlers has to retest any time she changes a spool of ribbon.

When the only recourse for airing concerns is to address the one person in charge of the legislation and regulation of the CPSIA, who is in turn the ONLY person asked to give her concerns on the subject in a legislative arena, I shudder with dismay. To this I say, "Hello, Big Brother. Thank you for taking our voices away." We as American people *should* question the decision-making of our legislators. I sincerely urge you to please take *immediate and direct* action to revise the legislation. Temporarily remove the thought of "free trade or die" and "he with the most money wins," and make some adjustments to the law that actually *support America*. Modify the law so that it is written to support *American* small business with *American-made*, safe (and ideally American-made) components resulting in quality *American* products for our *American* children. We're told to buy American and support America, and are then prevented from making educated, personal choices that supports this initiative. The bottom line is that I don't want my only choice surrounding my children's health and safety to be "Pampers" or "Huggies," "Fisher Price" or "Playskool." I want options that go beyond b g business. Please help to put that choice back in my hand, so that I can support it with my dollars.

A fellow member of the "blogosphere" and mother of two special needs children strikes the heart when she says, "As a parent of two children with special needs that have high levels of toxins in their system due to everyday exposures, I see this as a waste of time and resources. There are REAL dangers out there to our children that are 100% being ignored by these same "concerned" politicians. But let's make sure to not sell a 1972 copy of The Pokey Little Puppy. *Eek, the horrors!* While we put REAL toxins into our kids with little to no notice, we freak out over these ridiculous things. *Wake up and spend that money on real issues.* Don't turn over rocks, dig down 15 feet, get out your flashlight, and pray to find an issue you can deal with. We have real ones out there that are so much bigger and of more concern."

Respectfully Yours,

Carrie J.t. Burgan

Dear Chairmen and Ranking Members:

I am writing in regard to the Committee hearing set for September 10, 2009 in which the Hon. Inez Tenenbaum, Chairman of the U.S. Consumer Product Safety Commission (CPSC), is scheduled to testify on the implementation of the Consumer Product Safety Improvement Act (CPSIA).

I am very disappointed that no one outside the CPSC has been called to testify. The CPSIA affects small businesses and average citizens who sell used "children's products." Conceivably, any person who sells an old lunchbox, used children's clothing with a zipper, or a jigsaw puzzle could be penalized under the law if the items contain lead, toxic plastics, or could be choked on by a child who is too young to use the item anyway.

Personally, I do check the recalls.gov website to investigate my children's toys, so I know how time-consuming and difficult it is to determine if something has been determined "unsafe". I can hardly imagine how difficult it must be for the local Goodwill or other secondhand stores to try and determine whether items are "safe" to sell – safe for children **and** safe from the CPSIA penalties.

In these tight financial times, shouldn't a committee hearing actually hear from the small businesses that help drive our economy? Shouldn't secondhand goods dealers who may be punished by the implementation of the CPSIA have the chance to testify that they have been requesting for over a year? I think any sensible person would answer "yes" to both.

Thank you for your consideration of this important matter.

Sincerely,

The Honorable Henry A. Waxman, Chairman
The Honorable Joe Barton, Ranking Member
Committee on Energy and Commerce
United States House of Representatives
2125 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairman Waxman and Ranking Member Barton:

Congress enacted the Labeling of Hazardous Art Materials Act (LHAMA) in 1988 which directed the Consumer Product Safety Commission (CPSC) to adopt ASTM D 4236 as a mandatory safety standard under the Federal Hazardous Substances Act (FHSA). To insure compliance with LHAMA and ASTM D 4236, The Art and Creative Materials Institute, Inc. (ACMI) added LHAMA to its well-respected almost-fifty-year-old certification program for its members. The ACMI certification program insures that children's art materials are non-toxic and adult art materials are properly labeled with cautionary warnings and safe use instructions if those art materials could produce any adverse health effect with improper use. In ACMI's program, the toxicological evaluation is performed by a team of three toxicologists at Duke University, testing required by the toxicologists must be performed by laboratories approved by the toxicologists, and the toxicologists have the added expertise of four eminent toxicologists serving on its Toxicological Advisory Board. Risk assessments utilized by Duke toxicologists are submitted to CPSC as required by LHAMA. The program essentially mandates a pre-market clearance regime for art material products. Since the adoption of LHAMA, no children's art material product certified by ACMI has been involved in a recall by the manufacturer and/or CPSC. This is an outstanding record by any account of any industry's products.

Because ACMI was very concerned that the Consumer Product Safety Improvement Act (CPSIA) passed last year by Congress would conflict with LHAMA, ACMI was successful in having Congress add the following amendment to CPSIA in Section 102 for art materials that have been certified by ACMI:

> TESTING AND CERTIFICATION OF ART MATERIALS AND PRODUCTS.—A certifying organization (as defined in appendix A to section 1500.14(b)(8) of title 16, Code of Federal Regulations (or any successor regulation or ruling)) meets the requirements of subparagraph (A) with respect to the certification of art material and art products required under this section or by regulations prescribed under the Federal Hazardous Substances Act (15 U.S.C. 1261 et seq.).

LOOK FOR THESE SEALS.....

The Honorable Henry A. Waxman, Chairman
The Honorable Joe Barton, Ranking Member

September 8, 2009

It was our understanding that the purpose of this amendment was to insure that LHAMA as implemented by ACMI continued to be the primary regulatory vehicle for children's art materials as requested in our letter at that time to Congressman Dingell, then Chairman of the House Committee on Energy and Commerce. A copy of that letter is enclosed.

Unfortunately, CPSC which administers the CPSIA cannot or will not acknowledge that exemption, even after numerous letters to and visits by ACMI with CPSC. Even though ACMI's program certifies that the children's art materials it evaluates **contain contaminant total lead levels already lower than what CPSIA requires on August 14, 2011**, had already **banned the use of phthalates now banned by CPSIA**, and also **bans any other hazardous ingredients that could cause a potential acute or chronic risk of injury**, this outstanding certification program might be rendered moot because member companies cannot afford both the cost for the evaluation and testing for LHAMA and the additional redundant testing required by CPSIA. Compounding the redundancy problem are the various retailer programs that require testing for art materials that is neither required by CPSIA nor LHAMA and only at their designated labs. Thus, member companies may be required to do the same tests at as many different labs as they have retailers.

Why is CPSIA testing necessary if the products have already received pre-market testing and approval? And, why should CPSIA compliance be retailer-driven? Without relief from this excessive testing burden, member companies may have to close their doors. We do not believe that this was the result that Congress intended.

We feel Congress must now act to correct this situation. We respectfully ask that Congress clarify this conflict between LHAMA and CPSIA for art materials or direct the CPSC to confirm ACMI's interpretation of its statutory exemption in CPSIA or to explain why the agency does not agree with our interpretation and what actions ACMI needs to take to achieve their agreement.

Respectfully yours,

Deborah M. Panning, CAE
Executive Vice President

DMP:tb
Enc: ACMI November 12, 2007 Letter to John D. Dingell and Bobby L. Rush

AMA MOTORCYCLIST

AmericanMotorcyclist.com

September 8, 2009

The Honorable Joe Barton
U.S. House of Representatives
2109 Rayburn House Office Building
Washington, DC 20515-4306

Dear Congressman Barton:

The American Motorcyclist Association (AMA) understands that the Subcommittee on Commerce, Trade, and Consumer Protection of the U.S. House Committee on Energy and Commerce will hold a hearing titled, "Consumer Product Safety Commission (CPSC) Oversight: Current Issues and a Vision for the Future" on Thursday, September 10. We are writing to voice are concern about the lead content requirements of the Consumer Product Safety Improvement Act of 2008 (CPSIA) and its effects on the off-highway vehicle (OHV) community.

The Act signed into law on August 14, 2008 and effective February 10, 2009, subjects any consumer product that is designed or intended primarily for a child age 12 years or under to the new limits on lead content (section 101). While the Act was passed with laudable intent, it has created a severe and unwarranted disruption to families who recreate together responsibly, a deleterious effect on youth amateur racing and is counterproductive to a well-documented safety hazard for children because some consumers will likely purchase vehicles that are physically too large for young riders.

The CPSC has voted to stay enforcement of the CPSIA that currently bans the sale of youth-model OHVs. The stay, which extends through May 1, 2011, follows a unanimous vote by Acting Chairwoman Nancy Nord and Commissioner Thomas Moore.

While we applaud the CPSC commissioners' vote to stay enforcement of the law, this does not solve the real issue, which is the law itself. Despite the stay, it is unclear whether state attorneys general will also decline to enforce the CPSIA. The sale of youth-model motorcycles and ATVs is still technically illegal. Even though a stay means that dealers would not be subject to fines or penalties imposed by the CPSC, state attorneys general would still be able to prosecute violators if they chose to do so. Youth-model motorcycles and ATVs should be exempt from the law.

To permanently address this issue, the AMA supports H.R. 1587, introduced by Representative Denny Rehberg. This legislation will exempt youth-model motorcycles and ATVs from the CPSIA.

In accordance with the foregoing, the AMA respectfully requests your consideration of our concern for the hearing regarding the lead content requirements of the CPSIA and to support H.R. 1587, which will provide immediate relief to the OHV community.

Thank you for your time and consideration of our concern. Should you have any questions or request additional information, please do not hesitate to contact me at 202-742-4302 or by e-mail at rpodliska@ama-cycle.org.

Sincerely,

Richard Podliska
Washington Representative

Deborah S. Gustafson
Associate Director

November 12, 2007

The Honorable John D. Dingell, Chairman
The Honorable Joe Barton, Ranking Member
Committee on Energy and Commerce
United States House of Representatives
2125 Rayburn House Office Building
Washington, D.C. 20515

The Honorable Bobby L. Rush, Chairman
The Honorable Cliff Stearns, Ranking Member
Subcommittee on Commerce, Trade and Consumer Protection
2125 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairman Dingell and Ranking Member Barton, Chairman Rush and Ranking Member Stearns:

ACMI has continued to study the various provisions of H.R. 4040, even after its submission of comments in a letter dated November 7, 2007. In the course of this study, it determined that one of its two recommendations for amending H.R. 4040 might not alleviate our concern that ACMI's well-established certification program would not qualify to provide manufacturers of art materials compliance to all the certification requirements established by this legislation. Therefore, we ask that you discard the second recommendation we offered which was to insert in the Section by Section Analysis or the Committee report this sentence: "Nothing in Section 102 is intended to supersede, or otherwise interfere with, Section 23 of the Federal Hazardous Substances Act, 15 U.S.C. 1277."

It dawned upon ACMI that the recommendation referenced above would limit ACMI's certification program to chronic hazards only, since Section 23 of FHSA addresses chronic hazards alone. ACMI's program also certifies that art materials in its program have been evaluated to meet the regulations for acute hazards in the FHSA as well. Given the recent experience with the recalls of so many children's products,

LOOK FOR THESE SEALS.....

we believe acute hazards certification is as important as - and may be more important than - chronic hazards certification. Therefore, we would like to recommend that our original first proposal with a slight modification be accepted as an amendment to H.R. 4040. The modified language is as follows:

> Insert after the phrase "*... and is not owned, managed, controlled, or directed by such manufacturer or private labeler*" the following **"except as for non-profit trade associations who offer their members certification programs for acute and chronic hazards under any of the Acts administered by the Consumer Product Safety Commission similar to a certifying organization as defined in FHSA 1500.14(b) (8) Appendix A."**

Thank you for your consideration of this suggestion. We apologize for not recognizing the limitation imposed by one of our original proposals. ACMI hopes that this change of position will not inconvenience you in any way.

Sincerely,

Deborah M. Fanning, CAE
Executive Vice President

CC: Members of the Committee on Energy and Commerce

"United effort for individual security"

Representing the Bulk Vending Industry Since 1950

September 9, 2009

The Honorable Joe Barton, Ranking Member
House Committee on Energy and Commerce
2322-A Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Barton,

The National Bulk Vendors Association ("NBVA") represents both suppliers and operators of vended products that include toys and novelties that are dispensed from vending machines all over America. While demographics vary from product to product, we especially cater to children. On behalf of the more than 300 members of the NBVA representing thousands of bulk vendors, I urgently want to express my views on Section 103(a) of the Consumer Product Safety Improvement Act of 2008 ("CPSIA"), commonly referred to as the "tracking labels" requirement. I understand that a hearing is planned by your Subcommittee on Commerce, Trade, and Consumer Protection this Thursday, September 10, and would like to reiterate our position so that it can be expressed to the other committee and subcommittee members.

The vending industry is unique in terms of products and distribution but it is important to understand that it supports thousands of U.S. jobs, including work opportunities for disabled Americans as these groups fill our plastic capsules. Other charities, including the American Cancer Society and the Center for Missing and Exploited Children for example, raise substantial funds through sponsored vending machine sales. Most importantly; however, our industry brings smiles and enjoyment to millions of low-income American children every year for whom a vending machine may be their first (or only) purchasing experience and means of obtaining toys.

As you know, Section 103(a) requires that all "children's products" and their packaging manufactured on or after August 14, 2009 bear a permanent tracking label "to the extent practicable." On July 20, 2009, the Consumer Product Safety Commission (CPSC) issued its "Statement of Policy" concerning the implementation and enforcement of Section 103(a). The statement reflects the Commission's current interpretation of the statutory requirements of Section 103(a) and how it intends to enforce the provision for products manufactured on or after August 14, 2009.

The NBVA is pleased that the Commission's guidance explicitly recognizes that it is not "practicable" to label each bulk vended product. The policy, however, does require that the package or carton in which such products are shipped to the retailer be marked with the requisite information. Effective immediately, supplier members of the NBVA are making a concerted effort to make sure that their shipments comply with this policy.

The NBVA considers the CPSC guidance to be a positive development for the industry and a step in the right direction. However, we remain concerned about the tracking label mandate of Section 103(a) as the agency's Statement of Policy can be changed by the Commission at any time, and it is not binding on state attorneys general (who are specifically empowered to independently seek enforcement of Section 103(a)).

NATIONAL BULK VENDORS ASSOCIATION
7782 East Greenway Road, Suite No. 2, Scottsdale, AZ 85260
Toll Free: (888) NBVA-USA ▪ Fax (480) 302-5108 ▪ www.nbva.org ▪ admin@nbva.org

the federal courts or other interested parties. **Therefore, the National Bulk Vendors Association continues to request that Congress include an explicit exemption for bulk vended children's products in any future technical corrections bill or similar amendments to the CPSIA or other appropriate legislative vehicle.**

On behalf of the thousands of Americans whose livelihoods depend upon bulk vending (including many disabled Americans and numerous charities), we therefore respectfully ask for your consideration for binding, statutory assurance that Section 103(a) will not be applied to children's products dispensed from vending machines. Such assurance is absolutely necessary to ensure the long-term survival and success of this uniquely American industry.

Thank you for your consideration of our concern and request. Please feel free to contact me if you have any questions regarding the tracking labels requirement of the CPSIA and its effect on the bulk vending industry. In addition, you may reach our Washington, D.C. counsel on this issue, Quin Dodd of Mintz Levin, P.C., at 202-434-7435 or qdodd@mintz.com.

Sincerely,

Randy Chilton, President

Dear Chairmen Waxman and Rush and Ranking Members Barton and Radanovich:

I understand that the House Subcommittee on Commerce, Trade and Consumer Protection will hold a hearing tomorrow where the new chairman of the U.S. Consumer Product Safety Commission (CPSC), Inez Tenenbaum, will testify regarding the CPSC and issues before it.

On behalf of the Toy Industry Association Inc. (TIA) and its more than 500 member companies, we respectfully urge you to focus this hearing on an examination of the unintended and harmful consequences that have been – and continue to be – caused by problems with the implementation of the Consumer Product Safety Improvement Act of 2008 (CPSIA). Now is the time to closely examine these problems and to provide relief to businesses that are struggling to comply with the Act by:

- providing the CPSC the clear and necessary authority to promulgate practical common sense regulations that will support the CPSIA's implementation.
- acting on legislation that will address specific areas of the CPSIA that need correcting by Congress, not the CPSC.

TIA is the not-for-profit trade association for producers and importers of toys and youth entertainment products sold in North America; our members represent more than 85% of the total domestic toy market. As a global leader in the development of sustainable toy safety initiatives, TIA and its members are committed to implementing standards and regulations that will help to keep young consumers safe. We are advocates for a national approach to safety requirements for toys and children's products and we support many of the concepts contained in the CPSIA.

However, you have likely already heard many shocking stories from constituents in your district and around the country who are struggling with the law. Efforts to implement the Act have regrettably resulted in confusion and placed unnecessary burdens on many small- to medium-sized businesses, including toy sellers that are suffering from the current economic downturn.

(continued)

One month following the February 10, 2009 effective date for a number of new CPSIA requirements, TIA surveyed manufacturers/importers and retailers to collect information about the economic impact the law is having on the toy industry. At that point, we estimated that CPSIA implementation would result in a $2 billion negative affect – nearly 10% of the total value of the U.S. domestic toy market.

The lack of clarity in the law and implementing guidelines has forced safe toys off retail shelves, small toy businesses to close, and local economies to suffer.

Chairman Jason Altmire (D-PA) and the members of the House Small Business Committee received first-hand accounts of these economic hardships during a CPSIA oversight hearing on May 14th. Following the day's testimonies, members of the majority and minority were united in calling for a further examination of the law. TIA shares this sentiment – which is why we intend to continue working closely with the CPSC and Congress to address CPSIA implementation requirements.

We applaud President Obama's decision to provide much-needed additional funding for the Commission and congratulate the President and Congress for making an excellent choice in the appointment of the Agency's new Chairman and new Commissioners. We also support Chairman Tenenbaum's approach to "common sense rulemaking" and ask Congress to help the new Chairman achieve her objectives by formally considering the current inadequacies of the CPSIA at tomorrow's hearing:

The CPSC Needs Authority to Regulate Based Upon Risk Assessment
The CPSIA contains inflexible standards which are difficult or impossible to modify. Without consideration of quantifiable risk of injury, far too many safe products are swept up into the safety legislation's overly broad reach. The CPSC needs discretion to exclude products and materials that do not represent a health risk.

Retroactive Application of New Standards is Unreasonable
The applicability of new requirements should be limited to products manufactured after the effective date, except in circumstances where the CPSC decides that exposure to a product presents a health and safety risk to children. Applying the new law retroactively has caused widespread market chaos and significant business losses.

Unreasonable Implementation Timeline
The CPSIA's unrealistic implementation deadlines did not provide the CPSC with sufficient time to manage the deluge of questions, certifications and rulemakings that were required to effectively manage product that was already in inventory. Nor was time available for firms to transition manufacturing standards or sell off inventory. This lack of lead time has led to large business losses for both manufacturers and retailers across the industry.

Testing and Certification Must Be Efficient and Clear Protocols for Periodic Testing Must be Established by the CPSC on a Timely Basis
Upstream component testing and reliance on manufacturer's supplier certification of compliance should be permitted to reduce costs and duplicative testing. In addition, the CPSIA calls for CPSC to establish by November 14, 2010 protocols and standards for ensuring that a children's product is subject to testing periodically. Those protocols and standards must be clear and practical; they should recognize measures taken upstream in the manufacturing process; and they must be promulgated by the statutory deadline to provide timely guidelines for manufacturers.

(continued)

I am sure you and your staff are aware that these and other concerns surrounding the CPSIA's new requirements were the subject of an April 2, 2009 Congressional Research Report (CRS) titled: *Consumer Product Safety Commission: CPSIA Implementation.*

Thank you for your time and interest in toy safety issues. TIA stands ready to meet with you to discuss these issues in more detail. Should you have any questions or if TIA can be of future assistance, please do not hesitate to contact me (ckeithley@toyassociation.org; 646.520.4841) or Ed Desmond, TIA's Executive Vice President for External Affairs (edesmond@toyassociation.org; 202.857.9608).

Sincerely,

Carter Keithley

Re: Format of the House Subcommittee on Commerce, Trade, and Consumer Protection Hearing, "Consumer Product Safety Commission Oversight: Current Issues and a Vision for the Future", scheduled for Thursday, September 10

Dear Chairmen and Ranking Members:

We are writing in regard to the subcommittee hearing set for September 10, 2009, the first Commerce Committee hearing on consumer product safety since the CPSIA was passed over a year ago. We are very disappointed to learn that the committee will not be taking this opportunity to hear from any small businesses affected by the CPSIA. Indeed, we have learned that CPSC Chair Tenenbaum will be the only person invited to testify.

While we have full faith in the abilities of Ms. Tenenbaum and believe she is working to apply common sense interpretations to the CPSIA, we do not believe that the she can represent the full scope of the CPSIA's impact on responsible American small businesses. Nor do we believe that the unintended consequences of the CPSIA can be solved through the CPSC's rulemaking. A technical correction is required, and we would like the opportunity to tell your committee why.

Our businesses have been burdened by a law designed to fix a problem created by irresponsible multi-national corporations such as Mattel. The small manufacturers, crafters, and retailers represented by our alliance have impeccable safety records, yet we are burdened by excessive compliance costs while Mattel has once again been trusted to police itself.

Now is the time for Congress to hear the voices of small businesses. Now is the time to show that laws can be written for the common good, not just for the interests of large, well-connected corporations such as Mattel. Now is the time to invite small businesses, including a representative of our alliance, to speak truth to Congress about how the CPSIA is devastating our businesses and our livelihoods.

As parents, consumers and small business owners, we all believe that children's products should be free of toxins and safe for our children. We are in business due to our sincere desire to put forth quality products. Unfortunately, the CPSIA has made this endeavor much more difficult than it should be.

Please, help us fix the CPSIA. Help us continue to provide unique clothes and playthings for America's children. Please, invite us to testify.

Respectfully,

The Handmade Toy Alliance

Dear Chairmen Waxman and Rush, and Ranking Members Barton and Radanovich,

On behalf of the National Federation of Independent Business (NFIB), the nation's leading small business advocacy organization, I want to thank you for holding today's hearing on the Consumer Product Safety Commission. NFIB is hopeful that today's hearing will address the negative effects the Consumer Product Safety Improvement Act (CPSIA) – the Commission's chief concern – has had on America's small businesses.

In the current economic recession, the CPSIA further cripples small businesses by requiring that more time, money and labor be devoted to government regulations, diverting these precious resources away from job creation. In the months since the law's enactment, NFIB's Small Business Economic Trends (SBET) survey has continued to report that small business owners have a negative view of the economy. While our members understand that the intent of the 2008 law is to protect children, small businesses are concerned that the law will continue to cause serious economic hardships for many law-abiding small businesses that manufacture and sell safe children's products. During a time of economic uncertainty, new costs and mandates inhibit economic growth and may force small businesses to raise prices, cut jobs or shut their doors.

NFIB has heard from members nationwide from diverse industries about how the CPSIA has severely impeded their businesses. For example, an NFIB member in the Midwest owns a small retail children's store with over 100 different products on the shelves and about $90,000 in inventory. Attempting to comply with the myriad of new regulations and deadlines in CPSIA has been a significant business hurdle for him, including but not limited to labeling, testing and certification of his inventory. Another NFIB member manufactures educational science products geared towards high school and college science classes, although some school districts may choose to use his products in classrooms with children under age twelve. The largest cost he has faced under the new law continues to be the countless hours spent researching the new law. Because he buys from component suppliers and sells to catalogue retailers, multiple questions arise as to who is responsible for the testing, labeling and certification of the parts he purchases and the products he sells. NFIB urges Congress to act on legislation that will alleviate these burdens.

In particular, NFIB strongly supports allowing for "component part testing" which is necessary to prevent duplicative and expensive testing. Small manufacturers would be permitted to use the testing and certification that are obtained by their component suppliers (if all components are certified, the final product is certified). Component part testing would in particular help alleviate some of the financial, labor and administrative burden that small businesses face in complying with the CPSIA. NFIB strongly supports legislation that would amend the current law to allow for component part testing.

Additionally, the Commission should exercise a more practical interpretation of the current law as it did when resale establishments were exempted from the testing requirements. This exemption and others stays of enforcement are a good start. If the Commission does not have the authority under current law to make common sense exemptions, then Congress must act to provide the Commission with such authority. NFIB remains hopeful that Congress and the Commission can begin to work together to address additional burdens that may be fixed through the regulatory and legislative process.

NFIB is encouraged that during her Senate confirmation hearing, Chairman Inez Tenenbaum committed, "I will also ensure that industry knows that their views will be heard and considered," and that "regular and timely public communication is critical to keeping the public informed about consumer product safety." Thank you again for holding this hearing. NFIB looks forward to working with the Commission and Congress on this issue as the 111th Congress continues.

Sincerely,

Susan Eckerly

Dear Chairs and Ranking Members:

As the Commerce, Trade, and Consumer Protection Subcommittee conducts a hearing titled, "Consumer Product Safety Commission Oversight: Current Issues and a Vision for the Future" on Thursday, September 10, Goodwill Industries International, Inc. (Goodwill Industries) urges you to consider the unintended consequences that the Consumer Product Safety Improvement Act of 2008 (CPSIA) (P.L. 110-314) have affected nonprofit resellers, such as Goodwill, that sell donated children's products to support the delivery of mission services. It is important that future hearings take into account the concerns that the business community, especially resellers, have raised over the implementation of the CPSIA.

Goodwill Industries' network of 159 local Goodwill agencies provides jobs, job placement and training to people with disabilities and other barriers to employment through revenues raised in donated goods stores. Goodwill Industries wholeheartedly agrees with those who supported passing the CPSIA in order to create a safety net that protects all children from exposure to products that have dangerous lead levels. Throughout Goodwill's more than 100 year history, our first priority has always been the safety and well-being of the people that we serve, the families who shop at our stores, and our donors and community partners. Goodwill Industries has a long and distinguished track record of working with the CPSC to ensure that potentially dangerous products never make it to our store shelves. Before a product is placed for sale at a local Goodwill store, we confirm that the product is not on the CPSC's product recall list. Products found on the recall list are disposed of in compliance with the law.

As you consider the challenges that the CPSC currently faces and its vision for the future, it is worth noting that Goodwill Industries has partnered with the CPSC in a public awareness campaign to work in concert to educate shoppers and employees about the hazards of certain products and proper recall procedures. Goodwill Industries recognizes Chairwoman Tenenbaum's efforts. While the unintended consequences of the CPSIA

certainly has the potential to have negative impact on local Goodwills and the communities they serve, Goodwill Industries has been pleased to be part of this collaborative effort. Goodwill Industries looks forward to being part of ongoing discussions and solutions with the CPSC and Congress regarding implementation of the CPSIA and its potential to negatively impact our communities, as we continue to ensure the safety of the people we serve.

Sincerely,

Jim Gibbons

The Honorable Thomas Hill Moore
Commissioner
U.S. Consumer Product Safety Commission
4330 East West Highway
Bethesda, MD 20814

Dear Acting Chairman Nord and Commissioner Moore:

As an author of the original Consumer Product Safety Act in 1972 and a long-standing advocate for better protections for our Nation's consumers, I wholeheartedly support a stronger regulatory framework to ensure the safety of children's products. Nevertheless, I share the reasoned concerns of my colleagues, House Committee on Energy and Commerce Chairman Waxman, Subcommittee on Commerce, Trade, and Consumer Protection Chairman Rush, Senate Committee on Commerce, Science, and Transportation Chairman Rockefeller, and Subcommittee on Consumer Protection, Insurance, and Automotive Safety Chairman Pryor, about the implementation of the Consumer Product Safety Improvement Act (PL 110-314, "the Act"). In particular, I am troubled that the Act includes unrealistic deadlines for rulemakings and compliance, as well as too little implementation discretion for the Consumer Product Safety Commission (CPSC), both of which are exacerbated by CPSC's lack of adequate resources, both in terms of funding and staff.

In describing the implementation of the Act, Acting Chairman Nord's January 30, 2009, letter to the Congress maintains, "the timelines in the law are proving to be unrealistic, and [CPSC] will not be able to continue at this pace without a real risk of promulgating regulations that have not been thoroughly considered." Moreover, the letter states, "Although [CPSC] staff has been directed to move as quickly as possible to complete its work, short-circuiting the rulemaking process gives short shrift to the analytical discipline contemplated by the statute." In light of these statements, I would appreciate your candid responses to the following questions, which will assist me and my colleagues in our consideration of common-sense and workable solutions to some of the more pressing problems that have arisen during the Act's implementation:

1. To what extent has robust implementation of the Act been hampered by CPSC's lack of resources? What levels of funding and staffing does CPSC believe necessary for proper implementation of the Act?

2. Given the paramount importance of ensuring children's safety and the overall mission of CPSC, to what extent are the deadlines in the Act practicable for CPSC and industry to meet acting with all deliberate speed? If these deadlines are not practicable, what revisions to them does CPSC suggest?

3. Does CPSC have quantitative data concerning any negative impact of the Act (*i.e.*, the lead and phthalate limits and testing requirements) on small manufacturers of children's products, and if so, would CPSC please provide them? What information does CPSC have on any such negative impact of a more anecdotal nature?

4. Does CPSC have any suggestion for how to mitigate any such economic impact of the Act on small manufacturers of children's products (*e.g.*, component testing for lead and phthalate content) that, in accordance with the intent of the Act and the CPSC's mission, will not compromise the health and safety of children using them?

5. What information has CPSC received about the impact of the Act on the availability of second-hand products for children, especially clothing? It is my understanding that many second-hand stores now refuse to sell children's products. Does CPSC have any suggestions for how to mitigate any negative effects of the Act on second-hand stores for children's products, especially in light of the recent economic downturn and the consequent increased need for low-cost sources of children's clothing?

6. Does CPSC believe that the age limit contained in the Act's definition of "children's products" (*i.e.*, 12 years and under) is appropriate? If not, what should the age limit be? Further, should CPSC have the discretion to lower the age limit for certain groups of children's products for which the risk of harm from lead or phthalate exposure is remote to non-existent (*e.g.*, snaps or zippers on children's clothing)?

7. Although some youth all-terrain vehicles (ATVs) and youth motorcycles are intended for use by children under 12 years of age, does CPSC believe it is necessary that these products be tested for lead and phthalate content? Similarly, does CPSC believe that these products present a risk to children for the absorption of phthalates or lead?

8. In light of recent court decisions that the lead and phthalate content restrictions are retroactively applicable, does CPSC have concerns about the effect on the environment of the disposal of inventories of non-compliant children's products?

9. I understand that, since early December 2008, CPSC has had access to a large number of lead content test results for finished "ordinary books" (*i.e.*, books published in cardboard or paper by conventional methods and intended to be read by or to children age 12 or under) and their component materials (*i.e.*, paper, paperboard, ink, adhesives, laminates, and bindings). Have CPSC staff reviewed those test results? What do those test results indicate about such ordinary books and component materials in connection with the statutory lead limits prescribed in Section 101(a) of the Act? Does CPSC have any recommendations regarding how to mitigate the burdens that the testing and certification requirements of the Act, and especially the retroactive applicability of those requirements to inventory, could otherwise impose on publishers, printers, and retail sellers of such ordinary books, as well as on libraries, schools, charities and other second-hand distributors of such ordinary books, including those published before 1985?

10. In general, does CPSC believe that the Act was written with too little implementation discretion for the Commission? If this is the case, for which issues (*e.g.*, third party testing requirements) does CPSC require more discretion?

Please provide your responses to my office by **no later than the close of business on Friday, March 13, 2009**. I intend to work with my colleagues in the House and Senate to resolve these issues, as well as call on Chairman Waxman and Chairman Rush to hold hearings on problems arising from Act's implementation. Your responses to these questions will be invaluable in preparing Members of Congress for a frank discussion about several of the Act's apparent shortcomings. Should you have any questions, please feel free to contact me or Andrew Woelfling on my staff at 202-225-4071.

With every good wish,

Sincerely yours,

Dear Representative Dingell:

Thank you for your letter of March 4, 2009, regarding the U.S. Consumer Product Safety Commission's (CPSC) implementation of the Consumer Product Safety Improvement Act of 2008. Recognizing and respecting the knowledge that the CPSC career staff has acquired in implementing this new law, I asked them to prepare answers to the important questions that you asked in your letter. Their responses are enclosed.

Since its passage last August, the CPSC staff has been working tirelessly to implement this comprehensive legislation in the most efficient and effective manner possible given the limits of our resources and the time consraints mandated in the law. As you will note in their responses, they have identified some proposed refinements to the law based on their front-line experience with it.

We share your commitment to better protection of our nation's consumers, and we very much appreciate your long-standing advocacy and support of the CPSC. After reviewing the staff's responses, please let me know if you have additional questions or comments.

Sincerely,

Nancy A. Nord

Assistant Executive Director for Hazard Identification and Reduction
Assistant Executive Director for Financial Management, Planning and Evaluation CEQ

SUBJECT : Responses to Letter from the Honorable John D. Dingell

Chairman Nord has asked us to respond to the questions recently received from Representative Dingell. The following responses have been prepared by career staff at the U.S. Consumer Product Safety Commission (CPSC).

1. To what extent has robust implementation of the Act been hampered by CPSC's lack of resources? What levels of funding and staffing does CPSC believe necessary for proper implementation of the Act?

The CPSC has made implementation of the Consumer Product Safety Improvement Act (CPSIA) our highest priority. Since August 2008, the agency has initiated and advanced over 20 rulemaking activities required by the CPSIA which is an unprecedented number for this agency or any other of this size, published enforcement guidance and policies to enhance compliance with the new law, conducted numerous meetings with stakeholders, developed a special website dedicated to the CPSIA, responded to questions from the public numbering in the thousands, and generally focused the agency's limited scientific, legal, technical, educational, training and administrative resources on CPSIA implementation requirements.

Because requested funding for implementation of the new law was not forthcoming during the critical first six months when many of the CPSIA requirements needed to be initiated or completed, implementation of the CPSIA has impacted our ongoing safety mission by delaying and deferring work in many other areas. While work has been deferred or delayed on these activities – such as rulemaking activities on portable generators and voluntary standards work on electrical, fire, mechanical, chemical and children's hazards -- some of CPSC's ongoing safety work such as hazardous product investigations and recalls could not be deferred. This has limited our ability to advise you on how to fully reallocate existing staff resources to implementation of the CPSIA.

Moreover, issues related to the accreditations of laboratories and the increasing number of requests for exclusions from the Act's provisions have caused unanticipated additional demands on staff resources, at the same time that the staff has been implementing the Virginia Graeme

Baker Pool and Spa Safety Act (which became effective in December 2008), and the Children's Gasoline Burn Prevention Act (which became effective in January 2009). This has severely overstretched the agency staff and has begun resulting in delays in implementation that will continue until we are able to fully hire and otherwise maximize the resources that have just been provided to the agency for the second half of fiscal year 2009.

Three examples of the burden and complexity presented by the work on these issues are: (1) the continuing need to process and review applications for laboratory accreditation, including applications from government and proprietary firewalled laboratories, a process initiated by the CPSIA and one that the agency is handling for the first time in its history; (2) the need for further refinement of guidance on the scope of the phthalates ban and, in particular, defining a testing method and dealing with compliance questions regarding the chemistry and carbon chain branching that determines whether a product contains a banned phthalate; and (3) the engineering issues raised by the Pool and Spa Safety Act and the need to reconcile state regulations on health and safety issues such as water quality with the need to replace drain covers as required by that Act. The Commission staff cannot address these and similar matters all at once, yet delay has serious economic impacts on the affected parties which no one anticipated would happen at the same time as the current economic downturn.

As we implement each new requirement, we are seeing unanticipated issues arise, and we are learning more of the far-reaching effects of the CPSIA and there will undoubtedly be more to learn. In August 2008 following passage of the Act, staff estimated that it would require a full annual increase of $21.1 million and 59 FTEs to begin implementing the new legislation in Fiscal Year 2009. That same month, the Commission submitted an amendment in this amount to the then-pending President's Budget Request through the Office of Management and Budget, as well as directly to Congress. In November 2008 a revised amendment was provided to Congress to reflect CPSC's requirements for only the second half of the fiscal year. Through the first six months of implementing the CPSIA, none of this additional funding was received by the Commission.

The funding amount in the Commission's revised amendment has just been approved by Congress. While we will use these funds to immediately and aggressively hire and train new staff, the six-month delay in funding will cause continued deferrals until such time that the agency fully absorbs the new appropriation. For Fiscal Year 2010 the Commission has requested additional funding to continue implementation of the CPSIA.

2. Given the paramount importance of ensuring children's safety and the overall mission of the CPSC, to what extent are the deadlines in the Act practicable for CPSC and industry to meet acting with all deliberate speed? If these deadlines are not practicable, what revision does CPSC suggest?

Mandated Deadlines: Effect on Safety Priorities and Staff Workloads

In the CPSIA, Congress set an aggressive regulatory agenda for the CPSC over the course of the first two to three years after enactment. The work required by the CPSIA is in addition to the

Commission's ongoing regulatory activity in a variety of areas, including upholstered furniture, portable generators and other important standards development activities, as well as our ongoing compliance work in evaluating and recalling products that present hazards to consumers. As with any regulatory agency, CPSC's safety work must be prioritized to deal with the most significant risks; however, the deadlines mandated in the CPSIA have jeopardized our ability to meet Commission priorities and proven to be too much for a relatively small agency to handle all at once. Timely implementation is important, but the flexibility to prioritize our work to deal with the most serious risks is equally important to maximize effectiveness and do the greatest good with the resources that we have been given.

While the CPSIA mandates more than 40 separate action items for the Commission to undertake, that number understates the agency workload that results from each of those mandates. For example, there is no requirement to adopt an interpretative rule defining "child care article" and "toy" under section 108. Yet the Commission has been inundated with thousands of product specific inquiries about what types of products fall within those definitions, from shoes to sporting goods to electronic games. An interpretive rule is our recommended way to address this issue and adds to our rulemaking burden.

The action item count also does not include acting on requests for exemptions from the lead limits provision, nor does the list contemplate making "determinations" on classes of materials or products not covered by the ban on lead in children's products. Because the statute did not permit the agency to exempt products from the scope of the definition of children's product, the staff has been engaged in a process of narrowing the scope of materials likely to include lead in order to provide relief to small businesses and home crafters faced with crippling costs of testing and certification requirements. Many of those businesses are now asking the Commission to begin the same process of exemption of materials with regard to phthalates. As another example, consideration of component testing is not a part of the list of rulemaking activities in the CPSIA, yet it is a challenging issue to consider in implementing its requirements.

There are other activities required of the Commission in the CPSIA that require resources and time that are not evident in the list of required rulemakings. The resource needs have been enormous, ranging from projects so basic as educating headquarters and compliance field staff on the scope of the new regulatory requirements of the Act to the more complex work of updating the Commission's regulations to permit the use of its new authorities with regard to refusing admission of imports. Updating our regulations and coordinating with Customs and Border Protection to allow for a process for a hearing upon refusal of admission requires significant agency resources, as does developing a process for bonding shipments to cover the cost of destruction and related import activities.

Suffice it to say that each of the various initiatives in the Act -- whether it be the lead and phthalates limits, the testing and certification regime, the import provisions, or the new database and information technology upgrades -- will require significantly more time to implement than anyone originally anticipated. Having all of that done simultaneously would have taxed the agency even if we had been given additional funding from the start. Moreover, the agency has significant ongoing work that remains, as well as two other new statutes that it must implement

this year, the Virginia Graeme Baker Pool and Spa Safety Act and the Children's Gasoline Burn Prevention Act.

The deadlines have proven to be impracticable for our staff to meet and are presenting significant problems for the agency to solve. The Commission staff must have some relief from the deadlines imposed.

Practical Solutions: Prioritizing Workload Based on Risk or Extending Deadlines

The following suggestions, ideally in combination, would help ameliorate the issues discussed above.

- Use of Risk Assessment to Establish Priorities

Use of risk assessment methodology would allow the Commission to establish priorities, provide for common sense exemptions, and set CPSIA implementation deadlines. Congress took this approach, to some degree, when setting the initial testing and certification deadlines. Using recall frequency and, to a lesser degree, the severity of possible injuries, Congress determined that cribs, pacifiers, small parts, lead in paint, and lead in children's metal jewelry would lead the children's product testing and certification effort.

However, by this June the Commission must accredit laboratories for third-party testing to all other children's product safety rules, which includes any new or previously existing rule applicable to a product intended for children 12 years of age or younger. The agency will be pushed to meet that deadline as the staff will need to issue accreditation procedures, and all related testing procedures, for the many rules applicable to children's products at that time, including the enormously complex requirements of the ASTM F963-07 Toy Safety Standard. All of this will take place simultaneously with work we are doing to open CPSC's new laboratory facilities.

Examples of inefficiencies: Furthermore, inefficiencies have been created given the tight timeframes of the Act. For example, under section 102 of the CPSIA, the Commission is required to publish accreditation procedures for laboratories testing baby walkers, bouncers and jumpers by March 12, 2009. However, the existing regulations for baby walkers and bouncers are outdated. The Commission through its enforcement actions has been requiring compliance to the voluntary standard rather than the outdated regulations, and for the most part industry is complying with the voluntary standard. It is inefficient for the staff to accredit laboratories to test to outdated regulations.

The baby walker standard will be one of the first two rules the Commission handles under the series of new consumer product standards required for durable infant products under CPSIA section 104, and therefore, the most efficient (and common sense) resource allocation would be to accredit laboratories for testing when we announce the new baby walker standard in February 2010. Because the statute was written without such flexibility, we must develop an approach to deal with the outdated baby bouncer, walker, and jumper standard, which may include withdrawing the outdated standard to avoid accrediting laboratories to standards no one follows

and to clarify that there is no need for industry to take a step backwards to test to standards that will be updated in a matter of months.

From our standpoint, an ideal solution to these challenges faced by our staff would be for Congress to let the Commission decide what level of testing is required for which products, allowing the Commission to prioritize based on risk and tackle any problems that need to be addressed in the most efficient manner. Alternatively, Congress could continue to require certification and third-party testing for all children's products but allow the Commission to prioritize as to when the testing to each children's product safety rule will begin, so that it can roll those out on a timetable that is based on its discretion and expertise. To do this right, we need to:

- provide our stakeholders with a list of all standards that are applicable to a children's product;
- identify which children's products need to comply with which standards;
- define the test methods for each standard and whether they make sense for all of the different products covered;
- accredit the laboratories for testing to each standard; and
- develop a process for inspecting certificates.

All of that takes time and the ten months the CPSIA gave us to accomplish this task has not proven to be workable.

The wholesale release of "all other" children's product standards in June 2009 may further stress manufacturers, importers, and retailers while providing marginal improvement in children's safety for many of the products. A methodical, pragmatic approach to the release, based on priorities determined by CPSC staff, would facilitate a smoother rollout while addressing first the products presenting the greater risk to children. This allows CPSC staff the flexibility to prioritize tasks, manage our workload, and assure greater safety without an unnecessarily burdensome impact on product sellers.

- Extend Deadlines

Another alternative is to move certain of the dates for implementation in the CPSIA to allow the Commission the time to provide additional implementation guidance. The most challenging deadlines for compliance were those that went into effect on February 10, 2009, requiring retroactive compliance to the new lead and phthalate content limits. The breadth of products covered by the definition of children's products covered by the lead limit, *i.e.*, any product designed or intended primarily for a child 12 years of age or younger, implicated numerous industries that had not understood that their products would be subject to the new lead provisions.

The question asks us to comment on the impact of the deadlines on industry. Whether it be makers of books, bikes, or baseball bats, every industry needed more time to determine which, if any, of its products were covered under the definition of children's product, test those products for compliance, and develop new methods of manufacture to eliminate the lead if it was present

in the product. The scope of products covered by the new regulation and the amount of inventory implicated went well beyond what many may have contemplated. Our information is incomplete but we are told that millions of products wait in storage warehouses for return and destruction. Retailers have indicated that most of these products do not contain accessible lead, and a real question exists in our staff's mind as to whether they contain accessible lead in a sufficient amount to be anything other than a *de minimis* risk but simply were unable to meet the standards that took effect in February. It will be even more difficult for these products to meet the stricter standards to come. These challenges faced by industry have a direct impact on CPSC staff resources and our ability to meet deadlines given the need to respond to their inquiries.

Another approach to the deadlines is to allow the Commission more discretion to move an effective date for a given product or class of products in certain circumstances. The CPSIA does not permit the Commission to delay the effective date of any of the new standards to deal with a problem such as the lead in bike tire valves where the risk to a child is exceedingly small but still measurable, and the economic impact is substantial. In cases such as these, some reasonable amount of time should be allowed to reengineer the product to develop an alternative that can meet the new lead limits.

3. Does CPSC have quantitative data concerning any negative impact of the Act (i.e., the lead and phthalate limits and testing requirements) on small manufacturers of children's products, and if so, would CPSC please provide them? What information does CPSC have on any such negative impact of a more anecdotal nature?

CPSC staff does not have data on the total value of impacted inventories, lost sales, disposal costs, and other costs likely to be incurred by small manufacturers because of the CPSIA; however, information of an anecdotal nature, that has not been verified by CPSC staff, puts the impact in the billions of dollars range.

Industry Estimates

For example, the Motorcycle Industry Council reported in a February 26, 2009, press release that the new lead rules would result in an annual impact of $1 billion on their industry. In a request for a moratorium on the retroactive application of the lead ban, the American Chamber of Commerce in Hong Kong estimated that the impact on their members producing children's wearing apparel would run in excess of $300 million. In a letter to the CPSC, counsel to a major mass retailer stated that a client estimated their cost to test inventory at $1.4 million and projected inventory losses of $30 million. Another client estimated the value of their unsalable inventory at $7 million. It was also reported in a March 5, 2009, article in the Wall Street Journal, that the Toy Industry Association estimated inventory losses valued in the range of $600 million.

CPSC Testing Estimates

CPSC staff has estimated that the cost for third-party testing of product for lead and phthalates would range from several hundred dollars to several thousand dollars per product tested.

depending on the number of product components requiring testing. Based on information obtained from testing laboratory price lists and quotes, the cost to test for the lead content of a substrate appears to range between about $50 and $100 per tested component. In a recent public meeting, industry representatives stated that testing of the 233 various components of a bicycle, valued at $50, cost one of their members approximately $14,000. Less information is available about the cost of testing products for phthalates, but the limited information obtained from price quotes and laboratory presentations to CPSC staff suggests the best estimate for the cost of phthalate testing at this time ranges from $300 to $500 per tested component. The cost to test for phthalates appears to vary widely from market to market. In a recent CPSC public meeting on phthalates, one participant told of receiving quotes for the testing of a product ranging from $7,000 in Asia to $22,000 in the United States. Because these tests tend to be destructive, manufacturers also bear the expense of lost material, labor, and overhead associated with production of the products tested.

Economies of scale provide an advantage to larger volume manufacturers, relative to their smaller volume counterparts, as they can absorb these testing costs over a larger production volume. Spread over this larger volume, the incremental increase to the cost of each product is much smaller for the large manufacturer versus the much smaller manufacturer. In short, the heavier burden falls to the smaller volume business. When the Commission establishes random sampling requirements (as part of the required rulemaking on periodic testing in Section 102(b)), testing costs will increase over current levels for manufacturers of all sizes.

The exclusion of most fabric from the third-party testing requirements will provide only limited relief for npparel manufacturers, including small manufacturers. In a public meeting with CPSC staff, several apparel retailers reported finding virtually no lead in fabric, but they did find lead in about 2% of the tests on hard items, such as buttons, zippers, snaps, and fasteners. Since most apparel items have some non-fabric items, there will still be testing requirements for most apparel items. Moreover, under the new restrictions the presence of lead in fasteners used on clothing has had a negative impact on the second-hand market for children's clothing in the United States.

Although testing children's products, as applicable, for lead and phthalates has received the most attention, many products will be subject to additional third-party testing requirements. For example, cribs must be tested for compliance to the crib safety standards at 16 CFR part 1508. Toys are also subject to testing for compliance to applicable provisions of the Toy Safety Standard, including testing for additional heavy metals, such as arsenic, cadmium and chromium. We have no quotes for these tests; however, it is probable that the major factor in the cost of the tests will be the labor time required to conduct the tests. Once again, given the destructive nature of the testing, the manufacturer will also bear the expense of lost material, labor, and overhead.

It is important to keep in mind the wide expanse of goods falling under the definition of "children's products" and subject therefore to third-party testing requirements. Beyond toys and durable infant and toddler products, items such as books, bicycles, clothing, youth-sized motorized off-road vehicles, school supplies, and Scout equipment and accessories are subject to lead and/or phthalates testing. Likewise, all products for children 12 years of age or younger that are made by crafts people, stay-at-home moms or dads, charitable church groups and the like,

must meet the new limits and be tested for compliance or their products are banned. This has completely upset the business model for many of those small businesses and charitable organizations. Because of the retroactive nature of the regulations, many retailers began turning back product with more than 600 ppm well in advance of February 10, 2009, in order to ensure their shelves were free of non-compliant product. As a result, many small manufacturers, who failed to recognize the true scope of the law or were unprepared for the retailers' reaction to the CPSIA, now find they have inventory they cannot sell.

Retailers Accelerating Deadlines

Retailers continue to move well ahead of the deadlines established in the CPSIA. For example, it is staff's understanding that Wal-Mart stopped receiving product with more than 300 ppm lead in January 2009. These actions have stranded inventory that may be compliant today but will be banned in August as the lead limit drops to 300 ppm. In addition to the risk that these products may become obsolete and will need to be reworked or destroyed, manufacturers of all sizes are incurring expenses to hold this inventory while they decide how to move their product. The cost to carry this inventory varies by business, but typically runs about 25% of the on-hand inventory value.

As retailers pull product from their shelves, many consumers have also been negatively impacted. For example, CPSC staff have received numerous emails from consumers stating they could no longer purchase parts for their child's youth model motorcycle because of retailer concerns over the lead content of the parts. More than one consumer has noted the possibility of consumers' purchasing vehicles sized for older children or adults if they could no longer service their current motorcycle or ATV. This reaction potentially places these children in a situation of increased risk of injury or death.

Solution: Risk-based Assessments That Consider Age and Exposure

It may be too late to mitigate the significant economic impact of the February 10, 2009, ban on children's products containing more than 600 ppm total lead content, by weight, for any part of the product. However, some relief could be provided to deal with the impact on thrift shops and second-hand sales, and Congress still has time to act to prevent the even greater impact that will occur when the lead limit drops to 300 ppm in August 2009. For example, toxic substances limits are better regulated based on the possibility of exposure in relation to age. Foreseeable use data, combined with mouthing and ingestion data at various ages, would define the group at risk for any given product.

This approach would exclude items such as bikes and ballpoint pens from the discussion and we could focus on items like metal jewelry and other objects likely to be mouthed or ingested. By granting the CPSC the flexibility to determine the relevant hazards, flexibility in determining exemptions based on assessment of risks, and the discretion to adjust the age limit for certain groups of products where the exposure is low, resources can be properly focused on areas of greater risk, yielding maximum reductions in consumer risk of death and injury.

4. Does the CPSC have any suggestions for how to mitigate any such economic impact of the Act on small manufacturers of children's products (e.g., component testing for lead and phthalate content) that, in accordance with the intent of the Act and the CPSC's mission, will not compromise the health and safety of children using them?

In light of the concerns expressed by small business owners and employees, CPSC staff has been considering what relief might be provided for them without compromising safety. The first challenge was to define what is meant by "small business" in the context of the manufacture of children's products.

For example, with regard to children's apparel, there are not good statistics differentiating those firms that make all apparel versus those firms that make apparel intended only for children 12 years of age or younger. With regard to toys, the analysis of those businesses that are focused on the manufacturing of products solely for children is more reliable. Bureau of the Census (2006) data shows that there are 776 firms that manufacture dolls, toys, and games (NAICS 33993); 403 of those firms (51.9%) have fewer than 5 employees, 632 (81.4%) have fewer than 20 employees, and 963 (98.3%) have fewer than 500 employees which is the standard definition of a small business. Only 13 of the firms (1.7%) that produce toys would not be considered small businesses by the Small Business Administration. All (or almost all) of these firms are likely to produce children's products and all are affected by the current economic downturn.

Another group significantly impacted by the CPSIA is small crafters of products for children, many of whom work out of their homes. Based on a 2000 survey conducted by the Craft Organization Directors Association, there were an estimated 106,000 to 126,000 craftspeople in the United States. Additionally:

- The average gross sales revenue was $76,000 per craftsperson.
- The median household income of craftspeople was $50,000 per year, with about half coming from craft activities.
- 64% of craftspeople worked alone, 18% work with a partner or family member, and only 16% had paid employees.

Component Certification

The cost of testing and certification is a huge burden on these small businesses and a robust component certification program would be extremely helpful. However, any component testing rule would have to apply across the board to all businesses, small and large, and to our global trading partners in compliance with international trade laws. Furthermore, we have to design a program we are confident will avoid the switch of components during manufacture which is the very problem that Congress was intending to fix by requiring testing of children's products in the CPSIA. Component testing presents real challenges since many of the components used in children's products are not children's products on their own and do not require third party testing. Snaps could be used on a hand knitted sweater that were not produced primarily for use in children's products, and we cannot be sure given the expense of testing, that a market will develop for certified compliant materials for use by crafters.

Potential Solutions

Recognizing that the Commission always has the ability to take action to address unsafe products in the marketplace, Congress could take many different approaches to mitigate the effects on small businesses. Congress could apply the new lead and phthalates limits prospectively to mitigate the impact on inventory existing prior to enactment. It could allow for a more flexible exception process based on balancing of risks against the burdens of the costs of testing and certification but that could overburden staff. Another option would be to allow the Commission the flexibility to decide what children's products require testing and certification.

5. What information has CPSC received about the impact of the Act on the availability of second-hand products for children, especially clothing? It is my understanding that many second-hand stores now refuse to sell children's products. Does CPSC have any suggestions for how to mitigate any negative effects of the Act on second-hand stores for children's products, especially in light of the economic downturn and the consequent increased need for low-cost sources of children's clothing?

CPSC staff has only limited, anecdotal information concerning the impacts of the Act on second-hand stores. Major resellers such as Goodwill Industries and the Salvation Army have estimated impacts, including both lost sales and disposal costs, totaling hundreds of millions of dollars. Many smaller resellers have indicated that under present circumstances, they cannot afford to continue selling children's toys or apparel, which account for much of their revenues. Even church bazaars and neighborhood yard sales are adversely affected.

The major problem for second-hand stores and other resellers is that the CPSIA prohibits the sale, distribution or export after February 10, 2009, of any children's products exceeding the applicable lead or phthalate limits regardless of when they were made. Second-hand stores are typically selling items that were manufactured years earlier. Thus, a large percentage of a reseller's current inventory of children's products may have been manufactured long before the stringent new limits took effect, and it may now be impossible to dispose of such items lawfully except by destruction (which itself may be costly, particularly for non-profit organizations). To make matters more difficult, there is often no cost-effective way to determine which products can lawfully be sold and which cannot.

Unlike other retailers, resellers generally have little or no control over the compliance of the goods that they obtain. Most are donated. Even where they have regular donors, resellers cannot practically establish specifications for children's products as major retailers can for their regular suppliers. Testing everything they receive is not a practical solution either. Like small, home-based manufacturers, resellers cannot spread testing costs across many units of the same type; at any given time, they would usually have on hand no more than a few items of the same type. The standard tests for lead and phthalate content are destructive, so if one tests a single item to determine whether it can be sold, one no longer can sell that item.

Screening devices, such as x-ray fluorescence (XRF) machines, can help in weeding out children's products that have excess lead, without destroying products that comply, but the new technology is still expensive. No such screening device yet exists for identifying phthalates. Even if such technology can be developed quickly, it remains a disproportionate burden to test every unique item in inventory. Some internet resellers and auctioneers do not even have access to the products that are offered for sale by third parties on their website and so could not feasibly test them by any method.

The second-hand store problem will get worse for several years before it may ultimately get better. The lead content limits will drop to 300 parts per million in August 2009 and to 100 ppm in August 2011 (unless the Commission determines that such limit is not technologically feasible for a class of products). Products manufactured after these dates will be in use for some years before they are donated to second-hand stores. So, it will probably take many years before children's products that comply with these stringent limits make up a sizable majority of the products for sale at second-hand stores.

Potential Solutions

Under the circumstances, merely postponing the effective date of the lead or phthalate limits for everyone, while this would help alleviate some problems we are seeing, would not be very helpful to resellers because it would allow products with excess lead and phthalates to continue being made, and thus add to the number of noncompliant products that may eventually find their way to resellers and so postpone the day of reckoning.

The most effective way to help resellers is to address the issue of retroactivity, requiring that manufacturers meet the statutory limits for products manufactured after the effective date but that retailers and resellers be allowed to continue sale. If this suggestion were adopted, it would be important to note that resellers could not sell recalled products and that the Commission retains its authority to stop sale of any product if it finds an exposure that presents an unreasonable health and safety risk to children.

A law like the CPSIA that outlaws sales of previously lawful products will, by its nature, hurt retailers more than manufacturers and hurt resellers even more than other retailers (given the fact that products are typically in consumers' hands for several years at least before they reach second-hand stores). While dealing with retroactivity across the board would be the most effective way to deal with the inequities presented by the current law, other suggestions include such things as establishing a separate rule for resellers. For example, the ban on selling children's products with excess lead or phthalate content could take effect at a later date for second-hand sellers than for retailers generally. Or, resellers (or some subset of them, such as individual consumers or non-profit resellers) could even be exempted entirely from the provision that makes it a prohibited act to sell products containing more than trace amounts of lead or phthalates. Children's products that would have been banned under prior law should not be exempted in any case, and there may be categories of products, for example, children's metal jewelry, that should be handled more strictly. While consumers are accustomed to the notion that used goods are sold "as is," it might be appropriate to require a label or other type of

warning at the point of sale if resellers are allowed to continue to sell older children's products that do not comply with the new limits.

Lest there be any question, CPSC staff does not favor exempting second-hand sellers from the prohibition against selling recalled products (including children's products that are recalled for excess lead paint, or excess lead or phthalate content). The staff believes that resellers can reasonably be expected to keep abreast of CPSC recalls by signing up to receive CPSC's recall press releases and to remove any recalled products from their shelves. Similarly, where Congress has unambiguously directed application of new regulatory requirements to a discrete class of used children's products, such as cribs, CPSC staff believes that resellers no less than others must take steps to comply, even if that means deciding not to sell the products in question.

The Commission has adopted an enforcement policy on lead limits and has issued other guidance to second-hand stores to address many of the recurring issues. In the staff's view, however, the core problem is caused by the retroactive nature of the law and is beyond the agency's authority to solve.

6. Does CPSC believe that the age limit contained in the Act's definition of "children's products" (i.e., 12 years and under) is appropriate? If not, what should the age limit be? Further, should CPSC have discretion to lower the age limit for certain groups of children's products for which the risk of harm from lead or phthalate exposure is remote (e.g., snaps or zippers on children's clothing)?

The term "children's product" has significance for several different provisions of the CPSIA. It specifies which products are subject to the lead content limits. Indirectly, it plays a role in defining which products are subject to the phthalate limits. It governs the scope of products that require certification based on third-party testing and those that will require tracking labels "to the extent practicable."

CPSC staff believes that for purposes of defining which products are subject to lead limits, the boundary age could reasonably be lower than 12, at least in most cases. The Senate bill (S. 2045) deemed age 7 a satisfactory upper limit. CPSC staff understands that the conferees ended up agreeing to age 12 primarily because of the so-called "common toy box problem" – *i.e.*, the concern that a product intended primarily for older children might nonetheless be available to younger ones in the same home. This choice had the effect, however, of applying the lead limits to a much larger population of products, including many that are not toys and even including outdoor products such as dirt bikes or ATVs that would rarely be accessible to younger children under any circumstances.

CPSC's Regulations Established Age Limits by Product Class

CPSC's own regulations have used a variety of different ages to define what group of children's products will be subject to a standard or ban, and these precedents may be useful to consider. For example, the small parts ban applies to products that are intended for children under 3. Toys that are intended for ages 3 through 5 are allowed to have small parts, provided that they have

cautionary labels to warn that they are not suitable for youngsters under 3. In general, toys that are intended for children 6 and older do not require cautionary labeling except in a few specific cases such as balloons and small balls. The lead paint ban (16 CFR part 1303) applies to children's products without a specific age definition. Despite this broad applicability, the scope of the lead paint ban has rarely if ever, generated controversy. This is probably so because it is limited to children's products that have paint or similar surface coatings, and such products are much fewer in number and more easily identified than children's products generally.

Both the likelihood of exposure and the route of exposure are factors to consider in deciding what products should be subject to lead limits. Lead presents an acute hazard when direct ingestion is possible. For this reason, CPSC staff has long treated children's metal jewelry as warranting special concern. In other applications, brass and many other metals often have some lead content, particularly to improve workability, corrosion resistance and other properties. Where such objects can be mouthed but not swallowed, they generally pose a lesser risk, and objects that can be licked but not mouthed pose still less risk. There are some products where mouthing or licking is unlikely but where some lead exposure may result from touching and inadvertent transfer of lead from hand to mouth. A child's exposure to lead from zippers and snaps will depend on the type of garment and the child's age, among many other factors.

Practical Solution: Commission Discretion

One way to address these issues would be to give the Commission more discretion to grant exclusions from the lead or phthalate limits. Under the law as currently written, a material having more than 600 parts per million lead cannot be excluded unless touching the product will not result in the absorption of *any* lead. Taken as a whole, the language of section 101 appears to rule out treating even very low levels of absorbable lead as negligible. Congress could modify this exclusion criterion to allow *de minimis* levels of absorption or to change the focus to preventing any significant increase in blood-lead levels of a child, particularly for children who are of the age of the intended user.

Giving the CPSC discretion to lower the age limit for certain classes of products might be more efficient than dealing with many requests for exclusion, which is a resource-intensive process. Another resource conserving approach would be for Congress to lower the age limit across the board and give the CPSC discretion to set a higher age for certain materials or classes of products that pose a risk to older children or to younger ones in the same household.

7. Although some youth all-terrain vehicles (ATVs) and youth motorcycles are intended for use by children under 12 years of age, does CPSC believe it is necessary that these products be tested for lead and phthalate content? Similarly, does CPSC believe that these products present a risk to children for the absorption of phthalates or lead?

CPSC staff is aware that many different parts of youth ATVs and youth motorcycles have lead content, some of which may exceed the 600 or 300 ppm level. Some of these parts are inaccessible, and some parts may qualify for the higher limits applicable to certain electronic components. Other parts, however, appear to be accessible and may not qualify for any

exclusion under section 101 of the CPSIA. These youth vehicles may also have some phthalate content, but they do not appear to be covered by the section 108 bans, which are limited to certain toys and child care articles.

The possibility that children will suffer significant lead exposures from these classes of vehicles appears to be remote at best. First, the vehicles are generally stored outside the home, where younger children would rarely be allowed unsupervised access. The vehicles are generally designed for children of at least 6 years of age and older. These children are far less likely to ingest or mouth components of a motorized vehicle – even those that are physically exposed – than something that fits readily in the mouth, such as a jewelry chain or charm. Children may still be exposed to some lead as a result of touching seats, handle bar grips or other places and then inadvertently transferring some of the lead to their mouths from their hands, either directly or indirectly, as for example while eating. For most children, however, this type of exposure is not likely to result in significant absorption of lead. This is particularly true where children are wearing appropriate protective riding gear, such as gloves and helmets.

Broadening the Exemptions for Metals

In section 101(b)(4), Congress recognized that it might not be technologically feasible for certain electronic devices to meet the lead limits applicable to children's products generally and gave the CPSC authority to adopt other requirements for such devices. The Commission has exercised this authority on an interim basis and established higher limits for certain electronic components where it concluded that such parts cannot be made inaccessible and it is not technologically feasible to substitute other materials at this time. These include metals such as steel, aluminum and copper alloys as used in electronic devices. In adopting these alternative limits, the Commission made reference to exemptions recognized elsewhere, such as the European Union directive 2002/95/EC known as RoHS. It is worth noting that in Europe, the RoHS exemptions are equally applicable to non-electronic uses of these metals, but the staff believes that section 101 gives us no flexibility to apply the same exemptions outside the realm of electronics. This means that children's products containing these metals and metal alloys manufactured for the U.S. market cannot employ recycled metal to the same extent as they can in Europe; rather, the manufacturers for the U.S. market must obtain supplies of primary metal, forcing vastly higher energy consumption and higher costs, or they must quickly switch to substitutes whose properties are poorly understood and may even pose more significant safety risks to children.

Under the current law, CPSC staff believes that an exclusion for youth ATVs would be very difficult to justify. Some have argued that if youth-sized ATVs cannot be sold for an extended period of time, owing to lead limits, then more children may end up riding adult-sized ATVs. A child using an adult ATV as a substitute would face a far graver and more immediate risk than that of the possible lead exposure from the youth ATVs.

Potential Solutions

The ATV situation is illustrative of a number of product classes that may not qualify for an exclusion. Congress could moderate this situation in several different ways. These include one or more of the following (not in priority order): (1) postponing the deadline for sales (not

manufacture) of children's products containing lead above the new limits; (2) lowering the age limit for children's products (as discussed in the response to question 6); (3) exempting some or all children's products that are usually not kept in the house, such as bicycles and ATVs; (4) giving the CPSC greater discretion to exclude from compliance with the lead limits any materials or products that pose a negligible risk to children (as discussed in the response to question 6); or (5) allowing materials that are eligible for special treatment when used in electronic devices to receive similar treatment in other children's products when the justification is equally compelling.

8. In light of recent court decisions that the lead and phthalate content restrictions are retroactively applicable, does CPSC have concerns about the effect on the environment of the disposal of inventories of non-compliant children's products?

This issue lies within the authority and expertise of the Environmental Protection Agency (EPA).

9. I understand that, since early December 2008, CPSC has had access to a large number of lead content results for finished "ordinary books" (i.e., books published in cardboard or paper by conventional methods and intended to be read by or to children age 12 and under) and their component materials (i.e., paper, paperboard, ink, adhesives, laminates, and bindings). Has CPSC staff reviewed those test results? What do those test results indicate about such ordinary books and component materials in connection with the statutory lead limits prescribed in section 101(a) of the Act? Does CPSC have any recommendations regarding how to mitigate the burdens that testing and certification requirements of the Act, and especially the retroactive applicability of those requirements to inventory, could otherwise impose on publishers, printers, and retail sellers of such ordinary books, as well as on libraries schools, charities and other secondhand distributors of such ordinary books, including those published before 1985?

Lead Testing and Printing Ink: The Publishing Industry's Challenge

Given the breadth of the definition of children's product in the CPSIA, the Commission received thousands of questions over the past six months regarding the scope of applicability of the retroactive lead limits and the required third–party testing of such products. At the same time, retailers began demanding certificates of compliance for products likely to be on their store shelves on February 10, 2009. The publishing industry claimed to have been unaware that the definition of children's product would encompass books until retailers started asking for certificates of compliance and we posted a response to one of the frequently asked questions regarding the application of the CPSIA to books intended or designed primarily for children. Because of the variety of colors of inks used in making children's books printed on paper and cardboard, the requirement of testing for compliance to the new lead limits proved costly and onerous. Some retailers were demanding separate certificates of compliance for each book title.

The issue of lead in printing ink and other products used to make a book is not new. Indeed, in 2007 the publishing industry issued a statement on lead in books to respond to any concerns

raised about books related to that year's toy recalls for excessive lead in paint. (See American Booksellers Association statement of November 29, 2007, Bookselling this Week: Getting the Lead Out: Consumers Question Books Made in China, found on March 15, 2009 at http://news.bookweb.org/news/5695.html.) The Commission has occasionally recalled such products for excess lead; for example, a recall was conducted in February 2008 for excess lead in paint on the colored spiral metal bindings of several sketchbooks. In July of 2004, the Commission issued a warning regarding the hazards of lead in candy wrappers that contain lead or bearing lead-containing ink.

The "Ordinary Book" Exemption

The Commission staff wanted to provide some relief to the book publishing industry given the extraordinary impact of third-party testing for lead and because the publishing industry maintained that the Commission had never considered ordinary children's books to be a health hazard. However, given the requirements of the CPSIA, the staff felt that they needed some representative data upon which to base a decision to exempt children's books from the requirements. The number of requests for relief from the retroactive effect of the CPSIA was so high that the staff felt that in fairness, any determination that the law did not apply to a material or class of products should be based on science and supported by test results.

It is not the case (noted in your question) that the Commission staff has had access to a "large number of tests on finished 'ordinary books'," but rather we have had access to a very limited data set on which the publishers have based their request for an industry-wide exemption from testing to the new lead content limits. The publishing industry association provided the staff with 152 separate entries representing testing done on approximately 157 books conducted anywhere from 2004 to 2009. The books tested range from the ordinary books to books with handles, stickers, kits or other accessories. The staff reviewed those test results, and initially concluded that many of the tests were done for European standards and/or did not test for total lead content as required by Section 101 of the CPSIA. The staff of the CPSC asked the industry to provide more data for total lead content and demonstrate that the data submitted was representative of all of the millions of ordinary books sold to children 12 years of age or younger.

The additional data submitted suggests that modern book publishing using offset lithography does not result in books with lead levels in excess of the 300 ppm limit that goes into effect in August of 2009. However, the Commission staff has not had the time or resources to look at the issue completely or comprehensively and has been hopeful that more data would be submitted by industry particularly with respect to books published in the 1960s and 70s. The Commission staff has been assured that the publishers now all use inks that result in children's books that fall below the statutory limits for lead. While the staff does not have a statistically valid basis for a wholesale exclusion of children's books at this time, its determination to exclude them from testing and certification does not mean that any children's book can exceed the lead limit. All children's books must meet the lead limit.

Making a determination that ordinary books cannot and will not exceed the lead limits appeared to be the only means of providing immediate relief. Such an exemption from testing also should

provide relief from the retroactive application of the standard to all books in schools and libraries that are provided to children for their use. In the meantime, the publishing industry was given a conditional enforcement waiver on the testing and certification requirements for lead, pending staff's review of the data and any additional data that may be submitted. That exemption was limited to books manufactured after 1985 because the publishing industry has not provided any test data on books published in the 60s and 70s. Instead, the industry has pointed to the fact that lead was removed from printing operations in this country due to federal statutory restrictions on worker exposure to lead in printing operations which went into effect in the late 70s. The very limited testing the Commission staff has done indicates that the lead content of these older books can occasionally exceed the 300 ppm limit that goes into effect in August 2009 but that data may not be representative. At this time the Commission staff has not had the time or resources to prove that books made more than twenty years ago do not exceed the lead limits as staff has needed to focus its resources on its investigations of deaths and injuries to children and other emerging risks and health hazards.

Library Books and Used Book Resellers

The retroactivity of the lead provision is particularly problematic in the area of books and other printed materials. We have done very limited testing of books from the 60s and 70s. It suggests that the lead content hovers around the 300 ppm mark. Anecdotal evidence received by the agency suggests that on occasion books from this earlier period may contain lead in excess of the lead limits in their binding materials. The only way to determine the total lead content in these books is to test them.

Under the CPSIA, however, sellers of used children's books, including used book stores and thrift shops, are not required to test or certify that children's books meet the new lead or phthalates limits. The CPSIA does not require resellers to test children's products in inventory for compliance with the lead limit before they are sold. However, resellers cannot sell children's books intended primarily for use by children that exceed the lead limit.

The Commission had hoped that an exemption for "ordinary books" plus its announced enforcement policy for lead would alleviate this situation. Based on information received from the trade associations with information regarding books in libraries and schools, the Commission staff understands that most textbooks in schools are less than ten years old. Likewise, the information received suggests that most library books lent to children are recycled approximately every 18 lending cycles or three years. Thus, it appears that few of the books being provided to children in their schools and from libraries would be more than 20 years old.

Potential Solutions

Staff has considered children's behaviors with books and concluded that after about 19 months of age, children may occasionally put part of a book in their mouths, but they typically are taught to care for their books so that they can continue to be used for reading and learning. This information suggests that any exposure to lead from contact with books diminishes as children age. We believe an exemption is the only way to provide relief under the CPSIA. Congress could limit the testing of books to only those picture books provided to children much younger

than 12 since this is the population of children that would be most likely to interact with their books in a way that could expose them to inks with higher lead content. Lowering the age limit would be extremely helpful to staff in dealing with books and many other products by narrowing the scope of products covered. Lowering the age limit would also provide relief to schools who face retroactive application of the lead provisions not just with regard to books but also the wide variety of other educational materials they provide to school-aged children.

The CPSIA establishes that any children's product no matter when it was made is a banned hazardous product if it exceeds the lead limits and the law does not have an exemption procedure other than one based on scientific proof that there will not be absorption of any lead. One solution would be for Congress to create a waiver process allowing the Commission to "grandfather" in products made prior to the date of enactment if the Commission concludes those products present only a *de minimis* exposure level and, therefore, a negligible risk. This could be used to solve the problem of used books as well as other products commonly sold second-hand such as used clothing or youth bicycles. It creates an administrative burden that the Commission may not be able to handle without some delay, but it would provide relief without having to undo the retroactive effect of the law altogether.

10. In general, does CPSC believe that the Act was written with too little implementation discretion for the Commission? If this is the case, for which issues (e.g., third party testing requirements) does CPSC require more discretion?

The CPSIA provides too little implementation discretion for the agency. One of the major problems with implementation has been the statute's reach across a variety of industry sectors quickly and simultaneously by virtue of its broad definition of "children's product." The lead limits reach literally every product intended or designed for a child 12 or younger. The breadth of the statute's reach has made it difficult for the Commission to address industry specific concerns in the few areas where the agency has discretion. The Commission needs room to address toy industry concerns separately from those of the apparel industry, from those of the publishing industry, and separately again from those of industries that make outdoor products for children such as motorized recreational products, playground equipment and bikes.

The lead limits and testing and certification provisions could be implemented much more smoothly if the Commission had the discretion to roll out those requirements on a product class basis. The same will soon be true for tracking labels where each industry has specific concerns about how additional labeling requirements will work given existing and multiple other labeling requirements. Congress can direct the agency as to how to determine priorities and work to a specific schedule as evidenced by section 104 which gave some flexibility to the Commission in pursuing the congressional mandates for new durable infant product standards. A similar approach to implementing all of the Act's new rules and requirements would ease the implementation burden. Indeed, the stay of enforcement of certification and testing was the agency's only means to get the breathing room it needed to deal with the various unanticipated issues that arose given the breadth of the industries affected.

Some have argued that the Commission should have a more relaxed approach to exclusions from the lead limits. However, the lead provision of the CPSIA restricts the agency's discretion at a variety of points in the statute. It allows for exemptions in three limited circumstances described in section 101(b). That section allows exclusions for inaccessible component parts of children's products and also allows the Commission to exempt electronic devices where lead is necessary for their functionality and cannot be made inaccessible. Beyond those exclusions, however, the statute leaves very little flexibility. Section 101(b)(1) of the CPSIA provides that the Commission may, by regulation, exclude a specific product or material that exceeds the lead limits established for children's products under § 101(a) of the CPSIA if the Commission, after notice and a hearing, determines on the basis of the best-available, objective, peer-reviewed, scientific evidence that lead in such product or material will "neither result in the absorption of any lead into the human body," given reasonably foreseeable use and abuse of such product, including swallowing, mouthing, breaking or other children's activities or the aging of the product, "nor have any other adverse impact on public health or safety." (Emphasis added.)

The clear language of the statute is rigid; an assessment of whether there is absorption of "any lead" cannot be based on a risk based assessment because that language does not appear to allow any amount of lead, no matter how insignificant, to be absorbed in the human body. While the courts have occasionally upheld agencies applying a *de minimis* standard and exempting trivial risks from regulation, that has been permitted only when Congress has not unambiguously denied agencies that authority.[1] Here the act specifically limits the exclusion to an application supported by peer reviewed science supporting a demonstration that there cannot be absorption of *any* lead. Moreover, section 101(e) appears to restrict the agency's ability to use enforcement discretion while exclusion requests are pending, by stating that a pendency of a rulemaking to consider a request for exclusion "shall not delay the effect of any provision or limit . . . nor shall it stay general enforcement" of the lead limits.

Those who argue that common sense exclusions are permitted by the CPSIA would have to ignore sections 101(b)(1) and 101(e). Yet as the unanticipated consequences of the retroactive effect of the law have demonstrated, some ability to provide for *de minimis* exclusions would be helpful in implementing of the Act. The effort to deal with the *de minimis* risks given the speculative yet conceivable routes of exposure presented by certain products such as bike tire valve stems distracts attention from more serious health and safety problems that the agency must address. Recently proposed legislation banning BPA recognizes the need for such flexibility to provide relief when a manufacturer cannot comply because it is not technologically feasible to do so in the timeframes permitted. Yet such a waiver or exemption process could prove to be too resource intensive and divert agency resources to handling thousands of exemption requests when staff should instead be dealing with other risks that deserve attention such as identifying emerging hazards.

Cir. 1993). *See also* Hahn and Sunstein, *A New Executive Order for Improving Federal Regulation? Deeper and Wider Cost-Benefit Analysis*, U Chicago Law & Economics, Olin Working Paper No. 150. This paper can be downloaded without charge at: http://www.law.uchicago.edu/lawecon/index.html.

The CPSIA forsakes the core strengths of the CPSC's original statutory framework which has from the beginning allowed the Commission to prioritize its regulation of consumer products by an overall assessment of all the risks at stake, the magnitude of those risks and the actual consequences of the hazard. Congress should permit the agency to exempt certain products from the limits established by the CPSIA, to ease the burdens of testing and certification on products unlikely to present more than a negligible health risk, and to regulate on a timetable influenced by the seriousness of the actual risks not artificial deadlines. A more flexible exception process would avoid regulation of *de minimis* problems both prospectively and retroactively.

Moreover, this would allow the CPSC to consider the impacts of the regulatory requirements of the CPSIA, like the balance between the adverse effects on second-hand sales of children's clothing or bicycles and the potential risks from exposure in such products, which is especially important during the current economic crisis. It should also allow the Commission to balance risks such as balancing the risk of possible lead exposure to a child riding a youth-sized ATV against the risk to the child from riding a larger and more powerful adult ATV. Given that exceptions would be made on a notice and comment basis, the underlying analysis and support for any exceptions will be public allowing for transparency and accountability. Finally, relaxing certain deadlines in the Act will allow for better priority setting which will allow Commission resources to be put towards the most serious health risks first.

* * *

CONCLUSION

The staff has set forth in its answers to specific questions above numerous approaches to dealing with the issues raised. In our view, we have been confronted with three major issues in implementing the CPSIA: (1) the retroactive application of requirements to inventory; (2) the broad reach of the legislative mandates given that "children's product" is defined as a product for children 12 years of age or younger; and (3) the impact of the new testing and certification requirements for all consumer products and the third-party testing requirements for children's products. You have asked us to consider possible solutions to the problems raised in the letter, and make our best recommendation as to productive solutions recognizing that these are ultimately policy decisions for others to make. We concluded that the following three changes would resolve many of the major difficulties identified above:

- Limit the applicability of new requirements to products manufactured after the effective date, except in circumstances where the Commission decides that exposure to a product presents a health and safety risk to children.

- Lower the age limit used in the definition of children's products to better reflect exposure and give the CPSC discretion to set a higher age for certain materials or classes of products that pose a risk to older children or to younger ones in the same household.

- Allow the CPSC to address certification, tracking labels and other issues on a product class or other logical basis, using risk-assessment methodologies to establish need, priorities and a phase-in schedule.

As discussed above, there are many ways to address the challenges of implementation and meet the important goals of the statute. Regardless of the path chosen, some legislative changes would be helpful to allow the agency to set risk-based priorities given the finite resources available to the Commission.

UNITED STATES
CONSUMER PRODUCT SAFETY COMMISSION
4330 EAST WEST HIGHWAY
BETHESDA, MD 20814

March 20, 2009

The Honorable John D. Dingell
Chairman Emeritus
House Energy and Commerce Committee
Room 2328
Rayburn House Office Building
Washington, D.C. 20515-2215

Dear Chairman Dingell:

Thank you for your letter of March 4, 2009, regarding the Commission's implementation of the Consumer Product Safety Improvement Act of 2008 (CPSIA).

Nearly two years ago I stated that the CPSC was at a crossroads. We would either get more funding and more staff or we would continue a decline that would eventually result in the agency ceasing to be an effective force in consumer safety. At that same time, wave after wave of press stories about hazardous products that the agency had purportedly not acted on in a timely manner were appearing and recall after recall involving lead were being announced. In response, Congress, and the citizens it represents, decided that not only should the agency survive but it should regain its lost stature. Through the CPSIA we were given new enforcement tools, manufacturers were required to prove that their products met national safety standards and the agency was given the resources (after a decade of seeking them) to build an IT system that will pull all of our disparate pieces of hazard data into one comprehensive, searchable database that will enable the agency to spot emerging hazards in a much timelier fashion.

The CPSIA presents both opportunities and challenges for our staff. Despite the fact that the agency did not get the immediate increase in funding that the Act envisioned, our staff has done a remarkable job of meeting the Act's deadlines (in some cases many months before the Act required them to be met). Staff has done this with an agency that only has two Commissioners who do not view the Act in the same light and who do not always agree on the Act's meaning. This has left the staff unsure in some instances about how to proceed and caused delays in providing guidance and in prioritizing the agency's work. That is also why there is no *Commission* response to your questions. The single most important step that needs to be taken in furtherance of the implementation of the CPSIA at the agency is to have the third Commissioner, who would also be the Chairman, appointed to lead the agency. Then the Commission would be able to give the staff direction and attend to various concerns that have gone unaddressed. This would also eliminate the threat of yet another loss of quorum, which has happened twice since July of 2006, and which would severely hamper the continued implementation of the CPSIA.

Congress has entrusted this agency with a large and important mission. The passage of the CPSIA was a huge vote of confidence for the agency and despite the hue and cry of some in the business community who will never be happy with the closer scrutiny and accountability required by the Act, it is a major accomplishment of the last Congress, and one that your leadership was instrumental in achieving.

I do agree with staff that additional time to implement certain of the Act's provisions (such as the one that made nearly all of the voluntary requirements in ASTM's F963 mandatory) would have been preferable. However, I think that when the agency gets the third Commissioner, we will be better able to address some of the concerns voiced by staff and by industry. Until then any legislative "fixes" are premature. Only the *Commission* should recommend what, if any, changes should be made to the CPSIA and no assumptions should be made that there are no other solutions than legislative ones until all three Commissioners have a voice in the matter.

Sincerely,

Thomas H. Moore
Commissioner

cc: Acting Chairman Nancy Nord

UNITED STATES
CONSUMER PRODUCT SAFETY COMMISSION
4330 EAST WEST HIGHWAY
BETHESDA, MD 20814

CHAIRMAN INEZ M. TENENBAUM

October 16, 2009

The Honorable Henry A. Waxman
Chairman
House Committee on Energy and Commerce
2125 Rayburn House Office Building
Washington, DC 20515

Dear Chairman Waxman:

Attached please find responses to the written questions for the record submitted by certain Members of the Committee in connection with the September 10, 2009, hearing entitled "CPSC Oversight: Current Issues and a Vision for the Future." An electronic version of these responses will also be provided to Early Green, Chief Clerk of the Committee.

Thank you again for the opportunity to testify before the Committee. Should you have any questions or require additional information, please do not hesitate to contact me or Christopher Day, Director of Congressional Relations, at (301) 504-7660 or by e-mail at cday@cpsc.gov.

Very truly yours,

Inez M. Tenenbaum

Attachments

The Honorable Joseph R. Pitts

Chairman Tenenbaum, in your testimony to the Subcommittee, you made reference to the need for import monitoring by stating:

"Pursuant to Section 225 of the CPSIA, the GAO recently released a study that audited and analyzed the agency's efforts to police imports, and prevent the entry of unsafe products into the U.S. market. In the report, the GAO found that increased agency staffing at ports, combined with revised information sharing agreements with U.S. Customs and Border Protection (CBP) would allow the agency to better detect faulty products before they enter the country – not after they enter the stream of commerce.

"I agree with these recommendations, and have directed Commission staff to update agreements with CBP to allow better information sharing. This information sharing would include use of CBP's Automated Targeting System (ATS), which contains advance manifest information for shipments entering the United States."

Directly tied to the need for import monitoring is the development of a mandatory standard for cigarette lighters, which would give the Commission additional authority to exclude unsafe lighters from the U.S. steam of commerce.

1. **The Committee would like to ensure that the CPSC complete a rulemaking mandating general safety standards for lighters that it initiated on April 11, 2005. In fact, the Senate approved an amendment (as Section 33) during consideration of the CPSIA that would have required the CPSC to complete its rulemaking within 24 months. The House did not include this language, but the Conference Committee included committee report language urging the CPSC to complete the rulemaking. Can you please explain the status of this proceeding and the timetable for its completion?**

   Answer: The April 11, 2005, rulemaking mandating general safety standards for lighters remains an agency priority and is listed on the Commission's current regulatory agenda.

2. **There has also been some concerned about the Staff not adhering strictly to the procedure of the regulation to determine if new cigarette lighter products comply with the requirements of the CPSC child resistant standard. Can you please explain the Commission's process of review of these products?**

   Answer: In the just-ended FY 2009, CPSC staff received 230 lighter submission reports addressing 576 separate lighter models. CPSC staff has completed its review on 554 models; 22 recent submissions are still pending. We are not aware of any irregularities or other factors that would give rise to the expressed concerns about not strictly adhering to the procedures of the regulation. Most of the submissions we

receive involve requests to cross-qualify one lighter based on the child-resistance testing of a model previously approved by CPSC.

In these cases, CPSC staff compares the later model and its characteristics with those of the previously approved model. Another type of submission involves a request that a company be added to the list of authorized importers for a previous approved lighter model. In these instances, CPSC staff works to verify that the lighter has in fact been previously approved for import. The last and smallest category of applications involves newly tested models. The staff spends more time on these than on any other category of application.

With regard to newly submitted models, the submission report is first sent to the Health Sciences to determine whether the testing performed on the new model was consistent with the protocol specified in our regulations. A copy of the report also goes to the Human Factors Division of the Office of Engineering Sciences to review the characteristics of the lighter and determine whether a child could operate the lighter having the specifications shown in the application. In some cases, physical testing of the lighter may be done at CPSC's laboratory to verify that the specimen is operating within specifications. As soon as a determination has been made, the applicant is notified. If the lighter is approved, it is added to a list that enables that lighter to be imported by specific entities.

3. **Finally, are CPSC resources devoted to the implementation of CPSIA preventing staff from completing the rulemaking?**

Answer: The implementation timeline required by the CPSIA, the delay in receipt of additional funding earlier this year, and the emergence of several new hazards requiring immediate Commission attention, such as imported drywall, required a significant reallocation of resources and reprioritization of planned agency work. This has resulted in a delay in completing this particular rulemaking.

The Honorable George Radanovich

CONFLICTING STANDARDS

1. **The Consumer Product Safety Commission's (CPSC) organic statute establishes the purpose of the Commission as to protect against "unreasonable risks of injury" associated with consumer products, not from "*any* risk of injury." The Consumer Product Safety Improvement Act (CPSIA) takes something like this latter approach and attempts to remove any *theoretical* risk of injury by establishing specific bright line requirements for all children's products. Should the CPSIA standard of risk conform to the underlying statute or does the underlying statute need to be amended to reflect the zero tolerance standard of CPSIA? Additionally, could this new standard affect the Commission's ability to conduct its "unreasonable risk of injury" mission over non-children's products not covered by CPSIA?**

   Answer: The findings and purposes section of the Consumer Product Safety Act (codified at 15 U.S.C. 2051) provides that the Commission's overall, general mission is to "protect the public against unreasonable risks of injury associated with consumer products." In the CPSIA, however, Congress decided that certain areas, such as lead and phthalates in children's products, required bright-line standards.

   These provisions are not contradictory; rather they express Congressional intent to apply a stricter standard to certain classes of materials and products intended for children. Both the CPSA and the FHSA remain the primary vehicles for addressing non children's products not covered by the CPSIA and allow the Commission to consider unreasonable risks of injury.

2. **A few weeks ago, the CPSC released its "Back to School Safety Checklist," which included a reminder for parents to make sure all children wear their safety helmets whenever they ride their bikes. Commission staff estimates an average of 80 deaths of children 16 and under each year related to bicycle accidents. Is it consistent to continue to permit bicycles to be distributed in commerce when we know their use will result in scores of deaths each year, yet ban the use of any bicycles with tire valves containing trace amounts as hazardous products?**

   Answer: On June 30, 2009, the Commission published a two-year stay of enforcement of the CPSIA Section 101 lead level requirements with regard to certain bicycle parts. (74 FR 31254) During the pendency of this stay, the sale or use of bicycles with tire valves containing trace amounts of lead is not banned. Furthermore, the Commission has committed to work with bicycle manufacturers during the stay to come into compliance with the Section 101 requirements, or identify those areas where compliance is technologically infeasible.

During the course of the stay, the Commission believes it is still prudent to warn children of other risks – such as failing to wear a safety helmet – in order to reduce injuries and deaths to the lowest level possible.

COSTS ASSOCIATED WITH CPSIA

3. **Testing products for lead and phthalates requires destroying a product sample. In some cases, the independent tester requires multiple samples. How do we effectively address the unique circumstances to preserve cultural benefits of products - such as the Native American clothing - that are one- of a kind and can't be tested unless the product is destroyed?**

   Answer: A children's product that is produced as "one-of-a-kind" obviously cannot be subjected to destructive testing. However, the CPSIA requires the manufacturer to certify the product as compliant to all applicable children's product safety standards based on the results of third party testing. Third party testing of components parts may satisfy the testing requirements of the CPSIA without subjecting the final product to destructive testing. Staff is in the process of developing a rule on testing requirements that will address the issue of "one-of-a-kind" products.

   a. **In addition, how should similarly situated business that produce few items per batch be addressed when the costs of testing a product are greater than the value that can be recouped by the manufacturer or home based business selling the rest of the batch?**

      Answer: The CPSIA requires manufacturers of children's products subject to a children's product safety rule to certify their product complies with all applicable safety rules. This certification must be based on third party testing. Staff is in the process of developing testing requirements for Commission consideration that will attempt to address the need to balance testing costs with the Congressional mandate to ensure compliance to applicable safety standards.

4. **There have been numerous reports from industry surveys about the lost inventory and testing costs that have forced businesses to simply fold up their shops. In total, these costs are in the billions. Is the Commission tracking the economic impact and costs of the CPSIA? If not, does the Commission plan to produce an estimate in the future?**

   Answer: The Commission does not customarily track the economic impact and costs of federal legislation, and is not tracking this data regarding the CPSIA. In the past, Congress has relied on the Congressional Budget Office (CBO) and the Government Accountability Office (GAO) to conduct analyses detailing the economic impact of federal legislation. At this time, the Commission does not plan to produce an estimate due to the resources that would have to be diverted from CPSIA implementation and other deadlines.

5. **Should the Commission survey the independent testing labs to see what percentage of products tested for CPSIA compliance failed these tests? If not, please explain why.**

   Answer: The Commission is not currently surveying independent testing labs for this data. However, there may be some value in using the results of the suggested survey as an indicator of industry's progress, or lack thereof, towards ensuring their manufacturing processes are capable of producing compliant products.

STAYS OF ENFORCEMENT

6. **Are companies regulated by CPSIA still subject to State Attorneys General (AG) enforcement and penalties regardless of any stays of enforcement issued by the CPSC?**

   Answer: Companies regulated by the CPSIA remain subject to state attorney general injunctive actions during the stays of enforcement issued by the Commission. To date, no state attorney general has filed an injunctive action to enforce the CPSIA and several have indicated that they do not plan to do so until implementation issues have been addressed by the Commission. Commission staff recently met with and will continue to meet regularly with several assistant and deputy state attorneys general with responsibility for consumer health and safety to foster constructive dialogue in an attempt to reach a common approach on these issues.

7. **Would you consider the enforcement stays issued by the Commission relief if companies are subject to State AG enforcement and potential civil liabilities?**

   Answer: The CPSIA reflects Congress's intent to allow state attorneys general to pursue an injunction. Although legally the state attorneys general can bring an injunction action, to date they have not done so.

8. **What happens when the stay on ATV's expires in 2011? Is the Commission ready to implement and enforce the law as written? Will the Commission have the necessary resources to implement and enforce the law as written?**

   Answer: During the pendency of the two-year stay of enforcement of the Section 101 lead limits for certain ATV component parts, the Commission will continue to work with manufacturers to identify feasible means to comply with the Section 101 limits. It is premature to predict what might happen when the stay expires in 2011.

   The Commission has the resources absolutely necessary to implement and enforce the law. However, we would welcome any additional resources and appropriations Congress can provide not only to implement provisions of CPSIA, but also to help the Commission increase staffing and improve its information technology modernization efforts, both of which will enhance the Commission's ability to identify and address new and emerging product hazards.

9. Do you believe industry will be able to comply with both the decreased lead limit as well as the testing and certification requirements, or will additional relief be necessary? If so, will the Commission consider issuing another stay of enforcement?

Answer: The one year stay of enforcement on testing and certification was intended to give industry a year to prepare for the testing and certification requirements. The Commission will fully review this issue again in February of 2010 but I cannot speak for the Commission on how individual Commissioners might vote on this issue.

10. Do you believe the Commission has the legal authority to issue further stays of enforcement? If not, what actions could the Commission take if it determined an additional stay is necessary?

Answer: The stays of enforcement issued to date have been based on a policy determination by the Commission that the safety of the product given the functional purpose of the part containing lead in excess of the limit supported a decision to provide the manufacturer with additional time to determine whether and when substitute parts made in accordance with the lead limits would be available. The stays are limited as to the parts covered and the duration of the stay and require interim reporting on the efforts made by the various companies to bring their products into compliance. Furthermore, the stays are tantamount to a refusal to initiate enforcement proceedings, which is ordinarily committed to the agency's discretion. The Commission could issue additional stays if warranted. The clear intent of the law is to remove lead from children's products so any additional enforcement stays should be limited to the narrow circumstances where the strict, immediate compliance with the lead limit could jeopardize the health and safety of children.

PHTHALATES

11. The CPSIA contained an exemption for lead parts that are inaccessible to children through reasonable and foreseeable use and abuse. In perhaps an example of unforeseeable issues, Congress overlooked that some products may contain inaccessible parts made of phthalates, versus other products such as rubber bathtub toys that typically contain phthalates. How will CPSC address concerns expressed by toy manufacturers about the requirement to test "inaccessible" parts? Does CPSC need additionally authority to exempt inaccessible phtbalate parts in parity with the lead scheme of the CPSIA?

Answer: In February 2009, the Commission requested public comments on draft guidance regarding which children's products are subject to CPSIA requirements for phthalates. (74 FR 8058) Commission staff is currently reviewing those comments, and the Commission plans to issue guidance on the matter shortly. In addition, on August 6, 2009, the Commission voted to issue a *Statement of Policy: Testing of Component Parts with Respect to Section 108 of the Consumer Product Safety*

Improvement Act, and requested public comments. The policy statement describes the Commission's position regarding component testing, and the Commission has posted a new test method on its Web site.

Through these rulemakings and policy statements, the Commission has attempted to simplify the phthalate component part and testing guidance as much as possible. With regard to phthalate parts that are completely inaccessible and present no risk of leaching (i.e., a moving belt enclosed in a hard plastic case), the Commission is reviewing whether Section 108 of the CPSIA contains flexibility to allow an exemption from the overall prohibition as a part of the ongoing rulemaking.

12. What is the status of the Chronic Hazard Advisor Panel (CHAP), which is tasked with a scientific review of phthalates?

Answer: The CPSC staff is in the final stages of compiling a list of possible candidates for Commission consideration. Staff received names of scientists from the National Academy of Sciences (NAS). The nominees have been contacted by the staff and asked to indicate their interest in serving on the CHAP. Responses have been received from most, but not all, of the nominees. Once the information provided by the interested nominees has been reviewed by the CPSC Office of General Counsel's ethics officials for conflicts of interest and cleared, staff will forward to the Commission a proposed list of candidates for the CHAP. The staff hopes to transmit its recommendations to the Commission in November. The Commission will then vote on the information provided to them.

Do you plan to make the participants of the CHAP public?

Answer: Yes, we will make the participants of the CHAP public.

AGENCY SUPREMACY

13. Since the effective dates of the CPSIA have gone into effect, the Commission has issued more than one stay of enforcement. Additionally, you stated in your August 18, 2009 signing statement an intention to focus the Commission's enforcement priorities to a smaller world of products than that laid out in CPSIA. However, the law grants State Attorneys General enforcement of CPSIA. Do you believe the Federal agency should have the primary authority in interpreting a Federal law? How can Federal agency supremacy be reconciled with State Attorneys General potential enforcement in areas in which the Commission has yet to pursue enforcement and will not pursue enforcement due to the issued Federal stays of enforcement?

Answer: As discussed above in response to question 7, while we should have the primary responsibility and authority for interpreting federal law, legally the state attorneys general can pursue their own injunctive proceedings. The law allows the Commission to intervene in a case filed by a state that should allow us to protect the

Commission's interests in interpreting the federal law. We are working to coordinate federal and state enforcement activities with the state attorneys general to avoid the situation where the states take enforcement positions different from those of the Commission. We have recently met with several assistant and deputy state attorneys general with responsibility for consumer health and safety and plan to continue quarterly meetings with them to discuss and coordinate our enforcement activities.

14. One of the purposes behind the CPSIA was the establishment of bright-line, uniform legal safety standards. How does the Commission intend to maintain the bright-line rules established by the CPSIA if Commission interpretation is preempted by State Attorneys General enforcement due to the Federal stays of enforcement?

Answer: To date this has not proven to be a concern as no state has filed such an action. As discussed in response to question 13 above, we have recently met with and will continue to meet with assistant and deputy state attorneys general with responsibility for consumer health and safety and plan to continue quarterly meetings with them to ensure that they understand our interpretation and enforcement policies with regard to the CPSIA. The FHSA has always contained a provision allowing for state attorneys general to file actions seeking injunctive relief for many years, and the issue of preemption and federal agency supremacy has not presented a problem.

15. Please detail the Commission's efforts in working with State Attorneys General to create a uniform enforcement scheme that assures consumers and businesses will be treated consistently in every state.

Answer: As noted in the answer to question 13, the Commission recently met with assistant and deputy state attorneys general with responsibility for consumer health and safety and will continue to meet with them on a quarterly basis to discuss and coordinate federal and state enforcement efforts. At our most recent meeting we discussed the importance of cooperation and uniformity in enforcement. Through these meetings, and other efforts, the Commission strives to coordinate enforcement activities with the States to the maximum extent possible.

EXEMPTIONS FROM LEAD LIMITS

16. In your July 17 statement accompanying the Commission's denial of the request to exclude crystal and glass beads from the CPSIA lead provisions, you stated:

> **"In making a determination, I was mindful that the statute does not use the term 'harmful' amount... which would allow staff to utilize a risk based approach... Thus, while Commission staff recognized that most crystal and glass beads do not appear to pose a serious health risk to children... the request for an exclusion must be denied."**

a. Do you support banning products from the marketplace that have been scientifically proven to present no unreasonable risk of harm?

Answer: With regard to crystal beads, data provided to staff indicated that there may be some absorption of lead from ingestion depending on the type and amount of beads swallowed. In the CPSIA, certain other children's products containing lead and phthalates were banned by limits set on their content. When the CHAP finishes its work on the three phthalates that have been banned on an interim basis, the Commission will revisit those limits. Otherwise, the CPSA and FHSA provisions on when a product can be banned remain unchanged and require consideration of risk.

b. Do you support statutory exclusions for products and materials that can be scientifically proven to present no reasonable risk of harm?

Answer: Section 101(b)(1) grants the Commission some authority to exclude certain products or materials where "the Commission, after notice and a hearing, determines on the basis of the best-available, objective, peer-reviewed, scientific evidence that lead in such product will not result in the absorption of any lead into the human body nor have any adverse impact on public health or safety."

In the interest of making effective use of Commission resources, however, it would be helpful to have a narrow exception to the overall Section 101 lead prohibition in cases where a component with lead is required for a functional purpose, contact with the lead is infrequent, and the elimination of such component part is impracticable or impossible based on available scientific and technical information. This exception would provide the Commission with greater flexibility.

17. In your July 17 statement accompanying the Commission's denial of the request to exclude crystal and glass beads from the CPSIA lead provisions, you stated, "the agency will take a common sense approach to enforcement," and that the Commission "will focus [its] enforcement activities on crystal and glass bead products designed and intended primarily for children six years of age and younger[.]"

- **a. Please explain the basis for the determination that the CPSC should limit its enforcement activities in this way.**
- **b. Are there other areas in which you foresee the CPSC using enforcement discretion to focus on products manufactured for an age range of less than 12 years?**
- **c. Does this enforcement decision mean that companies do not have to report such products under 15(b) of the Consumer Product Safety Act (CPSA) and will not face civil penalties for sales of such products?**

d. Does this enforcement guidance provide relief from State Attorneys General enforcement? Does the CPSC have or intend to enter agreements with the State Attorneys General in which the State will honor the Commission's decision to focus enforcement on products for children 6 and under?

Answer: Enforcement decisions are generally matters that are left to agency discretion. In this case, my July 17, 2009, statement indicated that the focus of enforcement actions would be on products designed an intended primarily for children 6 and under. This reflects a Commission enforcement policy determination, and does not impact the underlying statutory provisions.

As noted in the answers to questions 7 and 13, we have already met with and plan to have quarterly meetings with the states to discuss enforcement efforts. We are working to coordinate federal and state enforcement activities with the state attorneys general to avoid the situation where the states take enforcement positions earlier than or different from those of the Commission. Furthermore, the law allows the Commission to intervene in a case filed by a state which should allow us to protect the Commission's interests in interpreting the federal law.

18. In your August 18 signing statement accompanying the Commission's decision on printed materials, you stated, "older children's books did not use the modern CMYK printing process and some have been able to contain lead, [therefore] *the Commission was unable to make a determination that older books...do not exceed the CPSIA's lead limits.*" In the same paragraph, however, you state the Commission intends to issue a separate statement of policy on such books that may still be lent out by libraries or other institutions for use by children. You said, "It is my hope that this guidance will offer common sense solutions that alleviate undue burdens on those who lend older children's books." Please explain from where you will derive the authority for a solution permitting the continued lending and use of these books if they exceed the 600ppm or 300ppm standard and can result in the absorption of some lead, such that they are not eligible for an exemption under CPSIA.

Answer: The Commission is continuing to look at the lead levels in children's books manufactured prior to 1985, and is continuing to test those books in order to make additional determinations.

With regard to the policy guidance, that document will integrate the results of the ongoing testing. Furthermore, the Commission has determined that many older books are not used by children (due to the fact that they wear out quickly), and still others may be used by adults as older "collector's items." In that context, they may not be subject to the Section 101 lead limits.

19. How does the Commission intend to address an environment potentially made more dangerous for children by the CPSIA standards because they use replacement products not primarily intended for use by children? Does the Commission have the flexibility and authority to exempt certain children's products, even though they may not meet the CPSIA exemption standard, in order to protect their safety? For instance, children's use of adult-sized all terrain vehicles (ATV) is far more dangerous to their safety and lives than the possibility of lead exposure from ATV parts on a child-fitted ATV.

Answer: CPSIA section 101(a) explicitly limits the exceptions to the general rule that children's products exceeding the lead limits must be treated as banned hazardous substances. In the case of youth ATVs and certain other motorized vehicles intended for children, the Commission recognized that strict enforcement of the new lead limits could increase the risk of injury to children rather than reduce it as intended. Nevertheless, the Commission did not exempt such vehicles from the lead limits entirely; rather, the Commission adopted a temporary stay of enforcement of the lead limits for certain component parts of such vehicles. To date there have only been a few products where strict enforcement of the new lead limits could potentially increase the risk of injury to children.

20. Is it possible that certain products that are compliant with the total lead limit could have more accessible lead available to be absorbed than products excluded from the market, such as crystal, that have less accessible lead? Would a solubility standard encompassing risk be more protective or less protective of children?

Answer: It is possible, *on a case-by-case basis*, that a lead-content compliant product could have more accessible lead than a product that is not compliant with the lead content requirement. Limited data (provided by industry; letter from Sheila Millar, representing the Fashion Jewelry Trade Association, *et al.*, dated February 2, 2009) on leaching of lead into a mild acid solution from crystal beads showed that some bead samples had very little accessible lead, but other beads leached higher amounts of lead. From CPSC staff analysis of lead accessibility from compliant metal jewelry items, in some cases, the accessibility of lead from a crystal bead would be less than from a metal item, but in other cases, the accessibility from a crystal bead would be greater.

A lead content limit that is more than zero could result in some lead exposure in children, depending on the characteristics of the product and the expected interactions between a child and the product. Further, given a particular lead content standard, it is not possible to generalize expected or potential lead exposure for children's products because of the inherent variability among products and children's behaviors. A solubility standard would require that a test method be designated and a soluble lead limit be chosen. The choice of an "acceptable" lead exposure level is not straightforward, because there is no known level of exposure to lead that is safe for children.

21. If child-sized ATVs cannot be made to meet the 600ppm, 300ppm, or 100ppm lead limits, how do you intend to deal with these products when the ATV exemption expires? Is a legislative fix needed to provide such authority?

Answer: During the pendency of the stay of enforcement, the Commission is continuing to work with the ATV manufacturers to bring them into compliance with the lead limits contained in Section 101. In the interest of making effective use of Commission resources, however, it would be helpful to have a narrow exception to the overall Section 101 lead prohibition in cases where a component lead is required for a functional purpose, contact with the lead is infrequent, and the elimination of such component part is impracticable or impossible based on available scientific and technical information. This exception would provide the Commission with greater flexibility.

22. At the Subcommittee hearing, you stated rubber grips could be used to prevent youth ATV operator exposure to lead in the metal handlebars. However, under the Commission's August 2009 final interpretative rule on inaccessible component parts in children 's products cnntaining lead, hundreds of other parts of these vehicles, such as engines, suspensions, carburetors and frames, with which child operators do not normally or routinely interact are also deemed accessible and thus subject to the lead content limits. Because of this fact -- and despite the stay of enforcement, many companies have ceased selling youth ATVs for children under 12, which may unfortunately lead these children to ride larger, faster adult-size ATVs on which CPSC studies show they are at much greater risk of serious injury or death. Should this interpretative rule he revised to specify that with respect to youth ATVs and other youth motorized recreational vehicles, only those components, such as hand grips, brake and clutch levers, throttle controls, ignition keys and seats, with which child operators routinely interact during normal and reasonably foreseeable operation of the vehicle will be considered accessible and thus subject to the lead content limits?

Answer: As noted in the answer to question 21, the Commission is continuing to work with youth ATV manufacturers during the pendency of the stay of enforcement to address specific issues of accessibility and inaccessibility.

23. Art supply manufacturers have been required since 1988 to test and certify under the Labeling of Hazardous Art Material Act (LHAMA), including testing and certification for lead content. Does the Commission have the authority those products or materials already subject to Federal testing requirements to avoid duplicative and unnecessary testing?

Answer: CPSIA section 102(f)(2)(C) provides a special rule allowing organizations who are qualified, under CPSC regulations, to certify art materials, to qualify as third party conformity assessment bodies "with respect to the certification of art material and art products" without meeting any additional requirements. CPSC staff does not

interpret this privilege as exempting anyone from testing art materials for purposes of establishing compliance with section 101 lead limits.

TRACKING LABELS

24. There is an exception to the tracking label requirement if placing such labels on consumer products or packaging would be "impracticable." What does "practicable" entail in your opinion? Should the word "practicable" encompass the economic practicality of these tracking labels, in addition to the technological feasibility of placing them on consumer products?

Answer: The CPSIA provides an exception to the tracking label requirement when placing such labels on products or packaging would be impracticable. On July 20, 2009, the Commission issued a statement of policy on interpretation of the tracking labels provision that recognized that the statutory provision does not require a uniform one-size-fits-all system. The Commission announced that it "is not imposing any such uniform requirements, but expects that manufacturers will use their best judgment to develop markings that best suit their business and products." I look forward to working with industry on these tracking labels as they clearly will aid in determining the origin of the product in the event of a recall. Different products have differing levels of risk and cost which are both factors in determining what kind of tracking labels should be used on a product. There are exciting new technologies that are and will become available in the future for consumer use in tracking products. Finding the right tracking solution for the right types of products and harmonizing those requirements with systems being developed in Europe and elsewhere will be something the Commission works diligently to pursue in the coming years.

GENERAL

25. Please provide statistics regarding the impact of CPSIA on the relative safety of children's products.

Answer: It is too early to estimate the impact of the CPSIA on the safety of children's products.

26. One of the chief criticisms of early CPSIA implementation was the Commission's slowness in responding to industry concerns or the issuance of guidance.

a. Specifically, the Commission reportedly received approximately 9,000 questions regarding how interested parties may comply with the new law. How many of those questions have been answered? Does the Commission intend to answer each of these questions? What impact does answering these questions have on Commission resources? What do you expect the continued impact on resources will be? Generally,

what is the current state of Commission outreach to various affected industries?

Answer: When the CPSIA was enacted the Commission very quickly received thousands of questions from individual parties. Many of those questions were received before the Commission had a chance to thoroughly study the new requirements in the Act and before there was time to educate the Commission staff about those requirements. We took the approach of reviewing the questions for major themes and then posting Frequently Asked Questions (FAQs) and responses on our newly created CPSIA web site. Soon after the volume of questions rose dramatically, we provided an automatic response to those individuals who submitted their questions through email indicating that their question was important to us and that while we would not be able to respond to each question individually, we would be developing responses to FAQs. The response also noted that individuals could sign up to receive email notification when new information was added to the CPSIA web site. Responding to the questions has a significant impact on Commission resources and takes time away from important activities such as rulemaking and work on emerging hazards. We recognize, however, the need to provide responses to our stakeholders and are looking for ways to provide those responses more efficiently.

For example, beginning in FY 2010 we have contracted for a new provider for our hotline services. The new provider has the ability to take CPSC-approved FAQs and turn them into automated email responses based on key word searching through the use of a "knowledge-based" email management database. This new database will allow hotline staff to accurately respond to questions posed through email using agency-approved FAQs and scripts. In addition, this software has the ability to search individual emails for keywords and phrases and provide automated form responses, thus preventing email backlogs like we saw when CPSIA was implemented. The system will also track new trends in email and telephone inquiries and identify when new scripts need to be developed.

We have done and are continuing to do extensive outreach to affected industries. We have published enforcement guidance and policies to enhance compliance with the new law, held numerous public briefings to help stakeholders understand their obligations under the law, created a special web site devoted to posting information and answering questions about CPSIA, and responded to thousands of inquiries from affected manufacturers, retailers, resellers, and consumers.

CPSC RESOURCES

27. **In her March 20th response to Mr. Dingell, then-Acting Chairman Nord suggested a lack of resources impacted not only CPSIA implementation, but also the Commission's other non-CPSIA safety mission activities. Specifically, she stated that CPSIA implementation, requests for CPSIA exclusions, Virginia Graeme Baker Pool and Spa Safety Act, the Children's Gasoline Burn Prevention Act, and the rest of the CPSC's ongoing safety mission *"severely***

overstretched the agency staff and has begun resulting in delays in implementation that will continue until we are able to fully hire and otherwise maximize the resources that have just been provided to the agency for the second half of fiscal year 2009." **Similarly, in your August 18 signing statement excluding certain materials from testing and certification you stated *"The Commission has limited resources to make these types of determinations while also vigorously attempting to implement other provisions of the CPSIA and carry on the day to day business of the agency."***

a. Where do the Commission resources now stand?

Answer: CPSC's appropriated funds in 2009 were $105.4 million to fund 483 staff. For 2010, the President's request pending before Congress for CPSC is $107 million to fund 530 staff. The House has approved a $118 million level for 2010 while the Senate Appropriations Committee has reported out a level of $115 million.

b. How will the delay in additional resources affect continued implementation of CPSIA – either mandated actions or CPSIA-related actions such as exemptions?

Answer: The full 2009 appropriation was not enacted until the sixth month of fiscal year 2009. This resulted in delays in staffing up to the desired 483 employee level; we are only now approaching the desired 2009 staffing level.

c. How many exemption requests has the Commission received? How many requests has the Commission responded?

Answer: The Commission has procedures for requesting a determination that a certain material or product does not and would not exceed the lead content limits. The Commission has received approximately 270 requests for lead determinations. These requests were all addressed in the determinations rule, which is codified under the Commission's regulations at 16 C.F.R. § 1500.91. The Commission also has procedures for requesting an exclusion from the lead content limits for a material or product that exceeds the lead limits. Five requests have been received to date (youth motorized recreational vehicles, bicycles and related products, pens, crystal and glass beads, and brass and mechanical components in toys). Four of these requests have been addressed by the Commission. The brass and mechanical components in toys request is currently pending before the Commission.

d. Are the Commission's other safety tasks negatively impacted by the resources demanded by the CPSIA and its mandated timelines?

Answer: One of our highest priorities has been the implementation of CPSIA. As a result, we have had to defer several hazard reduction projects that promise long-term decreases in consumer product-related injuries and deaths. These deferred hazard reduction efforts include activities for products such as cigarette lighters (mechanical malfunction), lighter amendments, bedclothes, range extinguishing systems, sensor technology, carbon monoxide alarms, high energy battery packs, bicycle integrity and illumination, sensitizers, and electric toys. We have, however, maintained our pressing consumer product safety activities such as product recalls and safety information campaigns.

28. In her March 20th response to Mr. Dingell, then Acting Chairman Nord suggested that due to the Commission's limited resources and its ongoing safety mission in non-CPSIA areas combined with the significant new responsibilities imposed under CPSIA, *"The deadlines have proven to be impracticable for our staff to meet and are presenting significant problems for the agency to solve. The Commission staff must have some relief from the deadlines imposed."* Do you believe this is still the state of resources versus burden at the Commission?

Answer: Six months have passed since this letter was sent and after much hard work by the Commission, I believe we have turned a corner. We have much hard work ahead of us, including completion of scheduled rules, perhaps refining earlier rules, and beginning the enforcement of the new rules. Each day, however, we are hiring more staff and Congress has signaled increased resources for 2010. Thus, I believe the case for relief from statutory deadlines is now substantively diminished.

29. Due to the timing of the passage of this Act and the House appropriations bills, we did not specify an authorization level for FY 2009. However, we recognized the massive burdens we placed on the Commission and authorized the CPSC at $118 million for FY 2010.

a. At what level were the Commission's appropriations for the current fiscal year, FY 2009, and when did those funds make it to the Commission?

Answer: The 2009 appropriation of $105.4 million was enacted March 11, 2009. The Office of Management and Budget (OMB) approved our apportionment request for use of the funds on April 15 with one exception. OMB placed apportionment restrictions on the use of funds allocated for the creation of the public database and information technology modernization. These restrictions required certain processes and documents be completed and approved by OMB before funds were

available for CPSC use later in the fiscal year. The majority of these funds were made available by mid-September.

b. How many rulemakings or other agency actions were mandated to be completed by the CPSIA in FY 2009?

Answer: The CPSIA required a total of 16 rules or other documents in fiscal year 2009. The CPSC began and, in most cases, completed 15 required rules and other documents and completed the majority on time despite tight statutory deadlines. (In one case, the CPSIA required the Commission to issue a final rule by a particular date; the Commission issued the proposed rule, but, due in part to a need to comply with other rulemaking requirements, was unable to issue the final rule by the date. In another case, the CPSIA required the Commission to consult interested parties on the toy standard, and the Commission fulfilled this requirement by issuing a notice in the *Federal Register* inviting public comment.)

The number of completed assignments required by the CPSIA, however, is only a partial accounting of the Commission's actual workload. For example, in some cases, a statutory requirement under the CPSIA triggered a need for the Commission to issue a proposed rule before it could issue the final rule required by the CPSIA or to issue an interpretative rule, a statement of policy, or some guidance so that interested parties could understand the Commission's interpretation of a particular requirement or could learn how to request an exemption or to pursue some other administrative action. When one considers these other rules and documents that help implement, but are not required by, the CPSIA, an *additional* 20 rules and other documents were completed during fiscal year 2009.

The only item required by the CPSIA which the Commission did not begin during the fiscal year was a "notice of requirements" relating to baby walkers, walker jumpers, and bouncers. The Commission did not begin the assigned task because the regulation specified by the CPSIA pertaining to baby walkers, walker jumpers, and bouncers was obsolete, and the Commission proposed instead to withdraw the cited regulation. Thus, it would have been inefficient and a waste of resources for the Commission to issue a notice of requirements pertaining to an obsolete rule.

c. Did the delay in appropriations have any impact on the implementation of this law?

Answer: Yes. Commission staff had to undertake CPSIA work beginning immediately upon enactment of CPSIA (August 14, 2008). Without an increase in staff, several product hazard projects were deferred in order to free up staff time for CPSIA work. These deferred hazard reduction

efforts include activities for products such as cigarette lighters (mechanical malfunction), lighter amendments, bedclothes, range extinguishing systems, sensor technology, carbon monoxide alarms, high energy battery packs, bicycle integrity and illumination, sensitizers, and electric toys.

d. Given that the budget request for FY 2010 is $107 million, $11 million less than the authorization, what impact do you foresee on implementation of this law, along with pursuit of the rest of your mission?

Answer: As we work with CPSIA, we have learned more about the requirements. As issues are addressed, we have encountered a need for greater resources. Thus, I am grateful that the House and Senate appropriations committees have reported out resource levels greater than the original request. If these funds are appropriated we will put them to good use in continuing to implement CPSIA and addressing other critical safety issues.

30. The March 20th response CPSC staff memo indicated that the timelines for rulemaking and certification of testing labs were one example where there is a mismatch in the law. Specifically, the baby bouncer standard is out of date and the Commission doesn't rely on it as it will have a new standard by February of 2010. Accrediting labs to test to a standard the Commission does not rely on was properly viewed by Commission staff as incongruous. Ultimately the Commission has wisely proposed to revoke that standard and continue relying on the industry standard. Are there similar problems caused by the mandated rulemakings and certifications that could be fixed with more time for the Commission? Would you agree it is better to have more time as a safety net rather than find out too late that the Commission does not have sufficient time to effectively implement CPSIA mandates?

Answer: In the approximately three months since I assumed the Chair, the Commission has released 12 substantive rules and policy guidance documents implementing various provisions of the CPSIA. I am also committed to meeting the remaining deadlines in the CPSIA. It is true, however, that the Commission still requires additional funding and staff resources to effectively implement the CPSIA, and the other emerging hazards that the Commission investigates.

31. Various laws administered by the CPSC use terms such as "technological feasibility," "practicable" and other similar phrases. What specific considerations do you think are important in looking at technological feasibility or practicability? In particular, should costs or economic impact be factored into these assessments? Why or why not?

Answer: Cost and economic impact are relevant to interpreting terms such as "technological feasibility" and "practicable." These terms are used in very specific

and limited places in the CPSIA and where they are used we have already embraced them in our interpretations.

RISK ASSESSMENT

32. CPSC follows a risk-based decision-making process in setting priorities and in rulemaking. Do you agree with this regulatory philosophy used at the CPSC? Does the current adoption of the CPSIA contradict or prevent this long standing policy?

Answer: The findings and purposes section of the Consumer Product Safety Act (codified at 15 U.S.C. 2051) provides that the Commission's overall, general mission is to "protect the public against unreasonable risks on injury associated with consumer products." In the CPSIA, however, Congress decided that certain areas, such as lead and phthalates in children's products, required bright-line standards.

These provisions are not contradictory; rather they express Congressional intent to apply a stricter standard to certain classes of materials and products intended for children. To this end, the Commission generally prioritizes its rulemaking based on degree of risk, except in those areas (such as lead and phthalates) where Congress has deemed certain materials as inherently risky, and has established bright-line tests for those materials.

33. Do you believe safety would be compromised if human factor studies that monitor what small children touch and play with were included as part of an evaluation to determine whether there is even a risk of exposure associated with certain products that don't meet the lead standards – such as the tire valves on a bicycle that are rarely touched and generally unavailable to small children?

Answer: Prior to the CPSIA implementation, CPSC Human Factors and Health Sciences staff routinely considered both the exposure to a chemical such as lead (*i.e.*, through children's mouthing, hand-to-mouth behaviors, or ingestion) and the toxicity of the chemical to determine an exposure level at which the chemical might be considered a hazardous substance under the Federal Hazardous Substances Act. Because the CPSIA provides specific lead content limits, rather than exposure limits, this type of assessment is not called for at present.

However, human factors analysis is part of an evaluation as to whether certain products could be excluded from the CPSIA lead content requirements. CPSC Human Factors staff have assessed children's interactions with pruducts and components, such as the tire valve on a bicycle. Staff concluded that compared to children's interactions with components such as handle bars and levers, children will have less frequent contact with tire valves, but that older children are likely to have such contact when inflating or deflating a bicycle tire. This conclusion, in conjunction with the industry-supplied data (letter from Erica Z. Jones, representing the Bicycle Product Suppliers Association, dated January 28, 2009), that showed that some

exposure to lead could occur when a child handles components such as tire valves resulted in the Commission's decision to not exclude such products from the lead content requirements of the Act.

If the Commission were to evaluate products based on exposure and risk, as discussed above, questions remain as to the appropriate test methods, the limit for lead solubility or lead exposure that should be designated, and, if the lead content requirement still applies to children's products, the specific product types that would be subject to an exposure assessment rather than the lead content requirements.

34. Most regulatory and enforcement authorities use a risk-based system to target violations, including the CPSC's joint operations with the Custom and Border Protection.

a. How do you see this principle being applied in CPSIA-related rulemakings and in CPSIA-related enforcement?

Answer: CPSC's Office of Compliance is responsible for enforcing CPSIA requirements as well as other standards and regulations. The Office of Compliance uses a variety of approaches, including risk factors, to establish priorities for enforcement each year. In some settings, we use screening criteria to zero in on violations that pose a relatively greater risk. Risk assessment also plays a major role in deciding the appropriate remedy for violations. For example, if a violation is considered to present a low risk to consumers, CPSC staff may ask the responsible party to stop sale of the item but not seek a consumer-level recall. On the other hand, if a violation is considered to present a high risk, the staff would always seek a recall and may take other action.

35. Is the agency ready to patrol safety using its discretion and new enforcement tools? Would the agency have an easier time (be more effective) if the rules permitted it to revert to risk assessment, rather than patrolling compliance with a one-size-fits-all standard?

Answer: A bright-line standard may be easier to enforce, in some cases, than an approach that is based on risk alone. Where enforcement resources are scarce, however, as is certainly true in the case of CPSC enforcement staff, it is important not to lose sight of risk in deciding where to focus enforcement. Vigorous pursuit of minor violations is not in the public interest if it means that other, higher risks go unaddressed. As explained in the response to question 34, CPSC's Office of Compliance tends to use risk assessment at several decision points in enforcement, such as deciding what products to target and what remedies are most appropriate for a particular violation.

36. Does the lead content standard present a contradiction in what presents an unreasonable risk of harm by permitting certain products to be legally entered into commerce because they are below the total lead limit, but which may have

more soluble lead than non-compliant products that exceed the total lead limits but have less soluble lead available to the child? Do you think that materials should be excluded from total lead limits if they are demonstrated to result in exposure to lead in amounts no greater than the exposure of products that comply with the total lead limits?

a. Regarding lead content and items that do not meet the total lead content limits but may only leach trace amounts of lead, during the hearing you indicated that the Commission isn't looking at the potential effect of just one item's risk of exposure if swallowed, but rather the risk of the aggregate effect if many of the like items were swallowed. How is this different than the risk that potentially exists for legally compliant products if multiple items were swallowed?

Answer: The Commission is enforcing the statutory lead limits in Section 101 as provided by Congress, which apply to a children's product or a component part thereof. Enforcing an "aggregate impact" or "cumulative effect" standard for lead in multiple children's products would require congressional action.

b. Is the Commission proposing to treat children's products, which are legally compliant under CPSIA's lead limits, as banned hazardous products if the aggregate potential exposure to lead resulting from swallowing multiple items presents an unreasonable risk of injury? If so, please indicate at what level the Commission would consider necessary to trigger such a determination.

Answer: No, the Commission has not taken this position.

37. Please provide any information the Commission has to support your testimony that swallowing 50 beads presents a health risk to children regarding lead ingestion.

a. Please provide any supporting data regarding the amount of lead that is leached and the resulting effect on blood lead level.

Answer: It is important to note that my decision to deny the Fashion Jewelry Trade Association's request to exclude crystal and glass beads contained in children's jewelry and other products from the lead content limits was based on the statutory language of the CPSIA. The amount of lead contained in the crystal bead that were tested ranged from 900 ppm to 23,000 ppm—in excess of the statutory limit set by Section 101(1) of the CPSIA, which was 600 ppm at the time and the data submitted by the FJTA indicated that some lead could be absorbed into the body.

Information about crystal beads and data on the potential exposures to lead from crystal beads was provided by the industry in their request for an exclusion from the CPSIA-

mandated lead limits (letter from Sheila Millar, representing the Fashion Jewelry Trade Association, *et al.*, dated February 2, 2009). The letter stated that a children's jewelry item would typically include 4-18 beads or stones, depending on the size of the stones.

The data for 18 types of crystal beads of varying sizes showed that extraction of lead from the beads using a mild acid solution (to evaluate possible exposure to lead if the beads were swallowed) ranged from 0.01 microgram per bead to 2.8 micrograms per bead. The former value might be considered to be so small as to be insignificant to a child's health and overall lead exposure, but ingestion of the latter sample could be considered to be an important source of a child's lead exposure that should be avoided. An abundance of research has demonstrated that there is no safe level of lead exposure. Any exposure to lead by a child that results in absorption of some lead into the body will add to a child's overall lead exposure and will have an impact on the child's blood lead level, regardless of whether a change in the blood lead level could be detected. The language of the CPSIA specifically addresses the concern about lead exposure and provides that the Commission may exclude a product from the lead limits only if it determines that the lead in the product will not result in the absorption of any lead into the human body, considering normal and reasonably foreseeable use and abuse of the product by a child, including swallowing, mouthing, breaking, or other children's activities.

The industry provided the CPSC data stating that the amount of lead exposure for the largest bead was 2.8 micrograms per bead. That number multiplied by 50 results in 140 micrograms of lead as the possible exposure.

An exposure at this level would likely result in the blood lead level increasing by several micrograms of lead per deciliter of blood. The CPSC staff had previously estimated that an acute exposure to lead by a small child could change the blood level in micrograms per deciliter by a factor equal roughly 1/20 of the ingested amount. In this case, the increase in blood lead level would be about 7 micrograms per deciliter. This would be in addition to the other sources of exposure the child already experiences. For some children, this additional lead exposure would result in the blood lead level exceeding 10 micrograms per deciliter. Once the source of exposure is removed from a child's environment, the blood lead level will slowly decrease, returning to the previous level over many months.

In 1991, the U.S. Centers for Disease Control and Prevention (CDC) set its "blood lead level of concern" that could cause adverse health effects at 10 micrograms per deciliter. The CPSC adopted the CDC's recommendation of 10 micrograms per deciliter as the threshold lead amount in determining whether to list a product as banned under the Federal Hazardous Substances Act. Research conducted since 1991 has strengthened the evidence that children's physical and mental development can be affected by blood level limits at less than 10 micrograms per deciliter.

b. Would a child swallowing 50 beads be a "foreseeable use and abuse"? If so, please provide supporting data.

With regard to foreseeable use and abuse, I will summarize data provided to the Commission on child ingestions.

The National Electronic Injury Surveillance System (NEISS) is a probability sample of approximately 100 U.S. hospitals having 24-hour emergency rooms (ERs) and more than six beds. NEISS collects injury data from these hospitals. Coders in each hospital code the data from the ER record and the data is then transmitted electronically to CPSC. Because NEISS is a probability sample, each case collected represents a number of cases (the case's *weight*) of the total estimate of injuries in the U.S. Different hospitals carry different weights, based on stratification by their annual number of emergency room visits (Schroeder and Ault, 2001).

Hazard Analysis staff searched NEISS for all cases with diagnosis code 41 (Ingested Foreign Object) and patients 18 years of age or younger. Staff then used SAS® version 9 to categorize the data by product code and age categories by quartile, and to compute estimates and the associated coefficients of variation for the number of injuries as well as the estimated number of injuries with particular characteristics such as age and associated product. A coefficient of variation (C.V.) is the ratio of the standard error of the estimate (i.e., variability) to the estimate itself. This is generally expressed as a percent. A C.V. of 10% means the standard error of the estimate equals 0.1 times the estimate. Large C.V.'s alert the reader that the estimate has considerable variability. This is often due to a small sample size.[1] Estimates and confidence intervals are not reported here unless the number of cases is 20 or more, the estimate is greater than 1,200, and the C.V. is less than 33%.

From 2000 to 2006 staff found 14,421 NEISS cases involving ingestion of a foreign object and a child aged 18 years or younger. Based on these 14,421 cases there were an estimated 365,108 emergency-room treated injuries from 2000 to 2006 involving a child 18 years old or younger ingesting a foreign object. The 95% confidence interval about the number of emergency-room treated injuries from 2000 to 2006 for children 18 years of age or younger is 307,562 to 422,653. A breakdown of the incidents by age group is given in Table 1. The age groups in Table 1 were chosen based on quartiles of age using estimated injuries.

[1] For a more detailed discussion of measures of variation associated with NEISS estimates, see Schroeder and Ault, 2001.

Table 1: Emergency-Room Treated Ingestions by Age Group, 2000-2006

Age Range	Estimate	Percent of Total	Sample Size	C.V.	95% Confidence Interval
0 – 20 months	89,588	24.5%	3,760	9.61%	72,706 – 106,470
21 months – 3 years	116,407	31.9%	4,602	8.52%	96,960 – 135,853
4 – 6 years	85,895	23.5%	3,436	7.89%	72,613 – 99,178
7 – 18 years	73,218	20.1%	2,623	7.83%	61,976 – 84,460
Total	365,108	100.0%	14,421	8.04%	307,562 – 422,653

Source: National Electronic Injury Surveillance System
U.S. Consumer Product Safety Commission, April 2007

The cases were also categorized by the product associated with the ingestion injury. The ten product categories with the highest estimates are shown in Table 2 on the next page. Note that NEISS allows for the coding of one or two products for each incident. An incident with two associated products would be counted twice in the breakdown by product category, once for each product. Of the 14,421 incidents analyzed, 683 incidents had two associated products. There are several situations where two products may be coded for an ingestion. Both products may have been swallowed. If a part of a product is swallowed, such as a battery from a toy, both the part (the battery) and the whole (the toy) may be coded. One product may also be associated with the incident but not swallowed, such as a toddler swallowing a coin found on the floor, with both the coin and the floor being coded.

Table 2: Top Ten Swallowed Products by Individuals 18 Years Old and Younger, 2000-2006

Based on Number of Estimated Emergency-Room Treated Injuries

Product Code	Product Code Description	Estimate	Percent of Total	Sample Size	C.V.
1686	Coins	177,523	48.6%	7,340	8.73%
1616	Jewelry	24,366	6.7%	971	9.65%
5004	Toys, not elsewhere classified[2]	23,240	6.4%	896	9.31%
1819	Nails, screws, tacks, or bolts	20,540	5.6%	720	8.04%
0884	Batteries	15,366	4.2%	682	11.78%
1354	Marbles	11,992	3.3%	441	12.67%
1650	Desk supplies	7,251	2.0%	254	10.92%
1682	Hair curlers, curling irons, clips, and hair pins	6,073	1.7%	276	12.42%
1729	Christmas decorations (nonelectric)	5,350	1.5%	213	13.20%
1685	Pens and pencils	5,318	1.5%	185	15.57%

Source: National Electronic Injury Surveillance System
U.S. Consumer Product Safety Commission, April 2007

From 2000 to 2006 staff found 3,760 NEISS cases involving ingestion of foreign objects and children aged 20 months or younger. Based on these 3,760 cases there were an estimated 89,588 emergency-room treated injuries from 2000 to 2006 involving children under the age of 20 months and the ingestion of foreign objects. The cases were categorized by the product associated with the ingestion injury. The ten product categories with the highest estimates are shown in Table 3 on the next page. Of the 3,760 cases analyzed, 250 cases had two associated products.

[2] Toys, not elsewhere classified is a broad category including all toys that do not have their own NEISS product code, and any case where the type of toy involved was not clearly specified. Most cases involved an unspecified toy or part of a toy, but other common toys swallowed from this category include game pieces, puzzle pieces, doll accessories, small balls, and pieces from building sets.

Table 3: Top Ten Swallowed Products by Children 20 Months Old and Younger, 2000-2006

Based on Number of Estimated Emergency-Room Treated Injuries

Product Code	Product Description	Estimate	Percent of Total	Sample Size	C.V.
1686	Coins	35,637	39.8%	1,616	12.15%
1819	Nails, screws, tacks, or bolts	6,489	7.2%	219	10.43%
1616	Jewelry	5,817	6.5%	279	13.71%
5004	Toys, not elsewhere classified	5,178	5.8%	196	16.71%
1729	Christmas decorations (nonelectric)	3,851	4.3%	151	15.31%
0884	Batteries	3,681	4.1%	177	12.99%
1682	Hair curlers, curling irons, clips, and hair pins	3,127	3.5%	145	15.09%
1137	Paper products	2,606	2.9%	89	17.83%
1807	Floors or flooring materials[3]	2,555	2.9%	90	19.89%
1650	Desk supplies	2,055	2.3%	79	18.17%

Source: National Electronic Injury Surveillance System
U.S. Consumer Product Safety Commission, April 2007

From 2000 to 2006 staff found 4,602 NEISS cases involving ingestion of foreign objects and children aged 21 months through three years old. Based on these 4,602 cases there were an estimated 116,407 emergency-room treated injuries from 2000 to 2006 involving a child between the ages of 21 months and three years and the ingestion of a foreign object. The cases were categorized by the product associated with the ingestion injury. The eight product categories with the highest estimates are shown in Table 4. Only eight product categories are shown in Table 4 due to low, and therefore unreportable, estimates for all other product categories. Note that of the 4,602 cases analyzed, 167 cases had two associated products.

[3] Note that in the case of product code 1807 (floors and flooring materials), the children are not actually swallowing parts of floors, but rather objects that were found on the floor.

Table 4: Top Eight Swallowed Products by Children 21 Months through Three Years Old, 2000-2006

Based on Number of Estimated Emergency-Room Treated Injuries

Product Code	Product Description	Estimate	Percent of Total	Sample Size	C.V.
1686	Coins	70,237	60.3%	2,826	8.66%
5004	Toys, not elsewhere classified	8,101	7.0%	303	12.32%
1819	Nails, screws, tacks, or bolts	5,975	5.1%	206	12.25%
1616	Jewelry	5,250	4.5%	212	11.12%
0884	Batteries	4,942	4.2%	218	13.08%
1354	Marbles	3,432	2.9%	134	20.11%
1682	Hair curlers, curling irons, clips, and hair pins	1,444	1.2%	69	21.01%
1729	Christmas decorations (nonelectric)	1,355	1.2%	52	20.65%

U.S. Consumer Product Safety Commission, April 2007

From 2000 to 2006 staff found 3,436 NEISS cases involving ingestion of foreign objects and children aged four through six years old. Based on these 3,436 cases there were an estimated 85,895 emergency-room treated injuries from 2000 to 2006 involving a child between the ages of four and six years and the ingestion of a foreign object. The cases were categorized by the product associated with the ingestion injury. The seven product categories with the highest estimates are shown in Table 5. Only seven product categories are shown in Table 5 due to low, and therefore unreportable, estimates for all other product categories. Note that of the 3,436 cases analyzed, 92 cases had two associated products.

Table 5: Top Seven Swallowed Products by Children Four through Six Years Old, 2000-2006

Based on Number of Estimated Emergency-Room Treated Injuries

Product Code	Product Description	Estimate	Percent of Total	Sample Size	C.V.
1686	Coins	49,974	58.2%	2,028	8.24%
5004	Toys, not elsewhere classified	6,522	7.6%	265	10.78%
1354	Marbles	5,497	6.4%	185	15.74%
1616	Jewelry	4,584	5.3%	187	11.22%
1819	Nails, screws, tacks, or bolts	3,391	3.9%	139	14.29%
0884	Batteries	3,148	3.7%	154	18.87%

1354	Marbles	2,334	3.2%	88	16.94%

Source: National Electronic Injury Surveillance System
U.S. Consumer Product Safety Commission, April 2007

Coins are by far the most common consumer product ingested, accounting for almost half of the estimated injuries (Table 2) when viewed across age. With respect to age quartiles, the highest percentage of injuries due to ingestion of coins is in the 21 month- through three year-old age group (60.3%) and lowest in the seven through 18 year-old age group (29.6%). The next three most commonly ingested product categories are jewelry; toys, not elsewhere classified; and nails, screws, tacks or bolts. These three are always in the top five regardless of age category, except for the seven through 18 year old age category, where toys rank sixth. The only other product categories to make it into the top five in any age category are batteries, marbles, nonelectric Christmas decorations, and pens and pencils.

[4] Note that product code 1103 (self-contained openers) refers to pop-top openers from soda cans.

Table 7: Emergency-Room Treated Jewelry Ingestions by Age Group, 2000-2006

Age Range	Estimate[5]	Percent of Total	Sample Size	C.V.	95% Confidence Interval
0 – 20 months	5,817	23.9%	279	13.71%	4,254 – 7,380
21 months – 3 years	5,250	21.5%	212	11.12%	4,106 – 6,394
4 – 6 years	4,584	18.8%	187	11.22%	3,575 – 5,592
7 – 18 years	8,716	35.8%	293	11.78%	6,703 – 10,729
Total	24,366	100.0%	971	9.65%	19,756 – 28,976

**"The Consumer Product Safety Commission:
Current Issues and a Vision for the Future"**

September 10, 2009

Responses of Chairman Inez M. Tenenbaum to Questions for the Record:

The Honorable Jan Schakowsky

1. **It is my understanding that in August, the CPSC granted Mattel an exemption to the requirement that toymakers use independent laboratories to conduct safety tests on their products. As you know, Mattel and its subsidiary Fisher-Price produced six toys that were recalled due to lead contamination in 2007 - affecting millions of toys. Those recalls were part of the reason that we passed the CPSIA in the first place.**

   a. **What is the ageney's justification for granting Mattel this exemption?**

      Answer: Section 14(f)(2)(D) of the CPSA grants the Commission the authority to accredit a conformity assessment body (or testing laboratory) that is owned, managed, or controlled by a manufacturer, such as Mattel, if the Commission by order finds that the testing laboratory would provide equal or greater consumer safety protection than the manufacturers' use of an independent testing laboratory and the testing laboratory has established procedures ensuring test results are protected from undue influence by the manufacturer or other interested parties, procedures to ensure the Commission is notified immediately of any attempt to hide or exert undue influence over test results, and procedures to ensure allegations of undue influence can be reported confidentially to the Commission.

      To be accredited by the Commission, all third party testing laboratories must be independently accredited to ISO/IEC 17025:2005--General Requirements for the Competence of Testing and Calibration Laboratories. The accreditation must be conducted by a full member of the International Laboratory Accreditation Cooperation--Mutual Recognition Arrangement ("ILAC-MRA").

      ISO 17025 accreditation of a laboratory includes an assessment to confirm the technical competence of the laboratory for certain testing methods and also includes an assessment of a laboratory's management and organization to ensure safeguards against undue influence. The laboratory must have arrangements to ensure that its management and personnel are free from any undue internal and external commercial, financial and other pressures and influences that may adversely affect the quality of their work.

To meet these criteria, firewalled third party testing laboratories must meet the same ISO/IEC 17025 accreditation requirements as independent third party testing laboratories, including requirements for technical competence, standards for management and organization, and safeguards against undue influence.

In addition, the laboratory must establish procedures to ensure that:

i) its test results are protected from undue influence by the manufacturer, private labeler or other interested party;
ii) the Commission is notified immediately of any attempt by the manufacturer, private labeler or other interested party to hide or exert undue influence over test results; and
iii) allegations of undue influence may be reported confidentially to the Commission.

Application materials submitted by Mattel and reviewed by Commission staff demonstrated the required procedures were in place. The firewalled laboratory employees also received training on the procedures.

b. I understand that Mattel demonstrated that their testing was protected from corporate influence. How can CPSC ensure that the testing is kept truly separate from other parts of the company?

Answer: Commission staff reviewed Mattel's organizational charts to ensure the reporting structure properly isolated laboratory personnel from production, sales, and marketing functions. It should also be noted that in order to maintain their ISO/IEC 17025 accreditation, the laboratories undergo periodic audits that include an assessment of a laboratory's management and organization to ensure safeguards against undue influence.

c. Mattel also sends some toys to third party testers. What percentage of Mattel toys will be tested by the company's own labs?

Answer: That information is not available to Commission staff.

d. Are their other companies that have sought this arrangement? Which companies are they and what has been the result for these companies?

Answer: In addition to Mattel, staff have received applications from two other entities seeking accreditation as in-house firewalled conformity assessment bodies. These applications are currently under review by Commission staff and have not been submitted to the Commission.

2. **In July, the Illinois Department of Public Health, which inspects swimming facilities, estimated that more than fifty percent of pools in the state were not in compliance with the law. Press reports have indicated similar or higher levels of noncompliance in states and cities across the country and there were a number of moderate to severe drain-related injuries over the summer. What is the status of implementation of the Virginia Graeme Baker Pool and Spa Safety Act?**

   Answer: CPSC's Office of Compliance and Field Investigations is responsible for enforcement of the Virginia Graeme Baker Pool and Spa Safety Act. In Fiscal Year 2009, CPSC staff inspected nearly a thousand public pools, and more than 300 public spas. We have made compliance determinations for 909 pools thus far; of those 81% were determined to be in compliance. For spas, we have found thus far about 78% in compliance. While our sample is not considered statistically representative of pools and the inspections involved basic screening techniques, these results suggest that much progress has been made and that more work remains to be done.

   Our inspections included 54 pools and 29 spas in the State of Illinois. We found that 74% of the inspected pools in Illinois were in compliance—a bit below the national average—and 86% of the inspected spas were in compliance—a bit above the national average.

   The Office of Compliance has awarded contracts to a number of state and local jurisdictions to conduct additional pool inspections for the CPSC. One of the successful bidders was Winnebago County, Illinois. The Illinois Department of Public Health also expressed interest in the program, but ultimately declined to bid on the grounds that state law prevented it from complying with the nondisclosure terms of the contract.

3. **Chairman Tenenbaum, as you know, the CPSIA has called for a scientific review of the health effects on children of three of the currently banned phthalates – DINP, DIDP, and DnOP. As I understand it, a Chronic Hazard Advisory Panel (CHAP) of independent scientists is currently being convened to conduct the review.**

   a. **What stage is the CHAP process in?**

      Answer: The CPSC staff is in the final stages of compiling a list of possible candidates for Commission consideration. Staff received names of scientists from the National Academy of Sciences (NAS). The nominees have been contacted by the staff and asked to indicate their interest in serving on the CHAP. Responses have been received from most, but not all, of the nominees. Once the information provided by the interested nominees has been reviewed by the CPSC Office of General Counsel's ethics officials for conflicts of interest and cleared, staff will forward to the Commission a proposed list of candidates for the CHAP.

b. When can we expect the panel to be named?

Answer: The staff hopes to transmit its recommendations to the Commission in November. The Commission will then vote on the information provided to them.

c. When can we expect the first meeting to take place?

Answer: After the Commission chooses the CHAP members, they will be polled for availability. The first meeting will take place on a date mutually acceptable to all CHAP members. The meeting date chosen will also have to take into account the time needed to give the public advance notice of the meeting in the Federal Register.

d. What was the process for vetting the candidates for possible conflicts of interests – and ensuring that the individuals appointed come to the panel without a preformed opinion?

Answer: The Consumer Product Safety Act (CPSA) specifies criteria for selecting CHAP members (section 28). The CHAP is composed of 7 members appointed by the Commission from a list of 21 individuals who are nominated by the President of the National Academy of Sciences who:

> (1) are not employees of the federal government, except for the National Institutes of Health, National Toxicology Program, or the National Center for Toxicological Research;
> (2) do not receive compensation from or have any substantial financial interest in any manufacturer, distributor, or retailer of a consumer product; and
> (3) have demonstrated the ability to assess critically the chronic hazards and risks to human health presented by the exposure of humans to toxic substance as demonstrated by the exposure of animals to such substances.

In addition to excluding employees of manufacturers of consumer products, the staff also excludes employees of companies that manufacture phthalates, phthalate substitutes, or chemicals with similar properties.

To assess the potential for conflicts of interest, each nominee who was willing to serve completed a conflict of interest form (attached). CPSC attorneys under the direction of the Designated Agency Ethics Official (DAEO) reviewed the forms and curriculum vitae of each nominee. Only nominees approved by the DAEO were given further consideration. Those nominees will undergo even further screening for conflicts before a final list is submitted to the Commission for approval.

Finally, the qualifications of approved nominees are reviewed by CPSC scientists. Recommendations are based on the qualifications of the nominees. The expertise of the CHAP nominees is considered in order to ensure that the required areas of scientific expertise are present on the CHAP.

4. **I understand that the CPSC staff will play a substantial role in supporting and providing background materials for the CHAP. Given this role, I wanted to bring to your attention a rather disturbing story that ran on NPR not too long ago. The story ran several months after the CPSIA became law and focused specifically on the phthalate ban, and it quoted Dr. Marilyn Wind, the CPSC's deputy associate executive director for health sciences, as saying that she is opposed to the phthalate ban because phthalates "posed no risk to children."**

   a. **Is Dr. Wind's position that of the CPSC?**

   Answer: Dr. Wind, in the NPR interview, was discussing the Commission's prior work on Diisononyl Phthalate (DINP), the phthalate studied in response to a request to ban the use of PVC in children's products intended for children five years of age and younger. This petition was submitted to the Commission in November 1998. Dr. Wind was the project manager for that project. A Chronic Hazard Advisory Panel (CHAP), seven independent scientists recommended by the National Academy of Sciences, was convened to review all the toxicological data available on DINP and make recommendations to the Commission about the toxicity of DINP. The Federal Hazardous Substances Act (FHSA) requires that a substance must not only be toxic but there must also be exposure that would result in an unreasonable risk of injury in order to declare a substance a hazardous substance and ban it. Since there was no exposure data available, CPSC staff undertook a behavioral observation study in which 169 children were observed in their homes and day care sites, and what they put in their mouths and how long the objects remained in their months was recorded. In addition:

   1. methodology was developed to measure how much DINP migrates out of polyvinyl chloride (PVC);
   2. the methodology was validated in an international study;
   3. a "chew and spit" study was done in adult test subjects to relate the test method to what might happen in children; and
   4. toys on the market were tested.

   Based upon the recommendations of the CHAP, the data collected from the behavioral observation study, and the survey of products on the market, the staff did a risk assessment and recommended to the Commission that they deny the petition to ban PVC in toys and other products intended for children five years of age and under. This recommendation was based upon the best scientific data available at that time. In their briefing memo to the Commission, staff concluded, "The staff concurs with the CHAP conclusion

that exposure to DINP from DINP-containing toys would be expected to pose a minimal to non-existent risk of injury for the majority of children. The new data from the behavioral observation study not only confirm this conclusion, but demonstrate that children are exposed to DINP at lower levels than the CHAP assumed when it reached its conclusion." The Commission voted to accept the staff recommendation and deny the petition. Thus the Commission formally accepted the staff recommendation above. This is the only position that the Commission has taken on phthalates in children's products to date and it specifically refers to one specific phthalate, DINP. As Chairman, I will ensure that the congressional mandate of the CPSIA to look *de novo* at the issue of phthalates and their health effects on children is followed.

b. The CPSIA instructs the CPSC to conduct the scientific CHAP *de novo*, from scratch. Given that a number of career staff at CPSC were involved in the previous CHAP and some have made public statements specifically opposing the phthalates provision passed by Congress, should Congress be concerned that government scientists have a predisposition or predetermination ahead of that endeavor?

Answer: No, the Congress should not be concerned that government scientists have a predisposition or predetermination ahead of that endeavor. The previous recommendation to the Commission was based on sound science and the requirements under the Federal Hazardous Substances Act (FHSA). In preparation for the new CHAP, Commission staff is conducting a complete *de novo* review of the three phthalates temporarily banned by the CPSIA. These reviews of the current literature are from a strictly scientific point of view. The staff toxicity reviews of DINP and other phthalates are also being subjected to outside scientific peer review before being finalized and made available to CHAP members.

A new CHAP is in the process of being formed from nominations submitted by the National Academy of Sciences, as mandated under the Consumer Product Safety Act. CHAP members will review the toxicity of all the phthalates, consider exposure, make recommendations of how to deal with exposure to more than one phthalate, and make recommendations of what level of exposure could cause a risk of injury. In addition to information provided by CPSC staff, CHAP members will also be considering information from the public. The meetings of the CHAP are held in public and will provide opportunities for all points of view to be expressed.

c. How are you ensuring that the staff's personal biases do not taint the *de novo* review of the science?

Answer: Scientific staff does not approach any scientific review with "personal bias." Review of the science involves evaluation of all studies available based upon well established scientific criteria. The CPSC staff does

not advocate for or against specific chemicals or products; their concerns are focused on assuring scientific integrity and protection of public health.

5. **I understand that industry representatives have provided materials to the CPSC staff that no doubt reflect their spin on the science relating to phthalates. I also understand that those provided materials will be included in the packet of materials the CPSC staff is providing to the CHAP once appointed.**

   a. **How will you ensure that other stakeholders, including public health and environmental professionals and organizations, are given equal access to the process and that the CHAP will ultimately received the full spectrum of science available to best equip them to make a fair and thoroughly informed decision?**

      Answer: All CHAP meetings are open to the public. Stakeholders are free to submit comments or information they think the CHAP should consider. That information will all be public and part of the record. The CHAP will hold a public hearing in which they will receive testimony from interested members of the public. This will be announced in the Federal Register and on the CPSC web site.

   b. **Will the materials provided to the CHAP be made public at the beginning of the process, and will the source of the materials be identified?**

      Answer: To date, no one has submitted data or other materials for the CHAP. Any information submitted to the CHAP will be made available to the public. Copyrighted materials will be cited so individuals can access them but because of copyright law will not be made available to the public.

6. **Will the CHAP require consensus, offering only one opinion from the 7 panel members; or will individual CHAP members be allowed to offer minority opinions?**

   Answer: Section 28(d) of the Consumer Product Safety Act requires that a decision of a Chronic Hazard Advisory Panel (CHAP) be made by a majority of the CHAP. However, an effort is made to achieve consensus among the members of the CHAP. In the event that such consensus is not possible, it has been past practice to provide for differing or dissenting opinions from those presented by the majority of the CHAP.

7. **There has been some confusion and misinformation about the purpose of the ban on lead in children's products, with some people foeusing on death and injury from single exposures to lead as the key problem that the lead ban will address. Congress made clear in enacting the Consumer Product Safety Improvement Act that there is no safe level of lead, and that the risks from cumulative exposure**

are grave. Can you explain the current scientific understanding with regard to the risks from lead exposure and the impacts on children's health and development from such exposures?

Answer: CPSC staff have concluded, as have toxicologists in other federal agencies and outside the government, that there is no known safe level of exposure to lead, though it is clear that lower levels of exposure to lead are associated with fewer and less severe effects than exposure at higher levels. The staff also recognizes that it is not possible to completely eliminate lead from products, foods, or the environment, but that limiting lead content of certain products or lead exposures from products may be necessary to protect the health of children.

Lead accumulates in the body, and even small exposures contribute to the overall burden of lead in the body. Both acute exposure (*i.e.*, a single exposure incident or short term exposure) and chronic exposures (*i.e.*, occurring over a longer period of time) to lead could result in adverse health effects. In both cases, relatively high exposures are associated with symptoms of lead poisoning, including serious health effects and sometimes death. Again, lower levels of exposure to lead are associated with fewer and less severe effects than exposure at higher levels. At lower exposure levels, adverse health effects may be subtle, with no obvious symptoms or indications that exposure has occurred. For example, the scientific literature shows that lead exposures resulting in small increases in the amount of lead in children's blood (*i.e.*, 1 microgram of lead per deciliter of blood) is associated with an IQ decremeot of 1 to 2 points. This adverse effect would not be obvinus in an affected individual child.

8. **In August 2009, the Commission issued a final rule on, "Determinations Regarding Lead Content Limits on Certain Materials or Products." This rule makes determinations that certain untreated and unadulterated products, including precious gemstones, wood, natural fibers, and other natural materials do not exceed the lead content limits under section 101(a) of the CPSIA. It is not clear from the rule if this determination exempts these products from only the testing requirements of the CPSIA, or both the testing and certification requirements. Could you clarify the intent of this rule?**

Answer: The determinations rule, which is codified under the Commission's regulations at 16 C.F.R. § 1500.91, provides that those materials specifically listed in the rule do not need to be tested. The Commission is currently considering guidance that will explain that no third party testing needs to be done and therefore, no certification is required. The Commission has not yet voted on the guidance but the voted is expected to occur within the next few weeks.

Chronic Hazard Advisory Panel Questionnaire[1]

1. Name: _____

2. Employment Affiliation:

   a. Current Position and Description of Duties:

   _____

   _____

   _____

   _____

   b. Employer's Name and Address:

   _____

   _____

   _____

   c. Type of organization, e.g., health care, manufacturing, educational, testing laboratory, governmental, public interest, retail. (Please complete this item even if self-employed).

   _____

   d. Telephone number: _____

   e. Consulting work contracts and grants (current or anticipated only): Specify for whom work is done and who receives payment:

   _____

   _____

   _____

3. Financial Interests:

   a. Companies which you, your spouse, or minor children own or in which you are a partner:

   _____

   _____

   _____

[1]Office of Management and Budget Control Number: 3041-0139.

b. Companies or trusts in which you, your spouse, or minor children hold securities (stocks, stock options, bonds, etc.) that are worth more than $15,000. or which pay you more than $500 per year:

4. Any other information which you believe might relate to the questions of compensation from, or substantial financial interest in, any manufacturer, distributor, or retailer of a consumer product. (For example, do you have any continuing financial interests, through a pension or retirement plan, shared income or other arrangement as a result of any current or prior employment or business professional association.)

I certify that this information is true, complete, and correct to the best of my knowledge and belief.

CRIB SAFETY: ASSESSING THE NEED FOR BETTER OVERSIGHT

THURSDAY, JANUARY 21, 2010

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON OVERSIGHT AND INVESTIGATIONS,
COMMITTEE ON ENERGY AND COMMERCE,
Washington, DC.

The Subcommittee met, pursuant to call, at 10:03 a.m., in Room 2322 of the Rayburn House Office Building, Hon. Bart Stupak [Chairman of the Subcommittee] presiding.

Members present: Representatives Stupak, Braley, Schakowsky, Christensen, Green, Sutton, Walden, and Burgess.

Staff present: Bruce Wolpe, Senior Advisor; Alison Cassady, Professional Staff Member; Michelle Ash, Chief Counsel, Commerce, Trade, and Consumer Protection; Will Cusey, Special Assistant; Dave Leviss, Chief Oversight Counsel; Ali Golden, Professional Staff Member; Erika Smith, Professional Staff Member; Ali Neubauer, Special Assistant; David Kohn, Press Secretary; Elizabeth Letter, Special Assistant; Alan Slobodin, Chief Counsel for Oversight; Krista Rosenthall, Minority Counsel; Kevin Kohn, Minority Professional Staff Member; and Brian McCullough, Minority Professional Staff Member.

OPENING STATEMENT OF HON. BART STUPAK, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MICHIGAN

Mr. STUPAK. Good morning. We are going to begin this hearing, the Subcommittee on Oversight and Investigations.

Our hearing today is entitled "Assessing the Need for Better Oversight on Crib Safety." Members will be recognized for opening statements. I will begin.

Today we are here to answer a painful and difficult question: Are we doing enough to protect infants and toddlers from injuries and death in their cribs? Most experts agree that the safest place for an infant to sleep is in a properly made crib that meets the highest safety standards. Babies sleeping on their backs in the crib with a firm mattress and without soft bedding are less likely to die from SIDS or accidentally suffocate. Our work today is critical because of the unique nature of a baby crib. As we will hear from our witnesses, a baby crib is the only product designed expressly so parents can leave their child unattended for a long period of time and be confident that their child will be safe. It is reasonable for parents to expect that the crib they purchase meets safety standards enforced by a strong regulator. Unfortunately, this Subcommittee

has learned that those reasonable expectations of crib safety have not been met.

The Consumer Product Safety Commission, CPSC, the government agency tasked with keeping consumer products safe for Americans, has recalled millions of cribs in recent years after investigating reports of broken and defective crib hardware, dropped sides that detach and poor wood quality. What is most shocking is that all these recalled cribs were certified as meeting the industry's voluntary safety standards. The crib recalls raise questions about the effectiveness of the current regulations and leave some parents who doubt whether any crib on the market in safe.

In November of 2009, the CPSC announced the recall of more than 2 million Stork Craft drop-side cribs, the largest crib recall in U.S. history, and just this Tuesday, the CPSC announced yet another voluntary recall involving 635,000 drop-side and fixed-rail cribs manufactured by Dorel Asia Corporation. Congress instructed the CPSC to revisit its safety standards for cribs under the Consumer Product Safety Improvement Act of 2008. CPSC is prepared to meet that obligation. Our hearing will detail the recent crib recalls and consider how CPSC plans to prevent cribs with significant defects from entering the market. We will also examine industry's role in ensuring that their products are safe and if crib standards are designed to keep consumers safe.

Today we will hear specifically about the safety concerns of drop-side cribs. A drop-side crib allows a parent to raise and lower the front of the crib for easy access to their baby as opposed to a fixed-rail crib, which has four sides that do not move up or down. According to the Juvenile Products Manufacturers Association, retailers sold approximately 500,000 full-sized cribs in 2008, of which 15 to 20 percent had drop sides. Since 2005, the CPSC has announced more than 30 recalls of 7 million cribs for a variety of safety problems, many of them involved drop sides. CPSC experts have found that mattress support brackets and drop-side hardware can break, deform or are lost. Design flaws permit consumers to intentionally or unintentionally install the drop-side railing upside down, putting unintended stress on the crib hardware. Many different problems can cause the drop side to detach, creating a dangerous gap between the crib railing and the crib mattress. As this simulated picture from the CPSC shows—it should be up here on our screen—in some cases the body of an infant or toddler can become trapped in the space and a child can suffocate.

Since 2007, the CPSC has issued recalls involving millions of drop-side cribs sold by different manufacturers. The CPSC has issued four recalls of drop-side cribs manufactured by Simplicity after receiving reports of dozens of incidents involving several deaths. In October 2008, the CPSC recalled nearly 1 million Delta brand drop-side cribs. The CPSC issued two recalls in 2009 of Stork Craft drop-side cribs for problems associated with the brackets that hold the mattress in place and problems with the cribs' plastic hardware. The CPSC linked four deaths associated with Stork Craft faulty cribs. In November 2009, a recall involved more than 2 million cribs, the largest crib recall in U.S. history.

The fact that most recalls have involved cribs that were built in compliance with current voluntary safety standards shows that our

system for measuring and ensuring and enforcing crib safety is not working. The Juvenile Products Manufacturers Association, a national trade association representing more than 250 companies, certified that Simplicity, Delta and Stork Craft cribs involved in each of these recalls met all U.S. standards and voluntary industry standards. The JPMA gave these cribs their seal of approval. Unfortunately, neither the mandatory nor the voluntary standards were or are strict enough. JPMA will be testifying at today's hearing, and I look forward to learning more about what the crib industry must do to improve its safety record.

In November 2008, the CPSC acknowledged that the mandatory and voluntary standards do not include adequate performance requirements for durability of drop-side crib hardware, the strength and quality of the wood used to make the cribs, and the utility and clarity of crib assembly instructions. I look forward to the CPSC chairperson's testimony today about what the Commission can do to develop and enforce stronger crib safety standards.

Today we will also examine the November recall of 2 million Stork Craft drop-side cribs as a case study on the need for better regulation and oversight of crib safety. First, what can Congress, the CPSC and crib manufacturers learn from these massive recalls? And second, how does the CPSC plan to address the ongoing safety problems with drop-side cribs under its rulemaking authority? The CPSC has the legal authority to tackle this problem and restore American consumers' confidence in the safety of cribs. Because of the work of some of the members of this Subcommittee, particularly Congresswoman Schakowsky, the Consumer Products Safety Improvement Act requires the CPSC to study and develop safety standards for durable nursery products including full-sized cribs. The Act directs the CPSC either to accept the existing voluntary safety standards for these products and make them mandatory or provide a stricter federal safety standard.

Our hearing today consists of three panels of witnesses. First we will hear from Mrs. Susan Cirigliano, who lost her son Bobby in 2004 when the drop side of Bobby's crib detached and he suffocated. Mrs. Cirigliano and her husband have been working to ban drop-side cribs in New York State. Second, we will hear from Michael Dwyer of the Juvenile Products Manufacturers Association, and Nancy Cowles of Kids in Danger, a consumer organization founded in 1998 by the parents of a toddler who died when a portable crib collapsed around his neck. These witnesses will be able to share their perspectives on crib safety, consumer protection, and comment on CPSC's rulemaking authority. And finally, we will hear from the chairperson of the Consumer Product Safety Commission, Inez Moore Tenenbaum.

I want to thank all of our witnesses for participating in today's hearing. Particularly, I want to thank the Ciriglianos for their time, their testimony, traveling from New York to share their personal tragedy with us and the American people.

In preparation for this hearing, the Subcommittee requested and received documents from the Consumer Product Safety Commission and the Juvenile Products Manufacturers Association. The CPSC and the JPMA have been very cooperative with the Subcommittee document request and produced ten of thousands of pages of docu-

ments over the holidays. I appreciate their cooperation with this important inquiry. In addition, the Subcommittee requested documents from Stork Craft, a Canadian-based crib manufacturer whose drop-side cribs were the subject of the largest recall in CPSC history. Stork Craft has pledged its cooperation, and just yesterday provided the Subcommittee with its first submission of some responsive e-mails. I urge Stork Craft to cooperate fully and complete its production of documents promptly. Stork Craft will not be testifying here today but we look forward to reviewing their submissions, the documents they submitted yesterday, and reserve the right to schedule an additional hearing if necessary to bring Stork Craft here and to explain their role in the recall process and its responsibility to ensure the safe manufacture of cribs.

With that, I will yield back the balance of my time.

I would next like to turn to the ranking member of this Subcommittee, Mr. Walden of Oregon, and they have been very cooperative. We have worked well on this one and I think we may have future hearings, but Greg, thanks for your efforts on this issue.

OPENING STATEMENT OF HON. GREG WALDEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OREGON

Mr. WALDEN. Thank you, Bart, and I appreciate your holding this hearing and the work that both sides have done on this issue. I first want to mention that I am also scheduled to be in a Telecommunications Subcommittee markup session that is going on right now. We are actually voting on a couple of bills, so I may have to step out and go down to that committee and then I will return.

I want to extend a warm welcome to the Ciriglianos. We really feel awful about the loss that you have suffered. It is unthinkable and it is the last thing any parent wants to go through, and so you have our deepest condolences and sympathy. Thank you for traveling here. Thank you for telling us your story. We look forward to your testimony, admire your courage and your willingness to speak up and make a difference in public policy.

The U.S. Consumer Product Safety Commission is charged, as you have heard from my colleague, with protecting the public from unreasonable risk of serious injury or death from thousands of products. Infant cribs are one of the products under CPSC's jurisdiction and a major focus of that agency. The Commission has acted in the past several months to recall millions of drop-side cribs. Today we have an opportunity to examine the recall process and product integrity questions raised by the latest Stork Craft brand crib recall and understand the roles of the company, the agency and the consumer play in ensuring the effectiveness of the recall and keeping children safe. Our goals here today are first to identify the strengths and weaknesses of the current system, and second, to discuss possible solutions to improve safety and oversight while still allowing access to a wide range of products with the assurance of the public's safety. We will also consider the ASTM international standards specifically for crib manufacturers that were released in December of last year. ASTM is an entity that develops technical product standards that guide the CPSC's evaluation of products. We will want an assessment from our wit-

nesses of whether the new ASTM standards will eliminate or significantly reduce the risk of serious injury.

I welcome CPSC Chairman Tenenbaum and look forward to her statement and the opportunity to ask questions. I am anxious to hear if and when the Commission will adopt the ASTM standard, and if not, why not. I am also interested in learning about the complex matrix the agency uses to determine when a certain number of isolated consumer complaints and incidents evolve into a full-blown investigation and lead to an ultimate product recall.

Congress has not been inactive when it comes to increasing federal regulation of juvenile products and increasing the effectiveness of product recalls. The Consumer Product Safety Improvement Act of 2008 addresses several of these issues that bring us here today. Ms. Tenenbaum will be able to talk about the new authorities of the Commission that they have under CPSIA including new rulemaking procedures that allow the agency to revise its mandatory product standards more easily, new product registration programs and increases in the agency's budget. With the implementation in the last Administration of the early warning system, the CPSC staff and previous Commission leadership were already increasing their surveillance of cribs, bassinets and play yards. This system helped trigger the recalls of millions of cribs since that time. I hope the chairwoman will talk about this system and how it can be expanded, strengthened, improved under the new leadership of the Commission.

Since medical experts agree the safest place for an infant to sleep is in a crib, I want to know what we can do to increase consumer confidence in these products to ensure that parents are not discouraged from purchasing a crib at all. The consumer, the companies that manufacture these products, CPSC and Congress must work together to improve communications and quickly yet thoroughly respond to products that may pose a threat. I do hope that as we move forward, the CPSC will be able to maintain a strong level of collegiality amongst its five commissioners and that both Republicans and Democrats will work together to ensure that the CPSC effectively and wisely uses its new and additional resources and authorities to improve crib and product safety.

Thank you, Mr. Chairman. I look forward to the witnesses, and again at some point I will have to step out for this other markup.

[The prepared statement of Mr. Walden follows:]

Opening Statement of the Honorable Greg Walden
Ranking Member
Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
Hearing on
"Crib Safety: Assessing the Need for Better Oversight"
January 21, 2009

Thank you, Mr. Stupak.

I want to start by extending a warm welcome to our first witnesses, Susan and Robert Cirigliano (SIR-RIG-LEE-ANO). The Ciriglianos experienced an unthinkable crib-related tragedy first-hand when they lost their son Bobby in 2004. Time does not blunt the deep sadness of losing one's child and I extend sincere condolences to you. There is no greater grief than that which you've experienced.

Thank you both for traveling here today to tell your story and help us understand the issues associated with drop-side cribs from a consumer's standpoint. I admire your courage and willingness to discuss your story to

help identify ways in which we can improve the safety of cribs, the recall process, and communication among consumers, companies, and regulators.

The U.S. Consumer Product Safety Commission (CPSC) is charged with protecting the public from unreasonable risks of serious injury or death from thousands of types of products. Infant cribs are one of the products under CPSC's jurisdiction and a major focus of the agency. The Commission has acted in the past several months to recall millions of drop-side cribs.

Today we have an opportunity to examine the recall process and product integrity questions raised by the latest Stork Craft brand crib recall and understand the roles the company, the agency, and the consumer play in ensuring the effectiveness of the recall and keeping children safe. Our goals here today are first, to identify the strengths and weaknesses of the current system; and second, to discuss possible solutions to improve safety and oversight while still allowing access to a wide-range of products with the assurance of the product's safety.

We will also consider the ASTM International standards specifically for crib manufacturers that were released in December 2009. ASTM is an entity that develops technical product standards that guide the CPSC's evaluation of products. We will want an assessment from our witnesses of whether the new ASTM standards will eliminate or significantly reduce the risk of serious injury.

I welcome CPSC Chairman Tenenbaum and look forward to her statement and the opportunity to ask her questions. I am anxious to hear if and when the Commission will adopt the ASTM standard, and if not, why not. I am also interested in learning about the complex matrix the agency uses to determine when a certain number of isolated consumer complaints and incidents evolve into a full-blown investigation and lead to an ultimate product recall.

Congress has not been inactive when it comes to increasing federal regulation of juvenile products and increasing the effectiveness of product recalls. The Consumer Product Safety Improvement Act of 2008 addresses several of the issues that bring us here today. Ms. Tenenbaum will be able to talk about the new authorities the Commission has under CPSIA

including new rule-making procedures that allow the agency to revise its mandatory product standards more easily, new product registration programs, and increases in the agency's budget.

With the implementation of the Early Warning System in 2007, the CPSC staff and previous Commission leadership were already increasing their surveillanee of cribs, bassinets, and play yards. This System helped trigger the recalls of millions of cribs sinee that time. I hope the Chairman will talk about this System and how it can be expanded and strengthened under her leadership.

Since medical experts agree that the safest place for an infant to sleep is in a crib, I want to know what we can do to increase consumer confidence in these products to ensure parents are not discouraged from purchasing a crib. The consumer, the companies that manufacturer these products, CPSC, and Congress must work together to improve communications and quickly yet thoroughly respond to products that may pose a threat. I do hope that as we move forward the CPSC will be able to maintain a strong level of collegiality amongst its five commissioners and that both Republicans and Democrats can work together to ensure that the CPSC effectively and wisely

uses its new and additional recourses and authorities to improve crib and product safety.

Mr. STUPAK. Well, thank you, Mr. Walden. You make a good point. There is another hearing going on on the first floor and members will probably be bouncing in and out. It is a markup. By markup, it just means we might have a vote in committee so we may have to leave. I will stay and keep the hearing moving on.

Next, Mr. Braley for an opening statement, 3 minutes, please, sir.

OPENING STATEMENT OF HON. BRUCE L. BRALEY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IOWA

Mr. BRALEY. Thank you, Mr. Chairman and Ranking Member Walden. I can't imagine a more important hearing for this Committee to hold than the one we are having today.

As a child growing up in the late 1950s, my parents had a drop-side crib. As a parent whose children were born in the late 1980s, I purchased, assembled and my kids all spent time in a drop-side crib, and to the Ciriglianos, I want to extend to you our sympathy and also our appreciation for your courage in using this tragedy to teach others about this danger, and I can't thank you enough for coming down and spending your time to help educate us on this important issue.

I am very, very concerned about the recall, not just of these recent cribs but of the millions of cribs that have been recalled in the last several months, and I believe we need to act immediately to ensure that all cribs sold in the United States meet the highest safety standards possible. You have heard the number, 635,000 cribs made in China and Vietnam by Dorel Asia recalled, this right on the heels of the largest crib recall in U.S. history two months ago, and this has been something that hits home for me personally because the most recent recall has been linked to the October 2008 death of a 6-month-old infant in my State of Iowa who strangled after getting trapped in a Dorel Asia crib when the drop-side hardware broke. In addition to that tragedy, the CPSC received 31 reports of incidents involving Dorel Asia drop-side cribs including six reports of children being trapped between the mattress and the drop side and also received 36 reports of broken slats on the Dorel Asia crib, and this gets back to my point earlier. I can tell you having purchased and assembled a drop-side crib 30 years after I was in one, that the quality of materials being used in these cribs is much less than it used to be in terms of the wood products, and that is why we need to have a strong response to deal with this clear pattern of problems.

In their statement, Dorel Asia said that the recalled cribs meet and exceed all applicable safety standards. If that is true, then this is just one more clear indication that we need to act as quickly as possible to strengthen and enforce any standards.

These deaths are inexcusable. They involve the most vulnerable members of our population and we have no excuse for not fixing this problem immediately. I am glad to hear that CPSC has taken initial steps to address these safety concerns for cribs as mandated by the Consumer Product Safety Improvement Act, which we passed hear in 2008 and which this Committee addressed in hearings, but I am concerned about the length of time this is taking and I look forward to hearing from Chairwoman Tenenbaum about

the additional steps the Commission is taking to improve and upgrade crib safety standards.

Unfortunately, these crib recalls also illustrate the dangers of free and unrestricted trade with companies that don't have the same safety standards for manufacturing that we do in the United States. To ensure the safety of American families, we need to ensure that the countries we import products from are on a level playing field with those that are manufactured here in this country regarding product safety regulations. That is why as chairman of the Populous Caucus, I am working to make sure that future trade agreements including strong product safety standards and that products imported into the United States meet or exceed U.S. health and safety standards, and I believe that the enactment of those provisions contained in the trade act would go a long way toward ensuring the safety of imported products including cribs.

So I want to thank you, Chairman Stupak, for holding this timely and important hearing. I look forward to the testimony of all of our witnesses and I hope that this hearing will be an important step forward toward the prompt implementation and strong enforcement of the highest crib safety standards possible. I yield back.

Statement of Congressman Bruce Braley
Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
"Crib Safety: Assessing the Need for Better Oversight"
January 21, 2010

Thank you, Chairman Stupak and Ranking Member Walden for holding this important hearing today on crib safety and federal safety standards for infant cribs. I'm deeply concerned by the recall of millions of cribs in recent years and believe that we need to act immediately to ensure that all cribs sold in the United States meet the highest safety standards possible.

Just this Tuesday, 635,000 cribs made in China and Vietnam by Dorel Asia were recalled, right on the heels of the largest crib recall in U.S. history just two months ago, when the Consumer Product Safety Commission (CPSC) announced the recall of over two million Stork Craft drop-side cribs. This most recent recall has been linked to the October 2008 death of a 6-month-old infant in my state of Iowa, who strangled after getting trapped in a Dorel Asia crib when the drop-side hardware broke. In addition to the death of the child in

Cedar Rapids, Iowa, the CPSC received 31 reports of incidents involving Dorel Asia drop-side cribs, including six reports of children being trapped between the mattress and the drop side. The CPSC also received 36 reports of broken slats on Dorel Asia cribs, including two reports of trapped children and seven reports of bruises and scratches.

These numbers indicate a clear pattern of problems with this product. If Dorel Asia's statement that "the recalled cribs meet and exceed all applicable safety standards" is true, this is just one more clear indication that we need to act as quickly as possible to strengthen and enforce these standards.

The deaths and injuries of infants caused by unsafe cribs are simply unacceptable, and we have no excuse for not fixing this problem immediately. I'm glad to hear that the CPSC has taken initial steps to increase safety standards for cribs, as mandated by the *Consumer Product Safety Improvement Act*, which Congress passed in 2008, but I'm concerned about how long this is taking. I'm looking forward to hearing from Chairwoman Tenenbaum about the Commission's plans to improve and uphold crib safety standards and about the support and resources the Commission needs from

Congress to help with and expedite this critical and long-overdue process.

Unfortunately, these crib recalls also illustrate the dangers of free and unrestricted trade with countries that don't have the same safety standards as the United States. To ensure the safety of American families, we need to ensure that countries we import products from are on a level playing field with regards to product safety regulations. That's why, as the Chairman of the Populist Caucus, I'm working to ensure that future trade agreements include strong product safety standards and that products imported into the United States meet or exceed U.S. health and safety standards. I believe that the enactment of these provisions included in the *TRADE Act* would go a long way towards ensuring the safety of imported products, including cribs.

Thank you again, Chairman Stupak, for holding this important and timely hearing today. I look forward to hearing the testimony of all the witnesses, and hope that this hearing will be an important step forward towards the prompt implementation and strong enforcement of the highest crib safety standards possible.

Mr. STUPAK. Thank you, Mr. Braley. Mr. Burgess, opening statement, 3 minutes, please, sir.

OPENING STATEMENT OF HON. MICHAEL C. BURGESS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF TEXAS

Mr. BURGESS. Thank you, Mr. Chairman.

Mr. Chairman, of course we are here today because of a tragedy. It is a tragedy that we cannot reverse. Maybe we can prevent future tragedies. I am profoundly regretful that for so long the standards as they relate to crib safety have been voluntary and not mandatory despite more than 7 million cribs being recalled in the last 5 years.

We have a new commissioner at the Consumer Product Safety Commission, Inez Tenenbaum. One of her first speeches was last August and she correctly noted that a great deal of product safety occurs by relying on consensus standards coupled with regulatory authority to intervene quickly, and she prefaced this by saying that they should be voluntary consensus standards. This makes sense for a new commissioner who has witnessed the aftermaths of some of the mandates that were issued from the Congress through H.R. 4040, the Consumer Product Safety Improvement Act, because we in the Congress have yet to go back and fix some of the unintended consequences that we visited upon parents and consumers with that Act.

However, that being said, the Consumer Product Safety Improvement Act has beleaguered the Consumer Product Safety Commission. Yes, we have improved their funding. Yes, we have improved their staffing, but I will tell you, as one of the few Members of Congress who has been to the Consumer Product Safety Commission and watched the good men and women out there do their work, I will tell you that it is startling with the amount of work that the amount of safety which they are asked to assure the small staff and the rather primitive working conditions that they face on a daily basis. They don't have the manpower to implement the law and they don't have the finances and they are vainly trying to meet the deadlines imposed, and they issue stays and enforcement, stay after stay after stay and enforcement, while trying to come up with solutions and the only real solution is Congress going back and fine-tuning some aspects of that legislation and fixing the mistakes that we made when that legislation was drafted. Section 104 of the Consumer Product Safety Improvement Act specifically requires the Consumer Product Safety Commission to study and develop safety standards for durable nursery products such as infant bath seats, infant walkers and cribs. The Consumer Product Safety Commission could have either made mandatory existing voluntary safety standards or provided a stricter federal safety standard, and the Consumer Product Safety Commission worked to initiate two rulemakings by August 2009 and two more rules every 6 months until all durable nursery products have a mandatory safety standard. But to date, the Consumer Product Safety Commission has only proposed safety standards for infant bath seats and infant walkers but not cribs, the course of 30 recalls.

The crib issue is an issue of failure of those trusted by the American public to act. During the last Administration, the rule regard-

ing crib safety was being advanced but a new Administration came in and this rule has never been finalized. Here we are a year later, we see the same problems as we have seen before, and really, Mr. Chairman, we have no one to blame but ourselves for not regulating not one single product, and especially cribs.

I yield back the balance of my time.

Mr. STUPAK. Thank you, Mr. Burgess.

Mr. Green for an opening statement, please, 3 minutes.

OPENING STATEMENT OF HON. GENE GREEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF TEXAS

Mr. GREEN. Thank you, Mr. Chairman, for holding this hearing, our oversight hearing on this important issue. There have been 30 recalls since 2005. The largest such recall happened just 2 months ago when more than 2 million cribs were recalled in November of 2009. Again on Tuesday, there was a recall of more than 600,000 cribs. These major recalls demonstrate what we need to do in setting safety standards for cribs and testing and enforcement of those standards.

As a grandfather of four under 5, I want to thank all our witnesses today but particularly the Cirigliano family for the loss of their child. It leaves a hole in your heart for your whole life.

I also want to thank our Consumer Product Safety Commission Chair Tenenbaum for being here today. I look forward to hearing what actions the Commission plans to take as it reviews safety standards for cribs that are required by the Consumer Product Safety Act of 2008.

ASTM International, which provides voluntary technical standards manufacturers can follow, amended their standards last month and removed standards for what had been one of the most dangerous types of cribs, a drop-side crib, especially making any drop-side crib noncompliant with the ASTM standards. There is a serious problem in that these types of cribs are not addressed sooner either by ASTM or the CPSC when it was the drop-side crib that led to so many recalls because of the safety hazards they pose to infants and children.

In 2007, a 7-month-old in my hometown of Houston died due to a malfunctioning drop-side crib made by Simplicity. The CPSC recalled cribs made by that manufacturer but the overall issue of dangers posed by drop-side cribs is not addressed. Without knowing it, the family of the 7-month-old put the drop-side crib on upside down, the rail, and because of that the hinge on the rail broke. That allowed a gap between the mattress and the rail and the gap is where the child suffocated to death with their head against the mattress. This is not a unique problem on drop-side cribs but is one that was not specifically addressed until December 2009 when ASTM removed standards for this type of crib. CPSC now has the authority provided by the Consumer Product Safety Improvement Act to move forward with strengthening regulations relating to crib safety, and I hope it is not just setting standards but enforcing testing to ensure unsafe cribs never make it into consumer homes in the first place.

I am also concerned about the secondary market for cribs, whether it be through garage sales or resales, similar to car seats. You

can buy a car seat on the side of the road in Houston. It may be 20 years old but it doesn't meet the safety standards of today.

Again, I want to thank the chairman for holding this hearing and look forward to the testimony from all our witnesses on what Congress can do to help protect infants from these terrible accidents. I yield back my time.

[The prepared statement of Mr. Green follows:]

Congressman Gene Green
House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
"Crib Safety: Assessing the Need for Better Oversight"
January 21, 2010

Thank you Mr. Chairman for holding this oversight hearing on this important issue.

There have been 30 recalls since 2005 – the largest such recall happened just two months ago, when more than two million cribs were recalled in November 2009, and again on Tuesday, there was a recall of more than 600,000 cribs.

These major recalls demonstrate we need to do in setting safety standards for cribs and in testing and enforcement of those standards.

I want to thank Consumer Product Safety Commission Chairwoman Tenenbaum for being here today, and I look forward to hearing what actions the Commission plans to take as it reviews safety standards for cribs as required by the Consumer Product Safety Improvement Act of 2008.

ASTM International, which provides voluntary technical standards manufacturers can follow, amended their standards last month and removed standards for what has been one of the most dangerous types of cribs, the drop-side crib, essentially making any drop-side non-compliant with the ASTM standards.

There is a serious problem however, that these types of cribs were not addressed sooner either by ASTM, or the CPSC, when it was

the drop-side crib that led to so many recalls because of the safety hazard they posed to infants and children.

In 2007, a 7 month old in my hometown of Houston died due to a malfunctioning drop-side crib made by Simplicity.

The CPSC recalled cribs made by that manufacturer, but the overall issue of dangers posed by drop-side cribs was not addressed.

Without knowing it, the family of the 7 month old put the drop rail on upside-down and because of that, a hinge on the rail broke.

That allowed a gap between the mattress and the rail, and that gap is where the child suffocated to death with her head against the mattress.

This is not a unique problem among drop-side cribs, but one that was not specifically addressed until December 2009 with ASTM removed standards for this type of crib.

CPSC now has the authority provided by the Consumer Product Safety Improvement Act to move forward with strengthening regulations relating to crib safety, and I hope it is not just setting standards, but enforcing testing to ensure unsafe cribs never make it into consumers' homes in the first place.

I again want to thank the Chairman for holding this hearing today, and look forward to the testimony from our witnesses on what Congress can do to help protect infants from these types of terrible accidents.

Mr. STUPAK. Thank you, Mr. Green.

Ms. Christensen, opening statement, please.

Mrs. CHRISTENSEN. Thank you, Mr. Chairman, and I want to also thank you, Chairman Stupak and Ranking Member Walden, for holding this important hearing.

Becoming a parent marks the most important event in someone's life, and as parents and consumers, we trust that the products that we buy are safe for our children and we need to have that reassurance. However, we are here this morning because some of those products are not safe, in particular, faulty cribs that have resulted in injuries and even death, and I would like to also add my word of welcome to the Cirigliano family and extend my sympathy to them as well, and also commend them for being here today and turning their tragedy into a crusade to save lives and preventing other parents from experiencing the same misfortune.

We can all agree that we need to work diligently to strengthen crib standards and standards for every child entity and to ensure that they are meeting the highest of safety measures and providing protection to children in a manner that they are supposed to be designed to do, and I would also like to extend a thank you to all of the other witnesses for being here today and look forward to their testimonies.

Mr. STUPAK. Thank you.

Ms. Schakowsky, opening statement. I know you are probably at the other hearing but I mentioned your leading role in the Act that we just passed in 2008 and your interest in this area, so thanks for being here and thanks again for your diligence on this.

OPENING STATEMENT OF HON. JANICE D. SCHAKOWSKY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Ms. SCHAKOWSKY. Thank you, Mr. Chairman. I am happy that we are holding this hearing.

This is a life-of-death issue, the safety of cribs. Attending hearings where we hear testimony from families of children who have died in preventable accidents is one of the hardest things I do as a Member of Congress but of course nothing compared to what it means to the families like the Ciriglianos who mustered the incredible courage to come here and tell us their story so that they can prevent these accidents from happening to other children.

The Consumer Product Safety Improvement Act has taken a lot of heat over the last year or so, and it is true that under previous leadership the CPSC's implementation of the law as problematic and produced widespread confusion, particularly among small business owners, but we can't lose sight of why this legislation was passed: to protect children, children like Danny Keysar, for whom the bill is named, and Bobby Cirigliano, whose parents are brave enough to share their son's story today.

For years we have heard stories of the horrible injuries and deaths of children in cribs and it has been mentioned many times how literally millions of cribs have been recalled in the last few years. No need to go through that again. But I authored the provision in the CPSIA that requires the Consumer Product Safety Commission to develop the strongest possible mandatory standards for

durable infant and toddler products including cribs. It is my understanding that the CPSC has proposed rules for the first two products, infant bath seats and infant walkers. I am concerned that a year and a half after the bill became law, there is still no rule for cribs, and I am eager to hear from Chairman Tenenbaum, who I welcome today, about how we are moving forward on such a rule, and I also want to welcome other witnesses including Nancy Cowles, a leader with whom I have worked for years on children's product safety issues, and again, I thank you, Mr. Chairman, and yield back the balance of my time.

Mr. STUPAK. Thank you. That concludes all the opening statements of members.

I would like to call our first panel of witnesses now. Robert and Susan Cirigliano, if you would please come forward? I have a chair there. As you know, the Ciriglianos are from New York, and unfortunately and tragically they lost their son Bobby.

It is the policy of this subcommittee to take all testimony under oath. Please be advised that you have the right under the rules of the House to be advised by counsel during your testimony. Do you wish to be represented by counsel?

Mrs. SUSAN CIRIGLIANO. No, thank you.

Mr. STUPAK. The witnesses indicated they did not. Therefore, I am going to ask you to raise your right hand to take the oath.

[Witnesses sworn.]

Mr. STUPAK. Let the record reflect that the witnesses have replied in the affirmative. They are under oath. I would now ask for an opening statement, 5-minute opening statements. It will be part of the record, so if you want to submit a longer statement, you may, and it is my understanding, Susan, you are going to testify?

Mrs. SUSAN CIRIGLIANO. Yes.

Mr. STUPAK. Would you pull that mic up a little further and press the button. A light should go on there.

TESTIMONY OF SUSAN CIRIGLIANO, MOTHER OF BOBBY CIRIGLIANO, ACCOMPANIED BY ROBERT CIRIGLIANO

Mrs. SUSAN CIRIGLIANO. Good morning. We are Robert and Susan Cirigliano, also known as Daddy and Mommy, but we have only heard three of our four children call us that because our son Bobby never had the chance.

On September 15, 2004, Bobby was 6 months and 3 days old when his head and neck were caught in the detached side rail of his crib. After the drop-side detached, Bobby's head was caught between the side rail and the mattress. With his face pressed against the mattress, he suffocated. Bobby was taken from his crib, put into an ambulance, arrived at the hospital and never came home.

We miss Bobby every day, but what is most important is what Bobby misses. Bobby has an older sister who never had the chance to teach him how to get in and out of trouble. Bobby has a younger brother and sister that he has never met. Bobby has two grandfathers that he never played catch with, two grandmothers whose cookies he was never able to taste. Bobby never had a chance to wear his first Halloween costume. He didn't get to sit on Santa's lap, and never blew out a birthday candle.

Our smiles have dulled and our family will never be complete again. Other than Mommy's and Daddy's arms, Bobby was in one of the safest places, his crib. The reality is, his crib was not safe and our lives will never be the same. We refuse to allow any other families to suffer the pain we have.

While we are happy to hear about the millions of crib recalls, we are convinced that the only answer is a complete ban on drop-side cribs. We do not believe that parents realize the severity of placing their children to sleep in a drop-side crib. The one place that you would leave your child alone has become a threat. If they cannot purchase a drop-side crib, they would have no option but to purchase a stationary crib. We do not believe a repair kit is the answer. If a crib has the ability to kill a child, it should not be manufactured. The recalls are downplaying the number of children that have been suffocated in a drop-side crib. Our son Bobby was not included in the CPSC's reports. Their reason for this is the location his drop-side rail detached was not the same as the other infants. Our problem with this is the investigator's report stated the bottom left rail was not secure while Bobby's rail detached on the lower right side. The point is, bottom left, bottom right, Bobby was asphyxiated and died when his drop-side rail detached and he was trapped between the mattress and the side just like infants before him and just like infants after him. The number of infants reported should not be determined where the rail detaches but by the end result.

We have in the last 5 months worked with Legislation in Suffolk County having a bill passed banning the sale of drop-side cribs. We have worked with Nassau County Legislation banning the sale of drop-side cribs and are waiting the bill's signing. We are currently working with Rockland County Legislation to have the ban passed there also, which by the way, it passed on Tuesday night.

We appreciate Congress inviting us to be here today to share our story. We hope you think of Bobby while you determine how to keep our babies safe. We are all they have. Their lives depend on it. Thank you.

[The prepared statement of Mrs. Cirigliano follows:]

Testimony of Susan Cirigliano
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigatious
"Crib Safety: Assessing the Need for Better Oversight"
January 21, 2010

We are Robert and Susan Cirigliano also known as Daddy and Mommy. But we have only heard three of our four children call us that because our son Bobby never had the chance. On September 15, 2004 Bobby was six months and three days old when his head and neck were caught in the detached side rail of his crib. After the drop side rail detached Bobby's head was caught between the side rail and the mattress. Wit his face pressed against the mattress, he suffocated. Bobby was taken from his crib, put into an ambulance, arrived at the hospital and never came home.

We missed Bobby everyday but what is most important is what Bobby misses. Bobby has an older sister who never had the chance to teach him how to get in and out of trouble. Bobby has a younger brother and sister that he has never met. Bobby has two grandfathers that he never played catch with. Two grandmothers whose cookies he was never able to taste. Bobby never had a chance to wear his first Halloween costume. He didn't get to sit on Santa's lap and never blew out a birthday candle.

Our smiles have dulled and our family will never be complete again. Other than Mommy and Daddy's arms Bobby was in one of the safest places - his crib. The reality is his crib was not safe and our lives will never be the same. We refuse to allow any other family to suffer the pain we have.

While we are happy to hear about the millions of crib recalls we are convinced that the only answer is a complete ban on drop side cribs.
We do not believe that parents realize the severity of placing their children to sleep in a drop side crib. The one place that you would leave your child alone has become a threat. If they cannot purchase a drop side crib they would have no option but to purchase a stationary crib.

Another reason we feel strongly about the ban is the CPSC's approach with the recalls. We do not believe a repair is the answer. If a crib has the ability to kill a child it should not be manufactured. The recalls are downplaying the number of children that have been suffocated in a drop side crib. Our son Bobby was not included in the CPSC's reports. Their reason for this is the location his drop side rail detached was not the same as the other infants. Our problem with this is the investigator's report stated the bottom left rail was not secure while Bobby's rail detached on the lower right side. The point is bottom left, bottom right Bobby was asphyxiated and died when his drop side rail detached and he was trapped between the mattress and the side rail just like infants before him and just like infants after him. The number of infants reported should not be determined by where the rail detaches but by the end result.

We have in the last five months worked with Legislation in Suffolk County having a bill passed banning the sale of dropside cribs. We have worked with Nassau County Legislation banning

the sale of dropside cribs and are awaiting the bill signing. We are currently working with Rockland County Legislation to have the ban passed there also.

We appreciated Congress inviting us to be here today to share our story. We hope you think of Bobby while you determine how to keep our babies safe. We are all they have. Their lives depend on it. Thank you.

Mr. STUPAK. Mr. Cirigliano, would you like to say anything at this time? Okay. That is no. Thank you again for being here and thank you for sharing your story.

Mrs. SUSAN CIRIGLIANO. You are welcome. Thank you for inviting us.

Mr. STUPAK. We are going to have members ask you questions, okay?

Mrs. SUSAN CIRIGLIANO. Okay.

Mr. STUPAK. Let me ask you this. In your statement, you said, "Our son Bobby was not included in CPSC's reports. Their reason for this is the location of the drop-side rail detached was not the same as other infants." Can you explain that?

Mrs. SUSAN CIRIGLIANO. When we saw an interview on television regarding the manufacture of our crib's recall, the chairperson at the time was asked why Bobby's death wasn't included in the recall, and her response was because of the location of where his drop-side rail detached.

Mr. STUPAK. There was no doubt that the rail detaching was the cause of his suffocation, it is just the location of it for——

Mrs. SUSAN CIRIGLIANO. Yeah.

Mr. STUPAK [continuing]. Their rules and regulations? Is that your understanding?

Mrs. SUSAN CIRIGLIANO. Yes.

Mr. ROBERT CIRIGLIANO. The recalled crib, the manufacturer highlighted the piece that malfunctioned on my son's crib, and that was one of the two pieces for the recall, and we would still like an explanation for it actually. We never got one. You know, the manufacturer put a picture on their website of the same exact piece that malfunctioned on my son's crib also.

Mr. STUPAK. Did you report your son's death to the CPSC, Consumer Product Safety Commission?

Mr. ROBERT CIRIGLIANO. They came down to the medical examiner's office and they inspected the crib.

Mr. STUPAK. But do you have any personal knowledge—I don't mean to push you on this. I am just trying to figure out, because it is my understanding, there is really no requirement to report it, so we really don't know how many deaths have been caused or even the number of injuries. Was there a requirement that you know of to report to the CPSC the injury to your son?

Mrs. SUSAN CIRIGLIANO. Well, I don't understand. I am sorry. Were we required to report it?

Mr. STUPAK. Right.

Mrs. SUSAN CIRIGLIANO. I don't know.

Mr. STUPAK. I mean, your son went to the hospital and unfortunately died.

Mrs. SUSAN CIRIGLIANO. Right.

Mr. STUPAK. Then who has the responsibility then to report it so we have accurate information of the information the——

Mr. ROBERT CIRIGLIANO. The last thing you are thinking about is reporting it to the CPSC.

Mr. STUPAK. I agree.

Mr. ROBERT CIRIGLIANO. But after a couple of weeks, we realized that they came down and inspected the crib, because at that point we didn't know what had happened.

Mr. STUPAK. When you say they came down and inspected the crib, "they" would be local officials or——

Mr. ROBERT CIRIGLIANO. I am not sure, but there was a report and actually there was some parts of the report that didn't make sense. The bottom right drop side was the malfunctioning side. They reported the bottom left, so that was wrong also, and also they said that they asked the medical examiner if they could come and interview us and they said the medical examiner said no, don't bother the family, and that turned out not to be true.

Mr. STUPAK. Okay.

Mr. ROBERT CIRIGLIANO. So I don't know. There is just a lot of in there that——

Mr. STUPAK. Well, that is what we are trying to——

Mr. ROBERT CIRIGLIANO. Right, and we would like some answers. That would be nice.

Mrs. SUSAN CIRIGLIANO. I am curious too because when you are in a situation like that. The last thing that goes through your mind is to contact anybody, you know what I mean? And I understand your question and it is a great question. From what I have on our CPSC report, they received their information from one of the newspaper articles, but that is a wonderful question. You know, as a parent when you are in that position, the last thing you are thinking about——

Mr. STUPAK. Nor should the burden be on you.

Mrs. SUSAN CIRIGLIANO. Right, and I am wondering, maybe the local police department, you know, somebody has to contact.

Mr. STUPAK. What we are looking for is a way to make sure that the Consumer Product Safety Commission and public authorities have the most complete information on this product or any product. I mean, just listening to the opening statements, Mr. Braley mentioned one in his area, Mr. Green mentioned one. We have you. We have at least four deaths reported in 2009. I will bet you there are many more in 2009 but no one knows because how do you get the information there, who is required to give it, in what timely manner, and then there is always the escape clause, if you will, that you have to have reason to believe whoever is doing the reporting that the crib is the one that was actually the cause of death, and there is always a way to see, well, it really wasn't the product, it was something else.

Mrs. SUSAN CIRIGLIANO. Right.

Mr. STUPAK. And in many of these cases, it looks like a lot of times they say well, the parents did this wrong. So that is why, and I don't mean to push you. I won't expect you to know who to report it to. I am just trying to——

Mrs. SUSAN CIRIGLIANO. No, I understand. We are trying to figure out the chain of, you know, how is it supposed to get to where it should be.

Mr. STUPAK. Correct. That concludes my questions.

Mr. Walden, questions, please.

Mr. WALDEN. Yes, I think you have covered most of it, Mr. Chairman, very well.

I guess the question I would have is, do you think that the new system for reporting, the early warning system and all, can be effective, as effective? I realize it wasn't in place in your situation,

the tragedy, but it looks like perhaps out of your situation and that of others. They have said, okay, we have to fix how we collect these data and how we evaluate them and how we spread that out so somebody catches these problems quicker. Are you familiar with the new early warning system? Do you think it would have made a difference in your situation?

Mr. ROBERT CIRIGLIANO. Well, yeah, there has been a lot of recalls from the early warning system, and, you know, basically the problem was that one agency wouldn't know what the other agency reported, and they couldn't get their data together and put the similarities together, and I think that is a big step that the CPSC has taken. I think it is working. I think they need—I think the big thing is to make it a mandatory. Every single crib needs to be tested and it shouldn't be voluntary. And we all know that. You know, and the other big problem is these countries that are importing these cribs into the United States and, you know, they are making them a lot flimsier. You can just tell. I mean, the plastic spring pegs have been a big issue and it is a little three-quarter-inch piece of plastic that is supposed to hold a whole side rail up, and, you know, back in the day they used to make them out of metal, and you know, they are just trying to make a cheap—they are making a cheaper product and that needs to be tested. Every single crib needs to be tested.

Mr. WALDEN. And the new standards that are coming out, and came out, I guess, the recommendations in December of last year, have you had a chance to review those, the ASTM standards?

Mrs. SUSAN CIRIGLIANO. No, I haven't seen them.

Mr. WALDEN. I would be curious to—and I realize you probably have other things going on in your life too than this, but I can certainly understand why this is such an important issue for you, but I would be curious to get your feedback at some point on the ASTM standards, because I think they address some of these issues.

Thank you, Mr. Chairman. That is all I have.

Mr. STUPAK. Thank you, Mr. Walden.

Mr. Braley for questions, please.

Mr. BRALEY. Mr. Cirigliano, I want to follow up on that point you just made because my recollection of the crib that was in our family for years is exactly as you described. The quality of the wood itself, you could probably run a tank into and it wouldn't have collapsed. I took 4 years of high school shop classes and I have assembled a lot of consumer products and I apply a lot of torque to make sure that they are properly tightened and yet I remember the one that I assembled. Even though it was on wheels and on a hardwood floor, there was a flimsiness to it just in the way that it stood there that I don't remember on the one that my parents owned. As a parent, can you just share with us where Bobby was in the number of children you had? Was this the first child you had this crib for, the second, the third? Tell us a little bit about that.

Mr. ROBERT CIRIGLIANO. No, we had the crib for my daughter, and at the time she was——

Mrs. SUSAN CIRIGLIANO. Well, we bought it for her when she was born.

Mr. ROBERT CIRIGLIANO. And when my son started using it, I guess 3 years later, and we never took the crib apart. I remember

putting it together. You know, you try and tighten everything down as tight as you can, and, you know, when you go and buy a crib, they have got all these safety labels on it. Maybe you have a false sense of security, and at that point we never realized that there were all these problems with these cribs. You just—it just wasn't out there. If it was, we would have never bought one. And I think that is a very important piece here, and Congress's voice is going to be huge in this. Getting the word out to everybody that has these cribs, they could be in the garage, up in the attic, and they go to bring it back out for a newborn in the family, they need to throw those out. They are no good. And I think the voice of Congress is going to be huge in this.

Mr. BRALEY. Mrs. Cirigliano, I want to talk to you about the safety certification on cribs in the marketplace because a lot of parents, a lot of young parents are constantly trying to educate themselves about product safety. They want to buy products that are going to take care of their children. We have seen information in preparation for this hearing that the thing that makes a crib unique, it is one of the few devices that an infant uses where you expect that child to be safe absent the constant attention of a parent. That is the whole underlying premise for having a crib so that you can go to sleep yourself at night with the confidence that child is going to wake up healthy and alive in the morning.

Mrs. SUSAN CIRIGLIANO. Right.

Mr. BRALEY. So one of the things we know is that most manufacturers who sell cribs in this country use this certification, meeting voluntary safety standards through the Juvenile Products Manufacturing Association and they certify with a seal on the product that it has been tested by independent labs and meets all current mandatory and voluntary safety requirements, and if you look up here on the screen, I believe this is the seal that is used. Is that your understanding?

Mrs. SUSAN CIRIGLIANO. Yes.

Mr. ROBERT CIRIGLIANO. Yes.

Mr. BRALEY. So was this crib that you bought for your daughter originally and that was used by Bobby, did that bear this seal?

Mr. ROBERT CIRIGLIANO. It looks very familiar. I am not sure exactly but I know it did have two seals on it, and that was one of the things that we were looking for when we went to go purchase a crib.

Mr. BRALEY. And when you look for that and see it on there, as parents, what does that say to you?

Mr. ROBERT CIRIGLIANO. It is safe, it has been tested.

Mrs. SUSAN CIRIGLIANO. It gives you a sense of security.

Mr. BRALEY. Would it surprise you to learn that the cribs involved in these latest CPSC recalls were certified by JPMA as meeting all applicable safety standards?

Mr. ROBERT CIRIGLIANO. It wouldn't surprise me, no.

Mr. BRALEY. In your opinion as parents who have purchased this product, what value does that certification seal have to parents?

Mrs. SUSAN CIRIGLIANO. Now or when we purchased the crib?

Mr. BRALEY. Now.

Mr. ROBERT CIRIGLIANO. It has no value right now.

Mr. BRALEY. And why is that?

Mr. ROBERT CIRIGLIANO. Because we've been doing a lot of research and it seems like, I mean, you are looking at millions and millions and millions of cribs that have been recalled, and the reasons for the recalls, you know, just little pieces of plastic that—and springs. You know, how long is a spring reliable?

Mrs. SUSAN CIRIGLIANO. You are talking about a spring and a plastic piece that are exactly what you use in a Bic pen. It's basically the size of what it is, and how long does a Bic pen last? I would think a majority of families do not go out and buy a new crib every time a new child is born. Most families buy one crib and they, you know, use it for the length of all of their children.

Mr. BRALEY. Well, I couldn't agree more, and Mr. Chairman, I hope that we will use this hearing as a way to identify ways to improve the safety certification process to protect the rights of consumers and the safety of infants, and I yield back.

Mr. STUPAK. Thank you, Mr. Braley.

Mr. Burgess for questions.

Mr. BURGESS. Thank you, Mr. Chairman, and thank you both for being here. I think you have already answered this with Mr. Braley, but this was a crib that you had purchased new yourselves?

Mrs. SUSAN CIRIGLIANO. Yes.

Mr. BURGESS. So this was not a hand-me-down, it was one that you had. Was this crib, did it end up on a recall list?

Mrs. SUSAN CIRIGLIANO. Yes.

Mr. ROBERT CIRIGLIANO. Yes.

Mr. BURGESS. How did you receive the notice of the recall?

Mrs. SUSAN CIRIGLIANO. By watching television.

Mr. BURGESS. So it was after the fact?

Mrs. SUSAN CIRIGLIANO. Yes.

Mr. ROBERT CIRIGLIANO. Right.

Ms. BURGESS. Now, I think, Mr. Cirigliano, you referenced this, the way the data is managed, the way the data is collected is obviously critical and the CPSC is trying to build a registry, so clearly that would be something that would be helpful and yet I get the impression from listening to your testimony that with the drop-side design, that even the registry is really insufficient, it is the design itself of the drop side. Is that correct?

Mrs. SUSAN CIRIGLIANO. That is my belief, yes.

Mr. BURGESS. And yet the drop side presumably developed at some point because someone thought it would be worthwhile to save wear and tear on mom's back as baby gets bigger and bigger and bigger to be able to change him, attend him and move him in and out. So there may be a tradeoff there but at the same time safety ought not to be the thing that we trade off, and I agree with Mr. Braley, consumers need to be informed about the potential dangers of the drop side if that indeed is what they are going to purchase. There are advantages but there are disadvantages as well. Do you think if CPSC had had registry when your crib was recalled, would that have been helpful to you all? I am worried that we don't get the word out. Now, you bought your crib new so if there was a warranty card that you returned or a website that you registered, that is one of the things that we struggled witb when we did 4040, the big improvement act on consumer product safety that we did a year or two ago, but I will tell you, I am not good

about those warranty cards myself, and as I remember cribs from my kids were little, my wife's dad got a crib down from the attic in Arkansas and brought it down to Texas and that was a crib for a couple of years, and then it went on to its next life in her sister's home for a while, and I don't know where that crib is today but I think it is still probably in circulation out there. I don't know how, you know, if that crib were on a recall list, I don't know how folks would ever know. Where that becomes important in the resale industry, the Goodwills, the Christian Community Action stores in my district that do good work for providing low-cost products to young families who don't have the wherewithal to go out and buy new products, how do you get that information to them, and that is one of the things that we struggled with when we did 4040, and I guess listening to you today, sir, it would just be if a resale shop has a drop-side crib, they need to be very, very circumspect about whether or not they go ahead with resale to another family because at least the more recent product manufacturer has left you feeling that there is going to be some danger involved in that product. Am I overstating that?

Mrs. SUSAN CIRIGLIANO. No, I agree. I definitely think there's going to be danger. That is why we feel like the ban is very important, and we have been doing a lot of media and word of mouth. I am small but I have a large mouth when it comes to this and I make sure that every person I talk to, and sometimes I feel I am being a little hurtful to the pregnant mom that I am walking up to by explaining my story to her but I think that is the only way to get it out there.

Mr. BURGESS. Well, let me just ask you, and you heard my opening statement about whether or not these safety standards be voluntary or mandatory. Do you have a feeling about that? Should the standards be voluntary?

Mrs. SUSAN CIRIGLIANO. I think they should be mandatory.

Mr. BURGESS. And the last question I have, again, you already answered it. What would you fix about the drop-side crib? Well, you would fix it by not having it. Probably fix it with an ax.

Mrs. SUSAN CIRIGLIANO. We say we would break them, burn them and throw them away.

Mr. BURGESS. I can't even tell you the crib that my kids were in. It was probably manufactured in the 1930s, and like Mr. Braley's experience, I mean, I tried hard, I think, to destroy it trying to fit it in the back of U-Hauls over several moves, and that thing was—I mean, you just couldn't destroy it.

I think we have to be careful how we proceed, Mr. Chairman. We got into a lot of difficulty with the unintended consequences when we did that big 4040 bill. I got motorcycle dealers in my district who sell used motorcycles and they are banned from selling them in case the kid eats the battery, he could get lead poisoning. I mean, that is ridiculous. And we haven't gone back and fixed that. So I do want us to be careful at the same time. I mean, here is a problem, I have got a list of crib recalls going back to the 1970s, 2 million in 2009, 1 million in 2007, 104,000 in 2005, 6,000 in 1997, 1,600,000 in 1986, 400,000 in 1979, 70,000 in 1978. I mean, clearly there is a problem here that we need to solve.

All right. I will yield back the balance of my time.

Mr. STUPAK. Thanks, Mr. Burgess. Most people don't eat batteries so I don't think it is really necessarily the law but maybe the way we apply it, and that is the reason why the testimony of the Ciriglianos and others are very helpful. I agree with you, some of the applications of the law as it was passed have not been the best by any Administration, and that is part of our job, to make sure they are done properly.

Mr. Green for questions, please.

Mr. GREEN. Thank you, Mr. Chairman, and hearing both from Congressman Braley and Congressman Burgess. When my daughter was expecting, I went up to the attic and got our crib from our children, which is the 1970s. My wife explained to me very quickly that, you know, they were too far apart, and instead of putting it out on the curb, I actually took a sledgehammer to it so nobody else could use it, and that is what bothers me, I guess, because, you know, I was going to try and use it from generation to generation. It doesn't work. Our grandchildren actually stay in a Pack and Play when they come to our house.

But I want to go to the instructions that you all received, because the child, the 7-month-old in Houston who passed away, the parents actually put the rail upside down, and did you have problems with the instructions? Having put together lots of stuff, it sometimes is real difficult, and don't torque it too much because you might have to take it off and put it back together again. Did you all have problems with the instructions?

Mr. ROBERT CIRIGLIANO. I don't remember having problems with the instructions, but the one thing I found odd was, our instructions were on the mattress board. That is the board that is put under the mattress. So you are actually putting the instructions in place, and I just remember, I mean, it was just the oddest thing and I to this day can't believe that that was done. It wasn't a piece of paper. It was on a mattress board.

Mr. GREEN. The least they could do is make it on the upside so you can read it.

Mr. ROBERT CIRIGLIANO. It was pretty bizarre.

Mr. GREEN. And I think that is something that I——

Mr. ROBERT CIRIGLIANO. That is another problem.

Mr. GREEN. They need to make sure that, one, they are easily readable, but they are also common sense-wise that you have it. And again, for the loss of your child, like I said, we have had three in the Houston area over the last few years. What a tragedy.

I yield back my time, Mr. Chairman.

Mr. STUPAK. Thank you, Mr. Green.

Ms. Schakowsky for questions, please.

Ms. SCHAKOWSKY. I will pass on questions but I just really, really want to thank you for informing us with what is probably the most compelling testimony of all, and that is your personal experiences and your advice. I think right now there is some voluntary standards about not having any drop-side cribs. We want to make sure that they are eliminated from the marketplace so no one else has your experience, and I admire you for going up to pregnant women. It may be the most important piece of advice that they get during their pregnancy, and, you know, being pushy in that sense is a really good thing. So thank you very much for being here today.

Mrs. SUSAN CIRIGLIANO. Thank you.

Mr. STUPAK. Ms. Sutton for questions, please.

Ms. SUTTON. Thank you, Mr. Chairman, and thank you very much for your testimony, for coming forward today. We are so sorry for your loss.

Mr. Chairman, I want to thank you very much for holding this hearing because, you know, it is clear with millions of cribs being recalled because of problems with drop sides, it is time for the CPSC to take action, to protect the infants and address millions of parents' concerns. You know, we have the responsibility to act to ensure that parents can lay their infant down without fear in their crib, and I am deeply concerned also that when we hear about problems, oftentimes products that recalled were manufactured in other countries, and it is unconscionable when companies and importers pay more attention to cost than to our safety. Product safety has to always be the primary focus, and so parents, as I said, should not have to worry about laying their infant child in a crib and being exposed to grave danger. And so while we are happy that recalls advise parents but it is after the danger, you know, is present and identified. The products need to be safe when they are manufactured and put on a store shelf.

Now, Mr. Chairman, one of the reasons why I appreciate this hearing and your testimony also is that it sort of draws attention to this problem where we have products coming in that consumers assume are living up to our safety standards, and they may not even know—it is impossible to subject foreign manufacturers to U.S. law, and I am going to be introducing soon a bill called the Foreign Manufacturers Legal Accountability Act to protect American consumers and businesses from defective products manufactured abroad because we need to make sure that the products being consumed in this country are safe for consumption.

So thank you again for your testimony. We are very, very sorry for your loss. But thank you for being here.

Mrs. SUSAN CIRIGLIANO. Thank you.

Mr. STUPAK. I thank you both for being here, and thanks for your testimony and really helping us understand the issue more, and we are going to continue with this hearing. You are welcome to stay if you like but we will dismiss you now, and thanks again and thanks for working with us.

Mrs. SUSAN CIRIGLIANO. Thank you.

Mr. ROBERT CIRIGLIANO. Thank you.

Mr. STUPAK. I will call our next panel of witnesses. On our second panel we have Nancy A. Cowles, executive director, Kids in Danger, and Michael Dwyer, executive director, Juvenile Products Manufacturers Association, if they would come forward?

It is the policy of this subcommittee to take all testimony under oath. Please be advised that you have the right under the rules of the House to be advised by counsel during your testimony. Do you wish to be represented by counsel? Both indicated not. Then I am going to ask you to raise your right hand to take the oath.

[Witnesses sworn.]

Mr. STUPAK. Let the record reflect both our witnesses answered in the affirmative. They are under oath. We would ask for an opening statement of 5 minutes. If you have a longer statement and

supporting documents, we will be happy to make it part of the record. Ms. Cowles, would you like to go first?

Ms. COWLES. Sure.

Mr. STUPAK. Just pull that mic up and press the button. Thank you, and good morning.

TESTIMONY OF NANCY A. COWLES, EXECUTIVE DIRECTOR, KIDS IN DANGER; AND MICHAEL DWYER, EXECUTIVE DIRECTOR, JUVENILE PRODUCTS MANUFACTURERS ASSOCIATION

TESTIMONY OF NANCY A. COWLES

Ms. COWLES. Good morning, Chairman Stupak, Ranking Member Walden and committee members. First let me thank the House Subcommittee on Oversight and Investigation for holding this very important hearing on crib safety and for giving us the opportunity to participate. I do have a much lengthier statement, which I believe I have already submitted, so I will read very briefly through a shorter statement for this purpose.

Kids in Danger is a nonprofit organization—we are based in Chicago—dedicated to protecting children by improving children's product safety. As Congresswoman Schakowsky mentioned, we were founded in 1998 by the parents of Danny Keysar, who was killed in a portable child crib at his childcare location. Even though the home had just been inspected days before, the crib had been recalled 5 years earlier, had already killed four children, and yet there was no publicity. No one knew that it was recalled in that home. And our mission is to prevent this from happening to other children, to promote the development of safer children's products, advocate for children, and educate the public about these important issues.

And I think it has been said, the crib is first and foremost a safety device. Cribs are the only children's product that is made to leave a child unattended so that someone so aptly said, you can get a few hours sleep yourself. But concerns about this issue are not new. Crib durability, more strenuous testing, hardware failures, assembly problems have been raised at almost every one of the voluntary standard-setting meetings that I have attended since I joined that body in 2001 and yet there has been until very recently little or no change to the standard for years. And the mandatory standard has been stuck even farther back in time. Any new changes at all were made to the voluntary standard. Even the vital safety measure of banning corner posts on cribs, which led to many deaths, does not appear in the current federal standard.

The failure of the voluntary system to adequately protect children is what led Congresswoman Jan Schakowsky to first introduce the legislation that is now in the CPSIA calling for stronger mandatory standards and third-party testing back in 2001. Had we done it then, we may have a different outcome to Susan and Rob's story here. So it isn't that the problem wasn't known, rather it is that CPSC lacked the resources and authority and manufacturers lacked the will to strengthen the standards. Now with the statutory requirement in the CPSIA, we will be seeing a strong standard.

As has been mentioned, since September 2007, over 7 million cribs have been recalled by the CPSC. Most were tested to the voluntary standard and certified by the Juvenile Products Manufacturers Association. Many were recalled for hardware failures, drop-side failures, but some were recalled for clear violations of the mandatory standard. They were painted with lead paint or they simply did not meet the required dimensions. If manufacturers are making cribs that don't meet standards that can be confirmed with a tape measurer and a lead test swab, then how can we expect that they can be safe in terms of design to keep babies safe unattended?

This current situation leaves parents in a horrible position. We often get calls from parents asking for advice, what to do, especially as they hear about all these new recalls. We can be of limited help. We can't say to look for the JPMA label, even though it does indicate some minimum testing, since all of the recalled cribs primarily were certified to that standard. We can say to stay away from drop-side cribs but there is also incidents with mattress supports, hardware failure and breaking crib slats, and the last thing any of us want is for parents to get the idea that other places are safer for their baby than a crib. Babies are safest in a safe crib, and that is why this is so urgent that we solve this problem now.

Let me briefly talk about consumer use of cribs. Parents will use a crib for more than one child. They will pass them on to their sister or friends and sell them secondhand. It doesn't mean it is a 20-year-old crib they are passing on, it could be a 2- or a 3-year-old crib. I think we can assume that if someone spends, you know, up to $1,000 on a product, they aren't going to use it for 2 years and then throw it out. It is not consumer misuse when a crib is assembled, taken apart and reassembled more than once. In addition to military families—I was an Air Force brat myself who moved frequently—other families move and many parents on the advice of their doctors start with the crib in their bedroom and then need to move it to the child's bedroom later on. In these tough economic times and in the midst of a growing green mindset, manufacturers should expect that this is what will happen to their products. They will be used for more than one child or even more than just two children in a row.

So if a crib can't handle being reassembled, it should not be sold. If the crib falls apart, losing screws or the little safety plugs or has a drop side that won't stay up, parents are going to try to fix it. They aren't engineers and they do not clearly understand the risk of that action. We need to give parents a crib that lasts, hardware that doesn't fall out and clear instructions on how to use that product. We are glad that CPSC is finally moving to a strong mandatory standard. In our written statement, we have a lot of suggestions for that. But I would just like to again talk about the misassembly. Far from seeing misassembly as solely a consumer use problem, I would assert that products designed in such a way that parts can be assembled in more than one way including ways that lead to death is a design problem and not a consumer misuse problem. As I said, I have specific things, but I would also like to just mention the public consumer incident database that the CPSC is working on because I think that will also be very important for safety. That way parents can get the information themselves. If

they are about to buy a crib or have a problem with their crib, they can find other people who have the same problem. So I applaud CPSC for moving ahead with that.

And secondly, I have something I would suggest for this committee, and that is, the big problem is recall effectiveness. These cribs remain out there once they are recalled. So of the 7 million cribs recalled, more than half of them are probably still in use. We need to improve recall effectiveness. One way you could help do that is to require CPSC to report to you annually on their recall effectiveness for each of these recalls. Each manufacturer is required to file a monthly corrective action report that says how many consumers have contacted them, how many products they have replaced or fixed. If that information was public—right now it is a very difficult FOIA process to get it—I think that alone would make manufacturers work much harder to get those products out of use.

So again, thank you so much today. I appreciate it, and I would be happy to answer any questions.

[The prepared statement of Ms. Cowles follows:]

KIDS IN DANGER℠

Protecting Children by Improving Children's Product Safety

Testimony of Nancy A. Cowles
Before the House Subcommittee on Oversight and Investigations
Crib Safety: Assessing the Need for Better Oversight
January 21, 2010

Good morning Chairman Stupak, Ranking Member Walden and committee members. First, let me thank the House Subcommittee on Oversight and Investigations for holding this important hearing on crib safety and for giving us the opportunity to participate.

Kids In Danger (KID) is a nonprofit organization dedicated to protecting children by improving children's product safety. The organization was founded in 1998 by Linda Ginzel and Boaz Keysar, after the death of their son Danny Keysar in a poorly designed, inadequately tested and finally recalled portable crib. KID's mission is to promote the development of safer children's products, advocate for children and educate the general public about children's product safety.

KID works closely with other consumer groups, especially the Consumer Federation of America, Consumers Union and Keeping Babies Safe on the issue of crib safety and urge the committee to seek input from these groups as well. This testimony today represents the views of Kids In Danger along with the Consumer Federation of America.

Importance of Crib Safety

KID has always had a special interest in sleep environment safety, including cribs. The crib is first and foremost a safety device – meant to keep a child safe while sleeping and more importantly while the caregiver is sleeping. Cribs are the only children's product meant to be safe enough for a helpless infant to use while unattended by an adult.

The issue of sleep environments is larger than just cribs and yet the safety issues are similar across all products meant for sleeping –

- Again, cribs must be safe enough to leave the child unattended while sleeping, with the assumption that a baby will also spend some time awake, but unattended, in the product.
- Parents must understand the age, weight, height and developmental limits of each product. Bassinets can be used only until the time a baby starts to roll over or push up on her hands and knees. Crib mattresses must be lowered as a child grows. And most cribs are considered safe sleeping environments only until a child can attempt to climb out – usually around age two, but sometimes earlier.
- Cribs are usually set up in the home by the consumer. Rarely do they come pre-assembled or does a professional from the manufacturer or retailer come to the consumer's home for installation.
- Cribs are probably the most expensive nursery item parents buy. It should be expected that parents plan to use cribs for more than one child or sell or hand it down when their children outgrow it.
- Cribs are often taken apart and reassembled, either between children or while moving or changing location in the home. In between, they may be stored in attics, basements or garages until needed again.

History of crib standards and safety efforts

While we appreciate the committee taking the historic step of holding a hearing about crib safety, concerns about this issue are not new. Back in 1984, the parents of Danny Lineweaver started the Danny Foundation after their Danny was strangled on the corner post of a crib. Their experience led to changes in the voluntary standard (ASTM F 1169) on that issue and others. I joined the ASTM

International subcommittees on juvenile products in the spring of 2001. Since that time, and even before, crib durability, more strenuous testing, hardware failures and assembly problems have been raised at every meeting, addressed by task groups, and the subject of testing on everything from humidity to side impact – with little or no changes to the standard for years.

At the same time, the mandatory standard has been stuck in time as well. All new changes have been made to the voluntary standard – even the vital safety measure of banning corner posts on crib was integrated into the ASTM voluntary standard and does not appear in the Federal standard.

In 2001, Marla Felcher's book, **It's No Accident, How Corporations Sell Dangerous Baby Products**[1], was published. All the concerns raised here today are addressed in that book. The failure of the voluntary system to adequately protect children is what led KID to support the drafting of strong mandatory standards for cribs and other juvenile products and to require third party testing to those standards. Congresswoman Jan Schakowsky first introduced legislation calling for this in 2001; it was included in the Consumer Product Safety Improvement Act of 2008 (CPSIA) and has led to U.S. Consumer Product Safety Commission (CPSC) now developing a mandatory crib standard.

In the spring of 2005, working with freshman engineering students at Northwestern University through KID's Teach Early Safety Testing (TEST) program, KID asked students to review incident data from crib injuries or failures and design a product that would address a prevalent hazard. The students chose to develop an aftermarket device that parents could install to prevent drop-side failures. Nineteen year old students could see more than four years ago that this was a likely failure scenario.

---

[1] Felcher, E. Marla. *It's No Accident: How Corporations Sell Dangerous Baby Products*. Monroe, ME: Common Courage, 2001. Print.

So, it is not that the problem wasn't known; rather it is that CPSC lacked the resources and authority, and manufacturers lacked the will, to strengthen standards. Now, with the statutory requirement in the CPSIA, a strong standard must be developed.

Current State of Crib Safety

Since September 2007, 5.8 million cribs have been recalled in the U.S. – this number does not include at least a million more of the same cribs that were recalled in Canada. Most were certified by the Juvenile Products Manufacturers Association, indicating compliance with the ASTM standard for full-size cribs, which includes the mandatory federal standards as well. Many were recalled for hardware failures and drop-side failures, but some were recalled for clear violations of the current mandatory standard – painted with lead paint or not meeting the required dimensions to keep a baby safely contained in the product. If manufacturers are making cribs that don't meet standards that can be confirmed with a tape measure and lead testing swab, it is not surprising that their designs lead to hardware failures that cause entrapments and deaths.

But recalls don't paint the full picture. Cribs still on the market have similar hardware and drop-side failure incidents to those that have been recalled. KID received information from an attorney[2] that detailed an incident in a Dorel Juvenile Group crib that appears identical to those involving both Simplicity and Storkcraft cribs that have been recalled. Kids In Danger is currently working with a mother whose new Graco crib's drop-side fails continually and yet the companies involved won't replace her product. A recent document sent to the ASTM task group that met these last two days on the crib standard listed more than 300 incidents.

[2] Kelly, Charles, Hersh & Hersh,. "Citizen Letter on Dorel Industries Inc. Drop-Side Cribs." Letter to Theresa Nelson, CPSC. 7 Dec. 2009. MS.

The current situation leaves parents in a horrible position. Kids In Danger get calls often asking which cribs are safe, which ones won't be recalled. We can be of limited help. We can't say to look for the JPMA label, even though it does indicate minimum testing – since most of the recalled cribs were certified. We can say to stay away from drop-side cribs, but there are also incidents and deaths with mattress support issues, fixed side failures, other hardware failure and breaking crib slats. Other parents, who may already have a drop-side crib, now hear of the move away from this design and wonder what to do with their crib. The last thing any of us want is for parents to begin to believe other places are safer for their baby than the crib. That is what gives urgency to the development of a strong standard with rigorous testing requirements – so parents can rest assured while their baby sleeps at night that the crib is safe.

Consumer Use of Cribs

Let me address consumer expectation and use of cribs and other sleeping environments. There is not a consumer out there who expects to pay anywhere from $200 to over $1000 for a crib, use it for two years for one child and then destroy it. We welcome the addition of 'lifetime products' that allow parents to convert a crib to a toddler bed and then an adult bed – increasing the likelihood a new crib will be bought for a new child. But in reality almost every crib is used for more than one child, for more than 2 years. Using the same crib for all of your children, even if you have many; lending it to your sister, donating it to charity or even selling it, is not a misuse of a product. In these tough economic times and in the midst of a growing 'green' mindset, it is exactly what manufacturers should expect will happen to their products.

At ASTM meetings, currently the only forum for discussing cribs, CPSC brings incident data on these products for the committee to review and consider if changes to the standard are needed to address a safety hazard. Automatically, the manufacturers in the room want to dismiss any incident in a crib older than five

years that has been used more than once – somehow blaming the family for thinking their product should last through more than one child. Here are the facts of consumer use:

- Parents will use a crib, bassinet and portable crib for more than one child. They will offer these products to their family and friends and even sell them secondhand. It isn't consumer misuse when a crib is assembled, taken apart and reassembled more than once. In addition to our military families who move frequently, other families do move and many parents, on the advice of their doctors, initially set up a crib in their room and then move it. Portable cribs are meant to be set up and taken down numerous times. So if a crib can't handle being reassembled – it should not be sold.

- If a crib falls apart, losing screws or little safety plugs, or has a drop side that won't stay up – parents are going to try to fix it. They aren't engineers in most cases and don't clearly understand the risk that a different screw or even duct tape might pose. Give parents a crib that lasts, hardware that doesn't fall out and clear instructions on how to assemble, store, and use the product.

CPSC Development of a Strong Mandatory Crib Standard

CPSC staff, in particular Patricia Edwards and Jonathan Midgett, have been strong advocates for standards and testing requirements to address the failures being reported to the agency. KID is confident that now, as they work on the mandatory standard required by the CPSIA, that the staff will continue to press for a strong standard that will assure parents of the safety of their crib. KID applauds the CPSC's decision to move up the development and release of that standard to this year – it is a crisis situation that needs an immediate response.

There are not adequate performance requirements in either the mandatory or ASTM voluntary standards pertaining to: (1) the durability of drop-side systems

and related hardware, (2) the durability of other crib hardware, (3) wood strength or quality, (4) the hazards that can result from incorrect assembly and reassembly/storage issues and (5) warnings to parents to ensure safe usage.

ASTM just spent two days at CPSC working to address these shortcomings in the voluntary standard. Once this process is complete, hopefully at the full ASTM juvenile product subcommittee meeting in March, CPSC can more easily integrate the voluntary standard into the new mandatory one.

We also urge CPSC to look beyond ASTM and consider all current test methods in other standards, including crib standards from Underwriters Laboratories (UL) developed in 2001, British Standards Institute (BSI), Health Canada, and the International Organization for Standardization (ISO), as well as retailers' internal testing methods that have been shared with CPSC (such as those from Toys"R"Us). The UL standard was developed with input from many parties and appears to be the most rigorous standard currently available – exactly what is needed to stop the myriad failures seen in the field.

Recommendations for a Strong Mandatory Standard

The ASTM F1169 standard now contains an effective ban on the drop-side design of cribs. While the need for durability testing for drop-side hardware and other hardware issues has been discussed for years, the ban on the design was a new proposal in the past year. While it solves the problem for drop-side crib failures, it does nothing to subject cribs to more strenuous testing that would weed out designs that weren't durable and bring to light hardware issues. Consumer groups support the ban – the injury and death rate in these cribs has been too high, but still believe the durability question of hardware in general needs to be addressed.

One of the most important provisions to include in a CPSC mandatory crib standard is a durability test which is sometimes called a "racking test." This test

includes moving the crib and applying forces that more accurately imitate a child in a crib for longer periods of time and might loosen hardware or stress plastic parts.

The ASTM standard also addresses the issue of wood slat strength, after thousands of cribs were recalled because slats were breaking – some with only the force of a toddler waking up from a nap. CPSC should closely examine the performance standard and tests included to make sure they are adequate to address the hazard.

In 1997, Brandon Dorian was found hanging through the side rail of his Cosco metal crib[3]. His face was pressed against the mattress and he was suffocated. When assembling the crib, Brandon's grandfather had inadvertently replaced one of the side rails with the mattress support. The parts fit perfectly with one deadly difference – the slats were farther apart on the mattress support, allowing Brandon's body to slip through while his head was trapped. And Brandon wasn't the only baby trapped – the CPSC had 47 reports of misassembly and 27 reports of additional entrapments. After Brandon's death, the company recalled the crib, but due to the ineffective nature of recalls, another baby was trapped and killed a year later.

So here it is 2010 and cribs are still easily misassembled and assembly instructions are confusing and unclear. The new standard must address assembly issues as well as the likelihood that a product will be taken apart, stored and reassembled at least once in its useful life. The standard should address what type of hardware should be allowed for parts a consumer will assemble, how parts fit together and ways to increase the likelihood it will be properly assembled or reassembled. Far from seeing misassembly as solely a consumer use problem, I would assert that products designed in such a way that parts can be assembled in

---

KID Testimony, page 8

multiple ways, including ways that lead to death, is a design problem that must be solved.

In the new mandatory standard, CPSC should carefully review the warning labels and instructions. Consumers need basic straightforward information written not to appease the lawyers, but to communicate clearly to parents what is safe and what is not. Warnings should be placed where parents as well as occasional caregivers will see the information. When possible, hazards should be eliminated rather than warned against. So rather than warning parents to avoid putting the side rail on upside down, manufacturers should design the crib so that isn't possible. To avoid parents going to the local hardware store to get replacement parts, manufacturers can make screws and bolts an unusual size or shape to make that unlikely.

As CPSC writes a new mandatory standard and develops a strong third party testing program for cribs, the process must be open and inclusive. Manufacturers are an important sector of the standards setting process –their knowledge and experience is vital– but other stakeholders must be involved in the process. In particular, the process by which products are tested and certified to meet the new mandatory standard must be transparent, with testing results available to consumers and others.

Other Actions to Keep Cribs Safe

In addition to the new standard that is underway and a rigorous and transparent testing program, CPSC can do more to improve crib safety.

First, CPSC should continue work already started on the public consumer incident database. This important source of safety information is scheduled to be up and running by March of 2011. The database is a vital approach to get safety information to consumers, even before there is a recall and will provide essential data to CPSC to act quickly on emerging hazards or troubling products.

Second, CPSC, with oversight from Congress, must strengthen recall effectiveness. It is not enough to recall a product if CPSC's own data shows that

most of the dangerous items remain in use. Just this week, while preparing for this testimony, I found an Evenflo Happy Cabana Portable Crib for sale through eBay, without the manufacturer's 'fix' for the hazardous product. This product was recalled in 1997 after the death of Jared Adams[4]. The provision in the **Danny Keysar Child Product Notification Act**, part of the CPSIA which require a product registration program for cribs and other durable infant and toddler products, will help get unsafe products out of consumer use. CPSC must be rigorous in monitoring not only the collection of the data and its use in a corrective action plan, but in publicizing the value in participating in the manufacturers' program as well as registering for CPSC's own recall notices.

This Committee, as part of your ongoing oversight role, could ask CPSC for an annual report on recall effectiveness. The report could include information from the monthly Corrective Action Plan reports that manufacturers file with CPSC. Currently that data is only available to the public through the lengthy FOIA process at CPSC and filings appear to be incomplete. By making this information public, the Committee will provide incentive to companies to improve their recall programs.

Finally, CPSC should use their enforcement powers to require adequate corrective actions for recalls. While manufacturers might prefer to send out a new plastic part to fix the plastic part that broke, it is often in the best interest of the consumer to replace or refund the product. A recent survey KID conducted with families in Illinois showed a marked increase in participation when a refund or replacement is offered.

Again, many thanks to CPSC staff for their hard work on crib safety and for beginning this process for a strong mandatory standard. And thanks to this Committee for airing these issues and taking seriously Congress's role of oversight of consumer safety.

---

[4] Jared, a toddler from Antioch, was the third child to die in the Evenflo portable crib, a product that has the same flawed design as the Playskool Travel-Lite that killed Danny Keysar. Another child died in 2003 in Wisconsin.
KID Testimony, page 10

Mr. STUPAK. Thank you.
Mr. Dwyer, your opening statement, please, sir.

TESTIMONY OF MICHAEL DWYER

Mr. DWYER. Thank you. Good morning, Chairman Stupak, Ranking Member Walden and members of the committee. I appreciate the opportunity to testify today about crib safety. The timing of this hearing is fortuitous since my fellow witness, Nancy Cowles, and I just spent two very productive days at the CPSC developing the new voluntary standard for full-sized cribs which the CPSC is hoping to promulgate later this year as a new federal standard. JPMA has long advocated the adoption of the more expensive ASTM F–1169 as a mandatory federal standard. At the behest of Chairman Tenenbaum, juvenile products manufacturers, ASTM and consume advocacy groups have worked with CPSC technical staff to update CPSC crib regulations. This rulemaking comes on the heels of similar rulemakings for infant walkers, bath seats and upcoming rulemakings on toddler beds and bassinets and cradles. These rulemakings are all occurring pursuant to section 104 of the CPSIA passed by Congress in 2008 with extensive input from the full committee.

JPMA has been working and will continue to work collaboratively with all stakeholders towards our common goal of promoting the safest and most effective juvenile product safety standards in the world. Our members produce products that help prevent injuries to our children. While tragic accidents often occur or may occur, these products save many lives. As an example, child restraint seats or car seats save an untold number of children's lives in motor vehicle accidents. Similarly, cribs have helped assure that children are placed safely to sleep.

JPMA offers a certification program to manufacturers who are willing to have their products tested to ASTM standards by independent third-party CPSC-accredited laboratories. The certification program was created in 1976 when manufacturers approached ASTM through the association about setting a voluntary safety standard for high chairs. That standard has evolved but it is still in effect today. Since then, JPMA has expanded the certification program to cover 19 additional products with two more pending. ASTM is one of the largest voluntary standard-setting organizations in the world with over 22,000 members worldwide. ASTM standards are developed on a consensus basis by all interested parties. Any reputable stakeholder can join a standards development committee and vote on all aspects of the standard. Every standards development committee member with a vote can influence this process.

For years, JPMA has worked alongside consumer advocacy organizations such as Consumers Union, the Consumer Federation of America, Keeping Babies Safe and Kids in Danger on the development of a variety of juvenile products standards including the full-size crib standard. The first federal full-sized crib standard was promulgated in 1973, as we heard earlier, and ASTM developed its first full-size crib standard in 1988. The voluntary standard fully incorporated the federal standard and added numerous performance testing requirements including corner posts, height restric-

tions and additional warning labels and instructional requirements. Since then it has been modified multiple times to address emerging hazards including last December's modifications which eliminated traditional drop sides and established crib slat integrity criteria and testing procedures.

F–1169 has been extremely effective. During a 2007 hearing on the CPSIA, the CPSC testified to an 89 percent reduction in crib-related fatalities due to the establishment and effectiveness of the voluntary standard. The federal standard has been updated once since its inception 37 years ago. The CPSC has relied on the ASTM voluntary standard as the best tool for promoting crib safety in the marketplace. The JPMA certification program provides consumers the best way to know that their crib meets both the mandatory and the voluntary standards.

Here is how the program works. A manufacturer must apply to participate in the program and agree to have all of its models and product category tested to the applicable ASTM standard. We do not test products ourselves nor do we maintain our own standards. JPMA relies on the experts at independent third-party CPSC-accredited labs to verify compliance to the applicable ASTM standard. JPMA has never used or promoted its own safety standards. All products including full-size cribs bearing the JPMA certification logo must meet all parts of the applicable ASTM standard.

Achieving compliance, however, is just the beginning of a manufacturer's obligation under the program. Manufacturers must also submit to ongoing testing. This testing occurs quarterly for at least 25 percent of their models so that all models are tested at least once per year. In addition, an independent third-party CPSC-accredited laboratory pulls JPMA-certified products at random from retail shelves and tests those products for compliance. JPMA is proud of our role in promoting safe sleep for the most vulnerable segment of our population.

According to First Candle, one of the Nation's leading nonprofit organizations dedicated to safe pregnancy and the survival of babies through the first years of life, there are about 4,700 incidents each year involving infant sleep environments. At least 80 percent involve parents and caregivers putting their children in an unsafe place outside the crib. A properly assembled, fully functional ASTM-compliant crib remains the safest place for our babies to sleep. Unfortunately, tragic accidents can occur with improperly assembled, second use or heirloom cribs. We believe that better information and education can help reduce these rare fatalities involving missing hardware or improperly assembled or reassembled cribs. That is why JPMA has designated safe sleep as the theme for this year's Baby Safety Month, which takes place in the ninth month of each year. JPMA is working with the CPSC, our retail partners and any interested consumer safety advocacy groups to promote safe crib assembly and safe sleep practices. JPMA welcomes all efforts in this regard.

Again, I thank you for the opportunity to appear tnday.

[The prepared statement of Mr. Dwyer follows:]

Statement of Michael Dwyer, CAE
Executive Director of the Juvenile Products Manufacturers Association
House of Representatives Committee on Energy & Commerce
Subcommittee on Oversight & Investigations
Hearing On "Crib Safety: Assessing the Need for Better Oversight"
Thursday, January 21, 2010

The Juvenile Products Manufacturers Association, Inc. (JPMA) is a national industry association representing 95% of the $2.7 billion juvenile products industry (in manufacturers' sales). JPMA was formed in 1962 with 29 industry companies and has grown to include more than 250 member companies in the United States, Canada and Mexico. These companies manufacture and/or import infant products such as cribs, car seats, strollers, bedding, and a wide range of accessories and decorative items, but not toys and not apparel. Our members produce some of the most effective, life-saving infant products in use.

Core Mission –

The core mission of JPMA is to be an information source, and to provide leadership for the industry and consumers on the production and safe use of infant products. Towards this goal, JPMA publishes *Safe & Sound for Baby*, a full-color, 16-page brochure to promote baby product use and safety. The brochure outlines safety measures for the home and car that will help ensure baby's safety and is available in English and Spanish. More than 4 million copies of the complimentary brochures have been distributed to consumers through our retail partners and the JPMA website.

JPMA also sponsors Baby Safety Month each September to help educate parents and other child caregivers on the safe selection and use of all baby products. Retail outlets and the media use Baby Safety Month to increase consumer awareness about baby safety. In the past, JPMA has partnered with CPSC and NHTSA on this program. We have also partnered in the past with Safe Kids Worldwide to promote infant safety.

Focus On Improving Safety –

The juvenile products industry has a long history of ensuring that juvenile products are built with safety in mind. Our mission is safety, and the recent recalls of drop sided cribs concern us greatly. As a father blessed with three healthy children, I know the importance of crib safety, including the proper storage, assembly and disassembly of drop sided cribs.

The primary goal of JPMA is to develop consumer education programs related to product safety. JPMA wants all parents to be confident the juvenile products they purchase are designed and built with baby safety in mind. For this reason, JPMA initiated a voluntary certification program in 1976 with the introduction of a program for high chairs. JPMA worked with consumer advocacy groups, representatives from the U.S. Consumer

Product Safety Commission, and other interested parties to develop the standard on high chairs under the auspices of ASTM International (formerly the American Society for Testing and Materials), a highly regarded non-profit organization that publishes numerous, well-regarded standards for materials, products, systems and services.

The CPSC is also a valued partner in the voluntary standard setting process and JPMA is very proud of our 30+ year relationship with the agency.

How the JPMA Certification program works –

Currently there are 20 product categories in the JPMA Certification Program: bassinets/cradles, bath seats, booster seats, carriages and strollers, changing tables, children's folding chairs, frame infant carriers, full-size cribs, gates and enclosures, hand-held infant carriers, high chairs, infant bouncers, infant swings, play yards/non-full size cribs, portable bed rails, portable hook-on chairs, soft infant carriers, stationary activity centers, toddler beds, and walkers. With the recent publishing of new ASTM standards, JPMA is also currently working on adding commercial cribs and infant bath tubs to the program. Currently, 80 companies participate in the JPMA Certification Program and we saw an increase of 15% in participation in the program in 2009.

Manufacturers seeking the JPMA Certification for their products must apply to participate in the program. They must agree to have all of their models in a product category tested by one of two official, independent third party CPSC accredited laboratories, Bureau Veritas or ITS (Intertek Testing Services). JPMA does not test products itself - we rely on the experts at certified product testing laboratories. Nor does JPMA maintain its own safety standards. Manufacturers participating in the program must have their products tested to the relevant ASTM standard for that product.

ASTM and the standards setting process –

ASTM works with regulators, safety advocates, other outside experts, and industry to develop and publish voluntary consensus standards for a wide range of products and services. Committees within ASTM, which are comprised of a balance of manufacturers, consumer groups, representation from the U.S. Consumer Product Safety Commission and other interested parties, develop and revise the standards as necessary. A full consensus standard is developed by a cross-section of stakeholders with an interest in its use. When there is a need for new standards, requests can come from trade associations, government agencies, and professional societies that do not create their own standards. Manufacturers, consumer groups, and even individuals may also request a standard. The request is presented to an ASTM technical committee and the process of standards development begins.

The ASTM process transcends what entities could do individually because it bridges gaps of technology, combines resources and overcomes bites of competition. The result is a product of the highest credibility, integrity, and marketplace acceptance.

ASTM standards are developed through a three-tiered hierarchy of main committees, subcommittees, and task groups. Task groups perform most of the "leg-work" and research that forms the basis of draft standards. Once the group completes its work, it forwards these drafts through the hierarchy for review and voting. The standard must gain subcommittee, main committee, as well as full Society approval before becoming an official ASTM International standard (there are currently 22,000 members of ASTM). At each level, voting requirements are enforced to ensure fairness. When a draft standard has been reviewed and accepted at all levels, the draft becomes an ASTM standard and is published. Depending upon the need for the standard, drafting and approval can occur in a few months, a year, or more. Fairness in ASTM standards development is ensured through: 1) a required balance of interest between producers, users, and general interest members and 2) a voting process that ensures due process.

Ongoing commitment to infant safety –

Once a manufacturer has become JPMA Certified, their testing responsibility does not end. Manufacturers must test 25% of their models each quarter with the goal that all models are tested at least once a year. If a manufacturer has invested in its own testing lab, it can perform the quarterly testing itself only if it also agrees to send the test reports to an independent lab for review, and submit to site inspections by that third party lab to ensure the manufacturer's lab is capable of performing the required tests on an ongoing basis. Otherwise, a manufacturer seeking JPMA Certification must send its products to an indepeadent third party CPSC accredited lab to meet the regular follow up testing requirements we impose.

To provide additional rigor to the program, the third party lab also pulls product from retail shelves on a quarterly basis and performs testing to all or part of the appropriate ASTM standard.

A manufacturer may only use the JPMA seal on its products after it has fully complied with these program requirements, including full safety testing of all product models to the ASTM standard by independent third party testing labs and submission to the ongoing quarterly testing requirements. Manufacturers who agree to these requirements may place the seal on their products, packaging, and in advertisements (a copy of the seal is attached herein as Attachment A). The manufacturer must adhere to all the guidelines of the program in order to remain a JPMA Certification Program participant.

JPMA publishes a *Directory of Certified Products* which is available to retailers. The directory lists the manufacturers and the products bearing the JPMA Certification Seal. It

is updated twice a year, and is also posted on the JPMA Web site for access by consumers, retailers, media, and the public.

In a 2007 Senate hearing on the reauthorization of the U.S. Consumer Product Safety Commission (CPSC), the CPSC testified that an 89% reduction in crib-related fatalities and an 84% reduction in serious injuries related to the use of infant walker was due to the establishment and effectiveness of ASTM Standards for these products.

Crib Safety –

The safety of our nation's children is always a concern to us. As a result of our extensive experience in this area, JPMA has been positioned to be part of the solution to solving children's product safety issues for over 30 years. JPMA has led the way on crib safety development from the outset. Last year JPMA members took the lead in addressing crib slat integrity and drop side failure issues, working with the ASTM crib subcommittee, which includes representatives from the CPSC and consumer advocacy groups as well as crib manufacturers. Our members' efforts resulted in a modified voluntary standard which incorporates a new crib slat integrity test and the elimination of traditional drop side mechanisms. That updated standard has just been published.

We are also proud of our history of working with advocacy groups such as the Danny Foundation, with whom JPMA collaborated to improve crib safety. Working with the CPSC, the Danny Foundation and the industry, cribs today are safer and fewer children die from corner posts, catch points, problems with structural integrity and other unsafe crib designs. When the Foundation started its programs of education and advocacy, baby cribs caused approximately one hundred deaths per year. According to recently released data from the U.S. Consumer Product Safety Commission, annual crib deaths have been reduced 89% from these levels. JPMA was involved in urging updates to the voluntary ASTM standard to address the hazards that could be addressed by improved designs and dynamic performance testing. Similarly, JPMA has worked to promote crib round-ups with the CPSC for products that have previously been recalled.

The ASTM voluntary standards process is often able to more quickly address evolving safety issues than the mandatory federal standards. The previous changes in the standard regarding crib corner posts is another example. Together, these changes demonstrate that standard setting is an evolving process in which JPMA and our members, as well as the CPSC and the advocacy groups, have been actively involved. This process works because it's based on consensus, and it provides the flexibility necessary to address emerging hazards.

The JPMA Certification Program is a verification process, similar to that included in the Consumer Product Safety Improvement Act. As noted above, products are provided to an independent third party CPSC-accredited lab to verify that they meet the requirements of the ASTM standard. When products are tested, they are assembled and used in accordance with the manufacturer's stated intent as embodied in the assembly and use

Juvenile Products Manufacturers Association, Inc.
15000 Commerce Parkway, Suite C • Mt. Laurel, NJ 08054 • 856.638.0420 • 856.439.0525
E-mail: jpma@ahint.com • Website: www.jpma.org

instructions. If the instructions are not followed, risks associated with use of any product may be exacerbated.

Not all recalls occur because of a violation of a regulation or product standard. In addition, recalls do not account for certain factors typically not measurable in a lab, such as unintended use, improper assembly, and excessive wear and tear over time. Most of the reported fatalities with cribs involve multi-use or heirloom cribs that may not have been properly maintained or assembled. Other heirloom cribs handed down do not meet current or recent safety standards.

Tough standards don't necessarily mean a product won't ever get recalled. JPMA is dedicated to promoting the development through ASTM of effective safety standards and promoting infant safety and well being, wherever there are defined risks. JPMA frequently conducts information and education campaigns to remind parents: not to use any crib with missing, broken, or loose parts; to check hardware from time to time to keep the crib sturdy; to make sure the drop side or any other moving part operates smoothly; to check all sides and corners of the crib for disengagement; and not to use tape, wire, rope or any makeshift hardware to re-assemble any crib.

Safe Sleep –

A very important fact to remember is that cribs remain, by far, the safest place for infants to sleep. Between eighty and ninety percent of the 4,700 or so incidents involving sleep environments and children each year involve parents and care givers putting their children in an unsafe sleep environment that can result in entrapments, suffocation or positional asphyxiation (on the floor on pillows, on adult beds or other household furniture, certain co-sleeping conditions, makeshift sleep environments, etc.).

According to First Candle, a leading infant health organization, research and statistics continue to indicate that babies who sleep in adult beds are at up to 40 times greater risk of dying than those sleeping on their back in a safe crib. In fact, in many jurisdictions, makeshift sleep arrangements are directly implicated in more than 50 percent of all sudden, unexpected infant deaths.

Properly assembled, functional cribs remain the SAFEST place for a baby to sleep. JPMA believes that experts and opinion leaders should take care to stress that point even if a particular crib model is recalled for any reason.

Mr. STUPAK. Thank you. We will go to questions from members.

Ms. Cowles, let me ask you, in your statement, and explains a little bit more on page 2 and going on the top of page 3, you talk about the corner post of the crib. In fact, both of you mentioned the corner post of the crib, and then you go on to say at the top of page 3, "At the same time, the mandatory standard has been struck in time as well. All new changes have been to the voluntary standard. Even the vital safety measure of banning corner posts on cribs was integrated into ASTM voluntary standard does not appear in the federal standard." So it was mandatory and now it is voluntary?

Ms. COWLES. No, it was never mandatory. It has always been in the voluntary standard. They first—as Mr. Dwyer mentioned, that standard was passed in 1988 but they first started working on it in 1984 after unfortunately another child named Danny died when he strangled on his corner post of his bed. So it has always been in the voluntary standard.

Mr. STUPAK. So right now I could make a crib. I could have this post here. It is a voluntary standard not to do it?

Ms. COWLES. You could have it. You would probably have difficulty if you wanted to sell it through traditional retailers, who probably wouldn't take it, but certainly with the extent of the Internet and CPSC would probably recall it if they got it, but you could certainly try and sell it. It does not violate the mandatory standard.

Mr. STUPAK. Does not violate the mandatory standard?

Ms. COWLES. Right.

Mr. STUPAK. Mr. Dwyer, let me ask you this. The Consumer Products Manufacturers Association—we will just call it JPMA—is a trade association that represents the manufacturers of children's products, of course. You offer your members a certification, as you testified, and there is a fee that certifies a product such as a crib meets all applicable mandatory standards as well as voluntary standards of the ASTM, correct?

Mr. DWYER. That is correct, sir.

Mr. STUPAK. The JPMA encourages its members to use your seal of approval. I think we had it on the board there at one time. And then they are advertising to show consumers that they are JPMA certified. I want to show you this ad. I think it is in tab 11 there, if you want to look at it right there in the book in front of you. In this ad the JPMA ran in several magazines for new parents, this ad says, and I quote, "Be confident that juvenile products you purchase are designed and built with safety in mind." What does safety in mind mean in the ad?

Mr. DWYER. That parents can be assured that the products that we certify meet the applicable voluntary and mandatory standards for those products.

Mr. STUPAK. In a way, would it be safe to say you are certifying the cribs as being safe then?

Mr. DWYER. We are verifying that the manufacturers who meet at ASTM along with all other stakeholders to discuss incident data, and Ms. Cowles mentioned the data, that is used to drive the activity of the committee, and if there are issues related to a product concern, that they address those and incorporate those into the standard and that the manufacturers meet those standards.

Mr. STUPAK. So what you are really saying is, we met all the standards, this product meets the standards, whether voluntary or mandatory, not verifying safety, just that the standards are met. Is that what we are saying?

Mr. DWYER. We believe that by meeting all of the standards that the products are safe and that manufacturers take into account certainly the safety of their ultimate customers, our babies, when they build these products.

Mr. STUPAK. The ad goes on, and again I want to quote from the ad. It says, "Buying a JPMA-certified product in any of the below categories ensures that the product has gone through an extra set of rigorous testing." Over the past several years, and we have heard testimony today, cribs involved in some of the largest recalls are Simplicity, Delta, Stork Crafts, all earned the JPMA seal of safety certification. So my question, Mr. Dwyer, would be, has JPMA changed the requirements for the certification program in light of the recalls we have seen? In fact, even Tuesday we had one of 635,000 cribs. Have you changed the certification that would be found in this ad?

Mr. DWYER. Well, just to make sure everybody is clear, the certification is a verification that they meet the standard.

Mr. STUPAK. Correct.

Mr. DWYER. The standard—as the standard changes, the certification changes inasmuch as that is what it is, it is a verification to the change in the standard. I am not quite sure I understand the question.

Mr. STUPAK. Since the recalls in 2008 and 2009, Stork Craft had two big recalls, have those standards changed at all?

Mr. DWYER. The ASTM standards?

Mr. STUPAK. Yes.

Mr. DWYER. The standard changed with a recent change in December that would ban the drop sides and also added a slat integrity test and requirements to the crib standard as well——

Mr. STUPAK. So——

Mr. DWYER [continuing]. In December of 2009.

Mr. STUPAK. So when you certify now, so when you run this ad, that means the slat has been changed and no more drop side, right?

Mr. DWYER. It verifies that the cribs meet the standards. However, the certification program does allow for 180-day sell-through period, so we will certify to the new version of the standard 6 months after it has been implemented.

Mr. STUPAK. When is the 6 months up?

Mr. DWYER. It will be in June. I don't know the exact date.

Mr. STUPAK. Right.

Mr. DWYER. But I do know that manufacturers at this point to move product out of the marketplace, they are no longer manufacturing drop-side products.

Mr. STUPAK. Right, but just so we are clear, we have until June. So there still could be drop-side cribs out there right now for sale with the JPMA certification because they have until June, 180 days, right?

Mr. DWYER. That is correct.

Mr. STUPAK. I guess my time is up. Mr. Walden, questions?

Mr. WALDEN. And that would be unless CPSC recalls that?

Mr. DWYER. That is correct.

Mr. WALDEN. So that would be the only check then, is if there is an identified problem, and CPSC could step in, issue a recall and take those out of the marketplace but parents may still have those cribs, legacy cribs, if you will?

Mr. DWYER. That is correct.

Mr. WALDEN. Ms. Cowles, you were recently quoted in the press as saying the same problems have existed for 10 years and nothing has been done and we are glad to see that it is now a crisis and people are acting. Do you want to talk about that quote?

Ms. COWLES. Sure.

Mr. WALDEN. So nothing has been in 10 years?

Ms. COWLES. Well, I have sat on the ASTM committee since 2001 and there have been other consumers who have been on those committees before that, and in those committee meetings the same issues that we are talking about here today, the same issues we talked about the last 2 days where we actually finally made real progress such as putting in a test that has been in Canada during all that time. It is called a racking test. It subjects the crib to much more rigorous shaking and testing, much more similar to——

Mr. WALDEN. Like a child would do.

Ms. COWLES. Like a child might do, and we have asked repeatedly since 2001 to add that test to the ASTM standard and it was never added.

Mr. WALDEN. So on the ASTM standards, and your committee, I am not familiar with how that operates. How many members are on that committee?

Ms. COWLES. Mike might know better than I do. I would say around 50 but I am——

Mr. WALDEN. Mr. Dwyer.

Mr. DWYER. I would say actively participated in F-15, it is at least 50.

Mr. WALDEN. So 50 members, 15 that actually participate?

Ms. COWLES. Fifty.

Mr. WALDEN. Fifty, five zero?

Ms. COWLES. Correct.

Mr. WALDEN. And during that 9-year period that you have been on it and this has been an issue floating around, have there been recommendations that have gone forward that you voted against because they are not strong enough or——

Ms. COWLES. Yes. As one of the sometimes three, sometimes four consumers in the room out of those four, our votes unfortunately did not go too far.

Mr. DWYER. Can I just follow up on that?

Mr. WALDEN. Yes, Mr. Dwyer.

Mr. DWYER. I mean, and again, I don't—I am not representing ASTM, they are not here at the table, but I do participate in the process as Nancy does, and, you know, anybody who participates in that process has the opportunity to cast a negative vote on any ballot, and if that ballot is—if that argument is found persuasive through the ASTM process, it can be upheld and modifications can be made to the ballet before the final rule is issued. I just want

to be very clear that everybody that participates in the process has an equal vote in that process.

Mr. WALDEN. Okay. And then Mr. Dwyer, I wanted to—in light of recent events, do these companies like Stork Craft lose their membership status in your organization?

Mr. DWYER. No, they would not lose their membership status. The certification program is separate and apart from membership in the organization.

Mr. WALDEN. Okay, so same for Delta and other brands that are JPMA certified?

Mr. DWYER. Correct.

Mr. WALDEN. Okay. So they can still be a member?

Mr. DWYER. Correct.

Mr. WALDEN. Okay, even though they have these—in your testimony, JPMA lists over 20 product categories that are currently in your certification program and including cribs and infant carriers. Which products should CPSC list as their top priorities for safety issues and issue safety standards for as soon as possible?

Mr. DWYER. In my opinion, sir, which products?

Mr. WALDEN. Yes.

Mr. DWYER. I would say cribs, and that is why we spent 2 days and why the chairman reached out to the manufacturers and the consumer groups and asked us, as I testified, to please help us accelerate rulemaking on full-size cribs.

Mr. WALDEN. And Ms. Cowles, are you satisfied with the new recommendations that came out in December?

Ms. COWLES. I think banning drop-side cribs is an important step. However, the real problem with drop sides, as the family testified, is the hardware failures, using plastic hardware, and those hardware pieces are still in other parts of the crib so we do believe we still need this stronger racking test to test hardware for durability, and that in fact is being talked about in the meetings that we have been to, so we are satisfied that the new mandatory standard will have sufficient strength in it once we get to that point.

Mr. WALDEN. And did you all vote then on this new standard that came out in December?

Mr. DWYER. Not yet. The process——

Ms. COWLES. In December, he is asking.

Mr. DWYER. Oh, I am sorry.

Mr. WALDEN. And did you support that then?

Ms. COWLES. Yes.

Mr. DWYER. I abstain from voting on the ASTM committees. We support an administrative role but I do support the activities.

Mr. WALDEN. Okay. You know, I think that is—yes, that is a good point. The manufacturing problems I think is probably the issue we are all kind of looking at here. What should be done there?

Ms. COWLES. In terms of the manufacturing of the product itself? Well, I would submit, and I will talk to that, but just let me briefly say, many of these are design issues, if you design a product with bad hardware, but manufacturing, and I think one of the reasons the older cribs that people are talking about that seemed to have held up well were made under the same lax regulations but were made, you know, here under our—so I think that manufacturing

plays a role and I am hoping that both JPMA, CPSC in their oversight role, you know, work to make sure that, you know, if you choose to make a product overseas that you are selling to American consumers, you need to make sure it is as safe as if you made it here. That is really the manufacturer's responsibility.

Mr. WALDEN. Thank you.

Mr. Dwyer, do you want to comment on that?

Mr. DWYER. Manufacturers of these products are incredibly responsible. Ultimately their customers are babies. I am the father of three children. I used a drop-side crib that was handed down to me by a friend of a friend, disassembled it three times, put it together three times, took care to follow the instructions every time, and manufacturers—ultimately children's lives are the most precious commodity and I believe manufacturers have always had that—

Mr. WALDEN. You know, if I can interrupt you just a second, the family behind you made the comment about the instructions being on the bottom of the mattress or the bottom of the slat and sort of glued on there. Is that done so that it continues on if somebody takes it apart?

Mr. DWYER. Correct.

Mr. WALDEN. Because I don't know anybody that keeps the instructions for anything we put together.

Mr. DWYER. Correct. It is part of the standard because just that, so that the instructions don't get lost if the crib is handed down or if it disassembled in between each child, which a product should be made to be able to disassembled multiple times, as Nancy indicated, and the instructions are on there so they don't get lost.

Mr. WALDEN. That is why they are glued on there?

Mr. DWYER. Correct.

Mr. WALDEN. Okay. Thank you, Mr. Chairman. I know I have exceeded my time. Thanks for your courtesy.

Mr. STUPAK. I thank you, Mr. Walden.

Mr. Braley for questions.

Mr. BRALEY. Mr. Dwyer, I want to follow up that last comment you made, manufacturers of these products are incredibly responsible. You stand by that statement?

Mr. DWYER. I do.

Mr. BRALEY. In the statement you submitted, it indicates that your manufacturers association has grown to include more than 250 member companies in the United States, Canada and Mexico, and that these companies manufacture and/or import infant products. So do you have members that are manufacturers in China and Vietnam?

Mr. DWYER. No, we do not.

Mr. BRALEY. Okay.

Mr. DWYER. That actually are manufactured in the country or manufacture in those countries.

Mr. BRALEY. Right, but my point is, since you have the word "import" in there I assume some of your members are importing products that are being manufactured, and that is who the manufacturer is you are referring to when you said manufacturers are incredibly responsible?

Mr. DWYER. The manufacturers that are members of the association must have a place of business in North America but yes, some of them do manufacture their products overseas or import their products from overseas.

Mr. BRALEY. Right, and isn't it customary that the inspections that you rely upon are done at the point of manufacturing?

Mr. DWYER. The inspections for the certification program?

Mr. BRALEY. Yes.

Mr. DWYER. They are done both domestically and overseas.

Mr. BRALEY. Okay. And you are aware that it is much more difficult to ensure the integrity of those inspection processes when they are being done in a country like China which has very strict controls on access?

Mr. DWYER. Our members take great care to visit with their factories overseas every year and to make sure that quality control practices are taking place at the highest levels.

Mr. BRALEY. Have you ever tried to serve a Chinese manufacturer of a defective product that is marketed in the United States?

Mr. DWYER. Serve?

Mr. BRALEY. Serve for legal process.

Mr. DWYER. No, I have not.

Mr. BRALEY. Do you know what is involved in that process?

Mr. DWYER. I do not, sir.

Mr. BRALEY. Do you know that international treaties have to be complied with and that service has to be performed domestically through the Chinese government that erects roadblocks that can prolong the actual accountability of foreign manufacturers who are selling defective products in this country for years and years if you are ever successful?

Mr. DWYER. I am not familiar with that process, sir.

Mr. BRALEY. Are you aware that certain States like my home State of Iowa have domestic laws that provide immunity to sellers of products like some of your members if the manufacturer is accountable and can be served and that may put you into this endless limbo of trying to get service in a country that doesn't want its manufacturers to be served? And that is exactly what Representative Sutton is talking about in this bill she is about to introduce. Are you familiar with that problem from your work with these many people selling products that affect infants' lives and safety in this country?

Mr. DWYER. No, sir, but, you know, our program is built with safety in mind and we have testing. We have multiple testing. We had multiple testing before the Consumer Product Safety Improvement Act was even implemented. Our program, section 104, the requirements of certification, are more robust and they mirror what this Congress, what this committee has put together. I am not familiar with the challenges with serving Chinese manufacturers with, you know, warrants for defective products but we are here to talk about our certification program, the ASTM standards.

Mr. BRALEY. Well, in your certification program, have you ever encountered incidents where the instructions on assembly are written in that country of origin, in some form of English that would not make sense to anybody in this room and yet is being used by the manufacturer and the subsequent seller of that product as a

guide for people in assembly of that product. Are you aware that takes place?

Mr. DWYER. There is pretty clear guidelines both at the voluntary and the mandatory level for the standards that dictate how the instructions should be put together, and I am not aware that there are issues with communication on the instructions. It is an issue that the group is working on and looking at adding some additional warnings and looking at instructions. Eliminating moving parts would help with any disassembly issues, but I am not aware that there are any issues with instructions, sir.

Mr. BRALEY. As part of your certification requirement, do they look at the assembly instructions being supplied by the manufacturer?

Mr. DWYER. Yes, they do.

Mr. BRALEY. And do they look at whether or not the language that is being used is in plain English that can be easily understood and adapted by the consumer in the assembly of that product?

Mr. DWYER. Well, the product and the certification program, the product has to be assembled to the manufacturer's instructions and so that is a requirement.

Mr. BRALEY. Well, and that is my point. My point is, the manufacturer in the latest recall is located in China, located in Vietnam, and they sometimes have a very different understanding of the English language than American consumers putting that product together. I am not just taking about from a professional standpoint. I am talking from the standpoint of a parent who has assembled many of these products and is frequently mystified by what the intention is in the assembly process because it is obviously being written by somebody who doesn't live in this country.

Mr. DWYER. Are you specifically talking about the Dorel recall, the Dorel Asia recall?

Mr. BRALEY. Yes.

Mr. DWYER. Six hundred and thirty-five thousand units?

Mr. BRALEY. Yes.

Mr. DWYER. Which are not JPMA certified, and I am well aware of extenuating circumstances in that case where that crib was put together with duct tape by parents, and criminal charges were charged against those parents for endangering their child.

Mr. BRALEY. And I would like to bring that up before I close, Mr. Chairman, because what happens in these cases is everybody engages in finger pointing, and one of the first people on the line are the parents dealing with the tragic loss of their child who are frequently blamed and subject to criminal prosecutions which are many times later dropped, and I think that it is important that if there are manufacturers profiting from the sale of these products, they take a good look in the mirror and do everything they can to address the problem, not always blame the parents, and that is why this work we are here for today is so important, and I yield back.

Mr. STUPAK. Thank you, Mr. Braley. It should be noted too in that case where the parents, charges were brought, they were dropped, and so just so the record is clear.

Mr. Burgess, when he comes back, I will reserve his spot. So I guess we are to Ms. Schakowsky for questions.

Ms. SCHAKOWSKY. I want to talk a little bit more about the role of parents. In November of last year, we talked about this, but the CPSC and Stork Craft recalled more than 2 million cribs due to reports of broken or missing drop-side hardware. As part of that recall, Stork Craft crated an instructional video and posted it on YouTube—and so whoever is working on that, let us get it up there—to show consumers how to identify problems with their cribs and how to install the repair kits the company supplied, so if you will play that.

[Video playback]

Ms. SCHAKOWSKY. So let me ask you, Ms. Cowles, it is responsible or realistic, rather, to expect that parents will follow this recommendation in the real world?

Ms. COWLES. No, I don't think any parent does that every time they put a baby in a crib any more than you open your hood and check everything before you get in your car to drive. It is certainly something that we might expect them to do occasionally but no, I think parents assume they put together a crib, it is going to stay together.

Ms. SCHAKOWSKY. Mr. Dwyer, do you think that a tired mother or father, baby wakes up at 2:00 in the morning and you put the baby back in bed is going to go around and do a crib inspection every time before putting the baby back to sleep?

Mr. DWYER. Having been a very tired father at one time, no, ma'am.

Ms. SCHAKOWSKY. So Mr. Dwyer, the JPMA put together a frequently asked questions page about drop-side cribs. It is on tab 10 of the document binder. And here is what your association FAQ sheet says: "JPMA reminds parents and caregivers that when you assemble a crib to the manufacturer's instructions and use it properly, a crib provides the safest sleeping environment for a baby." What do you mean by—what does JPMA mean by use it properly?

Mr. DWYER. That it is assembled according to the manufacturer's instructions.

Ms. SCHAKOWSKY. And inspected every time, right?

Mr. DWYER. We would recommend that parents be aware that inspection may be needed and we also have safe sleep guidelines for what not to put in the crib that is part of the whole process such as heavy blankets or pillows or that type of thing.

Ms. SCHAKOWSKY. Stork Craft's CEO Jim Moore issued a statement after the November recall in which he asserted that parents improperly used the drop-side cribs implicated in infant entrapments. Here is how the news accounts quoted Mr. Moore: "In the majority of instances, the cribs were being used with broken parts, parts with pieces missing, parts that were damaged or with modified or homemade parts." So Ms. Cowles, what do you think of the Stork Craft response?

Ms. COWLES. Well, I think that it is particularly damaging to the recall process, that when manufacturers come out, and as Mr. Dwyer has done here, continue to blame the individual parent whose child either has died or was hurt. It basically says to every other parent using that crib, oh, I am sure you don't need to worry about your crib because you are a smart parent who is using it correctly, and so I think that kind of language, especially after the

CPSC has to spend time negotiating what is in the press release and they come to an agreement of what is going to be said about it, then the company comes out later that day or the next day with those kind of damaging comments I think again both discourages parents from participating with the recall because they think theirs must be okay because they obviously put it together right and downplays the problem. I mean, all that list of things, if that crib wasn't falling apart, parents wouldn't have to do any of those things, so it is the crib, I think, that we are here to talk about and not how individual parents may decide to fix the problem when their crib does in fact break.

Ms. SCHAKOWSKY. And Mr. Dwyer, what were you saying kind of I felt sort of self-righteously about how these parents were on the Dorel Asia cribs charged with criminal negligence or whatever it was.

Mr. DWYER. I just wanted to clarify for Mr. Braley that those products were not certified by the association and that I was aware, made aware that there were extenuating circumstances, that that crib, that there were photos of the crib that showed duct tape holding the pieces of the crib together, and that one side was broken from the crib and had been pushed against the wall, and I was aware that criminal charges had been brought for child endangerment, and also there were drug charges. I was not aware that those charges had been dropped but I was specifically addressing we do not want those cribs that were recalled lumped into because they were not certified by the association.

Ms. SCHAKOWSKY. Did you want to comment, Ms. Cowles?

Ms. COWLES. I just wanted to say about the charges, I know that is not why we are here today but having worked with many parents whose children have been killed, more times than you can imagine, that is at least threatened or brought before the medical examiner can ascertain that the product itself was defective, so I have had parents charged with that, with child abuse, with all kinds of things. And so the initial charge made by the police is no indication of what is actually responsible for that child's death, especially in a case like this where the charges are dropped.

Ms. SCHAKOWSKY. Thank you.

Mr. STUPAK. Ms. Sutton for questions, please.

Ms. SUTTON. Thank you, Mr. Chairman, and I want to follow up on two things. First of all, Representative Braley's line of questioning about foreign manufacturers, and I just want to invite all of our colleagues to seriously consider getting on this bill—it is a bipartisan bill—to make sure that we can serve process and submit people who are selling products in this country to the jurisdiction of our courts and the enforcement of our laws. That is what I think the American people expect, and those are the consumers. Your customers are infants with parents, and they are counting on us to deliver a degree of safety.

But I also want to follow up with Ms. Schakowsky's line of questioning because I think this idea of parental error versus product defect is an important one, and along the same lines, in September of 2007, CPSC recalled more than a million Simplicity-brand dropside cribs in one of the many recalls involving this company, and the CPSC noted that some consumers installed the drop side unin-

tentionally down, upside down. In this situation, the drop side would function upside down, it would function that way, and it would weaken the hardware and in some cases detach from the crib. The Stork Craft drop-side cribs recalled last year had the same problem, had similar problems. So Stork Craft asserts that this drop-side problem is not the company's fault. In a Stork Craft position paper provided to the committee located at tab 8 in the document binder, the company states, and I quote, "It is absolutely unreasonable to expect Stork Craft to reasonably foresee that a consumer would install the drop-side rail upside down." Mr. Dwyer, do you agree with Stork Craft's statement? It is unforeseeable that a consumer might improperly install the drop side upside down when the drop side will still function that way?

Mr. DWYER. I am not intimately familiar enough with the product. Obviously if the product is manufactured in such a way that it could be installed upside down, as was the case with this product, that that would be the case.

Ms. SUTTON. I don't understand your answer.

Mr. DWYER. Your question was, is it foreseeable for that product, for that rail to be installed upside down. Apparently that is the case, that it is—it was not—it is foreseeable if it can be installed upside down.

Ms. SUTTON. So you disagree with Stork Craft's statement that it is unreasonable to expect that to be foreseen?

Mr. DWYER. I would say based upon the information, the limited information I have about the specific product as I read it here, I would say that I would disagree with that statement.

Ms. SUTTON. Thank you.

And Ms. Cowles, I understand that you were a part of a task group assigned to examine the improper drop-side installation after the Simplicity recall. Is that correct?

Ms. COWLES. That is right.

Ms. SUTTON. Okay. And the Consumer Product Safety Commission produced an e-mail to the committee, which is located at tab 1 of the document binder, and it relates to this issue. This is an e-mail chain between you, Jonathan Midget of CPSC and other members of the group tasked with looking at improper assembly of drop sides. Dr. Midget, who is an engineering psychologist, comments as follows: "The best way to prevent misassembly is to limit the consumer's ability to put parts in the wrong place. The least effective strategy is to modify the instructions or create a list of warnings." To his workers at CPSC, Dr. Midget notes in an e-mail that the crib industry has been, and I quote, "freakish in its insistence that instructions of cribs are at fault. This only makes sense if you don't want to change any of the shapes of your crib hardware and would rather blame the consumer." Ms. Cowles, is this observation consistent with your experience negotiating crib safety standards?

Ms. COWLES. I think that this is very consistent both with my experience on the committee. I think I mentioned in my longer testimony that the committee will not even look at incidents that happen in cribs older than 5 years old, even though as we heard from the family, that could have easily been a crib that was just in one place and not reassembled, because they consider it old. They are

very quick to blame when they account things to what the consumer did rather than to their crib, and again, I think as I said today, that if a product is made so you can put it together in a way that causes death, that is a design problem, not a consumer problem.

Ms. SUTTON. Thank you, Ms. Cowles, and I appreciate again, Mr. Chairman, that you are holding this hearing. These e-mails illustrate the risk of relying on voluntary industry safety standards, and I yield back.

Mr. STUPAK. Thanks. If I may, just one question or two. I think Mr. Burgess will be here in a minute. Let me just ask this. Mr. Dwyer, I asked about this ad that you put out saying that you certify products.

Mr. DWYER. Yes, sir.

Mr. STUPAK. And we talked about recalls. Do you ever take out similar ads in the same magazines advertising there has been a recall, like on the cribs?

Mr. DWYER. I am sorry. I didn't understand the question.

Mr. STUPAK. Does your association, the Juvenile Products Manufacturers Association, you put out these ads advertising these products, that they are certified safe. Then when they are recalled, do you ever take out an ad saying these things have been recalled so consumers would know?

Mr. DWYER. No, we don't name specific products and put ads for a recall in any magazine.

Mr. STUPAK. But wouldn't that be a good idea?

Mr. DWYER. I believe that is the role of the agency. We can, you know, communicate. We issued statements and we provided statements based upon when the Stork Craft products were recalled to help parents and concerned consumers understand the implications. We link to recall.gov on our website. We——

Mr. STUPAK. So other than your website, that is all you do to let parents know that——

Mr. DWYER. We do not take out ads in magazines to promote the fact that products are recalled. This is part of a product safety campaign that involves multiple communication——

Mr. STUPAK. Sure. These are all products with your seal on it so if your seal products are being recalled, I would think you want to let people know that, target these audiences.

Mr. DWYER. We do communicate but we don't take out ads in magazines.

Mr. STUPAK. Okay. I would like to thank this panel for their testimony. Thank you, witnesses, and thanks for being here. As Mr. Walden reminds me, we are going to have votes here pretty quick, so let us see if we can't finish up this hearing. I will ask the chairperson to come forward, please, the Hon. Ms. Tenenbaum of the Consumer Product Safety Commission. Let the record reflect that before you have your opening statement, it is the policy of this committee that you have the right under the rules of the House to be advised by counsel during your testimony. Do you wish to be represented by counsel?

Ms. TENENBAUM. No, sir.

Mr. STUPAK. And then Ms. Tenenbaum, I would ask you as the chairperson of the Consumer Product Safety Commission to take the oath, please. Raise your right hand.

[Witness sworn.]

Mr. STUPAK. Thank you. Let the record reflect Ms. Tenenbaum is under oath, and please present your opening statement.

TESTIMONY OF THE HON. INEZ MOORE TENENBAUM, CHAIRMAN, CONSUMER PRODUCT SAFETY COMMISSION

Ms. TENENBAUM. Good morning, Chairman Stupak, Ranking Member Walden and members of the Subcommittee on Oversight and Investigation.

The overall safety of cribs is a critical concern of the CPSC and a personal priority of mine. Getting unsafe cribs off the market and out of the home has always been a key part of the CPSC's mission, but I strongly believe that we must do more and have strong federal safety standards that prevent cribs with design flaws or safety defects from ever making it into the stream of commerce or into nurseries.

Since the inception of the agency in 1973, the CPSC has been deeply involved in issues of crib and infant sleeping environment safety. In November 1973, the Commission promulgated the first mandatory safety standard governing full-size cribs. Since that time, the CPSC has also worked diligently with other standards-developing organizations such as the ASTM International on voluntary cribs standards. These mandatory and voluntary standards combined with substantial outreach efforts have undoubtedly prevented numerous infant and child injuries.

However, one question that has arisen in some media reports is the issue of why the CPSC's mandatory crib standards have not been revised since 1982. The main answer is that the Commission has limited authority to do so under section 9 of the Consumer Product Safety Act. Under that section, which was revised by the CPSIA, the Commission was generally required to rely on voluntary standards that would likely result in the adequate reduction of risk and injury and where there would be substantial compliance with the standard. This reliance on voluntary standards worked well in many areas but it also left some substantial gaps that voluntary-standard-developing organizations were either unwilling or unable to confront. This provision was modified by the CPSIA to give the Commission additional authority to promulgate rules, even when a voluntary standard is in existence.

In addition, the CPSIA also included section 104, the Danny Keysar Child Product Safety Notification Act, which directs the Commission to promulgate new standards for 12 groups of durable infant and toddler products. I strongly support these additional authorities and have directed the CPSC staff to make crib safety a key priority starting with immediate recall of cribs that have been shown to present a substantial risk of danger and injury to children.

One example of the Commission's efforts to remove potentially hazardous cribs from the marketplace has been the two recent recalls of Stork Craft drop-side cribs. In January 2009, Stork Craft agreed to voluntarily recall over half a million impacted cribs due

to a bracket defect. At that time the CPSC was also investigating instances regarding a potential drop-side issue with the cribs. These incidents, however, involved a large population of cribs with different styles of drop-side hardware and a different mode of drop-side failure.

After my arrival at the Commission, I requested weekly Commission briefings from the Office of Compliance on pending consumer product investigations. The subject of the September 24, 2009, briefing was nursery products and included the Commission's investigation into drop-side cribs. During that briefing, I learned about the developing compliance case regarding Stork Craft drop-side cribs as well as the tragic June 2009 death in Louisiana that involved a Stork Craft drop-side crib. Following this briefing, I directed the staff to give immediate priority to the recall of Stork Craft cribs and this drop-side hazard. On November 23, 2009, the Commission and Stork Craft announced the largest crib action recall in CPSC history, and as you know, this involved 2.1 million Stork Craft cribs.

We also recently recalled the Dorel Asia cribs, which I will not go into detail to save time because you are very well aware of that recall.

Now, since these recalls, and since my tenure as chairman, I have decided that we need a new safe sleep initiative, which has six points that I want to talk to you about. In my brief statement this morning, I will just talk about the highlights and then you can ask me questions later.

I think the CPSC has very talented staff that has worked diligently for years on these issues of safe cribs but I also think that we could have for a variety of reasons including funding, inadequate statutory authorities and competing priorities move quicker to have mandatory and stronger voluntary standards and I want you to know and make very clear to this subcommittee that those days are over at the CPSC. This morning I am pleased to announce the details of the Safe Sleep Initiative.

First of all, you have heard from other speakers that the first part of this initiative is to expedite the rulemaking and have mandatory standards under section 104 for cribs, and I might want to add that when I came to the Commission, the schedule for this rule for cribs was scheduled for 2012. When I learned about it, I pulled it in front of other rules and said we have to have this standard now. Second, we are going to expand the Commission's successful early warning system by having an early warning team for bassinets, cribs and other sleep environments for children. Three, we will also increase the monitoring of recall effectiveness and corrective actions on take rates on crib recall cases. We want to know how effective are these recalls. Fifth, we are going to continue with our additional media outreach. For example, when we recalled Stork Craft, we estimated that 200 million people saw the television clips of those recalls. And sixth, we are going to have an internal management review of how we do recalls not only for cribs but for other products. When I came to the Commission, I realized that the Commission needed a new strategic plan. It also needed consultants from the outside to come in and look at the operations and the management of that agency, so we went through the pro-

curement process and I am pleased to announce that just recently we have secured Booz Allen Hamilton to do a top-to-bottom review of the CPSC and help us in this area.

And Mr. Chairman and Ranking Member Walden, I thank you for having this meeting. It is very important that you show everyone involved in crib safety how important it is to you, and I look forward to answering your questions.

[The prepared statement of Ms. Tenenbaum follows:]

Statement of
Inez Tenenbaum
Chairman
U.S. Consumer Product Safety Commission

Before the Subcommittee on Oversight and Investigations

"Crib Safety: Assessing the Need for Better Oversight"

January 21, 2010

Good morning, Chairman Stupak, Ranking Member Walden, and Members of the Subcommittee on Oversight and Investigations. I am pleased to be here today to discuss the actions we are taking at the U.S. Consumer Product Safety Commission (CPSC) to ensure the safety of cribs and promote a safe sleep environment for all children in the United States.

Let me begin by saying the overall safety of cribs is a critical concern of the CPSC – and a personal priority of mine. Parents across this country expect cribs to be a sanctuary for their children, regardless of that crib's price or size. I share this belief, and have made crib safety a cornerstone of my work as Chairman of the CPSC.

Since 2007, the Commission has taken action to recall almost 7 million cribs for various defects. Getting unsafe cribs off the market and out of homes has always been a key part of the CPSC's mission. But I strongly believe that we must do more – and have strong federal safety standards that prevent cribs with design flaws or safety defects from ever making it into our stream of commerce or into nurseries.

In my testimony today, I will provide the Subcommittee with a brief overview of the Commission's past efforts with regard to crib safety and the recent Stork Craft recall. More importantly, however, I will also outline my overall Safe Sleep Initiative to prevent deaths and injuries from crib design flaws and defects, and promote a safe sleeping environment for all babies.

Overview of CPSC Efforts to Prevent Crib Defects and Injuries

Since the inception of the agency in 1973, the CPSC has been deeply involved in issues of crib and infant sleeping environment safety. In November 1973, the Commission promulgated the first mandatory safety standards governing full-sized cribs. These standards included regulations governing rail height, spacing of crib components (slats, crib rods and corner posts), and the hardware used in the construction of the crib. These standards were updated in 1982 to impose requirements regarding the crib "cut-outs," or the parts of cribs where the various component parts fit together.

The CPSC has also worked diligently with other standards developing organizations, such as ASTM International, on voluntary crib standards. In 1988, CPSC participated in the ASTM subcommittee that adopted the F1169 standard for full-size cribs. CPSC staff was also actively involved with this subcommittee when it revised the F1169 standard to:

- Include a performance requirement addressing slat detachments in 1999;
- Integrate a requirement governing the design of crib corner posts in 2003;
- Update crib warnings and labeling in 2007; and
- Adopt a restriction of drop-side cribs and new slat strength requirements in November 2009, which was published on December 10, 2009.

Furthermore, the CPSC has worked for decades on education and outreach initiatives. CPSC has partnered over the years with the American Academy of Pediatrics, the National Institute of Child Health and Development, Gerber, the Juvenile Products Manufacturers Association (JPMA), The Danny Foundation, and the Black Entertainment Network (BET) on:

- The landmark Back-to-Sleep campaign aimed at preventing Sudden Infant Death Syndrome (SIDS) related deaths;
- An initiative encouraging parents to create a sleeping environment free of pillows and other soft bedding that could pose a suffocation risk to babies; and
- A special campaign aimed at educating African-American parents about how to keep babies safe in the crib.

These mandatory and voluntary standards, combined with substantial outreach efforts, have undoubtedly prevented numerous infant and child injuries.

However, one question that has arisen in some media reports is the issue of why the CPSC's mandatory crib standards have not been revised since 1982. The main answer is that the Commission had limited authority to do so under Section 9 of the Consumer Product Safety Act. Until that section was revised by the Consumer Product Safety Improvement Act of 2008 (CPSIA), the Commission was generally required to rely on any voluntary standard that was "likely to result in the elimination or adequate reduction of the risk or injury" and where it was "likely that there would be substantial compliance with that standard." This reliance on voluntary standards worked well in many areas, but also left some substantial gaps that voluntary standard developing organizations were either unwilling or unable to confront.

Due to the hard work of the full Committee and many other members in both Houses of Congress, this provision was modified in the CPSIA to give the Commission additional authority to promulgate rules, even when a standard is in existence. In addition, the CPSIA also included Section 104, the Danny Keysar Child Product Safety Notification Act, which directs the Commission to promulgate new standards for twelve groups of durable infant and toddler products – including full-size cribs and nonfull-size cribs. Section 104 gives the Commission regular rulemaking authority not just to adopt existing voluntary standards, but to adopt standards that are more stringent "if the Commission determines that more stringent standards would further reduce the risk of injury associated with such products."

As Chairman, I strongly support these additional authorities and have directed CPSC staff to make crib safety a key priority – starting with the immediate recall of cribs that have been shown to present a substantial risk of injury to children.

The Stork Craft Recall

One example of the Commission's efforts to remove potentially hazardous cribs from the marketplace is two recent recalls of Stork Craft drop-side cribs.

In early 2008, our Early Warning System (EWS) team brought concerns about Stork Craft cribs to the attention of our Office of Hazard Identification and Reduction and Office of Compliance and Field Operations. This led to a request to the company in August 2008 for information about potential problems with both the cribs' drop-sides and mattress support brackets. The investigation established a pattern of defect on the support brackets used on certain cribs. The metal brackets used were of insufficient strength, leading to cracking and posing a potential entrapment hazard. In January 2009, Stork Craft agreed to voluntarily recall over a half-million impacted cribs. CPSC was also investigating incidents regarding a potential drop-side issue with the cribs. These incidents, however, involved a large population of cribs, with different styles of drop-side hardware and different modes of drop-side failure.

After my arrival at the Commission, I requested weekly Commission briefings from the Office of Compliance on pending consumer product investigations. The subject of the September 24, 2009, briefing was nursery products, and included the Commission's investigation into drop-side cribs. During that briefing, I learned about the developing Compliance case regarding Stork Craft drop-side cribs, as well as the tragic June 2009 death in Louisiana that involved a Stork Craft drop-side crib. Following this briefing, I directed the staff to give immediate priority to the recall of Stork Craft cribs for this drop-side hazard. On November 23, 2009, the Commission and Stork Craft announced the largest crib action in CPSC history, involving the recall of approximately 2.1 million Stork Craft drop-side cribs.

Throughout this investigation, Stork Craft has maintained that there is no evidence of a pattern of defect and, in the end, voluntarily recalled the cribs without admitting that the cribs were defective.

My Safe Sleep Initiative

During my brief tenure as Chairman, I have reviewed past actions of the Commission in the crib safety area. The CPSC has a very talented staff that has worked diligently in this issue for many years, and their past efforts to ensure safe cribs and safe sleeping environments are to be commended.

At the same time, however, I also recognize that the Commission may not been as vigilant in this area as it could have been in recent years for a variety of reasons – including funding, inadequate statutory authorities, and competing priorities. I want to make it clear to the Subcommittee this morning that those days are over.

This morning, I am pleased to announce the Safe Sleep Initiative. This six-part action plan takes a holistic, multi-pronged approach to the issue of crib safety and focuses not

just on new crib safety rules, but also new methods of identifying existing hazards in the fastest way possible, increased monitoring of recall effectiveness, increased public outreach, and internal management reform.

1. Expedited Implementation of the Section 104 Crib Rulemaking

Section 104 of the CPSIA requires the Commission to promulgate product safety standards for two categories of infant and durable toddler products every six months "beginning with the product categories that the Commission determines to be of the highest priority." Among these twelve categories are full-size cribs and nonfull-size cribs.

All of the categories listed in Section 104 are important. In light of recent recalls, however, I believe crib regulations should take on a higher priority. Accordingly, I have directed CPSC staff to accelerate – to the maximum extent possible – the rulemaking for cribs under Section 104.

2. Expansion of the Early Warning System (EWS)

In November 2007, the CPSC implemented what was then a pilot program called the Early Warning System (EWS). This EWS is a multi-disciplinary team of CPSC staff consisting of compliance officers, attorneys and technical staff from CPSC's Engineering, Epidemiology, Human Factors and Health Sciences organizations that focuses solely on three product categories: cribs, bassinets and play yards.

This team was formed in an effort to catch serious risks of injury or death, patterns of defect, and regulatory violations as early as possible. The EWS team meets on a weekly basis and reviews all incoming bassinet, crib and play yard incidents reported to the agency. Incident reports specific to products evaluated by the EWS pilot team are drawn from the CPSC's epidemiological databases (EPIR) that reside on the CPSC network and are appended into the specific EWS database. As part of its review process, the EWS team electronically codes the failure mode of each product-related incident. By electronically capturing the technical coding for each incident, the EWS team is able to create a historic record that can support more expeditious identification of potential emerging hazards. During the weekly review, the EWS team also assigns in-depth investigations (IDIs) of incidents, reviews completed IDIs, evaluates collected product samples, and makes recommendations to the Office of Compliance on cases to open for possible recall.

Overall, the EWS team does an excellent job of quickly identifying emerging nursery product hazards. Nevertheless, under current CPSC database and Information Technology (IT) infrastructure, identifying emerging hazards and patterns of defect is labor intensive and requires significant staff involvement to manually go through much of the information that is received. In some cases, staff manually receive reports within 48 hours and are able to initiate an investigation. In other cases, however, there can be a significant lag between the time reports are received and when they are entered into the

database. For example, in the case of incidents reported to CPSC staff via manufacturer reports, Medical Examiners and Coroners Alert Project (MECAP) reports, and news reports, there can be a lag of up to a month or longer before incoming data reports are available in EPIR and extracted for entry into the EWS database. This "data utilization lag" is currently too long. To address this, the Commission is currently taking two steps to improve the data flow.

First, the Commission is engaged in a major upgrade of its IT systems as part of its mandate under Section 212 of the CPSIA to create a product incident database that is easily searchable by the public. In response to that mandate, the agency is developing a single, integrated web-based environment, the Risk Management System (RMS) that will support the database and other associated data collection activities. Specifically, RMS will capture CPSC subject matter experts' assessments of the failure mode and severity associated with product incidents – and share those coded historic incidents with all other CPSC staff. This feature does not currently exist outside of the EWS program, and will greatly improve our information sharing abilities. In addition, this feature will also support advanced data-mining capacities that will analyze various information flows – including public product incident reports, Injury or Potential Injury Incidents (IPII), and information from the National Electronic Injury Surveillance System (NEISS) – and issue "red flags" for products that may present evidence of a new or emerging hazard.

Second, the Commission is working to enhance staffing in our Office of Compliance to recognize and react to the "red flags" generated by these new sources of information. With the new funding available in the Fiscal Year 2010 CPSC budget, we anticipate being able to hire new staff that will focus on priority areas – such as cribs. This, in turn, will allow us to more quickly initiate recalls and other corrective actions when hazards are identified.

3. Creation of a New Safe Sleep Environment Team

As I reviewed the great strides made to date by the EWS team, I also identified an opportunity to take that approach to the next level of responsiveness in the overall context of children's sleep environments. To that end, I have created a new "Safe Sleep Environment Team," which is a pilot project to bring the same EWS team of compliance officers, attorneys, epidemiologists, and other technical staff to work on issues related to the sleep environment. The compliance officers and attorneys involved will be exclusively dedicated to this new team.

As a dedicated, interdisciplinary team, I am confident that this will allow the CPSC to use the information harnessed by EWS and act faster and more efficiently not just with crib defects – but also for all defects related to a child's sleep environment. In addition, their work will be critically important in pointing out new ways to effectively utilize the increased amount of incident reports that will be generated by the RMS upgrade and the public database required by section 6A of the CPSIA.

4. Increased Monitoring of Recall Effectiveness and Corrective Action "Take-Rates" in Crib Recall Cases

Recalls are only effective if parents and caregivers avail themselves of the corrective action offered, and either return, replace, or fix the defective product in a manner that will ensure a baby's safety. Nowhere is this more important than crib recall cases, where a corrective action is critical to ensuring a safe sleeping environment.

The CPSC has already taken one critical action to address the effectiveness of crib recalls using the power Congress provided us in the CPSIA. In addition to the product safety standard requirements for durable infant and toddler products, Section 104 also mandated that registration cards be included with cribs and other durable infant products. On December 29, 2009, the Commission published a final rule requiring manufacturers of such products, which includes cribs, to establish and administer a registration program for their products.

Specifically, the rule requires that each manufacturer: 1) provide a postage-paid registration form with the product; 2) keep records of consumers who register their products; and 3) permanently place the manufacturer's name and contact information, model name, number, and date of manufacture on each product. The rule covers the twelve specific product categories identified in the CPSIA (full-size cribs and nonfull-size cribs; toddler beds; high chairs, booster chairs, and hook-on chairs; bath seats; gates and other enclosures for confining a child; play yards; stationary activity centers; infant carriers; strollers; walkers; swings; and bassinets and cradles), as well as six additional products the Commission specified in the rule (children's folding chairs, changing tables, infant bouncers, infant bath tubs, bed rails and infant slings). The rule will take effect for the first twelve products, including cribs, on June 28, 2010, and for the additional six products on December 29, 2010.

I strongly believe that these new registration and marking requirements will improve the effectiveness of future recalls involving cribs and other infant and toddler durable products. At the same time, however, I am also very concerned about recalled cribs that remain in the stream of commerce. In particular, I am concerned about the low response rates associated with numerous recalls of cribs made by Simplicity, which is now bankrupt and out of business. Millions of their cribs were sold over the past decade, and millions of them have a deadly defect. To date, eleven babies have become entrapped and died in the various crib models – and there are still far too many parents who have not responded to the recall announcements. As a result, I ordered another major education effort last November to stop consumers from using Simplicity cribs with drop-sides.

In addition to outreach, we must also ensure that consumers with recalled cribs and other durable nursery products take advantage of corrective actions offered by manufacturers. To this end, I have directed CPSC staff to increase monitoring of corrective action plans. Specifically, I have asked staff look at the take-rates of repair kits offered by

manufacturers in several recent recalls, how fast those kits are being shipped, and the quality of materials in the repair kits.

We are also examining the effectiveness of repair and retrofit kits that are currently offered to most consumers in crib and other durable infant and toddler product recalls. During the April 2009 Roundtable on Cribs and Infant Sleep Environments, several parties – including the Illinois Attorney General's Office – suggested that we require manufacturers or importers to offer either a refund or store credit when cribs are recalled. It is an idea that is worthy of full Commission consideration. Such a requirement would certainly incentivize many consumers to discard and replace defective cribs – and might have a significant impact on removing defective cribs from homes and secondary markets. At the same time, however, the Commission must also be cognizant of the financial situation of manufacturers involved and the fact that this type of remedy might push them into financial distress or bankruptcy – and foreclose the possibility of any corrective action.

5. Additional Media Outreach and Education to Foster Safe Sleep Environments

In the days after the Stork Craft recall, the Commission engaged in a very aggressive media outreach mission in announcing the Stork Craft recall. The day after the recall was announced, I appeared on all three of the major network morning shows to discuss the recall, and emphasized the need for impacted parents to take action to move their children to another safe sleep environment until they obtained the repair kit to fix their cribs.

In addition, the agency sent out a video news release (VNR) that was shown on numerous local television outlets and has received more than 200 million views to date. Information was also distributed utilizing all the social networking resources of CPSC 2.0 – including Twitter, our blog, and YouTube. CPSC also targeted the minority and traditionally underserved communities through the Neighborhood Safety Network (NSN).

Overall, we believe that the media outreach conducted with this recall was among the most comprehensive ever conducted by this agency. However, I believe we can still do more to ensure that every consumer impacted by a recall is "touched" in some form by the CPSC or the manufacturer of the recalled product.

Therefore, I have directed CPSC staff to look at further efforts to reach the public in cases of crib and durable infant and toddler product recalls. As noted above, the registration card rule is a very positive step forward – but we have to ensure that this information is maximized in the case of a recall. Similarly, I also want the Commission to examine new opportunities with other technologies. Currently, consumers can sign up for e-mail alerts for all new recalls. I would like to expand on these efforts, and work on other notification technologies – such as those to mobile devices – to further expand the Commission's reach to younger and more mobile consumers.

As part of my Safe Sleep Initiative, we will also implement a targeted program aimed at increasing awareness of hazards associated with cribs, as well as best safe sleep practices for babies. This outreach initiative will use various tools, including multi-media (print, radio, television and social media), grassroots (community-based events), and partnerships with crib advocacy groups (including Keeping Babies Safe, Safe Kids USA, and the National Safety Council).

6. Internal Management Review and Reform

Finally, I would like to touch briefly on the issue of internal management reform. In a time of increasingly tight Federal budget constraints, it is critical for all agencies to maximize their resources and always strive to identify new efficiencies. The CPSC is no exception. Over the past two years, the agency has been rewarded with substantial funding increases to beef up staffing and enforcement efforts. My goal is to ensure that these resources are utilized to their fullest extent.

To that end, the CPSC recently engaged Booz Allen Hamilton to complete a top-to-bottom review of the CPSC, and help us complete a new agency Strategic Plan. They will look at all aspects of the agency's current management practices and organizational structure. In particular, I have requested that they review our current practices in the Office of Compliance and recall area – and recommend areas where we can improve our responsiveness to removing hazardous products from the marketplace and consumers' homes.

*****

Chairman Stupak and Ranking Member Walden, thank you again for giving me the opportunity to update the Subcommittee on the critical issue of crib and sleep environment safety.

I now look forward to answering your questions.

Mr. STUPAK. Thank you, and let me thank you on behalf of the whole committee and our staffs for your work and cooperation in this area and also for being here all morning. You have sat through all the panels and we appreciate that, and we think that helps in what we are trying to achieve here.

You said your Safe Sleep Initiative, that was starting today?

Ms. TENENBAUM. We have already started it. It started really several weeks ago.

Mr. STUPAK. And part of that you said in your testimony, when Stork Craft announced a recall, that 200 million saw that.

Ms. TENENBAUM. We went on every morning show to announce the recall and we are using all of our social media—Twitter, YouTube, CPSC 2.0, but we estimate over 200 million saw those—had access to those television tapes.

Mr. STUPAK. When you do a recall here, especially like with Stork Craft, the 2 million that were recalled here in November, that is a voluntary recall, right?

Ms. TENENBAUM. It is a voluntary recall, and——

Mr. STUPAK. And you have to convince the manufacturer to do it. You don't have authority to say that is it, we are recalling these cribs, correct?

Ms. TENENBAUM. We could if we wanted to go into an administrative action, which would probably result in litigation and take more time, but the compliance officials and the lawyers at the CPSC have said to me, if we can get a voluntary recall, we can get the remedy to the consumer quicker and it takes less time, but you have to negotiate.

Mr. STUPAK. You have to negotiate. And if you look at tab 7 there, I want to talk a little bit about that, because you asked to negotiate with the company that does not believe that their product is defective, right?

Ms. TENENBAUM. That is correct. In fact, Stork Craft maintains to this day that the product is not defective.

Mr. STUPAK. Still maintains that even though we recalled 2 million cribs in 2009. So if I look at tab 7, if I understand this correctly, starting on May 6, 2009, staff sent an e-mail to Stork Craft advising them to stop the sale of drop-side cribs, right?

Ms. TENENBAUM. That is correct.

Mr. STUPAK. And then there is a number of entries in here about what staff was doing, conversations, discussions, and that wasn't really completed until about October 9. Stork Craft submits a press release and then you have negotiations of the press release begins.

Ms. TENENBAUM. That is correct.

Mr. STUPAK. So it takes you about 6 months to convince them to do a recall, correct?

Ms. TENENBAUM. It just depends on the circumstances.

Mr. STUPAK. But in this one it took about 6 months?

Ms. TENENBAUM. It took about 6 months.

Mr. STUPAK. And then why do we begin negotiations of a press release? That is October 9th, and it is my understanding—again, I have another whole page of all the entries that went through in trying to negotiate a press release on a recall which infant children possibly died because of defects in these cribs, and that takes us

to press release issuance of October—excuse me—November 24. So that is another 6 weeks. You negotiate 6 weeks for a press release.

Ms. TENENBAUM. That is correct. We negotiate every word of that press release. We are required to under 6B with the company. Now, 6B under the CPSIA was amended which gives us more flexibility but we negotiate press releases, and——

Mr. STUPAK. Six weeks here. You know, being where I am sit, and maybe I am a little skeptical, but this is sort of like the Christmas season. That is when people are buying things. Do you think part of the negotiations is to drag out the press release, a 1-page press release for 6 weeks, is to get into the Christmas season to sell more cribs that are defective that are being recalled?

Ms. TENENBAUM. Well, I have asked my staff why it takes so long, once you have made the decision for recall, why it takes 6 weeks, and that is the standard procedure, the standard amount of time, and they produced a document for me with everything that has to be done, particularly if you are going to do a recall repair. You have to manufacture the repair, you have to test it, and then inside the company, in Stork Craft Company, you know, those decisions, if you are talking to someone, they have to run it all the way up to the CEO or whomever is at the level to make the decision, but it is the truth. I mean, it takes an inordinate amount of time, and all during this time the consumers don't know that their crib needs a repair kit.

Mr. STUPAK. Correct, and then even after you do the recall, now this is well over 6 months from when we started this process and 6 weeks to get a press release out, but then now on top of that they have another 6 months they can sell the product to the American people, right? Don't they have another 6 months?

Ms. TENENBAUM. No, we stop sale.

Mr. STUPAK. Pardon?

Ms. TENENBAUM. Once the recall is announced, we stop sale. In fact, the retailers have a way to in their computers put the serial number of the product and it stops——

Mr. STUPAK. I thought from Mr. Dwyer, I thought we had another 180 days after that. Maybe I misunderstood.

Ms. TENENBAUM. No, after the—at the recall, it stops sale.

Mr. STUPAK. That is the certification, I guess. Okay. I had it wrong. Why does it take so long? I mean, you had a number of recalls. In fact, you had one Tuesday here, 635,000 more cribs. Why does it take so long? Why does it take 6 months?

Ms. TENENBAUM. Well, it shouldn't take 6 months, and that is why under our Safe Sleep Initiative, we are going forward going to have a safe sleep team where everyone works together, the compliance officers, the attorneys, the epidemiologists, the engineers so that we can all work together to move a case forward quicker. I think 6 months personally is too long. And you can also if the company is not cooperating and keeps insisting, you know, they shouldn't have a recall, we can issue a unilateral press release, which we have threatened to do. I have also told our staff, use every enforcement power you need to move cases forward; don't let a company push back on you if you have the science and the engineering complete and you know this is a product that needs to be recalled. So they know that leadership is behind them in these re-

calls. We also have instituted since I came to the Commission where once a week all five commissioners meet and we have weekly compliance briefings, and then we have monthly compliance briefings so we know the status of cases and can give the staff our thoughts on how urgent we think these recalls are.

Mr. STUPAK. Well, hopefully the next time the press release doesn't take 6 weeks. Six hours should be enough. If not, you can issue a unilateral one.

Mr. Walden for questions, please.

Mr. WALDEN. Thank you very much, Mr. Chairman.

Now, Chairman, I thought I heard you say you have the authority at CPSC to unilaterally issue a press release.

Ms. TENENBAUM. That is if the company does not cooperate.

Mr. WALDEN. Okay. So——

Ms. TENENBAUM. And we have threatened that.

Mr. WALDEN [continuing]. What the chairman is talking about, a 6-week delay in getting a press release, was the company not cooperating in that process?

Ms. TENENBAUM. The company was at that point—they were cooperating once we told them we were going to do the recall but when it said 6 weeks, it is not really—I mean, there were other things going on in that period of time.

Mr. WALDEN. And what other things were going on?

Ms. TENENBAUM. Okay. I can give you the recall notification process. I can talk to you—I mean, first of all, you have to determine the scope of the product to be recalled. You have to request——

Mr. WALDEN. And this is CPSC has to do this or the company?

Ms. TENENBAUM. Yes, the Commission has to do this. You have to look—I mean, it is a 2-page-long or 3-page-long document of everything that has to occur before you can recall a case, and you have to make sure the 800 number and the website are operational. You have to test the kit. The company has to manufacture the kit, and——

Mr. WALDEN. These are required by your rules?

Ms. TENENBAUM. These are required to have a successful recall so that——

Mr. WALDEN. In your rules, though, right? These are CPSC rules you are talking about?

Ms. TENENBAUM. I don't know that they are rules, they are just procedures.

Mr. WALDEN. But you control the procedures at CPSC?

Ms. TENENBAUM. The Consumer Product Safety Commission, yes. We control it but we also have to make sure the recall is done appropriately.

Mr. WALDEN. I fully concur with that, but I am just trying to get at this issue of why it took 6 weeks to get a press release out.

Ms. TENENBAUM. Well, this was a staff member's notes, and I don't know if they——

Mr. WALDEN. So you don't think those are accurate maybe?

Ms. TENENBAUM. No, I am not saying that, Mr. Walden. I am saying that it might have reflected that it was going on 6 weeks but we do have to negotiate every word. They might go up to their supervisor or to the CEO, come back to us and say we really dis-

pute this death, so that was a good example. The death in the Dorel Asia case, the company felt like that we should not mention the death. So when you get in whether or not you are going to mention a death, the lawyers on both sides have to get into it. You have to do an investigation. So it can take 6 weeks. If we want to say no, we are going to list, say, four deaths, then you have to say in Stork Craft there were four deaths. You had to go back and make sure your facts were true on every death and——

Mr. WALDEN. And do you think that is an unfair process?

Ms. TENENBAUM. Do I think it is unfair? We have to make sure that it is correct.

Mr. WALDEN. Right. I would concur.

Ms. TENENBAUM. I think what I would like to see on the front end is for us now that we are going forward and we have our team that is going to be working together, I hope we can shorten the part of the point leading up to the recall.

Mr. WALDEN. Do you think that the early warning system has been toothless? Do you think that has worked?

Ms. TENENBAUM. The early warning system was formed after the Simplicity recall, and it puts together a team of people—lawyers, compliance officers—to look at the data that is submitted to us.

Mr. WALDEN. It tries to get everybody in your agency, right, to talk?

Ms. TENENBAUM. Right. Earlier on, you mentioned—you asked me if—or you asked one of the Ciriglianos, you asked them if they had a duty to report, and they did not.

Mr. WALDEN. No, that was the chairman who said that.

Ms. TENENBAUM. Right, and that is one of the issues. We do not get reports sometimes until years after an incident has occurred and the sample is gone. So one of the issues that we were going to say in terms of improving the process which would take probably statutory authority is to require States to report events to us. Medical examiners' reports, we purchase. We work with other—we work voluntarily with hospitals. We have the NICE system. We have a number of ways. We go through press releases, newspapers. We do everything to find out about incidents but there is no duty to report from the State coroners or medical examiners.

Mr. WALDEN. Thank you. That is helpful information to have as we go forward. I have just 45 seconds left here, and we have got votes on, so let me ask you this. Is it the industry trade group's duty to come up with these new standards, or if there is a gap in safety, is it CPSC's duty to put in mandatory standards? You have that authority. Your predecessors have had that authority. You can step in and put a standard in that says we are not going to have drop-side cribs or we are not going to have this type of manufacturing process, right?

Ms. TENENBAUM. I think the ASTM should always have state-of-the-art, robust standards for all the products.

Mr. WALDEN. I agree.

Ms. TENENBAUM. But I also see, when you see patterns of this kind of thing that go on for years, then it is time for the CPSC before it gets this late to have a mandatory standard, and that is why when I came to the Commission we started looking at the cribs. We changed the schedule so that this year we will have the mandatory

standard. We asked the ASTM. I called them personally, got them on the phone, you need to work with us right now to have the best voluntary standard possible. They voluntarily said yes, we would love to work with you. They came and spent yesterday and the day before and worked all day long, and they have come to an agreement that we need to increase the wood quality. Now it is a 50-pound standard. They agreed to an 86-pound standard. We need to test the hardware, given the Canadian racking method. I understand that is 9,000 times the hardware is put under stress to be tested. They outlawed wooden screws, and they also, you know, talked about other issues that would make the voluntary standard robust.

Mr. WALDEN. Good. Thank you. Thank you for your work and thanks for your response to questions.

Mr. STUPAK. Thanks, Mr. Walden.

Ms. Schakowsky for questions, please.

Ms. SCHAKOWSKY. So let me get it clear. We are going to have a mandatory standard for cribs that will prohibit drop sides?

Ms. TENENBAUM. Yes, ma'am, we will.

Ms. SCHAKOWSKY. And when will that be?

Ms. TENENBAUM. It will be 2010. We hope by early summer to have the NPR published in the Federal Register. We have to have 75 days of comment and then we will have the standard by the end of the year. We are also pushing the ASTM to go ahead and adopt voluntary standards with this, and the good thing about having a mandatory standard that you put in the CPSIA is that it will be retroactive. It will cover cribs that are in public places like hotels and childcare facilities so that the drop side will be banned in the public places. But we still worry about cribs in homes that continue to have the drop side.

Ms. SCHAKOWSKY. And in the meantime, how are we going to keep these cribs—are all of them with drop sides recalled?

Ms. TENENBAUM. Well, we have recalled 6 million of them, and all these are voluntary recalls where we have repair kits and we have to keep continuing to educate people in the home who have cribs that there is a repair kit that they need to purchase and so it will still be in the home. And we also want to reach out to the minority communities through the neighborhood safety network, the minority outreach program. Also, we are looking at how we can communicate through every State agency that licenses childcare facilities so that we can send out e-mails to say don't use this brand crib, children have been injured or killed with these drop sides. So it is up to us to continue with our public information campaign.

Ms. SCHAKOWSKY. But there still will be until—so after the 75-day comment period, when are we going to say a ban nn drop-side cribs?

Ms. TENENBAUM. Well, prospectively the ASTM has banned them, and I asked the director of DHS—well, I asked——

Ms. SCHAKOWSKY. Ban the manufacture but not all of them have been recalled?

Ms. TENENBAUM. I don't think every crib has been recalled.

Ms. SCHAKOWSKY. Drop-side cribs.

Ms. TENENBAUM. Drop side, but it is banned prospectively. I will have to get back with you on that. I know that——

Ms. SCHAKOWSKY. But under CPSC, after the—what does that take us to? There is a 75-day comment period——

Ms. TENENBAUM. I would hope by December to have our mandatory rule done, and I hope we can do it sooner. And the work that has been done the last 2 days by the ASTM should allow us to have information, plus the agency put out an ANPR in 2008, so we are going to try as fast as possible to have this done.

Ms. SCHAKOWSKY. Okay. I want to get the letters right. The JP—what is it?

Ms. TENENBAUM. JPMA?

Ms. SCHAKOWSKY. Voted against having a mandatory standard, or what was it? I mean, I am trying to understand the relationship with the industry, and for a long time I have been concerned about the issue, for example, of these press releases, and I understand, of course, getting the accuracy but it doesn't take that long to figure out if someone has—if a child has died or four children have died, and the fact that the industry doesn't want that in a press release, who cares? Why do we have to negotiate that? Why should it take so long if this is a threat of life? Do we have to do more? How does our new Act, the Improvement Act, change the rule about these press releases?

Ms. TENENBAUM. Well, I will give you an example. Just this week we recalled Dorel Asia and the Today show and other morning shows are very helpful to us and they say we will announce this so that people can get the word on this, and we had had it in the press release that a child had died. The people representing Dorel Asia were talking to Tom Castello up until right before he went on the air saying do not mention that death, and so that is how we have to deal with this, and he mentioned it because we asked him to.

Ms. SCHAKOWSKY. Well, under the new Act, you said that there has been some improvements in that. What was improved?

Ms. TENENBAUM. Well, the time under 6B. It just shortened the period of time. But still the negotiations about whether or not a death is, you know, because of the hardware or some fault of the consumer, and that goes back and forth and we have to be really hard about pushing forward that we are going to list this death.

Ms. SCHAKOWSKY. I think we really have to do something about that, because don't you think that the impact of a statement where a death has occurred is much more powerful than——

Ms. TENENBAUM. Yes. I mean, if parents know that your child can tragically die by being entrapped, they will go in that room and look at that crib immediately, we hope, or even when a child is injured and we can show parents, this is not something that you can fix yourself, please get the repair kit, and if the crib is in such bad shape, please do not use it.

Ms. SCHAKOWSKY. Well, as far as I am concerned——

Mr. STUPAK. I have got to cut you off.

Mr. Burgess, we have 2 minutes left to vote.

Ms. TENENBAUM. Thank you, though, for bringing this up.

Mr. STUPAK. Mr. Burgess, questions, please.

Mr. BURGESS. Thank you, Mr. Chairman, and thank you, Commissioner, for being here today. I hope we have—I know we have

a request in to your office to have a meeting. I hope we are able to have that soon.

Mr. Chairman, I will also say, having taken a trip out and seen the testing facility at CPSC, I would encourage a field hearing at the testing facility sometime. I think it would be important for us to see how they do a good job with really sometimes some pretty rudimentary tools, and if we behave ourselves that day, they will even let us test some of the toys if we promise not to break them.

Now, I am a little confused on the—that you have banned the manufacture of drop-side cribs. Is that correct?

Ms. TENENBAUM. ASTM has.

Mr. BURGESS. ASTM has?

Ms. TENENBAUM. And we will put that in our mandatory standard.

Mr. BURGESS. Who needs to ban the import? Because a drop-side crib could still be imported by a retailer.

Ms. TENENBAUM. Well, what the ASTM is a voluntary standard and they are saying in the standard, which they voted on in December of 2009, that it will no longer meet standards if it is drop side. But, you know, we will have a rule this year, and I don't want to whine but I want to tell you that we have had 48 Federal Register notices since the passage of the CPSIA. There are so many rules under that we pushed forward that that is why it takes a while to finish these rules, but anyway, I got you off your train of thought. I am sorry.

Mr. BURGESS. Well, some of the things we have been through before with the lead-up to the CPSIA was the problem that we have with stuff that is made overseas, read China, and then brought to this country that doesn't meet our standards. If we decided that it is the design of the drop-side crib that is the problem, then it doesn't matter where it is made, in my opinion. If it is made overseas, then we should not allow its import. Now, what do we have to do with the World Trade Organization and all of our treaties and border stuff, what do we do to keep those cribs from coming in and being sold in retail outlets in this country?

Ms. TENENBAUM. If we ban the drop side, we could stop it at the port.

Mr. BURGESS. Have we banned it?

Ms. TENENBAUM. We will in the rule.

Mr. BURGESS. Which is going to happen when?

Ms. TENENBAUM. In 2010 we are going to finish that. It was originally scheduled for 2012 and we have expedited that to move it up to 2010.

Mr. BURGESS. Yes, the notes I have from the U.S. Consumer Product Safety Commission, Office of General Counsel, required actions pursuant to the Consumer Product Safety Improvement Act of 2008, and this is dated September 2008, that we would do this by August of 2009, so I guess that slipped a little bit?

Ms. TENENBAUM. I guess it did. We did the durable nursery equipment items, there were 12 of them, baby baths and baby walkers.

Mr. BURGESS. Shouldn't cribs have been up at the top of that list of 12?

Ms. TENENBAUM. Cribs, in my opinion, yes. That is why I have expedited it.

Mr. BURGESS. So we on this committee can expect you to issue a mandatory ban on drop-side cribs sometime in 2010?

Ms. TENENBAUM. Yes, sir, and that will be retroactively applied for cribs in public places such as childcare facilities and hotel rooms but it won't apply to bans in homes, so the consumer would still have it under section 104.

Mr. BURGESS. Well, if they had existing ones, but will they still be able to go to a retail outlet and purchase one?

Ms. TENENBAUM. No.

Mr. BURGESS. Would a retailer be able to import one for sale?

Ms. TENENBAUM. No, not after we say that they don't meet the standards.

Mr. BURGESS. So we will be able to stop those at the border?

Ms. TENENBAUM. Yes, sir.

Mr. BURGESS. Let me just ask you, one of the things we struggled with during the run-up to the bill in 2008 was the funding and personnel levels at the CPSC. Where are we with that now?

Ms. TENENBAUM. Well, we are at the level of having 530 FTEs, full-time equivalents, and we now employ as of today 479. So we are—but we have 45 recruitments in the process of being hired, and it is our goal to be at the top of the 530 this year.

Mr. BURGESS. Now, we were given—both Nancy Nord and Mr. Moore felt that the funding levels we were providing CPSC in past years were not satisfactory. Those were increased. What actions are you taking now? We are going to be in a tough budget yet. Guess what? It is going to be real tough. And yet this is one of the more important functions but still very low on the totem pole of things that get funded. So what actions are you taking now to ensure that your funding does not slip?

Ms. TENENBAUM. Well, when we—I go and meet personally with OMB and I go myself, just talk to them about how important it is to be able to implement the CPSIA and other statutes. I ask them to hold our agency harmless. And so I have said, you know, $10 million to the CPSC is a tremendous amount. Ten million dollars to a mega agency would not have the same effect. And we keep demonstrating to them how we are using it. Also with Booz Allen Hamilton, which is the company that is going to be doing a management, operational and strategic plan for us, they will be looking at what additional resources we need or how we use existing resources to accomplish our goal, which is keeping consumers safe.

Mr. BURGESS. Well, I would just say, don't forget you have friends on this committee if the appropriators aren't treated you squarely.

Thank you, Mr. Chairman. I know we have got to go vote.

Ms. TENENBAUM. And thank you, Mr. Burgess.

Mr. STUPAK. Thank you. That concludes all questioning. First I ask unanimous consent Mr. Waxman's opening statement and the attachment from the Consumers Union be made part of the record.

[The information appears at the conclusion of the hearing.]

Mr. STUPAK. And that concludes all questioning. I want to thank our witnesses for coming today and for their testimony. The committee rules provide that members have 10 days to submit addi-

tional questions for the record. I know there are questions as to manufacturers have a duty to report deaths and injuries, and after you do a recall, we have seen going in the stores, there is no notification. So there are going to be other questions. We will follow up probably with you, Madam Chairperson.

So I ask unanimous consent that the contents of our document binder be entered into the record provided that the committee staff may redact any concerns about privacy, business proprietary or other law enforcement-sensitive issues. Without objection, documents will be entered in the record.

That concludes our hearing. This meeting of the subcommittee is adjourned. Thank you all for being here.

[Whereupon, at 12:18 p.m., the subcommittee was adjourned.]

[Material submitted for inclusion in the record follows:]

Opening Statement of the Honorable Joe Barton
Ranking Member
Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
Hearing on
"Crib Safety: Assessing the Need for Better Oversight"
January 21, 2009

Thank you, Mr. Stupak and Mr. Walden for this hearing. Approximately 4 million babies are born in the U.S. every year and their parents want the cribs they buy and place their babies in to be safe. The recent recalls of millions of cribs raise fresh questions about the safety of our juvenile products and the effectiveness of the U.S. Consumer Product Safety Commission.

Lately, the threat has come from drop-side cribs, which may pose risks of entrapment and or suffocation. It seems that the risk becomes especially great when parts are not properly assembled, are lost, or they break from age and use. I want to know if the drop-side crib design is inherently unsafe and dangerous. If it isn't a basic design flaw, then I want to know the reason for the increase in the number of incidents and recalls associated with these types of cribs. Some manufacturers have drop-side

cribs in the marketplace that do not show any problems and have not had recalls. I want to know why.

I would like extend a very warm welcome to Susan and Robert Cirigliano from New York who have traveled here to share their story. I look forward to listening to their ideas and suggestions on how we can increase crib safety and improve the recall process and communication between crib-makers, retailers, industry, regulators, and parents.

I also look forward to hearing from our other witnesses including Nancy Cowles from Kids In Danger and Mike Dwyer from the Juvenile Products Manufacturers Association. They will be able to offer different viewpoints on several issues relating to this topic.

Chairman Tenenbaum from CPSC is here to discuss the Commission's role in this matter and I hope she can assure us that the CPSC is handling the recalls and their repercussions in a fair and effective manner. She can also speak to us about the changes to the Commission since Congress passed the Consumer Product Safety Improvement Act of 2008 (CPSIA). That legislation gave the Commission new authorities and resources to effect quicker recalls and requires the Commission to promulgate new mandatory standards for infant products, including cribs and play yards.

Lastly, I want to get Chairman Tenenbaum's commitment to transparency and robust discussions among the five Commissioners and all of CPSC's stakeholders. An effective Commission is one that listens more than it talks, and one that bases its regulatory decisions on hard science and expert coosensus.

So I look forward to hearing from our witnesses, and I yield back.

Opening Statement of Rep. Henry A. Waxman

Chairman, Committee on Energy and Commerce

"Crib Safety: Assessing the Need for Better Oversight"

Subcommittee on Oversight and Investigations

January 21, 2010

More than 25 years after safety standards for cribs were first established, neither the crib industry nor the government can gaurantee today that drop-side cribs are safe. Problems remain with our products, and our safety oversight, recall, and enforcement systems need improvement.

Parents who put their babies to sleep in a crib should not have to be afraid of what might happen in the night.

Since 2005, the Consumer Product Safety Commission (CPSC) has recalled more than 7 million cribs for a variety of hazards. Most of these recalls have occurred in the last three years, as CPSC experts have identified and responded to a disturbing pattern of child entrapments, injuries, and even deaths associated with drop-side cribs.

The CPSC created an Early Warning System in late 2007 to track emerging product safety hazards. According to the CPSC, the Commission has evaluated more than 2,800 crib-related incidents identified through the Early Warning System. In the last two years, CPSC has identified almost 700 crib-related incidents that merit extensive in-depth investigations. As a result, the Office of Compliance has opened more than a dozen investigative cases pertaining to crib hazards, resulting in the recall of millions of cribs.

This is an unacceptable state of affairs, and today's hearing examines these issues in full.

The CPSC has not updated its mandatory crib safety standards since 1982, instead deferring to the voluntary safety standards developed by ASTM International, a private organization that develops voluntary standards for a range of industries.

As Nancy Cowles from Kids In Danger will testify today, the ASTM committee that is devoted to setting voluntary standards for cribs has discussed its concerns about the durability of drop-side cribs for years but took little action until last month.

As a testament to the shortcomings of existing standards, the drop-side cribs implicated in each of the major recalls over the last three years — Simplicity, Delta, and Stork Craft branded cribs—carried the Juvenile Products Manufacturers Association (JPMA) safety certification seal. JPMA calls this seal a "symbol of confidence," which demonstrates that certified cribs meet all mandatory and voluntary ASTM standards, and are made, "with safety in mind.". We will examine today whether existing safety standards are truly strong enough to merit parents' confidence in these products.

While CPSC's data on the number of crib incidents investigated and cribs recalled is extremely disturbing, the agency's actions also demonstrates its renewed commitment to identifying emerging product hazards and responding quickly to remove dangerous products from the marketplace.

The CPSC has new authority under the Consumer Product Safety Improvement Act to develop tougher mandatory safety standards for cribs and other children's products. I look forward to Chairman Tenenbaum's plans for this rulemaking.

Today's hearing will also address the November 2009 recall of two million Stork Craft drop-side cribs as a case study of the CPSC recall process. Chairman Tenenbaum acknowledged in the press that the CPSC has not responded quickly enough to reports of crib safety hazards. I am eager to hear more from the Chairman about the lessons she learned from her first major crib recall as the head of the Commission.

Finally, it is also important, in the context of these issues, that we discuss personal responsibility and corporate responsibility.

Too often, the crib industry is quick to blame parents for an incident involving a broken crib. Following the November 2009 crib recall, Stork Craft told the Canadian press that most drop-side cribs implicated in infant entrapment incidents were used improperly, and I quote, "with broken parts, parts with pieces missing, parts that were damaged or with modified or homemade parts."

The Juvenile Products Manufacturers Association, as part of its crib safety resource guide, warns against alarming parents and emphasizes the need to educate them about "the importance of the proper use, assembly, and reassembly of cribs and how to provide the safest sleep environment for a child."

Parents are indeed responsible for doing the best they can to ensure the health and safety of their children. But the crib manufacturers have a responsibility too. They are responsible for manufacturing cribs that are durable and can withstand normal consumer use, such as disassembly and reassembly, without easily

breaking or losing parts. Overall, they are responsible for manufacturing cribs that parents can trust and must be held accountable for that responsibility.

I want to thank our witnesses for appearing at our hearing today, especially the parents who are here to share the tragic story of their son. Thank you for your testimony and for helping this Committee understand what is at stake.

Honorable Greg Walden
Ranking Member, Subcommittee on Oversight and Investigations
2322A Rayburn House Office Building
Washington, D.C. 20515

Re: "Crib Safety: Assessing the Need for Better Oversight"

Dear Chairmen Waxman and Stupak and Ranking Members Barton and Walden:

Consumers Union (CU), the non-profit publisher of Consumer Reports® magazine, writes to commend the Subcommittee on Oversight and Investigations of the Energy & Commerce Committee on holding a hearing on crib safety.

Parents and caregivers place a lot of trust in cribs. So much trust, in fact, that they leave children in cribs overnight, unattended. As the seemingly endless series of crib recalls over the past few years have demonstrated, however, there are urgent safety concerns with cribs. In the past few years alone, there have been at least 37 recalls involving more than 7 million full-size cribs, play yards and bassinets. Between 2004 and 2006, the last 3-year period for which there is complete data, there have been 93 deaths associated with cribs. In 2008, there were 11,500 estimated hospital-treated injuries associated with cribs.

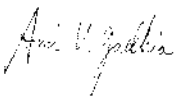
CU has long advocated for mandatory crib safety standards, and we are pleased that the Consumer Product Safety Commission (CPSC) is moving forward on this matter. In addition to concerns about the safety of cribs, we are also concerned about the speed and thoroughness of information given to

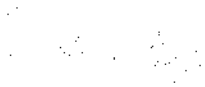
consumers after cribs are recalled. When the CPSC issues recall announcements for cribs it consistently recommends that owners stop using them immediately and contact the manufacturer, which often supplies repair kits. However, we have heard complaints from our readers that those fix-it kits sometimes take too long to arrive from the manufacturer. As a result, parents often cannot provide a safe sleeping environment for their babies until the repair kit arrives.

Our goal is to provide consumers with up-to-date safety information, including tips and information on what to do if their crib is recalled. (See our Safety Blog, [illegible]) But as you know, recalls attempt to fix a problem after an unsafe product has entered consumers' homes. We share your goal of ensuring that cribs are ultimately safer, and that fewer recalls are necessary.

We recognize that current industry voluntary safety standards are grossly lacking, and we welcome much-needed improvements to crib safety and crib recalls. We thank you again for holding this hearing, and look forward to assisting you as you move forward on crib safety.

Sincerely,





Ami Gadhia

BETHESDA, MD 20814

May 14, 2008

Mr. Bill Suvak
Chairman, ASTM Crib Standard Subcommittee
1010 Keller Drive NE
New Salisbury, IN 47161

Re: ASTM F1169 *Standard Specification for Full-size Baby Cribs*

Dear Mr. Suvak:

This letter presents recommendations from the U.S. Consumer Product Safety Commission (CPSC) staff[1] regarding revisions to ASTM F1169 *Standard Specification for Full-size Baby Cribs* to address hazards posed by cribs with sides that can be assembled backwards or upside-down. Some crib designs give the appearance of proper assembly with the drop-side inverted. In this configuration, the drop-side can detach from the crib, possibly creating a dangerous gap that may lead to the entrapment and suffocation of infants. CPSC staff is aware of four deaths where the crib's side was installed upside-down[2]. These deaths included a 6-month-old child, a 7-month old child, a 9-month-old child and a 1-year-old child.

Crib failures can result from a combination of hardware and crib design, which allows consumers to install one or more of a crib's components (a side or mattress support platform) in an incorrect orientation while giving a visual appearance that the crib was assembled correctly and without affecting the crib's first or primary use. In some circumstances, such improper assembly can result in unforeseen stresses on the hardware used to secure that component to the rest of the crib. This may contribute to the component detaching from the crib. When a crib side or the mattress support detaches in one or two corners, it creates a gap that can entrap infants. At the April 1, 2008 ASTM subcommittee meeting on full-size cribs, a requirement for drop sides that are assembled by consumers was proposed by the task group assigned to this matter. The requirement stated that a drop side intended to be installed in a defined orientation must meet one of two conditions:

1. It can only be assembled to the crib in one orientation and function as specified in the instructions, or

[1] The views expressed in this letter are those of the CPSC staff and have not been reviewed or approved by, and may not necessarily represent the views of, the Commission.
[2] 061129HBB2115, 071114HCC1107, 070726CAA3587, and 050615CWE5015

2. If it can be assembled in any other orientation, a label must be provided to clearly indicate the proper orientation.

In order to properly address this hazard, CPSC staff recommends that the requirements proposed by the task group be expanded to include all sides and the mattress support platform and that a third requirement be added as follows:

Crib designs that permit backwards or inverted assembly of the drop sides, stationary sides, mattress support platforms, headboards or footboards, shall pass all applicable performance tests in the misassembled state.

If you have any questions regarding this recommendation, please feel free to contact me. Thank you for your consideration of this important consumer product safety concern.

Sincerely,

Jonathan Midgett, Ph.D.
Directorate for Engineering Sciences

Subject: FW: StrkCraft Letter and Poster
Date: Tuesday, November 24, 2009 4:58:06 PM

Jim & Jude,

We have gotten emails from retailers that said they did not receive notice from Stork Craft. This is a bit troubling as we received confirmation from you that all retailers, in particular those that were cited in the press release, had received notification. The retailers that we sent notification letters and posters include:

- Target
- Sears
- Burlington
- Meijer

What actions are you proposing to ensure that ***all retailers*** have or will be officially notified about the recall and receive posters? CPSC investigators have already gone out to several retail stores today and the results have been negative, meaning no notification and no posters up in stores. I'll send you the names and addresses.

Subject: Recalled Stork Craft Cribs Press Release

Dear Mr. Moore,

Many of the consumers that contact CPSC about the recall tell us that they cannot reach Stork Craft because the lines are constantly busy or the web site is not responding to their requests for replacement brackets. Other consumers state they have not received repair kits even though requests were made when the press release was issued. What is Stork Craft doing to resolve these issues? I am asking Stork Craft to provide a detailed plan of action for what it has done or will be doing to correct these problems.

Two consumers have threatened to tell their stories to the news media. This would be damaging to both CPSC and Stork Craft.

Also, I spoke to Jude two weeks about taking down the Stork Craft Advisory on cribs. The advisory remains on the web site. Please remove the advisory as the wording conflicts with the intent and wording in the press release.

Please email pictures, names and model numbers of fisher-price and storkling logo cribs. And, provide a description of each and the number of cribs distributed from 2000 to present.

Regards,

Dollie Nicholson

Compliance Officer

To: Tarnoff, Howard;
Subject: RE: Voluntary Crib Standard-- dropsides
Date: Friday, September 25, 2009 11:18:51 AM

In September 2002, Staff (me) wrote a letter to the ASTM subcommittee chair on cribs expressing our concern with the number of hardware related incidents we had seen and asked the subcommittee to step up efforts to address these problems in the standard. Task groups were formed and for 5 years, there was activity in the task groups but it never resulted in any change to the standard. At the March 2007 ASTM meeting, during a discussion of the lack of progress regarding the hardware task groups (raised by me), a manufacturer's representative proposed that abolishing drops sides from cribs should be considered. At that time, there was much opposition to it, mostly due to the unknown – would that create additional hazards.

Six months later, in Sept 2007, I wrote a second letter to ASTM, pointing out that nothing has changed in the standard in the 5 years since I wrote my original letter, and that we continue to see more hardware incidents. I recommended some specific options that could be undertaken, including: ***"eliminate the use of plastic hardware on any moveable component of a crib (drop sides and mattress support systems). An additional consideration, which was posed at the last ASTM crib subcommittee meeting by a participating member, would be to explore ways to amend the standard in order to abolish drop sides from cribs altogether."***

Since that letter, the task groups were taken over by one individual (Dave Campbell) who put considerable effort into trying to develop a test requirement for drops sides. Many laboratories participated, including CPSC. The conclusion was reached that an adequate, reliable and repeatable test procedure was a long way off. At that point, the focus turned toward writing a requirement that would eliminate the common movable drop side on cribs. In the winter of 2008/2009 Bill Suvak (the subcommittee chairman) developed a draft requirement to eliminate drop sides, along with a wood slat strength requirement, and reviewed it with CPSC staff in a closed meeting. This draft was presented for ballot at the March 2009 ASTM meetings and was approved as written. The ballot received a few negatives (from a manufacturer and an inventor of a new drop side hardware system). A supplemental meeting was held in July

CPSC023933

2009 to review the ballot results. The negatives were found to be non-persuasive which means it must go out to ballot again to uphold finding the negatives non-persuasive. That ballot was sent out Aug 27th and votes are due back Sept 27th. Assuming it is upheld, then the new requirement will go forward to ASTM for inclusion in the standard. This typically takes 1 – 2 months to get through the edit, review and approval stages of ASTM. Thus, by the end of the year, I anticipate that it should be part of the ASTM standard.

To: McLaurin, Hugh;
cc: Ochsman, Robert; Kumagai, Mark; Hackett, Patricia;
Subject: FW: Crib Instruction /Assembly Task Group
Date: Thursday, March 13, 2008 10:27:00 AM

Below is a thread of an ASTM task group that is (supposedly) addressing the fatalities that we saw last year with the Simplicity cribs. The crib drop sides were installed upside down. The task group was not going to form at all, except that Nancy Cowles of Kids in Danger loudly protested and got the subcommittee to form it. The task group is headed by Jerry Drobinski of Revmark and Ken Waldman of Simplicity.

Their approach has been freakish in its insistence that the instructions of cribs are at fault. This only makes sense if you know that you don't want to change any of the shapes of your crib hardware and would rather blame the consumer. I tried to gently suggest the best course of action in my email below. The response from Drobinski is evasive and just outright wrong. Since then, the committee has been gathering instructions, but has not scheduled a conference call or done **anything else**, which in my opinion is blatant malingering.

I am drafting a letter to ASTM to explain exactly what needs to be done to prevent this hazard from occurring again. It is totally easy to do and will not cost much. If they don't adopt our recommendation, I believe we have a case for rulemaking.

Thank you all for your kind support,
jonathan

Subject: Re: Crib Instruction /Assembly Task Group

Jonathan,

I and co-chair Ken Waldman agree with what you and Nancy are saying. But we think we need to start with the instruction sheet and build from there. To be sure, some of the things you are suggesting are already being done and/or can easily be incorporated. Once we can agree to a format for the instruction sheet and make it uniform, we can recommend addition of some identifiers to the crib that would help assembly. One of the MOST important parts is to make sure we do not make these too wordy and confuse the customer. Also, adding warning is NOT the answer, in fact, we should narrow down the warnings, so that the customer will read them.

Jerry

In a message dated 11/19/2007 10:12:08 A.M. US Mountain Standard Tim, JMidgett[redacted].

> Nancy makes an erudite point.
> Human factors psychologists would say that the best way to prevent misassembly is to limit the consumer's ability to put parts in the wrong place. For instance, changing the shape of part-to-part interconnections so that they can only fit in a single orientation, like a key, is extremely effective. This would be the first choice solution.
> Second choice would be to place unpleasantly textured or colored surfacing on the bottom rail so that consumers intuitively recognize that side should face the floor, out of view. An ugly orange stripe with tire treads along the bottom of the rail would help.
> The third choice would be to put a label that says, "This side down!" on the bottom of the rail.
> The least effective strategy is to modify the instructions or to create a list of warnings.

Subject: RE: Crib Instruction /Assembly Task Group

I don't mean the assembly instructions, I mean how the crib parts are manufactured and labeled to avoid putting it together wrong – for instance, so that the side rails cannot be attached if they are upside down through design and hardware, not just instructions.

Subject: Crib Instruction /Assembly Task Group

All,

At the last ASTM Meeting Session for Cribs, it was decided that a task group would be formed to make recommendations for standards modifications which would lead to improved instructions. This task was undertaken since, due to the analysis of IDI data provided by CPSC, it was determined that a significant number of incidents involved cribs which were incorrectly assembled by consumers.

You are receiving this correspondence because you are identified as the contact person for the JPMA program

In order to have a bank of information for comparisonson, we are requesting that all of the manufacturers involved in the JPMA Certification Program forward to us one or more examples of the instructions they are currently using. It would be preferred that the instructions could be forwarded in PDF format to make distribution to the task group more efficient. In addition to your instruction/assembly information, if you have any suggestions or comments in the area of assembly, we would be grateful for that input as well.

Thank you in advance for your cooperation.

Jerry Drabinski

JPMA Certification Program and ASTM Standards

FREQUENTLY ASKED QUESTIONS

How many juvenile products are currently certified through the JPMA Certification Program?
Approximately 2,000

How long does a certification last?
Until the company chooses to leave the program or if they no longer pass the testing.

Do companies have to renew each year?
Yes, companies must renew each year to continue participation in the program.

How often are products re-tested?
There are quarterly testing requirements for the program. Each product model has to be tested at least once a year through the quarterly testing. Also, the program includes random retail testing where the test lab will purchase the product at the retail level and test the product. This is in addition to the quarterly testing.

Why would a company not want to certify their product?
Sometimes they can't get certified because there is not a program for that type of product category.

What product categories are available for JPMA Certification?

Currently there are 20 product categories in the JPMA Certification Program: bassinets/cradles, bath seats, booster seats, carriages and strollers, changing tables, children's folding chairs, frame infant carriers, full-size cribs, gates and enclosures, hand-held infant carriers, high chairs, infant bouncers, infant swings, play yards/non-full size cribs, portable bed rails, portable hook-on chairs, soft infant carriers, stationary activity centers, toddler beds, and walkers. JPMA is currently working on adding commercial cribs and infant bath tubs to the program.

Why doesn't JPMA offer more categories?
The development of a certification program for a product is based upon several factors. JPMA adds new categories to the certification program as new standards are developed by ASTM. The development of standards is typically driven by incident data provided by the CPSC. If there is data which demonstrates performance or safety issues with a product, ASTM will facilitate the establishment of a standard.

Is the certification international or domestic only?
The products are tested to U.S. standards.

Is the whole line of strollers etc. certified or just those that were tested?
If a manufacturer wants to participate in the carriage/stroller certification program, then all of their carriage/stroller models must be tested and pass the ASTM standard prior to certification being granted.

Why are car seats not part of the certification program?
All car seats manufactured today must be designed to meet stringent safety standards set by the Federal government. In fact, child restraints sold in the United States are required to satisfy the rigorous performance standards established by the National Highway Traffic Safety Administration (NHTSA), and are certified by their manufacturers as compliant before they can be offered for sale.

What does "ASTM standard" mean?
The testing is done to voluntary standards that are developed and published by ASTM International (formerly The American Society for Testing and Materials). Participants in the development of standards for juvenile products within ASTM include representatives from the federal government, including the Consumer Product Safety Commission, along with manufacturers, retailers, test labs, consumer advocate groups, and individual consumers.

How are the ASTM standards developed?
The ASTM standards are developed for juvenile products based on hazard data, which provides each of the subcommittees insight into how the products are used by consumers and, in some cases, misused. Some products even have comprehensive federal mandatory standards that all manufacturers of those specific products must meet in order for the products to be sold in the U.S. Each standard's requirements are specific to the individual product. The testing

requirements reflect "real world" injuries and are intended to address typical use as well as reasonably foreseeable abuse of the product(s).

For example, the following are some requirements incorporated into ASTM standards for cribs that go beyond mandatory federal requirements of full-size baby cribs (16 C.F.R. 1508), and non-full-size baby cribs (16 C.F.R. 1509):

- Cribs
— Corner post vertical extensions
— Dynamic impact testing for crib structural integrity
- Crib interior dimensions and component spacing
Impact testing of crib side rails

In addition, each of the standards contain specific requirements for labeling and marking of both the product and packaging. These warnings/markings are intended to alert parents/caregivers to specific issues involving each product.

What is the process for developing or revising an ASTM Standard?
ASTM subcommittees are responsible for the development and/or revision of an ASTM standard. The subcommittees via meetings and appointment of task groups work on the requirements included in the standard. Proposals are sent out to ballot to ASTM members to vote on and then those comments are considered by the subcommittee and either included in the standard or it is determined that additional work needs to be done. ASTM subcommittees include representatives from the federal government, including the Consumer Product Safety Commission, along with manufacturers, retailers, test labs, consumer advocate groups, and individual consumers and must have a balance of official voting members.

Has there been any indication that voluntary standards work?
Yes, in fact, in a 2007 Senate hearing on the reauthorization of the U.S. Consumer Product Safety Commission (CPSC), authorities cited an 84% and 89% reduction in fatalities and injuries due to the establishment and effectiveness of ASTM Standards for baby walkers and cribs, respectively.

If the standards work, then how can a JPMA Certified product be recalled?
When products are tested, they are assembled and used in accordance with the manufacturers stated intent as embodied in the assembly and use instructions. If the instructions are not followed, risks associated with use of any product may be exacerbated. Not all recalls occur because of a violation of a regulation or product standard. In addition, recalls do not account for certain factors typically not measurable in a lab, such as wear and tear over time.

To alleviate confusion that is in the media regarding the recently announced recall of certain drop-side cribs, the Juvenile Products Manufacturers Association (JPMA), the not for profit trade association that promotes infant safety and the development of recognized ASTM International product safety standards, reassures the public regarding the safety of properly used, drop side cribs.

All new cribs on the market today must meet minimum government requirements. In addition, there are consensus performance standards, which are established by ASTM with involvement of the government and recognized experts, to which JPMA certifies cribs and other durable infant products. JPMA also reminds parents and care givers, that when you assemble a crib to the manufacturer's instructions and use it properly, a crib provides the safest sleeping environment for baby.

Recent media reports notwithstanding, cribs are intended to last for years (or multiple births) when properly cared for. Crib instructions which are attached to cribs include information on assembly, maintenance, cleaning, storage and use.

"JPMA believes that instead of alarming parents, we should work together to educate them about the importance of the proper use, assembly and reassembly of cribs and how to provide the safest sleep environment for a child," said Mike Dwyer, JPMA Executive Director. "The safest place for a child is in a fully functional, properly assembled crib. Parents are urged to closely inspect the hardware and stability of their cribs to ensure all parts are in place and secure when assembling and re-assembling cribs."

Each year hundreds of deaths occur when children are placed in a sleep environment that is not specifically designed for children. Parents should continue using properly assembled cribs in good condition as it provides the safest sleep environment for children.

JPMA suggests the following safety tips to sustain the proper lifespan of your crib:

- Parents should not use any crib with missing, broken or loose hardware parts. Crib slats or spindles should be spaced no more than 2 3/8 inches apart, and none should be loose or missing. Also NEVER use a crib with corner posts over 1/16 of an inch above the end panels (unless they're over 16 inches high for a canopy).

- NEVER place infants to sleep on pillows, sofa cushions, adult beds, waterbeds, beanbags, or any other surface not specifically designed for infant sleep. NEVER place the crib near windows, draperies, blinds, or wall mounted decorative accessories with long cords.

- When using a drop side crib parents and care givers should check to make sure the drop side or any other moving parts operate properly. Parents should be sure that hardware is installed properly. When assembling and disassembling drop side cribs, parents should always confirm that the parts are reassembled following the manufacturers guidelines as listed in the instructions.

Juvenile Products Manufacturers Association, Inc.
15000 Commerce Parkway, Suite C Mt. Laurel, NJ 08054 856.638.0420 856.439.0525
Email: jpma@jpma.org Web site: www.jpma.org

Additional safety tips to sustain the proper lifespan of your crib:

- Always check all sides and corners of the crib to assure proper assembly with no openings that may entrap a child. The crib mattress should fit snugly with no more than two fingers width, one-inch, between the edge of the mattress and the crib side. Otherwise, the baby can get trapped between the mattress and the side of the crib.

- Do not try to repair any side of the crib without manufacturer approved hardware.

- Putting a broken side up against the wall does not solve the problem and can often make it worse.

JPMA is pleased to note that the Consumer Product Safety Commission (CPSC) recognizes the importance of urging parents and caregivers to closely inspect the hardware and stability of their cribs to ensure all parts are in place and secure when assembling and re-assembling cribs.

Recent recalls of juvenile products highlights the importance of proper assembly and use of cribs. Many older cribs do not meet all current safety standards. Even if you are on a tight budget, you should not purchase an old crib at a garage sale or accept a hand-me-down crib that may not meet current Federal and ASTM standards.

For additional tips on how to keep baby safe, including a list of JPMA Certified cribs, please visit www.jpma.org .

"We are all committed to making sure that baby's sleep environment is as safe as possible," said Amy Chezem, JPMA Communications Director and mother of two. "We have consistently promoted safe sleeping practices and the importance of ensuring proper assembly and use of products that have long provided the safest place to sleep for babies."

The Juvenile Products Manufacturers Association is a national trade organization of more than 250 companies in the United States, Canada, and Mexico. JPMA exists to advance the interests, growth, and well-being of North American prenatal to preschool product manufacturers, importers, and distributors marketing under their own brands to consumers. It does so through advocacy, public relations, information sharing, product performance certification, and business development assistance conducted with appreciation for the needs of parents, children, and retailers.

For more information, please visit www.jpma.org.

# # #

To alleviate confusion that is in the media regarding the recently announced recall of certain drop side cribs, the Juvenile Products Manufacturers Association (JPMA), the not for profit trade association that promotes infant safety and the development of recognized ASTM International product safety standards, provides answers to some frequently asked questions by parents and caregivers.

Question 1 of 3:
As a parent or care giver, should I discontinue use of my drop side crib?

Answer:
As long as they are properly assembled, full functional and not subject to a recall, drop side cribs can be safely used.

If you own a Stork Craft crib that is part of the recall announced on November 24, 2009, we strongly recommend that parents follow corrective action of the company (Stork Craft) and the CPSC relative to this recall. For additional information, contact Stork Craft toll-free at (877) 274-0277 or log on to www.storkcraft.com.

Parents can be confident that **properly assembled fully functional cribs, that are not part of a recall**, that are in good condition are safe for use and provide the safest sleep environment for children. This recall highlights the importance of periodically checking the hardware on your crib for any loose or broken parts and to make sure all fasteners and screws are tight. Parents are also urged to closely inspect the hardware and stability of their cribs to ensure all parts are in place and secure when assembling and re-assembling cribs.

Question 2 of 3:
What should I inspect on my drop side crib?

Answer:
When using a drop side crib parents and care givers should check to make sure the drop side or any other parts are not missing or damaged and that they operate properly. Parents should be sure that hardware is installed properly. When assembling and disassembling drop side cribs, parents should always confirm that the crib is reassembled following the manufacturer's instructions. Instructions are attached to all cribs when sold; if they are missing, contact the manufacturer for a replacement copy.

Question 3 of 3:
Should I stop using a properly working drop side crib?

Answer:
No. The safest place for a child is in a fully functional, properly assembled crib that is not part of a recall that is in good condition as it provides the safest sleep environment for children. This is true for ALL cribs. Each year hundreds of deaths occur when children are placed to sleep in an environment that is not specifically designed for them. Many times more infants die each year when they are placed in unsafe sleep environments.

NEVER place infants to sleep on pillows, sofa cushions, adult beds, waterbeds, beanbags, or any other surface not specifically designed for infant sleep. NEVER place the crib near windows, draperies, blinds, or wall mounted decorative accessories with long cords.

JPMA reminds parents and care givers, that when you assemble a crib to the manufacturer's instructions and use it properly, a crib provides the safest sleeping environment for baby.

About JPMA
The Juvenile Products Manufacturers Association is a national trade organization of more than 250 companies in the United States, Canada, and Mexico. JPMA exists to advance the interests, growth, and well-being of North American prenatal to preschool product manufacturers, importers, and distributors marketing under their own brands to consumers. It does so through advocacy, public relations, information sharing, product performance certification, and business development assistance conducted with appreciation for the needs of parents, children, and retailers. Each year, JPMA sponsors Baby Safety Month in September. JPMA initiated Baby Safety Month to educate parents and caregivers on the importance of the safe use and selection of juvenile products.

CERTIFIED

Stork Craft Manufacturing, Inc.'s Position Paper
Re: CPSC File No. CA 090072; Stork Craft Cribs that Contain Plastic Drop-Side Hardware

I. No Defect Exists with Stork Craft's Cribs which Contain Plastic Drop-Side Hardware

A defect is a fault, flaw, or irregularity that causes weakness, failure, or inadequacy in form or function. 16 CFR § 1115.4. Defects may be the result of a manufacturing or production error, or they may arise from misuse or incorrect operation of the product. *Id.* The CPSC has recognized that not all products that present a risk of injury are defective. *Id.* In determining whether a risk of injury associated with a product could make the product "defective", the Commission has set forth a number of factors which it considers including the case law in the area of products liability and other information that sheds light on the product and patterns of consumer use.

Case law does not require that a product be accident-proof or incapable of doing harm. *Jamieson v. Woodward & Lothrop*, 247 F.2d 23, 101 U.S. App. D.C. 32 (1957). It would be unreasonable to require that a manufacturer warn or protect against every injury which may result from the use of its product. *Id.* In fact, no state imposes a duty on the manufacturer to make its product accident proof or foolproof. *Campo v. Scofield*, 301 N.Y. 468, 95 N.E.2d 802, 804 (1950).

With regard to products liability, courts have concluded that a seller is required to manufacture a product that is not unreasonably dangerous when used for a purpose and in a manner that is reasonably foreseeable and that if the product is not unreasonably dangerous when used for a purpose and in a manner that is reasonably foreseeable, it is not defective, and the seller will not be liable. *Ellsworth v. Sherne Lingerie, Inc.*, 303 Md. 581, 596-98, 495 A.2d 348 (1985). When applying a "foreseeability" test, courts must be extremely careful because, with the benefit of hindsight, any accident could be foreseeable. *Id.* One court concluded that without care, the imposition of strict products liability could result in a manufacturer's becoming an insurer for every injury that may result from its product. *See, e.g., Phipps v. General Motors Corp.*, 275 Md. 337, 363 A.2d 955 (1976).

In the present case, Stork Craft has been made aware of fifteen incidents by the CPSC. Of those fifteen incidents, seven resulted in no injury, four resulted in bruising and minor injuries not requiring hospitalization, and four resulted in death. Thus, the majority of complaints resulted in no injury or minor injuries that were treated at home. Furthermore, in two of the four incidents resulting in death, it is unclear whether the hardware failed or was loose before or after the incident. Furthermore, in one of the other incidents resulting in death, the consumer installed the drop side rail upside down, with a broken claw and a missing screw.

Furthermore, with respect to one specific instance where a plastic claw was retained by the consumer and tested by Stork Craft, it was determined that the deformation on one side of the claw caused by stress was the result of isolated human error in manufacturing. *See* Expert Report of Dr. Marek Gnatowski. Dr. Gnatowski opined that injection molded parts are taken hot from the mold to reduce manufacturing time and increase productivity and can be easily

damaged or deformed during removal from the mold. *Id.* Dr. Gnatowski found that the deformation of this particular claw was consistent with this type of manufacturing deficiency. *Id.* This type of human error during the injection molding process of the plastic claw is impossible to eliminate 100% in manufacturing. *Id.*

II. No Substantial Hazard Exists with Stork Craft's Cribs which Contain Plastic Drop-Side Hardware

The Commission defines a "substantial product hazard" as either (1) a failure to comply with an applicable consumer product safety rule under the Act or a similar rule, regulation, standard, or ban under any other Act enforced by the Commission which creates a substantial risk of injury to the public, or (2) a product defect which (because of the pattern of defect, the number of defective products distributed in commerce, the severity of the risk, or otherwise) creates a substantial risk of injury to the public. 15 U.S.C. § 2064(a).

Section 15(a)(2) of the CPSA lists the following factors to be considered in determining whether a defect creates a substantial risk of injury:

(i) "Pattern of defect: The Commission and the staff will consider whether the defect arises from the design, composition, contents, construction, finish, packaging, warnings, or instructions of the product or from some other cause and will consider the conditions under which the defect manifests itself.

(ii) Number of defective products distributed in commerce. Even one defective product can present a substantial risk of injury and provide a basis for substantial product hazard determine under section 15 of the CPSA if the injury which might occur is serious and/or if the injury is likely to occur. However, a few defective products with no potential for causing serious injury and little likelihood of injuring even in a minor way will not ordinarily provide a proper basis for a substantial product hazard determination.

(iii) Severity of the risk. A risk is severe if the injury which might occur is serious and/or if the injury is likely to occur. In considering the likelihood of any injury the Commission and the staff will consider the number of injuries reported to have occurred, the intended or reasonably foreseeable use or misuse of the product, and the population group exposed to the product (e.g., children, elderly, handicapped).

(iv) Other considerations. The Commissions and the staff will consider all other relevant factors."

16 C.F.R. § 1115.12(g).

In the present case, the fifteen incidents cited by the Commission allegedly arise from the sale of cribs with plastic drop side hardware manufactured by Stork Craft from 1993 to the present. During that time, approximately 2,187,526 Stork Craft cribs with plastic drop side hardware were sold. Thus, looking at the total number of cribs with plastic drop side hardware

sold and the number of investigative incident reports prepared by the Commission, the percentage of Stork Craft cribs allegedly involved in an incident is .00000686%. Stork Craft's US sales can only be determined from 2003 to the present. During that time, Stork Craft sold 810,179 cribs with plastic drop side hardware in the US. Even if we assume that all fifteen incidents investigated by the Commission were manufactured between 2003 and the present (when there is evidence that suggests at least two of the cribs were manufactured before 2003), the percentage of cribs allegedly involved in an incident is .00001851%.

With regard to the severity of the risk, while the Commission investigated four incidents that resulted in death, the majority of the alleged incidents involved no injury at all. Furthermore, the Commission specifically states that it takes into account **the intended or reasonably foreseeable use or misuse of the product.** In two of the four incidents resulting in death, it was unable to be determined whether the hardware had failed or was loose before or after the incident. Furthermore, in one of the other incidents resulting in death, the consumer had installed the drop side rail upside down, with a broken claw and a missing screw. Clearly, these consumers misused the product – by not tightening the screws and hardware and by installing the hardware upside down with broken and missing pieces.

It is absolutely unreasonable to expect Stork Craft to reasonably foresee that a consumer would install the drop side rail upside down, or to expect that a consumer would use broken pieces or allow use of the crib with missing pieces or without properly tightening all of the pieces. Furthermore, as discussed above, the pattern of defect and other considerations such as case law in the area of products liability demonstrate that Stork Craft's cribs do not pose a substantial hazard. Thus, based on an analysis of the factors that the Commission considers, Stork Craft cribs do not pose a substantial hazard.

III. No Imminent Hazard Exists with Stork Craft's Cribs which Contain Plastic Drop-Side Hardware

The CPSC has defined an imminently hazardous product as one "which presents imminent and unreasonable risk of death, serious illness, or severe personal injury." 15 U.S.C. § 2061(a). By way of example, in May 1985, the CPSC published an Advance Notice of Proposed Rule Making concerning three and four wheeled ATVs due to a number of deaths and injuries involving that product. *See* 50 Fed. Reg. 23,1139 (May 31, 1985). In addition, the Commission sought to have ATVs declared an "imminent hazard". *Id.* at 23,142-43. The Commission cited 161 deaths associated with ATVs during a three-year period and 66,956 ATV-related injuries treated in hospital emergency rooms in one year alone. *Id.* at 23,139-40. Subsequent to the Commission filing an imminent hazard lawsuit or a mandatory recall, Honda Motor Company and the Commission reached a Final Consent Decree, which focused on additional warnings to be given to the consumer.

For all of the reasons stated above, Stork Craft cribs containing plastic drop side hardware are not imminently hazardous. Looking at the total number of cribs with plastic drop side hardware sold and the number of investigative incident reports prepared by the Commission, the percentage of Stork Craft cribs allegedly involved in an incident is .00000686%. In addition, the majority of the complaints investigated by the Commission resulted in no injury. The complaint against Honda Motor Company, however, was due to an alleged 161 deaths during a

three-year period associated with the use of its ATVs and nearly 67,000 injuries requiring treatment at a hospital in one year alone. By comparison, Stork Craft cribs cannot and do not pose an imminent hazard.

Timeline for Stork Craft, CPSC File #CA090072

1/09 Stork Craft Mattress Support Bracket Recall - In January 2009, staff was concentrating on the mattress support bracket pattern of defect associated with Stork Craft cribs. Specifically, CPSC and Stork Craft announced the recall of 532,000 units in January 2009. The company offered replacement mattress support brackets approved by technical support staff. This release was re-issued in April 2009 to include 92,000 Fisher-Price cribs.

04/24/09 Emailed to Stork Craft IDI Report 090304HCC2424 ("non-injury" incident that occurred in 2/09) that demonstrated broken lower track and drop-side detachment. Stork Craft had collected the broken claws from the consumer for evaluation.

05/06/09 EWS meeting in which technical staff expressed concern that hardware may be similar to Simplicity hardware.

05/06/09 Staff sent an email to Stork Craft advising them to stop sale of drop-side cribs. Stork Craft's response was that crib hardware was not similar to Simplicity. Staff responded back to Stork Craft to say it would send Stork Craft all IDI reports on drop-side detachments.

05/20/09 Telephone discussion with Stork Craft regarding staff's request to stop sale of Stork Craft cribs. Stork Craft asked staff to retract request to stop sale of drop-side cribs because CPSC technical staff had not evaluated hardware. Request on hold. Stork Craft agreed to send staff Stork Craft's technical reports on drop-side hardware.

06/23/09 New Iberia, LA incident involving the death of a 7-month-old Caucasian male on 5/26/09 that became entrapped in the space between the crib and drop-side. The Stork Craft crib was installed upside-down and the claw was broken.

06/25/09 Staff emailed death report to Stork Craft.

06/25/09 Compliance staff met with OGC staff to review IDIs involving prior deaths with Stork Craft cribs.

City/State	Age	Death Dates	Ethnicity	Crib Type
Bronx, NY	9 month old male	4/10/01	African- American	Fisher-Price
Summerville, WV	6 month old male	1/16/07	Caucasian	Stork Craft
Gouverneur, NY	7 month old female	5/01/07	Caucasian	Stork Craft

06/25/09 Staff issued assignment to field to complete IDI on New Iberia, LA incident.

07/01/09 Staff telephoned Stork Craft requesting broken claws (from IDI 090304HCC2424) be sent for CPSC technical evaluation.

07/10/09 Receipt of consumer claws and brackets from Stork Craft (regarding IDI 090304HCC2424).

07/28/09 PSA request submitted to evaluate claws and brackets and compare Stork Craft plastic drop-side hardware to Simplicity plastic drop-side hardware.

08/10/09 ESME PSA 0866.09 completed. ES staff determined that the predominate failure mode was drop-side disengagement where the drop-side separated from the rest of the crib at one or more corners. The probable causes of the drop-side disengagements include broken plastic parts, drop-sides installed upside-down, stripped/missing screws, deformed plastic parts, missing metal springs, deformed mattress support brackets and undetermined causes.

In addition, ES staff compared Stork Craft hardware with the Simplicity hardware and determined that the designs are fundamentally the same in shape and function. They have the same mechanical elements (stopper, tab, metal spring insert), the manner of operating the drop-sides to lower and upper positions is identical, and they have some of the same failure modes as seen in the IDIs.

08/20/09 CA090072 Stork Craft case opened in Section 15 data base on plastic drop-side hardware.

09/02/09 Stork Craft case opening letter dated, faxed, and certified mailed.

09/03/09 Assigned Limited Inspection (LI) at Stork Craft Manufacturing USA, Inc. in Bellingham, WA (See 090903CRC1583).

09/24/09 Stork Craft agreed to meet with the CPSC staff on 10/05/09.

09/25/09 Strategy meeting with Chairman staff and Cherly Falvey, Howard Tarnoff, Gib Mullan, Marc Shoem, Dean Woodard, and Dollie Nicholson

09/25/09 CA090087 opened with Fisher-Price.

09/25/09 PSA 1076.09 assigned to Human Factors. Focus of the PSA was to evaluate the old and new crib instructions to determine if the instructions did or did not adequately warn consumers about and to prevent the improper installation of drop-sides upside down.

09/28/09 Fisher-Price case opening letter faxed and certified mailed.

09/28/09 PSA 1076.09 completed.

09/29/09 Stork Craft submitted its Full-Report.

09/30/09 Incident data spreadsheet prepared which integrated all reported USA incidents with reported Canadian incidents.

10/02/09 Pre-meeting - CPSC staff met to prepare for Stork Craft meeting on 10/05/09. Pre- preliminary determination discussions.

10/05/09 CPSC and Department of Justice staffs met with Stork Craft (Jim Moore, President, Jude Emnace, COO; and, outside attorney [redacted] and paralegal, [redacted]. Stork Craft agreed to voluntarily recall all drop-side cribs manufactured with plastic trigger and one-hand hardware systems. The recall will also include cribs manufactured with the Fisher-Price logo. The recalled cribs would have dates of manufacture and distribution between 1993 and October 2009.

Stork Craft presented for staff review a prototype deigned to immobilize the drop-sides on cribs with one-hand hardware. The prototype design was not applicable to trigger hardware cribs; therefore, Stork Craft understood that it had to come up with a fix for those cribs as well.

10/06/09 Evaluation of prototype 1 – This was not a good fix.

10/07/09 Telephone Conference Meeting – Stork Craft and the staff. Stork Craft agreed to immediately stop sell of 35,000 crib units in stock. Notification to online buyers of a "0" inventory was completed by Jim Moore. Stork Craft will do the VNR and will brief Health Canada about the recall and stop sale. Discussions of prototype evaluation – This was not a good fix. ES and HF went over possible solutions to drop-sides. Stork Craft concurred. Stork Craft will be sending in a second prototype for evaluation.

10/09/09 Staff approved the 2nd version"fix" for one-hand hardware system drop-side cribs.

10/09/09 Stork Craft submits draft press release. Negotiation of the press release begins.

10/09/09 Stork Craft briefed Health Canada on the voluntary recall of its drop-side cribs. Health Canada received diagrams of the proposed retrofit kit for evaluation by its engineers.

10/13/09 Fisher-Price submitted its Full-Report.

10/14/09 Received limited inspection report from field staff.

10/21/09 Received 1st draft of retrofit instructions from Stork Craft.

10/30/09 Approval given from the staff to Stork Craft for the one-hand system fix.

11/05/09 Staff approved instructions for one-hand hardware system.

11/05/09 Draft press release emailed to Fisher-Price.

11/05/09 CPSC staff provided feedback to Stork Craft on 1st draft of instructions for retrofit.

11/12/09 Fisher-Price comments received.

11/13/09 OIPA includes Fisher-Price comments. Revised press release emailed to Health Canada, Stork Craft & Fisher-Price. Issuance of release date changed to 11/24/09. Stork Craft, Fisher-Price and Health Canada agree on date.

11/16/09 Received updated instructions that addressed all of the staff's comments.

11/17/09 Staff drafts poster and retailer letter.

11/18/09 Staff approved the "fix" for trigger hardware system drop-side cribs.

11/18/09 **Final Clearance** - Stork Craft, Fisher-Price & the staff agree on the joint press release and clearance proceedings start.

11/18/09 Draft poster and retailer letter emailed to Stork Craft & Fisher-Price.

11/19/09 Stork Craft & Fisher-Price comments incorporated into poster and letter.

11/20/09 Staff accepts poster and letter for distribution to retailers.

11/23/09 Public Affairs purchased satellite feed time for VNR.

11/23/09 Stork Craft issued notification letters and posters to retailers.

11/23/09 Press release issuance date changed from 11/24/09 to 11/23/09 due to unforeseen circumstances. Health Canada & Fisher-Price notified via emails. Stork Craft was notified via telephone by managers within the Office of Compliance & Field Operations.

11/25/09 Accept CAP letter faxed to Stork Craft.

12/02/09 Fisher-Price web site notification posted.

FROM: Dollie Nicholson
Compliance Officer

DATE: October 22, 2008

SUBJECT: Closed Meeting with Stork Craft

Jude Emnace, Chief Operating Officer, met with CPSC staff today. Mr. Emnace presented an overview of Stork Craft's business structure. He discussed the company's commitment to making safe and reliable cribs to its customers and purchasers. The company takes exception to allegations that the brackets currently installed on Stork Craft cribs are defective.

Metal mattress support brackets were originally manufactured in Canada and installed on Stork Craft cribs from 1994 through 1999. In 1999, Stork Craft stopped producing brackets in Canada. In early 2007, Stork Craft closed the Canada plant and sold its machinery.

According to Emnace, the factory in China started manufacturing the brackets subject to CA080066 in 1999 to present; while the installation of brackets on Stork Craft cribs started in 2000.

Stork Craft has one primary supplier in China that builds parts, test and inspects the cribs and boxes them up. Since March 2000, approximately 1 million crib units were sold with the currently installed hardware system. The prototype crib was tested 44 lbs @ 150 cycles and passed all crib test requirements.

Emnace reported that Stork Craft received a total of four incidents regarding the brackets. Three of the four incidents involved 1 of 4 brackets breaking into 2 pieces. In one of these incidents a 22-month-old male became entrapped in the gap created between the mattress corner and drop side. All three incidents involved the Heather Stages crib (Model 04588-478 and 321) with manufacture dates 7/06, 1/31/07 and 4/07. The Aspen crib was involved in the other crib model (date of manufacture unknown).

To correct the problem of brackets breaking, Stork Craft decided to take the following approach:

1. Reduce flexibility of the bracket's base by increasing the thickness of the brackets, thereby reducing stress points on the brackets. Jude submitted four redesigned units for staff assessment (see sample #09-302-0424);
2. Develop a crib assembly poster and insert in inside crib packages. The poster could be hung on walls as a reference point for consumers;

3. Stork Craft has started the elimination of drop-side cribs to be replaced with stationary side cribs. Emnace did not give a date for when the elimination process started nor when all drop-side cribs would be totally phased out. According to Emnace, Stork Craft has convinced Wal-Mart to sell Stork Craft stationary side cribs.

Patty Hackett, Engineer strongly recommended that Stork Craft recall its drop-side cribs due to mattress support bracket failure and provide replacement brackets as a remedy to consumers. Staff stressed to Emnace the importance of Stork Craft being proactive by offering the new brackets to consumers primarily because of staff's failing test results on the brackets and IDI/incident reports. Staff was certain to see additional consumer complaints of bracket failures. Emnace stated that it was impossible for a child to become wedged in the gap as demonstrated in IDI 080201HCC3397. He also said that because there have been no injuries, the brackets were not defective. Emnace said that at this time, Stork Craft had no intention to replace consumer brackets with the redesigned brackets.

ESME will examine the bracket samples provided by Stork Craft. Staff will submit its findings to Stork Craft.

Emnace said Stork Craft would do the following:

1. Trace from 2066 to present any and all requests for brackets; and,
2. Have a risk assessment performed on the brackets.

Patty Hackett gave Stork Craft a test methodology. Stork Craft should get the crib component (brackets) to fail and trace back to define what was good and bad. Stork Craft should show us how the crib failed and how much force it took to get the crib to fail. Stork Craft agreed to do this.

Stork Craft has purchased three Canadian companies, Regatzi, Status Furniture, and Kenwood.

Congressman Henry Waxman
Chairman, House Committee on Energy & Commerce
Congressman Bart Stupak
Chairman, Subcommittee on Oversight
2125 Rayburn House Office Building
Washington, DC 20515-6115

Dear Chairman Waxman:

As requested, enclosed please find responses to Congressman Markey's questions of February 19, 2010.

The undersigned hereby certifies that he has made and/or has directed to be made by JPMA staff, a diligent effort to collect data responsive to your requests. JPMA expressly reserves the right to supplement, clarify, revise or correct any or all of the responses herein at any time.

Sincerely,

Michael Dwyer, CAE
Executive Director

Cc: Rick Locker, JPMA Counsel; Robert Waller, JPMA President

Juvenile Products Manufacturers Association, Inc.
[illegible]

I'm concerned about the effectiveness of recalls – there have been reports that parents aren't getting the information or repair kits they need. In fact, a quick search on *eBay* on January 20 found more than 30 MacLaren umbrella strollers, all of which were recalled in November because of risk that children's fingers would be amputated by the hinge mechanism, and a search on the DC area *Craig's List* found a number of recalled drop-side cribs for sale.

1. Crib manufacturers often pay to advertise their products in parenting magazines. Can you think of an instance in which your organization or a crib manufacturer whose crib were recalled paid to advertise the recall in these same publications? If so, when?

   Recalls are individually negotiated between the manufacturer involved and the CPSC. Each recall has specific remedies that are developed to address the hazard that has been identified. JPMA has never been a party to the negotiations, but does provide links from our Web site for consumers to www.recalls.gov. Some manufacturers have placed trade advertisements promoting their recalls but television advertising is generally not prevalent in the industry.

2. In your testimony you cite several examples of work your organization does to help promote infant safety. What specifically does your organization do to publicize and promote awareness about specific product recalls?

   We produce statements that are posted on the JPMA Web site (www.jpma.org), samples of which we provided to the Committee prior to the hearing. We also provide a link to www.recalls.gov on our Web site. We are currently working to implement the establishment on our Web site of direct HTML links to recall announcements on the CPSC Web site and have also linked to the CPSC RSS Feed and Recall Subscription List Widget.

   JPMA has also participated in "Recall Round-ups" with CPSC and with several not for profit Consumer Organizations and has urged retailers and sellers of second hand products to assure that product sold are not subject to recall (or not repaired in accordance with terms of a particular recall) and meet current applicable mandatory and ASTM standards.

3. Your organization publishes a directory of "certified products" that have been independently tested and found to meet safety standards. How many of the 7 million or so cribs that have been recalled in recent years were in that directory?

   The JPMA Certification Seal on a product tells consumers this product has been verified as conforming to the requirements established by ASTM existing at the time they are originally sold, through independent laboratory testing and follow-up on-site inspection of the manufacturer's production line. The manufacturers that participate in the JPMA Certification Program are held to the highest

standards and are obligated to meet those principles with every certified product.

Of those cribs recalled, the following were JPMA Certified as having met the requirements of the ASTM F-1169 standard for full size cribs:

Simplicity – 1 million (drop side)
Graco – 104,000 (drop side)
Delta – 600,000 (drop side)
Delta – 985,000 (drop side)
Stork Craft – 2.1 million (drop side)
Stork Craft – 500,000 (mattress support)
LaJobi – 4,900 (crib slat breakage, drop side)
Jardine – 472,000 (slat breakage – only applies to those cribs manufactured in 2005 or later)

Total (estimated) Certified: 5,765,900

Of those cribs recalled, the following were not JPMA Certified:

Generation 2 – 500,000 (drop side)
Dorel Asia – 635,000 (drop side)
Caramia – 1,000 (slat breakage)

Total (estimated) Non-Certified: 1,136,000

A review indicates that the underlying reasons for these recalls vary, but it is significant to note that recalls occur for a variety of reasons. On its face, based upon a review of CPSC announcements, these recalls cribs did not occur due to a violation of mandatory or ASTM crib standards to which JPMA Certification independently verifies sample conformance.

4. Does that directory get immediately updated whenever a recall of one of those products is announced? If not, when would such information appear in the directory? For example, would a consumer that is in the market for a second-hand crib who wishes to utilize your directory to ensure they are buying something that is safe and be able to ascertain, based on an examination of an old JPMA Directory, that a particular model was recalled? If not – don't you think you immediately take steps to alter these products?

As noted not all recalls are a result of a product not complying with ASTM International or mandatory standards. The Web version of the Directory is updated on a regular basis to provide the most current information on manufacturers who participate in which categories. It does not contain any recall

information. As cited above, we have links from our Web site to CPSC's Web site that contains the most current recall information.

JPMA does not recommend that parents caregivers purchase second hand products of any type. We appreciate that it is very difficult for consumers to know whether a second hand product they are purchasing has been recalled (or if it has been damaged), and in most cases, the product does not meet the most current version of the ASTM standards.

To your last question posed here, we believe that providing recalled product information on the JPMA Web site is a good step in communicating to the consumer when these products are recalled. JPMA also often has instituted campaigns in collaboration with CPSC and other consumer organizations directed at ensuring consumers purchase and use only product that conforms to current safety standards.

5. Knowing that consumers have come to rely on the JPMA certification mark as an indication of safety, what checks and balances are in place to ensure that certified cribs remain in compliance with standards? Is there market surveillance or independent, third party certification of compliance?

In order for a manufacturer to be JPMA Certified, they must submit an application and contract to the Juvenile Products Manufacturers Association (JPMA) to participate in the certification program. They can be either a member or non-member of the association. They must have all of their current models in a product category tested by the official laboratory, which is an independent, 3rd party CPSC-accredited lab. The testing is done to voluntary standards that are developed and published by ASTM International. Committees within ASTM are comprised of a balance of manufacturers, consumer groups, representation from the U.S. Consumer Product Safety Commission (CPSC) and other interested parties, and they develop and revise the standards as necessary. Approval of a standard is consensual.

Once a manufacturer has become JPMA Certified, its testing responsibility does not end. Manufacturers must test 25% of their models each quarter with the goal that all models are tested at least once a year. Manufacturers can either perform the quarterly testing in their certified lab and send the reports to the official lab, or have a CPSC accredited lab do the testing for them. If the manufacturer is performing the quarterly testing in its own lab then the official lab will do a site visit once a year to verify the manufacturers' capability of performing the tests.

Random Retail Testing is also performed on a quarterly basis by independent 3rd party (currently CPSC-accredited) laboratories. In this part of the program, the official lab purchases participants' products from retail stores and performs testing to all or part of the appropriate ASTM standard. JPMA provides the manufacturer a certification seal to use on their products and packaging, and in

advertisements. The manufacturer must adhere to all the guidelines of the program in order to remain a JPMA Certification Program participant.

JPMA's certification seal also specifically notes that it is evidence that a sample has been verified by an independent accredited test laboratory as complying with mandatory and ASTM standards. Also we note that since January of 2009, under Section 102 of the Consumer Product safety Improvement Act of 2008 (CPSIA), that all cribs must be certified by manufacturers as meeting mandatory CPSC requirements. We have repeatedly noted in our CPSC filings that the ASTM standards are significantly more comprehensive than existing mandatory CPSC standards. This is why we promote adherence to such standards. Section 104 of the CPSIA requires CPSC to consult with stakeholders and by rule update their standards commensurate with the more expansive requirements of the ASTM standards.

6. What does the JPMA do when they find a crib with a JPMA label to be out of compliance with standards?

Once JPMA becomes aware that a certified product is not in compliance with the ASTM and/or mandatory standards, we issue a Corrective Action Request (JCAR) that requires a manufacturer to respond within 14 days as to what they will do to correct the issue. For additional details on this process we reference the JPMA Procedural Guide (included with our original submission). If the manufacturer does not assure substantive compliance with applicable safety based standards, they are subject to de-listing.

U.S. CONSUMER PRODUCT SAFETY COMMISSION
4330 EAST WEST HIGHWAY
BETHESDA, MD 20814

March 5, 2010

The Honorable Henry A. Waxman
Chairman
Committee on Energy and Commerce
United States House of Representatives
2125 Rayburn House Office Building
Washington, DC 20515

Dear Chairman Waxman:

Attached please find responses to the written questions for the record submitted by certain Members of the Committee in connection with the January 21, 2010, hearing of the Subcommittee on Oversight and Investigations entitled: "Crib Safety: Assessing the Need for Better Oversight." An electronic version of these responses will also be provided to Early Green, Chief Clerk of the Committee.

Thank you again for the opportunity to testify before the Subcommittee. Should you have any questions or require additional information, please do not hesitate to contact me or Christopher Day, Director of Congressional Relations, at (301) 504-7660 or by e-mail at cday@cpsc.gov.

Very truly yours,

Inez M. Tenenbaum

"Crib Safety: Assessing the Need for Better Oversight."
Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
January 21, 2010

Responses of Chairman Inez M. Tenenbaum to Questions for the Record

Questions from the Honorable Bart Stupak

Manufacturers, importers, distributors, and retailers are required to report to CPSC within 24 hours of obtaining information if a product does not comply with a safety rule issued under the CPSA, or contains a defect which could create a substantial risk of injury to the public or presents an unreasonable risk of serious injury or death. However, as we learned from our investigation, Stork Craft still believes to this day that mechanical problems by their cribs did not cause "substantial risk of injury to the public or present an unreasonable risk of serious injury or death."

1. Does CPSC have the authority to assess a penalty on companies that do not meet the reporting requirements?

Response: Under section 20 of the Consumer Product Safety Act ("CPSA"), the Consumer Product Safety Commission ("CPSC") has authority to seek a maximum civil penalty of $15,000,000 for a party who knowingly fails to report defect information, required under section 15(b) of the CPSA, or otherwise fails to report or to provide information required under the CPSA. The CPSC lacks authority to "assess" such a penalty through its own administrative process, however, and must pursue a party in court if the party does not agree to the penalty.

2. Does CPSC believe that the current reporting requirements are set too high? How would you change the reporting requirements if you could?

Response: No. The CPSA requires in section 15(b) that any manufacturer, distributor, or retailer of a consumer product "who obtains information which reasonably supports the conclusion that such a product," fails to comply with an applicable standard, contains a defect which could create a substantial product hazard, or creates an unreasonable risk of serious injury or death, must immediately report such information to the CPSC. This is a broad obligation and necessary for the CPSC to receive complete and timely information about possibly unsafe products. Reporting is required when a company receives information about a possible defect and the CPSC may conclude that no defect exists or require appropriate corrective action. Therefore, the reporting obligation does not appear to be too high. Indeed, one court has applauded "Congress's decision to impose penalties for reporting violations without requiring proof of a product defect," because it

encourages companies to provide all necessary information to the CPSC regardless of whether a defect exists. See *United States v. Mirama Enterprises, Inc.*, 387 F.3d 983, 988-89 (9th Cir. 2004).

3. Does CPSC believe manufacturers under-report? If so, why do you believe manufacturers are under-reporting?

Response: As noted above, the CPSA requires in section 15(b) that any manufacturer, distributor, or retailer of a consumer product "who obtains information which reasonably supports the conclusion that such a product," fails to comply with an applicable standard, contains a defect which could create a substantial product hazard, or creates an unreasonable risk of serious injury or death, must immediately report such information to the CPSC. We believe some parties underreport based on a narrow interpretation of what information they view "reasonably supports" a conclusion that a product presents a hazard or risk.

As also noted above, however, the CPSC has authority to seek civil penalties when a party knowingly fails to make required reports, and the CPSC staff regularly collects such penalties from firms to enforce reporting obligations. In FY2009, we collected the largest amount of civil penalties in the CPSC's history, and from the largest number of firms.

Consumers are not required to report safety information if they know a product is endangering an infant.

4. How does the CPSC encourage parents to report safety incidences to the CPSC?

Response: CPSC uses all means at its disposal to connect with parents and provide easy pathways for these parents to communicate to the CPSC issues, concerns, or problems with products in their home. To reach parents, our communications include not just traditional methods such as speeches, interviews, presentations, and a website, but we are also active in social media arenas like Twitter and YouTube. We also offer both a telephone hotline as well as a website reporting feature to receive information from parents. A link to report unsafe products is also part of our Neighborhood Safety Network Tool Kit, an innovative program designed to help underserved communities promote safety and health. We are always seeking to improve the accessibility and ease-of-use of each of these information channels.

In addition, the Consumer Product Safety Improvement Act of 2008 ("CPSIA") requires CPSC to create a public portal and a publically accessible, searchable database of consumer product incident reports. Through the public portal, consumers will be able to report potential product safety hazards to CPSC in ways that improve the quality, value, and accuracy of the data collected. This database is under development, and is scheduled to launch in March of 2011 with broad public outreach and education.

Questions from the Honorable Edward J. Markey

It seems to me as though recalls of cribs whose drop-sides were trapping and suffocating children have been occurring for years now. More recently, Graco strollers were recalled because they use a hinge that has been shown to amputate children's fingers – but that follows an almost identical situation in which MacLaren strollers were recalled for the very same reason.

1. Why can't the CPSC move to recall ALL cribs that use the same sort of drop-side mechanisms, or ALL strollers the same sort of hinges?

Response: The CPSC does achieve recalls for similar product designs. For example, in FY2009, the CPSC recalled essentially all Roman shades and roll-up blinds in the United States based on a common strangulation hazard.

Such recalls, however, can be challenging. While CPSC does watch closely for any common problematic features across product classes, unique manufacturing or design characteristics often make a generalized defect analysis difficult. For example, a hinge made of high quality materials could be safe while the same part of lesser quality materials could break in a hazardous way. Further, because the particular manufacturer, distributor, or retailer is responsible for the remedy of their specific products, recalls remain particular to the responsible party. That is to say, a recall of all strollers for the same sort of hinge, as you describe, would still need to be considered with regard to each particular manufacturer, distributor, or retailer to ensure an adequate remedy.

2. Why do we have to wait until each brand or model is demonstrated to kill or maim someone?

Response: CPSC always strives to take action before any injuries occur and very often obtains voluntary recalls before any such injuries occur. Indeed, based on four incidents – none of which involved any injuries – the CPSC achieved the recall of 500,000 Stork Craft cribs in January 2009 due to a risk of entrapment or suffocation from mattress support bracket failures.

CPSC is constantly on the lookout for hazards and our Early Warning System, described in greater detail below, helps identify emerging hazards in certain children's products. Nevertheless, it is often very difficult to identify and address problems in a consumer product before patterns of defect emerge.

3. What is the CPSC doing to proactively identify and recall or otherwise regulate classes of products that all share known hazards?

Response: The CPSC Office of Hazard Identification and Reduction, particularly the Division of Hazard Analysis within our Directorate for Epidemiology, is tasked with monitoring information that could identify a common problematic feature across a product class. Given particular sensitivities related to children's products, in November

2007, the CPSC implemented what was then a pilot program called the Early Warning System ("EWS"). This EWS is a multi-disciplinary team of CPSC staff consisting of Compliance Officers, attorneys and technical staff from CPSC's Engineering, Epidemiology, Human Factors and Health Sciences divisions that focuses solely on cribs, bassinets, and play yards.

This team was formed in an effort to catch serious risks of injury or death, patterns of defect, and regulatory violations as early as possible. The EWS team meets on a weekly basis and reviews all incoming bassinet, crib and play yard incidents reported to the agency. Incident reports specific to products evaluated by the EWS pilot team are drawn from the CPSC's epidemiological databases. During the weekly review, the EWS team also assigns in-depth investigations ("IDIs") of incidents, reviews completed IDIs, evaluates collected product samples, and makes recommendations to the Compliance Division on cases to open for possible recall.

Building on the success of the EWS team, I have recently created a new "Safe Sleep Environment Team," which is a pilot project to bring the same EWS team of compliance officers, technical staff, attorneys, and epidemiologists to work on the particular issues related to the sleep environment for children.

Finally, with regard to regulatory matters, I will continue the sort of proactive efforts we took with regard to cribs to involve stakeholders and the American Society for Testing and Materials ("ASTM"). The results of our direct outreach in that case demonstrate the effectiveness of proactive involvement of voluntary standards organizations and interested parties to consider regulatory approaches as safety issues emerge across a class of products.

4. In addition to voluntary or mandatory recalls, what authority does CPSC have to inform the public about risks to particular products or classes of products? For example, could it issue a press release that included a recommendation that consumers not purchase drop-side cribs and indicate that the Commission was planning to take regulatory action involving all of these products? If so, how often has the Commission taken such action?

Response: The CPSC has authority to inform the public about risks to particular products and classes of products and regularly uses it to alert the public to both specific and general issues.

Under new authority in the CPSIA, CPSC can make certain public health and safety findings and disseminate information to the public in an expedited manner about a risks posed by a particular product. Such public health and safety findings have been undertaken twice since implementation of the CPSIA.

With regard to classes of products, the CPSC can make public general warnings. For example, in October of 2008, the Commission issued a press release announcing that defects identified by the EWS system demonstrated the need for stronger mandatory

standards for drop-side cribs, and urging parents and caregivers to inspect closely the hardware and stability of their cribs to ensure that all parts were securely in place given the entrapment risks associated with those cribs. A similar general message regarding the safety of children's products and recalls was the focus of a September 2009 video released by CPSC on YouTube and through our blog, "OnSafety." The CPSC also undertakes regular outreach efforts each year to make seasonal alerts and provide information to the public about risks presented by fireworks, carbon monoxide poisoning, and pools, for example.

FISCAL YEAR 2011 BUDGET FOR THE CONSUMER PRODUCT SAFETY COMMISSION

WITNESSES

INEZ TENENBAUM, CHAIRMAN, U.S. CONSUMER PRODUCT SAFETY COMMISSION

NANCY NORD, COMMISSIONER, U.S. CONSUMER PRODUCT SAFETY COMMISSION

INTRODUCTION OF WITNESSES—CHAIRMAN SERRANO

Mr. SERRANO. The committee will come to order. We welcome you to this very cozy room.

Today the subcommittee meets to discuss the fiscal year 2011 budget request of the Consumer Product Safety Commission. Joining us today are the Chairman of the CPSC, Inez Tenenbaum, as well as CPSC Commissioner, Nancy Nord. We thank you both for joining us today.

CHAIRMAN SERRANO'S OPENING STATEMENT

For fiscal year 2011, the budget request for the Consumer Product Safety Commission is $118.6 million. The agency has seen its responsibilities grow enormously for the last few years. In response to a large number of product hazards and product recalls, Congress enacted the Consumer Product Safety Improvement Act of 2008. This law, together with other recent legislation addressing pool and spa safety and the protection of children from gasoline burns, provides for important consumer protections but has also essentially doubled the workload of the CPSC. It is important to determine whether the agency staffing levels are adequate to fulfill these responsibilities.

In 2007, when I became Chairman of this subcommittee, the agency had fewer than 400 full-time employees. Funding increases provided by this subcommittee have enabled the CPSC to grow to 530 full-time employees in fiscal year 2010, a more than 30 percent increase in staffing in 3 years. However, this is still far less than the agency staffing 30 years ago when it had 978 employees.

A strong CPSC is more important than ever. This is particularly evident in the area of imported products. The volume of imported products has doubled in the last 15 years, and while imports account for 20 percent of all consumer product purchases, they account for more than 80 percent of recent product recalls. GAO re-

ported last August that the CPSC's ability to monitor imported products is limited by staffing shortfalls. The Fiscal Year 2010 Appropriations Act included funding to help address this problem, and I am pleased that the fiscal year 2011 budget requests additional resources for the agency and for the import safety initiative. It is important for this subcommittee to determine whether these resources are truly adequate to ensure the safety of imported products.

The Commission has worked hard to implement the many provisions of a Consumer Product Safety Improvement Act. At the same time, we have heard about confusion among manufacturers, distributors and retailers about particular requirements. I am interested in knowing how implementation is going right now, whether industry is complying, and whether the CPSC is devoting adequate resources to enforcing the new laws, and many important consumer protections.

In addition to implementing these consumer protections, the new law directed CPSC to establish a public Internet-accessible database on the safety of consumer products. The agency is also preparing to move into a modernized laboratory facility designed to enhance its research on product hazards. Furthermore, the agency has begun an effort to work more closely with manufacturers and regulators in China by opening an office in Beijing. I am interested in hearing about the status of all of these efforts and how budget requests will enhance them going forward.

Chairman Tenenbaum joined the Commission in June 2009. She has a long history of public service, including 8 years as South Carolina's State superintendent of education.

Commissioner Nord is no stranger to this subcommittee. This is her third appearance before us. She has served on the CPSC since 2005 and served as Acting Chairman from 2006 to 2009.

We thank you both for your testimony. We look forward to a very informative discussion. And I also look forward to a great baseball season where the Cardinals will do almost as good as my Yankees.

Mrs. EMERSON. Hey now, we have really, really done a great job on recruitment this year, so I am not certain of that, Mr. Chairman, I must add. But Debbie and I are actually the cochairs of the congressional softball team, and we start our practice next week. You will be happy to know that since we are playing the women of the press, that we actually think we will prevail this year since at least there is not such an age differential where we set ourselves up for failure last time and Debbie broke her leg. But other than that, we are getting all ready, we are getting all ready for a wonderful, wonderful baseball season. And I truly am excited. I don't know anything about this new Brad Penny, this new pitcher we have gotten, but he has been around a while. Do you know anything about him?

Mr. SERRANO. Yes. He is good, unfortunately.

Mrs. EMERSON. Thank you. Thanks, Mr. Chairman.

Mr. SERRANO. Jo Ann Emerson, ladies and gentlemen.

Mrs. EMERSON. I have the app on my phone so I can get all the Cardinals news, like Google alerts, Cardinals alerts.

Mr. SERRANO. Who says Members of Congress are not regular people?

MRS. EMERSON'S OPENING STATEMENT

Mrs. EMERSON. I do love my Cardinals, I must tell you.

Anyway, thanks for holding this very important hearing. Thank you all very much for being here today. We do welcome you for your first appearance, Madam Chair.

And, Commissioner Nord, thank you for being back for the third time? Third time.

Anyway, as the Chairman said, you all have received large funding increases since 2007 compared to other agencies, and I really am anxious to hear how you all are spending those funds and hiring the necessary people to do the important work that we keep laying upon you all.

I also want to say that I did vote for the Consumer Product Safety Improvement Act. And I, like most members of the committee, believe that protecting consumers should be our top concern of the business community and the regulatory community. And facilitating those goals should be one of our most important, if not the most important, responsibility we have.

But we are also charged here in Congress with addressing the unintended consequences of its actions. And with respect to the CPSIA, this means realizing that in addition to the benefits of the statute, there has been some avoidable damages to small businesses, domestic manufacturers, thrift stores and charities. And I think we can all agree upon that. However, our economy isn't as resilient today as it has been in the past, so it is really very, very important that we not ignore those jobs lost or those that could be lost due to unnecessary aspects of this statute.

The 2010 appropriations bill directed the Commission to provide recommendations to the Congress on changes needed to CPSIA, and for whatever reason that I cannot understand, I don't know why these recommendations have become politicized in this body, but it appears, as usual, that logic and sensible actions are not immune from partisanship in Washington.

Let me close by stating that regulation is a balancing act so that consumers, especially children, are protected, but businesses are able to operate without unnecessarily burdensome requirements. And I want to say this because as we try our best to jump-start the economy, I have met with hundreds of small business people over the last month, all of whom tell me that you can give me a tax credit, you can take away my—the need for me to pay payroll taxes, but at the end of the day, it is the uncertainty in the economy and the burdensome regulations that are thrust upon my business each and every day that no other country or competitor faces that are causing me not to hire people. This is what they have said across the board. So that is worrisome, and that is why I am hopeful that we will all be able to work together to maximize the benefits and minimize the detriment of this statute and the work that you all are doing.

So thanks, and I look forward to hearing your testimony.

Mr. SERRANO. Thank you.

Mr. SERRANO. Now we will take your testimony. Please keep in mind that we would like you to keep your testimony to 5 minutes. And then, of course, your full text will be included in the record.

CHAIRMAN INEZ TENENBAUM'S OPENING STATEMENT

Ms. TENENBAUM. Thank you. Good morning, Mr. Chairman, Ranking Member Emerson and Members of the Subcommittee on Financial Services and General Government. I am so pleased to be here to discuss the U.S. Consumer Product Safety Commission's fiscal year 2011 budget request.

During the past 8 months, as Chairman of the CPSC, I have had the great opportunity to see firsthand the great work that the Cnmmission undertakes every single day, from new regulations to ensure the safety of cribs to enforcement actions against children's jewelry with harmful levels of lead, cadmium and other toxic metals, the CPSC is once again an agency that means business when it comes to protecting the safety of the American consumer.

Much of this progress would not have been possible without the reauthorization of the Commission through the Consumer Product Safety Improvement Act of 2008 and the additional funding received by the agency in 2009 and 2010. I greatly appreciate the increased resources that members of the subcommittee have supported all through the past 2 years and can assure all of you that those resources have been put to good use through increased staffing, improved import surveillance, and rapid and robust responses to new and emerging hazards.

The results of this new commitment to the CPSC are really very encouraging. One concrete example of this is the increased staffing and resources at the agency. During 2008, the number of CPSC full-time employees had dropped to only 385. This was the lowest level in the agency's history and down from a high of 978 in 1980. Section 202 of the CPSIA required the agency to increase its FTEs to at least 500 by the end of 2013, and I am pleased to report to you that we have already reached that milestone and currently have approximately 501 FTE positions filled at the CPSC as of March 1, 2010. In addition, we are currently interviewing another 16 FTE positions, and have open announcements for another 9 FTE positions. Taken as a whole, this puts us well on track to meeting our approved FTE ceiling of 530 in 2010.

But employee numbers are only one indicator of change. Another key metric is results. One concrete example is that of our ability to stop dangerous products before they enter the stream of commerce. In fiscal year 2007, the CPSC collected approximately 750 samples of suspect products entering our country. In fiscal year 2009, that number rose to almost 1,600. At the same time, we started to see a commensurate decrease in the number of voluntary recalls, from 563 in 2008 to 466 in 2009.

The Commission's proposed 2011 budget request of $118 million, $600 thousand is designed to accelerate this forward momentum by continuing internal modernization and rebuilding efforts. It is noted in my written statement the proposed fiscal year 2011 is only $400,000 over our 2010 level, but it will allow the Commission to support the key above areas of emphasis by reallocating $13.9 million in funds used for 2010 nonrecurring activities.

Specifically, the proposed budget will allow the Commission to pursue new and enhanced initiatives in four key areas. The first is the Commission's compliance initiative. Since passage of the

CPSIA, Commission staff have worked diligently to promulgate and implement the numerous rules required by that law. In 2011, the CPSC's work will shift from developing rules mandated by the CPSIA to enforcing those rules, both within our borders and at ports of entry. To further facilitate those efforts, the CPSC's 2011 budget requests $4.6 million and the addition of 41 full-time employees to support additional responsibilities associated with three key elements of the compliance program, and that is regulatory enforcement, import surveillance and defect investigation.

The second area is information technology modernization and the Commission implementation of a searchable public database of consumer product safety information. Section 212(b) of the CPSIA requires the Commission to upgrade its information technology systems and develop a database that allows consumers to submit incident reports that can subsequently be reviewed by all members of the general public. In response to this mandate, CPSC is developing a single integrated Web-based environment, the Consumer Product Safety Risk Management System, the RMS, which will change the way the Commission receives and analyzes data.

The Commission has already allocated approximately $20 million to fund many of the initial planning and design costs of the RMS and deeply appreciates this subcommittee's past support of this program. In fiscal year 2011, funding requirements will largely shift from design and build costs to maintenance costs. Therefore, the 2011 budget requests $1.8 million for staffing combinations of eight FTEs and other contract positions to maintain the system and comply with the OMB's requirement for information technology governance, cybersecurity and privacy.

Now, the third area of focus is consumer outreach and education. Providing consumers with recall and product hazard information that helps make families and communities safer is one of my top priorities. This year and in fiscal year 2011, the Commission plans to accelerate efforts to conduct grassroots education and advocacy in hard-to-reach and vulnerable populations. In August 2009, the GAO released a report recommending that the CPSC increase its focus on reaching minority populations. Mr. Chairman, I know that this is a key priority for you. Since becoming the Chairman of the CPSC, I have directed the Commission staff to explore additional outreach efforts to underserved populations, and this will remain a key priority going forward.

We also continue to focus on public education and outreach efforts to prevent drownings and entrapments involving children in residential and public pools. Congresswoman Wasserman Schultz has been a tireless advocate of increased safety measures and outreach in this area. And I am pleased to note that the 2011 budget contains $1 million specifically to continue the pool and spa safety education. This funding will build on the previous funding of $8.1 million in fiscal year 2009 and 2010 to continue to help the agency drive down the 300 child drownings each year.

And fourth, the 2011 budget proposes an additional $200 million for CPSC to support the National Nanotechnology Initiative. In the last few years, there has been increasing public concern over the potential health impacts associated with the technology. Although nanomaterials may have the same chemical composition as non-

nanomaterials, at the nanoscale they may demonstrate different physical and chemical properties and behave differently in the environment and in the human body. The $2 million proposal will allow the Commission to conduct exposure and risk assessment of nanomaterials, allow database updates to properly flag reports of nanotechnology incident reports in consumer products, and conduct consumer outreach efforts such as public meetings.

Mr. Chairman, Ranking Member Emerson, thank you again for the opportunity to testify on the proposed 2011 budget for the U.S. Consumer Product Safety Commission. And I look forward to working with you and other members of this subcommittee on the budget request. And I will be happy to entertain your questions after Commissioner Nord makes her statement.

Mr. SERRANO. Thank you so much.

[The prepared statement of Chairman Inez Tenenbaum follows:]

Statement of
Inez Tenenbaum
Chairman
U.S. Consumer Product Safety Commission

Before the

House Committee on Appropriations

Subcommittee on Financial Services and General Government

March 4, 2010

Good morning, Chairman Serrano, Ranking Member Emerson, and Members of the Subcommittee on Financial Services and General Government. I am pleased to be here today to discuss the U.S. Consumer Product Safety Commission's (CPSC) fiscal year (FY) 2011 budget request.

During the past eight months as Chairman of the CPSC, I have had the opportunity to see first-hand the great work that the Commission undertakes every day. From new regulations to ensure the safety of cribs to enforcement action against children's jewelry with harmful levels of lead, cadmium and other toxic metals, the CPSC is once again an agency that means business when it comes to protecting the safety of American consumers.

Much of this progress would not have been possible without the reauthorization of the Commission through the Consumer Product Safety Improvement Act of 2008 (CPSIA), and the additional funding received by the agency in FY 2009 and 2010. I greatly appreciate the increased resources Members of this Subcommittee have supported over the past two years, and can assure all of you that those resources have been put to good use through increased staffing, improved import surveillance, and rapid and robust responses to new and emerging hazards.

The results of this new commitment to the CPSC are already very encouraging. One concrete example of this is increased staffing and resources at the agency. During FY 2008, the number of CPSC full-time employees (FTEs) had dropped to only 385 – the lowest in the agency's history. Section 202 of the CPSIA required the agency to increase the number of FTEs to at least 500 by the end of FY 2013. I am very pleased to report that we have already reached that milestone, and have 501 FTE positions filled at the CPSC as of March 1, 2010.

But employee numbers are only one indicator of change. Another key metric is results. One concrete example of that is our ability to stop dangerous products before they enter the stream of commerce. In FY 2007, the CPSC collected approximately 750 samples of suspect products entering our country. In FY 2009, that number more than doubled to almost 1600. At the same time, we started to see a commensurate decrease in the number of voluntary recalls—from 563 in FY 2008 to 466 in FY 2009.

The Commission's proposed FY 2011 budget request of $118.6 million is designed to accelerate this forward momentum by focusing on modernization efforts that will flag emerging hazards – and help us to keep those products out of our country and the hands of children.

While this request is only $400,000 over the FY 2010 level, it will allow the Commission to increase the FTE level by 46 in FY 2011 (for a total of 576 FTEs), fund a broad new compliance initiative, implement the second phase of the Commission's continued Information Technology (IT) modernization, continue to improve consumer outreach, and direct $2 million in support of the federal National Nanotechnology Initiative by reallocating $13.9 million in funds used for FY 2010 nonrecurring activities.

The Commission's Compliance Initiative

Since the passage of CPSIA, Commission staff have worked diligently to promulgate and implement the numerous rules required by that law. In 2011, the CPSC's work will shift from developing rules mandated by the CPSIA to enforcing those rules – both within our borders and at ports of entry.

To further facilitate those efforts, the CPSC's FY 2011 budget requests $4,647,000 and the addition of 41 full-time employees (FTEs) to support additional responsibilities associated with three key elements of the compliance program: regulatory enforcement, import surveillance, and defect investigations.

Regulatory Enforcement:

Experience shows that enforcing new rules takes considerably more resources than enforcing an existing rule that has been in place for a number of years. The number of rules mandated by CPSIA during FY 2009 and FY 2010 are more than double the number of rules promulgated by the Commission since 1990 – and will result in a dramatic increase in enforcement responsibility.

The FY 2011 budget, therefore, requests $1,647,000 and 15 FTEs to enforce the new rules. This includes 4 new compliance officers, 5 field investigators, 3 lab testing and other technical specialists, 2 attorneys, and one FTE to coordinate with state and local authorities.

Import Surveillance:

The Commission's import enforcement workload will also increase as investigators ramp up efforts to verify testing certifications and collect increasing numbers of suspect product samples at our Nation's ports. The need for more staff and better coordination with U.S. Customs and Border Protection (CBP) was highlighted in an August 2009 Government Accountability Office (GAO) report, and the Commission is eager to fully address this issue.

Accordingly, the FY 2011 budget requests $1,965,000 to expand coverage at the ports, verify third-party testing certifications, collect samples of suspect products, and – most importantly -- stop unsafe products from entering the country. This request will support an additional 16 FTEs dedicated to import surveillance (5 investigators and analysts that will be stationed at ports, 2 compliance officers to process additional import samples, and 9 FTEs for lab testing and other specialties), as well as $100,000 for destruction of goods refused at the ports by CPSC.

Defect Investigations:

The number of product incident reports the Commission receives almost doubled between FY 2003 and now. With the rollout of the public database by March 11, 2011, we expect that the number of incident reports will grow exponentially. These reports often provide critical information and data to the CPSC. However, with current resources, CPSC staff is only able to thoroughly investigate a very small number (approximately 10 percent) of the total reports received.

Increased resources are needed to enhance our defect investigation capability, and ensure that the Commission can adequately review and process the rapidly increasing number of product incident reports. Therefore, the FY 2011 budget requests $1,965,000 and 10 additional FTEs (3 compliance officers, 5 field investigators, 1 technical specialist, and 1 attorney) to support this critical effort.

Information Technology Modernization

Section 212(b) of the CPSIA requires the Commission to upgrade its information technology systems and develop a database that allows consumers to submit incident reports that can subsequently be reviewed by all members of the general public.

In response to this mandate, CPSC is developing a single, integrated, web-based environment, the Consumer Product Safety Risk Management System (RMS), which will change the way the Commission receives and analyzes data. Current systems at the Commission are fragmented, and information flows often have to be manually sorted by staff to identify new and emerging hazard patterns.

With the new RMS, CPSC will be transformed. The Commission will have one powerful database for the input and analysis of multiple sources of data. This capability will be absolutely critical as data streams from the new public database start flowing into the Commission. In addition, the system will have new predictive "data mining" tools that will allow the CPSC to compare new incidents electronically with all prior incidents. Overall, this new capability has the potential to uncover more defect patterns for staff to examine. This, in turn, could lead to an increase in recalls of defective products and the prevention of injuries and deaths.

The Commission has already allocated approximately $20 million dollars to fund many of the initial planning and design costs for the RMS, and deeply appreciates this Subcommittee's past support of this program. In FY 2011, funding requirements will largely shift from design and build costs to maintenance items. Therefore, the FY 2011 budget requests $1.880 million for a staffing combination of 8 FTE and contract positions to maintain the system and comply with Congressional and Office of Management and Budget (OMB) requirements for information technology governance, cybersecurity and privacy.

Consumer Education and Outreach

Providing consumers with recall and product hazard information that helps make families and communities safer is one of my top priorities. Over the past year, the Commission has made great strides in consumer outreach by re-establishing our presence on network television, in national newspapers, and on the radio. The agency also launched "CPSC 2.0," a social media initiative that is reaching tens of thousands of consumers via YouTube, Twitter, FlickR, the OnSafety blog, and our Recall Widget. This year, the Commission plans to further accelerate this initiative by expanding the platforms we use to include cell phone text messages.

The Commission also plans to accelerate efforts to conduct grassroots education and advocacy in hard-to-reach and vulnerable populations. In August 2009, the GAO released a report recommending that the CPSC increase its focus on reaching minority populations. Mr. Chairman, I know this is a key priority for you. Since becoming Chairman of the CPSC, I have directed Commission staff to explore additional outreach efforts to underserved populations. In carrying out a special Minority Outreach initiative, we will increase our use of existing tools, such as the Neighborhood Safety Network (NSN) program – which provides vital information to more than 5,600 community organizations and leaders – as well as use new tools, such as targeted, grassroots programs for Hispanics, African-Americans, American Indians, and other minority groups. This will also remain a key priority of the Commission in FY 2011.

One of the most tragic subjects the Commission deals with are drownings and entrapments involving children in residential and public pools. Congresswoman Wasserman Schultz has been a tireless advocate of increased safety measures and outreach in this area, and I am pleased to note that the FY 2011 budget contains $1,000,000 specifically for continuing pool and spa safety education. This funding will build on the previous funding of $8.1 million in FY 2009 and FY 2010, and continue to help the agency drive down the 300 child drownings each year and increase compliance with the Virginia Graeme Baker Pool and Spa Safety Act.

Nanotechnology

The CPSC's FY 2011 budget also proposes $2 million to support the federal National Nanotechnology Initiative, and seeks to collect additional data and explore environmental, health, and safety issues related to the increasing use of nanotechnology in consumer products.

In the last few years, there has been increasing public concern over potential health impacts associated with this technology. Although nanomaterials may have the same chemical composition as non-nanomaterials, at the nanoscale they may demonstrate different physical and chemical properties – and behave differently in the environment and the human body.

The $2 million proposed will allow the Commission to conduct exposure and risk assessments of nanomaterials, allow for database updates to properly flag reports of nanotechnology incidents with consumer products, and conduct consumer outreach efforts such as public meetings. Perhaps even more importantly, it will also allow the Commission to take a very proactive approach to this emerging issue, rather than merely reacting to incident reports after they are received.

* * * * *

Mr. Chairman, thank you again for the opportunity to testify on the proposed FY 2011 budget for the U.S. Consumer Product Safety Commission. It provides the funding necessary to continue the transformation of this agency from what some have described as a "teething tiger" into the world's leading lion of consumer protection.

I look forward to working with you and other members of the Subcommittee on the Budget Request, and would be happy to now answer any questions you may have.

COMMISSIONER NORD'S OPENING STATEMENT

Mr. SERRANO. Thank you, Commissioner Nord. Welcome back.

Ms. NORD. Thank you so very much. I am delighted to be here with my friend and colleague Chairman Tenenbaum to fully support the agency's 2011 budget request. And I also want to thank this subcommittee for all of the support that you have given us to help us push forward our ongoing safety initiatives.

Chairman Tenenbaum has mentioned the initiatives that we plan to undertake in the next fiscal year, and these initiatives build on the growth and the progress that we have made over the last 2 years, and that is a direct result of the support that this subcommittee has given us.

Since Inez has given you a good overview of our request, I want to spend my time with you talking about a related issue, and that is the agency's implementation of the Consumer Product Safety Improvements Act. The CPSIA is landmark legislation. It gave the agency important new tools, tools which we requested, are grateful for, and which we are using. But as we implement the CPSIA, we have seen where more flexibility in the law would help us respond more appropriately to real-world situations in order to avoid consequences that we don't believe that Congress really intended.

You asked us for a report on ways in which to improve the CPSIA to help the agency better carry out its mission, and we sent that report in January. So let me suggest a couple of key issues on which we could all focus.

First, I think we need to focus on products that present real risks of injury. I know you want us to be using public resources in the most efficient way, to address the most pressing safety issues, and the CPSIA identifies lead poisoning as one of those. And to be very clear, all of us believe that lead should be removed from children's environments. That is not open to debate, as far as I am concerned. But under the law, we are spending immense amounts of staff time and resources to examine and regulate things that really do not present a lead risk to children.

Just to give you a couple of examples, we spent hours debating whether we needed to prohibit 12-year-olds from using ballpoint pens. The little tip that holds the ball in place has more lead than the law allows. So that was a real question that the agency had to deal with.

A question is presented whether your preteen daughter can have rhinestones and lead crystals on her ballet costume. Under the law right now, the answer is no. Any glitz is going to have to be plastic.

The question of children's bicycles. The little Schrader valve, the little air pressure tire valve, the tip of it has brass in it. It needs to be there for the threads. But brass has lead in it above the statutory limits, so it violates the statute right now. And speaking of brass, we have ruled that it has to be removed from children's products, even though our scientists have found that it does not pose a risk, and that they would have no qualms letting their children use the products that we are banning.

And finally, I think all of you have probably heard from your libraries. Older books may have lead in the ink that violates the

statute. So this presents a real question for libraries and what they are going to do loaning out older books.

We do not see a risk, real risk, with these products, but as currently written, things like pens, books, bikes are being pulled into this regulatory net.

Secondly, I think we need to focus on effective testing, trying to minimize needless burdens. Some facts here. I think all of us agree that a very rigorous testing program should be required to ensure the safety of children's products, but the law requires that all children's products be tested by a third-party independent testing laboratory. And in some cases, that probably isn't necessary. We certainly know it adds expense to the process, and it increases costs to consumers. And some flexibility, I think, needs to be given to the agency.

Representative Emerson referred to small businesses that I know all of you have heard from. We have, too. A small company just reported that they spent $50,000 having their inventory of educational products tested even though they knew there was no lead in them. I just talked last week to a U.S. furniture manufacturer who has decided not to go into children's furniture line, which he had been planning to do, because of CPSIA. We heard from a very small business with eight employees that adapts products, toys, for use for special needs children. They told us they probably can't survive because of this law. The agency needs some flexibility to deal with these situations while still giving safety in appropriate ways.

Finally, I think we need to be focusing prospectively rather than retroactively in how we regulate products. When I say retroactivity, what I mean is we are dealing with products—we are banning products that are already in the stream of commerce rather than looking at their manufacturing date. But that phenomenon really hits retailers, especially resellers, much more dramatically than others. The president of Goodwill Industries has written to us about his concerns, and to quote his letter, he says that the CPSIA unnecessarily puts local communities at risk. That is what he told us. The Kentucky Goodwill has advised our colleague Commissioner Northup that they have seen a very large drop in the number of child items through their stores across the State of Kentucky. The Honolulu Salvation Army has closed its entire children's section because of liability fears.

Surely Congress did not intend this, but the agency really needs the assistance of Congress to make this right. Our concern is that we are now regulating products that do not present a real risk, and it really does raise the question of best use of scarce public resources. Whether we have two Commissioners, three Commissioners or five Commissioners, all of us are committed to making this law work, but we have also united in our request for greater flexibility. We need your assistance, and we stand ready to do everything we can to, as you indicated, have this law maximize benefits and minimize burdens. That is what we all want.

Thank you so much.

Mr. SERRANO. Thank you.

[The prepared statement of Commissioner Nancy Nord follows:]

1-800-638-CPSC

TESTIMONY OF COMMISSIONER NANCY NORD TO THE SUBCOMMITTEE ON FINANCIAL SERVICES AND GENERAL GOVERNMENT

MARCH 4, 2010

I am pleased to be here with our new chairman, Inez Tenenbaum, who is providing solid leadership at a time of exciting growth for the agency. I want to extend my personal appreciation for the long standing support and interest of Chairman Serrano, Ranking Member Emerson, and members of this subcommittee in the activities of the Consumer Product Safety Commission.

The Commission submitted a fiscal year 2011 budget request for $118.6 million that I fully support. The increased funding the agency has received over the past two fiscal years has enabled us to put in place the foundation on which the current budget request builds. We have made much progress, thanks to the support this subcommittee has given the agency.

As an example, Chairman Serrano has been a strong advocate of the agency, especially with respect to our efforts to improve outreach to underserved populations. We are building on our Minority Outreach Campaign aimed at increasing awareness of product safety in the home such as safe sleep for babies, TV/furniture tip over and poison and drowning prevention. Staff will expand the Neighborhood Safety Network program and also plans a more focused and concentrated effort to conduct a grassroots initiative to connect with hard-to-reach and vulnerable populations.

As another example, the Virginia Graeme Baker Pool and Spa Safety Act, which went into effect in December 2008, has generated a great deal of activity at the agency. Funding for the act has enabled us to initiate an expansive national education campaign on pool and spa safety. We have been working especially closely with Representative Wasserman-Shultz as we implement requirements of the act. Funding for the pool and spa safety education initiative is proposed at $1 million for FY 2011. This builds on the previous funding of $8.1 million used over the past two years to implement grassroots safety education and advocacy campaigns to address child drowning and the hidden hazard of drain entrapment. These campaigns are designed to warn the public, target underserved populations, and educate state and local jurisdictions and affected industries about requirements of the Virginia Graeme Baker Pool and Spa Safety Act. The act provides the CPSC an important opportunity to work with state and local health organizations as they are our on-the-ground partners at the community level.

In the past two years, our staff has grown from 396 to over 500 employees. With the recruitments pending, we are on target to reach our planned level of 530 staff for FY 2010. This has been an extremely aggressive and successful recruitment effort given that it takes an average of 115 days to bring a new employee on board. The FY 2011 request enables us to add an additional 46 staff people for a total of 576 employees. These new hires are necessary for the successful implementation and enforcement of our expanded authorities.

With passage of the Virginia Graeme Baker Pool and Spa Safety Act and the Consumer Product Safety Improvement Act (CPSIA) at virtually the same time, the agency has been challenged to promulgate a number of new requirements as well as advance its ongoing, existing safety agenda and meeting that challenge has been the agency's focus over the past two fiscal years. In FY 2011, work will shift from mandating new requirements of these laws to enforcing these rules, and that requires a dramatic increase in enforcement capabilities. The FY 2011 request includes a significant increase of $1,647,000 and 15

FTEs to enforce the growing number of rules issued under CPSIA. With the increased enforcement workload, we need more investigators and compliance officers, along with technical, laboratory and legal staff to support their efforts.

Critical to this expanded compliance effort is the Import Surveillance Division. Set up in 2008, the division started as a small program that provided the first full-time presence of CPSC investigators at key U.S. ports. It grew last year and is growing again in the budget before you with a request to fund five additional investigators to expand coverage at the ports.

Another related development to enhance compliance activities was the establishment of a CPSC office in China, an effort that has been in the works since early last year. We now have the first staff person located in China and anticipate hiring a second staffer to work on CPSC issues at the U.S. Embassy in Beijing. The CPSC staff in Beijing will facilitate efforts to promote a clearer understanding of U.S. product safety requirements by producers in China, the largest exporter of consumer products to the United States. Representative Kirk has been especially supportive of these efforts.

Our laboratory provides critical support to both the agency's compliance and hazard identification activities. As was reported to you in earlier budget presentations, we have undertaken a focused, multiyear effort to upgrade and improve our laboratory facilities. As a result, in the spring of 2009, we signed a lease for a new modernized facility. The build-outs are underway and we anticipate a move-in date later this year. This new, up-to-date testing laboratory facility will be a tremendous asset for our expanded enforcement and hazard identification activities.

When the agency asked for funding to overhaul our IT system to provide the foundation needed for the public database mandated by Congress, you gave it to us. Building on the success of our Early Warning System (EWS) pilot program that enables staff to mine data for similar hazard patterns for cribs, bassinets and play yards, we are developing a single, integrated web-based environment. Based on the positive results from the EWS, this predictive search capability will expand to all product categories and greatly enhance product hazard identification. The FY 2011 request allocates over $9 million for the integrated database that Congress directed us to establish. The CPSC will complete the first phase of the public database in March 2011. When fully operational, the database will allow the public to submit incident reports, have immediate access to safety information and will provide a single, integrated IT structure, with new data-mining tools that will greatly improve the way staff identifies hazards. We are currently tackling a number of issues as we reengineer our IT system, including assuring accuracy of information in the new public database. These issues will be the focus of our attention over the coming months.

The request before you proposes $2 million to continue support of nanotechnology research relating to the health and safety of consumer products, including exposure and risk assessment of nanomaterials. This is an area where I have an especially strong interest and am pleased to see the agency take a strong role as nanomaterials transition from the research laboratory to the consumer marketplace.

However, the bulk of the focus of the agency's work over the past 18 months has been implementation of CPSIA. This landmark legislation gave the agency many new authorities and resulted in a modernization of our statutes that has been very helpful. In addition, the new law also gave us significant new responsibilities to be implemented under aggressive deadlines. As the budget document before you notes, the number of rules mandated by CPSIA during 2009 and 2010 is more than double the number of rules promulgated by the Commission since 1990.

As the agency has worked aggressively to implement the law, we have found some problems that the agency cannot solve and will require Congressional action to fix. In the Consolidated Appropriations Act of 2010, this committee specifically asked for our views on the need for amendments to the law and the agency has been unanimous in its view that amendments giving us more flexibility would be useful (although we have differed on the substance of those amendments). Attached is a copy of my statement that accompanied the Commission Report to Congress Pursuant to the Statement of Managers Accompanying P.L. 111-117.

To summarize, I believe the statute would be strengthened by the following suggested changes:

- *Focus on products that present real risks.* The lead exclusion provisions of the law (Section 101) need to be amended so that the agency can focus its attention on products that actually present a risk rather than spending scarce public resources regulating products that do not present real risks, as is happening now. In this regard, various solutions have been proposed and they merit close examination. One suggestion put forward is to consider the "functional purpose" of the lead in the product. While there is no agreement over the reach of this language or the products it would actually cover, such an approach would result in a resource intensive product-by-product approval process. Instead the law should direct the agency to regulate products based on whether a child's interaction with a product results in a measurable increase in blood lead levels.

- *Focus on the most vulnerable population group.* The law treats all children--from infants to preteens--the same even though product interaction at various ages is quite different and the risks are different. The scope of the law should be narrowed to apply to products intended for younger children, especially since the agency has the authority to regulate other products if they indeed do present risks at higher age limits.

- *Focus on effective testing, without needless burden.* The law should provide more flexibility with respect to third party testing (Section 102) which adds costs to products and has proved to be especially burdensome on small manufacturers. The agency should have the ability to set appropriate testing requirements as long as those requirements provide for a reasonable testing program and provide reasonable assurance of compliance with the underlying safety standards.

- *Focus on prospective rather than retroactive implementation.* Another needed change is to limit the retroactive aspect of the law which hits especially hard on retailers, small businesses, charities and other resellers.

Small businesses have been especially hurt by the sweep of this law. The agency has not done a full economic impact on the effects of CPSIA on small businesses; however anecdotal information puts the impact in the billions of dollars range. We know that many small businesses have been put out of business or have left the children's products market.

There is only limited action the agency can take under CPSIA to ease the burden it places on small businesses while still protecting consumers. Nevertheless, we are trying to do what we can. For example, we have put out information and education materials to explain the law to the small business community and these activities will be enhanced by the budget we have submitted. The component testing enforcement guidance is intended to push testing obligations upstream and take some of the test burdens off the final producer, including the small manufacturer. The Compliance: Continued Testing Rule, which will come out this fall, will impose significant new testing obligations on producers in

addition to those now in place. We hope to ameliorate the adverse impact this rule will have on small businesses by delaying some of the testing burdens for small volume producers. While we hope that these actions will be helpful, we will not know the success of their efforts or their impact for some time. In the meantime, small businesses are suffering now and the agency needs the authority to ease unnecessary and counterproductive regulatory burdens. In my view, the component testing enforcement policy and a possible small volume provision for additional testing requirements, along with education, are not sufficient to address legitimate small business concerns. I recommend Congress give the Commission additional flexibility to ease the regulatory burdens on small businesses and charities while still providing the strong consumer protection that we all desire.

With the changes outlined above, the CPSIA could become a much stronger tool for consumer protection. These changes would allow the Commission to focus its efforts and its limited resources on the real hazards that impact consumers, a goal that we all can agree is needed.

U.S. CONSUMER PRODUCT SAFETY COMMISSION
4330 EAST WEST HIGHWAY
BETHESDA, MD 20814

STATEMENT OF COMMISSIONER NANCY NORD ON THE COMMISSION REPORT TO CONGRESS PURSUANT TO THE STATEMENT OF MANAGERS ACCOMPANYING P.L. 111-117

January 15, 2010

My fellow Commissioners and I, together with the agency's staff experts, have been working diligently to respond to the request of Congress for recommendations on how to change the CPSIA. Our bipartisan approach has produced a report that is a good step in the right direction. While the report identifies several recommendations with which all the CPSC Commissioners agree, it stops short of addressing all the issues that need to be considered before the CPSIA can truly become the constructive force for consumer protection envisioned by the Congress when it passed the legislation. The law contains a number of useful new tools, many of which were requested by the agency, to better position the CPSC to act more quickly and effectively to protect consumers. However, there are aspects of the law that limit the flexibility of the agency to act appropriately and, as a result, we have seen unfortunate, unintended consequences flowing from the law's implementation. I have been requesting for some time that the Congress address these problems and I appreciate the opportunity to contribute to that process. The recommendations in the report represent a good start, but the conversation about how to fix the problems with the CPSIA needs to go further. I have listed below some of the critical changes that need to be made to the law.

1. Lead Exclusions and the Process for Granting Exclusions

There is absolutely no disagreement over the need to limit children's exposure to lead. However, the language of the CPSIA is drafted so tightly that the exclusions process in the law, which Congress intended for the agency to use, is not workable. The law limits the agency's ability to focus on products that present actual injury or harm to children. The CPSC scientific staff has told us that they are not aware of any product that could meet the exceptions requirements of the law and hence have had to recommend denial of each of the petitions for exclusions that have been considered. This is in spite of the fact that staff has told us with each petition for exclusion that the products in question do not present a risk of harmful exposure to lead.

Over the past 18 months, staff has taken thousands of hours away from dealing with ongoing, significant safety concerns to consider issues such as the following:

- Determining whether to exempt ball point pens, which have a tiny brass tip that holds the ball. That brass tip contains lead over the statutory limit. After much deliberation, the Commission decided that a pen that is used by both adults and children is not a children's product and is not subject to the law but if that same pen is decorated with brightly colored cartoon characters it may fall within the reach of the law and if so, could not be sold.
- Determining that it is illegal to sell children's products containing crystals or rhinestones which, by necessity, contain more than the statutory amount of lead and for which there is no suitable substitute. This is true even though the lead in rhinestones and crystals does not easily leach out and even though a child could be exposed to more lead from products that meet the statutory requirements than from

exposure to rhinestones and crystals.

- Determining how to allow for the continuing sale of children's bicycles even though some parts contain lead, e.g. the Schrader valve used to put air in the tire. Many bicycles are made with recycled metal that also may contain lead at levels that are unpredictable and not easily controllable but which may exceed the statutory limits. In this case, a stay of enforcement was the only way to avoid an unacceptable regulatory result – banning children's bicycles – flowing from applying the statute to this product.
- Determining that a brass collar and other brass components of die-cast toys are prohibited even though staff reported there is no real risk of harmful lead exposure. The implications of this decision for other products containing brass, not only those in the home, but also in our schools – such as desk hinges, locker handles and coat hooks – are significant and far-reaching.

The agency needs flexibility to deal with products that contain lead over the statutory limits but which do not present a risk to children. The Congress specifically asked the agency to look at risk and exposure in crafting a solution to this problem. To solve the problems we have had in applying the exclusions language of the current statute, Congress needs to give the agency the flexibility to look at whether there is a real risk of lead exposure based on the child's interaction with the product and the extent to which that interaction results in a measurable increase in the child's blood lead levels, rather than the absolute language that is now in the statute. This would address the conferees direction to look at risk and exposure and the many concerns expressed by individual members of Congress, including primary sponsors of the law, who have indicated that they thought the statute contained this flexibility. As we do this analysis, it is important to look at how other jurisdictions and agencies address lead exposure so that we consider consistent requirements where appropriate.

In addition, additional thought should be given to the scope of the law. There are certain products – most toys and children's metal jewelry, for example – that warrant aggressive regulation with respect to lead. There may be others – books, educational products, sporting equipment and apparel, for example – where there is less concern. Congress should either write the law specifically to spell out what they want included and excluded, or they should give the agency sufficient flexibility to regulate appropriately. This could be done either by product category or by age. With respect to age, the agency has extensive experience in dealing with the ways that children of different ages interact with consumer products. The CPSIA does not allow flexibility for the agency to utilize this expertise. It treats all children – infants to pre-teens – the same, and, as a result, our regulatory decisions cannot be tailored to meet the requirements of the age of the child and thereby apply the most effective solution for the greatest risk and exposure. Lowering the age requirements of the statute and making clear the agency's ability to regulate upward as safety circumstances warrant, would go a long way to solving many of the problems in the law and keeping the agency's resources focused on providing real protection for consumers.

2. Testing and Certification/Small Manufacturer and Crafter Concerns

The agency and the Congress have heard from many small manufacturers and crafters that are being severely and adversely impacted by the CPSIA. Indeed, a website has been established that tracks the demise of businesses attributed to the law. The testing and certification requirements are at the heart of the complaints being made by small manufacturers and crafters. The agency has worked hard, within the confines of the statute, to deal with the issues small manufacturers and crafters are facing as they struggle to meet CPSIA's requirements, but our options are limited. Our report points to the guidance booklets we have published, the component testing enforcement guidance and possible regulatory relief in the so-called '15-month rule' dealing with frequency of ongoing testing. It is not clear that the problems small manufacturers and crafters are having now can be adequately addressed with more education, a policy on components that is still unimplemented and unproven, and by the promise of future regulatory action, months from now, that treats only part of the problem.

While independent third party testing is the most robust way to provide assurance of compliance, it is also the

most costly and least efficient. The requirement that all children's products be third party tested has raised the cost and added to the complexity for many small producers of children's products. The application of this requirement to handcrafted products made by individual artisans has raised serious concerns about their continued viability. While we hope that our component testing enforcement policy will address some of this concern, we have been told that this is not a panacea and more must be done. In addition, small producers face higher testing costs, are receiving conflicting information from testing labs about what must be tested, and are facing barriers from retailers who are requiring redundant testing or additional testing to be done by laboratories they specify, often at prohibitive cost.

Given all this, Congress should consider whether child safety can be served by other testing alternatives that will assure adequate compliance testing without the cost and complexity of third party testing. Specifically, the agency should have the ability to establish, by rule, alternative testing requirements for certification under section 102 of the CPSIA for manufacturers based on small volume or other appropriate criteria, as long as the requirements provide for a reasonable testing program and such other provisions as the Commission deems necessary to provide reasonable assurance of compliance with underlying consumer product safety rules.

3. Retroactivity

The report's recommendation that retroactivity not apply when the lead provisions of the statute transition from 300 ppm to 100 ppm is the minimum that must be done to address the significant losses that businesses have incurred because of the retroactive nature of the statute. The problems with retroactivity have been exacerbated by retailers who have required the lower limits ahead of their implementation dates in the statute, stranding safe inventory that cannot be sold. Although it is unfortunate that a recommendation could not have been made and acted upon a year ago to forestall the economic losses that have already been suffered, it is imperative that it be implemented as soon as possible.

We are seeing the same phenomenon occur with respect to phthalates, where the testing process to determine the presence of phthalates is much more difficult than is that for lead. The CPSIA permanently banned three types of phthalates and banned, on an interim basis, three other types until more health data could be assembled and analyzed. A Chronic Hazard Advisory Panel is being convened according to the timetable set out in the CPSIA, to look at the health effects of the various phthalates banned on an interim basis by the statute. The Commission is trying to define the universe of products to which the phthalate ban is applicable, is still working on a test method to determine the presence of phthalates in those products, and has not yet approved a laboratory accreditation process. Unlike lead, there is no screening test to more easily determine the presence of phthalates. It is unreasonable to require that retailers and resellers either face potential liability or go back through their inventory to try to determine the presence of phthalates when we do not even have a test method in place, putting aside questions of testing practicality and affordability. Congress should consider clarifying that this provision will not apply in a retroactive manner. At the very least, retroactivity should apply only to the three permanently banned phthalates.

Finally, the recommendation with respect to retroactivity does not go far enough since it does not treat sales by charities, consignment shops and other resellers. For example, we have been told that many of the charities are not selling children's apparel because of the potential liability imposed by this law. Obviously, it is crazy for people not to be able to buy their children winter coats or boots at a Goodwill store or at a yard sale. Yet that is where the CPSIA leads us and I doubt Congress really intended this result. The agency has an excellent working relationship with charities such as Goodwill and the Salvation Army, and our regulation of these groups should focus on stopping the sale of recalled products. Congress should act to assure that the products parents need to buy are available in the resale market.

Conclusion

This statement is not intended to be a comprehensive description of all the implementation issues we have seen with respect to the CPSIA. I have focused for the past 18 months on the major challenges we have faced in implementing this law. As Congress reflects on the implementation issues presented by the CPSIA, there are a number of other things - both technical and substantive - that should be considered, including coordination with the state attorneys general in enforcing the law and issues related to improving the agency's database.

Please be confident that the Commission shares the commitment of the Congress to assure American families that products on store shelves do not present an unreasonable risk of injury. These recommendations are given in the spirit of finding a path forward that, while minimizing unnecessary regulation, assures parents that the products they buy are as safe as possible for their families.

Mr. SERRANO. And thank you both for your testimony.

Let me put aside for a second the questions I had prepared, because you bring up an interesting point and one I think that merits both dealing with the points you bring up, Commissioner Nord, and also with a little bit of history. And my question then would be how do we create a fair and just balance? Perhaps Congress legislated in a way that it has created some issues that we have to address. That is possible. It happens all the time. But why did Congress legislate? Because of the lack of oversight in the past and the ability to give everybody flexibility created an unsafe environment for children and for all Americans. So every so often in this country, we do this. We do this with everything, not just legislating. We do it with all kinds of issues in the House where there is a crisis, and we react to it, and then we go perhaps beyond what we were supposed to. I am not suggesting that is what we did. That is what you are suggesting.

So my question is how do we now make sure that we don't have to legislate a few years from now or a generation from now to deal with the fact that we had such a problem before us? Yes, there are Salvation Armies and Goodwill and other people who are saying you did too much. But we had to because we had a mess on our hands, and we had a very unsafe environment for our children and for our citizens.

So my question is how do we adjust that that we have to adjust if it is true we have to adjust, if there is a need, without going back to the days where no one cared what came into the country and what happened? This was not done because one day Members of Congress got up and said, oh, what do we do today? Okay, let us pass a new consumer law. No. It was because we were being hit hard and people were demanding action from us. I remember the time. People were saying, you have got to do something. We are trying to do something. How do we balance it?

Ms. TENENBAUM. First nf all, we have been working very hard to implement the CPSIA, and we very much are mindful of the strains on small businesses and low-volume manufacturers. We responded to your request to come up with the report. We all worked on this report. It was a bipartisan, unanimous report that we sent to Congress asking for flexibility.

But in the interim we at the Consumer Product Safety Commission have tried to provide flexibility as well. We have issued 41 Federal Register notices, and we will have 12 more additional rules in the next 8 weeks, because industry has told me, "We want to have predictability. Hurry up with these rules so we know how to respond."

Second of all, you had inaccessibility, and you had lead in electronic products as an exemption to the lead requirements. So what we also came up with were lead determinations for textiles, for other materials that we said you don't have to test. If you make a shirt we know it won't have lead in it. Now, if you buy buttons from a button maker who can say they are lead-free, then you don't have to test the shirt at all.

So we have tried to use common sense in the implementation. We put out a guide for small businesses and reseller stores like the Goodwills. I have been on many nonprofits, and so has my husband, that have sponsored these resale stores. We try to educate these resellers on what they can look for in products to pull them from the shelves. We have done this kind of education with resellers.

We also have come up with an enforcement policy which would allow for component part testing so that if you buy a component part, and it is lead free—like, if you are making blue jeans, and you buy lead-free zippers, which YKK is making now, the button manufacturers are making lead-free buttons, then you don't have to test if you buy it and you have a reasonable assurance that it does not contain lead.

So we are working to do all of this, but at the same time we, in that report to Congress, realized that we needed flexibility. And we all agree that the "any lead standard" was something that was a little too tough. It was tough for bicycles and ATVs, and we gave a stay of enforcement so we would not be enforcing this law against them. It was too tough for books in terms of those published prior to 1985. The books that are now published don't really have a lead problem because the process does not contain lead. If you have a book with a spiral binding, you might have a different problem because it might contain lead. But the publishers now know what to do, and they don't have to go test every book because they are lead-free.

But we have asked to have this flexibility, and now it is in the Commerce Committee. We are working with them to try to see what is the best way to approach the flexibility. We propose that if you could show us that the lead was needed because it was impractical to remove, or it really did not pose any measurable adverse health effect to the consumers, then that was the functional purpose.

Now, we understand that there are some people in the ATV industry that have supported that amendment to the CPSIA. The bicycle industry supported that. So now it is the issue of whether we have functional purpose or whether we have a risk-based approach. Any way you approach it, it is going to be more work for the CPSC.

What you [Congress] did was establish a bright-line test. You said no more than 300 parts per million, which is where we are now, in the content of lead in a product, or 90 parts per million in terms of lead paint. So that is what we enforce. But what we have all agreed on is that the ATVs and bicycles do not pose the risk to the consumer, and the ATV industry has also assured us that they can manufacture an ATV where the rider does not come in contact with lead. So this would work for us.

FLEXIBILITY IN CPSC IMPLEMENTATION

Mr. SERRANO. Let me ask you, Commissioner, you were very clear in supporting the report that says, give us flexibility. But in the meantime are you satisfied with some of the steps that have been taken to give some flexibility outside Congress giving you that?

Ms. NORD. Well, the agency is doing what it can within the confines of the law. But on the Commission level, on the staff level, we are very clear that our hands are tied in a number of different ways. As the Chairman said, we are looking at component testing, but that is out in the future. Hopefully that will help small businesses. We don't know yet. We are doing some other things. But we don't have the ability to address the underlying systemic problems that we have seen come up.

Your question is important. When the crisis with imports hit, obviously the Congress was very concerned, the agency was very concerned, and we were all working together at that time to get our arms around this, also working with an admittedly and incredibly constrained budget.

Perhaps the most effective thing to address this issue is the fact that you all gave us resources to set up an import surveillance division so that we would have people at the ports. And our strategy has been to push safety as far back up the manufacturing chain as we possibly can and then have an ability at the ports to look more broadly at the products that are coming in, and that is because of our agency is working with this subcommittee and your Senate counterpart to make that happen, and that has been really effective.

Now, obviously we understand that Congress was concerned about this and wanted to address it, but the provisions in the CPSIA do tie our hands in a number of different ways. And it really ends up making us focus on all products with lead whether the child is exposed to the lead or not. And that is the concern we have, and that is what we would like to address.

Mr. SERRANO. I can speak for myself, but I tell you, I think Congress would be open to revisit, but I don't think Congress on either side of the aisle is interested in going back to the days when the situation got so out of hand, it created the situation where we had to react.

Mrs. Emerson.

LEAD STANDARD CHANGE

Mrs. EMERSON. I am not disagreeing with you, Mr. Chairman, that we need to keep the bill, but here is just a list for you of all the companies that have either been hurt or closed as a result of this act, all of which are small businesses, I might add.

Chairman, you mentioned 300 parts per million of lead, and that is due to be reduced to 100 parts per million by August.

Ms. TENENBAUM. If technologically feasible.

LEAD CHANGE FEASIBILITY

Mrs. EMERSON. If technologically feasible. But it is pretty darn hard for a lot of companies to meet even the 300 parts per million. In other words, companies are having to decide to use different types of materials to make things, and, of course, they break, and it costs the companies money. There is just a chain reaction, if you will. So how do you determine if it is going to be technologically feasible, number one? And number two, what is going to happen if companies cannot, cannot find the products that they need with-

in that 100 parts per million to make whatever item it is they are making?

Ms. TENENBAUM. Well, we are grappling with that now at the CPSC on what will companies have to show us to prove that reducing it to 100 parts per million is not technologically feasible. Our scientists and engineers will review the criteria that companies present us to determine if the lead is needed in the product to make it stronger. If you need the lead, then we will allow you to continue the 300 parts per million.

And so the other thing is that in the report to Congress in January that we filed, we asked that that 100 parts per million be applied prospectively and not retroactively, because there are companies now who are meeting the 300 parts per million standard. They will be applying to keep that standard if they feel like it is not technologically feasible to go down to 100. While we are reviewing their application and making these findings, we don't want stores to be in limbo or the companies to be in limbo on what the limit will be. So we are asking that to be applied only prospectively.

Mrs. EMERSON. I would hope so, given the fact that we have all these companies.

But let me hear from Commissioner Nord on this question.

Ms. NORD. One of the concerns that I have about migrating down to 100 parts per million is in order to hit the technologically feasible standard, companies are going to have to individually come in and make that case to us. So it could potentially be an incredible drain on resources for the agency, because, for example, as I indicated, brass has got lead in it, but we can't give an across-the-board exemption. We will have to be looking at these things on a case-by-case basis.

We also get into the situation where perhaps it is technologically feasible. I mean, it is technologically feasible. Recycled metal has lead in it. You can have virgin metal. It is technologically feasible. It is very expensive. But you can meet the 100 parts per million requirement, but to do it is requiring these companies to spend resources reengineering their products in a way that hits the statute, but doesn't necessarily address safety or advance safety.

Again, my concern is that the agency really needs to be focusing on products that are unsafe and that harm children. That is our mission, not dealing with ballpoint pens and bicycle tire valves where nobody gets lead poisoning from riding a bicycle. So we would like to get off that and back onto our core mission.

JOB LOSS AND CPSIA

Mrs. EMERSON. Okay. So then I will pose the question to you, which is obviously not part of your core mission, but the question is begged nonetheless, and that is has the Consumer Product Safety Commission or any other agency in the Federal Government or executive branch, I should say, estimated the number of jobs that will be lost as a result of this new law?

Ms. NORD. The agency has not done an economic analysis of the impact of this law. I think it would be something that would be very, very helpful.

Mrs. EMERSON. What do you think, Chairman?

Ms. TENENBAUM. No, we do not have the ability to do that, but I have not seen any other agency in federal government who has done it as well.

But going back to what the Chairman mentioned, this law was passed because of a number of egregious cases where there were high levels of lead in paint, and in toys. Congress spent hours listening to testimony on how lead affects the developmental and brain development of children. It was mentioned many times that there are no safe levels of lead.

Now, Commissioner Nord talks about that the staff does not think that there are risks. What the staff at one point, before you passed the CPSIA, had to rely on was the Federal Hazardous Substance Act, and at that point, they had established that 1 microgram per deciliter, a blood lead level increase was the standard. That was the standard until Congress set this bright line of 300 parts per million, and 100 parts per million if technologically feasible, and 90 parts per million for lead in paint. So it has helped the industry to know where the bright line is. We are struggling with the same thing now on cadmium, cadmium and other heavy metals, that we found in high levels in jewelry.

CADMIUM REPLACEMENT FOR LEAD

Mrs. EMERSON. Is cadmium now being used to replace lead?

Ms. TENENBAUM. I have sent a strong warning in my speech to the APEC, the Asian Pacific Economic Council, in my speech to APEC in January. I said, do not use cadmium and other metals in place of lead. The AQSIQ, which is our counterpart in China, has made that same stern warning just in the last few days to manufacturers,"Do not use cadmium and antimony, barium and other heavy metals in place of lead."

So we have warned them, but we also are looking now at establishing what the limits are on cadmium in children's jewelry that we find safe and unsafe. And that is what we had to do on lead repeatedly, item by item.

ECONOMIC IMPACT ANALYSIS

Mrs. EMERSON. I understand. In my district, 97 percent of all the lead that is mined in the United States comes from my district, and I am very sensitive about having lead in soil and harming children, and that is why I was very supportive of this particular bill. But I dn think that sometimes things get out of hand, as you all well know.

May I ask if both of you, even though you don't do it today, would you support having an economic impact analysis done on the effects of this law on jobs in the United States?

Ms. TENENBAUM. I would have no problems at all having someone do an economic analysis.

Ms. NORD. I think that would be incredibly helpful. How can you regulate if you don't know the impact of your regulations? I think it is something we desperately need.

Ms. TENENBAUM. But we also want to make sure that we maintain a very high level of safety for children, and that economic impact does not override the concern for safety. And we really agree that we need flexibility. All five Commissioners think we need

flexibility on lead. How we get there is how we disagree. There were some who want to set a *de minimis* level, and there are three of us that would rather have a level where you have to show that you really need this lead in the product, and it is impracticable for you to remove it, and that you can show that there are no reasonable or demonstrable or measurable health risks to children.

So we agree on this but not on how we get there. And Congress will have to determine what is the most common sense way to get there.

Ms. NORD. There is a great deal of agreement. I guess my response would be that once you have shown that there is no risk, then isn't that the end of the analysis? I mean, that is really what we are trying to focus on is deal with risky product, harmful product. If the product has no risk, then I think we don't have any business regulating it.

Mrs. EMERSON. Okay. There are so many questions, and it is complex, but maybe we should let Debbie go.

Mr. SERRANO. Before we turn to Debbie, again, this is an issue, in my opinion, of balance, because at the expense of making the business community angry, which I tend to do at times, if Congress said, let the business community write all consumer protection laws in this country, the end result might be zero consumer protection laws in the country. It was never the intent, nor should it ever be the intent, to legislate on behalf of the consumer and the American public by getting rid of jobs. But also we can't take an economic crisis and assume that everything we legislate here is going to cost jobs, so we can't do health care because it will cost jobs, we can't get out of Afghanistan because it will cost defense jobs, we can't do Consumer Product Safety Commission stuff because it will cost jobs. I am not sure that that is—really at the end of the road what happens.

So we have to continue to be protective of the people we represent, while being sensitive to the fact that you are right, if something is found not to be harmful, then maybe we will move away and do something else. But I can tell you that as I turn to her, when Debbie Wasserman Schultz spoke about pools and spas, I was asked by reporters, why are you dealing with that? In fact, one had the nerve to say there are not too many pools in the South Bronx. I say that is not the point, right? Well, no one questioned that what she did was very important. What a build-up.

Ms. WASSERMAN SCHULTZ. Thank you.

Mr. SERRANO. And we do have a couple of pools in the South Bronx.

CPSIA FLEXIBILITY

Ms. WASSERMAN SCHULTZ. Thank you very much, Mr. Chairman.

I can appreciate the need for flexibility. Flexibility is fine, but I think that, Commissioner Nord, you are starting from an unfounded premise that somehow the size of the business and what it manufactures makes it more likely to manufacture a safe product versus a large business. So it is popular now to carp about the need to protect small businesses and to save jobs and make sure that we cannot lose jobs. I agree with all of that. But I come to this debate as the only person around this table with young children.

Mrs. EMERSON. I have grandchildren.

Ms. WASSERMAN SCHULTZ. I mean, I am the mother of twin 10-year-olds and a 6-year-old. And I will just give you my own anecdotal example. While it might not seem like a ballpoint pen with lead in it at the tip is a dangerous product or poses a potential risk to any child—the other day when I came home from Washington, I saw a scratch up my son's arm from about midforearm to midbicep, and I asked him how he got it. And he said, Mom, I accidentally scratched myself with a pencil.

Now, I mean, it was a scabbed scratch. Now, my son is not self-mutilating. This was just an accident. But it happens. And if there is an unsafe level of lead, a pencil, pen, it could have easily have happened with a ballpoint pen. Fortunately he is in elementary school, and they are still requiring the use of pencils and not pens, but that could cause him harm.

And during the whole debate on the CPSIA, I found that I had one of those products in my home—this was at the time my youngest daughter was 4—that had those little pieces that were not meant to be placed in any child's mouth, but that children were placing in their mouth, and they were lead balls basically. Here is another example of a product that was manufactured by a small business. You just recalled baby bracelets and pacifier clips last month because of high levels of lead, and that was manufactured by a small business.

CPSC RESOURCE NEEDS

Commissioner Nord, with all due respect, in 2007 I had an exchange with you prior to the passage of this law, and you argued that the Commission didn't need more resources and didn't need more staff. So today you are praising the fact that you have more resources and more staff. So your position is inconsistent, with all due respect.

Ms. NORD. Thanks for the question because it gives me an opportunity to clarify what my position was. I have never—and I think we can go back to the record, and I would love to do that with you—argued that we should not have more staff. What I did, Commissioner Moore and I presented a budget that allowed us to do certain things with the budget in front of us, but when asked, I have always welcomed more resources.

Ms. WASSERMAN SCHULTZ. The exchange was with me, Commissioner, and I asked you specifically. My recollection is clear. You said specifically that you didn't ask for more resources, you didn't think it was necessary, you just thought the size of the staff was adequate to do the job that you needed to do. That was our exchange.

Ms. NORD. With all due respect, I would disagree. My recollection is different.

But nevertheless, getting to the core question, no one is arguing that small businesses by definition will never produce an unsafe product. What we are arguing is that we need to be focusing in on the products that cause harm, not regulating things across the board in the kind of rote way that we are doing it now. And that is what the CPSIA does not allow us to do.

With respect to minimizing regulatory burdens on small businesses when we don't think there is going to be a risk, that is what we don't have——

LEAD IN TOYS

Ms. WASSERMAN SCHULTZ. Let me ask you, since you are making that argument. From the perspective of what parents think, we think—and I think I can speak for lots of parents—that it is really not understandable why a product has to have lead in it. There are some products that I agree, the lead, but why is it that there are certain toys that have more lead than necessary? Why can't they just reduce the amount of lead below the limit?

Ms. NORD. If the toy has lead in it that is going to expose the child to the lead in any kind of measurable amount——

Mr. WASSERMAN SCHULTZ. I just gave you an example from this week.

Ms. NORD. I am sorry to hear about your child, but the scratch on his arm is not going to give him lead poisoning. Lead poisoning is a chronic hazard. And the question should be should we remove ballpoint pens from children's environments.

Ms. WASSERMAN SCHULTZ. Why not just reduce the lead in the tip of the ballpoint pen?

Ms. NORD. The problem is that the lead is there for a purpose. And, yes, we could do that, and your child would not be using ballpoint pens because they would be unaffordable. As I said, brass is the example I used.

Ms. WASSERMAN SCHULTZ. I am sorry. That is a blanket statement that you have no qualification to back up.

Ms. NORD. I am more than happy to provide you with that.

Ms. WASSERMAN SCHULTZ. Ballpoint pens would be unaffordable unless we have lead in the tip of them?

Ms. NORD. The lead serves a purpose there. It would meet the functional purpose.

Ms. WASSERMAN SCHULTZ. So if we don't have lead in the tip of ballpoint pens, they would be unaffordable?

Ms. NORD. You would replace it with something more expensive.

Ms. WASSERMAN SCHULTZ. Unless you can show me a documentation and economic analysis of that, I have a hard time understanding that.

Ms. NORD. I would be delighted to give you what we have. But again, if the agency had done more economic analysis of these issues, we would be in a better place to regulate, and that is something I think we do need to be doing.

Ms. WASSERMAN SCHULTZ. I support flexibility. I do not support making sure that children are exposed to lead unnecessarily.

Ms. NORD. Then we agree.

Ms. WASSERMAN SCHULTZ. But we don't agree with the difference between the majority of the Commission and the minority in one which you serve where you allow a de minimis level of lead versus ensuring that it is inappropriate for—or not possible for a company to follow the law. The law was debated and discussed and supported for a reason, because there was an absence of regulation. There was no one minding the store. And parents became scared and tired of it. And I will tell you as a mother of young girls who

wear the jewelry around their necks, and I see them playing with it in their mouths all the time, even though that is silly and they shouldn't do that, if unbeknownst to them and to me it has an inappropriate level of lead in it, then they could get lead poisoning.

Ms. NORD. We all agree on that point, And I think there is no debate. And we want to work with you to make that happen.

POOL AND SPA SAFETY ACT GRANTS

Ms. WASSERMAN SCHULTZ. There appears to be some debate.

Turning, Mr. Chairman, if I can, just to two other subjects, one being my appreciation for you for providing the resources, and also to the Commission for your excellent enforcement of the Virginia Graham Baker Pool and Spa Safety Act, both under your chairmanships. I am a little bit frustrated that the grant program, the State grant program, even though it has been fully funded the last two fiscal years, has taken an extraordinarily long time for the Commission to get off the ground. So can you, Madam Chair, describe your progress? I mean, there is $2 million that is potentially going to expire in September, and I don't want to see that happen.

Ms. TENENBAUM. Well, first of all, we fully support the Virginia Graham Baker Act and appreciate your advocacy in getting this bill passed.

We have been working hard with the Centers for Disease Control and Prevention to establish the State grant program that the act calls for. We finalized the details of the plan just this week. The CDC in conjunction with the Commission will be releasing a funding opportunity announcement the beginning of April. And my understanding is the grant applications will be due in June, and the grant qualifying to States will be made in August.

POOL AND SPA GRANT QUALIFICATIONS

Now, it is important, however, that the states currently meet the statutory requirements. In fact, the states must pass legislation in order to qualify for this act. We have looked——

Ms. WASSERMAN SCHULTZ. We are in the middle of the legislative session season right now.

Ms. TENENBAUM. And we are following some States, Florida, Texas, to see if they will pass this legislation. We will be showing states what model legislation looks like and we have relayed the model legislation. In the event that it does not pass, it [the funding] stays at the Commission. What we want to assure you, that in the event states do not pass this legislation, we can take that money, and we would use it in the spirit of the Virginia Graham Baker Act to do more contracting with people to do education advocacy, if we are allowed to.

Now, the other thing is we have also asked Congress to consider whether it should be states or a municipality. For example, the city of Miami, could they apply for the grant? Could they pass an ordinance? It might be that the pool safety is closer to local government than state government. Should Fort Lauderdale, or—Jacksonville, any of your large cities pass an ordinance——

Ms. WASSERMAN SCHULTZ. Phoenix has a very strong one.

Ms. TENENBAUM [continuing]. That complied with this, they could then get the grant. And we were asking you to make amendments to the CPSIA so that we could—

Ms. WASSERMAN SCHULTZ. I would be glad to work with you on that, because whether we do it state by state or major city by major city, the idea is to make it more likely that we have tighter restrictions around pools.

Mrs. EMERSON. Can I add something? Those state grants really would be helpful, because I have small community pools that truly cannot afford the 10- or $15,000 that it is going to cost them to comply with the law. And I hate for the kids in these towns where there is no other place to have recreation to not have that ability to seek assistance here.

Ms. TENENBAUM. Well, in Columbia, South Carolina, the headlines in last summer's paper was the main community pool could not open because it had not met the requirements. So they scrambled around and got the equipment and met the requirements. But you are right, if we could provide some flexibility.

POOL AND SPA EDUCATION

If you wanted to know about the education outreach program, we have that information, too. We have given our grant to Widmeyer Communications and Omni Digital Studio to create the largest public education campaign the agency has ever done: $3.6 million will go to Widmeyer for a Website, for all kinds of educational materials for us to use in pool and spa safety; $200,000 for Omni Digital Studios; and then we have $4 million in which we will contract with third-party organizations to train and target education this week. So that would be something that a community organization or regional and State organizations could apply for those awards, and we would give them those awards to do education advocacy of pool and spa safety.

So we are working very hard. The initial launch in April for the rollout of the program will be at the National Drowning Prevention Association's conference in Pittsburgh, I think you have spoken to that conference several times. We will have a broader launch on Memorial Day, and I hope this is a press conference we can do it in Florida together. I know that you joined Commissioner Nord, Senator Klobuchar and the Taylor family for last year's kickoff. So we want to work with you again on that.

Ms. WASSERMAN SCHULTZ. Absolutely. I look forward to it.

Mr. Chairman, are you planning on having us come back?

Mr. SERRANO. We are in the process of having three votes, but as you can see from the yeas, it is going to be a while before it gets to a significant number there. So we will keep going here.

IMPORT SAFETY

On the issue of product recalls, we know that 80 percent of recent U.S. product recalls were imported items. The CPSC budget request would devote approximately 57 staff to the import safety initiative comprised of personnel stationed at ports, field support and other support staff. However, as GAO pointed out last August, the import staff of the Commission are significantly smaller than that of other agencies like the FDA, which has 700 people.

Does CPSC have a long-term plan for ensuring adequate oversight of imported products?

Secondly, has the Commission improved its information sharing with customs to ensure that the Commission has access to ship manifest data before products arrive at U.S. ports?

Ms. TENENBAUM. Well, thank you. Just to give a comparison, in 2009, we had 12 people in the Import Surveillance Division, 10 people actually at the ports, and for this year we had 18 in the whole division and 14 at the ports. We are trying to increase that to 23 in the division and 19 at the ports. But we also, if you add to that the field staff which we have in many of our states, also hazard identification and reduction, and also support from our attorneys and general counsel, the whole number is now 43 total for import surveillance program, and next year will be 57. However it is still woefully under what other agencies have in port surveillance.

We are trying to do is work through technology in cooperation with Customs and Border Protection so that we get this information from the manifest. We are asking for just $250,000 to implement the analysis and planning phases to develop an automated interface with ITDS operated by Customs and Border Protection. This will allow our system to talk to their systems and do data mining. This is only the planning stages.

We also had additional contract funds left over. We are looking at using $2 million to do a risk management system so that we can have the technology to look in those manifest systems and determine what is there that really we should be paying attention to.

So technology will help considerably, but once we phase it in this year, it is not inconceivable that next year if we do the risk assessment, we will come back to you and let you know where our gaps are.

We also have a contract with Booz Allen Hamilton. It has been since 2003 that we had a strategic plan, and we need a new operating plan as well. We need to look at all the requirements under CPSIA, what kind of information we are going to get on the public database in terms of the referrals and consumers letting us know about deaths and injuries and how we are going to respond to that. It will be more information than we have really handled before. So we, through that planning and strategic process with Booz Allen, will look at the service gaps and be able to tell you when we come back next year what the big needs are for this agency to function appropriately and have stronger surveillance in the ports.

Now, we consider ports not just to be ports on the coast, but ports of entry. So we have 300 ports of entries, and we have as you—19 people stationed at the ports. However, we do use the State field staff. So if we know that there are fireworks that were put on a train on a California coast, and they go to an inland city, and that is where they are unloaded, we can send field staff there to check on what the status of those—whether they are in compliance in terms of fireworks. We will be able to give you a better idea of need.

LEAD IN BOOKS

Mrs. EMERSON. Can I just ask you for a clarification real quick? This is quick. We started to talk about lead, and I want to talk

about the whole functional issue when we get back. You said books are lead-free. Are not the books that were pre–1985, don't those contain lead in the ink?

Ms. TENENBAUM. They do. Pre-1985 had lead in the ink. If you use the four-color process and modern printing now, the books that are printed in today don't have lead.

Mrs. EMERSON. But what happens to libraries and that sort of thing who——

Ms. TENENBAUM. That is why we needed some relief so that the libraries don't have to test. They are not selling books, but they are lending in the stream of commerce. But it is the pre-1985 books, that if we could just warn parents—maybe a warning would be adequate. If you look inside some of these 1985 books, it is the illustrations in the older books that have lead in the illustrations. So we want to advise parents not to let children mouth the books. And the books for little children aren't lasting since 1985. But if you go into schools, particularly in rural areas, and you go into libraries, you are going to see pre-1985 books.

Mrs. EMERSON. I still have all my Golden Books when I was a kid that I gave to my kids, who hopefully will give them to their kids.

Ms. TENENBAUM. Well, if you want to bring them to Washington, we will test them for you.

LEAD IN DOLLS AND COMPONENT TESTING

Mrs. EMERSON. I might do that.

And also then just very quickly, you said something about lead-free buttons on dolls. But do you not have to test every single part of dolls, including the rouge on the checks? You do not have to test every part of the doll?

Ms. TENENBAUM. We have implemented an enforcement policy on component part testing. In fact, I was just at the toy fair. We went in to see Legos. They thanked us for having the component part testing where they can buy the lead-free paint, and they don't have to take the whole Lego apart and chip off the paint.

Mrs. EMERSON. We are talking about dolls here.

Ms. TENENBAUM. Dolls. If you manufacture new dolls, and you use lead-free products, then you keep that certification, and you have a reasonably check up, just to make sure it is lead-free, then you wouldn't have to test the doll. You would not have to destroy a doll to find the lead. You would say, I bought lead-free paint, I bought lead-free buttons, here is my certificate. It is like Commissioner Nord said, the component part testing market has not developed, but it is a huge market for someone who wants to develop a hobby store with all lead-free component parts. It is a huge market for people.

Mr. SERRANO. Yes. We have three votes, so we will ask you for your help here in waiting for us.

Before I leave, one thing. So you mean those spiral notebooks that our great friends in the media use could be hurting them?

Ms. TENENBAUM. It is not a children's product for them.

Ms. NORD. It would explain a lot, wouldn't it?

[Recess.]

Mr. SERRANO. Okay. We will do the best we can. She is reading something there, which means something will come up soon.

CHANGING CPSC FOCUS

Some of the agencies under our subcommittee's jurisdiction, such as the Federal Communications Commission and the Securities and Exchange Commission, have had to change their regulatory approach in response to changing products in the marketplace. Chairman Tenenbaum, what are some ways you plan on changing the focus of the CPSC going forward in response to changes in the marketplace for consumer products?

Ms. TENENBAUM. Thank you, Mr. Chairman.

As incoming Chairman, my first obligation was to finish the rulemaking required under the CPSIA. That has been a top priority for me so that we would have the rules developed, and industry would know how to comply. We could go beyond just rulemaking and start enforcing the requirements of the CPSIA.

But even broader than that, we are not just a lead and phthalate agency. We also need to look at fires, carbon monoxide and other issues that cause injury and death. The database that Congress required us to develop will give us more information than ever before. Now we collect data from emergency rooms, death certificates and newspaper articles, as well as from our hotline and as many other sources as we can get, but sometimes we don't get the information until years after it has happened. The public database will allow consumers to give us information, and then we will have to respond as quickly as possible. If we know of a death, we can't let a death just stay in the database for months and not investigate. So we are going through this management and operations planning with Booz Allen Hamilton, the company we have hired to help us with our strategic planning, and we will look at the service gaps and gaps within our organization that would prohibit us from responding quickly.

But we are always looking at developing trends; nanotechnology, for example. We have asked for $2 million so that we can participate in the whole nanotechnology research project that is under way with all of the other Federal agencies. With this $2 million, we will be able to contract with them to ask them to review our products that we oversee to determine what problems they see in terms of nanotechnology that we need to be aware of.

So I think you always have to be looking at the marketplace, getting the best data possible, having relationships with the research agencies of the Federal Government, working with your state officials. Some states do research. The attorneys general also; we are working with them closely so that they turn over products that they find. We need to be open to getting information from all sorts of avenues.

COLLECTING DATA

Mr. SERRANO. And in the past, you say it was difficult to get this information, or you got it late. Any resistance to getting it now?

Ms. TENENBAUM. Well, we have ways of collecting data. One is the NEISS system, and through that system we pay emergency rooms to fill out forms on injury and deaths related to products,

and they give us that on a regular basis. We also get death certificates from states, and we look at that. We have five different silos of information at the Department, and we haven't had the ability to data mine. With the money that Congress has given us for IT modernization, we can now have a technology that allows CPSC to go through all of these systems and mine data so that we will have death and injury information on products quicker than ever before.

So with IT modernization, the public database, this risk management program that we want to do with Customs and Border Patrol, we will be able to get more data sooner and respond to it more effectively.

COMMUNICATING SAFETY INFORMATION

Mr. SERRANO. Now, in both of your testimonies, you spoke about communicating important safety information in minority communities. What has the Commission done, and what is it currently doing, to ensure that important product safety information, including information on recalls, is being disseminated in these communities, including communities where languages other than English is spoken, and particularly for families who do not have a computer at home?

Ms. TENENBAUM. We are well aware, and I come from a state where we have so many rural areas where there is a great digital divide where people don't have computers. So what we try to do is when we announce a recall is work with the media. For example, on crib recalls we had almost 200 million people get information. We go on all the national morning news programs. We use social media such as Twitter, and we will be using Facebook. We use as much of the free media as possible to get our word out.

But we also provide hard copies of the product recall. We can mail those to States, and we provide hard copies to child care providers and consumers who don't have access. We work with the Neighborhood Safety Network, which has 5,600 members, and through that Neighborhood Safety Network, which is very much in touch with minority communities, we get those safety messages out.

But we do have a dedicated Spanish-speaking spokeswoman, Arlene Fletcha, whom you met at the 2008 press event that you had with Nancy Nord at the Bronx library. And Arlene translates dozens of announcements for the Hispanic community and conducts interviews with Telemundo and Univision that reach millions of viewers.

We still plan to launch our special minority outreach campaign that will increase the use of the Neighborhood Safety Network, which is 5,600 community leaders. We are going to five cities this year for minority community outreach.

Mr. SERRANO. Which city; do you know?

Ms. TENENBAUM. I don't have that, but Scott Wolfson might know. We will get back to you. We are in the planning stages, working on that. But it will be the Hispanic, African American, Asian American populations.

We also translate our information on the Web in Chinese, too. We are very aware that we can't just have English only on our Web site.

Mr. SERRANO. What a phrase.
Mrs. Emerson.
Mrs. EMERSON. Sorry. You caught me chitchatting. I apologize.

FUNCTIONAL PURPOSE

Let us talk about functional purpose, which is kind of arcane to talk about. You have suggested, Madam Chair, that a way to fix the unintended consequences of the CPSIA is to add an exclusion for function purpose, which basically—I understand that would allow the Commission to exclude components with higher levels of lead if the lead was found to be essential for the function of whatever the item is. So can you elaborate for me how such an exclusion might work at the Commission, please?

Ms. TENENBAUM. Well, the term came from the Federal Hazardous Substance Act, and that term was a part of that act. So if someone came to you and said, we have chemistry sets, and we need this banned hazardous substance to be part of the chemistry set to teach chemistry, we were allowed to give a pass on substances that were ordinarily banned because the petitioner would say, we need it for a functional purpose. So it was a legal term that we have always used under the Federal Hazardous Substance Act for products that you had to have the ingredients because it was a functional purpose of the product.

Now, I want to clarify that I support the bright line, the lead limits under the CPSIA. I thought that was a step forward because you have 300 parts per million for the lead content and 90 parts per million for lead paint. I support that, and several other Commissions do as well. We are not talking about reducing those, but what we are talking about is for a person who has a product that cannot meet those levels to be able to say we need it for the functional purpose of this product. The amendment is being discussed in the Commerce Committee and it depends on what the components of that are. I don't really have the components at this time because it is under discussion.

So we support the bright-line test, and that was in the report to Congress. But when we wrote to Congress, we didn't recommend functional purpose or *de minimis*. Commissioner Northup and Commissioner Nord have said—Commissioner Northup has been very strong, and I think she put in her statement that she wanted a *de minimis* standard. But it would put the agency back in having to test every product for what is *de minimis* for product. Lead can bind, depending on the alloy it is attached to, we would have to go through and look at every product and to see how it would increase the blood lead level. And that is where we were before you passed the CPSIA. To give exclusions will require agency resources and staff; however, it depends on how the exclusion is written by the Commerce Committee on how extensive those resources will be.

Mrs. EMERSON. Commissioner Nord, how do you feel about the concept of functional purpose?

Ms. NORD. I have got concerns about it, as does my colleague, Commissioner Northup. Our concern is that it could be very, very subjective.

Mrs. EMERSON. Who makes the decision?

Ms. NORD. The agency would make the decision.

Mrs. EMERSON. So you would ask your scientists as opposed to you as Commissioners?

Ms. NORD. Does the lead in this particular product meet a functional purpose with respect to this product. And that is—at least in the legislative constructs we have seen today—is defined as highly impracticable to remove that lead. That term "highly impracticable" is well litigated. It has a meaning in the law which takes a bit of the functionality away from the functional purpose provision.

And we are alsn very concerned it is going to be very, very resource-intensive for the agency, and it is going to turn the agency into a product-approval-type agency.

With respect to the bright-line aspect of the law, I mean, because the law is a bright-line law, you end up with these anomalies that we have been talking about. Instead, what I would like to see is an amendment so that the law recognizes the expertise of the agency to define the risk and then regulate based on the child's interaction with the product. If it results in any kind of measurable increase in the blood lead level, whether it is a functional purpose or not, then I think we need to regulate it and take that product out of the marketplace.

Mrs. EMERSON. So taking it back to the book analogy, if you will, then if, in fact, the lead in the ink of the pre-1985 books doesn't have a functional purpose, but—so we still know that that poses no real threat to the kids. So how then, if that is the case, and you all have determined tbat the book industry is exempt, then does that mean you have to use that same—you would have to use the same criteria for any other perfectly safe products, too? Correct or not?

Ms. NORD. Right now under the functional purpose test as we understand it, the book industry would not be exempt. They would not be able to meet that. That is why we have had to ask for a separate exclusion for them. And the book example makes the point. It does not meet the functional purpose. However, we are not aware of any risk of lead poisoning to children using a 1985 book. It just doesn't happen. So that would be an example of where a negligible risk-type concept would accommodate all of these things.

IMPACT ON CPSC BUDGET

Mrs. EMERSON. I have to believe that going through, looking at all of the exclusions, that has got to have a huge impact on your budget.

Ms. TENENBAUM. So will the *de minimis* test. If we do away with the bright-line test, and everyone comes forward and says, you know, we are not going to raise the blood lead level, we will be back in the same position we were before the law was passed. We will have to test every product. And that is why we all agreed that we would tell Congress we needed flexibility, and you would listen and make the best determination.

FUNCTIONAL PURPOSE

But on functional purpose, the idea is to have 300 parts per million or 100 if technologically feasible and 90 parts for paint, because all the research in terms of scientific research has dem-

onstrated that there is no safe level of lead. And it is to incent people to take lead out.

For example, Commissioner Nord was talking about the little toy, the John Deere tractor, that had the lead in the tire. The company has already taken the lead out. They are manufacturing that without a lead ring. A lot of the button manufacturers have visited us and said, we are taking the lead out. They are going all the way up the supply chain, and using the raw materials that do not have lead. YKK visited us to report that they are making lead-free zippers. It provides incentives. It is 2 years out since the passage of the CPSIA, and manufacturers have complied. One company came to see me and said, "We read the law, and we didn't stop at 300 parts per million, we stopped at 100 parts per million." This major toy manufacturer has already gone to 100 parts per million because it could do that, and it didn't stop at 300.

So I see a lot of positive changes. I see also people struggling to enact this law. But we have tried to take a common sense approach and give guidance with component part testing, and determinations that whole lines of products don't even have to be tested in textiles. We are working through this. So we want flexibility, but we are trying to do it without making lead prevalent in the marketplace as it was before in children's products.

Mrs. EMERSON. Commissioner Nord, do you have anything to add?

Ms. NORD. Well, again, our objective is the same. We want to have a safe marketplace for children's products.

IMPACT ON CPSC BUDGET

With respect to agency resource issues, I am very concerned that the functional purpose test, if it is put into place, is indeed going to be very resource-intensive as opposed to some sort of negligible risk kind of standard, because we will have to be looking at each product and the functional purpose of the lead in that product. We won't be able to look across product lines at commodities, for example. We wouldn't be able to look at brass, for example, as it is used in all children's products under the functional purpose test, and that is of concern to me.

With respect to trying to work to get the lead out, again, we all agree that that is what the agency should be doing. But you do end up with the strange results where you have got a product that meets the standard in the legislation that could expose a child to more lead than a product that exceeds the lead levels. And it is those kinds of anomalies that are bothersome to us and we would like the flexibility to be able to address. That is what we are asking for.

Mrs. EMERSON. I just hope that, depending which way you all determine to go, or whether our legislation—our refinement legislation, that you will have the resources to do what you need to do, which if you go to—I mean, this sounds rather complicated, this whole functional purpose—and complex, I should say, that requires a lot of people touching it.

Okay. I better stop there. Thanks, Chairman.

Mr. SERRANO. I am just thinking. I really hope you both walk away from here today understanding that we understand that this

is not easy what has to be done, and we respect both of your views. My only problem is that I keep remembering back to where the SEC sat in front of me and told me, no, we are fine, we don't need any more money, and we are doing what we are supposed to do, and then we saw what happened. And so we had all of that happen because in the past the Commission was allowed to look at what it needed to look at and not what it was told to look at every so often. So we had major recourse.

But anyway, the gentlewoman from Florida.

Ms. WASSERMAN SCHULTZ. Thank you, Mr. Chairman.

In fact, the CPSIA was in response to a significant problem.

Mr. SERRANO. Right. And it ended up passing—the behavior was always, let us do our thing, don't overburden us.

Ms. WASSERMAN SCHULTZ. And look where it got us.

CHINESE DRYWALL

I want to just change the subject for a moment and focus on Chinese drywall. I know that the CPSC, Madam Chair, HUD and CDC have been tasked with coordinating the investigation. I appreciate your meetings with the task force on the drywall, Chinese drywall crisis. My understanding is that the CPSC received the first reports of the problem over a year and a half ago, and since that point we have some homeowners that have lost their homes, many homeowners that have moved out or abandoned their homes.

My district is dotted with Chinese drywall. They are not able to live in their homes. Their homes are making them sick, and they are faced with not only not being able to live in them, but they can't sell them. Their insurance isn't covering them, so they have an asset that is only a burden to them, and how are they supposed to go pay for other housing? It is just really a huge, huge problem, particularly problematic in that insurance companies are denying coverage to homeowners, and that the foreign manufacturers are refusing to accept responsibility.

CHINESE DRYWALL REMEDIATION PLAN

So I know you have conducted studies, and you are cooperating with other agencies. Has the CPSC begun formulating a remediation protocol that can be accepted by the homeowners with confidence that it will fix the problem, and when can we expect to see that remediation plan?

Ms. TENENBAUM. We have been working with HUD on the remediation plan, and it should be available to the public by the end of April. We have a new study, the Lawrence Berkeley National Laboratory study, that has data that showed some Chinese drywall samples had significantly higher emission rates for hydrogen sulfide and other reduced sulfur gases compared to domestic samples and other imported samples. This has been consistent with the chemical analysis that we did in October 2009. It is also consistent with the November 23, 2009, 51 homes study, which found a strong association with the problem of drywall and hydrogen sulfide.

So last week, February 25th and 26th, brought together all of the experts from our contractors and our Federal partners. We had a 2-day discussion on what we learned about Chinese drywall. The studies we have done have been used in the multidistrict litigation

in Louisiana. So they have used our studies in terms of the plaintiffs' cases down in Louisiana, which has parties from all of the states.

We have spent $3.5 million on the investigation. It is the largest investigation we have ever done in the history of the CPSC.

I visited personally drywall homes in Florida and in Virginia. I feel deeply for the homeowners. They have had to move out. It really is tragic because so many of the young families with whom we have spoken and visited in their homes, this is all their equity. Everything is tied up in this home. They have moved in with relatives. We carry a heavy burden at the Department to get this finished in terms of our studies, and to get the remediation guidelines announced with HUD in April.

We also work with HUD, and we did a joint announcement with them that states could use the community block grant money, if it was not already designated, to help families remediate their homes. We also wrote a letter to the IRS regarding drywall asking them to do a casualty loss reduction. So we are looking at creative ways that we could allow the homeowner to have a write-off or deduction to help them financially.

Ms. WASSERMAN SCHULTZ. Now, they are getting a property tax break?

Ms. TENENBAUM. Right. They are getting a property tax break. But in Florida we have 1,723 reports. Overall, we have received 2,941. Florida has the highest with 1,723. But when we talked to the mayors and the Governors in all the other states, we think it could go as high as 5,000. We have investigated every death that we have read in newspapers where there were people that said there were deaths. We have investigated every one of those and have not determined that drywall was the cause of it.

CHINESE DRYWALL ILLNESS

Mrs. EMERSON. I actually have a constituent who is a drywall installer who is, we think, permanently disabled now because of just getting sick from all of the exposure.

Ms. TENENBAUM. Hydrogen sulfide. In Florida you have a home builder, Lennar. Lennar is going into the homes it built and stripping it down to the studs and taking out the drywall and then rewiring. There is another major homebuilder in Virginia that is also doing the same thing. And this remediation program will spell out what we think needs to happen for full relief.

CHINESE DRYWALL FINANCIAL IMPACT

Ms. WASSERMAN SCHULTZ. Do you know what the financial impact is?

Ms. TENENBAUM. Well, it just depends on the size of the house and the amount of drywall.

Ms. WASSERMAN SCHULTZ. I mean, the total financial cost for the remediation.

Ms. TENENBAUM. No. I had heard numbers of $75,000 per home to take out all the drywall, but that just depends—I think Lennar told me, or Dragus up in Virginia told me that. But it is the size of the home and the amount of drywall. In some cases the drywall

was upstairs, from China, but it wasn't downstairs, so you didn't have to take it all out.

CHINESE DRYWALL HEALTH EFFECTS

Ms. WASSERMAN SCHULTZ. Do you have a timetable for a report on the health side effects of the impact of the drywall?

Ms. TENENBAUM. Well, we had looked at the health effects, and we think this latest study from Lawrence Berkeley Laboratories will address that. But the original studies we did, the 51 home studies, was reviewed also by the CDC, and they found that the amount of hydrogen sulfide that was emitted did not contribute to a chronic or acute health problem.

But we have thought that all of the synergistics—if you get into a home that is tightly built, and in Florida you build a home and you often don't open the windows because you have the air conditioner on all year, we have found that all of that together can be an irritant.

CHINESE DRYWALL MANUFACTURER COOPERATION

Ms. WASSERMAN SCHULTZ. Are we getting any cooperation from the Chinese drywall manufacturers?

Ms. TENENBAUM. Well, we have not to date. In the multidistrict litigation, there is one Chinese manufacturer who has defaulted on the complaint. They are having a hearing, and they are going to assess damages in absentia for this drywall. Knauf is a German company that has manufacturing in China, and it has been working with the court. It has also been sued in the multidistrict litigation, and it has cooperated.

CRIB SAFETY

Ms. WASSERMAN SCHULTZ. And lastly, Mr. Chairman, I wanted to commend your leadership, Madam Chair, on the issue of crib safety. I passed legislation in Florida that actually was ultimately vetoed by Governor Jeb Bush despite overwhelming support for it, including from the industries it impacted, that would have made sure that cribs sold in Florida were safer and didn't have a lot of the problems that you have found that they still have. But they are still in hotels and places where cribs are repeatedly used over a long period of time. And we don't really know where they have been or where they—and they are beyond the reach of recall notices. So can you talk a little bit about your efforts in this area?

Ms. TENENBAUM. Well, thank you. And this is something that Commissioner Nord has supported with me, and really the whole Commission has stood up to the crib issue.

First of all, we will have a new crib rule in 2010, and that rule will outlaw or ban drop-side cribs. Once we write that rule, it can be applied retroactively to cribs in public places like child care facilities and hotels.

We still have concerns with cribs in homes, and so I have asked my colleagues and staff at the CPSC to continue monitoring the effectiveness of recalls and how many people are actually getting these repair kits, because the repair kits make the side immobile

so that the drop-side is not going up and down. You don't have that pull-out where the children fall into the crack and suffocate.

But we also work with the ASTM. We brought the Committee in and said this has gone on long enough, and we want you to work with us. They worked with us for 2 days, coming up with a new standard in which the ASTM, through their voluntary standards, banned the drop-side crib. It is now out for vote. In March we will have the results of the ASTM vote. We realize that this has really started something within the crib industry that all of them need to come out with a repair kit, if they have drop-side cribs, to make the side immobile.

The registration cards, which are part of the CPSIA, are for required people to fill out the information when they purchase a new crib. When you have a recall, all the people who have sent the registration card in will be able to be contacted. On crib recalls we go on all the national morning shows. We do as much media as possible. We also get coverage on national nightly news.

Ms. WASSERMAN SCHULTZ. Are these mandatory or voluntary standards?

Ms. TENENBAUM. These will be mandatory new crib standards.

MANDATORY CRIB STANDARD

Ms. WASSERMAN SCHULTZ. Because right now the crib standards are voluntary, aren't they?

Ms. TENENBAUM. Well, they are, and the CPSIA outlined a list of 12 durable nursery products that had to have mandatory standards. And cribs were scheduled for 2012 at the Commission, and I moved it up to 2010 so we would have a mandatory standard.

We also started this Safe Sleep initiative in January where we have a team of attorneys, compliance officers, engineers, public affairs specialists, who meet regularly weekly on all of the information we have on cribs and expedite the recalls of cribs that have been in the pipeline for several years.

So we are trying to do everything we can to get the old cribs off the market, or either to get repair kits, and to have a brand new standard which is state-of-the-art.

FOREIGN MANUFACTURE OF CRIBS

Mrs. EMERSON. Is foreign manufacturing any part of the problem?

Ms. TENENBAUM. A large number are from China. A large number are from China and from other countries. But probably the major manufacturers are from outside the country.

Mr. SERRANO. We are going to try to have one more round and then try to wrap it up because we have yet another series of votes coming.

CHINA OFFICE

You know, again going back to my other subject, this is why it is such a delicate balance, because we have the drywall issue that I am sure if we had started on voluntarily testing on Chinese drywall, you would have had a lot of people saying, why are you doing that, leave that alone, do something that is important, and

yet now we have a problem. So there is a balance. I don't envy the work you have to do, and I don't envy what we have to do in the future to assist your doing it.

I have one last question, and then I am going to submit the other questions for the record. You are setting up an office in China, and China is a big issue. So tell us what kind of cooperation you are getting in China to set up this office.

I would be remiss if I did not put in the usual Emerson-Serrano comment on—isn't it amazing that we can have an office of our government in China, but we can't even be allowed to visit Cuba? But anyway, that is another issue for another day.

I am all for it, but think of it. I am just wondering out loud. I think it is great. But if you had told—well, no. I was going to say Richard Nixon. He is the reason why we have relations with China. If you would have told somebody else that we were sending an office of our government to China, they would say, what are you talking about?

Ms. WASSERMAN SCHULTZ. Mr. Chairman, the track record of China really rings strongly towards expanding our outreach to Cuba. The results have been so incredibly good, haven't they?

Mr. SERRANO. It is good for the CPSC.

Mrs. EMERSON. They have got more staff.

Mr. SERRANO. They have got more staff.

So tell us what that office is like very quickly and what issues you have had. And what kind of support are you getting from the Chinese Government? And lastly and most importantly, what are we beginning to see in terms of cooperation for better products, safer products?

Ms. TENENBAUM. Well, thank you.

Because China is the largest single source of imported consumer products, it will and has been the focal point of CPSC's external efforts. First of all, we are seeing great cooperation from the American Embassy in China. Ambassador Jon Huntsman has been very helpful. In fact, our office will be in the American Embassy in China, and we have hired one person, Jenny Wang, who is at the CPSC for the next month receiving training. She is Chinese. She is a delightful person and will be helping Chinese manufacturers as well as U.S. manufacturers ensure that product safety is paramount with the manufacturers.

We also will be hiring an American employee, and we are working with the Chinese Government to try to get approval for that diplomatic post. Ambassador Huntsman is working closely with us to try to get that approved as well, and we expect we will have the American employee in place in the next few months.

Mr. SERRANO. One employee?

Ms. TENENBAUM. We will have two, a Chinese and an American, for right now to see how it works and see how it is utilized by the Chinese. They will be doing training.

Mr. SERRANO. Where is this office physically?

Ms. TENENBAUM. It is in Beijing in the American Embassy. So that is very good. We didn't have to go out and get our own space. They gave us space because the embassy is very helpful to us in all efforts in China. But training and outreach to China is a priority.

WORKING WITH CHINA

This year we had our biennial summit in China where we took our employees and also stakeholders, American businessmen and women, with us to China, and we focused on writing a new—not a memorandum of agreement, but a working document going forward. We are asking the Chinese government to emphasize best practices in manufacturing. Also, we have stressed that they had the responsibility to ensure that their manufacturers are meeting our standards.

We have had a successful Webinar in January with Chinese manufacturers, that was very highly attended. We also did training at the Hong Kong toy show in January. We had 120 manufacturers view a Webinar that we did over the Internet in December.

We will continue to work with the Chinese in a very agreeable fashion. It is not perfect. But they also assure us that they understand it is their responsibility to make sure manufacturers meet best practices and comply with the standards.

Now, this fall, we will go back to Shanghai, China and have a meeting with China, the European Union and the United States on safety standards. We have our Office of International Programs who regularly translates requirements and regulations on the Internet in Chinese so that the Chinese have access to this.

So we feel that our relationships with China are strong and very amicable, and we keep pushing forward to make sure they understand what are the best practices in manufacturing.

Do you want to add to that?

Ms. NORD. One of the themes ever since 2007 has been to push safety back to the source, and that means going to China. And I think the agency has been consistent over the last 3 or 4 years that that is very important.

One of the first things I did after the passage of CPSIA was to go to China to explain to the Chinese Government and to the Chinese manufacturers the changes that were in store for them. And what was interesting, Mr. Chairman, was that right then is when the melamine in the milk crisis in China hit, and that was killing Chinese children. And I have to tell you that the change in attitude was striking.

So I think the Chinese are starting to get that product safety is important. It is not only important for their export markets, it is important for their population.

Mr. SERRANO. Because they sell it to themselves, too, right?

Ms. NORD. Exactly. And that was such an instructional experience to be on the ground and see that happen. That trip was our first venture over to China with our counterpart from the European Union, and I have to say it was a very, very powerful message for the world's two biggest markets to be standing there and saying to the Chinese that product safety is a core value, and we expect it from those who export to America.

Ms. TENENBAUM. I might say that one of the things we continue to see in China, though, is counterfeiting and that looks like the real product. So it is very important that third-party testing be required for importers bringing children's products into the United

States from China, because that is allowing us to stop at the port those goods that are not meeting the requirements of the CPSIA.

INTELLECTUAL PROPERTY THEFT

Mr. SERRANO. Which I had a question. Just your presence there in China. We know what your mission is, but does it have a side effect on the issue of intellectual property theft and so on? I mean, I know that is not your mission, but your presence there is important and historic in so many ways. What about that other conversation?

Ms. TENENBAUM. Well, we have not entered into that conversation. We have entered in trade conversations. When we were at the summit, one of the members of the delegation from China made some claims that the requirements, the safety requirements in the CPSIA were hurting trade. We were able to show them the trajectory, that the number of imported products from China continues to go up and be increased every year, and that the safety requirements was not inhibiting trade or dampening trade.

But the intellectual property needs to be addressed in China because they counterfeit products. The manufacturer is going out of its way to buy lead-free zippers and lead-free components to put on their products, so when they counterfeit, they are buying from another source that has not tested the product, and it is a serious safety problem.

Mr. SERRANO. Well, Ms. Wasserman Schultz left before Mrs. Emerson and I had told her if we ever do establish relations with Cuba, you won't be asked to test rum, cigars, music or baseball players, because they are known to be of world-class quality. Thank you so much.

Mrs. EMERSON. I love it. I love it.

CHECKING CHINESE MANUFACTURERS

Do you all actually get into the—get into the lab? Do you actually expect to do spot checking of manufacturing facilities in China? I mean, how are you going to determine with two people whether or not things are either copies or they are original, or is that going to be the third—go ahead.

Ms. TENENBAUM. When you have third-party testing, the children's products have to go to a private laboratory or either a laboratory that is operated by the company and firewalled to assure that they meet the lead limits. That is how we ensure that they have a certificate of third-party testing, and that they meet the lead and the phthalate limits required under the CPSIA.

Mrs. EMERSON. Have you found any fake certificates?

Ms. TENENBAUM. Well, we are certainly aware that that counterfeiting of certificates and this is something that we have to watch for constantly.

Mrs. EMERSON. Yeah, because actually even with a whole different issue—I have a company in my district who is in competition with a Chinese company, and technically—and there is some anti dumping—there is an anti dumping situation going on. But nonetheless, there is all sorts of fake certificates of things that get routed through South Korea, for example. So I was just curious if you were—

Ms. TENENBAUM. But we are aware that is an issue on which we have to have surveillance. And we have also told the Chinese that this is their responsibility from their ports to make sure that the certificates aren't counterfeit.

Mrs. EMERSON. And you feel good that they get it?

Ms. TENENBAUM. Well, anytime you are in a regulatory position and you are a regulator, you have to have a program whereby you provide oversight to make sure the quality is there and call them out if you find one. We certainly can't turn our back on any company. We have to continue to insist that they take responsibility for products coming out of their country, and that they have a certificate. The Chinese government requires companies to certify that it meets the requirements.

Mrs. EMERSON. Do you have anything to add?

Ms. NORD. I think you have identified a key problem that we are going to see more and more going forward, and that is fake certificates. I think it is probably going to be a growth market that we will probably have to watch closely.

Mrs. EMERSON. We probably shouldn't discuss this here today.

TESTING LABORATORY

Let me ask you about your testing laboratory, and then I am going to submit the rest of my questions, Mr. Chairman, because there—I have several more.

Your budget justification for 11 mentions that you carried over $6 million in previously appropriated funds for modernization of—I have the worst time saying modernization for some reason. Now, does this signify——

Mr. SERRANO. Try it as English as a second language.

Mrs. EMERSON. How do you say it in Spanish?

Mr. SERRANO. I cannot say it in Spanish.

Mrs. EMERSON. Does this signify a delay in your move to the new laboratory? Or maybe you should fill us in on the current schedule.

Ms. TENENBAUM. We will move into the laboratory by the end of the year. That is our goal. Now, the cost of the facility is 16.1 million in Federal funds, plus 3 million that the landlord is putting in, for a total of 19.1 million. So the funds are carried over to renovate the lab, to provide the kinds of testing spaces that we need.

But we are very excited, and I will give Nancy Nord credit for really starting this process under her leadership. The new laboratory will be in Rockville. The space was built as a laboratory, so it was not a building that we had to go in and put in all of the cabinets and all of the labs. So it will not only be a state-of-the-art lab, it will also he office space, as well as storage space.

And there are a number of new features that it will allow in that it will have a dedicated testing area for children's electrical, combustion, and sports and recreational products that we don't have now. It will enhance the fire-testing spaces with modern safety and environmental features, and the provisions for more accurate observation of fire developments in products. We think that it will reduce facility operations because now we have a series of little buildings, and this will be under one roof.

Mrs. EMERSON. So it will obviously be more efficient?

Ms. TENENBAUM. It is a total cost of $16.1 million, and we have an annual recurring rent of $2.2 million. The rent is really $2.8 million, but we will use the $600,000 that we pay rent on now. It will be a state-of-the-art facility that we have needed for a very long time. And you might want to say something, since it was under your leadership that you kicked this off.

Ms. NORD. Well, we have been working towards this goal for sometime. It became very apparent when I became Acting Chairman that we needed this, and we went out and did what we needed to do to get it, again with funds that you all provided and which we are so thankful for.

TESTING CHOICES

Mrs. EMERSON. So describe what current testing is conducted at the—at your testing laboratory now. And I am just curious, how do you determine what is going to go out to a third-party lab, for example? I am just curious.

Ms. TENENBAUM. Well, third-party labs are used by importers and domestic manufacturers to test their products, the children's products, to ascertain the level of lead and phthalates. So that is where you use the third party.

Our lab will be where we do our own testing. For example, with cadmium, we had "The Princess and the Frog" jewelry. It had the Disney logo, and we went out and bought that jewelry. We were successful in getting Walmart to do a recall, because we tested the jewelry and found that it was well over what the Federal Hazardous Substance Act allowed.

So we do those kinds of tests. We do a number of tests, engineering, toys, cigarette lighters, mattresses, flammability in children's products. But if you allow me to give you a full description of what we do for the record, I would appreciate it.

Mrs. EMERSON. That would be great.

[Summary of CPSC Lab Testing follows:]

Current Testing Capabilities
March 2010

U.S. CONSUMER PRODUCT SAFETY COMMISSION
DIRECTORATE FOR LABORATORY SCIENCES
10901 DARNESTOWN ROAD
GAITHERSBURG, MD 20878

BACKGROUND

Mission

The laboratories support the overall CPSC mission to reduce unreasonable risk of injury associated with consumer products. This function requires selecting, procuring, calibrating, operating, and maintaining sophisticated laboratory equipment by knowledgeable and skillful personnel. Work results must be competent to successfully withstand the scrutiny of litigation.

The CPSC Laboratory tests and evaluates products for hazards under Sections 7, 8, 12, or 15 of the Consumer Product Safety Act.

Testing Capabilities

The flammability laboratory contains facilities for testing of regulated products such as children's sleepwear, general wearing apparel, mattresses and futons, carpeting, etc. The facilities include a 2-hour fire-rated burn room for large- and bench-scale ignition test, various hoods and test chambers for small-scale ignition tests, and a chemistry laboratory and chemical hood for fiber analysis and specialized (plastic film, chemicals and solids) flammability testing.

The electrical and mechanical test laboratories are used for testing various consumer products, such as ATVs, small electrical household appliances, cribs, baby walkers, and toys.

Class C pyrotechnic devices are tested for compliance with federal regulations in our fireworks laboratory.

CPSC's combustion products and appliances laboratory contains three specialized and highly sophisticated chambers and instrumentation for testing a range of residential appliances including furnaces, stoves, ovens, gas-fueled fireplace sets, unvented space heaters, and camp stoves and heaters. A temperature- and humidity-controlled carbon monoxide gas chamber used to test CO alarms is also situated in that space. Adjacent to these chambers is installed the apparatus of the mechanical test laboratory: a large fatigue cycle test frame, a 14-foot tall monorail head-form drop tester for helmet and playground surface testing, two tensile/compression strength testers for evaluating mechanical support structures (such as bicycle frames), and a hydraulic pressure test facility for evaluatiog fire suppression sprinklers. The laboratory contains a burn room which is comprised of a combustion chamber and an observation and instrument room. The burn room has been used to measure the fume spread of spilled gasoline, to evaluate small flame ignition of full-sized upholstered chairs, and, most recently, to test detector and controller performance for preventing stovetop cooking fires.

The chemistry laboratory houses all the analytical instrumentation used by the chemists to evaluate children's and consumer products and household chemicals. This laboratory contains four separate laboratory testing cells used for sample preparation where solvents and acids are used, the analysis of total acids and bases, testing for flash point and

viscosity analysis and extractions such as those used in the phthalate plasticizer project. The Instrumentation Laboratories house the inductively coupled plasma spectrometer, which is used for analysis of metals, two Gas Chromatograph Mass Spectrometers, a Fourier Transform Infra-red Spectrophotometer, and two small indoor air quality exposure chambers.

Ms. TENENBAUM. Because that is where we could give you a full picture of how hard our people work in such limited conditions.

Mrs. EMERSON. I think that would be a fun field trip for us to make, Chairman.

Ms. TENENBAUM. We would love for you to come to the new lab.

Mr. SERRANO. We can test the lack of bipartisanship in the House.

Mrs. EMERSON. They can test how much lead.

Mr. SERRANO. These four people here should be an example, right?

Ms. TENENBAUM. We would like for you to come out. You can either visit now or toward the end of the year. Our goal is to get into it by the end of the year, and we would like to take you out and visit there. That would be excellent. If anytime you ever want to go to a port, too, we have now a full-time staff member at CTAC, which is looking at all of the information that is coming in to Customs. But we can take you to a port and show you how the containers come through and how we test and look at the certificates and seize products.

Mrs. EMERSON. That would be interesting. And I appreciate you allowing that. Maybe if we plan a date to go see the lab that way, you will be forced to get it finished on time.

Ms. TENENBAUM. That is right. And I would invite you to Charleston, South Carolina, where you could visit that port. That would be a nice trip. That is a wonderful port.

Mrs. EMERSON. Thank you.

Thanks, Mr. Chairman. I am done for now.

Mr. SERRANO. Okay. Thank you so much for your testimony, both of you. Thank you for the work you do. We will continue to try to be helpful in making your job easier, making your challenge less challenging. And don't ever lose sight of the fact you may not be the most famous agency in the government, but you certainly have the safety of people, especially children, in your hands. So it is something to be proud of, and we are proud of the work you do. Thank you so much.

SUBCOMMITTEE ON FINANCIAL SERVICES AND GENERAL GOVERNMENT

HEARING

ON

THE FY 2011 BUDGET REQUEST OF THE CONSUMER PROTECTION SAFETY COMMISSION

Questions for the Record

for

The Consumer Protection Safety Commission

March 4, 2010

"The FY 2011 Budget Request of the U.S. Consumer Product Safety Commission"
House Committee on Appropriations
Subcommittee on Financial Services and General Government
March 4, 2010

Responses of Chairman Inez M. Tenenbaum to Questions for the Record

Questions for the Record Submitted by Chairman Serrano

1) With regard to the Consumer Product Safety Improvement Act, since the Commission has delayed until 2011 its enforcement of testing and certification requirements for many children's products, how can consumers be assured that the law is being followed, and that children's products are safe? Overall, how is implementation of the Consumer Product Safety Improvement Act progressing, and how are you working to educate manufacturers and retailers about their new responsibilities under this law?

Response:

On December 18, 2009, the CPSC voted to extend the stay of enforcement on testing and certification of many regulated children's products.[1] The stay of enforcement will remain in effect for certain categories of children's products while the CPSC continues to promulgate requirements for third-party testing of specific products. As these requirements are implemented, additional products will become subject to the testing and certification requirements. For example, on February 10, 2010, the stay on third-party testing and certification was lifted for bicycle helmets, bunk beds, infant rattles, and dive sticks.

In addition, it is important to note that third-party testing and certification was never stayed for the requirements applicable to lead-in-paint, small parts, the lead content of children's jewelry, full and nonfull-size cribs, or pacifiers. Furthermore, while the enforcement of certain testing and certification requirements have been stayed, all children's products still must comply with all applicable rules and bans, including the lead content limits.

In order to ensure the safety of children, the Commission has greatly increased the number of products it is screening and testing for compliance with safety requirements. We collected a record number of samples at the ports last year (almost 1,600) and expect to break that record again this year. This is due to several factors. First, the recent increases in appropriated funds have permitted us to increase staff at the ports of entry, in the field, and at our laboratory. Second, we are looking for ways to use new technology to increase our reach. For example, we are employing X-Ray Fluorescence (XRF)

[1] This document can be found on the CPSC's Web site at http://www.cpsc.gov/cpscpub/prerel/prhtml10/10083.html.

technology to screen children's products for lead. Using this technology, in just a few minutes we can screen out products that do not have high levels of lead and save the much greater time and expense of testing them at our laboratory, not to mention the time and cost needed to package them safely and ship them to the lab.

The overall implementation of the CPSIA is progressing rapidly. Since my arrival at the CPSC last summer, the Commission has published over 45 *Federal Register* documents to help implement the CPSIA, including:

- July 2009: a policy statement providing guidance on section 103 tracking labels.
- August 2009: a final rule providing gnidance on whether parts of a product may be considered inaccessible and exempt from the lead limits of section 101.
- August 2009: a final lead determinations rule that exempts many common materials from the testing and certification requirements for lead content because they do not contain lead above the 100 parts per million lead content limits.
- December 2009: a two-day work shop on testing and certification, and issuance of a policy permitting component part testing for lead content and lead in paint.
- January 2010: adopted a final rule establishing alternative lead limits for electronics parts of children's products.
- March 2010: approved a proposed rule interpreting the term "children's product."
- April 2010: approved a proposed rule outlining how the new public database will function.
- Currently: considering a proposed rule on continuing testing and component part testing under section 102(d) and will soon consider proposed rules on the definition of "children's toy" and "child care article."

Despite the extraordinary pace of our efforts, the Commission still has more work to do to fully implement the CPSIA. We are hard at work on several different standards relating to durable nursery products. We expect to issue at least five of these in 2010, with more than a dozen additional standards planned for the next few years. The agency is keenly focused on issuing these durable infant nursery standards and other CPSIA activities, including the Chronic Hazard Assessment Panel (CHAP) on phthalates, the upgrade of the mandatory toy standard, and enforcement of the many new CPSIA requirements.

Against this backdrop of rapid change, the Commission has stepped up its efforts to keep manufacturers (including importers) abreast of their responsibilities under the law. We have conducted numerous workshops and webinars for manufacturers both here and abroad, with special attention to the problems of small manufacturers and resellers. We have also developed guides that small manufacturers, in particular, can use to determine which requirements apply to their specific products.

2) The CPSC's new product testing laboratory is slated to open later this year. Compared to the CPSC's current laboratory, how will the new one enhance the CPSC's work, and how will consumers ultimately benefit?

Response:

The new product testing laboratory will enhance CPSC's work in several ways. The new laboratory is larger, providing room for additional equipment and personnel. For example, the new laboratory will permit CPSC to approximately double the chemical laboratory space. This additional space will allow CPSC to add an Inductively Coupled Plasma – Mass Spectrometer (ICP-MS), that will improve our lead testing throughput and extend our testing capabilities to more complex samples and lower detection limits for many elements.

CPSC is also adding a calorimetry burn room in the new laboratory. This new burn room will significantly enhance our fire and flammability work, providing the in-house capability to perform conformance testing in accordance with existing regulations and support test efforts required to develop new or revise existing regulations. Having our own capability enhances sample security, eliminates scheduling issues when using other facilities, and, dramatically reduces the costs of sample transport and storage, facilities reimbursement/rental, staff travel costs, and lost time to staff travel.

The various testing areas in the new lab allocated to mechanical and children's product testing will allow CPSC to test more items than we can today. The new lab will have an Outdoor Power Sports Equipment test lab with an integral tilt table that will be used to characterize many tip-over characteristics of ATVs, ROVs, and other related equipment in a controlled environment. The tilt table will permit the indoor testing of ATVs to all the ANSI/SVIA standards, including the parking brake holding test. An exhaust system will permit safe indoor engine operation and allow the functional testing of engine controls per the performance standards. The lab will also house new crib testing equipment.

The new lab will house a pool and spa test facility capable of testing a much broader range of safety vacuum release systems (SVRS), pool drains, and drain covers year around in accordance with the provision of the Virginia Graham Baker Pool and Spa Safety Act. The test facility at the current lab is located outdoors and must be shut down during the winter months. The new lab will also house two new environmental test chambers designed to test a broader range of products known to generate hazardous quantities of carbon monoxide, including portable generators.

The new equipment and additional personnel allows CPSC to expand testing to a broader range of consumer products and to test a larger volume of products, in support of CPSC's expanded compliance activity, thus ultimately benefiting the American consumer.

3) **As you know, the Consumer Product Safety Improvement Act also prohibits the export to other countries of toys containing substances banned in the U.S. What resources has the Commission dedicated to enforcing this provision? Are you aware of any instances of toys containing banned substances being exported to another country since the new law was signed in August 2008?**

Response:

The Consumer Product Safety Improvement Act (CPSIA) strengthened CPSC's control of exports in several important ways, but it did not prohibit *all* exports of toys containing substances banned in the United States. The CPSIA added a new paragraph (15) to Section 19(a) of the Consumer Product Safety Act. This provision now makes it unlawful to export *for purpose of sale* a toy that is or contains a banned hazardous substance, unless the Secretary of Treasury permits the export pursuant to section 17(c).

This provision does not reach all toys containing substances banned in the United States; rather, the toy must be or contain a "banned hazardous substance within the meaning of section 2(q)(1) of the Federal Hazardous Substances Act." Toys that contain lead above the limits prescribed by the CPSIA meet this description as a consequence of section 101(g) of the CPSIA. Section 108, by contrast, did not characterize all toys containing banned phthalates as banned hazardous substances. In addition, the CPSIA left undisturbed section 18(a) of the Consumer Product Safety Act that makes the whole Act, including the new prohibition in section 19(a)(15), inapplicable to any consumer product that is *manufactured for export*, with certain exceptions.

As section 19(a)(15) itself makes clear, even if a toy is a banned hazardous substance, its export is not always unlawful; rather, it is still possible to export such a toy for purposes other than sale. Also, the Secretary of Treasury has authority to allow the export a toy that is stopped at import, even if the purpose is for sale.

A party that wishes to export a toy (other than a toy that is manufactured solely for export and never distributed in the United States) must notify CPSC at least thirty days in advance of a proposed export. Under the CPSIA, unless the destination country affirmatively agrees to the export, the Commission has authority to prohibit the shipment. The resources dedicated to export control are primarily involved with this process rather than with attempting to find unauthorized exports more generally.

The Office of Compliance staff has not identified any instance of toys containing banned substances being exported to another country since the CPSIA took effect.

Questions for the Record Submitted by Ranking Member Emerson

Regarding the Consumer Product Safety Improvement Act of 2008:

1) **Has there been sufficient analysis to identify all the industries that may be impacted, and has their comment been solicited?**

Response:

Many of the rules promulgated by the Commission pursuant to the CPSIA have undergone a Regulatory Flexibility analysis. The purpose of this analysis is to identify the industries that are likely to be affected and evaluate the impact of those rules on small businesses. Throughout this process, the Commission has been very sensitive to the concerns of small business and, in some cases, has explicitly solicited their opinions. One example of this is the December 2009 workshop the Commission conducted on the continuing testing rule and component part testing. Another example is a series of webinars that senior CPSC staff conducted on March 25-26, 2010, with members of the Etsy community and Handmade Toy Alliance to discuss how the CPSIA is being implemented and enforced.

2) Has sufficient analysis been given to the consideration of industries that should be exempted?

Response:

Under the statutory framework of the CPSIA, the Commission does not have the authority or discretion to exempt entire industries or subclasses of industries. However, the Commission has given extensive consideration to the issues faced by all industries in crafting regulations.

One example of this is the lead determinations rule, which stated that certain products – such as paper, cotton and untreated wood – will never exceed the lead limits under section 101 of the CPSIA and, therefore, do not need to be tested and certified under section 102 of the CPSIA. Another example is our efforts in the context of the third-party testing to allow component testing and certification by component suppliers in many cases rather than to require all third-party testing by the final product manufacturer.

3) Has the regulation received adequate review in an effort to avoid the unintended inclusion of industries that were not originally within the scope of regulation?

Response:

The CPSIA sets, by statute, the industries and products covered by its jurisdiction. However, in an attempt to give clear guidance to industry on which products are subject to regulation, the Commission has promulgated a proposed interpretative rule defining

what constitutes a children's product and will soon issue proposed interpretative rules on what constitutes a children's toy and child care article. These interpretative rules will help to give industry certainty and predictability in determining whether their products are subject to regulation.

4) Do the industries affected have the expertise to be reasonably expected to have the ability to comply with the regulations without creating an undue burden?

Response:

As noted above, the Commission has undertaken substantial efforts to educate all industries – and especially small businesses – on the steps necessary to achieve compliance with the requirements of the CPSIA. Some industries, however, will incur additional costs (such as outside technical expertise and third-party testing) to comply with the Act.

5) Has there been adequate and appropriate consideration regarding the financial impact of the industries affected?

Response:

As noted above, the Commission has conducted a Regulatory Flexibility analysis on many of the new regulations required by the Act, and conducted significant outreach to affected industries. However, the Commission does not have the resources to conduct a "global" analysis of any economic impact resulting from the CPSIA. The Congressional Budget Office (CBO) or the Government Accountability Office (GAO) would be more appropriately situated to conduct that sort of economic analysis.

6) Is there sufficient clarity of definition and are the material resources readily available to those who are held accountable for compliance?

Response:

As stated in the response to question 1, the Commission has made every effort to reach out to small businesses and other industries impacted by CPSIA to make sure that the requirements of the Act, and regulations promulgated pursuant to the Act, are fair and clear to all stakeholders. It is likely, however, that some affected businesses may require outside technical resources to comply with the Act.

Questions for the Record Submitted by Congresswoman Lee

Question on Testing of Imported Products

1) What percentage of imported products are currently tested and can we expect that someday soon every product sold on store shelves in America has been tested for safety?

Response:

Before enactment of the Consumer Product Safety Improvement Act (CPSIA), most consumer products imported into the United States were not required to be tested unless they were subject to one of about a dozen mandatory standards. The CPSIA strengthened testing requirements in a number of ways. First, it required testing for a much broader array of mandatory standards. Second, it required CPSC to adopt many additional standards for which testing will also be required. These include standards for many different types of durable infant and toddler products, as well as standards for toys and all-terrain vehicles (ATVs). Third, for children's products, the CPSIA required testing to be conducted by third-party test laboratories whose credentials have been recognized by the CPSC.

CPSC has also increased the number of imported products it is screening and testing for compliance with mandatory standards. Last year, we set the all-time record for import samples collected. As we begin to take advantage of our new laboratory in the near future, we expect to be able to expand our testing even further.

However, despite these factors expanding the number of products undergoing testing before being imported, there are still many consumer products that are not required to be tested.

Questions on Fire Safety

Of course I support the work of the CPSC in reducing the tragic impact of injury and death due to fires in America, but I am concerned about some of the chemical fire retardants currently in use.

1) Are we replacing one danger, of fire, with another, of exposure to toxic chemicals, such as brominated flame retardants and other persistent organo-halogenated compounds and their descriptors, in our homes?

Response:

No. One of CPSC's objectives in the area of fire safety is to provide reductions in product-related fire risks without imposing potential health risks associated with flame retardant chemicals. This objective, along with other factors, guided the CPSC staff's

development of the recent flammability performance rules for mattress and (proposed) for upholstered furniture.

CPSC's flammability performance rules neither require nor prohibit any fire safety technologies, including flame retardant chemical treatments. Halogenated flame retardants are not currently used in the U.S. to meet any existing or proposed CPSC flammability performance rules.

2) Has the CPSC tested fire retardants for safety and the impact of long term exposure to retardant materials in furniture and clothing on children and adults?

Response:

CPSC has studied flame retardant chemical (FRs) safety extensively. Recently, in developing rules on mattresses and upholstered furniture, CPSC staff reviewed many toxicity data reports, conducted laboratory experiments to assess potential exposure, and developed estimates of human health risks associated with FRs that could be used to comply with various alternative regulatory approaches. While developing the Commission's 2006 mattress open-flame rule[2], CPSC staff conducted an exposure and risk assessment of possible fire retardant treated barriers that could be used to meet the Standard. The assessment included conservative assumptions for the calculations used to estimate the risk of health effects to consumers, and was subjected to external peer review. The staff concluded that there were fire retardant treated barriers that could be used in mattresses that would not pose an unreasonable risk of health effects to consumers.

In the case of upholstered furniture, the staff's evaluation of flame retardant fabric treatments (and a National Academy of Sciences report[3] on the subject) concluded that the most likely treatments would not pose significant health risks, but that data were lacking for other candidate treatments; the staff's evaluation of flame retardant polyurethane foam treatments concluded that one currently used candidate was unlikely to pose significant risks, but that complete data were lacking, and another currently used candidate could pose a significant risk. In view of these conclusions and other guiding factors, the Commission's 2008 proposed rule[4] is crafted such that neither fabric nor foam flame retardant treatments would likely be used as a method of compliance. The chosen approach would not result in consumer exposure to flame retardant chemicals.

The flammability performance requirements for children's sleepwear[5] do not mandate or prohibit any type of fabric or flame-retardant treatments. Due to fiber characteristics,

---

[2] 16 Code of Federal Regulations Part 1633. Standard for the Flammability (Open-Flame) of Mattresses.
[3] Toxicological Risks of Selected Flame-Retardant Chemicals. National Research Council. National Academy Press, Washington, DC. 2000.
[4] U.S. Consumer Product Safety Commission. Standard for the Flammability of Residential Upholstered Furniture: Proposed Rule. 73 *Federal Register* 11701; March 4, 2008.
[5] 16 Code of Federal Regulations Parts 1615 and 1616.

however, some synthetic fabrics pass the test, but untreated cotton fabrics generally do not.

While not prohibited from doing so, apparel manufacturers have been reluctant to treat sleepwear fabrics with flame-retardant chemicals since the late 1970s. Sleepwear treated with flame-retardant chemicals, including the flame-retardant chemical tris (2,3 – dibromopropyl) phosphate, commonly known as Tris, was available in the 1970s. However, after it was determined that Tris caused cancer in test animals, almost all children's sleepwear garments treated with any type of flame-retardant chemical disappeared from the market.[6]

In 1996 CPSC amended the children's sleepwear flammability standards to exempt sleepwear sized for infants aged 9 months and younger and tight-fitting sleepwear for older children.[7] This allows parents to choose cotton sleepwear for their children, as long as it meets the tight-fitting requirements.

CPSC continues to monitor ongoing studies, including CPSC-requested chronic toxicity studies by the National Toxicology Program of the Department of Health and Human Services, which will contribute to the overall level of knowledge about FR chemicals among scientists and regulators.

3) **Does the CPSC have plans to consider including the costs of chemical exposure in their calculation of the impact of product hazards?**

Response:

CPSC does plan to consider potential costs associated with potential health effects, related to chemical exposures or otherwise, in the context of specific rulemaking activities. In the ongoing proceeding on upholstered furniture flammability, for example, CPSC staff plans to consider potential health costs in its regulatory analyses, to the extent that FR chemical additives could be used to comply with a rule or other alternatives. In keeping with the agency's objective to provide reductions in product-related fire risks without imposing potential health risks, this rule would not likely result in chemical exposures or attendant potential costs to consumers. In 2006 (the most current data), there were an estimated 2,280 deaths, 12,820 injuries and $6.3 billion in property loss associated with unintentional residential structural fires.[8] The estimated societal cost of these fire losses was approximately $20 billion.

---

[6] The CPSC banned brominated Tris under the Federal Hazardous Substances Act and it disappeared from the market; the ban was later overturned. Subsequently, EPA issued and Significant New Use Rule (SNUR) for brominated Tris.

[7] U.S. Consumer Product Safety Commission. Standard for the flammability of children's sleepwear: sizes 0 through 6x; standard for the flammability of children's sleepwear: sizes 7 through 14. *Federal Register* 1996; 61 (175):47634-47649.

[8] Miller, D., Chowdhury, R. and Greene, M. 2004-2006 Residential Fire Loss Estimates. U.S. National Estimates of Fires, Deaths, Injuries and Property Losses from Unintentional Fires. U.S. Consumer Product Safety Commission. October 2009.

4) **When considering the safety of materials like lead, phthalates, cadmium, and toxic chemical in products, what consideration is given to the impact on consumer safety when those products reach the waste stream and possibly cause unsafe exposure through the air or water?**

Response:

While waste management and "end of life" product recycling is not within the Commission's jurisdiction, the CPSC does consider chemical risks from children's products in the context of overall chemical exposure by a child. For example, section 108 of the CPSIA requires that we look at a wide pattern of possible exposures in assessing the toxicity of children's products containing phthalates. We also coordinate with other agencies with relevant jurisdiction over waste, and specifically turn to the U.S. Environmental Protection Agency (EPA) for disposal guidance for products that contain toxic substances.

Questions on Minority Hiring and Contracting

1) **Does the CPSC have a written diversity outreach, hiring and contracting plan in place?**

Response: Yes, the CPSC outreach and hiring plan is detailed in our annual MD-715 report to the Equal Employment Opportunity Commission. A copy of the plan is enclosed. CPSC also has a diversity outreach management goal to address under representation written into its strategic plan. The Office of EEO and Minority Enterprise serves as the small and disadvantage business agency liaison. This office responds in writing to requests for information, networks, and conducts outreach activities with small and disadvantaged business communities through conferences and workshops.

2) **Will you provide the Subcommittee with information regarding the diversity of the professional full time employees at the CPSC broken down by job title or GS level?**

Response: Yes, a copy of career, professional full-time employees by job title and GS grade level is attached at Appendix A.

3) **What measures or procedures are in place at the CPSC to ensure that it is recruiting and hiring a diverse staff including from different race and ethnicities, for instance does CPSC recruit or have a internship programs at Historically Black Colleges and Universities and other Minority Serving Institutions?**

Response: CPSC has a diversity outreach management goal to address underrepresentation written into its strategic plan and conducts outreach activities with many organizations, including Historically Black Colleges and Universities (HBCUs) and

other Minority Serving Institutions as well as vocational rehabilitation offices and veterans groups for agency vacancies. CPSC has recently sent recruitment memoranda and brochures to all HBCUs, Hispanic Serving Institutions, and Tribal Colleges promoting the agency as the employer of choice.

When funding is available, CPSC works with the Hispanic Association of Colleges and Universities (HACU) to bring aboard a student engineering intern. CPSC has partnered with Howard University Law School to bring law interns into the agency. In addition, CPSC participates in job fairs including minority job fairs such as the recent Society of Hispanic Professional Engineer, Blacks in Government job fair, and will participate in the Office of Personnel Management Hiring Fair for Schedule A appointees.

We also take advantage of marketing our agency as an employer of choice through networking at conferences sponsored by Federally Employed Women, the Federal Asian Pacific Islander Council, the Urban League, the National Association for the Advancement of Colored People (NAACP), the National Council of La Raza, League of United Latin American Citizens (LULAC), and National IMAGE, Inc. CPSC also leverages its partnerships with other federal agencies, including using the National Council of Hispanic Employment Program Managers, to disseminate our vacancies in an effort to achieve a diverse applicant pool. Finally, we attend local elementary and secondary school career days and sponsor a career day and internships for a local high school.

4) On the procurement and contracting side, can you also provide us with information regarding the amount and percent of contracts that the CPSC makes with small and disadvantaged business enterprises, particularly women and minority owned firms?

Response: CPSC awarded a total of 886 contracts for $26,447,912.31 in FY 2009. CPSC awards for small businesses are shown in the table below. This data was compiled through the GSA Federal Procurement Data System - Next Generation (FPDS-NG) (info website: https://www.fpds.gov/fpdsng_cms/).

	CPSC Small Business Awards		
Type of Business	**Actions**	**Dollars**	**Percent (total contracts)***
Small Business	381	$11,402,341.69	43.1%
Small Disadvantaged	43	$7,532,679.89	28.5%
8(a) Procedure	27	$7,368,054.68	27.9%
Veteran Owned Small Business	14	$2,459,937.72	9.3%
Service Disabled Veteran Owned Small Business	7	$2,270,630.22	8.6%
Women Owned Small Business	140	$4,059,857.76	15.4%
Certified HUBzone Small Business	14	$2,666,862.65	10.1%

*Percents do not add to 100% due to overlap among the categories.

5) What proactive steps is the CPSC taking to ensure a diversity of companies can compete for any contracts that you offer?

Response:

CPSC's written directives on procurement encourage the use of set-asides, such as 8(a) set-asides and identification of 8(a) and other small business sources. These goals are further clarified during face to face acquisition planning for specific procurements. Anticipated open market procurements exceeding $25,000 are synopsized in FedBizOpps and are available for all business enterprises to review.

In addition, the agency sets aside all procurements for small businesses when two or more responsible small business sources have been identified. When possible, these are further set-asides for 8(a) small and disadvantaged business firms. We have had continued success in soliciting the participation of, and awarding contracts to, small businesses and small disadvantaged businesses, and veteran owned, service disabled veteran owned, women owned, and HUBzone businesses.

Also, CPSC staff from the Office of EEO and Minority Enterprise has participated in small and disadvantaged business fairs, which included veterans, women, and minority owned businesses and has conducted presentations about contracting opportunities for these groups. Additionally, this individual is exploring the establishment of a website link to a small business page that would describe and define opportunities for businesses.

*Copies of relevant EEO Policy Statement(s) and/or excerpts from revisions made to EEO Policy Statements	X	*Organizational Chart	X

The U.S. Consumer Product Safety Commission (CPSC) is an independent health and safety regulatory Agency, responsible for protecting the American public from unreasonable risks of injury and death from thousands of consumer products.

CPSC's mission is to address unreasonable risks of injury and death from consumer products and to assist consumers in evaluating the comparative safety of consumer products. The CPSC has two major programs: Reducing product hazards to consumers and identifying product hazards. CPSC uses a variety of tools to reduce the risks of hazardous consumer products including (1) developing and strengthening voluntary and mandatory safety standards; (2) initiating recalls and corrective actions of hazardous products and enforcing existing regulations; and (3) alerting the public to safety hazards and safe practices.

Under its work on strategic management of human capital under the President's Management Agenda, CPSC established recruitment and training goals to strengthen the Agency's Equal Employment Opportunity (EEO) program.

Summary of Agency's Annual Self-Assessment

The Agency's annual self-assessment against the essential elements of a model EEO program reveals the following strengths, weaknesses and plans to overcome identified weaknesses (bolded):

- **Element A – Demonstrated Commitment from Agency Leadership.**

  The Chairman's policy letters on Non-Discrimination in Employment and the Prevention of Harassment were issued to the entire workforce via email on July 21, 2009. **The Chairman will re-issue the EEO policy statement annually.**

  New employees are provided a copy of the policy letters, along with other EEO related material, upon in-processing. EEO materials, including the Directive on Reasonable Accommodation, are posted on the EEO intranet site. The Directive on Reasonable Accommodation is also posted on our public website. EEO has dedicated bulletin boards in the Headquarters building where materials and information, including the counselor poster, policy letters and No Fear Act information, are displayed. EEO related meterials are available in the personnel office.

  We conduct management training regarding their responsibilities under the procedures for reasonable accommodation as well as EEO policies and principles. We inform the workforce of what behaviors are inappropriate and the penalties for unacceptable behavior through training, email, and one on one counseling.

  Through our Directive on EEO and procedures for filing complaints of discrimination we reinforce managers and supervisors responsibilities to address concerns, resolve conflicts, and take appropriate corrective action.

  Managers and supervisors are evaluated on their support of EEO goals.

- **Element B – Integration of EEO into the Agency's Strategic Mission.**

The Director of EEO reports directly to the Chairman with clearly defined duties and the knowledge, skills and abilities to carry out the duties and responsibilities of the position. The Director has access as needed to the Chairman, Chief of Staff, and other senior management officials to inform them of the status of the Agency's EEO program on a regular basis.

The Chairman, Chief of Staff, Commissioners, managers and supervisors were provided the opportunity to identify barriers, develop action items, and report on the accomplishments listed in this plan prior to its submission. Senior leaders were asked to review Agency recruitment, retention, and advancement within their organizations and identify any new barriers to equal opportunity and commit to an action item to overcome any current or new barriers. Additionally, each senior official received a copy of this report prior to its submission for information and review as part of the State of the Agency briefing report.

The EEO office works with selecting officials in developing outreach initiatives to ensure the widest possible applicant pool. EEO provides advice and assistance to managers and supervisors on employment related issues and concerns.

The Agency has appointed a Disability Program Manager and in FY04 revised the Agency directive on the reasonable accommodation process. The directive is posted on the Agency directives and EEO intranet sites, and on the public web site. EEO staff work collectively and individually on a case-by-case basis with supervisors and employees on procedures for reasonable accommodation. EEO works closely with the Office of Human Resources Management (EXRM), Office of General Counsel (OGC), the supervisor and the employee providing assistance with accommodation issues. A central Agency fund exists for providing ergonomic assessments and equipment. The Agency has a memorandum of agreement with the Defense Computer and Electronic Equipment Program to provide other electronic and computer accommodations. In FY09, our bi-annual No FEAR Act training provided all employees training in reasonable accommodations.

The Agency has appointed Federal Women's Program, Black Employment Program and Hispanic Employment Program managers. The Agency has three EEO Counselors.

The EEO office is responsible for coordinating compliance with the Federal Equal Opportunity Recruitment Program (FEORP), Veterans Employment Programs and other special emphasis programs.

EEO training and education programs are made available to all supervisors and employees through a variety of methods. Headquarters training and programs are broadcast live and videotaped and posted on the EEO intranet site available to supervisors and employees teleworking full-time and for those Headquarters staff that may have missed the opportunity to participate. The EEO Director provides training at Field Managers meetings and regional employee meetings. Funding is adequate to support EEO program goals including funding for EEO materials, training, and the EEO complaints process.

This year, several EEO related training opportunities were conducted for employees, managers and supervisors including the ADA act of 2008, Ebbing the Tide of Reprisal Complaints, How to Stay Out of Legal Hot Water, Demystifying EEO (for employees), Workplace Harassment, and Conflict Resolution (Field Staff). A power-point refresher training on Mediation was provided to 100% of the workforce.

This past year, we have been able to fund training opportunities for collateral duty EEO counselors (EEO refresher training) and special emphasis program managers including the Blacks in Government (BIG) and Federally Employed Women (FEW) conferences. Training was funded for EEO full-time staff, including the Perspectives in Disability conference and the EEOC EXCEL conference.

EEO officials are provided a copy of weekly staffing reports to identify anticipated vacancies for outreach activities. EEO officials participate in Agency selections for executive level training. Additionally, EEO is included in the review of Agency documents, policies, and directives that may affect EEO.

- **Element C – Ensuring Management and Program Accountability.**

The EEO staff provides regular reports to the Chairman and senior staff on the status of the EEO program. The EEO Director ragularly sends out EEO-related information to senior Agency staff. This information includes case law updates, reports on best practices, Government Accountability Office (GAO), Office of Personnel Management (OPM), Merit Systems Protection Board (MSPB) and other reports on EEO and diversity. This information is posted on the EEO Outlook bulletin board and on employee exchange.

EEO meets weekly with the Executive Director, Deputy, Human Resource Director and Office of General Counsel to discuss employee relations and EEO issues of concern.

The Agency developed a training directive for supervisors, managers and executives, which include both substantive and procedural EEO training components. The Agency also developed a directive establishing a Federal Career Intern Program. **In 2005, the Agency reviewed and updated its merit promotion policy and procedures. The EEO office provided input into this review. The Agency is purchasing a Talent Management System that will assist managers in developing competencies for job series and subsequent training plans to close any employee skill gaps. This system will help senior managers identify leadership competencies to identify training plans to grow leaders at all levels.**

No findings of discrimination or breach of settlement agreements have occurred in the Agency in the past year.

There have been no instances of Agency noncompliance with Equal Employment Opportunity Commission (EEOC), MSPB, Federal Labor Relations Authority (FLRA), arbitrators, and District Court orders.

- **Essential Element D – Proactive Prevention.**

  EEO staff and senior managers collaborated on the barrier assessment, analysis, objectives and accomplishments forming the framework of this plan. This assessment included trend analyses of workforce profiles, major occupations, grade level distribution, compensation and reward systems, and a general review of the effectiveness of management/personnel policies, procedures and practices by race, national origin, sex, and disability.

  Input is sought regarding the workforce environment through several means. These include assessment of exit interviews, employee surveys, and the annual OPM Human Capital Survey.

  The Agency includes annual EEO performance goals as part of its performance and budget plan under the President's Management Agenda in the areas of targeted recruitment, EEO training, and diversity initiatives. EEO staff works with managers at all levels in successfully implementing these goals. The goals include conducting recruitment outreach initiatives and developing plans to increase representation of Hispanics and individuals with disabilities in the Agency workforce. The latter have included mentoring programs, awareness training, shadowing assignments, targeted outreach and partnering with a local high school. In FY09, we exceeded all these goals.

  The Agency has an effective Alternative Dispute Resolution (ADR) program with employees encouraged to consider participating in the process. When an employee requests ADR and it is deemed appropriate to offer ADR, supervisors and managers are required to participate.

  The Agency has revised its ADR directive to ensure incorporations of the suggestions made by EEOC in its August 4, 2005 letter to the Agency. That directive was signed by the Chairman in FY06 and distributed again to all employees via email notification. In FY09, the Agency conducted refresher training in Mediation for 100% of personnel via an intranet training presentation.

  Since 2007, CPSC has captured and reviewed applicant flow data through the Quick Hire system. This data captures all race/national origin (RNO) groups including Native Hawaiian/Pacific Islanders and individuals with disabilities. Since August 2005, CPSC has captured RNO data for Native Hawaiian or Other Pacific Islander new employees using the revised SF181. In FY04 we developed a tool that included Native Hawaiian or Other Pacific Islander as well as other RNO groupings and resurveyed our entire workforce.

- **Essential Element E – Efficiency.**

  EEO staff has the necessary training and experience to conduct the MD-715 analysis.

The Agency gets its personnel data base support from Department of Interior (DOI).

The EEO Office conducts periodic assessments of data contained in the Human Resource database against standard forms received and manual reports compiled as a quality control measure for Race, National Origin (RNO) and disability data.

FY09 afforded the Agency the use of Quick Hire for recruitment purposes. Quick Hire has an effective means of capturing or gathering applicant flow data including RNO and disability data on applicants for employment; recruitment trends, and targeted recruitment effort, **which is used by the Agency. FY09 data indications is addressed in the workforce analysis portion of this report.**

The Agency uses a complaint tracking and monitoring system that allows identification of the location, status, length of processing time at each stage, issues, bases, complainant, and involved management officials.

The Agency also monitors trends via the annual EEOC 462 report including the new complaint trend analysis. We also monitor the training of contract investigators and collateral duty counselors via this report. **In FY08, 60% of individuals filing pre-complaints were offered consideration for ADR (3 of 5 individuals). Two of the 5 pre-complainte were deemed not suitable for ADR due to the nature of the complaint issues. Of the three pre-complaints considered for ADR, the Agency rejected one as the complaint was outside the purview of the Agency to resolve. In FY09, of the 8 pre-complaints completed, 7 or 88% were offered consideration for ADR. Four of the seven individuals offered ADR consideration rejected ADR and elected traditional counseling. Out of the 3 ADR attempts, 67% were resolved.**

Our complaint tracking system provides the benchmarks for comparison of the Agency's processing of discrimination complaints with 29 C.F. R. Part 1614.

Given its size and personnel constraints, the Agency does everything within its power to ensure no conflicts exist with regard to legal sufficiency reviews, Agency representation in EEO complaints, and the neutral adjudication of EEO complaints. The Office of General Counsel and Office of EEO and Minority Enterprise have established a working relationship that provides for fair and timely review and consultation.

- **Essential Element F – Responsiveness and Legal Compliance.**

The EEO Director's performance plan contains elements ensuring the timely, accurate, complete and consistent reporting of EEO complaint data to the EEOC. In FY06, EEO began developing new management controls which will include reporting of data and compliance with corrective actions and settlements as required. This process is on-going.

In this reporting period, 100% of EEO counseling's were completed within the applicable timeframes. The average days for investigation were 148 (well below the EEOC required number of days of 180 days). The Agency issued no merit decisions in FY09.

Summary of Analysis of Work Force Profiles

At the end of this reporting period, CPSC's workforce consisted of 439 full-time permanent employees (95% of the total workforce) located at the Headquarters in Bethesda, Maryland, the CPSC laboratory in Gaithersburg, Maryland and those assigned to Field and Import positions.

Of these, 425 were in the General Schedule (GS) and 14** in the Senior Executive Service (SES). The CPSC has no employees in the Wage Grades (WG). The FY08 permanent workforce was 415.

**One of the 14 reflected as a permanent SES is a political appointee and should be reflected under temporary employees. This issue has been reported to the Human Resource Management Office.

Hiring efforts resulted in gains across the workforce with a net change of 5.78% (24 employees) relative to our FY08 level in its permanent workforce. With the exception of African-American males (no change) and American Indian/Alaskan Native males (-66.8% or 2 separations) all other categories had positive net changes in FY09.

We experienced 28 permanent workforce losses.

	White Males	White Females	Black Males	Black Females	His Males	His Females	AA/PI Males	AA/PI Females	AI/AN Males	AI/AN Females
Voluntary Retirement	4 40%	3 30%		2 20%	1 10%					
Disability Retirement		1 100%								
Transfer to New Job	2 17%	2 17%		4 33%	1 8%		2 17%		1 8%	
Resignation	1 33%	1 33%		1 33%						
Death	1 50%	1 50%								
CPSC09 CLF	35.1	30.0	4.8	15.5	2.1	1.8	5.7	3.6	.2	.2

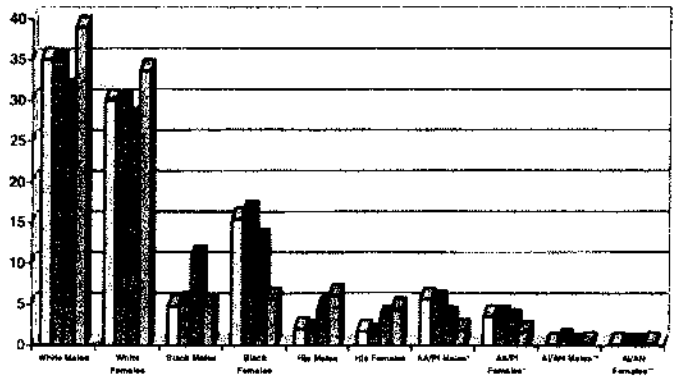
Minority losses due to transfer or resignation were 60% compared to their workforce representation of 35%. Fifty three percent of women were loss due to transfer or resignation compared to their workforce representation of 51%. One voluntary retirement and one death were also individuals with a disability. **A review of exit survey results indicate that 56% of the employees taking the survey would recommend CPSC to a friend as a good place to work. When asked what could be done to prevent the employee from leaving, of those that responded, opportunities for growth (training), promotion, and respect for abilities were the most frequent responses. When asked what CPSC could do better, those that responded said communication, decisiveness, meeting time, empowerment, and telecommuting.**

Permanent employees who have identified themselves as individuals with a disability experienced a net change of 2.8% (1 employee) representing 8.4% of the permanent workforce. Individuals with targeted disabilities remained the same at 7 employees, 1.6% of the permanent workforce which is still below the government high of 2.95%.

The Federal Information Processing Standards (FIPS) code identified in this report is that of Montgomery County, Maryland, as that is where the headquarters is located.

However, many employees and applicants reside in the greater Washington, DC-MD-VA-WV Primary Metropolitan Statistical Area (PMSA). Additionally, approximately 30% of our workforce resides across the US and our applicant pool potentially draws from across the US. Therefore, both the Greater Washington DC-MD-VA-WV PMSA and National Civilian Labor Force (CLF) are used for comparison purposes.

FY08 Percentage of Permanent Workforce Distribution



CPSC FY09	35.1	30.0	4.8	15.5	2.1	1.8	5.7	3.6	.2	.2
CPSC FY08	35.0	29.6	5.1	16.4	1.7	1.7	5.3	3.6	.7	.1
DC-MD-VA CLF	31.2	27.7	10.9	12.9	4.6	3.5	3.4	3.1	.1	.1
NCLF	39.0	33.7	4.8	5.7	6.2	4.5	1.9	1.7	.3	.3

* AA/PI = Asian American/Pacific Islander
** AI/AN = American Indian/Alaskan Native

Native Hawaiian or Other Pacific Islander Males represent .2% of the workforce (increase of 1 employee over FY08 total of 0) and Two or more races males represent .5% of the workforce (increase of one employee over FY08 total of one employee) with females representing .5% as well (staying constant at 2 employees).

In FY09 minorities represented 31% of permanent new hires, a decrease of 11% over permanent new hires in FY08. Black females and Asian males represented the majority of minority new hires at 13% for Black females (7 employees) and 9.1% for Asian males (5 employees). Asian females and Hispanic males represented 3.6% with 2 employees in each category. Women represented 47% of all permanent new hires, a decrease of 2% over FY08. Three FY09 new hires identified him or herself as an individual with a disability. No new individuals with target disabilities were identified. We will continue to try and meet our goal of one new hire of an individual with a targeted disability in FY10.

Of the permanent workforce in FY09, 245 employees or 56% are in the Officials and Managers occupation category compared to 238 employees or 57% in FY08. Of these 245 employees, 173 or 71% are non-supervisory. In FY09, 160 employees or 36% are in the Professional category compared to 142 or 34% in FY08. In FY09, 5 employees or 1.2% are in the Technicians category the same as in FY08. In FY09, 22 employees or 5% are in the Administrative Support Workers category compared to 25 or 6% Administrative Support Workers in FY08. Finally, in FY09, 6 employees or 1.4% are Service Workers compared to 5 employees or 1.2% in FY08. CPSC has no employees in the Sales Workers, Craft Workers, Operatives, or Laborers and Helpers occupational categories.

The percentage representation of employee groups in the **Officials and Managers** occupational category (our largest employment category with 245 employees) reflects the following information. CPSC occupational series in this category include GS-0301, 0340, 0343, 0501, 1102, and 1801.

Officials and Managers Data

	White Males	White Females	Black Males	Black Females	His Males	His Females	AA/PI Males	AA/PI Females	AI/AN Males	AI/AN Females
CPSC FY09	37.1	32.0	4.9	13.5	2.9	2.5	3.6	1.6	.4	.4
CPSC CLF 09	35.1	30.0	4.8	15.5	2.1	1.8	5.7	3.6	.2	.2
CPSC FY08	37.0	32.4	5.0	13.9	2.5	2.1	3.4	1.7	.8	.4
CPSC CLF08	35.0	30.0	5.0	16.4	1.7	1.7	5.3	3.6	.2	.2
DC Metro CLF	42.4	29.5	7.0	9.8	2.3	1.9	2.9	1.9	.1	.2
NCLF	52.1	30.6	2.8	3.5	3.3	2.4	2.1	1.3	.2	.2

Highlighted percentages indicate underrepresentation in that RNO category. In this category, Native Hawaiian or Other Pacific Islander males are .4% and two or more race females are .8%. Also, in this category, individuals with disabilities represented 9.8% of the permanent employees in FY09 compared to 9.7% of the permanent employees in FY08. Individuals with targeted disabilities represented .8% FY09, the same as in FY08. **Note that our Project Safety Investigator positions, which make up a good portion of our mid-level officials and managers group, have bona fide occupational physical requirements that may cause fewer individuals with disabilities to apply.**

Tha percentage representation of employee groups in the **Professionals** occupational category (our next largest employment category with 154 employees) reflects the following. CPSC occupetional series in this category include GS-0110, 0180, 0201, 0405, 0415, 0510, 0801, 0830, 0850, 0905, 1035, 1320, 1629, 1529, 1530, and 2210.

Professionals Data

	White Males	White Females	Black Males	Black Females	His Males	His Females	AA/PI Males	AA/PI Females	AI/AN Males	AI/AN Females
CPSC FY09	36.9	28.8	5.0	9.4	1.3	.6	9.4	7.5	0	0
CPSC CLF09	35.1	30.0	4.8	15.5	2.1	1.8	5.7	3.6	.2	.2
CPSC FY08	38.0	26.8	5.6	10.7	.7	.7	9.2	7.8	0	0
CPSC CLF08	35.0	30.0	5.0	16.4	1.7	1.7	5.3	3.6	.2	.2
DC Metro CLF	35.8	32.9	6.7	10.4	1.8	1.9	4.8	3.5	.1	.1
NCLF	37.1	42.3	2.7	4.9	2.3	2.8	3.2	2.6	.2	.3

Highlighted percentages indicate underrepresentation in that RNO category. In this category, there are no Native Hawaiian or Other Pacific Island employees and 2 (1.3%) employees identified as two or more races (male). Also, in this category, individuals with disabilities represented 5.63% in FY09, the same as FY08 permanent employees. Individuals with targeted disabilities represented 1.25% in FY09, a slight decrease over the FY08 percentage of 1.41.

The majority of the permanent workforce is concentrated in the GS-12 and above grade levels.

Fiscal Year (FY)	GS-12	GS-13	GS-14	GS-15	SES
FY09	102	131	64	54	14
FY08	102	127	51	47	14

Participation rates of Women, Hispanic males and females, Black males and females, American Indian males and females and two or more races male and female in senior grade levels (GS13 – SES) fell below their rates in the CPSC permanent workforce.

	All Women	White Males	White Females	Black Males	Black Females	His Males	His Females	AA/PI Males	AA/PI Females	AI/AN Males	AI/AN Females	2+ races Males	2+ races Females
GS13-SES	44.9	41.4	29.7	3.9	8.8	1.5	.4	7.2	5.3	0	0	0	0
CPSC CLF	51.48	35.0	30.0	4.8	15.5	2.1	1.8	5.7	3.6	.2	.2	.5	.5

Highlighted percentages indicate underrepresentation in that RNO category. There was little improvement in FY09 over FY08 in the representation of individuals in the senior grade levels. Women represented 45.2% in FY08 despite a workforce participation rate of 52.1%, Black females – 8.4% despite a workforce participation rate of 16.4%.

However, in the 1601 series (Officials and Managers), our largest feeder groups to the GS13 and above grade level, 40 individuals are in career ladder positions at grades 7-12 with the target grade of GS13. Of those, 22% are women, 52% minority, and 2% individuals with disabilities. This includes 20% Black females, 10% Black males, 7% Hispanic females, and 5% 2+ race males and females.

CPSC major occupational categories are: GS-343, Management and Program Analyst (30 employees), GS-0905, Attorney (28 employees), GS-1801, General Inspection, Investigation, and Compliance (137 employees) and GS-2210, Information Technology Management (28 employees).

In the GS-0343 series, Hispanic females, White males, Asian males, and American Indian females are underrepresented in comparison to the relevant civilian labor force. No change from FY08. **FY09 applicant pool data shows that women and minorities were well represented and qualified but individuals with disabilities were lacking on referral lists.**

In the GS-0905 series, Hispanic females, White males, Black males, Asian/PI Males, and American Indian males and females are underrepresented compared to the relevant civilian labor force. **Due to a FY09 hire, Hispanic males are no longer underrepresented. FY09 applicant pool data shows the women and minorities are well represented and well qualified, however there were no individuals that identified themselves with a disability on any referral list.**

In the GS-1801 series, Hispanic males, White males, American Indian/Alaskan Native males are underrepresented compared to the relevant civilian labor force. **FY09 applicant data shows well qualified women, minorities and individuals with disabilities in the merit promotion and DEU investigator hiring pools. In the Compliance Officer applicant pools, women and minorities are well represented and well qualified, however there is a lack of candidates with disabilities.**

In the GS-2210 series, Hispanic females, White males and females, and American Indian females are underrepresented compared to the relevant civilian labor force. **FY09 applicant data shows that women, minorities and individuals with disabilities are well qualified and well represented in the applicant pools.**

Individuals with two or more races are underrepresented across the major occupations.

Individuals with disabilities are not represented in GS-0905 labor force. The 2210 series now includes an individual with a disability.

Generally, a review of FY09 applicant pool data indicates that well qualified women and minorities are well represented in hiring pools across series. However, a review of internal processes in selection of applicants may be warranted in some areas where minorities have not been traditionally brought into the workforce. The data does indicate a greater need to focus on outreach to individuals with disabilities across series.

In FY09, 23 competitive promotion actions were finalized. Minority candidates received 34.8% of competitive promotions (1 Black male, 4 Black females, and 1 Asian female). Female candidates received 30.4% of competitive promotions.

In addition to the promotions indicated above, CPSC hired at least 23 employees into permanent positions with career-ladder promotion potential as high as the GS-13 (30% minorities, 60% females). In FY 08, CPSC hired 27 employees into positions with career-ladder promotion potential as high as the GS-13 (59% minorities, 56% females).

CPSC reviewed statistical data that reflected accessions, separations, promotions, major occupations, awards, grade and occupational distribution, and changes in the workforce for this report. We also reviewed Agency employee exit interviews, EEO complaint activity, applicant flow hire data, and the OPM Human Capital Survey.

Summary of EEO Plan Objectives to Eliminate Barriers or Correct Program Deficiencies

The Agency conducted a barrier analysis and assessment. Barriers and objectives to overcome identified barriers are identified below:

- **Recruitment** – Present recruitment sources may not yield the expected rate of qualified applicants of all racial and national origin groups, both sexes, and individuals with disabilities who meet organizational needs. Fiscal constraints have limited CPSC's ebility to pay recruitment/retention bonuses, relocation expenses, interview travel expenses, cost of participation in job fairs or scientific meetings, and costs for job postings in scientific publications, job banks, or professional societies.

Several initiatives have been genereted to increase CPSC visibility and target outreach activities to underrepresented populations. These included the direct-mailing to Hispanic-serving institutions of higher education of a recruitment brochure and materials with an introduction to the Agency and the nature of positions. **(Completed)** CPSC will compile statistical and contact information of the number of underrepresented groups graduating from colleges and universities with degrees in math, statistics, the sciences, engineering, and law so that recruitment efforts can be targeted. **(Continuing)**

CPSC will also generate a list of contacts with professional, trade and alumni associations serving underrepresented groups for targeted recruitment efforts. **(Completed)** CPSC will pursue opportunities to expand the worker-trainee placement program by increasing the use of Hispanic Association of Colleges and Universities (HACU) interns and the workforce recruitment program for college students with disabilities. **(Continuing)**

Report of Accomplishments and Modification to Objective

CPSC hosted no HACU interns at our Laboratory facility in FY09. **Funding exists to fund at least one intern in 2010.** CPSC was able to use the Schedule A student appointments to bring on students in offices throughout the Headquarters.

The Agency engaged in several other efforts to expand its applicent pool and introduce the Agency as an employer of choice:

- Pursued participation in Operation Warfighter. Provided resumes to managers as potential intern candidates. **In FY10, we hope to place at least one disabled veteran at CPSC for training. We will also participate in an Operation Warfighter briefing at Bethesda Naval Hospital and Walter Reed Army Medical Center, and job fair.**
- Participated in job fairs with Department of Agriculture and the Hispanic Association of Colleges and Universities (HACU), the University of Maryland, University College, Partnership for Public Service, and John Hopkins University.
- Participated in career fairs at the Blacks in Government (BIG) and La Raza Conference. Sent a Public Affairs employee to the Urban League conference.

- Worked closely with the National Council of Hispanic Employment Program Managers and the National Association of Hispanic Federal Executives to advertise job vacancies to constituency groups.
- Continued to utilize the Department of Labor EARN program to post job vacancies in the hopes of attracting individuals with disabilities.
- Forwarded Workforce Recruitment Program (WRP) resumes to Laboratory, Engineering, and Compliance.
- Conducted training for managers and supervisors on their EEO responsibilities.
- Utilized the Partnership for Public Service Hot Jobs.
- Joined Call to Serve as a Partner Agency.
- Utilized Craig's List and other non-traditional sources for job postings.
- Provided recruitment brochures at the BIG and FEW conferences.
- Continued our partnership with Bethesda-Chevy Chase (BCC) High School providing tutoring, mentoring and providing students, who receive course credit, working internships in CPSC positions. We participated in the BCC Career Day.
- Participated in the Sligo Creek Elementary School Career Day.
- Partnered with Howard University Law School and recruited student legal interns.
- Direct-mailed all Historical Black Colleges and Universities a recruitment brochure and materiels with an introduction to the Agency and the nature of positions.
- Met with Society of Hispanic Professional Engineers regarding FY10 conference participation.
- Provided recruitment incentive bonuses and superior quelification determinations to new hires including women and minorities for hard to fill positions.
- Presented conference workshops, participated in conferences, and set on subject matter expert panels for a number of science, engineering and statistical groups.

Additionally, CPSC exceeded its three Quality and Management goals under the President's Management Agenda. These are: Target recruitment efforts to organizations serving under-represented pepulations; Conduct training sessions for employees in EEO/AEP responsibilities; and Promote representation of underrepresented groups. We accomplished the following:

- Conducted targeted outreach recruitment efforts focusing on underrepresented groups for Property Management, Product Safety Investigator, Physiologist, Toxicologist, Deputy Hazard Reduction, Mechanical Engineer, Electrical Engineer, Engineering Psychologist, Assistant IG, Chemist, Fire Protection Engineer, Math Stat and Program Analyst vacancies.
- Conducted training in the Conflict Resolution for Field Operation employees.
- Conducted ADA Act of 2008, Ebbing the Tide of Reprisal Complaints, How to Stay Out of Legal Hot water training Supervisors.
- Provided Demystifying EEO training for employees.
- Supported the participation of Agency employees in the Federally Employed Women, Blacks in Government, Urban League, Perspectives, EXCEL, and La Raza conferences.
- Participated in career days and fairs.
- Conducted a CPSC wide Diversity Day.

- **Employee Development and Training** – Training and other developmental opportunities, including management and executive training, are limited. Lack of formalized succession planning inhibits career development planning (including the opportunity to experience executive level decision-making) and mentoring of high potential employees. Fiscal constraints have inhibited available training funds. While CPSC advertises many job positions as career-ladder positions, internal applicants do not always meet the specialized experience to qualify and advance.

As appropriate, CPSC will create opportunities that will allow employees to receive the experience and training necessary to qualify for higher graded positions within the Agency by modifying selected positions for recruitment at the lowest possible grade level, thus ensuring internal applicants meet minimal qualifications and can be considered. CPSC will also establish internal training plans for these positions that will provide the experiences and on-the-job training necessary for successful advancement to the next and subsequent grade levels. CPSC will develop "bridge" positions in selective technical occupations affording administrative or clerical staff the ability to apply and qualify for in-house positions. CPSC will form mentoring circles to assist employees at all grade and experience levels in learning the organization hierarchy and provide opportunities for growth and development. CPSC will also use developmental details and shadowing assignments to provide career enhancing experiences at all levels of the organization. **(Continuing) One management official expressed concerns regarding the process of providing job details to employees and suggested a review of this process in FY10.**

Report of Accomplishments and Modification to Objective

CPSC was successful in developing career ladder professional positions and upward mobility positions for staff. **Over 23 vacancies were announced as career ladder positions. We will continue to seek targets of opportunity to do the same in FY10.**

CPSC continues to recruit both product safety investigators (target Grade GS-12) and compliance officers (target Grade GS-13) at the GS5/7 level in an effort to reach the broadest applicant pool possible and provide the opportunity for career growth and development. Investigator positions have comprehensive training plans for each grade level to ensure the employee achieves the necessary competencies to perform at the next higher grade level.

In FY09, CPSC was able to provide the following developmental and training opportunities to staff either on site or through our partnership with the Small Agency Council:

- Senior level management development training opportunities were made available to individuals in the GS14 and above grade levels and all nominees were selected for attendance at the training of their choice. This group of 10 individuals included 3 women and 2 minorities.

Every Agency employee has desktop access to the Go LEARN treining. This package includes over 100 on-line course offerings in personnel management, EEO, leadership and supervision, information technology, administrative management, the NO FEAR Act and other topics of interest to help employees develop new and career enhancing skills.

Conclusion

In FY10, CPSC will continue to focus on the two key barriers initially identified in the FY04 plan and affirmed through this report process. **This will include continued expansion of our outreach efforts to reach individuals with disabilities for mid-level positions, review of Agency job details, and a flash mentoring program.**

EEOC FORM 715-01 PART F	*U.S. Equal Employment Opportunity Commission* FEDERAL AGENCY ANNUAL EEO PROGRAM STATUS REPORT

CERTIFICATION of ESTABLISHMENT of CONTINUING EQUAL EMPLOYMENT OPPORTUNITY PROGRAMS

I, Kathleen V. Buttrey, Director, EEO and Minority Enterprise, GS-260-15 am the

(Insert name above) (Insert official title/series/grade above)

Principal EEO Director/Official for The US Consumer Product Safety Commission

(Insert Agency/Component Name above)

The Agency has conducted an annual self-assessment of Section 717 and Section 501 programs against the essential elements as prescribed by EEO MD-715. If an essential element was not fully compliant with the standards of EEO MD-715, a further evaluation was conducted and, as appropriate, EEO Plans for Attaining the Essential Elements of a Model EEO Program, are included with this Federal Agency Annual EEO Program Status Report.

The Agency has also analyzed its work force profiles and conducted barrier analyses aimed at detecting whether any management or personnel policy, procedure or practice is operating to disadvantage any group based on race, national origin, gender or disability. EEO Plans to Eliminate Identified Barriers, as appropriate, are included with this Federal Agency Annual EEO Program Status Report.

I certify that proper documentation of this assessment is in place and is being maintained for EEOC review upon request.

Kathleen V. Buttrey 1/26/10

Signature of Principal EEO Director/Official Date

Certifies that this Federal Agency Annual EEO Program Status Report is in compliance with EEO MD-715.

Inez Tenenbaum, Chairman 1/26/10

Signature of Agency Head or Agency Head Designee Date

UNITED STATES
CONSUMER PRODUCT SAFETY COMMISSION
WASHINGTON, DC 20207

Memorandum

Office of the Chairman

Date: JUL 2 1 2008

TO : All CPSC Employees

FROM : Inez Tenenbaum
Chairman

SUBJECT : CPSC Policy on Non-Discrimination in Employment

The Consumer Product Safety Commission (CPSC) is fully committed to ensuring equal employment opportunities for all employees and applicants. No one will be denied opportunities because of race, color, religion, sex, age, national origin, mental or physical disability, or reprisal or retaliation for opposing discriminatory practices and/or participating in the discrimination complaints process.

Unlawful employment practices, including those prohibited personnel practices based on sexual orientation, status as a parent, marital status, or political affiliation, are detrimental to the accomplishment of CPSC's mission and to the morale of our workforce and will not be tolerated.

As CPSC seeks to position itself to continue to attract, develop, and retain a highly skilled workforce that delivers results, I am committed to ensuring a qualified agency workforce reflective of our nation's diversity and one that includes opportunities for women, minorities, people with disabilities, and disabled veterans. This involves providing a workplace free of discrimination with the necessary tools, training, and support systems that employees need to develop to their fullest potential.

Employees at all levels are free to bring concerns they feel are relevant to the EEO Director or EEO office at any time. No other employee shall attempt to dissuade an employee from making such contacts or take any action against them for having done so. Such actions can have a chilling effect on the EEO process and are prohibited by law. Any employee found to have done so shall be subject to disciplinary action.

We must all work together to demonstrate fairness, cooperation, and respect toward our colleagues and customers. Each of us is responsible for creating an environment in which every employee is treated with respect, dignity and professionalism. This includes a collaborative effort to develop positive approaches in resolving employment problems at the lowest level possible.

Questions and additional information on this policy may be directed to Kathy Buttrey, Director, EEO and Minority Enterprise, (301) 504-7771.

UNITED STATES
CONSUMER PRODUCT SAFETY COMMISSION
WASHINGTON, DC 20207

Memorandum

Office of the Chairman

Date: JUL 21 2009

TO : All CPSC Employees

FROM : Inez Tenenbaum
Chairman

SUBJECT : CPSC Policy on the Prevention of Harassment (Sexual and otherwise)

As part of my commitment to the CPSC workforce, I want to emphasize my pledge to providing a work environment for our employees and guests that is free from discrimination, including all forms of harassing behavior.

Harassment in the workplace violates federal law and will not be tolerated whether the discriminatory treatment is based on sex (whether or not of a sexual nature), race, color, religion, national origin, age of 40 or older, disability, or protected activity under the anti-discrimination statutes.

Harassment is defined as unwelcome verbal or physical conduct based on any characteristic protected by law which the conduct has the purpose or effect of (1) unreasonably interfering with work performance and/or (2) creating an intimidating, hostile or offensive work environment. Sexual harassment is more specifically defined by statute and regulation as unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature which is made a term or condition of a person's job, is used as a basis for employment decisions affecting a person, creates a hostile or abusive environment, or interferes with the performance of a member of CPSC's workforce. Harassing conduct may include, but is not limited to, racial slurs, demeaning or sexual jokes, negative stereotyping, offensive written material or electronic media, or inappropriate unwanted touching.

Offensive conduct constitutes harassment if it alters the conditions of the victim's employment either by culminating in a tangible employment action or by being sufficiently severe or pervasive as to create a hostile work environment. Supervisors have a special responsibility to exercise reasonable care to prevent and promptly correct any harassment in the workplace. All employees have a responsibility to avoid the potential harm of harassment by promptly reporting such behavior to their supervisory chain and the EEO Office.

Each of you is responsible for ensuring that CPSC maintains a professional work environment free of all forms of harassment. Managers and supervisors will take the lead in setting the example of treating all people with mutual respect and dignity, fostering a positive climate, and taking appropriate action when conduct is disruptive, provoking, discriminatory, or otherwise unprofessional.

Incidents of harassment should be reported to the appropriate supervisor and the Equal Employment Opportunity Office promptly. Allegations of harassment will be dealt with swiftly, fairly, and confidentially. If harassment is found to occur, corrective action, including appropriate disciplinary measures, will be taken. In addition, no person shall be subject to reprisal for opposing any practice made unlawful by the antidiscrimination laws, or for filing or taking part in presenting or processing discrimination complaints.

Questions and additional information on this policy may be directed to Kathy Buttrey, Director, EEO and Minority Enterprise, (301) 504-7771.

Questions for the Record Submitted by Congressman Crenshaw

Regarding X-Ray Fluorescence (XRF)

1) **During a recent conference, the CPSC's head of compliance called handheld XRF the "secret to our success." Can you please describe for the committee how exactly the commission is using XRF?**

Response:

CPSC lab and field staff uses XRF in a number of ways. In our Product Testing Laboratory, chemists employ portable XRF as well as a research-grade XRF machine to analyze samples for elemental composition, including lead, cadmium, and many other elements. We screen products for lead, cadmium, and other elements to see if additional testing may be necessary, such as extractions for cadmium or total digestions for lead content.

We are also conducting research together with the National Institute of Standards and Technology (NIST) to determine if XRF can be used, according to the CPSIA, for lead in paint testing. CPSC Field and Import Surveillance staff use portable XRF to screen for lead, cadmium, and other hazards potentially in products entering the country at our ports, or in retail stores or warehouses. This screening allows our staff to cast a wider net and collect the samples most likely to present a hazard to consumers.

2) **Manufacturers, retailers & importers remain unclear about how exactly *they* can use XRF. Can you please describe in detail how companies are currently legally allowed to use XRF in testing their products?**

Response:

XRF can be part of a "reasonable testing program" for General Certificates of Conformity for products that may have lead in the substrate. XRF can be used as part of in-house screening procedures for incoming materials and for spot-checking of products in-process. However, XRF cannot be used by any entity as a basis for official tests of the lead-in-paint limits or lead content in children's jewelry.

3) **Please detail how third party labs are allowed to use XRF to test products in a non-destructive way?**

Response:

Test Method CPSC-CH-E1002-08 was published by CPSC staff in 2008 and provides guidance on the potential use of XRF to test for lead in polymers. Currently, there is no requirement for third-party testing for such products, but where such testing is done, this provides guidance on the proper way to do such testing. There are many laboratories

whose accreditation has already been accepted by CPSC for testing of lead in nonmetal products by CPSC-CH-E1002-08.

4) **Finally, what future regulatory steps do you envision taking to permit broader use of XRF technologies?**

Response:

If the Commission determines that x-ray fluorescence technology or other alternative methods for measuring lead in paint are as effective, precise, and reliable as the methodology used by the Commission for compliance determinations prior to the date of enactment of the CPSIA, the Commission may promulgate regulations governing the use of such methods in determining the compliance of products with part 1303 of Title 16, Code of Federal Regulations, as modified pursuant to this subsection. CPSC is continuing to work with NIST to evaluate XRF and other non-destructive technologies that may lead to more efficient and enhanced methods. Furthermore, the Commission will be issuing regulations for third party testing of lead in products other than paint and children's metal jewelry. Such regulations may include provisions for the use of XRF for determining lead in plastic, such as described in Test Method CPSC-CH-E1002-08.

TUESDAY, APRIL 27, 2010.

FISCAL YEAR 2011 BUDGET REQUEST FOR THE ELECTION ASSISTANCE COMMISSION

WITNESS

HON. DONETTA DAVIDSON, CHAIR, U.S. ELECTION ASSISTANCE COMMISSION

Mr. SERRANO. The subcommittee will come to order.

Mrs. Emerson will be joining us in a second, but she has given us the okay to proceed since that side is in great hands.

Mr. CULBERSON. We are in good hands, yes.

Mr. SERRANO. Today, we will hear from the Election Assistance Commission on its budget request of fiscal year 2011. We welcome back Election Assistance Chair Donetta Davidson, who is making her third appearance before the subcommittee. I think that is a record.

As it is an election year, it is of particular interest for the subcommittee to hear how the EAC has prepared for the upcoming midterm elections, lessons learned from past elections, the main challenges the EAC must address in the lead-up to November, and what additional resources the Commission will need to successfully perform its mission.

As I have said many times, the EAC is a small agency with a significant responsibility. The Commission plays a critical role in giving guidance and information to election officials, providing regulatory authority over the National Voter Registration Act, and directing Federal resources to support the conduct of open, fair, and accessible elections.

More than $3 billion in Federal money has been appropriated over the past 7 years, including $93 million in fiscal year 2010, to help improve election administration and voting systems. Even with this commitment of resources, election officials continue to have critical unmet needs relating to the smooth conduct of elections.

For fiscal year 2011, the President's budget proposes $16.8 million for operating expenses, a decrease of $1.2 million from fiscal year 2010. The President's request does not provide any funding for State election reform agendas, representing a $75 million decrease from fiscal year 2010. I am particularly interested to hear about how this cut in requirement payments will impact States.

The 2008 election had the highest voter turnout in recent years. More than 132 million Americans voted. While perhaps not everything went perfectly, we did not see the same level of controversy that plagued other recent elections, such as the 2000 Presidential election. We hope that this is a sign that the EAC, together with

State and local officials, are learning from experience and are moving in the right direction.

Finally, I strongly believe that the often intense debate over election issues is due to the passion we share when it comes to protecting our democratic process in guaranteeing the right of every individual to cast a ballot in a fair, open, and honest election. Our goals should be to ensure that we count every vote and make every vote count. I hope this hearing will help us to understand better what the EAC needs to help the Nation meet that goal.

Testifying before us today is the chair of the Election Assistance Commission, Donetta Davidson. Ms. Davidson has served as the commissioner at the EAC since 2005 and is now chair of the Commission for the second time. Prior to her service at the EAC, she was Colorado's Secretary of State; and she also has significant experience administering elections in two Colorado counties.

We are pleased to have her here again today, and the timing is so wonderfully well set in place because—and here is Mrs. Emerson.

Mrs. EMERSON. Thank you. I am so sorry.

Mr. SERRANO. No, no. It is okay. And I just finished my statement.

Mrs. EMERSON. Thank you very much for being here today. We are very grateful and look forward to your testimony.

Ms. DAVIDSON. Thank you.

Mrs. EMERSON. May I say something else?

Mr. SERRANO. It is your statement.

Mrs. EMERSON. I want to apologize to you for not being available to meet with you when you were in the office. I had something unexpected come up that I had to deal with. So my apologies.

Ms. DAVIDSON. Not a problem. Not a problem.

Mr. SERRANO. You know how it goes.

We ask you to limit your statement to 5 minutes. The rest of your statement will go in the record, and that will give us hours upon hours to grill you, although Mr. Culberson has agreed to stay within the 5-minute time limit, which is a major accomplishment for this committee. Please proceed.

Ms. DAVIDSON. I will try. Good morning, Chair Serrano and Ranking Member Emerson and committee members and the appropriation committee for inviting me today. I want to thank you for your support.

My name is Donetta Davidson, and I am a lifelong election official. I became chair of the Election Assistance Commission, or the EAC from now on in my testimony, in January this year. I serve alongside my commissioners, Gracia Hillman and Gineen Bresso Beach, who I thank for their hard work and dedication to the success of the EAC.

The EAC is a small Federal agency with a big mission to improve administration of Federal elections. Today, I will discuss our fiscal year 2011 budget and how it will be executed to achieve our mission. The EAC's budget request is 16.8, which will include 3.25 million to the National Institute of Standards and Technology.

As EAC chair, I will focus on the following initiatives: improved service for military and overseas voters, the National Voter Registration Act, and collecting and ensuring creative solutions in elec-

tions like contingency planning in the States and counties and polling place work recruitment.

Let me describe a few budget items that are of great interest to the committee and the public, beginning with our grants and our requirements payments section. Our fiscal year 2011 budget request includes 750,000 of college poll worker grants. Last year, 71 organizations requested 5 times more funding than was available. This program has been very popular because we continue to have a shortage of poll workers throughout the Nation.

Regarding how States are spending their requirement payments, since 2003, I cheated and I brought some charts with me today. The chart on my right is showing section 251 expenditures by year. As you can see, we saw a big spike in the spending in 2006. Then, on my left, the chart shows a comparison of when the funds were received by States versus when the funds were used. The majority of the funds were received in 2004 and 2005, as the orange and yellow show.

Again, we see most of the funds were spent, as you can see by the blue indication, in 2006. A small amount of the funds were spent in 2004, 2005, primarily due to the provisional voting implementation and polling place information for voters. A few States had already purchased new equipment and were eligible for reimbursement of HAVA funds.

With these charts, it shows that it takes about 18 months of time before a State when the appropriation is passed and that the State receives them and spends the money. It takes about 18 months. There is two reasons for this. It is the State's ability to appropriate the 5 percent match and the State procurement process.

In 2007 through 2009, HAVA distribution and expenditure rates slowed down. Most likely, these rates will continue to follow the typical 18-month cycle that we saw in previous years as we know that some States were unable to appropriate the 5 percent match in 2008 and 2009 due to budget constraints.

So let us review some of the basic facts regarding the payments. Appropriated has been 2 billion six; through March of 2010, over 2.4 billion has been distributed. States have reported spending about 80 percent of the funds through September 30, 2009. Twenty-one of our States have certified that they have met the compliance of Title III.

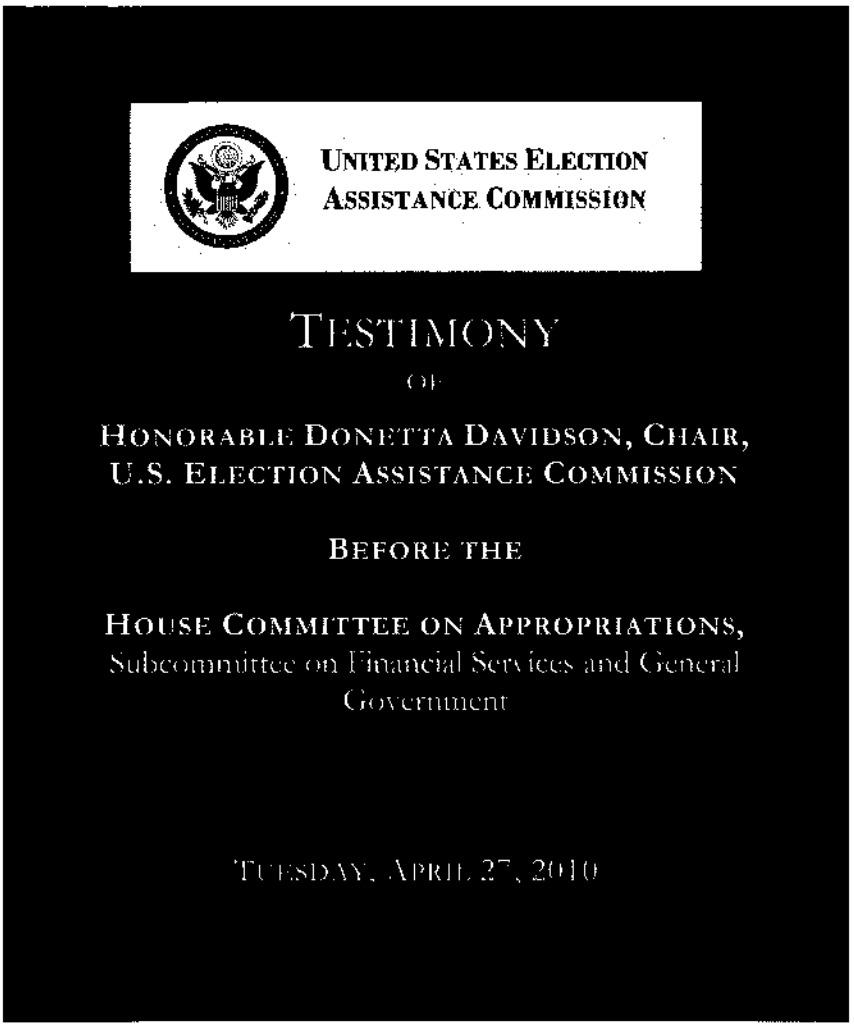
Of course, managing and distributing HAVA funds is not the only main responsibility we have at EAC. We have certified four voting systems, and we are in the last stage of our next iteration of voluntary voting system guidelines. And, as a part of our responsibility under the MOVE Act, we just delivered yesterday a roadmap to Congress which included a draft remote electronic voting system pilot program that we devised.

I also want to make sure that you are aware that EAC has translated the national voter registration form and also other material into five Asian languages, along with the Spanish that is available.

There is not enough time to tell you about all of the work EAC is doing on behalf of the voters and the election officials, but it is always available at www.eac.gov, including the translation of voters registration forms and other material in the six languages.

Before I conclude, I want to thank the EAC staff for their hard work. They are creative, industrious, and dedicated. I also want to thank you for your leadership to the EAC and to the American voters.

I will be happy to answer any of your questions.



U.S. Election Assistance Commission
1201 New York Ave., NW - Suite 300
Washington, DC 20005
www.eac.gov

Good morning Chairman Serrano, Ranking Member Emerson, and Members of the Subcommittee. I am pleased to be here on behalf of the U.S. Election Assistance Commission (EAC) to discuss our Fiscal Year 2011 budget request and the Commission's goals and activities.

INTRODUCTION

EAC is a bipartisan, independent Commission consisting of four members: Chair Donetta Davidson and Commissioners Gracia Hillman and Gineen Bresso Beach. There is one vacancy on the Commission.

EAC is a small federal agency with a big mission – to improve the federal administration of elections. To achieve its mission, EAC assumes a dual role of providing resources to help states make improvements and assisting election officials throughout the nation empower voters through access, collaboration and engagement. The commission has embraced the concept of collaborative governance and is working to break down communication barriers between the federal government and America's voters.

To ensure success, the Commission has established a solid internal foundation for managing personnel and resources, as well as a structure to ensure accountability. In Fiscal Year 2009, EAC hired a chief financial officer and an accounting director, who achieved immediate results by aggressively finalizing financial management policies and procedures. Consequently, EAC received an "unqualified," or clean, opinion on its financial statements and Annual Financial Report. An "unqualified" or clean opinion indicates that the Commission followed all accounting rules appropriately and that the financial reports are an accurate representation of the Commission's financial condition.

To build upon EAC's actions to effectively manage resources, the Commission is working to foster a culture of accountability among staff by improving staff satisfaction ratings and achieve management excellence through improved internal controls and human resource initiatives.

In addition to establishing a foundation of accountability, EAC has also instilled a spirit of creativity and innovation among staff to meet our mission and maximize the use of available resources. Initiatives include applying technological solutions, establishing strategic partnerships and collaborating among program areas to eliminate duplication of effort, maximizing skill sets and strategically leverage talents and abilities throughout the Commission. For example, the EAC Design Team, consisting of administrative and program area employees, provide management with recommendations and input and to make sure the lines of communication remain open at every level of EAC. The Design Team will ensure that all EAC employees have a voice and a platform to offer solutions and suggestions, but also incorporate strategies to create a healthy working environment and a solid foundation for the future.

EAC believes its efforts to strengthen financial operations, promote synergy among staff and use technology to reach more stakeholders will enable the Commission to better manage and allocate its FY 2011 budget and ultimately serve more voters and develop more tools and resources to improve federal elections.

Below we discuss EAC's FY 2011 budget request and how the Commission plans to allocate resources to achieve its mission.

BACKGROUND, MISSION AND ORGANIZATIONAL STRUCTURE

In October 2002, Congress passed the Help America Vote Act (HAVA). The law recognized the need for states to invest in their election infrastructure and set out a comprehensive program of funding, guidance, and ongoing research. To foster those programs and to promote and enhance voting for United States citizens, HAVA established the EAC.

EAC is an independent, bipartisan agency. Four full-time Commissioners, appointed by the President and confirmed by the U.S. Senate, and three federal advisory committees--the Standards Board, Board of Advisors, and the Technical Guidance Development Committee-- guide the EAC. Its mission is to assist in the effective administration of federal elections. EAC is statutorily required to:

- Create a clearinghouse of information for election officials and the public.
- Distribute HAVA funds to states for election administration improvements.
- Issue, and periodically review and modify, as necessary, Voluntary Voting System Guidelines (VVSG).
- Accredit voting system test labs and certify voting equipment.
- Conduct periodic studies of election administration issues.
- Establish best practices and guidelines on election administration for state and local election officials.
- Maintain the national voter registration form developed in accordance with the National Voter Registration Act (NVRA) of 1993.
- Provide Congress with a bi-annual report to assess the impact of the NVRA.

The Standards Board and the Board of Advisors provide advice and guidance to EAC on Voluntary Voting System Guidelines and other election administration issues. In addition, the Technical Guidelines Development Committee (TGDC) assists EAC in the preparation of the VVSG. The VVSG sets the standards against which voting systems are tested. The Director of the National Institute of Standards and Technology (NIST) serves as the Chair of the TGDC and provides technical support to the Committee.

Additionally, HAVA specifies that NIST provide recommendations to EAC regarding voting system test laboratories. Since Fiscal Year 2004, EAC's annual appropriations have included funds for NIST support.

The Senate confirmed four Commissioners in December 2003 and EAC began operations in January 2004, within ten months of the date mandated by HAVA. Its Fiscal Year 2004 operating budget was $1.7 million. At the close of the fiscal year, EAC had a staff of 18.

EAC's focus in 2004 was to assemble staff, obtain office space, arrange for administrative support from the General Services Administration (GSA), establish a website, start clearinghouse operations, and distribute federal financial assistance to states. In regard to federal financial assistance, Congress appropriated nearly $3 billion in Fiscal Years 2003 and 2004 for payments to states under Titles I and II of HAVA. States received the funds to upgrade their voting systems, establish a statewide voter registration database, train election officials, and educate voters. As EAC did not begin operations until 2004, GSA initially distributed HAVA funds to the fifty states, Guam, Puerto Rico, the U.S. Virgin Islands, American Samoa and the District of Columbia on EAC's behalf in Fiscal Year 2003.

In FY 2004, EAC appointed a statutorily-required General Counsel. During Fiscal Year 2005, EAC appointed its other statutorily-required position, the Executive Director, and an interim Inspector General. EAC focus in subsequent years was on upgrading the VVSG, completing required research to promote effective federal elections and to present key data on election practices and voting, instituting a voting system testing and certification program, auditing state use of HAVA funds, and providing information on improving elections to its stakeholders.

In FY 2007, the full-time equivalent staffing ceiling of 24 was lifted. As of the end of FY 2009, EAC had a full-time staff of 43 employees, including three Commissioners. Since its inception, EAC has received $2.5 billion in requirements payments for the states based on a formula of the number of eligible voters, $14.7 million in discretionary grant funds for Poll Workers, Mock Elections and Election Data Collection, and transferred $17.7 million to NIST. EAC is located in Washington, D.C.

FISCAL YEAR 2011 HIGH PRIORITY GOALS

Voters need easy access to up-to-date information on where, when and how to vote. Leading up to an election year, election officials face an increase in activities to inform voters and recruit and train Election Day poll workers.

Federal elections are locally administered with a wide variety of practices and policies. Election officials work hard to conduct fair, accessible, accurate and secure elections by

informing the electorate and properly training poll workers. EAC assists states and local jurisdictions by providing tools and best practices to improve election administration practices, including pre-election testing and contingency planning materials, which promote a proactive approach to election management.

As states look to new technology and practices in voting (including remote access voting for Uniformed and Overseas Citizens Absentee Voting Act [UOCAVA] voters, vote by phone and accessible technology for disabled voters) and private sector manufacturers expand the number and type of voting systems available, EAC must be in a position to test the new systems against rigorous federal standards in a timely, efficient and high-quality manner.

As part of the process to prioritize tasks, maximize existing resources and focus on mission-specific goals, EAC defined a limited number of high-performance priority goals consistent with the Commission's Fiscal Years 2009-2014 Strategic Plan. The high-performance priority goals will help EAC measure its ability to provide assistance to the public and voters as well as meet the mandates of HAVA. Our focus in FY 2011 will be on the following high-performance priority goals:

1. Serve as a clearinghouse and provide election officials and voters with information regarding the process for casting a vote in the 2012 federal elections, including technical assistance and information, poll worker recruitment and training, and basic information for voters such as links to states' polling place locators and voter guides about how, when and where to vote for the 2012 federal elections.
2. Distribute materials designed to allow citizens who are not proficient in the English language to participate fully in federal elections to any jurisdictions covered by the Voting Rights Act Section 5 languages.
3. Provide voluntary best practices for computerized statewide voter registration list requirements and registration by mail guidance to the states.
4. Ensure that voting systems and modifications of already-certified systems submitted to EAC program are thoroughly and efficiently tested to federal standards.

Implementation of the high-performance priority goals in FY 2011

Goals 1a and 1b

1(a) Serve as a clearinghouse and provide election officials and voters with necessary information regarding the process for casting a vote in the 2012 federal elections.

1(b) Provide election officials with funding, technical assistance and information, as appropriate to support poll worker training, educate the

public, and help provide voters with access to information such as when and where to vote for the 2012 federal elections.

The first of the high-performance priority goals is aimed at assisting voters so that they have the necessary knowledge to cast and have their ballots counted on Election Day. Three EAC program areas will be involved in implementation of the goals—the Research, Policy and Program, Communications, and Grants divisions—in partnership with state and local election officials, voter advocacy groups, voters and all other stakeholders.

EAC will employ the following strategies to implement the goal:

- Increase the use and availability of EAC research products and teaching materials through the EAC clearinghouse and other electronic tools.
- Use the results of the 2010 evaluation of EAC products to revise publications such as the poll worker training manual, poll worker recruitment guide, and voter education materials for 2010 and beyond.
- Implement an annual research plan
- Disseminate voluntary guidance on provisional voting pursuant to Section 311 of HAVA.

Goal 2

Support jurisdictions covered by the Voting Rights Act Section 5 languages so that all jurisdictions have access to and use materials designed to allow citizens who are not proficient in the English language to participate fully in federal elections.

The aim of the goal is to ensure that all voters assigned to jurisdictions covered under Section 5 receive materials and support from EAC. These voters include persons who are Native American, Asian American, Alaskan Natives or of Spanish heritage. It also will help in ensuring that limited and non-English proficiency voters are able to register and vote. The lead EAC offices responsible for implementing the goal are the Language Accessibility Program of Research, Policy and Program Division, and the Grants Division. Partners in the effort include state and local election officials, voter advocacy groups and all other stakeholders.

EAC's strategy to achieve the goal is to update and expand the resources available through the Language Accessibility Program. Recent deliverables include the translation of the National Voter Registration Form into Chinese, Japanese, Korean, Tagalog, Vietnamese and Spanish. The EAC *Voters' Guide to Federal Elections* is also available in these seven languages, but the information needs to be updated. Based upon the 2010

Census results, EAC will provide other materials to jurisdictions determined to be covered under minority language provisions of the Voting Rights Act and any other jurisdiction that may have a need based on their population. Resources needed to achieve the goal include funds for translations, publications and the expenses related to working group and roundtable discussions with experts in these languages. These resources are included in the 2011 Budget request for EAC Salaries and Expenses.

Goal 3

Provide states with best practices for computerized statewide voter registration list requirements and registration by mail based on voluntary guidance provided by EAC pursuant to Section 311 of HAVA.

The aim of Goal 3 is to work with the 50 states, Puerto Rico, the U.S. Virgin Islands, the District of Columbia, Guam and American Samoa to adopt best practices that encourage increased voter participation and more accurate voter registration lists. The lead EAC division for the effort is Research, Policy and Program, in partnership with state and local election officials, and voter advocacy groups, the public and all other stakeholders.

HAVA requires states to "implement, in a uniform and nondiscriminatory manner, a single, uniform, official, centralized, interactive computerized statewide voter registration list...." Congress mandated that EAC issue voluntary guidance to assist the states in implementing the provisions of HAVA relating to statewide voter registration list requirements. EAC issued its first set of voluntary guidance in July 2005.

In accordance with EAC's Fiscal Years 2009-2014 Strategic Plan., EAC contracted with The National Academy of Sciences (NAS) to conduct further research to expand upon the 2005 voluntary guidance. Issued in 2009, the *Improving State Voter Registration Databases* report, included data gathered from the states about their databases and short-term and long-term recommendations for improving and implementing them. EAC will use the NAS report as a basis to update its 2005 voluntary guidance for statewide voter registration databases.

EAC's updated voluntary guidance on statewide voter registration databases may include but is not limited to: matching protocols, maintenance of accurate voter registration lists, data collection and storage, online functionality, identification requirements for first-time voters, and interoperability and intraoperability of databases; and help states promote intergovernmental cooperation between their various agencies and departments.

Goal 4

Ensure that modifications of certified systems submitted to EAC's program are successfully and efficiently tested to federal standards.

The goal is to ensure that modifications of certified systems submitted to EAC's Voting System Testing and Certification Program are thoroughly and efficiently tested to federal standards in a transparent manner.

The lead office for implementation of the goal is the Voting System Testing and Certification with input from partners including the National Institute of Standards and Technology and the TGDC.

EAC has aligned its five Strategic Plan goals—Communicate; Fund and Oversee; Study, Guide, and Assist, Test and Certify; and Manage—with the offices responsible for implementing them.

BUDGETS & PERFORMANCE MEASURES BY STRATEGIC PLAN GOAL

EAC's Fiscal Years 2009-2014 Strategic Plan provides the public with the framework for the Commission's short and long-term goals in accordance with HAVA. The plan lays out an approach to create a receptive and productive Commission fully capable of the unique leadership role it has been given as a national clearinghouse for election information, a manager of federal financial assistance, certifier of voting systems and a resource and hub of credible information for election officials throughout the nation.

The plan provides the structure for EAC's performance-based budget approach. A budget allocation history as well as the FY 2011 request accompanies each of the five strategic plan goals.

EAC's offices have been realigned to address the goals in the Strategic Plan:

- Goal 1: Communicate is administered by the Office of Communications and Clearinghouse.
- Goal 2: Funds and Oversee is administered by the Grants and Inspector General Offices.
- Goal 3: Study, Guide and Assist is aligned with the Research, Program and Policy unit.
- Goal 4: Test and Certify is administered by the Voting Systems and Certifications unit.
- Goal 5: Manage is aligned with the Boards, Commissioners, Executive Director, Chief Operating Officer, Chief Financial Officer and General Counsel.

A cost allocation model distributing administrative costs to the goals was developed and submitted to the financial statement auditors for review. Budgets tie to information in the financial statements.

Strategic Plan Goal 1: Communicate timely and accurate information on the effective administration of elections for federal office and on the operations and services offered by EAC.

Outcome: The Congress, federal agencies, state and local election officials and the public receive reliable, accurate, and non-partisan information about administering, conducting and participating in federal elections and how, where, and when Americans vote.

FY 2009 Enacted	FY 2010 Enacted	FY 2011 President's Budget
$985,017	$848,752	$840,167

The Communications division is responsible for administration of the agency's website, www.eac.gov which contains over 1,000 documents with information about voting system test plans, agency correspondence, and testimony from EAC monthly Public Meetings and hearings; and external and internal communications such as press releases, news articles and speeches, informational videotapes on the programs, a monthly newsletter about EAC activities and events to approximately 1,200 subscribers, and a weekly email on internal operations. The unit coordinates with EAC staff to communicate policies guidance, research, and other agency initiatives to the Public.

The Communications division is instrumental in ensuring all stakeholders receive information about the testing and certification program. EAC's Testing and Certification Voting System Reports Clearinghouse is where Communications staff post and disseminate voting system reports and studies that have been conducted or commissioned by a state or local government.

Using an interagency agreement with the U.S. Department of Agriculture, the division produced poll worker and election official training videos, available on the eac.gov website and on YouTube. As we prepare for the 2010 federal election year, EAC plans on producing four new training videos at approximately $8,000.

In 2009, in order to accelerate establishment of a Clearinghouse of information on federal elections and to ensure a cost-effective contract, EAC recompeted its contract which includes the Clearinghouse and a restructure of the website. With the new contract, EAC will continue to achieve our goal of serving as the trusted source for information about elections and election administration. In 2010, EAC intends to connect its stakeholders to a new, separately identifiable Clearinghouse on the EAC website. The fixed price for the website contract in FY 2011 is $130,000 with optional time and materials task orders.

Goal 1 is administered by a staff of three. The unit spends approximately $26,000 to produce the mandated EAC Annual Report.

Strategic Plan Goal 2: Deliver and manage federal funds effectively.

Outcome: States and other recipients promptly and accurately receive federal funds administered by EAC and use the funds appropriately to improve the administration of elections for federal office.

	FY 2009 Enacted	FY 2010 Enacted	FY 2011 President's Budget
Grants Management	$1,965,889	$1,914,069	$1,406,639
OIG	1,757,730	1,770,259	1,837,836
Total	$3,723,619	$3,684,328	$3,244,475

Goal 2 is administered by the Grants Management unit and the Office of the Inspector General (OIG).

In FY 2009, EAC reorganized, creating a Grants Management division. The division is responsible for distributing, monitoring, providing technical assistance to states and grantees on use of funds, and reporting on requirements payments and discretionary grants that improve administration of elections for federal office. The office negotiates indirect cost rates with grantees and resolves audit findings on use of HAVA funds.

With EAC's reorganization of the financial management functions, a new senior level grants director was hired in FY 2009. The director is emphasizing technical assistance to the states and grantees, offering workshops and training sessions using distance learning tools and services of a grant support contract. EAC will continue to work with the states and grantees to clarify their responsibilities they have in managing the funds they receive or are awarded.

A system to track audits and state completion of corrective actions will be established. Another goal is to achieve the performance targets for timeliness in the Strategic Plan, such as resolving 100 percent of audit findings, awarding grants in established timeframes, and submitting state plans to the Federal Register within 30 days of receipt.

Providing assistance to states about HAVA Section 251 funds, or requirements payments, is the division's highest priority. A total of $2.604 billion in requirements payments has been appropriated to the states. These funds may be used to implement provisional voting; provide information to voters; procure voting systems; implement a statewide voter registration database; implement identification requirements for first-time voters who register to vote by mail; and other activities to improve the administration of elections for federal office.

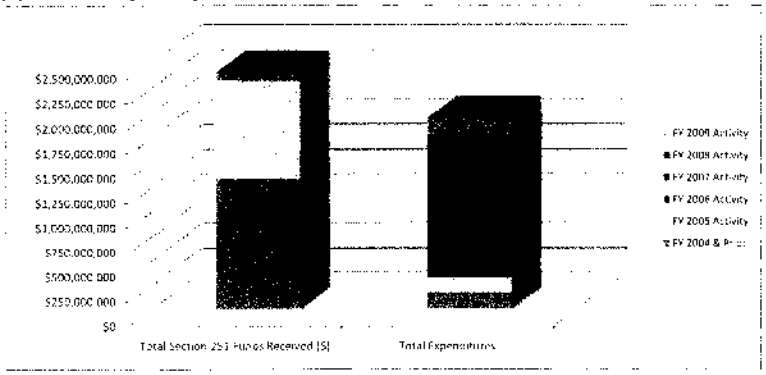
Requirements Payments Appropriations & Disbursements

Requirements Payment Appropriated		Amounts Disbursed	Percentage
Section 251 (2003 & 2004)	2,319,360,617	2,319,360,617	100%
Section 251 (2008)	115,000,000	80,450,626	70%
Section 251 (2009)	100,000,000	51,969,214	52%
Section 251 (2010)	70,000,000	6,608,177	9.4%
Total Appropriations	2,604,360,617	2,458,388,634	94.4%

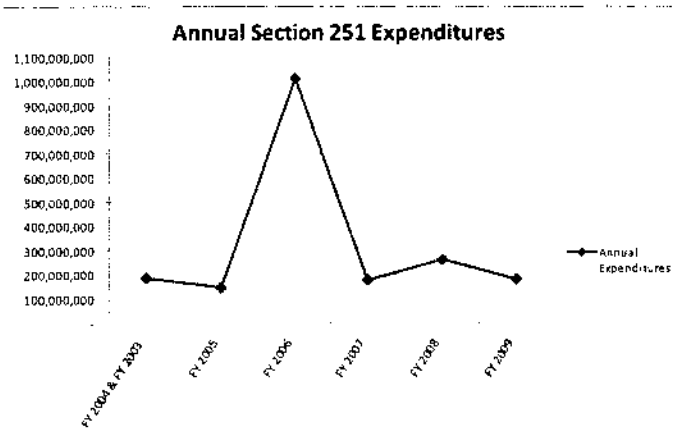
Based on aggregate financial reports from states reporting through September 30, 2009, with 80% of states reporting, and using projections for remaining states based on last year's spending rates, we can make several observations:

1. It takes about 18 months after a major disbursement of funds for states to begin spending funds. The time lag is due to state appropriations processes needed to secure matching funds and procurement processes needed to spend funds.

2. The implications for not disbursing funds in 2011 may be mitigated by the fact states will have received funds for three years in succession prior to 2011, so there are funds in pipeline to keep state processes moving forward.



3. The aggregate HAVA spending (Section 101 and Section 251) increased approximately $90 million from 2007 to 2008. After 2006, states are spending less in non-election years, but they are spending funds at a 2:1 ratio to how much is annually being appropriated. At this expenditure rate, Section 251 funds should be completely expended in 3-5 years. As of September 2009, 23 states have spent 90% or more of their 251 federal funds.



4. Twenty-one out of 55 states (and Territories) have certified as being compliant with Title III of HAVA, which includes meeting HAVA voting system standards (Section 301), provisional voting and information requirements and adopting computerized statewide voter registration systems. Of the 34 states that are not yet certified compliant 19 of those states have expended 90% or more of their federal 251 HAVA funds.

EAC's goal for 2010 is to better understand how much it will cost for each of these 34 states to become Title III compliant and how much it will annually cost to maintain that compliance. This information will be helpful for the 2012 budget process as we examine the continning budget needs associated with helping states maintain compliance with HAVA.

Our work in this area will include analysis of how much it will costs states to become compliant with the MOVE Act, which is relying on Section requirements payments. MOVE Act costs were not contemplated during the time the 2011 bndget was being developed.

The Grants Office is currently staffed by the director and a grants specialist with contractor and temporary staff support. An estimated $303,000 will be needed to print State Plans and grants notices in the Federal Register. In FY 2010, EAC plans on hiring one full-time staff in lieu of FY 2009 contractor support.

For FY 2011, the Office of the Inspector General initial request is $1,893,494. The President's Budget request is $1,837,836. The Inspector General has determined that these amounts will support operations for FY 2011. Of the total requested in the President's Budget, $25,000 is for staff training to meet the continuing education requirements applicable under Generally Accepted Government Auditing Standards, and $4,534 is for support for the Council of Inspectors General on Integrity and Efficiency.

OIG plans on increasing the number of HAVA funds audits from five per year to eight, and the number of reviews and investigations that are conducted. OIG plans on conducting two internal audits/evaluations of EAC programs and operations and an evaluation of its own operations in 2011.

As reported in the *OIG Semi-Annual Report to Congress, April 1, 2009 to September 30, 2009*:

"Since the inception of the audit program, the OIG has completed audits of 22 states – with audits of additional five states under way – and through the completed audits reported findings related to states' expenditures of nearly $25.5 million. In the first several fiscal years, the OIG questioned a greater percentage of HAVA funds based upon their use. However, over the past fiscal year, the OIG has seen a reduction in the monetary findings associated with its HAVA funds audits. This is directly attributable the states' efforts to effectively monitor and document their use of federal funds. In fact, one state audited in the current reporting period received no monetary findings and one state audited during a prior period received a clean audit."

An increase of one junior auditor was requested for FY 2010, in addition to the existing positions of the Inspector General, legal counsel, and senior auditor. OIG requests 3.5 additional staff – a director of audits, a journeyman auditor, an investigator, and a part-time administrative assistant – for 2011 to build two audit teams. The additional staff would be hired in lieu of a portion of the more than $900,000 in audit contracts awarded annually to increase flexibility to react to and further investigate questionable situations and potential audit findings. The staff would help manage contract audits to more efficiently review state and local government use of HAVA funds, expand grant audits to include the discretionary grant programs, and evaluate EAC operations.

Strategic Plan Goal 3: Identify and develop information on areas of pressing concern regarding the administration of elections for federal office and issue guidance, translations, best practices and recommended improvements as required by HAVA, and carry out responsibilities under the National Voter Registration Act.

> Outcome: As a result of this goal: 1) the election community and other key stakeholders improve the administration of elections for federal office on the bases of pertinent, impartial, timely, and high-quality

information, recommendations, guides and other tools on election and voting issues and 2) eligible citizens use the mail voter registration application to register to vote, register with a political party, or report a change of name, address, or other information.

FY 2009 Enacted	FY 2010 Enacted	FY 2011 President's Budget
$1,191,890	$1,544,817	$1,523,184

The Research, Policy and Programs division administers:

1) The Election Management Guidelines Program to provide information on topics such as Ballot Design, Contingency Planning, Managing Change in an Election Office, Media and Public Relations, and Developing an Audit Trail for the verification of votes, to help election officials promote secure, accurate, and accessible elections.

2) The Language Accessibility Program to provide informational materials on the federal election process and election terminology in languages other than English, translate the national voter registration form, and gather information from working groups to address the election needs of voters with limited or no English proficiency.

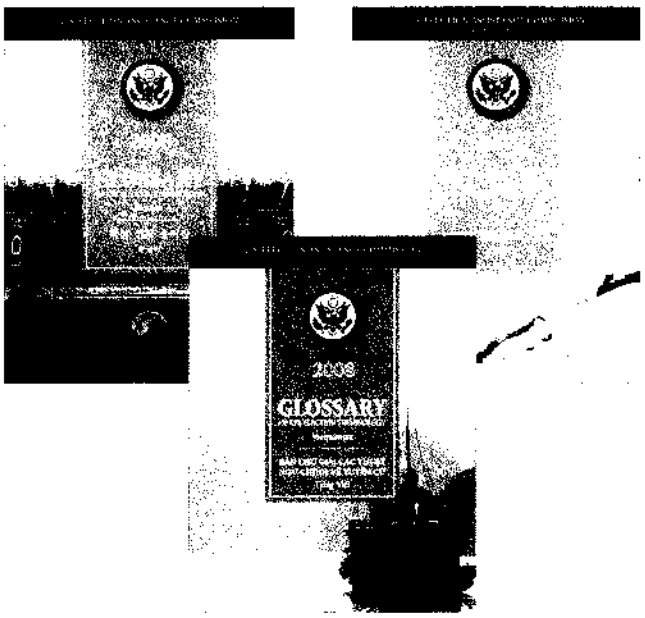
3) Provides materials to voters to facilitate successful participation in federal elections such as registering to vote.

4) Conducts election research on mandated topics.

HAVA mandates that EAC issue studies on the impact of free absentee ballot return postage on voter participation, electronic voting and Uniformed and Overseas Citizens Absentee Voting Act voters, the feasibility of alternative voting methods, the voting experiences of first-time voters who register to vote by mail, and the feasibility and advisability of identifying voters by Social Security Numbers.

Each year, staff presents potential Election Management Guideline (EMG) chapters and Quick Start Management Guide ideas to the Commissioners for their review and consideration. Ideas for new chapters and guides are gathered by program staff from a variety of sources in the elections field. Once reviewed by the Commissioners, staff from the Research, Policy and Programs Department complete preliminary research for each new agreed-upon chapter.

EMG chapters are vetted with the topical working group and made available for comment to the EAC's Board of Advisors and Standards Board through the Virtual Meeting Room.



The final version of each EMG chapter is formally adopted by the Commission. Once this has occurred the chapter is disseminated by mail and the Internet to all local and state election officials.

In 2011, EAC will release a report on data collected in the 2010 elections and a report to Congress assessing the impact of the National Voter Registration Act (NVRA) on the administration of elections for federal office. On August 28, 2009, the NVRA regulations were transferred from the Federal Election Commission to EAC. The project will involve review of the current regulations, any proposed changes to the regulations, and consideration of public comments. The EAC will conduct hearings to ensure broad participation in the rulemaking process. Final regulations must be adopted by a vote of the Commission following the public rulemaking process and published in the Federal Register before taking effect. In addition, EAC will update the Federal Election Commission's implementation manual to reflect any changes in the regulations and the additional requirements added by the passage of HAVA.

EAC's Board of Advisors and Standards Board assist in prioritizing research topics that are important and helpful to election officials. When new research projects are identified as priorities to undertake, a working group is organized. The members of the working

group provide feedback to Research staff about possible topics of study and are subject to final approval by Commissioners as part of the annual research plan.

Strategic Plan Goal 4: Build public confidence in elections by testing and certifying voting systems to improve system security, operation and accessibility.

Outcome: Voting equipment operates more reliably and securely and is more accessible to the disabled. States use EAC testing and certification program to ensure voting systems meet standards.

FY 2009 Enacted	FY 2010 Enacted	FY 2011 President's Budget
$1,672,406	$1,861,008	$1,825,642

Under HAVA, EAC is responsible for assisting states with improvements to voting systems through the distribution of federal funds and by providing a voluntary federal certification program. The federal government's first voluntary Voting System Testing and Certification Program for the states also provides the public the opportunity to review every aspect of certifying voting equipment, such as voting equipment system information, test plans and reports, and reports on irregularities. Comprehensive procedures for the program are detailed in EAC's Voting System Testing and Certification program.

The division works on EAC's full accreditation and certification program. Staff works with the National Institute of Standards and Technology (NIST) to evaluate and accredit voting system test laboratories and the management of the voting system certification process. The program assists states with voluntary certification of their systems, supports local elections officials in the areas of acceptance testing and pre-election system verification, increases quality control in voting system manufacturing, and provides clear procedures to manufacturers for the testing and certification of voting systems to specified federal standards consistent with the requirements of HAVA Section 231(a)(1).

In FY 2009, EAC increased the Testing and Certification staff to expedite the voting system certification process. An EAC certification means that a voting system has met the requirements of the federal standards by passing a series of comprehensive tests conducted by an EAC-accredited test laboratory. Procedural requirements for the Voting System Test Laboratory Program are detailed in EAC's Voting System Test Laboratory Manual. Currently, six voting systems are participating in EAC's Testing and Certification Program.

The additional staff hired in 2009 has improved the process by answering technical questions of the election officials and vendors, helping test lab vendors understand how

to test specialized systems, reviewing test plans, tracking complaints, visiting the testing labs, and keeping the technical review and approval process moving forward. The staff has made a commitment to match the testing time schedules provided by the voting system test laboratories and manufacturers. Staff holds weekly teleconferences with the labs and manufacturers of all testing engagements underway. Staff holds kick-off meetings with the labs and manufacturers to give the technical reviewers an opportunity to meet with the labs and manufacturers and ask them about everything they need to know about the systems for their reviews.

In addition to staffing and staff efforts to streamline the voting system certification process, EAC along with its Standards Board, Board of Advisors, and Technical Guidelines Development Committee (TGDC) (chaired by the director of NIST and comprised of 14 other members) work together to review voluntary testing standards. Efforts are underway to revise the 2005 Voluntary Voting System Guidelines. The revisions are aimed at aiding the creation of test suites that promote uniform, consistent and faster testing by eliminating bottlenecks in the testing process. Revisions will also provide clarification in key areas that may cause confusion and slow the process.

In 2011, EAC plans on transferring $3,250,000 to NIST via interagency agreement for activities required under Sections 221 *Technical Guidelines Development Committee* (TGDC), 231 *Certification and Testing of Voting Systems*, and 245 *Study and Report on Electronic Voting and the Electoral Process* of HAVA.

EAC and NIST seek to produce final reports by the second quarter of 2010 related to UOCAVA initiatives on Best Practices for Transmission of Election Material and Security Considerations for Remote Voting. NIST's interim report, "A Threat Analysis on UOCAVA Voting Systems," discusses the need to balance security and privacy in electronic transmission of voting materials with ensuring UOCAVA voters get to vote in a timely manner.

The Testing and Certification unit consists of six full-time staff, four part-time technical reviewers, and two contractual staff. Total cost of staff, reviewers, and contractors for FY 2011 is $1,254,941. Travel is budgeted at $280,500; printing at $105,200; other services at $180,000; and $5,000 for supplies. Current plans are to begin phasing out one of the contractual staff as new full-time staff are trained and can take over the function.

How does a Voting System Get Certified by the EAC?

Step one: Voting system manufacturers must register with the EAC.

Step two: Manufacturers must submit an application and select a federally accredited test laboratory to begin the testing process.

Step three: Test laboratory submits draft test plan to EAC for approval.

Step four: EAC approves test plan.

Step five: Voting system is tested to the applicable standards.

Step six: Testing concluded; draft test report submitted to EAC for approval.

Step seven: EAC approves test report and issues initial decision on certification.

Step eight: Test laboratory rebuilds voting system in a trusted environment, otherwise known as a "trusted build."

Step nine: Manufacturer provides software identification tools to EAC, which enables election officials to confirm use of EAC-certified systems.

Step ten: Manufacturer provides voting system software to EAC repository, allowing EAC to capture an official record of the voting system it has tested and certified.

Step eleven: Manufacturer agrees in writing to all EAC certification conditions and program requirements.

Step twelve: EAC certifies voting system.

Strategic Plan Goal 5: Achieve organizational and management excellence.

Outcome: EAC Commissioners and staff proficiently carry out EAC's strategic objectives.

Goal 5 consists of one clear-cut objective; to implement a high performance organization. Goal 5 is administered by the Commissioners, the Standards Board, the Board of Advisors, the Technical Guidelines Development Committee, Executive Director, Chief

Operating Officer and Chief Financial Officer with support from the Offices of the General Counsel and Administration.

In FY 2009, in response to the agency's first financial statement audit, EAC reorganized the agency structure and created a financial division. The division consists of a senior level grants director who administers HAVA funds, an accounting director who is a Certified Public Accountant, and a Chief Financial Officer who ensures that EAC is compliant with federal requirements and resources are used efficiently.

The CFO department will continue to focus on resolution of issues identified in audits, setting up sound systems and policies and procedures, working with managers on the relationship between budget and performance, maximizing use of staff and financial resources, and training EAC staff on financial management processes and their responsibilities.

Management is working to foster a culture of accountability among staff. The agency is seeking to improve staff satisfaction ratings and achieve management excellence through improved internal controls and human resource initiatives.

INFORMATION TECHNOLOGY

The Commission's information security program encompasses those measures necessary to protect the Commission's information resources. These measures include providing for each project: the appropriate technical, personnel, physical, administrative, environmental and telecommunications safeguards; and continuity of operations through contingency or disaster recovery plans. The Commission's protective measures cover the following information resources: data, applications, software, hardware, physical facilities and telecommunications. The Commission's information security program assures that each automated information system has a level of security that is commensurate with the risk and magnitude of the harm that could result from the loss, misuse, unauthorized disclosure or improper modification of the information contained in the system.

Currently, EAC depends on GSA for email, internet and information technology (IT) security services, and on a contractor for maintenance of the website, www.eac.gov. Current EAC IT staff maintains personal computers and smartphones, provide software requested by EAC staff, and perform vulnerability scans. The agency has a shared drive but does not have an intranet where policies and procedures can be posted.
EAC is GSA's last IT client agency. EAC's vision is to be responsible for our own infrastructure led by a qualified Chief Information Officer (CIO). EAC expects to replace the acting CIO with a CIO in the second quarter of FY 2010. The CIO will work on integration of EAC systems, upgrade the agency's email to MS Outlook from Lotus Notes, assist the directors with systems to capture performance metric data, and guide

EAC in implementation of an automated Time and Attendance system and an e-Travel system. Currently, EAC submits hard copy exception-based time sheets to GSA, where the Electronic Time and Attendance Management System is used. EAC submits hard copy Travel Authorizations and Vouchers to GSA.

CREATIVE SOLUTIONS & APPROACHES

Thanks to an innovative and creative staff, EAC has implemented several initiatives to use contractors more efficiently, save money, leverage partnerships and increase productivity throughout the Commission.

Procurement Innovations

Beginning in FY 2008, EAC started the process of hiring staff in lieu of contractors for its research and evaluation work. By FY 2009, EAC had phased out 12 contracts awarded by the Department of Interior on EAC's behalf and instead used staff to produce publications and reports.

In accordance with the President's Memorandum on Government Contracting, issued on March 4, 2009, we reviewed EAC's existing contracts and current acquisition practices to target achievable cost savings. The acquisition budget for FY 2010 is budgeted at $4.3 million and FY 2011 is approximately $3.3 million. The following items are proposed to save 3.5 percent of EAC's baseline contract spending in FY 2010 and a further 3.5 percent in FY 2011.

Acquisition Savings Plans Steps to be Taken for FY2010/2011

1) Perform an analysis of organizations within EAC to consider the continued need and cost-effectiveness of out-sourcing expertise that could be staffed in-house.
2) Cost savings are projected by converting current out-sourced resources to current or future in-house staff for ongoing work tied to growth projections of EAC.
3) Re-compete two current contracts to obtain cost reductions:
   - EAC Website Maintenance & Hosting Contract. Savings in 2011: $235,000
   - EAC Election Day Survey Analysis Contract: $130,000 in 2010

Partnerships and Collaboration

The federal government consists of a wealth of valuable resources, including experts in the areas of policy, budget and technology. In recent years, federal agencies have experienced an increase in cross-agency collaboration, which has facilitated the sharing of resources and knowledge. For a small agency like EAC, these federal resource hubs are invaluable. EAC employees have joined federal organizations like the Small Agency Council, which offers ways for agencies to share training costs and ideas. Through the Council, the participants pooled resources to fund training classes through the Gradnate School (formerly the United States Department of Agriculture [USDA] Graduate School). Participants even share physical training space. Due to the cost savings and the small agency perspective provided by the trainings, EAC intends to continue being an active participant in FY 2011.

EAC also participates in events sponsored by the Web Managers' Council, an interagency group of senior federal government web managers who collaborate to improve the online delivery of U.S. Government information and services. The Council offers training courses at reduced prices and hosts a list-serve in which federal employees exchange ideas, ask questions and share solutions. EAC recently participated in training sponsored by the General Services Administration for www.data.gov. Communications Division employees will continue to draw upon the expertise of the group of federal employees managing this new site, which is the designated location for high-value federal data sets.

As part of EAC's effort to develop and share best practices in election administration, EAC contracted with USDA, Office of Communications, Broadcast Media and Technology Center to produce training videos. The collaboration resulted in four very well received videos about polling place set-up, accessibility at the polling place, contingency planning and an overview about how the EAC tests and certifies voting systems. Videos are available at www.eac.gov as well as on EAC's YouTube page, Help America Vote. EAC will again partner with USDA to produce another series of videos, including one featuring a Mock Election Grant recipient's approach to forming a partnership with a local election office.

An invaluable resource for EAC has been the Target Center at USDA. The Target Center's mission is to make sure that USDA employees have "safe and equal access to electronic and information technology by assessing, educating, and advocating for the integration of assistive technology and worksite accommodations." EAC reached out to the Target Center for assistance with making documents accessible. Consequently, the Center hosted a training session for the entire EAC staff and continues to be available to us if we need assistance.

EMPLOYEE SATISFACTION & SUPPORT

Program and financial integrity depends on well-structured human resource policies and practices. Along with the Chief Operating Officer and Chief Financial Officer, EAC's Human Resource (HR) Director in the Office of the Chief Operating Officer is charged with improving program operations and tracking accomplishment of goals. In 2009, HR began the process of implementing policies and procedures to improve staff performance and to establish a human resource accountability system. The system will ensure effective Human Resource management in support of the agency's Strategic Plan and in adherence to the federal merit systems principles, and other federal HR laws and regulations.

EAC is committed to building a diverse, well-trained, high-performing workforce. Managers and supervisors are accountable for efficient and effective human resources management in support of the agency's mission and in accordance with merit system principles. Supervisors will undergo a human resources management training program with the aim of enhancing managers' and supervisors' ability to accurately evaluate performance, recognize good performance, and take corrective action as needed to address identified performance deficiencies. They will be trained on effective performance management: the importance of providing feedback to employees frequently throughout the year, and of conducting regular formal performance appraisals with appropriate detailed feedback to help staff grow and succeed. The supervisory training program also includes modules on EEOC and sexual harassment, No Fear Act, teambuilding, ergonomics, and work/life balance.

EAC has expanded the services provided under the Employee Assistance Program via a Memorandum of Understanding with Federal Occupational Health to include clinic services such as first aid and blood pressure checks and the WorkLife4You Program. The Work/Life Program includes consultations for staff on such topics as child and elder care, adoption, career development, retirement planning, and services for adults with disabilities and illnesses

Staff and supervisors will also be responsible for annual Performance Plans and Individual Development Plans (IDPs) to help employees identify strengths and weaknesses, reach their potential and attain their career goals. The Performance Plans will address not only accomplishment of strategic plan goals and how each employee contributes to achievement of the agency's mission and goals, but will also address core competencies and performance elements for each position. Development activities in the IDPs include in addition to formal training, mentoring, coaching, computer-assisted training, brown bag lunch-time learning groups, and formal feedback.

In September 2007, EAC produced a Succession Management Framework to mitigate the impact of employee attrition. The plan outlines recruitment, selection criteria,

identification of agency-wide core competencies required, development of staff, and retention of staff by providing challenges and rewards. The acquisition budget for FY 2010 is planned at $4.3 million and FY 2011 is approximately $3.3 million.

INVESTING IN EMPLOYEE SATISFACTION & WELLNESS

EAC plans on using employee survey findings to improve recruitment, retention and future ratings. We are developing an action plan to address the specific areas that employees have identified as needing improvement. One area identified as needing improvement is leadership and supervisory skills. As mentioned in the Internal Control section of this document, a Supervisory Development Program will be offered with courses in project cost management; EEO, sexual harassment and diversity; financial management, human resources management, and performance appraisal. Further, the agency arranges team building exercises to improve internal communication over and above the activities described in Goal 1 Communicate.

The acquisition budget for FY 2010 is planned at $4.3 million and FY 2011 is approximately $3.3 million. In an effort to promote health and wellness initiatives, EAC provides staff with an Employee Assistance Program via a Memorandum of Understanding with Federal Occupational Health. EAC has expanded the services provided under the MOU to include clinic services such as first aid and blood pressure checks and the WorkLife4You Program. The Work/Life Program includes consultations for staff on such topics as child and elder care, adoption, career development, retirement planning, and services for adults with disabilities and illnesses. In addition, EAC does not have to expend funds on offering a fitness facility as one is provided to staff in the building to use free of charge. EAC participates in the Flexible Spending Account program, and provides flexible work schedules, telecommuting, and transit benefits. In FY 2009, EAC purchased automated external defibrillators for each of its three locations and provided cardio-pulmonary resuscitation training to approximately 12 staff on use of the machines through the Red Cross.

LOOKING FORWARD

FY 2011 will be a busy year for EAC as we prepare for a presidential election year. We anticipate that the technology investments and Web site enhancements will help us deliver and provide information to a larger audience, enabling more voters to have a successful experience casting their ballot. We will expand the online resources provided to election officials, including an effort to collect best practices about contingency planning, poll worker training, pre-election testing and audits.

EAC's Voting System Testing and Certification Division will be working towards the final adoption of the next iteration of the VVSG, as well as manage the responsibilities that will come from the EAC-certified voting systems operating in the field, many of them for the first time. Manufacturers are obligated under the terms of the program to report problems that occur in the field, and we must make sure we have the resources to thoroughly follow up. Efforts to work with the Federal Voting Assistance Program and NIST to develop a remote electronic voting system for overseas citizens and the military will continue.

Staff will collect information from the 2010 election for EAC's Election Administration and Voting Survey, including data about the rate of participation for overseas citizens and military voters. Almost simultaneously, they will begin developing the survey instrument for the 2012 election.

To support staff as they embark upon the many responsibilities ahead, EAC will continue to provide training, support services and make sure that the work environment is healthy and will promote productivity. Therefore, EAC will continue to focus inward to improve internal operations. The Design Team will continue to serve as a liaison between staff and management, making sure the lines of communication stay open.

EAC will continue to form strategic partnerships within the federal government, employ the use of technology to broaden our reach and deliver information to more people, and be responsible stewards of federal resources.

Mr. SERRANO. Thank you so much. Thank you for your testimony.

Two quick things come to mind that I didn't have prepared to ask. Refresh my memory. The five languages, the six languages, is that by law or is that—that is by law, right?

Ms. DAVIDSON. That is correct. The National Voter Registration Act requires that the languages be available in certain areas within the United States underneath Title—I want to say Title V requirements, but I am not sure that is right, and then there is that section of the National Voter Registration Act.

Mr. SERRANO. Okay. And, secondly, just on a personal level, when we say you were a local election official, you did it all at the local level, right?

Ms. DAVIDSON. I was a local election official in a very small county, very rural county. And then also I was the election official—elected county clerk in both of them—in a very large county. So I had the rural and the metro experience, and they are very different.

Mr. SERRANO. I just think that every so often we should mention people in this society who don't get much credit. Having been in elected office for 36 years now, some of the folks that work at the local level never get any credit; and I am not talking just about the officials but the folks that get up at 4:30 in the morning, for instance, in New York to be at the poll site by 5:00 to have those machines ready by 6:00, and then they are there until 9:00, and then they have to count. And years like last year, the count went on, just the lines of people outside and the whole thing; and they do it for very little money and with no fanfare. And so every so often in public we should give them a special thanks because, without them, it doesn't happen.

Ms. DAVIDSON. Absolutely. You are absolutely correct. They are really the vital source of our Election Day process. Without them, we couldn't conduct the elections.

Mr. SERRANO. Right. Congress provided $115 million in fiscal year 2008 and $100 million in 2009 and $75 million for fiscal year 2011 for grants to States for the purpose of helping them meet the requirements of the Help America Vote Act. What percentage of this funding has been distributed to States? What are the reasons for funding not yet being disbursed or used by the States? And, lastly, how fast are States spending HAVA funds relative to the rate at which this subcommittee has provided funds to them?

Ms. DAVIDSON. The States in some areas—it is State by State. Every State is different. I need to make that statement, first of all.

But we have appropriated all the funds except about $200 million of the funds, and that has been the later funds that have been given for us to appropriate to the county and—to the States, I should say, to the States—And the reason why they haven't been able to meet that 5 percent. We have been trying to work with the States to give them the flexibility. If they can meet part of that, we will give them the money that they—a portion of that 5 percent that they have met to give them that capability at drawing down some of their funds. But we do have some States that are really under dire stress.

Mr. SERRANO. And this stress is caused by what, their own inability to absorb the funds, their inaction, resistance? Is there any resistance?

Ms. DAVIDSON. Mr. Chairman, there is no resistance. If the States had the 5 percent match, they have to go through their own legislative process to get the 5 percent and their budget or their budget process, and it usually is legislative. Some States, as you notice, it took them 2 years to be able to get their money. Some of our States only—their legislators only meet every 2 years. So that is one of the things that holds up them getting them money.

And then the other thing is we have found that there is just as much problem out there with the States currently—the ability of meeting the financial needs, they just haven't been able to get the 5 percent. States have asked us for special ability—like Florida asked us if they could use their interest money to meet that 5 percent. We don't have that authority, obviously. So right now, no, we can't do that.

Mr. SERRANO. This was the interest money on——

Ms. DAVIDSON. That they had made on HAVA and haven't spent today.

Mr. SERRANO. I see.

Now, on a personal note, I know that my State of New York had some problems catching up to date, I would say. From your point of view, are we ready to go in New York? I know what they tell me, but are they ready to go?

Ms. DAVIDSON. New York, we are aware, has been spending money and buying equipment this last year. I think New York City was one of the last counties that actually purchased—or the city and county that actually purchased the equipment. So it is probably being manufactured and delivered as we are speaking, and it should be utilized in this next election.

Mr. SERRANO. Okay. That makes me a little nervous with September primaries and November elections. Not that I have a special interest, but——

Ms. DAVIDSON. Well, I can tell you, Mr. Chair, that we found—as you stated in your opening statement, it takes time for election officials to write new manuals when they get new voting systems, train their poll workers, train, obviously, their office staff and even training the voters to vote on new systems. So we had more problems. When we put all of the systems in at one time nearly throughout the United States, there were more problems. And, as you have said, the problems seem to have ceased this last election, be a lot less. We are always going to be training new election officials, but definitely we hope—and I know that they are working very hard at training everybody to make sure it is a smooth election for everyone.

Mr. SERRANO. Thank you.

Now, as you know, there are proposed budget cuts, a decrease of $75 million. We also know there are States that have the leftover dollars. So will all States be eventually impacted by the proposed budget cut in the elections reform program in 2011? How will States continue to be compliant in the future? In other words, what do States need in the mid to long term to keep up with the HAVA requirements?

Ms. DAVIDSON. You know, as I said in my opening portion, every State is different. I really think that you need to talk to the individual States. Some States have spent all of their money. Others have spent a percentage of it. But, really, it is up to the State, every State. How they have run their elections and how they run them, because of their State laws, is much different throughout the Nation. So it is by an individual State-to-State need.

Mr. SERRANO. Thank you. I can't believe that the chairman stuck to the 5-minute rule.

Mrs. Emerson.

Mrs. EMERSON. Wow, I guess I better be—don't start the clock yet. How did the Yanks do last night?

Mr. SERRANO. The Yankees were at the White House yesterday.

Mrs. EMERSON. Did you have fun?

Mr. SERRANO. It was fabulous. I yelled out, 28, Joe. Not meaning his number, but 28th World Series, the next one. Arrogant on my part.

Mrs. EMERSON. Did you have your picture made with everybody?

Mr. SERRANO. No, they wouldn't let us near them. It was terrible.

Mrs. EMERSON. When the Cardinals came from having won the World Series we got our pictures.

Mr. SERRANO. And I am a Cardinal, right?

The greatest time was when the President complained that the White Sox would probably never win a World Series again; and Joe Girardi, the manager, says, Mr. President, hold onto the Yankee trophy. He said, you better hold onto it because it will be the last time you touch a World Series trophy.

Mrs. EMERSON. Sorry. We have this little baseball competition going here. My Cardinals won last night, too.

Okay. Ms. Davidson, you said that the States are not allowed to use the interest money that they earn on the monies that they have received for purposes of their 5 percent match, correct? So what do they do with this interest money? What can they use it on?

Ms. DAVIDSON. That is correct. If a State has not met the requirements of Title III, they can purchase more voting equipment. They can use it on a voting registration system or improving it. A lot of States are having to improve their voter registration because of the MOVE Act. They can also use it on the procedures on doing the—let me stop and think. There are four reasons: provisional ballots, and then educating voters, and putting the information up in the polling place, also.

Mrs. EMERSON. Well, it seems to me, though, just looking at these numbers—for example, Missouri, which is my home State, received $44,914,650. They have spent 88.9 percent of their funds, which is—excuse me, no, that is plus interest—95.7 percent of their funds. So that is good. They are still sitting on $3,878,000 plus. And it seems to me that it is somewhat advantageous for the States to just be sitting on this money and not spending it because they are earning all this interest. So it multiples and they have got more money to spend, correct?

Ms. DAVIDSON. Of course, they make a lot less on the interest now than what they used to.

Mrs. EMERSON. But New York is sitting on $22 million interest. Missouri is on almost $3.9 million. They make less on interest, but it is still sitting there, and it is growing a little bit.

Ms. DAVIDSON. You are correct. That report is as of September 30, 2009, So there could be more expenditures made since that time.

Mrs. EMERSON. Since that time. Okay.

Now, given the fact that for every other government program known to mankind, practically, the State or the local match is 25 percent, 30 percent, even up to 40 percent, so 5 percent just doesn't seem a lot to me, given—and I am very sympathetic and understanding of the financial positions States find themselves in, but I am still looking at this list of how much money all the States are sitting on and I am wondering why we are sending the States—they are sitting on nearly a billion dollars worth of unspent HAVA grant money; and, given that our deficit is projected to be $1.6 trillion this year, why would we be giving these States more money? Please tell me why.

Ms. DAVIDSON. Well, what I can tell you is every State is different. Some of States have spent all of their money, including their interest money. There have been a few of those that have spent 110 percent. So that includes their interest money. Other States have spent an average of probably 80 percent. Some States are still holding on to probably about 50 percent of their money, and I imagine New York is in that category is shown there because they have just started spending the money this last year. So with the report being due in September of 2009, there is quite a bit of money to spend in that area since that time. But every State is so different. So it is hard for me to tell you why.

I can tell you from history that States know this money is not going to continue, and they are afraid they are not going to be able to continue meeting the needs of the contracting, supporting their voting systems. They know that voting systems only last about 8 to 10 years, and they know they are going to be up for a new allocation of money that has to be spent, and they are afraid where they are going to get that because they know the Federal money has not been appropriated for anything like that.

Mrs. EMERSON. We keep giving them money, though, so it seems to me—I don't know. Do you think it would be better for us to take back the money that we have got and wait for them to apply for grants and you all just hold it in D.C., as opposed to leaving it there for them since they are not applying for the grants in the first place?

Ms. DAVIDSON. I really don't have an opinion on that. The States being able to have it in their funds and spend it at the time—I do know that when we have money that has been allocated to give to the States it takes them a great deal of time to first meet the HAVA requirements, have a State plan, how they are going to spend it and have that put in the Federal register and then also do any type of expenditures they have to go through their appropriation that is required by State law. So it does take them about 18 months to be able to, from the time it has been appropriated, to be able to receive it and spend it is what we are finding.

Mrs. EMERSON. Could you provide us with some updated figures? Do you have any beyond September 30, 2009?

Ms. DAVIDSON. I don't—the laws require them to report on that time. Now——

Mrs. EMERSON. Do you mean like quarterly?

Ms. DAVIDSON. The reports are due September. So that is——

Mrs. EMERSON. Each year?

Ms. DAVIDSON. Each year. So I am trying to think if I could ask them to give us an additional report right away without going through the Paperwork Reduction Act. We do have to do that; and, as you know, that takes 3 to 4 months to get it through.

Mrs. EMERSON. Could you just send them an e-mail maybe?

Ms. DAVIDSON. I am sorry to say if I ask more than nine people, I fall underneath that. Even with an e-mail. But I will see if we have anything. I will report back to you.

Mrs. EMERSON. That would be awesome. Thank you so much.

Ms. DAVIDSON. I definitely will do that.

Mrs. EMERSON. Thank you.

Mr. SERRANO. Just as an aside, I am told that part of what is happening in the States is that the States are unsure what commitment the Federal Government will make to them as they move along. For instance, all the ones who are already on board now in 10 years will have to replace the machines. In the meantime, machines break down and so on.

Then there is the other point, I am told, where funds sitting there may have already been obligated in some way. So it is not that they are not spent.

Mrs. EMERSON. That is why I asked if we could get a midterm report by e-mail so we could keep the paper at a low level.

Mr. SERRANO. I am for paper, but—yes.

Ms. DAVIDSON. There is one thing that comes to light that has happened this last year, the MOVE Act. The MOVE Act has required several elements for the States to meet that will be additional funding that they will be spending of their HAVA dollars. And one of those is to make their system where they can send out electronically to the overseas and the military any blank ballots and election material. They also have to be able to track that ballot, the absentee ballot when it goes out and when it comes in and put that up on a Web site to make it available to the individuals.

So their systems will need work; and every time that we even ask for a change of our report, that costs the States money. So I can tell you that much. When laws are changed, obviously, that costs money for them; and they can utilize the HAVA dollars in meeting those needs.

Mr. SERRANO. Since I am lobbying my Republican colleagues for a bill that is on the floor on Thursday——

Mrs. EMERSON. He is being nice to us.

Mr. SERRANO. Mrs. Emerson is one of the greatest ranking members in history; and now I yield to one of the greatest members in the history of the world, Mr. Culberson, under the 5–minute rule.

Mr. CULBERSON. Thank you very much, Mr. Chairman.

We really do appreciate your service, Ms. Davidson. Thank you very much.

When a State election voting system is certified as accredited, you are looking not only at the actual machinery and mechanism the State uses for people to vote but their entire voting system, correct? You are looking at the way they conduct the election, the way that the State ensures it that people with disabilities or other language barriers have access to vote, that sort of thing. You are looking at the whole comprehensive system or just the machine?

Ms. DAVIDSON. I am sorry to tell you that I cannot meet your dream. It is just the equipment that we look at. We test it by the standards that have been set by the TGDC, NIST, and the EAC. So it is tested just to those standards.

Mr. CULBERSON. As I recall—and I know all of us were here after the—I think this law was initially passed in 2003, 2002—2002—in response to the problem with the Florida election and hanging chads and the punch card system. We are trying to find a way in Federal elections to make sure the votes are counted accurately and honestly, and I know that the money that the States are given as a part of the funding is to help them replace their old punch card system, correct? And we ideally want States to be able to move to an electronic system that has been certified as accurate by the Election Assistance Commission, correct?

Ms. DAVIDSON. That is correct.

Mr. CULBERSON. You also, I notice in your report, have as a part of your responsibility, in addition to making—there is a national voter registration form, some standards that if it is a Federal election—obviously, if it is a State election that is there, we, as the Federal Government, can't necessarily dictate to the States what sort of standards they are going to set in a State election. But if it is a Federal election, this national voter registration form, just a standard that was adopted apparently in 1993, that is also a part of your charge, is to make sure that States are registering and allowing people to vote that are qualified, correct?

Ms. DAVIDSON. That form is utilized by anybody throughout the Nation, along with the State form. They are not required to only accept that form. I mean, they have to accept that form, but they also can utilize their own State form. They also utilize the Federal form that FVAP hands out. That is the overseas and military form. So they utilize all those forms, but it is not mandated that is the only form they can use.

Mr. CULBERSON. What I am driving at is—and, also, I noticed you also help States with this funding they can also use to help keep their voter registration lists purged from people who pass away or are disqualified because of a felony conviction, et cetera; is that correct?

Ms. DAVIDSON. That is correct.

Mr. CULBERSON. What I am driving at is, how do we help ensure that States are registering people who are qualified, that are able to vote, and that we are not voting people that are either felons or otherwise disqualified because they are not a citizen, for example?

Ms. DAVIDSON. Everything that the Election Assistance Commission does is voluntary except provide the form and the rules that we have to go through to develop that form.

Mr. CULBERSON. But the States, by accepting the money, they are locked in to comply with the requirements of the Act.

Ms. DAVIDSON. Remember, we are an assistance commission. We can give them all kinds of assistance. They are not required to accept that. Even our testing that we do on equipment, that is a voluntary process. The States can utilize equipment that has been tested and certified by the EAC or they can go out and buy equipment on their own and it does not meet our qualifications.

Mr. CULBERSON. But once the State accepts the funding, they are not required to comply with any of the——

Ms. DAVIDSON. It is still an assistance commission.

Mr. CULBERSON. Have any of the States rejected the funding?

Ms. DAVIDSON. No, no States have rejected the funding. There was a couple of States that rejected the initial up-front funding to replace the—I believe that is the 102 money. The 102 money, they rejected that; and I think it was only one or two States that rejected it, wanted to keep their same system that they had.

Mr. CULBERSON. Who was that? What States?

Ms. DAVIDSON. Through the 102 money was to buy one piece of equipment for every precinct that met the needs of the disability community to be able to vote openly and fairly and confidentially. That it had to meet those standards, also.

Mr. CULBERSON. What, if anything, does the Commission do to ensure that the voter registration rolls are purged of people that have passed away, become convicted of a felony, or that the voter registration rolls do not contain the names of people who are not eligible to vote because they are not citizens?

Ms. DAVIDSON. We do not have any authority. We are not a regulatory agency at all in that area. The only ones that really review that is the Justice Department.

Mr. CULBERSON. Or the Secretary of the individual States—

Ms. DAVIDSON. The Secretaries of States and also the Attorneys General within their own States, obviously. Yes. But I meant at the Federal level.

Mr. CULBERSON. Thank you.

Thank you very much, Mr. Chairman.

Mr. SERRANO. Just an editorial comment. If there is something I know about undocumented folks is that they really don't want to be found out. The idea of going to a register to vote is like in your face, here I am, and it is just the opposite.

Ms. Lee, before you came in, I made a comment that I was being extra nice to all colleagues because I need your votes on Thursday. But you have been with me for a few years on that. I am still going to introduce you as the greatest Member of Congress in the history of the world.

Ms. LEE. Thank you very much, Mr. Chairman. And that vote on Thursday, I think it is extremely important in terms of democracy building.

Let me thank you for being here. I apologize for being late. I hope my questions are not redundant.

Let me just say, Ms. Davidson, I, of course, come—my congressional district is in Oakland, California, northern California. But I was born in El Paso, Texas. So I come from a State where there was a poll tax and I went through the civil rights struggles and finally got the right to vote, my family and friends. And so the protection of the rights of voters in the election process is very, very

dear to not only myself but members of the Congressional Black Caucus, to all of us.

After the Bush versus Gore decision, I once again became very concerned about the protection of the rights of our voters and the election process, from ballot issues in Florida to voting machine dysfunctions. There were real issues that needed to be resolved.

And since the right to vote is really at the core of our Constitution and at heart of the civil rights movement, I guess I am very concerned about how the Help America Vote Act of 2002 is being implemented, especially as it relates to, one, the commissioners.

Now, you can correct me if I am wrong. It is my understanding right now there are three commissioners and there is one Democrat on the Commission and the vacancy. I want to know how that affects the deliberations and the operations of the Commission in terms of the real imbalance in terms of political party affiliation and the important work that needs to be done. So that is my first question.

Secondly, of course, you know, the lack of diversity among the 37-member Board of Advisors and the 110-member Standards Board and the hundreds of election officers around the country, do you have a breakdown on the demographics of the Board of Advisors and the Standards Board?

Of course, we have 50 percent women in our country, 65 percent white, 15 percent Hispanic or Latino, 12 percent African American, 4.5 percent Asian American, 1 percent American Indian, point 2 percent native Hawaiian and other Pacific islanders, and 1.7 percent persons who claim two or more races. So I think it is very important to get it right because of the history of what we have been through in our country to make sure that diversity is there in a very clear way. So I would like to find out if you have that information. If not, could you submit to the committee?

Ms. DAVIDSON. The first question on the three members of the EAC commissioners, we are a nonpartisan board. We act as a nonpartisan board. There have been times when it has been one Republican and two Democrats with vacancy, is how it seems to work. But I have not seen that be a problem in any way, shape, or form.

The other question, the Standards Board is two members from each State; and one is appointed by the Secretary of State for the State and then the local individual is appointed by the locality. I do not have a breakdown of that board at all, and I am not sure I would be accurate in trying to guess the diversity of the nationality of individuals.

And, second, the Advisory Board is appointed by other people than the EAC, so we have never, ever had a breakdown there, either. I can tell you that the Standards Board is half and half Democrat and Republican. That is the only thing that the law made sure, that there wasn't a lopsidedness on that Board.

Ms. LEE. Well, I guess, Mr. Chairman, I don't know if we could ask the Commission for the breakdown in terms of gender and race on these boards. Because, again, it may be fine. It may reflect the diversity of our Nation, and it may not. And I think it is important that we know the background and the race, ethnicity, and gender of people on the 37-member Board and the 110-member Standard Board. Because if they didn't take diversity into consideration, then

we may not have a Board that is diverse. Or if they did, we are fine.

Ms. DAVIDSON. I will be more than happy to try to collect that information, but, again, I will have to go through the Paperwork Reduction Act to be able to collect that information for you.

Ms. LEE. That is fine. Whatever it takes.

Ms. DAVIDSON. It may take a while. But I would be happy to put that issue into action and be able to work on it.

Ms. LEE. I really appreciate it and just let us know what you think in terms of time frame, however long it takes. But we need to know sort of the time frame it would take to get this.

Ms. DAVIDSON. I will try my best in as short of time as possible.

Ms. LEE. Thank you.

Ms. LEE. Finally, let me ask you about the needs of Americans with disabilities and access to voting machines, written ballot, and other ways to verify that the vote that they believe they are casting is actually the one cast. How are we moving in terms of Americans with disabilities? My sister has a disability, and I am very in tune with the needs of the disabled in terms of the voting machine issues and all the barriers that have been there for the disabled community.

Ms. DAVIDSON. You are absolutely right. And with the Help America Vote, that was one of the main issues that was in that main legislation.

We have done several things. The equipment that is out there, we have pushed very hard to make sure that we are meeting more and more disabilities. You have got to remember somebody could have more than one disability as they go to the polling place, and it is very important by law they be able to vote independently and privately. And so we are working very hard on that.

We also received an $8 million grant to move forward on a study for the disability community on equipment, and that grant is getting ready to go out. Part of that grant we are doing with the injured military voters, that we have about a $500,000 grant that will go for a tally vote either later today or tomorrow, for the commissioners to vote on. And that is to study what the needs are of our individuals returning back from the military with some type of—being injured and meeting that need. So that is part of that $8 million grant.

The rest of it will go out very shortly for study of disability issues and needs that we can improve upon in the future. So we are hoping that that grant is very popular and we get a lot of information.

Ms. LEE. Great. That is very important. But it is hard to believe that we are just going to begin to study it. Don't we have the data already that show what the needs of the disabled are and how to effectively ensure that they vote—have access to voting?

Ms. DAVIDSON. We did a roundtable in the last of 2009 with the community that was really all the community from the diverse community of disability. And what we found was that education was one of the things that we need to be doing more on as well as the equipment. The equipment that we have, the DREs, met more the needs of the disability, but that was the equipment that came up where the public felt—or some of the public felt that it was not as secure as it should be.

Ms. LEE. What happened to Diebold, parenthetically?

Ms. DAVIDSON. Diebold has been purchased by ES&S, and that is being reviewed by the Department of Justice, whether they can purchase that. It is an issue that is being—it is clearly not a complete decision that has been made on that, whether that purchase may go forward.

Ms. LEE. Good. I am glad of that.

Ms. DAVIDSON. But the direct record machines, there are still several States and localities that have that. They have in a lot of areas put paper with it to make it where the public feels it is more secure.

Ms. LEE. Thank you.

Mr. SERRANO. Thank you.

Chair Davidson, what are the top priorities that need to be accomplished before the 2010 midterm elections to ensure that the election is fair, open, and accurate? I said in my statement that you are not seen as a big agency, but you have a major responsibility. And these elections don't get boring in this country. They get more exciting all the time. And I expect these midterm elections are going to be heated, and you are going to see reports on TV saying that people are registered who shouldn't have registered and machines are not ready and States are not ready. So what needs to be in place, in your opinion, to make sure that the right election is conducted in terms of having every vote counted properly and what steps are the States taking to prepare for the midterm elections? What role are you playing with the States?

Ms. DAVIDSON. First of all, the role we play is to try to provide as much as we can throughout the Nation of educating our election officials. When you stop to think about it, three-fourths of our election community, whether they are county or municipalities that are running the elections, are small. They are small to medium size. We only have a few large. So being able to get the information out to them, even if it is on the Web site, we find not always do our municipalities and counties get this information and utilize it.

Being able to share our information that we have developed is one of the biggest things I think that we need to try to improve upon. We send it out, but it seems like it doesn't get into the hands of the people that really need it.

It is on the Web site. We go to conferences. We will go to any State conference and talk about the information that is out there.

I will say that I think that is being spread far more than what it had been in the past. I was just at an election conference that was held in Seattle, and part of the presentations were even on our work that we do at the EAC, the type of information that we have to go out to those localities. And even in the audience they were talking about other portions of our program that we have done, whether it is laying out your ballot properly to make sure that it is not confusing to the voters, as well as information at the polling locations, hiring poll workers, recruiting, maintaining the poll workers.

We have got to distribute about 22 different documents that have been placed upon our Website quick starts that will be really easy for the counties and localities to read and to be able to improve upon their elections. Security, testing equipment before an election

and also doing audits after elections, information there, how valuable that is for them to know the process and to do it right. So getting the information out is very important to the Election Assistance Commission because that is information that would help every locality.

The other thing is States are very dedicated, as you said, in your opening remarks. States and localities, they are very proud of their election officials and maintaining and running that election fair; and making sure that all of their citizens are able to register and to vote and to have their vote counted is very important to all of our election officials. And they are learning more and more about pre-testing, L&A testing, and testing after the election to make sure the election was run accurately and without any problems.

Mr. SERRANO. So, with that in mind, how reliable would you say were the voting systems that were used in the 2008 election?

And, also, I understand that the Election Commission always conducts a survey after an election, but since 2004 this survey has not collected information on voting system performance or malfunctions. So in the absence of a formal survey in 2008, did you receive reports of voting machines not working or possibly recording a vote inaccurately and what, if anything, how extensive was this and what role have you played? How do you feel about the equipment that will be used this November? And, secondly, what kind of reports have you been getting about the past?

Ms. DAVIDSON. First of all, I feel good about the equipment that is out there. 2008, the equipment ran very well.

I will tell you we do have one open-ended question on our survey, because we thought they would fill that out and we would get more information on any type of anomalies they found within their election during the process. We never received any answers whether we had questions on there before or not. But we are finding States are reporting to us when they do any type of testing themselves, reports that they have conducted within their States. Those are up on our Web site. They have presented those, and they are up on the Web site.

Now that we have certified equipment, it is also part of our procedures and our manual; and a manufacturer has to do this just to keep his manufacturing capability, is he has to report if he has been certified by EAC any anomaly that takes place in the election process to the EAC immediately. So, in the future, that is how we will get it; and it will be more accurate and up to date than if we wait until a report after the election. We will get that immediately so we can notify our localities of any issue that they need to be aware of before Election Day, possibly, rather than after the election and not notifying them.

Mr. SERRANO. Did you get many reports in 2008 or were things much smoother than—I was going to say in 2000, but that is unfair. Everything is smoother than in 2000. Well, it was——

Mrs. EMERSON. That is true.

Mr. SERRANO. I think we all agree, right? They are still counting votes in some places.

Mrs. EMERSON. They counted them twice in my place.

Ms. DAVIDSON. We did not get any anomaly reports from the States.

Mr. SERRANO. You what?

Ms. DAVIDSON. We did not get any reports from the States that there were problems in the 2008——

Mr. SERRANO. Okay. One of the areas that I am very excited about—and it is a small area—is mock elections. I really believe that education and civic engagement begins in a person's youth. The Mock Election Program is a grant program under the EAC that allows students to participate in simulated elections with actual voting equipment, ballots, and poll workers. And I tell you, I wish there was one in every community in the Nation, because I think it is a great idea.

Can you give us an example of one or two programs that have been implemented under the Mock Election Program and what kind of impact are you seeing, how are the grant recipients engaging the students?

Ms. DAVIDSON. I can. In 2008 and in 2009, we gave out each year $300,000 worth of grants. That was each year. Excuse me. Two of those that were so successful, one was in Miami which they are even this year having two schools a day teaching the students about election process and even allowing them to vote on voting equipment, and this will last for 3 months. So this should include educating students on election——

Mr. SERRANO. Is that the whole city of Miami, the school district, or what?

Ms. DAVIDSON. Miami-Dade County I believe is what it is called, a county.

Mr. SERRANO. It is two schools a day?

Ms. DAVIDSON. For 3 months. So that will contact many students. I cannot tell you exactly how many it will. They have to report that after they get through with that grant, so we will have a report on that when it is finished.

Mr. SERRANO. We would like to see that.

Do you know offhand what the actual work with the students consists of? I mean, I remember about 25 years ago I set up a program in my district where I had the local—I found out that the local middle school, one of the many local middle schools in my district—at that time, my State assembly district was having a student election. I said, why don't I provide a couple of voting machines and you will have inspectors and have a table and you will have to register ahead of time and register with a party and then you can vote for any candidate. And we took them through the whole thing.

And we found out a few years later, according to the principal, that that graduating class eventually in high school had a very high participation rate in the local election because we had used those machines.

So do you know what it entails, what it actually entails?

Ms. DAVIDSON. I do. I do have that in front of me.

The election department will run a Mock Election Program to introduce to the high school students a new optical scan voting system. The mock election will be conducted as if the school were an actual precinct. The school students will serve as poll workers and as judges. And that is what they do on each one of them.

We think this will be utilized by over a thousand students, and we are also going to do a video of this so that we can put this up on the Web site to educate other people that come into our EAC Web site to learn from that.

Mr. SERRANO. I commend you for that, and I would hope that continues to grow. I think that is very, very, very key. And at these mock elections, Mr. Culberson, maybe you allow everyone to vote, just in case they become citizens later.

Mr. CULBERSON. Don't ask, don't tell.

Mr. SERRANO. Mrs. Emerson.

Mrs. EMERSON. At least we have fun, right? That is a good thing. And I thank you.

I actually chaired my college mock election probably back in—I didn't run for anything. I didn't want to run for anything. I am an accidental Member of Congress. It was a wonderful experience, particularly for those of my fellow students who were not at all politically involved; and they learned a lot. And one of my daughters did the same thing when she was in college, too. So I commend you all for that. I think it is great.

Let me ask you a little bit about staffing, if I might, please. You all are authorized for 50 full-time employees, and your budget is $17 million. How many staff people do you have on board right now?

Ms. DAVIDSON. I would say it is possibly 40, is what I am guessing. Forty-two is what I was just told.

Mrs. EMERSON. Can you give me a sense or give all of us a sense of what percentage of your staff are involved directly in such activities such as grant management, election studies, writing guidance, and what percentage play a strictly administrative role?

Ms. DAVIDSON. The administrative role is 21 out of the 42.

Mrs. EMERSON. So then the other 21 are involved in the other sections. I am curious, because you are a small agency; and I know you have a big mission. But with 50 full-time employees, or the ability to have 50, and a $17 million budget, I think I am confused as to why you have an executive director, a chief operating officer, a chief financial officer, and an acting director. I mean, do you really need all of those people at the top end of the administrative, as opposed to actually working in a liaison function with the State, et cetera? That is a tiny agency to be so top-heavy in management.

Ms. DAVIDSON. You know, when I came to the agency, I believed the same way you did. But we went through our first audit over a year ago and failed it miserably.

Mrs. EMERSON. That was because?

Ms. DAVIDSON. That was because we were even told in our audit that we needed to hire these positions, get people that had expertise in there to be able to handle the job. We hired not only the CIO, but we hired the auditor. We came out this last year with a clean audit. In one year, we changed the way we were working. We had relied on other agencies,

In our audit, also, it showed that we had not met anywhere near the needs of the requirement of developing procedures and guidelines to meet the Federal requirements. We walked in there and started doing what HAVA told us to do; and, being a new agency, we didn't think about that we had to meet all of the requirements

and all of the rules and regulations that the Federal Government had set out. There wasn't a handbook on how to form an agency, and we weren't doing a very good job of it.

Mrs. EMERSON. Who all gave you an audit, the GAO or who it was?

Ms. DAVIDSON. No. We had to be audited because of the amount of money that we get in. We had to be audited by our Inspector General, and he had to go out to a special—it was a special audit because of the amount of money. So it was a higher audit.

Mrs. EMERSON. Was it an outside contracted audit?

Ms. DAVIDSON. Yes, it was an outside contract that our IG went through to audit our agency. And the first one we did fail. But the second one we worked very hard at meeting all of the requirements of the Federal Government, and we passed that audit this last time, and we were very proud that we passed it.

What we found and what I have found to be personally—you know, to open up really with you, is, yes, we are a small agency, but we have to meet every requirement that the Federal Government sets out, no matter what size the agency is. There is no different requirements for us than there are for others.

Mrs. EMERSON. I understand. No, I understand that. It just seems to me, when there are only 50 people, to be top heavy that way, I mean, you wouldn't run a business that way. But you know that as well as I do, if you, in fact asked the same question.

Now that you have gotten a clean audit and everything is squared away—I know that, over a year ago, the Commission interviewed and made an offer to an individual to backfill the general counsel position and then subsequently withdrew the offer; and I know that that person then took the issue to the Office of Special Counsel and claimed he was denied the position due to his political leanings. The Office of Special Counsel ruled in favor of this individual's claims that you all had wrongly denied him the position, and I am told that you all have now reposted the position. So have you identified anyone to backfill the general counsel's position and what will you do to make sure that the next candidate is handled in a fair and unbiased manner?

Ms. DAVIDSON. EAC takes this situation very seriously, and we are working now to make changes to improve our hiring process, and we are committed to a fair and rigorous process in doing so.

Currently, the applications process has been closed. They are being reviewed to make sure that every candidate meets the minimum requirements.

Mrs. EMERSON. So do you know when you might be hiring this person?

Ms. DAVIDSON. Hopefully very shortly. We are all excited, and we are ready to hire. We have been without a counsel too long.

Mrs. EMERSON. So then you are going to have an executive director, a CFO, a COO, an acting director, and a general counsel. You couldn't combine those position, huh? I am having issues with this many for a 50-person—and I understand, but I am not satisfied with the answer: That is the way the government tells me to do it. It is not personal towards you. It is just stupid, in my opinion. But I appreciate your commitment to trying to make this Commission work properly.

Ms. DAVIDSON. And if I haven't answered it properly and the staff didn't feel like I have, we will make sure that you get additional information.

Mrs. EMERSON. Thanks. Thank you.

Mr. SERRANO. My dear, dear friend, Mr. Culberson.

Mrs. EMERSON. You didn't say my dear, dear friend, Mrs. Emerson.

Mr. SERRANO. I said the greatest ranking member——

Mrs. EMERSON. You then called her the greatest. You called Barbara the greatest.

Mr. SERRANO. She has been with me on that bill for 6 years now.

Mrs. EMERSON. I see. If we go with you on the bill, that means we rise up in your esteem?

Mr. SERRANO. You would be like the greatest of all time.

Mr. CULBERSON. Thank you. Thank you, Mr. Chairman.

It does look like the Attorney General—I was going back through the statute trying to refresh my memory, and the uniform and nondiscriminatory election requirements in the Act, do you enforce those at all or is that entirely up to the Attorney General?

Ms. DAVIDSON. Would you repeat your question?

Mr. CULBERSON. This is your enabling Act, Title 42 of the U.S. Code, looks like it is section 15.401 in the following sections. Title III looks like the requirements for uniform and nondiscriminatory election technology, that the States have to have an accurate voting list, et cetera. The question I was asking you earlier, a State does have to certify it looks like to the Commission that they are in compliance with the requirements of the Help America Vote Act and they file that certification with you, correct?

Ms. DAVIDSON. That is correct. And we have 21 States that have filed that and met those requirements. And it is not only that they have to meet it. They have to continue to meet that yearly. That is even their precinct, whether they are accessible to the disability. It falls down to that level, as well as equipment and the voter registration. But it is a self-certification.

Mr. CULBERSON. Right. You don't confirm the accuracy of the certification?

Ms. DAVIDSON. No, we don't. That is for the Department of Justice. We have no authority underneath the law to do so.

Mr. CULBERSON. You have no authority to confirm the accuracy of the certification given to you by the States?

Ms. DAVIDSON. What really happens is——

Mr. CULBERSON. That is implicit. I would think.

Ms. DAVIDSON. If there is any indication that something is not right, we can ask our Inspector General to go out and audit the State and to see, and then his audit—he will review that audit to see if they are meeting what he feels. That is the only thing we can do, is really turn it over when we feel that somebody hasn't quite met it or we ask for more information when they send in their certification. It is a pretty simple process for them to say they have certified, that they are compliant.

Mr. CULBERSON. I notice there is also a section in the enabling act that allows State election officials in Texas, the Secretary of State, to enter into an agreement with the Social Security Administration to cross-check the voter registration rolls, for example, in

Texas against the Social Security list and to try to ensure the accuracy of the voting list. Do you have that information about which States have entered into an agreement with the Social Security Administration to cross-check their voter accuracy, the voter registration list? Could you provide that to me?

Ms. DAVIDSON. I don't think I have that.

Mr. CULBERSON. That has to be a part of your jurisdiction. It is in your enabling act.

Ms. DAVIDSON. Well, one of the things that they do is some States have an agreement with the Motor Vehicle Department because they collect it, and they check it every time with them. So they get it through the Motor Vehicle—they don't get it just directly through the Social Security. We have got——

Mr. CULBERSON. From the Federal Government, who makes sure that those—other than if you get a complaint, for example, and you perform an audit and in this case with the Social Security Administration cross-checking the accuracy, a list with the States, wouldn't that be within your jurisdiction, if there is such an agreement, that it is being carried out in a way that is accurate and fair and keeps the Social Security records confidential?

Ms. DAVIDSON. I will double-check. But we don't have any authority, I don't believe, at all in that area. But I will double-check and get back with you. Because if I am wrong, I don't want to give the wrong information.

Mr. CULBERSON. I would like to know which States have that agreement and particularly in Texas. Do we have it in Texas?

The problem is, in some jurisdictions, there has been a recurring problem with people who are deceased or felons or not eligible voting. Now the computer technology has gotten so good it is possible to cross-check those lists, and the statute does authorize the State to enter into an agreement with the Social Security Administration to cross-check those lists. That is a really important way to confirm the accuracy of the voter registration rolls, and I would be grateful if you could tell me which States are doing so.

Mr. CULBERSON. All of Title III then, what authority do you have to ensure that States are in compliance with the requirements of the Title III, the uniform and nondiscriminatory election administration requirements?

Ms. DAVIDSON. We don't have any authority.

Mr. CULBERSON. Any authority at all?

Ms. DAVIDSON. No. We are just an assistance commission, and we don't have any authority. It is only the Department of Justice that has the authority to go out. If we see clips, we turn those clips over sometimes to our IG to go out——

Mr. CULBERSON. Clips?

Ms. DAVIDSON. Newspaper clips that there is a problem in some States how they are spending their money that possibly we don't think meets the requirements of HAVA. So we turn that over to our Inspector General.

Mr. CULBERSON. Do they take it to the Department of Justice?

Ms. DAVIDSON. And then if there is something in our report that we feel that States are not giving us, our full report goes to the Department of Justice, and they review it.

Mr. CULBERSON. Do you do anything or could you provide me with information on what enforcement actions the Department of Justice is taking?

I notice at the end of Title III it does say that the Attorney General—excuse me—in Title IV, Section 401 of the Act, the Attorney General may bring a civil action against any State or jurisdiction for declaratory or injunctive relief, a restraining order or a permanent injunction to enforce the provisions of the Act. Is that something you monitor or work with them? And could you provide us with a list of what civil action the Attorney General has taken, where and when?

I am still trying to figure out—I have to tell you, I tend to agree with Mrs. Emerson's comments about overloaded bureaucracy. You all have a lot of noble purposes, but it really just seems to me from first blush you generate a lot of paperwork, a lot of reports, a lot of paperwork and a lot of busywork. And it just doesn't seem like there is a whole lot of beef here, a whole lot of substance to what you do because you say you don't have any enforcement authority.

What can you tell me about what the Attorney General has done under Title IV? Could you provide my with information on what civil actions the Attorney General has taken to enforce the Act?

Ms. DAVIDSON. I can ask the Attorney General to give us a report.

Mr. CULBERSON. You don't monitor that?

Ms. DAVIDSON. They do not give us information. They don't keep us up to date when they are going out to even look into a State or a county. They don't keep us in their—we have asked to be acknowledged and know more information.

Mr. CULBERSON. The chairman has been very generous with his time. And you all have a noble purpose. Mr. Chairman, there is clearly a need for Federal funds for some States to update the voting machines to go from the punch cards. I don't know what purpose this agency has got. This might be a good place to look to save some money.

Thank you very much. I appreciate it.

Mr. SERRANO. It is interesting that you are bringing up the issue of possible voter fraud. I recall we had an issue here a few years ago where the agency had hired a contractor to look at the issue of voter fraud and some very serious newspapers reported that indeed the issue was not that there was voter—that voter fraud was not a problem, but voter intimidation was, and that some folks allegedly at the Justice Department got involved in what the final report should look like, and the final report said voter fraud was the problem when the initial draft report said voter intimidation was the problem, not voter fraud.

Mr. CULBERSON. If I may recall, also, the Black Panther suit that was dropped by this Justice Department was a real concern because there was videos of these big thugs running people off from the polls. And the previous Justice Department pursued those guys, and then this Justice Department dropped them. That is a problem on both sides.

And if I may share with you a story. It illustrates the problem with elections. My grandfather was actually a Federal election poll watcher in South Texas in Duval County, the famous Box 13 in

Lyndon Johnson's election. This in the 1940s. And my grandfather noticed that a lot of the migrant voters were coming in that had a piece of string with knots in it. And they would come in to—this is why I am so interested in this. My grandfather—I grew up with this, the problem in South Texas and particularly——

You will love this story, Mr. Chairman. It is relevant to the Commission.

But my grandfather noticed that these people would come in to vote, and they had a string with knots tied in it. And they would lay the string down next to the ballot; and wherever there was a knot, they would check off the ballot. And then they would take the string, and they would hand it to the next guy, and he would come in and lay it down.

My grandfather as the Federal election watcher studied that for a minute, and he finally instructed the poll workers to hand them the ballot upside down. And because these poor folks were illiterate and they were using the string, they would lay it down there and it screwed up their whole system. This is Duval County, Box 13.

Mr. SERRANO. And you thought this was bad? From strings—that is before it became a palm card. Now you have got a palm card outside the polling site telling you put a check next to Serrano, put a check next to Serrano, put a check next to—and don't vote—yeah, but——

Mr. CULBERSON. These guys can't enforce it. That is what worries us. We want you to be able to——

Mr. SERRANO. I am just telling you that that might have been just the way to tell people how to vote. That happens all the time. They are called ads, too.

But, anyway, I am not making light of it. I understand what you are saying.

Let us move on for a second to Military and Overseas Voting Empowerment, MOVE. What is the status of States implementing MOVE and can States use HAVA dollars currently distributed to address the new requirements of the MOVE Act?

Ms. DAVIDSON. The States have been asked by our department to send us a letter if they are not able to get a plan in to how they are going to spend it under the MOVE Act. And we are supposed to be receiving those by May of this year.

I would tell you probably we will receive every different way that you can think of meeting the MOVE Act because our States are all different. Can they use HAVA money? If they are Title III compliant, they can spend HAVA money as much as they need to. If they are not Title III compliant, it depends on how they are going to spend the money. If it is a voter registration system, improving that, they probably could spend it under Title III and not be compliant. But there is about $350,000 that each State can spend on it without being compliant. So they can spend some, but they may not be able to meet all their needs.

Mr. SERRANO. I am just concerned that as we get closer to these elections and then to the 2012 elections, or any other, actually, for that matter, that we are not where we need to be with the military and the overseas voters. And that is key. I mean, we spend a lot of time in this country making great comments, as we should, about our troops. And then not to give them all the help they need

in making sure that they get to vote is just a shame. So I would hope that we continue to stay on top of that and make it possible.

Ms. DAVIDSON. We also have a pilot program that the EAC has been working on for several months. Even before MOVE, we started working with NIST and the Federal Voting Assistance Program to develop a pilot program that would be put into an area outside of the country that voters could vote on. It would be a kiosk-type system and would have a backup of a paper. But it allows people to vote right there at their locality.

Plus, the MOVE Act has added more time to the ballots to be out. Hopefully, that will help our overseas voters.

We are continually trying to get information and putting information out to the States on how they can help their overseas and military voters. Many of the States have moved forward, putting a lot of the information up on their Web site and providing blank ballots to voters so they can vote early and get those ballots back in time. It cuts away that time of mailing a ballot out and getting it back in so they can get the ballot to the voter.

Mr. SERRANO. Well, I hope we really stay on top of that. That is of interest to all of us. I know Mrs. Emerson and I share the same thoughts on this.

The impact of the census and redistricting. As a result of the census, 2012 elections will be the first year the States will face redistricting since the passage of HAVA. How will the 2010 census impact State spending of HAVA funds?

Ms. DAVIDSON. For the States, the census could affect them in several ways. If there is a locality that has growth in the community, they will have to have more precincts, more equipment. If they are bilingual, they will have to create their ballots and their voting information in the languages that are required. We have a lot of that information that we have already done, but if there is also more languages added, obviously we will have to start working on that and getting it provided for them. There are also more judges that could be utilized and things like that. So it depends on how the census creates or breaks up a county or a municipality in their voting. It could make more precincts. Definitely, the census is something that the States are considering and knowing that they have got to work through.

Mr. SERRANO. Now, I suspect that the census will show that we have become yet even more a diverse Nation, which will require special needs. Will States be able to use HAVA funds to address an increase in alternative language communities for ballots, polling, and place signage?

Ms. DAVIDSON. Yes, Mr. Chair, they will. They will be able to use HAVA funds to make sure that the signages are in all languages and the ballots and everything like that so they can use HAVA funds.

Mr. SERRANO. Thank you.

Mrs. Emerson, my dear, dear, dear friend, Mrs. EMERSON.

Mrs. EMERSON. Thank you, Mr. Chairman.

MS. DAVIDSON, you may remember that Congressman Lungren and I recently raised concerns about some of the Commission's contracting practices; and we specifically raised questions concerning EAC's practice of awarding contracts noncompetitively or in in-

stances where you all only received one bid. We additionally asked to what degree you contract out positions at EAC that include inherently governmental roles. So I have a few little questions about that.

First of all, can you explain what you all are doing to make sure that this practice of awarding contracts on a noncompetitive basis remains limited?

Ms. DAVIDSON. When EAC was formed, there was a lot more contracts. Because we didn't have the employees to do the jobs, a lot of contractors were hired. Since that time, the contracts have come down. We are bringing the contracts down constantly in our agency, and that is one of the reasons why people were hired to do some of the work.

Mrs. EMERSON. So how many contracts do you all have outstanding right now?

Ms. DAVIDSON. I am sorry. I don't have that right in front of me, but I will get it for you. I remember the letter that I sent and listed all the contracts, but they went back for 3 years. So I cannot tell you——

Mrs. EMERSON. If you can just get that information to me some time—you probably have it readily available. Someone in the staff does.

Ms. DAVIDSON. I think that we do. So I can get that to you right away.

Mrs. EMERSON. Right. Normally, I am not a big fan of contracting out inherently governmental functions. However, in some cases, if there is something temporary to be done, it makes less sense to hire someone permanently than it does to make the contract. So it is concerning. And if you could get that information from obviously how many contracts you all started, where you are today and whether or not some of these are inherently governmental roles and some are not.

Let me ask you a little bit about grants. Your budget request shows an amount of $740,000 for grant funding in 2011. This is a reduction of $300,000 from 2010. What is the amount requested for each grant program for 2011 and what changes were made for each program from 2010?

Ms. DAVIDSON. What we have in that section is just the poll worker grant, over $700,000. The mock election, because we made those a 3-year grant in 2008 and a 2-year grant in 2009 knowing that money was tight, those are ongoing grants right now. We didn't ask for the $300,000 until the mock election.

Mrs. EMERSON. I see. Can you tell me how much of your grant money went to ACORN or any of its affiliates?

Ms. DAVIDSON. We had two contracts underneath, that we had Project Vote that got money—I think it was 2007, maybe 2008. I am unsure of that. But there were two grants in 2006, it looks like. So it amounted to around $16,000 each. There were two of them, and they were given to Project Vote. We have asked our Inspector General to investigate that and to get a full report on if it was allocated to ACORN and how it was spent. So we have asked for an investigation.

Mrs. EMERSON. Do you have measures in place now to assure that no grant moneys will go to ACORN or any of its affiliates? I

realize that a lot of ACORN has closed down, but they have also renamed themselves. So——

Ms. DAVIDSON. If we know the affiliates and we know—that would be something we would look at when grants come in.

Mrs. EMERSON. But you don't have any specific measures in place right now with regard to that; is that correct?

Ms. DAVIDSON. Well, we ask for affiliates; and so that will help us in that way. But I don't know what kind of measures you are talking about.

Mrs. EMERSON. Just a policy that says no money is going to go. We put it in law, but——

Ms. DAVIDSON. We are following the law. So that is where we are at.

Mrs. EMERSON. Just because knowing or doing the research necessary to be able to recognize some of the new names of this organization, I mean, that hopefully is ongoing among your staff.

Let me ask you——

Mr. SERRANO. Excuse me a second. I am just confused, and I am not trying to be difficult. Didn't the court just rule that we couldn't have done that to ACORN?

Mrs. EMERSON. I don't know the answer.

Mr. CULBERSON. A district court did. It is on appeal. The statute still stands until——

Mr. SERRANO. Okay. All right.

Mrs. EMERSON. Let me ask you, have you all ever considered conducting a study to determine the unique requirements of meeting the needs of voters in both urban and rural settings? I have a very, very, very rural, very rural district with 28 counties. I just want to make sure that all of my voters have the ability to vote, and I just am curious if you all have ever considered doing something. And then there are equal challenges in urban settings. One of my big issues would be transportation to get to a poll, if you will. And you might not have that in the city where there is public transportation, but we don't have that. I am just curious if you all have ever thought about it.

Ms. DAVIDSON. We are doing a study currently. We are just getting ready to start it. We are selecting people from localities that would be willing to serve on that. So if you have somebody in mind that is from your district, we would be more than happy to put them on that.

You are absolutely right. It is very different for an urban county. And with money being tight, they close precincts. So it means further for them to drive. That also means, then, there needs to be consideration for those voters, how can they vote. Maybe early voting where they could go to the poll when they go shop for groceries before the Election Day. Or absentee ballots given to individuals that live so far away from a polling place. It is a real problem.

I understand where you are coming from and we do at the agency. The cities have their issues and how they are meeting them. They can meet it in some ways with technology, but that doesn't work for a small county. So we are very aware that there are some real needs for a study there, and that is beginning to start. So I welcome if you would like to have somebody put on that committee.

Mrs. EMERSON. That would be wonderful. I appreciate that offer, and we will definitely get back to you sooner rather than later. I am thrilled you are doing that study because—I mean, people who live in cities can't imagine the issues that folks out in the rural area have and vice versa. So I am grateful that you all are doing that. Thank you.

Ms. DAVIDSON. Not a problem. I understand that well, because I have served different sizes of counties, and my job was completely different.

Mrs. EMERSON. Thanks.

Mr. CULBERSON. Thank you, Mr. Chairman.

Mr. SERRANO. I am going to introduce to everyone the immigrant's greatest friend, Mr. John Culberson.

Mr. CULBERSON. The legal immigrant's greatest friend.

Mr. SERRANO. Try to ask a set of questions without immigrants in it.

Mr. CULBERSON. Actually, this is about military personnel and following up on——

Mr. SERRANO. You don't have to be a citizen to serve in war in the military, right?

Mr. CULBERSON. In fact, it entitles you to go to the front of the line to become a citizen, God bless them, if they serve in the military, which is really a wonderful provision of the law.

I wanted to ask about military people, service members voting. I know in Texas, for example, if you mail in a ballot to vote, as long as the postmark is on or before Election Day, the clerk will count it. That is pretty standard, I think, nationwide, right?

Ms. DAVIDSON. That is——

Mr. CULBERSON. In your experience in Colorado as well, if you received a ballot from someone voting by mail, if the postmark was on or before Election Day, you counted it?

Ms. DAVIDSON. And the laws are changing throughout the Nation. A lot of the States have said that if the ballot was received up to 10 days after the election, it would be counted, if that was postmarked on Election Day.

Mr. CULBERSON. Sure. A reasonable period after the election, right. But as long as the postmark is on or before Election Day.

Ms. DAVIDSON. That is correct.

Mr. CULBERSON. What surprises me actually in here, Mr. Chairman, this is something we really ought to look at because this I think will disenfranchise a lot of military people. I didn't realize this was in the Act. But in Title VII of the statute in voting assistance programs for overseas voting materials, the Secretary of Defense has to ensure that the measures implemented, da, da, da, do not result in the delivery of absentee ballots by service members to the financial destination after the date on which the election for Federal office is held.

So that Federal law is inconsistent with, really, the standard rule across the country. I am sure it is true in New York and Missouri, that if you vote by mail and again the postmark is on or before the date of the election, it is counted if it is received within 10 days.

We probably ought to fix that, because I bet that results in disenfranchising a lot of military people that are serving overseas. I didn't realize that was in there. Would you agree?

Ms. DAVIDSON. I didn't realize it was in there, either. I would agree. Because I will tell you right now that——

Mr. CULBERSON. It says, if the ballot is not received—the Secretary of Defense has to ensure that the ballots are received by the clerk—for example, you were a clerk in a county in Colorado, in Bent County, that the Bent County election clerk has to receive the ballots on or before Election Day or they are not counted.

Mr. SERRANO. Right. Well, that is true for everybody else.

Mr. CULBERSON. No, no. Actually, the rule for everybody else is, if the ballot is received up to 10 days after the election, as long as the postmark is marked before—but he can't—even if he is delivering ballots postmarked on or before the Election Day, they are no good.

VOICE. Delivered to the soldier to cast the ballot by election.

Mr. CULBERSON. No. The statute says, the Secretary shall ensure that the measures implemented—his measures implemented under the statute result in the delivery of absentee ballots to the final destination of such ballots. The final destination is the clerk.

So we have really got to fix that, Mr. Chairman and Mrs. Emerson, because we are disenfranchising a lot of military people.

Now, the 10-day rule is reasonable. Obviously, if the guy's ballot comes in 6 months later, you don't want to count that. But 10 days, don't you think we probably ought to fix that? Because I guarantee that is probably disenfranchising——

Mr. SERRANO. If that is the way it reads, I would agree with that. If that is the way they are implementing.

Mr. CULBERSON. Yeah. The way the statute reads on its face and as the commissioner says, the chairman says, it is—and it is your opinion as well as an election clerk, that would disenfranchise members of the military whose ballots were received 10 days or less after the election as long as the mail-in ballot were postmarked on before the election date, correct? That is an accurate statement?

Ms. DAVIDSON. Yeah. Congressman, you are absolutely right. If that is the way the law reads—I mean, I think that everybody has been reading it to say that a ballot that is unvoted should not be sent to a voter after the election.

Mr. CULBERSON. Sure. But that says the final destination, And the final destination has to be the county clerk.

Ms. DAVIDSON. If that is the way it is, that definitely needs to be fixed, because we don't want to disenfranchise any more of our military members.

Mr. CULBERSON. Right. That is a bad problem.

You also, I understand from reading the statute, have the authority, as Mrs. Emerson said, to issue grants to nonprofit entities that are engaged in helping to organize voters or register voters, correct? Do you only issue grants to government entities or can you also issue grants to nonprofits or nongovernment entities?

Ms. DAVIDSON. We can issue to nongovernment entities, but we cannot issue a grant on voter registration.

Mr. CULBERSON. I understand. Therefore, the question——

Ms. DAVIDSON. It was through the mock election that this happened, so that you are aware, a college poll worker.

Mr. CULBERSON. If I could just follow up with some precision to get a really clear answer on Mrs. Emerson's question about ACORN. Because we did pass in an appropriations bill last year I think, after all this monkey business came out about ACORN, flat prohibition against any Federal money going to ACORN or to any of their affiliates. It is the law. It has not been overturned by a final judgment of an appellate court. So, therefore, it is the law of the land. What are you doing to ensure the enforcement of that law?

Ms. DAVIDSON. We are making sure——

Mr. CULBERSON. That you are not issuing grants to ACORN. It is prohibited.

Ms. DAVIDSON. To ACORN or anybody that affiliates with ACORN.

Mr. CULBERSON. It is prohibited?

Ms. DAVIDSON. Yes.

Mr. CULBERSON. Have you issued any grants to ACORN or any of their affiliates?

Ms. DAVIDSON. Not since the law was passed. That was in 2006 that we did that.

Mr. CULBERSON. You are sure of that? Because your answer to Mrs. Emerson was a little foggy.

Ms. DAVIDSON. I am sure of it.

Mr. CULBERSON. Okay. And we really do appreciate your service, and I thank you for your answer to our questions, and I appreciate the chairman's indulgence for the time. Thank you.

Mr. SERRANO. We have your papers over here. We are looking at it. We are as concerned as you are, and we will look at it and make recommendations.

I have one last question, and then we will let you go. How is that?

I have heard that the job of—well, I know the job of an elected official is often challenging, ensuring that elections are fair, accurate, and carried out officially with small staffs and limited resources. So in a tough budget year, I can imagine the job of an election official is particularly challenging.

I understand that you have personal experience, as we said, working as an election official when you were county clerk and later as Colorado's Secretary of State. Can you relate some of your experiences to the challenges that election officials will face this coming year throughout the Nation? Every State has less money than they had before. How will this affect the running of these elections? And how can we assure that local and State election officials have the resources they need to successfully oversee the elections?

Think back to those days when you were sitting there wondering if you would ever get to testify in front of Mr. Culberson.

Ms. DAVIDSON. I think probably my knees would have been shaking a little bit more than today.

Mr. SERRANO. My knees are shaking right now.

Ms. DAVIDSON. Oh, good. I am in good company then.

Elections are difficult. They are not the same throughout the United States, as I have said before. Every State has their own

issues. Every county has their issues. Polling place workers are a tremendous—a scarceness. And our college poll worker program has been a big success because it brings in individuals with the experience of technology, the energy to be able to carry those 8 hours—not 8 hours but almost 18 hours sometimes of Election Day, but making sure that they have the resources that they need.

I would tell you in a county budget, as I was a county clerk, I found that I was the last one on the list of receiving money. It was always the potholes that needed to be filled, the police department that needed the money. We weren't thought about.

But I will say since HAVA came on the forefront and the heightened public interest in elections, it has been good because it has brought a lot of good ideas and a lot of things forward. And with the passage of HAVA and the Federal funds, it has helped the States to become more up to date, the voter registration lists and being able to have that throughout the States, to be able to control people being registered more than once. It is also hooked up with the deceased files and the motor vehicle files. It has improved the election process. So the money that has been spent definitely has improved that process of Election Day.

Also, the disability people being able to vote for the first time independently and privately has been an asset to all of those people. It is very hard to answer your question, how can we make sure that they have everything that they need, because we hear from the States when we go to their meetings that there are issues that they have that we haven't even begun to think about. So it seems like it is constant that there is always a new issue that they need to be considering.

Our contingency planning is one of my pet ones, because when we think about what can go wrong on Election Day—somebody said, why is the election so hard? It is not rocket science. You know what? It is worse. Because we can't say 3 minutes or 2 seconds before it is supposed to go up in the air that the rocket—that we are going to stop the process. We have to have Election Day.

So training our election officials to be ready for that pre-certification and everything that goes on is very important. Every State has their own issues and their own needs.

So for me to answer that, I am really not able to answer I know to what you really want. And I am sorry about that. Because it changes it seems daily even within the States and the counties. So I am not doing a good job for you, and I apologize.

Mr. SERRANO. That is okay. I know it can become difficult at times. Always feel free after this hearing to supply us with any further information on any of the questions that were asked.

Mrs. Emerson and I have some questions for the record.

I want to thank you for your testimony today. We want to thank you for your service. We want to remind you again that, regardless of differences you may see within the two parties on many issues, there is one issue where we don't disagree on and that is having fair and accurate elections. There will different interpretations as to what that means to some people in some areas, but certainly we understand on this subcommittee the importance to our democracy and to our system to have fair elections with full or as close to full participation as possible.

I am always amazed at how much you hear people say how much they love this country and how much they love our system and to the point—and this is only my comment—where sometimes we try to force our system down other country's throats, where they should be like us. And yet when it comes to election, we are not outraged when only half of the people vote or we are not outraged in the past when we elected the President from both sides with 43 percent of the people voting.

So anything we can do to make elections better, to have more people participate, and to make sure that when that person voted for a certain candidate that that is pretty much—or should be actually the actual result of that vote with no hanging anything in the future. So that is what we ask you to continue to look at; and, in the meantime, you will continue to have our support.

I am sure if people were to do an analysis of this subcommittee they would find out that Mrs. Emerson and I treat everybody who comes here with respect. That is because we understand that everybody who sits before us has a major role to carry out, and we want you to be successful. Our patience is running thin on the Security Exchange Commission. Other than that, we want to be supportive.

Other people say his subcommittee meetings are like a love fest. Well, because we want to be supportive, especially you. You have a major, major role to play; and your agency has a major task to accomplish. So thank you for your work. Thank you for what will be your work, and keep us informed on anything that is going on that we should know.

Ms. DAVIDSON. I would be more than happy to. Thank you.

Mrs. EMERSON. Thank you.

Mr. SERRANO. The meeting is adjourned.

SUBCOMMITTEE ON FINANCIAL SERVICES AND GENERAL GOVERNMENT

HEARING

ON

THE FY 2011 BUDGET REQUEST OF THE ELECTION ASSISTANCE COMMISSSION

Questions for the Record

for

The Election Assistance Commission

April 27, 2010

Questions for the Record
Submitted by Chairman Serrano

HAVA Requirements Payments

In the past three years, Congress has provided $290 million for grants to states for the purpose of helping them meet the requirements of the Help America Vote Act. In regards to the requirements payments, please indicate:

- What percentage of this funding has been distributed to states? What the reasons are for funding not yet being disbursed or used by states?

Requirements Payment Appropriated		Amounts Disbursed	Percentage
Section 251 (2003 & 2004)	2,319,360,617	2,319,360,617	100%
Section 251 (2008)	115,000,000	81,206,590	72%
Section 251 (2009)	100,000,000	52,626,574	53%
Section 251 (2010)	70,000,000	9,274,223	13%
Totals	2,604,360,617	2,462,468,004	95 %

Between May and November of 2009, EAC distributed over $85 million in Requirements Payments. We anticipate a similar amount of disbursements for 2010 as states receive the 5% match from their legislatures and complete the HAVA Section 253(b) certification needed to receive funding. The 33 states (as of June, 2010) that have not certified to EAC that they are Title III compliant may be limited in the ways they can spend HAVA Section 251 funds; as such, they may not have any use for additional funds until they can complete their Title III certification.

Challenges with becoming Title III compliant are often not tied directly to availability of funds, but have to do with challenges in meeting all the requirements outlined in HAVA (for example, implementation of the state-wide voter registration system that meets HAVA specifications). Once these challenges have been met, states should be able to spend Requirements Payments to improve administration of federal elections at a faster rate.

Two additional factors that affect whether states request remaining funds are: 1) state appropriation cycle and ability to appropriate the 5% match; and 2) the

complex and lengthy state planning process required by HAVA for revising the HAVA-mandated state plan, which can take up to two years to complete.

- How fast states are spending HAVA funds relative to the rate at which this subcommittee has provided funds to them?

Beginning in FY 2007 through FY 2009, states are spending on average $203m per year in Requirements Payments funds. The average appropriation over fiscal years 2008-2010 has been $95m, which means states are spending funds on average over two times faster than funds are being appropriated.

- Will all states be evenly impacted by the proposed budget cut to the election reform programs in FY 2011?

States will not be evenly affected by the proposed cut. The 23 states listed below have spent over 85 percent of their Requirement Payments funds and accrued interest. These states could experience a negative impact in the very near future by reduction of Requirements Payments.

STATE	Funds & Interest Expended
NEBRASKSA SECRETARY OF STATE	100%
RHODE ISLAND SECRETARY OF STATE	100%
NEW MEXICO SECRETARY OF STATE	99%
NC STATE BOARD OF ELECTIONS	99%
INDIANA SECRETARY OF STATE	98%
IDAHO SECRETARY OF STATE OFFICE	98%
OHIO SECRETARY OF STATE	95%
WYOMING SECRETARY OF STATE	92%
IOWA SECRETARY OF STATE OFFICE	92%
UTAH STATE ELECTIONS OFFICE	92%
LOUISIANA DEPARTMENT OF STATE	92%
GEORGIA SECRETARY OF STATE	91%
TEXAS SECRETARY OF STATE	90%
SOUTH CAROLINA SECRETARY OF STATE	90%
WEST VIRGINIA SECRETARY OF STATE	89%
MONTANA SECRETARY OF STATE	88%
CONNECTICUT SECRETARY OF STATE	88%

MISSOURI SECRETARY OF STATE	88%
MISSISSIPPI SECRETARY OF STATE	88%
PENNSYLVANIA DEPT OF STATE	88%
COLORADO SECRETARY OF STATE	86%
MINNESOTA SECRETARY OF STATE	86%
KANSAS SECRETARY OF STATE	85%

- How will states continue to be compliant in the future?

Presently, states have several strategies for maintaining compliance with Title III as it relates to spending. The first is to carefully manage existing HAVA funds; ensuring that they will last well into the future.

A second strategy is to rely on future HAVA support up to the level of funding authorized in HAVA. States in this category may have operational challenges in 2012 if 2011 Requirements Payments are not provided or alternative sources of funds are not identified.

Two states have taken a third approach by setting-up revolving funds so that counties can borrow funds to purchase new equipment, paying back the state's HAVA election funds over time.

Despite differences in short term strategies for maintaining Title III compliance, all states will eventually need to confront how to purchase the next generation of voting equipment they will need when current equipment becomes obsolete or needs to be replaced.

- What do states need in the mid to long-term to keep up with HAVA requirements?

The level of funding states will require to maintain the reforms instituted under HAVA is an open question. Currently, states are spending on average $203.m per year in Requirements Payments to support the election infrastructure including statewide voter registration databases, voting systems and education and training associated with being compliant with Title III of HAVA.

I understand that in order to receive the Section 251 requirements payments states are required to provide a 5% match in funds. As you know, some states are facing severe budget shortfalls for FY 2011.

- Have you heard from any states whether they are having difficulty in providing the 5% match?

  EAC has heard informally from several states that match for 2010 and 2011 will be a challenge to identify. While the percentage of funds required by the match is low (5%), states describe a budget climate where every other state department is seeing large cuts to their budget, making it difficult to request additional funds for election purposes.

- What will the consequence be for these states if they are unable to make the 5% match?

  EAC will continue to hold funds until states can identify and deposit the 5% match into their state election account. If match cannot be identified, states will not have access to Requirements Payments to support implementation of their state HAVA plan in that year. EAC is not in a position to predict whether or not lack of funds would actually disrupt elections.

The Help America Vote College Program

The EAC administers a grant program to recruit and train college students to become poll workers.

- What have the results of this program been?

  Through FY 2010 EAC has awarded 89 grants totaling $3.1 million to recruit, train and place college poll workers since the program was established in 2004. The program has received appropriated funds in 2004, 2006, and 2008-2010.

  According to EAC's Election Administration and Voting Survey, 46% of our nation's voting jurisdictions reported having difficulty recruiting poll workers during the 2008 election cycle.

  Approximately 8,000 college poll workers have been recruited, trained and served as election workers through this grants program. Student poll workers conduct a variety of crucial election administration tasks, such as setting up polling places, checking off names on the registry (the most common activity), checking voters' identification, staffing information

booths, demonstrating how to use the machines, answering voters' questions, serving as election observers, acting as translators, assisting voters with disabilities, securing the machines at the end of the day, counting votes, and transmitting unofficial results.

All grantees use the EAC College Poll Worker Handbook, which has won praise from election officials for being comprehensive and easy to use.

In addition to successfully placing college poll workers, the grants have facilitated:

1) *Institutionalization of the program on college campuses, including incorporation of poll worker service into college courses, which generates college poll workers after EAC grant support has stopped;*

2) *Enduring partnerships between local election offices and colleges and universities which have created pipelines for new election workers and led to the creation of innovative, university-sponsored training material and pedagogies for training all poll workers in a given jurisdiction;*

3) *Development of specialized curriculum to better equip poll workers for supporting voters that have disabilities and to recruit and train election workers that have disabilities; and*

4) *Outreach to traditionally underrepresented groups through grants to historically black colleges and universities, Native American groups and an emphasis on serving both urban and rural populations.*

EAC is also working to make the program more cost effective by encouraging development and use of:

- *Web sites to inform students about the program and allow students to submit their contact information;*
- *Social-networking Web sites to create supportive communities for promoting the program;*
- *Automated, web-based training using avatars and virtual reality software to create contextualized, online training environments;*
- *Videos to document training and post the awarding of certificates to attract future student poll workers;*

- *Use of email and text messaging to recruit students and campus organizations to take part in the program; and*
- *Local television and radio advertisements to allow program directors and students to reach a broader audience.*

Accessible Voting Technology & Pre-Election Logic & Accuracy Testing Initiatives

The FY 2010 bill included $3 million for grants authorized by HAVA to carry out research on voting technology improvements directed at improving accessibility for voters with disabilities. The bill also included $2 million for a pilot grant program for States and local governments for pre-election logic and accuracy testing, and post-election verification, of voting systems.

- What is the status of the implementation of these programs?

  The FY 2009 funds for the Accessible Voting Technology research were combined with the $5 million appropriated in FY 2010 for the same purpose. EAC has conducted extensive outreach, including hosting a day long roundtable with top researchers and policy specialists in the area of technology research and disability policy, to support development of this important initiative.

  The first grant competition with these funds, the Voting Technology and Accessibility Research—Military Heroes Initiative will be awarded by the end of 2010. This $500,000 initiative will support research to better understand the needs of injured military personnel related to election processes, including: 1) documentation of current practices associated with voting activities at these faculties; 2) identification of barriers that may prevent this population from voting privately and independently; and 3) reviews and assessments of new and innovative technologies for assisting military personnel's ability to participate in the electoral process.

  The grant solicitation for the remaining funds is under development and will be submitted to EAC Commissioners for an initial review in July 2010. After an additional round of EAC Commissioner and public input on the draft funding solicitation, EAC will publish the notice by September 30, 2010.

  The FY 2009 funds for pre-election logic ond accuracy testing, and post-election verification grants were combined with the FY 2010 funds

appropriated for the same purpose. The draft grant solicitation is currently posted for public input. EAC anticipates publishing the notice this summer with the goal of having grants in place prior to the 2010 general election.

Military and Overseas Voter Empowerment (MOVE) Act

The Military and Overseas Voter Empowerment (MOVE) Act was signed into law last October as part of the FY 2010 National Defense Authorization Act. MOVE allows for electronic and mail transmission of voting materials and requires that states send out absentee ballots at least 45 days before an election, in addition to other improvements to make voting more accessible for Americans stationed and living abroad.

- What challenges will the states face in implementing MOVE?

One of the most difficult challenges states face when trying to implement MOVE or improve services in general for UOCAVA voters are related to security concerns. EAC and its partners, FVAP and NIST, have made significant progress toward assisting election officials with providing services to UOCAVA voters, but these security concerns have delayed the implementation of general purpose personal computers for transmitting electronic ballots via the Internet. Therefore, solutions will require input and support from a wide variety of stakeholders as well as frequent public updates. The following stakeholders must work together on behalf of UOCAVA voters: state and local election officials, computer science researchers, experts in fields such as usability and accessibility, industry representatives, and other federal agencies charged with improving the remote UOCAVA voting process.

- What role is the EAC playing in assisting states in the implementation of MOVE?

EAC is developing intermediate testable guidelines that leverage the successes achieved to date by jurisdictions with electronic absentee voting systems. These guidelines will be used to pilot remote electronic absentee voting systems implemented as a manned kiosk with printable paper ballots for audit capability. Election jurisdictions and FVAP will be able to use these guidelines to run pilot programs for UOCAVA voters should they choose to do so. The information gained from the pilot projects will be used to help inform the final guidelines development process by providing valuable information regarding the security and logistical challenges of a remote electronic voting system.

EAC is working to facilitate an inclusive approach and will continue to solicit input from its statutory boards and the public, and will work with NIST and FVAP to ensure that the remote electronic absentee voting guidelines will provide the structure to successfully develop and test systems for UOCAVA voters.

States will also be able to use EAC's electronic absentee voting guidelines when evaluating electronic voting systems that facilitate the return of marked, or voted ballots.

For more information about EAC's work to lead the effort to help states comply with the MOVE Act and improve services for UOCAVA voters, please see the attached Report to Congress on EAC's Efforts to Establish Guidelines for Remote Electronic Absentee Voting Systems.

Questions for the Record
Submitted by Ranking Member Emerson

Paper vs. Electronic Voting Systems

Some individuals in Congress and elsewhere continue to claim that electronic voting machines can readily be manipulated and insist that States Nation should create a paper trail of recorded votes. But I'd have to question whether a paper trail would be more secure than an electronic record. In fact, a 2004 study by Carnegie Mellon University concluded that paper records do not address those risks. While a paper trail may be able to show voters that their choices were properly recorded, it offers no guarantee that their ballot was counted or that it will be when a recount or audit is conducted

- Are you aware of any documented cases of voter fraud related to the use of electronic voting machines? Has there ever been a documented case of electronic voting equipmeut being hacked into during an election and votes being changed?

EAC is not aware of any documented cases of fraud related to the use of electronic voting machines and we are not aware of a documented case of electronic voting equipment being hacked into during an election and votes being changed. There have been hacking experiments on voting systems in

controlled environments such as laboratories, but we are not aware of a successful hacking attempt during an actual election.

However, regardless of the voting system – electronic, paper, or hybrid – every system is vulnerable if the appropriate procedures are not in place. That is why EAC developed the Election Management Guidelines program, a collection of best practices on everything from logic and accuracy testing to chain of custody procedures to ballot design. These materials were created with input from election officials to ensure they would be applicable in the real world of elections, regardless of what kind of voting system the state or local entity has in place. EAC continues to receive positive feedback from election officials about the Election Management Guidelines materials.

Focusing on only one kind of voting system risk ignores large, known vulnerabilities in our election process. To successfully compromise a voting system – any voting system -- during an election, you must have two things –

- *knowledge OF, and*
- *access TO a system.*

- Are paper trails for electronic voting machines necessary? Can't paper ballots readily be manipulated, thrown away or forged?

It is important to remember that whether we are discussing a ballot box, an optical scan machine or a touch screen – people (poll workers, election officials and voters) control whether an election is fair and accurate. The bottom line is that real security for any voting system comes from systematic preparation:

- *Prepore systems to PREVENT tampering;*
- *Prepare people to DETECT tampering;*
- *Prepare poll workers and law enforcement officers to REACT to tampering; and*
- *Prepare election officials to RECOVER by auditing and investigating.*

- And more importantly, shouldn't we let the States decide which form of voting systems they would prefer to use as opposed to dictating that from Washington, D.C.?

  EAC recognizes that one-size-fits-all does not apply to elections. For example, some rural areas prefer to use mail and other regions prefer optical scan systems. Electronic voting machines bring advantages to large

cities with diverse populations because they can make it easier and cheaper to meet language and accessibility requirements. States already choose voting systems that best meet the needs of their voters.

Appropriate Role of the Federal Government in Election Administration

The administration of elections is largely a State and local function. There have been calls over the last few years for Congress to legislate new election requirements and standards and to provide additional Federal funding to subsidize the cost of elections.

- Can you discuss the role that Congress should play in assisting States?

EAC has observed that in recent years, the interest Congress has shown in election administration through not only legislation but also hearings has provided the public with valuable information about how elections are administered. Issues such as pre-election testing, audits and voting system certification have been the subject of many Congressional hearings and have resulted in election administration improvements among election officials and voters. The dialogue facilitated by Congress has brought awareness to the need to professionalize the election administration field.

- Should Congress be legislating how the States administer elections?

The Commission does not have an opinion regarding the role Congress should or should not assume in state elections.

- Should Federal tax dollars be used to fund the cost of elections that have traditionally been funded at the State and local level?

Appropriations available through the Help America Vote Act of 2002 were the first funds ever provided by the federal government to the states for election administration. As the entity responsible for administering these funds, EAC can report that states have used these resources to replace outdated voting equipment, implement statewide voter registration databases, provide accessible voting systems for people with disabilities and make other key improvements to improve the election administration process on behalf of voters. EAC tracks and reports annually how states are using

HAVA funds, and while the Commission does not have an opinion regarding the role Congress should play in election administration, EAC provides this information to assist Congress as it considers future election administration funding and other election administration-related legislation.

Contracting

Please provide the number of contracts and contractors that EAC funded in its first year and the current levels for each. How many of the current contractor positions fall into the inherently government category?

During FY04, the EAC had a few small dollar purchase orders and GSA delivery orders primarily for Commission start-up support such as office equipment and miscellaneous supplies. There was one GSA Schedule Delivery Order service contract to Glynn Interactive, Inc for $54,559 (EAC Web site). This contract was completed in FY05. Additionally, there was one GSA Schedule Delivery Order supply contract to Kimball Office Furniture, Inc for $28,781 (EAC Office Furniture). This contract was completed in FY04.

A report the EAC provided on contracts shows a contract for nearly 250 thousand dollars with a company called Practical Strategies. That is a large contract for an agency with your budget, and I have a few questions about it.

- What exactly is Practical Strategies doing for the EAC?

Practical Strategy is providing technical support to EAC grantees, grant policy support services, and developing core competencies for HAVA funds management. This includes state audit and resolution reviews, contact and assessment of needs with audit targets, review of IG audit plan for 2010; review EAC and federal grant requirements, draft new grant policies, provide grant handbook reviews, and draft recommendations; attend EAC meetings and two (2) national grantee meetings and workshops; develop self-assessment tools, templates, and processes; and codify competencies and tools.

- Looking at the company's web site, the only place I see the word "elections" is where they list the EAC as a client. What qualifications does Practical Strategies have for its work for you?

Practical Strategy is a small woman-owned business and a GSA Schedule Contract holder who has a GSA Mission Oriented Business Integrated Services

(MOBIS) contract (GS-10F-0111V). Under this GSA Schedule Contract Practical Strategy provides specialized services to include Federal Grants Management and Consulting. (www.practicalstrategy.org)

Employee Issues

A recent report from the EAC Inspector General suggested some serious concerns about the EAC's performance evaluations of its employees. For example, the report said management claimed three employees had performance issues but there was no evidence management attempted to take corrective action. The report also cited an individual's performance evaluation being reduced based on failure to return two phone calls, another whose work was praised but who was denied travel after being told three individuals felt the person "did not know their place."

- What, specifically, is the EAC doing to improve its employee performance management systems?

EAC recognizes the importance of appropriately managing performance and discipline issues. As such, staff has been provided with ongoing troining opportunities. Training has been provided to senior management, supervisors, mid-level and junior-level staff. Further, management supervisory training has been provided to EAC managers. Most recently EAC provided mandatory staff training addressing Equal Employment Opportunity (EEO) requirements.

With respect to the specifics of EAC's performance management system, the system was approved in 2006 by the Office of Personnel Management (OPM). The system was implemented with the hiring of a Human Resource Director in 2007. OPM evaluated the results of the system after it was implemented using the Performance Appraisal Assessment Tool (PAAT). Based on the results of the PAAT, EAC revised the performance management system in 2009. Each Division was briefed on the revisions, trained on how to develop critical elements and standards, and provided resource materials. The opproved personnel management system is currently in place and the performance period is January through December.

A report the EAC provided on contracts shows significant expenditures for temporary staff – $329K in 2008, $459K in 2009, and $359K in 2010.

- What tasks have these temporary staff performed? Are they included in the total staff figures you provided?

The chart below provides a detailed description of the tasks temporary staff performed and the associated costs.

FY 2010 - $359,000

% of Expenditure	EAC Division	Scope of Work
91%	Voting Systems Testing & Certification	Retired annuitant brought through temporary employment services because of prior work with EAC as a NIST employee. Performs technical reviewer services for testing and certification unit. Retired annuitant (DOD) brought through temporary employment services because of elections experience with military and overseas voters.
9%	Research	Continued data entry of contract information and the training of newly hired program staffer to take over task.

FY 2009 - $459,000

% of Expenditure	EAC Division	Scope of Work
34%	Election Administration & Support	Retired annuitant (former DOI IG detailed to EAC in 2007) brought through temporary employment services because of expertise with HAVA funding and government auditing standards.
25%	Voting Systems Testing & Certification	Retired annuitant brought through temporary employment services because of prior work with EAC as a NIST employee. Performs technical review services for testing and certification unit.
16%	Administration and Grants Division	Administration: to fill absences for Receptionists and Administrative Assistant. From 12/08 – 5/09, Financial Management Specialist position was temporarily filled during recruitment process. Grants Division: Data entry operator to assist with grants award process.
16%	Voting Systems Testing & Certification	Retired annuitant (DOD) brought through temporary employment services because of elections experience with military and overseas voters.
9%	Research	Data entry and status reporting on contracts.

FY 2008 - $329,000

% of Expenditure	EAC Division	Scope of Work
43%	Administration, Office of General Counsel & Communications	Administration: temporary fill for 2 vacant positions during recruitment. Office of General Counsel: Information request for Congresswoman Lofgren (generated 40,000 pgs) Communications: FOIA requests
37%	Election Administration & Support	Retired annuitant (former DOI IG detailed to EAC in 2007) brought through temporary employment services because of expertise with HAVA funding and government auditing standards.
17%	Voting Systems Testing & Certification	Retired annuitant (DOD) brought through temporary employment services because of elections experience with military and overseas voters.
3%	Research	Development of Contract Tracking System

WEDNESDAY, JUNE 9, 2010.

FEDERAL COMMUNICATIONS COMMISSION FY 2011 BUDGET REQUEST

WITNESSES

JULIUS GENACHOWSKI, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION

Mr. SERRANO. The subcommittee will come to order. Before we begin are there any numbers from the FCC as to the ratings last night for the Nationals game?

Mr. GENACHOWSKI. I did some firsthand research, Mr. Chairman, and took my son to the game, and I can give a full report at a later time.

Mr. SERRANO. Great. That is wonderful. The ratings must have gone through the roof.

We are pleased to have Chairman Genachowski before us today to discuss the FCC's proposed budget for next year—and the Nationals game from last night—on the Commission's Broadband Plan also.

Rapid changes in communications technologies are giving consumers more options, even as it gives some providers more leverage for high prices. The FCC must run faster and faster to keep pace with these changes. We count on the FCC to regulate communications so as to protect consumers without stifling innovation.

Last March, the FCC issued its Broadband Plan that lays out the current Commission's perspectives on the future of communications. As the Broadband Plan made clear, Americans increasingly rely on broadband Internet connections for delivery of fast, rich and reliable transmission of voice, text, Internet browsing, medical images, entertainment or almost any other form of communication.

Now, as you know, this hearing is on-line live as we speak, and I sent out a Twitter message, I put it on two Facebook pages and an e-mail. So we should get at least 10 people to watch.

Mrs. EMERSON. Do you have your BlackBerry out so you can answer or Twitter as we are going along.

Mr. SERRANO. Yes. And we are being recorded.

Mrs. EMERSON. Good.

Mr. SERRANO. Just to make the point that we are up to date on some of the technology, although it is all very confusing to us still.

As the Broadband Plan explains, wireless spectrum is becoming increasingly in demand as more communications go wireless and require more bandwidth. We face a crisis if we do not act soon to free up more spectrum for broadband. I applaud the FCC's efforts to identify under-used spectrum for possible conversion to broadband applications.

I am also pleased that the Plan recognizes the benefit to our society when almost everyone has access to broadband. More and more, access to broadband opens opportunities in education, job hunting, becoming an informed voter, and so forth, and lack of access to broadband closes opportunities. We must work to close the digital divide in access to broadband.

Not long after the ink dried on the FCC's Broadband Plan, a ruling by the Court of Appeals for the District of Columbia Circuit

raised questions about the FCC's authority to regulate Internet service providers. As a recent New York Times editorial pointed out, it is essential for the FCC to have authority over the Internet, the dominant 21st century mode of communications. We are looking forward to better understanding your decision to launch proceedings to bring ISPs under Title II.

This subcommittee has also been concerned that almost 9 years after 9/11 and 6 years after the 9/11 Commission report our first responders still lack the robust interoperable communication system needed in the case of major emergencies. Your plan recommends one approach that has been endorsed by both co-chairs and two members of the 9/11 Commission, but that approach has been opposed by some organizations representing first responders. We look forward to learning how you propose to resolve this situation so that we can move ahead.

PEG channels that provide public, educational, and governmental information to cable TV viewers make a vital contribution to our civic society. As technology has evolved some of those PEG channels have become more difficult to access. Despite many petitions and comments for the record, the FCC has failed to fix this problem. I was disappointed that your 360-page Broadband Plan made no mention of the future of PEG, much less proposed a solution.

Finally, as you know, I have been concerned that Americans living in the Territories often lack communication services comparable to those available in the States. Your report on communication services available in the Territories shows dismal rates of Internet use in the Territories. I was pleased to see that your Commission recently gave the go-ahead for XM-Sirius to make the investments necessary to operate effectively in Puerto Rico. I remain concerned about the availability of universal service funds there.

I want you to be assured, Mr. Chairman, that it is in the best interest of this committee and this Congress for you folks to succeed, but to succeed on behalf of the consumer, to succeed on behalf of strong technology for our future, to succeed on behalf of bringing us to where we should be as a nation, but never at the expense of leaving behind any community, including those folks who live in the Territories.

And with that I turn to my colleague, my sister and the ranking member, Mrs. Emerson.

Mrs. EMERSON. Thank you, Mr. Chairman. Chairman Genachowski, welcome and thanks so much for being here today.

The FCC has an important regulatory role in the county's communications, television, radio, Internet and cable industries, and we all know these services touch nearly every American citizen and business daily. Ultimately you all have to find a balance between enabling technological progress and providing enough regulation and oversight to ensure that the American people have available communication services. It is a very challenging job, with many business technology and consumer groups watching your every move.

I want to congratulate you on the development of the national Broadband Plan. Developing a strategic plan to provide every American with affordable access to broadband services is a worthy

goal. And I am very pleased because it has the potential to assist those Americans without Internet access to improve health care, education, public safety, access to government and the economy. I am still a little confused why we used—we were going to deploy rural Internet opportunities, or at least broadband opportunities, after which you were then going to do a new map, if you will. So perhaps the cart got before the horse, in spite of the fact that I do think that that is a good use of stimulus funds is the deployment of broadband, particularly since I have a hugely rural district. So it will end up helping my constituents a good deal.

I will say, though, that I, like many others, have some concerns with your plan. As the chairman said, many in the first responder community are concerned with your strategy to implement a nationwide wireless first responder network, or at least the means by which you want to do it. And I am also concerned with your announced plan to reclassify broadband as a phone service instead of as an information service. Many have questioned whether this reclassification will stand the scrutiny of the courts.

In addition, my constituents, my very small providers, really believe this action will reduce private sector investment and broadband expansion, which will obviously then hinder your goal of expanding affordable broadband access.

Thanks for being here. I look forward to your testimony, and we will have lots of questions, I presume. Thanks, Mr. Chairman.

Mr. SERRANO. Thank you. You know the drill, Mr. Chairman. You give us 5 minutes, we will put your whole statement in the record, and then we will drill you to the point of exhaustion on our part, I am sure.

Please proceed.

Mr. GENACHOWSKI. Thank you. Good morning, Chairman Serrano, Ranking Member Emerson, Congressman Crenshaw. Thank you for being here. I am pleased to be making my first appearance, so I am learning the drill. But I welcome this subcommittee's oversight and input and look forward to working with you to ensure that the Commission is able to perform its mission and that we get good input into all of the issues in front of us.

I also want to take a minute to thank your staff, Lee Price and John Martens, who have taken considerable time and effort, a very healthy working relationship at the staff level, and I appreciate their work.

The FCC's mission is to promote opportunity and prosperity for all Americans through communications, technologies, and networks. To advance this mission we are focused on these goals: Promoting universal broadband that is robust and affordable for all Americans regardless of where they live; pursuing policies that promote job creation, investment, competition, and innovation; protecting and empowering consumers and families; helping deliver interoperable public safety communications networks with the best technology to serve our firefighters, police officers, and other first responders, and ultimately to save lives; advancing a vibrant media landscape that serves the public interest in the 21st century; and seizing the opportunity for the United States to lead the world in mobile.

The budget we have submitted will considerably enhance the FCC's ability to achieve these goals. It will help ensure that we have the staff we need with the technical skills we need to support our work to promote investment, competition, job creation, public safety, our global competitiveness in this complex communications landscape.

The budget request also includes investments in technology that will enhance agency operations, particularly in the area of public safety. My written statement contains more details on this. I ask that it be included in the record.

Let me briefly touch upon some key items before the Commission, and I am sure we will have an opportunity for a good exchange on these.

First, as I am glad both of you mentioned, Congress directed the FCC to produce a national Broadband Plan, and we have now done so and submitted it to Congress and the President. It includes key recommendations to transform the Universal Service Fund from supporting yesterday's technologies to tomorrow's, recovering and unleashing licensed and unlicensed spectrum so that we can lead the world in mobile. It proposes ways to promote investment by cutting red tape, lowering the cost of deployment and accelerating broad deployment everywhere of wired and wireless networks. It proposes initiatives to foster vibrant competition and empower consumers who are often confused about this landscape. It includes a roadmap to tackle vital inclusion challenges so that everyone everywhere, individuals and small businesses, can enjoy the benefits and opportunities of broadband, and it proposes concrete ways in which broadband can be deployed to help solve many of our Nation's major challenges, including education, health care, energy, and public safety.

In April, the Commission released a detailed, extensive timetable for taking action on the Plan's recommendations. The Commission has since unanimously approved eight action items already, including a notice kicking off broad-based universal reform. In May we continued driving on this agenda by approving three more items from the Plan's recommendations, a notice to cut red tape in the E-Rate program and increase flexibility for schools to better serve their communities with the funds and the technology, and order a notice to foster competition in broadband deployment by improving access to pole attachments, part of the blood and guts of this area where if we get it right we can seek faster deployment of infrastructure, and an order enabling the use of 25 megahertz more spectrum for mobile broadband.

Although many of the action items from the national Broadband Plan can be further reviewed and acted upon by the Commission, a few major recommendations require review and action by both Congress and the Commission, one of the most urgent being the creation of a nationwide interoperable public safety broadband wireless network. For far too long, as you said, Mr. Chairman, our Nation's first responders have lacked such a network. As part of the national Broadband Plan I tasked our FCC team, led by a brilliant retired admiral with great experience in this area, with starting anew and developing a comprehensive plan for an interoperable broadband public safety network. The Commission staff has pro-

posed a multi-part plan that will support the greatest benefits for public safety's day-to-day needs and provide essential redundancy and resiliency during the worst emergencies. The Plan confirms that the current 24 megahertz of spectrum identified by Congress and allocated to public safety is sufficient for public safety needs for the foreseeable future, and that if necessary in dire emergencies public safety will be able to access and roam on adjacent commercial networks in the 700-megahertz band, including the D-block, which Congress has required the FCC to auction.

It includes specific recommendations to get our mobile broadband public safety network built during a window that is closing of the rollout of commercial 4G networks. If we can get this done now, taking advantage of efficiencies that can happen by building out at the same time, we can both get it done and save a tremendous amount of money than if we wait.

Second, with respect to our goal of ensuring that the U.S. leads the world in mobile, there is little debate that our Nation's spectrum needs are rapidly increasing, with demand for spectrum very significantly exceeding the supply. If the U.S. is to lead the world in mobile services and technologies, we must address this looming spectrum crunch. I understand and share the concern that in pursuing this objective that we take full account of viewers of free over-the-air TV as we pursue what we strongly believe is a win-win-win plan to benefit free over-the-air viewers, the broadcast industry, our broadband future and American consumers.

I look forward to working closely with this committee and Congress on a mechanism for a win-win-win auction to address our mobile spectrum needs and make sure that we take full accounts of existing services like free over-the-air TV.

Finally, I remain focused on the importance of broadband to our Nation's economic growth, competitiveness, investment and innovation, huge opportunities here for the country. But as we heard, we face legal uncertainty now as a result of a recent court decision in the Comcast case.

Comcast, although we argued to sustain the framework that had existed, the court disagreed and that decision cast real doubt on whether the legal framework the Commission chose for broadband Internet services nearly a decade ago is adequate to achieve core broadband policies such as universal service, public safety, and promoting investment and innovation related to broadband and extending it to all Americans.

In addressing this issue, I reject both extremes, the extreme of overregulation and the extreme of doing nothing. I believe that a light touch approach continues to be the correct one, and look forward to ongoing dialogue with Congress as the Commission seeks public comment on how best to ensure that our broadband policies rest on a solid legal foundation and that we foster a climate for robust private investment in communications that benefits all Americans.

As you may know, the chairman of our authorizing full and subcommittees have announced they will start a process to develop proposals for updating the Communications Act. I welcome their process and the opportunity to serve as a resource to them and Congress in their work, and of course I look forward to working

with the members of this subcommittee on these issues and all issues the FCC faces.

Thank you again for this opportunity to discuss the FCC's 2011 budget request and our work under the Historic Recovery Act. I respectfully request that the subcommittee consider granting the FCC's fiscal 2011 funding request, and I would be happy to hear comments and of course take any questions.

Mr. SERRANO. Thank you so much. Thank you. Around here we always use the phrase "win-win." You say "win-win-win." Does that extra "win" mean you know something is going to happen?

Mrs. EMERSON. It means the Cardinals and the Yankees and the Nationals are all going to get a win.

Mr. SERRANO. It used to be a situation where everyone asked how long before Serrano brings in Cuba and Puerto Rico into any kind of a hearing and now it is how soon the Yankees and the Cardinals come into it. So we will see you in September.

The court decision, the D.C. Decision, now, first of all, when you come before this committee or any committee in Congress, and I am sure some of my colleagues are going to be upset with this, not in this committee, don't ever assume that Members of Congress know this issue through and through, because this is one of the more complicated issues that we deal with, and I am sure it is for you folks too. Now, the court decision kind of threw everybody for a loop. And the issue was, as we saw it, do you have the authority, existing authority, to move in the direction that many of us want you to move in. So what's your sense?

Now, just as a little aside, if one looks at your biography, you have done enough in the past to have dealt with many issues on many levels, from the Supreme Court to Congress to the administration to the FCC. So you certainly have an understanding of how these things move. Did that court decision cripple you? Does it allow leeway? Does it give you leeway to do what you need to do? Where are we at now? How can you explain that to us?

Mr. GENACHOWSKI. There is no question that the decision raised serious questions, created a problem that we have to solve. There had been a consensus that the FCC could adopt sensible rules around broadband for universal service, for public safety, for consumers, under a particular Title I approach. We defended that in court, we thought it was fine. We want to focus on what the American people want us to focus on, which is extending broadband to all Americans, leading the world in innovation, driving tremendous investment, having this be a platform for job creation, and extending the wonders of broadband and health care and education to all.

Unfortunately, we didn't win the case. And in its opinion the court raised real questions about the consensus framework that had been used. We now have to solve that problem. As I looked at it, we had two extremes in the debate. We had an extreme of oh, well, this is fine, the FCC doesn't need to do anything here at all, and we had what I believe is an extreme of oh, this is an opportunity for massive regulation of this infrastructure. And I reject both those extremes. And I directed our staff to identify a strategy that would restore the status quo, that would restore the light touch framework that would allow the Commission to do what is necessary to promote investment, to promote public safety, to ex-

tend broadband, not to do more than what is necessary. And the staff developed what we have called the third way approach that is modeled on the existing approach for how mobile voice is regulated and that we will continue to take public comment on and discussion on, with our central goal being the litigation. The court decision created a problem, let's solve it so that we can tackle our country's broadband needs.

Mr. SERRANO. And how do other members, I mean they are not here, but is there support on the Commission for that approach?

Mr. GENACHOWSKI. Well, I wouldn't want to speak for other members. I think we have healthy debate at the Commission, which is a good thing. I think each of the members of the Commission has expressed their initial views. This is an issue of sufficient importance that we should have public comment, public discussion, and encourage everyone involved to roll up their sleeves with the Commission with an approach of problem solving. I don't think anyone disputes that there is a problem. And I am going to do everything I can to work with all stakeholders, my colleagues at the Commission, the great staff at the Commission, to tackle this and solve it so that we can focus on the core goals that I think are widely shared of promoting broadband for our economy and for solving major national challenges.

Mr. SERRANO. And if I was to put you on the spot and say looking forward, at what point date wise can you say we have put this part aside and we are moving on now? I mean, I know you are moving on different fronts at the same time, but we have put this issue behind us, this has been resolved, what do you see?

Mr. GENACHOWSKI. Well, the first step is to start the proceeding, which we haven't done yet. It takes time to get it going. We will start the proceeding, we will encourage broad public comment and input, and we will do everything we can to solve this problem while we continue to move forward simultaneously on key elements of the Broadband Plan. We can't slow down, it is too important for extending opportunity to all Americans. And we have continued to move forward in the ways that I mentioned, we will keep on moving forward, and we need to tackle this issue for many reasons, including the fact that the rest of the world is not standing still.

Mr. SERRANO. Let me, I am going to be asking members after Mrs. Emerson speaks to stick to the 5-minute rule, so I will abuse it now and say the following. On your last comment, I don't know how briefly you can do this, but what happened to us, why did we fall behind, why are we in so many ways the greatest country on Earth and in this particular one we are trying to catch up, what happened to us?

Mr. GENACHOWSKI. It is obviously a very good question. A lot of people disagree on why we are where we are, but I think there is broad agreement that we are behind where we should be. Perhaps one of the drawbacks to having the infrastructure that we do is that we have to deal in this country with legacy infrastructure that in some cases slows us down. We have to reform the Universal Service Fund so that it applies to broadband, not just all telephone service. But I think what we focused on in the Broadband Plan was assessing what the current obstacles are and what we need to do to tackle them.

Mr. SERRANO. Mrs. Emerson.

Mrs. EMERSON. Thanks, Chairman. So Commissioners McDowell and Baker have stated that no evidence exists of systemic failure in the broadband market that would justify a new onerous regulatory regime. So perhaps you can tell us, because we are the Financial Services Subcommittee and generally we deal mostly with something dealing with financial services, and I will admit to not having a lot of expertise in this issue, but other than the Comcast case, which I actually kind of understand, what problem would be solved by increasing Internet regulation and is there evidence that Internet service providers are discriminating against certain customers?

Mr. GENACHOWSKI. A couple of points if I may. One is I don't support a new onerous regulatory regime. I oppose it. I support the restoration of the light touch regulatory regime that we have. There are a couple of different issues that get talked about together here. With respect to the basic authority issue, there is a broad list of problems we have to solve and they are detailed in the national Broadband Plan; broadband for all of America, tackling public safety, tackling privacy, promoting investment. All of these require the FCC to have basic authority with respect to broadband access.

Another issue that gets discussed in this is the issue of preserving a free and open Internet. I do believe that we have something very special in this country: An Internet built on an open architecture that allows free speech, that allows innovators to reach a broad audience. It has led to the development and growth of small businesses across the country, huge benefits in terms of investment. My view on this is that we need to preserve what we have and make sure that this platform remain open as we drive more and more investment in it so that the infrastructure can lead the world.

Mrs. EMERSON. Well, are you concerned that a majority of Members of Congress in both parties oppose your plan? I think there were 171 Republicans and 74 Democrats who wrote you a letter basically saying not to move forward with your plan, quite frankly because it is our responsibility to give you direction as opposed to you giving us direction. But you know we all are trying to work together to help the American people. But does that bother you that the majority of Members aren't, on the House side anyway, aren't in favor of your plan?

Mr. GENACHOWSKI. Well, the concerns that Congress have of course I take very seriously. And I share many, if not all, of the concerns that are in the letters. We need to find a way to make sure that we restore the status quo that exists, protect consumers, promote competition, promote investment, promote universal broadband to all Americans in a way that is a healthy framework that is consistent with the framework that we had. So I am looking forward to ongoing discussions with Members of Congress to developing broader understanding of the options, of the approach that I have suggested, and I believe that this is an area where I hope and I think we should be able to achieve better understanding and enable us to move forward in a way that allows us to have a solid legal foundation that promotes investment so that we have a basis for making sure we can take care of universal service, take care of

public safety, take care of small businesses and broadband, and I look forward to this process and I think our proceeding will help be a resource as we move forward.

Mrs. EMERSON. Well, since your Broadband Plan assumes significant contributions or investments by the private sector, and if, I mean you just mentioned investment, but if investors are fearful of government's involvement in regulating the Internet, and you may not call it regulation but others do so, it is all a question of semantics, so how is that going to impact the expansion of broadband to all Americans if in fact you have investors who say, well, wait a minute here, this is overreach-overreach. And I realize that you say it is not, but some others would think it is.

Have you studied the question and the impact that that might have on how we do achieve at least the large goals in your plan.

Mr. GENACHOWSKI. I am committed to making sure that we have a framework that promotes investment. As Congressman Serrano mentioned, I spent many years in the private sector, including work as an investor. This is essential. In this country private investment will fuel our broadband networks, and we have to make sure that we achieve that. We are just at the beginning of tackling this issue. I would note just one thing, which is that the third way approach replicates the framework for mobile, which has been very consistent with investment, it has been widely praised. And I look forward to discussing this with you and other members to make sure that we have a framework to achieve our common goals with respect to broadband.

Mrs. EMERSON. Are you having trouble with the authorizing committee? This is something that everybody believes will somehow solve a problem that exists out here, at least, you know, according to you. Have you not talked to the authorizing committees to determine whether or not a narrow bill could simply be written and that would preclude you from having to do it by regulation? People are very nervous about any regulatory body doing things by regulation in place of us legislating it because it is a little heavy, at least the perception is it is very heavy handed.

Mr. GENACHOWSKI. The chairmen of the authorizing committee on the House side and the Senate side have announced that they are looking at proposals to update the Communications Act and we will of course be a resource to that. So they are looking.

Mrs. EMERSON. So in other words, you would not hold back and perhaps let Congress do what it is supposed to do as opposed to you all doing it instead?

Mr. GENACHOWSKI. I am looking for a solution that allows us to work together to promote our common broadband goals. And I put on the table a solution that I believe rejects both extremes that is modeled on regulatory frameworks that work, but I am focused on a solution and if Congress were to provide a solution that would be welcome.

Mrs. EMERSON. Thanks.

Mr. SERRANO. Thank you. And now under the 5-minute rule, with a very nice gavel in my hand, I am honored to introduce the newest member of our committee attending his first hearing, the legendary gentleman from New York, a legend in his own time, Congressman Steve Israel.

Mr. ISRAEL. Thank you, Mr. Chairman. Mr. Chairman, thank you for your hospitality. I have heard references to the Yankees and the Cardinals, but nothing about my beloved New York Mets, by the way, and I hope that changes.

Mr. SERRANO. The chairman is a Yankee fan.

Mr. ISRAEL. Mr. Chairman, although I am new to the subcommittee, back in December I sent you several letters expressing concern for the deterioration of negotiations on retransmission agreements between broadcast companies and Comcast providers. Both parties have intended to do brinkmanship, but it is the American people who hang in the balance. In Chairman Serrano's community and my community about 3 million subscribers in New York, New Jersey, and Connecticut lost access to their ABC affiliate 15 minutes into the presentation of the Oscars when it went dark until the switches were turned on. And in the letter I asked you to consider ordering carriage on an interim basis when this happens, ordering arbitration, other alternative dispute resolutions so that the American people don't hang in the balance.

Two questions. One, what can the FCC do to ensure that there is not a repeat of this kind of brinkmanship and protect consumers? And second, I believe that this is just a tip of iceberg and as we move forward there are going to be more and more cases where the American people suddenly find themselves literally in the dark with respect to their access to programming. And so what are you planning to do in order to keep pace? The regulations that were promulgated in the early 1990s clearly are not keeping pace with the intensity of failed negotiations, and so what can we do moving forward to provide those consumer protections?

Mr. GENACHOWSKI. I share your concerns, particularly with respect to viewers, consumers who don't have a seat at the negotiating table and can wake up and find out that what is expected of them doesn't make any sense. You mentioned the February/March issue. I remember back to December/January when there was a possibility that viewers might find out on the Friday before a holiday weekend that they would lose their signal over the weekend for when there were high interest, in that case football programming on that they would want to watch. And at one level making sure if consumers have a real ability with sufficient time and notice to change providers that is debatable, that is something we can debate and think about. But the idea that a viewer would find out on a Friday that, oh, you can't watch some programming that is very important to you on a Monday unless you go to a store that is closed and order a product that you can't get in time, that doesn't make any sense at all. So we have announced that we are looking at the retransmission framework, and it is largely a statutory framework that has been the same framework in place for a very long time. And we are running a process to see whether it can and should be updated. I do think that the private parties in this should have the ability to negotiate their own deals, but I think something—the consumers and viewers who are not at the table, their interests have to be taken into account as we analyze the framework and make sure that it fully serves the whole ecosystem.

Mr. ISRAEL. And what is your timeframe for the review of the retransmission process?

Mr. GENACHOWSKI. It is ongoing now. I believe we are in the public comment process, and our staff is having discussions with the various players to see what recommendations we can come up with to improve and update the process.

Mr. ISRAEL. Thank you, Mr. Chairman.

Mr. SERRANO. Thank you. The distinguished Mr. Crenshaw.

Mr. CRENSHAW. Is that all you have to say, Mr. Chairman?

Mr. CULBERSON. That is all you get.

Mr. CRENSHAW. Is that all I get?

Mr. SERRANO. I spent the last year and 6 months praising you.

Mr. CRENSHAW. Thank you, Mr. Chairman. And thank you for being here, Mr. Chairman.

One of the things that when I talk to my folks back home what drives them crazy is every time there is a problem Washington says we will either spend more money, we will pass more laws, we will implement more rules, more regulations. And I guess I am trying to understand what the problem is that you are trying to solve, trying to understand why if Congress, if you have the chairmen of the authorizing committees saying they are trying to identify the problem, they want to solve the problem, that is kind of Congress' role. So when I look at the telecommunications industry it seems to be fairly innovative, it seems to be growing, there is a lot of private investment. And it would seem that I hear you saying you want to have a light touch, but it sounds like there is going to be more regulation and more regulation is going to bring more uncertainty. And I would like you to maybe just touch on a couple of things. One is kind of succinctly tell me what the biggest problem that you are going to solve, or maybe Congress is going to try to solve as well, tell me why it is important that you solve it through rules and regulations before Congress has a chance to solve it through input from their constituents, et cetera, more accountability. And then the third thing, maybe can you tell us, because this committee is interested in the money that we are going to spend, what kind of expenditures are going to be necessary if you put in place whatever rules and regulations you think you are going to put in place. It would seem to me you are going to need more people which would cost more money. So you know, and I guess you are also going to face a bunch of lawsuits and things like that. So can you highlight that as quickly as you can? I know that is probably not that easy to do quickly, but help me understand those three things.

Mr. GENACHOWSKI. Sure. First of all, I have been and the Commission has been very transparent over the last year on what policy objectives we believe need to be pursued to advance our broadband goals as a country, I think a greater level of transparency and openness about that than anyone remembers.

Mr. CRENSHAW. Now is that the problem, there is not enough transparency?

Mr. GENACHOWSKI. Transparency at the Commission? No, no, I don't think that is the problem at all. What the court decision did and our reaction to it doesn't change at all, not one bit, the policy goals that we have articulated in terms of getting broadband to rural America and all Americans, dealing with public safety issues, addressing basic consumer protections, nothing changes with re-

spect to our goals. What this uninvited, undesired court decision does is it forces us to look at the legal foundation underneath it, to go into the basement and say, all right, we need to do these things for the country, they really matter. Even though we liked the structure that existed, the court told us you got to go into the basement and fix the foundation so that what you are doing for all these other things stands up. That is what we are trying to do.

Mr. CRENSHAW. So that is the problem.

Mr. GENACHOWSKI. That is the issue.

Mr. CRENSHAW. Okay. And is that not being done now?

Mr. GENACHOWSKI. Well, that is the process. We believe we have an obligation at the Commission to say, look, this court decision came down, it raises questions, we need to have a public, open, transparent process to identify what to do going forward. A lot of other people are looking at it, and I encourage that. This is an area where it is in our national interest to have all stakeholders come together, roll up their sleeves, get into the basement, get their tools out and fix this.

Mr. CRENSHAW. What needs to get fixed? What is the big, big, big problem? You got goals, you got objectives and some of them I guess are being accomplished. But is there one big thing that is not, that you got to fix?

Mr. GENACHOWSKI. Well, in terms of the legal foundation the court said, hey, your foundation is broken, we need to go fix it. With respect to the broadband policies and objectives, transforming the Universal Service Fund so that we can extend broadband to all Americans, a vital thing we have to fix.

Mr. CRENSHAW. Is that not being done now?

Mr. GENACHOWSKI. It is something we are working on very, very hard. The court decision raises questions about the legal basis on which it can rest. None of us want to spend a long time working together to build consensus for universal service reform and then have the court say, oh, you weren't listening, we told you that you can't rest it on this part of the Communications Act.

Mr. CRENSHAW. That is the big problem. All right. Now so you are working on that. Why are you working on that and not Congress working on that?

Mr. GENACHOWSKI. Well, I think we have an obligation as the agency that administers the Universal Service Fund to work on it and improve it. We have obligations with respect to public safety, obligations with respect to basic consumer protections. And as I said, all of these policy goals have been very transparent and open. And nothing about the litigation or this process that we are dealing with now to deal with it affects our policy goals, affects our desire to have light touch regulation, to promote investment, to cut red tape, to focus on consumers' real needs, to focus on broadband and education.

Mr. CRENSHAW. Won't you end up with more regulation?

Mr. GENACHOWSKI. No.

Mr. CRENSHAW. So you might actually reduce regulation, your new rules might be less restrictive than the rules you have now?

Mr. GENACHOWSKI. Our goal is to go into the basement, fix the foundation so we can continue to work on exactly the same house that we have been working on and do that in a spirit of bipartisan-

ship and consensus and global competitiveness in the United States.

Mr. CRENSHAW. And what do you think the Congress' goal is?

Mr. GENACHOWSKI. I am not sure that I would—I am not sure——

Mr. CRENSHAW. Would they be working on—I assume that Congress is going to—I don't sit on the Energy and Commerce Committee, but I assume somebody there is. As you say, the authorizing committee chairmen are talking about fixing the telecommunications industry or rewriting laws or whatever. Is that a mutually shared goal they have with you?

Mr. GENACHOWSKI. Yes. And I wouldn't want to speak for other Members of Congress, but we work closely with our authorizing committees and have great respect for the chairmen of those committees.

Mr. CRENSHAW. So why don't you wait and let them do it? It is that urgent?

Mr. GENACHOWSKI. I think success in broadband is urgent for the country, I do believe that.

Mr. CRENSHAW. Thank you, Mr. Chairman.

Mr. SERRANO. Thank you. Ms. Wasserman Schultz, the gentlewoman from the great State of Florida.

Ms. WASSERMAN SCHULTZ. Thank you very much, Mr. Chairman. And a lifelong Yankee fan I might add, having been born in your home State.

I am going to be the fly in the ointment among the members here and tell you, and not be afraid to say out loud, that I don't really have a problem with your move towards light touch regulation and am very interested in seeing what benefits to the consumer we might have. I mean, we have been struggling with issues related to the Internet like net neutrality, like how to make sure that we decide how much a company should be able to restrict access to a piece of network or control a piece of the network and package that and sell it. I would like to hear from you, to the degree you haven't already touched on it, what consumer benefits you think would come from light touch regulation.

I also, though, would like you to touch on the whole issue of child pornography trafficking across the Internet. That is something that I have been very focused on since passing the Protect Our Children Act in 2008. I mean just to give you an example, last year a major ISP in the world tried to determine the magnitude of child pornography trafficking across their network in just one country, and it was a small country, fewer than 10 million people, something like the size of New Jersey, they used known child pornography identifiers, hash values from a registry provided for them by Interval. They determined that 120,000 transactions for receipt, distribution and possession of child pornography had occurred in one day in one country. If we were to extrapolate a similar demand on the United States it would mean that there could be as many as 3 million hits for child pornography in our own country.

I would like to know what the intended policy is toward anonymity on the Internet. Does the agency see a need to mandate that broadband providers keep and manage information like that? And I have a couple other questions related to that as well. But I know

the easiest thing in the world to do politically is to just stay away from the Internet, stay away from Internet taxation, stay away from Internet regulation. The Internet has been off limits to any suggestion of anything governmentally related in touching it since its explosion. And I think as far as the answer to the question why not leave this to Congress, I mean sometimes Congress leads and sometimes we are pushed. And to be honest with you, I am not sure, as much respect as I have for the chairmen working on the issue now, I am not sure that they would have taken the issue up quite as soon if the FCC had not begun exploring the avenues that you are exploring. So I would love to hear from you.

Mr. GENACHOWSKI. Thank you very much. Consumer benefits, the FCC has always promoted consumer benefits with respect to the main access to communications that goes into people's homes. And a lot of this issue is about preserving the ability to do, to take necessary steps for consumers. I will give you an example. We have been working recently on the issue of bill shock. There are consumers who get their bill in the mail for their mobile service and where they thought they were going to have a bill of $70, $80, $90 they get one for $2,000 because they exceeded their limits and they just didn't know. Our survey found that as many as 30 million Americans are affected by this at some level. And there are some basic things that we are exploring that might be able to fix this; making sure that consumers get text messages when they exceed their limits, for example, number one. Number two, I believe that information technologies actually provide a whole new range of opportunities to address consumer confusion, deal with basic consumer issues in a way that is lighter touch and more beneficial than in the past, because it is easier now to put in front of consumers of broadband access services information that will help them understand their speeds, their services. You know we found an international Broadband Plan that the speeds that consumers actually get for broadband are about half of what is advertised. Well, there are things that we ought to look at with respect to transparency rules that make it clearer to consumers. All of these issues are tied up in do we have basic authority to adopt sensible rules with respect to broadband access.

With respect to preserving a free and open Internet, I believe that is a huge consumer issue. The ability of consumers to have choice, to access services that they would like, I think about consumers too as small businesses who want to have the opportunity to put a business on line and know that they can reach an audience, I think it is a very, very big consumer issue.

To your child pornography point I would say that that focus is about lawful content and services. And I feel very strongly that we need to preserve the freedom and the openness of the Internet for lawful communications, lawful business relations, but unlawful content and services are in a different category. And in fact I think for the success of our Internet in the future we need to recognize both the need for openness and the need for safety, being very cognizant of the First Amendment and its vital importance.

Ms. WASSERMAN SCHULTZ. Can I just ask you, because you just described reasonable network management practices. Mr. Chair-

man, if I can just finish this sentence and get an answer that would be great. Thank you.

Does the FCC intend to allow ISPs to block, thwart and encourage identification of legal content? I mean, during this light touch regulatory process I would think that that is something that you could take up that would really protect children and address the explosion of illegal content that is being transmitted across the Internet.

Mr. GENACHOWSKI. Yes. Preserving a free and open Internet and making sure that reasonable steps can be taken to deal with unlawful content or unlawful activities, we need to get that balance right, and I think we can.

Ms. WASSERMAN SCHULTZ. Thank you very much.

Mr. SERRANO. Let me just say that that is, and that was a great line of questioning, that is my biggest concern, that you allow the freedom that we Americans always love to enjoy and at the same time not allow the Internet to be used to destroy people or to commit unlawful acts. And that is a challenge and a half, because it has to be done carefully. And we can't do it every time there is a crisis. Because when we respond to a crisis we tend to go too far to one side. And so it is a balance. I don't envy the job you have to do, but we do remind you on both sides that this is a huge challenge you have.

Mr. Culberson.

Mr. CULBERSON. Thank you, Mr. Chairman. Following up on Ms. Wasserman Schultz's question, and she is absolutely right, all of us are deeply concerned about the proliferation of child pornography, exploitation of children on the Internet, but the District Court of Appeals for the D.C. Circuit, the Supreme Court in this most recent decision from the D.C. Circuit, you don't have ancillary jurisdiction to regulate in areas that are not specifically authorized by the statute. I saw you were the general counsel of the FCC from 1994 to 1997. And when you tell us blithely and broadly that you are going to go work on the foundation, you don't have the statutory authority to do what you are attempting to do. You have a unanimous decision from the D.C. Court of Appeals, you have 10 years of precedent from the FCC in decisions and from the U.S. Supreme Court that you do not have the authority or jurisdiction to do what you are attempting to do. And all that is necessary if you are, if you are passionate about this and concerned about it is to go to the authorizing committees and ask them to amend the Communications Act to give you authority to regulate information services. And I would suggest that what you need to ask for specifically is the authority to prohibit illegal content and in particular the abomination of child pornography. And anybody that traffics in it, promotes it, allows it to be transmitted ought to be boiled in oil. And you guys ought to be able to have authority to regulate that. And I am confident the authorizers would do so. But you do encounter strenuous opposition from all of us in any broader effort to regulate lawful content on the Internet. You don't have the authority to do what you are attempting to do, do you?

Mr. GENACHOWSKI. Well——

Mr. CULBERSON. Where in any court decision and where in the statute—you were the general counsel from 1994 to 1997—tell me

specifically in what court decision and where in the statute does it explicitly give you the jurisdiction to do what you are attempting to do? It is not there, is it?

Mr. GENACHOWSKI. Well——

Mr. CULBERSON. Where?

Mr. GENACHOWSKI. With respect, I believe that the proposals that have been laid out—actually, by the different stakeholders in this there are many who agree that there are different ways under the statute to pursue broadband, and a lot of the debate is which is the best way. So we would be happy to provide a fuller legal—go on, please.

Mr. CULBERSON. You can do it I am sure off the top of your head. You were the general counsel for the FCC, you are an attorney, I am an attorney. Tell me specifically, show me, just tell me where in the statute, what court decision is it that gives you the authority to attempt to regulate the Internet in the way that you are attempting to do? I don't see it, it is not there. Can you tell me as the former general counsel and the Chairman, where in the statute and what court case gives you that authority.

Mr. GENACHOWSKI. Just one correction, I wasn't the general counsel. I was chief counsel to the Chairman.

Mr. CULBERSON. Same thing.

Mr. GENACHOWSKI. Yes. But nevertheless, the third way proposal would go back to the definition that the FCC had of broadband access providers as telecommunication service providers, the people who provide the pipe into your home for broadband access.

Mr. CULBERSON. You would just issue a regulation that says they are telecommunication?

Mr. GENACHOWSKI. The Commission had that in place in the past and then it adjusted that, and I think lawyers would agree we have the discretion to adjust it back.

Mr. CULBERSON. Ancillary jurisdiction is what you are talking about and the D.C. Circuit said you don't have ancillary jurisdiction, and you would also be reversing 10 years of explicit decisions from the FCC classifying the Internet as information services, not telecommunication, right?

Mr. GENACHOWSKI. Well, if I could, there are people who believe we continue to have ancillary jurisdiction.

Mr. CULBERSON. Despite the court decision?

Mr. GENACHOWSKI. Yes. But by the way, those are some of the carriers who would urge us to continue moving under Title I. With respect to whether the classification of broadband access can be changed there are many, many lawyers, our general counsel currently at the agency believes that it is well within Supreme Court decisions and D.C. Circuit decisions to adjust that clarification.

Mr. CULBERSON. Forgive me. My chairman is correct on the 5–minute rule and I will have follow-up. Harry Truman used to say he always wanted to meet a one-armed economist so they couldn't say on the one hand and then on the other hand. There are always lawyers that can tell you that no matter despite this mountain of Supreme Court decisions, and this most recent explicit Court of Appeals decision, that you do not have ancillary jurisdiction, and despite all these decisions from the FCC over the last 10 years that

you don't have the jurisdiction or authority to regulate the Internet, we are just going to do it anyway is what you are telling me.

Mr. GENACHOWSKI. No, sir, that is not what I am telling you.

Mr. CULBERSON. Sure.

Mr. GENACHOWSKI. We are not going to regulate the Internet.

Mr. CULBERSON. Let me just ask you again. Where in the law, what statute specifically gives you this authority and what court case gives you this authority explicitly when you have got a unanimous opinion from the D.C. Circuit that says you do not have, quote, untrammeled freedom to regulate activities over which the statute fails to confer you that authority?

If you don't have the authority, all you need to do is go to the authorizing committee, go to Mr. Waxman. As Ms. Wasserman Schultz suggests, child pornography is vile. I mean you ought to go in and just ask for authority to regulate illegal activity. You would get it. Ask for the authority. You don't have it in statute, you don't have it under court cases, do you? Tell me the case.

Mr. GENACHOWSKI. With respect, I believe we have authority.

Mr. CULBERSON. Where?

Mr. GENACHOWSKI. Under Title II. Many believe authority under Title I.

Mr. CULBERSON. Where? I have got it right here. Where?

Mr. GENACHOWSKI. Section 201, Section 202.

Mr. CULBERSON. 201 and 202. Hold on. I will do my follow up. Where else?

Mr. GENACHOWSKI. In general Title II applies to telecommunications providers.

Mr. CULBERSON. But telecommunication is not information services, that is my point. The D.C. Circuit said the Internet is information services. You are given authority to regulate telecommunications, right? You are an attorney, come on.

Mr. GENACHOWSKI. Yes. I would be happy to continue this discussion.

Mr. CULBERSON. Don't dodge.

Mr. GENACHOWSKI. No, sir. I am trying to answer your questions directly. The question is whether the provision of broadband access to consumers is——

Mr. CULBERSON. Is information or telecommunications. The chairman has been very generous. But Ms. Wasserman Schultz is exactly right, we need to absolutely shut down child pornography. Go to the authorizers. You don't have the authority to do what you are attempting to do. Why don't you go to the authorizers, will you?

Mr. GENACHOWSKI. I understand your point. We are in discussion with our authorizers.

Mr. CULBERSON. Thank you, Mr. Chairman. You have been very gracious. Thanks for the indulgence.

Mr. SERRANO. Were you a prosecutor?

Mr. CULBERSON. I just feel as strongly as we all do. And my good friend Debbie Wasserman Schultz is right about this. I mean these people ought to be boiled in oil and it is inexcusable that this vile material is allowed to be broadcast. And we can find them and roast them. She is right, toast them up.

Mr. SERRANO. We all agree.

Mr. Fattah.

Mr. FATTAH. Mr. Chairman, just let it be for the record I would rather you go deal with the child pornographers and if someone wants to say you don't have the authority let them defend on the other side. But I want to pass this round to Congressman Ryan, and then I will catch him on the next round because he wants to do something to facilitate us continuing in this particular vein.

Mr. SERRANO. Well, in that case——

Mr. RYAN. Mr. Chairman, I feel like this is a basketball game because I am going to pass to Ms. Wasserman Schultz so that she can follow up on her line of questioning.

Mr. SERRANO. Right. Who is in charge here?

Mr. RYAN. I don't know. This is my first meeting.

Mr. SERRANO. I was going to welcome the newest member of our committee, Mr. Ryan, who already has broken three other rules.

Mr. FATTAH. I think the gentlelady from Florida is in charge.

Mr. SERRANO. Of the time now I guess. Okay. Ms. Wasserman Schultz.

Ms. WASSERMAN SCHULTZ. I will only take a couple of the very generous 5 minutes that my colleagues have tossed me. I actually agree with Congressman Fattah that to the degree that you have authority, whatever authority you possess today to restrict the transmission of child pornography and to be able to go after pornographers who are transmitting content on the Internet and to be able to expose them and deal with a telecommunications policy that prohibits them from being anonymous, then you should use all that authority and you should seek more. So if we can split the difference and say that you may not have all the authority you need, but whatever authority you have you should pursue that.

Mr. GENACHOWSKI. If I could say done, like many of us, I have three kids, including two young ones, and it is a huge, huge terrible issue that needs to be tackled very fully, and so I completely agree.

Ms. WASSERMAN SCHULTZ. Good. And then the other quick question I had is just about the life line service, because life line has not, has traditionally been for land line services. Obviously it is very important now given how many people use cell phones. In September, Congresswoman Matsui, our colleague, introduced legislation that would require the FCC to establish a broadband assistance program for low-income people by expanding the life line program. Have you had a chance to review that legislation and are you supportive of it?

Mr. GENACHOWSKI. Yes and yes. And our national Broadband Plan recommends that we move forward on it, and we have actually begun the process in May looking at doing exactly that.

Ms. WASSERMAN SCHULTZ. Does your fiscal year 2011 budget request reflect it?

Mr. GENACHOWSKI. It would be part of our overall Universal Service Fund reforms, it would be inside the Universal Service Fund.

Ms. WASSERMAN SCHULTZ. Which I guess if you had some light touch regulation you would be able to advance even further?

Mr. GENACHOWSKI. Yes.

Ms. WASSERMAN SCHULTZ. Thank you very much for my colleague's indulgence.

Mr. RYAN. Thank you. I just have—it is me, right? I just have one question. The national Broadband Plan recognizes that we have this huge gap in funding, $24 billion. And we have similar issues with our transportation budget. We have a $1.4 trillion transportation infrastructure gap. And we are trying to come up with some creative ways through transportation banks and leveraging private financing and those kind of things, creative ways to try to address this issue.

Are you exploring some creative ways that we can address this issue, because we have got a lot of work ahead of us? And I think economic development and a lot of communities, not just rural but urban centers as well, who are trying to regenerate and restore their local economies, for example, in the industrial Midwest where a lot of this stuff was steel, rubber, manufacturing that is now trying to move into some higher technology, biofuels, whatever the case may be, software, this is very important for us. And so the only question is, and if we can help you in any way figure out creative ways to finance this and then to maintain it over the long term.

Mr. GENACHOWSKI. And I agree with the premise of your question completely, and there is always the opportunity for new ideas, and I welcome that.

Transforming the Universal Service Fund, it is approximately an $8 billion a year fund that needs to be focused in a smart way on new technologies to benefit people all over the country. There are opportunities in thinking creatively about spectrum options, and so the kinds of policies that we have proposed, some of which require legislation, to recover and auction off new spectrum, it has this win-win-win effect, because it can free up more spectrum, and spectrum is a form of infrastructure when it comes to wireless technologies for mobile broadband in urban and rural areas, which can make a big difference. It can generate substantial funds for the Treasury, which can help funding across the board, and there are ways to do it that work and are wins from the perspective of entities that hold spectrum licenses now.

And so there are some creative ideas there around two-sided auctions, incentive auctions that we would be happy to follow up with you on because it is an important area where we do need to work with Congress to make sure that we have the spectrum infrastructure that will allow us to lead the word.

And to your earlier question, Chairman, about what the U.S. hasn't done right in the past, this is an opportunity in the future for us to focus on our mobile infrastructure, on our wireless infrastructure to make sure we get it right for the next 10, 20 years.

Mr. RYAN. Thank you.

Mr. SERRANO. Thank you, Mr. Ryan.

Let me go into an area that is of great interest to me and I know to members on both sides, and that is the treatment of the PEG channels. In 2008, this subcommittee held a hearing on Public, Educational, and Governmental, or PEG, access television subscribers. At that time, several companies were denying PEG channels treatment equal to basic commercial channels. PEG supporters have filed petitions at the FCC to ensure fair treatment of PEG channels.

When I urged prompt resolution of those petitions at our FCC hearing last year, Acting Chairman Cox said, it is my hope—this is a quote—that the Commission will take whatever steps are necessary to ensure that PEG channels remain a vibrant and valuable service.

One year later, the FCC has apparently still not resolved the situation.

Now, some of us have been around long enough to remember that when this great bonus, cable television, went out, it was with an understanding that the local community would have access through these channels, and everything from the local Little League football team being able to present their awards live, or taped on a local channel, to the local church having a Sunday service to whatever cultural and ethnic groups wanted to go on the air; they could do it.

And what has happened is that more and more, the people are making them—making it hard for them to function. And in some cases, we hear stories out in the West Coast and other places where the channels now have moved from the first 15, 20, 30, 50 channels to channel 800, and it is a dropdown menu, and making it almost impossible for you to get.

Now, I think eventually, as we begin to trade off support, as we always do, where you have some issues that you want Congress to support you and Congress needs for you to do something, this little issue of PEG channels may become a very difficult issue, because on both sides, people support the fact that there is this public access, and it is important.

So, before I ask you what is happening, I am telling you that this has to be dealt with fairly and strongly; otherwise, we are going to have some very difficult times between this subcommittee and the FCC, because we will not sit by and allow the FCC to allow commercial carriers to just push these folks aside.

Mr. GENACHOWSKI. I appreciate the question. There has been some good news with respect to PEG, and there is also a lot more work that needs to be done. So one of the major disputes that existed was one involving Comcast, and that now has been, there has been a satisfactory solution there. We would be happy to review it with your staff and make sure it is satisfactory to you and your staff. But it is our understanding that the PEG community is satisfied with how that was resolved, and that obviously involves many communities across the country. There is at least one other major provider where there is an ongoing dispute that has not been resolved, and I can assure you that we will go back and make sure that it is on a track toward resolution.

Mr. SERRANO. Now, do you feel that there is a concentrated effort to move them off the bands, if you will? Is there indifference by the major carriers, or is there a plan here?

Mr. GENACHOWSKI. Well, I don't know that I would be comfortable characterizing their points of view. The issues tend to come up, as you know, in convergence to digital. And sometimes the conversions are done to digital transmission of video services in a way that leaves PEG behind. That is what creates the issue.

Mr. SERRANO. When you buy a house or get a car, you don't leave some of the members of the family behind. Right? You move them

all to the new place and you all celebrate. And I think that what has happened is that the FCC has not regulated these folks. And you do have the authority to do so on this particular issue, to say, this is part of the deal. And we remember the deal. I remember, in the Bronx, which took longer than most places, as you know, to get cable, that those were the agreements. Now, they have done pretty well there, but in some places, they are totally forgotten.

Mr. GENACHOWSKI. The issue remains, and we will work with you closely on this. My hope is that the successful resolution in one case can be a model for successfully resolving it in others. But there is no question that the rights of PEG channels to have access to systems and access to the audience have to be honored and enforced.

Mr. SERRANO. Okay. Now, taking Mr. Culberson's approach of being more direct. You do have the authority. Do you intend to use it to make sure that they are not left behind?

Mr. GENACHOWSKI. We intend to honor the statute here and take this very seriously and make sure that PEG channels are not left behind.

Mr. SERRANO. Okay. I understand your desire to honor it. I am going to take it a step further. I hope you get angry. Because I think as we deal with bigger issues, or what some people perceive as bigger issues, these will be left off the table again. And we can't do that.

Which brings me to my next question, which is another favorite subject of mine. And that is, why can't the FCC do what some of us would want to do with all Federal agencies, but since you have a broader understanding of a lot of issues, why do you find it so difficult to understand that we have 50 States and territories? Why do the territories always drag behind, lag behind in everything the FCC does? Why do we have American citizens who have the least access to the Internet in places like Puerto Rico and the Virgin Islands and Samoan and so on, why when we put forth a plan we always seem to say, for the States and the territories?

And understand, this is a mantra of mine with every Federal agency. But I don't have oversight over all Federal agencies, and we do over the FCC. So why is it that at every turn the territories are always left behind?

Mr. GENACHOWSKI. Well, we take this very seriously. And in fact, in the universal service proposal that we put out last month, there is a specific discussion of territories and looking at a proposal to modernize Lifeline and Link-Up to take into account the unique situations of Puerto Rico and other territories. So it is something that we take seriously, that we are looking at. And I do believe the FCC has made progress over the last few years in thinking about the Universal Service Fund applying to everywhere, including the territories.

Mr. SERRANO. But there are disparities, and you acknowledge that.

Mr. GENACHOWSKI. Yes.

Mr. SERRANO. Well, despite these disparities, you recently declined to set up an insular specific Universal Service Fund mechanism to provide wireline voice service in Puerto Rico, citing recent improvements in overall voice service.

In light of this, what can the FCC do to narrow this wide gap in Internet and especially broadband use in the territories versus the States, and make sure that a similar gap does not develop in the future?

Because what is happening is you have got this gap that exists already. Then every time you move into a new area, you leave them behind again. And so they are not only catching up to what we have now, but they are already in line to have to catch up to what we will have a year or 10 years from now or 5 years from now.

What is so difficult for the members of the Commission to understand that these folks are American citizens living under the American Flag?

Mr. GENACHOWSKI. I believe that we do understand that. And in fact, this is why specifically in our proposals to modernize the Universal Service Fund, we are focused on this issue. The biggest gap that we see and look forward to ongoing discussions with you on this is on the adoption gap. The adoption levels in Puerto Rico, for example, are well, well beneath national averages. There is no question that there is serious lagging behind, and of course, that affects people's ability to look for jobs, to get access to health care information, to be entrepreneurial and start businesses. And it is why this reform that we have proposed with respect to Lifeline and Link-Up to make significant progress on broadband adoption is so important.

On the deployment side, we are looking at both wireline deployment and wireless deployment, and we would like to see progress on both because they are both essential to participating in our economy, connecting with family and friends.

And so we hear you on this. It is very important. I think the Commission is paying very close attention to this.

Mr. SERRANO. In closing, before I turn to Mrs. Emerson, let me do a combination of Mr. Fattah and Mr. Culberson.

Assume you had the authority, if you think you don't have the authority, go and make believe we have 55 States and not 50, and let Congress get upset at you later for treating all Americans equally.

Mrs. Emerson.

Mrs. EMERSON. I am not going there.

Thank you, Mr. Chairman.

Let me ask you a question. Do other countries in the world have interoperable first-responder networks?

Mr. GENACHOWSKI. It varies from country to country. I would be happy to get you detail.

Our military has better interoperability than our first responders. And one of the things that we have been trying to do is increase the best practices, the information, the knowledge that go from our military being able to solve some of the interoperability issues to our first responders. And I think that is an area where we can make progress.

Mrs. EMERSON. But I am asking you, is there another country? Are you aware of any other country in the world that has an interoperable network for public safety folks?

Mr. GENACHOWSKI. Countries that are comparable to ours in the sense that they have so many different local authorities, it is hard to find that level of comparability. It may be that countries that have one single communications force don't have the issues that we have. So the locally-based system that we have is very important to our country. It does create interoperability issues that I think are somewhat unique to the United States.

Mrs. EMERSON. Well, that may be well true. And it is pretty embarrassing that it is this long after 9/11 and we still don't have a network.

And, as a matter of fact, even after Hurricane Katrina within the military, the military itself, active-duty folks had a pretty darn good interoperable system, which has been much improved even since then. But the Guard and—the National Guard and the Reserves couldn't talk to the active duty folks. And I don't know if that has been fixed since then, but it was very apparent during Katrina that they couldn't even do that.

I know that—I mean, I am all for building out and securing a first-responder network, and I know that you all have worked really hard on getting that plan done. I guess I am a little bit confused, because on the one hand, your plan proposes to provide $6.5 billion in assistance to first responders to build out a network, but then the National Governors Association wrote and asked that your plan be amended to allow the D block to be allocated to public safety. And then first responders say that they actually want to control the spectrum, and that priority access on—on a commercial network is insufficient in a crisis. And then we are told that all these different people are coming at it from different approaches.

I guess I want some clarification from you, if you would, because I don't know, why would it be preferable to auction the spectrum commercially and give first responders $6.5 billion, while hoping the industry will work with them? Why wouldn't you just allocate the D block to first responders without giving them the $6.5 billion, and then they can control the spectrum and establish their own relationship with industry to build out a reliable and a resilient network?

It is all a little bit too many different competing interests here. And, you know, the bottom line is, we want a system that works, and I don't know why we would pay $6.5 billion for it if they could get it for free and then do it themselves. So I want to hear your reasoning behind it, if you wouldn't mind.

Mr. GENACHOWSKI. A couple points. One is the goal of finally delivering on the recommendation of the 9/11 Commission that we have interoperable communications, number one. And, two, that we have a mobile broadband first responders is absolutely vital. Two, we don't have the authority to do anything other than auction the spectrum. This was the allocation that Congress made, and for that to change, we couldn't do that on our own.

In connection with the National Broadband Plan, we put together a team led by a retired admiral who is just completely dedicated to tackling these issues. And the team developed a multi-part plan, that there is no single thing that can solve this. But their biggest concern was that the record of the last number of years suggests that if spectrum is allocated for public safety, and there isn't a plan

to build the network, it doesn't get built. And there is spectrum out there that has been allocated. This isn't like other areas that the FCC deals with where private investors will come and invest in networks and they would get them built.

And the conclusion of our staff on this was that if the funding issue isn't tackled directly, the towers and the equipment and everything else that needs to get done won't get done. And that is a suggestion and a request that we have made to Congress, making the point that if this is done now while the commercial four G networks are getting built out, the cost will be much, much less than if it is done in the future.

There are a series of things that are part of the plan that need to be done to make sure that the network not only gets built but that it gets built in a way that is interoperable. And so we have set up an office for interoperability coordinating with Homeland Security Department and the Justice Department to make sure that we don't repeat the errors of the past, and that there are people looking at standards for interoperability, so that as the new network is built out, that can happen.

And the team of course looked at the sufficiency of the spectrum as Congress had allocated it and came to the conclusion, dispassionate staff just looking at the facts, that the issue wasn't quantity of spectrum; the issue was funding to get the network built.

Mrs. EMERSON. Have the first responders even presented a plan? I don't know. I am really asking you, have you seen any kind of plan on the part of first-responder community?

Mr. GENACHOWSKI. There have been many, many discussions between the first-responder community and the agency. And I know from my own conversations with them that many parts of the plan they feel strongly represent real progress, as I think Chairman Serrano mentioned, on a bipartisan basis. The four members, two Democrats, two Republicans on the 9/11 Commission supported the ideas and the plan as the best thing that they have seen to really make progress on this. We will continue to work with the public safety community.

Our goals are the same, and we look forward to working with the public safety community, with this committee, with other committees to get this done for our country. It has not been a proud history. We have made much less progress over the last 10 years. Different people have different views on why that has occurred. But what is important to me was to set up the kind of team that had the right level of experience and could dispassionately look at it and make recommendations to Congress and for our own actions that we believe would accelerate interoperability and accelerate a mobile broadband public safety.

Mrs. EMERSON. So let's just say we all agree with you. Hypothetically, we all agree with you, and you have the go ahead and you are going to get this done, and you will get your $6.5 billion to give out, hypothetically. How long will it take from start to finish to put in place a nationwide public safety network that is going to resolve all the communications issues we faced during both 9/11 and Katrina?

Mr. GENACHOWSKI. Two answers. Several years. And I would be happy to get back to you with something more specific. But I can tell you, it would be roughly built out on the same pace as the buildout of commercial networks. Because part of the idea is, as the commercial carriers are building up four G networks, let's take advantage of that buildout; let's do one truck roll, not two. Let's have equipment go out at the same time. Let's take advantage of the same towers. So the pace would be the pace that is driven by the commercial buildout, and the cost would be much less than if we didn't move forward on this, allow the commercial networks to be built out, and then came back and said, okay, now let's do another set of truck rolls to put in the equipment for public safety.

So I wish we could do it in 6 months. We can't. It will take several years. But it will be much faster than any other approach that we have seen.

Mrs. EMERSON. So several years. Is that under 10?

Mr. GENACHOWSKI. Yes.

Mrs. EMERSON. Is it more than 5? I am not—and I am not going to hold you to it. But just to give us a sense of—because we already have this other broadband deployment in place. I mean, I am happy to get EDGE in my district. You know? I mean, I am happy to get EDGE in some places. So what can I tell you, but nonetheless, it is worrisome in deploying a system like that. I mean, I just watched the nightmares that all of these little companies are going through trying to get approval from either RUS/NTIA just to do the broadband deployment from the stimulus bill, let alone some major national network. So I appreciate your answer. Thanks.

Mr. SERRANO. Mr. Fattah.

Mr. FATTAH. Thank you, Mr. Chairman. And I wish the Yankees well this year.

Mrs. EMERSON. What about the Cardinals?

Mr. FATTAH. But the Phillies are going to be the number one.

Mr. SERRANO. I suspect it will be the Yankees and the Phillies again.

Mr. FATTAH. I am with you.

Welcome to the committee. And you have a recommendation for an increase of $19 million over your base from last year. Now, in part, you got some technology initiatives. There is also an additional 900,000 you are asking in terms of the, I guess the replacement of the vehicles you use now to protect public safety networks from interference. Would those dollars over the long term be backed out in future year budgets, assuming we do the Nationwide D block plan?

Mr. GENACHOWSKI. I am not sure they would. The public safety work that we do, and I am very proud of this, we have developed technologies over the years that have the ability to identify spectrum uses in different markets that has been of tremendous value to our sister agencies in government in dealing with disasters, and we would be happy to follow up with you and give you more examples. Some of them can't be discussed in a public setting. But they have been very valuable throughout the United States, especially with respect to disasters, and I think it is a program that has earned its presence.

Mr. FATTAH. Another part of this increase request is to recruit and hire talent on it, on cybersecurity issues and some other issues. Right? So, now, I assume you do have authority to be concerned about cybersecurity.

Mr. GENACHOWSKI. We are very concerned about——

Mr. FATTAH. This is on the Internet. Right?

Mr. GENACHOWSKI. Yeah.

Mr. FATTAH. There was some debate about whether you had any authority to have interactions around the Internet.

Mr. GENACHOWSKI. It is a very significant challenge for the country. As the FCC, as the expert agency responsible for communications, we have an important role to play here. It is vital that we have the expertise, the engineers and others, who can play a role in our system with respect to cybersecurity.

Mr. FATTAH. Now, in regards to one of your major goals of the agency, as you have identified, is to advancing a vibrant media landscape. In this regard, one of the big concerns has been about making sure that we continue to advance the interests of ownership, both in the media for African Americans, Hispanics, Native Americans, women. And I am, wondering whether it would be, as your role as chair, you see any major initiatives in this regard given the dearth of interest over the last decade in this issue.

Mr. GENACHOWSKI. It is a very important issue. And it becomes even more important as technologies change, as the next generation is looking at new media channels instead of old media channels. So we are both, with respect to older media, getting our arms around the data and pursuing initiatives to continue to encourage those goals with respect to older media. And I also think it is vitally important that we look at a broad opportunity with respect to new media and new technologies. And in some ways there is an even greater opportunity to make a difference there because there are new entrepreneurs starting every day. And so it is one of the reasons, if I may, that I think preserving a free and open Internet is so important, because it gives the opportunity from anyone from any background to start a media company, start a business, reach an audience and have a realistic chance to succeed.

Mr. FATTAH. Well, I concur. And I want to thank you for your work. And I know there is a libertarian streak that we should—that free and open might mean unfettered. I mean, we have a Federal highway system that is free and open, but you do have to be moving on the right direction. You can't be coming up the opposite way. So I want to concur with my colleagues' interest in this child pornography issue, that we need to be clear that, even though we are very interested in a free and open Internet, we don't mean that in that context that people should be able to abuse children and feel as though they can be anonymous and out of the reach or touch of the society in terms of addressing what is a, I think my Republican colleague said, an abomination. But we should be passionate about addressing at every turn people who are involved in that type of activity. So thank you very much.

Mr. GENACHOWSKI. I totally agree.

Mr. SERRANO. Thank you, Mr. Fattah.

I want to echo his words. I think it has to be said again that, on behalf of all members of this committee, we do believe in a free

and open Internet, but not one that then has the ability to bring harm to people. And that is, again, that is your challenge. That is the challenge for all of us. But it is clear that, as he says, you can't use the highway going in the wrong direction. You shouldn't use the Internet to bring harm to people.

Mr. GENACHOWSKI. Absolutely. We have free and open commercial markets in our regular business, and we enforce the hell out of our child pornography laws. And that should be the same approach with respect to these new technologies. It is vital.

Mr. SERRANO. Mr. Culberson.

Mr. CULBERSON. Thank you, Mr. Chairman.

If I could throw out an idea that would allow you to very rapidly permit interoperability of our first responders and law enforcement, and I don't think it would cost much money, if any, and that would be to authorize the television broadcasters to use the currently unused part of their digital spectrum, and let them become Internet providers. If you authorize television broadcasters to function as Internet service providers, they can use the digital spectrum they currently broadcast on, large portions of which are unused, to sell that spectrum to the public, number one.

And then, number two, you can then also simply require them as they do, they have to carry public service messages and broadcast the—PBS, for example, it would be probably within your authority under the statute to authorize the television stations to provide a certain piece of that spectrum to law enforcement community. And then you would have instant interoperability. The whole country has got television service and the towers are there; the digital broadcast is there. That would work. And it is there, and you don't have to do anything other than change the rules and the marketplace to take care of it. Right?

Mr. GENACHOWSKI. Those are issues that we look at. There are some challenges. Broadcasting is a one-way medium; big towers transmitting in one way. And converting that infrastructure into something that works for two-way communications on a nationwide basis is—I wish it were easy.

Mr. CULBERSON. Sure. But the marketplace would solve it. If you authorize it—I guarantee you, I have talked to the television people about it because it occurred to me when I was looking at what they were doing, they have got big gaps. They have got big areas of the digital spectrum they are not using. I throw that out as an idea.

Number two, I know that Puerto Rico and others have cellular phone service, have television service. The cellular service alone, Mr. Chairman, I know provides people with iPhone or BlackBerry access to the Internet. And the purpose of what you are attempting to do you say is to provide the country with greater access to the Internet, but the broadband plan, the National Broadband Plan acknowledges that 95 percent of the country already has access to broadband at 4 megabits per second, and that, by 2013, 90 percent of the country is going to have access at 50 megahertz per second. So the marketplace is already taking care of this.

And, number two, I want to go back to your statement a minute ago. You said you are going to honor the statute. Now, if you are going to honor the statute, as we were just discussing, the statute does not give you the authority to regulate the Internet. You ac-

knowledged that—and I am reading from the District Court of Appeals opinion—in this case, the FCC does not claim that Congress has given it express authority to regulate the Internet. You acknowledge that. It was stipulated. And you are an attorney; you know what that means. You don't even contest it. By the way, you did not even appeal this decision to the U.S. Supreme Court.

So, Mr. Chairman, Chairman Serrano, the FCC stipulated in Federal court that they do not have the authority to regulate the Internet. And when the District Court of Appeals said you don't have the authority to regulate the Internet, they didn't even appeal that to the Supreme Court. They didn't even appeal it. So what they need to do is go to the authorizers and ask for statutory authority to do what you are attempting to do.

The Commission, Mr. Chairman, Chairman Serrano, and I know you know this, Chairman Genachowski, the FCC has ruled that the Internet is not a telecommunications service. You have ruled that it is an information service.

They simply don't have the authority, Chairman Serrano, to do what they are attempting to do. And it is not within the jurisdiction of this committee to fund unauthorized and, in this case, specifically prohibited activity.

So, therefore, Mr. Chairman, I don't think—we need to have—a hard part of our bill needs to say that none of the funds appropriated by this act may be used by the FCC to regulate the Internet, because it is not authorized by law.

I would repeat my question. Tell me, show me where in the statute you have the authority to.

Mr. FATTAH. Mr. Chairman, you have asked this question several times.

Mr. CULBERSON. But he can't answer it.

Mr. FATTAH. But yeah, but that is fine. But we don't badger witnesses.

Mr. CULBERSON. No, sir, I am not attempting to badger.

I mean to make the point to the committee, Mr. Fattah and Chairman Serrano, and this is really important, that the FCC stipulated in court they don't have this authority. They didn't appeal it. When the District Court of Appeals said, you don't have this authority, they didn't even appeal it. So they acknowledged, you don't have statutory authority to regulate the Internet.

Mr. SERRANO. Well, I understand that. But I know what you are trying to get at. But why don't you let him answer the question.

Mr. CULBERSON. And the question would be, where in the statute do you have the authority to regulate the Internet, when you stipulated to the D.C. Court you don't have this authority? And I just looked at title 2, section 201. That talks about communication services. These are the duty of every common carrier to furnish communication services and to hook up other carriers. And then section 202 of title 47, USC, again deals with communications services. That does not give you the authority to regulate the Internet, and you stipulated in Court of Appeals that you do not have the authority to regulate the Internet, and the standing rules of the FCC say you do not have the authority to regulate the Internet.

So my question is, where explicitly in statute or rule do you have the authority to regulate the Internet?

Mr. GENACHOWSKI. So, if I may. It has been a long time since I have been a practicing lawyer, so I would say a couple of things. One is, we have a great experienced legal staff at the FCC, and I would refer you to a long explanation of the legal issues that our general counsel has written.

If I could attempt to summarize some of it. The question of, does the FCC have the authority to determine, not that the Internet, but that providers of broadband communication services are providers of communications services under the provisions you mentioned. I believe one that they do, and that the Supreme Court in the Brand X decision and other decisions confirms that we have the authority to do so.

But we would be happy to provide a legal briefing for the committee. I have excellent lawyers that I rely on for this, institutional lawyers of the FCC, who are committed to making sure that consumer interest, competition interest, promoting innovation and investment are protected with respect to broadband communications.

Mr. SERRANO. Your time is up.

Mr. CULBERSON. He can't answer the question. It is not authorized.

Mr. SERRANO. No, no, he gave you an answer; but that you don't accept the answer. I understand that.

Mr. CULBERSON. May I ask him one follow-up? I will do another round.

Mr. SERRANO. One follow up. But let me preface your follow up by telling you that some members of this committee feel he has the authority to do so and the Commission does, and we are hopeful that they move ahead and do what they have to do, and then run into trouble with Congress if that is going to happen on behalf of the American people and the consumers. That is a good confrontation that I am willing to be supportive of on the Commission side. I don't want them to sit around waiting to see if they have when they feel they have it, and many of us feel that they have it and should use it.

Mr. CULBERSON. You are very gracious with the time, Mr. Chairman, and I do appreciate it. You are a gentleman and a scholar. It is fun working with you. I really mean it. I appreciate the extra time.

But I want to make sure Chairman Serrano and the committee members understand that the FCC stipulated, you would agree, Chairman Genachowski—I am quoting from the District Court of Appeals' opinion: In this case, the FCC does not claim Congress has given it express authority to regulate the Internet.

That is your position in court. You did not appeal it to the Supreme Court. And you do not have and have never claimed in court that you have the authority to regulate the Internet. Isn't that correct?

Mr. GENACHOWSKI. It is not, sir.

Mr. CULBERSON. I am quoting from the opinion.

Mr. GENACHOWSKI. I understand. We will provide you and the other members of the committee a full legal analysis. I will be happy to discuss it on an ongoing basis. But as I tried to indicate, I think we disagree on these legal points. And I do have excellent counsel at the FCC that is focused on these issues.

Mr. SERRANO. They did not claim it.

Mrs. EMERSON. Let me just say something, because one, we are talking about the Internet. Otherwise, we are talking about reclassifying the transmission component of broadband. And so it is not necessarily the same thing. So I just raise that as a question as a point of refereeing.

Mr. GENACHOWSKI. Thank you.

Mr. SERRANO. We don't always claim what we think we are. You are the greatest Member of Congress. You don't claim that all the time.

Mr. Fattah.

Mr. FATTAH. Just to clarify. I agree with the ranking member.

What the chairman has said is that they have the authority to regulate the providers of broadband. And it is different from the question regulating the Internet, even though the broadband providers are operating on the Internet.

So we can play games here, but the reality is that I think the question has been asked and answered. There has been an offering of a legal briefing. And none of us can assert what the law is. That is what we have the courts to determine, and that is why we have lawyers on all various sides of this. But let's proceed.

Thank you, Mr. Chairman.

Mr. SERRANO. Thank you.

And let's do this officially. Why don't we invite your legal staff to come and speak to our staffs and to discuss this at length. Because this chairman would rather you upset some Members of Congress when you defend the rights of the American people as consumers than to wait around to interpret totally whether you have one right or not.

Mr. GENACHOWSKI. Thank you. We will provide that briefing.

Mr. SERRANO. Ms. Lee.

Ms. LEE. Thank you very much. I apologize if this question is redundant due to my being late. I had things off the Hill I had to do. But good morning. Good to see you.

Mr. GENACHOWSKI. Good morning.

Ms. LEE. I know that you are concerned that the National Broadband Plan meets the digital future and is accessible to every American.

We talked with the Congressional Black Caucus when you came in. So it is very important I think to continue this discussion as it relates to diversity in media ownership, management, access, how it is integrated into the National Broadband Plan. Also, the fair and equitable contracting opportunities for minority- and women-owned contractors and subcontractors and the fulfillment of this national effort. So I just want to get a sense of how you are doing in terms of this, in terms of the diversity question and the inclusion question.

And also, it is really important, and I wanted to ask you this before, in terms of businesses and organizations that require people to submit their resume or information only through the computer, only through the Internet, they won't accept any other way of submission, how is that fair to people who don't have access? I mean, the digital divide is alive and well, unfortunately. And so when people—and I know, in my district, say, look, they won't accept my

resume unless I put it online. My God, can we stop that, at least until everyone has access to broadband and to the Internet and has enough money to buy a computer?

Mr. GENACHOWSKI. It is such a powerful point and such an important issue. The costs of digital exclusion today are so much higher than they were 10 years ago. Ten years ago, if you were looking for a job, you could get the newspaper and find a job and apply for it. Today, as you mentioned, more and more job postings are online only and job applications require online submissions.

Ms. LEE. But how can we stop that?

Mr. GENACHOWSKI. Well, I am not sure that our authority extends to address the hiring practices of companies.

Ms. LEE. Not hiring practices.

Mr. GENACHOWSKI. In the way they take applications. But we are very focused on tackling these digital divide issues as fast as we can. It is part of the urgency for moving forward on broadband, on the adoption issues, the inclusion issues, where there are clear gaps, low-income Americans, minority Americans, rural Americans, seniors are behind a level that is already too low. Students and others. So it is vital that we do this.

We suggested a series of things in our plan. Reforming the Universal Service Fund in a way that efficiently tackles this is vital. We suggested the creation of a digital literacy corps that would focus on the communities that are most behind and tackle that with a kind of energy that we are capable of as a country. And on the ownership entrepreneur side, we are doing a series of things working closely with the Small Business Administration to make sure that the programs that exist, the mentoring programs and others, are modernized to help small businesses, entrepreneurs from all communities take advantage of new technologies.

There is no silver bullet here, as you know, but there are a series of things we can pursue with energy. Some of them are within our jurisdiction. We will pursue them. Some of them are suggestions we have made to other agencies and to Congress. But it is very important, and I think the urgency is increased by the fact that the costs for jobs, for health care, for education, of not being online are much higher than they used to be, and they are getting higher every day.

Ms. LEE. But can't the FCC send out an, I won't say directive, but a suggestion that organizations and businesses not require resumes and information to be submitted online only? That that could be discriminatory, and until everyone, every household is wired, that they have to or they should have other means of being able to receive submissions that are critical to people in terms of their lives? Because I think if the FCC just said that, you know, the country would listen. And I know, oftentimes, I talk to companies and nonprofits even. I say, you guys are shutting out a whole population of people because you require online-only submissions. And they say, oh, yeah, we hadn't even thought about that.

So if the FCC would think it through and talk about it a little bit and send out a suggestion that this stop until every household is wired, you know, we may see a bit more fairness in terms of this whole system now.

Mr. GENACHOWSKI. We will work with you on this. And I think we also would need to work together on the other half of it. More and more companies tell me that they need their employees to have basic digital skills and tools.

Ms. LEE. Why sure. That is a given. You know, especially for many of our districts that are not wired and where the digital divide is huge. That is what we intend to do.

Mr. GENACHOWSKI. I agree. So working on the front end, as you said; this back end, we set goals in the plan with respect to schools and libraries in every community that are open to people to make sure that even as we try to get broadband into every home, that there is meaningful access in every local community to the ability to both have access to the Internet, and also to the digital skills and tools that one needs in order to have meaningful access and to be eligible for a lot of the jobs that more and more require digital skills and tools.

Ms. LEE. I look forward to working with you on that, because we have to send out that message that people can't be discriminated against because they don't have access to the Web and to the Internet and to broadband and to a computer. Okay. That is basic. Thanks a million.

Mr. SERRANO. Thank you, Ms. Lee.

I am going to try to wind this down. So I am going to submit most of the rest of my questions for the record. I have two quick ones, and then I will turn it over to the rest and wrap it up.

On wireless contract termination, something we all deal with, I went in recently just to reduce my minutes and ended up with a new phone and a new contract. Don't ask me why. And they told me if I reduce my minutes, then I couldn't get my five friends and relatives on it or whatever. And if I did that—it was like a scene from Mad, Mad, Mad, Mad World where they are all trying to figure out how to get the loot, and Sid Cesar says, well, you were in the car, so you get one share for having a car and one share for being you. You were on foot, but you had two people, so you get three shares. And Jonathan Winters says, It doesn't matter, I still get less than everybody else because I was alone. So it is every man for himself.

Have you ever tried going to redo your contract? It is where you reduce your minutes, you get less options. You get more options, then you are going to fall under this plan. You walk out of there and you say, I speak English, I speak Spanish, I don't speak this language. Very embarrassing.

So what happens when a new generation of iPhones or a new version of an android becomes available? Providers increase their cancellation fees to prevent customers from changing service providers. The FCC survey shows 43 percent of consumers have remained with their current service provider because of high early termination fees. What can the FCC do to restrict anti-competitive behavior so that consumers are not prevented from swapping service providers as technology improves and options increase?

And for the record, my explanation of my own personal account is not a statement about what I want done either for me or for the industry. It is just that I pride myself on the fact that I do a lot

of these things myself and therefore I know what consumers go through. But I am not asking for any special favors from anyone.

Mr. GENACHOWSKI. Our surveys and our complaints show a tremendous amount of consumer confusion over many different aspects of wired and wireless communications. It is a thing that we are very concerned about, because the more confused consumers are, the less they can make the market work and drive competition. So whether it is speed of broadband, whether it is how early termination fees work, we believe that there are real opportunities using information technology to provide greater disclosure, greater transparency to consumers in a form that ordinary people would understand so that consumers can help make the market work better. And we are pursuing that around bill shock. We are pursuing that around early termination fees. We are pursuing that around broadband speeds. And I think this is a promising approach that should empower consumers to help make the market work. With respect to—and one of the things consumers are confused about what choices they have with respect to different services and alternatives to signing up for long-term contracts.

We are also looking at the issue in general with respect to ETFs. We pay close to this. We are in active discussion with companies. On various occasions, we have seen things that have caused us to write letters to companies to ask them to explain some of what they have done, and in some cases, those letters have caused some of the companies to say, Oh, we didn't really mean that, and to adjust behaviors in ways that were more consumer friendly. But there is no question, there is tremendous confusion here, and I think we can play a helpful role in increasing transparency and disclosure and lessening consumer confusion.

Mr. SERRANO. I hope you do. And I know that I speak for all members of the committee when I say that. I hope you move in that direction to make life a little easier for folks. And not only that, to give them a real chance to be able to make wise decisions, because sometimes you are lost.

My last question. As you know, we are big-time baseball fans and believe that all American households should have regular access to baseball games from both leagues. Currently, Time Warner and the Mid-Atlantic Sports Network, MASN, are engaged in a dispute over Time Warner's cable carriage in Eastern North Carolina. In the past, that cable franchise carried the MASN which shows games of both the Nationals and the Orioles, the closest teams to the area. I understand that there have been two arbitration decisions in favor of MASN and that, in October of 2008, the media bureau of the FCC also ruled in MASN's favor. Time Warner has since appealed the decision. In the meantime, baseball fans there are missing out on these two teams.

So I asked you the question last year, but—I asked this question last year, but I understand there has still not been a ruling. Is there a reason that it has taken so long? And do you have any sense of how long it will take the commission to make a final decision so that folks in that part of the country will know where they stand?

Mr. GENACHOWSKI. The Bureau is actively working on it, and we need to bring it to conclusion. The issue of sports programing and

consumers and video carriage is one that occupies a good deal of our time. We adopted rules a couple of months ago that will make it easier for competitors to cable companies to get access to local regional sports networks. It had been both a real barrier to competition and also unfair to consumers who were signing up to the other networks. The retransmission consent issue that we talked about before, one of the areas where it tends historically has had some real impact on consumers is that that becomes a leverage point for negotiations between cable companies and broadcasters and consumers who want to watch the programming they want to watch end up getting hurt. And then there are issues like the one that you mentioned. So these are all activity on the plate of the FCC. On some, we have moved on, and I think we have made really good progress. On this particular one, we still need to act, and I will make sure we do soon.

Mr. SERRANO. Well, with that statement that you will move on it so that the folks know what is going on, especially with this kid in Washington who is going to keep striking people out. Okay.

Mrs. Emerson.

Mrs. EMERSON. Thanks. I have some questions I would like to submit to the record, Mr. Chairman. And just on that—one little quick question again on that retransmission thing, because my smaller carriers who cannot necessarily afford it pay much, much higher rates than my larger carriers for retransmission rights. And it is problematic because they just can't compete; but yet, quite frankly, the larger cable companies don't come in there, anyway, into these communities because they are very rural anyhow. So it is really—and those are also the communities where folks aren't allowed, don't have the means necessarily to be paying outrageously high cable bills. And so, quite frankly, if you can figure out how to make that work. I realize you believe in negotiation between the parties, and I think that is grand. But for some reason, the little guys, because they don't have as many people over whom to spread their higher costs, it makes it really problematic. And I am just making that statement. You don't have to really respond, but just because Joe brought it up.

Let me ask you a really quick question about Universal Service Fund, and you will have to forgive me, because I am actually late to be somewhere. How will this proposal—is it possible this proposal could increase the cost of phone service to customers living in high-cost areas? Number one. That is the first question. And how are you going to allocate the new funding? Is it going to be based on populations that are the most underserved or unserved? And is every State going to receive money? All sorts of things like that.

I just—you know, I know these are questions that I have, and of course, where I live, people still have land-line telephones. So I don't know if that, how regular, old-fashioned phone service is going to be impacted as well.

Mr. GENACHOWSKI. The Universal Service Fund is one of our most complex, challenging issues, but it also affects so many Americans, and it is so important to get it right for our broadband future, especially when it comes to rural America.

In putting together the broadband plan, we made the following recommendations. One is we need to transform the fund to apply to broadband, as we have discussed, particularly for rural areas. Our recommendation was that we do this not in a flash cut because we are concerned about ongoing provision of telephone service as broadband is coming in, but also not in a way that goes on indefinitely. So we put out a multiyear plan. It is a 10-year plan to gradually move the system from telephone service to broadband in a way that doesn't increase the rate of growth of the fund, because someone has to pay for it; in these times, it is very important for us to be fiscally prudent.

We have also suggested that there is a way to accelerate the transition. This is not something that we will do on our own, but we have suggested that Congress has the ability to authorize, appropriate essentially a bridge fund that would be sort of a one-time capital infusion into the Universal Service Fund that would allow the transition to happen more quickly in rural areas. And I would encourage the committee to look at that. We encourage Congress to look at it. We understand that it is a challenging time fiscally, but we wanted that option to be available because it would accelerate the transition.

And then, with respect to your question about unserved and underserved, the priority is unserved. It is getting broadband to the parts of the country that don't have it. So we are looking at all the various ways we can cut and cap the existing fund to free up money as quickly as possible for the Americans who are most in need and who don't have service wherever they live. And it applies both to high cost and the Lifeline and Link-Up as well as the rate program and the rural health care program.

Mrs. EMERSON. So where you have unserved, that means, unfortunately, in my district, a lot of white, you know, on the red and white maps on TV in a lot of the white area. And I have so much National Forest and so therein lies part of the issue, so that parts of my district are totally unserved as far as any kind of broadband. On the other hand, I have underserved areas, too, whereby like one half of—for example, you have got a little town, and on one side of Main Street, it is dial-up; other side, it is not 3G, but it may be EDGE or something like that. So would that be considered underserved, and would only be in the main part of the town, but if you lived anywhere on the outlying areas, you are out of luck?

Mr. GENACHOWSKI. I would say the principle is every American, wherever they live, should have access to broadband infrastructure. And one of the issues that comes up, including in the 95 percent figure that we heard earlier, is that it often looks at things on a zip code basis, on a county basis, and it obscures some of the real issues inside, where a county might be counted or a zip code might be counted as having broadband infrastructure, even though 20, 30, 40, 50 percent of the people inside don't have it. So we are going to be very practical about making sure that the Universal Service Fund goes to actually get people service where they need it. If you are part of the 20 percent that lives in a county or a zip code that doesn't have it, you shouldn't be penalized because you are in that zip code. We also have to figure out a way not to overfund areas that don't need it so we can target the money where it is really nec-

essary. It is not easy, but we are committed to taking it on. And not to reintroduce the authority issue, but this is part of what is at stake.

Mrs. EMERSON. I don't have as much of an issue with this part of it. And it is critically important, and it helps for lots of reasons, not the least of which is when you go to a little clinic and we can do telemedicine—you don't need it in your district. You can do telemedicine with MD Anderson, for example. That is pretty significant. And I would like for all of my constituents to have those same opportunities.

So, anyway, best of luck as you get that whole system deployed.

Mr. GENACHOWSKI. Thank you.

Mr. SERRANO. The last question goes to Mr. Culberson. However, the singular ruling does not allow him to ask anything about authority.

Mr. CULBERSON. If I could just ask Mrs. Emerson if you have got television service in all parts of your district, broadcast, where they can put rabbit ears.

Mrs. EMERSON. No, I do not. There are parts of my district where you have to use satellite in order to get television. And it is not necessarily local.

Mr. CULBERSON. But it is all digital now.

Mrs. EMERSON. Yes, it is.

Mr. CULBERSON. The way to do this, I am serious, if you would consider just granting television stations the ability to be Internet service providers, the marketplace will take care of this. And they can install the equipment, let them charge a fee for it, and through the satellites or through the transmission towers, they could provide Internet service on that unused portion of their digital spectrum to the country. Just consider it. Try to think outside the box, you know?

And a couple of follow ups, Mr. Chairman, because it is truly not a matter—and I am really not—this is not a matter of interpretation on my part. The D.C. Circuit Court of Appeals in the first week of April just handed down this decision in the Comcast case.

And if I could, Chairman Serrano, during the last part of my 5 minutes here, the remainder, just a couple of sentences. Let me quote for the record that the D.C. Court of Appeals says: In this case, we must decide whether the FCC has authority to regulate an Internet service provider's network management practices. The FCC acknowledges, Mr. Chairman, that it has no express statutory authority over such practices. And the commission relies on section 4(1) of the Communications Act which authorizes the commission to, quote, perform any and all acts and make such rules and regulations and issue such orders that are not inconsistent with this chapter as may be necessary in the execution of its functions.

Sort of like the necessary and proper clause, Chairman Serrano, of the Constitution, which has been interpreted very broadly to give Congress authority in areas that the Founders did not intend.

But here, the D.C. Court ruled explicitly you do not have authority to regulate the Internet service providers, regulate the Internet, not only because the statute doesn't allow you to do it, and you acknowledge that the FCC stipulated in court that you don't have this authority expressly in statute, but you are relying on this nec-

essary and proper clause. And the FCC has repeatedly ruled that the Internet is information services, not telecommunications services. Everything I have just said is accurate.

Mr. GENACHOWSKI. I disagree with you, sir. We will provide a full legal briefing.

Mr. CULBERSON. I just quoted from the D.C. Court. Did I misquote the D.C. Court of Appeals? I just read it to you.

Mr. GENACHOWSKI. I don't have it in front of me. I don't think you misquoted it. But the issue of whether transmission services by broadband providers is inside the Communications Act under its various titles is one in which many lawyers, including the career staff at the FCC and our excellent general counsel, believes that, under Brand X and other decisions, there is clearly the authority to move on it.

Mr. CULBERSON. Therefore, let me just quote you. This is the D.C. Court of Appeals: The FCC acknowledges that you have no express statutory authority over the regulation of the Internet. I am quoting from the D.C. Court of Appeals' opinion. That was your decision in court. Are you telling this committee that your position today on June 10 is different from the position you had in the D.C. Court of Appeals in April?

Mr. GENACHOWSKI. You are raising issues around definitions of information services, transmission services, telecommunication services that are very complex. We would be happy to——

Mr. CULBERSON. I am quoting from the Court of Appeals' opinion. You told the Court of Appeals you don't have authority. Have you changed that position?

Mr. GENACHOWSKI. The Court invalidated the approach that the Commission had taken. It did not invalidate other approaches that are now on the table for consideration. I would have preferred the other approach.

Mr. CULBERSON. Well, of course. You are an attorney.

Mr. GENACHOWSKI. But because the court disagreed with the mechanism that the FCC had used to protect consumers, promote competition, particular form, and the reasoning.

Mr. CULBERSON. I understand. My time is very limited. And forgive me for interrupting, and the chairman is very gracious with the time.

But, Mr. Chairman, it is a fact, and Chairman Genachowski cannot disagree that the FCC has standing rules that the Internet is information services, and he has not disagreed that the FCC stipulated, told the Federal Court of Appeals that the FCC has no—and I am quoting from the opinion—has no express statutory authority to regulate the Internet.

He can't quote me the statute. You haven't changed your position that you had in court. So, therefore, you, the FCC, has no express statutory authority to regulate the Internet.

So what my point is, Mr. Chairman, is that we need to have an amendment—and I will be offering an amendment—that none of the funds appropriated by this committee can be used to regulate the Internet. Because that is the ruling of the Court of Appeals; that is the ruling of the FCC.

And you have not appealed this to the Supreme Court. Have you?

Mr. GENACHOWSKI. Well, I look forward to working with you and others making sure that we can pursue investment on a broadband future for all Americans, because that is what is at stake in this debate.

Mr. CULBERSON. Leave that to the marketplace.

Mr. GENACHOWSKI. I disagree with you on the legal interpretations, but we will provide a full legal briefing, and I look forward to ongoing discussions about it.

Mr. CULBERSON. Mr. Chairman, you have been very gracious, and I appreciate the time.

Mr. SERRANO. I shouldn't alert you to what my comeback would be in committee when you propose that amendment. But my comeback will be, for the record, that what you are proposing also will not allow him to do anything about pornography if that is the case. And I am not a lawyer, but that is the way I would read it; that he could not move on anything, including something that we all agree he should be moving on this afternoon.

Mr. CULBERSON. Could we work together on an amendment to let him have that on the pornography?

Mr. SERRANO. See, I am not chairman of this committee to take power away from this committee only in the case of Washington, D.C., which I have stated I don't want to supervise Washington, D.C. So I am not going to be sending him to the authorizers to get powers I think the Commission has to carry out their duty. It is a matter of interpretation: Does he have all the total powers? Maybe not. Does he have enough powers to move on some very specific issues? Absolutely. And so as long as they are fighting on behalf of the American consumer and allowing the digital divide to be narrowed and done away with, I take—and maybe it is because I am not a lawyer and I take irresponsible stances—that some people say, stop, you can't do that much on behalf of the consumer. That would be a great day in America when people tell them to stop and tell the commission to stop. That is what I want to see happening. Thank you.

Mr. CULBERSON. Could I offer a suggestion? I would love to work with you on the amendment with Ms. Wasserman Schultz.

Mr. SERRANO. I always work with you. But we are not going to work on an amendment that says they cannot move ahead and do. That is something you will have to do on your own, because I think they should move ahead and do as much as they can.

Mr. CULBERSON. I was going to suggest a very narrow one to give them the authority to regulate child pornography and keep it off the Internet. We could work one up together with Ms. Wasserman Schultz and target that rifle shot authority in that one area, and otherwise——

Mr. SERRANO. Well, this is not the time.

Mr. CULBERSON. I would love to help you with that.

Mr. SERRANO. I think they should move on everything.

Mr. Chairman, thank you so much. I think it is clear to you that, notwithstanding the fact that the average American may not know what FCC stands for, that certainly this committee understands the major role you play. And from the unemployed person carrying a cell phone to the folks who sit at the major corporations, you can affect them all. And I think at the end of the day, just my personal

position, the ones who need the most protection are the ones at the bottom of the totem pole who get ripped off a lot of times. We are not here asking you to do a number, if you will, and not support major corporations in their desire to make the industries grow. You know, it is all for the country. But this whole issue of consumerism is very important to us.

But I think you have noticed that while we all agree on most of the issues and the approaches to them, we have certain interests. So Ms. Lee reminded you of diversity and how important it is, and it is something we all subscribe to. I would be very happy if I saw communications coming out of your office saying the territories are treated equally and that an American citizen with a need for the Internet in the Virgin Islands has the same right as one in L.A. and in Chicago and in D.C.

You have agreed to—and you are going to hate me for this. You have agreed to bring the legal team here, and I invite the gentleman to join the staff. That is the part you are just going to hate me for. Every member is always allowed to join the staff.

Mrs. Emerson spoke about the rural areas. With all the problems we have in the inner city, and God knows we have a lot of problems, it is hard for me to understand how you can be in a place where you can't get a telephone signal at all. And I don't mean an apartment in the Bronx or a television signal. So those are issues.

And, lastly, we all want you not to wait for any court ruling, but to move on the pornography issue.

We commend you for your work. We will support you in your challenge. And understand that, notwithstanding at times the tone of this committee, it wants to be a partner with you in moving ahead and resolving all of these issues. And thank you so much for your testimony today.

Mr. GENACHOWSKI. Thank you very much.

Mr. SERRANO. And this hearing is adjourned.

SUBCOMMITTEE ON FINANCIAL SERVICES AND GENERAL GOVERNMENT

HEARING

ON

THE FY 2011 BUDGET REQUEST OF THE FEDERAL COMMUNICATIONS COMMISSION

Questions for the Record

for

The Federal Communications Commission

June 9, 2010

Questions for the Record
Submitted by Chairman Serrano

Auctioning of Spectrum now Held by Broadcasters
The Broadband Plan proposes that broadcasters be allowed to give up some of their spectrum in return for some of the auction proceeds. The broadcasters strongly objected to the possibility that some of their valuable and underutilized spectrum might be taken away involuntarily.

1. **Could you describe the extent to which this spectrum is underutilized and why it is valuable?**

RESPONSE:
The spectrum currently used by television broadcasters, particularly in the UHF band between 470 MHz and 698 MHz, is ideally suited for mobile broadband uses for a number of reasons. First, the propagation characteristics of this band allows for wide coverage areas, which reduces the need for dense network builds that require many towers, and therefore reduces the cost of deployment. Second, this band allows for better in-building penetration, which also simplifies the network build and provides a better consumer experience. Third, the UHF band is wide enough to configure into nationwide blocks, which is the optimal configuration as data traffic increases dramatically in the coming years.

I believe that some of the UHF spectrum can be put to a higher and better use for wireless broadband for a number of reasons. Use of the mobile Internet and other mobile applications continues to increase at a rapid rate, while television viewing over the television spectrum has been declining since the late 1980s. Indeed, nearly 90% of Americans do not rely solely on over-the-air as the means for receiving television programming. In addition many broadcasters have not yet taken advantage of the additional capacity afforded to them by the digital transition – either through multicasting, high definition television or mobile DTV – and thus some portion of this valuable spectrum remains unused. My aim is to find ways to ensure the vitality of broadcasting while improving the efficient use of this precious resource. One possible solution to this is channel-sharing. Channel-sharing takes advantage of the benefits of the DTV transition while also making most efficient use of television spectrum by enabling two television stations to operate on one 6-megahertz channel, while preserving their ability to broadcast in HD or broadcast multiple streams, including mobile streams. Another efficiency enhancement resulting from our incentive auction proposal is the planned post-

auction repacking, which will result in a much more efficient allocation of television spectrum, and correct some of the legacy inefficiencies that have historically plagued the band for the past many decades.

2. What are the prospects and timeframe for implementing this proposal in the Broadband Plan?

RESPONSE:
We have proposed and are seeking Congressional Authority to implement a voluntary program by which only those broadcasters that want to contribute spectrum to the auction would do so, and would be able to exchange their spectrum for a portion of the auction proceeds. If granted by Congress we can move expeditiously to implement a completely voluntary program in the next few years.

Small Business
There is a huge digital divide in this country. Even small business owners, especially those in disadvantaged areas, may not be as technology savvy as they need to be in order to promote their goods and services and transact business online. The Broadband Plan includes a digital literacy initiative that promotes partnership between SBA's SCORE program and private sector partners to provide education and training to small businesses.

3. What are the major impediments to faster implementation of IT among small businesses?

RESPONSE:
The challenges that small businesses, located in disadvantaged areas, face in utilizing broadband to grow their businesses certainly include, but are not limited to, insufficient digital literacy. Many of the areas where such small businesses are located lack access to high-speed internet. Where infrastructure is lacking digital literacy becomes a moot point. It is not uncommon for at-risk communities to be the last on the list to receive advanced cable, fiber optics or enhanced telephone services. In most rural counties, nearly 50% of businesses lack assess to broadband at speeds of 4 Mbps or higher.

In areas with high-speed connectivity, many small businesses find their broadband communications services to be too slow and they lack choices to select alternative hardwire or wireless service providers. Finally, small businesses pay an average of

three times more per employee than large businesses for comparable broadband services.

Broadband Service in the Territories

During the hearing I asked about your decision to decline to institute an insular wireline program. I understand that part of the reason for this decision was the recent increase in telephone subscribers in Puerto Rico, which has presumably been largely driven by new wireless service. This is wonderful news for telephone service.

4. **As we move forward with implementing broadband for all Americans, including equal service for those in the territories, do you think that broadband will require wireline service? If so, how do you plan to address the ongoing lack of sufficient wired infrastructure in Puerto Rico?**

RESPONSE:

I am committed to ensuring that all Americans, including those in the territories, have access to high-quality broadband and voice service. To achieve this goal, the National Broadband Plan recommended that the Commission create a Connect America Fund (CAF) to directly support broadband and voice service in areas that are unserved, as well as areas that are currently served with the assistance of high-cost universal service support. Consistent with the principles of competitive and technological neutrality, the Plan further recommended that any broadband provider that can meet or exceed the specifications set by the FCC for the provision of broadband and voice service should be eligible to receive support under the CAF. This could include wireline, wireless, and satellite broadband providers.

I have committed to initiate a rulemaking in the near term that would seek comment on these issues, among other things. I also anticipate that we would seek comment on whether unique circumstances exist in insular areas and how any unique circumstances should be taken into account, as we did in the April 21, 2010 rulemaking that initiated reform of the high-cost universal service program.

Questions for the Record
Submitted by Ranking Member Emerson

Emergency Response Interoperability Center

Your budget request proposes a $1.5 million increase to establish an Emergency Response Interoperability Center to ensure the operability and interoperability public safety wireless broadband communications. Several other Federal agencies work with public safety agencies on interoperable communications including the National Institute of Standards and Technologies, the Department of Justice and the Department of Homeland Security.

- What work will this Center perform that is unique to the FCC's mission?
- How will you ensure that the Center's efforts are well coordinated with Justice, Homeland and NIST?

RESPONSE:

The Commission established the Emergency Response Interoperability Center (ERIC) in connection with its ongoing rulemaking proceeding to establish a nationwide, interoperable public safety broadband network in the 700 MHz band. The mission of ERIC is to ensure that the public safety broadband network will be fully operable and interoperable on a nationwide basis, both day-to-day as well as during times of emergency. To accomplish this mission, ERIC is tasked by the Commission with implementing national interoperability standards and developing technical and operational procedures for the network. The Commission has jurisdiction to implement these requirements and procedures under Sections 1, 4(i), 4(j), 5(b), 5(c), 201(b) and 303(r) of the Communications Act of 1934, as amended.

In terms of coordination, ERIC is already actively working with the Department of Justice, the Department of Homeland Security, and the Department of Commerce, including the National Institute of Standards and Technology and the National Telecommunications and Information Administration. ERIC has established a weekly meeting with these Federal partners to ensure that work to further the development of the interoperability framework for the public safety broadband network is well-coordinated. In addition, ERIC is performing regular outreach with each of these Departments. The Commission is also in the process of finalizing Memorandums of Understanding relating to ERIC with several of these federal partners to further the coordination effort.

On April 23rd, the Commission announced the establishment of the Center.

- If the Center is being established this year instead of in fiscal year 2011, do you still need a $1.5 million increase for fiscal year 2011?

RESPONSE:
Yes. The FCC established ERIC in 2010 because it was critical that ERIC begin its work as soon as possible. The Commission has recently granted authority to 21 state and local jurisdictions to begin broadband network deployment. In order to ensure that these deployments are interoperable from the outset, and will support nationwide interoperability in the long run, ERIC must establish initial interoperability requirements starting in the next few months. To date, however, ERIC has been staffed with existing resources, and current staffing levels will not provide sufficient resources for ERIC to fully perform its important role after this fiscal year. Further, the current FCC budget does not account for the necessary travel and other expenses that will be required for ERIC to work with the public safety community, equipment vendors, and Federal partners to perform its mission. Therefore, increased fiscal year 2011 funding is critical if ERIC is to have an impact on the recently authorized state and local efforts.

Consolidated Out-Dated IT Licensing Systems

Your budget request proposes a $1.4 million increase to continue work begun in fiscal year 2009 to consolidate and upgrade your licensing systems. I understand that many of these systems are more than 10 years old.

- How many years will this consolidation take and how much total funding do you estimate will be needed?
- Do you have experienced IT program and contract management staff in place to successfully implement a multi-year and multi-million IT project?

RESPONSE:
Full consolidation of the licensing systems is anticipated to take approximately five years. The implementation of the new system is being pursued in phases so that existing legacy systems are replaced on a rolling basis beginning in Fiscal Year 2011. The full acquisition cost for the system is approximately $22 million; however, most of the funds will be provided through offsets from deferred system and lifecycle maintenance on the existing legacy systems. As such, the Commission has only sought a net increase in $4.5 million over the fiscal years 2009 through 2011 - $1.5 million in this year's budget submission. As legacy systems are retired in FY 2011, future year acquisition funds will be supported by the cost savings derived from the new, more efficient licensing platform.

The FCC has several experienced IT Program Management and Contract Management staff in place to successfully implement a multi-year and multi-million IT project. Many of the IT Managers currently employed by the Commission have previously developed and deployed large information management systems comparable to that being pursued in this consolidation effort.

Staffing Increase

Your budget request proposes 75 additional staff. I am interested in learning more about the work that these additional staff would perform.

- Can you tell us how many staff would be engineers or technology experts that would provide assistance to first responders, local governments and service providers?
- How many additional staff would be attorneys working to implement controversial new regulations?

RESPONSE:

The additional staff will be devoted primarily to implementing the National Broadband Plan, increasing our openness and transparency, and strengthening our role in government and industry cyber-security preparedness. The specific allocations by occupation have not been finalized, but will include engineers, attorneys, economist/econometricians, statisticians, business and market analysts and data analysts and architects. One example of how we propose to allocate these additional staffing resources includes a projected increase of more than 30 positions in the areas of public safety and homeland security. To support our expanded public safety and homeland security goals, we will need attorneys with expertise in privacy law and homeland security compliance requirements as well as engineers and data analysts able to understand the technical needs of the public safety communities nationwide.

Cyber Security Certification Program

Recently, the Commission issued a Notice of Inquiry seeking input on the establishment of voluntary cyber security certification program to encourage communications service providers to implement a full range of cyber security best practices. I am pleased that the Federal government is increasing its efforts to address cyber security. As our use of broadband and mobile technologies increase, more and more of our personal information is vulnerable to criminals and espionage. However, the Department of Homeland Security is the lead Federal agency addressing cyber security in the United States.

- What unique role does the FCC play in the area of cyber security?

RESPONSE:
The FCC's role is to promote "a rapid, efficient, Nation-wide, and world-wide wire and radio communications service" to the American public. Among the Commission's statutory purposes for carrying out this role is doing so "for the purpose of national defense [and] for the purpose of promoting safety of life and property through the use of wire and radio communication." In times of emergency, the Commission's primary mission becomes more focused on these purposes, i.e., ensuring that essential communications networks and services are operable, reliable, and quickly restored. Given its statutory role, the FCC has a unique role to play in adopting rules and policies to strengthen the critical communications infrastructure, and in maintaining the reliability and security of communications networks.

Most cyber attacks are not an attack *on* the communications infrastructure but an attack *through* it. Targets are more often the information systems that lie across the communications infrastructure from attackers, and the communications infrastructure is merely an unwilling enabler. The communications infrastructure is not immune to cyber attacks, though, and a successful attack on this critical infrastructure could be crippling to our nation's way of life. The FCC, in concert with other Federal agencies and in cooperation and partnership with the private sector, has a role to play in preventing cyber attacks and mitigating their effects when they do occur. The Commission's unique role in this team effort is on the protection of the critical communications infrastructure against cyber attacks. We do, of course, stand ready to support our Federal partners in efforts to respond to a cyber attack.

The Commission is considering several measures to strengthen the security of the nation's critical communications infrastructure to prevent and withstand cyber attacks. The National Broadband Plan, which the Commission released in March after gathering and considering a substantial record, includes recommendations to strengthen the cyber security of the critical communications infrastructure. Following up on these recommendations, the Commission is actively considering:

- Establishing a voluntary cyber security certification program to create additional incentives for industry implementation of important security methods and procedures.

- Creating cyber security information reporting systems to help us monitor the

health of the network and provide us with data with which to work with communications providers on preventative measures.

- Taking steps to improve the communications infrastructure resiliency, thereby mitigating the effect of cyber attacks.

- Discussing cyber security issues with international organizations and the regulatory authorities of other nations.

- Finally, the Commission is formulating a roadmap, in coordination with the Executive Branch, that will identify the five most critical cybersecurity threats to the communications infrastructure and its end users, including a two-year plan for the FCC to address these threats.

Moreover, the FCC chartered a new federal advisory committee, the Communications Security, Reliability and Interoperability Council (CSRIC), which held its first meeting Dec. 7, 2009. The Council is expected to recommend actions to enhance the security, reliability and resiliency of America's communications systems.

- How are you coordinating your efforts with the Department of Homeland Security?

RESPONSE:
To ensure that our cybersecurity efforts are effective, the FCC is building successful policies and programs, while coordinating with the White House Cyber-Security Coordinator, Howard Schmidt, and with the Department of Homeland Security (DHS). The FCC staff has met not only with Mr. Schmidt but also with several members of his staff. We have also met with Rand Beers, DHS Under Secretary, National Protection & Programs Directorate; Philip Reitinger, DHS Deputy Undersecretary of National Protection and Programs Directorate; and Greg Schaffer, Assistant DHS Secretary for Cybersecurity and Communications. We have discussed with them what the FCC is doing at sector-specific coordinating councils hosted by DHS. Moreover, the FCC staff participates in interagency groups, such as the DHS National Communications System (NCS), to coordinate government cyber security and other communications network security policy, and the Joint Telecommunication Resources Board (JTRB), which provides expert counsel and recommendations on communications issues to the Director of the White House Office of Science and Technology Policy (OSTP). Further, our staff

monitors daily appropriate sources of information (e.g., trade journals, professional newsletters, the Federal Register, etc.) for any developments within our sister agencies that may have an impact on the FCC cybersecurity efforts.

- Will your efforts create confusion among service providers and consumers if multiple agencies are working on similar programs to address the same problem?

RESPONSE:
Currently DHS does not have an effort that is similar to the voluntary cyber security certification program or other programs that the FCC is considering. Also, as mentioned above, the FCC's focus has been on cybersecuring the critical communications infrastructure, which has not been the primary focus of other agencies. In this respect the Commission has not been working directly with consumers, but rather with their communications service providers. Typically, these service providers have a very sophisticated understanding of the FCC's role in promoting safety of life and property through the use of wire and radio communications. Virtually all of these providers are acutely aware of the major cybersecurity problems that confront the nation, and their efforts are to be commended as many are making security software available to their customers, frequently free, in their efforts to protect their customers' computers from malware. Recognizing this difficult challenge, many providers welcome the Commission's efforts to secure cyberspace.

Retransmission Consent

This spring I met with several small cable providers who expressed concern regarding existing retransmission consent regulations. Many of these operators are paying significantly higher rates for the same content then larger operators, and I share their concerns that small companies and their customers (my constituents) in rural American are being overcharged for service. I understand the FCC is reviewing the retransmission consent issue.

- Could you update Committee regarding the status of this review?

RESPONSE:
Given recent concerns raised that the Commission's current retransmission consent policies need a fresh look, I directed the Media Bureau to begin a review of our retransmission consent regulations to determine whether the existing framework

continues to be effective or whether reforms may be necessary to protect consumers and ensure fairness to all parties.

Subsequent to the commencement of the Bureau's review, a coalition representing a number of MVPDs and public interest groups submitted a *Petition for Rulemaking* seeking to reform the retransmission consent rules. Among other things, the *Petition* proposes that the Commission establish new mechanisms that provide for mandatory arbitration when a MVPD and the broadcaster are not able to reach a retransmission consent agreement, continued carriage of broadcast signals during the negotiation or dispute resolution process, and the adoption of rules to address the practice of tying broadcast programming to the carriage of non-broadcast services. The Media Bureau issued a *Public Notice* inviting public comment on the proposals and issues discussed in the *Petition*. The comment period recently closed and we received comments from a broad range of interested parties, including consumers, programmers, broadcasters and MVPDs that serve small and rural areas. The Media Bureau currently is reviewing the record compiled in the proceeding and will draft recommendations regarding how the Commission should proceed.

Questions for the Record
Submitted by Congressman Culberson

You have asked for a significant increase in your FY'11 budget for personnel—75 FTE's which would represent a 10% increase (185 FTE's) over five years. While I understand the needs that are represented by the implementation of the broadband plan, as stewards of the taxpayer's dollars, I think we should be wary about adding employees to the federal payroll.

- As yon yourself have noted, we are transitioning to a broadband world, so rather than hiring additional staff, could you examine re-tasking current employees?

RESPONSE:
Not since the enactment of the Telecommnnications Act of 1996 has the FCC been charged with such an ambitious new set of requirements. At the time of the 1996 Act, the FCC had increased its staffing level from a low of 1753 FTEs in 1993 to 2112 FTEs in 1995. This influx of new talent and expertise allowed the FCC to implement the complex requirements of the 1996 Act fully and on time. Today, the FCC is charged with an equally ambitious agenda but with a much smaller workforce lacking the needed skills. Our current workforce of 1830 FTEs at the end of FY 2010 is fully engaged with our ongoing commitments, and therefore not available for retasking. The additional positions are essential to the completion of our additional requirements such as implementing the National Broadband Plan, examining the future of media, increasing our openness and transparency, and strengthening our role in government and industry cyber-security preparedness. Even with these new positions, our staffing will still remain well below historical levels.

I am concerned about how much resources the FCC will use up as it attempts to regulate broadband instead of trying to eucourage broadband adoption and deployment.

- How long was it between the time that the FCC decided the *Comcast-Bit Torrent* case and the time it was reversed by the Court of Appeals?

RESPONSE:

The FCC issued the Memorandum Opinion and Order at issue in *Comcast Corp. v. FCC* on August 20, 2008. The D.C. Circuit issued its decision in *Comcast Corp. v. FCC* approximately a year and a half later, on April 6, 2010.

No one doubts that if the FCC decides to regulate broadband, those new rules will be challenged in court.

- Assuming this challenge goes to the Supreme Court, how long would that take?

RESPONSE:
Historically, when the Supreme Court has reviewed a Commission order, its decision has been issued approximately two to three years after the FCC order. For example:

- On November 6, 2006, the Commission released an order finding that utterances in two awards shows broadcast on television were indecent. *See Complaints Regarding Various Television Broadcasts Between February 2, 2002 and March 8, 2005*, 21 FCC Rcd 13299 (2006). The United States Court of Appeals for the Second Circuit vacated the Commission's order. *See Fox Television Stations, Inc. v. FCC*, 489 F.3d 444 (2007). The Supreme Court reversed the judgment of the Second Circuit and remanded the case on April 28, 2009, roughly two years and six months after the Commission released its order.

- The Commission released a declaratory ruling classifying cable modem service as an information service on March 15, 2002. *See Inquiry Concerning High Speed Access to the Internet Over Cable and Other Facilities*, 17 FCC Rcd 4798 (2002). The Supreme Court upheld the Commission's ruling three years and three months later, on June 27, 2005. *See NCTA v. Brand X Internet Services*, 545 U.S. 967 (2005).

- The Commission released its Local Competition Order, which implemented provisions of the Telecommunications Act of 1996, on August 8, 1996. *See Implementation of the Local Competition Provisions in the Telecommunications Act of 1996*, 11 FCC Rcd 15499 (1996). The Supreme Court upheld the Commission's order in part two years and five months later, on January 25, 1999. *See AT&T Corp. v. Iowa Utilities Board*, 525 U.S. 366 (1999).

It should be noted that if the Commission were to alter its legal framework for broadband Internet services, the ensuing court challenge to that change might well be completed years earlier than the alternative path of litigating the Commission's jurisdiction to issue various substantive orders on a case-by-case basis under the current legal framework and the recent *Comcast* decision.

- How much taxpayer money will be spent defending the FCC's new rules?

RESPONSE:
Any defense would be performed by existing FCC staff which is funded by regulatory fees. Regulated companies and other interested persons routinely file lawsuits challenging final FCC actions (as well as non-final actions, which are not properly reviewable by the courts). Lawsuits are filed regardless of whether the Commission comes out one way or the other, and it is impossible to quantify the incremental cost of adopting one particular legal or policy approach, as opposed to an alternative path. As noted above, if the Commission were to alter its legal framework for broadband Internet services, the ensuing court challenge to that change might well be faster and less expensive than the alternative path of litigating the Commission's jurisdiction to issue various substantive orders on a case-by-case basis under the current legal framework and the recent *Comcast* decision.

- Can you please explain the specific problem you are trying to address with your proposal to dramatically increase the level of regulation on Internet Service Providers?

RESPONSE:
The recent decision of the United States Court of Appeals for the D.C. Circuit in *Comcast v. FCC* casts doubt on whether the legal framework the Commission chose for broadband Internet services nearly a decade ago is adequate to achieve widely supported broadband policies, which prior Commissions thought they had legal authority to implement. To evaluate its options, the Commission adopted a *Notice of Inquiry* at its June 17 Open Meeting to initiate a public discussion on how the Commission should proceed in light of *Comcast*. The *Notice* does not propose to increase regulation on Internet Service Providers. Rather, the *Notice* seeks comment on all options, and invites any ideas for how the Commission

should proceed, including: maintaining the current "information service" classification of services such as cable modem and DSL Internet access; classifying broadband Internet connectivity service as a "telecommunications service" to which all the requirements of Title II of the Communications Act would apply; and a "third way" – similar to the highly successful approach that has been used for cell phone services since 1993 – under which the Commission would identify the Internet connectivity service that is offered as part of wired broadband Internet service as a telecommunications service and forbear from applying all provisions of Title II other than the small number that are needed to implement fundamental universal service, competition and market entry, and consumer protection policies. I am enclosing a copy of the *Notice* for your information. The reply comment period closed on August 12 and the Commission staff is currently reviewing the large volume of responses in the record.

- What industry wide problem exists today among Internet service providers that warrants the government having unfettered ability to regulate Internet rates and micromanage network engineers?

RESPONSE:
Neither the *Open Internet Notice of Proposed Rulemaking* nor the recently adopted *Notice of Inquiry* propose regulating Internet rates or micromanaging network engineers. The *Notice of Inquiry* is not about unbundling and price regulation. Rather, it is about fixing the basic legal foundation for broadband policy, which will enable us to accomplish widely supported goals, including reforming universal service to ensure all Americans can enjoy the benefits of broadband. The *Open Internet Notice of Proposed Rulemaking* proposes high-level rules of the road to provide greater clarity regarding network management practices and preserve Internet openness, while protecting broadband providers' ability to reasonably manage their networks.

- Will you consider the concerns of churches and other wireless microphone users as you continue to deliberate interference protections for wireless microphones?

RESPONSE:
In a pending Further Notice of Proposed Rulemaking the Commission is considering how to revise rules concerning the use of wireless microphones. The Commission will review all of the information in the record in deciding how to

best address the concerns of the many wireless microphones users, including houses of worship, schools, libraries, museums, theaters, and concert halls. In many of the bands in which these wireless microphones operate, there also are other important uses of the bands, and wireless microphone users are required to share spectrum with such users, including television broadcasters and unlicensed TV band white spaces devices. The Commission must carefully balance the important interests among all of these users before it adopts final rules for wireless microphones.

- Will you consider the language in H.R. 4353, which provides for geolocation database protections for 13 specific classes of professional wireless microphone users, including Houses of Worship, arenas, theaters, restaurants, stadiums, and museums?

RESPONSE:
The Commission recently adopted a Second Memorandum Opinion and Order that revised the rules unlicensed devices operating in the TV White Spaces. The rules included several provisions to minimize the risk of harmful interference wireless microphones. Two TV channels will be reserved in every market that can be used by wireless microphones and are available for used by TV White Space devices. These two channels can accommodate at least 12 to 16 wireless microphones at any given location, which should be sufficient for most uses. In addition, many other TV channels will not be available for TV White Space devices at any given location. These channels will be identified in a publicly accessible data base and can be used for additional wireless microphones without concern of interference from TV White Space devices.

The Commission also recognized that certain venues and events, such as the kinds you describe, use many wireless microphones and cannot be accommodated in the reserve channels and other channels that are not being used by TV White Space devices. The Commission established a process where these venues and events can be included in the data base of locations and channels where TV White Space devices may not operate. The TV White Space fixed transmitters and portable transmitters must be located at least 1000 meters and 400 meters away from these sites.

We believe that these measures strike an appropriate balance in accommodating existing users of wireless microphones while creating opportunities for innovation

and investment in new devices and services and making more efficient use of the TV spectrum.

The National Broadband plan recommends that "States should reduce impediments and financial disincentives to using commercial service providers for Smart Grid communications."

- What more can be done to ensure/motivate utilities to leverage commercial technologies for their Smart Grid applications?

RESPONSE:
A beginning point towards the goal of encouraging utilities to leverage commercial technologies for Smart Grid applications is to ensure a thorough understanding of the evolving communications requirements of electric utilities. As an input to the NBP plan, the FCC solicited public comment on Smart Grid technologies, and a number of utilities filed detailed responses. Many utilities declined to comment, however, and others understandably declined to reveal confidential or sensitive information in public filings. Thus, the NBP recommends that DOE, in collaboration with the FCC, conduct a thorough study of the communications requirements of electric utilities, including, but not limited to, the requirements of the Smart Grid. Building upon the FCC's research and development in the NBP proceeding, DOE should collect data about utilities' current and projected communications requirements, as well as the types of networks and communications services they use. Such an analysis will bring to light barriers to utilities' adoption or deployment of commercial technologies for their Smart Grid applications. The DOE has already begun to implement this recommendation, by issuing a RFI on utility Smart Grid communications.

- What activities are specifically recommended for removing financial disincentives and who is undertaking them?

RESPONSE:
The NBP recommends that state public utility commissions (PUCs) review regulatory requirements applicable to electric utilities to ensure that utilities' financial interests do not lead them to reject the use of commercial networks, thereby making suboptimal communications and technology decisions. Specifically, as rate-of return regulated utilities, large utilities typically earn guaranteed profits on the assets they deploy—including private communications

networks—but only receive cost recovery if they use commercial networks. The NBP recommends that state regulators carefully evaluate a utility's network requirements and commercial network alternatives before authorizing a rate of return on private communications systems. Consistent with the Energy Independence and Security Act of 2007 (EISA), the plan recommends that PUCs also consider letting recurring network operating costs qualify for a rate of return similar to capitalized utility-built networks. California is currently considering this question.

Moreover, in many states, electric utility incentives are still oriented toward deploying assets and selling more power, not selling less or cleaner power. While this structural problem is outside the scope of the National Broadband Plan, despite its explicit Congressional mandate to address energy efficiency, a national strategy to support the growth of the Smart Grid must recognize that many large electric utilities have inherent financial incentives to deploy regulator-approved communications systems but have mixed-to-poor incentives to use these systems to deliver energy more efficiently.

- Why should utilities be allocated or re-allocated spectrum (as they have requested) if there is existing infrastructure via commercial technologies that will be utilized for other critical applications like public safety?

RESPONSE:
Utilities will need greater communications across the grid, and many are increasingly using wireless technologies, which are often more cost-effective that wired facilities in reaching wide areas or distributed assets. These wireless networks include licensed commercial networks, licensed private networks, and private networks operating at power levels where FCC licenses are not required.

Developing a Smart Grid is national policy set forth by EISA 2007, and the NBP recommends that the federal government continue to explore the issue of providing spectrum, recommending that "NTIA and the FCC should specifically explore possibilities for coordination of Smart Grid use in appropriate federal bands. Any new broadband network built in the identified spectrum should be required to meet standards of interoperability, customer data accessibility, privacy and security. Use of this spectrum should not be mandated, so that legacy systems are not stranded and that commercial, other shared networks and unlicensed wireless networks can be used where appropriate."

Dedicating spectrum for the Smart Grid could have advantages and disadvantages. Potential advantages include: 1) providing another mechanism for the federal government to drive national interoperability standards and best practices of cyber-security, privacy, and consumer data access; 2) vendor standardization and competition, which could lead to lower equipment prices or more functionality; and 3) a possible acceleration of smart grid deployments. Risks/disadvantages to dedicating spectrum include: 1) possible sub-optimal use of spectrum; 2) fewer applications and users on commercial networks to drive down the cost for all users; 3) the opportunity cost to the U.S. Treasury of not auctioning off the spectrum to commercial broadband users; and 4) a near-term effect of "freezing the market" while companies re-evaluated their Smart Grid technology road maps.

It should be noted that the NBP has a number of general spectrum recommendations that will also benefit the Smart Grid. Increasing spectrum transparency, promoting incentives to improve the secondary market, and providing more opportunities for unlicensed uses – all of these have the potential to be beneficial to Smart Grid networks, including both commercial and private networks. Recent FCC rulings to unlock spectrum – such as the clarification of WCS rules – can also benefit the Smart Grid. Specifically, WCS licensees can now satisfy their build-out requirements by serving utility customers in fixed applications; i.e. Smart Grid applications.

- Will this encourage the build out of duplicative networks that stick the American energy consumers with the bill?

RESPONSE:
A variety of possible models could be employed to provide spectrum to the industry and avoid the possible build out of duplicative networks that impose further energy costs on American consumers. For example, utilities could share spectrum with federal users or with public safety networks (also recommended in the NBP). Other models might result in a private network for electric utilities, by dedicating spectrum to utilities with specific build-out requirements or auctioning spectrum for critical infrastructure uses (which includes the Smart Grid, but could also include natural gas and water management, among others), thereby supporting applications with a high level of reliability, such as those for grid control and protection. The costs and benefits to American consumers – in financial, public safety, and homeland security terms – must be weighed, whatever the model.

Ultimately state regulators and utilities will need to choose the networking strategy that is the most appropriate and cost-effective for their ratepayers.

The National Broadband plan recommends "The Federal Communications Commission (FCC) should start a proceeding to explore the reliability and resiliency of commercial broadband communications networks."

- Will these reliability standards be applied to the private technologies that Utilities are currently deploying and considering for their CIP Smart Grid Applications?

RESPONSE:
There are over 3,000 utilities in the U.S. that serve customers across very different topologies and regulatory regimes. There is not a single solution or a "representative" network for the Smart Grid. Many utilities use a mix of commercial and private networks in the Smart Grid and will continue to do so.

Although, electric utilities traditionally prefer to build and maintain private networks for mission critical communications, some utilities do use commercial networks for mission critical communications today. Commercial networks can be made secure and resilient, as demonstrated by their use in the federal government (DoD, DHS, etc.). For some smaller utilities, the lack of internal networking expertise and personnel might have driven the decision to use commercial facilities.

The NBP recommends that the FCC start a proceeding to explore the reliability and resiliency of commercial broadband networks (Rec. 12.1). As noted in the NBP, commercial broadband networks, and wireless broadband networks in particular, can serve more mission-critical and wide-area utility communications needs as service providers adopt measures to improve the reliability and resiliency of these networks during emergency scenarios. Because 97.8% of Americans are already covered by at least one 3G network, a hardened commercial wireless data network could serve as a core part of the Smart Grid. The benefits of a more reliable commercial broadband network are much broader than enabling the Smart Grid alone. A more reliable network would also benefit homeland security, public safety, businesses and consumers, who are increasingly dependent on their broadband communications, including their mobile phones. Today, more than 22% of households in America do not subscribe to fixed-line telephone service.

The North American Electric Reliability Corporation, an organization under the U.S. Federal Energy Regulatory Commission's (FERC) authority, has been responsible since 1968 for the reliability of the bulk power system. NERC develops and enforces reliability standards. As of June 18, 2007, FERC granted NERC the legal authority to enforce reliability standards with all users, owners, and operators of the bulk power system in the United States, and made compliance with those standards mandatory and enforceable.

- Does having a double –standard for reliability and resiliency testing indirectly support the adoption of "sub-optimal choices" (see section 12.2 page 270) that are being made due to financial incentives (guaranteed profits/rate of return for proprietary buildouts of duplicative network technology)?

RESPONSE:
Reliability and resiliency standards should be consistently applied, regardless of the nature of the network – private or commercial. Thus, for example, the NBP recommends that the North American Electric Reliability Corporation (NERC), the organization under FERC's authority responsible for the reliability of the bulk power system, should revise its security requirements to provide utilities more explicit guidance about the use of commercial and other shared networks for critical communications. In future versions of the Critical Infrastructure protection (CIP) standard, NERC should clarify whether such networks are suitable for grid control communications. NERC should also clarify how its CIP requirements will coexist with the cybersecurity standards of the National Institute of Standards and Technology (NIST). The perceived ambiguity on CIP requirements appears to be slowing utility decision-making and stifling the deployment of some Smart Grid applications on commercial networks.

- What is the FCC doing to ensure that ALL technologies being considered for Critical infrastructure meet the same high standards for reliability and resiliency?

RESPONSE:
The FCC will work closely with FERC, DOE and other applicable organizations to ensure that all technologies being considered for critical infrastructure meet the same high standards for reliability and resiliency, thereby removing incentives –

financial or regulatory – to the deployment or use of suboptimal technologies or networks.

CONTENTS

H.R. 1796, THE RESIDENTIAL CARBON MONOXIDE POISONING PREVENTION ACT, AND H.R. 4805, THE FORMALDEHYDE STANDARDS FOR COMPOSITE WOOD PRODUCTS ACT

THURSDAY, MARCH 18, 2010

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON COMMERCE, TRADE,
AND CONSUMER PROTECTION,
COMMITTEE ON ENERGY AND COMMERCE,
Washington, DC.

The Subcommittee met, pursuant to call, at 10:07 a.m., in Room 2322 of the Rayburn House Office Building, Hon. Bobby L. Rush [Chairman of the Subcommittee] presiding.

Members present: Representatives Rush, Schakowsky, Sutton, Matheson, Barrow, Matsui, Castor, DeGette, Radanovich, Whitfield, Terry, Gingrey and Scalise.

Staff present: Michelle Ash, Chief Counsel; Robin Appleberry, Counsel; Timothy Robinson, Counsel; David Kohn, Press Secretary; Will Cusey, Special Assistant; Daniel Hekier, Intern; Brian McCullough, Minority Senior Professional Staff; Jerry Couri, Minority Professional Staff; Shannon Weinberg, Minority Counsel; Robert Frisby, FTC Detailee; and Samuel Costello, Minority Legislative Analyst.

OPENING STATEMENT OF HON. BOBBY L. RUSH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Mr. RUSH. The subcommittee will come to order.

The Chair wants to thank all the members and the witnesses on both panels for your participation in this hearing this morning. This subcommittee is here on H.R. 1796, the Residential Carbon Monoxide Poisoning Prevention Act, and also H.R. 4805, the Formaldehyde Standards of Composite Wood Products Act. The Chair recognizes himself for 5 minutes for the purposes of an opening statement.

The subcommittee is holding today's hearing on two introduced bills that would protect scores of consumers from highly dangerous and lethal carbon monoxide and formaldehyde emissions. The first bill we will take up, H.R. 1796, the Residential Carbon Monoxide Poisoning Prevention Act, was introduced by Mr. Matheson of Utah. The Consumer Product Safety Commission reports that carbon monoxide poisoning is the leading cause of poisoning deaths in the United States. Carbon monoxide poisoning claims the lives of over 400 people each year, hospitalizing another 4,000 individuals

and it causes 20,000 individuals to seek emergency medical treatment. H.R. 1796 would amend the Consumer Product Safety Act to require that residential carbon monoxide detectors meet current voluntary safety standards. Warning labels would have to be placed on portable generators advising consumers that they should not be used inside residential and dwelling units. And H.R. 1796 would authorize the Consumer Product Safety Commission to establish a grant program to assist the States in training fire code enforcement officials and educating the public about carbon monoxide risks and the proper use of carbon monoxide detectors.

Through these simple actions, H.R. 1796 will enable consumers to better protect themselves against carbon monoxide exposure and poisoning, and I want to take this time to commend Mr. Matheson for his tireless work to prevent these outcomes, many of which are avoidable, and I look forward to hearing from our first panel of witnesses and our ensuing discussion on this important bill and this important matter.

The second bill before us is H.R. 4805, the Formaldehyde Standards of Composite Wood Products Act. This legislation will achieve two very important goals: protecting American consumers and protecting American jobs. H.R. 4805 will amend the Toxic Substances Control Act by establishing a federal standard based on requirements already set by the State of California to limit the amount of formaldehyde that can be emitted from composite wood products. Because this standard will apply nationally, the legislation will result in greater protection for all Americans. It will also ensure that we do not have a repeat of the disaster with FEMA trailers that were used for emergency housing following Hurricane Katrina, which I might remind all of us, the thousands sick unnecessarily, and it would make all of our consumers much safer.

Mrs. Matsui's proposed legislation will level the playing field for American manufacturers. Currently, importers do not have to meet these standards except to the extent that they conduct business in California. As a result, badly needed manufacturing jobs are going overseas and American consumers are less safe. And I want to again take this moment to applaud my colleague from the State of California, Mrs. Matsui, for championing this legislation and working hard on this legislation and ensuring that we are doing everything that we can for both consumers and businesses.

With that, I yield back the balance of my time and recognize the ranking member, Mr. Whitfield, for 5 minutes for the purposes of an opening statement.

OPENING STATEMENT OF HON. ED WHITFIELD, A REPRESENTATIVE IN CONGRESS FROM THE COMMONWEALTH OF KENTUCKY

Mr. WHITFIELD. Well, thank you, Chairman, and I certainly want to welcome all the witnesses today. We do look forward to your testimony, your expert testimony on both of these bills, and I certainly want to thank Mrs. Matsui for her bringing to our attention the formaldehyde issue with her legislation, H.R. 4805, which is the Formaldehyde Standards for Composite Wood Products Act.

I don't think there is any question that all of us recognize the concerns with formaldehyde, and the purpose of these hearings of

course is to bring out issues that are of concern to us, and one of the concerns that I have about this particular bill, which does not mean I am opposed to it in any way, but it does not write an actual standard into law and it does not direct the scientists at EPA to investigate this matter. Instead, it explicitly cites a State regulation that was adopted in California and it refers to the California provision. The California regulation has not been fully phased in yet. We cannot get a complete picture of any incremental improvements in public health or how smoothly businesses subjected to it have transitioned and whether consumers, particularly low-income Americans, have been able to have access to affordable products. On top of those concerns but no less importantly, I do always have a concern when we set a federal standard that there is not federal preemption, and I know that one of the witnesses, I believe maybe it was Mr. Tom Julia, although I am not 100 percent certain, expressed concern about their only concern about trying to push for federal preemption was that it might slow down this process. So I think that is a couple of issues that we can explore today in this hearing.

And then I certainly want to thank Mr. Matheson for H.R. 1796, the Carbon Monoxide Poisoning Prevention Act, which we also recognize is a real problem. I suppose that one issue that we will want to explore in this hearing as well relates to right now I guess about 25 States have voluntary standards on this issue and I believe this legislation makes it mandatory, and it is my understanding the Consumer Product Safety Act that the Commission can invoke a mandatory standard but it has to be under certain conditions and whether or not those are met in this situation, I am not sure.

One other concern that I have, particularly with our current financial situation in America with a $14 trillion debt is starting a new grant program, and I don't remember precisely how much money is authorized for this per year but my recollection was maybe it is a couple of million a year, but those are issues that you all are going to help us address and so I want to thank you for being here, Mr. Chairman, and we look forward to their testimony today.

Mr. RUSH. The Chair recognizes the gentleman from Utah, the author of the bill that is currently under consideration, Mr. Matheson, for 2 minutes for the purpose of opening statements.

OPENING STATEMENT OF HON. JIM MATHESON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF UTAH

Mr. MATHESON. Thank you, Mr. Chairman, and thank you for holding this hearing. I do look forward to hearing from the witnesses and look forward to hearing from my colleagues because that is the purpose of these legislative hearings. We try to look to work together to build more consensus, and I am certainly not wedding to the specific text of the initial draft of the bill. I think that is why we are here today is to learn and improve on that to deal with what I think is a really important issue. We have roughly 500 deaths a year in the United States from carbon monoxide poisoning. An additional 15,000 people are hospitalized due to this. If there are efforts we can make that are prudent to create greater awareness of prevention, I think that is a worthy cause to take up,

so I am glad that this subcommittee has scheduled this hearing on this legislation.

Just real quickly, there are three basic components to the bill. It codifies current voluntary standards for carbon monoxide detectors into law. It mandates labeling standards for portable generators and establishes a grant program for States that want to raise awareness and provide carbon monoxide detectors.

Again, Mr. Chairman, I do appreciate you calling this hearing. I hope it is a productive hearing for all of us and we look to improve on this legislation as we move forward. I yield back my time.

Mr. RUSH. The Chair thanks the gentleman. The Chair now recognizes Dr. Gingrey for 2 minutes for the purposes of opening statement.

Mr. GINGREY. Mr. Chairman, I thank you and I would like to ask unanimous consent to submit my prepared remarks for the record.

Mr. RUSH. So ordered.

OPENING STATEMENT OF HON. PHIL GINGREY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF GEORGIA

Mr. GINGREY. I want to spend my 2 minutes, Mr. Chairman, relating something anecdotally, and I hope you will bear with me. It was 53 years ago that I was a 14-year-old kid and my mom and dad owned a small mop and pop motel at the state line between South Carolina and Georgia, and in Georgia, it was permitted to drink at age 21 but in South Carolina it was permitted to drink at age 18. So a lot of the soldiers at Fort Gordon would come across the river on the weekends and stay at our motel for a couple of nights for relaxation and yes, of course, to go across the street and drink a little beer. On a cold March night on a Saturday night, we had three soldiers in one of the motel rooms. Sunday morning my mom and my two brothers and I, all Catholic, went to Mass, and when we came back to the motel, we were shocked to see Army hearses in the parking lot from Fort Gordon, Georgia. And what had happened is, those three soldiers in that motel room died from carbon monoxide poisoning that night because of a faulty heater. My dad has been dead for a long time. I wish he were alive today so he could know about Mr. Matheson's bill and be here and listen to what we discuss today because he never got over that emotionally. It wasn't his fault but of course as I say, he felt to blame for the deaths of these 18-year-old and I believe one 19-year-old soldier from carbon monoxide poisoning. Their bodies were found right next to the door trying to get out of that motel room. They almost made it but not quite. So I have very strong feelings about this and I told my staff that instead of reading the great written remarks he had prepared that this really means a lot to me and it all comes back. It is like it happened yesterday.

So this is serious business and I really commend Mr. Matheson and I commend my good friend, Mrs. Matsui, as well. I look forward to the testimony from the witnesses and discussion from my colleagues, and Mr. Chairman, with that I will yield back.

[The prepared statement of Dr. Gingrey follows:]

Rep. Phil Gingrey
Opening Statement for HR 1796 & HR 4805 Hearing
Commerce, Trade, and Consumer Protection Subcommittee
March 18, 2010

Mr. Chairman, I want to thank you for calling today's hearing on two pieces of legislation – H.R. 1796, the Residential Carbon Monoxide Poisoning Prevention Act and H.R. 4805, the Formaldehyde Standards for Composite Wood Products Act. I also want to commend you for moving these bills through regular order. I believe that both pieces of legislation fall into important areas of the jurisdiction of the Subcommittee.

Mr. Chairman, I am pleased that we are going to be able to hear from both panels of witnesses on each bill so we can get a closer look at the need for federal action in this arena. On both bills, there are already mechanisms in place with the Consumer Product Safety Commission to potentially address these matters, but the question that I hope these witnesses will address is whether or not there is the need for further federal regulation.

Let me be clear, both carbon monoxide and formaldehyde present problems to consumers that have led to disease and in a number of cases – particularly with carbon monoxide – death. H.R. 1796, introduced by our Subcommittee colleague, Mr. Matheson of Utah. will mandate the current voluntary standard for carbon monoxide detectors and require warning labels on portable generators. One concern that this poses is that it may not have an impact on reducing the unfortunate fatalities that have resulted from carbon monoxide.

Mr. Chairman, H.R. 4805 – introduced by our Subcommittee colleague from California, Ms. Matsui – seeks to codify that the California standard on formaldehyde standards in composite wood products be applied at the federal level. As will be discussed throughout this hearing, this standard was only recently adopted in California, and I would like to get more information from the panel as to the impact it will have on both safety and the economy before we move forward on this legislation.

Mr. Chairman, I believe that we can all agree that there are a number of important issues that will affect consumer safety that will be discussed today. Again, I applaud you for allowing us the opportunity to fully discuss these issues in this hearing. I look forward to hearing from our panels, and I yield back the balance of my time.

Mr. RUSH. The Chair now recognizes the gentlelady from California, Mrs. Matsui, for 2 minutes for the purposes of opening statement.

OPENING STATEMENT OF HON. DORIS O. MATSUI, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Mrs. MATSUI. Thank you, Mr. Chairman, and thank you very much for calling today's hearing. I would also like to thank the panelists for appearing before us today and I look forward to hearing your views.

The legislative proposals being discussed will help industry achieve consistent standards of compliance, create jobs, protect public health, boost consumer confidence and reduce harmful emissions. It is for these reasons that Congressman Matheson is to be applauded for sponsoring H.R. 1796, which will require the United States Consumer Product Safety Commission to enforce stronger standards to protect people nationwide against the deadly dangers of carbon monoxide. As we continue to discuss ways in which certain products impact American consumers, it is critical that the federal government adopt approaches that are stimulative, effective, innovative and efficient. It is equally important, however, that we ensure that our Nation follows best practices and adheres to the toughest production standards in the world.

Toward that end, I have partnered with Congressman Ehlers to introduce H.R. 4805, which would establish national standards for formaldehyde in domestic and imported composite wood products. The emissions of formaldehyde, which is a chemical widely used in a variety of composite wood product applications, are known to have adverse effects on human health and resulted in cases of toxicity for those storms victims provided FEMA trailers following Hurricane Katrina.

H.R. 4805 would apply the rule recently adopted by the California Air Resources Board, otherwise known as CARB, in collaboration with industry, regulatory authorities and public interest groups to lower limits for formaldehyde emissions in those composite wood products. In doing so, the bill would direct the EPA to accept the standard that is already being practiced by our domestic industries and ensure that ongoing economic recovery efforts continue. I urge my colleagues to favorably consider this bipartisan, bicameral legislation which is publicly endorsed by industry, environmentalists, labor and health care advocates, and I commend Senators Klobuchar and Crapo for offering the Senate counterpart and for their leadership on jobs and consumer health issues.

Mr. Chairman, I thank you again for calling today's hearing and I yield back the balance of my time.

Mr. RUSH. The Chair recognizes the gentleman from Louisiana, Mr. Scalise, for 2 minutes.

OPENING STATEMENT OF HON. STEVE SCALISE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF LOUISIANA

Mr. SCALISE. Thank you, Chairman Rush and Ranking Member Whitfield for having this hearing today.

I believe it is important that our subcommittee continue to examine chemicals and substances that are used in our everyday lives as well as the laws governing their use in commerce. It is our obligation to ensure that consumers are properly protected. As I have said before, we must also find the appropriate balance between protecting our health and the environment and protecting jobs in this economy and the manufacturers who make the products that we enjoy.

Of particular interest to me and my constituents for this hearing is formaldehyde. It is a chemical that is widely used but one that unfortunately my constituents are all too familiar with. In 2005, Hurricanes Katrina and Rita destroyed more than 300,000 homes and displaced approximately 700,000 people. As a result, FEMA and its contractors shipped over 200,000 mobiles home, travel trailers and other temporary housing units to our region. These temporary units helped meet the critical housing need following the 2005 hurricanes. Only later did we find out that some of these trailers contained formaldehyde and had exposed people to health risks associated with this chemical. According to the Department of Homeland Security's Inspector General, approximately one-third of the units had "significant potential formaldehyde problems." This led to many people experiencing health and respiratory issues and some even had to move out of the trailers.

Given the challenges we have faced, formaldehyde is an issue that we take very seriously in south Louisiana. That is why I am pleased to see some of my colleagues focusing on this issue and introducing legislation aimed at setting standards for formaldehyde in composite wood products. However, I do have concerns with the legislation and would like to see changes made. My office has discussed this legislation with a number of organizations and businesses involved in the composite wood industry and they have all echoed support for these changes. Chief among these is preemption. As many members have already said, I am afraid that without preemption, businesses will face a myriad of different state regulations that will only make it more difficult for them to conduct business. If California is essentially setting the national standard, what is to prevent them from changing the standard again, thereby creating different requirements and compromising the national standard?

I am also concerned about the timing requirements and restrictions that could be placed on businesses. It is my understanding that implementation was delayed in California because of the challenges business faced in meeting the requirements. I hope that we would look at these issues and the potential unintended consequences that could result from this bill.

Again, Mr. Chairman, formaldehyde is a serious issue that has impacted many of my constituents and I am pleased that we are having this hearing. I do hope that we will fully examine the legislation and proceed carefully when debating the possibility of implementing the prescriptive requirements of one State across the Nation. I look forward to hearing from our panelists on their views on H.R. 4805, particularly on whether preemption would improve the bill. I yield back.

Mr. RUSH. The gentlelady from Ohio, Ms. Sutton, is recognized for 2 minutes.

OPENING STATEMENT OF HON. BETTY SUTTON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OHIO

Ms. SUTTON. Thank you, Chairman Rush, and thank you for holding this hearing on these two bills that are critically important moving through the subcommittee. I am proud to be a cosponsor of these initiatives and I commend Mr. Matheson and Mrs. Matsui for their leadership on these very important safety issues.

The Residential Carbon Monoxide Poisoning Prevention Act will require all manufacturers to meet widely accepted standards for carbon monoxide detectors, and the Formaldehyde Standards for Composite Wood Products Act will protect the health of American families from high uses of formaldehyde in common household products like flooring, paneling, cabinets and doors, both important objectives.

Carbon monoxide poisoning is the leading cause of poisoning death in the United States and formaldehyde has been recognized as a carcinogen. National standards will certainly enhance safety for consumers and will level the playing field between foreign and domestic manufacturers. Currently, foreign manufacturers who use unsafe levels of harmful toxins like formaldehyde are able to undercut domestic manufacturers who put safety above profit. Every year, countless Americans are injured, sometimes fatally, by harmful products that have been manufactured abroad and imported into the United States.

I recently introduced the Foreign Manufacturers Legal Accountability Act of 2010 to protect American consumers and businesses from defective products manufactured abroad. It is our job to protect American consumers. The American people expect and demand that the products that they are sold are safe for themselves and their families. When they install a carbon monoxide detector, they expect that it will warn of dangerous levels of carbon monoxide, and when they install a new countertop or paneling, they expect that the wood products are harmless, and we must ensure that that is the case regardless of where products are made. Dangerous products are dangerous products, and those who would profit over the safety of the American people must not escape accountability simply because they manufacture unsafe products abroad and ship them to the United States for our use, and I yield back.

Mr. RUSH. The Chair now recognizes the vice chairman of the subcommittee, the gentlelady from Illinois, Ms. Schakowsky, for 2 minutes.

OPENING STATEMENT OF HON. JANICE D. SCHAKOWSKY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Ms. SCHAKOWSKY. Thank you, Mr. Chairman. I am proud to be a cosponsor of the Residential Carbon Monoxide Prevention Act, which would establish a mandatory safety standard for all carbon monoxide detectors and requires warning labels on portable generators, a major source of carbon monoxide poisoning. I can't think of more dramatic and compelling testimony than we heard from Representative Gingrey about how important this legislation is, and I am not going to try and elaborate on that.

We do know, according to the Illinois Department of Public Health, however, that infants are even more susceptible to carbon monoxide poisoning because their hemoglobin binds with carbon monoxide better than adults do, so this is a special problem for children. The highest rates are among seniors because they are most likely to mistake the symptoms of carbon monoxide poisoning for the flu or general fatigue. So I am very happy to join my colleagues in H.R. 1796.

The Formaldehyde Standards for Composite Wood Products Act is another very important bill, and I would ask my colleague, Representative Matsui, to add me as a cosponsor of the bill to establish a strong standard for emissions of formaldehyde from the covered products, which are very common in usage and in most of our homes and backyards. But I think it is important to emphasize that Congress is being forced to act on this measure because the Environmental Protection Agency hasn't been able to do so under the existing Toxic Substances Control Act. This is another reason why we will turn our attention to reforming TSCA later this year. Thank you, Mr. Chairman.

Mr. RUSH. The Chair recognizes the gentleman from Nebraska, Mr. Terry, for 2 minutes.

Mr. TERRY. Waive opening statement.

Mr. RUSH. The Chair thanks the gentleman. The Chair now recognizes the gentlelady from Colorado, Ms. DeGette, for 2 minutes.

Ms. DEGETTE. I will put my opening statement in the record.

[The information was unavailable at the time of printing.]

Mr. RUSH. The Chair thanks the gentlelady. The chair now recognizes the gentlelady from Florida, Ms. Castor, for 2 minutes.

OPENING STATEMENT OF HON. KATHY CASTOR, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF FLORIDA

Ms. CASTOR. Thank you, Chairman Rush, and good morning, everyone.

It is a good day when we can come to a hearing and discuss bipartisan legislation that will put more Americans back to work and make families and communities safer. I am supportive of both of these bills because there is no doubt they will save lives and jobs. When industry and public health can agree that new laws are in the best interest of all involved, that is very positive. However, I want to stress that these bills should be viewed as just steps in the path to where we really need to go. They don't really bring us across the finish line.

Now, H.R. 1796, the carbon monoxide bill, requires that the voluntary standard for carbon monoxide alarms be made mandatory, as many of you know, carbon monoxide, it is the leading cause of poisoning death in the United States each year so the urgency to pass this bill is particularly acute for Floridians because we are beginning to plan for hurricane season, and besides bottled water and batteries, Floridians are going out to buy generators, and when the big storms roll up through the Gulf or the Atlantic, they lose power and start their generators, and these generators, they will put them in the garages and the gas is colorless, odorless, and this poison can kill them while they sleep and we have had some very sad occasions there. So we need to pass this uniform standard. This is

going to protect all of us. It is a good start but what we really need to do is pass comprehensive TSCA reform so that we don't create more loopholes with piecemeal chemicals legislation. We need to give EPA the authority to regulate harmful chemicals in many of the products that are being dumped on us from overseas.

So in closing, I strongly support both of these bills and encourage my colleagues to vote for them as well.

Mr. RUSH. The Chair thanks the gentlelady and the Chair thanks all the members for their opening statements.

It is now my privilege to welcome our panel of witnesses before this subcommittee. It is indeed an esteemed panel, and I will introduce each panelist beginning on my left where we find Mr. Robert J. Howell, Jr., who is the assistant executive director of the Office of Hazard Identification and Reduction for the U.S. Consumer Product Safety Commission. Seated next to Mr. Howell is Dr. Eric Lavonas, who is the associate director of the Rocky Mountain Poison and Drug Center, and he is an emergency physician at the Denver health Medical Center in Denver, Colorado. And seated next to Dr. Lavonas is Mr. John Andres, who is the director of engineering for the Kidde Corporation. And seated next to Mr. Andres is Mr. Mark Devine, who is the vice president of marketing for First Alert, which is an outstanding and illustrious company from my home State of Illinois located south of Chicago in Aurora, Illinois, where I visited many times, and First Alert is indeed an excellent Illinois corporate citizen.

I want to welcome all of the witnesses today, and I want you to know that it is the practice of this committee that each witness must be sworn in, so would you stand and raise your right hand?

[Witnesses sworn.]

Mr. RUSH. Let the record reflect that the witnesses have all answered in the affirmative.

And now we will invite Mr. Howell to present his opening statement. Mr. Howell, you are recognized for 5 minutes.

TESTIMONY OF ROBERT J. HOWELL, JR., ASSISTANT EXECUTIVE DIRECTOR, OFFICE OF HAZARD IDENTIFICATION AND REDUCTION, U.S. CONSUMER PRODUCT SAFETY COMMISSION; ERIC LAVONAS, M.D., ASSOCIATE DIRECTOR, ROCKY MOUNTAIN POISON AND DRUG CENTER, EMERGENCY PHYSICIAN, DENVER HEALTH MEDICAL CENTER; JOHN ANDRES, DIRECTOR OF ENGINEERING, KIDDE RESIDENTIAL AND COMMERCIAL DIVISION; AND MARK DEVINE, VICE PRESIDENT OF MARKETING, FIRST ALERT

TESTIMONY OF ROBERT J. HOWELL, JR.

Mr. HOWELL. Good morning, Chairman Rush, Ranking Member Whitfield and members of the Subcommittee on Commerce, Trade, and Consumer Protection. My name is Robert Howell and I am the assistant executive director for the Office of Hazard Identification and Reduction at the U.S. Consumer Product Safety Commission. I appreciate the opportunity to testify before you this morning regarding H.R. 1796, the Residential Carbon Monoxide Poisoning Prevention Act and the overall dangerous of carbon monoxide poisoning.

Before I begin, I would like to note for the record that the testimony that I will give this morning is mine and reflects the views of my technical staff. The testimony has not been reviewed or approved by the Commission and may not necessarily reflect the views of the Commission.

Carbon monoxide is a colorless, odorless and poisonous gas that results from the incomplete combustion of fuels such as natural gas, gasoline, oil, coal and other fuels. The health effects related to carbon monoxide depend upon its concentration in the blood, which in turn depends upon its concentration in air, the duration of exposure and each individual's general health.

Some symptoms of CO poisoning may mimic common illnesses, such as influenza or colds, opening up the opportunity for an initial misdiagnosis. Patients are frequently unaware of exposures to carbon monoxide, and health care providers may not always consider carbon monoxide poisoning as a cause of such nonspecific symptoms.

CPSC staff estimates that there were 180 unintentional, non-fire carbon monoxide poisoning deaths in 2006 associated with consumer products with 71 percent of these deaths occurring in homes. Gas furnaces and boilers have historically been a leading cause of carbon monoxide deaths associated with consumer products. However, portable generator-related have increased more than 350 percent in recent years from an average of about 16 deaths per year from 1999 through 2001 to about 75 deaths per year from 2004 through 2006. But regardless of the type of appliance involved in the incident, CPSC data show that carbon monoxide poisoning and death are much more likely to occur in homes with no functioning carbon monoxide alarms.

CPSC recommends that every home have a carbon monoxide alarm in the hallway near the bedrooms in each separate sleeping area. These alarms should be battery operated or plug-in with a battery backup. CPSC publishes annual press releases on the importance of maintaining home heating systems using carbon monoxide alarms, meeting the requirements of the UL 2034 standard and installing carbon monoxide alarms outside every sleeping area in the home. We also issue our rapid response media alerts when an oncoming storm is likely to spur power outages, as happened in this winter's historic snowfalls. The Commission has also taken action to warn consumers of the specific danger posed by the improper operation of portable generators. In January 2007, the Commission issued a final rule making a portable generator labeling requirement mandatory on units manufactured after May 13, 2007.

The Commission has also directed staff to investigate methods to address the carbon monoxide hazard associated with portable generators. CPSC staff is working expeditiously and making excellent progress to develop and demonstrate a proof of concept for technology that would lower the risk of carbon monoxide poisoning associated with portable generators. To date, the work has yielded promising preliminary results such as prototype generators which would significantly lower emissions rates than found in today's marketplace. However, it likely will take another 2 years of additional testing and modeling before the Commission is ready to con-

sider a proposed rule to regulate carbon monoxide emissions from portable generators.

CPSC staff supports the goals of H.R. 1796. Carbon monoxide alarms save lives by warning consumers of the presence of carbon monoxide before the onset of its debilitating effects. CPSC staff believes that the current edition of UL 2034 is an effective standard and that products meeting those requirements provide adequate protection against carbon monoxide poisoning. Making conformance to UL 2034 mandatory will establish a minimum acceptable performance standard for carbon monoxide alarms and will give CPSC greater authority to keep non-complying carbon monoxide alarms out of the U.S. marketplace.

CPSC staff also supports the provisions in H.R. 1796 for a state grant program for carbon monoxide alarms. Reportedly, only 35 to 50 percent of U.S. households have carbon monoxide alarms. Working with state and local authorities is critical to amplifying our message on the dangers of carbon monoxide poisoning. Getting carbon monoxide alarms into more American homes, both existing and new construction, will save lives. We believe the passage of H.R. 1796 along with our work to reduce or eliminate carbon monoxide emissions at the source, alerting consumers to the presence of hazardous carbon monoxide levels if they occur, and educating consumers to the hazards posed by carbon monoxide will provide a comprehensive approach to addressing the risk to the American consumer from carbon monoxide.

Mr. Chairman, thank you again for the opportunity to testify on H.R. 1796 and the overall issue of carbon monnxide dangers.

[The prepared statement of Mr. Howell follows:]

Statement of
Robert J. Howell
Assistant Executive Director
Office of Hazard Identification and Reduction
U.S. Consumer Product Safety Commission

Before the

House Energy and Commerce Committee

Subcommittee on Commerce, Trade and Consumer Protection

March 18, 2010

Good morning, Chairman Rush, Ranking Member Whitfield, and Members of the Subcommittee on Commerce, Trade and Consumer Protection. My name is Robert J. Howell, and I am the Assistant Executive Director for the Office of Hazard Identification and Reduction at the U.S. Consumer Product Safety Commission ("CPSC"). I appreciate the opportunity to testify before you this morning regarding H.R. 1796, the Residential Carbon Monoxide Poisoning Prevention Act, and the overall dangers of carbon monoxide poisoning. The testimony that I will give this morning is mine and reflects the views of my technical staff. The testimony has not been reviewed or approved by the Commission and may not necessarily reflect the views of the Commission.

In my role at CPSC, I oversee the technical work of the agency within the directorates for Engineering Sciences, Epidemiology, Economic Analysis, Health Sciences and Laboratory Sciences. My office is responsible for the collection and analysis of death and injury data associated with consumer products, which include fuel-burning products such as heating systems, engine driven tools, gas appliances, and portable generators and related products, including carbon monoxide alarms. My office also is responsible for analyzing product safety performance, developing technological solutions to address product safety concerns, and working with those stakeholders involved in developing voluntary standards designed to improve consumer product performance.

I. Carbon Monoxide: The Silent Killer

Carbon monoxide (CO) is a colorless, odorless, and poisonous gas that results from the incomplete combustion of fuels such as natural or liquefied petroleum (LP) gas, gasoline, oil, wood, coal, and other fuels. The health effects related to CO depend upon its concentration in blood, which in turn depends on its concentration in air, the duration of exposure, and each individual's general health.[1]

Some symptoms of CO poisoning may mimic common illnesses, such as influenza or colds; thus, there likely is a high incidence of initial misdiagnosis by physicians and victims. Patients are frequently unaware of exposures to CO, and health care providers may not always consider CO poisoning as a cause of such non-specific symptoms.

For example, picture an apartment complex with a faulty furnace. As CO seeps inside of that apartment or home, the residents will begin to feel sick. At first, maybe they will just believe they are coming down with the flu, as they experience mild nausea and headaches. The symptoms then worsen as the CO continues to concentrate and dizziness and disorientation set in. This is the critical moment. If the residents do not exit their dwellings and get to fresh air, then unconsciousness is the next stage. If the furnace does

[1] Carbon monoxide combines with hemoglobin (Hb) with an affinity about 250 times that of oxygen, forming carboxyhemoglobin (COHb) and interfering with oxygen transport, delivery and utilization. Generally, there are no perceptible health effects or symptoms in healthy individuals at COHb levels below 10 percent. Symptoms associated with blood levels at or above 10 percent COHb include headache, fatigue, nausea, and cognitive impairment. Loss of consciousness, coma, and death can occur at COHb levels greater than 20 percent, although for healthy adults CO fatalities typically require levels above 50 percent.

not shut down, or a carbon monoxide alarm fails to warn the occupants, serious injury or death is likely to occur. That is why properly operating CO alarms should be installed in all residences.

II. CO Poisoning Incidents: Recent Trends

CPSC staff estimates that there were 180 unintentional non-fire CO poisoning deaths in 2006 associated with consumer products with 71 percent of these deaths occurring in homes. Consumer products often associated with CO fatalities include fuel-burning appliances such as furnaces, portable generators, portable propane heaters, gas ranges, gas water heaters, and charcoal and gas grills.

Gas furnaces and boilers have historically been a leading cause of CO deaths associated with consumer products. From 2004 to 2006, they accounted for almost half (43%) of the estimated 69 CO deaths associated with the gas fueled appliances.

However, a significant increasing trend in consumer product-related, non-fire CO fatalities from 1999 to 2006 is attributable to generators. Portable generator-related deaths have increased more than 350 percent in recent years, from an average of about 16 deaths per year, from 1999-2001, to about 75 deaths per year in the period 2004-2006. During the three-year period 2004-2006, 41 percent of consumer product-related CO poisoning deaths (an average of about 75 deaths annually) were generator-related and 35 percent (an average of 63 deaths per year) were heating system-related.

Regardless of the type of appliance involved in the incident, CPSC data also show that CO poisoning and death are much more likely to occur in homes with no functioning CO alarms.

III. CPSC Response to CO Poisoning from Consumer Products

To address the non-generator related CO hazard, CPSC staff has employed a three-fold approach: (1) reducing or eliminating CO production at the source, (2) alerting consumers to the presences of hazardous CO levels if they occur; and (3) educating consumer to the hazards posed by CO.

In its efforts to reduce CO deaths, CPSC staff has taken the approach of limiting CO levels in the home to the lowest possible level achievable taking into account the limitations of combustion appliance technology and the detection capabilities of low-cost CO alarms. Avoidance of nuisance appliance shutdowns and alarm activations has been a primary concern. Historically, we have had good success, but more needs to be done.

When cooking or heating appliances are kept in good working order, they produce little CO. Improperly operating appliances can produce fatal CO concentrations in the home. Proper installation, operation, and maintenance of fuel-burning appliances in the home are the most important factors in reducing the risk of CO poisoning. In addition to the

proper use and upkeep of appliances that are potential CO sources, CO alarms provide a valuable second line of protection.

CPSC recommends that every home have a CO alarm in the hallway near the bedrooms in each separate sleeping area. The CO alarms should be battery-operated or plug-in with battery back-up. The CO alarms should be certified to the requirements of the most recent Underwriters Laboratories (UL) standard for CO alarms. Consumers should test CO alarms frequently and replace batteries annually. CPSC reaches out to the media and consumers about the dangers of carbon monoxide through many venues. Twice a year CPSC reminds consumers to check their CO alarms when they adjust their clocks for daylight saving time and to change the alarm batteries annually.

We also publish annual press releases on the importance of maintaining home heating systems, using CO alarms meeting the requirements of the UL 2034 standard, and installing CO alarms outside every sleeping area in the home. Our "rapid response" media alerts are issued when an oncoming storm is likely to spur power outages, as happened in the recent historic snowfalls here in the Northeast. We also have several publications on our Web site aimed at warning consumers about carbon monoxide poisoning. Consumers may download these publications or order free copies.

In addition, this year we are developing a poster contest for middle school students - the collection of contest submissions is anticipated in 2011. The goal is to educate students and families and generate awareness across the country about poisonous carbon monoxide.

The Commission has also taken action to warn consumers of the specific danger posed by the improper operation of portable generators. In January 2007, the Commission issued a final rule making a portable generator labeling requirement mandatory on units manufactured on or after May 14, 2007. The mandatory warning label informs purchasers that "Using a generator indoors CAN KILL YOU IN MINUTES; "Generator exhaust contains carbon monoxide. This is a poison you cannot see or smell;" "NEVER use inside a home or garage, EVEN IF doors and windows are open;" "Only use OUTSIDE and far away from windows, doors and vents." The warning label also includes pictograms indicating the danger of CO emissions from portable generators for consumers who may not understand the written warnings. However, labels are only part of the answer; vigorous action is needed to limit the amount of carbon monoxide produced by portable generators.

To lower the CO poisoning risk associated with portable generators, the approach the agency is taking is similar to the approach CPSC takes with many other products, which is to reduce the risk at its source. In December 2006, the Commission directed staff to investigate methods to address the CO hazard associated with portable generators and published an Advance Notice of Proposed Rulemaking (ANPR).

CPSC staff is working expeditiously and making excellent progress to develop and demonstrate a "proof of concept" for technology that would lower the risk of CO

poisoning associated with portable generators. Under a contract with the University of Alabama (UA), CPSC and UA staff have worked to develop two prototype portable generators. The first prototype is designed to operate with significantly reduced CO emissions in the exhaust. The prototype design incorporates electronic fuel injection (EFI), which is a proven, well-understood technology. The prototype generator was subjected to a durability test program to ensure it would perform while achieving the desired emission rates throughout the entire advertised useful life of the generator and not adversely affect generator performance.

A second prototype was developed that uses the same CO-emission reduction strategy as the durability-tested unit but incorporates programmed logic that can distinguish when engine performance is affected by operation in an enclosed space and shuts the engine off. This is a tamper-proof safety feature intended to further limit consumers' exposure to CO when the product is used in an enclosed area.

In tandem with the University of Alabama contract, we are also working with our federal partner – the National Institute of Standards and Technology (NIST) – to develop the requirements for a potential proposed rule limiting CO emissions from portable generators, the criteria for which will be based on health effects. To do this, NIST is testing the two University of Alabama prototype generators in a garage attached to a house set up to measure how CO moves from the garage into the rest of the house. This set-up, with the generator operating in an attached garage, is a common fatal consumer incident scenario. The results from these and other tests, conducted by NIST, will be used by CPSC staff to evaluate the efficacy of the prototypes, and compared to tests run with off-the-shelf commercially available generators, in creating survivable conditions for occupants in the house.

To date, the work on prototype generators that can reduce the risk of CO poisoning has been very promising. However, it likely will take another two years of additional testing and modeling before the Commission is ready to consider a proposed rule to regulate CO emissions from portable generators.

IV. H.R. 1796

CPSC staff supports the goals of H.R. 1796. CO alarms save lives. They do that by warning consumers of the presence of CO before the onset of its debilitating effects. CPSC staff believes that the current edition of UL 2034 is an effective standard, and that products meeting those requirements provide adequate protection against CO poisoning. CPSC staff worked closely with UL on the development and subsequent revisions to UL 2034. Making conformance to UL 2034 mandatory will provide a level playing field for CO alarm manufacturers and will give CPSC greater authority to keep non-complying CO alarms out of the U.S. market.

CPSC staff also supports the provisions in H.R. 1796 for a state grant program for carbon monoxide alarms. Reportedly, only 35 percent to 50 percent of U.S. households have CO alarms. CPSC is a small agency with a big mission. Working with state and local

authorities is critical to amplifying our message on the dangers of carbon monoxide poisoning. Getting CO alarms into more American homes – both existing and new construction – will save lives.

However, I should stress that our support of H.R. 1796 does not diminish the need for manufacturers of generators and gas appliances to design and build products in a manner that provides the greatest level of protection to consumers from CO exposure. We will continue to pursue our current initiatives to ensure that this is accomplished. We believe these initiatives, along with passage of H.R. 1796, will provide a comprehensive approach to addressing the risks to the American consumer from carbon monoxide.

* * * * *

Mr. Chairman, thank you again for the opportunity to testify on H.R. 1796 and the overall issue of CO dangers. CPSC continues to work aggressively to reduce deaths and injuries associated with carbon monoxide poisoning from consumer products under our jurisdiction, and we appreciate the Subcommittee's awareness of this critical issue. I would be happy to answer any questions at this time.

Mr. RUSH. The Chair now recognizes Dr. Lavonas for 5 minutes for the purposes of opening statement.

TESTIMONY OF ERIC LAVONAS

Dr. LAVONAS. Good morning, and thank you. I would like to thank the committee and particularly Mr. Rush and Mr. Matheson for inviting me to be here today. As Mr. Rush said, I am an emergency physician and a medical toxicologist from Denver. I am one of Ms. DeGette's constituents. Thank you. I am the associate director of the Rocky Mountain Poison and Drug Center, which is the State-designated poison control center for five States, and also a faculty member at the University of Colorado.

As Mr. Gingrey said, this is serious business, and I am passionate about this, probably for the same reason that Mr. Gingrey is. Carbon monoxide poisoning is the leading cause of unintentional poisoning death. That is after you subtract out deaths related to complications from drug abuse. The most recent data from CDC reports 562 unintentional deaths caused by carbon monoxide poisoning. That was in 2004. That is not counting fire-related deaths nor is it counting another 1,200 deaths due to suicide. There are approximately 20,000 people treated in America's emergency departments each year because of unintentional carbon monoxide poisoning. Again, that is not counting suicide attempts. As Ms. Schakowsky pointed out, infants and the elderly are at increased risk, as are women. Surprisingly, there is not much variation around the country. North, south, east or west, this is still a big problem. Of those 20,000 or so people treated in emergency departments every year, about a quarter will have lasting brain damage, and that is even with the best available medical treatment. This is a major public health problem in the United States.

So Mr. Gingrey stole my thunder. Statistics are important but sometimes it helps to understand two or three deaths instead of 562. In November 2008, we had an incident in the Colorado mountains in which the Lofgren family from Denver won use of a ski house in their kids' Presbyterian school charity auction. Unfortunately, a vent pipe in the heating system of that home had come unglued, apparently well installed but some glue failed. A pipe was disconnected. Parker and Caroline Lofgren, their 10-year-old son, Owen, and their 8-year-old daughter, Sophie, never woke up the next morning.

In January of 2009, we had a winter storm blow through Denver, as it is wont to do, and it loosened the chimney cap on an apartment building near the University of Denver. So the building super went up on the roof, tightened the cap down as you should do, and accidentally killed a 23-year-old graduate student named Lauren Johnson, who was found dead in her apartment the next morning.

But let me tell you a success story, and these kinds of success stories are why I am here. So when I was in Charlotte, North Carolina, we helped to pass and then strengthen a residential carbon monoxide alarm ordinance. The Charlotte ordinance requires a carbon monoxide alarm in every dwelling unit in the county. So this January, about 2 months ago, a woman, presumably a single mom, for reasons that I don't understand decided to use a charcoal grill inside the house to cook a meal for herself and her three small chil-

dren. Now, the landlord is a good landlord and he complied with the law so there was a carbon monoxide alarm and a smoke alarm in every dwelling unit in the building. Her carbon monoxide and smoke alarms went off but she knew the building wasn't on fire. She didn't understand about carbon monoxide and presumably she pulled the batteries. A few hours later, the carbon monoxide alarm in the upstairs apartment went off. The upstairs neighbor recognized the problem, went downstairs to check on his neighbor. He could hear people moving inside the apartment but nobody could answer the door, so he called Charlotte Fire Department. They gained entry to the apartment, found the mother semicomatose on the floor and the children severely ill. Happy ending. So if you want to know why am I here today, there are five very good reasons why I am here today. We had a good landlord spurred by a good law.

The impact on the survivors is meaningful. For example, I took care of an international—this is a patient I treated, so I can't use his name but an international building business consultant who flew back from wherever he flew back from, got home to his apartment, dropped his bag on the couch, went to bed. In the middle of the night his carbon monoxide alarm went off. He had to crawl down the steps to get help but we were able to treat him. He initially made what looked like a good recovery and then subsequently developed some problems with concentration. I lost track of him after we had referred him to brain injury rehab but he was unable to work, unable to perform his job.

So as you have heard, carbon monoxide poisoning is called the silent killer. This poison has no warning properties. You can't see it, you can't smell it. It mixes freely with air. The first signs that you are being poisoned feel like the flu: vomiting, diarrhea, achiness, fatigue, headaches. Doctors miss this diagnosis a lot, sometimes with tragic results.

If we are going to do something about this, we need three things: source reduction, early detection and public education. Now, I am sitting next to an expert from the Consumer Product Safety Commission so it is silly for me to talk about source reduction. I am not an engineer. Public education is important and both CDC and CPSC are doing aggressive messaging for public education. We can always do more. But we are here today to talk about early detection, carbon monoxide alarms. Even if you could control the behavior of 303 million Americans, there are 127 million households in this country and things break. I have had a carbon monoxide leak in my own home, and my home is 2 years old. Carbon monoxide alarms are inexpensive. They are about 20 bucks, and the price keeps going down. The sensor reliability for modern alarms is very good. We tracked our false alarm rate in Charlotte and found that about 60 percent of the time when Charlotte Fire Department got called for CO alarm activation, they found CO in the home.

As Ms. Castor said, this bill is a small step towards an important goal and I support the goals of this bill, and would look forward to an opportunity to come back with something even more effective and impactful in the future. Thank you.

[The prepared statement of Dr. Lavonas follows:]

Written statement of:

Eric Lavonas, MD
Associate Director, Rocky Mountain Poison and Drug Center
Denver Health and Hospital Authority
Denver, Colorado

Appearing before the:

Subcommittee on Commerce, Trade, and Consumer Protection
Committee on Energy and Commerce, United States House of Representatives
March 18, 2010

Regarding:

H.R. 1796, the Residential Carbon Monoxide Poisoning Prevention Act

Good morning. I'd like to thank the Committee, and particularly Representatives Rush and Matheson, for inviting me to speak with you today. By means of introduction, I am an emergency physician and medical toxicologist from Denver, Colorado. I work for the Rocky Mountain Poison and Drug Center, the nation's busiest poison control center, serving the states of Colorado, Nevada, Montana, Idaho, and Hawaii. We are part of the Denver Health and Hospital Authority. I'm also on the faculty of the University of Colorado School of Medicine. I have worked actively in the prevention and treatment of carbon monoxide poisoning for ten years. I have worked with state and local government to design and enact carbon monoxide alarm laws, performed research with the Centers for Disease Control and Prevention to study the effectiveness of these laws, and serve on the Underwriters Laboratories / American National Standards Institute Standards Technical Panel 2034, which sets the voluntary standards for carbon monoxide alarms. Before coming to Denver, I worked in Charlotte, North Carolina, where I ran the hyperbaric oxygen unit that took care of most of the serious carbon monoxide poisoning cases in western North Carolina.

I am passionate about this issue because, despite all our efforts, carbon monoxide poisoning remains the third leading cause of unintentional poisoning death in the United States. Poisoning is second only to motor vehicle crashes as a cause of death due to injury in the United States.[1] Excluding deaths due to drug abuse, more than half of all unintentional poisoning deaths in the United States are due to carbon monoxide poisoning.[2] The most recent data from CDC reported 562 unintentional deaths caused by carbon monoxide poisoning in 2004. That does not count deaths that were fire-related, nor does it count another 1,200 deaths due to suicide. More than 20,000 people are treated in America's emergency departments each year because of unintentional carbon monoxide poisoning.[3] Rates are slightly higher for women and small children. It's surprising, but there isn't much variation between regions of the country. Even with the best possible treatment, about a quarter of these survivors develop brain injuries, many of which are permanent.[4] There is no question that carbon monoxide poisoning is a major public health problem in the United States.

Statistics are important, but they don't do enough to convey the importance of this problem. Let me give you three recent examples. I should stress that, although I have some connection to each of these stories, all the information I'm sharing comes from public sources:

- In November, 2008, the Lofgren family of Denver, Colorado, won the use of a ski home in Aspen in their children's school charity auction. Unfortunately, a vent pipe in the heating system had become disconnected. Carbon monoxide poisoning killed Parker and Caroline Lofgren, their 10-year-old son, Owen, and their 8-year-old daughter, Sophie.[5]

- In January of 2009, a winter storm loosened the chimney cap on an apartment building near the University of Denver. A repairman tightened the cap down. The following morning, a 23-year-old graduate student, Lauren Johnson, was found dead in her apartment from carbon monoxide poisoning.[6]

- Just this January, we had a success story in Charlotte, North Carolina. A family in a downstairs apartment used a charcoal grill to cook dinner and warm the home. Charlotte has a carbon monoxide alarm law, and the landlord had installed a carbon monoxide alarm in every apartment in the building. It appears that, when the alarm went off in the downstairs apartment, the mom pulled out the battery. A few hours later, the occupant of the upstairs apartment was awakened when his carbon monoxide alarm went off. He heard people inside the downstairs apartment, knocked on the door, and then called 911. The Charlotte Fire Department forced entry, and found the mother and three small children semi-comatose and vomiting on the floor. Potentially lethal levels of carbon monoxide were present in both apartments. If it wasn't for a good landlord who followed Mecklenburg County's carbon monoxide alarm law, at least five people would have died.[7]

To give you a better idea of the impact of carbon monoxide poisoning on survivors, let me tell you about a few of the patient's I've personally treated:

- An international business consultant flew home from Europe, dropped his bag on the couch, and went to sleep. Several hours later, he woke up with a horrible headache, vomiting, and trouble walking. He had to crawl down his stairs to get help. Even after treatment with hyperbaric oxygen, he had difficulty with concentration and complex thinking, and was unable to work. The last I heard, he was applying for permanent disability.

- A general contractor just happened to have a generator in his truck when an ice storm took out the power to his neighborhood. He's a pretty smart guy, so he set up the generator in his unfinished basement, opened all the windows and doors, and went to bed. Being a contractor, he had a carbon monoxide alarm in his home. The alarm woke him up, and he stumbled around the house to shut off the generator. The next morning, the paperboy found him passed out on his front lawn. Like the previous patient, he looked good after treatment, but then developed trouble concentrating. The last time I spoke with him, he was still unable to work, and his business was falling apart.

Carbon monoxide poisoning is often called "the silent killer," because it gives little warning. Carbon monoxide is colorless, odorless, and mixes freely with air. Carbon monoxide is present in nearly every home. Everything that burns fuel, including automobiles, gas appliances, fireplaces, grills, and electrical generators, produces some carbon monoxide. The reason more people don't get sick is a combination of good design, such as furnaces that vent to the outside, and good behavior, such as not running a generator inside the house or garage.

Three pillars of carbon monoxide poisoning prevention are source reduction, early detection, and public education.

Source reduction is basically good engineering: Designing, installing, and maintaining equipment to minimize the amount of carbon monoxide that is produced and to safely route the gas out and away from people. The CPSC and EPA have good people working on that. Other than to say that they need more resources, I'm not going to talk about that any further today.

Public education is crucial as well, for obvious reasons. The CDC and CPSC have put a lot of energy and focus into this area, and HR 1796 addresses this a bit with generator warning labels. However, people often don't follow written warnings. Changing behavior requires a message that is timely, relevant, and repeated often. We can do much more to train the public not to accidentally poison themselves, but that's a conversation for another day.

We are not going to make much headway in the fight against carbon monoxide poisoning without early detection, and that means carbon monoxide alarms. In our nation of 127 million households, things break! This can happen to anyone; I've even had a carbon monoxide leak in my own home. Unfortunately, it's easy to mistake the early signs of carbon monoxide poisoning for food poisoning, a headache, or "the flu." Doctors miss the diagnosis, too. When carbon monoxide leaks into a home, the best way to prevent serious carbon monoxide poisoning is a carbon monoxide alarm.

Carbon monoxide alarms are inexpensive. They currently cost about $20, and the price continues to drop. Although sensor reliability was a problem in the past, modern sensors are quite good. The Charlotte Fire Department tracks its false alarm rate. About 60% of the time, when they respond to a carbon monoxide alarm activation, the alarm is right. Both the National Fire Protective Association and the International Code Council have placed carbon monoxide alarm requirements into their residential building codes.[8,9] Because building code requirements generally only kick in when a home is build or undergoes substantial renovations, it will take 30 years or more to solve this public health problem through building codes. Currently, 24 states have some form of residential carbon monoxide alarm law.[10] This is a growing national standard, and the states are leading the federal government.

To my knowledge, HR 1796 and its companion, Senate Bill 1216, are the first pieces of national legislation to directly address the problem of carbon monoxide poisoning. HR 1796 is a small step in the right direction. Its goals are modest: To ensure that generators have appropriate warning labels, as currently required by the CPSC, to ensure that all carbon monoxide alarms sold in this country meet widely agreed-upon industry standards, and to authorize block grants to help the states that choose to do so implement carbon monoxide alarm programs.

In addition to the provisions in HR 1796, I would encourage the Committee to consider these "next steps" for future legislation.

First, require that carbon monoxide alarms be installed in any housing subsidized by the federal government, including HUD housing, VA-subsidized housing, and government-controlled housing such as military and diplomatic housing. The cost would be about 50 cents per dwelling unit per month, including batteries. That's money well invested in terms of lives saved, and would be largely offset by health care costs avoided.

Second, fund positions within the CDC dedicated to addressing the problem of carbon monoxide poisoning. Currently, the Air Pollution and Respiratory Health Branch of the CDC's National Center for Environmental Health has no positions funded for carbon monoxide poisoning work. The agency has done excellent work in recent years, but each CDC official has to do this work in between other projects. The EPA, which regulates carbon monoxide in automobile exhaust, and the Consumer Products Safety Commission are also trying to do this work on a shoestring. I can't think of another problem that kills 1,700 Americans each year and has so little federal support.

Thank you for taking the time to meet with me today. I will do my best to answer any questions.

Mr. RUSH. Thank you. The Chair recognizes Mr. Andres for 5 minutes.

TESTIMONY OF JOHN ANDRES

Mr. ANDRES. Good morning. I am John Andres, director of engineering for Kidde Residential and Commercial Division located in Mebane, North Carolina. Thank you, Chairman Rush and members of the committee, for the opportunity to contribute to the discussion on the prevention of carbon monoxide poisoning in the United States.

Kidde Residential and Commercial Division is part of UTC Fire and Security, a subsidiary of United Technologies Corporation. We are a proud leader in designing and manufacturing lifesaving residential carbon monoxide alarms and other fire safety devices and are committed to strict compliance to industry standards.

Kidde supports enactment of H.R. 1796, the Residential Carbon Monoxide Safety Act. The Centers for Disease Control and Prevention report each year unintentional CO poisoning kills more than 400 Americans, requires 20,000 more to seek emergency medical attention and causes more than 4,000 hospitalizations. H.R. 1796 is a strong first step toward preventing these tragedies. I commend Congressman Matheson for his leadership in elevating this public health and safety issue.

H.R. 1796 would focus much-needed federal attention and resources toward ending accidental carbon monoxide poisoning, The bill's provisions to create a grant program supporting residential CO alarm laws are especially important. However, for the purposes of today's hearing, my comments will focus on describing the carbon monoxide hazard and how CO alarms operate to provide warning and on explaining why it is necessary to establish mandatory federal product safety standards as laid out in H.R. 1796.

Known as the silent killer, carbon monoxide is a byproduct of incomplete combustion. Potential sources are gas-burning appliances such as a furnace, water heater, stove and grill as well as other fuel-burning devices like fireplaces and engines. If such devices are improperly installed or malfunction, carbon monoxide can build up inside a home. Carbon monoxide easily mixes with the air and can quickly reach dangerous levels. Because one cannot see, taste or small carbon monoxide, the only safe way to detect the gas is to install working carbon monoxide alarms. Kidde and fire safety experts such as the National Fire Protection Association recommend placing carbon monoxide alarms outside each bedroom and on every level of an occupied dwelling.

When inhaled, carbon monoxide bonds with the blood's hemoglobin to form carboxyhemoglobin, which then deprives cells of oxygen. The CO alarm works by measuring CO concentrations over time to ensure that an alarm will sound before a person's blood level reaches 10 percent carboxyhemoglobin. Below this level, a normally healthy adult will not experience symptoms of CO poisoning.

Two key attributes of carbon monoxide alarms are accuracy and reliability. These form the cornerstone of Underwriters Laboratories UL standard 2034, an independent third-party standard for which carbon monoxide alarms are voluntarily tested and listed.

UL 2034 is an American National Standards Institute, or ANSI, accredited standard that combines input from medical experts, approval bodies like UL, government agencies such as the Consumer Product Safety Improvement Act, the National Fire Protection Association, users and manufacturers in order to create a robust standard of performance. First published in 1992, UL 2034 has gone through several revisions, each of which is based on years of field test data intended to progressively strengthen the standard. Kidde supports this standard because it specifically tests the product design for electrical safety, mechanical robustness and the accuracy of CO detection over time and in different environmental conditions. UL 2034 is continually reviewed by a standards technical panel in order to keep pace with technological advances and past lessons learned. This revision process has led to the creation of CO-sensing technology that is more advanced, stable and reliable than past generations.

To date, 24 States have enacted laws requiring CO alarms in residential dwellings, and while most mandate that CO alarms meet UL 2034, there is no uniform requirement. More States will likely adopt similar legislation in order to avoid confusion among regulators, consumers and the industry. State lawmakers need a consistent standard to define what constitutes an approved alarm. Without such a reference, conflicting regulations arise that counter one of the CPSC's objectives, which is to develop uniform safety regulations for consumer products and to minimize conflicting State and local regulations.

In closing, each week we hear families whose lives have been saved through the use of carbon monoxide alarms. Having a CO alarm can make the difference between life and death. A federal standard would provide an umbrella of protection for all consumers in the United States as well as increased awareness and save lives.

Again, I thank the committee members for their consideration of H.R. 1796 and for raising awareness about CO dangers. Congressman Matheson, we look forward to working with you to pass this important legislation expeditiously. Thank you for the opportunity to contribute to the discussion.

[The prepared statement of Mr. Andres follows:]

WRITTEN STATEMENT OF

JOHN ANDRES,

DIRECTOR OF ENGINEERING,

KIDDE RESIDENTIAL AND COMMERCIAL

ON

CARBON MONOXIDE POISONING PREVENTION

March 18, 2010

Subcommittee Hearing

Subcommittee on Commerce, Trade and Protection

House Energy and Commerce Committee

Good afternoon, I am John Andres, Director of Engineering for Kidde's Residential and Commercial Division located in Mebane, North Carolina. Thank you, Chairman Rush and members of the Committee, for the opportunity to contribute to the discussion on the prevention of carbon monoxide (CO) poisoning in the United States. Kidde Residential and Commercial Division is part of UTC Fire & Security, a subsidiary of United Technologies Corporation. We are a proud leader in manufacturing life-saving residential carbon monoxide alarms and other fire safety devices. We are committed to leading the industry in product safety and strict compliance to industry standards.

Kidde supports enactment of H. 1796, "The Residential Carbon Monoxide Safety Act." The Centers for Disease Control and Prevention reports that each year, unintentional CO poisoning kills more than 400 Americans, requires 20,000 more to seek emergency medical attention, and causes more than 4,000 hospitalizations. H.1796 is a strong first step toward preventing these tragedies. I commend Congressman Matheson for his leadership in elevating this critical public health and safety issue.

H.1796 would focus much-needed federal attention and resources toward ending accidental carbon monoxide poisoning. The bill's provisions to create a grant program supporting residential CO alarm laws are especially important. However, for the purposes of today's hearing, my comments will focus on describing the carbon monoxide hazard and how CO alarms operate to provide warning, and on explaining why it is necessary to establish mandatory federal product safety standards, as laid out in H.1796.

Known as the "silent killer," carbon monoxide is a by-product of incomplete combustion. Potential sources are gas-burning appliances such as a furnace, water heater, stove, and grill, as well as other fuel-burning devices like fireplaces and engines. If such devices are improperly installed or malfunction, carbon monoxide can build up inside a home. Carbon monoxide easily mixes with the air and can quickly reach dangerous levels. Because one cannot see, taste or smell carbon monoxide, the only safe way to detect the gas is to install working CO alarms. Kidde and fire safety experts such as the National Fire Protection Association recommend placing CO alarms outside each bedroom and on every level of an occupied dwelling.

When inhaled, carbon monoxide bonds with the blood's hemoglobin to form carboxyhemoglobin, which then deprives cells of oxygen. A CO alarm works by measuring CO concentrations over time to ensure that an alarm will sound before a person's blood level reaches 10-percent carboxyhemoglobin. Below this level, a normally healthy adult will not experience symptoms of CO poisoning.

Consumers must have confidence that a properly installed and maintained CO alarm will warn them about the presence of dangerous CO levels, and avoid nuisance alarms. This need for accuracy and reliability is the cornerstone of Underwriters Laboratories (UL) 2034, the independent, third-party standard to which U.S. carbon monoxide alarms are voluntarily tested and listed.

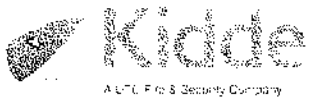
UL 2034 is an American National Standards Institute – or ANSI - accredited standard that combines input from medical experts, approval bodies like UL, government agencies such as the Consumer Product Safety Commission (CPSC), the National Fire Protection Association, users and manufacturers in order to create a robust standard of performance.

First published in 1992, UL 2034 has gone through several revisions, each of which is based on years of field test data intended to progressively strengthen the standard. Kidde supports this standard because it specifically tests the product design for electrical safety, mechanical robustness and the accuracy of CO detection over time and in different environmental conditions. UL 2034 is continually reviewed by a standards technical panel in order to keep pace with technological advances and past lessons learned. This revision process has led to the creation of CO sensing technology that is more advanced, stable, and reliable than past generations.

To date, 24 states have enacted laws requiring CO alarms in residential dwellings, and while most mandate that CO alarms meet UL 2034, there is no uniform requirement. More states will likely adopt similar legislation. In order to avoid confusion among regulators, consumers, and the industry, state lawmakers need a consistent standard to define what constitutes an "approved" alarm. Without such a reference, conflicting regulations arise that counter one of the CPSC's objectives, which is "to develop uniform safety standards for consumer products and to minimize conflicting state and local regulations."

In closing, each week we hear of families whose lives have been saved through the use of CO alarms. Having a CO alarm does make the difference between life and death. Consumers must have confidence that their CO alarm will work reliably and accurately. A federal standard would provide an umbrella of protection for all consumers in the US, as well as increase awareness and save lives.

Again, I thank committee members for their consideration of H.1796, and for raising awareness about CO dangers. Congressman Matheson, we look forward to working with you to pass this important legislation expeditiously. Thank you again for the opportunity to contribute to this discussion, and I will be glad to answer any questions.



Understanding the standard for carbon monoxide alarms and why it should it be mandated

What is the Standard for carbon monoxide alarms?
Underwriters Laboratories (UL) 2034, is the independent third-party test and performance standard to which U.S. carbon monoxide alarms are voluntarily tested and listed. This American National Standards Institute (ANSI) recognized standard combines input from medical experts, approval bodies such as Underwriters Laboratories, government agencies such as the Consumer Product Safety Commission (CPSC), and the National Fire Protection Association (NFPA), users and manufacturers. This group of interested parties is referred to as the Standards Technical Panel (STP)

What is the purpose of the UL 2034 standard?
The purpose of UL 2034 is to describe and set-forth an orderly process for ensuring CO alarm designs perform to critical performance requirements. For example, the UL standard covers electrical safety and mechanical robustness of design for CO alarms and also requires tests of the alarms at various CO levels to ensure they activate according to the requirements set forth in the standard.

Why is it important to consumers that such a standard exist?
CO alarms continuously monitor the home's environment. They are designed to sound before a healthy adult would feel the effects of CO poisoning. The only safe way to detect this odorless, colorless and invisible gas in a home is with a working CO alarm. Consumers should have confidence that their properly installed and maintained CO alarm will function appropriately in the presence of dangerous CO levels, while avoiding unwanted nuisance alarming that may otherwise cause them to doubt the accuracy of the alarm. The UL 2034 standard accomplishes these goals.

How has the UL 2034 standard evolved?
UL 2034 was first published in 1992 and has since gone thru several revisions. Each revision is intended to strengthen the standard, and each revision is supported by years of field test data. All currently manufactured CO alarms approved by UL must meet this updated standard.

The UL 2034 standard is reviewed by the STP in order to keep pace with technological advances and past lessons learned. In accordance with ANSI rules, any member of the STP can recommend a revision in order to improve product performance or reliability. This revision process has led to the creation of CO sensing technology that is more advanced, stable and reliable than prior generations.

Why should the Federal Government set a mandatory federal Consumer Product Safety Standard for CO alarms?
Today, it is voluntary for a manufacturer to test and certify its CO alarms to the UL 2034 standard. While most states with laws requiring residential CO alarms mandate that the alarms meet UL 2034, there is no uniform requirement. By setting a mandatory Consumer Product Safety Standard, the federal government would provide a consistent standard of protection for all consumers in the US. This has been done in the past involving such standards for garage doors, bike helmets, ATVs, toys, cribs and pool drains.

To date, 25 states have enacted laws requiring CO alarms in residential dwellings, and more states are likely to adopt similar legislation in the coming years. In order to avoid confusion among regulators, consumers and the industry, state lawmakers need a consistent standard to define what constitutes an "approved" alarm. Without such a reference, conflicting regulations may arise, which would directly run counter to one of the CPSC's guiding objectives "to develop uniform safety standards for consumer products and to minimize conflicting state and local regulations."

Mr. RUSH. Mr. Devine is recognized for 5 minutes.

TESTIMONY OF MARK DEVINE

Mr. DEVINE. Thank you very much, and good morning. As the chairman indicated, I am Mark Devine, vice president of marketing for First Alert and BRK Brands in Aurora, Illinois. I would like to first take this opportunity to thank all of the members for bringing this important issue in front of us all today. I would like to also thank Chairman Rush for his kind words regarding our company. We do enjoy being in Illinois with you, sir. In addition, I would like to thank Mr. Matheson for really representing this whole event in front of us today.

First Alert is a whole-home safety company with a foundation in fire safety, carbon monoxide safety and extinguishing products. Our name is very synonymous with alarms, and like Mr. Andres, we also take pride in our quality, innovation, engineering and our manufacturing. We are also a leader in our industry in terms of public outreach and collaboration with all the fire safety organizations.

I speak for First Alert when I say that we are concerned about protecting and preserving human lives. That is the primary reason that we support in its entirety the Residential Carbon Monoxide Poisoning Prevention Act, H.R. 1796. As we understand it, this bill would require carbon monoxide alarms to be installed in residential dwellings and places where people sleep. This provides an effective way to reduce the incidence of carbon monoxide poisoning.

The need for such federal regulation is strong. Carbon monoxide continues to be the number one cause of accidental poisoning in the United States. Each year, tens of thousands of people as we have heard are driven into the medical care facilities as well as over 400 lives are lost each year. We are keenly aware of how many fatal CO poisoning incidents occur in this country. Another example is just recently Amanda's Law took effect in the State of New York. This was named for Amanda Hansen. She died of CO poisoning at age 16 while sleeping at a friend's house. The law requires that New York State residents take necessary precautions to protect themselves from the silent killer. Amanda's father, Ken Hansen, has become a vocal proponent of measures that would require consumers to protect themselves from carbon monoxide poisoning.

Moreover, each year we receive hundreds of calls, letters and e-mails from individuals whose families have been saved, and I brought just a few examples today of the literally hundreds of examples that we receive from people who purchased alarms and who have had unfortunate incidents but the alarms saved their lives. These people take the time to literally write in, call in, e-mail, send photographs because they feel so compelled after they have had the saving incident from the alarm, so it is a strong testimonial as to why I am here today is to help more individuals understand the necessity for alarms within their homes.

To better ascertain consumers' knowledge about carbon monoxide and their awareness, we conducted a survey in 2009 where we spoke to 1,000 adults across the United States. The survey that we conducted, we found some very startling statistics. Forty-seven percent of households still do not have carbon monoxide alarms. These

products have been in existence for well over 10 years, a lot of education, a lot of information, but again, nearly 50 percent still do not have alarms. We also asked consumers do you understand the importance of carbon monoxide. Seventy-three percent of those individuals said yes, they do understand carbon monoxide is very hazardous and it is very important to them that they have protection but yet they are not going out and purchasing products to protect themselves. We also learned that 23 percent of those individuals who have purchased alarms have never replaced them. These products, as you stated, have been in existence for well over 10 years. They do need to be replaced as time goes on, just like any electronic device within your home. So the message is not fully penetrating the American public at this time.

With this said, we can also confidently state that education can work. In 2002, there was a study that indicated that 40 percent of households claim to have a carbon monoxide alarm, but in our recent study that number has only increased in 7 years by 9 percent. So there are still many homes that are unprotected. Because of the effectiveness of education, we do support earmarking grant money for additional public education efforts. We believe this will further curb the rate of accidental carbon dioxide poisoning. We greatly are encouraged by the number of States and municipalities who have enacted legislation. We also are grateful to legislators like yourselves who are now working hard to gain that federal support.

Again, I want to thank all of this committee and the chairman, Mr. Rush, for allowing us to be here today to provide this testimony.

[The prepared statement of Mr. Devine follows:]

March 18, 2010

The Honorable Bobby L. Rush
Chairman
Subcommittee on Commerce, Trade, and Consumer Protection
House Committee on Energy and Commerce
Washington, DC 20515

The Honorable Ed Whitfield
Ranking Member
Subcommittee on Commerce, Trade, and Consumer Protection
House Committee on Energy and Commerce
Washington, DC 20515

Dear Chairman Rush and Ranking Member Whitfield:

On behalf of First Alert, a trusted name in consumer home safety products and a leading manufacturer of carbon monoxide detection and notification devices, I am writing to formally convey our company's support for the Residential Carbon Monoxide Poisoning Prevention Act (H.R. 1796), introduced by Representative Jim Matheson. We join Representative Matheson and the National Electrical Manufacturers Association (NEMA) in their concerns for protecting and preserving human lives and in their confidence that carbon monoxide alarms installed in residential dwellings, and other places where people sleep, provide an effective way to reduce the incidence of CO poisoning.

Each year, we receive hundreds of calls, letters and emails from individuals and families whose lives have been saved by our carbon monoxide alarms. Still, CO continues to be the number one cause of accidental poisoning in the United States, claiming nearly 400 lives each year and driving tens of thousands of others to seek medical attention (American Medical Association). In far too many cases, these incidences could have been prevented with proper detection and notification devices.

Last year, we conducted two nationwide surveys* related to the consumer use and replacement of residential carbon monoxide alarms. The findings were alarming. Nearly half of Americans (47 percent) do not have CO alarms in their homes. Equally disturbing is the fact that nearly a quarter (23 percent) of those who do have CO alarms at home have never replaced them, and five percent haven't replaced their CO alarm(s) in more than five years, the recommended replacement timeframe.

We are greatly encouraged by the numerous states and municipalities that have enacted legislation requiring CO alarms in residential dwellings. We also are grateful for legislators like yourself and Representative Matheson who are working hard to gain federal support to prote all Americans from the dangers that CO poses in homes.

Carbon monoxide poisoning is a threat to everyone. However, we believe bills like the Residential Carbon Monoxide Poisoning Prevention Act coupled with education and awarenes will help to reduce the number of accidental poisonings from this "silent killer." We enthusiastically support H.R. 1796 and thank you for your attention to this life-threatening issue.

Sincerely,

Mark Devine
Vice President, Retail Marketing
First Alert

cc: The Honorable Jim Matheson

**The First Alert survey results are based on the responses of 1,000 adults in the United States who answered telephone surveys conducted Jan. 29 through Feb. 1, 2009 and July 31 through August 3, 2009. Results are accurate to +/-3 percent points with a 95 percent confidence level and can be generalized to the entire U.S. adult population.*

Mr. RUSH. Thank you. The Chair thanks all the witnesses, and now the Chair recognizes himself for the purposes of asking questions of the witnesses, and the Chair recognizes himself for 5 minutes.

I am going to begin with you, Mr. Howell. In your testimony, you state that a properly functioning carbon monoxide alarm should be installed in all residences and currently many States and localities require that carbon monoxide detectors be installed in homes to protect against carbon monoxide poisoning. The question that I have, actually four questions, I will ask them all in consideration of the time that I have and you can answer them, and if anybody else wants to chime in, please. The first question is, have these State and local regulations generally been effective in protecting people from harmful exposure to carbon monoxide, and are there any inconsistencies that give you concern? Should some form of these State and local requirements be adopted at the federal level, and lastly, States and localities also have regulations on fire detection. Are there efforts being made to ensure that the two detectors, fire and carbon monoxide, that they work together or be combined in some way?

Mr. HOWELL. Thank you, sir. In regards to the first question, as far as the effectiveness of State and local codes in requiring alarms, they certainly are effective. Given the fact that our data shows that 35 to 50 percent of homes have no alarms at all, I think I need to emphasize that there is an urgent need to get an alarm in every home, so whether it be a federal requirement or a State or local requirement, any move that would put an alarm in every home would certainly be effective in reducing the number of incidents, death and injuries, from carbon monoxide poisoning. As far as the question regarding a need for a federal requirement versus State and local, you know, I represent the technical arm of the agency and that truly would be a policy question. From a technical perspective, once again, regardless of what the source of the requirement was, any move to get an alarm in the home would certainly improve the odds of the American consumer surviving if exposed to hazardous levels of carbon monoxide.

Mr. RUSH. And what about combining fire and——

Mr. HOWELL. There are combined smoke alarms and CO alarms. You know, at this point in time as technology advances, you know, certainly there be an opportunity to combine those but the sensing technologies required for those devices are certainly unique and we want to ensure that the performance standards for each device reflect the particular hazard that is trying to identify an alarm to.

Mr. RUSH. Dr. Lavonas, do you have any response to that?

Dr. LAVONAS. Certainly. In answer to your first question, I absolutely agree with Mr. Howell. The State and local laws are generally effective. They are a patchwork quilt of some strong and some weak provisions. However, every step in the right direction gets you one step further in the right direction. There are inconsistencies, and I would love to see a federal standard on this, but that would be a much longer discussion than what we are prepared for today.

In terms of the combinations, in my home I have two combination dual-head smoke-carbon monoxide alarms, three wire nuts to

switch them. I dropped down the existing smoke head, three wire nuts, put up a smoke-carbon monoxide combination head. That takes advantage of the interconnect system that is part of smoke alarms in the code. Both of the major building standards, code-setting organizations have adopted carbon monoxide alarms. It is in the most recent version of both the international residential code and the National Fire Protection Association 720 code. However, building codes only trigger when you build or renovate a structure so if we are going to use building codes to solve this problem, it will take a good 30 years. We are losing people every week, so I would love to see a strong federal initiative on this question. That is my opinion.

Mr. RUSH. I am going to now recognize Mr. Whitfield for 5 minutes.

Mr. WHITFIELD. Well, thank you, Mr. Chairman, and thank you all very much for your testimony.
