The population remains mostly urban (73.9%), although a large proportion of these urban dwellers live in small, isolated towns. The Russian population is also aging: the proportion of those below 15 year fell from 24 to 22 % between 1991 and 1997; while that of population above 64 rose from 19 to 20%. Consequently, the number of pensioners has risen by 14% in the same period, reaching 262 per 1000 population. It is that part of the population who has borne the brunt of the economic decline and the falling standard of living.

## Poverty, Social Safety and Healthcare

A collapsing economy and long periods of inflation have had a devastating effect on the living standards in Russia. Some 20% of the population had fallen below the official poverty line by 1997; the financial collapse of August 1998 brought that number to 28%. The average wage fell additional 40% in that year. Moreover, income inequality grew throughout the 1990's. The average income of the top 10% was 13.4 times that of the bottom 10% in 1998, as opposed to 3.5 times in the Soviet era. The only silver lining to these official statistics may lie in underreporting of income by most families to avoid taxes, and in their ability to produce their own food on the wide-spread private garden plots.

The social safety net remains unreformed. It is organized along egalitarian lines of the Soviet era and does not rely on need-based criteria. It continues to include extensive housing and energy subsidies, as well as health care (20% health insurance tax was introduced in 1994). The large state-funded health care system, however, has been seriously damaged by severe budget cuts and general deterioration of infrastructure. Staff in state medical facilities are underpaid and often hit by wage arrears; as a result, patients are required to pay bribes for a modicum of medical care.

**Suggested Reading:** Judyth Twigg, *Russian Health Status in the 1990's: National Trends and Regional Variation*(NCEEER Paper (Title VIII), June 2000)

## Environment

Environmental degradation has been one of the most serious concerns to emerge after the collapse of the Soviet Union. As with health issues, environmental problems had not begun in 1991; however fuller reporting and a partial lifting of secrecy surrounding the Soviet-era nuclear, chemical and biological programs has moved these problems to the center of public, if not official, concern.

Among the most serious aspects of environmental degradation in Russia are:

**Water:** limited potability of fresh water supplies due to bacterial and chemical pollution; heavy metal pollution in rivers now impacting open seas (especially the Arctic Ocean);

**Air pollution:** especially in large industrial cities, heavy lead, solid particles, CFS, sulfur dioxide and other dioxins due to ineffective (or absent) scrubbing equipment;

**Soil pollution:** overuse of pesticides and fertilizers, heavy chemical pollution;

**De-forestation:** serious forest cover loss due to clear-cutting in Siberia;

**Bio-Chemical hazards:** concerns over improper storage of bio-chemical materials by the former military/industrial facilities;

**Nuclear hazards:** concerns over safety of the nuclear power industry, secure storage of nuclear material and safe disposal of nuclear wastes (submarines, etc.)

In 1997, the Ministry of Environmental Protection was abolished and its tasks were given to the Ministry of Natural Resources, which is also responsible for overseeing the extractive and mining industries.

**Suggested Reading:** *The Environmental Atlas of the Russian Federation*, ed. Murray Feshbach (1997).

## Education

Despite social stresses, the population of the Russian Federation remains relatively well educated. By 1998, there were 3.25 million students in Russia and 880 institutions of higher learning. Since 1991, many of them became private and focus on commercially oriented qualifications. At the same time, a decade of national economic decline has hurt the quality of Russian state education. Teachers have been among the hardest hit by wage arrears, large numbers of the highest-caliber professors leaving the public for the private sector.

## Women's Issues

Women have been hit the hardest by the economic decline and social stresses. A high proportion of women-led households is below the poverty level. Level of health in general, and reproductive health in particular, show alarming declines due among others to sharp increase in the cases of sexually transmitted diseases. Among the most troubling aspects of women's social situation is the growth of human trafficking in women and girls in Russia. Controlled by organized crime groups, trafficking in women has increased throughout the 1990's and has become a prominent human rights and consular issue in Europe and, increasingly, the U.S.

In the political arena, few women's rights organizations exist; Women of Russia –the most prominent among them –failed to clear the 5% vote threshold in the 1999 Duma elections. The most active women's group today is Soldiers' Mothers. Its focus has been on the war in Chechnya and the treatment of the conscripts in the Russian army.

## **National Security**

### National Security Concept

An official and revised National Security Concept was signed as a decree by Vladimir Putin in January 2000. This document –outlining broad guidelines rather than concrete policy prescriptions –is notable for several reasons:

**Threat assessment** continues to focus on domestic factors, especially economic crisis, social problems,

and lack of law and order. This, combined with the separatist drive in Chechnya (classified as terrorism), is seen as the main threat to the territorial integrity of the Federation.

**Enhanced role of the state** is stressed in economic as well as political/social spheres, and in areas such as strengthening the rule of law and combating corruption and crime.

**Opposition to the unipolar world system** is a chief diplomatic Russian goal. The unipolar world -- i.e. the U.S.-dominated international system and institutions -- are seen as a threat to the multipolar world of "collective management" in world affairs; Russia will actively cooperate with states that oppose "U.S. hegemony" and "arbitrary U.S. /NATO use of force".

**Reliance on nuclear weapons** is required to compensate for the severely weakened Russian conventional force. The new concept relaxes the criteria for the use of nuclear weapons compared to the doctrines of 1993 and 1997.

Continued stress on **arms control and nuclear non-proliferation** regimes, including adapting old agreements and developing new ones to reflect "the new conditions in international relations."

**Suggested Reading:** Stephen Blank, "Preconditions for a Russian RMA: Can Russia Make the Transition?" *National Security Studies Quarterly* (Vol VI, issue 2, 2000)

## Armed Forces

Russia remains the world's second largest nuclear power, but its conventional force has declined dramatically in almost all areas. While the Russian armed forces still rely on universal draft, they have shrunk from the 1992 levels of 2.7 million to 1.24 million in 1997. In the Defense Ministry's blueprint for military reform, a smaller and better equipped professional army is foreseen, but the additional funds required for such a wholesale restructuring are lacking and in recent years even the budgeted levels have often not been disbursed. As a result, the military personnel have often faced shortages of equipment, fuel, electricity, and even food.

This pattern of "benign neglect" of the armed forces, established under President Yeltsin, may change under the Putin administration. The successful military prosecution of the conflict in Chechnya was one of his priorities; consequently, he has officially committed to increasing the funding for the armed forces, including funds for the military reform as well as purchase of new equipment and weapons systems. These plans, however, clearly hinge on the economic turnaround in the country.

## **Russian Military Forces in 1997:**

Army: 420,000

Navy: 220,000

Air Force: 130,000

Air Defense: 170,000

Strategic Nuclear Forces: 149,000

Paramilitary: 583,000

Reserves: 20,000,000

Source: International Institute for Strategic Studies, *The Military Balance, 1998/99*

**Suggested Reading:** Roy Allison, "The Russian Armed Forces: Structures, roles and policies" in *Russia and Europe*, ed. V. Baranovsky (1994)

**Suggested Resource:** *The Journal of Slavic Military Studies* (Frank Cass, London)

### Arms Control and Nuclear Non-Proliferation

According to the new National Security Concept, arms control –especially non-proliferation of nuclear weapons and weapons of mass destruction –holds a prominent place in Russia's security policy. Russia is intent on halting its decline as a world power and to that effect is eager to preserve its status as one of the five "official" nuclear powers. It is also true that Russia's exports of dual-use and nuclear technology to such states as Iran, Iraq and India puts these official statements into question. [See section below on weapons and nuclear technology exports.]

At the same time, Russian policy makers have recognized that both its domestic resources and international conditions have changed drastically since 1991. As Nikolai Sokov from the Center for Non-Proliferation Studies put it, "the agreements concluded during or immediately after the Cold War were adequate for a superpower, but are awkward for Russia today. Some are too restrictive on Russia, while others insufficiently restrict Russia's neighbors and rivals." Consequently, Russia "intends to adapt the existing arms-control agreements to the new conditions" and "develop, as necessary, new agreements." (START III treaty would seem to fall into this category).

**Suggested Reading:** Nikolai Sokov, "Russia's New Concept of National Security," *East European Constitutional Review* (Winter/Spring 2000).

### Weapons and Nuclear Technology Exports

With orders from the Russian military at a historical low, the Russian defense industry has turned to exports to ensure the survival of their production and research/development capacities. As a result, Russia has become the second largest arms exporter in the world, focusing above all on China, India, the Near East and South-East Asia. Its exports range from small firearms to the state-of-the-art weapons systems, including Sukhoi 27 and nuclear submarines.

Along with the conventional arms trade, a number of Russian institutions (including the Ministry of Atomic Energy) have been involved in dual-technology and nuclear technology sales, which have called into question Russia's commitment to non-proliferation and caused the U.S. to threaten sanctions against

Russian parties involved in those deals. While some of such export contracts may have been due to simple financial considerations, others –like the exports to Iraq and India -- reflect Russia's foreign policy priorities.

## Foreign Policy of the Russian Federation

### Russia and the CIS

The rise of 15 independent states out of the territories historically controlled by Moscow has presented the greatest discontinuity and challenge for Russian foreign policy. In numerous statements, presidents Yeltsin and Putin stressed that "integration" of the territories of the former Soviet Union and preservation of a Russian sphere of influence are a vital national interest of the Federation. Neither president has suggested the use of military means; rather, further economic, political and defense integration is presented as the chief objective.

At the same time, Russia has had little or no means of economic or political leverage in the region to achieve such ambitious goals. The Commonwealth of Independent States has proved to be a better forum for resisting regional Russian initiatives than for pushing them through. Although a large number of CIS agreements have been signed, they remain unenforced due to lack of agreement on any common mechanisms. And, in a sign of Russia's decreasing influence within the CIS, six countries (Georgia, Ukraine, Uzbekistan, Azerbaijan and Moldova) have created an unofficial coordinating group to promote

their economic and security interests vis a vis Russia and other international players.

## **The History of the CIS**

**July 1991:** Gorbachev attempts to negotiate the New Union Treaty among the 15 Soviet republics to replace the existing Union

**August 1991:** Unsuccessful hard-liners' coup, aimed against N.U.T.

**Fall 1991:** All fifteen republics declare independence

**December 8, 1991:** Yeltsin (Russia), Kravchuk (Ukraine), and Shushkevitch (Belarus) announce in the Belovezhska agreement the creation of the Commonwealth of Independent States as a "coordinating body."

**December 21, 1991:** CIS is joined by the non-Slavic republics: Kazakhstan, Uzbekistan, Tajikistan, Turkmenistan, Kyrgyzstan; Armenia, Azerbaijan, and Moldova. Georgia and the Baltic states decline to join.

**1992:** Minsk becomes the official site of the CIS "coordination center."

In light of the difficulties in using the CIS as a tool of its regional policy, Russia has turned to bilateral relations with the immediate neighbors as well as other former Soviet republics. Here, Russian foreign policy-makers have more points of leverage at their disposal. Peace-keeping forces and regional security issues play a key role in Russia's relations with Tajikistan, Uzbekistan, Georgia, Armenia, Azerbaijan and Moldova. Energy dependence is a prominent issue in Russia's relations with Ukraine and Belarus. Increasingly, then, Russia's relations with its neighbors cannot be defined in group terms, but must be analyzed on a case-by-case basis.

**Suggested Reading:** M. Olcott, A. Aslund, *Getting It Wrong: Russia and the Commonwealth of Independent States* (Carnegie Endowment, 2000).

## **Multilateral Relations**

Integration into the global economic system and a desire to maintain "a multipolar world" form two distinct objectives of Russian foreign policy in the arena of multilateral relations.

In its relations with the G7, the European Union, and the International Financial Institutions, Russia has stressed its desire to enter the WTO in order to boost its international trade and foreign investment. However, full integration has been hampered by Russia's insistence on protecting domestic producers and on regulating foreign firm operations. It has also been undermined by continued barriers to some Russian exports in Europe and the U.S. As a result, Russia has discussed a shift of its economic priorities

from the West to the CIS.

In the area of traditional diplomacy, Russia has raised the banner of resistance to the "unipolar world" dominated by the U.S. and NATO. It stresses that such multilateral organizations as the United Nations' Security Council and the OSCE have lost control over the international use of force, with the Kosovo intervention used as the most vivid example. Consequently, Russia sees "the collective management" of international affairs as seriously threatened. To halt this tendency, Russia has increasingly cooperated with China, India, Iran, and other nonaligned countries.

## Questions and Issues

How did Moscow's foreign policy making evolve after the Soviet collapse?

Russian foreign policy establishment has experienced serious changes and challenges since the end of the Soviet Union. The Russian Ministry of Foreign Affairs became more transparent and sensitive to domestic public opinion under its first minister, the liberal and pro-Western Andrei Kozyrev. Since his departure in 1995, however, the Ministry saw a resurgence of the traditional great power-based diplomacy, especially under the leadership of Yevgenii Primakov and his hand-picked successor, Ivan Ivanov.

At the same time, the decision-making process in Russia has seen

unprecedented influence of domestic economic and political actors. In particular, energy producers (Lukoil, Gazprom) with interests abroad, arms exporters, the nuclear industry, and even some regional leaders, have been able to shape the debate on issues relevant to their interests. This growing role of the independent economic actors may temper statist impulses of Vladimir Putin's foreign policy.

**Suggested Reading:** Celeste Wallander, "Ideas, Interests, and Institutions in Russian Foreign Policy" and other essays in *The Sources of Russian Foreign Policy After the Cold War*, ed. C. Wallander (Westview Press, 1997)

## Relations with the United States:

Relations with the United States have lost their elevated and exclusive character of the Cold War era. While Russia has sought to avoid serious disagreements with the U.S., it has increasingly put its geo-strategic interests ahead of a special bilateral "partnership."

From Russia's perspective, the United States remains a crucial interlocutor in arms control, monetary and trade issues. In the area of diplomacy, by contrast, Russia insists on placing the U.S. in a multilateral context, where Russia's relations with other countries may leverage its weakened position vis a vis the U.S. This is seen as the rationale behind Vladimir Putin's European tour in the wake of the U.S. debate on the Missile Defense Initiative; as well as the main driving force of Russia's expanding partnership

with China.

Among the most important issues on the Russo-American agenda are:

**Security structures** in Europe and the second wave of NATO expansion;

**Arms Control:** START III and national missile defense initiative;

**WTO,** trade access and direct foreign investment.

**Suggested Reading:** P. Stavrakis, "After The Fall: U.S.-Russia Relations"; Thomas Graham, "Reflections on U.S. Policy Toward Russia," *East European Constitutional Review* (Winter/Spring, 2000)

## Russia and Europe

In contrast to its relations with the U.S., Europe's relative importance in Russian foreign policy has increased since the Cold War. Changes in European security structure and economic/political integration on the continent are of direct interest to the Russian Federation. Since 1991, the enlargement of NATO, the proposed expansion of the European Union, and finally, the NATO intervention in Kosovo, have all caused serious tensions.; however, Russia remained engaged through a variety of older and new mechanisms, such as NATO observer status or participation in the Contact Group.

Economic factors -- from debt restructuring (via the London and the Paris Clubs) to trade and investment -- have also come to greater prominence in the Russian-European relations.

**Suggested Reading:** Russian Policies on Central and Eastern Europe: An Overview" in *European Security* (Autumn 1999); Stephen Blank, ed., *NATO after Enlargement: New Challenges, New Missions, New Forces* (Institute for Strategic Studies, 1998).

## Russia in Asia

In the Soviet era, Russian involvement in Asia was extensive and deep: from the troubled relationship with China and an active role in the Korean conflict, to close ties in South-East Asia and a warm relationship with India. Today, Russia's foreign policy in the region has been hampered by its weak economic position. The centerpiece of Russia's Asia policy is the deepening partnership with China. It is built on extensive weapons exports and cooperation in multilateral diplomacy. However, as both sides acknowledge, economic ties between the two countries have been slow to develop while long-term demographic trends create more areas of potential problems (such as legal and illegal Chinese migration into Primorskii Krai in the Far East).

Relations with Japan have also been a disappointment, especially in the economic area. Japanese direct investment, as well as levels of government assistance, have been low due to the unresolved territorial

dispute with Russia over the South Kurile Islands.

Weapons trade is also the chief component of Russia's relations with the Koreans, and to some extent, with India. On October 3, 2000, the two countries signed a strategic partnership agreement which stressed their dedication to elimination of nuclear weapons and close cooperation at the U.N. However, as long as India perceives Russian policy as tilted toward China, the latter's long-term hope of a Russo-Indian-Chinese "strategic triangle" will remain weak.

- c. 454-495 Huna invasions
- c. 400-500 Kama Sutra by Vatsyayana
- c. 405 Fa-hsien, Chinese pilgrim, arrives in Magadha (Bihar)
- c. 500 Six orthodox Hindu systems of philosophy established
- c. 550-753 Western Chalukyas in Deccan
- c. 629-645 Hsuan-tsang, Chinese pilgrim, visits subcontinent
- c. 630-970 Eastern Chalukyas
- c. 700-800 Buddhism spreads to Tibet
- c. 760-1142 Palas of Bihar and Bengal
- c. 907-1310 Chola Empire at Tanjore
- 997-1026 Invasions of Mahmud of Ghazni
- c. 1192 Prithivi Raj Chauhan, King of Delhi, defeated by Shahab-ud-Din

## Ghorid dynasty in Delhi

- c. 1000-1200 Buddhism disappears from subcontinent as organized religion
- 1136-1565 Vijayanagar Empire
- c. 1542 Francis Xavier, Catholic missionary, arrives in India
- 1211-1236 Reign of Iltutmish, first sultan of Delhi

1266-1287 Balban, consolidator of Delhi sultanate  
1296-1316 Ala al-din Khalji  
1306-1310 Bhamani sultanate in Deccan  
1325-1352 Sultan Muhammad ibn Tughluq  
1251-1288 Sultan Firuz Shah Tughluq  
1398 Invasion of Timur and sack of Delhi  
1451-1526 Lodi sultanate in Delhi  
1492 Vasco da Gama lands in Malabar  
1496 Birth of Guru Nanak, first guru of the Sikhs  
1526 First Battle of Panipat, Babur defeats Lodis

Mughal empire founded

1555 Humayun resumes reign in Delhi  
1556 Accession of Akbar  
1600 Charter of incorporation granted to East India Company

Elizabeth I

1605-1627 Reign of Jahangir  
1627-1658 Reign of Shah Jahan  
1639 Fort St. George, Madras, founded by E.I. Company  
1668 Bombay ceded to E.I. Company  
1651 Foundation of East India Company factory at Hugli  
1658-1707 Reign of Aurangzeb, last great Mughal emperor  
1739 Sack of Delhi by Nadir Shah of Persia  
1757 Battle of Plassey, Robert Clive defeats Siraj ud-daula,

Mughal Nawab of Bengal

1765 Battle of Baksar, E.I. Company final defeat of Mughals  
and grant of Diwani (revenue collection) for Bengal  
1773 Parliament begins supervision of E.I. Company  
1799 Defeat of Tipu Sultan  
1813 E.I. Company monopoly revoked  
1833 E.I. Company ceased to be a trading company  
1772-1833 Raja Rammohan Ray, the great Bengali reformer  
1848 State of Kashmir created by treaty  
1857-1858 War of Independence with British (Indian Mutiny)  
E.I. Company dissolved, Viceroy appointed by Parliament  
1877 Queen Victoria proclaimed Empress of India  
1885 Indian National Congress inaugurated in Bombay  
1906 Muslim League founded  
1912 Transfer of Capital from Calcutta to Delhi  
1869-1948 Mohandas Karamchand Gandhi  
1876-1948 Mohammad Ali Jinnah, the Quaid-i-Azam

1889-1964 Jawaharlal Nehru

1941 U.S. and British India establish diplomatic relations

1942 Quit India movement founded

1946 Henry Grady, first U.S. Ambassador to India

1947 Independence for India under leadership of Jawaharlal Nehru

Independence for Pakistan under Mohammad Ali Jinnah

1947 Accession of Kashmir to India

1950 Indian Constitution ratified

1919-1984 Indira Gandhi

1951 First Indian general election

1962 Indo-China Border War

## GENERAL INTRODUCTION

The *South Asia Self-Study Guide* introduces the reader to this region of rapidly growing strategic, economic, geo-political importance first, by identifying eleven broad themes or topics that both provide essential background to and put into sharp focus the dominant issues, personalities and events in South Asia today. Second, this *Self-Study Guide* provides a short bibliography of readily available critically acclaimed literature that present the most authoritative crossfire of expert viewpoints on the issues, events and people of the subcontinent, Sri Lanka and Indian Ocean. This reading list is not intended to be representative of the broad sweep of literature on any topic. It provides an introduction to the some of the best currently available studies. For further more general or specialized study the reader may turn to the extensive bibliographies in the books recommended. Third, this *Guide* provides internet sources to direct the reader to the most up-to-date world reportage and commentary. Because of the unpredictable turnover of internet sites preference is given to search engines which direct the reader to currently available homepages and other more stable sites and links.

The following are among the most important general South Asia search

engines:[www.samilan.com](http://www.samilan.com)(South Asian Milan Search Engine),[www.southasia.net](http://www.southasia.net)(the South Asia Search Engine),[www.bestofasiapacific.com](http://www.bestofasiapacific.com)(has links to every country),[www.tufts.edu/fletcher/cais/index.html](http://www.tufts.edu/fletcher/cais/index.html)(Center for South Asian and Indian Ocean Studies at Tuft University),[asnic.utexas.edu/asnic.html](http://asnic.utexas.edu/asnic.html)(Asian Studies Network Information Center, University of Texas at Austin),[www.virginia.edu/~soasia/](http://www.virginia.edu/~soasia/)(Center for South Asian Studies at the University of Virginia),[www.wisc.edu/southasia](http://www.wisc.edu/southasia)(Center for South Asia, University of Wisconsin at Madison. The Lonely Planet Guide sites ([www.lonelyplanet.com](http://www.lonelyplanet.com)) are another excellent source of general information.

*Familiarity with and appreciation for this diversity is a critically important part of preparation for successful, informed and rewarding service abroad.*

## INTRODUCTION TO MAJOR THEMES AND TOPICS

Identifying the major themes and topics in the study of South Asia is not without problems. Just as there is vigorous diversity of expert opinion on every current issue and its interpretation there is equally vigorous diversity of opinion on what are the major themes and topics and on what are the most reliable sources of information and judgment.

Since this introductory study *Guide* is designed for journalists, travelers and their families who have little or no personal experience and knowledge of South Asia it takes a general historical approach to the region. Identifying major themes and relevant topics (phrased as study questions) for the study of South Asia prepares the way to examining continuities as well as discontinuities in the ancient and proud civilization of nations which are key players on the world stage today.

*This historical approach seeks to encourage students and other observers of South Asia to develop the discipline of a rigorous "critical path analysis" of current events by looking for evolutionary linkages between events, people in the news, groups such as political parties, religious bodies, communal organizations, regional coalitions and their background institutions in their historical-religious-cultural-political-economic and domestic strategic contexts.*

## METHOD OF STUDY

This is an independent study program. The following method of study is recommended. A self-study guide is just that, a program to help you plot your own learning curve. So go at your own pace. Set a comfortable regimen. Demand a lot from yourself. Define weekly goals. Schedule a set time every week for study. Be an active learner. True learning is self-motivated learning. Your success will be in direct proportion to your personal effort. Here are some tips to send you on your way on this fantastic journey of discovery.

First, become acquainted with general reference literature, for example, Francis Robinson's (ed.) *The Cambridge Encyclopedia of India, Pakistan, Bangladesh, Sri Lanka, Nepal, Bhutan and the*

*Maldives* (Cambridge, 1989), Gordon Johnson's (ed.) *A Cultural Atlas of India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka* (Andromedia, 1996) and Ainslee Embree and Stephen Hay's (eds.) *Sources of Indian Tradition*, vols. I and II (Columbia, rev. 1995). A. L. Basham's (ed.) *A Cultural History of India* (Oxford, 1997) is also an important reference work.

Second, start from the beginning at subsection **A. Books**. Pick a book, read it, use the bibliography as a map to guide you to other literature and related topics. Go to **B. Internet Sites**. Explore, explore, explore the net looking for current reportage and discussion of issues. Move to subsection **C. Study Questions**. Tackle these questions as you would any worthy challenge. They are your sign posts in a bountiful wilderness of new ideas. They will help you single out key organizing issues in what can often be a bewildering flood of new ideas as you begin to study the vast and complex civilization of South Asia.

Third, an approach with instant gratifications is to get in the habit of reading the major South Asian daily online newspapers and journals like *Dawn*, *Pakistan Today*, *Herald* (Pakistan), *The Hindu*, *Express India*, *Hindustan Times*, *India Today* (India), *Daily Star*, *The Independent* (Bangladesh), *The Sunday Times*, *Daily News (Sri Lanka)*, *Kathmandu Post* (Nepal). Browse their archives for interesting articles, book reviews and features. Although these newspapers are not indexed, they are well-maintained and they are "user friendly." A word of encouragement and advice! Don't pass up a tangent! Wander off the subject at every opportunity but always get back on track. Learning is a journey of discovery, some would even say self-discovery!

### I. Geography, Climate and Eco-Systems

Weather and habitat have always been favorite topics not just of casual conversation but serious discourse in South Asia as any traveler to the region can attest. Monsoons and mountains, the Lu and the heat of the dry season, all are immortalized in ragas (music) and shlokas (verse), and in the colorful metaphors and euphemisms of street speech. Some writers like Jared Diamond (*Guns, Germs, and Steel*, 1997) argue that geography, climate and eco-systems are the single most important forces in the shaping of human institutions.

Rammohan Ray listed ("Remarks on the Settlement in India by Europeans" in 1832, *The Essential Writings of Raja Rammohan Ray*, ed. Bruce C. Robertson, 1998) climate as a significant "obstacle in the way of settlement in India by European." Arguing in favor of encouraging European settlement in India he wrote to the Select Committee of the House of Commons, "the climate in many parts of India may be found destructive, or at least very pernicious to European constitutions, which might oblige European families who may be in possession of the means to retire to Europe to dispose of their property to disadvantage, or leave to ruin, and that they would impoverish themselves instead of enriching India." Ray recommended "cool and healthy spots" like the Nilgiris in South India, as places where Europeans could escape the heat and settle down keeping their wealth and industry in India.

Mark Harrison (*Climates & Constitutions: Health, Race, Environment and British Imperialism in India 1600-1850*, 1999) discusses British attitudes towards the Indian climate and environment. In the eighteenth-century a prevalent East India Company perception was that as India was an extreme hardship tour of duty one had to get in make as much money as quickly as possible and leave before cholera or some other dreaded affliction struck. "In and out while still alive," "get rich quick," were the mottos. Rammohan Ray viewed this perception as a significant impediment to Indian development as a modern

nation. Ray's solution to develop recreation centers in the more temperate climate of the hills was soon followed up and became very popular in South Asia. As a child growing up in India "going to the hills" to escape the dry season was an annual pilgrimage for my family. One year it would be Naini Tal in the Kumaon Hills. Other years it would be Mussourie, Ooty, Kodaikanal, Chikalda, or Kashmir. Dane Kennedy's excellent *Magic Mountains: Hill Stations and the British Raj* (1996) and Barbara Crossette's *Great Hill Stations of Asia* (1999) capture some of the complex subculture that grew up around the hill stations and which exists to this day.

In *The Continent of Circe* the always controversial Nirad Chaudhuri argued that the geography, climate and eco-systems of the South Asian subcontinent radically altered every foreign invader and culture lured to the region, from the ancient Aryans to the British colonialists. He goes further to say that the entire civilization of the subcontinent -- its religious institutions, sacred literatures, social systems, legal traditions, political institutions, arts, cuisines -- has been a process of coping with the harsh natural environment. India's varied ecosystems have always been a leit motif in Indian literature ancient as well as contemporary.

Gita Mehta's *River Sutras* is a riveting collection of short stories strung together (this is what *sutra* means) by a common theme like Shusaku Endo's *Deep River* (1996) which invokes the Ganga as sacred destination where travelers are reawakened to a primordial awareness. The Narmada River, second perhaps only to the Ganga in sanctity, is the setting for all the stories. The banks of this magnificent river meandering through central India is many things to many people, a place of rest and relaxation, of solace, of spiritual retreat. It is a source of life giving water for vast irrigation systems and now the highly controversial Sardar Sarovar dam project. The Narmada has taken on a larger significance in contemporary India. Booker Prize winner Arundhati Ray (*The God of Small Things*, 1997) has joined the Narmada Bachao Adolan (Paul Kingsnorth, "Small Things and Big Issues," *The Utne Reader*, March, 2001, [www.utne.com](http://www.utne.com)), a local largely tribal movement against the dam, and made it into an international campaign.

In antiquity the Narmada River marked the southern boundary of *Aryavarta*, the sacred and holy land (*punjabhu*) of the Vedic age. For this reason alone it is a sacred river. In one of the best and most highly acclaimed works of contemporary fiction Gita Mehta's stories pair the mythology of sacred rivers with their ecological and spiritual importance to modern Indians in real-time glimpses of rural life today.

Ranchor Prime has explored (*Hinduism and Ecology*, 1992) classical Hindu teachings on the importance of right balance in the relationship between human society and the natural environment. Prime argues for a contemporary environmentalism based upon classical norms.

Ramachandra Guha's *Unquiet Woods* is a contemporary classic of grassroots political and social activism. The *chipko*, "hugging trees" movement has antecedents in Rajasthan during the eighteenth-century and has spread throughout South Asia, and even in America. Today environmental groups in South Asia are doing what governmental agencies are not doing.

## C. Study Questions

1. What role do mountains like the Himalayas and Vindhyas, play in the life of religious communities of the subcontinent today? In domestic and regional subcontinental politics?
2. What role do forests, rivers and oceans, as eco-systems, boundaries and destinations, play in the life of religious communities? In domestic and regional subcontinental politics?

3. What subcontinental climactic factors influence your daily and seasonal schedules?

## II. Peoples and Languages

The subcontinent has always been an enormously rich and colorful patchwork tapestry of peoples and languages reflecting millenniums of continuous interaction between indigenous peoples and institutions and foreign invaders. Modern ethnological, classical and linguistic studies have shown the interconnections between ancient Greece, the Mediterranean region, Africa, and ancient and medieval India. The Sanskrit language is closely related to Greek and Latin within the Indo-European family of languages. The three most important administrative and literary languages of the subcontinent have all been imported, namely, Sanskrit, Persian and English. Rammohan Ray (1772-1833), the great Bengali reformer, praised Sanskrit as the one world language that never needed to borrow words from any other language to convey philosophical and modern scientific ideas. Not only the language but the gods of Vedic India have their counterparts in the pantheons of ancient Greece and Rome. Ethnic and racial interconnections also cross national and cultural boundaries. Language has often been a divisive force in the subcontinent. The peoples of the subcontinent today are as much a mixture of racial and ethnic types as any other peoples anywhere in the world today. Anthropologists and sociologists from M.N. Srinivasan (*The Cohesive Role of Sanskritization and Other Essays* (Oxford, 1989) to Akbar S. Ahmed have studied the length and breadth of the subcontinent. Srinivasan shows that Hindu caste society has never been a rigid system but rather one that allowed for considerable mobility. Akbar S. Ahmed's *Resistance and Control in Pakistan* (Routledge, 1991) stands out as one of the most important studies, indeed a model of field research, of tribal society in South Asia.

More languages (over 300) are spoken in South Asia than in any other region of the world of comparable geographical size. Many of these languages are however only dialects of a "parent" language. It has been said that the languages of adjacent region are dialects but those of more distant regions are distinct languages. So Punjabi and Hindi, spoken in the adjacent states of Haryana and Uttar Pradesh would be dialects but Punjabi and Bengali, spoken in the eastern most state of West Bengal, are distinct languages. Punjabis and Bengalis have a difficult time understanding each other if at all. A Hindi speaker especially from the neighboring state of Bihar would have much less difficulty understanding a Bengali speaker from either side of the border with Bangladesh. Urdu and Hindi have been two names for the same language, in other words, with the same grammar, syntax and vocabulary. Practically the only difference (aside from minor pronunciation and syntax changes) has been that Urdu is written in Perso-Arabic script and Hindi *indevanagari*, the script of the Sanskrit language ("Hindi-Urdu," Yamuna Kachru, *The World's Major Languages*, ed. Bernard Comrie, 1990). The language I spoke as a child in India was Urdu-Hindi.

An anecdote will illustrate the point here. At a local gas station in Baltimore run by Sikhs I spoke to an attendant in what I would describe as bad Hindi. He responded, "Oh, you know Punjabi?" He was the son of the owner. A week later I said the same thing to another attendant. His response was "You speak Urdu?" He was from Pakistan. The next time I repeated the same greeting to a third attendant, an Indian, who replied "How do you know Hindi?" The last attendant I spoke to had no idea what I was saying. He was from Kerala, South India.

After the creation of the independent states of India and Pakistan in 1947 however, changes have been forced on Urdu, the national language of Pakistan, and on Hindi spoken in India. In Pakistan Sanskrit-based words are replaced by Persian-Arabic words in the name of cultural purity. Because of India's large Muslim minority the change is perhaps less pronounced though the Hindu *parivar*, religious right, has made this an issue. For example, in Pakistan it is *shukriya*, "thank you" not *dhanyavad*, a Sanskrit word. Though *shukriya* is in the Hindi dictionary *dhanyavad* is probably more correct among Hindus. In India I was once mildly rebuked for using *shukriya*. While many view these changes as frivolous expressions of xenophobia a gradual shift is taking place.

In Pakistan Urdu is the native language only of the minority Mohajirs or Muslim immigrants from India who settled in Karachi and in Sindh during Partition. Balochi is spoken in Baluchistan in the south and Pukhto, the language of the Pukhtun tribe, Dari, and Punjabi are spoken in the north. Language in Sri Lanka also marks the major ethnic divides. Tamils speak Tamil and Sinhalese speak Sinhala.

Language has been one of the barriers between north and south India. The northern languages--Hindi-Urdu, Punjabi, Gujarati, Marathi, Bengali, Oriya, Assamese, Nepali--all belong to the Indo-Iranian branch of the Indo-European family. South Indian languages—Tamil, Malayalam, Kannada, Telugu--belong to the Dravidian family of languages ("Tamil and the Dravidian Languages," Sanford B. Steever, *The World's Major Languages*). This explains why the Malayali gas station attendant in Baltimore could not understand what I said in Hindi when the others from the north pretended to understand me.

The one language that is understood throughout the subcontinent is English. While this has been galling to nationalists there are those who contend that English has long been a language of the subcontinent. This fact has been one of the biggest selling points for India as a friendly environment for Americans and Europeans to do business. The controversy surrounding the use of the English language in India will go on and so will the use of this primary language of international business and contemporary world culture.

## C. Study Questions

1. How are the romance languages related to modern north subcontinental languages?
2. Is English a language of modern India?
3. What are the major language groups?
4. Are Hindi and Urdu separate languages?
5. Who are the Dravidians?
6. Where are the Aryans today?

## III. Major Religions

All the major world religions -- Hinduism, Buddhism, Judaism, Zoroastrianism (Parsis), Christianity, and Islam -- are active in the South Asian subcontinent today. Religion is a dominating force in every aspect of the public and private lives of the people of South Asia and continues to be perhaps the major source of division in the region today. Attempts to understand the politics, social systems and customs, economy, culture and international relations of South Asian nations without reference to the religious context are doomed to failure. Religious festivals occur with such frequency that it is often bewildering to business visitors because every festival means a business holiday. The literature on South Asian religions is copious, and like the religions themselves, is subject to endless impromptu interpretations and divisive controversy. Students should familiarize themselves with the following introductions to the great religions, taking the time to read from their scriptures.

South Asia has bequeathed two great religions to the world--Hinduism and Buddhism. Indic intellectual-

religious culture is to Asia what Hellenic culture is to western civilization. It would be difficult to exaggerate the ancient impact of Hellenism and Indicism upon the shaping of the modern world. Buddhism was Indic intellectual-religious culture for export. The Hindu tradition is for home consumption.

Today there are Hindu mandirs (temples) in every major U.S. urban center, twelve in the Baltimore-Washington, DC area alone. Mosques are in every major city. Islam is the fastest growing religious tradition in America. Gurudvaras (Sikh temples), Shambala and other Buddhist centers can be found everywhere. Today, there are ample opportunities to become acquainted with the general teachings of all these great traditions of spirituality without ever leaving your neighborhood. Internet chat rooms like that of [www.beliefnet.com](http://www.beliefnet.com) offer opportunities to enter into dialogue with communicant members of every religious community.

## C. Study Questions

1. In the Hindu tradition what do the following sets of terms signify? **Dharma, karma, samsara, moksa – brahmana, ksatriya, vaishya, sudra – brahmacharya, grihastha, vanaprastha, samnyasi. – Brahma, Vishnu, Shiva**
2. Who was the Buddha? What are the **Four Noble Truths** and **The Noble Eightfold Path**? What is the **Pali Canon**? What are the two main schools of Buddhism?
3. What are the five **Pillars** of Islam? Who is Muhammad?
4. Who are the ten gurus of the Sikhs? What are the 5 Ks? What is the **Adi Granth**?

## CULTURE

[Literary Culture](#)

[Arts: Music, Drama Cuisine](#)

## IV. Literary Culture

Salman Rushdie wrote in the June 23, 1997 issue of the New Yorker that the most important writing in the English language in the world today was coming out of the South Asian subcontinent. The oldest continuously read sacred texts in the world are the Vedas. Literary culture has been both a dominating force in the shaping of subcontinental civilization and an inexhaustible living chronicle. The Sanskrit language is the door to a one of the most extraordinary world literatures. Thomas Babington Macaulay's famous remark that the whole of Indian literature was not worth a single shelf of European classics should be remembered in the context of Rammohan Ray's earlier reference to Sanskrit literature as unrivalled even in the West as a repository of the world's greatest ideas. National pride in arts and letters

in the South Asian subcontinent can never be underestimated. Modern South Asian and South Asian American writers like Nayantara Sahgal, Anita Desai, Gita Mehta, Salman Rushdie, Bharati Mukherji, Bapsi Sidhwa, Khushwant Singh, Arundhati Roy, R. K. Narayan, and others are almost household names for many around the world.

Ainslee Embree and Stephen Hay's two-volume classic *Sources of Indian Tradition* provides the beginner with an invaluable survey, complete with samples of primary texts in translation, of the inestimably rich literature of South Asia.

## C. Study Questions

1. What are the following works? *Vedas*, *Upanishads*, *Bhagavad Gita*, *Mahabharata*, *Ramayana*, *Artha Shastra*, *Laws of Manu*,
2. Who are Vatsyayana, Kalidas, Kautilya, Mirabai, Kabir and Rammohan Ray?
3. What Indian author provoked a *fatwa* condemning him and a price on his head, and why?
4. What South Indian author won the Booker Prize in 1998? For what book?

5. What Indian-American author won the 2000 Pulitzer prize for her first work of fiction? What was the title of the book?

## V. Arts: Music, Dance, Drama, Cuisine

In the **Artha Shastra**, literally, "Treatise on Means," Kautilya, the mentor of Chandragupta (c. 321 BCE) the founder of the Mauryan Empire, sets forth the Hindu ideal of the full life, well-lived. It included practicing all the arts. The great Mughals were patrons of the arts. In the broad realms of music, dance, architecture, dress, cuisine and the arts in general there has been a remarkable synthesis of two commonly perceived as intrinsically adversarial civilizations. The age-old traditions of skilled craftsmanship is one of the most enduring and endearing aspects of South Asian civilization.

The Festival of India celebration at the Smithsonian Institution in Washington, DC during the summer of 1995 introduced South Asian arts and crafts to a broader spectrum of the American people than ever before. Tourism is a flourishing industry in this region. Travelers are attracted by the magnificent architectural wonders such as the Taj Mahal, and Mughal ghost city of Fatehpur Sikri, the vast temple complexes of Khujarah, Puri, and Madurai, the Ellora and Ajanta caves, the great Rajput fortresses and palaces, and the vibrantly colorful regional cultures, to name just a few examples.

"Music, dance, and drama are all integral parts of South Asian culture and society," writes Alison Arnold, editor of *South Asia, The Indian Subcontinent* (*The Garland Encyclopedia of World Music*, vol. 5, 2000), the most comprehensive survey of subcontinental music, dance and drama available today. Arnold goes on to explain that these traditions have been transmitted orally within families, social groups and artistic lineages and provide continuity with the past. South Asian musical traditions are furthermore part of our global cultural heritage influencing the culture of every continent, and for this reason alone deserve our serious study.

The music traditions of South Asia have been popularized around the world by great virtuosos like Ali Akbar Khan, Vilayat Khan, and Ravi Shankar. Even the major schools of dance—Bharatnatyam, Kathak, Manipuri, Odissi, Kuchipudi, Mohini Attam, and Kathakali—while not yet household terms, are becoming known outside of the region through cultural exchange programs. Fine carpets from India, Kashmir and Pakistan are readily available today, as well as many other crafts.

No discussion of modern South Asian civilization can omit mention of Bollywood, the world's largest film industry headquartered in Mumbai. Bollywood films are the primary vehicle for the export of Indian culture throughout the Middle East and Asia. Ashish Rajadhyaksa and Paul Willemen have edited the impressive *Encyclopaedia of Indian Cinema* (new revised edition, 1999). Especially noteworthy is Rajadhyaksa's introductory essay arguing that the grand onward march of history has evolved new modes of production of Indian films, that Indian films are somehow the standard bearer of India's cultural leadership in the world. One could arrive at the impression that the rest of India is trying to follow the lead of its film industry that in India life does imitate art. In the United States we hope that the world reflected in Hollywood films is not the real America.

Perhaps one of the best indexes of the growing familiarity with South Asian arts in America is the increasing numbers of critically reviewed restaurants springing up all over America. Four and five-star South Asian restaurants are common in every major city, according to *Zagat Survey*. Nothing written on the subject of South Asian arts can, however, prepare one for the first-hand, personal encounter with great art, food, music, literature, dance and craftsmanship.

## C. Study Questions

1. It is sometimes said that north Indians and Pakistanis have more culturally in common than do north Indians and south Indians. Is this true?
2. In what ways are the artistic traditions of South Asia a force of continuity, that is for breaking down barriers between religious, ethnic, racial and social communities?

# HISTORY

Historical Overview	Colonial History
---------------------	------------------

## VI. Historical Overview

The writing of contemporary histories of the subcontinent is a highly controversial enterprise today. Most current histories fall into four schools, "colonialist" or "imperialist," "orientalist" (some critics would subsume this under colonialist-imperialist), "nationalist," and "subaltern" (some critics classify this as nationalist). Each group regards the others' history as propaganda. These criticisms are in some cases justified. Yet all agree that understanding the past is critically important to dealing with the present.

At no time have these often conflicting approaches to history writing been more tested than in the Babri Masjid Ramjanmabhumī controversy which continues to this day. On December 2, 1992 in Ayodhya a mosque was torn down by Hindu radicals because it was believed to have been built on the site of a Hindu temple marking the precise spot of the birthplace of the mythical god Ram. Not only is there disagreement on fundamental details (whether there really was a Hindu temple at that very or any spot) and sources of information (whether the *Ramayana* is in any sense an historical document, and archeological evidence is trustworthy) but also on their interpretation and present-day significance. The doyen of Indian historians, Sarvepalli Gopal (*Anatomy of A Confrontation: The Babri Masjid-Ramjanmabhumī Issue* (1991) brought together historians from various schools in an attempt to bring balance to the investigation and understanding of a conflict which has cost thousands of lives and created a constitutional crisis. Not everyone is happy with Gopal's approach nor his conclusion that the entire tragic set of events has been manufactured by the professional myth-makers motivated by political and class-based agendas.

Though not without their own difficulties like the so-called colonial and orientalist histories, the new (post-Independence) indigenous schools of history writing have attempted what is characterized as "ground-up," micro rather than macro, histories of South Asia which seek, with varying degrees of success, to reevaluate traditional Indian vernacular sources. The subaltern group focus on village life and on regional agrarian culture and reassess the past in light of the interplay of indigenous institutions. A careful selection of representative writers of all these distinctive approaches may give students a better balanced understanding of the broad sweep of civilization than from any one by itself.

W. Norman Brown (*Man in the Universe: Continuities in Indian Thought*, 1966) discusses what he terms continuities (forces of integration), for example religion, in the broad narrative sweep of the peoples of the subcontinent. As in all civilizations there were also discontinuities, forces of disintegration. In the South Asian subcontinent these polar forces can be seen shaping institutions, the climate of opinion and competing value systems. The Chronology in this **Guide** may be used as a starting point for the fascinating study of South Asian history. Several formative ages may be pointed out.

The first age is commonly known as "prehistoric" because, ironically, of what we will never know due to the lack of written records. From approximately 3000 to 1500 B.C.E there was an advanced civilization known for its location, the fertile Indus Valley. This civilization was held together and threatened by the same sets of forces--its alluvial river eco-system, religious institutions and technology. Modern research

suggests that this was the eastern edge of a vast inter-related world that stretched to Mesopotamia and perhaps to the Nile valley.

While it is fashionable in some nationalist circles to question the "invasion theory," there is evidence that around the beginning of the second millennium B.C.E. a nomadic people from Central Asia calling themselves the "worthy ones," *Arya*, began migrating into the valley of the Indus river a period of over centuries. They brought with them new ideas, social organization, polity, technology, economics, a language, and a vigorous literary-religious culture. Equally controversial is the notion that they may have challenged the already fragile sedentary world of the Indus Valley peoples. The textual sources are sketchy at best.

The early Vedas, the texts of these immigrant peoples, are the first written record of this age. The Arya poets and writers say very little about the indigenous culture and so the picture of the Indus civilization as a superceded system. Similarly there is silence on any invasions in the archeological evidence unearthed by excavations of the ruins of the great Indus Valley cities of Mohenjo Daro, Chanhu Daro, Harappa and others. These texts, handed down orally through cultic priestly family traditions, became the sacred scripture of these nomads who settled in the land of the five rivers feeding the Indus.

The four Vedas which include their commentaries are held to be revelation (sruti). These are the oldest most sacred texts of the Hindu tradition, in fact they are the oldest continuously read sacred literature in the world. The society and times reflected in the Vedic literature were subject to the pull and tug of many of the same forces as in the Indus Valley civilization, namely, religion-based institutions, priestly hierarchies, ecosystems, and technology.

In the sixth-century B.C.E. Buddhism and Jainism emerged as alternative views of the world, society, polity, and spirituality. Their founders, Siddhartha Gautama, the Buddha or enlightened one, and Vardhamana Mahavira, were charismatic sannyasis (wandering world-renouncers) who rejected brahmanical hierarchical Hinduism teaching new self-help paths of self-discovery that could be followed by anyone irrespective of social standing. Gods, priests, sacrifices, rituals, caste, all were irrelevant to the attainment of liberation from the human condition in these new paths. Thus was born new egalitarian religious options to the highly stratified path of what Brahmanical religion had become.

When in 1954 B.R Ambedkar, the drafter of the Indian Constitution and leader of the Dalit (formerly known as "untouchables") movement, renounced his Hindu faith in protest that it had made outcasts of his class publicly announcing his conversion, with fifty-thousand of his fellow dalits, to the egalitarian religion of Buddhism, he and his followers were exercising one of these historic options.

Under Ashoka Maurya (c. 273-237), himself a convert, Buddhism flourished. Ashoka adopted the Buddha's symbol of the Wheel of the Law as his symbol for good government. The King is the hub which turns the wheel (hence the title Chakravartin, literally, "wheel turner"). The ministers and ministries are the spokes, and the people the rim. Today the Ashokan wheel may be seen at the center of the Indian tri-color flag.

The Mauryan dynasty founded by Ashoka's grandfather Chandragupta I (c. 322-298) was the first major empire on record in South Asia. Ashoka's reign has been held up as a golden age by Savarkar (*Hindutva*, 1926) and Nehru (*Discovery of India*, 1946) as well as by other nationalist writers. Chandragupta's minister, Kautilya (also known as Chanakya) wrote the famous treatise on statecraft titled *Artha Shastra* which has unfortunately been trivialized by comparison with Machiavelli's *The Prince*.

The Gupta dynasty (c. 319-540) in the north, also founded by a Chandragupta I (c.319-335) has also been viewed as a golden age of Hindu culture. Two other dynasties, the Chola kingdom of Tanjore (c. 907-1310), and Vijayanagar (1300-1400) in the south were patrons of a massive growth of Hindu culture and domestic economy which has put its stamp not only on the South but upon all India. Not until the great Mughals (1526-1707) was there any comparable flourishing of arts, government and economy. Islam in South Asia developed a unique hybrid culture unlike that anywhere else in the Islamic world as Aziz Ahmed (*Studies in Islamic Culture in the Indian Subcontinent*, 1964) has shown. Hindu scholars from Rammohan Ray (1772-1833) to Jadunath Sarkar (*India Through the Ages*, 1993) have remarked upon the generally peaceful relations and compatibility of Muslims and Hindus in India.

The British Raj (1865-1947) for all the controversy has provided the model for not uncontroversial governance (Bhabani Sen Gupta, *India: Problems of Governance*, 1996, Mushahid Hussain and Akmal Hussain, *Pakistan: Problems of Governance*, 1993, Rehman Sobhan, *Bangladesh: Problems of Governance*, 1993, K. M. de Silva, ed., *Sri Lanka: Problems of Governance*, 1993, Lok Raj Baral, *Nepal: Problems of Governance*, 1993) in South Asia today. The Raj has been succeeded by other raj, by license raj (the rule of excessive regulations) being now replaced by that great scourge of public administration and every foreign tourist, babu raj (the enigmatic multi-layered maze of petty bureaucracies that turn routine daily tasks into diplomatic incidents).

## C. Study Questions

1. Who were the Aryans and why are they important in subcontinent history?
2. Over what geographical area did the Indus Valley civilization extend?
3. What is the significance of the Ashokan wheel on the Indian flag?
4. Which periods (dynastic and cultural) in subcontinental history are the most important in the shaping of civilization according to Bose and Jalal? Do Basham and Rizvi agree?
5. Were the Muslims colonizers? Were the Aryans colonizers?
6. How did the British come to power?

## VII. Colonial History

The Raj has been vilified and extolled. Few topics raise more heated discussion in South Asia or the university world or inspire less clarity of argument.

K. N. Panikkar (*Culture, Ideology, Hegemony: Intellectuals and Social Consciousness in Colonial India*, 1995) argues that the European presence in South Asia confronted the proud, sophisticated and ancient civilization of the subcontinent with institutions and exercises of power which it had not the resources to resist. A literal handful of foreigners managed to wield irresistible force over hundreds of millions of indigenous people. The shock waves of wounded pride for the people of this ancient and sophisticated civilization are felt even today in the fraternal conflict between its two largest subdivisions, India and Pakistan and in the endless often rancorous debate about colonialism. For Panikkar there is a perpetrator, a victim and an inexorable historical process that renders the entire drama predictable *a posteriori*.

This was not so for Raja Rammohan Ray (Bruce Carlisle Robertson, ed., *The Essential Writings of Raja Rammohan Ray*, 1998). Rammohan Ray offers an invaluable but largely forgotten view of the dawn of what came to be called colonialism because it provides the context for understanding the evolution of the institutions of the British presence in South Asia.

Raja Rammohan Ray was an eyewitness to the rise of British power. Born in 1772 eight years after the Battle of *Baksar* (1764) when as the spoils of conquest (in true Mughal fashion) having defeated the last Mughal army, the British East India Company was handed the *Diwani* (revenue collection) over Bengal. He died in 1833, the year the Company was metamorphosed, with all the liabilities that made it a failed business corporation, into *defacto sarkar* (governing body) over the entire area of its former commercial operations centering in Bengal, Bombay and Madras. Mughal *Diwani* entailed not only revenue collection but public administration which included responsibility for maintaining law and order. The East India Company Charter of 1833 only put the stamp of approval in London on a state of affairs which had evolved naturally by default on the subcontinent.

Rammohan Ray lived during the period in which the Company gradually assumed, by natural processes of default, the role of *defacto sarkar*. The British became *dejure sarkar*, that is, the *Raj* (making official institutions which had already begun to take shape by the end of Rammohan Ray's lifetime) only after the Great Revolt of 1857, nearly twenty-five years after the Raja's death.

Yet living in these times Rammohan Ray like many others of his generation viewed this unfolding process not just as the lesser of two evils but as preferable to the alternative they could envision, namely a complete breakdown of law, order and commerce. There was a sense of genuine though guarded optimism about British governance among his contemporaries. No study of colonialism, indeed, of modern India, is complete without careful study of Rammohan Ray's writings.

The subcontinent looked different to Rammohan Ray in the first third of the nineteenth-century than it does to Panikkar, writing at the end of the twentieth-century. He was the son of a high-caste Brahmin family that had abandoned its priestly social role by becoming middle-level zamindars under the Mughals. The Great Revolt of 1857 had not yet happened, nor the Jallianwala Bagh massacre, nor any of the other flashpoints of confrontation between the British and the people they ruled which have become paradigmatic in collective public memory. The world looked very different to Rammohan Ray than it did to Veer Savarkar, Subhas Chandra Bose, Gangadhar Tilak, Sir Sayyed Ahmed Khan, Mahatma Gandhi, Jawaharlal Nehru, Muhammad Ali Jinnah and other leaders of the Quit India movement. There was room in Rammohan Ray's world for positive change.

But Rammohan Ray had premonitions of what was coming and recommended corrective course adjustments. Watching the unfolding drama of the beginning entrenchment of British institutions of governance he became an outspoken critic. Rammohan Ray wrote from experience as *amunshi*, Indian "civil servant" in East India Company service. He saw problems all around.

First, he voiced strong reservations as to the quality of local British administrators he witnessed in action in the judicial and revenue administrations. With notable exceptions they were not, in his judgment, the *crème de la crème* of the British labor pool. His prescient and historic *Memorial to the King in Council* (1824) protesting the revocation of freedom of the Indian press by the Governor-General John Adam warned that His Majesty's officials in India had something to hide and now he feared they could get away with anything since they were now safe from public scrutiny. All was not lost however since

India needed His Majesty's benevolent rule. Restoration of the freedom of the press would restore not only his but the confidence of every Indian about the future of enlightened British rule. While the choice of British personnel in India did not reflect well on His Majesty's hands-on approach to rule he was not himself, in Rammohan Ray's eyes, yet guilty of misrule. He needed only to keep his officials on a tighter rein. What was true of British officials in India was also true of Christian missionaries in Bengal. The good works of the group far outweighed the misdeeds and indiscretions of the few.

The greater problem Rammohan Ray saw was the low quality of indigenous leadership in his own society. He charged brahmans as a class and the elites as a cross-cultural economic, political group with responsibility for the breakdown of traditional Hindu values and institutions of governance. Bengali brahmans, the guardians of Vedic tradition, were primarily guilty of selling out Hindu culture for personal gain. A brahman himself, he charged brahmans with the ultimate disqualifying failure, namely, ignorance of *shastra*, the sacred literature. Putative religious leaders, they were guilty of obscurantism which kept the people ignorant even of their own sacred traditions, of fraudulent use of sacred ceremonies to further suppress and exploit the poor, and even of criminal responsibility for the murder of widows in the name of *sati*, the dowry and polygamy systems, and other abuses of women and the defenseless--children (born and unborn), the aged and other wards of society. Modern-day brahmans had forfeited all legitimate claim to the guardianship of sacred society, Rammohan Ray argued. Rammohan Ray was a scandal, *apariah*, the target of death threats in Calcutta, the seat of power of the British *defacto* sarkar.

The sharp edge of his sword was also drawn against his fellow elites, the so-called *bhadralok*. Their complicity in the evils of brahmanism made them co-conspirators against sacred Hindu tradition. The rancor of the *bhadralok* attack upon Rammohan Ray softened his own criticism of the British *sarkar*. While many British officials in high places were willingly misled to their own advantage, it was his own countrymen who "greased the slide" and who equally profited from what was in their case treachery, Rammohan wrote.

The angry ostracization of Rammohan Ray by fellow brahmans and the *bhadralok* was the beginning of modern Hindu radicalism. The Dharma Sabha (1828) formed by anti-Rammohan Ray forces in Calcutta was the forerunner and model of the Jan Sangh, and Rashtriya Swayamsevak Sangh (RSS) today.

In a series of pamphlets and written statements to the Select Committee of the House of Commons Rammohan Ray outlined the reforms needed to bring British rule in India up to the standard of their own ideals and of their own practice of governance in England. These writings are critical to understanding the evolution of colonialism in the South Asian subcontinent. While quoting Rammohan Ray's writings extensively Panikkar is guilty of anachronism, of reading back into the writings of the Father of Modern India assumptions from a later time. The great constitutionalist Dr. Ambedkar's public rejection of Hindu tradition would have been sympathetically understood by Raja Rammohan Ray.

U.S.-South Asian Relations

## VIII. Politics Since Independence in 1947

Independence brought many changes to South Asia. Parliamentary democracy modeled after the British colonial form was established with varying degrees of success. In India, Sri Lanka and Bangladesh it has been successful unlike in Pakistan. In Nepal, Bhutan and the Maldives constitutional monarchies and theocracies struggle with growing popular demand for more democratic institutions. The communal strife of colonial times has continued, largely unabated.

In *From Raj to Rajiv* (first published under the title *India: Forty Years of Independence*, 1988) Mark Tully and Zareer Masani chronicle the evolution of Indian politics under the Nehru dynasty, with the brief but significant interlude of P.M. Lal Bahadur Shastri.

## IX. Political Economy

South Asia has not always been an economically underdeveloped region relative to other regions according to K. N. Chaudhuri (*Asia Before Europe, Economy and Civilisation of the Indian Ocean from the Rise of Islam to 1750*, 1990). Alberuni's

(c.1020) account of the Chola empire describes vast irrigation systems, a rich mental culture and thriving economy.

Independent India has been torn between two legacies—Jawaharlal Nehru's state control economics and Mahatma Gandhi's swadeshi (boycott anything not homemade) economics (V.A. Pai Panandiker, "The Present Indian Economic Situation," *The Divine Peacock, Understanding Contemporary India*, ed. K. Satchidananda Murty, 1994). Both were a response to colonial-control economics. Nehru's socialist ideals took "us to a dead end, and the dream soured," writes Gurcharan Das, former CEO of Procter & Gamble India (*India Unbound*, 2000). "Jawaharlal Nehru and his planners attempted an industrial revolution through the agency of the state. They did not trust private entrepreneurs, so they made the state the entrepreneur. Not surprisingly, they failed, and India is still paying a huge price for their follies."

Privatization even of Maruti, a state-run automobile manufacturing company, is in the news today. But Gandhi's economics has been more difficult to shake even though *hissatyagrahapolitics* has long been out of fashion. The *swadeshi* card has been played by radical Hindu groups who are threatened by the idea of a free-market economy and open competition. Liberalization has been a hard fought battle with conservative Hindu groups.

In South Asia only the Indian economy has enjoyed significant growth and that only within the last ten years of liberalization. This has been the subject of numerous studies In Bangladesh there have been developments in the economic sector which have attracted world attention, among them Muhammad Yunus' Grameen bank micro-lending program. Yet most economists, including the Noble Prize winner Amartya Sen and Jagdish Bhagwati, see room for substantial development.

Amartya Sen argues (*Development as Freedom*, 1999) that true individual freedom means living as full "social persons, exercising our own volitions and interacting with—and influencing—the world in which we live." "The usefulness of wealth lies in the things that it allows us to do—the substantive freedoms it helps us to achieve."

A free society is one in which the "unfreedoms" of poverty, undernutrition, famine, lack of health care, lack of sanitation and clean water, lack of functional education, over population, unemployment, economic and social security, inequality and premature morbidity are removed. There can be no political liberty and civil, human rights until these substantive freedoms are available for all members of society.

"Development," according to Sen, "consists of the removal of various types of unfreedoms that leave people with little choice and little opportunity of exercising their reasoned agency." Since development and freedom go hand in hand it is the primary function of governments, in fact their *raison d'être*, to

insure and safeguard the "intrinsic importance of human freedom." Responsible governments do this by creating environments in which economic and political freedoms reinforce one another, in which social opportunities for education and healthcare compliment individual opportunities for full economic and political participation while fostering creative initiative taking.

Critics have taken Sen to task for not arguing for development within the context of a completely open, market-driven economy. Sen's response is to draw attention to the distinction between the "process aspect" and the "opportunity aspect" of freedom. Process must work from the ground up creating opportunity for everyone including those outside traditional economic, social, political systems. In other words, the agencies of new development cannot simply be transposed onto existing social, economic and political hierarchies and their institutions but must form new twentieth-century structures to build a truly free twenty-first century society.

Jagdish Bhagwati, India's other great economist, argues (*India In Transition, Freeing the Economy*, 1993, *The Wind of the Hundred Days: How Washington Mismanaged Globalization*, 2001) that trade barriers like India's have been public confessions of domestic market failure. Bhagwati's "principle of targets and instruments," that specific economic policies must address specific goals, is articulated in terms reminiscent of the classic *Mundaka Upanishad* (3,1) two birds metaphor for human conflict. One bird represents the individual ego the other the transcendent self, (*theatman*). These two birds represent different ways of knowing. One seeks instant gratification, the other liberation from suffering. Bhagwati argues that policies that seek to maximize GDP and protect the environment or promote free trade and a global social agenda or protect domestic companies and encourage foreign investment at the same time attempt to hit two birds with one stone and usually miss both (Jeffrey Frankel, "The Crusade for Free Trade: Evaluating Clinton's International Economic Policy," *Foreign Affairs*, March/April, 2001). For both Bhagwati and the *Mundaka Upanishad* the error is one of vision, of working at cross-purposes.

Eshwaran and Kotwal (*Why Poverty Persists in India: A Framework for Understanding the Indian Economy*, 1994) agree. Neither license raj nor grand development schemes have created a strong Indian economy. The poor are still poor. They argue that industrialization, new technology, foreign investment and all the five-year plans have done nothing for the vast majority of people. They urge the necessity of development that recognizes agriculture sector as the largest employer and the largest supplier of essential goods and services. Agriculture puts people to work and feeds the nation. Since agriculture has always driven the Indian economy (Chaudhuri) the central goal of any economic development program must be to selectively apply the best new technology to maximize yields and cooperation between rural farmers and distribution systems on the one hand and mid-sized businesses on the other. They argue for re-invention of some of the traditional economic institutions that Chaudhuri describes. While critically important in the twentieth-century world economy multi-national corporations, big business, are not the panacea for India's economic woes. Technology that creates large scale unemployment, poverty, homelessness and consequent social unrest is not development. Eshwaran and Kotwal reject a one-size-fits-all, standard industrialized world template economic plan in favor of smart, culturally, socially, environmentally appropriate economic development.

2. How does Amartya Sen link community and national economic development with personal freedoms?

## X. Regional Strategic Environment: Dispute Over Kashmir

Since India and Pakistan have become regional nuclear powers the strategic environment has reached a new level of volatility. This is of great concern not only to the United States but to the world. The dispute over Kashmir has the potential of blowing up into a nuclear confrontation that could draw the world into

the conflict Neither country has signed CTBT though there are signs of new willingness to do so on the part of both nations. SAARC has attempted to mediate between the two regional adversaries. The new Bush administration is back off CTBT which the U.S. has not signed. Bruce C. Robertson, ed., *A Brief Overview of the Dispute Over Kashmir* (FSI, 2000) provides the most complete available case history of the major point of conflict between India and Pakistan today.

2. What is SAARC?

## XI. U.S.-South Asian Relations

Relations between the United States and post-Independence South Asian nations have largely been a footnote to Cold War international relations. Since the end of the Cold War, particularly since India and Pakistan have become regional nuclear powers, good relations with both nations has become vital to U.S. interests. The March, 2000 visit of President Clinton to South Asia and the return visit of the Indian P.M Vajpayee to the US has underscored how important India is in the world today. On the other hand, Pakistan has isolated itself from the world community because of its political and economic instability.

Raja Rammohan Ray (1772-1833), the early nineteenth-century Indian reformer, defined India's relationship to the young United States of America in one of the modern world's greatest declarations of democratic ideals, an open letter in 1824 to King George IV of England protesting the revocation of the fundamental human right of freedom of speech.

"...your Majesty is well aware, that a Free Press has never yet caused a revolution in any part of the world, because, while men can easily represent the grievances arising from the conduct of the local authorities to the supreme Government, and thus get them redressed, the grounds of discontent that excite revolution are removed...." (Bruce Carlisle Robertson, ed., *The Essential Writings of Raja Rammohan Ray*, 1999)

Despotic governments, Rammohan Ray argued, "...naturally desire the suppression of any freedom of expression" which will expose them to public scrutiny and accountability. He cited two models of governance from North America that His Majesty would have no trouble understanding, the United States and Canada, one negative, the other positive. "...as a people become enlightened, they will discover that by a unity of effort, the many may easily shake off the yoke of the few, and thus become emancipated from the restraints of power altogether...." The American Colonists revolted because, as the lessons of history teach, "the resistance of a people advanced in knowledge has ever been—not against the existence,—but the abuses of the Governing power." Canada did not join the American Revolutionaries because "their rights and privileges had been secured to them, their complaints listened to, and their grievances redressed by the British government."

His Majesty had a clear choice. He could either give his Indian subjects no option but to "shake off the yoke...and...become emancipated from the restraints" of British power as the Americans, former British subjects, did or follow the example of a happy, contented Canada. In these eloquent, prescient words Rammohan Ray held up the United States of America as the model that India would follow if the King did not learn from the bitter lessons of his father, George III.

In an 1832 letter to Prince Talleyrand, French Foreign Minister, Rammohan Ray again addressed the theme of conflict resolution this time between nations governed by the rule of law. He proposed a Congress of Nations where disputes between "...two civilized countries with constitutional Governments, might be settled amicably and justly to the satisfaction of both and profound peace and friendly feelings might be preserved between them from generation to generation." In Rammohan Ray's mind was the thought that such a Congress might have been able to resolve the disputes that led to the American Revolution and might yet be instrumental in remedying the abuses of British governance in India. The founding of the United States of America was, for Rammohan Ray, the inevitable consequence of British misrule and unless drastic changes took place the American lesson would repeat itself in India.

According to Rammohan Ray, India and the United States shared a common British colonial experience and as civilized, enlightened peoples with a deep-rooted sense of identity, they were destined to follow

similar paths toward independence.

The history of U.S. relations with the Indian subcontinent begins in our own colonial period. Elihu Yale, an East India Company official, founded his namesake university with the fortune he amassed in India. Lord Cornwallis has the unenviable legacy of being a dismal failure on at least two continents. After instituting in 1793 a ruinous tax administration (the infamous Permanent Settlement) which impoverished the entire eastern region of India known then as Bengal he surrendered to General George Washington at Yorktown, Virginia, effectively losing the Revolutionary War.

Flourishing trade between New England and Bombay, Madras and Calcutta was one of the major causes of the collapse of the East India Company as a commercial monopoly in the subcontinent. In the early nineteenth-century, the fast Baltimore Clipper became the symbol of burgeoning American sea power. Americans were the revolutionaries changing the world order, feared and vilified by many. "Citizen," the word for the American, had the unsettling connotation of "radical revolutionary" in the eighteenth and early nineteenth-centuries that "comrade" had for many in the twentieth-century before the collapse of the Soviet bloc.

During the Civil War it was Indian and Egyptian cotton that supplied the North during its naval blockade of the South. In a famous 1824 letter to King George III Raja Rammohan Ray (1772-1833), the great Bengali reformer who is known as the Father of Modern India, wondered why the British had not learnt their lesson in America. He warned that if British injustices in India did not stop Indians would revolt like the American colonialists.

Dennis Kux (*India and the United States: Estranged Democracies 1941 -1991*, 1992) has traced the evolution of U. S. relations with the subcontinent from President Franklin Delano Roosevelt to President George Bush. Kux attempts to answer the central question "Why have ... (the U. S. and India), both democracies, so often found themselves at odds with each other in the international arena? What lies behind their difficulties in getting along politically?" While his answer may appear simplistic to many it identifies two not insignificant sources of irritation. "In arming and aligning itself with Pakistan, the entity born of the traumatic partition of British India, the United States linked arms with the country which independent India considered its principal security threat. For the United States, the decisive problem has been India's attitude toward the Soviet Union."

Since the end of the Cold War U.S. relations with Pakistan have become strained and since the end of the Soviet occupation of Afghanistan, estranged. The Pakistani perception has been that the United States "uses" its friends and abandons them when they are no longer needed.

From the U.S. perspective relations with both nations have been significantly influenced by a combination of three factors. The first is an unspoken attitude of "preachy" anachronistic post-colonial "hegemonizing" of all more politically and economically successful nations especially the United States. Secondly, their inability to solve their own domestic problems and the isolationism that this reinforces has not made their "preachiness" easier to accept. Third, their escalating fraternal strife has undermined

their credibility as would-be world leaders. If they cannot work things out between themselves how can they be trusted as responsible members of the nuclear club? There are positive signs of change in both India and Pakistan, however. The United States is looking for a break through in the Kashmir deadlock. If this happens a ripple effect of better relations will hopefully develop.

## C. Study Questions

1. What domestic (economic, political, cultural, South Asian-American community) and global strategic concerns have an impact on the shaping of US policy towards India, Pakistan, Sri Lanka, Bangladesh, Nepal and the Maldives?
2. What domestic, regional and global concerns have an impact on the shaping of the policy of these South Asian nations toward the US?

## **SELF-STUDY GUIDE TO SURINAME**

The **Self-Study Guide: Suriname** is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to Surinamian history, geography, politics, economics, culture, religion, media, and international relations. The Guide should serve an introductory self-study resource.

The topic is far too complex to be covered in depth using only the text in this Guide. The reader is encouraged to explore the questions and issues introduced, using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of this Guide was prepared by Gary Brana-Shute, Ph.D., adjunct professor at the Center for Hemispheric Defense Studies of the National Defense University at both the Special Operations School at Hurlburt Field, Florida and Defense Institute Security Assistance Management, Wright-Patterson Field, Ohio.

The views expressed in this Guide are those of the author and attributable sources and do not necessarily reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by Dr. Brana-Shute.

All sources used for graphics and extended quotes are from the public domain, from sites that explicitly say “can be used for non-profit or educational use,” or are from the author’s own materials.

This publication is for official educational and nonprofit use only.

## **CONTENTS**

[Foreword](#)

[Executive Summary](#)

[Introduction, Acronyms and Map of Suriname](#)

[Chapter I: A Profile of Suriname](#)

[Chapter II: Instability and Peace in Suriname](#)

[Chapter III: Consolidating Democracy in Suriname](#)

[Chapter IV: Policies: Suriname, Netherlands, and USA](#)

[Chapter V: Lessons and Opportunities in Suriname](#)

[List of Sources and Guide to Further Reading](#)

## **FOREWORD**

This self-study guide is designed as an essential resource for personnel who cannot take Area Studies training at The Foreign Service Institute in preparation for their country assignments as well as for officers at post who may seek additional current material. Although the text parallels the Advanced Area Studies course available at The Foreign Service Institute designed for personnel assigned to the Republic of Suriname, it cannot be the full equivalent of that course. Efforts will be made, however, to provide the officer with access to knowledge not contained here. Supplementary reading is suggested in the bibliography and useful internet websites are pointed out at appropriate places in the text.

The Guide hopes to provide basic background material and serve as a foundation for attaining cultural literacy on the multi-cultural Republic of Suriname. The subjects discussed include geography, history, culture and anthropology, languages and linguistics, religion, social issues, economics, politics and background on foreign affairs and policy.

The language of scholarship and journalism on Suriname is Dutch, a legacy of Suriname's more than 450 year colonial association with the Netherlands. English language resources are few, checkered in quality and tend to focus on what is perceived of as "exotica" (Suriname Maroons, for example), "hot" issues (such as the 1980's dictatorship and civil war) or contemporary matters with "appeal" in the United States (rainforest preservation). Thus this Guide will attempt to place the complexities in a context of understanding that makes sense in Suriname terms and also allows the officer to "make sense" of the realities which they are entering. The preparation of this text relied on consulting the voluminous Dutch language literature. Suggestions for further reading will emphasize what material there is in English and also cite several Dutch/Suriname sources which were drawn upon heavily.

Finally, each chapter and, in some cases, sections of chapters will end with a series of questions designed to engage readers in a thought provoking interaction and engagement with the text. A learning device and exercise, thus. The questions will be followed by suggested readings keyed specifically to the questions at hand.

Good luck.

## **EXECUTIVE SUMMARY**

The chapters that follow in this self-study guide on the Republic of Suriname treat the experience of that country comprehensively. That is, the material aims to trace the emergence of Suriname as a northern European colony, through its colonial period of slavery and indentured labor and through the country's difficult years of independence, conflict and strife.

The chapters that follow are both descriptive and analytical, and cover the events and major themes of Suriname's history and political experience. This guide is written not

only with a Suriname-oriented audience in mind but also a broader hemispheric readership so as to avoid inadvertent isolation and provincialism. Thus I have introduced and concluded each chapter with a thematic essay that locates the unique Suriname experience in the larger context of an issue that has occurred in or afflicted many countries in the Inter-American system. For example, Chapter One profiles the emergence of modern Suriname and inevitably incorporates ethnicity and Suriname's unique multi-ethnicity into the text. However, I did not want to simply mention ethnicity and leave it at that, with no clear conclusions and broader understandings. Thus I concluded Chapter One with a statement on "pluralism, Development and democracy." Other chapters are structured in a similar fashion.

I hope thus that this self-teaching guide will serve to introduce officers to the Republic of Suriname, and add to the hemispheric discourse on maintaining and strengthening peace and democracy. The self-teaching capacity of the text will be reflected in the learning device of ending each chapter and, sometimes, chapter section with interactive and thought provoking questions and issues to "test" and challenge the reader's knowledge and command of Suriname issues. A mini-bibliography of additional sources keyed specifically to the questions and issues will be appended here as well as in the cumulative bibliography at the end of the Guide.

The material is structured in the following manner.

A Guide to Suriname introduces the reader to the basic demographics of the country and includes up-to-date (2000) social, political, cultural and economic data; a snapshot profile if you will.

A List of Acronyms follows. The official language of Suriname is Dutch, although many other languages are spoken there as well. We have left the acronym in the original abbreviation and then translated it into English and followed in parentheses by the original Dutch (or, in several cases, another language which will be identified).

Chapter One locates Suriname in time and space and describes the evolution of a plantation society which at once places Suriname in the colonial conquest of the Americas and also makes an effort to point out Suriname's differences. One trope that runs through this chapter, and indeed the entire guide, is that in addition to Suriname's multiethnicity, there are in effect, two Surinames. One is coastal Suriname with its diverse, cosmopolitan population living in a modern market-oriented city, Paramaribo, and smaller towns and villages along the coastal savanna. The other Suriname is rainforest occupying 80 percent of the country's land surface and home to groups of Maroons (rebel Africans who escaped the plantation system) and Amerindians. An effort is made to point out that these are "kin-ordered" societies and are fundamentally different in organization from the coastal market economy. Kin ordered societies also have special needs and if not attended to can result in misunderstandings at best, or conflict at worst. The chapter is closed with a discussion of the challenge of independence and the May 25, 2000 elections.

Chapter Two examines the period of political instability that characterized the 1980's and 1990's in Suriname, the civil war of that period, the Peace Treaty of 1992 and the fragile democratic aftermath.

The so-called internal conflict of the late 1980's and early 1990's brought to the forefront the deep gulf between the needs, perceptions and aspirations of the interior and those of the coastal area. At root, the Jungle Commando and his fighters had as their immediate goal the removal of the commander of the military and the military-backed government. These conditions presented a fertile environment for the emergence of Ronnie Brunswijk and his men. The immediate oppressive conditions preceding hostilities coupled with the intervention of external actors supporting the insurgency were but the immediate instigators of action in pulling together the long simmering grievances.

The FRONT government attempted peace efforts in the late 1980's. However, the civilian backed efforts were not supported by the military which itself recruited a shadow army of the Tucajana Amazonas to fight a counter-insurgency along with the regular army. Nor was the Jungle Commando willing to strike peace and end hostilities while a still formidable military dominated the elected civilian government (of 1987). Under these conditions there was no chance or serious possibility to talk of strengthening democracy and stabilizing the country until a cease-fire was struck and a peace treaty (Agreement for National Reconciliation and Development) in 1992. The chapter ends with a discussion of "incorporating peace-building in development."

Chapter Three deals with efforts to strengthen democracy in the post-civil war period. The chapter opens with a brief discussion of some of the generally agreed upon tenets of democracy, and the options and experiences they can provide for strengthening democracy in Suriname. From there, the text moves to identifying the problems in Suriname's recent past which interrupted the democratic process and, also, the strengths in Suriname which helped in the transition and return to democracy.

The chapter summarizes four periods of military rule during the 1980's and points out that during the regime the military/military-dominated governments never were able to mobilize the support of or participation of a broad-based sector of civil-society, a basic requirement of democracy. The road to reform and rebuilding thus required strengthening existing institutions in society and creating new avenues of communication in order that Suriname could re-stabilize. Several case studies are offered, both for the interior (land rights and the recognition of traditional tribal authorities) and the coast (strengthening of the parliament—National Assembly—and the elections commission) to address weaknesses in governance.

Chapter Four summarizes, since after the Second World War, the sometimes divergent foreign policies of the Republic of Suriname (independent 1975), the Kingdom of the Netherlands (of which Suriname was a part from 1954 to 1975) and the United States.

Chapter Five makes a modest attempt, based on years of experience in Suriname, to summarize the valuable lessons learned and to offer them as options and ideas to keep in mind for the furtherance of democracy in Suriname.

The guide concludes with a modest bibliography outlining the most salient texts used in the preparation of this guide, and which could be usefully consulted by officers wishing to pursue further study. Websites and internet links are included here as well.

## **INTRODUCTION, ACRONYMS AND MAP**

Suriname is a tropical Caribbean country located on the north east of South America and bordered by Guyana, Brazil, French Guiana and the Atlantic Ocean. With a land area of 164,000 square kilometers the country is roughly the size of the state of Georgia. Best

estimates place the population of Suriname at about 425,000 although this is uncertain due to a huge resident population of illegal Brazilian gold miners and the fact that a census has not been undertaken since 1980. The average yearly temperature is about 27 degrees centigrade and seasonal variations revolve around two rainy seasons (roughly January and June) and two dry seasons (roughly March and October). The 350 kilometer long coast is marsh, mud bank and tangled mangrove swamp and gives over to a savanna area ranging inland from 10 to 70 kilometers. The rest of the country, some 80 percent, is largely thick jungle rain forest cross-cut by major river systems draining the Amazon basin.

Called the “wild coast” by early Europeans, various settlements were attempted by British, French and Dutch colonists until a British settlement was established in 1650. The Dutch acquired Suriname in 1667 as a peace concession and created a full blown plantation economy system based on African and, in rare instances, Amerindian slavery. By the mid-18<sup>th</sup> century the population of the colony was about 50,000 with about 10,000 residing in Paramaribo, the only city. During this period the population was composed of Europeans, free persons of color and free blacks, urban and plantation slaves, free Maroon communities and Amerindians.

Slavery was abolished in 1863. Ten years later the Dutch turned to importing East Indian contract labor from (British) India, an importation that continued until 1916 resulting in the relocation of about 35,000 East Indians to Suriname. The quest for cheap labor also siphoned off Javanese from the island of Java in the Netherlands East Indies (Indonesia). Indonesian contract labor was imported from 1893 to 1939 and brought in some 33,000 persons. In the mid-19<sup>th</sup> century several hundred small scale Dutch farmers (“boers”) migrated to Suriname and joined almost 4,500 Chinese contract laborers. In the early 1920’s, and continuing sporadically to the present, Christian Lebanese entered Suriname voluntarily. At this writing (2001), estimates place the percentage of the population in the following ethnic mix:

East Indians:	38%
Creoles:	30%
Javanese:	15%
Maroons:	10%
Amerindians:	3%
Chinese:	2%
Other:	2% (Chinese and European)

These figures do not include Brazilian gold miners or Guyanese guest workers.

As will become clear in the following, Suriname’s social organization, sense of national identity and political behavior, in terms of political party choice and preference, is defined largely by ethnicity.

After a centuries long experience as a colony of the Netherlands, Suriname became a member of the Kingdom of the Netherlands in 1954 (“Het Statuut”), along with the Netherlands Antilles. As a “co-equal” member Suriname become internally self-governing in that year and modern Suriname politics began. The country obtained its independence in 1975.

Questions and Issues:

1. Prepare to think about the “Dutch Caribbean” as different from and similar to the Spanish, French and British Caribbean.
2. Did the Dutch have a specific and peculiar colonial policy?
3. Do other Caribbean countries have the degree of “cultural pluralism that Suriname does?”
4. Suriname obtained independence in 1975. Is the country’s sovereignty older or younger than that of the English-speaking Caribbean?

**ACRONYMS**

The following acronyms have been used throughout the text. Each acronym is defined first in English and then followed by the Dutch (or other language used in Suriname) rendering, which the acronym reflects in italics. If the acronym is of an English phrase no such rendering in Dutch will follow.

ABOP	General Liberation and Development Party ( <i>Algemene Bevrijdings en Ontwikkelings Partij</i> )
AG	Action Group ( <i>Actiegroep</i> )
ALCOA	Aluminum Company of America, Pittsburgh, Pennsylvania
APS	Suriname Amazon Party ( <i>Amazone Partij Suriname</i> )
BVD	Basic Party for Renewal and Democracy ( <i>Basis Partij voor Vernieuwing en Democratie</i> )
CBB	Central Bureau of Civil Registry ( <i>Centraal Bureau voor Burgerzaken</i> )
CDI	Council for the Development of the Interior
CMPA	Central Main Polling Authority ( <i>Centraal Hoofd Stembureau</i> )
D-21	Democrats of the 21 <sup>st</sup> Century ( <i>Democraten van de 21ste Eeuw</i> )
DA '91	Political coalition Democratic Alternative '91 ( <i>Democratisch Alternatief '91</i> ) joining Alternative Forum – AF - ( <i>Alternatief Forum</i> ) and Brotherhood and Unity in Politics – BEP – ( <i>Broederschap en Eenheid in de Politiek</i> )
DOE	Democracy and Development in Unity ( <i>Democratie en Ontwikkeling in Eenheid</i> )
DNP 2000	National Democratic Platform 2000 ( <i>Democratisch Nationaal Platform 2000</i> )
FRONT	Political Party Coalition run in the 1987 elections. Composed of NPS – the National Party of Suriname ( <i>Nationale Partij Suriname</i> ), the VHP – the United Reform Party ( <i>Verenigde Hervormde Partij</i> ; later changed to <i>Progressive Reform Party – Vooruitstrevende Hervormde Partij</i> ) and the KTPI – Party for National Unity and Solidarity of the Highest Level ( <i>Kerukunan Tulodo Prenatan Inggil</i> ).
HPP	Renewed Progressive Party ( <i>Hernieuwde Progressieve Partij</i> )

IDOS	Institute for Extension Services, Research and Study Support ( <i>Instituut voor Dienstverlening Onderzoek en Studiebegeleiding</i> )
ILO	International Labor Organization
JC	Jungle Commando
KTPI	Party for National Unity and Solidarity of the Highest Level ( <i>Kerukunan Tulodo Prenatan Inggil</i> ). See FRONT (1987), NEW FRONT (1991 and 1996) and MC (2000)
MC	Political coalition Millennium Combination ( <i>Millenium Combinatie</i> ) composed of NDP, KTPI, and DA – Democratic Alternative ( <i>Democratisch Alternatief</i> )
NA (or DNA)	National Assembly ( <i>Nationale Assemblée</i> or <i>De Nationale Assemblée</i> )
NDP	National Democratic Party ( <i>Nationale Democratische Partij</i> )
NEW FRONT	Political party coalition run in the 1991, 1996 and 2000 elections.  In 1991 and 1996 the coalition was composed of the NPS – the National Party of Suriname ( <i>Nationale Partij Suriname</i> ), the VHP – the Progressive Reform Party ( <i>Vooruitstrevende Hervormde Partij</i> ), the KTPI – Party for National Unity and Solidarity of the Highest Level ( <i>Kerukunan Tulodo Prenatan Inggil</i> ), and the SPA – Suriname Labor Party ( <i>Surinaamse Partij van de Arbeid</i> ). In 2000 the KTPI was replaced by Pertjajah Luhur (Highest Trust) who joined the coalition after the KTPI left to join the MC.
NHP	National Reform Party ( <i>Nationale Hervormings Partij</i> )
NK	Naya Kadam (New Choice – <i>Nieuwe Keus</i> )
NPK I and NPK II	National Combination Party I (1973) and II (1977) ( <i>Nationale Partij Combinatie</i> )
NPLO	National Party for Leadership and Development ( <i>Nationale Partij voor Leiderschap en Ontwikkeling</i> )
NPS	National Party of Suriname ( <i>Nationale Partij Suriname</i> ). See FRONT (1987) and NEW FRONT (1991, 1996 and 2000)
OKB	Independent Electoral Office ( <i>Onafhankelijk Kies Bureau</i> )

PALU	Progressive Laborers and Farmers Union ( <i>Progressieve Arbeiders en Landbouwers Unie</i> )
Pertjajah Luhur	Highest Trust - See NEW FRONT (2000)
PL	Pendawa Lima
PNP	Progressive National Party ( <i>Progressieve Nationale Partij</i> )
PNR	Party for a Nationalistic Republic ( <i>Partij Nationalistische Republiek</i> )
PSV	Progressive People's Party of Suriname ( <i>Progressieve Surinaamse Volks Partij</i> )
PVF	Political Wing of the FAL [Federation of Laborers and Farmers] ( <i>Politieke Vleugel van de FAL [Federatie van Arbeiders and Landbouwers]</i> )
FAL	Federation of Farmers and Farm workers ( <i>Federatie van Agrariërs en Landarbeiders</i> )
ROB	Council for the Development of the Interior ( <i>Raad voor de Ontwikkeling van het Binnenland</i> )
RVP	Revolutionary Peoples' Party of Suriname ( <i>Revolutionaire Volkspartij Suriname</i> )
SDP	Suriname Democratic Party ( <i>Surinaamse Democratische Partij</i> )
SKM	Suriname National Army ( <i>Surinaamse Krijgsmacht</i> )
SLA	Suriname Liberation Army
SLF	Suriname Liberation Front
SPA	Suriname Labor Party ( <i>Surinaamse Partij van de Arbeid</i> ). See FRONT (1987) and NEW FRONT (1991, 1996 and 2000)
SURALCO	Suriname Aluminum Company, a wholly owned subsidiary of ALCOA
VHP	The United Reform Party, later changed to Progressive Reform Party ( <i>Verenigde Hervormde Partij</i> , later changed to <i>Vooruitstrevende Hervormde Partij</i> ). See FRONT and NEW FRONT

VIDS	Association of Indigenous Leaders of Suriname ( <i>Vereniging van Inheemse Dorpshoofden Suriname</i> )
WIC	(Dutch) West India Company ( <i>West Indische Compagnie</i> )

## CHAPTER I

### A PROFILE OF SURINAME

When Suriname became independent in 1975 the new nation faced several challenges inherited from its pre-colonial and colonial past. In the ongoing discussion about how to structure the Suriname government after independence, in order to ensure adequate representation of the different groups or social categories, the focus has been on the problems associated with ethnic pluralism and/or the widening gap between rich and poor. There is a third factor, however, which should be given more attention: the cultural, economic and political gap between the coastal area and the interior. The challenge of incorporating kin-ordered societies into the nation state is no less daunting than balancing ethnic identity and overcoming poverty. These three themes will be used to link the wide range of information covered in the sections of this guide.

The social, political and economic history of Colonial Suriname has been shaped by the mineral and soil potential of two broad geomorphic zones: a coastal plain consisting of recent sedimentary deposits, and a shield area consisting of Precambrian rocks, which covers about 80% of the country. Before turning to the historical survey, therefore, a brief geographical orientation may prove helpful to the reader. After surveying the natural setting, the following outline will be used to present a brief historical sketch of the human settlement of Suriname:

1. The Pre-Colonial Period (prior to 1650)
2. The Making of Separate Worlds (1650-1875)
3. Attempts to Sustain and Unify (1875-1975)
4. The Challenge of Independence (after 1975)

#### 1.1 The Natural Setting

The coastal plain can be described in terms of three zones: the young coastal plain, the old coastal plain and the savanna belt. The coastal plain, made up of these three formations, is about 30 kilometers wide in the east and about 170 kilometers in the west.

Amazonian currents deposited the fertile clay of the *young coastal plain*. Here and there narrow sand and shell ridges, remnants of former beaches, cut through the clay in an east-

west direction. Natural vegetation consists of mangrove forests, open swamps with aquatic weeds, and low thin-stemmed swamp forests.

The genesis of the *old coastal plain* is similar to that of the young coastal plain, but it is slightly higher. It is surmised that the sea level was higher when the silt was deposited along this belt, it shows more form and relief as creeks carve their way through this landscape. The vegetation consists of swamps with grasses, high swamp forest, marsh forests and dry-land forests.

Further south one comes across the striking white sands of the *savanna* belt. It is surmised that this gently rolling landscape was formed by eroded quartz sands and other sediments from the hills further to the south. The high rainfall is quickly absorbed by the permeable soil, accounting for the savanna vegetation. About 10% of the savanna is made up of white sun-bleached sand. These areas are thinly covered with shrubs and herbs; the remainder is covered with low thin-stemmed or high savanna forest.

The *shield* area roughly corresponds to what is known today as the “interior” of Suriname. The area is covered with dense tropical rainforest with a closed canopy of about 40 meters. As one moves south, the elevation gradually increases and here and there mountain ranges and granite domes protrude above the plateaus and the green canopy, varying in height from 500 to 1.200 meters. The meandering rivers of the interior are difficult to navigate due to the large number of rock formations and cascading rapids.

## **1.2 The Pre-Colonial Period**

During the Pre-Colonial Period (prior to 1650) Amerindians settled in almost every part of Suriname, from the coastal plain to the southern highlands along the Brazilian border. Over the years the different communities adapted quite well to the heterogeneous and complex ecological systems of the coastal areas and the hilly rainforest further inland. They developed subsistence strategies and sustainable technologies appropriate to the regions they lived in. The land and forest was always able to regenerate after communities moved on the new locations. Guides of Amerindian communities suffering from food shortages under this subsistence system are hard to come by.

It was the mineral potential of the Precambrian Guiana Shield that lured the first Europeans to Suriname. This shield has been tectonically stable for a vast period of time and hosts valuable minerals such as bauxite and gold. The myth of Eldorado, featuring a king living in the town of Manoa along the Parima Lake who bathed in gold dust, was the driving force behind the first efforts of the Spanish conquistadors to explore the Guiana coast. Eldorado turned out to be an elusive dream, and gradually the emphasis shifted towards agriculture. Between 1500 and 1650 several attempts were made to colonize the region. It was not until 1651, however, that the first European settlement in Suriname survived the hot, humid climate, disease and attacking Amerindians. Up to that date the indigenous population fully controlled the region known today as Suriname.

Very little is known about the political systems, which existed among the autochthonous populations prior to the European incursion in the 17th century. There are some indicators, however, of what may have existed. Some scholars have suggested that there was no strong leadership among the Amerindian communities. Others have argued that this was not the case, that strong leadership did indeed exist, and that the role of leader was often combined with that of shaman or healer. Oral sources also suggest that pan-societal leaders existed among the Arowak and the Caribs.<sup>1[1]</sup> It is clear, however, that during periods of conflict identifiable leaders emerged and played a pivotal role in dealing with the colonists.

The Amerindian population of Suriname consists of the groups of the coastal area and the interior. The Caribs and Arowaks live in the coastal area. Many of their settlements are in the savanna belt. The Caribs living along the sandy beaches of the Marowijne river maintain close ties with their relatives across the border in French Guiana. The Trios and Wayanas live in the “interior” of Suriname, as far south as the Brazilian border. The Trios of Kwamalasamutu maintain relations with their relatives across the border in Brazil, and the Wayanas of southeast Suriname have close ties with their relatives in French Guiana. A small number of Akurios and Wai Wai have also settled in the Trio villages of the interior.

### **1.3 The Making of Separate Worlds (1650-1875)**

After 1650 the demographic development of Suriname evolved along two tracks. Europeans transported thousands of Africans to Suriname to develop plantations in the coastal area. Hundreds of plantations were established, first on higher ground of the old coastal plain further up-river, and then on the low-lying fertile clays of the young coastal plain. While the plantations were being established rebel slaves used the cover of the dense tropical rainforest to flee and establish themselves above the treacherous rapids of the inland rivers, beyond the reach of the colonial establishment. The rebel slaves relied on their knowledge of African tropical environments to sustain themselves, and drew on their cultural heritage to establish matrilineal kin ordered societies in the hinterland of Suriname.

#### *The Colonization of the Coastal Plain*

In 1651 Lord Willoughby of Parham sent first 100 British planters from Barbados to settle in the coastal plain of Suriname along the Suriname and Commewijne rivers. They already had some experience in tropical agriculture. In 1664 the British were joined by a group of experienced Portuguese-Jewish planters who were forced to leave Cayenne and settled in Suriname. They settled 70 kilometers upriver on high ground and established Torarica, the original capital of Suriname. A few years later the capital was relocated to a

---

<sup>1[1]</sup> For example, in 1674 the Amerindian leader Kaaikoesi led a revolt against the planters. In 1686 Governor Cornelis Van Aerssen Van Sommelsdijck signed a peace treaty with the Amerindians. From that time on the Amerindians no longer presented a threat to the plantations.

fort on the left bank of the Suriname river some 10 kilometers inland from the coast. This garrison evolved into Paramaribo, the current capital city. When the Dutch took over Suriname in 1667, there were already 175 plantations in the colony, and the population had grown to 4.000 (including slaves). Many English planters left Suriname and destroyed equipment and plantations on the way out.

Until the end of the 18th century (1792), the colony of Suriname fell under the direct authority of the Dutch sovereign, but was administered by several commercial consortiums, which functioned as a kind of privately owned public authority. Government was in the hands of the private sector, and this guaranteed the colony a certain measure of autonomy.

During the first 15 years of the colony's history, the foundation for this trend was laid. The establishment of the first permanent European settlement in 1650 was a private initiative. Lord Willoughby financed this effort. As noted above, English planters joined him in this venture. A few years after establishing the colony, these planters played an important role in establishing local government.

The period of “commercial government” continued under the Dutch, after they took over in 1667. In 1674 the second Dutch West-Indian Company (W.I.C.) was established, and in 1682 this consortium gained through its charter not only commercial, but also political control of the colony. Its principal aim was to exploit the resources of the colony of Suriname through a few, though significant, import and export monopolies. Only the W.I.C. was authorized to import slaves into Suriname, and to export sugar and other agricultural products. The charter, however, also contained provisions regulating the Government of the colony - it functioned as a kind of constitution of the colony. The W.I.C. appointed the Governor, who was assisted by one or more councils.

Slave labor was the key to the economic development of the coastal plain. First under the British, and then under the Dutch, Africans were forced to toil under sub-human conditions to develop the plantation economy of the coastal plain. After the Dutch takeover in 1667, investors began to develop the young coastal plain. Dutch settlers originating in the province of Zeeland began to import flood control technology and built irrigated plantations with dikes, sluices and transport canals in the young coastal area. The alluvial clays of the lowlands turned out to be very fertile, and the plantation economy shifted northwards. On account of this economic shift northwards, Paramaribo replaced Torarica as the capital city of Suriname.

After 1682 the Governor was assisted by a representative assembly consisting of ten members. The candidates for the body were elected by the white colonists, and then appointed by the Governor. Together these bodies formed the Government of the colony. A great deal of the local political power, however, was in the hands of the planters. For example, as representative of the W.I.C., Governor Mauricius (1742-1751) tried to improve the defense infrastructure and the legal apparatus of the colony, but ran up against the power of the planters, who objected to the costs of these efforts. He ended up leaving the colony, even though his policy efforts were supported by the W.I.C.

In 1700 there were about 100 active plantations in Suriname. In 1740 this number increased to 250, in 1750 some 300 plantations were in production, and in 1770 this number reached 500. The peak production year was 1765, when 10.000 tons of sugar, 7.000 tons of coffee, 100 tons of cocoa and 50 tons of cotton were produced. After the crash of the Amsterdam stock market in 1773, funding for Suriname investments dried up and the number of plantations declined steadily.

In 1792 the W.I.C. was formally abolished, precipitated by, among other things, the disastrous collapse of the economy of Suriname in the second half of the 18th century. The Maroon wars, covered below, further damaged the colonists and drained off more resources.

At the end of the 18th century, during the Napoleonic wars, the British occupied Suriname, and this presence ended in 1814. From 1816 onward the Governor of Suriname represented the King of the Netherlands, and not a commercial enterprise. The country was governed by royal decrees, and it ceased to have its own currency.

In 1865 a major change took place: Suriname acquired a renewed measure of autonomy with the installation of the Colonial Parliament. Four members of the Parliament were appointed by the Governor and nine were elected by a select group of eligible voters. The executive powers remained with the Governor. Another major change took place in 1865: Suriname was divided into districts, each headed by a District Commissioner.

When slavery was abolished in 1863 about 200 plantations were still in production. Particularly telling is the rapid decline immediately before and after the abolition of slavery in 1862. Without the free labor of slaves the Suriname plantation economy was destined to perish. Herewith an overview of this development:

Year	Number of Plantations
1700	100
1740	250
1750	300
1770	500
1820	416
1840	383
1862	216
1872	131

1900	82
1950	24
1975	1

The African population had paid a tremendous toll to develop the coastal plain. About 325.000 Africans had been transported to Suriname to work on the plantations. When slavery was abolished in 1863 a mere 33.621 African-Surinamers gained their freedom. Overwork, mistreatment and disease had resulted in the death of thousands of slaves. After leaving the plantations many African-Surinamers headed for Paramaribo and settled in the outskirts of the quickly expanding town. Names of neighborhoods such as *Frimangron* (“the land of the free persons”) reminds us of both manumission and the abolition of slavery. The urban Africans had access to better education and soon acquired the skills to take up positions as government administrators, teachers and employees in the commercial sector. The better educated became lawyers and doctors. The Moravian Church managed to win many converts among the town Creoles. However, elements of African religion remain to this day prominent in the Creole community.

### *The World of the Interior*

As soon as plantations were established in Suriname, Africans were transported to Suriname to work on these establishments. Suriname planters were notorious for mistreating their slaves, and the dense tropical forest provided excellent cover for those who were no longer willing to accept exploitation and mistreatment. The escaped slaves settled along the upper reaches of the interior rivers above the treacherous rapids. In those days travel with a loaded canoe could require up to three weeks of rowing to reach interior destinations.

Throughout the 1700s the Colonial Government tried to subdue the rebel slaves. Military expeditions were outfitted to locate Maroon settlements and to destroy them, or to engage and capture rebel slaves, but all with limited success. The Colonial Government sued for peace and in the 1760s peace treaties were signed with the major Maroon groups. The African rebel slaves were now free to live in the interior, alongside the Amerindian communities, and develop distinct and autonomous socio-cultural and political entities. Smaller Maroon communities were established after the treaties of the 1760s, but it was not until the second half of the 19<sup>th</sup> century that the leadership of these Maroon groups was formally recognized by the Colonial Government.

As the 19<sup>th</sup> century drew to a close, the interior - originally populated only by indigenous Amerindians - was now the setting for six Maroon nations. The Saramaka and Matakwa were living on the Upper-Suriname and Upper-Saramacca rivers, while the Ndjuka and Paramaka had settled along the Marowijne and Tapanahony rivers. The smaller Boni group ended settling on the Lawa river, and the Kwinti established themselves along the Coppename. The Trio Amerindians lived along the Palumeu river and in the Sipaliwini savanna, while the Wayana lived along the Middle-Tapanahony and Lawa rivers. Caribs

and Arowaks resided largely along the coast. Several other smaller groups lived in the southern fringes of the interior along the Brazilian border.

All these communities have a common characteristic – the Maroons and Amerindians live in kin-based societies in which descent and kinship are important ordering principles in the cultural, social, economic and political spheres.

Among the Maroons, political offices are also tied to the matrilineal descent system. During the past century the offices of the Paramount Chiefs (*Gaaman*) of the major Maroon societies have been passed down along matrilineal lines within a given lineage. The same applies for the office of regional chief (*ede kabiten*), village chief (*kabiten*), and assistant to the village chief (*basya*). Although leadership positions are respected in all regions or villages, the jurisdiction of a village chief is tied to a specific descent group and their settlements, while that of a regional chief is tied to the descent groups which make up the region for which he is accountable.

Currently, newly appointed traditional authorities are confirmed by the Government. Beginning after the Peace Treaties in the 1760s the Government agreed to pay tribute to the leaders of the Maroon societies, but during the 19<sup>th</sup> and 20<sup>th</sup> century this tribute was converted to payment in cash. The fee received by traditional rulers is an allowance and not a salary - they are not civil servants. The fact that the traditional leaders are not civil servants helps them retain a certain measure of autonomy historically accorded to them. The paying of this stipend implies official recognition, but it also creates a certain measure of dependency. Further, no mention is made of traditional authority in any of Suriname's Constitutions.

Decision making procedures also observe the societal levels outlined above. At the lowest level, the family elders, whether they are a village leader or not, convene to make decisions about family matters. At the lineage level, palavers (*kuutu*), are convened to discuss matters with a broader impact. A more inclusive village meeting is also common, whereas a regional or societal gathering occurs less frequently. During a *gaan kuutu*, which considers, among other things, pan societal matters and external relations, all elders, village and regional chiefs must be present. Recently the term *gaan kuutu* has also been used to refer to meetings between leaders of interior societies convened to discuss issues affecting the entire interior population.

The table below outlines some of the differences between the more western oriented nation-state and kin-based societies.

Characteristics	NATION STATE (modern)	KIN ORDERED SOCIETIES
BASIC SOCIAL UNIT	Nuclear family	Clan, lineage
OWNERSHIP OF PROPERTY OR WEALTH	Primarily Individual (though collective responsibilities do persist)	Collective ownership of land and resources (individual ownership of

		personal items)
POLITICAL PARTICIPATION	Individual, special interest groups	Through descent system
MORAL AND ETHICAL RESPONSIBILITIES	Primarily individual	Primarily collective
ECONOMIC PARTICIPATION	Individual, investment based on profit motive	Collective, subsistence oriented

In sum, with the exception of military incursions aimed at destroying rebel slave settlements, the functional presence of the European colonizers did not extend beyond the plantation economy of the coastal area. This is why the period 1650 to 1875 is described with the phrase “*the making of separate worlds.*” During this interlude the British (from 1651 to 1667) and the Dutch (after 1667) “owned” Suriname, but they never managed to take full possession of the colony. During this period the natural boundary between the lowlands of the coast and the highlands of the interior<sup>2[2]</sup> also became a political and socio-cultural frontier, setting apart the world of the European controlled coastal communities and the Amerindian and African communities of the interior.

#### 1.4 Attempts to Sustain and Unify (1875-1975)

This period is characterized by important demographic and economic transitions on the coastal plain, and the political and economic incorporation of the interior with the rest of the country. More than 60.000 laborers were brought from India and Indonesia to replace the slaves freed in 1863, but to no avail. After their contract period expired most contract immigrants abandoned the plantations and settled on small farms in the coastal area. The reluctance of labor led to the further decline in the number of plantations, and during the first half of the 20<sup>th</sup> century small-scale farming gradually replaced plantation agriculture. The once prosperous colony was now facing trade deficits. During the slave era the value of exports exceeded the value of imports by 30% or more. After abolition Suriname began to experience trade deficits and began to rely more and more on subsidies or development aid from the Netherlands to sustain itself.

After 1900 a general shift occurred in the economy. Small farming operations replaced the plantations. These plots were cultivated by ex-slaves, East Indians – known in Suriname as Hindustani -- and later Javanese. Around 1900 90% of the agricultural products were grown on plantations, 10% on smaller farms. In 1950 the reverse was true. Between 1875 and 1900 interest in gold mining was strong, but the boom did not last. The sector reached its zenith in 1908, after which a steady decline set in. Around the turn of the century there was a substantial production of natural rubber (balata), but this activity also dwindled quickly.

---

<sup>2[2]</sup> This boundary was marked by the lumber plantation Berg en Dal, located along the Suriname river at the foot of the first prominent elevation as one travels from the coastal area into the interior.

Bauxite mining, on the other hand, turned out to be a steady source of income and employment. From 1922 onwards, production increased almost yearly, and during World War II Suriname became a major supplier of bauxite to the United States. The bauxite was used for the production of aluminum, much of which went to the construction of war material. In the 1960s further investment in a hydro-electric dam, and an alumina and aluminum plant assured Suriname of many years of steady foreign currency income. Mechanized rice farming took off after the 1950s. Between 1955 and 1974 rice production rose from 64.000 tons to 175.000 tons, while the production share of the large-scale farms increased from 20% to 60%. As the century wore on, timber and wood products, as well as shrimp and fishing, became increasingly important.

The developments in the gold mining and bauxite sector had a major impact on the societies of the interior. After 1875, the boundary between the coastal area and the interior began to be challenged by exploration and economic incursions, and by the time Suriname gained independence in 1975 the central Government wielded much greater political and economic influence in the interior. These transitions will be surveyed next.

### *Transitions on the Coastal Plain*

With abolition in sight, the planters expected a massive exodus of African-Surinamers from the plantations and an extreme shortage of field laborers. Their assessment of the situation was correct. Most of the African-Surinamers left the plantations when they could. Attempts were made to obtain laborers from Netherlands-Indies, Madeira, China and the West Indies, with limited success. Between 1853 and 1870 about 4.500 Chinese were brought to Suriname to work on the plantations as indentured laborers. As soon as their contract period expired, the Chinese left the plantations. Most of the Chinese became active in the retail business (40% around 1900, 70% in 1970).

In 1870 the Dutch Government signed a treaty with England and in the period 1873-1916 some 34.000 East Indians were transported to Suriname to work on the plantations as indentured laborers. The period of indentured labor was not without incident. On two occasions around the turn of the century the Hindustani rioted against the plantation owners. These revolts turned bloody when they were struck down with force.

In order to lessen their dependency on the British, the Dutch decided to look for alternative labor sources. Between 1890 and 1935 almost 33.000 Javanese were transported to Suriname to work on the plantations.

Both the Hindustani and the Javanese settled in the coastal area after leaving the plantations. Many did not exercise the option to return to their country of origin because the Government offered them agricultural land. Most of the Hindustani settled in the districts of Nickerie and Saramacca. The Javanese settled in Commewijne, but also in the outskirts of Paramaribo and in some locations in Saramacca.

The demographic make-up of the coastal area after World War II reveals the following picture. In 1950 Suriname had 196.000 inhabitants, the population of Paramaribo was

about 80.000. The urban coastal population was predominantly Creole (about 70%), with a smaller contingent of Europeans and Chinese. Most of the rural coastal population was Hindustani and Javanese, with a smaller number of plantation Creoles who stayed on or settled near plantations after abolition. The population figures for the coastal area in 1950 were as follows:

Creoles	82.408	42.1 %
Hindustani	66.829	34.1 %
Javanese	38.165	19.5 %
Chinese	2.849	1.5 %
Other	5.390	2.8 %
Total	195.641	100 %

Most of the rural settlements were relatively isolated and became ethnic enclaves. The Hindustani and Javanese maintained their language, and despite efforts of the Europeans to Christianize them, most retained their original Hindu or Muslim religion. The temples and mosques developed not only as places of worship, but also centers of educational (especially for language courses) and social activities. Between 1936 and 1937 a law was passed, which recognized and structured village communities, and the Asiatic Marriage Law was also passed. Under this law, marriages concluded under Muslim or Hindi traditions were formally recognized by the Government. Efforts were also made to ensure that the Hindustani and Javanese could have separate representation in the Colonial Parliament. As time passed, the Hindustani and Javanese had increasing contacts with other Surinamers, especially through economic activities, but they retained their language and religion due largely to residential and occupational segregation.

While plantation agriculture faded away major undertakings in the mining industry were initiated. Around the turn of the century bauxite deposits (aluminum ore) were found in the coastal area and mines were established in the Moengo area, about 100 kilometers east of Paramaribo. In 1922 the first shipment of bauxite took place and a period of steady growth followed. In 1938 a processing plant was established at Paranam, some 30 kilometers upriver from Paramaribo. Bauxite mines were opened in the area. Just before World War II the Billiton Company started exploration activities in the Onverdacht area, and in 1953 the company was formally established.

In 1958 the Brokopondo Agreement was signed with ALCOA Aluminum, and in the early sixties, after the construction of the hydroelectric dam, an alumina and aluminum refinery got underway. In addition to the natural resources, Suriname made available the land and agreed to take care of the relocation of some 6.000 Maroons to locations below or above the hydro lake. The investment costs of the dam and the processing plants, including the infrastructure (roads and bridges), were covered by Suralco, a subsidiary of

Alcoa in Pittsburgh. Under the agreement the Government of Suriname would receive part of the electrical power at reduced cost. Ups and downs notwithstanding, over the years the bauxite industry has remained by far the most important foreign currency earner for Suriname (70-85%). Recently the aluminum smelter was taken out of service, but Suriname remains an important producer of alumina.<sup>3[3]</sup>

Other important sectors in the economy after World War II were rice farming, timber products and shrimp fishing. Mechanized rice farming took off after the 1950s. Between 1955 and 1974 rice production rose from 64.000 tons to 175.000 tons, while during the 1990s some 250.000 tons of rice were produced. As noted above, mechanization brought about a shift from small-scale to large-scale farming. During this period the production share of the large-scale farms increased from 20% to 60%. Two banana plantations were established, one in Saramacca and one in Nickerie. Production in this sector rose in the 1960s and in 1968 two million boxes were exported. As the century wore on, timber and wood products, as well as shrimp fishing, became increasingly important.

During the period 1875 to 1975 the political system of Suriname went through a number of major transitions. From 1865 to 1901 the local Government enjoyed a considerable measure of autonomy. The government policy was one of assimilation, primary education was made mandatory (ages 7–12) and the Christian religion was seen as a mechanism for promoting the Europeanization of the local population. In 1874 a decree was issued outlawing “heathen” African rites. This policy of assimilation lasted until the 1930s, when Governor Kielstra brought about a turn-around. He favored protective measures for Asiatic population, and this represented a reversal of the assimilation policy carried out by his predecessors. His efforts were controversial and resulted in several conflicts, especially the introduction of the above-mentioned Asiatic Marriage Law and the law regulating community organization.

In 1901 the appointed membership of the Colonial Parliament was discontinued. All members were to be chosen, but universal suffrage would not be introduced until 1948. After 1908 candidates had to be fielded by political organizations and this brought about the birth of the first political organizations. Despite these “improvements,” the number of political conflicts actually increased after 1900. With the further democratization of the political system, light skinned Creoles began acquiring more influence. One of the new political organizations even fielded socialist candidates and the plantation owners tried to organize their interests by starting their own political organization.

During World War II the Dutch Government promised to introduce a greater measure of autonomy with regards to internal affairs. In 1948 universal suffrage was introduced, and a general council was installed which had executive powers. In 1949 the first general elections were held. In 1954, Suriname acquired political autonomy with respect to internal affairs, while foreign affairs and defense continued to be handled in the context of the Charter and Constitution of the Kingdom of the Netherlands. The separation of powers was formalized. Since the introduction of universal suffrage, general elections

---

<sup>3[3]</sup>

Alumina is first extracted from bauxite and is then used to produce aluminum ingots.

were held eight times before independence. The political parties were based generally on and represented specific ethnic groups.

Here follows a brief overview of these elections held after universal suffrage was introduced:

#### Election Results by Party: 1949-1973

<u>Year</u>	<u>Political Party – see Acronyms</u>									
	NPS	VHP	KTPI	SDP	PSV	PNP	AG	PNR	Other	Total
1949	12	6	2	.	.	.	.	.	1	21
1951	13	6	2	.	.	.	.	.	.	21
1955	2	6	2	5	3	.	.	.	3	21
1958	9	4	2	0	4	.	.	.	2	21
1963	14	8	4	2	4	.	3	0	1	36
1967	17	11	0	2	0	3	4	0	2	39
1969	11	17	1	0	1	5	.	1	3	39
1973	13	16	2	.	3	0	.	4	1	39

The Suriname parliamentary system is a variation of parliamentary systems found elsewhere. Under this system the Government was held accountable to the Parliament for the approval of its policies. The elected representatives were also responsible for monitoring the implementation of the approved government policy and could draft and approve legislation. In practice, however, most legislation was drafted by technical commissions working at the various ministries and was sent on to the Parliament for approval.

When the Government could not rely on the support of a majority of the elected representatives in the Parliament for the implementation of its policies, it would step down. In 1951, 1958 and 1969 early elections were called after the Government resigned.

It should also be noted in this context, that with the passing of time, a shift in power relations occurred. Up to 1900 almost all of the political leaders were white. Between 1900 and 1958 light skinned Creoles, many of them elite, gradually took over as senior leaders in the political arena. In the early 1950s Johan (Jopie) Adolf Pengel made his entry into the Creole dominated NPS. Though a dark skinned lower class Creole, his political astuteness, excellent oratory skills and charisma brought about his rise in the

NPS. After 1959, when J.A. Pengel formed the government, the predominant position of the light skin Creoles had come to an end.

The urge to become independent was not shared equally by all Surinamers. The most outspoken supporter of the idea was a group of young Creole intellectuals who formed an association “Wi Egi Sani” (“Our Own Property/Thing/Heritage”) and championed the idea of an independent Suriname. In 1961 the largely Creole PNR was created and it was suggested that Suriname would become independent in 1963, exactly 100 years after slavery was abolished.

Up to independence it was generally assumed that the country was governable on the basis of the democratic system, which evolved as a hybrid of the Dutch and other parliamentary systems. The political reality after 1975 proved otherwise. It seems that the differences in the political vision of the members of the various ethnic groups and classes, but also the conceptual gap between persons from the interior and the coastal area, had been underestimated or overlooked altogether.

The chart above, outlining election results suggests, at least numerically that the three main, ethnic-based parties –the Creole NPS, the Hindustani VHP and the Javanese KTPI—voted as ethnic cartels. This is substantially the case as the smaller ideologically-based parties did not fare well in garnering votes (the PNP of 1967 and 1969 was substantially a break away Creole party while the PSV was a smaller Creole party with long standing roots). Notable during this period was the Creole tendency to establish broader ideological choice for its ethnic constituents; by 1969 four Creole parties of differing ideological persuasion had won seats in parliament. Hence, the two Hindustani and Javanese parties give the appearance of a more bounded and solidified ethnic conglomeration. To a real extent this is true but the blunt edge of ethnic-centric focus masks more subtle means of cooperation and coalition building. It is almost a cliché in the political discourse of Suriname to say that the Javanese block often functions in the role of government-maker by aligning with the larger parties who need their support to form a strong majoritarian government. Equally a cliché is to say that a government which excludes Hindustani is doomed to collapse or will, at least, not function well. The Creole-dominated governments of 1967—which collapsed—and 1973—which saw rancorous ethnic disagreement—are testimony to this observation.

Yet, there was established in the 1960’s and early 1970’s a tradition of Creole-Hindustani cooperation which continues to today. Called the “politics of brotherhood” (*verbroederingspolitiek*) or “broad basis” formation (*brede basis*) the ideas undergird the inter-ethnic collaboration which characterizes periods of stability. The reality of politics in Suriname, the preference to vote for “one’s own,” has never resulted in a large, corporate multi-ethnic political party based more on ideology and common cause than the primordial identification of one’s own group. However, mobilizing on the basis of ethnicity does not prohibit inter-party cooperation and coalitions. Ethnicity, one can argue, is merely a cultural resource, not in itself good or bad but merely a building block like age, gender, and residential location in society.

### *The Political and Economic Incorporation of the Interior*

The second economic phase of the colonial period (1875-1975) saw mining replacing agriculture as the main source of income for Suriname. After new deposits of gold were announced in the 1870s, thousands of fortune seekers headed for the interior. Between 1875 and 1925 the economic focus of Suriname was on gold. A 175 kilometers long railroad track was built to the gold fields of the interior. In 1908 production peaked at 1.210 kg. Thousands of fortune seekers flocked to the interior and despite the threat of malaria, worked long hours in the gold fields. Young Maroon men enjoyed relatively high incomes transporting the miners through the rapids to the remote mines in the interior. After the peak in 1908 gold production declined steadily until 1969, when the last mechanized operation was shut down. At the onset of the 20<sup>th</sup> century thousands of Creole men from the coastal area worked as rubber tappers in the interior, but competition from Southeast Asia and the invention of synthetic rubber brought about the demise of this industry.

Other developments also had a major impact on the life of the Indigenous and Maroon communities. In the 1940s and 1950s outboard motors were introduced, reducing travelling time to the interior from two to three weeks to two to three days. Operation Grasshopper began in 1959; a project to establish landing strips through the interior for the purpose of exploration. In the 1960s American missionaries established missions in the interior and began building small runways. Air transport reduced travel to the interior from two to three days to one to two hours.

Universal suffrage was introduced in 1948, and in theory, every adult citizen of Suriname was entitled to vote. However, in order to participate in elections, an eligible voter would have had to be registered. Since the majority of the interior population was not registered during the late 1940s and the 1950s, participation by persons from the interior was minimal. Moreover, there was no residence requirement for candidates, as a result, many persons elected to the Parliament did not have ties or a strong commitment to the people they represented.

Prior to the elections of 1963, a registration campaign was held in the interior, and during these elections, persons from the hinterland were in a position to cast a vote. Since that time, persons from the interior have participated in national elections. The involvement of the interior population in the national political process had a number of consequences for traditional rule (e.g., the *Gaaman*). From the very beginning of the involvement of the interior in the national political system, there was a noticeable association of traditional rulers in party politics. Persons living in the interior objected to this partisanship, and these associations seem to have contributed to the erosion of authority of the traditional rulers.

For better or for worse, the Amerindian and Maroon communities of the interior had become part of the national economic and political system. Some members of Maroon and Amerindian societies have adopted more western norms and customs and live in nuclear families. But traditional customs continue to play a role in the village setting, and

the challenge of integrating the kin-ordered societies of the interior into the nation state remains a formidable challenge. As major socio-cultural, economic and political incursions into the interior continue, further changes in the distribution patterns of resources will take place, and new power relations will be asserted. The accompanying stresses and strains of these changes harbor the potential for conflict. The resulting tensions are an inherent part of development, and democratic and other institutional instruments will have to be created to cope with the latent threats to stability and development. These needs would become particularly evident after 1975.

The cultural life of the interior Maroons and Amerindians remained largely unaffected by European ideas until the last years of the 19<sup>th</sup> century, when the first major economic incursions began to take place. To be sure, direct lumber trade between Maroons and Dutch merchants of the coastal area, and the contribution of Maroons to transport and exploration activities in the gold- and bauxite-mining sectors, structured the money economy of these predominantly subsistence societies. Missionaries had some influence in selective areas. All-embracing cultural, social and political influencing, however, only began in earnest when travel times were significantly reduced after the introduction of outboard motors, roads and air links. And yet, the cultural gap left behind by almost 250 years of development in relative isolation, makes incorporation of these societies into the nation state a significant challenge. The challenge posed by this gap would become manifest during the interior conflict in the 1980's and 1990's.

The challenges posed by ethnic pluralism, poverty and the ideological gap between the coastal area and the interior surfaced as key issues during the years immediately prior to and after independence.

### *The Road to Independence*

In early 1933 one of Suriname's first nationalist and political activists, Anton de Kom, arrived in Suriname with his family. From the moment he arrived he was tracked by the authorities, which feared that the labor strikes of 1931 would be rekindled by his political gatherings. He was prohibited from holding public rallies. In 1933 he was arrested. His supporters, both unemployed and poor town-Creoles and Javanese from Commewijne, took to the street demanding his release. Some 30 persons were shot during a public demonstration and de Kom was deported to the Netherlands. After returning to the Netherlands he published We Slaves of Suriname. This work, fundamentally a denunciation of colonialism, critical of labor conditions and poverty, and promoting a nationalist identity, became the canon of the nationalist movement.

Throughout the fifties and the sixties the idea of independence surfaced from time to time in different circles. In 1951 the association *Wi Egi Sani* ("Our Own Heritage") was established by young Creole intellectuals studying in the Netherlands. Eddy Bruma, Henny de Ziel and Jo Rens were the leading figures of this movement. Literary works were produced heralding the cultural heritage of Surinamers. In the early 1950s Johan Adolph Pengel, who was to emerge as the undisputed leader of the NPS, wrote several

articles with strong nationalist overtones. In 1961 the PNR was founded by Bruma and young intellectual supporters.

A serious move to independence would not take place until the NPS, PNR and the PSV (Progressive Peoples' Party of Suriname), all parties with nationalist roots, formed the NPK I coalition. One of the goals of this coalition was to achieve independence by the end of 1975. The Netherlands Government willingly supported the independence effort. Once the realization dawned on the people of Suriname that independence was inevitable, thousands migrated to the Netherlands out of fear for an uncertain economic and political future. Resistance to independence came from the VHP and its Hindustani following, who feared political domination by the Creole groups advocating the creation of a new nation. Tensions flared and several cases of arson occurred, leading to fears that serious civil unrest would erupt pitting the major ethnic groups against each other.

Initially the VHP opposed independence. Three members of the ruling NPK I coalition joined the opposition and technically the Government had lost its majority in Parliament. The Government did not budge and a 20-man delegation, headed by Jagernath Lachmon head of the VHP, flew to the Netherlands to plead their case. The impact of the trip had the opposite results. Leading politicians in the Netherlands convinced members of the delegation that independence was feasible. One of the members of the opposition, George Hindorie ended up supporting the coalition. The year preceding independence a number of colonial wooden buildings in the old section of Paramaribo were set on fire. Hindorie said that he did not want to be responsible for the possible violence and looting, which would break out if the independence effort was thwarted. He crossed the floor, supported the NPK I, Prime Minister Henck Arron got his way and the route to independence was secured. Suriname became a sovereign state on November 25, 1975.

### **1.5 The Challenge of Independence**

On November 25, 1975, Suriname became independent from the Kingdom of the Netherlands. A bilateral treaty fund was set up by the Netherlands and Suriname as an aid-program totaling 3.2 billion Dutch Guilders (approximately 1 billion U.S. Dollars) to be spent over a period of ten years. Suriname became a parliamentary democracy with a clear division of powers: the legislative, executive and judicial branch. The President of the Republic was elected by the Parliament, which had 39 members. The executive powers, however, were in the hands of the Council of Ministers, which was headed by the Vice-President. The Ministers were accountable to the Parliament for their political actions.

However, the new Constitution for the new Republic was a flawed document. Foremost, it contained no provisions to bridge the gap between the coastal area dominated by the merchant-city of Paramaribo and the hinterland, an omission which would be exploited a mere 11 years later with the outbreak of the internal conflict. Specifically, the new Constitution left the interior insufficiently represented by minority candidates as there was no residence requirement to ensure that members of the then Parliament had close ties with and strong relationships to the people and the region they represented. Also,

representation was only at the national level, a highly centralized membership in the Parliament, with no means for local and regional participation, representation, and mobilization. It was only after the period of military rule, in the Constitution of 1987, that such bodies as the local council (*ressort comite*) and district council (*distrikt comite*) would be designed and implemented.

*The First Five Years (1975-1980)*

The first post-independence period (1975-1980) started with optimism. A steady foreign currency income from the bauxite sector could be counted on, and development aid flowed into the State coffers at a rate above the absorption capacity of Suriname's institutions.

Graph 1: Development Aid 1954 – 1980 (in millions Sf)

The economic future of Suriname was to be assured by investing large sums into the West-Suriname project. Two interconnected hydro-electric dams and a river-diversion project would generate a total of 800 MW and this energy was to be used to fuel a new alumina and aluminum plant in the region, and also for other economic activities such as lumber, pulp and paper mills, gold, rubber and agriculture. In 1975 the construction of a 60-kilometer railroad got underway connecting the future bauxite mines in the Bakhuis Mountains to Apoera, an Amerindian village along the Corantijn river, some 150 kilometers inland from the coast. One outcome of the project would be the growth of a new residential area in Apoera, with modern houses and services.

As the seventies wore on, optimism gave way to pessimism. Persons began to doubt that the million-dollar investment in West Suriname would come to fruition. Too many questions remained unanswered and the Government did not seem to be in a hurry to administratively justify the ongoing million dollar spending sprees. Arron and his coalition partners were re-elected with a narrow margin in 1977, bringing the NPK II

coalition to power, and the Government seemed as reassured as ever. And yet, the ever-widening gap between the promises made at independence and their realization led to skepticism and dissatisfaction. Few new jobs were created and the gap between the rich and the poor increased. It was a labor conflict in the military, however, which ended the term of NPK II just prior to the scheduled elections. The non-commissioned officers in the armed forces tried to establish a union, an effort that was not supported by the government. The central issue concerned salary increases.

### *Military Rule: 1980-1987*

On February 25, 1980, the military took over the country. Between 1980 and 1987 four phases of rule can be recognized. Throughout this entire period, however, the ultimate authority resided with the military leaders. During the first phase (1980-1982), a military council was supported by civilians who assisted *a titre personnelle*. During the second phase (1983), the military leaders were supported by proponents of the small socialist parties (the RVP and the PALU). The third phase (1984-1985) saw unions and business associations join forces with the military leaders. During the final phase (1986-1987) the unions, business associations and the old political parties joined the military in the transition to democracy.

At the time of the take-over the population took a wait-and-see attitude. Within a week the President and the Military Council issued a press release saying that in undertaking actions the new rulers would try to adhere to the Constitution as much as possible. But as time wore on, things turned out differently. By the end of March of 1982 four counter-coup attempts had been thwarted and the military leaders began to worry about personal and state security. By mid-1982 the movement to restore democracy became increasingly vocal: church organizations, labor unions, students and teachers began to demand a timetable for the return to an elected government. In December of 1982 the military cracked down and executed fifteen leading opponents of the military regime. The group of victims included the President of the Bar Association, the Dean of the Social Science Faculty, a labor union leader, and several journalists.

When the military took over in 1980 they inherited a considerable foreign currency reserve, partially due to the influx of development aid in hard currency. In 1983, however, the economy suffered several setbacks. Development aid was suspended due to the events of December 8, 1982. A worldwide recession reduced the demand for aluminum and alumina, Suriname's most important export commodities. Moreover, monetary financing of the government deficit increased the money supply and fueled inflation. In the period 1981 to 1985 monetary reserves declined from about US \$ 225 million to US \$ 25 million and the value of the Suriname florin began to slide, a trend which would alternately accelerate and slow down, but continue to this day. The Central Bank, however, continued to maintain the official rate of Sf 1.77 to the US Dollar, resulting in an ever-increasing gap between the official and the parallel rate. Gradually, several "official" exchange rates were introduced, making it very difficult to bring the monetary situation under control.

The military-dominated governments of the period initiated measures to mobilize support outside of the traditional political party structures. A mass movement, which was to presage the emergence of the military's own political party – the NDP—and called variously the Stand Fast (*Standvaste*) or the 25 February Movement (*25 Februari Beweeking*) mobilized supporters through previously untried means. Also, the forerunner of local and district level committees was designed, the People's Committee's (*Volks Comite*), which sought local in-put through institutionalized organs aimed at decentralizing communication, participation and decision-making.

In September of 1987 a new Constitution was approved by a referendum and in November of 1987 elections were held. The old political parties, now in the multi-ethnic FRONT coalition, received an overwhelming majority (40) of the 51 seats in parliament. Under the new Constitution the president and the vice-president are to be elected by the National Assembly by a 2/3's majority. If the required majority is not achieved, the president and vice-president are elected by the United People's Council, consisting of the 51 members of the National Assembly, as well as by the 104 members of the newly created District Councils and the 710 members of the Local Councils. These two bodies were called into existence under the new Constitution in an effort to bring about a higher degree of administrative decentralization. Under the new system the president received a greater measure of executive authority. He appoints and dismisses the Ministers.

The 1987 Constitution, which served as the basic document to guide the country during the transition to democracy, remedied, in part, the flaws of its predecessor. It was a precondition, placed by the NDP, that local and regional committees be recognized and included in the Constitution as law. At the same time the statutory inclusion of these decentralized organs broadened the participation of the masses in governance and simultaneously weakened the centralized control of the traditional political parties. This is an important addition to the governing of Suriname and this positive development was in part a result of the process of decentralization and mobilization begun under the military. A residency requirement for National Assembly members promoted the idea that parliamentarians be recruited from minority groups with close ties to the interior and rural regions.

#### *The Country Divided (1986-1992)*

The year 1987 was marked by the transition to a weak form of democratic governance which was to last only until December 1990. Weak because the newly elected Front government of 1987 had only partial control over the strong and influential military. In fact, the 1987 Constitution guaranteed the military the military privileges embodied in two clauses of the Constitution, principally that of maintaining its role as defender of the revolution. These two clauses would not be removed until the 1992 advent of the Venetiaan New Front government, and only then in the context of a dangerous confrontation between the military and the civilians.

In 1986 a conflict broke out in eastern Suriname, which spread in the subsequent years to central and western Suriname. The conflict involved the national army and the Jungle

Commando, an insurgent group consisting mainly of Maroons. At the end of 1986 and during the first half of 1987, severe fighting took place in and around Maroon villages in east-Suriname. Some 10.000 inhabitants sought refuge in neighboring French Guiana, and another 13.000 people from the interior fled to Paramaribo. Lumbering, bauxite and gold mining, and the palm oil industry suffered major setbacks or closed down temporarily or for extended periods in the areas of conflict. In 1989, other illegally armed groups entered into the internal conflict: the Tucayana Amazonas (Amerindian group), Mandela, Angula and Koffiemakka (other Maroon groups).

It is important to note that the war broke out precisely at the time the country was preparing for the complex and delicate transition to democracy, when stakes for both the military and the civilians were very high. Although the war has been called an “internal” conflict, and it was fought out over serious internal issues, there was external involvement of partisan countries whose position was that Commander Bouterse and his military had to be put under pressure to assure the return of the traditional democratic parties. The actions of the Netherlands, the United States, and France appear to have been important sources of relief and support for the insurgents. It is further important to note that foreign support dwindled after the election of the civilian government in 1987 and the insurgency declined sharply in its ability to undertake combat. The insurgency never completely gave up arms during the late 1980’s. On the one hand the military was unwilling to endorse a peace treaty signed with a group they still considered to be dangerous, unpacified rebels. Equally, the Jungle Commando was unwilling to give up arms with a powerful military still in place. The situation would remain so until 1992.

During the late 1980’s tension between the elected Government of President R. Shankar and Commander D. Bouterse of the Armed Forces mounted. In July of 1989 the Government signed the Kourou accord, without the support of the military, with the intent to bring a halt to the interior conflict. The stresses and the strains culminated in the so-called “telephone” coup of December 1990, which dispatched the elected government with one telephone call from a senior ranking military officer. During the weeks thereafter the take-over was sanctioned by Parliament and new elections were called within six months.

*Consolidating Peace and Democracy (1991-2000)*

With the elections of May of 1991 democracy was restored. The traditional political parties once again united in the “New Front for Democracy and Development” and won a majority that proved sufficient to survive five years in office. The NDP, associated with the military, did well as did the private sector-associated DA ’91. This diversity of political choices reflected the complexity of Suriname’s interest groups. The results of the elections were as follows:

Party	New Front	NDP	DA’91	Total
Seats	30	12	9	51

The first two years in office, however, proved extremely challenging to the government of President Ronald Venetiaan. Among other destabilizing events the huge hydro-electric dam was occupied by terrorists and workers held hostage. The successful effort to place the military under clear civilian authority almost resulted in a military coup d'état (it would have been the third) and take-over. The president first had to have the two clauses providing military privilege removed from the Constitution by the National Assembly. Secondly, which is covered in the following chapter dealing with threats to peace, he moved to relieve Commander Bouterse from control of the military. He succeeded on both counts. On the positive side, the Accord for National Reconciliation and Development (Peace Accord) was signed in August 1992, bringing an end to the interior conflict.

In 1993, the Venetiaan Government started a structural adjustment program, in an effort to bring the economy under control. A single official floating rate replaced the numerous fixed currency exchange rates, foreign exchange rules were liberalized, monetary financing of the government budget was halted, the government debt to the Central Bank had been consolidated and a repayment schedule agreed to, subsidies were eliminated and tax collection improved. These measures were not taken without a price. The introduction of a floating rate brought about wild fluctuations in the exchange rate. In January of 1994 the US Dollar was exchanged for 85 Suriname Florins. By November the rate peaked at 600, but in 1995 the rate declined and finally settled at around 400. The rate stayed at this level for about two years (1996 – 1998) until skyrocketing to over 2000 by the end of June 2000.

The early nineties also saw considerable pressure exerted on the communities of the interior. With the signing of the Peace Accord the process of restoring security in the interior got underway. With an adjustment program underway, the Government was eager to develop the gold and lumber resources of the interior, in order to create jobs and supplement the foreign exchange earnings of the bauxite industry. The rapid devaluation of the Suriname currency prompted thousands of young Maroon men to seek employment in the gold sector, where salaries are paid in grams of ore and not Suriname currency, a hedge against the ongoing loss of purchasing power.

One gold exploration company alone secured almost one million acres in prospective lands, and plans for issuing million acre lumber concessions circulated. Vast tracts of tribal lands ended up in gold and lumber concessions. At the same time, thousands of Brazilian gold miners flocked to the interior and joined Maroon men already active in the sector. The pollution of rivers and creeks caused by the effluent of the small-scale miners took on major proportions. Lawlessness and gangs began to take the upperhand in some mining areas. Foreign lumber companies began extracting huge amounts of lumber at rates well above the prescribed cutting limits, established by law to allow for the natural renewal of the fragile tropical rainforest.

Instead of enhancing the social and economic security of the interior population and promoting national development, a partial implementation of the Peace Accord seems to have had a disruptive socio-economic and environmental impact at the local level. The

Government was not able to restore a functional presence in all areas of the interior and the status of chieftaincy remained in limbo. The lack of clear-cut lines of authority resulted in uncontrolled mining and forestry activities creating the problems mentioned above. The critical issue of land rights was totally ignored.

The outcome of the 1996 elections for the interior were an indication of the dissatisfaction of the population with the failure of the Government to implement the land rights provisions of the Peace Accord. The New Front lost ground in the interior to parties that promised to secure land rights for the population of the interior in the future.

Two new parties won seats: the Javanese Pendawa Lima and Alliantie, a party which had ties to the NDP.

The results of the 1996 elections were as follows:

Party	New Front	NDP	DA'91	Pendawa Lima	Alliantie	Total
Seats	24	16	4	4	3	51

The results of the elections showed that the New Front coalition lost its majority in the National Assembly, even though it had a large majority at the local council level. A coalition of two or more parties would be necessary to elect the president. During the period prior to the attempts to elect the president, friction in the VHP block of the NEW FRONT caused a split. Five of the nine members of the VHP disagreed with the lack of democracy within the VHP and the candidate nominated for vice-president. They did not support the New Front candidate. Two attempts were made and the New Front presidential and vice presidential candidates did not receive the required two thirds of the votes. The United Peoples Assembly was convened and the Candidate of the New Front, Ronald Venetiaan, received 407 votes, while Jules Wijdenbosch, the Chairman of the NDP, received 438 votes. On September 14, 1996, the new president was installed.

The five-year term of the president, however, was reduced by a year after two weeks of street protests in May of 1999. On May 12 the exchange rate reached a record 1400, and even jumped temporarily to 2000. Sales figures plummeted and several businesses closed their doors. The monetary authorities were not able to bring the exchange rates under control. The chart included here gives a clear indication of the dramatic increase in the exchange rates after January of 1995.

Graph 2: Exchange Rates – Suriname Florin to US Dollar

(Compiled by Christopher Healy, Paramaribo, July 2000)

While the crisis was brewing President Wijdenbosch departed with a delegation to Ghana on May 16, 1999. The “Structured Alliance,” a civil society solidarity of opposition parties, unions and other civil organizations, convened a meeting and decided to initiate the protest actions again which had been suspended a few months earlier. The Structured Alliance also advanced the idea that an interim government should be installed and several prominent persons in society were mentioned as possible candidates for president and vice-president.

At the same time, “The Union for the Defense of the Constitutional State“, consisting of the bar association and several civic organizations, were protesting the planned installation of five new judges by the President of the Courts, Mr. Alfred Veldema. This dispute centered on the alleged unconstitutional installation of the Chief Judge by the president. The appointment of the five new judges would also be unconstitutional, so they argued. The next day four of the five candidate judges were installed. One reneged. That same day, the meeting of the National Assembly was called off when a large number of protesters entered the building.

When the president returned on Sunday May 23, 1999, several days of street protests had already taken place. In the coming days the number of protesters would increase significantly, and by Wednesday May 26 some 150 unions had joined the strike, which had virtually shut down Paramaribo for ten days. On May 27 ten members of the National Assembly called for a meeting to discuss the situation in the country.

On Friday May 28 the president dismissed the entire Council of Ministers. On Saturday the meeting of the members of the coalition was cancelled because one party (the BVD, a break away group of parliamentarians from the VHP) did not attend while many of the members of another major coalition partner (the NDP) were absent. The leader of the NDP, former military commander Bouterse, the largest partner in the coalition, then called for the resignation of the president. On Tuesday June 1 the National Assembly adopted a motion of no confidence against the president. While the motion was being discussed in the National Assembly, the president sent a note indicating that he would be willing to shorten his term by one year and call elections, provided the National Assembly would also agree to shorten its term by one year. This was agreed and the protest actions were suspended. Attempts by the opposition to get André Telting and Eddy Jharap elected as president and vice-president in the National Assembly failed. A simple majority was not achieved. The Structured Alliance faded from the political scene.

On May 25<sup>th</sup>, 2000 elections were held, one year prior to the expiration of the five-year term of the President. The result of the elections were as follows:

Party	New Front	MC	DNP 2000	DA' 91	PVF	PALU	Total
Seats	33	10	3	2	2	1	51

For the fourth time in less than fifteen years the multi-ethnic (Creole, Hindustani, Javanese, and one labor party – largely Creole) NEW FRONT (and its 1987 predecessor the FRONT) demonstrated that ethnic coalitions could work and function under stress. The “politics of brotherhood” was an essential notion for the construction of stable politics in Suriname. It would seem, to promote inclusion of all Surinamers in their governance, that the idea must be expanded beyond the three major groups and include all Surinamers as well. During the electoral process the NDP fragmented into the Bouterse wing (MC) and the President Wijdenbosch wing (DNP 2000). DA ‘91’s vote share was reduced, the labor-associated PVF won two seats, and the left-wing PALU won one.

The new Government of Suriname, was installed in September 2000, and faced a future full with possibilities and a mandate from the citizens to implement reforms and measures, to secure and stabilize peace, democracy and development in the Republic.

## **1.6 Pluralism, Development and Nation Building**

In the profile above an effort was made to review the history of Suriname from a perspective that would promote awareness, not only of the obvious and visible challenges

faced by the country, but also reveal some of the underlying causes of the problems and conflicts to date. It was noted at the outset that this type of awareness and understanding was a necessary precondition for inspiring action aimed at achieving peaceful, harmonious and sustainable development in a truly democratic setting. We have also tried to assess the prospects for maintaining peace and strengthening democracy against the background of this historical sketch. The overview was divided into four sections, ranging from the Pre-Colonial period to the present. Some of the lessons taught us by this historical overview are summarized below. Our first theme was ethnicity.

The cultural landscape of the coastal plain was transformed dramatically after 1875. The abolition of slavery in 1863 led to the evacuation of the plantations by Africans who sought their livelihood in the city of Paramaribo or in freehold villages as small farmers. Dutch policy was to replace them with two major groups of contract laborers, Hindustani and Javanese contract. Coastal Suriname was no longer an African-European conglomerate but became increasingly Asian. By 1950 well over half of the population was of Asian decent (Hindustani, Javanese and Chinese). Their population share has increased to this day, making the coastal zone –just in raw numbers—more “Asian” than Creole or European.

Conventional thinking, framed in what has been called “plural society” theory, attributes much of the social and political problems of Suriname (and other countries) to the remarkable diversity of Suriname’s population. The assumption of this approach is that the many ethnic groups cannot and will not get along nor accommodate, much less cooperate with each other because they are different and invest their trust, time, and resources in their own group at the expense of other forms of cooperation. Hence, Suriname should be inherently unstable due to complexities associated with its ethnic make-up.

The political history of Suriname, after the introduction of universal suffrage in the 1940’s, does not support this view of things. The maturing of Suriname’s political parties, from the domination of white and Creole elites in the 1950’s, through ethnic political party organization and the constitutional advance to independence in 1975, demonstrates a remarkable stability and consistency of cooperation across ethnic boundaries.

Despite policy disagreements, which were often about economic issues rather than something inherently cultural, and personal feuds which occurred from time to time, the twin concepts of “the politics of brotherhood” (*verbroederingspolitiek*) and “broad basis” (*brede basis*) prevailed from the early 1960’s. Strong and stable governments were most likely to occur when the larger political parties representing the major ethnic groups shared power in a coalition.

To be sure, periods of ethnic tension occurred. We saw, for example, that during the years immediately prior to independence tensions flared. Many Hindustani opposed the path to independence set out by the Creole leaders of the time. Several instances of arson occurred, and thousands of Hindustani left the country and settled in the Netherlands. The NPK I government managed to secure a slim margin for its independence proposal when

Mr. Hindorie, a VHP parliamentarian, changed party alliance. This action was motivated by the desire to diffuse tensions between the two major ethnic groups in the country, and it worked.

The democratic tradition which developed after 1948 was interrupted by the military take-over in 1980. Ironically, that occurrence in 1979-1980 was at a time of unrivaled growth in prosperity, supported, among other things, by a large influx of foreign aid (see graph one, 28). Important for the preceding observation on power sharing was that this government, the NPK II, did not include representatives from the main Hindustani party in its coalition. The military coup of 1980 removed a government with only a slim majority in parliament and weakened by lack of representation of one of the largest ethnic groups.

Jules Sedney, former Prime Minister, scholar and himself head of a multi-ethnic government from 1969-1973, has argued that despite the delicate balance of multi-ethnic governance, called “consociationalism” or rule by ethnic cartels, this type of democracy functioned well in Suriname. And, he argued, that despite its shortcomings this type of democracy is to be preferred above the dictatorial military rule of the 1980’s, because it contains the necessary checks and balances needed to ensure governance acceptable to the people of Suriname. The system of rule during the military period seriously limited the participation of the essential associations of society, and pressure emanating from these groups hastened the return to democratic government.

The history of Suriname suggests that that multi-ethnicity is not an obstacle to harmony, cooperation and governance endorsed by the voters, it is, on the contrary, one of the essential building blocks of stable government. In the Suriname reality, the mobilization and management of ethnic balancing is what makes possible any governance at all. The ethnic group is one of the essential associations of society, and this identity is expressed through participation in clubs, churches/temples, sodalities, residential areas and so forth. It seems that the facilitating role of the government in Suriname is actually strengthened by incorporating representatives from the various ethnic groups. Trying to dominate or ignore this social dimension in government seems to promote passive resistance rather than effective participation.

One of the opening positions of this chapter, that awareness building is a prerequisite for effective action, compels us to reconsider the view that ethnicity is necessarily an obstacle to governance. Of course, the associations of society can be manipulated to such an extent that they have a very negative impact on governance and the well-being of the citizenry. However legitimate these fears, ethnic pluralism can also contribute to a stable government, and in Suriname this has often been the case. Cultural and social diversity can also be seen as an irreplaceable source of spiritual and intellectual richness as well as a source of self-esteem and pride for all humankind, an important development resource. Acknowledging the associations of society can help increase control of citizens of their own well-being and at the same time contribute to the process of nation building.

However, the fragile nature of ethnic coalition building leaves many in Suriname feeling uncomfortable. On July 10, 2000 Ruth Wijdenbosch, a leading spokesperson for the Creole NPS party of the New Front coalition, expressed her concern. On Radio ABC she said that she would feel more comfortable if the New Front were a single political party rather than an ethnic-based coalition.

Our second theme was the gap between the rich and the poor and the poverty that can be associated with the economic conditions in the country. Perhaps it is not possible to link the standard of living to occurrences of conflict in the history of Suriname, but one cannot help noting that many of the conflicts which did occur could be associated with rapid changes in the economic situation of the country.

After the collapse of the Amsterdam stock market in 1773 and the rapid decline in plantation output, and despite three peace treaties concluded in the 1760s, the Maroons war flared up again. During the protest actions in 1933 associated with the arrest of Anton de Kom, two persons were killed and 22 wounded. These events transpired during the depression, which also hit Suriname very hard. Large number of Surinamers were unemployed and had trouble sustaining themselves and their families. The socio-economic context of the military take-over in 1980 was not one of economic decline. Surinamers were living well at the end of the 1970s. The population, however, was becoming increasingly apprehensive, as it became clear that the large show projects financed by the massive influx of development aid were not creating a sustainable economic base. No increase of productivity and new jobs were forthcoming, at least, so it seemed. When the military took over, many gave a sigh of relief and hoped that the new rulers would embark upon ventures resulting in increased but sustainable welfare. This did not materialize.

The absence of checks and balances created a situation in which the foreign currency reserves inherited from the last democratic government were quickly depleted, and when development aid was suspended after the December murders of 1982, the economy went into a sharp decline. The shortage of foreign currency resulted in a parallel market, and the subsequent devaluation of the Suriname guilder impoverished the population at a rate hitherto unknown. In 1984 the Suriname guilder traded for US \$ 0.56 cents. By 1991 this rate had declined to 0.05 cents. In 1994 the rate dropped below 0.0025 cents, in 1998 the rate sank further to 0.001 and in 2000 we saw a rate of 0.0005 cents for the guilder. The Graph 2 (P. 34) gives a good impression of this devaluation in the 1990s.

The weak demand for bauxite products in the early 1980's forced the major companies operating in Suriname to cut cost and lay off workers. Modernizing operations in order to achieve more efficient production and lower costs was opted for in the bauxite town of Moengo in east Suriname. The labor force was reduced from 1200 to below 300. This massive lay-offs and an increasingly harsh and repressive regime by the military fostered a mood of civil disobedience among the Maroons in the area and in 1986 the interior war broke out. The dramatic decline in the value of the guilder between 1998 and 1999 crippled the Wijdenbosch government and, as we have seen above, after weeks of streets protests, the President agreed to shorten his term by one year.

We can conclude from the historical overview that, during periods of rapid economic decline often resulting in a widening gap between rich and poor, the citizenry suffering from a decline in standard of living and impoverishment, will respond forcefully to seek relief. This type of public response has been often been defined by those in power as unconstitutional. A case in point was the response of the government to the public manifestation surrounding Anton de Kom's arrest during the world depression. When protestors failed to disperse they were fired upon.

A recent example were the mass protests against the Wijdenbosch government in May of 1999. These actions were precipitated by hyper inflation in a rapidly deteriorating economy. In this instance, impoverishment and economic pain led directly to social and political instability making it impossible for the democratically elected government to function. Once economic problems created a political crisis of this magnitude, the risk of escalation resulting in serious conflict increased dramatically, and a peaceful resolution is rarely achieved without major concessions. The impact of economic decline and sharpening cleavage between the haves and the have nots posed a serious threat to peace and democracy. Again, this is not to say that there was an obvious causal connection between economic conditions and conflict or suspension of democracy. It was becoming clear from the history of Suriname, however, that good governance was an important condition for maintaining peace and strengthening democracy. This brings us to our third theme, the challenge of incorporating kin ordered societies into the nation state.

Suriname faces a formidable challenge in the process of nation building. Many Surinamers and outside observers decry that the promise of independence was never fulfilled. And, when the post-independence period is examined, they are correct about the facts of the matter. However, after the elections of 2000 we may be witnessing a new realism on the part of Surinamers and their friends. On the same radio program on which Ruth Wijdenbosch spoke, another NPS leader candidly reported that both Suriname and the Netherlands must share the responsibility for not meeting the development goals set forth in 1975 nor have they succeeded in resolving the dilemmas of decolonization.

Suriname is one of the many developing nations in the world seeking to establish overriding national alliances that transcend regional and ethnic differences. In addition to these complex diversities, however, looms the additional challenge of dealing with the issue of kin ordered societies existing in the context of a nation state modeled on western norms.

As noted above, several kin ordered societies exist throughout the hinterland of the country, and they can be grouped into two categories: the indigenous Amerindian population, which lived in the area long before the first Europeans arrived in the early 1600s, and the descendants of rebel African slaves who escaped from the plantations and settled along the rivers of the interior during the 17th, 18th and 19th centuries.

Opinions on what to do about the situation vary from one extreme to the other. Some believe that kin ordered societies are remnants of earlier forms of organizing society, and that the process of assimilating ethnicities into the nation state will follow a "natural"

course. Through exposure to Western influences, members of these communities will sooner or later abandon their ideology of collective ownership and family-based political participation, and embrace a more individualistic western economic and political order. At the other extreme there are those who believe that kin ordered societies are viable and functional socio-cultural entities and that their members must be afforded the opportunity to preserve their way of life in the context of the modern nation state, but also be granted autonomous administration of their territories.

During the past century, many of the kin ordered societies have disappeared. Some have been incorporated into modern political systems, but a growing number are advocating cultural revival and are seeking formal recognition of their socio-cultural, economic and political traditions. Out of necessity, they are also seeking legal protection of their resource based economy. In Suriname members of kin ordered societies are becoming increasingly vocal and now demanding legal recognition of their social, economic and political institutions. They want rights to land, access to natural resources and recognition of chieftaincy.

The assumption that kin ordered societies will automatically assimilate into the nation state, that this process will follow a natural course, and that their institutions will fade away with time, is not born out by the events of the past two decades. On the other hand, taking on a completely pro-position on the status of the people of the forest at the expense of coastal interests and enterprise will only end up alienating members of the legislative and executive branch, precisely those authorities whose opinions and views will shape modern Suriname, and who are in a position to do something about the future status of kin ordered societies.

To be sure, kin ordered societies are viable and functional socio-cultural entities. The Governments of the modern states need to recognize this. However, this does not mean that all cultural practices must be preserved and maintained at all cost. A traditional chief from Ghana recently argued that "our political institutions need to play a complementary role rather than a competitive role with our traditional institutions (such as chieftaincy) in moving Africa forward." He notes, however, that in order to achieve this

"our traditional institutions need some major reform and empowerment. We must within ourselves eschew avarice, unnecessary litigation and unwarranted autocracy in order to enhance our own credibility. We also need to modernize some of our cultural practices and religious beliefs to make them acceptable to the entire society."

In chapter 2 we explore conflict *and* development as related processes.

#### Questions and Issues:

1. How has geography and climate affected the emergence of "two Surinames?"
2. If you accept the position of two Surinames, would you consider three or four Surinames? If so, what would they be based on?

3. Did the arrival of Independence for Suriname differ in any substantial way from other countries with which you have experience or knowledge?
4. What was (is?) Suriname's "challenge of independence?"
5. What was the genesis of the 1980 coup? Was this coup more typical of Latin American military coups or the African experience?
6. When did "democracy" conclusively return? With the elections of 1987?, 1991?, 1996? or 2000? We will deal with these questions later but what do you surmise are the difficulties in the transition from authoritarianism to democracy?
7. Is cultural pluralism and multi-ethnicity a problem and extra burden for the emergence of an organic nation-state? How does one get around this? Is ethnicity more problematic than "class?"

## **CHAPTER II**

### **ACHIEVING AND MAINTAINING PEACE**

Chapter One outlined the events that defined the modern history of Suriname. As we have seen, however, several political events went terribly wrong in the late 1970's and throughout the 1980's. Authoritarianism and war cleaved the country and resulted in the destruction of democracy, life and property. Suriname lives with that legacy today.

The military government, established soon after the 1980 coup, oppressed the coast and soon began to expand its control and implement its revolutionary policies in the interior, the other Suriname. This would result in nearly seven years of bloody civil war; the so-called "Interior War" of the Jungle Commando headed by Ronnie Brunswijk. That story is told here in some detail because as of late 2001 the post-conflict issues are not yet resolved nor are the peace treaty protocols implemented. The interior of Suriname remains unsettled.

#### **2.1 The Conflict: 1986-1992**

In order to maintain peace it is essential to understand the nature, the causes, the life cycle, and the post conflict impact of the interior war. Needless to say, this type of analysis demands an impartial examination of the events and a good insight into the recent history of the country. A great deal of this chapter will consider the following questions:

- What type of conflict was the interior war?
- What were the causes?
- How did the conflict emerge, and what conditions and factors contributed to its cessation?
- What are the post conflict conditions in the conflict zone, but also in the country as a whole?

Conflict is defined as a situation in which two or more parties have conflicting interests. These parties can be individuals, small or large groups, or countries. If the divergent interest of countries or groups within a country cannot be integrated peacefully, a violent solution is often sought. Conflict situations vary from a very low level to a very high level; from taking on a hostile attitude to taking actions against the opponent that may

wound or kill and cause extensive material damage to public or private property. Interests can clash over issues related to resources, power, identity, status, and values. Experts active in conflict resolution generally agree that most conflicts are caused by individuals or groups and can be ended by individuals or groups. Conflicts and the prevention of their recurrence can be greatly facilitated by an understanding of the factors that created problems in the first place.

In the preface to a publication of the European Platform for Conflict Prevention and Transformation, Mr. Jan Pronk, former Dutch Minister of Development Aid and prominent figure during Suriname's move to independence, noted that

“[c]onflict and development are two sides of the same coin. Conflict is an inherent part of development. Changes in distribution patterns or in power relations lead to conflict of interest. If the divergent interests of the various groups within society cannot be integrated peacefully, a violent solution is sought ..... In view of the often-disruptive nature of development, peace-building must be incorporated into the development process.”

The interior conflict can be divided into two periods. The first covers the period between July of 1986 and August of 1989, when the two main actors were the National Army and the Jungle Commando (JC), a group of young Aukaner Maroon rebels who initiated the conflict with an attack on the army outpost at Stolkertsijver. Most of the fighting took place in East- and Central-Suriname. The second phase of the conflict began in August 1989 when the Tucajana Amazonas (TA) announced their entry into the conflict, by hijacking the Coppename river ferry with forty vehicles on board. This group consisted for the most part of Carib and Arowak Amerindians. The TA took control of western region of Suriname, but was also active in the Amerindian communities in the districts of Marowijne and Para.

In September of 1989 the Mandela group announced its existence to the media. The group was formed by young Matawai Maroons who operated along the Saramacca River region. Later on, yet another group was formed by Matawai youth, the Koffiemaka. This group also operated in the Saramacca River region.

In October of 1989 the Union for Liberation and Democracy (ULD) took over Mungo. This group was an offshoot of the JC, established to “disguise” the Mungo take-over as an act committed by a group other than the JC.

In May of 1990 the Angula group was formed by several Saramaka Maroons and challenged the JC in the Central Suriname region. Both the Mandela and Angula received technical and logistical support from the National Army.

During the second phase of the conflict, the Jungle Commando was challenged by the forces of the National Army, and also by the fighters of the Tucajana Amazonas, the Mandela and Angula. The JC was forced to relinquish control of several regions in Central Suriname.

#### The First Phase: July 1986–August 1989

The interior conflict in Suriname started out with several direct engagements between the military and the rebels. On the night of July 21, 1986, a group of rebel Aukaner Maroons from East-Suriname attacked the military post at Stolkertsijver. This small outpost is located near the bridge across the Commewijne River, some 50 kilometers east of Paramaribo. Twelve soldiers were taken hostage. At the same time, an attack was launched on the military camp at Albina along the Marowijne River, the border with French Guiana. The group of rebels became known as the Jungle Commando (JC). The conflict quickly spread throughout the entire Marowijne District, one of the ten administrative and electoral constituencies of the Republic of Suriname.

In the months that followed, the JC launched several attacks on the base camp at Albina and on military platoons patrolling the eastern and central part of Suriname. On August 20, 1986, the Suriname Aluminum Company (Suralco) was forced to shut down the bauxite processing plants at Mungo. The next day the JC attacked a platoon of the National Army at Ajumara Kondre along the lower Marowijne River. Several soldiers were killed. The JC fighters were very mobile and moved freely up and down the Marowijne, Lawa and Tapanahoni rivers. In September, the JC hijacked a single engine Cessna at Apetina (Puleowime), an Amerindian village on the Tapanahoni River. This was the first of several hijackings that would take place.

At the end of November the JC destroyed two more bridges along the East-West highway and took over Mungo. A patrol of the National Army entered the area between Mungo and Albina from the north via creeks and attacked the small Aukaner settlement of Moi Wana. Over 30 women, children and elderly men were killed. On December 1, the government issued Decree A-22 declaring the state of emergency for the area. On December 2, the National Army drove the JC out of Mungo. By mid December the French authorities reported that already 5,000 refugees had sought a safe haven in French Guiana. On December 12, the formulation of a new Constitution was announced, paving the way for a return to democratically elected government.

At the end of 1986 the son of Paramount Chief Aboikoni of the Saramaka Maroons was kidnapped on the Upper-Suriname River, indicating that the JC was already active in this area. In January of 1987 the fighting spread to Central Suriname. Several towers of the high-tension power lines between the dam at Afobaka and the alumina smelter at Paranam were blown up. The aluminum refinery was shut down and the capital city of Paramaribo was left without electricity. In February the villagers of Pokigron, the first Saramaka village above the hydro lake, requested protection from the government against harassment by men of the JC.

That same month the JC destroyed the powerhouse at Mungo. The economy of East Suriname had ground to a halt. The refinery of the 3,000-hectare palm oil plantation at Patamacca was destroyed. Fortunately no one was killed. Lumber companies abandoned their forestry camps in the Patamacca area and expensive equipment was lost. Because the bauxite production in Mungo was shut down, the reserves of Suralco were depleted and for the first time in the history of the country bauxite had to be imported. By

February 1987 the number of refugees in French Guiana was 6,500 and by April it had grown to 8,000. Suriname sought assistance from the International Commission of the Red Cross and the United Nations High Commissioner for Refugees.

During the month of May some heavy fighting took place in the Mungo and Albina area, but the army consolidated its position and by August the bauxite workers in Mungo were able to return to work. On September 30 a referendum was held to approve the new draft Constitution of the Republic of Suriname. An overwhelming majority approved it and the road to the restoration of democracy was opened.

On November 25, 1987, elections were held for the first time in seven years, and the traditional political parties won forty of the fifty-one seats. The JC would now be fighting the National Army of a democratically elected government.

Positive news notwithstanding, the year closed with a serious human rights violation. The National Army reportedly arrested seven Maroon men in the village of Pokigron. They were driven north along the road to Brownsweg. The truck was stopped and the men were asked to dig a large hole. They were shot and buried in the hole. One of the men rolled down the embankment of the road after being shot and survived a few weeks. He was taken to town by the Red Cross and testified to the killings.

The intensity of the conflict waned somewhat in 1988. There were less direct confrontations between the army and the JC. The rebels did, however, resort to hit-and-run tactics and continued to raid military outposts and police stations in order to secure weapons and ammunition. When two vehicles of Suralco were hijacked in September of 1988 the JC denied involvement. In 1988, there were a number of tragic events involving Saramaka settlements in Central Suriname. There were inhabitants in a number of villages who disliked the authoritative manner of Brunswijk, who was an Aukaner, in dealing with the Saramaka communities of the Upper-Suriname River. There were also Maroons living in villages who had relatives in the army and who sympathized with the political ideas of the revolution. It was also reported that in the case of Pokigron, one of the Chiefs had pointed out suspected sympathizers of the JC to the army, and that these men were arrested and executed by government forces. The JC, in turn, undertook various reprisal actions against inhabitants of several Saramaka settlements. In April of 1989 the JC attacked the village of Pokigron and almost the entire settlement was burnt to the ground. The next day the first eighty displaced persons arrived in Paramaribo. The JC also attacked the settlement of Brownsweg and a number of houses were also destroyed.

In 1988 several organizations were asked to mediate in the conflict and the first peace efforts were made. The mediation by the Commission of Christian Churches resulted in the Protocol of St. Jean of June 28, 1988, but the government never formally endorsed the results of this agreement.

A year later talks were resumed and on June 7, 1989, the JC agreed to a cease-fire. A month later, on July 21, the Accord of Kourou, named for the town in French Guiana, was signed. Both the government and the National Assembly endorsed the

agreement, but the army rejected it. There was opposition to the provision under which the ex-fighters would be incorporated into the police force. It was also argued that the accord was not in the interest of the Amerindian population, who would be at the mercy of legally armed ex-fighters of the JC in the police force, if the accord were to be implemented. On July 25, 1989, the Commander of the Armed Forces and chairman of the new political party NDP, Desi Bouterse, announced his disappointment with the Accord of Kourou. The French government, however, indicated that it was pleased with the accord, and that the refugees could now return home.

This disagreement resulted in a number of new developments that considerably altered the nature of the conflict. Four new warring groups would enter the conflict, and the stage of the fighting would now extend westwards, encompassing almost the entire interior region and a large part of the coastal area of Suriname. Only Paramaribo and its immediate surroundings would be considered safe from the threat of death and destruction.

#### The Second Phase: September 1989–August 1992

On August 31, 1989, the ferry at the Coppename River, 88 kilometers west of Paramaribo, was hijacked. One policeman died and the ferry was commandeered upriver, with forty cars and busses on board. The vehicles were unloaded at the Pikin Saron bridge, some eighty kilometers upriver and were used to take control of Carib and Arowak Amerindian villages along the 300-kilometer road from Zanderij to Apura. At the same time, two Maroon groups announced their existence, the Angula, consisting of primarily Saramaka youth, and the Mandela, manned by young Matawai Maroons. From the onset these groups cooperated with each other, and it was suggested that the National Army supported the new actors in the conflict. A few days after the hijacking of the ferry, Prime Minister Henk Arron told the National Assembly that he had no indications that the TA were armed by the army but, in early 1992, President Venetiaan said that it was clear who had armed the fighters in the western part of the country.

The JC reacted to these developments by taking over Mungo for the second time in October of 1989. This take-over was carried out under the aegis of a new group with a new name, the Union for Liberation and Democracy (ULD) headed by Kofi Ajompong, but Ronnie Brunswijk remained the *de facto* leader of both the JC and the new group. The army wanted to take hard action and drive the new group out of Mungo, while the civilian government seemed to take on a more lenient attitude against the occupiers.

The government of President Shankar backed down on the Kourou Accord, and in November of 1989 the Commander of the National Army, Desi Bouterse, took the initiative to begin negotiations with the JC. These talks notwithstanding, some serious clashes occurred in the weeks after Bouterse began his talks. Early morning December 4, 1989, a group of JC men accompanied by mercenaries attacked the army post at Kraka. Seven soldiers died. Apparently Brunswijk was not happy with the manner in which this attack was carried out and the leading mercenary was guideedly shot through the head when he returned to Mungo. Nevertheless, the talks between Bouterse and Brunswijk continued.

Eventually, the civilian government took the lead again in the peace talks, and on March 24, 1990, a major meeting got underway in the presidential palace. The president himself took charge of the talks. The talks were attended by the JC and the traditional authorities, and even refugee leaders were flown in from French Guiana to participate in the deliberations. The Tucajana Amazonas, however, refused to participate in the talks. The mood at the deliberations was tense and when word got out that a few days earlier a mysterious airplane with 1,000 kilos of cocaine had landed in the Mungo area, the talks fell apart.

In a scuffle at the cabinet of the Commander of the Armed Forces, two bodyguards of Brunswijk were shot. The National Army surrounded Hotel Ambassador, where the JC delegation was staying. The refugee leaders fled for a safe haven at the French Embassy until they could be shuttled out of the country. Brunswijk and the other members of the JC delegation were arrested. On March 28, fighters of the JC occupied the dam at Afobaka and the electric power to Paramaribo was cut off. The Marshall Creek bridge on the road to Afobaka was blown up and the production of bauxite in Mungo was halted by the JC. Brunswijk and the other JC members were released, and tension was reduced.

At the end of April the army landed troops in the Amerindian village of Pelelu Tepu along the Upper-Tapanahoni River and armed youth with military weapons. This was probably intended as a strategy to attack the JC strongholds along the Tapanahoni from the south. In May the military began a campaign to dislodge the JC from Mungo. As the army troops were advancing into Mungo, the JC took over the hydroelectric dam again and threatened to open the spillways, thus flooding the Suriname River with millions of gallons of water. At the end of May, the Angula group drove the JC from the dam and the army advanced in the direction of Mungo. The JC undermined Suralco facilities with dynamite and threatened to blow them up unless the president called a halt to the advance of the army into Mungo. The JC attacked Pelelu Tepu and disarmed the militia. Several hundred Trio and Oyanas (Wajana) Amerindians fled across the border into Brazil. Around mid-June the army and the JC were involved in heavy fighting, and on June 20 the army liberated Mungo. The JC blew up the office of Suralco and several other facilities on the way out.

In August the army attacked Langatabiki and tried to dislodge the JC from this island in the Marowijne River, some fifty kilometers upstream from Albina. The fighting continued and the villagers crossed the border into French Guiana, adding several hundred persons to the refugee population. The army finally took Langatabiki over in September.

Meanwhile, in the capital Paramaribo, political events were unfolding; in December of 1990 the so-called "telephone coup" took place, and the democratically elected government of President Ramsewak Shankar was removed from office. International condemnation of the take-over was overwhelming and the interim government promised elections within six months. The Permanent Council of the OAS repudiated the military coup and issued an appeal for reestablishment of the democratic institutional order. In May of 1991 elections were held and the Venetiaan-led FRONT returned to power. In

March of 1992 President Venetiaan installed the peace commission and talks to end the conflict began again. A detailed account of this story continues below.

## **2.2 The Type of Conflict**

It is difficult to precisely explain why and how tensions between parties with conflicting interests involve into a violent conflict or war, or to predict when such an escalation will take place. Efforts to achieve and maintain peace, however, will most certainly benefit from insights that can be gleaned from previous experiences. We have reviewed the main events that transpired in the course of the conflict. We will now try to identify some of the characteristics of the six-year conflict.

### *Force and Coercion*

The type of *force and coercion* used included conventional war, guerilla tactics, and intentional displacement of persons, besides destruction of private property and several instances of serious human rights violations. The interior conflict in Suriname started out with several direct engagements between the Suriname national military and the rebels. The first six months of the conflict were characterized by direct engagements between the military and the Jungle Commando. As the conflict wore on, however, the Jungle Commando shied away from direct confrontation and resorted to ambushes and hit-and-run military tactics. The JC did continue to attack military and police outposts and stations in order to secure weapons and ammunition.

Most of the material damage was done with fire and dynamite. Infrastructure, private houses and public buildings throughout the war zone were destroyed, either to protect through isolation areas occupied by the rebels, or to retaliate after demands were not met. For example, the office of Suralco and several other facilities were blown up in Mungo when the government did not halt the advances of the army to the east of the country. The National Army, likewise, used fire to destroy large parts of Albina in order to prevent the JC from using uninhabited structures as a cover for attack on the military camp. The National Army also destroyed houses of persons who collaborated with the JC.

Throughout the conflict both sides took actions against civilian targets. This also contributed an ethnic dimension to the conflict. The National Army burned Mungo Tapu, the largest Aukaner Maroon village in eastern Suriname, to the ground. Only the church and part of the school were left standing. It was also noted that the small Aukaner settlement at Moi Wana was attacked by a platoon consisting for the most part of Amerindian soldiers. Over 30 women, children and older men were shot. The Jungle Commando, in turn, took revenge on several occasions. The most notable was the attack on the Saramaka village of Pokigron in April of 1989. The Jungle Commando burnt this Central Suriname village to the ground as a reprisal for apparent collaboration with the army, and the entire population fled to Paramaribo. The army, in turn, burnt down some twenty houses in the village of Botopasi, as a reprisal for collaboration with the Jungle Commando. During the conflict the army detained over 100 Maroon men suspected of

being collaborators of the Jungle Commando, without ever being taken to trial. They were released after an intervention by the International Commission for the Red Cross..

There was no ethnic cleansing during the conflict, however. In the early stages of the fighting the National Army used public announcements to urge Maroons in East Suriname to move out of their respective areas of residence. As noted above, one village was totally destroyed and houses of other villages were burnt in East Suriname. These actions were not prompted by ethnic hatred, but primarily by the perceived need of the military to prevent the rebels from using communities as cover for their hostile acts. This is typical of a guerilla type war. The JC only maintained a relative small number of regular fighters under arms. In the different areas intermittent use was made of young volunteers to participate in the activities of the JC. The number of men in full time service was a little over 100, but the JC could field between 500 and 1,000 men at the height of its popularity. Communities in which leading members of the JC were born or raised, or were know to have resided, were viewed with particular suspicion.

However, there were several cases of outright human rights violations perpetrated by both the National Army and the Jungle Commando. Killings of civilians at Moi Wana and along the road to Pokigron allegedly by the military are examples of these violations. There were several guides of killing or torture of prisoners. At one point during the war the JC killed two National Army prisoners. It was claimed that the instruction from the JC headquarters in Stoelmanseiland—"do not take prisoners"—were not properly understood. Members of the JC killed the prisoners with machetes. After the war several shallow graves were found of Maroons who were summarily executed.

The conflict also produced a sizeable refugee population. At the end of 1986 and in early 1987 the National Army published announcements urging civilians living in the villages along the Cottica River to move to safer locations. A considerable number of houses along the road between Stolkertsijver, Mungo and Albina were repeatedly sprayed with bullets and many were burnt down. Thousands of residents of East Suriname fled to Paramaribo, while others crossed the border into French Guiana, and the refugee population abroad swelled to over 10,000 persons. Many Maroons living along the border with French Guiana fled across the river and settled in camps on French territory. The number of refugees was high enough to warrant a permanent presence of the United Nations High Commissioner for Refugees in Suriname and French Guiana. The number of displaced persons who fled to the capital city outnumbered the refugees on foreign soil. They lived under very poor conditions in makeshift shelters.

Damage to the infrastructure and businesses was also considerable. On several occasions the Jungle Commando hijacked airplanes and held the pilots hostage. The rebels hijacked numerous vehicles belonging to Suralco and private persons. On several occasions power lines between the dam at Afobaka and Paramaribo were blown up with dynamite, resulting in prolonged power outages. When the JC was dislodged from Mungo in June of 1990, the rebels blew up the Suralco offices and damaged several other facilities. In the conflict zone the rebels seriously damaged roads with dynamite during attempts by the rebels to ambush passing military, and destroyed quite a number of bridges during

attempts to fend off the army. The Patamacca palm oil plantation was abandoned and suffered major losses. Almost all lumber activities in the area were shut down. Transport, retail and wholesale business suffered major losses, as entire stores were plundered and burnt down.

The fighting in Marowijne District and the destruction of Albina isolated southeast Suriname during the interior conflict. Maroons living further upriver were forced to turn to towns in French Guiana, such as St. Laurent, to purchase goods and supplies. The devalued Suriname guilders were not accepted on French soil. Maroons and members of the JC were forced to find a source of currency acceptable to French businesses. During the early 1980s the Marowijne, Lawa and Tapanahoni rivers had become preferred locations for gold dredges. Gold was accepted as a method of payment and Maroons living in the areas isolated by the war were forced to take up gold mining in order to be able to purchase supplies across the border. During the conflict the Jungle Commando began to collect impromptu “taxes” from gold miners working in the area, and eventually members of the JC became active in dredging for gold. While the interior conflict had a negative impact on the economic situation in the country as a whole, it spurred considerable activity in the gold mining sector of East Suriname. The conflict also took on an economic dimension, which would become manifest during the peace talks. The representatives of the JC demanded that the issue of access to gold mining concessions be included in the peace accord.

Throughout the conflict the government maintained an intense propaganda campaign against the Jungle Commando, which was depicted as a group of terrorists supported by the Netherlands and mercenaries. Conversely, the Jungle Commando waged a propaganda war in the Netherlands with the support of the resistance groups, and claimed to be fighting for the return of democracy.

In sum, the conflict started out as an all out civil war, with direct engagements and field battles, but as time wore on hit-and-run ambushes replaced direct engagements as the preferred tactic of the Jungle Commando. All-out war evolved into a crisis situation or low intensity conflict. There was a lower level of lethality; however, the level of social and economic disruption grew worse and the conflict dragged on. Government officials, teachers and medical personnel were not willing to risk their lives and their material possessions by residing in the conflict zones. At some locations a humanitarian emergency developed, and assistance was needed to sustain the local population. As it evolved, the conflict took on an increasingly political and ethnic dimension. From an economic perspective, the conflict was very destructive, despite some local upsurges in gold mining to sustain the JC and the local population in eastern Suriname. Serious human rights violations occurred throughout the conflict, and the ethnic make-up of the various groups that challenged each other, did bring about tensions, but fortunately these sentiments seem to have dissipated in the years after the peace was achieved.

*Substantive Issues*

At the outset the *substantive issues* seemed to revolve around a conflict of governing ideologies. The development of this conflict goes back to the 1980s when the military leadership took over the country. With this take-over the stage was set for a split between the main political ideologies. As the months passed political leaders of the nationalist and socialist parties gained influence with the young military leaders and began to play an important role in policy making. Ideas, which did not find their way into the traditional political platform, were now developed and promoted. These new ideas were fielded in the context of an unrepresentative form of government, which did not promote inclusive forms of power sharing. A manifest of the revolution was produced describing the “rise and fall” of the old political system and the lack of development, and the failures of the development efforts were attributed to colonialism and neo-colonialism and the weak national consciousness of the upper class which dominated the business community.

During the second phase of the conflict a new substantive dimension was added. Three years of conflict pitted the National Army against the JC. The guerilla group consisted for the most part of Aukaner Maroons and it had its support base for the most part in the Aukaner villages of East and Southeast Suriname. As the fighting developed, the Amerindian villages in the conflict zones began to suffer the negative consequences of violence and the lack of government control. They began to search for means to protect their settlement and to secure their interests in the region. It was the Amerindian groups who supported the Tucajana Amazonas, and they began to bring into the discussion the causes of conflict related to the status and well being of kin ordered societies. The Accord of Kourou was rejected by the Amerindians because they felt that incorporating ex-fighters of the JC into the police force would side step the issue of the status and well-being of people living in kin-ordered societies. The matter of the status of chieftaincy and land rights would not be addressed. These and other issues would eventually become essential components of the peace accord of August 1992. The rejection of the Kourou Accord was well received by Commander Bouterse and his supporters, who were dead set against any measures which would enhance the status of the JC, or give the ex-fighters some kind of official role in the state apparatus.

### *Parties to the Conflict*

Initially the *parties to the conflict* were the military leadership and the army they controlled, on the one side, and the group of young Aukaner Maroons that formed the Jungle Commando, on the other. The clash started out as a confrontation between the military leadership of the country and a regional indigenous community. But as the conflict evolved, the already tense political situation in the country prompted many to take sides. Those persons and groups supporting the revolution and the military leadership depicted the rebels as traitors and mercenaries, while opponents of the undemocratic government quietly hoped that Ronnie Brunswijk and his men would be able to challenge or defeat the National Army and thus damage the credibility of the military leadership.

The overview of the history of Suriname in Chapter I indicated that Suriname inherited from its colonial past multi-ethnic make-ups as well as a social divide between the coastal

area and the interior. It was also noted that ethnic and regional differences as such do not pose a threat to political stability, but that these conditions may be negatively exploited by one or more parties seeking to advance their interests. The interior conflict did not start as a clash between ethnic groups. Ethnic identity did become an issue, however, as groups living in the war zones were drawn into the conflict. The area in East Suriname where the conflict started is populated for the most part by Aukaner Maroons. However, interspersed between the Maroon settlements are quite a number of Amerindian villages, both Carib and Arowak. These communities ended up in the middle of the fighting. Many Amerindian youths were part of the National Army, and many more were recruited as the fighting continued. This situation ended up pitting Maroons in the Jungle Commando against Amerindians in the National Army.

As the fighting spread to Central Suriname, other Amerindian and Maroon communities were also dragged into the conflict. In fact, the Saramaka Maroons ended up fielding their own guerilla group, the Angula, with covert support from the armed forces. The Matawai Maroons fielded two groups, first the Mandela group appeared on the scene, and then the Koffiemaka announced its existence. These groups also seemed to have been supported by the National Army in their fight against the JC. Even though the conflict did not start out as an ethnic conflict, it did attain this dimension as the fighting spread to Central Suriname and more and more communities were dragged into the conflict.

### **2.3 The Causes**

In discussing the causes of the conflict, a distinction can be made between the more enduring structural conditions that led to the conflict, and the more immediate causes, including the enabling and triggering factors. In the discussion below a distinction will be made between the more enduring structural conditions, the systemic causes, the more recent enabling factors, the proximate causes, and the immediate causes, the triggering events. These distinctions can be illustrated with an example. In the case of the interior conflict of Suriname, over-dependence on development aid could be considered a structural condition, a systemic cause; dissatisfaction about the use and contribution of the aid to the well being of the people could be considered an enabling factor, a proximate cause; while the economic impact of the suspension of development aid after 1982 may have helped trigger the conflict. The suspension itself, however, could also be a proximate cause. After all, development aid can help lessen the negative impact of certain structural conditions on the lives of the people in the country. When aid is suspended, this positive mediating role ceases to exist. These are very fluid concepts that are used to describe hyper-complex situations. It is not always easy to decide if a factor is structural, enabling or triggering. Moreover, the factors that brought about the transition from a political dispute to a violent conflict in 1986 are numerous and difficult to identify. There will be no consensus among experts about the relative importance of the structural, enabling and triggering determinants, and yet, we should try to at least identify what we think are some of the key factors that contributed to the outbreak of the conflict. Let us look first at the structural considerations.

#### *Structural Determinants*

As we have seen in the brief overview of the history of Suriname, the countries' colonial legacy left it with a multi-ethnic population, but also with a socio-cultural and economic gap between the coastal area and the interior. These conditions by themselves need not be problematic. In general ethnic relations in Suriname are quite good, and relations between the coastal area and the interior have also been cordial. Ethnicity and the differences between the coastal area and the interior were not the driving factors in the interior conflict, but they became a factor once the conflict was set in motion. The initial conditions for the conflict, however, were set in Paramaribo, five years after the massive influx of development aid had started and had yielded almost no tangible result.

The take-over by the military in 1980 brought into focus the contrasting views entertained by politicians regarding the development of the country. On May 1, two months after the military took over the country, the appointed President Henk Chin A Sen presented a government statement on Independence Square calling for an overhaul of the government and the private sector. A process of renewal involving the political, social, economic, and educational system would be initiated. The statement noted that large-scale corruption, paternalism, deception during elections and electoral fraud had left Suriname a democratic country in name only. It was suggested that in reality the country was not a parliamentary democracy. Under the new system a law regulating internal democracy in organizations wishing to participate in the elections would force the parties to adopt more democratic decision-making procedures. The old political system was to be blamed for the lack of development, or the failures of the development efforts. The military government promised drastic measures to ensure that the conditions prior to 1980 would not return to everyday life. To the supporters of the democratically elected leaders of the past this promise sounded more like a threat than an assurance of a brighter future.

Not surprisingly the military and their revolutionary advisors opted to create ruling and administrative structures, which would serve to consolidate their power at the expense of the traditional political parties, churches, and other forms of assemblage and organization. Two such instruments were People's Committees (*Volks Comité*) and People's Militia (*Volks Militie*), which were largely grass roots organizations to mobilize mass support for the revolution on the one hand, and recruit support for the regime through new channels dominated by the revolutionary elites.

To be sure, regional representation in Suriname to this day is made difficult by language and cultural barriers, especially between the coastal area and the interior, as well as by the large distances. The highly centralized government finance system with limited return of revenues to the contributing regions is also a structural problem that still prevails. The latter highlights the contrast between the coastal area and the districts where major mineral and forestry extraction take place. No formal legislation exists to this day to establish the integration of the kin-ordered societies into the nation state. There is a limited government presence and control of the hinterland. These are all factors that existed then, and still exist today. The claim that the process of state formation is still incomplete, and that the democratic tradition is not fully developed, is reasonable. However, this does not mean that in the period prior to 1980 Suriname was a democracy

in name only. The historical overview indicates that the Suriname's democratic tradition made some important advances in the period 1948-1980. After the restoration of democracy in 1987 and 1991 the process of democratic development continued unabated. The discussion about the need for internal democracy in political parties is slowly beginning to take shape. The newer political parties are strongly advocating internal democracy, but this trend has not yet made significant inroads in a number of established political organizations.

In looking at the causes of the interior conflict at the *local level*, several structural conditions stand out. The fact that the status of traditional leaders is not legally defined, and that there are no territorial safeguards for the Indigenous and Maroon peoples may have something to do with the fact that their traditions were not respected at the time.

In the interior the People's Committees formed alternative governance that ran directly into conflict with the traditional authority of the Maroon chiefs. Pitting the People's Committee against the Chieftaincy and, in fact, trying to displace and ignore the traditional leadership as this revolutionary policy did, would be one of the key issues that led to conflict. Disregard for Maroon practices was widespread and Maroons themselves were stereotyped as retrograde. The coastal military leaders and their clique of supporters tended generally to hold all aspects of Maroon culture—religion, aesthetics, and language—in disregard.

The introduction of the money economy into the production for consumption economy of the Maroons and Amerindians also had a profound impact. As the reliance on imported goods increased, Maroons were forced to spend more and more time in money earning activities. The men were active in the lumber trade; the women in the Mungo area would produce ginger, peanuts and Chinese yams for sale in Paramaribo. This increased competition for resources. The government-owned lumber company and several private firms secured lumber concessions in the traditional residence areas of the Maroons, where they had harvested trees for over 150 years. Very few Maroon women were given title to land, and the gardens surrounding the villages closer to Mungo were often taken over by local residents or persons from town. These circumstances no doubt contributed to the erosion of the authority of the traditional leaders, who could do little to fend off occupation of land or forest by persons with official title from town.

At the *international* level, the over-dependence on external aid for foreign income could also be considered a structural determinant of the conflict. In early 1983 development aid was suspended after the execution of fifteen prominent citizens, including the dean of the bar association, a number of attorneys, several pressmen, and a leading labor leader. Though it represented a minor portion of the overall government budget, development aid was responsible for over 40 percent of the foreign currency earning of the country. Those appalled by the human rights violations committed by the undemocratic military government quietly welcomed the suspension and hoped that it would expedite the return to democracy. Officially, the suspension was depicted by an illegal unilateral act committed by the government of the Netherlands.

The structural over-reliance on the bauxite industry can also be considered a contributing factor. Fluctuations in this sector can and often have had a negative impact on the economy of the country. After World War II the bauxite industry became the most important foreign currency earner of the government and in the eighties this industry accounted for over 80 percent of Suriname's foreign income. Because it is an extractive industry, the reliance on the bauxite sector carries with it the risk that one day the resource that brought so many good tidings will be depleted. From a structural perspective, that is, in looking at objective changes in parties' material circumstances, we must note the mass layoff of Maroons in Mungo by Suralco in the mid-1980s.

In those days one of the main topics of discussion was the pending depletion of the reserves near the mining town of Mungo. The mines would be relocated further east to the Adjuma Hills, and Suralco, the mining company, would no longer need the infrastructure and facilities of Mungo. Surely the capital city of the Marowijne District would not become a ghost town, but a pullout by Suralco would have a very negative impact on the local economy. The company decided to cut back on services provided to employees and the Mungo community. Many lower ranking employees, such as gardeners and service providers, were laid off, or offered a transfer to new local contractor companies that paid considerably less. The company began negotiations to transfer the infrastructure and utilities to the government.

### *The enabling factors and triggers*

**In the case of the interior conflict it is difficult to distinguish the enabling and immediate causes. As the conflict escalated, different factors came into play, some of a more long-term nature and others more immediate. And yet, we will try to identify some of the major issues that fueled the conflict.**

As noted above, the unrepresentative form of government of the 1980s did not promote national unity, the situation led to an increase in political tension and instability. The country was ruled by military who had suspended the democratic institutions. Many did apparently not appreciate the impact of this suspension. In a multi-ethnic nation such as Suriname, which is the home to several kin-ordered societies along the coast and in the interior, democratic feed-back mechanisms, which mediate the effect of the structural conditions on peoples' lives and behavior, are essential mechanisms for preventing differences in interests from escalating into conflict. In addition to representing the people, democratic leaders have to be re-elected, and this too forces one to consider up-front the impact of certain decisions on the people who one represents. Under the military leadership of the 1980s few took decisions and a system of direct management of the country's affairs without need for lengthy consultations was the preferred *modus operandi*. The existing social divides, such as that between the coastal area and the interior, were further exacerbated by the approach of the young military leaders not experienced in achieving conciliatory solutions through diplomatic action.

In February of 1986 a palaver of Maroon tribal chiefs (*Gran Krutu*) was held at Poketi, one of the main Aukaner ritual villages on the Tapanahoni River. Several representatives from the government attended the meeting, including the District Commissioner of Marowijne. The Paramount Chief of the Aukaner Maroons called attention to searches by the military in Albina of boats belonging to Maroons about to travel up-river with goods

and provisions. The Maroons living along the Lawa and Tapanahoni rivers had for over one hundred years used Albina as a post for purchasing supplies. The town is located on the Marowijne River, the border between Suriname and French Guiana, and it is very difficult to distinguish a smuggler from a person transporting supplies upriver. The military, on the other hand, claimed that these actions were necessary to curb smuggling. The searches, however, were at times conducted in a hostile manner, with guns pointed at the occupants of the boats. The Chief asked the visiting delegation to convey his concern about the searches to the government.

Once the JC actions got underway, the struggle was depicted as an attempt to dislodge the military leadership of the country and bring about a return to democracy. The Surinamese resistance in the Netherlands, formed by leading figures who fled from the military in the early 1980s, supported the JC and this added an international political dimension to the conflict. The resistance raised funds and helped the JC secure weapons to fight the army controlled by the military leadership of the country. The Netherlands, France and the United States were also supportive of the JC, albeit indirectly or covertly. Over 30 million Dutch Guilders (around US\$ 13 million) in Dutch humanitarian aid was channeled into Eastern Suriname through the offices of the Moravian Church in St. Laurent. Some of this support, such as food, clothing, outboard motors and fuel, ended up in the hands of the JC.

The traditional Maroon leaders stood by powerlessly as the young militants in the villages prevailed over the moderates. The military fed the spiral of violence by answering every challenge by the Maroon rebels with a counter challenge. The harmed parties who felt justified in striking back fueled escalation. As the conflict escalated, third parties were drawn into it. The Amerindians probably felt that joining forces with the National Army would provide protection and further their interests, and this view was probably also shared by the Saramaka and Matawai Maroons who fielded their own forces to fight the Jungle Commando.

The situation was further complicated by economic decline at the national level. As noted above, in early 1983 development aid was suspended after the execution of fifteen prominent citizens. As a result of this suspension foreign exchange reserves fell precipitately and this trend continued into the years ahead, until the reserves were practically exhausted. It became harder and harder to secure foreign exchange and a parallel market developed for foreign currency such as US dollars and Dutch guilders. Uncontrolled deficit spending became the trend for the years to come and the high standard of living enjoyed by Surinamese declined as inflation began to take its toll. An almost last straw for interior dwellers was the recall of Suriname paper money at the end of 1985 and its replacement with new bills.

The impact on the economy of the villages was devastating. Some villages were left without a single regular wage earner. In this situation it was not to be expected that a foreign investor would be sensitive to the local impact of their decisions. If they had some advance indication of the events that were about to happen, management might have chosen a different way of doing what had to be done—increase competitiveness of

the bauxite industry, that is, cut costs, increase productivity and efficiency. This meant laying off several hundred workers.

Anthropologist Thoden van Velzen sums up the mood nicely:

“Armed resistance against the army started as early as 1984, when a small group of young Maroons, led by Ronnie Brunswijk ... seized government property and stopped trucks carrying luxury goods for the military elite from Cayenne to Paramaribo. The army retaliated with round-ups and other collective reprisals against Maroon communities on the coast. Maroons traveling from Paramaribo to their homes were stopped at checkpoints, where they had to strip to show they were not wearing any *obeahs* (spiritual icons). At some places, the army desecrated shrines and other places of worship, as if they represented a military threat. These measures caused widespread dissatisfaction and unrest among the population, and readied the scene for more ambitious actions...”

The crack down of the military on people of Mungo Tapu, the home village of Ronnie Brunswijk, seemed to have been one of the most immediate and direct causes of the conflict. The lack of respect shown for Maroon culture and traditions by the military made the situation worse. In dealing with the chiefs of Mungo Tapu, the military leaders showed no moderation in their words and actions. Perhaps inadvertently the military ended up creating an atmosphere that was conducive to conflict. As a result, Brunswijk and his rebel group received overwhelming support from other Maroon communities in the area, and he began to be depicted as a kind of folk hero. In the early days of the conflict Brunswijk was even supported by elderly Aukaner men, who joined his forces or supported them with religious rituals and with the preparation of charms. As the conflict wore on, this support would erode. His hero image faded as Brunswijk also took to heavy-handed means of dealing with local people and communities. His coercive actions provoked resistance, and the other Maroon groups who originally welcomed him as a hero took up arms to fight his rebel group.

#### 2.4 Early Attempts at Achieving Peace

The military made its position clear after the 1987 election by saying that “You don’t negotiate with terrorists.” The Front government was powerless and the Jungle Commando swung into action again, launching attacks now in central Suriname. Some exploratory talks between the Jungle Commando and members of the Surinamese Council of Christian Churches were held in French Guiana and at Brunswijk’s base at Langatabiki, but produced no results because of lack of government and military support. In 1989 President Ramsewak Shankar called for a general amnesty for all war-related violence in his New Year’s address. The National Assembly had passed such a law earlier in the year but had excluded cases involving human rights violations (such as summary executions, torture, and others). This exclusion provoked an angry response from the military that claimed that the law and its exclusions were aimed squarely at them and that they had the most to lose.

Nevertheless, the peace initiative in 1989 would pass from the Christian Council of Churches to the Front government. Members of the Front government had preliminary talks with the Jungle Commando at Schiphol Airport, in the Netherlands, and several months later resumed talks in French Guiana. Nothing concrete emerged until the venerable head of the East Indian party (the VHP) of the Front government, Jaggernath Lachmon, headed a series of negotiations at Portal Island in the Marowijne River, on the border with French Guiana. He and Brunswijk signed a document which called for an immediate cease fire, termination of the state of emergency in east and south Suriname, provision of representation in the National Assembly for war torn areas, and aid for resettlement of refugees. Subsequent negotiations stalled on Brunswijk's demand that members of the Jungle Commando become a unit of the National Police, a position adamantly opposed by the military and not supported at all by the President Shankar. The National Assembly dropped the provision calling for an armed unit of former fighters in the police. However, it continued defying the military—which was in reality against the peace treaty no matter what the compromises or conditions the National Assembly was willing to concede—when it voted in favor of the peace treaty.

The peace did not last long. Shortly after its passage by the parliament, an Amerindian counter-insurgency calling itself the Tucajana Amazonas opened hostilities, explaining that their grievance was to protest what had become known as the Kourou agreement of 1989, and to serve as opponents of what they proclaimed was an unconstitutional agreement between the Front government and the Jungle Commando, who they claimed were common terrorists. The government now confronted two armed groups in the interior with the Tucajana, many claimed, acting as allies of the military against the government, and Brunswijk's forces.

With this news, Brunswijk himself withdrew from the peace agreement, leaving the Kourou peace agreement with but one supporter, an increasingly weak civilian government. Remarkably, with the withdrawal of the Jungle Commando from the civilian supported peace efforts, the Commander of the Armed Forces, Desi Bouterse, started making overtures to strike peace with Brunswijk, and met him in 1989 in a town near Mungo. The meeting led to little more than propaganda, but served to illuminate the complex flux of parties and events in Suriname. By the end of 1989 the positions of the active parties privy to the Kourou peace accord saw the Jungle Commando willing to continue a dialogue although still technically at war with the military; the civilian government non-committal and, the military and Tucajana against the peace agreement as it stood.

All of the delicate and sometimes contradictory negotiations were mooted however in December of that same year when the military launched a second coup (the first was ten years before, in February 1980) and sent the Front government home in what has been called variously the “telephone coup” and the “Christmas Eve coup.” The military took over again and the abortive redemocratization of Suriname, started in 1987, came to an abrupt end.

The military leadership selected Johan Kraag, a former politician with the NPS block of the Front and elder statesman, as the new president, and Jules Wijdenbosch, a prominent member of the military-aligned NDP, as vice president. Elections would be held by mid-1991 and monitored by the OAS. The main concern then in the diplomatic circles in Paramaribo was that, with elections approaching, if legal procedures were followed and respect was shown for constitutional norms and laws—not only in political but also in criminal matters ... then the question of the use of force would not come up.

As the conflict wore on the number of Suriname refugees on French soil caused a political backlash. Crime rates in St. Laurent and in the vicinity of the camps increased and the local French population began to worry about the prospect of a permanent presence of the refugees in the area. With each year that passed the French authorities lost more and more sympathy for the struggle of the JC and hoped for a speedy resolution of the conflict, so that the almost 10,000 Surinamers could be repatriated.

With the demise of law and order in the interior, Maroon groups who had originally supported the JC began to demand the return of a government presence and formal institutions of social control. The heavy-handed manner of Brunswijk and his supporters also germinated an aversion against the situation. As the conflict dragged on, the quality of life in the war zone went from bad to worse. Schools remained closed in the interior and medical care was hard to come by. Young armed rebels could at any time demand support from the local population, and refusal was not taken lightly. With most of the businesses shut down, employment opportunities for those not active in the conflict had become almost non-existent.

The free and open elections of May 25, 1991, yielded the following results: New Front thirty seats, the NDP twelve seats, and the coalition DA '91 nine seats. The NDP was reasonably pleased with their results; up from three to twelve seats. The New Front coalition was not; seeing its vote share drop from forty-one to thirty. The new coalition DA '91 enjoyed the fortunes of winning an impressive nine seats and defined itself as a middle block of sorts. With its thirty seat majority the New Front was once again faced with forming a new government, although this time in a more complicated position than 1987. Besides the old challenges of military insubordination, economic collapse, and a guerrilla war still not sealed by a durable peace convention, they now had to negotiate with a new party, the DA '91 to find the votes for the two-thirds parliamentary majority (thirty-four votes) to pass legislation resulting in a change of the Constitution which also required a two-thirds majority vote.

The first task faced by the New Front government, headed by President Runald R. Venetiaan, was to reduce the power of the military, remove the leadership in place since the early 1980's and, if possible, return the military to the barracks. This series of negotiations, which resulted in the removal of Commander Bouterse from command in 1993, and replacing him with former officer Arthy Gorre.

With the military more or less under the control of the civilian government in early 1992, the New Front turned its attention to the resolution of the interior conflict. Efforts were

made to restart the Kourou negotiations. Initial discussions were held with Amerindians under the umbrella of the Council of Eight, a group of prominent Amerindians, in an attempt to repudiate the Tucajana and their leadership and to consolidate democratic Amerindian elements. It is far less clear what occurred with the Jungle Commando except to say that by late April 1992 government mediation between the Jungle Commando and the Tucajana resulted in some initial and modest success. A peace agreement was signed between Brunswijk of the Jungle Commando and Thomas Sabajo of the Tucajana, which called for the opening of the interior to travel and trade, with the clause “so long as all economic activity was of benefit to the local population.” However, both groups refused to turn in their weapons to the government.

By July 1992 the government reached an accord with the two armed groups agreeing that the parties involved in the civil war (the government, the military, the Jungle Commando, and the Amerindian Tucajana Amazonas) would accept and abide by negotiations and agreements. This agreement led directly to the Lelydorp talks of August 1992, and their successful outcome under the Peace Agreement.

In the prolonged series of negotiations there were still many moves to be made and points to be discussed. Would either the Jungle Commando or the Tucajana be allowed to undertake any sort of political-military activity in their domains? What would be done with the armaments of the two groups? How were questions of demobilization, the return of refugees, and resettlement to be addressed? And, finally, what guarantees would be provided for a just and equitable re-development of the interior following years of destruction and erosion of infrastructure?

### *The Lelydorp Talks*

The civil conflict continued with varying degrees of intensity until the Peace Accord, or formally the Agreement for National Reconciliation and Development, was signed between the government, including the military, on the one hand, and the Jungle Commando and the Tucajana Amazonas, on the other. The other three smaller groups agreed to become party to the accord after the negotiations had been concluded.

The urge for peace grew stronger and after the second restoration of democracy in 1991 almost everybody agreed that the interior conflict was causing more harm than good. On July 2, 1992, the Minister of Social Affairs and Housing, Willy Soemita, in his capacity as chairman of the Commission for the Advancement of the Peace Process, met with the leaders of the Jungle Commando. President Venetiaan chaired the meeting, held in the locality of Alliance, district of Commewijne. The parties agreed to work towards the signing of an all-inclusive peace agreement by August 1, 1992.

The negotiations, in the village of Lelydorp, outside Paramaribo, started on July 28, 1992, gathering representatives of the Jungle Commando, and the Tucajana Amazonas. The government of Suriname was represented by the Peace Commission, composed of members of several ministries and assisted by representatives of the National Police and the National Army. Ronnie Brunswijk, of the Jungle Commando, and Thomas Sabajo, for

the Tucajana, represented the illegally armed groups. The other three armed groups (Angula, Mandela, and Koffiemaka), although not participating in the original deliberations, joined the negotiations in the last stages, when success for the Peace Accord became evident, and accepted the final agreement.

On August 8, 1992, the government and the five illegally armed groups signed the “Agreement for National Reconciliation and Development” in a ceremony at the National Assembly.

Critical to the success of the peace accord was the establishment of a consultative body for the development of the interior, with representatives from the interior communities, further underlining the need to have the Indigenous and Maroon residents of the interior participate in political decision-making. The urgent need to deal with the status of Chieftaincy and land rights were also indicated by the inclusion of such topics in articles 10 and 13. The need for a broader framework under which the incorporation of the Indigenous and Maroon societies into the nation-state could take place was also suggested by article 11, which called for a discussion of the status of these societies in the context of the International Labor Organization (ILO) Convention 169. Other levels of complexity were referred to with the inclusion of article 12. While intended to improve regional representation, the two-year residence requirement for being elected to the National Assembly had, according to many persons from the interior, negative repercussions. Indigenous and Maroon representatives are not allowed to use their native languages during the debates in the National Assembly, and are forced to use their second or third language, Dutch. The skill to deliberate in Dutch requires a level of education most persons of the interior did not have an opportunity to acquire. Since most of the Indigenous and Maroon intellectuals lived in town, the two-year provision denied them the opportunity to put their educational skills at the service of the interior.

It should be noted that the need for mentioning the difference between the material conditions (systemic), and the political or institutional factors (proximate) was revealing because the accord assigned high priority to the former, while no obvious sign of prioritizing the latter is indicated. This distinction seemed to have had an impact on the implementation of the relevant provisions. Measures intended to improve material conditions were taken, while the implementation of the provisions related to the political and institutional factors lagged far behind. This most certainly undermined the objectives set out in article 2.2, relevant to the social, economic and political integration of the interior into the nation state.

Appropriately, the title of the agreement—Accord for National Reconciliation and Development—implied that getting the warring parties to lay down their arms was not enough; conditions that led to the conflict also had to be addressed. Measures intended to bring a halt to the immediate crisis had to be followed by structural interventions to ensure that such a conflict did not recur in the future.

The term “reconciliation” in the Accord title referred to the operational measures. These were measures intended to bring a halt to the immediate crises, and included the

demobilization of the illegally armed groups, which, according to the agreement would cease to exist, as well as the turning in and destruction of all military weapons. The return of confiscated property and the amnesty law would also be placed in this context.

The term “development” in the Accord implied structural measures intended to prevent such a conflict from recurring. These provisions anticipated wide-ranging political, economic and social interventions, including the reintroduction of health care, education, social security, food assistance programs, the rehabilitation of electricity and water services, infrastructure such as bridges and docks, and other transport facilities. Article 6, part 1, of the Accord states that the government should “design and execute a program in order to facilitate the reintegration in society of the former fighters.” Part 2 said that “the government shall, in consultation with other parties, and on the basis of a) the information provided, b) a selection procedure, and, if necessary, c) additional education and training, promote that the chances of the former fighters of the Jungle Commando and the Tucajana Amazonas to find employment are enhanced.”

Other points and protocols of the agreement were:

- Demining: the Jungle Commando and the Tucajana Amazonas would cooperate with the government in the identification, searching and pointing out the location of mines, unexploded shells, weapons, and weaponry placed in the interior by the combatants.
- Disarmament: the objective was to start disarming the illegally armed groups in the two weeks after the signing of the agreement. This was contingent on the publication of the Amnesty Act.
- Amnesty: the Amnesty Act of 1989 (which was not approved at the time) would be granted to those persons who, from January 1, 1985 to the date when the Act enters into force, were involved in hostilities.
- Third party property: the illegally armed groups would return all third party property and belongings confiscated in a 30 day period after the signing of the agreement.
- Security: the government would take measures to optimize security and to enforce

law and order in the interior through the National Police and military. A special unit of the National Police would be established for the interior, and former members of the Jungle Commando and Tucajana Amazonas might be considered to join it. Patrols by the National Army would also be involved in the maintenance of law and order. (The government did not accept this protocol)

- Illegally armed groups: after demobilization the Jungle Commando and the Tucajana Amazonas, as well as those illegally armed groups that later became part of the agreement, would cease to exist as operational groups.

## 2.5 Threats to Peace

### Returning to the Barracks

In mid-1991, free and fair elections were held in Suriname, months after the Christmas Eve “telephone coup” of 1990, and eleven years after the original military coup of 1980. The elections of 1991 were the second elections held following the 1980 coup and, like their predecessor in 1987, elected a democratic government seriously weakened by the events of the 1980’s. The 1991 victor, President Runald R. Venetiaan and the New Front political coalition, continued to face formidable threats to peace, both from remnants of the ex-fighters, particularly the Jungle Command of Ronnie Brunswijk and from the National Army itself, unhappy with a change in its commanding officer, former authoritarian leader Desi Bouterse, an issue which was to come to a head in 1993.

Desi Bouterse was the unelected, de facto head of Suriname following the military coup of 1980. With the election of the first free government in 1987 since the coup, then Colonel Bouterse became commander (*Commandant*) of the National Army. He continued to wield power and influence over the government of Ramsewak Shankar and his multi-party Front coalition. Following an alleged personal affront at the hands of the president, and sensing that he could capitalize on the growing economic frustration of the Surinamese people, Commander Bouterse launched a bloodless “telephone coup” (the government was telephoned at a Christmas Eve celebration at the presidential palace and dismissed by a senior military leader and associate of Commander Bouterse).

A handpicked civilian government with close associations to the military was installed with the promise that there would be elections in May of 1991. During that time the ruling National Democratic Party (NDP) under President Johan Kraag and Vice President Jules Wijdenbosch, and the military under Commander Bouterse, consolidated power and public support.

Although the NDP performed decently in the 1991 elections the government was won by the New Front coalition, basically a revised and expanded version of the 1987-1990 Front government. President Venetiaan had several mandates to undertake in order to secure and strengthen democracy. With his installation, the president had unstable situations on two fronts. The Peace Accords were not yet signed with the warring groups in the interior and, on the urban front, Commander Bouterse was head of an anti-government armed forces.

In the government itself, an emboldened President Venetiaan began efforts in 1992, through his Minister of Defense S. Gilds, to remove Commander Bouterse from office and replace him with an officer whose allegiance was to the elected civilian officials. By early 1993 the situation would become dangerously strained, as the civilian government

feared that the military would oppose the removal of Commander Bouterse and, perhaps, might launch a military operation and once again sack an elected civilian government.

The New Front government realized that without the removal of Commander Bouterse there would be little chance of the military “returning to the barracks” and thereby reducing military influence and threat to democratic governance.

On January 30, 1993, Commander Bouterse was elected party chairman of the National Democratic Party, thus securing a continuing base of power and influence in the national political dialogue. On February 1 he resigned as commander in chief of the National Army (after President Venetiaan signed the resolution of removal on January 29). The acting commander of the military was Ivan Graanoogst, close associate of Mr. Bouterse and one of the principals in the military telephone coup of 1990.

In a March 13 meeting between the president, acting commander Graanoogst, and associate commanders B. Sital and Ch. Mijns, and minister of Defense S. Gilds, the military officers asserted that the president’s and the minister’s actions in the removal of Commander Bouterse was a conspiracy to threaten the security of the state. It was further asserted that the minister had attempted to foment insurrection in the ranks of the military by talking with subordinate officers without the approval or knowledge of senior commanders. The president replied that the armed forces were in a transitional stage from the unconstitutional 1980’s to the freely elected government of the 1990’s, and that the possibility should not be excluded that the question would arise to what extent the commanders of the 1980s would be able to function under the new constitutional relations which had been established between the armed forces and the government.

In April 1993, the government of Suriname appointed former military officer Arthy Gorre commander in chief of the National Army. He returned from civilian life to take the post during the change of military leadership from the authoritarian 1980’s to the current situation. Although there was some resistance and defiance by the former military commanders—particularly because Mr. Gorre did not come from within the military hierarchy, but from the outside—the situation stabilized and held. The foundation for a durable peace was laid in Paramaribo.

### New challenges

By that time problems also began to arise surrounding the implementation of the Peace Accord. Several challenging issues and problems were itemized:

- Government services in the east Suriname border town of Albina were not able to function properly, due to the lack of manpower, housing, proper equipment;
- Criminal activities in both Albina and Mungo were growing alarmingly, and the populations there were growing increasingly provoked;

- A general lack of coordination was evident between the government and its peace and reconstruction services, and the formerly illegally armed groups who seemed to be at the basis of the problems;
- Smuggling activities between Albina and French Guiana were taking place on a large scale and in an organized manner. Lack of a government security presence made it impossible for authorities to distinguish between legal and illegal river traffic;
- The number of houses occupied illegally was increasing, despite police surveillance;
- Robberies in broad daylight were commonplace;
- Women were forced to travel the streets accompanied by male relatives to avoid harassment;
- The Javanese community in Mungo considered the situation unbearable, and was ready to take the law into its own hands the moment one of its members became a victim;
- Workers in the Mungo Mine Workers Union threatened strike action if schools were forced to close because of the lawlessness, and the police did not intervene;
- Unemployment among the ex-Jungle Commando was extraordinarily high, and businessmen were reluctant to hire them;
- Crimes appeared to be committed also by persons who were not members of the former fighters, but who masqueraded as former combatants;
- Ex-Jungle Commando fighters repeatedly claimed that they did not believe the government was serious about implementing the Peace Accord. Disillusionment was widespread.

The Good Services Commission responded quickly by saying that if corrective measures were not taken the situation among the ex-fighters would escalate out of control. The government was called upon to install relevant services including police, customs, public works, health services, and good faith measures to assure the population that the Peace Accord remained in effect, despite logistical problems with its implementation.

The chairman of the Peace Commission, Romeo van Russel, informed the Mission that it had been exceedingly difficult to make contact with Ronnie Brunswijk, former leader of the Jungle Commando. Nevertheless, the government, concerned about the presence of former fighters involved in illegal activities, redoubled its efforts to locate and convince Brunswijk of the necessity to organize a *palaver*, or meeting (*Gran Krutu*) among all clan dignitaries of the Ndjuka tribe. The conference finally took place on May 31, 1993, and was attended by traditional authorities, the district commissioner of the district Sipaliwini

of interior Suriname, representatives of the Peace Commission, and the OAS Special Mission.

Nevertheless, at the end of the first week of July 1993 both the Jungle Commando and the Tucajana Amazonas again launched protest actions against alleged lack of action on the part of the government in implementing the Peace Accord. Barricades were erected on the east-west highway in east Suriname. Following a statement by former Tucajana Amazonas leader Thomas Sabajo—"in the interior they now think that the peace accord is a big zero," he said—barricades were erected by the former Tucajana Amazonas and the Angula on the roadways south of the international airport at Zanderij. The government seemed to lack the resources, personnel, and administrative capacity to effectively implement the Peace Accords it had endorsed. Impatience was growing, and protest action increasing, among the former fighters.

## **2.6 Nieuw Koffiekamp: A Case Study**

The issues raised by the land tenure and mining privileges dispute in Nieuw Koffiekamp resonate throughout the debate over the rights of indigenous people and the privileges of the state. As a case study, Nieuw Koffiekamp encapsulates all of the elements of the debate, namely land rights, and the role of traditional authority.

The main objective of this section is to present basic information on the problem of Nieuw Koffiekamp. The rights to parts of the Gros Rosebel gold concession (where the village of Nieuw Koffiekamp is located) are being contested by the villagers and the Canadian company *Golden Star Resources*. Both parties are claiming rights to the same territory and, if not resolved peacefully, these conflicting claims will continue to be a source of considerable friction, and may escalate.

### *The Commission for Nieuw Koffiekamp*

During the first week of June 1995, the Nieuw Koffiekamp conflict escalated and the government asked the Paramount Chief (*Gaaman*) of the Saramaka Maroons, Songo Aboikoni, to intervene. The Gaaman recruited officials from both Paramaribo and the interior to assist him in the effort to reach a peaceful solution to the problem. The Ministry of Natural Resources and the state-owned mining company Grassalco appointed representatives to this body that became known as the Commission for Nieuw Koffiekamp. Both the village council and the youth organization of Nieuw Koffiekamp were represented in the talks.

The Commission served to bring the parties into a dialogue and achieve a compromise. The issues at play were: Maroon culture, the local environment and pollution, the local economy of the Maroons, the recent large scale developments on the Gros Rosebel concession, and relevant local, national, and international instruments which should function to define and defuse problems such as this.

The National Assembly passed in April 1995 a Mineral Agreement consigning mineral exploration and exploitation rights to *Golden Star Resources* of Canada. It disregarded the presence of Maroons in the village of Nieuw Koffiekamp, located squarely in the middle of the Gros Rosebel concession. The area was calm immediately after the signing of the agreement, but when Golden Star began to ask the small-scale Maroon miners to leave the Gros Rosebel concession, tension built up. Talks were initiated in an effort to solve the problem, but not long thereafter problems surfaced again. Alternating periods of calm and tension followed throughout 1994 and 1995, when the paramount chief of the Saramaka intervened.

By September of 1994, hundreds of small-scale miners had taken up gold mining in the concession. *Golden Star* responded by erecting barriers and gates in order to keep the small-scale miners from reaching two main ore deposits. In late 1994 the Geological Mining Service and the District Commissioner intervened and agreed to set aside an alternative mining area for the small-scale miners.

Tensions flared again and in January 1995 and a government delegation initiated talks that led to another temporary agreement. An area of 8,000 hectares would be reserved for the Maroon miners provided they left the Gros Rosebel concession. Response from the Maroons was negative, as the option of building a new road to the alternative mining area turned out to be too expensive. By March 1995 the miners were returning to the Gros Rosebel concession.

The efforts of the *Gaaman* also highlighted an important concern on the part of government and the villagers. The Ministry of Justice and Police and other government agencies stressed that those persons with ties to the area should be assisted. During initial talks no clear distinction was made between persons with ties to Nieuw Koffiekamp and other migrant small-scale miners. As the talks progressed, the delegation representing Nieuw Koffiekamp began to appreciate the fact that to reach an agreement the rights—whatever they turned out to be—are granted in principle by a legally binding document, the Peace Accord. A peaceful resolution and the mutual coexistence of small-scale and corporate mining interests would require a comprehensive and systematic arrangement to prevent further conflict.

### *The Legal Context*

Article 41 of the Constitution of the Republic of Suriname supports the land rights provisions of the Peace Accord because it grants mineral rights to the local population. The Constitution is the supreme law of Suriname and all other agreements, legislation and arrangements are subsidiary to its provisions. The Peace Accord, although not clearly written, grants villagers a "priority right" to conduct small-scale mining in designated "economic zones" around and near villages. The provisions are outlined in Article 10 of the Peace Accord.

The Mining Decree of the laws of Suriname also figures in the effort to identify zones that could be made available under the Peace Accord and Constitutional guarantees. The

Mining Decree gives the government considerable latitude to define the rights of companies and local populations. In effect, the Mining Decree provides for the right of the government to extend, revise, and alter concessionary agreements to and for miners of every size and scale in order to support and advance the interests of the state. Thus, the Constitution, the Peace Accord, and the Mining Decree provide a framework of understanding that can be interpreted as a course of action to provide a platform(s) for compromise.

Article 25 of the Mining Decree states that requests filed to secure the rights of exploitation must list all tribal villages in or near the requested concessions. The significance of this provision cannot be overlooked. It gives policy and law makers a clear indication of the number of local communities that will be affected by future or planned mining activities.

There are as well international human rights standards applicable to the Nieuw Koffiekamp situation. These call for the protection of the cultural integrity of indigenous and Maroon people, and that some form of land and resource rights be recognized and observed including the protection of traditional resource use patterns. With the signing of the Peace Accord, an important step was taken in the effort to realize these aims as set out in a variety of international instruments. However, the land rights provisions have not been acted upon yet nor in any way implemented with the writing of this guide (late 2001).

The Peace Accord also foresaw the establishment of mechanisms by which indigenous and Maroon people were able to effectively participate in decisions relating to their land and resource use and management. The Council for the Development of the Interior was established under the provisions of the Peace Accord (Article 4.1) with exactly this objective in mind. Unfortunately this body is not functioning effectively because indigenous people are not represented. Indigenous leaders have objected to the way in which the body was incorporated into the government administration, and have refused to field representatives to the Council for the Development of the Interior. This development is particularly unfortunate because the clock is ticking for the indigenous people of Suriname.

Many private firms are moving ahead with their activities in the interior, sometimes with consent of indigenous leaders and sometimes not. The government seemed reluctant or incapable of coming up with a definite policy; sometimes endorsing the activities of companies, sometimes powerless to stop or alter them, and sometimes recognizing the short-term interest of indigenous people. During the Wijdenbosch administration a second attempt was made to implement the Council for the Development of the Interior, in which indigenous people agreed to participate. However, government resources were insufficient to finance serious activities and any practical projects were left wanting. The Council for the Development of the Interior remains on the Venetiaan government's agenda at this writing."

*Summary*

Government sources on Nieuw Koffiekamp points out the following:

" a conflict fueled by contrasting ideologies rooted in two worlds very far apart from each other; Maroon and corporate culture. Land is of primary importance to Maroons. The social, political and economic system of Maroon society is deeply rooted in clan ownership of territory, and the threat to what Maroons consider traditional tribal territory is regarded with great seriousness. From the perspective of large mining companies, having full title and unlimited access to concessions under development is a condition *sine qua non* for developing a mine."

At the time of writing this guide in late 2001, the corporate mine at Gros Rosebel has been put on hold indefinitely pending approval for the feasibility and environmental impact studies, approval of permits and economic concessions demanded by the company, and, perhaps an increase in the price of gold on the international market. No agreement has been reached with the community of Nieuw Koffiekamp nor with other villages that find themselves in the same situation. According to *Golden Star Resources*, when and if the price of gold rises, relocation remains the only option for dealing with the community. The Maroons of Nieuw Koffiekamp rejected this position. The situation remains unresolved and in crisis; as it does throughout the interior of Suriname with Amerindians and Maroons alike.

## **2.7 Incorporating Peace-Building in Development**

Several other issues, which were related to the civil war but not caused by it, emerged to challenge peace and disturb the newly elected democratic New Front government. In 1992 President Venetiaan, after overseeing the removal of Constitutional clauses assuring military preeminence, initiated through his Minister of Defense procedures to remove Commander Bouterse as head of the Suriname army. The senior officers reacted with accusations of civilian meddling and threats, claiming that the president would be held responsible for the consequences of removing the Commander. The president held firm and restated the need to make a firm transition from the army of the 1980's to a renewed one appropriate for the 1990's. The situation came to a dangerous head in May of 1993. The government prevailed and civilian control of the military was established; a widely recognized precondition for democracy everywhere.

Several other delays on the way to stabilizing peace occurred in 1993 and 1994. Periodic roadblocks increased national anxiety, especially after the trauma of the civil war had placed people on edge and made them fearful of any activities that placed the security of the newly elected government under threat. The roadblocks themselves were not spontaneous protests of local conditions nor, necessarily, the random manifestations of frustration. There was organization and leadership to instigate pressure against a government that was developing programs designed to establish peace and security in the country as a whole; and to redefine power relationships both in the interior and the coastal area.

The occupation of the Afobaka Dam was a serious and visible problem that could have resulted in tragedy and significant damage to property. Ultimately this problem was defused and the situation normalized. But, these flare-ups and orchestrated events in the aftermath of the Peace Accord indicated that problems still remain in the post-conflict interior and could again lead to the initiation of violence and conflict.

The land tenure and mining privileges dispute in Nieuw Koffiekamp provide us with a case study that encapsulates almost all of the issues at play in the interior of Suriname. Without some sort of code which promotes a more equitable distribution of economic access to resources and a more inclusive and participatory form of decision-making there will likely be more Nieuw Koffiekamp-like disputes in the future. It will be a difficult and doubtless complex process to reconcile the conflicting views of exploitation and development held by coastal government and corporate interests and those ideas held by people in the interior.

The issues raised by Nieuw Koffiekamp will be dealt with again in Chapter 3 when we deal with democracy and development. The short case study was included here precisely because the solution or amelioration of Nieuw Koffiekamp problems were critical in the process of achieving and maintaining peace.

The process of achieving peace is the critical precondition for moving into the following phase (and chapter), that of democracy building and strengthening. The successes of achieving peace and defusing threats to civilian authority now pave the way to democracy building and the options Suriname faces. The options and instruments the country has at its disposal must address many of the root causes which remain and which led to the breakdown of peace and the threats to peace in the first place. The interior of Suriname is where solutions to the problems of land rights, exploitation rights, investment procedures, and the like will have to take place. The role of the state and the rights of its citizens will likely be re-defined here. As well, the over 900 traditional authorities of the interior provide a voice that a democratic government may wish to listen more closely to.

A general state of security has been established in Suriname; economic security, political security, and social and ethnic security. The next step is democracy, its challenges, options and rewards.

### Questions and Issues:

This chapter opened by posing a number of questions. Namely, what type of conflict was the interior civil war?; what were the causes?; what conditions contributed to its cessation?; and what were/are the post-conflict conditions in the country? Let us examine these issues more critically.

1. What were the ethnic dimensions to the war? Were more than two ethnic groups involved? Did the insurgency have personalistic motives as well as purely ideological?

2. Did the insurgency have widespread “grassroots” support? Was a refugee population displaced?
3. How did the civilian coastal population respond to the insurgency? Did they lend it support for its battle with a military-supported regime?
4. As early as 1989 the civilian government attempted to strike peace with the Jungle Commando but failed. Why was this? What hand did the military play?

What was the role of the Tucujana Amazonas counter-insurgency?

5. What issues and conflicts did the Peace Accord of 1992 have to deal with?
6. What were the immediate post-conflict threats to peace?
7. The Nieuw Koffiekamp issue included elements of both economic exploitation (gold) and land rights. What is the framework of (contradictory) law surrounding this question?
8. Think about the nature of peace and democracy in Suriname in the early 2000’s.

Can we anticipate more “conflict in development” in Suriname?

## CHAPTER III

### DEMOCRACY: CHALLENGES AND OPTIONS

Chapter 2 has outlined the events and issues that resulted in the derailing of democracy in Suriname for more than ten years. Now, in the early 2000's, efforts are seriously underway to strengthen and consolidate democracy in Suriname. Thus, it is useful in this chapter to review some of the basic principles of participatory democracy and to examine and evaluate Suriname's capacity to meet these commonly agreed upon democratic pre-conditions and requirements. Hence, the “challenges and options” of the chapter sub-title.

What support and strengthening does Suriname require to promote its democracy is addressed in this chapter.

#### 3.1 Democracy and Development

##### *Democracy as Structure and Code of Behavior*

Let us examine some of the generally agreed upon tenants of democracy, and the options and experiences they can provide for strengthening democracy in Suriname. From that foundation we can then explicitly move to identifying the problems in Suriname's recent past which interrupted the democratic process and, also, the strengths in Suriname which helped in the transition and return to democracy, and which today are deserving of strengthening and consolidation.

We can be guided by the following principles:

- democracy involves the right of people to freely determine their own destiny;

- the exercise of this right requires a system that guarantees freedom of expression, belief and association, free elections, respect for the rights of individuals and minority groups, free media and rule of law and justice for all;
- private institutions and private sectors in free societies can contribute to the development of democracy.

### *Governance and the Political Process*

The Preamble of the Charter of the OAS establishes that representative democracy is an indispensable condition for the stability, peace, and development of the region. Under the provisions of the Charter, one of the basic purposes of the OAS is to promote and consolidate representative democracy, with due respect for the principle of non-intervention. Democracy requires a system of representative government in which leaders are selected in freely contested elections. A precondition for democracy is a multiparty system that allows free competition among different political parties representing diverse interests and viewpoints. Political parties that are weak, internally undemocratic, or incoherent frequently become the vehicles of individual or narrow interests and can be easily dominated by the military or state bureaucracy. Stable democracy, therefore, requires the development of internally strong and democratic political parties which welcome and draw upon civil participation far beyond that of the simple format of periodic elections.

Strengthening the legislative process is key as democracy suffers when a legislative system is weak or when government institutions do not work effectively together. The rule of law and the administration of justice figures strongly here. The function of justice is to balance the rights of the State and the individual, to protect these rights, and to make possible the orderly and peaceful governance of society. The executive and the cabinet technically form the government, however they are but one element in the democratic separation of powers principle.

Democratic control of the military and police, the security arms of the state, is an essential precondition for democracy. A military that is committed to a professional as opposed to a political role is a vital asset to any democratic system. Civilian expertise in military affairs must be cultivated and used, not only to exercise civilian control of the military but also to support the security forces when their services are called upon.

### *Pluralism*

Another essential element for democracy is the existence of a variety of independent organized groups representing diverse interests outside of the structures of political party politics. Vigorous, private, voluntary associations serve as interest groups, pressure groups and, ultimately, “schools of democracy,” accustoming their members to free discussion, accommodating differing views, and a respect for procedural rules. Stable and well organized civic associations help form the foundation of a pluralistic society and strong civic culture. Democracy depends on these mediating institutions, the voice of an

informed citizenry, which strengthen links to and participation in their government, to provide avenues for public policy making and in-puts to government.

Trade unions represent an organized force for representing the interests of common people in the political, economic and social life of a country. By giving democratic representation to working people and ensuring their inclusion in the political process by which decisions are made and power is distributed, labor unions help societies avoid the kind of sharp polarization that feeds political extremism and allows anti-democratic groups to exploit worker grievances.

A dynamic private sector with an active small business community can supply a counter-weight to limit state power. The private sector can remain healthy and independent only if it is genuinely free, which is to say, not beholden to a government that controls all the economic resources of society. The large business sector has its strong interests too and can serve to protect and maintain a free and open society which welcomes foreign investment. Also, other less well organized components of society such as women, youth and disenfranchised minorities aid the work of democracy building and strengthening.

#### *Education and Awareness*

The consolidation and maturation of democracy occurs only when citizens are knowledgeable about the democratic process and the know-how and willingness to exercise their rights and fulfill their civic responsibilities. Citizens need knowledge to make decisions about the constitutional use of authority, along with the skills and confidence to voice their concerns and to hold public officials accountable.

In this regard, free and uncensored newspapers, journals, public forums and the communications media are indispensable for democratic societies. Public participation through newspaper editorials, call-in talk shows, professional news gathering and guiding, all serve to aid government in the distribution of timely, informative and accurate news.

#### *Democracy in the Two Surinames*

Chapter One outlines the political and economic history of Suriname. The latter portion of the chapter considers the historical narrative, primarily political and economic issues, and the unfulfilled promise of independence for Suriname. In this section we take a closer look at the post-independence period but, this time, from a democracy-building point of view. That is, to examine the period in terms of what has been said about the general principles of democracy in the first section of this chapter, in order to come to terms with what democratic institutions failed in Suriname but also how these democratic institutions were renewed and, ultimately, led to the return of democracy.

Dr. Jules Sedney, a former Prime Minister of Suriname, writes that in Suriname democracy is much more than the legal order of things. Democracy rests on five pillars: democratic inclinations, or the socio-psychological commitment; regulations, the juridical

and institutional order; policies, the guiding of state direction; control, or supervision; and correction, or the alteration of government policy in light of prevailing circumstances.

The First Republic, from 1975 to 1980, opines Sedney, failed in these measures and paved the way for the military take over. The 1975 Constitution was a sound document but the pillars became quickly eroded. Democratic inclinations were mortgaged to economic gain. Policy-making fell short in addressing the rapid changes taking place in the country's first years of independence. There was little concern for control and correction was scarcely spoken of. The mentality of "don't worry" (*no span*) prevailed which created an atmosphere of "the devil may care, damn the consequences." Democracy was weak and the agitation of the military for a labor union soon erupted into a small-scale military coup which easily toppled the wounded democratic system.

Four phases characterized the undemocratic period of military rule (Sedney, pp. 115-34). Each of these phases indicates that only some groups in society supported the military government at the expense of other groups at any one time. It was not until all the groups acted in concert that there could be any attempt made to a return to democratic governance.

#### Phase I: The military supported by the Masses (1980-1982)

There was relief among many citizens that the young soldiers had overthrown the inept NPK II government. Individuals came forth to render support, while the masses gave their endorsement to the military leadership. But the masses were not organized--they were more or less a populist crowd-- since the military had gutted the only institution through which common citizens could participate in politics; the old political parties. With few serious private institutions to voice their needs, fears and ambitions the masses and elites alike watched as the juridical, administrative and institutional infrastructure of Suriname was systematically compromised and rendered dysfunctional. The ardor of the masses for the military would soon cool; but by that point it was too late. Surinamers became observers rather than participants and for some both in the country and outside the only means to remove the military was to itself use armed force. Several counter-coup attempts were launched, and failed.

Newspapers were censored, the police were put under tight control, the National Assembly was stripped of power and most of what would be conventionally called democratic institutions and practices were rendered powerless. The Constitution was suspended and the country was ruled by decree. There were no elections. Civilian Presidents were installed and removed. Government positions were filled by appointment. The head of the largest labor union and 14 other prominent Surinamers who were agitating for the return to democracy were rounded up and murdered on December 8, 1982.

#### Phase II: The Military and the Left (1983)

The wide appeal of the masses for the military regime collapsed finally in the aftermath of the murders. The military command began a search for a slender reed of support and found it in two left wing parties. No institutions of democratic governance nor any other of the vital organs of democratic process were consulted in this decision. The military recruited the support of the small political parties PALU and RVP in its attempt to shore up support and develop new internal economic programs and to recruit support in the international community. Suriname's traditional patrons and investors, the Netherlands and the United States, had withdrawn their financial and political support, as had virtually all other democratic countries.

The PALU, which had never won a seat in the National Assembly under democratic rule (nor had the RVP), was a proponent of self-determination, small scale development projects and a renewed nationalism which would guide Suriname to seek more South-South diplomatic ties. The PALU had been an ardent critic of the huge, and fanciful, west Suriname hydro-electric dam project. Development preferences were more in the area of housing developments and the local exploitation of local mineral and agricultural products.

The other small partner, the communist RVP, was far more interested in foreign relations formation and the geo-politics of revolution. They were admirers of the Cuban revolution and the efforts of the New Jewel Movement in revolutionary Grenada, and welcomed the support of the two countries, and a visit by Maurice Bishop. Ties were also formed with Nicaragua and Libya as the isolated military regime sought support and recognition. Following the ascent of these two parties to power it is no coincidence that such exile groups such as the Council for the Liberation of Suriname (*Raad voor de Bevrijding van Suriname*) sprung up in the Netherlands.

More democratic voices were silenced during this period. The University of Suriname was infiltrated and taken over by Marxist scholars. School books promoted the revolutionary agenda. Draconian methods of social control in the name of revolution, such as curfews, nullification of rights of assembly, and unexplained disappearances became routine. The military grip on control was shaken and weakened and the first glimmers of change, that is broader-based participation in the regime, began to appear. It was becoming evident that the military had to solicit and negotiate with the very democratic groupings it had removed from influence and power.

### Phase III: Military Leadership, the Private Sector and Labor Unions (1984-1985)

The revolutionary phase of military rule had alienated even those Surinamers who remained willing to give the military government a chance. In its isolation the military command opened negotiations with two groups from the private sector; small scale business owners and producers, and larger business enterprise owners. The goal was to establish a "Think Tank" (*Denkgroep*) and (an appointed) interim government. Willem Udenhout was appointed Minister-President with the instructions to recruit the private sector organizations, the Labor unions and the old political parties to support the creation of "Sustainable Structures of Democracy." A memorandum of 1984 entitled "Basic

Principles and Structures of Democracy” (*Basisprincipes en Structuren van Democratie*), authored by the two largest political parties, the VHP and the NPS, called for the return of democratic rules and participation of political party leadership in any organs or deliberations which would discuss the transition to democracy. The political parties’ participation would not be called upon by the military government yet however.

The Udenhout cabinet was composed of the military and their civilian supporters, three labor union representatives and two private sector cabinet members. The National Assembly was appointed and reinstalled with members from the same sectors as the cabinet itself. The National Assembly was not elected. Representatives from political parties were not appointed in either the cabinet or the National Assembly.

The transition and return to democracy was underway. Participation in governance, although not elected, was being slowly broadened.

#### Phase IV: Military rule, Private Sector, Labor Unions and Political Parties (1986-1987)

In 1985 a political accord was struck between the military leaders and the three major political parties; the VHP, the NPS, and the KTPI whereby they would be represented in cabinet and the National Assembly along with supporters of the military government, the labor unions and the private sector. The unspoken agenda for all except the military was for a return to democracy.

By 1986 the interior war had broken out. The military regime was under stress both by democratic forces along in the coastal area and an armed insurgency in the interior. Foreign involvement became more visible in supporting a return to democracy, while at the same time providing assistance to the armed rebels in the jungle interior. In December 1986, for the first time since the military take over, Commander Bouterse used the word “election” in a public speech.

Preparations were simultaneously underway for the writing of a new Constitution. If all went according to plan the draft Constitution would be approved in a public referendum in September 1987 and national elections would follow in November of the same year. The citizens overwhelmingly endorsed the Constitution. Elections were held and were won decisively by the Front. Democracy, weakened as it was, returned to Suriname. The labor unions were cooperative, the private sector was organized, the press was supportive and positive, and the masses, through their political parties, had expressed their wishes.

Democracy would falter again with the re-intervention of the military in civilian governance in 1990. Elections were again held in 1991 and the New Front again won decisively. The New Front finished its term and elections in 1996 brought President Wijdenbosch to power. Public protest of the deteriorating economic situation in 1999 shortened his term by one year. Elections in 2000 once again brought the New Front to power.

The lesson from this narrative, consistent with the opening of this chapter, is that when there is widespread participation in governance, coupled with a serious commitment to the principles of democratic behavior, the democratic system functions.

It is useful at this point to examine the options for supporting and strengthening Suriname's democracy by examining the list of democratic characteristics which were enumerated at the opening of this chapter. The list would suggest that Suriname is well on the way to consolidating its democracy. The list would also suggest that there are additional options Suriname might want to examine to further strengthen its democracy.

#### **The Road to Reform**

In early 2000, scarcely six weeks before the May elections, land rights for indigenous people once again became a priority issue. As pointed out in the profile of Suriname, systematic economic penetration of the interior began about 1875, but no serious attention was paid to providing the Amerindians and Maroons with any systematic recognition of title or statutory rights to the land that they had inhabited throughout the colonial period, and for Amerindians, well before that. With the recent re-introduction of large-scale gold and timber exploitation of the interior, particularly by large-scale international corporations, sizeable national corporations both state- and privately-owned, and urban-based local concessionaires, the question of the development of the interior and the rights of indigenous people once again became a burning issue laden with the potential of serious disagreement and possible conflict.

In 1991 a project proposal prepared by the Suriname Institute of Extension Services, Research and Study Supervision (IDOS) and the Faculty of Law, University of Amsterdam prepared a "talking points" document that provided a concept outline for a serious fieldwork project which would lead to land rights policy formation. It was not acted upon but serves here as a basic introduction to the background of the land rights issues at play and the urgent call for their equitable solution to address the needs of the state and the indigenous communities.

For Amerindians there exists no systematic corpus of legislation which explicitly regulates their property rights. In fact, the only operative legislation in documentary form is aimed at the property rights and concessions of the colonial power, with indirect and unclear reference to the rights of indigenous people. At best, this sort of legislation stipulates that the land rights and concessions to colonials should not "inconvenience" or "hinder" the indigenous population. In 1953, twenty-two years before independence, efforts were made to codify lands rights for Amerindians, but only a few communities near the capital of Paramaribo were involved in any meaningful fashion.

In the second half of the 18<sup>th</sup> century, peace treaties were signed between the colonial Government of Suriname and the warring, rebel Maroons. No special mention is made of land rights in the otherwise comprehensive peace treaties. Following the abolition of slavery in 1863 these treaties were amended but again included no reference to land rights other than an implicit assumption that Maroons could cut timber in the interior. Officials of the colonial government were instructed to encourage Maroons to exploit the

lumber in their residential areas and to sell this lumber in Paramaribo, thus reducing their dependency on subsidies from the Government.

Time and again, in the course of the introduction of new legislation regarding the cutting of timber, the mining of gold, or the harvesting of natural rubber products, the stipulation was made that the residential areas of Maroons and Amerindians should be respected. However, the size and range of the indigenous areas seemed to shrink with each subsequent introduction of new legislation until only the villages themselves were declared off limits. In the case of Nieuw Koffie Kamp a gold concession was granted on and surrounding an existing village. Today, lumber and gold concessions are granted to village and senior chiefs, thus allowing all of the subjects of the chief to profit from the concession. In practice, however, most of the chiefs have sub-leased these concessions to large local and foreign companies and labor. The use of the proceeds from such sub-leasing has been a frequent source of dispute at the village level between rival factions of those who profit and those who do not.

The measures taken in 1962 to accommodate some 6000 Saramaka Maroons (and a smaller group of Ndjuka), who were forced to abandon their traditional residence areas to clear the way for the ALCOA hydroelectric project in central Suriname, is a good indicator of the position taken by the Government with regard to the land rights of indigenous peoples. The Government took the position that it was obligated to compensate only those affected by providing them with an alternative residential area and a small house. Interestingly, one of the villages involved in this relocation program is Nieuw Koffie Kamp, now under threat of being relocated again for the second time in less than forty years. This relocation scenario was repeated in 1975, when the central Government prepared to develop a hydroelectric project in western Suriname. The indigenous Amerindian community was expected to vacate the area without compensation for their lands and gardens in order to make way for the construction of a new mining village. Fortunately for the Amerindians this did not occur as financing for the project did not materialize.

With independence in 1975 no measures were taken in the new Constitution in recognition of past tacit treaties and land rights proposals for Amerindians and Maroons, nor to establish legal recognition of their over 900 traditional authorities. The post-revolution constitution of 1987 failed to address these questions of land, timber and mining rights, and the statutory role of traditional authorities.

The internal war of 1986-1992, which drew Maroons, Amerindians, and the National Suriname Army into the conflict underscored the dangers of ignoring the economic and political needs of traditional populations in a modern nation state. The authority of traditional leaders and their institutions was challenged, young fighters lost a decade of schooling, mining and timber corporations were entering traditional territory at an alarming rate and leaving behind a trail of destruction and pollution. Young indigenous people boldly took action to mine and cut timber in the name of their own economic well-being. Today Maroons and Amerindians are demanding land rights, and the establishment of any serious, durable peace must address the combined problem of land

and mining rights and the need for constitutional recognition of indigenous people as full members of Suriname's polity.

Since the 1991 IDOS guide there have been three conceptual breakthroughs. Although laws have not been signed into force, there are signals that the issue has obtained priority in the eyes of the Government, and that discussions are underway as of April 2000.

The "Frame Work Agreement," signed by the Government and indigenous dignitaries alike on 1 April 2000, provides a number of resolutions upon which a national law can be based. The Agreement lays out in principle three critical areas of concern and guarantees for the Maroons and Amerindians on the one hand, and the Government of Suriname on the other.

The evening newspaper, *De West*, summarized the three component protocols on 3 April 2000. First, that the collective nature of Maroon and Amerindian societies in the interior should be recognized by the Government. Indigenous people therefore have the right to commonly share and make use of the natural resources, including gold and timber, in their traditional living areas. In forthcoming discussions, expected in 2001-02, the exact boundaries of these "zones of exploitation" will be established and recognized, according to Government announcements.

Second, that questions of the "national interests," vested in the power of the state to use its products and resources for the well-being of the entire national population, have to be discussed and refined. Prior to the signing of the Agreement, indigenous people would often refer to the so-called national interests as the "Paramaribo interests" (urban, capital accumulation) which returned little or nothing in the way of capital or services to the interior of Suriname. The Agreement proposes that when national interests in resource exploitation involve activity on what is recognized as Maroon or Amerindian zones of exploitation, that negotiations have to take place between indigenous leadership and government officials.

Third, and key to the signing of the Frame Work Agreement, is the issue of compensation by government for any natural resource exploitation that takes place on indigenous lands and zones of exploitation. A compensation fund is to be established by the Government based on a percentage of revenues acquired from national concessionaires and companies, as well as international concessionaires. This compensation fund, which derives from capital gains in the name of national interest, is to be used to compensate indigenous people for the intrusion of gold and timber companies on their ground, and will be further invested in infrastructure development and the extension of Government services. This clause and the idea behind it were introduced to the Suriname delegation of Paramount Chiefs (*Gaaman*) when they visited Ghana (of which a discussion follows in section 3.2 "Chieftaincy") and surely influenced the results of the Agreement dialogue by their input and experiences.

Finally, if after continued dialogue and negotiation the Agreement and its resolutions (*besluiten* in Dutch) are agreed upon, they would obtain the status of a Government

decree and enter the law (*staatsbesluit* in Dutch). The Agreement is currently (2001) under discussion and would provide for the first legal recognition of indigenous land rights for Maroon and Amerindian people.

### **3.2 Kin-ordered Societies and the State**

#### *Democracy, Representation and the Traditional Authorities*

Civic participation in the creation of public policy and maintaining the standards of good governance is critical for the functioning of democracy. The flow of information from government to its constituent groups and the responses of those groups to their representatives is critical in expressing grievances and concerns, voicing support or dissent, and, ultimately, shaping policy for both citizens and the state. Deliberately ignoring, manipulating or, in some cases, destroying these organs of public communication weakens democracy and often places it in peril.

In 1970, *Gaaman* Aboikoni of the Saramaka Maroons, in a reply to a question about independence for Suriname, replied:

“If you sit in the darkness and someone asks you what time it is, you don’t know [what to answer]. In the interior we need information. Just as a child grows to be an adult, then he can say: I can stand on my own two feet and be independent. ... We can at this point not determine if Suriname is ‘ripe’ enough for sovereignty; that is a position that the Suriname government has to decide and we ourselves will take into consideration.”

This quotation will serve as an introduction to the ambivalent policies that the central government of Suriname has had, and continues to have, towards the equitable incorporation of Maroons into the State through representative democracy and the equally ambivalent positions most Maroons hold in regard to closer association with the State and its institutions. Policies, incomplete and unimplemented as they were and are, aimed at obtaining this elusive goal from independence to the present, are summarized below.

Several months after independence, Prime Minister Henck Arron in a statement delivered in the main village of the Saramaka, said “... the position of Maroon traditional authorities will be in no way changed after independence. Rather, the Government will make every effort to strengthen their position.” The *Gaaman*, later disillusioned with the unfulfilled promises of independence, mentioned that if he were several years younger he would simply pull up stakes and lead his people across the Marowijne River to French Guiana.

His frustration was based on the fact that the Arron government did not address the question of interior representation and administrative restructuring and opted to do nothing. The Constitution of 1975 did not mention the traditional authorities in the interior at all. Maroon leadership was at best tolerated. No official recognition was

extended to them other than the ceremonial swearing in of already established Maroon leadership and providing them with a small stipend.

The erosion of traditional leadership, the dismantling of their administrative duties and a one-sided incorporation of Maroons into the State is not a creation of Prime Minister Arron alone, but was rather a continuation of State policies reaching back fifty years and more. In the 1950's District Commissioners and their local administrators (*Bestuurs Opzichters*) began more intensive contact with traditional authorities. The presence of police officers in the interior became more widespread in the 1960's creating inroads into the traditional Maroon legal system which had functioned for two and a half centuries. Dislocations were inevitable and troublesome for Maroons. It would not be until the 1980's that serious discussions over the power structure(s) of the interior and their relationship to the State would take place.

One of the first declarations of President Henk Chin A Sen, an early civilian leader of one of the military-dominated governments, was that the revolution called for a renewal of the political and administrative machinery of state. The political philosophy of the "revolution" called for the mobilization of people where they lived and worked, and during this period several models were experimented with. The idea of political decentralization to the workplace and village is not a new one, but for Suriname it was the first time that such policies were given serious consideration.

In January 1981 the Directorate of District Administration of the Ministry of Interior Affairs prepared a policy note which called for an Interior Affairs Division to be established within the Directorate of District Administration. Despite its intentions at restructuring, the note pointed out that traditional authorities were not civil servants and that they would remain subservient to Government. In fact, the policy note went on to contradict its intentions to decentralize and restructure, and actually called for more centralization and less recognition of traditional authorities and their preferred means of organization and administration. The management-thinking of the note was decidedly western and corporate: the traditional authorities must be brought together in a "foundation" where they could "more adequately identify their tasks;" "norms" must be established for the number of traditional authorities to represent standardized population conglomerates; and, among other things, an increase in the number of *Gaaman* to "better" provide administrative support to the Government. Nothing of substance followed from the guide.

In the 1980's, People's Committees (*Volks Comites*) were established in a number of villages in the interior. But, despite the revolutionary intentions to mobilize Surinamers – whether they wanted to be mobilized or not—these structures remained strange and alien bodies in the experiential world of Maroons; something imposed from above, from outside. However, it would not be until the Constitution of 1987 that serious thought was given to participation and representation through Constitutional means rather than artificial revolutionary programs of mobilization. Yet, the policy begged the whole question of mobilization by who and for what?

The earmark of the new effort of political democratization and decentralization, and the one tangible effort aimed at decentralization, and that was embodied in the 1987 Constitution, took place on a regional and sub-regional level through two representative bodies. The District Council (*District Raad*) and the Local Council (*Ressort Raad*). These elected bodies would in turn represent local issues to elected members of the National Assembly and be further supported by the newly established Ministry of Regional Development. However well-intentioned the policy was, several questions remained unanswered. What sort of relationship were these elected bodies to have with the traditional leadership and their administrative structures in the interior? This was not made clear in either the Constitution nor the laws.

In 1983 the number of administrative districts was increased to ten by including the huge interior district of Sipaliwini. In principle, the large interior district would allow for a more effective development of the district and its Maroon and Amerindian populations. Although the geographical boundaries of the State were redrawn, and were sensible, little serious attention was paid to the position which traditional authorities should play. Nevertheless, the interior district was allotted four seats in the National Assembly; a sizable number given the relatively smaller population compared to the coastal area and, especially, Paramaribo. The new Constitution required that candidates for office abide by a residency requirement, further assuring representation by Maroon and Amerindian leadership at the national level. And, in justifying the new district, the Minister of Regional Development, also a Maroon, opined that the Maroons and Amerindians of the interior should not be artificially divided into different Districts by geographical boundaries. Rather, they should be included in one District on the “basis of their common languages and shared residential areas.”

In 1986 the District Commissioner of Sipaliwini H. R. Libretto, himself a Maroon, called for greater participation and greater representation of Maroon peoples to define their own interests. In no way, he went on, was there an intention of weakening traditional authority but rather to pursue real decentralization. These efforts at policy correction were cut short by the Interior War that lasted from 1986-1992.

With the restoration of peace in 1992 the newly elected President Venitiaan of the New Front once again opened the question of participation and recognition of traditional leadership. In a discussion with four of the Maroon *Gaaman* the President pledged that the traditional administrative structures of the Maroons and the position of their authorities would be taken up in revisions of the Constitutions. However, this pledge was not addressed by President Venitiaan's government, nor were they considered by the following government of President Wijdenbosch.

President Venitiaan was reelected to the Presidency in 2000. The question of democracy, participation and representation of the interior remains an issue very much alive. Let us examine in more detail the role of kin-ordered and the State.

The Constitution of the Republic of Suriname defines the role and the status of the National Assembly and its members, outlines the responsibilities of the President and the executive branch, and stipulates the tasks of the judicial branch. To be sure, politicians will debate at length how the Constitution and other laws and decrees are to be interpreted, but at least there is a skeleton on which to base such discussions. For the 900 or more traditional rulers with leadership responsibilities in the interior, the situation is less clear cut. Neither the Constitution, nor the organic laws of the Republic of Suriname, mention traditional rule. The country is left today with a colonial heritage of two political systems, the National political system and traditional rule, the latter subordinated to the former, but without a legal basis defining this relationship.

This lack of legal recognition was always a concern to traditional rulers in the interior of Suriname. The recent encroachment, however, of determined multinationals seeking to fix legal claims on vast lumber and mineral concessions - cutting right through what for over two hundred years or more Maroons and Amerindians considered their subsistence resources - has turned this concern into panic. Cries for help and for recognition of some sort of rights, have spurred an abundance of reflection and discussion, but yielded no concrete results to date. Throughout these developments traditional rulers have been faced with the impossible task of trying to answer the questions of their subjects on these issues, questions for which neither the national legal system, nor traditional rule, can provide answers.

In an act of desperation, some traditional rulers appear to have opted for capitalizing on the wisdom conveyed by the adage "if you can't beat them, join them." A number of chiefs were approached by multinational lumber firms - impatient with bureaucratic delays in securing large-scale lumber concessions - and were asked to make available tracks of forest issued in the name of the village chief on behalf of the villagers, against reasonable compensation of course. An added incentive was employment for village youths, who were given equipment and supplies to harvest lumber. These revenues were more than welcome in villages strapped for cash, but here again the lack of a legal framework took its toll. In some villages, the revenues were deposited in the village fund, in others it is not always clear how these revenues were spent. From an environmental perspective, moreover, leasing a concession issued to somebody else has its appeal. The legal holder of the title, and not the lessee, is responsible for observing the forestry code.

In the gold mining sector several options of revenue sharing and partnerships have been explored and developed. Small- and medium-scale miners have approached traditional rulers and secured permission to work in traditional settlement areas, usually after agreeing to pay a 10% royalty to the chief. These agreements have no basis in law, however, since the Constitution specifies that minerals are the property of the State. Moreover, as a consequence of the absence of legislation regulating traditional rule, no formal procedures exist for receiving, monitoring and spending such revenues at the village level.

Due to the absence of legislation defining the authority of the traditional rulers, adjudicating disputes with persons wishing to engage in economic activities in or near

interior settlements can be onerous. To cite a recent example, an ex-civil servant of Amerindian extraction returned to his village near the Brazilian border with mining title in hand, asserting that the ensuing gold extraction activities would bring welfare and development to the isolated village. Within a week or so he returned to town, and complained to a local newspaper that he was abducted and threatened by the village chief. It was reported that the Chief had summoned the miner to put off his mining activities until the water level in the river rose again. The water level was very low, and the silting produced by the tailings would make it impossible for the villagers to use the water from the river. However reasonable the summons of the chief, from a strictly legal point of view he did not have the authority to prevent a holder of a mining right from working near the village.

Several persons from the interior who succeeded in securing legal title to gold prospects have argued that such title gives them the right to work in the interior without having to consider demands made by traditional rulers. Others, without legal title, have simply bypassed the traditional rulers and have gone on to conduct gold mining activities. Also impatient with bureaucratic delays in securing large-scale concessions, a number of gold mining companies have approached senior traditional rulers with proposals involving the leasing or sale of concessions in traditional settlement areas. Several chiefs have secured gold exploration concessions, and have concluded joint venture agreements or simply sold their rights to foreign exploration companies.

Due to the conspicuous absence of legal definition and delineation, and the protection such a framework would provide, the future prospects for traditional rule and the people they represent are disheartening. One observer noted, "in the tumult of the confrontation between global commerce and parochial ethnicity, the virtues of the democratic nation are lost and the instrumentalities by which it permitted peoples to transform themselves into nation and seize sovereign power in the name of liberty and the commonweal are put at risk."

The Government of Suriname, while showing respect for the market ideology, is not pulling back and is getting ready to aggressively intervene. A minerals institute and a national environmental institute are in the making, and several efforts are now underway to order and legalize the small- and medium-scale gold mining sector. If the Government wishes to retain traditional rule, however, in the course of this and similar restructuring efforts, it would do well to also consider the desirability of formalizing traditional rule. Traditional leaders at the local level could then work side by side with representatives of the National Government in forging and preserving the new order. A prominent Chief in Ghana noted: "Our political institutions need to play a complementary role rather than a competitive role with our traditional institutions in moving Africa forward." In order to bring about such a mutual gains approach, reforms and empowerment are needed. Suggesting how to go about this endeavor, the Chief writes:

"To achieve all this ..... our traditional institutions need some major reforms and empowerment. We must within ourselves eschew avarice, unnecessary litigation and unwarranted autocracy in order to enhance our own credibility. We also need

to modernize some of our cultural practices and religious beliefs to make them acceptable to the entire society.

On the flipside, our governments and political systems must also restore the respect and power needed to enable our traditional institutions to function effectively, as major catalyst of growth and development. Political leaders in Africa must stop undue interference in their traditional institutions in their greed for absolute power. For, whether we like it or not traditional institutions and cultural values will remain forever with us in Africa."

In Ghana, the country from which at least half of the African-Surinamers originated, four-and-a-half pages of the Constitution are devoted to Chieftaincy and related institutions, such as the National and Regional House of Chiefs. The Chieftaincy act alone consists of 67 articles.

Clearly, the problems of traditional rule in the two countries are not comparable in every respect. Almost every area of Ghana inherited some form of traditional rule, whether the institution is referred to as the "stool" in the south or the "skin" in the north. In Suriname, however, only the interior inherited, by way of the colonial experience, marronage, a system of traditional rule with roots in West- and Central Africa. In the intervening years since traditional rule sprouted roots among rebel slaves, a similar system developed among the Amerindian societies also living in the interior.

In contrast to the interior, however, the coastal and urban areas are inhabited not only by African-Surinamers, but also by descendants of indentured laborers originating in India and Indonesia. These ethnicities are incorporated fully today into the national political system. Nevertheless, a visit to Ghana for the Maroon chiefs seemed a very worthwhile undertaking, even if it was meant to contribute to a more circumscribed discussion on the future status of traditional rule, a discussion that is to be related to the geographical confines of the interior of Suriname.

With this purpose in mind, a delegation of 29 Surinamese departed for Ghana on August 27, 1997. The first week of the visit was dedicated to participating in the Third Pan African Theater Festival - Panafest. During the second week, a smaller delegation of three Paramount Chiefs and two senior Chiefs toured Ghana, seeking to learn more about the ways in which traditional rule has been institutionalized in Ghana. This delegation included a legal expert specialized in traditional rule with 35 years of experience in the civil service, an anthropologist and a sociologist.

On 3 April 2000 the headlines of Suriname's daily morning paper, De Ware Tijd announced, in bold headlines, "Three Centuries of Land Rights Problems Solved." It would seem that the shared experiences of the Chief's and government official's visit to Ghana had some influence and in-put into the policy decision framework. Many of the lessons learned in Ghana were incorporated into the groundbreaking document, and cited in the newspaper.

The land rights problems came to a head in the early 1990's when national and international gold and timber companies received from the government huge concessions to undertake exploitation of huge reserves in the Suriname interior. Often these concessions lay directly adjacent to or on the traditional hunting, planting and fishing areas of the traditional populations. In the case of Nieuw Koffie Kamp, discussed above, the village lay squarely in the middle of a huge gold concession leased to the Canadian-based Golden Star-Cambior multinational gold conglomerate. Conflicts arose throughout the interior over traditional rights to make use of the natural resources and the rights of indigenous people themselves to undertake gold mining and timber cutting on lands they have inhabited since the colonial period for Maroons, and since the pre-colonial period for Amerindians. In addition, mercury pollution of the rivers, destruction of the natural environment, and the by-products of modern fossil-fuel technology wreaked havoc on the traditional life styles and mode of production of the indigenous people.

As made clear in the preceding section on "Land Rights," which opened this chapter, there are a number of conflicting and contradictory constitutional clauses, Peace Accord agreements, resolutions, and laws at play in the question of land rights on the one hand, and the national interests of the State on the other. The experience in Ghana, and the role of traditional leadership there in the affairs of state, provided the indigenous leadership and Government officials of Suriname alike with a common vision of how such disputes could be approached and gave them a common language in which to deliberate it.

#### **The Succession of Indigenous Leaders**

The Government of Suriname and the Association of Indigenous Village Chiefs (VIDS) worked on the implementation of a project aimed at drafting guidelines for electing or designating village leaders in the indigenous communities. In many of the Amerindian communities in the interior of Suriname elections took place in the mid-1990's to install new village councils. In several cases, these elections were marred by conflict. There were differences of opinion among the villagers on many issues, including questions related to the boundaries of the village, the eligibility criteria for voters and candidates, the time needed to prepare for the elections and to campaign, the electoral procedures to be utilized, the transition period, the mandate of the village council and the leaders, and the length of the term the village council and leader should stay in office. The indigenous people themselves called for some unification and collective agreement on a form of elected succession, which would be accepted throughout the country.

According to historical sources, Amerindians in Suriname did not have a strongly developed leadership system before colonization. Only in times of war did strong leaders emerge on the scene. In the late nineteenth century, the central Government needed a more clearly defined leadership system in the villages, an identifiable authority that could maintain relations between the village and the national Government. A system was chosen which resembled the traditional authority of the six Maroon groups. The main difference is that Maroon nations in Suriname all have a Paramount Chief (*Gaaman*), while the Amerindians have representation only on the village level; thus, there are no

Paramount Chiefs but only Captains (*kapitein*) for local administration<sup>4[4]</sup> . Village councils are decidedly local as well and function to maintain peace, order, dispute resolution and external village relations.

The status of traditional Amerindian leaders is not legally recognized in Suriname, but is taken into consideration on a de facto basis. Amerindians say that in the past it was common that when a Captain or village councilor died, the position was inherited by a son. Thus political system was based on succession. This is the case for Maroons as well, whereby leadership positions are inherited through the matrilineal line. Increasingly however, elections have been used to select leadership. The elections were not formal or legalized but largely ad hoc, and elections themselves as still viewed as a relatively modern development. In some villages the inhabitants, often led by young people, or potential rival councilors, organized the elections themselves. When disagreements arose the Government often had to step in.

A series of guidelines for elections was implemented, emphasizing secret balloting, and a set agenda and time table for elections; every five years. Arrangements such as identifying village boundaries and eligibility requirements were also put in place. A representative of the District Commissioner's office was on hand to monitor proceedings.

In the period after the signing of the Peace Accord, a number of indigenous villages held elections to install new village councils or leaders. In several of these villages, the elections were marred by conflicts. There were differences of opinion among the villagers on a number of issues, including questions related to the boundaries of the village, the eligibility criteria for voters and candidates, the time needed to prepare for the elections and to campaign, the electoral procedures to be utilized, the mandate of the village council or leader, and the term during which the elected village council or leader should stay in office.

After the election of a new village council or leader, the Minister of Regional Development installs the new leader or village council on a recommendation by the District Commissioner. However, in those instances where the outcome of the elections is disputed, the Minister of Regional Development is reluctant to install the new leaders. The Government is concerned about the consequences of installing leaders who do not enjoy the support of the majority of their constituency.

The indigenous population has also complained about the negative impact of the resulting administrative uncertainties on the development of their villages. It has also been very difficult for businesses from the coastal area and abroad to conclude agreements with the villagers, because there is no clear leadership.

---

<sup>4[4]</sup> The Captain of Kwamalasumutu claims *Gaaman* status as he represents a consortium of surrounding Captains as a senior Captain.

The objective was to design and develop guidelines for electing or designating members of village councils or village leaders at specified intervals or after the death or resignation of a village leader. These guidelines offer a solution for the problems inherent in centralized majoritarian rule, which many Indigenous people have with elections.

### **3.5 Opportunities for Strengthening Democracy**

Suriname has validated its democratic system with three free and fair OAS observed elections in succession: 1991, 1996, and 2000. The military dominated period is over and the country looks forward to the continuing renewal and further strengthening of the democratic process.

Pluralism is critical in a representative participatory democracy and is the energy behind the idea of a broadened civil society. Inclusion of diverse voices in the public forum strengthens democracy. Finally, education and awareness-building coupled with good communication and civic education forges a stronger public role and the institutions through which the public can make its voices heard.

The decade of the 1980's in Suriname taught us certain cautionary and valuable lessons. A democratically elected but weak and internally fragmented government crumbled under the stress of a military take-over. The military leadership then began its search for and recruitment of support from various sectors of society. Yet, the military during its seven years of direct rule, never succeeded in incorporating the participation of *all* groups in the process of governance. The transition and return to democracy for Suriname is almost a case study in expanding support through institutions that had been neglected or discredited by the military leadership. In the four periods of military rule which Jules Sedney outlines, there was rule with the support of the masses; rule with the support of the left; rule with support of the labor unions and private sector; and, finally, rule with the support of the masses, the labor unions, the private sector and the traditional political parties. It was this final broad-based stage that led to the return to democracy in 1987 and again in 1991.

Political party choice is not a problem for Suriname. Seventeen parties and/or coalitions contested the 2000 elections. Six coalitions and /or political parties won seats the National Assembly. The elections of 1996 were contested by far fewer political parties but still displayed a menu of choice for Suriname voters with five coalitions and/or political parties receiving representation in the National Assembly. Perhaps Suriname's leaders, in all fields and not just political, might wish to examine what other forums of participation and civic society, public policy making could be introduced to further root and make more effective democracy in Suriname.

The reality of the two Suriname's appears again in this chapter. The conditions in the hinterland for Maroons and Amerindians are far from ideal and large scale measures are required to restore and upgrade basic infrastructure.

The interior populations, what are called here kin-ordered societies, participate in national politics through political parties and have seats in the National Assembly. There are also, following the reforms in the 1987 Constitution, far more decentralized arms of the State in the interior through district-level and sub-district level elected councils. This presence, however, exists parallel to and sometimes in conflict with the traditional authorities of both Maroons and Amerindians. The over 900 traditional authorities in the interior are not recognized in the Constitution and this omission thus limits their capacity to more fully participate in national governance and to more effectively represent their peoples. Solving the questions over land rights, ownership, stewardship and rights to exploitation, particularly gold, will be critical in Suriname's near future. Peaceful settlement of these issues will require the inclusion of all parties concerned.

The Maroon Chiefs' visits to Ghana and Brazil, and the election of Amerindian leaders and village councils, are two projects worth noting. The Ghana visit allowed the Chiefs to see one version of how indigenous traditional leadership is incorporated into the State, while the Brazil consultation exposed to them new economic development ideas. The election of Amerindian village leaders and their councils is an important break through in promoting democratization in the interior.

The ideal structures and behavior of democracy outlined in the beginning of this chapter will remain an unfulfilled challenge for probably all but a very few democracies. Yet these principles serve to guide the way to a better and stronger democracy. Suriname is on this path now.

#### Questions and Issues:

The chapter opens with several agreed upon principles of democracy. Where do you see flaws and problems in the Suriname experience?

1. Jules Sedney opines that the revolution went through four distinct socio-political phases based on its recruitment of support. What were these phases and how did they differ vis-à-vis the support of democratic forces?
2. What are the issues surrounding the role of and incorporation of kin-ordered (tribal) societies into the modern state? Think in terms of: a) land rights, b) the role of traditional leadership and tribal authorities, and c) questions about cultural autonomy of indigenous people.
3. What measures to strengthen democracy do you see in the "two Surinamese?" What can be done at the political party level and National Assembly level in coastal Suriname? What measures are required in indigenous Suriname? How are the two worlds articulated without conflict?

## **CHAPTER IV**

### **POLICIES: SURINAME, NETHERLANDS AND USA**

It should be no surprise to the reader that after over 400 years of a colonial relationship, the Republic of Suriname and the Kingdom of the Netherlands have a tangled, emotional and sometimes contradictory character. This continues to the present and the foreign policy of Suriname, despite the rhetoric of decolonization and diversification, remains Dutch-centric. Let us concentrate on the period immediately prior to independence and follow that with several dangerous epochs which involved not only the Netherlands but also Brazil and China.

#### Periods:

- 1973-1975: Forced march to independence
- 1975-1979: The Golden Handshake
- 1980-1982: The Coup and Dutch/US reaction
- 1983-1992: Returning to Democracy
- 1992-present: Diversifying policy of sorts; New players

#### 1973-1975

Suriname was a co-equal member of the Kingdom of the Netherlands with its international representation and defense undertaken by the Netherlands. A governor of Surinamese descent represented the Queen/Crown, while the United States, France and the USA maintained consulates.

The US government presence, although small, represented the immense financial investment of Alcoa.

Minister of Development Jan Pronk of the Netherlands began serious talks with Suriname on independence; in fact, the Dutch worked closely with pro-sovereignty Creole groups much to the dissatisfaction of East Indians. The billions of dollars in foreign aid to be called the “golden handshake” were agreed upon. The USA displayed no particular position on independence and began during this time to forge its embryonic “Suriname is a Dutch problem” policy; only now beginning to change in the early 2000’s. France was a bit more animated and was concerned that Dutch withdrawal would lead to instability.

#### 1973-1979

Billions of Dutch foreign aid dollars flowed into Suriname. Graft and corruption grew as monies were siphoned off from development projects, particularly the so-called “west Suriname” hydro-electric” project at Kabelabo and Apoera. Dutch concern mounted as the government weakened and fragmented under the strain of corruption and rumors follow that a rogue colonel in the Military Attache office was working with young soldiers to “influence” the government.

There was the first appearance of Chinese representation during this period. The Soviets sent a mission but would not build an embassy until after the 1980 coup. The United States and France continued to work as good neighbors but showed no particular interest one way or another, reasoning that “Suriname is a Dutch issue (and, later, a problem).

#### 1980-1982

The military coup of November 1980 resulted in the USA issuing the usual concerns about the interruptions of democracy. This of course was prompted by cold war circumstances and the coincident regional events in Nicaragua, El Salvador, Jamaica, Grenada, Guyana and, of course, Cuba. Suriname was not to disappoint the USA as the government began a headlong pitch into “revolution.” Suriname ambassadors and foreign ministers were called to Washington to make clear their government’s positions to the Reagan government.

With the presence of a high ranking official as Cuban ambassador to Suriname, and rumors of a substantial build up of Cuban representation country, Brazil and France began a more watchful and activist policy. They two would soon be involved in concerted action to de-stabilize the military government of Suriname in late 1982.

The infamous “assassinations” of December 1982 pressed the USA into action. Several high American embassy officials were accused of being “CIA agents,” and substantial evidence exists that a covert action was in the advanced planning stages in early 1983 before it was exposed and, to a certain extent ridiculed, by then Senator Barry Goldwater. The US government position was hostile and a small military aid program was terminated.

In late 1983, several days before the US-led intervention into Grenada, a high ranking Brazilian general entered Suriname and made clear in no uncertain terms that the Cuban presence in Suriname must be drastically reduced. Brazil and, certainly, French concern over the radical drift and Cuban and Libyan presence in Suriname concerned neighbors and friends alike.

The Dutch terminated their foreign aid development package except for small humanitarian grants. The reestablishment of this aid pack remains a contentious issue at the time of this writing.

### 1983-1992

This period witnessed not only a slow process of democratic consolidation but also a dangerous civil war with a number of covert players involved and a second coup. The period eventuated in free elections held in 1991 which saw for the second time the installation of a civilian government.

An appointed civilian government in 1983 of moderates and technocrats mollified the fears of the Dutch, USA, France and the Brazilians but did not in itself lead immediately to general and free elections. In 1985 an insurgency erupted in the interior of Suriname and suddenly ex-patriot groups in the Netherlands, and operatives of the Dutch, French and US governments advanced the efforts of the “Jungle Commando” as a stalking horse with which to put pressure on the military government to hold elections.

The pressure eventuated in elections but the first civilian government of 1987 was weak and fragmented and soon capitulated to military pressure in the so-called “telephone coup” of 1990. The US, in particular, supported by the Netherlands, France, Brazil and the Organization of American States began immediate pressure for new elections in 1991. A protocol was added to the OAS resolutions in Santiago, Chile that the organization would tolerate no more “illegal interventions or disruptions of freely elected governments.” The military was on notice in Suriname.

On notice to the extent that in late 1991 the US Ambassador to Suriname, in collaboration with his Dutch and French colleagues in particular, had to insinuate (once again) the possible use of external force should Commander Bouterse not relinquish his control of the military as recently elected President Venetiaan wanted. The coalition, led by the Dutch and with significant US support (and French as well), won out and Bouterse left.

(Although out of chronological order it is important to mention that Bouterse's fortunes did not necessarily decline. Once out of the military he became party chairman of the NDP and saw his party form the government after the 1996 elections. He was the power behind the scenes until he split with President Wijdenbosch in the late 1990s. In the 2000 elections he ran for parliament and won a seat representing his NND in coalition with KTPI in the Millennium Combinatie. Bouterse is wanted on international narcotics trafficking charges and has been implicated in murders, arms smuggling, drug running, and syndicated crime in the so-called "Suri-kartels.")

It was during this period that US policy towards Suriname began taking on a much higher level of visibility and action-orientation. Not only was democracy and stability an issue but, by the mid-1980's it was evident that narco-commerce and trafficking were reaching alarming proportions; particularly after the arrest of a high ranking military officer in Miami.

### 1992-present

There have been free and open elections in 1991, 1996 and 2000. Governments are serving out their terms. The military is under control and, perhaps, gutted and undercapitalized perhaps far too much to undertake its constitutional duties.

The Dutch continue to negotiate the restoration of their interrupted foreign aid package, still valued at over 300 million dollars. The Dutch argue for "sectoral" investment schemes (e.g., "rice sector," "infrastructure") while the Suriname government prefers "lump sum" disbursement to be decided later.

The French maintain a keen interest in their border with Suriname and monitor the flow of legal and illegal migrants and visitors to French Guiana. Recent efforts to assist in the rebuilding of the army barracks in Albina, Suriname are a French effort to assist the Surinamers in controlling their own borders. Many Maroon and Amerindian women deliver their babies in French Guiana and pay no expenses.

Brazil is concerned about its nearly 40,000 (mostly illegal) gold miners in Suriname and their safety.

China provides Suriname with bicycles, military uniforms and has recently paved (asphalted) several hundred kilometers of road in Suriname.

Finally, let us quickly examine the outlines of Suriname policy and US policy.

Suriname boasts of diversifying its diplomatic portfolio to include Brazil, China, Ghana, and the countries of MERCOSUR in South America. Suriname has become a member of CARICOM. Suriname, by virtue of its colonial history, has an ambassador to the European Union.

However, when all is said and done the two significant relationships Suriname has are with the Netherlands and the United States. The Netherlands occupies the attention of Suriname because of the outstanding foreign aid balance and the fact that nearly 300,000 Surinamers reside in the Netherlands; more than half the population of the country.

The United States is represented by Alcoa Aluminum of Pittsburgh, the single most immense and important financial contributor to the wealth of Suriname. New projects call for even more investment and employment. As pointed out, the US government still tends to maintain a “Suriname is a Dutch problem” perspective although this has been changing since the early 1990’s. During the mid and late 1990’s and accelerating into the 200’s we can see a clear agenda of US policy issues emerging which are complementary to and, quite often, independent of Dutch policy.

### US Policy Issues

- Maintain and Strengthen Democracy through both formal institutions and NGO’s
- Promote Human Rights Protection including gender equity
- Promote Environmental usage and conservation through sustainable development, park and preservation development, and land use projections
- Strengthen capacity of security forces through joint programs and training activities
- Joint narcotics interdiction efforts supported by the Drug Enforcement Agency and the Maritime Law Enforcement Agreement

### Questions:

1. Reflect on Chapter one, the Dutch colonial experience in the Caribbean and Suriname, and think about the overwhelming Dutch presence and control in the colony. This is, interestingly enough, coupled with the increasing American economic presence in the colony from colonial times though to today.
2. Think about the isolation of Suriname, even from its “natural” allies in the pre- and post-independence Anglophone Caribbean. It is really no wonder that Suriname “turned in on itself” and became isolated and out of control.
3. The collapse of the revolution led to Suriname re-thinking its role in the global economy, Radical politics failed and the only way forward was though incorporation into the financial and democratic markets. How and why did this happen? The US and Dutch presence was critical to promote international investment, recognition and approval.

4. The post-1992 interest in the rain forest and also the US government concern about narco-trafficking has concerned the US for nearly two decades now. The policy interest in Suriname is growing, now that Suriname is a formal member of the OAS and the Western Hemisphere. Shall we begin to raise US visibility in the country?
5. At what level and in what sectors should US visibility be increased?

Reading:

For this section, the following reading materials come from one single volume.

It is entitled The Dutch Caribbean: Prospects for Democracy and is edited by Betty Sedoc-Dahlberg, a Surinamer. The publisher is Gordon Breach from New York and the date of production is 1990. The articles most germane to this discussion are:

Betty Sedoc-Dahlberg, "Suriname: 1975-1989. Domestic and foreign policies under military and civilian rule" (pp. 17-33) and "Struggle for democracy in Suriname" (pp. 173-190).

Gary Brana-Shute, "Love among the ruins: the United States and Suriname" (pp. 191-202).

Tony Thorndike, "Suriname and the military" (pp. 35-62).

Michael Allen, "The Dutch Caribbean and transitions in United States-Caribbean Relations" and "Struggle and synthesis: toward theory for the Dutch Caribbean experience" (pp. 151-172).

Alma Young, "Decolonization in the Dutch Caribbean: lessons from the Commonwealth Caribbean" (pp. 253-268).

## **CHAPTER V**

### **THE DIMENSIONS OF PEACE AND DEMOCRACY**

#### **4.1 Lessons and Opportunities**

Suriname is a much different country today than the one of the 1980's regarding the promotion of peace and democracy. Recent political developments have shown that that the country has reached the democratic maturity to face its problems within a constitutional framework and internationally agreed upon democratic principles. What was before solved by force it is now debated democratically; and it can be said that there is no room for the political adventurism as that described in this guide. Obviously, it does

not mean that Suriname has solved all its problems. On the contrary, there are still many obstacles and much to be done by supportive governments and the NGO community. However, many lessons may be drawn from that involvement and from the efforts to reach the two objectives of peace and democracy:

- Conflict resolution situations presuppose that all the actors involved in a discussion speak the same language and, more importantly, that they use a vocabulary understood by all. Failures in attempts of peace negotiations occur when it is assumed that all participants have the same conceptual framework. Even when all sides have legal representation, the lack of understanding by members of one of the groups may have a negative impact on the results of the negotiations. Representatives with lower educational levels or different perceptions may tend not to agree with proposals because such proposals may be framed in terms totally alien and inappropriate to them and their cultural concepts.
- Vertical efforts by international organizations, non-governmental organizations (NGOs) and government to continue the work of promoting and consolidating peace and democracy will depend in the long run on the “ownership” of the process by the Suriname people. It is fundamental to reinforce initiatives already taken and to strengthen public institutions in order to project to the citizen of the city and of the interior the feeling of being invested in a democracy, that his/her vote and voice have power. The element of national stewardship is critical and all participants must perceive gain for the common good.
- Surinamers are proud of their country and, although they always welcome visitors, they certainly prefer a direct exchange among themselves rather than to be told what to do by foreigners. In this context, it is important that training and development skills be shared with local institutions, which, in turn, could pass on such information to other associations such trade unions, women’s groups, teacher’s associations, government officials, senior citizens, and youth organizations. The best form to convey democratic and peace values to the interior population is to reach out to their members through those associations directly linked with the educational and cooperative activities of the communities.
- Women have a clear, direct, and influential participation in Suriname’s public and private sectors, mainly in political and educational life. Programs in the areas of promotion of peace and democracy should involve a representative number of men and women at all levels, from the national to the community, to the villages in the interior.
- Information technology can be developed in order to use the Internet as a civic learning tool. The Internet can multiply scarce human and financial resources expended to gather and disseminate information. It can also encourage, as the Mission project with the National Assembly demonstrates, other governmental entities to share computer hardware and software and Internet resources, and effectively bring together and promote communication among parties with little or

no contact at all. With the establishment of a resources center and training at the National Assembly, albeit a small one, the Mission has helped enable a component of government to pursue its mission more effectively and efficiently. The strengthening of democratic institutions in the country through information exchange demands obviously more efforts, especially when dealing with the interior and its widely dispersed populations.

- In a multi-ethnic, highly complex society such as Suriname, great care and energy must be devoted to the creation of a forum with conditions for open and peaceful communication and dialogue. And, experience has shown us, such a forum can most successfully be constructed through the good offices of friendly governments and the NGO community. These actors can help to expedite dialogue by identifying common goals, assuring the equal participation of all stakeholders, thus assuring “shared ownership” of the process, and acting as a neutral and honest broker.
- The role of the NGO community is critical as they serve as another arm of society and platform for dialogue. Although the NGO community in Suriname was not designed with peace negotiation in mind their concern for community and national development, and citizen participation in social, political and economic development made them “natural” partners in the constituency for peace and democracy. Two groups stand out in particular in this effort: *Moi Wana*, a human rights group; and the Suriname Council of Churches, a bundle of religious organizations.
- Peace and democracy flourish under the rule of law, and the efforts of friendly governments and the NGO community were able to be applied successfully after a partial rule of law was re-established in Suriname following the elections of 1991. Without the Venetian government’s commitment to at least the basic principles of law no real further efforts could have been successfully made towards the resolution of conflict and the consolidation of democracy and the further strengthening of the rule of law. The legal community must take responsibility for legal and human rights in a country, and thereby create both the opportunities and obligations for all parties to be involved in the peace and democracy process. This simply means that the efforts of friendly governments and the NGO community were supported and promoted, and functioned in the larger context of a society and government that were committed to a return to peace and democracy. Without such commitment international organizations are faced with what are perhaps insurmountable odds. This was not the case in Suriname.
- The electoral system of Suriname indirectly supported efforts to reestablish peace and democracy by assuring that citizens in the urban area, along the rural coast and in the interior had to means to directly participate in the elections of officials to represent them and to have their voices heard in governance. Suriname is divided into electoral district with each district voting for and electing its own representatives. For example, the vast and thinly populated district of Sipaliwini is

allotted four parliamentarians. This distribution, or decentralization, of power results in widespread participation of Surinamers particularly in the legislative branch of governance. Consequently, members of interior groups which were once in conflict have the constitutional means for self-representation in the National Assembly, the highest political forum of the land. Without this opportunity, continued debate and dialogue could not be effectively promoted.

- Professionalization of the security forces, for police and defense forces, is critical to restoring stability to Suriname.

Finally, and perhaps most importantly, let us return to what is perhaps the most important message of chapter III ("Democracy: Challenges and Options"). When there is widespread participation in governance by civil society, coupled with a serious commitment to the principles of democratic behavior, then the democratic system functions with equity and fair play. However, when groups and organizations are deliberately excluded from participation in their governance then the democratic system is weakened and wounded, and perhaps crumbles altogether

#### Questions and Issues:

1. Based on your knowledge of Suriname and US policy towards the region and, specifically, Suriname what would you add to this list?

#### Sources:

The Unit for the Promotion of Democracy of the Organization of American States, the United Nations and International Agencies of every ilk have a voluminous literature on democracy building and strengthening. Doubtless the best place to start would be in the Department of State's Office of Democracy, and also the Western Hemisphere Division in which Suriname is housed.

## SELF STUDY GUIDE

### **NATIONAL FOREIGN AFFAIRS TRAINING CENTER**

School of Professional and Area Studies  
Foreign Service Institute

The **Self-Study Guide: Thailand** provides U.S. government U.S. Department of State personnel in the foreign affairs community with an overview of important Thai issues related to geography, history, culture, social issues, economics, politics, and foreign affairs. The guide is introductory - a self-study resource. Thai affairs are complex, and the reader is encouraged to explore issues raised in the guide by referring to the books, articles, periodicals, and Internet sites listed in the appropriate sections.

The first edition of the **Self-Study Guide: Thailand** was prepared in June 2001 by Dr. Clark D. Neher, Professor of Political Science and Associate of the Center for Southeast Asian Studies at Northern Illinois University. The second edition includes updated information provided by David E. Jensen, Coordinator for Southeast Asia Studies at the Foreign Service Institute of the National Foreign Affairs Training Center. The views expressed in this guide are those of the authors and attributable sources and do not necessarily reflect official policy of the U.S. Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and non-profit use only.

Second Edition  
July 2005

# CONTENTS

## Part I: Geography and Population

1. Geographic Features
2. Thai People

## Part II: History

1. The Original Thai People
2. The Sukhothai Kingdom
3. The Ayuthaya Kingdom
4. Bangkok and the Rise of the Chakri Dynasty
5. The 1932 Revolt
6. The Rise of the Military
7. The Democratic Interregnum
8. The Return of the Military
9. The Transition to Civilian Democracy

## Part III: Culture

1. Hierarchy
2. Patron-Client Relationships
3. Buddhism
4. The Family System

## Part IV: Economics

1. Agriculture and Village Life
2. Economic Development
3. The Asian Economic Crisis and its Aftermath

## Part V: Politics

1. Patron-Client Relationships
2. Constitutions
3. Military
4. Bureaucracy
5. Parliament
6. Political Parties
7. Monarchy
8. Democratization

## Part VI: Foreign Affairs

## *Geography and Population*

Thailand is situated in the center of mainland Southeast Asia, surrounded by the countries of Burma, Laos, Cambodia, and Malaysia. It is one of the ten members of the Association of Southeast Asia Nations (ASEAN), including Burma, Laos, Cambodia, Vietnam, Malaysia, Indonesia, the Philippines, Singapore, and Brunei. Along with the people of the other mainland nations, the Thais are predominantly Buddhist.

### **Geographic Features**

A prominent geographic feature of Thailand is the rivers that flow north to south. Most emanate from China's mountains and empty into the Gulf of Siam. The largest of these is the *Mekong* River, which forms part of Thailand's border with Laos before cutting through Cambodia on its way to the Mekong Delta in southern Vietnam. Another important river is the *Chao Phraya*, which served as the primary route of southern Chinese migration to Thailand.

Thailand's other major geographical feature is the northern mountain chain, home to many "hill tribe" groups. These people are isolated from the majority Thais and keep their own practices, rituals, and language. They engage in *swidden* agriculture, moving to new fields every few years while allowing the old fields to regenerate. As farmers move to new areas to plant crops, they burn the area to clear it. This method of agriculture is sometimes known as "slash-and-burn," and is viewed as a primary cause of deforestation.

### **Thai People**

The Thais who migrated down the rivers to settle on the plains practiced wet-rice agriculture. Canals were constructed along the banks for irrigation. Rice has remained the staple food of Thailand ever since. Indeed, the verb "to eat" in the Thai language is literally "to eat rice." Thailand's agricultural industry has diversified somewhat in recent decades, although rice remains its primary export.

Thailand has a relatively homogenous population – about 95 percent of the country's 65 million people are Buddhist and more than 85 percent speak a dialect of Thai and share a common culture. However, the population is ethnically diverse due to the arbitrary borders drawn by Western colonial powers. For example, many Shan and Karen people live in the mountainous areas of northern Thailand, though the bulk of these peoples are found in Burma. Similarly, Lao, Hmong, and other ethnic groups that originate in Laos also inhabit northeast Thailand, and some speak dialects that would not be understood in the rest of Thailand. Malay-speaking Muslims, most of whom reside in the southernmost provinces bordering Malaysia, comprise another significant minority group with about 2-3 percent of the total population.

The ethnic Chinese are also an important minority group in Thailand. Although they are now mostly wealthy urbanites, the first Chinese immigrants in Thailand were brought by Western

powers to provide labor in the tin mines and rubber estates. Today the Chinese own large corporations, banks, and lending agencies. Although they only constitute about 10-12 percent of Thailand's total population, they enjoy disproportionate economic influence. Unlike in many other Southeast Asian nations, however, the ethnic Chinese minority has experienced relatively little difficulty assimilating into mainstream society in Thailand.

Notwithstanding increasing urbanization, Thailand remains a predominantly rural society. Almost 70 percent of the population still lives outside of urban areas. Bangkok, with over 10 million people or about one-sixth of the total population, is Thailand's only metropolitan area. It is the country's political, cultural, and economic capital. The city suffers from crowded slums, environmental pollution, and an inadequate infrastructure. In the past several years, new expressways, a "sky train", and a subway have been built to help reduce traffic.

Thailand is divided into four major zones: North, Northeast, Central, and South. The Central region consists of the Bangkok Metropolitan Authority. The city remains the focus of urban migration, as per capita income there is about three and seven times greater than the Central (outside Bangkok) and Northeast regions, respectively. The Central region contains the most productive farms and abundant land. A massive, semi-arid plateau can be found in the Northeast, home to about 20 million Thais. The North, with a population of about 12 million, is the most mountainous region and is where numerous hill tribe people reside. Finally, the South includes about nine million persons and has rubber plantations, tin mines, and rice fields.

Thailand's agriculture had made large strides over the last three decades. Green revolution technology has been adopted, and multiple cropping has become the norm. Most farmers now use machinery instead of water buffalo. Sophisticated canal systems provide irrigation and miracle rice is standard. Much of the land is now planted with alternative crops. Nevertheless, poverty is still prevalent among the rural peoples, and the gap between the rural poor and the urban wealthy has grown over the last thirty years.

### *Discussion Questions*

1. What are the principal geographic elements in Thailand that have affected its history and culture?
2. Is Thailand essentially homogeneous or heterogeneous? How so?
3. Has ethnic diversity in Thailand had a positive or negative impact on the stability of the nation?

## *History*

### **The Original Thai People**

The Thai people are a synthesis of a wide array of cultures from within Southeast Asia and from areas outside the region, China and India in particular. The traditional belief has been that the Thais were pushed from the Nanchao kingdom in southern China's Yunnan Province southward into the river valleys of mainland Southeast Asia around the 11<sup>th</sup> century. However, it is now thought that a large group of Thais lived in the valleys for many centuries prior to the southward migrations. The weakening of the neighboring Burmese and Khmer (ancient Cambodian) civilizations allowed Thai ancestors to expand and consolidate their holdings. By 1300, branches of the Thai racial group, which included the Shans, Laotians, and Siamese, controlled the major valleys of a large portion of the Southeast Asian mainland.

### **The Sukhothai Kingdom**

The Thais rose in the wake of the collapsing Khmer Empire, which for four centuries had been a civilization of great splendor and brilliance based at Angkor. In the early 13<sup>th</sup> century, the Thais built the capital of Sukhothai in an outlying province of the Khmer. There, they established a monarchy headed by paternalistic kings. The Kingdom was ethnically diverse and less unified than subsequent ones. The Sukhothai era lasted from about 1238 to 1350.

### **The Ayuthaya Kingdom**

The paternalistic character of the Sukhothai kings contrasts with the more absolutist rule of the monarchy that developed in Ayuthaya. Located several hundred miles south of Sukhothai, Ayuthaya was the area to which the Thais fled when the Burmese and Khmer overwhelmed their capital. In 1350 a new king, Rama Thibodi I, established a capital at Ayuthaya that continued for the next 400 years. The autocratic Ayuthayan monarchs, similar to the Khmer kings, were less accessible to their subjects, and considered "lords of the universe."

In Ayuthaya, every Thai person was organized hierarchically by means of *sakdi na*, a system which ranked individuals based on the size of their land holdings. All interactions were determined by status differentiation.

### **Bangkok and the Rise of the Chakri Dynasty**

In April 1767, Ayuthaya fell to the Burmese. Thousands of Thais were slain or captured and the royal family and nobility were disbanded. A new ruler, King Taksin, the first king not an heir to the royal family, was crowned. The capital was first established at Thonburi and then moved in 1782 to Bangkok, a small fishing village on the Chao Phraya River fifty miles south of Ayuthaya. Taksin was succeeded by Rama I, the first of the Chakri kings, from whom the

present monarch descends. The kingdom rebuilt its devastated society and a long line of kings emerged under whose reign the modernization of Thailand occurred.

By means of judicious diplomatic skills and the adaptation of selected Western practices, the Kings coped with the demands of Western nations seeking commercial and imperial power. The most famous of these kings were Rama IV (Mongkut), and his son, Rama V (Chulalongkorn). Mongkut established a government outside the royal palace. Under his and his son's rule, Thailand underwent major political and societal transformations. Slavery and corvee labor were abolished, the principle of universal military conscription was established, and secular educational opportunities were expanded for persons of all classes. The kings' power was enhanced by these changes.

During the 1880s and 1890s, the entire bureaucracy was reformed to better meet the needs of the people. The society remained centralized, however, with most power emanating from the capital city. Following King Chulalongkorn's death, two weaker kings, Rama VI, or King Vachiravudh, and Rama VII, King Prachatiptok, ascended to the throne. The latter was the reigning sovereign when the absolute monarchy was overthrown.

### **The 1932 Revolt**

The coup of 1932 occurred in response to the king's aggrandizement of power and his reluctance for further reform. The republican elite, angered at the King's royalist retrenchment that often blocked the promotions of the noble class, led the revolt under the leadership of Pridi Phanomyong, a civilian law professor, and Phibun Songkram, an army colonel. This group of some fifty persons formed the "People's Party," a loosely knit, poorly organized structure based more on personal relationships than on formal rules, party discipline, or common ideology.

King Prachatiptok acquiesced to the demands of the coup leaders to save the monarchy, In March 1935, Prachatiptok abdicated the throne in favor of his nephew and closest heir, Prince Ananda Mahidon, who was studying in Switzerland. A new elite class from the bureaucracy and the military now held power, headed initially by a retired jurist, Phraya Manopakorn. This was the first of many power successions engineered through coups rather than through heredity. However, the 1932 coup did not produce a social revolution; the masses remained deferential toward the government, and were little affected by the change in leadership.

### **The Rise of the Military**

By 1938 the military faction, led by Phibun, gained dominance. Phibun assumed the Prime Ministership. He was a partisan of Japanese fascism and his government collaborated with the Japanese during World War II. Because of Phibun's acquiescence during the Japanese occupation and his decision to join the Axis powers, Phibun was forced to resign at the war's conclusion. Pridi emerged as the next Prime Minister, though his rule suffered a grievous blow with the death of young King Ananda, in June, 1946 (His younger brother, Bhumipol Adunyadej became Rama IX). Although debate remains as to the cause of King Ananda's death, Pridi was

alleged to have played a role. A group of army officers then seized control, and Phibun resumed as Prime Minister. The “fascist dictator” of the 1940s had become the “leader of the bastion of democratic forces” in the 1950s. He was eventually overthrown by an army general, Sarit Thanarat, who led the country until his death in 1963. Sarit abolished the constitution, dissolved the Assembly, banned all political parties, jailed suspected leftists, and declared martial law. He became famous as an economic developer, focusing on the Northeast, his home base. Through ruthless governance, he cut through bureaucratic incompetence and pushed through favored development policies. After his death it was revealed that Sarit had amassed a huge personal fortune. Thus acclaim for Sarit’s accomplishments was modified by the revelation of his personal corruption.

General Thonon Kittikachorn, Sarit’s deputy, became his successor 1963. Kittikachorn was Thailand’s eleventh Prime Minister since the 1932 coup. He clung to power until 1973 when the student revolt occurred against military rule. Under his leadership, Thailand became a leader in Southeast Asian international affairs. Political parties were reintroduced, and Thailand’s economic development underwent high rates of growth. However, Kittikachorn’s rule did not alter the bureaucratic-elitist system of government.

### **The Democratic Interregnum**

On October 14, 1973, Thais overthrew the top leadership. King Bhumipol Adunyadej appointed a civilian government. The major underlying causes of discontent included the political and economic mismanagement by the military, factionalism within the ruling administration, and the rise of an organized and aroused student population, supported by the citizenry and the King. The Thanom government was unable to cope with natural disasters including drought, unbalanced trade agreements (particularly with Japan), and unruliness of students. A violent crackdown by the military exacerbated the situation. In an unprecedented move, King Bhumipol intervened. He exiled the military rulers, appointed a civilian Prime Minister, and established a National Convention to write a new constitution.

The democratic period lasted only three years. During this period, the Thai economy slumped, American influence declined as American military bases in Thailand were closed, oil prices rose, high inflation weakened consumer demand, and labor strikes paralyzed industries. Students were the primary forces behind daily massive demonstrations. New civilian Prime Ministers, brothers Seni and Kukrit Pramroj, could not counter the opposition. Of further concern were the 1975 Communist takeovers of neighboring Vietnam, Laos, and Cambodia.

The citizenry applauded the student-led revolt for bringing civilian-led government to power. Many Thais believed that democracy and progress would replace dictatorship and stagnation. However, the euphoria was short-lived. Their movement fragmented as leaders clashed over tactics, strategy, and ideology. A major rift developed between university and vocational students, with the latter becoming active in ultra right-wing organizations.

## **The Return of the Military**

At the same time, the military was reconsolidating to prepare for a return to power. The general population grew restive at the civilian government's inability to meet the new expectations of the citizenry. In October 1976, the military overthrew the democratic government again. It proclaimed martial law and abrogated the constitution. Thais were relieved that the era of "chaos" had drawn to an end, and that the administration would once again provide structure and discipline. Admiral Sangad Chalayu led the new military government, and established an Administrative Reform Council that included the leading military leaders. He appointed a civilian, Thanin Kraivichien, as Prime Minister. Thanin was a Supreme Court justice and close confidant of the King. The military chose Thanin because he lacked a political base and was perceived as being easily manipulated. Thanin proved to be less pliable than the military had expected. He moved forcefully in his suppression of suspected dissidents. His foreign policy was based on an anti-communist ideology that precluded improved relations with Cambodia, Laos, and Vietnam. Thanin's policies proved too rigid for the military. After months of unsuccessful attempts to moderate his views, military leaders in October 1977 executed another coup. General Kriangsak Chamanond became the new Prime Minister, and led the country until 1980 when General Prem Tinsulanond succeeded him.

The 1976 coup actually strengthened Communist Party of Thailand (CPT) fortunes, despite the doctrinaire anti-Communist policies of the Thanin administration. This crackdown sent the Communists into the jungles and mountains to join the insurgents. An estimated 4,000 students, intellectuals, politicians, labor leaders, and political activists joined this insurgency, swelling its ranks to around 12,000.

## **The Transition to Civilian Democracy**

Under General Prem's leadership, the military remained an important government institution. During this period, however, the country was transformed into a more democratic society. Prem appointed several civilian technocrats to his cabinet and relied on the freely elected legislature for support of his programs. Despite two coup attempts, Prem remained in power from 1980 until his voluntary resignation in 1988. His long tenure was a transitional period from military to civilian rule.

The clearest sign of democratization was Chatichai Choonhavan's rise to power in 1988. Chatichai became the first elected Member of Parliament to become Prime Minister since 1976. The smooth transition from Prem to Chatichai reflected the new optimism about Thailand's evolution toward democracy.

The military coup in February 1991 was a shocking assault on this notion. In retrospect, it is clear that democratization had not ended the factionalism that has long been a part of Thai politics. A source of discontent among coalition parties was that most of the popularity of the administration had been focused solely on Chatichai. Furthermore, corruption remained an

important part of the political process. The phenomenal economic growth rates of the 1980s brought large capital inflows, which became the targets of corrupt public officials. The military's stated motivation for the coup was the pervasive corruption of the kingdom's politicians.

On February 23, 1991, Supreme Commander Sundhara Kongsompong and Army Commander in Chief Suchinda Kraprayoon abrogated the constitution, dismissed the elected government, and set up the temporary National Peace-Keeping Council (NPKC) with powers of martial law. The coup was met with initial acquiescence. The NPKC established an interim constitution and named Anand Panyarachun, a distinguished civilian, as Prime Minister. Anand's appointment was universally praised, reflecting his impeccable reputation as a diplomat, administrator, and businessman. Anand ruled independently of the military and blocked its requests for more arms. He passed an election law and organized elections, which were held in March 1992.

Vote buying plagued the 1992 elections. To ensure that the military maintained its dominance, military-backed parties formed a joint campaign scheme to win a plurality of votes. The pro-military coalition nominated Narong Wongwan as the next Prime Minister. His credentials as a civilian, four-term elected Member of Parliament and former cabinet minister made him an attractive choice. However, the U.S. State Department confirmed that Narong had been denied a visa to the United States because of alleged involvement in drug trafficking. Following that realization, the military distanced itself from Narong, and supported General Suchinda as the new Prime Minister, despite his initial refusal to accept the position. When he was named, thousands of protesters demonstrated against Suchinda.

The conflict between Thailand's reverence for tradition and its plunge into modernity was the key factor in the events that drove Suchinda from office after only a forty-eight day reign. He bet that the military would prevail, and he underestimated the power of the ideal of democracy among the country's increasingly educated and sophisticated citizens. Suchinda did not understand that the days were long gone when the military could dominate every aspect of Thai politics. Thais were embarrassed that their country had suffered another coup just as much of the rest of the world was moving toward more open regimes. He misunderstood the reaction he would generate by approving a violent response to the anti-Suchinda demonstrations. When the crisis of May 1992 reached a stage of potential civil war, King Bhumiphol stepped in, and his extraordinary intervention forced the resignation of Suchinda and placed the immense prestige of the monarch on the side of democratic rule.

The establishment of a civilian administration was more difficult than the removal of Suchinda. In a second intervention, the King approved the return of Anand Panyarachun as Prime Minister. Most Thais greeted this appointment with enthusiasm. Once again, he made courageous and effective decisions that moved the kingdom closer to full democracy. In September 1992, another election was held and this time the civilian parties won a plurality under the leadership of Chuan Leekpai, the soft-spoken, moderate leader of the Democrat Party. He struck a balance between democratic rule and sensitivity to the traditional prerogatives of the military during his rule from September 1992 to May 1995. Chuan became at that time the

longest-serving elected civilian Prime Minister in Thai history, although this record has since been surpassed. His coalition fell apart as a result of differences among the ruling parties.

In the July 1995 election, the leader of the Chat Thai Party, Banharn Silapa-Archa, a billionaire businessman, emerged as the nation's new Prime Minister. Banharn's administration turned out to be ineffective, characterized by corruption, a lack of direction, personal dishonesty, and economic malaise. He was forced to call new elections in November 1996, which led to the emergence of a new ruling coalition with New Aspiration Party leader, Chavalit Yongchaiyut, as the next Prime Minister. Like Banharn, Chavalit was unpopular among Bangkok's elites and the leading newspapers. He was faced with two challenges – solving an economic crisis and drafting a new constitution.

In 1997, a currency crisis hit Thailand, and Chavalit was unable to resolve it. Chavalit resigned in November after holding office just 11 months. The country continued its economic turndown. The Thai baht lost half its value against the dollar, the stock market fell precipitously, and the International Monetary Fund was asked to help bail out the country with a loan of some \$17 billion. All these travails led to the reinstatement of Chuan as Prime Minister after he forged a new coalition of parties in the parliament.

The shock of the financial crisis created a widespread demand for change, especially in the political system which was perceived to have led to this disaster. A new constitution was approved in September 1997. Its principal aims were to restrict government corruption and to ensure a more transparent electoral process. Under the new constitution, Members of Parliament (MPs) must resign their parliamentary seats to take up cabinet posts, ministers are required to declare their financial assets before and after taking office, and the prime minister must be an elected MP. Candidates for the 200-member Senate (the upper house) must now be elected rather than appointed.

The new constitution calls for 500 members of the lower house, of whom 400 are to be directly elected in single-seat constituencies nationwide and the remaining 100 (called party-list MPs) are appointed to each political party in direct relationship to the proportion of votes they receive. Any party receiving less than 5 percent of the popular vote loses its right to any party-list MPs. Only MPs on the party list may be selected to join the cabinet.

Chuan led the country until 2001 when new elections led to an overwhelming victory for Thaksin Shinawatt, a billionaire telecommunications mogul and leader of the Thai Rak Thai (Thai Love Thai) party, who campaigned on a populist platform of economic growth and development. Thai Rak Thai won two seats short of an absolute majority in the lower house, and subsequently converted that into a majority of almost 300 out of the 500 seats by absorbing two other parties. Thaksin's Prime Ministership was in immediate jeopardy because of alleged corruption that threatened to force him from politics for a period of five years. However, the Constitutional Court, in an eight to seven vote, ruled that Thaksin could remain as Prime Minister. A majority of Thai citizens supported the decision.

Despite this shaky beginning, Thaksin progressively consolidated his hold on power and was able to complete a full four-year term as an elected Prime Minister for the first time in Thai history. His first term in office was not without controversy, however. Many criticized his Administration for using its powers to squelch dissent and weaken the institutions established in the 1997 Constitution to provide checks-and-balances on government authority. Others questioned some of the practices used in Thaksin's aggressive "war on drugs" in 2003, which resulted in the deaths of more than 2,000 people.

One of the most serious problems that emerged during Thaksin's first term was the resurgence of violence in the Muslim-dominated southernmost provinces, which had experienced sporadic, but relatively low-scale unrest for decades. More than 800 people were killed between January 2004 and mid-2005. The population in the affected region is largely of Malay origin and speaks a Malay-based dialect. It is still unclear who is causing the violence, but the Thai government blames Muslim separatists. The region is poor, unemployment is high, and there is a deep resentment of centralized rule from Buddhist-dominated Bangkok. The Thaksin government tried a variety of approaches, varying from more force to more negotiation to deal with the situation, but the violence has continued well into 2005.

Despite these problems, Thaksin's domestic popularity continued to grow through the end of 2004, aided by a growing economic recovery and strong support for his populist economic policies, the crackdown on drug dealers, and his quick response to a tragic tsunami storm in southern Thailand in December 2004. Thaksin and his Thai Rak Thai party were re-elected in February 2005 with an even greater majority than in 2001, winning 377 out of the 500 lower house seats. His second administration took office in March 2005.

Military coups have served as the major means of succession in modern Thai political history. Despite managerial changes at the top levels, policy continuity has been a feature of this process. New leadership has been generally met with acceptance by the politically aware, as coups have rarely obstructed government processes or undermined nation, king, and religion – the principal underpinnings of the state. The May 1992 incident was a violent affair, perpetrated by a military bent on power. That violence changed the Thai citizenry's views on the acceptability of military rule and undermined Suchinda's legitimacy. The King's interventions were indicative of a system that had not yet established succession processes independent of the ceremonial head of government. The struggles between state officials and the military, and politicians and business elites, remain a centerpiece of Thai political activity. The battles for political will persist between this new Bangkok-centered middle class and the entrenched military. The Thais' capacity to cope with change by balancing tradition and modernity suggests that democratization will likely continue to establish deeper roots in the future.

### *Discussion Questions*

1. What are the main external forces that have influenced Thai history? Are their effects more or less significant on Thailand's history than have been those of indigenous leaders and events?
2. How do Sukhothai and Ayuthaya differ in their impact on modern Thailand?
3. How did Thailand escape Western colonialism?
4. What are the prospects for Thailand continuing its progress toward civilian democratic governments?

## *Culture*

### **Hierarchy**

Over the centuries, the Thais have developed particular patterns of interaction and a composite set of attitudes, beliefs, and values. These interactions and value patterns constitute the culture of Thai society. For example, scholars of Thai politics have long noted the importance of status and hierarchy in Thai relationships. When two persons interact, they automatically assess each other's status. Physical stance, language, and the gestures of a "status inferior" show deference, whereas those of the "status superior" show dominance and authority. This show of status has been socialized into the behavior of Thais since childhood, when they are taught to treat certain persons as superiors. Persons deemed of higher status have some combination of the following characteristics: greater age, wealth, education, prominent family background, professional occupation, and affiliation with the Buddhist priesthood.

Such emphasis on status has resulted in a vertically organized and integrated society. Relationships among equals occur, for example, in schools where classmates interact with their peers. However, relationships that are fostered for self-interested purposes, such as protection or services, take place between persons of different status.

### **Patron-Client Relationships**

Patron-client relationships, which are one type of hierarchical tie, integrate the entire society. Patron-client relationships are informal, two-person ties in which a person of higher socio-economic status (patron) uses his or her resources and influence to provide benefits for a person of lower socio-economic status (client). Clients reciprocate by offering their patron deference, labor, or other services. Reciprocity assures that the relationship is not exploitative. If patrons make unreasonable demands upon or do not meet the needs of their clients, the latter may terminate the relationship. The flexibility of patron-client relationships keeps society from deteriorating into feudalistic practices.

Thailand's relatively few interest groups, weak political-party structure, and ineffective legislative bodies make it an ideal society for pervasive patron-client ties that substitute for more formal social institutions found in the West. These informal ties communicate information from the kingdom's leadership to the masses and, less effectively, from the masses to the leadership.

Groups of patron-client relationships also form among the political elite. He who rules in Thailand is dependent on the capacity of these groups to control the key positions of government. In recent Thai history, the configuration of groups within the military determines who rules. There is constant jockeying for position, and continual shifting of clients from one military patron to another. Once a particular faction prevails, there is a period of stability and consolidation as subordinates attempt to join the rulers. Patron-client ties act as an integrating mechanism by cutting across class and ethnic divides. Chinese businessmen, for example, are

integrated through their patron-client relationships with high-level bureaucratic and military leaders. Low-level civil servants have a stake in their ministry through patrons at higher levels.

Thailand is undergoing rapid changes in its political culture. As the society shifts from traditionalism to modernity, new values often conflict with those held by the older generation. The Thais' sense of identity and legitimacy toward the kingdom relates to the monarchy, the symbol of the Thai people. The traditional patron-client ties no longer can meet modern expectations and demands for a greater role in political processes. The democratic interregnum, from 1973 to 1976 is an example of the conflict.

## **Buddhism**

Buddhism is adhered to by about 95 percent of all Thais. Theravada Buddhism penetrated Thailand from India by way of Sri Lanka. Buddhism created a more egalitarian religious community and the religion was more easily assimilated to local cultures than was the previous hierarchical Hindu religion of the area.

Buddhism is not a God-oriented system of faith and worship. Beliefs such as the notion of a Supreme Being must not be taken on faith. Rather, all teachings must be evaluated in light of one's experience and reason. The Buddha points out the path on which to proceed, but all persons must tread the path themselves. The religion's most distinctive doctrine is karma, the notion of cause and effect. Good deeds will eventually benefit the doer of the deed, either in this life or in the next. Giving food to monks, refurbishing temples, leading the life of the middle path (moderation in thought and action), becoming a monk, and following the Buddhist precepts all are deeds that can make merit. The accumulated merit can help lead to a better existence, but the ultimate goal is nirvana, the complete cessation of suffering. To achieve nirvana, one must free himself from the cycle of karmic rebirth and live by the Four Noble Truths. The first Noble Truth holds that all existence involves suffering; the second teaches that suffering results from desire; the third teaches that suffering will cease when desire and greed cease; and the fourth indicates the Noble Eightfold Path that one should follow to bring suffering to an end. Buddhism emphasizes the need to withdraw from society to meditate and to protect the discipline that is necessary for achieving nirvana.

Some analysts explain the behavior of Thais in terms of their religious beliefs. For example, the Thai emphasis on superior-subordinate relationships is based on the Buddhist concepts of merit and karma. Deference to authority is explained by the Buddhist teaching that a person's lot in life is primarily a result of the virtue or immorality of his or her deeds in previous existences. People of high status are treated with respect because they are assumed to be good people who have accumulated great merit in past lives. These notions help explain the political passivity of Buddhists in Thailand and elsewhere. The Buddhist countries' low level of economic development is said to be rooted in a lack of greed and materialism, a belief fostered by the Buddhist idea that desire and greed cause suffering.

These explanations must be viewed cautiously. Buddhism is an important aspect of Thai culture, but Buddhists have different interpretations of their religion and display a wide range of motivations. Furthermore, deferential behavior was an operative force in Thailand before Buddhism was firmly established, though Buddhism may have strengthened it. Similarly, the Buddhists who build a temple may appear to be spiritually ascetic. However, Buddhist donors may view this as a way to guarantee a more comfortable life in their next existence instead of striving for self-perfection or the quenching of desire.

Buddhism contributes to the social fabric in a variety of ways. Buddhism provides a sense of national unity and identification that helps foster social stability and unity. Buddhism's inherent tolerance, flexibility, and lack of rigid dogma may have encouraged the spirit of compromise that is a hallmark of the politics of Buddhist nations, and the Buddhist emphasis on serenity and virtue mitigated the violence of rulers toward the ruled.

Modernization in Thailand has strained these traditional patterns. Urbanization and industrialization have upset the Buddhist ritual rhythms. Buddhism is becoming more worldly and practical. Traditionally, in Thailand the temples were the educational centers and the monks served as teachers. But in contemporary times, secular schools have been constructed and the monks seldom perform as teachers except in the most rural areas. Consumer capitalism has also made inroads, and the people are increasingly attracted to a variety of spirit cults.

### **The Family System**

Despite the patriarchal character of Thai families, women are not considered the "weaker sex." They are perceived as having high status in comparison to the women of China and India. Thai women have responsibilities for managing family budgets and influence on household decision-making. They are also becoming more active participants in the labor force. Although a woman is expected to be dutiful and obedient to her husband and his parents, this duty is not as important in Thailand as it is in China or India. Women cultivate the fields, interact with townspeople, own factories, maintain family stability, and discipline the younger generation. As the primary agents of family socialization, women are responsible for the education of the youth.

Thai families are becoming smaller. For centuries, Thai women averaged six births each. In the past two decades, however, family planning programs in Thailand have brought down the rate of population increase to about half what it was just two decades ago. Discussions about "the condom" have become acceptable in a society known for decorum regarding sexual matters.

### **Sex**

There is a sexual double standard in Thailand. Premarital sex is generally deplored, but this rule is applied more strictly to girls than to boys. Among higher-status and upwardly mobile families, girls who are thought to have had sexual relations before marriage are often ostracized.

A major blot on the reputation of Thailand is the easy availability of prostitutes. Thailand has developed a negative reputation for “commercial sex services” and “sex tourism.” It is difficult to explain this paradox of a large prostitution industry in the midst of a sexually conservative society that values female virginity. However, it must be remembered that only a small percentage of women engage in prostitution. Also, there is a double standard that promotes women’s virginity and faithfulness while condoning extramarital sex by men. The income from prostitution can be greater than that from other occupations, and many prostitutes send money to their families in the villages.

One result of prostitution has been a significant rise in HIV/AIDS infections in Thailand since the 1980s. The annual number of new HIV infections in Thailand reached a peak of about 143,000 in 1991. Alarmed Thai officials instituted an active campaign to increase public awareness of the disease and encourage the use of condoms as a preventive measure. As a result of these efforts, new HIV infections per year fell dramatically to about 16,000 in 2003. Nevertheless, the United Nations estimates that more than 50,000 Thais died of AIDS in 2003 and over 600,000 Thais (about 1.5 percent of the adult population) are currently living with HIV/AIDS. AIDS remains the leading cause of death among young adults in Thailand.

Many Thai men continued to patronize prostitutes even after the AIDS crisis began. However, in the past ten years a major behavior change has taken place. Thai men are no longer visiting prostitutes in such large numbers, because they fear catching AIDS and because their wives have made it clear that they will not sleep with husbands who continue going out. This change has helped bring the AIDS epidemic under greater control.

### *Discussion Questions*

1. How will modernization affect traditional patron-client relations in Thailand?
2. How has Buddhism affected the cultural values of Thais?
3. How does Thai family planning affect the country’s future?
4. Thailand is viewed as patriarchal, meaning that men dominate most sectors of society. How does that affect progress and change in the kingdom?

## *Economics*

### **Agriculture and Village Life**

The majority of Thais live in rural villages made up of some one to four hundred households. The family is the basic unit of social organization. Agriculture is the center of life and rice farming the main means of livelihood. Many farmers are poor while a minority of landowners are disproportionately well off. Droughts and floods can bring disaster to subsistence-level peasants and their small farms. Villagers are also vulnerable to powerful people such as urban and rural landlords, urban business people, moneylenders, and public officials.

Until recently, many Southeast Asian villagers were caught up in a vicious cycle of poverty. Machinery, pesticides, and fertilizer were not yet widespread. Debilitating diseases sapped the farmers' energy, labor-intensive farming methods resulted in low levels of productivity, and harsh weather conditions threatened the harvests. The lack of surplus crops kept farmers from earning capital, and the lack of capital precluded savings and investment. Birth control was not yet practiced. Arable land became less available as the population expanded, and family farms shrank as they were divided among the children.

Poverty also caused many villagers to be committed to the status quo and to traditional methods of farming. This conservative trait stemmed from a "safety first" principle. Subsistence farmers avoided economic disaster instead of taking risks to maximize their average yearly income. Instead of thinking like adventurous entrepreneurs, they typically preferred arrangements with social superiors that would enable them to survive times of bad harvests.

In the past several decades, the conservative and withdrawn nature of Thai peasants has changed. Since the 1960s, the "Green Revolution" has swept over much of the region as many farmers have adopted and adapted new technologies such as pesticides, fertilizer, and machines. The once traditional and subsistence-oriented farms have become part of a cash economy that has replaced the traditional barter economy. As a result, the richest farmers have increased their wealth while the poorest continue to struggle. The gap between the rural rich and poor has increased.

Thailand contains about 50,000 villages organized into some 5,000 "clusters" known as communes. Thai villages are led by headmen who are usually elected to the position by the villagers. They are "middlemen" between villagers and government officials. Village group activity is based on a web of loose, reciprocal relationships. Farmers who receive assistance are expected to help others in turn, though no formal record is kept of who worked for whom or for how long.

## **Economic Development**

During the 1970s, 1980s, and early 1990s, Thailand sustained a seven percent rate of real annual economic growth (measured in gross domestic product or GDP), a pace equaled by only a few other developing nations. In the late 1980s, the growth rate averaged over 10 percent, higher than in any other country. Coincident with these high growth rates was an increase in the export sector, which in the late 1980s grew by about 24 percent each year. Foreign investment also grew at a rapid rate, with Japan, Taiwan, the United States, Hong Kong, and South Korea the leading investors. Manufacturing replaced agriculture as the largest share of total Thai GDP.

Although the majority of the Thai people are involved in the agricultural sphere of the economy, the number of those in rice farming is decreasing. Thai farmers have diversified into crops such as vegetables, fruits, maize, tapioca, coffee, flowers, sugar, rubber, and livestock. Although rural areas have not developed as rapidly as urban environments, the standard of living in the countryside has improved since the 1970s. Nevertheless, the urban bias of Thai economic development is clear from both the emphasis on manufacturing and the higher percentage of budget allocations centered on Bangkok.

The kingdom's economic successes have been based on its commitment to free-market, export-driven policies, and political stability. While *coups* have commonly occurred throughout contemporary Thai political history, these have not undermined the continuity of the policy process. Furthermore, Thailand's ethnic Chinese minority has been a vital component of the country's economic engine. This group has provided leadership in banking, export-import manufacturing, industrialization, monetary policy, foreign investment, and diversification.

Liberal regulations governing foreign direct investment resulted in large capital inflows from industrial nations. This has improved Thailand's access to foreign credit, technical assistance, and international trade relations. Thailand has become a favorite site for production plants owned by Japanese, South Korean, and Taiwanese firms. The government's decision to move toward an export-oriented industrialization strategy has been central to the kingdom's economic growth.

## **The Asian Economic Crisis**

Nearly three decades of sustained economic development came to an abrupt halt in mid-1997 after the Chavalit administration, faced with depleted foreign reserves, floated the baht on the international exchange market. Within weeks, the currency and stock market plunged, losing about 40 and 70 percent of their values respectively. The International Monetary Fund, along with the help of other Southeast Asian nations, provided a \$17 billion bailout package for the Thai economy.

The Southeast Asian financial crisis occurred for several reasons. These include: weak political leadership, lack of fiscal discipline, corruption, the influx of short-term capital, and

growing offshore debt. Borrowed funds were spent on risky ventures – such as real estate and other investments that offered meager returns. As the Japanese yen depreciated throughout the late 1990s, the baht, which was pegged to the U.S. dollar, became overvalued. As a result, Thai labor and exports became more expensive and therefore less competitive on the world market. Speculators then bet on the devaluation of the baht, borrowing baht at one price and selling the currency back at a devalued rate, thereby making tremendous profits.

One obstacle to solving the crisis fully is the poor state of Thailand's infrastructure. Bangkok's gridlock traffic, despite recent improvements, continues to hinder economic development. Electricity and telecommunications are also unreliable. A second problem is the depletion of Thailand's natural resources. The government lacks the ability to enforce recent legislation aimed at curbing illegal logging. Flooding and landslides, exacerbated by deforestation, have killed hundreds of people and devastated human habitats.

Third, the AIDS crisis also has undermined economic growth. Billions of dollars will need to be spent on care for these victims. Fourth, the number of college graduates in the "hard" sciences and technology is not sufficient to meet developmental needs. Thai universities graduate only one-third of those needed in engineering. Public sector salaries cannot compete with those paid by the private sector.

Positive economic growth resumed in 1999 after two years of decline. Prime Minister Chuan's government claimed the country's economic recovery was a result of its strict adherence to IMF guidelines. Critics argued, however, that the economy was still in jeopardy due to a weak baht, deflation, and non-performing loans. Foreign direct investment had slowed, family businesses disintegrated, and ordinary Thais bore the greatest burden of the crisis.

The Thaksin government took office in February 2001 with the intention of stimulating domestic demand and reducing Thailand's reliance on foreign trade and investment. Since then, the Thaksin administration has refined its economic message, embracing a "dual track" approach that combines domestic stimulus with Thailand's traditional promotion of open markets and foreign investment. Weak export demand held 2001 economic growth to about two percent. Beginning in 2002, domestic stimulus and export revival fueled a stronger performance, with real growth at over six percent in 2003 and 2004.

### *Discussion Questions*

1. Why have Thailand's economic growth rates surpassed those of most other developing nations?
2. How will Thailand change as the economy shifts from agriculture to manufacturing?
3. What were the principal reasons for the 1997 Asian economic crisis?

4. How optimistic or pessimistic are you about Thailand's capacity to overcome the Asian economic crisis and to reassert itself globally and economically?

## *Politics*

### **Constitutions**

The Thai propensity for changing constitutions has been referred to as *faction constitutionalism* – meaning, each successive draft reflects, legitimates, and strengthens major shifts in factional dominance. Thai constitutions have not been considered the fundamental laws of the land, but rather, have functioned to facilitate the power of the ruling regime.

Since 1932, Thailand has had sixteen constitutions. Six of these were democratic, holding the executive accountable to the parliament. The remaining constitutions either balanced the near-complete power of the Prime Minister against the military's control over the upper house, or provided for neither an elected parliament nor multi-party participation.

Thailand's most democratic constitution was drafted in 1997. It was designed to combat corruption, improve human rights, decentralize governance, increase the accountability of the Senate or upper house through direct elections, separate the executive from the legislative branch (by requiring ministers to resign from the parliament), enhance the authority of the judiciary, and strengthen political parties. The new constitution also called for a neutral and autonomous National Electoral Commission.

In 2001, the Constitutional Court opened a corruption case against Prime Minister Thaksin. The National Counter Corruption Commission charged that Thaksin had concealed assets as a cabinet member in 1997 by transferring shares worth billions of baht to his family, servants and close friends. The Constitutional Court found him innocent, and Thaksin remained as Prime Minister.

### **Military**

Since the overthrow of the absolute monarchy in 1932, the Thai military has played the dominant role in Thai political history. It is the most organized institution in the kingdom, and its hierarchical structure is congruent with the nation's centralized political culture. Because Bangkok dominates every aspect of the country's political and economic life, the military has had only to control this one city in order to maintain its grasp over the entire kingdom. Army divisions that have jurisdiction over Bangkok can control those functions that are necessary for dominating society – defense, interior, and communications.

With Thailand no longer under threat from outside aggression, the military has moved more forcefully into the development arena. Communist insurgency, which had threatened Thailand in the 1960s and 1970s, had been quelled. This undermined the major rationale for military intervention in governmental affairs. Most scholars therefore suggest that the era of military coups has ended. The strengthened role of political parties and the parliament, plus a warming toward democratic civilian rule, also reduces the military's influence.

## **Bureaucracy**

For most of the contemporary era, Thailand has pursued a bureaucratic polity within the bureaucracy itself. The bureaucracy has been the bedrock of stability in a political system in which top leadership positions change unpredictably. Although coups may bring new factions into power, the bureaucracy maintains its conservative policy role. The formerly exclusive role of the bureaucracy has been widened in recent years by the new role of technocrats, who have attained important positions and brought a more rational mode to policymaking. The bureaucracy is no longer the only arena of politics, however. Extra-bureaucratic groups, including the parliament, political parties, and pressure groups, and the military, now play significant roles in determining public policy.

## **Parliament**

At one time, elections in Thailand were held only when the ruling group became convinced that it could reclaim victory. Today, elections provide more meaningful choices among candidates who represent alternative ideas. The bicameral Parliament, no longer the Prime Minister's rubber-stamp, engages in public debate over important issues. Today, both houses of the parliament are elected. In the past, the upper house or Senate was appointed and was comprised of military generals and protégés of the Prime Minister. The parliament includes a large number of Sino-Thai business executives, an indication that Thailand's ethnic Chinese minority is moving from the economic sector to involvement in politics as well.

## **Political Parties**

Thai political parties often center on individual personalities. The ruling Thai Rak Thai party is focused on the personality of Thaksin Shinawat. Without his leadership and money there would be no Thai Rak Thai. Nevertheless, there has been some institutionalizing of parties. The Democrats have been a party for over 50 years and have organizational structure down to the village level.

Most parties in Thailand are not truly ideological although they can be classified as liberal or conservative. Ideological positions are not paramount in campaigns because only a minority of voters makes choices based on issues. Parties continue to "buy votes" as well as "buy candidates" whom they believe can win elections. The Thai Rak Thai party bought dozens of candidates using funds from the vast fortune of the party's leader.

## **Monarchy**

Legally above politics, the Thai monarch is the nation's symbol. The monarch is the supreme patron who reigns over all, and is the leader and protector of the Buddhist religion. The prestige and veneration of the monarchy has grown since the coronation of King Bhumipol Adunyadej, who is the kingdom's longest reigning monarch, serving since 1946. In the 1980s the King became more involved in Thai politics, intervening against military *coup* attempts. The

King's most important intervention occurred during the 1992 crisis when he supported Anand Panyarachun to be interim Prime Minister.

The Thais' universal veneration for their monarch has raised concerns about a potential succession crisis. The King promoted his daughter Princess Sirindhorn to the rank of Maha Chakri (crown princess), thereby placing her in the line of succession along with her older brother, Crown Prince Vachiralongkorn. The crown prince has often been criticized for his lack of commitment and discipline, whereas the princess is admired for her dedication. Because the King is the symbol of all that is great in Thailand, a contentious succession could undo the present stability.

### **Democratization**

The history of politics in Thailand is largely a history of authoritarian rule. The strength of Thailand's semi-democracy is a function of the economic boom and the government's capacity to meet the needs of the citizenry. When basic needs are met, other non-democratic values become secondary. However, when a government is perceived as unable to meet citizens' needs, the values of security and stability take precedence. Hence, a severe downturn in the economy or an unexpected external threat to Thai sovereignty could undermine the evolution toward democracy.

Another threat to Thai democratization relates to monarchical succession. The Thais' veneration for their king is also directed more to his daughter than to the crown prince. Most observers expect that the Thais will likely acquiesce to the prince's ascension and simply ignore the monarchy, or tone down their attitude of veneration. In either case, the Thai monarchy will less likely be the kingdom's bedrock of stability and legitimacy.

Democracy thrives in a political culture supportive of its values. Modernization has brought high levels of education, literacy, free media, and travel – all of which have heightened Thais' awareness of democratic values. Traditionally, other values, such as security, development, deference, and economic stability, have taken precedence over citizen participation in governmental affairs. The status of democratization in Thailand is therefore tenuous.

### *Discussion Questions*

1. What are the primary institutions that affect Thai politics?
2. Why has the military dominated Thai politics?
3. What are the prospects for democracy in Thailand?
4. Who are some of Thailand's most effective leaders since the 1932 revolt?

5. What problems must Thailand overcome to become a functioning democracy?

## *Foreign Affairs*

Thailand's foreign relations underwent significant change following the end of the Cold War. Externally, Thailand no longer faced the communist threat of its neighbors. Internal considerations have also brought changes in Thai foreign policy-making. Thailand's economic development and the rise of business and other non-bureaucratic issues have had a particular influence. New advisors viewed international and domestic changes as an opportunity for Thailand to reassess its foreign policy. New foreign policy options included normalization of relations with China and Vietnam.

Thailand's foreign policy today includes strong support for ASEAN in the interest of regional stability. In recent years, Thailand has also taken an increasingly active role on the international stage. When East Timor gained independence from Indonesia, Thailand, for the first time in its history, contributed troops to the international peacekeeping effort. Thailand has recently contributed troops to reconstruction efforts in Afghanistan and Iraq.

Since World War II, Thailand and the United States have developed close relations, as reflected in several bilateral treaties, economic and security assistance programs, and joint involvement in United Nations multilateral activities and agreements. The principal bilateral arrangement is the 1966 Treaty of Amity and Economic Relations, which facilitates U.S. and Thai companies' economic cooperation. Thailand and the United States are also among the signatories of the 1954 Manila Pact of the former Southeast Asia Treaty Organization (SEATO), which stipulates that, in the event of armed attack in the treaty area (which includes Thailand), each member would "act to meet the common danger in accordance with its constitutional processes". Although SEATO was dissolved in 1977, the Manila Pact remains in force and, together with the Thanat-Rusk communiqué of 1962, constitutes the basis of U.S. security commitments to Thailand. Thailand continues to be one of five U.S. security allies in Asia, along with Australia, Japan, the Philippines, and South Korea. In December 2003, Thailand was designated a Major Non-NATO Ally.

### Discussion Questions

1. Is Thailand relatively safe from external aggression?
2. In the long run, did the United States prevail in its war in Vietnam?

## Time Line for Thailand

1238	Sukhothai Kingdom.
1350	Ayuthayan Kingdom.
1764	Burmese invade and destroy Ayuthaya but are expelled.
1767-1782	Thai recover under military leader Taksin; the Thai kingdom is united first in Thonburi and later in Bangkok.
1782	Chakri dynasty begins.
1851	Coronation of modernizer King Mongkut (Rama IV).
1893	Fighting between French and Siamese forces; Bangkok blockaded. Laos becomes French protectorate.
1909	Siam relinquishes northern Malay states to Britain in exchange for an end to extraterritoriality and a loan for railroad construction.
1932	Bloodless coup by army officers; monarch henceforth largely a figurehead.
1939	Name of country changed from Siam to Thailand.
1941	Thailand sides with Japan in World War II.
1946	Thailand forced to return ill-gotten territory to neighbors.
1947 - 1973	Series of military coups d'etat; abrogations of constitutions; periodic elections; dominance of government by military.
1973	Popular revolt against military. King Bhumipol Adunyadej (Rama IX) sides with student rebels. Three years of civilian democracy.
1976	Military seizes power following violent demonstrations. 1975 Constitution annulled.
1979	Legislative elections; followed by thirteen years' transition to civilian democratic rule, mostly under General Prem Tinsulanond.

- 1991 Bloodless military coup temporarily ends transition to democracy; provisional civilian Prime Minister, Anand Panyarachun appointed.
- 1992 Elections lead to Prime Ministership of General Suchinda. After 48 days he is ousted following large public demonstrations against him. Anand Panyarachun reassumes leadership. New elections lead to civilian democrat, Chuan Leekpai, as Prime Minister.
- 1995 New election leads to fall of Chuan and rise of Banharn Silapa-Archa and Chavalit as Prime Ministers. However, their rule is short because they could not manage the economy successfully.
- 1997 “Asian economic crisis” begins in Thailand with devaluation of the baht, the fall of the stock market, widespread unemployment, and an end to remarkably high economic growth rates. New Constitution adopted. Chuan Leekpai returns to the position of Prime Minister.
- 2001 Election provides Thai Rak Thai Party with absolute majority in parliament. Thaksin Shinawatt becomes Prime Minister. Constitutional Court meets to determine if Thaksin had engaged in corrupt activities while serving in a previous cabinet. He is acquitted of all charges and allowed to continue as Prime Minister.
- 2003 Thaksin launches controversial anti-drug campaign in which over 2,000 people are killed within three months.
- 2004 Long-simmering unrest in the Muslim-dominated provinces of southernmost Thailand erupts into violence. Several hundreds are killed in violence involving bombings and clashes between Thai security forces and armed militants.
- 2005 Thaksin and his Thai Rak Thai Party are re-elected with an even larger majority in the Thai parliament.

# Self-Study Guide: Tunisia

NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The *Self-Study Guide: Tunisia* is intended to provide U.S. government personnel in the foreign affairs community with an overview of important Tunisian issues related to history, culture, politics, economics, security and international relations. This guide should serve as an introduction and a self-study resource. Tunisian affairs are far too complex and broad to be covered in any depth using only the text in this guide. The reader is encouraged to explore the questions and issues raised in the guide by referring to the books, articles, periodicals and web sites listed in the appropriate sections. Most of the referenced material can be found either on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of the *Self-Study Guide* to Tunisia was prepared by L. Carl Brown, Garrett Professor in Foreign Affairs Emeritus at Princeton University

## Introduction

Tunisia is Muslim, Arab, Mediterranean and African (MAMA). Its population today is almost 100% Muslim and Arabic-speaking. Located in the southcentral Mediterranean area, Tunisia has played a role in Mediterranean history from the time of Carthage to the present. Tunisia is also African or more precisely the easternmost portion of that distinctive geographical area -- the Maghrib.

With an area of 63,378 square miles (164,150 square kilometers) the Republic of Tunisia is slightly smaller than the state of Missouri. Its population of 9,593,000 is somewhat less than that of Michigan. Of the world's 217 states Tunisia ranks 91st in size and 80th in population. In other indices Tunisia fits in the category of developing countries. It has a young population (63.3% under the age of 30), but its present annual population growth rate (1.3%) is fairly low for the developing world (it was 3% in 1966). Tunisia's 1998 per capita gross national product (gnp) was \$2,060 (or \$5,169 in the more meaningful purchasing power parity measure) which places it above its neighbors, Algeria and Morocco but well below oil-rich states such as Libya and the states of the Arabian peninsula. Life expectancy has climbed from 45 years in 1960 to 55 years in 1970 and now, in 2000, 72.6 years.

## Physical & Cultural Geography

Tunisia as a distinctive territorial and cultural entity has been in existence centuries longer than the name. To early Muslim geographers this was Ifriqiyya, an adaptation of the term the Romans used to designate this land -- Africa. It was only from the 16th Century that the usage "Tunisia" began. When the Ottomans definitely wrested this territory from the Hapsburgs in 1574 they established a province that became, somewhat later, the Beylik of Tunis. From this it was but a short step in European languages to speak of Tunisia. As Africa or Ifriqiyya or Tunisia this country is part of the larger geographical landmass, including Algeria and Morocco, that medieval Arab geographers dubbed *Jazirat al-Maghrib* (the Westernmost island). In modern usage this is the Maghrib or North Africa (a confusing usage, Northwest Africa would be more accurate).

The Maghrib thus defined is bounded by the world's largest desert, the Sahara, on the South, by the Atlantic on the West and the Mediterranean on the North and East. Within these bounds a defining feature is the great Atlas mountain chain that forms an obtuse angle extending from the southernmost parts of Morocco in a northeasterly direction through that country, then turning Eastward across northern Morocco and Algeria in two separate chains, the Tell Atlas and the Saharan Atlas. Upon reaching Tunisia, however, these mountains have subsided to become less imposing hills, ending entirely before reaching Tunisia's eastern coastal region. In Morocco the difference in fertility and accessibility between the lands lying northwest of the Atlas chain and those in the southeast shading into the Sahara was such that French specialists during the time of the Protectorate bluntly labeled the former "useful Morocco" and the latter "useless". No such stark contrast is needed to describe Tunisia where mountains only occasionally reach the height of 4,000 feet (1,219 meters). Moreover, in Tunisia the mountainous areas lie mainly in the western part of the country and the more desert-like areas in the south. Although its northern and eastern areas are distinctively "Mediterranean" as contrasted with its drier steppe and desert hinterland, Tunisia's mountains and deserts do not chop up the country into discrete areas poorly controlled from a central point as is the case with Algeria and Morocco.

All three countries have long coastlines, but in Algeria and Morocco the few good natural harbors offer only limited access to the hinterland. Tunisia's almost 900 mile coastline, by contrast, is blessed with several good natural harbors that open to an accessible interior. This is the core area that has provided throughout the centuries, indeed, millenia the matrix for successive political and cultural communities. This core area is the territory lying east of the Atlas mountains that have at this point become hills, north of the Sahara, and open to the seas both northward toward Europe (a scant 90 miles separate Tunisia from Sicily) and eastward to the Middle East. Distances within this Tunisian core area were manageable even in pre-modern times. From Le Kef near the Algerian border to Tunis/Carthage is 280 km. Tunisia's second major city, Sfax, is 270 km from Tunis and readily reached by either sea or land following Tunisia's long coastal area facing east, the Sahil (Arabic = coast). The small town of Bin Gardane, a scant 26 km west of the Libyan border, is double that distance from Tunis (539 km), but Tunisia's core area ends well north of Bin Gardane.

Tunisia's manageable size and geographical configuration helps to explain why throughout history it has been politically organized around a single major city. During most of its long history that city has been Carthage or Tunis (the former now a suburb of the latter). For several centuries following the Muslim Arab conquest beginning in the mid-7th century Qairawan replaced Carthage as the political capital, and

for clear geopolitical reason. The Muslim Arabs, coming from the Arabian peninsula and Egypt, took the desert route avoiding the coast and created Qairawan as their desertport, just as the seagoing Punic invaders, also from the East some 1600 years earlier, made Carthage their principal seaport. The Muslims moved on to raze Carthage, denying it as a base for a possible Byzantine counterattack coming from the sea and established Qairawan (Arabic for "garrison camp") sufficiently far inland (57 km from Sousse on the coast) to be immune from Byzantine naval power. It was only in the 10th Century that the Fatimids moved Tunisia's political center back to the coast, establishing Mahdiya in 912 on a site that had once been a Carthaginian and thereafter a Roman port. By the 12th c. the strategic site in which both Carthage and Tunis are located was restored as the political center of the country, a status that Tunis has maintained ever since.

Tunisia today is a country of considerable uniformity when compared with the rest of the Maghrib or the countries of the Middle East. Its population is for all practical purposes totally Arabic-speaking and 99.5% Muslim. Moreover, except for a small minority of Ibadites (descendants of that earliest schismatic group in Islam, the Kharijites) located in the extreme south and on the island of Jerba, Tunisia's Muslim are all Sunnis. The once significant Jewish minority (perhaps 4-5% of the total population at its peak) has been reduced to a few hundred. The native Christian population that had long existed before the coming of Islam in the mid-7th Century disappeared by the 13th century (unlike the situation in Egypt and the Fertile Crescent where Christian Arabs have remained an important presence, still accounting for as much as 30% of the population in Lebanon and from six to ten percent in the other countries). What might have been a demographic change in modern times with the influx of European Christian settlers coming with French colonialism (1881-1956), peaking at almost 8% of the population, was quickly dismantled following Tunisian independence. Europeans now account for a miniscule 0.3% of Tunisia's population. The descendants of Blacks brought to Tunisia as slaves from across the Sahara amount to only a few thousands in the North, somewhat more in the southernmost areas.

If Tunisia provides a significant geographical and cultural uniformity when compared with the rest of the Maghrib and the Middle East it is not lacking in conditions that hamper unity. No natural geographical boundaries separate Tunisia from its neighbors to the West and East, Algeria and Libya. Tunisia's border with Algeria stretches more than 500 miles. The route following towns lying close to the Algerian border proceeding southward from Tabarka on the Mediterranean to Le Kef, Gafsa and finally Tozeur adds up to 275 miles. From Tozeur southward through the Sahara to Ghadames is almost the same distance, the latter half of that political border being quite literally no more than a straight line across the Saharan sands. The only border that offers any ecological or, for that matter, strategic significance is not that North-South political line dividing Algeria and Tunisia but rather the East-West natural frontier separating the area of hills, plateaux and forests to the north and the arid Sahara to the south. It is, accordingly, not surprising to find that from at least Roman times much of the Eastern Constantinois area of Algeria has often been linked to what was described above as the core area of Tunisia. The political boundaries of the Roman Africa Proconsularis in, for example, the 4th century C.E. extended as far West as Hippo Regius (now Annaba in Algeria), where St. Augustine (354-430) served as bishop. Born in nearby Thagaste (now Suq al-Ahras, in the Algerian interior 68 km from the Tunisian border) Augustine spent many of his formative years in Carthage.

A roughly similar geographical consistency characterizes Tunisia's border with Libya. It is a coastal plain shading into the Saharan emptiness where (until the age of fossil fuels) precise borders were undrawn and unnecessary. Indeed, throughout most of its history what is now Libya has been divided politically and culturally into a western portion (Tripolitania) linked to Tunisia and an Eastern portion (Cyrenaica, or Barqa to the medieval Arabs) that gravitated toward Egypt and the East. Tunisia's political borders as they now exist have, however, remained largely fixed since the 16th Century when the several Maghribi beyliks or deyliks loosely tied to the Ottoman imperium were established.

A geographical contrast within Tunisia is produced by a mountain range, the Tunisian Dorsal, extending from the Kasserine region just north of Gafsa northeasterly across Tunisia to taper out in Cap Bon (Tunisia's northeastern peninsula east of Tunis). The Dorsal, this last, tapering leg of the great Atlas mountains is a chain of hills, not lofty by Moroccan or Algerian standards, but sufficiently high to divide Tunisia into a rainfed North and an arid, semi-desert region to the South. The former, only some 20% of Tunisia's total area, produces more than two-thirds of the country's agricultural product.

Another major geographical region is the long coastal plain facing eastward, the Sahil, extending from north of Sousse to somewhat south of Sfax. This is an area with adequate moisture for olive cultivation and ready access to the sea for fishing and trade. The Sahil was not so fertile as to tempt French agricultural colonists, and the inhabitants of the Sahil with their small holdings almost completely resisted loss of their lands to the *colons*. A scholarly French Protectorate official, Henri de Montety, advanced the theory that the Sahilians, as olive cultivators had learned the economic lesson of delayed gratification, for some 12 to 14 years must pass before olive trees produce their first crop. Although this theory may not appear plausible when applied to the many olive cultivating areas world-wide, it is certainly true that Sahilians, more than any other group of Tunisians, took advantage during the Protectorate of French educational and cultural opportunities and also led the nationalist movement. The Tunisian George Washington or Kemal Ataturk, Habib Bourguiba, was a Sahilian born and buried in Monastir, and most members of Tunisia's first post-independence cabinet were Sahilians as well.

The lack of natural borders dividing Tunisia from its neighbors and the several regional differences within the country only modify slightly the larger comparative theme: With its small size, compact core area and welcoming coastlines Tunisia is more easily governed from within and more open to invasions and ideologies coming from abroad than the rest of the Maghrib or, for that matter, most of the Middle East. Tunisia in past centuries was more quickly and effectively integrated into the Roman world than either Algeria or Morocco, more thoroughly Christianized and then later more readily Arabized and Islamized. To this day the percentage of native Berber speakers in Morocco and Algeria is estimated to be respectively almost 40% and 25%. Tunisia has only miniscule pockets of Berber speakers found, not suprisingly, in the remotest southern pre-Saharan reaches of the country.

Tunisia has impressed observers throughout the centuries as being more civilized (in the measurable sense of being more urban and more settled) than its neighbors. A 14th century Egyptian Muslim traveller wrote "The inhabitants of Ifriqiyya are to be distinguished from the inhabitants of Morocco and all of the Maghrib lands by the gentleness of their character." And in commenting on this passage the French scholar, Georges Marcais insisted, "These are the psychological traits of long-established city

folk, the heirs of societies going back more than 2000 years, belonging to a country where the Carthaginian, Roman, Byzantine and Islamic civilizations have been successively superimposed, a country which owes to these successive rulers the framework, many times retouched, of its urban life." In the early 18th Century a perceptive observer, the Englishman Thomas Shaw, wrote "The Tunisians are the most civilized nation of Barbary. They have very little of that insolent and haughty behavior which is too common in Algiers.... " And the Frenchman Dr. Louis Frank who served the Bey of Tunis in the early years of the 19th Century and wrote one of the most perceptive accounts of that country observed that "of all the Barbary peoples the Tunisians are, in general, the most gentle and the most humane."

Questions:

What geographical factors distinguish Tunisia from its neighbors, Algeria, Morocco and Libya?

It is often observed that states in Africa and the Middle East emerged from the colonial experience with far from "natural" political boundaries. Is this true for Tunisia?

Why has the area of greater Tunis served as the country's political and cultural center during most of Tunisia's history? Under what circumstances did Tunis lose this distinction?

## Tunisia in History

In this sketch of Tunisian history "Africa", "Ifriqiyya" and "Tunisia" will be used as appropriate to the period covered.

From Carthage to the arrival of Islam:

### **Before the Common Era (B.C.E.)**

c. 10th c. Phoenicians founded Utica (village and ruins 33 km from Tunis on the road to Bizerte).

9th c. Carthage (Qart Hadasht - "new city", i.e. as distinguished from the older Utica) founded by Phoenicians coming from Tyre (in modern Lebanon). Legend has it that Carthage was founded in 814 by the Phoenician Princess Dido.

6th c. Carthage's maritime empire controlled the Western Mediterranean from Spain to Western Sicily.

5th & 4th c. Period of Carthaginian conquest and colonization of the Tunisian hinterland and warfare with Greek colonists settled in Eastern Sicily.

The Punic (from Roman name for Phoenicians) Wars between Rome & Carthage:

1st 264-241 Carthage lost remaining hold on Sicily

2nd 218-201 Marked by Hannibal's daring march across Northern Africa, Spain and on to attack Rome (crossing the Alps in 218), but internal divisions in Carthage and Roman generals Fabius and Scipio brought ultimate Roman victory. Scipio defeated Hannibal at battle of Zama in 202 (central Tunisia c.30 km north of Maktar. Precise location of both the battle and the city, Zama, uncertain).

3rd 149-146 Urged on by Cato's ringing demands that *delenda est Carthago*(Carthage must be destroyed) Rome sent its armies to defeat the Carthagians, raze Carthage and establish their capital at Utica.

Early 2nd c. Numidian Masinissa established kingdom posing a threat to Carthage.

112-105 Grandson of Masinissa, Jugurtha, challenged Romans but was eventually defeated. Roman army veterans given lands in Africa.

46 Julius Caesar annexed Numidia and created a Roman colony at Carthage which soon became the capital of Roman Africa. Roman policy of military colonization continued.

### **The Common Era (C.E.)**

1st to early 3rd c. Prosperity for Roman Africa with increased urbanization of sites that had once been Punic cities, e.g. in addition to Carthage, Bulla Regia (160 km west of Tunis), Dougga (110 km west of Tunis), Mactar (157 km southwest of Tunis) and Sbeitla (Sufetula, 165 km south of Tunis).

170 Tertullian b. Carthage. His rigorous interpretation of Christianity presaged later Donatism.

180 First known Christian martyrs in Africa

189-199 Victor I, first pope from Africa

202-203 Septimus Severus first Roman Emperor born in Africa

203 Martyrdom Saint Perpetua and others at Carthage.

248-258 Saint Cyprian bishop of Carthage

4th c. Donatist schism. Donatists hard-liners challenging Church leadership by those Christians who had knuckled under to Roman persecution (under Diocletian, 303-305), even surrendering the Scriptures (*traditores*).

411 Council of Carthage: Saint Augustine prevailed against Donatists

429-543 Vandals invade Africa, seizing Carthage in 439. Although they embraced the Arian doctrine and thus presented yet another schism the century of Vandal rule actually brought enhanced public order and prosperity for a time.

543-mid 7th c. Byzantine General Belisarius led campaign to defeat the Vandals and establish Byzantine rule in Africa.

595 Heraclius appointed exarch of Africa. In 608 he sent his son, also named Heraclius, from Africa to overthrow the usurper to the throne in Constantinople (and release from captivity his cousin and fiancée, Eudocia, and her mother).

608-641 Reign in Constantinople of Heraclius (the son). Hard-pressed by the Persians, Heraclius considered moving imperial capital to Carthage. Church in Africa strongly resisted adoption by Heraclius of the monothelite doctrine and many in Africa tempted to secede from the empire.

641 Constantine succeeded his father as emperor and sought impose Orthodoxy on the now staunchly Catholic Africa. This policy was then reversed following his short reign by his successor.

646 Exarch of Africa, Gregory, proclaimed himself Byzantine Emperor but remained in Africa.

The Muslim period to c. 1800:

647 1st Muslim Arab incursions into Africa. Army of Abdullah ibn Sa`d defeated Gregory who died in battle at Sufetula (Sbeitla). Gregory's captured daughter committed suicide by throwing herself off her camel.

655 2nd Muslim Arab incursion into Africa.

670 3rd Muslim incursion under `Uqba ibn Nafi`. Founding of Qairawan.

681-698 Resistance to Muslim Arab control from areas west of Ifriqiyya by Berber chieftains, first Kusayla (defeated 686) and then the mysterious al-Kahina (the priestess, who may have led a Jewish or Christian tribe). She held out from the 680s until her defeat in 698. Thereafter, Berbers joined forces with the conquering Muslim Arabs, e.g. Tariq and most of the soldiers crossing from North Africa to Spain in 711 were Berbers (the point in Spain where they landed called Jebel Tariq = Gibraltar).

698 Muslim Arab expulsion of Byzantines from remaining (northern) areas of Ifriqiyya.

c. 8th Century Consolidation of Qairawan as capital of Muslim Maghrib. Deemed by many the fourth holiest city of Islam after Mecca, Madina and Jerusalem. Kharijism, a rigorous and egalitarian doctrine and the first major schism in Islam, appealed to Berbers in North Africa causing revolts (c.740-771).

800-909 Period of Aghlabids, a dynasty of autonomous rulers accepting suzerainty of Abbasid caliphs ruling from Baghdad. Aghlabids adapted Abbasid administrative as well as urban and architectural practices to Ifriqiyya. Increased urbanization in Tunis as well as Sousse, Monastir and Sfax. Building of coastal fortresses ( *ribat-s*) along the Sahil, remains of which seen today in Sousse and Monastir. Aghlabids achieved conquests in parts of Sicily and Sardinia and raided Rome itself in 846.

909 Fatimid conquest of Ifriqiyya and ouster of the last Aghlabid ruler. The Fatimids (legitimists claiming descendants of Muhammad, his daughter Fatima and son-in-law Ali, should lead the Muslim community as caliphs) had organized a revolutionary movement against the Abbasids in the mountainous Kabylia area (Algeria, c. 100 km east Algiers) and moved from there against the Aghlabids in Ifriqiyya. This was the first leg of their campaign to challenge the Abbasids in Baghdad.

911 Fatimid leader, `Ubayd Allah, founds Mahdiyya.

935-948 Berber resistance to Fatimid rule, at times under banner of the earlier Kharijite movement.

969 Fatimids, moving from Ifriqiyya to conquer Egypt and found Cairo (al-Qahira, "the victorious") left the Berber Zirids to rule the Maghrib from Ifriqiyya (from 972).

972-1050 Zirid rule. In 1050 the Zirids having faced numerous Berber challenges often under the banner of anti-Fatimid Sunnism, renounced their Shi`i overlords, returned to Sunnism and offered allegiance to the Abbasids in Baghdad.

1050 Beginning of the nomadic Bani Hilal and Bani Sulaym invasion of the Maghrib. Muslim historical account assert that the Fatimid ruler in Egypt "unleashed" these bedouin tribes against the Zirids in retaliation for their treason. This westward movement was in reality a great migration that continued over the next century. The introduction of these many Arabic-speaking bedouin accelerated the Arabization of Ifriqiyya. The bedouin also brought a sharp rise in nomadism and a concomitant decline of urban life. Qairawan, sacked by these bedouin, lost its preeminence to Tunis after c. 1057.

1134 Norman King Roger II in Italy and Sicily conquered the island of Jerba. In the following years Normans seized most of the coastal areas from Tunis to Tripoli.

1159 Almohades, Berber dynasty arising from mountains of Southern Morocco, conquered Tunis. The Almohades, with a rigorous, puritanical and messianic doctrine (the founder, Ibn Tumart, was deemed the *mahdi*, the divinely guided), ousted the Normans from their coastal holdings, and reined in the power of the Arab nomads. Almohade rule in North Africa, including Ifriqiyya, lasting until the mid-13th Century, brought the end of native Christianity in North Africa.

1229-1574 Hafsid dynasty in Ifriqiyya. The Almohades gave a member of the Moroccan Berber Abu Hafs clan the governorship of Ifriqiyya in 1206. A Hafsid successor in 1229 declared his autonomy from

the Almohades.

1270 Crusading French King Louis IX (Saint Louis), landing at Tunis/Carthage to seize Ifriqiyya before undertaking a second campaign against the Mamluks in Egypt, died and was buried in Carthage. (During the French Protectorate period the hybrid Byzantine-Moorish style Cathedrale Saint-Louis, on the hill of Byrsa overlooking the Punic ports of Carthage was completed in 1890. Following independence the Tunisian Government, in an accord with the Vatican, converted the cathedral into a museum.)

14th c. Moroccan Berber Merinid dynasty threaten Hafsids in Ifriqiyya twice occupying Tunis (1348-50 & 1357), but Hafsids prevail.

1336 Ibn Khaldun, eminent scholar and historian born in Tunis. His celebrated *Muqaddima* (Prolegomena) is deemed the most impressive interpretation of Muslim history and culture. He died in 1406.

15th c. Peak of Hafsids prosperity. Great building and expansion of Tunis.

16th c. Decades-long struggle between Hapsburgs and Ottomans based on the Western and Eastern peninsulas flanking the Mediterranean, Iberia and Anatolia. For Ifriqiyya the principal events were:

1492 Expulsion of Muslims and Jews from Spain, many of whom came to Ifriqiyya joining those earlier immigrants from Spain who had begun to arrive since the beginning of Muslim decline there in the early 13th century.

1534 Khayr al-Din (Barbarossa), who had taken control of Algiers and proclaimed his allegiance to the Ottomans, wrested Tunis from the Hafsids ruler who then appealed to Emperor Charles V for help.

1535 Army of Charles V expelled the Ottoman Algerian forces and restored the Hafsids ruler (henceforth essentially a puppet). The Spanish built an imposing fortress at La Goulette, remains of which survive to this day.

1569 Ottoman Algerians again conquered Tunis

1573 Don Juan of Austria reconquered Tunis.

1574 Definitive capture of Tunis and incorporation of Ifriqiyya into the Ottoman Empire as an Ottoman province.

1574-17th c. Ottoman Tunisia soon became autonomous. At first the Ottoman-appointed governor (pasha) lost effective control to the Turkish *jund* (army) led by its designated leader, the dey. The 17th c. saw the rise to power of another official, the bey, especially during the period of one Murad (a renegade, i.e. convert from Christian lands, from Corsica) and his son Hammuda (1613-1666). It was Hammuda

who built the Bardo Palace, the official residence of the beys thereafter. From the time of Hammuda's sons and successors it had become the rule that the officer selected as dey must be approved by the bey. The dey's powers declined to become essentially the official in charge of security in Tunis. Both "dey" and "bey" were Ottoman titles.

1609 Many of the Moriscos, expelled from Spain by Philip III came to Tunisia. These years also brought Jews who had settled in Leghorn (Livorno, Italy) after having been driven from Spain during the Spanish Inquisition. Active in Mediterranean trade these new Jewish immigrants to Tunisia came to be called *Grana* (from Livorno) as opposed to the native Jews ( *twansa*- Tunisians).

1705 Husayn b. Ali became the founding bey of the Husaynid dynasty continuing until the beylik was abolished in 1957. Husayn's father was from Crete, his mother Tunisian.

18th c. Succession crises, harsh rule of Ali Basha (1740-1756) and invasions from Algeria, 1735 and 1756, the latter producing as well the sack of Tunis.

1759-1814 Greater stability and prosperity under Ali Bey (1759-1782) and Hammuda Basha (1782-1814).

### **Themes for Study and Discussion:**

1. Phoenicians, Romans, Vandals, Byzantines, Muslim Arabs, Fatimids, Zirids, Almohads, Hafsid and Ottomans -- all were outsiders who conquered Tunisia. At the same time the capacity of Tunisia to absorb the ideas and institutions coming from outside by contrast with its neighbors (with higher mountains, greater deserts, more nomadism and more isolated territorial enclaves) is manifest. The Phoenicians became Carthaginians. Roman Africa was the portion of the Maghrib most integrated with Rome and, for that matter, more integrated than many Roman provinces in Europe. Christianity was more deeply rooted in Tunisia than elsewhere in the area. The same for Islam and the Arabic language.

Tunisia throughout history has often been able to emerge from its conquered status and achieve autonomy. This happened with the Aghabids in the 9th c. and again when the Zirids renounced the Fatimids and Shi'ism, returning Tunisia to Sunni orthodoxy. The Hafsid, a Berber clan from outside became sufficiently rooted to produce Tunisia's longest dynasty in the Islamic period -- almost three and a half centuries. The "Tunisification" of the Husaynids (1705-1956) followed this pattern.

The extent to which Tunisia in pre-modern times was a proto-nation must not be exaggerated. The nation-state is, after all, a modern phenomenon in Tunisia as elsewhere. The clear difference between rulers and the ruled was eroded only slowly and unevenly in the modern period.

2. Ibn Khaldun's classic interpretation of the rise and fall of states posited less "civilized" folk in the countryside endowed with great group solidarity ( *asabiyya* - a French scholar translated it *esprit de corps*) and brought to a fervor by a religious message overthrowing dynasties ruling in the cities where

they have become effete. This interpretation explains amazingly well much of pre-modern Muslim history and especially Ibn Khaldun's own Maghrib. Tunisia, however, provided not the hinterland base for new dynasties but the settled and urbanized area conquered by the outlander. Thus, the Kharijites and the Fatimids coming from the mountains of Algeria, the Almohades from the mountains of Morocco or the earlier Almoravids (whose conquests stopped just short of Ifriqiyya) from the Moroccan Sahara. Even the Donatist schism, although clearly present in Tunisia (Africa) as well as beyond, was to some extent a challenge by the native population in the countryside to the Roman and Romanized people in the urban areas. No great hinterland challenge creating a new polity arose within Tunisia.

3. Piracy: Tunisia from the Ottoman period until the early 19th c. was one of the states known to the West as the "Barbary Pirates". Tunis, just like Algiers, Tripoli, and Sale in Morocco (the Salee Rovers), did shelter and sponsor piracy, or more accurately privateering. Captives seized in such maritime raids were taken to Tunis to be ransomed or held as slaves who were absorbed into Tunisian society. The mother of Tunisia's Westernizing Ahmad Bey (reigned 1837-1855), for example, was captured in 1798 as a young girl in a corsair raid on Sardinia.

Mediterranean piracy in its heyday from the 16th c. to the early 19th c. was an international relations "system" with its distinctive rules. Piracy in the Mediterranean (and beyond, many of the more notable pirates being from Britain) had existed for centuries. Even Julius Caesar was captured by pirates and had to be ransomed. Piracy was sponsored from both sides of the Mediterranean. The Knights of Malta preyed on Barbary shipping, and in one bumper year (1780) seized 240 Muslim vessels. Pirates from Malta also captured in the last two decades of the 18th c. almost one thousand Tunisians, especially from raids against Jerba, and the gulfs of Hammamet and Tunis. European piracy plus European efforts to bar Muslim merchant ships from access to European ports (often in violation of existing treaties) was part of the system which, on balance, disadvantaged Tunis and the Maghrib more than Europe.

Piracy existed along with trade. Tunis had resident European merchants as well as Christian captives awaiting possible ransom. Treaties with the several different European countries secured immunity of that country's ships from pirate attacks. Often, lesser outside states paid tribute in order to obtain such protection. Such was the case of the early United States.

Piracy or privateering was a form of pre-modern warfare before governments created and supported regular navies. Barbary piracy had a brief final resurgence when Europe was preoccupied with Napoleon, but it was already an anachronism. Thus, Napoleon's defeat of the Knights of Malta in 1798 (while en route to invade Egypt) is of a piece with Lord Exmouth's imposition of the abolition of corsairing on the Barbary States, including Tunis, in 1816. (A footnote to the fate of privateering: Following the Crimean War the states assembled at the Paris peace conference in 1856 agreed to abolish privateering and pressed other states to concur. One state, pleading the possible need to commission and arm merchant ships in time of war, refused to sign this international convention -- the United States.)

## Tunisia in Modern Times

Tunisia at the beginning of the 19th c. had a population of perhaps one million to at most one and a half million. Of this number from two-thirds to three-fourths were sedentary, the remainder nomadic or transhumants. The capital, Tunis, had a population of perhaps 85,000. This was over four times larger than the second city, Qairawan, with 20,000. Sfax may have had 10,000, Sousse and Bizerte possibly 6,000. The great difference dividing the nomad from the settled is illustrated by the *mahalla*, the annual tax collection foray into the remoter countryside which took the form of a military expedition. A scarcely less important cleavage divided the urbanites from the rural population. The inhabitants of the capital were the *baldiyya* (roughly, the bourgeoisie) who superciliously regarded the country folk as *Uffaqi* ("from beyond the horizon").

Ruling Tunisia was a governmental establishment offering a small provincial replica of its suzerain, the Ottoman Empire. The classic Ottoman idea of government sharply distinguished rulers from the ruled. The former were soldiers (men of the sword) and administrators (men of the pen). The latter were *ra`aya* (literally sheep). This clear distinction between rulers and the ruled held sway in Tunisia. Almost all of the ruling class were non-Tunisians. The founder of the dynasty of autonomous rulers, Husayn b. Ali, had, admittedly, been the son of a Turk (from Crete) married to a woman from a local tribe, but the mother of his son and successor was a Genoese slave. And the next three generations of rulers were also sons of either slave mothers or a cousin. So, too, for the army (*jund*). It was largely "Turkish" which meant recruits from outside of Tunisia or their offspring plus a number of recruits from the Berber *Zwawa* (Zouaves) tribe whose homeland was the Kabylia region of Algeria.

The elite of the ruling class were the mamluks. These were Christians taken while young from all over the empire or beyond (e.g. the Greek islands, Georgia, the Caucasus). Later converting to Islam, they were raised to be rulers. Perhaps about 100 in all from "toothless" children to the elderly, the mamluks made up virtually all the military commanders and cabinet ministers throughout the 19th c. even as the "recruitment" of new mamluks ceased early in the century.

The few native Tunisian members of the ruling class were some, but by no means all, of the local governors (*qaid-s*), the scribes (*kuttab*, sing. *katib*) and the local cavalry (*Spahis*). Even the Muslim *ulama* ("learned", i.e. in religious studies) were divided. Although most of the native Tunisians followed the Maliki legal system, the Ottoman Empire adopted the Hanafi system and its *ulamawere* favored as well in Tunisia. (Maliki and Hanafi are two of the four accepted Islamic legal systems -- or, roughly, "codes" for implementing religious law -- in Sunni Islam. Maliki mosques in Tunisia tend to have four-sided minarets, Hanafi mosques octagonal minarets).

Tunisian history in modern times is marked by the slow and sporadic move away from the classic Ottoman pattern sharply separating rulers from ruled -- largely provoked by the threats and attractions coming from Europe. Tunisia was a minor player in that great diplomatic confrontation known as the "Eastern Question". At the turn of the 19th c. neither the Ottoman Empire nor its autonomous parts (such as Egypt and Tunisia) were sufficiently strong to withstand the growing might of Europe, and it was only because the several European states could not agree on an orderly division of the Ottoman Empire that it lasted until after the First World War. Even so, dismemberment proceeded apace -- Greece, the Balkans, Algeria (French conquest beginning in 1830), the British occupation of Egypt in 1882 and the French

Protectorate over Tunisia beginning the previous year, 1881.

Responding to this challenge the Tunisian rulers used the weapons of the weak. The beylik sought to remain loyal to its Ottoman suzerain while guarding against any effort by Istanbul to assert direct control over its Tunisian province (as happened in 1835 to neighboring Tripolitania). At the same time the beylik needed to balance off the contending European powers. Most of the time this involved a cautious acceptance of French support in order to offset the British who in championing Ottoman integrity had no interest in an independent Tunisia. At the same time, the Beylik tried to keep French ambitions within bounds.

Tunisia's rulers also, like their contemporaries in Cairo and Istanbul, felt the need to strengthen their states by adapting European institutions and ideas. This strategy of "defensive modernization" followed a similar trajectory in all three places:

Efforts to Westernize the military, including conscription of the native population and enlarging the military establishment plus bringing in European military advisors, sending student missions to Europe, and working to achieve more self-sufficiency in producing military materiel.

These and other efforts at centralization enlarged government budgets and led by mid-century to a policy of deficit financing by means of European loans at usurious rates. When this brought governmental bankruptcy, the Europeans imposed debt commissions on these countries. These were the penultimate stage before outright European colonial rule, from 1881 in Tunisia and 1882 in Egypt.

More than ideas of military Westernization seeped in during these years. Certain members of the ruling establishment began to think in terms of limiting arbitrary rule with constitutionalism and of strengthening the state by getting the populace involved.

## Principal Dates:

1811 & 1816 Revolts of the Turkish *jund*. In response belik began to decrease size and importance of the *jund*.

1816 Lord Exmouth and British fleet demonstrate before Tunis

1819 Anglo-French naval demonstration before Tunis

1830 Beginning French conquest of neighboring Algeria

1831 Creation of first Westernized military, the *nizam* forces

1835 Re-establishment direct Ottoman control over Tripolitania

1837-1855 Westernizing reign of Ahmad Bey -- Major Events:

1840 Establishment of westernizing Bardo Military School

1840-1855 French military mission to Tunisia. The following years saw a major buildup of Tunisian military at great expense.

Abolition of Slavery:

1841 Closing of slave market in Tunis

1842 Children of slaves declared free

1846 Liberation of slaves

1853 Ahmad Bey radically reduced military to avoid bankruptcy 1854 Ahmad Bey, at great expense, sent troops to join Ottomans and allies in Crimean War against Russia

1857 "Fundamental Charter" (*Ahd al-Aman*). Strong European reaction to summary execution of a Tunisian Jew obliged bey to issue a decree offering basic rights and promising a constitution.

1861 Tunisian Constitution (offering modest but innovative forms of representation and limitations on authoritarian rule)

1864 Revolt throughout much of Tunisia led by Ali bin Ghadhaham protesting increased taxation. Constitution suspended.

1867 State bankruptcy

1869 Anglo-French-Italian financial commission imposed on Tunisia

1873-1877 Reformist ministry of Khayr al-Din al-Tunisi achieved some progress but he was forced out by cabal of European consuls and favorites of the bey.

1881 Having received the green light from European powers earlier (Congress of Berlin) France seized on a pretext to invade Tunisia and impose Protectorate. (Treaty of Bardo)

1883 Convention of La Marsa extending and formalizing French Protectorate

**Questions:**

1. What does the institution of the *mahallat* tell us about the nature of Tunisian government in this period?
2. What strategies were used by the Tunisian government to withstand pressures from Europe and the Ottoman Empire?
3. What is the meaning of the assertion that Tunisia in these years was a part of the Ottoman system in the process of "Tunisifying"?

## The Protectorate Period 1881-1956

Although the formal structures of beylical government remained, France implemented what amounted to direct rule. The French Resident-General controlled the bey, the Tunisian ministers in the cabinet were outnumbered by French ministers and were, in any case, monitored by the French Secretary-General, and alongside each provincial governor was a French *contrôleur-civil*.

Tunisia under the Protectorate attracted many European settlers who came to account for almost 8% of the total population. The early years brought more Italian than French settlers, and it was only in the late 1920s that the French settler population outnumbered the Italian (and then only because many Italians acquired French citizenship). Settlers perforce intensify the colonial experience anywhere. They obtain land and create small family farms or large agribusiness holdings. They open businesses. They demand schooling, housing, medical care, and -- all in all -- a standard of living such as exists in the *metropole*. And as citizens of the *metropole* they have political clout to influence policy. In Tunisia the existence of a large settler population did help to produce economic development, a modern transportation and communications network, good schools and hospitals -- but available mainly to the settler society.

All Tunisians were strongly marked by the Protectorate period. For example, French came to be widely used even by semi-literate Tunisians, but the cultural impact was uneven. A tiny fraction of Tunisian society received a first-rate, French-style education, but at the end of the Protectorate only 26% of the primary school age children and a mere 3% of the secondary school age were in schools. Considerable modernization took place in agriculture, but the modernized sector was not labor-intensive. Thus, only a limited number of Tunisians were involved.

Tunisians responded to the Protectorate along lines similar to what their ancestors had done in the face of earlier invasions. Little resistance was offered to what was rightly seen as overwhelming force, and what little armed response occurred was confined to the remoter southern regions. "Pacification" (that colonial euphemism), a matter of decades in both Algeria and Morocco, was in Tunisia a matter of months.

Thereafter, late in the second decade of Protectorate rule a small group, dubbed the "Young Tunisians" began to campaign for a more liberal Protectorate policy. This small group, more a club than a party, was made up largely of younger members of the pre-Protectorate elite that had rallied around the reformist efforts of Khayr al-Din al-Tunisi. They created in 1896 the *Khalduniyya*, honoring Ibn Khaldun (1332-1406), which served as a kind of adult education facility and debating society. In this, they received the

support of the French Resident-General, Jules Cambon, one of the finer examples of a Protectorate effort to win over the native society. Later, from 1907 to 1912 the Young Tunisians presented their ideas in the newspaper *Le Tunisien* (n.b. in French, not Arabic, but an Arabic edition was begun in 1909). The Young Tunisians were at most only proto-nationalists. Favoring the adoption of French language ("instruct in French, teach the Arabic language" one Young Tunisian proclaimed) and methods they challenged the Protectorate authorities to honor their commitment to modernize Tunisia while exhorting their fellow Tunisians to break out of the "intellectual torpor".

The Young Tunisian organization was suppressed by the Protectorate authorities in 1912, and it was only after the First World War that the next Tunisian political movement emerged. This was the Destour, Tunisia's first nationalist party seeking a mass following. Leading the party was Abd al-Aziz al-Tha`albi who had been editor of the Arabic edition of *Le Tunisien*. The clarion call for this new movement was a short pamphlet he wrote published in 1919, *La Tunisie Martyre*. The book took the position that Tunisia was already fit for self-government and had been well embarked on appropriate modernization before being interrupted by the French Protectorate. That the party, organized in March 1920, adopted the name, Destour (more correctly, Dustur, Arabic for constitution) evoked the earlier short-lived Tunisian constitution 1861-1864 which was, indeed, the first written constitution in the Arab world or the Middle East.

Within a few years the Protectorate authorities estimated that the Destour Party had some 45,000 registered members organized in about 60 branches throughout the country. It was an impressive organizational feat, but the Destour remained rather tame, declining to identify with an abortive Tunisian effort in trade unionism in the 1920s, eschewing actions that might spark violence and repression, staying safely within the scope of petition and protest while offering conservative socio-economic positions. The party reflected the traditional values and interests of the *baldiyya* (the bourgeoisie).

Beginning in the late 1920s a group of provincials, especially from the *Sahil*, under the leadership of Habib Bourguiba (1902?-2000) began to challenge the Destour, and by 1934 they had created a break-away party that came to be called the Neo-Destour. Significantly the organizing meeting was not in Tunis but in the small village of Qasr Hillal in the *Sahil*. Theirs was a much more populist vision. They spoke out against the deplorable position of the Tunisian peasantry made even worse by the Great Depression. They supported the more successful effort at trade union organization in the 1930s. And they took risks in confronting the French Protectorate. Bourguiba himself spent eight years off and on in French jails from the 1930s to the 1950s. By the late 1930s the Neo-Destour had emerged as the strongest nationalist party.

Yet, Bourguiba (and here, as often, it is proper to let the man represent the movement) avoided the "all or nothing" tactical trap adopted by many radical colonial nationalist movements. He was willing to move in stages, and early on he worked to win over French opinion by lauding French values and insisting that the Protectorate authorities, the *preponderants*, were out of step with French interests.

Most surprisingly, even after the defeat of France in World War II and well before it looked like the Allies would defeat the Axis Bourguiba from his jail in France smuggled out instructions to party leaders predicting an Allied victory and demanding cooperation with France and the Allies ("Our support of the

Allies must be unconditional"). This was in August 1942.

It would be another 14 years before Tunisia attained independence. Those years witnessed a number of developments. After the Allied forces had ousted the Axis from North Africa ("Operation Torch", November 1942 to May 1943) the French authorities forced the abdication of Moncef Bey, making him the martyred hero. Had he lived he might have been able to lead Tunisia to independence, thereby reducing -- but not eliminating -- the Neo-Destour dominance, but he died in exile in 1948. Bourguiba in the years after 1943 sought support from the British and, even more, the Americans and for a time in 1945 and after looked for help from the newly formed Arab League. The U.S., however, while nudging the French toward reforms was reluctant to play a major role, and Bourguiba found even less help from the Arabs of the East caught up in their own problems and the looming crisis and war over Palestine.

The denouement leading to independence revealed again the Bourguibist capacity to proceed in stages. From 1954 to 1956 independence was achieved through various devices evoking such terms as "autonomy" and "interdependence". The French strategy after 1954 (when the Algerian revolt began) of scaling down other colonist commitments in order to concentrate on Algeria also aided Tunisia as well as Morocco. Algerians and certain of the more radical nationalists in Morocco and Tunisia championed a strategy of a unified Maghribi resistance until all three countries obtained independence. Bourguiba's Tunisia, as well as Morocco, opted to take the independence offered and then pressure France to move toward independence in Algeria. This decision occasioned the break between Bourguiba and his until then principal lieutenant, Salah bin Yusuf. The latter tried to organize armed resistance in the South and thereafter escaped to Egypt where he and his policy received Nasser's support.

Independence in 1956 was not complete. The issues of the large French landholdings and, even more, the continued existence of French troops in Tunisia as well as a major French base in Bizerte would not be worked out until several years later.

## Principal Dates:

1896 Founding of the *Khalduniyya* and beginning of the Young Tunisians proto-nationalist movement

1907-1912 Young Tunisian newspaper *Le Tunisien*

1912 Suppression of Young Tunisian movement

1919 *La Tunisie Martyre* by al-Tha`alabi and Ahmed Sakka

1920 Founding of the Destour Party

1934 Founding of breakaway Neo-Destour Party in Qasr Hillal

1938 Major Neo-Destour-led riots against Protectorate. Bourguiba again jailed.

1940 Vichy French rule in Tunisia following Nazi defeat of France.

1942-1943 American and British troops landed in Morocco and Algeria (Nov) & advanced eastward toward Tunisia. British 8th Army, following victories against Rommel's Desert Korps at El Alamein move westward from Egypt. Surrender of Axis at Cap Bon, Tunisia in May 1943.

1942 Following Anglo-American landings in North Africa in November, Axis occupied all of France (and Tunisia) and released Bourguiba and colleagues from French jail.

1943 Jan-April Bourguiba in Rome. Eluded Italian attempts enlist his support. Returned to Tunisia in April.

1943 May 14 Newly installed Free French administration deposed Moncef Bey.

1944-1945 Ferhat Hached organized *Union Generale des Travailleurs Tunisiens*(UGTT). Nationalist and anti-communist, the UGTT later worked closely with AFL-CIO (especially American union leader, Irving Brown) in organizing the International Confederation of Free Trade Unions (ICFTU)

1944-1948 Fleeing possible re-arrest Bourguiba left for Egypt, returning in September 1948.

1952 Jan: Bourguiba arrested again. Dec: French vigilante extremists assassinate Ferhat Hached.

1954 May: French defeat at Dien Bien Phu, Indochina. July: Mendes-France governments offers Tunisia autonomy. Nov: beginning Algerian war.

1955 May: Franco-Tunisian agreement on autonomy. June: Triumphant return of Bourguiba from exile. Oct: Salah bin Youssef, opposing autonomy accord, expelled from Neo-Destour.

1956 Following earlier French agreement independence for Morocco France granted same to Tunisia. 20 March: Tunisian independence.

## Questions:

1. Tunisia, like the other North African states -- Algeria, Libya and Morocco, experienced intensive settler colonization. What was their impact?
2. Did the existence of settlers make decolonization easier or more difficult?
3. What distinguished the Neo-Destour from the Old Destour?

## Tunisia since Independence

**Domestic Policies:** The newly independent Tunisian government lost no time in implementing measures that might well be compared in their modernizing boldness to the earlier program of Ataturk's Turkey in the 1920s. A law was passed offering a broad spectrum of rights to women. Polygamy was abolished and divorce was to be regulated by the courts eliminating the man's arbitrary ability to divorce his wife. Moreover, the separate personal status courts presided over by qadis chosen from the ranks of the ulama were merged into a unified judicial system. The venerable religious seminary, Zitouna, and its many feeder secondary religious schools were incorporated into an equally unified national school system. All this clipped the wings of the ulama, viewed by Bourguiba as the spokesmen of a traditionalism that would derail efforts to create a modern state and society.

In the same vein Bourguiba, who had in the early 1930s championed wearing the female veil and the male chechia (or shashia, the distinctive Tunisian soft fez) as symbolizing authentic Tunisian culture, advocated modern dress after independence. Even more challengingly Bourguiba sought to wean Tunisians away from fasting during the Muslim month of Ramadan. Since fasting during daylight hours followed by feasting and celebrating throughout the night reduced productivity for a full lunar month, Bourguiba advanced the ingenious argument that Islamic law excused those engaged in *jihad* (holy war) from fasting and Tunisians, fighting a *jihad* against underdevelopment, were thereby exempt and should put in a full day's work. Fasting during Ramadan, however, proved to be too deeply embedded in the Tunisian's religious and cultural identity. Even Bourguiba's most progressive followers resisted. Bourguiba, ever the realist, backed down.

Impressive steps were taken in education, both qualitatively and quantitatively. A plan was adopted to attain universal primary education within 10 years with an equal push for expanding secondary and higher education. Fully one-quarter of the Tunisian national budget was devoted to education, and it was to be a modern education modelled on that of the French. Independent Tunisia also opted for a de facto bilingualism. The language of instruction in the primary years amounted to a seven to six ratio of Arabic to French, and in the secondary education roughly two-thirds of the instruction was in French. The leadership's drive to modernize, to avoid a lapse into traditionalism, was so strong that not only was Zitouna schooling merged into the unified national system but at a time of acute teacher shortage over 800 Zitouna-trained teachers were released as sub-standard.

A works project somewhat akin to the WPA of America's New Deal days was undertaken, financed in part by US aid. Also, the early post-independence years brought the dissolution of Tunisia's *habous* (the usual term in the Maghrib for *waqf*-- a religiously sanctioned system of mortmain placing the endowed property beyond the hands of either the state or individuals). A *habous* could be public or private. The former was designated for a public charitable purpose (e.g. creation or upkeep of a school, mosque or hospital). Proceeds of the latter went to the founder's heirs, thereby circumventing the fissiparous Islamic inheritance laws. The private *habous* reverted to a public purpose only when all beneficiaries died, and since inheritance could pass on from generation to generation this reversion might well be deferred indefinitely. A case can be made for the institution of *habous* serving the public interest (witness the role

of tax-exempt charitable foundations in the US), but the reality in Tunisia was that *habous* properties were poorly exploited. Their being returned to state control or private ownership did offer an economic incentive.

The abolition of the *habous*, like most of the other projects set afoot soon after 1956 all fit into the clear pattern of implementing party and state control over Tunisian society. In addition to their developmental impact these many radical reforms checked forces in the larger society that might sooner or later pose a challenge to the Bourguibist program. Thus, just as the secularizing nationalization and the unified judicial system undercut the social standing and prestigious job opportunities for the ulama the abolition of the *habous* hit not only the ulama (often earning fees as administrators of *habous* properties) but the middle and upper-class Tunisians who were more likely to seek such shelters.

Even more draconian was the *Haute Cour* that brought to trial not only the followers of Salah bin Yusuf but others who could be branded as having been collaborators during the Protectorate period. Established as early as April 1956 the *Haute Cour* continued in existence until October 1959. Its harsh revolutionary justice (but mild by 20th c. global standards - some 16 executions and several times that number of long prison sentences) might be justified against the Yusufists who were openly at war against the Tunisian government. Less excusable, however, was the deliberate design to humiliate and impoverish those whose major crime was not having toed the Neo-Destour line in the years leading up to the independence. Those so charged and sentenced included three former Tunisian prime ministers serving during the Protectorate years. In any case, the *Haute Cour* did serve to eliminate or cow opponents, present or potential, to the new Bourguibist regime.

Authoritarian centralization was also demonstrated in the tight control that came to be exercised over the several different organizations of youth, students, women, farmers, merchants and the trade unions (UGTT). The latter had the most potential to maintain some autonomy, having achieved considerable organization strength under the leadership of Ferhat Hached. Had he lived he might have been able to withstand Bourguiba's effort to control the UGTT. His successors had no such luck, although they put up more of fight than did the other different organizations brought under the broad umbrella of the Neo-Destour. Such centralizing control did not require all that much pressure or intimidation. Most of these several different groupings of Tunisian society had been created by Neo-Destourians. Their leaders as well as the rank-and-file were ardent supporters of the party and the Bourguibist program.

In this atmosphere the abolition of the beylicate in 1957 and the establishment of what amounted to a "presidential monarchy" was an easy step. Bourguiba moved from being prime minister to become president. The prime minister and the other members of his cabinet were from the beginning essentially subordinate to President Bourguiba, not answerable to the National Assembly. The years 1958-1959 also brought party reorganization that facilitated greater control from the top.

Independent Tunisia did not at first apply centralized control over the economy. This came only in the 1960s and is associated with Ahmad Bin Salah whose rollercoaster political career exemplified Bourguiba's method of defeating would-be rivals but then bringing back into power as chastened subordinates. Bin Salah, as secretary-general of the UGTT in 1956, had sought a more independent line

but Bourguiba handily managed to force him out. Thereafter, deemed broken, Bin Salah was brought back into power as Minister of Health. Then, in 1961 he was appointed Minister of Planning, a newly created position. Bourguiba had been won over to Bin Salah's radical notion of creating a centrally-planned Tunisian economy. Bin Salah seized upon the opportunity offered by the 1964 nationalization of the remaining French-owned agricultural lands to push through a scheme of state-controlled agricultural cooperatives. By the end of the 1960s these cooperatives accounted for about one-third of Tunisia's cultivable land and also one-third of its rural population. Never popular, however, the *dirigiste* venture into agriculture confronted further setbacks brought by a venerable Tunisian phenomenon -- bad weather which produced poor harvests from 1964 to 1968. Ben Salah persisted, even planning to move toward eventual state control over all cultivable lands, but mounting discontent proved overwhelming. The ministry backed down in 1969 and even allowed farmers to opt out of the cooperatives which almost all of them immediately did. Bin Salah was dismissed from office in September 1969, later brought to trial and imprisoned. He escaped prison in 1973 and went into exile.

Hedi Nouira, appointed prime minister in 1970 and serving for a full decade until incapacitated by a stroke in early 1980, brought in a more liberal economic policy. He was succeeded by Muhammad Mzali who served until dismissed in July 1986. Later in September Mzali, fearing a reprise of the Bin Salah affair, fled the country. Bourguiba's shuffling of posts thereafter continued erratically. Less than a year later in May 1987 Bourguiba replaced Mzali's successor, Rachid Sfar, and chose as prime minister Zayn al Abdin Bin Ali who also was the first person of military background to hold this top position. Only four months later, just when it seemed that Bourguiba would dismiss Ben Ali, the latter struck first. In a bloodless coup Bourguiba was declared incompetent to rule. Bourguiba lived on under mild house arrest in his native Monastir until his death on April 6, 2000.

The long reign of Bourguiba was terminated not so much because of poor economic performance. Although there were ups and downs and a few serious riots against the regime (especially in January 1984) Tunisia's economic performance over the long period compares not unfavorably with that of other developing states.

In the last few years of Bourguiba's tenure a few tentative steps away from single party domination were taken, but they proved to be largely window-dressing. More significant was Bourguiba's adamant stand against the small but growing body of Islamists. The Islamist party, for example, was denied the legal status granted several other parties in the early 1980s. The confrontation with Islamists reached a climax in 1987 which brought the breaking of relations with Iran (accused of supporting an Islamist coup against the Tunisian government), Islamist demonstrations and attacks at several sites, and then a trial of 90 Islamists. When the judgments against those accused were handed down in September Bourguiba deemed them too mild (he apparently sought several executions) and was planning for retrials when he was removed from power by the Bin Ali coup of 7 November. Although many observers believe that the Islamists were not a threat and could have been coopted, there is evidence to suggest that by 1987 at least some of the Islamists were planning a coup. The relations between government and Islamists in Tunisia bears comparison with developments in Turkey -- both secularizing regimes whose leaders, Bourguiba and Ataturk, opposed all Islamist tendencies.

Bourguiba had ruled too long, and his radical modernizing program which commanded considerable support in the early post-independence period gradually lost its luster. The man who aspired to make Tunisia a progressive, secular state and Tunisians active citizens, not passive subjects, was clearly better at preaching the message and imposing change by fiat than fostering the institutional development necessary for a functioning democracy. Elected president for life in 1974, Bourguiba became as autocratic as any bey had been. Behind the veneer of a mass party plus the organizations of students, farmers, businessmen, workers, women and many others was a patrimonial ruler who would make or break subordinates at will. And just as with the earlier beylicate an official losing favor might well face fines and imprisonment. Or, fearing worse, he might choose exile.

Bin Ali began his tenure promising moves toward multi-party democracy and liberalization. Over the next few months after November 1987 hundreds of political prisoners were released, including the Islamist leader Rachid Ghanouchi. Steps thereafter were again taken toward a multi-party system, and a small quota of seats in local and national assemblies was reserved for the opposition parties which did not fare well in elections still dominated by the highly organized governing party. Still, the Islamists were kept at bay. Their party *Al-Nahda* (renaissance), which replaced the *Mouvement de Tendance Islamique* (MTI), founded in the early 1970s, was not granted official status.

The governing party received a new name. The Neo-Destour that had become *Parti Socialiste Destourien* (PSD) in 1964 during the heyday of Ahmad Bin Salah was renamed in 1988 the *Rassemblement Constitutionnel Democratique* (RCD).

Most of those high officials closely linked to Bourguiba were dropped, and a new leadership emerged made up of technicians and those close to Bin Ali. Steps were taken to prevent another long hold on power such as Bourguiba had achieved. The title of president for life was abolished, and the maximum age for a president was set at 70. A president could be reelected for no more than two additional five year terms. Bin Ali regularized his presidency first in the 1989 election. His two reelections stipulated by the constitution have now taken place in 1994 and 1999 (with over 99% of the vote each time). Now, moves may be afoot to modify the constitution permitting an extension of Bin Ali's rule.

Bin Ali soon developed a very Bourguibist approach to wielding power. The structures of a functioning democracy were in place with assemblies, elections, courts, political parties and many professional organizations, but after the good beginning of releasing so many political prisoners Bin Ali reverted to a pattern of arbitrary arrests. The Islamists were especially targeted, and their leader Ghanouchi who in 1988 had issued the optimistic declaration that the era of injustice was over prudently chose voluntary exile the following year. Secular leaders and human rights advocates were also harassed or arrested, and outsider reports by Amnesty International, among others, present a somber picture. By the early 1990s the number of political prisoners (perhaps as many as 10,000) released by Bin Ali soon after November 1987 was probably matched by almost that number again in jails and often undergoing torture. Even in the late 1990s, after some improvements in response to outside pressures (e.g. the European Union and the US), Amnesty International claimed that Tunisia held at least 1,000 political prisoners.

The Tunisian government's response to its critics is that Tunisia is taking the realistic steps necessary to

stifle disruptive and even terrorist challenges from Islamists, is making steady progress toward greater democracy, and achieving good results in both economic development and social justice. The economic performance overall during the Bin Ali years, with modest steps toward privatization, has been impressive. Many years since 1987 have brought increases in gross domestic product (GDP) of five, six and even seven percent, and the years of lower growth stemmed largely from events beyond the control of the planners, especially that venerable blight affecting all North Africa - a fickle weather that brings sharp declines in agricultural productivity. Unemployment is high -- an estimated 15% of the economically active population, but no more than in many developing countries.

Thus, any evaluation of whether the government is stable and perhaps even popular with the majority of Tunisians must weigh a relatively good economic picture and high participation in local and national elections against the negative factors of Islamist agitation, student protests and the harassment of the regime's critics.

### **Questions and Issues:**

1. Can Bourguiba rightly be dubbed the Tunisian Ataturk?
2. Has Ben Ali merely brought Bourguibism with a new face?
3. Who are the Tunisian opposition forces? Are they united? Are they a threat to the regime?
4. Sketch the different economic policies adopted since independence and evaluate their results.

### **Foreign Policy since 1956:**

Tunisia in 1956 confronted foreign policy challenges not all that different from those facing the Tunisia of past centuries. Tunisia was, as in the past, a small state surrounded by more powerful states. And certain of the states looming large in Tunisia's foreign policy calculations were old familiars. This included France and Tunisia's immediate land neighbors, Algeria and to a lesser extent Libya. The Ottoman Empire was no more but the pressures for regional and religio-cultural loyalty now took the form of Nasserist pan-Arabism. The major new player in Tunisia's international relations game was the U.S.

Independence for Tunisia, and Morocco, was accelerated because France sought to concentrate on the revolution in Algeria (launched the last day of October 1954). The Algerian nationalists (FLN), who would face eight years of war 1954-1962), had wanted a united Maghribi front against France. So, too, had Tunisia's Salah bin Yusuf who had split with Bourguiba and the Neo-Destour on this very issue, rallied an armed resistance in the South, and when that failed fled to Cairo. Thus, Tunisia faced the prospect of regional neighbors who might at least seek to impose changes in Tunisian foreign policy and at most threaten the regime itself. This situation only increased with Algerian independence in 1962 and the advent of Qaddafi's pan-Arabist regime in Libya in 1969. Indeed, the assassination of Salah bin Yusuf

in August 1961, made feasible by a brief period of detente between Bourguiba and Nasser (following the July Bizerte crisis pitting Tunisia against France) was deemed necessary lest, as one Tunisian official starkly put it, "we see Salah bin Yusuf returning to Tunisia in an Algerian tank."

Bourguiba's regime thus sought to demonstrate that an independent Tunisia was better positioned to support the Algerian struggle for independence, and this required diplomatic pressure on France. Tunisia, however, could not afford to alienate the former colonial power. France was needed as a potential counter to Nasserist and other regional forces. Moreover, Tunisia still had to negotiate such issues as continued French forces in Tunisia, the naval base at Bizerte and the status of the agricultural lands owned by French *colons*. And Tunisia relied heavily on French foreign aid and technical support (e.g. some 20,000 French teachers) in those early years, for unless independence could bring in its wake a certain level of improvement the siren song of Nasserist or Yusufist radicalism might well attract significant numbers of Tunisians. The several crises noted in the chronology (Sakiet Sidi Yusuf, Bizerte, etc.) reveal the Bourguibist step-by-step tactics and his occasional miscalculations (as at Bizerte in 1961).

Bourguiba's Tunisia also sought close relations with the United States as well as other Western states. This was a natural extension of the Neo-Destourian tactic since 1940s of seeking to enlist US support in the decolonization campaign. All three parties, France, Tunisia and the US, were caught up in a complex diplomacy: Tunisia solicited American support as a buffer against pressure from France even while working to maintain good relations with France. France was concerned to protect its preeminent position in Tunisia against real or perceived incursion by the US. The US, consistent with its overall policy of insuring that decolonized states of the area would remain within the Western camp, sought to strengthen Tunisia while assuring France that it did not seek to challenge France's position in Tunisia and the Maghrib, even though the overall balance of forces in the area necessarily entailed a decline of French influence. All this took place during the first six years of Tunisian independence in the context of the continuing war in Algeria, the 1956 Suez crisis, and the heyday of both Nasserist and Soviet influence in the area.

Tunisia's pro-Western orientation made for rocky relations with Nasser's Egypt. Tunisia broke relations with Egypt in 1958, claiming to have uncovered a Nasserist plot to assassinate Bourguiba and overthrow the government. Relations were restored after the Bizerte crisis, but another break in relations followed Bourguiba's rash venture into Arab politics concerning the problem of Palestine. In a March 1965 speech given before Palestinian refugees in Jericho Bourguiba claimed that the Arabs should accept the UN 1947 partition resolution and proceed from there in Bourguibist step-by-step fashion to attain the best possible terms for the Palestinians. This created a firestorm throughout the Arab world. Although it is claimed that Bourguiba had received Nasser's support for such a proposal in Cairo before proceeding the Jericho, Nasser was quick to take the lead in repudiating Bourguiba.

Diplomatic relations with Egypt were restored at the time of the June 1967 Arab-Israeli war, and since Nasserism never recovered from that crushing defeat the old Egyptian-Tunisian tension was removed. By the time Nasser's successor, Anwar al-Sadat, signed a peace treaty with Israel (March 1979) the Arab world in its boycott of Egypt decided to move the headquarters of the Arab League from Cairo to Tunis. Tunisia since has become much more in step with the Arab world. Later, Tunis become the headquarters

of the PLO after it was forced from Lebanon following the 1982 Israeli invasion.

Egypt and the Arab East are, in any case, physically at some distance from Tunisia, and although swaying of public opinion or organizing coups can come from afar more tangible foreign policy challenges come from immediate neighbors. Both Algeria and Libya have been charged with organizing coup attempts against Tunisia, in 1963 and 1980 respectively. Tunisia's relations with Morocco can be seen in part as a balancing against pressures from Algeria. Or, on the other hand, when Morocco agreed in 1984 to union with Libya (never implemented and cancelled by Morocco two year later) Tunisia quickly lined up with Algeria and others to counter the move.

Tunisia had its own brief and abortive flirtation with Libya when Bourguiba, surprisingly, had agreed to a merger with Libya in January 1974. The deal, arranged by Tunisian Foreign Minister Muhammad Masmudi while the prime minister, Hedi Nouira, was out of the country was dismantled upon the latter's return. This set in motion a period of tense relations between the two countries that peaked in the 1980 incident.

Bourguiba's sudden acceptance of union with Libya, often explained as a deviation due to his poor physical and psychic health at the time, does, however, illuminate another theme. Bourguiba desired a role larger than Tunisia's resources permitted. This explains his earlier proposal for a bloc of Francophone African states or his ill-fated 1965 venture into the Palestine problem. And the Tunisia of Bourguiba did achieve a certain cachet (usually quite positive in the West, usually negative in the Arab world) that began to dissolve during the last years of the aging, ill and perhaps senile Bourguiba.

A dramatic foreign policy position taken by Tunisia under Bin Ali was Tunisian disapproval of the US-led actions taken in 1990-1991 to expel Iraq from Kuwait. This stance was popular with the Tunisian public that strongly supported Iraq. As a result, the US cancelled military aid to Tunisia and reduced economic aid from \$12.5 million to a mere \$3 million, and Kuwaiti investments in Tunisia ceased. In the following years Tunisia worked to re-establish damaged relations with Kuwait and the several other Arab states that had supported the actions against Iraq, with some success.

Throughout the Bin Ali years the regime's harsh repression of the Islamists and equally the few liberal critics become a foreign policy issue with human rights organizations and Western governments criticizing these actions. At the same time, however, Tunisia has been able to move forward in its economic ties with Europe. An agreement signed with the European Union in July 1995 provided for a 12 year transition period leading to Tunisia's integration into the European economic area as regards industrial goods with future negotiations planned to cover the agricultural and service sectors. This agreement came into effect in March 1998.

### **Principal Dates:**

1956 March: Independence

1956 Personal Status Code

1956-1959 Period of the *Haut Cour*

1957 Abolition of the beylicate. Tunisia becomes Republic.

1958 Tunisia breaks relations with Egypt

1958 French bomb Tunisian village Sakiet Sidi Yusuf. Anglo-American mediation overtaken by developments in France bringing De Gaulle to power

1961 July: French troops attack Tunisians at Bizerte

1961-1969 Period of Ahmad bin Salah's centralizing socialist efforts

1963 Algeria coup against Tunisia alleged

1965 March: Bourguiba's Jericho speech sparks fierce Arab reaction

1967 Jun: Six Day Arab-Israeli war

1974 Jan: Libyan-Tunisian merger agreement, soon abandoned

1974 Bourguiba designated president for life

1978 General strike severely repressed

1979 March: Egyptian-Israeli peace treaty. Headquarters of Arab League moved from Cairo to Tunis

1980 Jan: Libya coup against Tunisia alleged. Tunisians trained in Libya attack Gafsa

1982 Israeli invasion of Lebanon ousting PLO which moved its headquarters to Tunis

1984 bread riots

1987 7 Nov: Bin Ali replaces Bourguiba in bloodless coup

1988 Socialist Destour Party becomes *Rassemblement constitutionnel democratique*(RCD)

1989 Tunisia joins Algeria, Libya, Mauritania and Morocco to form the Arab Maghrib Union (UMA).

1990-1991 Tunisia opposes U.S. led effort to expel Iraq from Kuwait

1995 Tunisian economic agreement with European Union

2000 6 April Bourguiba dies and is buried in Monastir

### **Questions and Issues:**

1. How have Tunisia's relations with the Arab states of the Mashriq changed since independence?
2. Does Tunisian foreign policy demonstrate a considerable continuity over time not just since independence but since the 18th Century if not even before?
3. Tunisia since independence has been generally well-regarded in the West, less so in the Middle East. Why? Is that image of Tunisia changing and, if so, why?

### **Governmental and Political Institutions:**

Tunisia's formal structures, as set out in the 1959 constitution with subsequent amendments, are those of a representative democracy -- a president presiding over the executive branch, a single chamber legislature, and an independent judiciary.

The reality, however, can at best be called a "guided democracy" in which a strong president, who also controls the monopoly political party, provides top-down governance. The president and the 182 members of chamber of deputies are elected by universal suffrage for five year terms. The president may be re-elected for two additional terms for a total of 15 years. Thus, Ben Ali must either step down in 2004 or push through a constitutional amendment permitting him to gain another term or more. In the last presidential election (1999), the first to have more than a single candidate, Ben Ali won a whopping 99.44% of the vote with the meagre remainder divided between two other contenders.

The president appoints the prime minister and the cabinet, the senior civil and military officials, including the judges, and the governors of the 23 regions. He has the power to dissolve parliament, propose legislation and legislate by decree when the parliament is not in session.

A constitutional provision specifies that the prime minister is responsible to parliament, but in practice both he and his fellow cabinet ministers, many of whom are technicians, are appointed and dismissed by the president.

The steps Ben Ali took after ousting Bourguiba in 1987 to make the governing system more democratic have had slight impact. Another effort to permit a multi-party system (as had been started in the early 1980s) was made, but the only significant opposition, the Islamists, remained expressly barred. The

ruling party, now renamed the *Rassemblement constitutionnel democratique*(RCD), has continued to dominate in all subsequent elections. The six small parties granted legal status under the new dispensation never managed to win all together as much as 10% of the total vote. No opposition candidate has won a seat outright, and these small parties have slight representation in parliament only because legislation has been passed setting aside 34 seats to be distributed among them. All 148 contested seats were won handily by RCD candidates. RCD dominance at the local level is equally secure. In the May 1995 municipal elections opposition candidates managed to win only six of the 4,090 seats cumulatively available and fared only slightly better in 2000 -- 243 of 4,128. The RCD controls all municipalities.

The RCD boasts almost seven decades of institutional history since it was formed in 1934 as a break-away party from the older Destour. As the Neo-Destour from that date until 1964 when it became the Socialist Destour Party (PSD) in 1964 and since 1988 the RCD this party has been a dominant force in Tunisian political and social life. It remains very much a mass party with a membership estimated at between 1.8 and 2 million divided into 7,800 cells which may be either territorial or professional. The last general congress of the party in 1998 (a party congress is usually held every five years) had over 2,000 delegates of whom 20% were women. Moreover, the party has established a loosely implemented series of quotas to facilitate membership of women and youth. Three out of five party members have entered the RCD since 1987.

What might be called the parliament of the party is the Central Committee with 89 members and the executive is its eight member *Bureau politique*. This party organization, in fact, mirrors that of the government in its "top-down" orientation. The central committee and the *bureau politique* are chosen subject to the approval of Ben Ali who is both president of the party and the Republic. The corporatist intertwining of party, government and professional organizations is well revealed in the central committee membership which includes, in addition to the president and the prime minister, all RCD cabinet members (excluding the two non-RCD cabinet ministers), other top government officials and the heads of the several different professional organizations such as the *Union nationale des femmes tunisiennes*.

Tunisia has avoided the burden taken on by the Middle Eastern countries of heavy military expenditures and equally heavy military involvement in politics. Its military expenditures have ranged between 3.6% (1985) and a low 2% (1995) of GNP and its armed forces total a modest 35,000 of whom 23,400 are conscripts. This amounts to 3.7 soldiers per 1,000 population, the lowest ratio in the Maghrib and much lower than in most Middle Eastern states (e.g. Egypt 7, Iran 8.8, Jordan 21.5 and Israel 29.2 per 1,000 respectively). The Tunisian official policy calls for conscription for all 20 year old males for one year of military service, but this can be avoided readily by pleading education, health or family concerns. Bin Ali, as noted, was the first military officer to play a leading role in politics.

Such a small military establishment can not be expected to do more than hold out for a limited time against any potential outside threat until other powers supportive of Tunisia can act. Domestic security forces, on the other hand, are numerous: 12,000 in the National Guard, a force directly responsible to the Minister of Interior, and 13,000 police. This amounts to one police officer for every 380 inhabitants

(compared to one for every 840 in Algeria and Morocco, 580 in Egypt and 318 in the US.)

### **Economic and Social Indicators:**

Governmental and political institutional rigidity over the years since 1956 can, however, be contrasted with considerable change in the Tunisian economy and society. The economy, where once agriculture predominated and phosphates were the largest export, has become more diversified. Today, an active population estimated at three million has:

25% in agriculture

33% in industry

40% in services

Of that total work force 800,000 (27%) are women. As with most developing countries unemployment is a problem. An official estimate puts unemployment at 15.4% of which half are under the age of 25. The actual rate is believed to be higher.

Agriculture now accounts for 25% of the working population but garners only 15% of the GNP. Most agricultural holdings are too small for economies of scale: 80% of the holding are under 20 hectares and only 3% are over 50. Olive cultivation, concentrated in the Sahil, continues to be important accounting for roughly one-third of the cultivated land. Tunisia ranks in most years as the world's fourth largest producer of olive oil.

Tunisia is also the world's fourth largest producer of phosphates, and for a brief time Tunisia has been able to profit from another natural resource -- oil, but only in a modest fashion when compared to neighboring Libya or the states of the Arabian peninsula. Oil was produced beginning in 1966 in the south and during most of the 1970s oil was the principal foreign currency earner, but none of these wells have been major strikes. It is estimated that Tunisian oil reserves may last only about another decade.

The most imposing change has been the rise of manufacturing which is now by far the major export item, especially textiles which in recent years have accounted for roughly one-third of total manufacturing and employs 280,000 workers.

These sector shifts got underway decades ago but received a major impetus following the economic crisis of the mid 1980s and the resulting efforts at moving toward a liberal, market-oriented economy (stimulated by pressures and inducements from outsiders, e.g the World Bank and the European Union). Involved in these plans have been efforts at privatization of state owned enterprises, but this has been slow. The public sector continues to employ 25% of the work force.

These moves toward a more diversified and developed economy have brought in their wake sharply

increased urbanization. Whereas in 1950 urbanites accounted for 25.9% of the total population they are now a sizeable 63%. Much of the change has taken place in the more "Mediterranean" north and east of Tunisia exacerbating the age-old problem of a less prosperous South.

As with all of the Maghrib (and Turkey) Tunisia has a considerable population living and working abroad -- some 610,000 of whom 450,000 (74%) are in Europe (350,000 or 57% in France) and 133,000 in other Arab countries (of which 97,000 in the Maghrib).

Another significant economic and social factor is tourism. Tunisia in the last five years has received annually a low of just over four million tourists to a high of almost five million. The tourist industry provides jobs for some 70,000 Tunisians and brings in as much as 16% of total foreign exchange earnings. Here, just as with manufacturing, the tourist sites are mainly those in the "Mediterranean" part of the country.

Education continues to rank high in governmental expenditure claiming 21% of the budget (6.1% of GNP). Almost universal primary school attendance has been achieved, and some 10% of the university age group are enrolled. Slightly more than 50% of those in higher education are women.

About 3% of Tunisia's GNP is devoted to health, and the decline in infant mortality offers a striking success story: From a tragic 132 infant deaths per 1000 births to 69 per 1000 by 1980 and down to 24 per 1000 in 1999. Tunisia has one doctor for every 1,280 inhabitants.

Tunisians are more mobile, healthier, wealthier, more urban and better educated than in the past. In comparative terms Tunisia ranks above the mean for all Arab states in all such indices (the low ranking of such states as Sudan, Yemen and even Egypt offsetting the higher rankings of the oil rich states), and falls in the middle of the "medium human development" states according the human development index produced by the UN Development Program (2000). Tunisia ranks quite high in estimates of recent developmental progress and in gender issues.

In sum, Tunisia gains a fairly high rating in basic social and economic indicators. As for democratization and advancement of human rights Tunisia presents a much less positive picture.

## **Conclusion: Tunisian Culture**

Here we return to the acronym MAMA with which we began. Tunisia has been a part of the Muslim world since the earliest days of Islam. Tunisians over the centuries have participated in the elaboration of Muslim culture, the mosque-university of Zitouna having played for centuries a role in the Maghrib equivalent to that of Egypt's al-Azhar throughout the Muslim world.

The Tunisian population is not only almost totally Arabic in speech and culture but has been for centuries. Even in the period of the Husaynid dynasty, nominally an Ottoman province, Arabic began to replace Ottoman Turkish as the language of government in the 19th Century. Ahmad Bey (r. 1837-1855),

for example, wrote to the Ottoman sultan in Arabic, pointing out that he wanted to be able to understand the message he was sending.

Yet, in today's Tunisia, in the fifth decade after independence, French is widely spoken, and many of the educated class (especially those born before independence) are likely to express their more serious thoughts and write their scholarly books in French. Tunisia's experience during the 75 years of French colonial rule was of an intensity that belies the usage "protectorate", and although much has faded since much remains. Add to this the many examples of Tunisia's orientation across the Mediterranean to Europe which remains physically and psychologically close. Tunisian emigrant workers go mainly to Europe returning with European ideas and artifacts. Europeans constitute the majority of tourists visiting Tunisia each year just as Europe accounts for most of Tunisia's foreign trade.

As for its African vocation the cultural evidence situates Tunisia within the larger region of the Maghrib, and the Maghrib while sharing much of the history and culture of the Mashriq, the Middle East, is distinctive. The spoken Arabic dialects of Tunisia and the rest of the Maghrib are to be distinguished from those of the Middle East. Architecturally, the Muslim mosques and public buildings carry on the Umayyad tradition as transferred to the Maghrib and Muslim Spain. The traditional Tunisian dress (now often superseded by Western modes) offers subtle differences, and in cuisine Tunisia shares with the Maghrib such dishes as cous-cous and tajin.

At the same time Tunisia's long history plus its striking linguistic, religious and cultural homogeneity make it very much an entity in its own right. Differences of class and region exist, but they are less than are to be found in most countries of the region. Moreover, these differences are largely worked out or fought out in the Tunisian context. The extremes of revolution and violent regime changes are less often to be found than in many other countries of the region, not just in past decades but in past centuries.

Tunisia's authorities like to boast that the majority of Tunisians are middle class, and that is presumed to be a source of stability and even a potential for democratic development. Such a high estimate cannot be accepted, but one interesting indicator merits mention: 78% of the Tunisian population own their own home.

Who are the opinion-molders and culture-bearers in today's Tunisia? Here is a mixed picture. From the earliest days of Bourguiba's long domination of political culture a relentless top-down informational program has accompanied political and social activity. This Bourguibist ideology obviously influenced Tunisians just as its moderation, good sense, absence of conspiratorial thinking, consistency of message to both friends and foes, and overall progressive pitch charmed outside observers. Bourguiba, like Ataturk, sought to be school teacher to the nation. For many years after 1956 Tunisian radio carried daily five minutes excerpts from Bourguiba's speeches addressing all manner of subjects, great and small, intended to guide Tunisians to modernity. A massive effort at the same time to write the history of Tunisian nationalism (which tended to become a hagiographical treatment of Habib Bourguiba) was also afoot.

In the first decades after independence this top-down informational program successfully matched the aspirations of many leaders in the arts and letters who also sought modernization in all its forms including a break with traditionalism, Western-style liberalism, women's liberation. Later, however, daily political life revealed increasing demands for political orthodoxy and Bourguiba's homilies paled, but the habit of controlling the message continued.

Tunisian radio and television are both government operated and controlled. The several French and Italian television programs that are retransmitted are occasionally stopped if they do not meet government approval. Tunisian national television is deadly dull, providing large doses of voice-over depictions of President Ben Ali addressing one or another gathering. Newspapers usually place a prudent governmental spin on their reporting. This makes it all the more important for the outside observer seeking to understand values and ideas to pay attention to those Islamists and others in exile, gauge the extent to which Tunisians follow European media or such interesting Arab media as the Al-Jazeera television in Qatar, and monitor the influence of the internet.

Beyond this, Tunisia today has a small movie industry, several well-regarded artists and writers, and a number of impressive historians and social scientists. A reasonably good effort to revive the traditional arts and crafts has been set in motion without lapsing into artificiality. The same holds for the traditional Tunisian (or Andalusian) music, but in both cases the strong commercial temptation to present kitsch to the tourist trade poses a threat.

That the Tunisian cultural effort continues to be split between French and Arabic may have a diluting effect, but on the other hand the exposure to those ideas from across the Mediterranean sparked some of the most exciting Tunisian intellectual effort starting as long ago as the modernizing political treatise of Khayr al-Din al-Tunisi written in 1867, and continuing with such works as the liberating break with older forms of Arabic poetry championed by Abu Qasim Chabbi (1909-1934, surely the modern Tunisian poet best known throughout the Arab world) or the existentialist play Al-Sudd (the Dam) written by Muhammad Messadi who also served as Tunisia's Minister of Education in the early years after independence.

## Questions:

1. The Tunisian Government would win applause and tangible support from Western governments if it could present a better human rights record. Why don't they work to that end? Do they truly see Islamists and the few other dissidents as a security threat? Are they haunted by the strife in neighboring Algeria since the late 1980s? Or does the legacy of top-down control still dominate their thinking as well as their actions?
2. Assuming the Tunisian ruling establishment is likely to consider only slow, staged moves toward democratization what kinds of steps might be acceptable?
3. How can an outsider most effectively evaluate public opinion and basic societal values in today's

Tunisia?

## Readings

A good self-study rule is to begin with the more general and interpretive sources, moving on from there to the detailed studies. A useful first step, accordingly, would be the country study on Tunisia by Kenneth Perkins.

Several general surveys include Tunisia within the context of the larger Maghrib. Two such histories of North Africa in the Islamic period are those by Charles-Andre Julien and Jamil Abun-Nasr. They are reliable chronological political histories, good to check facts but hardly the kind of book the non-specialist will read through.

More summary accounts, stronger on interpretation and with fewer details can be found in the books by Charles F. Gallagher and Richard B. Parker (who earlier served as US ambassador to Algeria and Morocco). Note also the strongly interpretative history of the Maghrib by the Moroccan Abdallah Laroui. Even more concise overviews are Gallagher's "A Note on the Maghrib" and the chapter by Michel Le Gall. Lisa Anderson has written a fine comparative study of state development in Tunisia and Libya in modern times (1830 to 1980). This is a book that should appeal to both historians and political scientists.

All these books, however, have been published more than a decade ago, some several decades ago, and cannot serve for the most recent times. Two more recent books also deserve mention. One, *Polity and Society in Contemporary North Africa* edited by I. William Zartman (several chapters in this work are cited below). Even more recent and confined to Tunisia is Emma Murphy's *Economic and Political Change in Tunisia*.

As for the basic data on contemporary Tunisia two good reference works updated and reissued each year are the Economic Intelligence Unit's *Tunisia Country Profile* (available on the web) and Europa Publications's *The Middle East and North Africa*. The year 2000 marked the 46th edition, and the editors have this reference work down pat -- Tunisia is covered in 49 small print, double-column pages, presenting a historical summary and especially detailed treatment of recent political and economic developments.

Nor should one overlook the utility of a good guide book. Two can be recommended -- the updated Baedeker and the Rough Guide. The pictures, the maps and the historical information keyed to each site covered should cause either of these books (preference to the Baedeker) to be dog-eared by the end of your tour of duty in Tunisia.

On Tunisia foreign policy see the interesting article by Mary-Jane Deeb on "Inter-Maghribi relations...", a splendid exposition of Maghribi-style balance of power diplomacy, and also the chapter by Deeb and Ellen Laipson. Nicole Grimaud's book covers the period from independence to 1995.

Mary-Jane Deeb also has a useful chapter on the Arab-Maghribi Union, and William Mark Habib treats Tunisia's relations with that other union, the EU.

For coverage of Tunisia's confrontation with the Islamists there is much to choose from including articles by Michael Collins Dunn, Abdelbaki Hermassi (two, one a general view of Islam in recent Maghrib history and the other specifically on Islamism in Tunisia), Henry Munson, and Susan Waltz. Mohamaed Elhachmi Hamdi's book offers an insider's view of Tunisian Islamists and also argues that the Islamists were preparing a coup in 1987 preempted by Bin Ali's ouster of Bourguiba.

A good study of that 1987 "constitutional coup" is Louis B. Ware's article. Ware offers in a second article one of the few studies of the role of the Tunisian military in politics.

Scholars of the Arab world given considerable attention to the issue of civil society, testing the theory that the existence of many thriving non-governmental organizations and associations facilitates democracy. Eva Bellin covers well the case of Tunisia, and in another article she treats relations between industrialists and the state in Tunisia.

As for the general pattern of politics and the role of the Neo-Destour/PSD/RCD the older study by Clement Henry Moore, *Tunisia since Independence* remains useful and can be updated by his later article on Maghribi political parties.

Not surprisingly, Bourguiba is the subject of several works. Two articles by Jean Lacouture, one in French and the other in English, provide a perceptive and highly favorable account, and I "revisited" Bourguiba in a recent article. A Tunisian team, Sophie Bessis and Souhayr Belhassen, offer a complete and more critical biography in two short volumes in French. Derek Hopwood has a biography in English. One interesting insider's view of Bourguiba is in the memoirs of Cecil Hourani.

On US-Tunisian relations in addition to the Gallagher and Parker books one can read the short essay by John Damis. The US became seriously involved in Tunisia only as late as during the Second World War. This early history can be recaptured in two solid articles in French by Juliette Bessis and Hassine Raouf Hamza. My essay on this subject, not yet published, is available in manuscript. It concentrates on the role of Hooker Doolittle, American consul-general in Tunis from 1941 to 1943. A street in Tunis is named for Doolittle, and the above three references will explain why.

This leads to the delicate Franco-American diplomacy concerning not only Tunisia but all of formerly French North Africa. A thorough treatment of this subject during the years 1943-1956, relying largely on available French public records, is the book by Annie Lacroix-Riz.

The above listing exceeds what even the most diligent student of Tunisia will find time to cover, and readers will necessarily be selective. What follows are a list of even more works on subject that may appear peripheral to immediate interests and needs but may, it is to be hoped, be just what some are seeking:

Two books on Carthage, one by B.H. Warmington and the other by David Soren et. al.

Susan Raven's *Rome in Africa* offers a readable survey of this subject.

The celebrated work of Tunisia's Ibn Khaldun is available in English translation by Franz Rosenthal but in three fat volumes. A one volume abridgement is more realistic, but even more economical of time and better presenting Ibn Khaldun's major ideas about Muslim politics and society is the short book of selections translated by Charles Issawi.

Lucette Valensi's engaging essays collected into a small book describe North Africa on the eve of modern times (including a good account of piracy).

*My Tunisia of Ahmad Bey* seeks to reconstruct Tunisian state and society as it existed in the middle years of the 19th century and to show the early Tunisian responses to Western threats and attractions. Lucette Valensi in her book, *Tunisian Peasants in the Eighteenth and Nineteenth Centuries* offers a rich history-from-the-bottom-up account.

The Tunisian statesman, Khayr al-Din al-Tunisi, wrote in 1867 a political tract arguing the need for Westernization. He is rightly seen as precursor of the Young Tunisians and thereafter Bourguiba's Neo-Destour. This little work is available in English translation.

Henri de Montety (cited above p.4 for his theory of how being cultivators of olives shaped the upwardly mobile orientation of Sahilians) also wrote a stimulating article showing how the French Protectorate stimulated class mobility in his "Old Families and New Elites."

Tunisian architecture from Roman times (not enough remaining from the Carthaginian period) to the present is an attractive subject, and so, too, is the morphology of its cities throughout the ages. In Tunis, itself, the old madina offers one of the most attractive and best preserved examples of classical Islamic urbanism. Read on this general subject the chapters by Richard Ettinghausen and Hasan Fathy in my *From Madina to Metropolis* (and note the figure on p. 29 showing the juxtaposition of Western new and Islamic old in Tunis). Also beautifully done covering major cities but giving considerable attention to Tunis is the book by Andre Raymond. Those who would really wish to study Tunisian urbanism should contact Ms. Jamila Binous of the Society for the Preservation of the Madina and consult as well (even just studying the illustrations if the French text is too forbidding) the several studies of Tunisian architecture by Jacques Revault.

Further Expansion into Europe and Middle East	c. 1500-1700
Decline of the Ottoman Empire	c. 1700-1900
Ottoman Entry into World War I	1914
Allied Occupation of Turkey	1918-22
End of the Ottoman Empire	1923

## The Turkish Republic

Establishment of the Republic	1923
Mustafa Kemal Ataturk as President	1923-1938
Founding of the Republican People's Party (RPP)	1923
Abolishment of the Shari'a and Adoption of Western Civil Codes	1926
Switch from Arabic to Latin alphabet	1928
Extension of Suffrage to Women	1934
Death of Ataturk	1938
Presidency of Ismet Inonu	1938-1950
Beginnings of Democratization and Multi-Party Politics	1946-1950
First Free and Honest Elections	1950
Democratic Party of Adnan Menderes in Power	1950-1960
Military Coup by Junior Officers	1960
Period of Direct Military Rule	1960-1961
Resumption of Electoral Politics and Period of Coalition Governments	1961-1965
Communal Clashes on Cyprus and Beginnings of the Cyprus Problem	1962-1963
Justice Party of Suleyman Demirel in Power	1965-1971
"Coup by Memorandum" and Indirect Military Rule	1971-1973
Period of Coalition Governments under Bulent Ecevit and Suleyman Demirel	1973-1980
Coup against President Makarios on Cyprus by Greek Junta and Landing of Turkish Troops on the Island	1974
Period of Escalating Terrorism and Political Violence	1976-1980
Military Coup by Senior Officers and Direct Military Rule	1980-1983
Ozal as Prime Minister (1983-89) and President (1989-93)	1983-1993
Beginnings of the Political Violence and Terrorism Campaign by Abdullah Ocalan's Workers Party of Kurdistan (PKK)	1983
Turkish Participation in Allied Coalition in Gulf War	1990-1991
Ozal's Death	1993
Period of Coalition or Minority Governments led by Suleyman Demirel, Tansu Ciller, Mesut Yilmaz, Necmettin Erbakan,	

and Bulent Ecevit	1991-2002
Islamist Welfare Party's Rise to Power in a Coalition	1996
The ouster of the Welfare Party from office under Military Pressure	1997
The worst economic crisis of the post-WWII period	2001
The victory of Tayyip Erdogan's Justice and Development Party in Parliamentary Elections	2002
Turkish parliament's vote against U.S. troop deployment in Turkey for the Iraq War	2003

## **INTRODUCTION**

The purpose of this self-study guide is to provide basic background information on Turkey for persons being assigned there. The guide tries to present the information in a way that individuals can obtain a better understanding of the country and, as a result, have a more productive and pleasant tour of duty. You are encouraged to think about the questions raised at the end of each section and pursue those that interest you, drawing on resource materials at the end of the paper.

## **GEOGRAPHY AND CLIMATE**

The Republic of Turkey is situated in a near-rectangular peninsula that is bounded in the north by the Black Sea, in the west by the Aegean and in the south by the Mediterranean. A small part of the country's territory known as Thrace (Trakya) that encompasses 3 percent of Turkey's total territory and holds about 8 percent of its population lies in Europe. The main heartland of the country in the semiarid central plateau is called Anatolia (Anadolu). Observers have often depicted Turkey as a bridge between Europe and Asia due to its unique geography that straddles two continents. Turkey's total area, including lakes, is approximately 780, 576 square kilometers (302, 169 square miles) is greater than that of any European state. Turkey is two and a half times as big as Italy and about three times as big as the United Kingdom. Turkey is also one of the larger states of the Middle East, where its area is exceeded by only Saudi Arabia, Iran, and Egypt.

Thrace is separated from Turkey's mainland by two straits, the Bosphorus and the Dardanelles, and by the Sea of Marmara. Historically, the Turkish Straits have played an important geostrategic role: Tsarist Russia as well as the Soviet Union have sought to control them for access to their navies from the Black Sea to the Mediterranean while Britain and France, fighting against the Ottoman Empire, sought to force their navies through the Dardanelles in a failed attempt during the famous Gallipoli campaign in World War I. Much of Turkey's past and present importance stems from its strategic location as a land that, in addition to the straits and the maritime routes between the Black Sea and the Mediterranean, also lies at the crossroads of Europe, the Middle East and Asia.

At present, the Republic of Turkey has borders with eight neighboring countries in the Balkans, the Middle East, and the Caucasus. In the Balkans, Turkish borders with Greece and Bulgaria in Thrace extend to 206 kilometers and 240 kilometers, respectively. Neither boundary has been a subject for territorial disputes since the signing of the Lausanne Treaty in 1923. Turkey's neighbors in the Middle East include Syria, Iraq, and Iran. The 822 kilometers-long boundary with Syria--the longest among Turkish borders--has been a source of conflict between the two countries over the Alexandretta (Hatay) province on the Mediterranean. Syria has not formally accepted the transfer of the sovereignty of this province to Turkey by France in 1938 following a plebiscite. This issue remains a source of tension between the two neighboring states. In contrast, Turkey's 331 kilometers long boundary with Iraq has not been contested since its confirmation through the Ankara Treaty of 1926 between Britain and Turkey. The boundary between Iran and Turkey, which covers 500 kilometers, has remained unchanged since the Ottoman times. In the Caucasus, the demise of the former Soviet Union at the end of the Cold War has led to the emergence of three independent republics that border Turkey: Georgia (252 kilometers), Armenia (268 kilometers) and Azerbaijan (9 kilometers).

Turkey's highly complex geological structure was formed as a result of approximately 600 million years of earth movements and geomorphologic evolutions. The country possesses all types of geological formations of various eras. Turkey's topography is varied with high elevations, lofty mountains, plains, plateaus, and depressions. There are high mountain ranges that parallel the Black Sea in the north and the Mediterranean in

the south. The large plains in the central part of Anatolia separate these mountain ranges to the north and south of the country. The topography of Turkey displays significant regional variations. Western Turkey from the shores of the Aegean and the Sea of Marmara to the borders of central Anatolia includes some of the country's most fertile agricultural areas as well as several densely populated urban centers such as Istanbul, Izmir, and Bursa. Several of the so-called "Anatolian Tigers", cities such as Denizli that have grown and prospered largely through the development of textile industry in the 1990s, are also located in the Western region. In contrast, the Eastern region that stretches from the central heartland to the east and the southeast is marked with rugged mountains and mostly arid terrain that makes agriculture more difficult than in the West. Eastern Turkey is where the Euphrates (Firat) and the Tigris (Dicle) originate from: Both of these large rivers flow southward from Turkey and eventually join in Iraq before emptying into the Persian Gulf. Turkey's Black Sea region has high mountain ridges along the coast that separate the valleys in the interior from the Black Sea. The slopes of the mountains along the Black Sea coast also have dense forests. In the south, the Mediterranean region extends from the Taurus Mountains to the coastal area. The Mediterranean region has fertile soil and warm climate that makes it ideal for growing variety of citrus products. Additionally, its sandy beaches have made this region a booming area for tourism since the late 1980s.

Turkey is geologically located in the Alpine-Himalayan belt, which is one of the world's important seismic regions. Throughout history, Anatolia has witnessed numerous major earthquakes. In more recent times, the country has experienced several devastating earthquakes along major fault lines of tectonic weakness and earth movement. Beginning with the 1939 earthquake in the eastern city of Erzincan that claimed more than 20,000 lives, there have been seven major earthquakes along the fault line that stretches westward from eastern Anatolia. The latest of these took place in August 1999 around the industrial city of Izmit located on the Marmara Sea close to Istanbul. Officially, the number of fatalities from the Marmara earthquake was put at 18,000 but unofficial estimates went as high as 30,000. The magnitude of the earthquake (7.4 on the Richter scale) was also visible from the destruction of over 100,000 homes in and around the Izmit province. Due to its proximity to Istanbul and the westward direction of this particular fault line, the Marmara earthquake of 1999 has intensified the fears of many residents of Turkey's largest city about the possibility of a similar earthquake in the near future.

Turkey's climate is generally described as a dry, semi-continental variant of the Mediterranean type or alternatively as transitional between the Mediterranean and temperate continental regimes. The temperature conditions in winter become progressively colder towards the east where, at times, very intense cold is experienced. However, winters along the coastal areas and in the western regions of the country tend to be milder. In summer months, temperature differences tend to be less varied and, with the exception of the high mountains, most areas of Turkey experience hot weather conditions. In particular, the Mediterranean and the Aegean coastal regions experience hot and arid summers. In terms of rainfall, the wettest areas are the coastlands, especially the coastal mountain ranges along the Black Sea.

### **Self-Study Questions for Further Exploration**

1. Should Turkey geographically be considered an Asian or a European country?
2. How does Turkey's size compare with other countries in Europe and the Middle East?
3. What gives strategic importance to Turkish Straits?
4. Does Turkey have boundary disputes with any of its neighbors?
5. Why are most Turks concerned about a major earthquake in Istanbul in the near future?

### **HISTORY**

Since ancient times, the Anatolian peninsula has been host to numerous civilizations and empires. The Old Testament includes numerous references to Anatolia and its peoples, from the prophet Noah whose ark was said to have landed on Mount Ararat in eastern Turkey to Abraham who came from Edessa, which is the present-day city of Urfa in southeastern Turkey. Over the centuries, the land of the present-day Turkish Republic was inhabited by a variety of peoples belonging to different racial, ethnic, and religious communities. This long history of civilizations, states, and peoples makes Turkey a fascinating place for visitors who can see the remnants of Anatolia's rich historical legacy in numerous archeological sites and ruins that dot the country's landscape.

## ANCIENT ANATOLIAN WORLD

The oldest traces of human existence in Anatolia date back to the Stone Age, around 10,000 years ago. Archeological evidence from several sites in western and southeastern Turkey shows that by approximately 6,000 B.C. the evolution from hunting to settled communities that subsided on the cultivation of agricultural crops such as barley was completed. Catal Hoyuk, near the present city of Konya in central Anatolia, was one of the earliest urban settlements in the world with a population of approximately 5,000 inhabitants around 6250 B.C. Some of the major discoveries from the excavations at Catal Hoyuk are on display at the Archeological Museum in Ankara. Around 2500 B.C., with the discovery of copper, Anatolia entered the “Bronze Age” and became a principal supplier of metal for the military empires of Mesopotamia. During this period, a people known as the Hattians inhabited Anatolia whose name led the Egyptians to call Anatolia the Hattian land.

Towards the end of the third millennium B.C., Anatolia witnessed an invasion from the northeast. The invasion led to the destruction of existing communities and the rise of the Hittite kingdom as the dominant power. Speaking an Indo-European language who got their name because they were known as “kings of the Hattian land,” the Hittites distinguished themselves as warriors and merchants who managed to establish their control over Anatolia and northern Syria. The Archeological Museum in Ankara has an impressive collection from the Hittite period. The artifacts on display attest to the cultural accomplishments of the Hittites. After reaching the zenith of its power in the fourteenth and thirteenth centuries, the Hittite kingdom came to an end around 1200 B.C. when the Phrygians defeated the Hittites and destroyed their capital Hattusas (today known as Bogazkoy). From the destruction of the Hittite kingdom until the ninth century B.C., most of Anatolia was engulfed in turmoil and disorder. Order was restored when the Phrygians, who had a written script, based on the Phoenician alphabet and spoke an Indo-European language, established their capital in the city of Gordium near today’s Ankara and ruled most of central and western Anatolia during the ninth century B.C.

The Phrygians were surrounded by hostile neighbors in much the same way the Hittites had been. Their kingdom was overthrown by the Cimmerians in the seventh century B.C., and then absorbed by the Lydians who dominated Western Anatolia for about a hundred years (650-546 B.C.). A Thracian warrior group, the Lydians set up a powerful kingdom with its capital at Sardis and accumulated considerable wealth from the alluvial gold found in the tributaries of Gediz (Hermus) River. In Eastern Anatolia, on the other hand, the Urartian Kingdom existed from the eleventh until the last decades of the seventh century when it was destroyed by the semi-nomadic Schyrtian tribes from central Eurasia and the Medes who marched northward into Anatolia. The seventh century also witnessed the appearance of the Armenians who took refuge in the region around Lake Van region to escape the raids launched by the Cimmerians.

In 546 B.C. the Persians under King Cyrus invaded Lydia and conquered it. Persian power quickly extended to the Aegean coast of Anatolia where Greek settlers had formed

their communities. Although the Greeks repelled the Persians from the Aegean coast, the interior parts of Anatolia remained under Persian rule until Alexander the Great set foot in Anatolia in 334 B.C. and defeated the Persians. Alexander did more than just liberate the population of Anatolia from Persian rule. He also spearheaded the dissemination of Greek culture and his influence on Anatolia that lasted for centuries. The cities of Anatolia during the Hellenistic period built grand city walls, gymnasiums to educate the youth, theaters for plays and concerts and stadiums for races.

For a generation after the death of Alexander in 323 B.C. the history of Anatolia was one of civil wars between smaller Hellenistic kingdoms. This period came to an end with the advent of the Romans into Anatolia around second century B.C. By A.D 43, almost all of Anatolia was integrated into the Roman imperial system. During the course of the next several centuries, the Romans, originally pagans and republicans, were transformed into the Greek-speaking, imperial, and Christian Byzantines. But they continued to call themselves “Romans” which is why the Greeks of Anatolia and Cyprus are known, in Turkish as “Rum”, even today. One of the most important developments of the Roman centuries in Anatolia was the establishment of the empire’s capital at the Greek city-state of Byzantium by Emperor Constantine in 330 A.D. Until its conquest by the Ottomans in 1453, the city renamed Constantinople, remained the capital of the Eastern Roman or Byzantine Empire.

The expansion of Roman rule into Anatolia was accompanied by the growth of Christianity in the region. Christianity was introduced into Anatolia by Saint Paul, a native of the city of Tarsus. His missionary journeys through southern and western Anatolia between A.D. 45 and 58 laid the groundwork for the spread of Christianity. After withering years of severe persecution by the authorities, Christianity was finally granted official toleration in A.D. 313. During the course of the next two centuries, Christianity was firmly established as the dominant religion of the Byzantine Empire. The basilica of Hagia Sophia, which was constructed by Emperor Justinian in Constantinople in 532, became the center of Greek Christendom as well as one of the most highly acclaimed architectural masterpieces in the world.

The high point of the Byzantine Empire was the tenth century when under Emperor Basil II (976-1025), its territorial possessions expanded vastly to include Anatolia and Greece along with the Balkans, most of Italy, North Africa, Egypt and Syria. The Anatolian hinterland served as the primary source of both military manpower and tax revenues for the Byzantine Empire. However, the supremacy of the Byzantines began to face a serious challenge in the mid-eleventh century from the raids by the Turks into eastern Anatolia.

## **THE TURKISH CONQUEST OF ANATOLIA**

The Turks originated as tribally organized semi-nomadic peoples in Outer Mongolia, south of Lake Baikal and north of the Gobi Desert. Most of the Turkish tribes originally followed a shamanistic religion and worshipped elemental forces of nature. However, a significant number also practiced Christianity, Buddhism, and Judaism. Turks first

encountered Islam following the Arab conquest of Iran in the seventh century when Arab and Persian missionaries carried the message of Prophet Muhammad to the fringes of Central Asia. Later, they adopted Islam as their main religion as they moved westward from Central Asia to the Middle East. By the tenth century, majority of Turks had converted to Islam. The Turks of Central Asia spoke a language recognizably akin to that spoken in Turkey today and they began to use the Arabic script upon accepting Islam as their religion.

Among the many Turkish tribes in the fringes of Central Asia, one large group known as the Oguz inhabited the region north of Lake Balkhash. One clan of the Oguz, the Seljuks, moved westward and conquered all of Iran by 1054. The following year, the westward Seljuk expansion culminated with the capture of Baghdad, the capital of the Islamic Caliphate. The great Seljuk leader, Tugrul, had himself proclaimed Sultan, relegating the Caliph to a vague spiritual power with little political influence. Upon their conquest of Baghdad, the Seljuks established themselves as the principal power in the Middle East as well as champions of Sunni Islam.

The single most important event in the expansion of Turkish presence in Anatolia took place in 1071 when the Seljuk Turks defeated the Byzantine army at the battle of Malazgirt (Manzikert) in eastern Anatolia. The battle of Malazgirt opened up Anatolia for the Turks and they proceeded to the westernmost parts of the peninsula to the port of Izmir (Smyrna) on the Aegean Sea and Iznik (Nicaea) not far from Constantinople. Soon after the Seljuk conquest, the Anatolian plateau became a Muslim Turkish land. There was a large influx of Turkish tribesmen. While some settled into hundreds of villages, others remained nomads.

In 1076, the Seljuk Empire expanded its territories in the Middle East by gaining control over Syria and most of Palestine. The growing power of the Seljuks prompted Latin Europe to organize the First Crusade to liberate Jerusalem from Muslim rule. On their way to Jerusalem in 1097-1098, the Crusaders recaptured Iznik, defeated the Seljuks at Doryleum, and took Antioch. Crusading armies crossed Anatolia throughout the twelfth century but the Seljuks remained in control of it. The greater impact of the crusades on Anatolia came with the blow to Byzantine power following the sack of Constantinople during the Fourth Crusade and the seizure of the Byzantine throne in 1204. Although the crusaders were driven out of Constantinople in 1261, the Byzantium Empire survived for two more centuries as a state whose size and power was considerably diminished.

At the end of the eleventh century, the Seljuk Empire began to disintegrate. The tradition of dividing rule among members of the Seljuk dynasty eventually led to the rise of conflicts and wars within the Seljuk household. The Turks who had moved into Anatolia eventually formed a separate state called the Rum Seljuk Empire with its capital first in Iznik, and later in Konya. The name Rum was used to distinguish it from the Great Seljuk Empire and in reference to their territory that had once been part of the Roman/Byzantine Empire. The Rum Seljuk rule in Anatolia saw a flowering of urban civilization as a number of cities such as Konya, Sivas, and Kayseri became prosperous centers of

commerce and culture. At the same time, the administrative and governmental systems established by the Seljuks provided the basis for later Turkish rule.

In the thirteenth century, the Rum Seljuks were overcome by the invading Mongols from the East who defeated the Seljuk army and established their control in Konya. The Mongol campaign in Anatolia led to the destruction of several major cities in Anatolia and the demise of the Rum Seljuk state.

## **THE OTTOMAN EMPIRE**

The Ottoman Empire is the immediate precursor of the modern Turkish Republic. The Republic emerged out of the ruins of the Ottoman Empire and the legacy of the Ottomans has had a strong impact on the new Republic.

The Ottoman Turks originated as a nomadic people who moved into northwestern Anatolia in the 12<sup>th</sup> century fleeing the invading Mongols. Initially, they were one of several small principalities in the western part of Anatolia. In the 13<sup>th</sup> century, the leadership passed to Osman I who is credited with establishing the dynasty that came to be called after his name as the Ottomans by the Europeans. Osman and his immediate successors managed to expand the frontiers of the new state first by absorbing neighboring Turkish principalities in Western Anatolia and then moving into the Balkans. By the end of the 14<sup>th</sup> century, the Ottomans had conquered most of the Balkan Peninsula along with western and central Anatolia. One of their most important military victories in the Balkans took place in Kosovo in 1389 when the Ottomans defeated the Serbs. The Ottomans encountered a temporary setback in Anatolia when they were defeated by the Mongol leader Timur (Tamerlane) near Ankara in 1402. In the battle, the Ottoman Sultan Bayezit was taken prisoner and he later died in captivity. However, the Ottomans recovered their power during the next two decades and resumed their raids into the Thrace and the Balkans. These renewed military campaigns expanded the Ottoman frontiers in the Balkans and southeastern Europe at the expense of various non-Muslim powers, especially the Serbs and the Hungarians.

Despite their successes in Anatolia and the Balkans, Constantinople eluded capture by the Turks until 1453. By this time, the once powerful Byzantine Empire had been reduced in size to its capital and the surrounding area. The Ottoman ruler Mehmet II, known also as Fatih (“the Conquer”) began to plan the conquest of the city upon assuming power in 1451. His predecessors had twice laid siege to Constantinople without success. However, under Mehmet II’s leadership, the Ottomans managed to capture the city on May 29, 1453 after a siege that lasted nearly two months. The conquest of the city, which the Turks called Istanbul, represented a major event in the development of the Ottoman Empire. It provided the Turks with one of the best-situated ports in the world and enabled them to control important trade routes. It also represented an important symbolic victory for the Muslim Turks who succeeded in capturing the capital of the Christian Byzantine state where the world famous Hagia Sophia was located. To highlight the religious

importance of the city's conquest, Mehmet II converted it into a mosque after removing its icons and covering its mosaics.

The fifteenth and sixteenth centuries were the Golden Age of the Ottoman Empire. Mehmet II's long and illustrious reign (1451-81) was followed by the successes of Bayezit II (1481-1512), Selim I (1512-20), and Suleyman I (1520-66). Under these four rulers, the frontiers of the Empire extended from the gates of Vienna in Europe to most parts of the Middle East and North Africa. Along with their military prowess, the Ottomans developed a strong bureaucratic and legal tradition that enabled them to rule over a vast empire that included numerous ethnic and religious communities. During the Middle Ages, the Ottomans generally showed greater tolerance toward those communities that did not share their religious beliefs in comparison with western European states. At the same time, the Empire achieved notable success in cultural matters and the arts. Ottoman Sultans built magnificent mosques in Istanbul and other major cities, displayed a keen interest in poetry, literature, music, and calligraphy. Sultan Suleyman I, called "Kanuni" ("the lawgiver") by the Turks and "Suleyman the Magnificent" by the Europeans, was renowned for his skills as a warrior. But he was also instrumental in the codification of the laws governing the Empire, especially in matters concerning taxation, land tenure, and related administrative issues.

The death of Suleyman the Magnificent marked the beginning of the reversal of the Ottoman fortunes. The Empire survived for another three centuries but encountered growing military, economic, and administrative problems. Following their unsuccessful siege of Vienna in 1683, the Ottoman expansion into Europe came to a halt and the Empire began to lose its territories to European powers, most notably the Habsburgs. The Ottoman decline was due to a multiplicity of factors. The Empire's military might weakened with the corruption of its principal elite fighting force called the janissaries and its failure to keep up with new technological developments in the West. The Ottoman economy was adversely affected from decreasing tax revenues that resulted from territorial losses and inflationary spirals. The Empire suffered from poor leadership since most of the Sultans from the 17<sup>th</sup> century onwards displayed much less ability in statecraft than their predecessors. While the Ottomans had earlier benefited from the weaknesses of the European powers, this trend was reversed as the European states increasingly grew stronger and gained superiority over the Ottomans in later centuries.

Despite its decline, the Ottoman Empire managed to survive until the end of World War I. The rise of independence movements among the Serbs, the Greeks, and the Bulgarians during the 19<sup>th</sup> century led to the shrinking of the territory controlled by the Ottomans in the Balkans. The Balkan Wars in 1912 and 1913 brought a dramatic end to centuries long Ottoman presence in the Balkans. Russian territorial gains around the northern shores of the Black Sea and the Caucasus progressively increased during the 19<sup>th</sup> and early 20<sup>th</sup> centuries. In a misguided attempt to recover its lost territories, the Ottoman Empire entered World War I on the side of Germany and against Allied Powers. With few exceptions, the Ottoman armies were defeated in various campaigns in the Middle East, North Africa, and the Caucasus. An Arab revolt against Ottoman rule that was supported by the British and the French facilitated the loss of Ottoman domains in the Middle East.

By the end of World War I, victorious Allied armies occupied Istanbul, and proceeded to organize the partition of the Ottoman Empire. The Treaty of Sevres that was presented by the Allies to the Ottoman officials in 1920 formalized the partitioning of the Ottoman lands among the British, French, Italians, and the Greeks. The Sevres Treaty also foresaw the establishment of an Armenian and a Kurdish state in eastern Turkey. Consequently, the Ottoman Empire was reduced to a small principality in Anatolia with its capital Istanbul under the Allied occupation. The future of even this small political entity seemed bleak when the Greek forces invaded Anatolia and advanced toward Ankara in 1921.

## **THE TURKISH REPUBLIC**

The Treaty of Sevres was never implemented thanks to the growth of a nationalist movement, which managed to mobilize the population against the Allies and score decisive victories against the invading Greek forces during 1921-22. The nationalists also succeeded in defeating the Armenians in eastern Anatolia as well as forcing the French to withdraw from several provinces in the southeast. These nationalist gains led to the signing of a new peace treaty in Lausanne, Switzerland, in 1923. The Lausanne Treaty affirmed the victories of the Turkish nationalist movement and undid the provisions of the Sevres Treaty regarding the partitioning of the Ottoman Empire among Allied powers and the establishment of independent Armenian and Kurdish states in eastern Anatolia. Through the Lausanne Treaty the nationalists regained all of Anatolia and eastern Thrace and established the territorial basis for the new Turkish Republic, which came into existence in October 1923.

One individual played a central role in Turkey's recovery out of the ashes of the Ottoman Empire. Mustafa Kemal (later given the surname Atatürk or "Father of the Turks" by the Turkish parliament) is commonly regarded as the founding father of the Turkish Republic. Born in Salonica in 1881 when the city was still under Ottoman rule, Mustafa Kemal graduated from the War College in Istanbul and began his career in the Ottoman army, serving in several campaigns in the Middle East, North Africa, and the Balkans. A distinguished military officer, he gained further acclaim with his leadership in the Gallipoli campaign and the defense of the Dardanelles. Promoted to brigadier, Mustafa Kemal began to organize the nationalist movement after failing to persuade the last Ottoman Sultan to take a strong position against the occupation of Anatolia by Allied forces and the landing of Greek troops in Izmir. Within a fairly short period, he managed to establish contact with local nationalist groups in Anatolia and organize the resistance against the Allied occupation. By convening several congresses for the nationalists that served to lay the foundations for an alternative new political structure, Mustafa Kemal openly defied the legitimacy of the Sultan in Istanbul. Mustafa Kemal's stature as the leader of the national independence movement rose to a new level when the Turkish troops defeated the Greek forces in two major battles in 1921 and 1922.

Upon the proclamation of the Republic in 1923, Mustafa Kemal became its first president. From 1923 until his death in 1938, he was the undisputed leader of an authoritarian one-party regime in which the Republican People's Party (RPP) functioned

as its “official” party. The 1920s and 1930s witnessed a series of reforms that were introduced by Mustafa Kemal. These included the abolishment of the Caliphate (1924), the outlawing of the fez for men and the veil for women (1925), the replacement of shari’a with civil codes based on European models (1926), the adoption of a new Turkish alphabet and the change from Arabic to Latin script (1928), the extension of suffrage to women (1934), the adoption of surnames (1934), and the replacement of Friday with Sunday as the legal weekly holiday (1935). Ataturk’s reforms aimed at the establishment of a Western-oriented, secular state that would rigorously follow the path toward modernization and Westernization. In particular, the reforms sought to lessen the influence of religion in political institutions, educational processes, and legal system. Given the importance of Islam in the Ottoman Empire, the changes that were brought about by Ataturk amounted to no less than a large-scale cultural revolution in Turkey.

Upon Ataturk’s death in 1938, one of his principal associates, Ismet Inonu, was elected to be his successor by the National Assembly. Inonu’s major achievements when he served as Turkey’s second president from 1938 to 1950 were twofold. First, he managed to keep Turkey out of World War II through skilful diplomacy that required a delicate balancing act between the Allied and Axis powers. Second, Inonu engineered the transition from an authoritarian regime to democratic politics at the end of the war. By permitting the formation of opposition parties in 1946, Inonu initiated the democratization process within a multi-party system and competitive elections. This regime change was to have far-reaching political, economic, and social consequences for Turkey.

Turkey’s first truly honest elections in 1950 resulted in a landslide victory for the main opposition group, the Democratic Party (DP). Two of the DP’s founders, Celal Bayar and Adnan Menderes, served as president and prime minister, respectively, from 1950 to 1960. The transition to democracy had shown that success in the elections depended largely on catering to the interests of farmers and peasants who made up nearly two-thirds of the electorate in the 1950s. The three electoral victories of the DP in 1950, 1954, and 1957 owed to the party’s ability to initiate rural development projects and show greater tolerance to religious traditions and practices than was the case under Ataturk and Inonu. However, the DP’s leadership increasingly grew intolerant of criticisms voiced by the political opposition, led by Inonu and his RPP. The government’s attempts to coerce the opposition eventually led to student demonstrations against the DP in Ankara and Istanbul. Amidst growing political instability, Turkey experienced its first military coup in 1960.

The 1960 military coup was staged by junior officers and it was broadly supported by the urban, educated, bureaucratic, and professional groups who had become disillusioned with the DP due to its authoritarian measures and its perceived deviation from the Republic’s strict secularist principles. Following an eighteen-month military rule, Turkey returned to democracy and competitive elections at the end of 1961. The two dominant parties of the 1960s and 1970s were the RPP and the Justice Party (JP), which was formed to capture the loyalties of the DP’s supporters after the DP was banned by the military following the 1960 coup. From 1961 to 1964, several coalitions led by the RPP were in power with Inonu serving as prime minister. Following its landslide victory in the

1965 parliamentary elections, the JP, under Suleyman Demirel's leadership, became the governing party. The JP repeated its success at the polls in 1969 but its tenure in office was cut short by the military intervention in 1971. Turkey's second experience with a military intervention was prompted both by the rise of radical leftist terrorist activism and factional competition for power in the armed forces. The so-called "coup by memorandum" (the armed forces had issued a memorandum that threatened a coup unless the government resigned) ousted Demirel from office. From 1971 until 1973, Turkey had civilian governments that were largely made up of technocrats with the military exercising power behind the scenes.

As in the case of the 1960 coup, the military interregnum in politics during 1971-73 was followed by the return to democratic politics. Since none of the parties could muster a parliamentary majority, Turkey experienced successive coalition and minority governments between 1973 and 1980. These center-left and center-right coalitions were formed by the two major parties of the center-left (RPP) and center-right (JP). Bulent Ecevit, who took over the RPP's leadership from Inonu in 1972, and Suleyman Demirel, leader of the JP, alternated in government as prime ministers. During the latter part of the decade, Turkey was engulfed in a protracted crisis that was brought about by an escalating wave of political terrorism and violence, governmental instability, and severe economic problems. Political violence initially erupted on university campuses in Ankara and Istanbul between radical groups on the far-right and extreme left. It then spread to other parts of the country when the traditional social and cultural cleavages based on religious sectarian (Sunni versus Alevi) and ethnic (Turkish versus Kurdish) differences were politicized and exploited by the warring factions of the rival ideological groups. The intensification of the crisis led to the third breakdown of Turkish democracy through a military coup in September 1980.

The 1980 coup led to the longest period of military rule in recent Turkish politics. The generals who stayed in power for nearly three years sought major changes in the Turkish political system by closing down all parties, banning their leaders from politics for ten years, drafting a new constitution that curtailed the activities of labor unions and civil society institutions, and introduced changes in the electoral system that aimed at reducing political fragmentation in the parliament. The main objective of the measures introduced by the military regime under Gen. Kenan Evren was to ensure political stability and prevent the recurrence of a crisis similar to the one that the country faced in the late 1970s. The bans on political parties and their leaders underscored the generals' belief that politicians bore the main responsibility for that crisis. The military regime (1980-83) also imprisoned thousands of leftist, rightist, and Kurdish militants who were suspected of involvement in terrorist activities. The regime's efforts to clamp down on militant groups led to a pronounced increase in human rights violations and infringement of civil and political liberties.

The resumption of electoral politics at the end of 1983 signaled the beginning of the transition from military to civilian rule. The military's scenario for the transition involved a contest between two newly formed parties, one of which was led by a retired general. Other potential contenders for power were vetoed by the ruling junta. However, the

officers reluctantly decided to permit a third newly formed party to enter the elections. Led by Turgut Ozal, who had served as the chief economic advisor to the military regime, the Motherland Party (MP) won a decisive victory in the 1983 elections. Throughout the 1980s, Ozal and his party dominated Turkish politics since the MP enjoyed a comfortable parliamentary majority and also controlled many municipal and local elective offices. First as prime minister (1983-89), and later as president of Turkey (1989-93), Ozal had a major impact on Turkey. He launched an ambitious economic liberalization program that emphasized privatization, free exchange rates, and export-oriented development. As a practicing Muslim who also had a Kurdish grandmother, he sought greater official tolerance toward both Islam and ethnic differences in Turkish society. Ozal's death in 1993 from a heart attack ended a period of remarkable changes in Turkish economy and society.

Another important development in Turkey during the 1980s was the reemergence of the Kurdish problem as a major issue. After posing a serious challenge to the Turkish state in the 1920 and 1930, the Kurdish question had remained largely dormant until it began to be politicized by leftist parties in the 1960s. However, it was only after the emergence of the PKK (Partiya Karkeran Kurdistan or Kurdish Workers Party) under the leadership of Abdullah Ocalan in the late 1970s that the Kurdish question gained prominence. The PKK chose terrorism as its principal strategy and it launched a campaign of political violence in the predominantly Kurdish regions in the southeast in 1984. Targeting Turkish security forces and Kurds who did not support the PKK, Ocalan's group advocated the establishment of a Kurdish state based on Marxist-Leninist ideology that would be carved out of existing Turkish territories. Faced with mounting fatalities and a serious challenge to the country's territorial integrity, Turkish security forces embarked on a large-scale anti-terrorism campaign.

Ozal's MP was the main loser of the 1991 national elections. The party finished second after the center-right True Path Party (TPP) led by veteran politician Suleyman Demirel. The TPP formed a coalition government with the center-left Social Democratic Party, which stayed in power until the next elections in 1995. Upon Ozal's death in 1993, Demirel left his post as prime minister to become Turkey's next president. In turn, Demirel was replaced by Tansu Ciller who was the country's first female prime minister. Turkey continued to be governed by coalition governments following the 1995 and 1999 elections since neither provided any one single party with a parliamentary majority. The 1995 elections witnessed the emergence of the Islamist Welfare Party (WP) as the strongest party. Led by the veteran Islamist politician, Necmettin Erbakan, the WP formed a coalition with Ciller's TPP in 1996. Turkey's first Islamist-led government had a turbulent stay in office and it was forced to leave power after a year under mounting pressure from the military and the country's secularist forces. The WP-TPP government was replaced by another coalition in which the MP, led by Mesut Yilmaz, served as the senior partner. The Democratic Left Party (DLP), which was formed by Bulent Ecevit in the aftermath of the 1980 military coup, also took part in the coalition. The DLP finished first in the 1999 elections and Ecevit became prime minister in a new coalition that also included the DLP, the MP, and the far-right Nationalist Action Party (NAP).

The rise and fall of successive coalition governments during the 1990s underscored the rise of electoral volatility and political fragmentation in Turkey. With the exception of the 1991-95 period, most of these coalitions were short-lived and failed to provide Turkey with stable and effective governance. The failure of the governing centrist parties to deal with economic and financial problems, especially their inability to bring down the inflation rate, which averaged 70 percent annually, undermined their popular support. In addition, they were also hurt with the widespread perception regarding their involvement in a number of major corruption scandals. The erosion of popular support for the center-right and center-left parties was evident in the 1995 and 1999 parliamentary elections. However, this trend became even more apparent in 2002 when the parties led by Yilmaz, Ciller, and Ecevit suffered their worst electoral defeats in more than a decade.

The clear winner of the November 2002 national elections was the Justice and Development Party (JDP). It was formed by the former mayor of Istanbul, Tayyip Erdogan, in 2001. Erdogan was a protégé of Necmettin Erbakan and he had been active in Turkey's Islamist movements and political parties. After Erbakan's WP was banned by the Constitutional Court in 1998, it reemerged as the Virtue Party (VP). However, the VP was also banned three years later. At that time, Erdogan decided to form his own party. Despite his long record as someone who wished to undermine secularism and distance Turkey from the West, Erdogan had gradually moved toward a more moderate position by the late 1990s. Unlike several Islamist parties that were led by Erbakan, Erdogan's JDP favored closer ties with the West and it refrained from pursuing policies that might provoke a confrontation with the secularist forces in Turkey, particularly the Turkish armed forces.

During the 1990s, the ascendancy of political Islam and the Kurdish issue posed two major challenges to the established principles of the Republic. The electoral successes of the Islamist parties increased the concerns of the secularists regarding the secular nature of Turkey's political institutions and educational processes. The polarization between the secularists and the Islamists reached its zenith after Erbakan became prime minister in 1996. This polarization culminated with his ouster from power under the threat of another possible military coup. In fact, some observers have called the muscle flexing by the army as a "post-modern coup" although the military did not, as in the case of the 1960 and 1980 interventions, actually seize power in 1997. The rise of political Islam, coupled with weak and unstable civilian governments, was one main reason for the increased influence of the Turkish military in politics. The other was the PKK's threat to Turkey's territorial integrity. In the early part of the decade, the PKK intensified its activism and terrorist campaign in the southeast. This was partly due to the emergence of a political vacuum in Northern Iraq following the 1990-91 Gulf War. The PKK established new bases near the Turkish border, which it used to launch raids into Turkey. In addition, many PKK militants slipped into Turkey among the refugees who were fleeing from Saddam Hussein's campaign against the Kurds in the aftermath of the Gulf War. In 1994, the Turkish military forces began a more pro-active strategy against the PKK, which included entry into northern Iraq to pursue the PKK's militants. This new strategy also included a large-scale pacification program that led to the evacuation of nearly 3000 Kurdish villages and small hamlets in the southeast. Although this policy intensified

Kurdish grievances against the state, it also significantly undermined the PKK's potential logistical support base. The capture and imprisonment of the PKK's leader Ocalan in February 1998 after he was forced out of Syria ended PKK's campaign of political violence and terrorism. After conceding military defeat, the PKK intensified its efforts to internationalize Turkey's Kurdish problem and to force the Turkish authorities to grant additional political and cultural rights to Turkey's Kurdish citizens.

### **Self-Study Questions for Further Exploration**

1. Why is Anatolia often viewed as the "cradle of civilizations"?
2. What historical links exist between the peoples of Central Asia and Turks living in Turkey today?
3. How did the Ottomans succeed in establishing a major world empire?
4. What were the principal objectives of Ataturk's policies and reforms?
5. What have been the main features of Turkey's experience with democratic politics since the late 1940s?

## **SOCIETY AND CULTURE**

Turkey has experienced rapid social and economic changes during the last half century. In 1950, it was a predominantly agricultural society where nearly two-thirds of the labor force was employed in the agricultural sector and lived in rural areas. Fifty years later, the share of the manufacturing and services sectors in the economy had surpassed that of agriculture and majority of Turkey's population lived and worked in cities and metropolitan centers. Until Turkey's transition to democracy in the aftermath of World War II, state officials kept Islam under close scrutiny. Since then, Turkey has experienced a gradual but unmistakable trend toward the reassertion of religious traditions and practices. Similarly, the ethnic and sectarian differences in Turkish society have become more apparent and politicized in recent years in comparison with the formative years of the Republic.

## POPULATION, DEMOGRAPHIC TRENDS, AND MIGRATION

Turkey's population between the country's first census in 1927 and 1950 increased from about 12 million to 21 million people. This modest growth rate changed dramatically during the second half of the 20<sup>th</sup> century. According to the national census in 2000, Turkey's population was 67.8 million. Recent years have witnessed a relative decline in average population growth rates. During the 1970-80 period, Turkey's population grew by 2.3 percent annually. In the period from 1990 to 2000, this figure dropped to 1.6 percent. Average annual population increase during the first decade of the 21<sup>st</sup> century is expected to further decline to 1.1 percent. Despite this slowdown, the annual population increase in Turkey is still relatively high in comparison to that of European countries. Moreover, Turkey is a country with a young population. 30 percent of Turkey's population is in the 0-14 age group while those who are 65 or older constitute only 5 percent of the population.

Beginning in the late 1950s, Turkey has experienced large-scale migration from the rural areas to the cities. This massive migratory process has led to the swelling of the populations of Turkey's major cities. Istanbul, which had a population of about 800,000 until the 1950s, today has about ten million inhabitants or approximately 14 percent of Turkey's total population. Nine other Turkish cities now have populations with more than one million people. They include Ankara (4 million), Izmir (3.4 million), Konya (2.1 million), Bursa (2.1 million), Adana (1.8 million), Antalya (1.7 million), Icel (1.6 million), Diyarbakir (1.3 million), and Gaziantep (1.2 million). The migration from the countryside to the urban centers has had major social and political consequences. Many newcomers to the cities settle in the large shantytown areas surrounding the urban centers called *gecekondu* in Turkish. Most Turkish cities now have sprawling *gecekondu* districts where the urban poor live. Initially, when they are first established, these districts lack roads, electricity, and sewage systems. Over time, many *gecekondu* neighborhoods receive municipal services while new ones are built on the periphery of the cities. During the late 1970s, many leftist and rightist militant who joined terrorist organizations were recruited from the *gecekondu* districts in Istanbul and Ankara. In electoral contests in the 1990s, the urban poor living in the *gecekondus* provided strong support for the Islamist political parties.

Migration from Turkey to Europe and immigration into Turkey from the Balkans has had a major impact on Turkey. Faced by a labor shortage, Germany and other Western European countries began recruiting workers from Turkey in the early 1960s. During the next ten years, thousands of workers left Turkey for Europe in search of higher wages and better living conditions. Although Germany and other European countries formally ended this practice in 1973-74, the size of the Turkish migrant worker community in Western Europe continued to increase through family reunification and relatively high fertility rates. Today, with 2.5 million, migrants from Turkey make up Germany's largest "guest worker" community. France, Belgium, the Netherlands, and Scandinavian countries also have large numbers of people from Turkey who have settled permanently in these countries with no intention of returning to their homeland. Immigration into Turkey from the Balkans started with a major population exchange between Greece and

Turkey after the founding of the Turkish Republic. In accordance with the Lausanne Treaty of 1923, there was an exchange of about 500,000 Muslims from Greece with 2 million Greeks in Anatolia in 1927. In later years, thousands of Bulgarians, Romanians, and Yugoslavs of Turkish origin immigrated to Turkey. The latest waves took place in the 1980s when over 300,000 Bulgarian Turks fled to Turkey to escape forced assimilation and in the 1990s when about 25,000 Bosnian Muslims sought refuge in Turkey after the eruption of the ethno-religious conflict in Bosnia.

## **ETHNIC AND LINGUISTIC GROUPS**

Situated at the crossroads of two continents, Turkey has been home to a variety of ethnic, linguistic, and religious groups over the centuries. As noted earlier, the Ottoman Empire was a multi-ethnic and multi-religious state where dozens of different ethnic and religious communities coexisted in territories stretching from the Christian Europe to the Muslim Middle East and North Africa. The Ottoman defeats in the Balkans and the Caucasus during the empire's disintegration in the first two decades of the twentieth century led thousands of Turks and Muslims who had settled in these regions to seek refuge in Anatolia. As a result, the population of Turkey today includes large numbers of people who can trace their ancestry to the Balkans and the Caucasus.

Turks constitute the major ethnic group in Turkey, comprising approximately 80 to 85 percent of the population. The ethnic and racial origins of today's Turks are diverse. Some are descendants of Turkish groups who settled in Anatolia following the entry of the Oguz tribes into the peninsula, settling in the Central Anatolian plateau, or the coastal areas along the Black Sea, the Aegean, and the Mediterranean. Others are descendants from Turks who settled in the Balkans following the Ottoman conquests in southeastern Europe in the 15<sup>th</sup> century. These so-called Rumelian Turks were resettled mostly in western Turkey and the Thrace as the Ottomans lost their territories that nowadays include former Yugoslavia, Romania, Greece, and Bulgaria. There are also Turks whose ancestors lived in the Caucasus and Crimea. In particular, there are sizeable numbers of Turks who have Azeri, Chechen, Circassian, Dagistani, Georgian, and Crimean Tatar origins.

In addition to ethnicity, language is the other major defining attributes of the Turks. The Turkish language, with its several dialects, which are spoken in different parts of the country, acts as a common, unifying element among the Turks. Turkish is a member of the southwestern or Oguz group of the Turkic languages, the others being: the Turkic dialects of the Balkans, Azeri or Azerbaijani, spoken in Azerbaijan and northwestern Iran, the Qashqai of southern Iran, and Turkmen or Turcoman of northern Iraq. Until 1923, the language of Turkey was known as Ottoman Turkish, which had thousands of Arabic and Persian words. Under Ataturk, a major effort was made to purify the language and find alternatives to words of non-Turkish origin. The language reform of 1934 had mixed results. While it removed many words of non-Turkish origin, some of the alternatives that were introduced failed to gain popular usage. The language reform also proved to have long-lasting political ramifications. While the left-wing intelligentsia and followers of Ataturk's ideology prefer to use the so-called purified Turkish, the Islamists

generally sprinkle their writings with a large dose of words borrowed from Arabic and Persian.

Kurds constitute the second largest ethnic group in Turkey. Although there are no census figures, it is estimated that approximately 12 to 15 percent of Turkey's population (or between 8 to 10 million) is of Kurdish origin. Turkey has nearly 50 percent of the total Kurdish population in the region that is dispersed between Turkey, Iraq, Iran, Syria, and former Soviet territories in the Caucasus. Kurds are ethnically distinct from the Turks and they have existed in Anatolia and Mesopotamia since the 5<sup>th</sup> century B.C. Kurdish is also distinct from Turkish and it belongs to the Indo-European family of languages. In Turkey, two dialects of Kurdish are spoken: the Kermanji, which is used by the majority, and Zaza that is largely confined to several provinces in the southeast. Turkey's Kurdish population has been historically concentrated along Turkey's borders with Iraq and Iran. However, during the past four decades, large numbers of Kurds have moved to western Turkey and settled in major cities such as Istanbul, Ankara, and Izmir. Kurds have also participated heavily in the flow of migrant workers from Turkey to Europe.

The Kurdish question in Turkey dates back to the formative years of the Republic. The Kurds resented Ataturk's emphasis on Turkish nationalism and his policy of radical secularism. Their opposition to the newly founded Republic took the form of several rebellions during the 1920s and 1930s, all of which were suppressed by the Turkish military. After staying dormant for the next three decades, the Kurdish issue reemerged in the 1960s when the radical leftist parties began to advocate greater cultural and political rights for the Kurds. The rise of the PKK and its campaign of violence in subsequent decades made Turkey's Kurdish problem a major issue in the country's domestic politics and foreign policy. Initially, the PKK called for the establishment of a separate, Marxist, Kurdish state that would be carved out of Turkey's existing territory. Later, it began to advocate a federal arrangement to replace Turkey's unitary administrative structure. The Turkish authorities have vigorously opposed these ideas. More recently, following Ocalan's capture and imprisonment, the PKK has announced that it would cease its activities in Turkey and work for a resolution of the conflict through democratic means. The organization has also changed its name from PKK to KADEK to highlight its new orientation. At present, the principal demands of the Kurds include greater cultural and political rights, reduction of the army's presence and role in the predominantly Kurdish populated provinces, and better economic conditions. In mid-2003, the Turkish government has passed an amnesty bill to entice the PKK's militants into giving up their arms and renouncing violence. Whether this measure will lead to a peaceful resolution of the conflict remains to be seen.

Turkey's citizens of Arab origins constitute the country's third largest ethnic group. Numbering around 1 million, they are concentrated in the villages and small towns along the Syrian border. The province of Hatay (also known as Alexandretta) is predominantly made up of ethnic Arabs. As noted earlier, since it was ceded to Turkey by the French through a referendum in 1938, Hatay's status has been challenged by Syria, which views it as part of its territory.

The three non-Muslim groups in Turkey are the Armenians, Greeks, and the Jews. In the Ottoman Empire, they all had sizeable populations. Today, their numbers are much smaller than in the past. The shrinking of the Armenian and Greek populations is largely due to political causes. The large Armenian community in Eastern Turkey practically disappeared in the aftermath of World War I through civil conflict and deportations. The Armenians maintain that what happened during 1915-16 that resulted in the death of approximately 500,000 people represents genocide. The Turks, on the other hand, deny that there was genocide and argue that large numbers of Turks and Muslims also lost their lives at the hands of the Armenians during this turbulent period in history. Today, the Armenian population, which is estimated to be around 50,000, is concentrated largely in and around Istanbul. The number of Greeks in Turkey has similarly declined over the years. The eruption of the Cyprus conflict and the rise of tensions between Greece and Turkey resulted in new waves of Greek migration from Turkey. At present, the Greek Orthodox community numbers only a few thousand people who live mostly in Istanbul. The shrinking of Turkey's Jewish population was prompted primarily by the establishment of the state of Israel in 1948. At that time, approximately 30,000 Jews immigrated to the newly established Jewish state. This process continued in the 1950s and 1960s, reducing the Jewish population to its present size of approximately 30,000 people. Like the Greeks and the Armenians, the Jews are concentrated in Istanbul.

## **RELIGION AND ITS ROLE IN SOCIETY**

Religion plays an important role in Turkish society. Turkey is a predominantly Muslim country, with nearly 98 percent of the population belonging to the Islamic faith. After their conversion to Islam beginning in the seventh century, the Turks became deeply involved in the expansion of Islam. In particular, the Ottoman march into Europe was primarily driven with a religious zeal that aimed at conquering the lands of the "infidels" in the name of Islam. When the institution of the Caliphate was brought from Cairo to Istanbul after the Ottoman conquest of Egypt in the 16<sup>th</sup> century, the Ottoman Empire became the center of the entire Islamic world. In the Ottoman Empire, Islam served as a source of political legitimacy for the rulers and a primary means of personal and communal identity for the empire's Muslim subjects. The Ottoman dynasty, as well as the majority of the Turks, belonged to the Sunni or orthodox branch of Islam. Along with this official Islam of the court and the administration, manifestations of what anthropologists refer to as "folk Islam" also flourished in society through a variety of sects and religious brotherhoods (or *tarikats* in Turkish).

Ataturk's radical secularization project sought to undermine the influence of Islam in Turkey, especially in political institutions and education. Measures such as the abolishment of the Caliphate and the shari'a dealt serious blows to religion. However, since the transition to democratic politics in the aftermath of World War II, Turkey has experienced a gradual but unmistakable trend toward the expansion of Islam in politics and society. Although Turkey today is one of the most secular states in the Islamic world, it is also a country that is going through a major redefinition of its identity, which stresses the importance of observing traditional religious practices, norms, and values. Until the

beginning of mass migration to the cities, religion played a more visible role in the daily lives of the people living in rural areas. Urbanization has altered this picture since most newcomers to the metropolitan centers bring with them their pious observance of Islam. The political ascendancy of the Islamist parties, as demonstrated most recently by the electoral victory of the Justice and Development Party in 2002, underscores the changing political climate in the country. At the same time, the growing strength of the Islamist parties and the trend toward further Islamization of society has increased the concerns of the Turkish secularists and it has accentuated the polarization between the Islamists and the secularists.

The majority of Turkey's Muslims (both ethnic Turks and ethnic Kurds) are Sunnis. However, approximately one-fifth of the country's population (or about 20 million) belongs to an offshoot Shi'a branch of Islam called the Alevi that includes ethnic Turks as well as ethnic Kurds. Like the Shii elsewhere in the Muslim world, the Alevi in Turkey are the followers of Ali, the son-in-law of prophet Muhammad. Apart from this, however, the beliefs and practices of Turkey's Alevi differ significantly from traditional Shi'a Islam as it is practiced in countries such as Iran. For example, unlike in Iran, the Alevi in Turkey do not have a hierarchical organization led by powerful religious figures and they have no mosques but community houses, called *cemevi*. The Alevi accept the basic Islamic creed: "There is no God but Allah, and Muhammad is His Messenger." However, their practices differ considerably from the Sunnis. In addition to the absence of mosques, they do not pray five times a day but only when they feel the urge or need; do not fast during the month of Ramadan or make the pilgrimage to Mecca; their services include both men and women; and their initiation rites include the consumption of alcohol. The Sunnis have historically viewed the Alevi as a heretical movement that is alien to real Islam. Since political Islam in contemporary Turkey is largely Sunni-based and supported, the Alevi tend to be strong supporters of secularism and fear that the ascendancy of Islam in society and politics could lead to their domination by the Sunnis. During the heyday of political violence in Turkey in the late 1970s, there was an alarming rise in bloody conflicts between the Sunnis and the Alevi in provincial Anatolian towns. Since then, there has been a steady trend toward the assertion of the Alevi identity and politicization of Alevi concerns and interests.

### **Self-Study Questions for Further Exploration**

1. What are the main characteristics of demographic change in Turkey?
2. What has been the social and political impact of uncontrolled urbanization?
3. What are the major characteristics of Turkish society regarding ethnicity and religion?
4. How has the Turkish government approached the Kurdish question?
5. What are the reasons for the ascendancy of political Islam in Turkey?

## **THE ECONOMY**

Economic development and growth have been the primary objectives of successive Turkish governments since the establishment of the Republic in 1923. During the past 70 years, there have been notable successes as well as serious problems in Turkey's economic development. The newly-established Republic faced truly dire economic conditions: protracted wars and conflicts during the final years of the Ottoman Empire had ravaged the country, majority of the population lived the rural areas and worked on the land using primitive agricultural methods, and Turkey lacked domestic or international capital that could be mobilized for industrialization. Seventy years later, the economic conditions in Turkey display a very different picture. Turkey has been transformed from a largely agricultural country into one with a rapidly growing industrial and manufacturing sector. Turkey now exports a broad range of manufactured goods as well as services to regional and international markets. Economic development and growth over the years have significantly improved the material conditions and well being of Turkey's citizens. However, Turkey's economic development has not been without its

problems. The country's economy has periodically encountered major crises, most recently in 2001, which resulted in a sharp drop in industrial productivity and a severe rise in unemployment. Although the Turkish economy has registered relatively high growth rates in the post-World War II period, its performance has been poor with respect to inflation and employment. Since the mid-1980s, inflation rates have hovered around 50-70 percent annually due to the failure of governments to exercise fiscal discipline and cut budget deficits. The economy has also not performed well in creating jobs for a growing young labor force and unemployment remains a perennial problem.

### **TRENDS IN ECONOMIC POLICY**

In the absence of significant private domestic capital or foreign investment, economic policies during the 1920s and 1930s emphasized the role of the state in fostering industrialization and growth. The establishment of the State Economic Enterprises (SES's) during the formative years of the Republican period represented an effort to promote industrialization under the aegis of the state. The dominant role of the state in the management of economic life remained a major characteristic of the Turkish economy well into the 1970s despite a noticeable growth of the private sector following the transition to democracy after World War II. During the period from 1950 to 1980, Turkish officials emphasized their commitment to a "mixed economy" in which the private and the public sectors would co-exist and play equally important roles in economic policy-making. In fact, however, until 1980, the Turkish economy remained largely under the control of the state and the public sector figured much more prominently than the private sector.

The rise to power of Turgut Ozal in Turkish politics led to a fundamental reorientation of the country's economic policies after 1980. Ozal, who had held high ranking positions in the economic policy-making bureaucracy, became the military junta's chief official in charge of the economy after the 1980 coup. As noted earlier, the military intervention of 1980 came in the wake of one of the worst economic crises in the Republic's history. The near collapse of the country's economy in the late 1970s created a favorable environment for major economic and financial reforms. The poor performances of the governments headed by Prime Ministers Demirel and Ecevit in managing the economy between 1974 and 1980 discredited both import substitution and statism as effective strategies for economic stability and growth. After successfully launching a stabilization program for economic recovery from the crisis, Ozal sought to liberalize the economy through a series of measures. These included a major policy switch from import substitution to export promotion, the abolishment of foreign-exchange controls, new laws to attract foreign investment, and emphasis on privatization schemes that aimed at the sale of the SES's. The performance of the Turkish economy during the 1980s reflected the impact of the changes that were implemented under Ozal's leadership. Following its recovery, the economy experienced a relatively high growth rate. The liberalization policies created a much better business environment for the private sector. The most striking results were achieved in the promotion of exports, which more than tripled between 1980 and 1987. The incentives granted to domestic and international investors paved the way for the emergence of tourism as a major sector in the economy. Ozal's efforts to modernize and

privatize the public sector had less striking but nevertheless significant results. The cutback of subsidies and the lifting of price ceilings forced the SES's to be more competitive and efficient. However, Ozal's policies failed in several areas. After a temporary decline in the early 1980s, Turkey was once again faced with a runaway inflation in the latter part of the decade resulting from expanding budget deficits. Economic liberalization also contributed to the widening gap between the higher and lower income groups as well as to a significant rise in political corruption.

Turgut Ozal's bold policies represented a watershed in the liberalization of an economy that had remained largely controlled and managed by the state since the founding of the Turkish Republic. Although Ozal disappeared from the political scene after his death in 1993, his views concerning the management of the economy continued to shape the outlook of the governments on the economy during the 1990s. This was most evident in the strong support given to expanding Turkish exports. While Turkey became the European Union's major supplier of textiles, Turkish manufactured goods (televisions, cars, refrigerators, etc.) managed to capture a respectable share of the regional markets. In addition, private companies from Turkey undertook a series of large construction projects in the Middle East as well as in the Russian Federation and the new Turkic Republics in Central Asia.

The Turkish economy during the 1990s was characterized by another legacy of the Ozal era: endemic high inflation resulting from excessive public spending and budget deficits. The decade also witnessed bouts of rapid short-term growth followed by recessionary trends, which prevented the economy from fulfilling its longer-term growth potential. The rise and fall of short-lived coalition governments during the 1990s represented another problem in the conduct and implementation of effective macroeconomic policies since these often led to a turnover in top ministerial positions in charge of running the economy. In 2001, Turkey was hit by one of the most serious economic and financial crises in its recent political history. The trigger for the crisis was the emergence of financial problems in the banking sector. The liquidity crunch faced by several banks turned into a major financial crisis when, following a heated cabinet meeting in which Prime Minister Ecevit and President Sezer exchanged heated words, the Prime Minister publicly declared that Turkey was faced with a political crisis. This sent shockwaves on domestic and international markets: overnight interest rates soared to 2000 percent, the Turkish lira was devalued by half against the dollar, and there was a massive capital flight out of Turkey. The crisis led to a sharp decline in business activity and rapid rise in unemployment. With respect to its destabilizing economic and social effects, the crisis that Turkey faced in 2001 displayed many similarities to the Argentinean crisis, which took place around the same time. However, Turkey did better than Argentina in its recovery from the crisis thanks to a \$7 billion loan from the IMF and speedy implementation of a series of monetary and fiscal reforms that were demanded by the IMF. Following its rise to power in 2002, the new JDP government continued the IMF-backed stabilization policies and Turkish economy appeared to be on the way to recovery.

## **FOREIGN TRADE**

The EU plays a major role in Turkey's trade relations. Imports from and exports to EU member states account for more than fifty percent of Turkish imports and exports. The signing of a Customs Union between Turkey and the EU in 1995 has enhanced the free circulation of goods between the two sides. In particular, the Customs Union has made a significant contribution to the expansion of textile exports from Turkey to Europe. Within the EU, Germany is Turkey's major trading partner. Trade with Germany accounts for nearly half of Turkish exports to and imports from the EU. Other EU members such as Italy, the United Kingdom, and France are also among important trading partners of Turkey.

Outside the EU, Turkey does a significant amount of trade with the Russian Federation, several Middle Eastern states, and the U.S. U.S-Turkish trade ties have grown since the mid-1980s. The volume of trade between the two countries rose from \$1.6 billion in 1985 to \$6.2 billion in 1998. The U.S. now ranks second after Germany in Turkey's foreign trade relations. The principal imports from the U.S are defense industry products, machinery, organic chemicals, cotton, and tobacco. Turkey's main exports to the U.S. are textiles, tobacco, and iron and steel.

### **Self-Study Questions for Further Exploration**

1. What were the reasons for the establishment of the State Economic Enterprises?
2. What role did the state play in Turkey's economic development?
3. What were the main reforms introduced by Turgut Ozal and how did they affect the economy?
4. What were the causes and consequences of the 2001 financial crisis?
5. Which countries figure prominently in Turkey's trade relations?

## **POLITICS AND GOVERNMENT**

Since its transition from an authoritarian one-party system to a multi-party system with competitive and free elections in the late 1940s, Turkey's political system has been based on democratic governance. However, Turkey's experience with democratic politics for more than half a century has also included several major crises leading to military interventions and temporary suspension of civil and political liberties. Turkey has made considerable progress in democratization over the years and represents an important example of a predominantly Muslim country that has had a strong commitment to the maintenance of representative institutions and processes. Yet, Turkey's democratic system is still not fully consolidated and it displays significant shortcomings in several important areas including political accountability, civilian supremacy over the military, and human rights.

### **THE CONSTITUTIONAL SETTING**

Turkey has had three constitutions since the founding of the Republic in 1923. The country's current constitution was drafted in 1982 by a commission of experts working under the aegis of the then governing military leadership. It went into effect the same year after it was approved in a national referendum. The 1982 constitution called for the continuation of the country's parliamentary system in which the prime minister, appointed by the president normally from the ranks of the party with the largest seats in the parliament, has the executive authority. The prime minister is the head of government and he or she is responsible for the coordination and implementation of government policies. While maintaining the country's parliamentary system, the 1982 constitution also increased the powers of the president. The president of the Republic is elected for a seven-year term by the parliament. Unlike the earlier 1961 constitution, the president is not required to be a sitting member of the parliament at the time of this election. A group of deputies not less than one-fifth of the full membership of the parliament can nominate a person for president from outside the legislature. The 1982 constitution gives the president a wide range of formal powers. Among the most important are the president's power to appoint the prime minister and other ministers, to request the parliament to reexamine bills, and to chair cabinet meetings if he or she wishes to do so. The 1982 constitution did not turn Turkey into a presidential or semi-presidential system but it did create a hybrid system in which executive authority is more diffused than before.

The Turkish parliament, called *Buyuk Millet Meclisi* (Grand National Assembly), has 550 members who are elected for a five-year term. Electoral districts are based on the country's 80 provinces (the largest administrative unit at the local level). Provinces with large populations, such as Istanbul and Ankara, have far greater representation in the parliament than others with small populations, such as Hakkari or Osmaniye. The strengths of the political parties in the parliament usually vary over the course of a legislative session due to the high rate of party switching among the deputies. In addition, there is usually a fairly high rate of turnover in parliamentary representation at each election. This trend was especially pronounced in the 2002 national elections when more than two-thirds of the deputies who won seats were newcomers to the parliament.

Turkey has experimented with a variety of different electoral systems over the years. Following the transition to democracy, elections were held according to plurality or winner-take-all system with multimember electoral districts. The outcome of the elections in the 1950s favored the strongest party at the expense of the others and led to disproportionately large parliamentary representation for the winners. Beginning in 1961, Turkey adopted the proportional representation (PR) electoral system in an effort to redress this problem. Since then different versions of PR have been in effect, with frequent changes in the mathematical formulae used in the allocation of parliamentary seats. The current electoral law is PR with national quota according to d'Hondt formula. In the Turkish electoral system, political parties prepare the lists of their candidates and voters cannot change the rank order on the ballots. Although parties are required by law to hold election primaries for the nomination of candidates to the parliament, this is not widely practiced. Instead, the leaders of the parties and their inner circle of associates commonly prepare the lists. This practice has provided party leaders with extensive authority over the party organizations and it has been a major reason for their long

durability despite repeated electoral failures at the polls. Another important feature of the electoral system in Turkey concerns the 10 percent threshold: To gain representation in the parliament, a party has to win 10 percent or more of the national vote. This high threshold was included in the 1982 constitution to limit political fragmentation.

Since its transition to democracy, Turkey has been governed by single party majority governments as well as coalition governments that have included two or more parties. Infrequently, there have also been minority party governments in power. The plurality system that was used in the 1950s enabled one party (the Democratic Party) to enjoy comfortable parliamentary majorities in successive elections and form the government by itself. Following the adoption of the PR system in 1961, Turkey had its first experience with coalition governments since no single party managed to control a majority in the parliament. This trend was reversed in 1965 and Turkey had a majority party government until 1971. During the period from 1973 to 1980, governments were formed either through coalition arrangements between two and more parties or through the use of minority government formula. In the aftermath of the 1980 coup, Turkey had nearly a decade-long period of majority party governments when Turgut Ozal's Motherland Party (MP) managed to win majority of the seats in the legislature. However, the increase of political fragmentation in the party system in the 1990s resulted, once again, the need to form the government through coalition partnerships among different parties. Turkey had its first majority party government in more than a decade when the Justice and Development Party obtained a parliamentary majority in the 2002 elections.

## **MILITARY'S ROLE IN POLITICS**

One of the major issues in contemporary Turkish politics concerns the role of the military in the political processes. Historically, the military has always been an important institution in Turkey. In the Ottoman Empire, the military constituted one of the major groups within the ruling establishment. The Turkish Republic was founded by a group of military men, led by Mustafa Kemal. Various public opinion surveys conducted during the past decade have shown that a majority of the Turkish population views the armed forces as the country's most trusted institution. The military has traditionally viewed itself as the guardian of the founding principles of the Republic, most notably secularism. It has intervened in politics to restore law and order during periods of escalating civil strife or when it viewed secularism coming under the threat of political Islam. Military rule in Turkey has been relatively short in comparison with military regimes elsewhere in the world and each intervention was followed by return to elections and civilian governments. In 1960, the military was in power for over a year, in 1971 it did not officially assume power but exercised it indirectly, and the military regime in 1980 lasted for approximately three years. After each intervention, the officers have either supervised the drafting of new constitutions (1961 and 1982) or amended existing constitutions (1971). They have also changed electoral laws and tinkered with the party system by banning parties and their leaders.

One of the principal constitutional channels used by the military to influence politics is the National Security Council (NSC), a body that was established in 1961 to provide a forum for coordination between the government and the armed forces. Although it was initially conceived as a consultative body, the NSC increased its role in the policy process, especially in the 1990s, when Turkey faced the double-threat of ethnic separatism and radical Islam. The NSC, whose membership is equally divided between several key government ministers and top commanders, often got involved in explicitly nonmilitary issues. In July 2003, the Turkish parliament passed a number of bills designed to conform Turkey to EU standards. One of these so-called “reform packages” aims to curtail the role of the NSC and redefine civil-military relations in Turkey. Whether this important new legislation will in fact lead to undermine the military’s influence in Turkish politics and usher in a new phase in civil-military relations remains to be seen.

## **POLITICAL PARTIES AND THE PARTY SYSTEM**

Political parties have existed in Turkey since the last decades of the Ottoman Empire. Despite the absence of a democratic regime until the late 1940s, parties played an important role in national politics during the Second Constitutional Era (1908-1918) in the Ottoman Empire, and following the founding of the Republic during the one-party authoritarian period (1923-1946). However, the importance of parties in Turkish politics increased markedly after the liberalization of the country’s political system and the beginning of free and honest elections. Within a fairly short time following the transition to democracy, competing political parties extended their organizational networks throughout the country in the late 1940’s. Parties became the principal means for the recruitment of local and national political elites, mobilization of the voters in electoral contests, and representation of social and political interests and concerns of their supporters in local and national elective bodies.

The natural evolution of party politics in Turkey has been hampered by the successive military interventions in politics. By banning some parties and excluding their leaders from politics, the officers have sought to reshape the party system. In most cases, however, their efforts have been fruitless: banned political parties have reappeared on the political scene under new labels after a short hiatus and their former leaders have usually managed to reenter politics as well. This fact of Turkish political life was best illustrated by developments in the aftermath of the 1980 coup when the ruling military leadership banned all existing parties and excluded their leaders from participating in politics for up to ten years. But by the latter part of the decade, all the pre-1980 parties were back on the political scene, and with one or two exceptions, all were led, once again, by their former leaders.

Over the years, the strengths of political parties in Turkey have witnessed significant fluctuations. Some parties have disappeared from the political arena, whereas others have shown greater capacity for survival. During the 1990s, most of the parties on the center-right and center-left have seen an erosion in their votes while the Islamists expanded their popular support. In the 2002 national elections, only two parties managed to clear the 10

percent threshold and entered the parliament. The Justice and Development Party (JDP) of Tayyip Erdogan finished first with 34 percent of the votes, which provided it with a comfortable majority. The JDP as noted earlier, was formed in 2001 following a factional split from Necmettin Erbakan's Virtue Party. The party has its roots in the Islamist movement but it has adopted a relatively moderate orientation and its first year in government did not display an Islamist agenda. The other party, which succeeded in winning representation in the parliament, is the Republican People's Party (RPP). It received 19 percent of the total votes and won 178 seats out of the 550-seat legislature. The RPP is Turkey's oldest party and it was founded by Ataturk in 1923 to serve as the "official" party of the one-party system. Since the mid-1960s, it has been a leading force of center-left politics with a social democratic program. The party has been mired in protracted internal factional fights and appears to have lost the momentum that it had gained prior to the 2002 elections. It is led by a veteran politician, Deniz Baykal. Two-center-right parties that alternated in government during the 1990s, the Motherland Party (MP) and the True Path Party (TPP), led by Mesut Yilmaz and Tansu Ciller, respectively, have lost much of their popular support and both of these leaders were forced out of their positions following their parties' poor showing in 2002. Bulent Ecevit's Democratic Left Party (DLP), which finished first in 1999 and became the senior partner of the coalition government from 1999 to 2002, suffered a dramatic loss in 2000 when its votes fell from 22 percent to 1 percent. Another partner of the coalition, the far-right Nationalist Action Party (NAP), also lost a significant portion of its votes in 2002 and failed to gain seats in the parliament. The pro-Kurdish DEHAP won 6 percent of the national vote and finished first in the Kurdish provinces. However, it, too, could not enter the parliament because of the 10 percent electoral threshold.

### **Self-Study Questions for Further Exploration**

1. What type of a system does the constitution provide for Turkey regarding the powers of the Prime Minister and the President?
2. What has been the political consequence of the electoral laws in Turkey?
3. What accounts for the influence of the military in Turkish political life?
4. How have the military interventions affected Turkey's party politics?
5. What factors have led to the decline in the popular support of the centrist parties?

## **FOREIGN AFFAIRS**

From the founding of the Republic until the mid-1940s, Turkey pursued a neutralist policy in foreign affairs. The bitter experience of Ottoman Empire's involvement in World War I which led to its demise and almost ended a sovereign Turkish state led Ataturk and his associates to shy away from international alliances in world politics. During the 1920s and 1930s, Turkey's energies were largely focused on domestic reforms and developments. The annexation of the Hatay (Alexandretta) province in 1938 was one of the few important foreign policy issues that preoccupied Turkish policymakers during the interwar years. Ataturk's successor as president, Ismet Inonu, continued the country's policy of neutrality and managed to keep Turkey out of World War II despite strong pressures from both the Allied and the Axis powers to join their side.

## **COLD WAR PERIOD**

At the end of World War II, the Soviet Union confronted Turkey with a major challenge: Moscow demanded territorial concessions in Eastern Turkey and a share in the control of the Straits. Faced with the Soviet threat, Turkey abandoned its neutral stance and sought to establish close political and military ties with the West. Fearful of further Soviet expansionism after Moscow's moves in Eastern Europe and the Balkans, President Truman responded to Turkey's search for deterrence and provided Turkey, along with Greece, with economic and military assistance through the Truman Doctrine in 1947. Turkey's bilateral ties with the U.S. grew rapidly in the next few years. Turkey sent troops to Korea in 1950 and joined the North Atlantic Treaty Organization (NATO) in 1952. During the 1950s, the U.S. established numerous bases in Turkey, which served as valuable listening posts at a time when the Cold War between the two superpowers was intensified. In return for providing Washington with bases where nearly 30,000 American personnel served, Turkey became one of the largest recipients of U.S. military and economic assistance.

Turkey's role as a key state in NATO's Southern flank continued throughout the Cold War period. With nearly half a million soldiers, Turkey had the second largest army in NATO after the U.S. Despite extensive cooperation between Washington and Ankara on security issues, the bilateral relationship was not without problems. The eruption of the Cyprus conflict in the early 1960s, and American efforts to prevent a war between its two NATO allies, Greece and Turkey, created tensions in the bilateral ties. The late 1960s saw the emergence of student-led demonstrations against the U.S. with radical leftist groups taking the lead in organizing street demonstrations in Ankara and Istanbul. The bilateral relationship was sorely tested again a decade later when the U.S. Congress imposed an arms embargo against Turkey in response to the landing of Turkish troops on Cyprus in 1974. Although the embargo was lifted in 1978, it left a bitter legacy for the Turks. Nevertheless, the U.S.-Turkey relationship was soon back on track when both sides realized the importance of close ties in the wake of the Soviet invasion of Afghanistan and the rise of a radical Islamic regime in Iran in 1979.

## **POST-COLD WAR ERA**

Turkey is one of the countries that was most profoundly affected by the end of the Cold War and the transformation of the strategic and political landscape of Eurasia. This watershed in international affairs radically altered Turkey's foreign policy environment, creating opportunities to expand its regional role while also posing new risks and challenges. Observers have described Turkey's efforts to chart its course in the new international system in such terms as a policy of "new activism" or one that displayed signs of both "daring and caution." Indeed, compared to the Cold War years, Turkish foreign policy in the 1990s was significantly more assertive and activist. However, this did not imply the abandonment of moderation and caution that has traditionally characterized Turkey's approach to international and regional affairs.

During the 1990s, Turkey's assertive and active policies was most pronounced in the Middle East. Turkey had traditionally pursued a cautious and low profile policy toward

its southern neighbors. Turkey's decision to join the Allied coalition during the 1990-91 Gulf War marked a major departure from this established policy. The expansion of Turkey's role in the Middle East continued after the Gulf War. The principal reason was the escalation of the PKK's campaign of political violence and terrorism. To prevent the PKK from launching attacks in Turkey from its bases in Northern Iraq, Turkish troops periodically entered into Northern Iraq in pursuit of the Kurdish militants. In the 1990s, Turkey mobilized its troops near the Syrian border to send a strong signal to the Syrian regime, which had harbored the PKK's leader Abdullah Ocalan and provided logistical support to the PKK. This showdown with Syria led to the expulsion of Ocalan from Syria. The Kurdish issue was also a major reason in Ankara's decision to forge closer military and security ties with Israel. The signing of a military training and education agreement in 1996 ushered in a period of increased military, commercial, and cultural relations between Israel and Turkey.

The rise of the new Turkic Republics in Central Asia and the Caucasus after the disintegration of the former Soviet Union provided Turkey with the opportunity to expand its regional influence in line with its new activist foreign policy orientation. Throughout the Cold War period, Turkey's relations with Central Asia and the Caucasus were almost nonexistent despite common ethnic and cultural ties. During the 1990s, Turkey expanded its political and commercial relations with Azerbaijan, Uzbekistan, Kazakhstan, and Kyrgyzstan. Turkey's efforts to expand its influence in these two regions were opposed by Russia and Iran. In particular, both countries were concerned about Turkey's participation in the export of Caspian energy resources to Western markets through the creation of an East-West energy corridor. Turkey, with Washington's backing, pushed for the construction of the Baku-Tbilisi-Ceyhan pipeline, which would carry Azeri oil from the Caspian Sea to the Turkish port of Ceyhan on the Mediterranean. By the end of the decade, the Russian opposition to this project had diminished considerably and the plans for the construction of the pipeline had made significant progress.

In the aftermath of the Cold War, there was a discernible increase in Turkey's interest and involvement in the Balkans as well. This was precipitated by the eruption of violent ethno-nationalist conflicts in Bosnia and Kosovo, which had the potential to spill over into Turkey. Furthermore, ethnic conflicts in the region generated extensive interest and concern in Turkey due to the presence of large numbers of Turks who had migrated from the Balkans to Turkey over the years. To prevent the escalation of the conflicts, Turkey participated in the multilateral UN peacekeeping forces in Bosnia-Herzegovina and Kosovo and deployed a small contingent of F-16 jets in Italy for use in NATO's air campaign against the Serb leadership during the Kosovo conflict. The 1990s also witnessed efforts by Turkey to develop closer political, economic, and military ties with Albania, Macedonia, Romania, and Bulgaria. In particular, the post-Cold War era saw a remarkable transformation in Turkey's relations with neighboring Bulgaria, which had remained strained throughout the preceding four decades.

Another significant improvement in Turkey's foreign relations concerned Greece. Although both countries had been allies within NATO, the relations between the two

countries deteriorated with the eruption of the Cyprus conflict in the early 1960s. The harassment of the Turkish Cypriot community on the island by the Greek Cypriot majority during the 1960s followed by the landing of Turkish troops on the island during the Cyprus crisis in 1974 led to the worsening of the ties between two NATO allies. In addition to Cyprus, the opposing positions of the two countries regarding a number of unresolved issues in the Aegean brought Ankara and Athens to the brink of armed conflict on several occasions. However, Greek-Turkish relations took a turn for the better in the aftermath of two major earthquakes that hit Turkey and Greece in August and September of 1999, respectively. The aid provided by the Greek relief organizations and workers to Turkey was reciprocated a month later by Turkish rescue teams a month later. These efforts paved the way for the so-called “seismic diplomacy” whereby the Greek and Turkish foreign ministers developed a close working relationship that led to a rapprochement after years of strained ties. Although serious differences over Cyprus and the Aegean remained, there was nevertheless a markedly improved environment in the bilateral relationship.

The Cyprus issue has been on Turkey’s foreign policy agenda for more than forty years. It has been a major irritant in Turkey’s relations with Greece, the U.S., and more recently, the EU. Following decades of British rule, the island became an independent republic in 1960 after lengthy negotiations between England, Greece, and Turkey. The newly established republic was based on an intricate power-sharing arrangement that sought to protect the rights of the Turkish-Cypriot minority (18 percent of the population) against the Greek-Cypriot majority (80 percent). However, this constitutional arrangement fell apart with the beginning of communal violence in 1962. Vastly outnumbered, the Turkish Cypriots began to clamor for intervention from Turkey for protection. Several Turkish threats to intervene were averted through American efforts during the 1960s. However, Turkey did intervene militarily in 1974 when the junta that was then in power in Greece staged a coup on the island to replace President Makarios with one of its henchmen. Turkish troops subsequently seized control of nearly half of the island. Since 1974, the island has remained divided and separated by a UN monitored “Green Line” that separates the two communities. The Turkish Cypriots established their own Turkish Republic of Northern Cyprus in 1984 but this political entity has been recognized only by Turkey. Numerous diplomatic efforts by the US, UN and the EU have not yet succeeded in resolving the dispute. The issue has become more complicated with the EU’s decision to admit the Greek-controlled southern part of the island--the internationally recognized body—as a full member in 2004. Over the years, the US has sought to mediate the conflict by periodically sending special envoys of ambassadorial rank. Washington’s approach has been influenced both by the desire to prevent an armed clash between Greece and Turkey over Cyprus and by the strong lobbying pressure brought on to the successive US administrations by the powerful Greek-American organizations.

Turkey’s long-standing goal to become a full member of the European Union (EU) continues to be a major issue in Turkish foreign policy. Turkey became an associate member of the European Economic Community (EEC) in 1963 through the Ankara Agreement. According to this agreement, Turkey could expect to become a full member of the Community within the next two decades after completing a three-phase accession

process. However, Turkey's aspirations for full membership soon ran into various roadblocks. Turkey's problems in consolidating its democracy, improving its human rights record, and stabilizing its economy constituted one set of problems. Europeans, in particular the Germans, were concerned about the prospect of new waves of worker migration from Turkey since 2.5 million Turkish citizens had already settled in Germany and elsewhere in Western Europe. The EU and Turkey entered into a formal custom union agreement in 1995, which created the closest economic and political relationship between the EU and any non-member country. In its Luxembourg Summit in 1997, the EU Council excluded Turkey from its list of formal candidates but this decision was reversed two years later in the Helsinki Summit. In its Seville Summit in 2002, the European Council reaffirmed that the implementation of the required political and economic reforms would bring forward Turkey's prospects of accession in accordance with the same principles applied to the other candidate countries. The reforms required by the EU include the abolition of the death penalty, improved rights for the minorities, and reduction of the military's involvement in politics. In addition to reforms, the EU also expects Turkey to work towards a solution of the Cyprus problem and reach an accommodation with Greece over the disputed issues concerning the Aegean. The new JDP government in Ankara has passed a series of reform bills to meet the EU's requirements. However, there are still a number of outstanding issues, most notably those concerning Cyprus and civil-military relations, and prospects for Turkey joining the EU as a full member still appear to be years away.

The U.S has been Turkey's most important ally in world politics since the Truman Doctrine in 1947, which provided aid to Greece and Turkey. Confronted with the Soviet Union's territorial demands at the end of World War II, Turkey eagerly accepted the development of close military and political ties with the U.S. For its part, the U.S. was also eager to build strong ties with Turkey given Turkey's strategic location at a time when Washington sought to "contain" the Soviet Union through alliances with countries bordering the Soviets. Turkey's participation in the Korean War and its inclusion in NATO further strengthened the relations between Washington and Ankara. Throughout the Cold War period, Turkey cooperated extensively with the U.S. through NATO's defense and security policies. The eruption of the Cyprus conflict did hurt the bilateral ties, especially when the U.S. Congress imposed an arms embargo on Turkey after the Turkish troops landed on the island in 1974. The lifting of the embargo four years later put the relationship back on track and Turkey's strategic importance for the U.S. was buttressed by the Soviet invasion of Afghanistan and the rise of a radical Islamic republic in Iran in 1979.

In the post-Cold War period, the U.S.-Turkish relationship encountered new challenges as each country sought to define its role in the changing international system. Turkey's contribution to the Allied coalition in the 1990-91 Gulf War proved to be an important development that helped shape closer cooperation between the two countries in regional security issues in the Middle East, Balkans, and the Caucasus, Caspian energy development, and economic and commercial ties. However, the 1990s also witnessed divergence of policies between Ankara and Washington over Iraq and, to a lesser degree, Cyprus. To prevent further attacks by Saddam Hussein against the Kurds in Northern

Iraq, Turkey agreed to host Operation Provide Comfort (later renamed Operation Northern Watch). However, the emergence of a Kurdish political entity in Northern Iraq under the protection of Western powers led by the U.S. increased Turkey's concerns about the possible spillover of this development into its own heavily Kurdish populated regions in the southeast. Turkey did not support the U.S. plans to topple Saddam Hussein's regime for the same reason since it believed that this could lead to Iraq's fragmentation and the rise of an independent Kurdish state near its borders.

The war in Iraq in 2003 was a critical turning point in U.S.-Turkish relations. Majority of the Turks opposed the U.S. decision to go to war in Iraq. However, Washington viewed Turkey as an important part of its war planning and wanted to open a "Northern Front" by deploying up to 60,000 troops through Turkey. In return for its cooperation, Washington promised to provide Ankara \$6 billion in aid and loan guarantees. The newly elected JDP government reluctantly agreed to support the U.S. request but it failed to muster a parliamentary majority when the troop deployment bill was voted on March 1, 2003. The Bush administration was clearly disappointed with the outcome of the parliamentary vote and senior officials expressed their dismay at Turkey's Iraq war policy. The crisis in U.S.-Turkish relations in 2003 was the most serious problem in bilateral relations since the imposition of the Congressional arms embargo on Turkey in 1974. In the aftermath of the March 1 vote in the Turkish parliament, both sides have sought to take measures to repair the relationship. Given its proximity, Turkey is likely to play an important role in Iraq's reconstruction and return to stability. However, the war in Iraq has clearly altered the nature of the ties between Ankara and Washington and its effects are likely to have a long-lasting impact on how the U.S. views Turkey.

### **Self-Study Questions for Further Exploration**

1. What prompted Turkey to adopt a pro-Western foreign policy in the aftermath of World War II?
2. What role did Turkey play in the Western Alliance during the Cold War?
3. How did Turkey seek to cope with the changes that took place in the international system with the end of the Cold War?
4. What are the major developments in EU-Turkey relations?
5. Why has Iraq figured prominently in U.S.-Turkish relations since the 1990-91 Gulf War?

# *Ukraine: A Self-Study Guide*

United States Department of State  
Foreign Service Institute  
George P. Shultz National Foreign Affairs  
Training Center  
Washington, D.C. 20522-4201

The Self-Study Guide: Ukraine is intended to provide U.S. government personnel in the foreign affairs community with an overview of important Ukrainian issues related to history, culture, politics, economics, and international relations. This guide is meant to serve as an introduction and self-study resource. It replaces the self-study guide of 2005 largely because political and economic events over the past year have changed sufficiently to warrant a new assessment. In particular, the leadership of the Orange Revolution – the spectacular popular upsurge of 2004 that swept away one regime and brought to power another – has morphed yet again into a largely new political configuration. At the same time, Ukraine’s energy dependency on Russia, at a time of heightened aggressiveness on Moscow’s part towards its neighbors because of Russia’s energy superpower status, requires fresh analysis and discussion.

The reader or user of this guide are also encouraged to supplement his/her reading by referring to the books, articles, periodicals and web sites listed in the appropriate sections. A relatively up to date bibliography of books and materials can be found in the Area Studies Office along with this guide.

Final preparation of this guide was facilitated and enhanced by two individuals at the Foreign Service Institute. Colleen O’Shea, an intern in the summer of 2006, conducted research on a number of articles and helped write several key essays, including ‘Ukrainian Folk Traditions,’ ‘The Jewish Question,’ ‘Corruption,’ and ‘Energy Issues.’ Her scholarly interest in Ukraine and in the countries of the former Soviet Union proved to be of inestimable value. In addition, Nesreen Matarnah, an Administrative Support Assistant at the FSI, added greatly to the overall quality of the guide by finding suitable pictures, art embellishments, and maps. Both Colleen and Nesreen are to be commended for their service.

In the end, however, responsibility for the overall guide are fell to Dr. William Gleason, Chair for Ukrainian and Eurasian Area Studies at the FSI. The views expressed in this guide those of the authors or of attributed sources and do not necessarily reflect official policy or the position of the U.S. Department of State or the National Foreign Affairs Training Center. This publication is for official educational and non-profit use only.

November 2006

## TABLE CONTENTS

### **Part I: Environment and People**

1. The Land
2. The People

### **Part II: History and Its Legacies**

1. Early History – Kievan Rus
2. Timeline of Ukrainian History
3. The Polish-Lithuanian Commonwealth: The Origins of Ukrainian Identity
4. Ukraine Under Imperial Rule: Russia and Austria
5. The Twentieth Century: Ukraine under Soviet Rule

### **Part III: The Ukraine Today**

1. Politics in Ukraine: 2006
2. America and Ukraine
3. Ukraine and the EU
4. Energy Issues
5. The Economy
6. Corruption
7. Legal Reform in Ukraine
8. Ukraine's Cultural Rebirth: The National University of Kyiv-Mohyla Academy
9. Religion in Ukraine
10. The Jewish Question: An Answer or a Tragedy
11. Ukrainian Folk Traditions
12. Women in Ukraine

### **Part IV: Resources**

1. Readers Guide – Ukraine
2. Suggested Periodicals
3. Web Resources

## The Land: Geography, Climate and Environment in Ukraine

Ninety-five percent of Ukraine is comprised of flat plain or steppe, a characteristic that provoked the early geographer Rudnytskyj to suspect that “nine-tenths of Ukrainians have certainly never seen a mountain and do not know what one looks like.” Ukraine is comparable to the American Midwest, similar not only in landscape and foliage, but in rich soil as well, making Ukraine a breadbasket similar to Kansas or Nebraska. These two characteristics—flat plains and rich soil—have played an almost deterministic role in Ukrainian history, establishing agriculture as a profitable occupation while allowing easy access to numerous invaders.

Source: CIA Factbook

Ukraine is a country of 603,700 square kilometers, approximately 1300 kilometers from east to west and 900 kilometers from north to south. The country is bounded by the Black Sea on the south, Moldova, Romania, Hungary, Slovakia and Poland on the West, Belarus on the North, and Russia on the East—borders carved out after centuries of expansion, contraction, and occupation. Kiev, the capital of Ukraine, is located in central northern Ukraine on the Dnieper River. The Dnieper is the largest river in Ukraine, snaking through the center of the country and flowing, like most rivers in the country, from northwest to southeast before emptying into the Black Sea. The Dniester River, which flows in Western Ukraine before cutting into Moldova, is the second largest river in the country. The average elevation in Ukraine is 574 feet and only 5% of the country—primarily near the borders—is mountainous. The highest point is Hora Hoverla at 2,061 m, part of the Carpathian Mountains.

Ukraine's soil is its most defining geographical characteristic. A substantial portion of the country is endowed with *chornozem*, a rich, black fertile soil that prompted Europe's first agricultural endeavors in Ukraine. In contrast to Russia, agriculture has consistently proved successful in Ukraine, and Russia's group farming techniques never became as prevalent in Ukraine. The very north of Ukraine contains a sandy soil with fewer nutrients than the rich chornozem, and salty chestnut soil is found near the Black Sea, but these soils cover a very small portion of the land. One-eighth of the country is forested, with most of these forests covering the northeast. Approximately one-third of Ukraine's land has been cleared for cultivation.

The climate of Ukraine is mostly mild, tempered by ocean air from the Atlantic and nearby seas. Although winters are more harsh in the East and summers more hot in the West, neither area generally experiences temperatures greater than 75° or less than 18° F. Crimea has a Mediterranean climate. Precipitation is largely unpredictable, with the only clear pattern being that much more rain falls—two to three times more—during the warmer seasons.

The Ukrainian government has long considered natural preservation a high priority, beginning with the creation of the Askania-Nova national wildlife refuge in 1875. Currently, the country protects thirty-nine national parks and reserves, some of the most prominent being the F.E. Falz-Fein Biosphere Reserve, Black Sea Nature Reserve, Danube Water Meadows, and Ukrainian Steppe Reserves. Despite these preservation efforts, the Soviet period seriously degraded Ukraine’s environmental conditions, and some of the most polluted areas in the world are now found in Ukraine. The Chernobyl nuclear accident in 1989 caused serious contamination, birth defects, and cancer in Ukrainian citizens living near the site, and the surrounding area will continue to be contaminated for thousands of years.

In addition, coal burning in Eastern Ukraine produces heavy air pollution and water pollution has contaminated some coastal areas of the Black Sea and Sea of Azov.

Source: University of Texas Libraries

Aside from environmental factors caused largely by Soviet domination and modernization, many of the tragedies—and fortunes—of Ukraine have been shaped by the lay and substance of the land. While the rich black plains and steppes of Ukraine have embraced and fed her people, this land has failed miserably in averting foreign invasions, repeatedly allowing tragedies wherein Ukrainian soil soaks up the blood of those it once fed.

As later sections on history will illustrate, Ukraine's endowment from nature has proven both a blessing and a curse.

### Questions for Study

- What nations and bodies of water bound Ukraine?
- What is the largest river in Ukraine?
- How much of Ukrainian land is mountainous and how much is forested?
- What kind of soil covers most of Ukraine and why is this important?
- What is the climate in Ukraine?
- What events have greatly affected Ukraine's environmental conditions?

## **The People**

### *Population*

Ukraine is a large country, larger than any European country except Russia, or about the same size as Texas in the United States. As of 2006, Ukraine's estimated population stands at almost 47 million. During the Soviet period, a policy of Russian in-migration and Ukrainian out-migration prevailed, and the ethnic Ukrainian share of the overall population declined from 77 percent in 1950 to 73 percent in 1991. The final Soviet census (1991) revealed Russians to be largest minority, at 22 percent. Ten years later the 2001 census showed the same figure, with the remaining minorities constituting about 5 percent of the nation. This includes (in descending numerical order) Belarusians, Moldovans, Crimean Tatars, Bulgarians, Hungarians, Romanians, Poles, and Jews.

Aside from specific numbers, the most salient feature of Ukraine's demographic history since 1991 is the precipitous drop off in the overall population, from a high of 52 million. The decline of 4 million over a 12 year period reflects the sharp deterioration of economic and social conditions as well as an emigration of large numbers, in particular to Israel, Canada, and the United States. Declining standards in healthcare and daily nutrition have yielded a lowering of fertility and life expectancy rates. Average life expectancy in Ukraine in 2000 was 68 years and in 2002 mortality rates exceeded birthrates by a ratio of

2:1. Male life expectancy is now about 65 years, mirroring widespread alcoholism and drug abuse. More tragically, by 2004, as in neighboring Russia, HIV/AIDS in Ukraine had reached pandemic proportions with no end in sight.

### *Ethnic Relations and Languages*

Before 1991, Russian was the required language of governmental administration and public life. Kiev, for example, was a Russian-speaking city along with the major urban centers of the eastern and southern region of Ukraine. That same year, immediately following the breakup of the Soviet Union, Ukrainian became the official language although in the Crimea, home to a large Russian-speaking majority, Russian remained. Similarly, despite the new policy, Russian was the preferred spoken language as well as the language of instruction in the Donets Basin and along the Dnipro river bend of south central Ukraine. And in 2004, in the midst of the hotly contested presidential election, Viktor Yanukovich, the Prime Minister and a leading presidential candidate, promised if elected to restore Russian to official status alongside Ukrainian.

Ukrainian and Russian, the two dominant languages throughout Ukraine, both belong to the East Slavic language family that also includes Belarussian. For native speakers, Ukrainian and Russian are mutually intelligible and millions of Ukrainians speak both languages freely. In addition, significant minorities in the Western regions of Ukraine speak Polish, Romanian, Bulgarian or Hungarian.

#### **Ethnic Composition of Ukraine**

	<b>2001</b>	<b>% of total</b>	<b>1989 % of total</b>
Ukrainians	37,542	77.8	72.7
Russians	8,334	17.3	22.1
Belarusians	276	0.6	0.9
Moldovans	259	0.5	0.6
Crimean Tatars	248	0.5	0
Bulgarians	205	0.4	0.5
Hungarians	157	0.3	0.4
Romanians	151	0.3	0.3
Poles	144	0.3	0.4
Jews	104	0.2	0.9

Source: Ukrainian National Census, 2001

Since 1991 – and in contrast to fears of many observers at the time of the implosion of the Soviet Union – ethnic relations between Ukrainians and Russians have been good. This success to date derives from several key factors, including a shared cultural history, a common faith (Eastern Orthodoxy) for most people, generations of intermarriage, and the government’s sensitivity to this issue. The 1996 Constitution enshrined both religious and ethnic rights and freedoms, rights that have been respected by virtually everyone across the various regions of Ukraine. Indeed, in sharp contrast to the treatment of ethnic minorities in several of the other former Soviet republics, Ukraine immediately bestowed full citizenship

on all non-Ukrainians. As a result, the largest ethnic Russian community in Ukraine – the largest numerically of any non-Russian republic of the former Soviet Union – accepted their new status and produced no nationalist parties or leaders. This fact was especially significant in Crimea, where a Russian naval fleet remained anchored at Sevastopol, a testimony to pre-1991 Soviet power and ambition.

### *Settlement Patterns*

Well over 50 percent of the Ukrainian population lives in the urban areas, a striking reflection of decades of Soviet industrialization and urbanization. Southeastern and south central Ukraine are home to the highest population densities, with large concentrations in the coal mining centers of the Donets Basin (Donetsk) and the Dniper Bend (Zaporizhzhia, Dnipropetrovsk). Cities with population over one million in Ukraine are Kiev, Kharkiv, Odesa, Dnipropetrovsk, and Donetsk. The next largest cities are Zaporizhzhia, Lviv, Kryvyi Rih, and Mykolaiv.

Although a majority of Ukrainians live in cities, a significant minority – approximately 30 percent – remain in the countryside. Of this number, most live in large villages, sometimes numbering up to 5,000 people, a reflection in part of the survival of the huge Soviet collective farms. Central Ukraine, with its fertile soil (the so-called ‘black earth’ or chornozem) and temperate climate conditions, accounts for the greatest number of rural inhabitants.

An old Ukrainian couple in the Carpathian Mountains. Photography by Jeremy Little.

### Questions for Study

- How big is Ukraine, compared to other European countries?
- Why has Ukraine’s population declined since the end of the Soviet Union?
- What are the dominant spoken languages of Ukraine?
- Why have ethnic relations between Russians and Ukrainians been good since 1991?

## History and Its Legacies

800	Ukrainian princedoms united by Vikings
980-1015	Volodymyr 'the great'
1019-1054	Yaroslav 'the wise'
1240	Mongols obliterate Kiev
1349	Polish occupation of Galicia
1596	Union of Brest; creation of the Greek Catholic Church
1632-1647	Petro Mohyla and educational modernization
1648	Cossack revolt under Bohdan Khmelnytsky; rise of the Hetmante
1654	Treaty of Perislav between Khmelnytsky and Moscow
1657	Khmelnytsky dies
1685-1686	Kiev Church dissolved into Moscow Church
1785	Abolishment of Cossak Hetmante
1880s	Ukrainian culture and history taught in Lembourg University during the reign of the Hapsburg Empire
Early 1900s	Ukrainians are elected to central Hapsburg Diet in Vienna
1914	Outbreak of WWI
1917	Bolshevik revolution
1918-1921	Ukraine tries and fails at independence, becomes part of the USSR in 1921
1932-1933	The great famine
1944	Western Ukraine becomes part of the USSR
1991	Ukrainian independence created through referendum on Dec.1; Kravchuk becomes president
1994	Kuchma defeats Kravchuk in the presidential election
1996	Ukraine adopts a new, internationally lauded constitution
1996	Introduction of the <i>hryvnia</i> , Ukraine's currency
1999	Kuchma is reelected and Yushchenko becomes Prime Minister
2000	Disappearance and murder of Gonggadze; Kuchma is accused as a participant in the affair
2001	Yushchenko is dismissed
2002	Parliamentary elections; <i>Our Ukraine</i> wins a plurality of seats
2004	Presidential elections and the Orange Revolution
2005	President Yushchenko takes Power
2006	Parliamentary Election in March; Party of Region
2006	Yushchenko (Party of Regions) appointed new prime Minister

## *Introduction*

The peculiarities of Ukrainian history are twofold: first, the fact that until 1991 Ukraine never existed as a true, independent state, and secondly, until that same date most of what we knew about Ukraine came from Russian secondary sources. The first point is explained by the fact that for over 850 years – from the destruction of Kiev and Kievan Rus by the Mongols in 1240 – Ukraine was a frontier region split between neighboring empires and states. Indeed, the Ukrainian word for Ukraine – Ukraïna – means ‘borderland,’ a word that perfectly expresses the central geographic determinant of a people whose identity had to be marshaled within other states, until 1991.

The second characteristic of Ukraine’s historic narrative comes from Russia’s long domination of most of Ukraine, a record stretching back to the mid 17<sup>th</sup> century when Ukrainians, under their Cossack leader Bohdan Khmelnytsky, called upon Moscow to aid them in the struggle for freedom from Polish overlordship to the West. Within decades Moscow had taken control of two thirds of modern day Ukraine and reduced Ukrainians to the status of “Little Russians,” the less than endearing term for their subjects for the next three centuries. As a result, after the mid 1600s, Russian writers and historians placed Ukraine within Russian history, and Ukraine was labeled either *Little Russia* or *South Russia* or *New Russia*. Whatever the name, except for a slice of Western Ukraine under the Habsburg Empire in the 1800s, Ukrainians lost their place as a distinctive culture and peoples until their sudden emergence in the aftermath of the collapsing Soviet Union in 1991.

### *Early History – Kievan Russia*

Ukraine’s earliest history is inseparable from that of other Slavic peoples whose original homeland in Eastern Europe stretched between the Baltic Sea and the Black Sea. Over time, as a consequence of successive migrations and invasions by peoples of both Asian and European origins, the Slavic agricultural tribes dispersed into the Western Slavs, (Poles, Czechs, Slovaks), the South Slavs (Serbs, Croats, Slovenes, Bulgarians), and the East Slavs (Russians, Belarussians, Ukrainians). Under nearly constant threat from nomadic horsemen from inner Asia, the East Slavs successfully established a loose collection of princedoms. By the 9<sup>th</sup> century these princedoms had been united by Scandanavian Vikings (known as Varangians or Norsemen), the center of which was Kiev.

From the 9<sup>th</sup> to 13<sup>th</sup> centuries Kievan Rus, as it was known, was the dominant power in Eastern Europe, trading with Byzantium and in regular contact with the feudal states of Central and Western Europe. Within a few decades following its emergence, the Viking ruling elite was Slavicized and during the reign of Prince Volodymyr, Christianized in 988d within the Eastern orthodox faith. For over two centuries the Rus witnessed a literary flowering, architectural marvels, and the codification of a uniform system of customary law. The code – known as the ‘Law of Rus’ – was extremely progressive for its time, with fines more typical than corporal punishment or property seizure, and with equitable property (inheritance) and family rights for women.

At the same time, Kievan Rus was not a modern nation or state. As time passed the princes quarreled amongst themselves, a development that exposed everyone to a terrifying

reality – the appearance of the Mongolians, a massive nomadic army from the Asiatic steppes. The result was the violent obliteration of Kiev in 1240 by Batu, grandson of the legendary Mongolian unifier Genghis Khan. Kiev’s destruction was the first instance of the subjugation of the local population and the resultant scattering of the surviving Slavic population across a huge area from the open prairie lands of southern Ukraine to the thickly forested lands to the northeast. Thus, in Ukrainian history, 1240 is viewed as a symbolic date: the end of a once-united Eastern Slavic state and the gradual emergence of Ukrainians as a separate people, with distinct mentalities, institutions, and values.

*Polish-Ukrainian Commonwealth (In Dark) and Cossack Empire (Thin Stripes)*

*The Polish-Lithuanian Commonwealth: the Origins of Ukrainian Identity*

Within 200 years of the Mongolian onslaught, Ukrainian territories were mostly under the rule of the Grand Duchy of Lithuania and the Kingdom of Poland. While direct Polish rule in Ukraine initially was limited to Galicia, an area of Western Ukraine, which changed suddenly in 1385 when Lithuania was drawn into the Polish realm following the dynastic linkage of the two states and the baptism of the Lithuanians into the Latin (Roman Catholic) church. The rapid diffusion of Catholicism among the Lithuanians and the equally significant diffusion of Polish language, culture, and ideas of political order – an elective monarchy for one thing – characterized the entire area. From 1350 to 1600 virtually all ethnically Ukrainian lands experienced the overwhelming impact of Polish cultural

predominance. By 1600, for example, Kiev was a Polish-speaking city with Catholic schools and a militant, proselytizing Jesuit faith. And it was exactly that development – the existence of militant Catholicism – that gave rise to the first offshoots of Ukrainian self-awareness.

The religious roots of Ukrainian identity assumed two forms, both growing out of the need of the Orthodox Church and faith to defend themselves. The first reaction was compromise with the Catholic hierarchy, an approach that led many Ukrainians to seek the protection of the Pope, but within an Orthodox context. The result was the Union of Brest in 1596, which placed the adherents under the authority of the Pope while allowing them to retain the traditional rite and church service. In time this movement came to be known as the Greek Catholic or Uniate Church.

The second reaction was reform from within, best illustrated by Petro Mohyla, the Kievan Metropolitan from 1632 to 1647. Mohyla founded the academy that bears his name to this day (and is now the main independent University in Ukraine). Mohyla's principal objective was to modernize the education of the Orthodox clergy in order to make them competitive and attractive to the people, principally to the Ukrainian aristocracy who had converted en masse to Catholicism for a half century. He updated the liturgy, revolutionized the program of religious education (introducing Greek and Latin over the ancient Church Slavonic), and insisted that the clergy engage in pastoral care across the greater community. By the end of the 17<sup>th</sup> century, the Mohyla Academy was the leading educational institution in Eastern Europe and a magnet for scholars and scientists from many countries, including Russia.

If religion was the primary badge of incipient Ukrainian identity, the other shaping force across the same period was the Cossacks. To modern Ukrainian historians, the Cossack tradition – best encapsulated in the Cossack revolt of 1648 that led, momentarily, to a Cossack state – sets Ukraine apart from Russia politically. The Cossacks were free men fleeing the tyranny of encroaching serfdom in both Poland and Russia to establish farming and fortress communities across the wild, open steppes of southern Ukraine. The Orthodox faith unified the Cossacks and often came together to fight their great enemies to the south – the Crimean Tatars and Ottoman Turks. It was under the Cossacks that the term ‘Ukraine’ became widespread to describe the lands around the Cossack kingdom or ‘Hetmanate.’ Equally important, the idea of Cossack liberty and freedom as a distinguishing Ukrainian trait mushroomed in the mid 1600s, in contrast both to the Polish aristocracy to the northwest and Muscovite (Russian) autocracy to the northeast.

The Cossack era in Ukrainian history – and all it promised for an early modern Ukrainian state – came to an end in 1654 when the Cossack leader Khmelnytsky forged ties with Russia to achieve his goal of defeating the Poles. The Treaty of Pereiaslav between Khmelnytsky and Moscow brought Ukrainian lands east of the Dnipro river under Russian control. Over the next century, gradually and in defiance of Pereiaslav in which Moscow pledged to honor Cossack autonomy, the remaining remnants of Ukrainian freedom were lost to the Russian tsars. In 1785 the Hetmante, the last symbol of Cossack independence, was abolished and absorbed into the tsarist regime. At the same time, the collapse of the Polish Commonwealth and its subsequent dismemberment by Austria, Prussia and Russia, gave western Ukraine to the Austrian (Habsburg) Empire in 1795. The long period of Polish sway over Ukraine was over. Khmelnytsky

### *Ukraine Under Imperial Rule: Russia and Austria*

It is safe to say that the embryonic Ukrainian culture of the 17<sup>th</sup> century was almost completely destroyed by the Russian empire. Because Ukrainian identity revolved around local concepts of Orthodoxy and the Cossack tradition, the disappearance of these realities rendered Ukraine hostage to subsequent Russification. By 1800, Cossack autonomy was long gone. As for orthodoxy, while remaining in principle, in reality much was lost when the Kievan Church was swallowed up by the Moscow Church in 1685-86 and Tsar Peter the Great subordinated church to state by abolishing the patriarchate altogether in 1721. From the early 1700s onward, Russia's strategy of integrating Ukrainian leaders into a multi-ethnic state bureaucracy – in essence a dynastic empire in which all could serve but on the tsar's terms – meant that Ukrainian cultural revival remained the preserve of a tiny, culturally isolated intelligentsia and publicists.

In truth, were it not for the existence of another Ukraine under the Habsburgs, it is at least debatable whether Ukrainian identity would have survived at all, even in a cultural sense. As with their ethnic counterparts under Russian rule, Ukrainians under Austrian control were members of a multi-ethnic empire, subject to the seductions of an imperial state. However, in sharp contrast to Russia, the Habsburgs favored local rights and responsibilities. As early as 1781, elementary education became compulsory, mostly in the local language, and by the 1880s Ukrainian history and language were being taught at Lemberg University (now Lviv University) by Mykhailo Hrushevsky, Dean of Ukrainian historians. By the early 1900s Ukrainians were being elected to the central Diet in Vienna and had created a whole network of peasant cooperatives, land banks, reading rooms, and political parties across Galicia. In a word, the Galicians, in almost total contrast to their eastern counterparts under tsarist rule, had grown quite used to governing themselves. World War I would bring them their first opportunity.

### *The Hapsburg Empire (In Dark)*

### Questions and Issues:

- What are the peculiarities of understanding Ukrainian history?
- How did religion shape the formation of Ukrainian identity?
- How did the Habsburg experience contribute to the evolution of Ukrainian consciousness?

Suggested Reading: Andrew Wilson, *Ukrainians: Unexpected Nation*, 2<sup>nd</sup> ed., 2002.

### *The Twentieth Century: Ukraine under Soviet rule*

World War I (1914-1918) brought a violent end to the age of empires. Within months the tsarist and Hapsburg dynasties disappeared, the former to a popular revolution from below, the latter to the war itself and allied treaties ending the conflict. In Russia, Ukrainians jumped at the chance to rule themselves, but the effort failed after four years (1917-1921) due to internecine strife between the competing factions and the destruction of independent regimes by the victorious Bolsheviks (Communists) in Moscow. By 1921, two thirds of Ukraine was again under Russian rule.

In western Ukraine, despite the hopes of local nationalists that the victorious Allies would recognize their claims for an independent state, the hopes were ignored and the people divided during the interwar period (1919-1939) between a reconstituted Poland, a newly created Czechoslovakia, and Romania. Notwithstanding their failed hopes, Western

Ukraine did not come under Moscow's control until 1944, when the Red Army seized this area from Nazi occupiers. For Western Ukrainians, memories of freedom and autonomy dating back to the pre World War I period remained embedded during the Soviet period.

From 1921 to 1991 the huge majority of Ukrainians lived under Soviet rule. During these seven decades Ukraine was subject to many wrenching changes: the transformation of the economy and society due to Soviet sponsored industrialization and collectivization of farming, and the imposition of Soviet marxism that promoted the notion of a superior Soviet system in the global competition with capitalism. During the 1930s one of the worst tragedies of modern times visited Ukraine when Joseph Stalin, the Soviet dictator, imposed a famine on Ukraine to eradicate the local peasantry (free farmers) and vestiges of cultural nationalism. According to official estimates (only revealed by the 1990s after the end of the Soviet era), at least 7 million died in the Great Famine of 1932-33.

To describe the Soviet impact on Ukraine in institutional and ideological terms alone, however, is insufficient. While millions died in the Great Famine, and Ukrainian nationalists were violently repressed, other millions from the village and urban working poor benefited from the Soviet state. These people – upwardly mobile men and women – staffed the Soviet bureaucracy with managers, technocrats, teachers, and engineers. They also provided a base of social stability for the ruling elite, a base that held for more than half a century.

By the 1960s and 1970s, as one author noted, a “real fear” existed among Ukrainian nationalists and dissidents that Ukraine would never attain sovereignty or self-rule. Soviet-Russian culture and ideology had sunk deep roots across the Ukrainian countryside and in the cities. Real hope of independence existed largely in the diaspora in Canada and the United States, along with a handful of dissidents in Ukraine, most of who were in jail or under close watch by the Soviet KGB.

How, then, did 1991 – complete independence and self-rule – happen? Three answers suggest themselves. First, the wholly unexpected emergence of a new, dynamic leader, Mykhail Gorbachev, who decided to engage the Soviet people nationwide in a dialogue in order to reform the increasingly moribund Soviet economy. By 1989 that dialogue meant that many local elements in Ukraine and elsewhere were being consulted broadly, a process that increasingly yielded uncontrollable results as people voiced their complaints and concerns.

Secondly, the world's worst nuclear accident in history at Chernobyl, north of Kiev, where an explosion on the morning of April 16, 1986 killed several dozen workers, spread radiation across a wide area (most of today's Belarus, and north-central Ukraine), and left millions susceptible to long term disease and illness. The impact on public opinion in Ukraine was devastating, made worse by the silence of the Soviet leadership for days after the explosion. That silence disillusioned millions of otherwise loyal citizens and left them open to suggestions for radical change and reform.

Third, the breakdown of communist party unity in Moscow as Gorbachev's reforms accelerated and exposed the underlying fissures in society, a breakdown that by 1990-91 emboldened elements in Ukraine, both within the local party leadership and the general population, to push for independence. By the summer of 1991 two factors, the spread of the popular movement Rukh (centered largely in western Ukraine and Kiev), and the decision of the Ukrainian Communist Party under Leonid Kravchuk to break with Moscow, took Ukraine to the edge of independence. Still, it was not until the so-called 'August coup' by Moscow conservatives against Gorbachev – a coup that was forcibly put down due to the emergence of the new Russian leader Boris Yeltsin – that Ukrainian leaders were emboldened to act. On August 24, three days after the suppression of the coup, the Ukrainian parliament declared independence by a vote of 346 to one. Three months later, on December 1, a national referendum secured a huge majority in favor of the newborn state.

Ukraine was born.

#### Questions and Issues

- How did the Soviet Union affect Ukraine and the lives of ordinary Ukrainians during the 1930s and beyond?

- What was the status of Western Ukraine during the 1920s and 1930s?
- What factors contributed to the emergence of independent Ukraine in 1991?

### Suggested Reading

Robert Conquest, Harvest of Sorrow (1986). The definitive examination of the Great Famine by a noted scholar. Includes a searing indictment of Western indifference to Ukraine in the 1930s.

On the period leading up to independence, there is Taras Kuzio and Andrew Wilson, *Ukraine: Perestroika to Independence* (1994)

### Politics in Ukraine

What a difference two years can make. In December 2004 – for 17 days before a transfixed, worldwide television audience -- the Ukrainian people literally stood up in Kyiv and other major cities to demand an end to corruption and bad governance, helping to initiate a wild series of events that came to be known as the Orange Revolution. To everyone’s amazement, including experts on Ukraine, almost none of whom foresaw the political zigs and zags, the people succeeded: by 2005 the old regime was gone, a new pro-western government was in power, and Ukraine seemed set to join humanity at the dawn of the 21<sup>st</sup> century, a time of global promise and integration.

Fast forward to late 2006. The Orange Coalition – the alliance of parties and political factions in support of the Orange Revolution – has collapsed. Viktor Yanukovich, the defeated presidential candidate in 2004, has miraculously re-emerged to become the new Prime Minister under President Yushchenko. Furthermore, Yanukovich’s comeback has the blessings of the people,

as his party (the Party of the Regions) received a plurality of votes in the March 2006 parliamentary elections, deemed to be the freest and fairest in Ukrainian history. And, to add insult to injury (at least from the perspective of 2004 and the Orange Revolution), the Communist Party now controls several key ministries in the Yanukovych government.

Two questions must be asked: What happened to change the political landscape so radically from 2004-2006, and where is Ukraine in all likelihood headed now?

The first question – what happened? – is easier to answer if for no other reason than hindsight offers the analyst a clear advantage. Many points surface, but three stand out:

- The ideological fallout between the leaders of the Orange Revolution in the first year of the Yushchenko Presidency;
- Yushchenko's personal shortcomings as a leader;
- The regional divide from East to West, a divide that reasserted itself in 2006 and became the dominant motif in the parliamentary elections.

The fallout within the upper echelons of the Orange Coalition should have been apparent almost from the beginning. In truth the Orange Coalition was a tactical alliance between key groups across the ideological spectrum, united mainly if not exclusively by a hatred of corruption and former President Leonid Kuchma. Once Kuchma was gone, the underlying differences between Yushchenko – an economist who favored free market solutions – and his Prime Minister, Yulia Tymoshenko – a populist with socialist leanings – became clear. As a result, within a year Tymoshenko was fired and the anchor of the Orange Coalition – the crowd pleasing appeal of Yushchenko and Tymoshenko in December 2004 – imploded. In effect, then, the top leadership cannibalized itself.

In addition to the leadership fallout, President Yushchenko himself failed to govern effectively. Presented with a golden opportunity in early 2005 to steer Ukraine in a different direction, Yushchenko hesitated, preferring throughout much of the year to travel to the West to receive acclaim and recognition. Within Yushchenko's governing circle friction emerged between key advisors, with further delays in enacting the President's program. And, finally, Yushchenko often appeared disconnected from public affairs, seemingly content to dabble in hobbies and personal pursuits.

Personality differences and leadership foibles, however, do not sum up the declining fortunes of the Orange Coalition. Although Yanukovych lost the final presidential election of 2004, the margin of Yushchenko's victory was relatively small – about 51 to 48%. That in turn reflected the cohesiveness of the Yanukovych's political base in eastern and southern Ukraine, home to Ukraine's largest cities (except for Kyiv itself) and home to a large Russian minority with close ties to its easterly neighbor. Quarrels within Yushchenko's entourage as well as the President's inconsistent leadership presented Yanukovych and his followers with a golden comeback opportunity.

By 2006, with little to show for his Presidency, Yushchenko was in trouble, which surfaced in the form of a bitter defeat for his party in the parliamentary elections. Unwilling to reconcile with Tymoshenko, his original ally from the Orange Revolution,

Yushchenko offered the Prime Ministry to Yanukovich, to the disgust of many stalwart supporters of the beleaguered President but a short time earlier. By fall 2006, the improbable combination of Yushchenko and Yanukovich – bitter enemies during the Orange Revolution – was a fact.

Where does this leave Ukraine now and what are its prospects? First of all, it must be admitted that Yanukovich's victory suggests that Ukraine isn't so orange after all. It is at least arguable that the West, which bet heavily on Yushchenko, misread the nature of the Orange Revolution. For while 2004 did indeed mobilize millions with hopes for a new Ukraine, it was not, as often said, only a democratic awakening. Rather, it could be portrayed as the latest chapter in a contest for power within an elite circle that has misgoverned Ukraine since independence in 1991.

That explanation may account for the deep disillusionment of many Ukrainians for the inability of Yushchenko to root out corruption which pervades the government at all levels. Recall that one of the main reasons for the Orange Revolution was popular disgust with a political system that was wide open to bribery along with personal abuse and misuse of power.

Even if this interpretation is wrong – if, for example, Yushchenko sincerely wished to change the underlying ethos of government, but failed for personal reasons – other facts remain, with potentially serious policy implications for Ukraine and the West. First, Yushchenko's power has been diminished by constitutional reforms enacted in January 2006 that augmented the powers of the prime minister. In effect Ukraine is now a presidential-parliamentary system, with considerable leverage in the hands of the legislature and the ministers, many of whom answer directly to the legislature.

Secondly, the collapse of the Orange coalition along with the appointment of Yanukovich as Prime Minister means that Ukraine's westward movement will be slowed, if not arrested altogether. It means that neighboring states, such as Georgia and Moldova, could find it harder to continue their westward courses since Ukraine – a big state that straddles a large geographical expanse – may not be able to offer much meaningful support. It means that Poland, which championed Ukraine's integration into Euro-Atlantic institutions and played a key role in the Orange Revolution, is unsure of its eastern neighbor and hesitant to offer advice.

Finally, it means that Russia will be encouraged to step up its pressure on Ukraine, whether it be in Crimea, with a Russian majority and the Black Sea fleet, or with energy supplies, for which Ukraine is completely vulnerable. Some of this has already happened, as in January 2006 when Russia momentarily shut off gas supplies to Ukraine while claiming that Kyiv was siphoning gas transit deliveries to Europe. And although Russia soon backed down in the face of western outrage over what was perceived as political blackmail by Moscow, the point is clear: Putin is using, and will continue to use, energy exports to enhance Russia's international clout. The fact that Ukraine, with its many ties to Russia, ties that include language, religion, culture, and ethnic identities, currently is led by a Prime Minister with pro-Russian sympathies, disturbs many people both in Ukraine and in Eastern Europe and beyond.

The unraveling of the Orange Revolution against a backdrop of rising Russian assertiveness pose deep challenges for the West, and especially for the United States. In 2004, America championed the Orange Revolution, so much so that Moscow, angered by the turn of events in Kyiv, portrayed the Revolution as an “American plot” to weaken Russian influence across the East European expanse. By 2006 the momentum for Ukraine’s integration in Euro-Atlantic institutions, including NATO and the EU, has slowed substantially, in part because of fatigue within Europe over the breath-taking expansion of the EU in recent years. In the end, three related questions remain whose answers could go a long way in determining the strength and stability of Europe and the West:

1. Can Ukraine resurrect a coherent agenda of political and military reform or is the Yanukovych government destined to be but the harbinger of deeper splits and fissures within the country, with potentially disastrous consequences for the people?
2. Assuming a resumption of reform, can Ukraine convince an otherwise skeptical West to take it seriously, or are major western countries (i.e., France, Germany) so transfixed by their own energy security needs that they no longer care about Ukraine (or other former republics within the Soviet Union for that matter)?
3. Can the United States somehow convince European skeptics that Ukraine’s integration within the Euro-Atlantic institutions is important enough to be kept on the agenda, while telling Kyiv that it must continue to move forward or risk all?

#### Questions and Issues

- Why did the Orange Revolution go astray within two years?
- What are the principal consequences of the unraveling of the Orange Revolution?
- What challenges does this story present for Washington and for American policymakers?

## *America and Ukraine*

Delivering remarks with [Bennett Middle School Students](#) [President Leonid Kuchma](#), on signing a Ukraine-United States Joint Statement in [Kiev, Ukraine](#) June 5, 2000

Ukraine's importance for the United States derives from multiple factors: its size (the largest European country, excluding Russia); its strategic location, between a rapidly expanding European Union to the West and an increasingly authoritarian Russia to the East; its natural resources and function as a supplier of energy to countries of the EU; and the impact of Ukraine's domestic development on Russia's stability and democratic future.

Despite the evident importance of Ukraine for the United States, Washington was slow to react to Ukraine's independence in 1991 and thereafter. Only in 1994, with the signing of Trilateral Agreement between Russia, Ukraine, and the United States – an agreement in which Ukraine gave up all its nuclear weapons in return for assistance on cleaning up Chornobyl – did things change for the better. The amount of US assistance to Ukraine since Ukraine's independence now totals above \$3 billion.

From 1994-2000, American-Ukrainian relations improved dramatically and decisively. Bilateral cooperation ranged over a number of areas, including agriculture, defense conversion, energy, culture, science, and technology. Particularly impressive was the exchange of scientists and scholars in numerous fields as well as the opportunity for hundreds of Ukrainian students and teachers at all levels to travel to the United States and learn of American life and institutions face to face.

This pleasant interlude ended abruptly in 2000 when Heorhiy Gongadze, an independent, internet journalist, was murdered, allegedly on orders from top government officials, including President Kuchma. By 2001, the Kuchma regime, in its second term in office following re-election in 1999, had become an international pariah. Significantly, that development coincided with 9/11 and the warming of relations between Washington and Moscow, as Russian President Vladimir Putin rushed to offer assistance in the American-led war on Islamic extremism in the aftermath of the devastation of the Twin Towers in New York. For the next three years, from 2000-2003, relations between Kyiv and Washington froze, with little contact between high-ranking officials, although non-governmental assistance continued during this period.

Only in 2003, with the American attack on Saddam Hussein in Iraq and the offer by Kuchma of military and logistical assistance for that attack, did relations improve somewhat. President Bush was duly appreciative of Kyiv's support although, as 2004 dawned, words of praise from Washington were coupled with admonitions to Ukraine to assure free and fair elections for Kuchma's successor. In other words, the entire American-Ukrainian relationship was increasingly enclosed in a complex web of domestic and international events that made any simple characterization difficult if not impossible. On the one hand, clearly Washington's interest lay in Ukraine's emergence as a democratic state through a transparent presidential election, interest expressed by a steady stream of official visitors from America to Kyiv as 2004 unfolded. On the other hand, while welcomed, Kuchma's involvement in Iraq was perceived by many in the West and in Washington as an effort to buy time for his regime and to downplay criticism of possible fraud as the elections approached.

Whatever problems existed across 2004 evaporated in the drama of the presidential election at the end of the year. By the end of 2004, what had seemed unthinkable only weeks before – a post-Kuchma era dominated by democrats and leaders of progressive society – had transpired, due to the incredible surge of popular support for Yushchenko along with the outpouring of international acclaim for the new regime. The American role in that fast-paced drama was symbolized by Colin Powell, the outgoing American Secretary of State during the first Bush Administration, who roundly condemned the fraudulent results of the November 21 vote in which Yanukovych, the pro-Kuchma successor, won. His condemnation, along with the refusal of hundreds of thousands of demonstrators in central Kyiv to end their protests, helped set the stage for the decision of the Ukrainian Supreme Court to overturn the November 21 vote and to call for a revote on December 26 that led directly to Yushchenko's election as President.

After the Orange Revolution, the US turned to Ukraine with praise and support. During President Bush's second inaugural speech in January 2005, Bush specifically praised Yushchenko for his victory in late December, coupling that praise with a commitment to freedom and democracy everywhere as the best guarantee of American security and stability. Scarcely a month later those words were given concrete meaning by a request from the Bush administration to the American Congress for a \$60 million dollar supplement for Ukraine to assist in the development of civil society and a free market. By the end of February, Bush and Yushchenko had met during the visit of the American President to Europe and the White House had extended an invitation to Yushchenko to come to Washington in April for talks on how to broaden the new dialogue and exchange.

The US believes that Ukraine's independence is still threatened by Russia, as evidenced by Russia shutting off gas to Ukraine in early January 2006. America thus would like to help Ukraine in its aspirations to become a NATO member, and later, and EU member. To help with such goals, the Millennium Challenge Corporation pledged \$45 million in June 2006 to help fight corruption (problems with combating public corruption disqualify Ukraine from receiving even more aid from the MCC). Additionally, US AID recently signed agreements working to support the rule of law in Ukraine through reforms and increasing transparency in the government. The US and Ukrainian governments have also signed agreements in the business and energy sectors, pledging reforms and improvements.

In the months since the elections, the country's dreams of continuing the Orange Revolution legacy have faded considerably. Supporters of the Revolution were disappointed by the appointment of business tycoons to Yushchenko's administration, despite his promises to separate business from politics. In the March 2006 parliamentary elections, no party won an overall majority, but the opposition Party of the Regions won a majority of seats. Following this turmoil, the Socialist party broke from its membership of the Orange Coalition, and formed a coalition with the Party of the Regions. The new coalition demands Yanukovich as prime minister, which would severely limit Yushchenko's power as president. Meanwhile, Yulia Tymoshenko calls for dissolving the parliament and holding new elections.

The current political situation in Ukraine is extremely fluid, with protesters again gathering on the Maidan, this time not to protest elections, but to protest the seeming dissolution of the government. With such an unstable government, at times it seems as though "Ukrainian fatigue" is setting in, as hopes for an effective democratic regime slip away. The political turmoil in Ukraine greatly affects the positive relationship that was growing between the US and Ukraine, and it is difficult to predict what will happen next.

Questions:

- Why is Ukraine important to the US?
- What was the importance of the 2004 elections to the US?

### *Ukraine and the EU*

With the election of Viktor Yushchenko, Ukraine has embarked on a new period in its history, one fraught with promise and peril. The promise is to build a stronger country through political, economic and social reform and to draw Ukraine into a closer relationship with Europe and the West. The peril is to squander the support of the population through half-hearted or mismanaged reform and continued corruption, thus aborting Ukraine's brightest moment since independence in 1991.

For Yushchenko, the most important long-term international goal is EU membership that will facilitate and strengthen Ukrainian democracy, civil society and a market economy. There are signs in early 2005 that this goal may take fruit, although historically the EU has shown scant interest in Ukraine. Indeed, under Kuchma, Ukraine regularly petitioned the EU to recognize it as a potential candidate for membership, only to be told that the petition was unacceptable. In part the traditional EU attitude reflected the difficulty facing the EU in digesting ten new Central and East European countries as well as in trying to decide what to do with Turkey's appeal for membership. In part, however, EU reluctance also drew on the belief of several key countries that Ukraine was in Russia's sphere of influence, and should remain so, rather than facing the formidable prospect of integrating a large, poor, and badly governed country.

That attitude began to shift in December 2004, when the EU sent Javier Solana, its foreign minister designate, to mediate the political crisis in Kyiv in the midst of the popular uprising. Other prominent EU figures were drawn in when Solana was accompanied by the

Polish President, Alexander Kwasniewski, and his Lithuanian counterpart, Valdas Adamkus. At the same time Lech Walesa, the hero of Polish Solidarity in the 1980s, traveled to Kyiv to speak on Independence Square, center of the Orange Revolution. And, following the vote on December 26 that brought Yushchenko to power, the European Parliament voted overwhelmingly for a resolution that asked Ukraine to be granted a “clear European perspective, possible leading to EU membership.” And although the resolution was nonbonding, it was, in the words of the prestigious Financial Times the best indication to date that “the EU’s door is open.”

By the end of January other developments were in the works. The EU was moving forward with a comprehensive package of measure to add substance to the stated desire for cooperation – the so-called EU-Ukraine Action Plan. This plan, as Solana noted in an article in the Weekly Mirror, foreshadows a “qualitatively new phase in our relationship.” It holds out the prospect for Ukraine of complete access to EU’s single market – the world’s largest of prosperous economies and affluent consumers. In addition to Solana, a key EU official, Ukraine retains the active support of Poland and Lithuania in its bid to join the EU and NATO. Thus, in April of this year, the Polish president promised to back Yushchenko’s efforts to have the EU soften its visa rules for Ukrainian scientists, medical personnel, and students.

In the end, and despite these hopeful beginnings, it will not be easy and the best that can be said about EU integration is that it is a long term objective. Ukraine is a large country with huge pockets of poverty and low wages, characteristics that make entry into the common market problematical. Poland’s Kwasniewski, Yushchenko’s most outspoken supporter, thinks that within 15 years Ukraine will be part of the EU. Pessimists and skeptics may feel vindicated, but if Yushchenko’s energy and determination are any indication, history may yet prove them wrong, as it did in 2004, when against all odds and predictions, the Ukrainian people stood up and voted for democracy and for the right to reclaim their European heritage.

### *Energy Issues*

When Russia shut off its gas supply to Ukraine in early January 2006, in the midst of a harsh winter, the world held its breath. Was Russia asserting its power, threatening Ukraine and the rest of Western Europe with discontinuing its gas supplies?

Russia was indeed trying to show its force and status on the world stage, although it denies such allegations. However, this was not the first time Russia has played the “petro-politics” game: it enforced similar tactics in the 1990s with the Baltic States, reduced gas

supplies to Ukraine in 1993 and 1994, in 2004 in Belarus, and stopped the flow of crude oil to Lithuania nine times between 1998 and 2000. Russian-owned Gazprom is known for its monopoly of Central Asian gas, creating major profits for Russia, and causing European consumers to worry about the dependability and security of their energy imports. When questioned about the incident during an online chat on the BBC's website, Russian president Putin denied any political motives. He stated that Russia will no longer give away its resources for peanuts, claiming that for fifteen years Russia sold gas under market prices and helped out its neighbors, but that now Russia must move to market principles.

Others suggest that one of Russia's motives was to express its unhappiness with President Yushchenko. In the 2004 elections, Russia supported Yanukovich, the losing candidate, and distrusts Yushchenko's policies of moving toward the West. Russia demanded a rewriting of the 2004 gas agreements, which are widely thought to have been written to aid Yanukovich's presidential hopes.

The demand for Ukraine to pay "world market prices" was settled in a manner no more transparent than in the past. Instead of submitting the case to international arbitration, the two countries settled it themselves. Five to six agreements signed in January 2006 by Russia and Ukraine remain private, and all Russian gas sent through Ukraine is contracted by RosUkrEnergo, widely considered to be a nontransparent company.

Ukraine's consumption of natural gas has increased since 1992, and it now accounts for over half of the total energy usage in Ukraine. There have been efforts to reform this sector, including a bill passed in 2001 encouraging alternative energy sector development through tax rebates, and the country is a member of the Methane to Markets Initiative, which pledges to reduce methane emissions. In July 2006, US AID launched a \$1 million campaign called US AID Ukraine Energy Efficiency Initiative Program, aimed at saving amounts of natural gas and to serve as a model for other businesses to emulate. As the December gas shut-off incident showed, there is still a lot of work to be done in this sector.

Ukraine is also the nexus of oil transit networks in the region: in 2005, Ukraine fed 67 percent of oil from Russia into the European oil market. However, the oil sector in Ukraine still reeks of corruption. Corrupt oligarchs still control gas deliveries from Russia and even domestic fields. Two-thirds of Ukraine's refineries were owned by Russian companies when Yushchenko came to power, and close to one hundred percent of the refined product that Ukraine exports is produced in Russian-owned companies. Russia completed a pipeline in 2001 that allows the oil to bypass Ukraine, effectively decreasing Ukraine's handling of its oil by 30 percent. Yushchenko has not made much progress in developing a system of fair investment, especially toward inviting Western investment, which means that the country remains dependent on Russia.

The *Oil and Gas Journal* reports that Ukraine has 395 million barrels of proven oil reserves, but Ukraine's refineries are working well below capacity, and thus the country is highly dependent on imported oil, primarily from Russia, secondarily from Kazakhstan. Ukraine would like to be a transit center for Central Asian oil by means of the Odessa-Brody pipeline and feasibility reports are being conducted currently.

Ukraine also remains dependent on coal, albeit less so than in 1992, as shown in the graph. According to the Energy Information Administration (EIA), in 2003 Ukraine produced 63.5 million short tons of coal, but consumed 67 million short tons, making the country a net coal importer, despite their vast coal reserves. The coal industry continues to face woes: until the end of 2002, the coal industry was heavily subsidized, and over half of the mines were operating at a loss. Privatization efforts have been proceeding since 2003 at a slow rate. Additionally, 4,300 deaths since 1991 have been reported in the mines, making Ukraine's mines among the most dangerous worldwide. Since 1997, the World Bank has given over 300 million to help with restructuring Ukraine's coal sector.

Fig. 5: Components of Energy Consumption in Ukraine

In terms of electricity, the EIA reports that Ukraine's power sector is the twelfth-largest in the world in terms of installed capacity, which is at 54 gigawatts. Generation and consumption fell steadily after 1991, but have been trending upward since 2000. Ukraine could produce more than twice its energy needs, but problems with infrastructure and maintenance prevent it from doing so. The country has begun improvements through privatization efforts, the completion of two new nuclear plants, and more efficient usage procedures at other plants. In 2004, Ukraine exported 5.14 billion kilowatts to other countries such as Belarus, Moldova, Slovakia, Poland, and Hungary. Ukraine is set to have its entire electricity grid integrated into the Union for the Coordination of Transmission of Energy (UCTE) by 2008.

After the gas shut-off crisis in January 2006, the world realized just how important Ukraine's role in providing and processing energy is. Because the energy sector in Ukraine is unstable and in need of much improvement, the world will continue to watch and assist the situation there.

## The Economy

A visit to Kyiv in 2006 is mind-boggling for anyone who has not seen Ukraine for the past decade. Even four years ago, for example, building cranes were conspicuous by the absence on the Kyiv skyline – today they dot the horizon and the air is heavy with the whirl of lifting gears and shouts from workers high overhead. Kyiv is in the midst of a building boom that shows no signs of slowing, let alone aborting. And not only in the city center – where retail shops and new businesses sprout almost daily – but along the periphery as well, where new homes arise like magic, testimony to the emergence of a new middle class, eager to buy and own property.

Now in its fifth year, the building boom is not the only sign that Ukraine's economy is taking off. Far from it. New cars flood the streets – expensive new SUVs and foreign imports – and drivers search endlessly for parking places, finally giving up and pulling onto the sidewalks already overflowing with impatient and well dressed consumers. Along the city's main boulevards, shoppers crowd into new department stores and retail shops, determined to spend their salaries and wages which have risen significantly since 2000. Indeed, aside from industrial manufacturing, it is consumer spending that is powering the economic surge, with consumer credit up by 75 per cent to date in 2006 alone.

All of this traces back to 2000, when President Yushchenko, then the Prime Minister under former President Kuchma, reformed the state finances and increased pension payments, helping to jumpstart an economy that until that point had been dead in the

water since Ukraine's independence in 1991. Those reforms generally are credited with providing the initial impetus for Ukraine's expansion AND for Yushchenko's political popularity that fueled his drive for the Presidency and victory during the Orange Revolution of 2004.

From 2000 the Ukrainian economy has grown at impressive rates and shows little sign of stopping. Kyiv is not the only recipient of the advance, although by far the most impressive to date. Other cities – Khar'kiv, Odessa, Dniepropetrovsk, L'viv, to mention four – also have benefitted. As a result, for the first time since 1991, international investors are beginning to take note: foreign direct investment has skyrocketed since 2004 to \$10 billion in 2005-2006, a figure equal in value to the cumulative total for the 14 prior years. True enough, as some might hasten to point out, Ukraine still lags woefully behind Poland and other East European countries when it comes to foreign direct investment, but the upward movement is remarkable, given the rate of increase and the potential for continuing investment targets.

Another sign of economic dynamism lies with the banking sector. This sector has seen a flurry of activity over the past eighteen months, as European banks have rushed in to acquire some of Ukraine's largest financial assets. Granted, the risks remain due to the absence of a credit control and accounting system on a level with the West. But the explosion of mergers and acquisitions is likely to continue as many European banks see Ukraine as a major source of growth. As a result, many key bankers predict that half of Ukraine's banks could come under control of European partners and holders by 2008, scarcely thirteen months away as of this writing.

None of the above suggests that Ukraine is home free when it comes to the economy. Big problems remain, foremost among them Ukraine's energy dependency on Russia (see above for additional analysis of Ukraine's energy problem). Agriculture lags, principally because many politicians refuse to sanction full property ownership in the countryside, a searing tribute to the Soviet legacy and to distrust of potential foreign ownership of Ukraine's fertile farmland.

Corruption also remains, with a handful of incredibly rich men who lined their pockets at everyone else's expense – and it is no accident that Ukraine has been dubbed an “oligarchical” economy par excellence. If outside investment is to continue, Ukraine must restructure its business system to reduce corruption and promote transparent business practices. There is no middle way now.

The latter point – the persistence of the oligarchs and their control of a corrupt economy – raises the final consideration here. Not long ago Ukraine's richest man, Rinat Akhmetov of Donetsk, said that Ukraine's economic future lay with the West, with European and North American markets and investors. Akhmetov is not alone in this sentiment, and the logic of this belief is that reform must come – big reform of Ukraine's convoluted business structures and underlying corruption – if he and others are serious. In other words, if Ukraine's oligarchs wish to continue their success, they are going to have to clean up their act, to put it simply. Otherwise they will be turned back and defeated by a lack of investment and of markets. They will have to retreat to the East, to Russia where

similar traditions of corruption and non-transparency exist, and where the future is also highly problematical. Do they fully realize this?

Thus, by the deepest of ironies, it may very well be that Ukraine's economic reforms and its economic future now rest in this hands of the very group that to date has stolen the lion's share of the national treasure. Can a generation of Ukrainian Rockefellers, Carnegies, and Kennedys be in the wings? Can Akhmetov rise above his natural instinct to make money through cronies and by underhanded means? These are questions worth pondering.

### *Ukrainian Reform Agenda*

Arguably, legal reform is the most pressing challenge facing Ukraine today. Without a just legal system, capitalism gives way to black markets and bribes, and attempts to gain justice get stymied by vacant courts and political agendas. From 2001 to 2002, small legal reforms took place on an incremental basis, but there were still not many programs in place. In the 2004 elections, the Yushchenko team placed reform high on its campaign platform. This created a wave of excitement in Ukraine because it meant that a politician finally had the political will to undertake the reforms so necessary toward inviting further foreign investment and moving toward entry to NATO and the European Union. After Yushchenko's victory, the country assumed reforms would be rolling along at a rapid pace. Unfortunately this has largely not been the case, leaving many feeling disappointed in the administration's progress. Some claim that the failure of the Yushchenko government has been its unfulfilled promises. Changes are finally on the government's agenda, although they have been slowed by the continuing political tumult.

The most notable push for reforms is taking place in the judicial realm, because ensuring justice is seen as critical in a civil society. At present, the public holds the judiciary in low regard, deigning the sector corrupt and disputing their judgments. In 2005, the American Bar Association together with Central and East European Law Initiative (CEELI) conducted a comprehensive judicial reform survey. The ABA CEELI Judicial Reform Index for Ukraine shows Ukraine scoring positively on just four out of thirty categories relating to judicial reform. Some of the group's biggest concerns were in relation to judicial independence:

improper influence on decisions by outside sources, lack of respect for judiciary decisions, lack of timely and proper enforcement of judgments, and opportunities for judges to be corrupted throughout their terms. The Criminal Code was established in 1960 and has just been amended since then, providing for a very unbalanced code. The Index found that the courts have overwhelming caseloads, but lack sufficient amount of judges to handle them.

Clearly, there is a lot of work to be done. The Yushchenko government recognizes this, and in May 2005, President Yushchenko established a Commission for Judicial Reform,

charged with developing reform proposals by the end of 2005. Curiously, this commission did not include any active judges, and only 4 out of the 40 participants were retired judges. To some, this meant that the people who knew best about what to reform were excluded from the process, as well as their opinions. The Commission developed a Concept plan outlining various judicial reforms. Critics denigrate the Concept as being very broad and theoretical; active judges complain that its ideas lack feasibility.

In May 2006, the President signed the Plan of Action established by the Commission for Judicial Reform. The Plan of Action covers a variety of reforms in addition to judicial reforms, but the courts were similarly not consulted concerning the Plan of Action. The Plan of Action calls for improving the judiciary system so that its procedure is on par of that of the European courts, which means that it needs to undertake a variety of measures, such as improving staff by creating a transparent selection process and requiring continuing education-type of courses judges, increase salaries and space, ensure adherence to the judicial oath, and keeping a register of all cases that is accessible to the public. There are many other measures outlined in the Plan of Action, including creating higher courts of civil and general jurisdiction and improving case distribution and workload, and all of these ideas require funding and commitment. Getting things moving beyond the paper is another task altogether, one which has been stunted by the lack of a Supreme Court Chairman, and because the Constitutional Court has not operated since October 2005 due to political reasons, leaving outside groups to claim that justice is being held hostage to political interests.

Outside of legal reform, other reforms such as tax, land, and religious reforms have also moved slowly. In 2001, Ukraine instituted changes to its tax code that lower corporate tax rates, decrease exemptions, and consolidate five income tax brackets into two. The new First Deputy Premier Mykola Azarov has recently stated that his goal is to start tax reform in 2007, and that taxes will soon be cut and import tariffs restored. Land reform has further privatized Ukrainian lands and provided for market-based agricultural financing. Reform of religious legislation has been instituted to guarantee the wide freedoms granted under the 1996 constitution and has proven successful.

Outside agencies have been helping to spur reform ever since Ukraine's independence. Most recently, US AID and the Ministry of Justice created a program to Combat Corruption and Strengthen the Rule of Law in June 2006, which means that both governments will be actively involved in planning and implementing activities to combat problems in Ukraine. Additionally instrumental in aiding reform has been the Millennium Challenge Corporation, which approved a \$45 million initiative to reduce corruption, strengthen the judiciary system, and improve governmental and administrative standards and regulations in Ukraine. The Corporation considers Ukraine a threshold country, which means that if Ukraine decreases the amount of corruption in the country, it may be eligible for more aid from the MCC. The US government also awarded a contract to Chemonics International in June 2006 to promote a rule-of-law program.

Despite this assistance, legal reform must ultimately be achieved by the Ukrainians themselves. Outside assistance can suggest language or specific reforms, but adopting—and, more importantly, implementing these reforms is a challenge unto itself. Legislators and legal enforcers need more than new laws alone: they need to understand

how these new laws work and the *ethics* that lies behind effective legal administration. The foundations for legal reform have been spelled out in the Concept and Plan of Action, and the next step is to establish a clear way to fulfill these goals and bypass the corruption that so often impedes change.

### *Corruption*

Ukraine’s pervasive corruption is a disease with the potential to destroy business, political, and educational interests and values. As of October 2005, Transparency International has placed the country 107<sup>th</sup> out of 159 countries—last place being the most corrupt—with a corruption score of 2.6 on a scale from 0 to 10, 0 meaning completely corrupt. Bribes and payoffs plague the government, business sectors, and higher education, while arbitrary rules, censorship, and even murder restrict Ukrainian media. In a country struggling to assert itself into the international sphere, corruption often holds Ukraine back.

The roots of corruption in Ukraine extend beyond the Soviet Era. Under the Russian empire corrupt practices became widespread, and the Soviet experience—typified by shortages, oligarchs, and few rubles to go around—only increased and solidified these practices. Over time, corruption became ingrained into local culture until bribery and dishonesty became taken for granted and viewed as the best and most efficient way to get things done. Indeed, in a system rampant with corruption, honesty and transparency often are prompting one to wonder whether Ukraine’s culture of corruption can ever be overcome. Current economic hardships and a lingering Soviet-instituted oligarchy have, if anything, made the problem worse today, paving the way for corruption in business, politics, media, and education.

Transparency International’s  
Corruption Percentage Index

Year	CPI	Ranking
2005	2.6	107/158
2004	2.2	122/145
2003	2.3	106/133
2002	2.4	85/102
2001	2.1	83/91
2000	1.5	87/90

Complicated and contradictory rules are the highest hurdle for businesses in Ukraine, difficulties that encourage payoffs to obtain business permits and evade taxes. Organized criminal groups often buy assistance from Ukrainian law-enforcement officials and bribe members of parliament to avoid financial disclosure. These circumstances lead to a widespread lack of transparency and disincentives for international investment.

Corruption in the political sphere is not limited to law-enforcement officers and members of parliament accepting bribes. Ukraine’s legal system lacks a reliable and adhered to judicial code of ethics, creating a system with a suspiciously high conviction rate where prosecutors have more influence than defense attorneys. Corruption also plagues elections: questionable media tactics skewed the 2002 parliamentary elections and critics charge both media and poisoning as rendering the 2004 presidential elections undemocratic. The new Plan of Action and its goal of reforming the judiciary is heartening, but only if the promised reforms take place.

Government regulations heavily constrain Ukrainian media. Most news and media sources adhere to these regulations, as deviance is heavily punished. The most brutal example of such punishment was the 2000 murder and beheading of Heorhiy Gongadze, a

journalist outspokenly critical of government corruption. Although Ukrainian President Kuchma denied any affiliation with the affair, subsequent evidence pointed directly back to him. In this way, the government controls much of the media, all but eliminating any reports of corruption and preventing media coverage advantageous to opposition groups.

The most discouraging sector for corruption, however, is Ukraine's universities, where the next generation is forming habits that will mold the future of the country. Corruption is rampant in institutions of higher learning, where students bribe entrance officials and professors on a regular basis, and Ukrainian students have the legal right to re-take any test, leading to widespread cheating. Although corruption varies among universities in Ukraine, the standards of integrity many graduates will meet if seeking further study or employment in the West are not only missing, but misunderstood.

Some argue that the culture of corruption plaguing Ukraine is unshakable while others contend that changes to exact improvement can be made. Through straightforward, enforced legislation, serious consequences for corrupt government officials, reduction of media regulations, and higher, strongly enforced standards in schools, Ukraine can make a turnaround. Yet with decades of corruption, little help for media, and a culture of corruption characteristic even in the young, the country's prospects for breaking free look grim. To break free from corruption, some Ukrainians and international investors are opting to break free from Ukraine.

***Ukraine's Cultural Rebirth:  
The National University of Kyiv-Mohyla Academy***

No institution symbolizes Ukraine's culture renaissance more vividly than the National University of Kyiv-Mohyla Academy. Founded in 1632 by the reform-minded orthodox clergyman of Kyiv, Petro Mohyla, the Academy quickly became a leading educational center throughout the seventeenth and eighteenth centuries for scholars and churchmen from across Eastern Europe. Unfortunately that happy state of affairs did not last because by the early nineteenth century, Mohyla's doors were closed forcibly because of Russia's concern that culturally conscious Ukrainians might destabilize the tsarist empire.

Mohyla's doors remained shut under tsar and commissar – from 1817 to 1992 – when, like Ukraine itself, that is rather unexpectedly, the doors reopened and a new Academy emerged. One dedicated to the aims of its founder 360 years earlier: progressive education for Ukrainian young people, but this time with a secular twist.

The founder of the new Academy – and over a decade later its President – was a leader of Rukh, the coalition of democratically minded Ukrainian nationalists formed in 1989 to oppose communist rule. Vyacheslav Brioukhovetsky, and colleagues around him, saw the reestablishment of the once famous academy as their contribution to Ukraine's rebirth. From its reincarnation the school – renamed the National University of Kyiv Mohyla Academy – was determined to uproot the system of nepotism and corruption that has plagued Ukraine in general and education in particular. The cutting edge of this broadside attack is the entrance exam that is graded anonymously at Mohyla. Today, Mohyla takes justifiable pride in being recognized across Ukraine as one of the very few educational institutions where admissions standards are based solely on a student's ability, rather than on cash or connections.

A second distinguishing feature of the Academy is its relationship to what might be termed the “outside world.” At Mohyla, the doors are wide open to Western educators. More Fulbright lecturers by far have taught at Mohyla than at any other Ukrainian university. One reason that Western educators (and not only Fulbright professors) are welcomed is that by official policy all students at Mohyla are proficient in English, one of two instructional languages, the other being Ukrainian. However, in addition, the faculty and students eagerly seek out western opportunities and contacts. And they are encouraged to do so by the administration and their peers. Mohyla's faculty regularly pull down Fulbright grants for research and/or teaching in the United States. Others journey to Germany or England under the auspices of similar programs for the same purpose.

Mohyla's existence throws into sharp relief several aspects of Ukrainian culture and Ukrainian higher education. To begin with the most general, it reflects the proliferation of new schools at all levels and the diversification of higher education since the Soviet Union. By 2000, private universities and institutes comprised twenty percent of the student population. In one sense, the diversification of higher education reflects the realization of many parents and students that the old curriculum imparts skills and attitudes inherited from a highly centralized planning system ill adapted to the new economy and to conditions in the global age.

Diversification also mirrors a critical and often overlooked aspect of Ukraine's transformation during the first post-communist years: the emergence of an entrepreneurial mentality, and not only in business, that is risk prone in support of an idea or vision, in this instance in education. Dozens, perhaps hundreds of men and women across the education spectrum, from the ground floor up, have cast their fate and reputations with creation of bold, new educational ventures and enterprises. To that extent one can speak of the existence of an entrepreneurial drive that has gone unmeasured in the literature on educational reform and merits a fuller study.

Mohyla's success in promoting a progressive curriculum and in attracting western assistance also underscores the necessary ingredients of a reform agenda, whether in higher

education or beyond. To put it simply, reform lasted and deepened at Mohyla because it was there to begin with, in the stated mission of the University and the philosophy of its founding president. Reform will outlast Briukhovetsky because it is bigger than any single individual or, in this instance, any group of individuals. It IS the University. Seen from this perspective, western assistance to Mohyla works because it facilitates local actors.

At the same time, the key question for Mohyla – and for other reform minded ventures and initiatives (whether in education or public policy or business) – is sustainability. Kyiv-Mohyla is not a rich institution, although compared to many Ukrainian universities, it is relatively well off. Certain departments, such as the graduate level economics program, are generously endowed from without (Eurasia Foundation). But what happens when the Foundation pulls out? When the spigot is turned off? This is the challenge facing entrepreneurs and reformers across the spectrum in Ukraine.

Finally, Mohyla's success story – including the challenge of sustaining the progressive momentum embodied in the University – points to an overwhelming need if schools at every level are to go forward in Ukraine. And that is the imperative of carrying institutional change into the heart of Ukrainian education, which is the pedagogical university where a new generation of teachers is being trained. The battle for the future of Ukrainian learning and culture is being fought and will be won or lost in the main pedagogical universities. That is where thousands of new teachers are being trained, teachers who will fan out across a vast land to classrooms in the 20,000 plus schools. For Ukraine to prosper in the 21<sup>st</sup> century, these universities will have to follow Mohyla's example and encourage active learning, creative thinking, and a new curricula. It can be done, as Mohyla and Ukraine's cultural history strongly suggests.

## *Religion in Ukraine*

Stories of religion in Ukraine are stories of solidarity and rivalry, characteristics of a state struggling with identity and religious freedom. Although some Ukrainians see a national religion as central to national identity, current constitutional standards prohibit state acknowledgement of any national religion—and rightly so. While Ukraine's constitution grants commendable rights for religious freedom, the struggle between this freedom and religion-based national identity has put the state in a relative quandary, a quandary exhibited in part by clashes between adherents of the Moscow and Kiev Patriarchates of the Ukrainian Orthodox Church. In July of 1995, a controversy arose over the burial place of Patriarch Volodymyr, a Patriarch under the Kiev branch of the Church. His followers felt he should be buried in St. Sophia's

Cathedral, but adherents of the Moscow Patriarchate forbade such a burial for an apostate priest and called out the Kievan police for support. The clash left Patriarch Volodymyr's coffin buried under the sidewalk just outside the cathedral and members of both Patriarchates unsatisfied with the outcome. *(Photograph: St. Michael's Church in Kiev by Jeremy Little)*

Quandaries such as this will be overcome only through time, as the interplay between national identity and religion matures. Indeed, the state has only recently re-entered the religious sphere after the long draught caused by Communism: in 1990, only 15% of Ukrainians considered themselves religious, while that number has risen to 70% today. In addition, 14% of people in Ukraine attend church weekly, contrasted with 3.6% in Russia. This increased religiosity resurrected the impact of religious history and demographics on Ukraine and brought to the forefront issues of national/religious identity and separation of church and state.

The overwhelming dominance of Orthodox religions in Ukraine can be traced back to Prince Vladimir's acceptance of Byzantine Christianity in 988 AD. This Orthodoxy survived despite invasion by the Mongols in the 13<sup>th</sup> century and a four-century occupation by Poland (although Poland's Roman Catholicism left a definite legacy). In 1596, the Union of Brest waged solidarity between the Orthodox and Catholic Churches in Ukraine and paved the way for establishing a Ukrainian Greek Catholic Church. The Ukrainian Autocephalous Church came into being in the 1820's and 30's, created in an effort to form a specifically Ukrainian church. In the mid 1900s many churches came under persecution, but none faced persecution as strong as that waged against the Ukrainian Greek Catholic Church, which was eliminated by the tsars and heavily punished under Stalin. The fall of Communism brought religious revival and rivalry, reflected by acceptance of new Western religions such as Baptists and Jehovah's Witnesses and deeper splits in existing Ukrainian churches. The Ukrainian Orthodox Church, which had traditionally looked toward the Moscow Patriarchate as its head, split to form the UOC Kiev Patriarchate, a separation influenced by nationalistic ideas and newfound independence.

The current demographics of Ukrainian religion reflect much of this religious history. Ninety-seven percent of churches in Ukraine are Christian, and half of all Christians belong to one of three main Orthodox churches: the Ukrainian Orthodox Church - Moscow Patriarchate (UOC-MP), Ukrainian Orthodox Church - Kiev Patriarchate (UOC-KP), or Ukrainian Autocephalous Orthodox Church. The UOC-MP and UOC-KP are primarily found in central and southeastern Ukraine while the

*The Geography of Religion in Ukraine*

Autocephalous Church is primarily found in Western Ukraine. Although official records show that the UOC-MP has substantially more communities than the UOC-KP, some surveys have shown that the Kiev Patriarchate has greater membership than the Moscow Patriarchate (10.7% of the population compared to 17.8%, respectively), illustrating the questions of property and ownership created when churches break apart, as buildings are required to create communities. Major Catholic churches in Ukraine include the Ukrainian Greek Orthodox Church, mostly in Western Ukraine, and the Roman Catholic Church, which is primarily in Central Ukraine. The UOC–MP, UOC–KP, Autocephalous Church and Ukrainian Greek Catholic Church are the four major churches in Ukraine. In addition, there are a number of protestant churches, the largest being the Baptist church, which is found throughout the country. The Pentecostals, Seventh-Day Adventists, Sub-Carpathian Reformed and Lutheran Churches are also well established in Ukraine. Jews and Muslims—the latter located primarily in the Crimea—make up small but important religious groups in Ukraine, while non-traditional groups such as Jehovah’s Witnesses have also taken root.

Religious Communities in Ukraine

The history and demographics of Ukrainian religion prompts some Ukrainians—primarily in Eastern Ukraine—to consider the Ukrainian Orthodox Church as “the Ukrainian Church,” and membership in this church is associated with a certain degree of

Ukrainian-ness. Some are even so bold as to suggest state-building through the church and support state favoritism toward “Ukrainian” churches to reinforce a Ukrainian state. In addition, it is the view of many that Orthodoxy is genetic, yet a nationally-oriented Ukrainian will not belong to the UOC-MP. At the same time, Western Ukrainians are receptive to new religions from the West (and more receptive to religion in general) and harbor the Ukrainian Greek Catholic Church, which stands as a reminder of persecution in the past. In these respects, religion reflects the demographic and political differences between East and West and is a critical factor in the creation of a Ukrainian national identity.

Although some Ukrainians have pushed for state favoritism of particular churches, Article 35 of the Ukrainian Constitution declares “the Church and religious organizations in Ukraine are separated from the state, and the school—from the Church. No religion shall be recognized by the state as mandatory.” In addition, the constitution provides everyone with “the right to freedom of personal philosophy or religion.” Ukraine has effectively upheld these standards, exhibited by the State Department’s Human Rights Report, which notes only the difficulties of some groups in gaining land to build religious structures—difficulties all groups experienced proportionately. Despite those pushing for a national church that will define what it means to be Ukrainian, it should be noted that no one church commands a majority of the population; religion in Ukraine is quite diverse, especially when compared to other European nations.

National/religious identity and religious freedom are two great forces at work in Ukraine. Although recent events have suggested a conflict between the two, many Ukrainian leaders—and even the Pope, during his seminal visit in 2001—see solidarity between the two notions. Ukraine and her people are still trying to find themselves, a search that often involves religion. Only as Ukrainian identity becomes more tangible and defined can religion can grow stronger in its separation from the state, a separation mandated by law, by international standards, and by the human spirit.

### Questions for Study

- What are the four primary religions in Ukraine?
- What are the roots of Ukrainian Orthodoxy?
- Into which two patriarchates is the Ukrainian Orthodox Church separated, and why is this significant?
- What percent of Ukrainians consider themselves religious?

*The Jewish Question:  
An Answer or a Tragedy?*

*Above: Jewish Cemetery in Berezhany. Photo taken by me in January 2001.*

What should be done about the Jews? This question has lingered in Ukraine for as long as the Jews have lingered, shouting for attention when 15<sup>th</sup> Century Polish occupation brought a wash of Jews to Ukraine and becoming less pertinent only as Jews emigrated from Ukraine by the thousands in the twentieth century. Indeed, the demographic trends of Jews in Ukraine have largely determined the magnitude and response to the Jewish question, turning a deep historical concern into a relatively peripheral issue.

During the 15<sup>th</sup> Century Polish occupation, Poles used Jews as middlemen in trade with Ukrainians, a situation that made Ukrainians feel robbed and cheated; they perceived the Jews as making a large profit at Ukrainian expense. From these days prevailed a widely held perspective of Jewish affluence bought by treachery, a socioeconomic perspective that in reality never did exist. Although Ukrainian Jews have historically lived in urban areas and held professional positions, they are not generally wealthier than the average Ukrainian, nor do they obtain wealth at Ukrainian expense.

Three main waves of Jewish emigration from Ukraine coupled with the Holocaust have significantly altered the demographics of Ukrainian Jews. The first wave of emigration came with the 1917 revolution and radical alteration of the economic and political system. Jews, many of whom created a comfortable living through study and work, disagreed with the new system and its mandates of state property. A large number of Jews opted to leave

the country instead of facing persecution for refusing to support the new system. Two decades later, the remaining Jews had to confront the horrors of WWII. The Holocaust in Ukraine killed more than 1 million Jews—but many Ukrainian citizens were killed as well, making an emphasis on Ukrainian Jews during the Holocaust a controversial matter. Although both the Holocaust and Soviet system systematically oppressed Jews, emigration was extremely difficult and costly, if not impossible. In the 1970's the United States made deals with the USSR to allow Soviet emigration in return for political favors in Europe, bringing on a second wave of Jewish emigration from Ukraine, where many Jews fled to Israel, Canada, the United States, and Germany. The fall of the USSR marked the third wave of immigration, a process that continues today.

In many ways, the Holocaust and waves of immigration have essentially 'answered' the Jewish question for Ukraine: in cities where 5,000 Jews were found thirty years ago, there are only 1,000 present today; in place of questioning where Jews fit in society, there is questioning of where Ukrainian identity is found. In addition, serious economic concerns that affect all Ukrainian citizens have pushed ethnic tensions to the background. Although perspectives of Jewish-Ukrainian relations differ, the Jewish question has largely been answered by emigration—emigration initiated by the tragedies of historical perspectives, the Holocaust, and Soviet oppression. These tragedies, however, have largely faded into the past as oppression on the government level has evolved into to little more than discussions on the kitchen table level. Thus, while the question “What should be done about the Jews?” has historically troubled Ukrainians, today it lingers as a waft of the past, a once-unanswered question of tragedy that has all but been transformed to an unspoken—yet implied—answer of “nothing; many of them are gone.”

Questions for further study:

- What Jewish organizations exist in Ukraine?
- How has Jewish emigration affected foreign relations between Ukraine and Israel, Canada, the United States, and Germany?
- What age groups of Ukrainian Jews are left in Ukraine? How does this affect their quality of life?
- How do anti-Semitic attitudes in Ukraine function within the larger context of Europe?

## *Ukrainian Folk Traditions*

Ukraine has a rich history of folk customs, stories, and art. Although Russian and Ukrainian traditions are similar and sometimes viewed as one and the same, Ukrainian folk culture is distinct and in many ways embodies what it means to be Ukrainian. The two most important types of Ukrainian folk art are *pysanky*, elaborately decorated Easter eggs, and *rushnyky*, embroidered hand towels. Both contain designs symbolizing family, marriage, life and death. *Rushnyky* are often used in Ukrainian weddings, which themselves are filled with traditions, including wedding marches, somber ceremonies, and riotous celebration afterwards. Fairy tales, folk tales, and suspicion of witchcraft are also distinguishing Ukrainian traditions, and many stories put an intriguingly strong emphasis on women.

Ukrainian folk traditions are observed most prominently in village life, and the onset of urban migration has diluted the influence and pervasiveness of folk traditions. At the same time, many urban Ukrainians have connections to the villages and old traditions and periodically go back to visit their homeland and observe village customs. One French professor at Mohyla University in Kiev—a very well educated professor who had studied in France for many years—once told her friend she was going to “my village” for the weekend, illustrating how even the most educated and urbanized of Ukrainians have ties to village life and customs. These traditions are at the heart of Ukrainian history, and even as the country transitions to a modern economy and migration movements redefine the importance of folk traditions, Ukrainians look upon these customs as part of themselves—as part of their identity.

### Questions for Study

- What are four aspects or attributes of Ukrainian folk traditions?
- Where are folk traditions most commonly observed?

## *Women in Ukraine*

A top official of Ukrainian President Yushchenko's Our Ukraine party (left) and former prime minister Yulia V. Tymoshenko exchange folders with signed documents — an agreement to reunite the estranged allies of the Orange Revolution in a coalition following parliamentary elections. (Photo: Sergei Supinsky / AFP-Getty Images)

Much has changed since the Soviet Union's fall, and Ukrainian women are among those who are learning to adapt to the new world. Those intrepid enough to plunge into the employment pool face discrimination and earnings well below male counterparts, or have to resort to “entertainment” careers to survive. In desperation, others leave as “Ukrainian brides” for affluent Western men. While women can still obtain good education, it does not make their futures any easier.

During the Soviet era, women were supposed to be liberated by having outside employment, but most were overwhelmed by the double hardship of having a job and having taking care of a family. For some women, the new era means that they have a right to not work and a right to resume their traditional place in the home. Other women have continued to work, despite the setbacks women face in the Ukrainian workforce, such as unequal wages and positions as compared to men with equivalent qualifications. The average yearly earned income for men in 2002 was \$6,493, while the average earned income for women was \$3,429. According to the Human Rights Watch in 2003, the Ukraine Ministry of Labor's responses to gender discrimination in the workplace were subjective and unmethodical. Most women interviewed in the report were unaware that they could report unfair labor practices. The Human Rights Watch also reported in 2005 that women make up 80 percent of the unemployed in Ukraine.

Against these incredible odds, there are some success stories, such as Prime Minister Yulia Tymoshenko, ranked the world's third most powerful woman by *Forbes Magazine* in 2005. Ukrainian women athletes have shown that they can compete at the highest levels: swimmer Yana Klockhova won two Olympic gold medals in the 2004 Games and the women's gymnastics team placed fourth.

Some headway toward helping women in the job market has been aided by the Women's Economic Empowerment project, sponsored by the US Agency for International Development and various Ukrainian NGOs. Since the project's inception, almost 13,000 Ukrainian women have received business training, and more than 1,000 of these women have started or expanded their own businesses. Non-governmental agencies such as Women's Information Consultative Center (WICC), which was founded in 1995, are also hard at work educating and informing women in Ukraine.

Another serious problem facing Ukrainian women is the massive human trafficking industry, be it in the realm of sexual exploitation or forced labor. Eastern Europe is a bastion for trafficking: people are sent from there to the rest of Europe, the Middle East, or Russia. Many women from rural areas in Ukraine unwittingly become victims of trafficking when they try to get jobs in the cities, while others simply submit to prostitution and claim that such a choice was unavoidable if they wanted to advance in the world.

The US State Department's Trafficking in Humans Report of June 2006 states that the Ukrainian government is not doing enough to combat the problem, although they are taking significant steps, such as establishing an anti-trafficking department in 2005 and cooperating with NGOs and international organizations to help victims.

Ukrainian women face other problems common to women in countries of the former Soviet Union: outnumbering and outliving men. As a consequence of these factors, there are many single mothers in Ukraine, as well as a low birth rate. The divorce rate in Ukraine is high, varying from 40 to 64 percent, depending on the source, and highest in urban centers. No system of child support payments exists, making life even more difficult for single mothers and creating a new backlash against having children.

Ukrainian women will continue to face challenges in the coming years, but they will undoubtedly meet these challenges with the same strength that has served them for centuries. After surviving communism, World War II, and a complete overhaul to democracy, Ukrainian women shall prevail against the odds.

#### Questions for further study:

- What are some of the most significant problems facing Ukrainian women today?
- What are some things that have been done to empower women?

# THE UNITED KINGDOM

## A Self-Study Guide

GEORGE P. SHULTZ  
NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

Winston Churchill's oft-repeated laconic statement about us and the "Brits"—that we are two great peoples separated by a common language—serves as a warning about how different we are and how little we know about each other. This Self-Study Guide is intended to provide U.S. Government personnel in the foreign affairs community with an overview of The United Kingdom, mainly historically and politically, as a partly Romanized island country, a constitutional monarchy, a union of peoples on whose empire as recently as a century ago the sun never set, a multi-ethnic society. It is a digest describing the Isles' specific characteristics, but it is also much more than that. The author presents the past and present insistently leading the British to an overwhelming question about their own identity. It is among other things an essay on a nation seeking to define itself anew in a post-imperial, post-cold war, perhaps even post-modern and post-national setting. As such, this guide is designed as an introduction, as an orientation, and as a mild provocation. It intends to provoke the reader's interest, which can be satiated to some extent by consulting the readings to which reference is made along the way.

The first edition of the Self-Study Guide to The United Kingdom was prepared by Dr. Robin Niblett, Executive Vice-President of the Center for Strategic and International Studies and Senior Fellow in that group's European Program. The views expressed in this Guide are those of the author or of attributed sources and do not necessarily reflect official policy or the position of the Department of State or the National Foreign Affairs Training Center. This publication is for official educational and non-profit use only.

THE UNITED KINGDOM

## Introduction

1997 – 2001 has been a period of intense change for the United Kingdom at the social, economic, and political levels. The ruling Conservative party has suffered an electoral collapse and ideological splintering and appears unelectable for the foreseeable future. A “new” Labour party has embarked upon fundamental constitutional reform to a polity and society hidebound by tradition. A surprisingly quick transition to a stable monetary economy has not slowed the continuing demise of the country’s once proud welfare state. By any measure, the last four years have been stressful for a country with such deep historical roots. The people of the United Kingdom have not yet decided whether to support the Labour party’s campaign to “re-brand” and reinvent the country, or whether to resist and choose a future as a “Little,” but more predictable England.

This guide provides a template for thinking about the challenges that the United Kingdom currently faces. It examines Britain’s physical and historical roots; its political and constitutional structure; its domestic economic structure and

performance; and its relations with its strategic partners – the United States and the member states of the European Union. The paper also pays special attention to one of the most fundamental decisions currently facing the country – whether to pool sovereign control over its currency and monetary policy alongside the other members of the European single currency, the euro.

# I. Environment and Its People

## Location / Geography

Located off the north western edge of the European continent, the United Kingdom is known as an island nation, although its domestic sovereign territory also comprises the northern portion of Ireland (see figure 1). It is separated from its nearest continental neighbor, France, by what the British call the English Channel and the French call “La Manche” (now linked, however, by the undersea Channel Tunnel between Dover and Calais). The United Kingdom also includes a collection of small nearby islands, with the Shetlands furthest to the north and the Channel Islands (Jersey, Guernsey) to the south off the French coast.

The United Kingdom contains large swathes of arable land across the South, the Midlands, the North, into the southern part of Scotland, and across Northern Ireland.

Fishing has long provided a source of food and income for the people, although over-fishing, especially in the North Sea between the United Kingdom and Norway, has depleted stocks and reduced catches considerably in the past decade.

After heavy clearing of forests for farming and, in the 16<sup>th</sup>, 17<sup>th</sup>, and 18<sup>th</sup> centuries, for house and shipbuilding, Britain’s forests have declined to 7% of land cover. England’s only significant range of mountains, the Pennines, runs down the center of the island. The tallest mountain in the British isles, Ben Nevis, is found in Scotland at 1,343 meters.

The United Kingdom has a modest climate, rarely declining below 30 F in the winter, even in the colder north, and rarely reaching above 85 F in the summer. Rainfall can be persistent, even in the summer months.

**Population:** 58 million

**Area:** 244,820 sq. km. (94,525 sq. mi.); slightly smaller than Oregon.

**Cities:** *Capital*--London (metropolitan pop. about 7.1 million).

**Other major cities:** Birmingham, Glasgow, Leeds, Sheffield, Liverpool, Bradford, Manchester, Edinburgh, Bristol, Belfast.

**Terrain:** 30% arable, 50% meadow and pasture, 12% waste or urban, 7% forested,

1% inland water.

**Land use:** 25% arable, 46% meadows and pastures, 10% forests and woodland, 19% other

Figure 1 from CIA World Factbook [www.cia.gov](http://www.cia.gov)

## Resources

The United Kingdom possessed historically extensive mineral resources, such as tin, iron ore, copper, and coal. While tin and copper reserves were exhausted in the early nineteenth century, domestic coal production continued to serve as a backbone of the British economy – fuelling the industrial revolution in the 19<sup>th</sup> century and then providing the bulk of the power to drive the country’s electrical grid into the 1980s. Starting in the 1980s, however, domestic coal production was gradually priced out of the domestic market by cheaper imports and the increasing cost of mining ever-deeper seams. In

the 1990s, gas has made significant inroads into Britain's generating capacity; to the extent where the new Labour government chose to limit future gas-powered plant construction to ensure a diversified power grid for the near future. Since the late 1970s, Britain has benefited greatly from oil and gas resources in the North Sea, which have not only supplemented domestic consumption, but provided a useful boost to Britain's current account.

## Religion

Most British are baptized into the Anglican Church (sometimes known as the Church of England). However, regular church attendance by Anglicans has declined steadily to a 6% minority of the population today. Nevertheless, the Archbishop of Canterbury, the Anglican Church's highest ordained priest, still acts as a focal point for the country's "moral conscience," and the Church's institutional role in British society is underpinned by the titular role of the monarch as the head of the Church and "defender of the faith."

Anglicans today comprise 45% of the population, Roman Catholics 15%, Muslims 3.5%, Hindus 0.6%.

### Immigration

Britain possesses a self-perception as a relatively integrated racial society, drawn from the early and nationwide abolition of slavery in 1833 (the trade in slaves was abolished in 1807) and subsequent lack of a racial protest movement and body of law built around the fight against racial discrimination. The most significant waves of immigration in recent times have come from the West Indies in the waning days of British colonial control and then from the former colonies of the Indian Empire – India, Pakistan, and Bangladesh. Today, West Indians and South Asians comprise about 3% out of a total British population in 2000 of approximately 59,500,000. The self-perception of an integrated society, however, bears closer examination. Minority groups are poorly represented in the judicial profession, in the police, the military, and among politicians. In 2000-2001, violent riots erupted in cities across the North of England involving the second generation of Asian immigrants, many of whom live in economically depressed urban areas and are believed to have suffered academically and economically from a rigid adherence to multiculturalism among immigrant groups.

## Muslims in Britain

The sense of a growing cultural divide, especially between Britain's Muslim population and the rest of Britain's citizens, has been thrown into sharp relief by the terrorist attacks of September 11, 2001 and the discovery of British Muslim citizens among Al Qaeda's forces in Afghanistan; by the infamous case of Richard Reid, the "shoe bomber;" and by the British origins of the ring-leader in the kidnap and execution in Pakistan of Daniel Pearl, the Wall Street Journal reporter. The fact is, however, that Britain's Muslim population is highly diverse, reflecting successive waves of Muslim immigration. This started in the 1950s, following the Hindu-Muslim violence and political turmoil in the Indian subcontinent that led to the creation of Pakistan and Bangladesh. In the 1960s, Africanization policies in countries such as Kenya and Uganda led to an influx of East African Asians, many of who were Muslims. The late 1970s and early 1980s saw the arrival of Iranians fleeing from the Iranian revolution. In the 1980s, members of political dissident groups from Arab countries, such as Shi'as from Iraq, and other dissidents from the Gulf states also made their home in the UK.

As a result of this "staggered" pattern of immigration, British Muslims are a diverse grouping, differing in their level of education, their social and economic conditions, their degree of integration into British society, their links to their home countries, and their commitment to political activism. Pakistanis and Bangladeshis appear to be the most disadvantaged economically; suffer the highest levels of unemployment (as high as 40% among Pakistani men in 1994); and have the lowest levels of academic achievement. Nearly half of Britain's Muslims and the majority of Arabs and Iranians live in and around London. Other major concentrations include Birmingham, where Muslims constitute 8% of the city's total population, and Bradford.

The vast majority (around 85%) of Britain's Muslims are Sunnis. Within the Sunni and Shi'a communities (the latter originating primarily from Iraq, Iran, and other Arab states) there is also great religious and political diversity, with different religious schools competing for influence and with dividing lines drawn primarily between traditionalists and activists and between traditionalists and modernists. Nevertheless, there has existed in the UK since the mid-1990s an extremist fringe, among which five groups stand out in particular: (1) the Supporters of Sharia (SOS), based in north London and bringing together members who had worked or fought in Afghanistan and Bosnia, (2) the Al-Muhajirun, which supports Islamic movements in current secular Arab states, (3) Jihad, which had ostensibly maintained relations with Osama bin Laden, (4) Gamaa Islamiyya, an offshoot of the Muslim Brothers based in Egypt (accused of the 1997 Luxor attack), and (5) the Armed Islamic Group (GIA), an umbrella group for the most militant of Algeria's Islamic movement.

Crucially, there is very little in the way of assimilation of the Muslim community within British society. Most Muslims see their mosque-based communities as the central focus of their social lives. Muslims in Bradford, Birmingham, and the East End of London live largely in closed communities. Despite a growing involvement in local politics and a turnout at parliamentary elections that parallels other British communities (voting primarily for Labour), Muslim representation in Parliament is very low.

A central issue of concern since September 2001 has been the extent to which Middle Eastern and other countries provide support to Muslim groups in the UK in order to exercise some form of political influence. Saudi Arabia provides large quantities of assistance for the building and maintenance of mosques, while countries such as Iraq, Syria, Egypt, and Libya provide lesser amounts for the same purposes. Nevertheless, a number of Britain's Muslim groups are active opponents of the current regimes in the Arab world, an issue that has caused tension between the British government and its Arab allies.

Looking ahead, the greater cause for concern lies in the rising militancy of many young Muslims in Britain. 51% of Pakistanis were born in Britain and yet they and their counterparts from Bangladesh and Kashmir increasingly identify themselves as Muslims first and by their ethnic group second. This does not reflect so much an adherence to the religious principles of Islam as much as an emphasis on Muslimness in order to develop their political identity. Riots in Muslim-dominated neighborhoods first in 1996 and most recently and violently in the summer of 2001, reflect a frustration among young Muslims that neither their parents' passivity nor the British establishment can protect their interests from economic deprivation or growing racial attacks.

### **The British Class Divide**

At the same time, some of the most distinctive sources of societal division in the British system derive not from issues of religious persuasion or ethnic background, but from a "class divide" that continues to be sustained by a two-tiered education system. Wealthy children are sent to private, often boarding, schools (confusingly termed "public schools for those schools that cater for children from 13-18), while the majority of children go to state, "comprehensive" schools, where expected standards of educational achievement are, in general, noticeably lower. Education is mandatory in the U.K from ages 5-16. While the number is declining, a substantial percentage of children still leave school at 16. At the same time, only about 18% of British students go on to college education, although this number is on the increase. The government is trying to move to a more American system, promoting higher education while lessening costs to government through a new focus on student loan schemes.

While access to promising careers in banking, industry, and many service sectors is now based to a far greater extent on meritocracy, top-level positions in finance and among barristers and the judiciary continue to be the preserve of the privately-educated class. One of the most noticeable features of the United Kingdom is the extent to which, the moment a person utters their first sentence in a conversation, it is possible to tell from their accent whether they have benefited from

a private or comprehensive education, with the former sharing a common “upper class” accent and the latter revealing their regional origins and, thus, their “lower” / “working” class roots.

<p><b>People</b>          Population (July 1999 est.): 59.1 million.          Annual population growth rate (1999 est.): 0.24%.          Major ethnic groups: British, Irish, West Indian, South Asian.          Major religions: Church of England (Anglican), Roman Catholic, Church of Scotland (Presbyterian), Muslim.          Major languages: English, Welsh, Irish Gaelic, Scottish Gaelic.</p> <p>Education: <i>Years compulsory</i>--12. <i>Attendance</i>--nearly 100%. <i>Literacy</i>--99%.          Health (1999 est.): <i>Infant mortality rate</i>--5.78/1,000. <i>Life expectancy</i>--males 75 yrs.; females 80 yrs.          Work force (1999, 28 million): <i>Services</i>--75.2%; <i>manufacturing</i>-- 15.6%; <i>construction</i>--6.5%; <i>agriculture and fishing</i>--1.9%; <i>energy and water</i>--0.8%.</p>	<p>Questions:</p> <p>-What efforts are local and central governments making to better integrate Britain’s immigrant communities into British society?</p> <p>-Is Britain finally transitioning into a classless society, where position is</p>

## II. History and its Legacy

### The Birth of England and the British People: A Tale of Invasions

At the outset, Britain was inhabited by Iberian tribes between 600 and 400 B.C. However, Britain became primarily a Celtic nation as Celtic tribes moved into the British isles from Gaul (France), the Danube Basin and areas North of the Alps. The word “Breton,” derived from the name *Pretanikai nesoi*, given to the people of the British isles by the Greek explorer Pytheas in 325 B.C., signified “the land of the tattooed men,” a practice much favored by the Celts.

Julius Caesar undertook the first Roman invasion of Britain in 54 B.C., but, for a century after Caesar’s departure, Britain was forgotten by Rome, being a source of only the most meager tribute. It was not until 43 A.D., under the emperor Claudius, that Rome undertook a full occupation that extended to the mountain regions of Wales and Scotland (Hadrian’s wall still stands as a testament to the Roman Empire’s northernmost reach). The Romans bequeathed to Britain excellent roads and a number of carefully constructed towns in Roman style (Bath contains some of the most elaborate Roman ruins from this period; “Londinium” owes its roots as Britain’s capital both to its port and its location as the cross-section between Roman roads cutting from North to South).

Rome’s rule of this far-flung colony decayed during the third century, as Rome’s legionnaires became separated from their capital and its generals sought to maximise their power at the expense of a decaying core. By the time of Rome’s collapse in 410, most of the legions had departed, leaving behind a people unprepared to protect themselves from war-like neighbors on the British isles and off their coast. Angles, Jutes, and Saxons crossed the sea, warlords and marauders who filled the vacuum, pillaging the country and destroying its infrastructure. Within a hundred years, few traces of Rome’s

occupation remained. Even the language lost most traces of its Roman influence, unlike Mediterranean countries closer to Rome's center, and acquired instead the Anglo-Saxon linguistic base that lasts to this day. Direct traces of Britain's Celtic heritage, especially in terms of language, are most prevalent in Wales, where Welsh remains the primary local dialect, and in parts of Scotland.

Angles and Saxons, rather than establishing a new race in Britain, added their Germanic influence to the pre-existing mixture of Iberian, Celt, and Roman genes which had preceded them. Their kings also put up little resistance to the arrival of Christianity from Wales and from Rome in the sixth and seventh centuries. Starting from the eighth century, all of England formed part of the Roman Church.

That same century, however, saw the arrival of marauding attacks by Norsemen from what now constitutes Denmark, Sweden, and Norway – the next wave of outsiders to embark upon an invasion of England. By 851, one hundred Danish ships sailed up the Thames estuary and took London by storm. Full Danish control of England and its disunited Anglo-Saxon kings was prevented only by the legendary King Alfred. Having drawn a line between Danish and Anglo-Saxon control of England, the scene was set for King Canute's uniting of the two groups in 1016. Despite this bold act, competition for the crown of England between diverse ruling families eventually drew England's last major foreign invasion over from the North of France, where William the Duke of Normandy linked to one of the families and backed by the Pope in Rome, laid his claim to the throne. After defeating his rival Harold, at the Battle of Hastings, William the Conqueror was proclaimed King of England in 1066, paving the way through his reign for the emergence of what we now recognize as the British nation and its particular institutions.

Before reviewing the history of Britain's institutions of government, it is worth noting that Britain, unlike most of its European neighbors, was sheltered for the next millennium from further invasion.

## **Britain's Two Distinctive Institutions**

# **The monarchy**

Several features define the United Kingdom. One of the most central is the monarchy, which, from William the Conqueror onward, has provided England, and then the United Kingdom its head of state in an unbroken line, except for a brief period from 1649 – 1660 (described below) through to the present day.

The dynastic lines of the British monarchy started with William the Conqueror (1066 – 1087) and his Norman and Angevin successors, William II (1087 – 1100), Henry I (1100 – 1135), Stephen (1135 – 1154), Henry II (1154 – 1189), Richard (1189 – 1199), and John (1199 – 1216).

Next came the Plantagenets, with their inter-linkages with the French royal family, Henry III (1216 – 1272), Edward I (1272 – 1307), Edward II (1307 – 1327), Edward III (1327 – 1377), Richard II (1377 – 1399), Henry IV (1399 – 1413), Henry V (1413 – 1422), Henry VI (1422 – 1461), Edward IV (1461 – 1483), and Richard III (1483 – 1485).

Then the Tudors, Henry VII (1485 – 1509), Henry VIII (1509 – 1547), Edward VI (1557 – 1553), Mary (1553 – 1558), and, most famously, Elizabeth I (1558 – 1603).

Since Elizabeth left no direct heir, then came the Stuarts, with their Scottish ties, James I (1603 – 1625), Charles I (1625 – 1649), Charles II (1660 – 1685), James II (1685 – 1688), William and Mary (1689 – 1702), and Anne (1702 – 1714).

Finally, there are the Hanoverians, with their German family ties, George I (1714 – 1727), George II (1727 – 1760), George III (1760 – 1820), George IV (1820 – 1830), William IV (1830 – 1837), Victoria (1837 – 1901), Edward VII

(1901 – 1910), George V (1910 – 1936), Edward VIII (1936 – abdicated), George VI (1936 – 1952), and Elizabeth II (1952 – present day).

While the monarchy has demonstrated a remarkable persistence through nearly one thousand years, its control on the levers of power has declined dramatically, first, following the execution of Charles I in 1629 at the command of Parliament; then after George I and the arrival of Hanoverians, when ministerial power became the prerogative of the government and not of the monarchy. Finally, in the last one hundred years, since the death of Queen Victoria, the indirect power of the monarchy has also been on the wane, as we shall discuss below.

Britain now possesses a “constitutional monarchy,” meaning that the monarch still acts as the titular head of state, but apart from having the right to dismiss Parliament and call a new election, he or she exercises no authority over the government in the exercise of its duties.

### Questions:

-The British monarchy has retained an unbroken line as the country’s head of state for nearly 1,000 years. Will the monarchy retain this position for the next 100 years? What chances are there of a republican movement appearing in the UK?

## The History of Parliament

A second defining British institutional feature is the Parliament. First called into being under Edward I (the Confessor) around 1305, it possessed from its earliest days a distinguishing characteristic of today: two houses – an upper chamber (now known as the House of Lords), composed initially of bishops and the higher nobility (barons), whose seats were passed forward by birthright, and a lower chamber (now known as the House of Commons), composed initially of appointments from the petty nobility (knights) and burgesses (well-to-do merchants). In Edward’s day, the purpose of the Parliament was to enable the King to consult and legitimize the imposition of taxes on these different classes of the state. It did not control spending, voting on taxation, or the right to make laws, all of which remained the prerogative of the King. By instituting this two-chamber system from the outset; however, England avoided the emergence of the deep-seated hostility between the classes that came to haunt most continental countries, including France in the 18<sup>th</sup> century.

Despite its limited powers, especially in the face of such strong Tudor rulers as Henry VIII and Elizabeth I, the institutionalization of Parliament led gradually to its emergence in the early 16<sup>th</sup> century as a political presence if not a political force within the United Kingdom. Parliament's gradual acquisition of political power emerged from its clash with James I, the first of the Stuarts, who took the throne after the death of Elizabeth in 1603. James I sought to impose on Parliament the doctrine of the divine and hereditary right of kings, whereby the king became a sacred personage and Parliament merely recorded his divine ordinances. This absolutist doctrine which was also espoused by Charles I, his successor, deeply offended the Commons. The desire of both kings to improve relations with catholic Spain and France also went deeply against the grain of the mass of the people and the Commons. A deep rift opened between James' and Charles' favoring of a "High Church," more tolerant of catholicism, and the growing calvinism and puritanism of the English people. In 1629, the clash between parliament and Charles I came to a head, with Parliament introducing the "three resolutions," passing final authority over spending from the monarchy to parliament and, in response, Charles I disbanding Parliament. There ensued civil war in England from 1642-46 and, with the defeat of the royalist forces, Parliament's decision to execute Charles I in 1649, with the encouragement of Oliver Cromwell, head of the Puritan army.

England's ensuing flirtation with republicanism proved short-lived as the people quickly grew wary not only of the rigid policies of the puritans, but also of the seeming tyranny of a parliament controlled by the Cromwellian army, and then a country with no Parliament controlled by Cromwell. With Cromwell's death, Charles II, Charles I's son, was recalled from France to take the throne. Despite this restoration, the balance between monarchy and Parliament had been changed for good. Although Parliament did not impose a cabinet between itself and the King, it did control the revenues at the King's disposal and prevented him from having a standing army.

The further transformation of the monarchy into its current constitutional role took place after the death of Queen Anne, when, childless, Parliament refused to turn for succession to her Catholic brother. Instead, in 1714, they reached out to George I, great grandson of James I, who had been brought up in Germany (Hanover) and spoke no English. With his arrival, ministerial responsibility shifted to Parliament, with the monarchy in an elevated form of constitutional supremacy only.

## Parliament Today

This relationship between the British monarchy and Parliament has now evolved to the point where the monarch is head of state in name only. Elections to the House of Commons, whose members are divided today primarily between members of the Labour and Conservative parties, are designed to produce a majority party that is then invited by the monarch to form a government. Britain's "first-past-the-post" electoral system, whereby members of parliament (MPs) are elected in winner-takes-all constituencies around the country, leaves little room for the sort of small parties fostered by countries that practice variants of proportional representation (whereby seats in parliament are apportioned as a percentage of the overall vote). The leader of the winning party becomes Prime Minister and has considerable discretion within party rules to choose his or her cabinet. With a clear majority in Parliament, the only real check on the power of the government is exercised by the House of Lords.

However, the House of Lords (whose membership and terms of office are currently under review by Tony Blair's "New Labour" government--see below), is entitled only to review legislation passed by the House of Commons, and may reject it only a maximum of three times, before the amended legislation can be forced through by the government. The Lords' main influence, therefore, derives from its ability to embarrass and expose excesses in government legislation. This can have impact, especially since the House of Lords has tended to demonstrate an independent streak, even when its majority has matched the political hue of the party in control of the Commons, as Margaret Thatcher discovered on a number of occasions and Tony Blair is now discovering over the issue of the curtailment of civil rights in the wake of September 11.

## Questions:

-What sort of check does the House of Lords actually apply upon the House of Commons?

-The British Parliament has been called the “mother of all Parliaments.” Can Parliament retain its vibrant position as the forum for genuine public debate and the airing of popular grievances in an era of increasingly Presidential governance?

## The British Empire: A Lasting Legacy

Britain’s recent history as an imperial power that, at its zenith, stretched across four continents, has had a defining impact not only on Britain’s position in the world, but also on the psyche of the British people. The rise and demise of the British Empire can be traced back initially to the reign of Elizabeth I. During her reign, the British established their first precarious fishing communities on the coast of Newfoundland and also attempted to establish a colony on what they called Virginia. Elizabeth’s reign, also marked the beginning of Britain’s mastery of the seas, with Francis Drake and other British mariners developing ships and naval techniques that held the upper hand over those of the 16<sup>th</sup> century’s principal empire: Spain. British colonization of North America did not really get into full swing until the mid-17<sup>th</sup> century, especially with the wake of the persecution of the Puritans after the restoration of the monarchy. At the same time, England acquired its first colony in India, when Bombay was ceded to British control as part of the dowry offered to Charles II.

Gradually, over the next three centuries, the British Empire took shape. After the loss of the American colonies in the late 18<sup>th</sup> century, it still extended at its height in the 19<sup>th</sup> century under Queen Victoria from Canada and the West Indies on the American continent, across key ports in the Mediterranean (Gibraltar, Malta, and Cyprus) to North Africa (Egypt and Palestine) and down East Africa (Kenya, Uganda, Zimbabwe, South Africa) across what are now the Gulf States to the “jewel in the crown” – India – and thenover, again to Burma, Malaysia, and Singapore, through portions of the Indonesian archipelago (Borneo, New Guinea), down to Australia and New Zealand. In addition, the British Empire also controlled key ports around the world, such as Hong Kong and Diego Garcia in the Indian Ocean.

At the heart of the success and longevity of such a far-flung empire was not just the British Navy, but also, the effort of successive governments to grant an element of autonomy to those parts of the empire where large communities of the caucasian race had taken root. The key to this British approach was the establishment in the mid 19<sup>th</sup> century of the Commonwealth of Nations, which was composed of Dominions, encompassing major English-speaking colonies such as Canada, South Africa, and Australia. In the Dominions, government was by self-representation, but with a Governor General consulted on the selection of ministers and serving as the link between the government and the country’s head-of-state – the British monarch.

Most remarkable, however, was the way in which the British controlled colonies that were not granted self-representation, not only in Africa, but, most notably, in India. There, 5,000 British administrators, backed by 75,000 troops and 150,000 native troops, held 350 million Indians in peace (with the occasional riots) and instituted significant improvements in land cultivation, irrigation, education, and health across the sub-continent.

In the wake of the first World War, Britain succeeded in holding together the bulk of its empire. In the case of the Dominions, these received separate representation in the League of Nations. Through the Imperial Conference of 1926 and the second Statute of Westminster in 1931, the British Parliament gave up the power to legislate for the Dominions on

either internal or external matters; transferred the right to make peace or war and to negotiate treaties to them also; and agreed that Dominion Prime Ministers would derive their power directly from the Crown. In 1921, Ireland was given a separate status as the Irish Free State, although the northern part of the island, largely protestant, retained its link to the United Kingdom. In 1936, Britain relinquished control of Egypt, but retained control over the Suez Canal.

### Map of the British Empire, 1897

from <http://www.btinternet.com/~britishempire/empire/maproom/pinkbits1897.htm>

The Second World War, however, had more devastating consequences for the British Empire. Britain finished the war deeply in debt and unable to sustain the costs of maintaining its far-flung possessions around the world. In Asia, Britain never recovered from the material or psychological impact of its ouster by the Japanese, abandoning Burma and Ceylon in 1947 and Malaysia, after coping with a Communist insurgency, in 1957. In 1945, the Labour government in London followed through on its electoral pledge and, in the face of growing popular agitation and religious discord, offered India full independence in June 1948. Britain left Palestine the same year. Its withdrawal from its African colonies and its island possessions in the Caribbean continued through the 1960s and 1970s, as the British relinquished, in most cases voluntarily, the remnants of their empire. The bulk of these former colonies became members of the Commonwealth, in

many cases keeping the British monarch as their titular head of state and preferential access for their modest exports to the British market, but with full political control over all aspects of government.

By the 1990s, the British Empire had shrunk to a few outposts some of accidental relevance (for example, Gibraltar, Belize, and a number of Caribbean islands), some of strategic or economic importance (for example, Hong Kong and the Falklands). However, the self-perception of being a former imperial power, underscored in the continued use of the term “Great Britain,” still animates the British public and its day-to-day politics.

### Questions:

-How was Britain able to conduct such a relatively painless withdrawal from Empire after World War II? What has been the legacy of its rapid withdrawal (Kashmir, Palestine)?

-How does Britain square its circle of an insular public-suspicious of ‘foreigners’-with its legacy of colonial ties and continuing global diplomatic influence?

-How important a role can the Commonwealth play in the future?

## III. The United Kingdom today

### Constitutional and Political Structure

Britain’s political institutions -- the Parliament and Monarchy, in particular – continue to play a central role both in the British people’s perception of their national identity and in outsiders’ perception of Britain’s national uniqueness, more so than do the political institutions of other West European countries such as France and Germany. This is due partly to their long history, but partly also to the fact that the British political establishment has consciously built the concept of the “United Kingdom” around these institutions. It is important to note, therefore, that, since the mid-1980s, the British people’s confidence in their institutions has declined significantly and that these institutions are trying to find a new sense of purpose.

*The Monarchy:*

Confidence in the monarchy, already low in the early 1980s at a little over

## Government

**Type:** Constitutional monarchy.

**Constitution:** Unwritten; partly statutes, partly common law and practice.

**Branches:** *Executive*--Monarch (head of state), Prime Minister (head of government), cabinet.

*Legislative*--bicameral parliament: House of Commons, House of Lords; Scottish Parliament, Welsh Assembly, and Northern Ireland Assembly. *Judicial*--magistrates' courts, county courts, high courts, appellate courts, House of Lords.

**Subdivisions:** Municipalities, counties, parliamentary constituencies, province of Northern Ireland, and Scottish regions.

**Political parties:** In Great Britain--Conservative, Labour, Liberal Democrats; also, in Scotland--Scottish National Party; in Wales--Plaid Cymru (Party of Wales). In Northern Ireland--Ulster Unionist Party, Social Democratic and Labour Party, Democratic Unionist Party, Sinn Fein, Alliance Party, and other smaller parties.

**Suffrage:** British subjects and citizens of other Commonwealth countries and the Irish Republic resident in the UK, at 18.

25%, dropped in the late 1990s to 18% (at the same time, confidence in the Church of England, associated for many with Britain's regal establishment, fell from 52% to 25%). An important reason for this decline, in contrast to the rising popularity of the Spanish royal family, for

example, is that the British monarchy has appeared hide-bound throughout the 1980s and 1990s in a Victorian and imperial time-warp that has increasingly weakened the bonds of respect between the Royal Family and its "subjects." Members of the royal family constitute the pinnacle of Britain's hierarchical social structure and enjoy the requisite life-style involving fox hunting, polo, and horse racing. Public appearances are encrusted in imperial pomp and ceremony. All aspects of their daily life reinforce the appearance of separateness.

The arrival of two "outsiders" -- Princess Diana and Sarah Ferguson, Duchess of York -- as spouses to Queen Elizabeth's two eldest sons in the early 1990s, far from popularizing the Royal Family, threw into sharp relief the foreignness of the Royal Family's attitudes and behavior. Princess Diana's public critique of Prince Charles and the Royal Family, "the firm," following the collapse of their marriage resonated strongly with the majority of the British population. Perhaps as a result, her death in 1997 has served as a watershed for the Windsors. Members of the Royal Family and their advisors now understand the importance of providing a more open and informal access to the public, one that encourages an impression of inclusion rather than the social separation of the 19<sup>th</sup> and early 20<sup>th</sup> centuries. Judging by the huge popular demonstration of goodwill toward the monarchy during the Queen's jubilee celebrations in 2002, the monarchy may be able to recapture some of its past affection and respect in the hearts and minds of the British people.

Prince Charles, represented by his son Prince William, may now serve as the bridge to a more modern British Royal Family, which has a strong chance of holding on to its position as the sovereign head of the British state.

### Parliament:

Public confidence in the Parliament also declined in the 1990s, from 54% to 10% by one estimate in 1997. Sixteen years of uninterrupted conservative government had, by 1997, jaded the opinion of the British electorate toward the public service ethos of members of Parliament, and newspapers feasted on a series of trivial but persistent "sleaze" (corruption) attacks on conservative MP's. At the same time, the conservative party's increasingly dismal electoral showings in Scotland and Wales over this period, combined with its refusal to countenance any form of devolution of power to regional assemblies, fed a growing popular resentment at the over-centralization of political power in London. The arrival of the "New Labour" government in May 1997 coincided with a new desire among the electorate to experiment with changes in their modes of governance, especially decentralization. As we shall see below, Tony Blair has embarked upon a program of constitutional reform that will affect both Parliament's modes of operation and its standing in the future.

# Domestic Politics

Domestic politics in Britain have undergone a seismic shift since the 1997 defeat of the Conservative Party. The scale of the Labour Party's victory in 1997 was remarkable. Labour gained 146 seats for a total of 418 (no losses) out of the total 631. The Conservatives lost 178 to finish with 165 (no gains). Equally extraordinary was the fact that the Labour Party held on to this lead four years later in its June 2001 election with a loss of only 6 seats, the first time in its history that the Labour Party has won a second consecutive electoral term. At the heart of this shift in British politics has been the rapid and radical program of reform that Prime Minister Tony Blair has pushed through the Labour Party.

## *Labour Party*

The policy agenda for "New Labour" was hatched principally by two individuals: Tony Blair, party leader since 1994, and Gordon Brown, now his Chancellor of the Exchequer (finance minister) with the effective strategic guidance of Labour party consultant and later MP, Peter Mandelson. Blair and Brown advocated from the outset a pragmatic and market-oriented approach to managing the British economy, an approach entirely free of old Labour dogma. In a bold move prior to the 1997 electoral campaign, Blair convinced the Party to abolish Clause 4 of its constitution, which supported the nationalisation of important industries and public services. During the 1997 campaign, Brown promised to abide by the Conservative Party's spending plans for the first two years of the new government and to maintain income tax (including the top rate of 40%) at existing levels for the life of the parliament. By sticking to these pledges through to 2001, New Labour was able to dispel fears among the British middle classes about the party's old "tax and spend" habits.

"New Labour" is to all intents and purposes a social democratic party shorn of most of the welfarist / corporatist baggage of its continental European social democratic counterparts. It represents a radical departure in recent British politics in that a "Labour" government has unavowedly adopted a largely "conservative" approach to its fiscal policy and its microeconomic management of the country. Brown, in particular, and a small group of his U.S.-educated advisers believed that Britain can lead the way in defining and implementing a new paradigm for economic growth, social solidarity, and the role of government -- what Blair has called a "third way." Blair's argument was that, having veered between the extremes of capitalism and socialism for the past fifty years, Britain is now in a position to carve out a middle course between the two extremes.

Tony Blair's ability to pursue this objective has been buttressed by the imposition of an iron discipline within the Labour party. The party is now far more tightly organized than the conservatives ever were, with centralized cabinet control extending from Parliamentary candidate lists to the press releases of government ministers. The deeper question is whether the party as a whole really has undergone a radical conversion to a Christian Democrat philosophy, combining belief in the market system with strong social policies. A number of Labour MPs, supported by the traditionally more radical local Labour party activists, still see the conversion as tactically expedient, but flawed in principle. Their influence, however, has remained limited due to the realisation of the majority of Labour supporters that Labour was only able to escape from the political wilderness by taking the middle ground away from the conservatives. Internal opposition has also reflected the political inexperience of the new intake of Labour MPs in 1997 and the presence of benign domestic economic conditions.

As New Labour approaches the first-year anniversary of its 2<sup>nd</sup> electoral victory, Tony Blair's position has been weakened by a number of factors. The most important are:

- A failure to translate macroeconomic stability into tangible social gains for the public;
- Rising levels of crime;

- An over-emphasis on “spin” (presentation) over policy (substance)

Current state of the parties in the House of Commons

<b>Labour</b>	411
<b>Conservative</b>	164
<b>Liberal Democrats</b>	52
<b>Scottish National Party/Plaid Cymru (SNP 5/ PC 4)</b>	9
<b>Ulster Unionists</b>	6
<b>Ulster Democratic Unionist Party</b>	5
<b>Sinn Fein (Have not taken their seats)</b>	4
<b>Social Democratic &amp; Labour Party</b>	3
<b>Independent</b>	1
<b>The Speaker and 3 Deputies (Do not normally vote)</b>	4
<b>TOTAL</b>	<b>659</b>

Government majority - **167**

- Blair’s perceived preference for foreign policy over domestic issues;
- The “sleaze” factor (political scandals), which voters had previously associated with the conservatives and most of which appeared to involved seeking political favors in return for party donation;
- An underlying tension with Gordon Brown over the latter’s desire to take over leadership.

### Questions:

-What has been Tony Blair’s political philosophy? What is or was the Third Way?

## Conservative Party

Along with losing over half its seats in 1997, the Conservative Party lost its claim to being the party of the Union, stripped of its last remaining MPs in Scotland and in Wales. Even after making some modest gains in the 2001 election, the party

of Winston Churchill and Margaret Thatcher has been reduced to a southern, rural, English party. The retirement and defeat of many of its most talented members in 1997 has left it demoralized and deeply split along two axes: between Thatcherite, tax- and welfare-cutting conservatives and more moderate patricians who want to do battle with Blair in the middle ground, and also between cosmopolitan, business-friendly pro-Europeans and an anti-European conservative heartland.

William Hague, appointed to be the Conservative Party's dynamic young new leader in Blair's mold in July of 1997, was unable to lift the party out of its state of demoralization and internecine warfare. Following its second severe electoral defeat in June 2001, Hague resigned as leader of the opposition. A bitter leadership contest ensued involving Michael Portillo, former Defence Minister and seeming heir to the Thatcher mantle, Kenneth Clarke, the pro-European Chancellor in John Major's government, and Iain Duncan-Smith, standard-bearer for the traditionalist and anti-European wing of the party. To many people's surprise, Duncan-Smith captured the majority of party members' votes in the September 2001 run-off against Clarke and will now lead the conservatives to the next election. Commentators warn uniformly of the uphill task that he will face, given his lack of past government experience and the ideological rigidity of the wing of the party that he represents. In the last 12 months, however, Duncan-Smith has surprised many commentators by demonstrating a steady hand in trying to steer his party toward the compassionate conservatism that proved so successful for George Bush Jr.

At best, however, Duncan-Smith has succeeded so far in stabilizing the party and preventing its further collapse. There is still little sense of an alternative social and economic vision upon which the conservative party could campaign toward an electoral victory.

### **Questions:**

-From what segments of the electorate is the Constitutional Party now drawing its support? Has this party lost its popular base?

### **Further Reading:**

Duncan-Smith speech at the last Conservative Party Conference in Blackpool , Oct., 2001.

## **Key members of cabinet**

**Tony Blair, Prime Minister**

**John Prescott, Deputy Prime Minister and First Secretary of State**

**The Lord Macdonald of Tradeston, Cabinet Office Minister and Chancellor of the Duchy of Lancaster**

**Robin Cook, President of the Council and Leader of the House of Commons**

**Andrew Smith, Secretary of State for Work and Pensions**

**Barbara Roche, Minister of State and Deputy Minister for Women**

**Christopher Leslie, Parliamentary Secretary**

**The Lord Williams of Mostyn**, Leader of the House of Lords

**Patricia Hewitt**, Secretary of State for Trade and Industry

**Lord Falconer**, Home Office Minister

**Gordon Brown**, Chancellor of the Exchequer

**Estelle Morris**, Secretary of State for Education and Skills

**Jack Straw**, Foreign Minister

**Geoff Hoon**, Minister of Defense

**Clare Short**, Minister for Overseas Development

**Alistair Darling**, Minister of Transportation

**Charles Clarke**, Minister without Portfolio and Party Chair

**Alan Milburn**, Health Minister

**Margaret Beckett**, Secretary of State for Environment, Food, and Rural Affairs

**Dr. John Reid**, Secretary of State for Northern Ireland

**Paul Boateng**, Chief Secretary to the Treasury

### **Liberal Democrats**

Despite building on their strong 1997 showing and gaining a record number of seats (52) in the 2001 election, Liberal Democrats, members of Britain's traditionally under-represented third party, face two fundamental problems. First, the scale of the Labour parliamentary majority means the government has no need for Liberal Democrat support in order to pass legislation. Second, the traditional Liberal Democrat claim to represent the center ground between the old politics of the left and right has lost its meaning. New Labour has taken possession of the political center, leaving the Liberal Democrats searching for a distinctive agenda that does not draw them toward the unelectable side of left-wing politics.

## **UK and Northern Ireland: An Evolving Political Relationship**

The Northern Ireland Assembly was established under the 1998 Good Friday Agreement, The Assembly is the prime source of authority for all devolved responsibilities. It has full legislative and executive authority - that is, the power to make laws and take decisions on all the functions of the Northern Ireland Departments. Power was devolved to the Northern Ireland Assembly at Stormont Castle and its Executive Committee of Ministers on December 2, 1999. The devolved government is responsible for transferred matters, such as Enterprise, Education, Health, Agriculture, Environment and Culture.

The biggest source of contention between Protestant Assembly members and Sinn Fein (the IRA's political wing) has been the IRA's refusal to decommission its weapons stockpiles. While political harmony was never a likely or achievable pre-requisite of a long-lasting peace in Northern Ireland, arms decommissioning by the paramilitaries has always been considered essential. The Irish Republican Army (IRA) has sustained its official cease-fire despite sporadic acts of violence by the splinter group, "Real IRA." However, security sources believe the IRA alone has enough weaponry to equip a small country's army and sustain a campaign for at least a decade. The IRA's arsenal was amassed over several years, some of it smuggled in from America and continental Europe, but most of it in several shiploads from Libya in the mid-1980s.

In May 2000, the IRA, which had given its support to the Good Friday Agreement, said it would not give up any of its weapons but would allow an independent inspection. At Stormont, the atmosphere soured over the IRA's refusal, leading ultimately to the resignation of David Trimble, first minister and leader of the Ulster Unionist Party on July 1, 2001. The IRA agreed a plan to put arms beyond use but withdrew it after the assembly was temporarily suspended. As the assembly crisis deepened, the IRA began decommissioning and placing arms beyond use, a move that led to Ulster Unionists returning to the power-sharing government as Trimble returned to be first minister on October 27, 2001. In response, the British government began scaling back its military presence. The loyalist UDA/UFF ceasefire was declared over and its associated political wing, the Ulster Democratic Party, was dissolved.

Actual decommissioning began in October 2001 with an announcement by the IRA that it had "implemented the scheme agreed with the Independent International Commission on Decommissioning (IICD)... in order to save the peace process."

In April 2002, the IICD announced that the IRA had decommissioned a second "substantial" amount of weapons. The IRA said in a statement that it had taken the step in an attempt to stabilize the peace process. Although continuing sectarian violence and hatred may undercut formal political efforts, the decommissioning process and the continued functioning and influence of the Northern Ireland Assembly will remain important forces in implementing a workable peace in this volatile area.

## **New Labour's Policy Agenda**

Blair and his ministers have sought to put their commanding domestic political position to active use in four areas: (1) constitutional reform, (2) the economy, (3) welfare reform, and (4) Britain's international relations, especially with Europe.

### **1. Constitutional Reform**

One of the main themes of Tony Blair's first parliament was to initiate a sweeping series of constitutional reforms that are transforming the political face of Britain. These reforms included:

- the devolution of the bulk of governmental affairs in Scotland to a national parliament in Edinburgh, and the transfer of more limited powers to national assemblies in Wales and Northern Ireland (the latter determined by the progress being made in the Good Friday peace accords);
- the removal of the rights of hereditary peers to vote and, for the majority, to sit in the House of Lords, Britain's upper chamber of parliament;
- the establishment of a Commission to examine the feasibility of a new voting system for the House of Commons. The impetus is to find a way to shift away from the current complete reliance on the "first-past-the-post" system to a new system involving a modest amount of proportional representation and incorporation of the European Convention of Human Rights into UK law;
- A deliberate effort to shore up public support for the monarchy by advising it on ways to present a more popular public image. The execution and debate over these reforms are not without risk.
- Scottish devolution could lead to demands for a referendum on independence and, thus, the break-up of the United Kingdom. The surprising surge in the popularity of the Scottish Nationalist Party (SNP) after the establishment of the Scottish Assembly took government ministers, many of whom are Scots, aback. Blair saw devolution as strengthening the Union, but it may have the opposite effect. Pressure for Scottish independence may come about not only because of growing popular support for statehood, but also because of the existence of an EU that lowers the costs of independence for small countries by providing them with a large free trade area for their goods and services and a credible common currency.
- The creation of the Scottish parliament and Welsh Assembly has led to calls, including within the conservative party, for the creation of an English Parliament or, along the same vein, for the exclusion of Scottish ministers from playing a leading role in both the British and Scottish parliaments. One concern is that, as the running sore of Europe continues to alienate the Conservative Party's traditional business constituency and its pro-European, pragmatic wing, the party may turn away from its traditional "unionist" stance and boil down to a core membership that feels most comfortable promoting a new form of English nationalism.
- Although the Blair government rushed forward in its first term to abolish the voting rights of hereditary peers, it has not come yet to an agreement on a new system to elect members to the upper chamber. As a result, new members continue to be proposed to "life Peerages" by the three major political parties and approved by the government of the day, a system that, far from promoting a new form of political balance to the lower house, smacks of the very cronyism that reform was meant to purge.
- Removing the right of hereditary peers to sit and vote in the House of Lords has also raised further questions about the legitimacy of the monarchy, the archetypal hereditary institution. Nevertheless, there appears to be little popular appetite for its replacement with a Presidential system and few other viable alternatives.

### **Question:**

-Is Britain genuinely becoming a de-centralized state? What new powers have regional or local governments actually acquired in the last five years?

-How will reform of the House of Lords affect policy-making in the UK?

### **Further Reading:**

The State We're In. Will Hutton. January, 1996.

## 2. The Economy

The Blair government's record on the economy has been much clearer and, overall, the record is a good one. In particular, the decision to stick by a fiscally stringent approach has produced impressive results.

- The budget ran a 2% surplus as a percentage of GDP in 2001, its third year in surplus (in 1993-94, Britain posted a 7.8% deficit);
- Government debt dropped in 2001 to 32% of GDP (compared to 62% in 1998, 57% in 1999, and 47% in 2000);
- Inflation hovers around 2%, one of the lowest rates in the EU and way below the rate of 9.5% in 1990;
- Unemployment fell below 1 million in 2001 for the first time since 1975, representing a jobless rate of 3.4% and contrasting to a current EU average of 8.5% .
- The ratio of general government spending to GDP dropped below 39% in 2000, in contrast, for example, to Germany's level of 47%.

These impressive figures have been underpinned by important structural characteristics of the British economy. As competition for global capital investment increased in the 1980s, conservative British governments adapted the domestic regulatory environment, introducing flexible labor markets, lowering non-wage labor costs, reducing the role of organized labor, and taking the lead in public sector privatization, strategies with which many other industrialized countries are still grappling. Britain also provided low taxation levels, with a corporate tax level of 30% and employers' social security level of 12%.

As a result, Britain benefited in the early to mid-1990s from large levels of foreign direct investment (FDI), becoming the third largest recipient of FDI in the world in 1996.

The Labor government has not rolled back any of these sources of attraction for foreign investment. In 1999, the United Kingdom attracted \$82 billion in FDI out of the EU's total \$302 billion (France, by comparison, attracted \$40 billion). One in five people employed in the British manufacturing sector now works for a foreign company. Foreign firms have brought not only financial investment, but also new work and management practices.

**GDP** (2001, dollars in million): \$307,116

**Annual growth rate** (2000): 3.0%.

**Per capita GDP** (1999): \$24,300.

**Natural resources:** Coal, oil, natural gas, tin, limestone, iron ore, salt, clay, chalk, gypsum, lead, silica.

**Agriculture** (1.8% of GDP): *Products*--cereals, oilseed, potatoes, vegetables, cattle, sheep, poultry, fish.

**Industry** (31.5% of GDP): *Types*--steel, heavy engineering and metal manufacturing, textiles, motor vehicles and aircraft, construction, electronics, chemicals.

**Trade** (1999): *Exports*--\$267.6 billion: manufactured goods, fuels, chemicals; food, beverages, tobacco. *Major markets*--U.S., Germany, France, the Netherlands, Ireland. *Imports*--\$311 billion: manufactured goods, machinery, fuels, foodstuffs. *Major suppliers*--Germany, U.S., France, the Netherlands, Japan.

Equally important to the British economy's recent success was the decision by Gordon Brown early in "New Labour's" first term to give the Bank of England nominal independence and, thus, introduce a greater level of macroeconomic stability to the British economy.

Foreign and British companies alike have benefited from this benign economic environment. Not only is Britain a location for globally competitive FDI, it also boasts a number of the world's leading multinational and global companies, including GlaxoWellcome, ICI, Shell, BP, BAE SYSTEMS, Diageo, Reuters, and BT. These companies have taken a lead in entering into cross-border alliances and mergers in an effort to reap the benefits of corporate consolidation and an expanded market base so as to compete at a truly global level. Despite its exclusion from the Eurozone since 1999, The City of London remains one of the world's two leading financial centers, with a workforce of over 800,000 (more than the entire population of Frankfurt) and a currency market turnover that is greater than that of New York and Tokyo combined. British firms also hold leading global positions in creative service industries such as advertising, the music industry, film and animation, retailing, and computer games. Overall, the British economy, rather than being a source of embarrassment, has started to serve as a source of national pride in recent years.

Underlying these positive statistics, however, are some important concerns. UK interest rates, although low by historical standards, remain higher than those of its continental partners in EMU. In part, this reflects the markets' suspicion of Britain's past economic volatility and its boom and bust cycles of the 1970s and 1980s. It also reflects a concern that UK unemployment has hit its structural floor. Public sector unions, resentful after several years of Conservative and Labour pay-restraints, may soon demand real pay increases, especially now that Labour's second term has been secured. UK interest rates also reflect reservations about Britain's ability to keep inflationary pressures in check indefinitely while staying outside EMU.

Relatively high interest rates have also helped keep the exchange rate of the pound sterling versus the Euro at punitive levels: the Euro is currently equivalent to approximately 0.65 pounds, representing a 60% appreciation since 1996. Companies that invested in plant capacity in the United Kingdom as a base to access the EU and world markets have been especially hard hit (60% of UK manufactured exports go to the Eurozone).

There is also a persistent negative side to Britain's economy. Try as it might, Britain has been plagued since the 1950s by economic decline relative to other European countries and globally. Part of this decline is subjective. Despite its strong roster of multinational companies, cutting-edge service providers, and technology start-ups, Britain is still perceived to excel in areas that are rooted in the past such as classic craftsmanship (clothes and sports cars) and traditional foods. More significantly, however, a thirty-year history of low economic productivity and low quality, and not just the recent high level of the pound, has undermined the competitiveness of the British manufacturing sector, excluding it not only from predictable areas such as the electronic appliances sector, but even the mass car industry.

Part of the reason for this decline is the legacy of having been the world's first industrialized country, a fact that has complicated Britain's transition to the just-in-time and knowledge era economies. However, Britain's 90 Nobel Prizes for science (second only to the United States) and its long list of significant technological inventions since the second World War (from the radio to the fiber optic cable), although a great testament to the creativity of British scientists and inventors, also expose the difficulty British companies face in translating their genius into marketable products and successful business ventures.

There are some who argue that the City of London's fixation on shareholder returns has trapped Britain in a state of economic short-termism that starves businesses of the stable investment capital necessary for long-term economic modernization and growth. Gordon Brown, however, has announced that one of his priorities for New Labour's second term is to improve the microeconomic environment for business innovation and competitiveness. Within two months of taking power, he announced sweeping changes to Britain's anti-monopoly system, with tough penalties outlined for price-fixing and other uncompetitive practices. More recently, he has proposed introducing bankruptcy laws that will mirror more closely the U.S. approach.

Britain will need several years of sustained, inflation-free growth before the economy will be able to recapture the ground lost in relation to its West European and other trading partners since the early 1980s. A priority for British policy-makers and business leaders alike over the next decade will be to ensure that Britain sustains its current comparative economic advantages while raising the competitiveness of British manufacturing and service industries in those areas that have suffered the greatest recent decline. This will be a tall order. Over this period, other European governments may undertake some of the structural domestic reforms that underpin Britain's recent economic competitiveness. And, as is discussed below, the government's decision on whether to join the Eurozone and pool its monetary policy with its EU partners will influence significantly Britain's future economic competitiveness.

### **Further Reading:**

The UK Economy. Malcolm Sawyer, ed. Oxford University Press, August 2001.

### **3. Welfare Reform: Britain's Fraying Public Services**

A further defining characteristic of Britain the last three decades has been the deteriorating state of its public services, particularly in the key areas of health, education, and transportation. Having focused in its first term on securing its macroeconomic credentials, New Labour has made improving Britain's public services its highest domestic priority for the next four to five years.

## **Education**

New Labour appears to be acutely aware of the challenges that economic globalization poses to Britain over the coming decade. Tony Blair's stated in the lead-up to his first term that the priorities of his new government would be "education, education, education," partly reflecting his assessment that this area will be central to the country's competitiveness in a "knowledge" economy. And yet, New Labour enters its second term presiding over one of the worst-performing school systems in the developed world. 7% of pupils in England and Wales still leave school with no academic qualifications. In mathematics, Britain ranks 17<sup>th</sup> in international assessments for 13-year-olds. Sadly, the British debate over education has been trapped on the field of social engineering (the need to provide, non-selective "comprehensive" schools to counter the existence of privately-funded "public schools").

Realising the seriousness of the situation, the new government has not been afraid to take on the teachers' unions in an effort to drive up education standards through a new regime of testing and school league tables, approaches they inherited

from the conservative party. Progress has been made since 1997, with school classes falling below thirty per class across the board and improving test results for children from 16 through 18. The government has also sidestepped the battle over the fairness of “selective” schools by encouraging the emergence of “specialist” schools that reserve 10% of their intake for children with a special aptitude in, say, modern languages or technology. In higher education, the government has stuck by the introduction of tuition fees and the gradual switch to a loan system to replace the old state-funded maintenance grants. However, it continues to limit the ability of universities to charge “top-up” fees, as in the United States, despite the growing crisis in university funding.

## National Health System (NHS)

Access to publicly-funded national health coverage from the cradle to the grave is seen as a fundamental right in the United Kingdom since its introduction after the second World War. The decaying state of the NHS, a thorn in the side of past conservative governments, has now become the Labour party’s problem. Having promised to “save the NHS” as part of its 1997 election campaign, the Labour government has been embarrassed to preside over a series of scandals involving improper patient treatment, a vicious nationwide flu epidemic in 1999-2000 that brought the NHS to its knees, and the release of several reports highlighting poor survival rates in the UK for illnesses that are far better handled in other countries. There are still over 1 million people on hospital waiting lists and Britain has a low rate of doctors per head compared to its EU partners.

The government’s solution is to spend a significant amount of additional funding over the next two to three years on hiring additional doctors and nurses, and building new hospitals. The government’s aim is to take health spending from its current 5% of GDP closer to the EU average of 7%, leading to a growth in the NHS of a third in real terms. As a result, Gordon Brown’s April 2002 budget contained the government’s first increase in direct taxation since it came to power in 1997. The 1p. (one penny) increase in National Insurance contributions is designed to pay for the UK’s biggest ever increase in health spending. Funding for the National Health Service will rise by an average 7.4% in real terms per year, increasing from £65 billion this year to £106 billion in 2007. The budget reflects the government’s desire to be able to defend its health record in the next election campaign in 2005-06. Nevertheless, improvements in health care will take a number of years to enact and will depend not only on financial infusion, but also on painful changes to management of the national health service that have yet to be agreed.

## Transportation

Transportation has been one of the government’s weakest policy areas, according to opinion polls, with over half of the public dissatisfied with the government’s performance to date. The problem is that rectifying what the Treasury Ministry in 1999 called, “an overcrowded, under-planned, and under-maintained transport system” will take decades, not the lifetime of a single government. Compared with Germany and France, Britain spends barely half as much on transportation as a percentage of GDP. The result is that rolling stock is outdated, tracks are ageing (at a terrible cost in injuries and lost lives in 2000-01), and car drivers face constant delays. The proportion of roads subject to serious traffic delays is three times higher than in France and five times higher than in Germany.

The government has set in train a major program to upgrade “strategic” portions of roads that constitute the major bottlenecks in automotive travel and to spend 29 billion pounds to expand rail passenger and freight traffic over the next ten years. It is also encouraging local authorities to invest heavily in light rail, trams, and other rapid-transit systems. The problem is that, as economic prosperity increases in the

UK, car ownership levels could still increase by 10% before they reach levels in France and Germany.

Despite the government's financial commitment to improve public services, there is a growing danger that results will come too late to prevent real damage to the reputation of the Labour Party and to Tony Blair directly. Another fatal rail crash in May 2002 caused by poor rail maintenance highlighted once again the bankruptcy of the current transportation system.

### Questions:

-How does UK spending on public services compare with its EU partners?

-What structural reforms has the government launched to modernize higher education and increase university attendance?

## Foreign Policy

### Britain's International Role

During the course of the twentieth century, Britain changed from being the world's leading imperial power to being a middle-ranking country with only fragments of its once global empire under its governance. Despite the decline in its relative diplomatic influence and economic prosperity that accompanied de-colonization, Britain has continued to play the role of a global power into the start of the twenty-first century as a result of its position as one of the world's recognized nuclear powers, its permanent membership on the UN Security Council, and its participation in the Group of Seven leading industrialized countries. Britain's role in these organizations reflects not simply a hangover from its Great Power past and status as a Second World War victor, but also its desire to protect its still sizeable global network of trading links and foreign investments.

The Labour government is determined to continue to preserve its position as a Permanent Member of the UN Security Council; of the G-8; and as a leading member of the Commonwealth. Although permanent membership of the UN and the G-7 may be expanded by 2007, Britain is unlikely to lose its individual seat in these fora. Two factors play to its advantage.

First, Britain is well-placed to continue playing a central role in international military operations and thus sustain its much-vaunted ability to “punch above its weight” in international diplomacy. New Labour's Strategic Defense Review of July 8, 1998 laid out a far-reaching plan to modernize the British armed forces and prepare them for involvement in international crisis management and response. The review highlights Britain's plans to build a new, more flexible and rapidly deployable “tri-service organisation,” including a joint Royal Navy / Royal Air Force fixed wing force, a joint battlefield helicopter command, joint army / RAF ground-based air defense organization, and a deployable joint force headquarters. The British government's ability to project these forces around the world should be supplemented by the purchase of new strategic lift assets and also by the purchase of two new aircraft carriers in the latter half of the next decade.

British defense capabilities are underpinned by a strong domestic defense industry, led by BAE Systems which is already engaged in the process of European defense industrial consolidation and has moved aggressively to build a transatlantic presence accessing both the U.S. and global defense markets. This will give the government additional leverage to determine future European and NATO military requirements and to buttress its foreign policy goals through exports of military equipment.

Second, Britain's global influence has also been leveraged by its close political relationship with the United States. Since 1945, government officials and policy élites in both countries have shared a sense of responsibility for upholding not only European, but also global security. Since the end of the cold war, they have sought to strengthen the NATO Alliance to this end. The UK's conventional military prowess and its shared willingness to use military force, a rare tendency among industrialized democracies in recent years, have bolstered the bilateral U.S.-UK security relationship.

## **Britain and the United States after 2000**

During the cold war, Britain served as America's leading security ally, an alliance cemented in intelligence sharing and sensitive military cooperation. At critical moments since the end of the cold war, Britain's utility to the United States has been significant -- in the bombing of Libya, in operation Desert Storm, in the anti-Saddam alliance since 1991, and now, most recently, in the coalition fighting international terrorism in Afghanistan and beyond. Notwithstanding these continuing examples of close bilateral cooperation, the context for the UK-U.S. relationship is far more complex now than during the cold war.

- Both the Bush Senior and Clinton administrations placed Germany, not Britain, at the center of their post-cold war European foreign policies, reflecting Germany's central position and influence in an undivided Europe.
- The Bosnian and then Kosovo conflicts demonstrated how British and American approaches toward and tactics within post-cold war crises could diverge in ways that would have been unthinkable during the cold war.

- Britain has been very concerned by the unilateralist stance taken in the first eighteen months of the new Bush administration on issues as varied as the Kyoto Protocol, the preservation of the Anti-Ballistic Missile treaty, the International Criminal Court, and the Chemical and Biological Convention.
- In contrast to its conservative predecessors, the Blair government has made improved relations with its EU partners and Britain's adoption of a leadership role within the EU one of its strategic foreign policy priorities. Having excluded itself from the first wave of monetary union, the logical focus for UK leadership has been in helping develop the EU's security and defense identity. This was apparent in Blair's launch with President Chirac at the Anglo-French summit on December 4, 1999 the intention for the EU to develop a common defense policy and capability. The emergence of a defense dimension to the EU will give Britain greater flexibility in the future to pursue EU foreign policy objectives which the United States may not wish to be involved in or to support. It may also cause new friction within the Anglo-U.S.-relationship.

The aftermath of the terrorist attacks on September 11 has had a paradoxical effect on U.S.-UK relations. On the one hand, British solidarity with the United States and the "specialness" of the US-UK relationship were underscored by Tony Blair's immediate commitment of UK special forces to the operations in Afghanistan as well as by the shared human losses in the attacks on the World Trade Center. Tony Blair's very personal commitment to the U.S. campaign against global terrorism raised hopes in London that this would give the British government the opportunity to draw the Bush administration into a more considered and multilateral approach to its foreign policy priorities. On the other, the realization that the United States would give its allies only a limited military role in the immediate battle against Al Qaeda and the Taliban and that it would seek no advice on how to prosecute the broader campaign against terrorism, quickly eroded support within the Labour Party for Tony Blair's approach. The "axis of evil" speech and the U.S. emphasis on the need to confront directly the potential combination of states producing weapons of mass destruction and suicidal terrorist groups has raised serious concerns within the British political establishment that, in its effort to be a good ally, the United Kingdom may get dragged into an ever-expanding, U.S.-led global war against terror. The treatment of Al Qaeda prisoners (including a few British citizens) in Guantanamo Bay exacerbated UK concerns. Tony Blair's staunch defense of the principles behind the U.S.-UK alliance and of the need to tackle rogue regimes such as Saddam Hussein's (a position which is supported by a majority of the British public if not of the Labour party) have not prevented the rise of public taunts in the press and television media that he has become "America's poodle."

At heart, the aftermath of September 11 has exposed significant differences between U.S. and UK perspectives on the threats to their security, their experiences of how to deal with terror, and their foreign policy priorities. Like most Europeans, the British public does not perceive Al Qaeda as presenting a major or an existential threat to their safety, unlike many Americans who have been traumatized by the suddenness, brutality, and scale of the attacks on their soil. The British have lived with terrorism for nearly three decades in the form of the campaign by extreme Irish nationalists for unification with the Republic of Ireland. Most British believe that, while military action can bring a short-term sense of success or vengeance, it has little long-term impact on the motivation of the

terrorists or on their ability to pursue what is a relatively easily sustainable campaign, given the asymmetric character of terrorist military strategy. Military action must be accompanied by a political vision of how a solution can be achieved.

Few UK citizens perceive this sort of longer-term vision among the current U.S. administration. Instead, they share a European skepticism of the apparent uni-dimensional nature of the U.S. campaign against international terror. Epitomizing this divergence of views is the question of how to deal with the Arab-Israeli conflict. Even Tony Blair has chosen not to endorse George Bush's characterization of Ariel Sharon as a "man of peace." Instead, there is a near-universal perception in the United Kingdom that Israeli insistence on continuing with its settlements policy on the West Bank has provoked Palestinians into extreme acts and into the hands of extremists. The British desire to open a dialogue with the government of Iran is also emblematic of the underlying differences between the United States and the United Kingdom in their approaches to foreign policy challenges beyond the ones of fundamental national security.

Many in the British government and Foreign Office believe that Britain's aspirations to lead in Europe and maintain its special relationship with the United States need not be mutually exclusive. Tony Blair takes every opportunity to make explicit the full commitment of his government to the Atlantic Alliance. However, he recognizes, as do most senior officials, that Britain's value to the United States as a strategic bilateral partner will be enhanced through its position as a leading member of the European Union, particularly in the fields of foreign and security policy.

Nonetheless, from a British perspective, the search for a reinvigorated partnership with Washington may still lead to difficult choices. The U.S. administration will continue to look for British political support for policies that are often at odds with the views of leading EU member states such as France and Germany. Areas where the United States seeks to influence Europe include accelerating EU enlargement to central and eastern Europe, sustaining sanctions on Saddam Hussein, containing Iran, supporting Turkey's membership of the EU, and opening EU markets to U.S. farm products and other sensitive products and services. After September 11, the long-term campaign against terrorism could open new divergences between Washington and European capitals. U.S. expectations on these issues will bring home to British policy-makers the fact that Britain cannot easily seek to maximize its global influence through partnership with the United States and simultaneously exercise leadership in Europe. Hard choices will have to be made and, occasionally, we can expect the UK to line up in European solidarity rather than always in transatlantic partnership.

### Questions:

-What concrete forms of bilateral cooperation now underpin the "special" UK-US relationship? Intelligence-sharing? Weapons acquisition? Military training and operations? Coordination of diplomatic initiatives (South Asia, Middle East, UN)

## Britain and Europe

Blair's new focus on partnership with the European Union belies the fact that a defining feature of Britain has been its geographical and psychological detachment from the European continent. It is an axiom that Britain is part of Europe, but not of it. As Winston Churchill famously suggested, a "United States of Europe" might be in British interests, but, of course, would have to exclude the United Kingdom.

Reliance on the empire and then on the Commonwealth after 1945, however, proved to be no substitute for U. K. membership of the European Community. Despite this hard lesson, the lack of British historical or cultural affinity with the fears and ambitions of the founding countries of the European Community has not been mitigated by successive EU enlargements nor by the success of the EU in promoting the growth of a single European market that now accounts for 50% of British exports. The British continue to perceive European integration as a uniquely economic exercise and, since joining the European Community, UK governments have been an obstacle rather than a dynamic contributor to almost all broader European integration initiatives. Moreover, to the extent that the growth of the EU as a political entity has reflected a Franco-German entente, successive British governments have sought to weaken this alliance which appears to be achieving a political dominance over European affairs that Britain had long fought to avert.

British official Euroscepticism is nurtured by the feeling among many in Britain that the United States, not the European Union, is Britain's ideal global partner. This predisposition to look westwards across the Atlantic is reciprocated by U.S. politicians who see in Britain an important bastion for Anglo-Saxon, free-market economic principles that have traditionally been shunned by other EU governments. During the latter half of the 1990s, strong economic growth and falling unemployment in the United States and the United Kingdom has been contrasted to the high levels of joblessness in continental EU, confirming the impression that most EU governments remain trapped in a rigid social market system from which Britain would do well to remain detached.

The innate public British Euroscepticism is fed by an unremitting diet of Euro-bashing by the British press, from broadsheets such as "The Daily Telegraph" to family newspapers such as "The Daily Express," to tabloids such as "The Sun" and "The Star." Anti-European headlines, articles, and editorials frequently refer to Germans and other Europeans in terms drawn from the Battle of Britain and the blitzkrieg. Rubbishing the EU, of course, is good copy, a fact which politicians now complain about throughout Europe. In Britain's case, however, the high degree of North American newspaper ownership combines with the instinctive British antipathy towards Europe to produce a particularly

vitriolic form of anti-European coverage.

Just as in 1957, Europe is emerging from a transitional period following revolutionary systemic change. Just as Britain made choices to remain apart from the search for European institutional construction during the last European transition in 1945-57, so did the conservative government in 1989-97, rejecting monetary union and other key aspects of the new EU agenda such as the Social Chapter and the Schengen agreement. As in the early 1960's, however, Britain may now be psychologically prepared to make more formal commitments to Europe that will have a far-reaching impact on all aspects of Britain's development.

The Labour party under Tony Blair certainly offers Britain the chance to build a more constructive relationship with its EU partners in the near future. Notwithstanding important differences in national emphasis, New Labour's ascendancy to power coincided with the broad social democratic wave that swept over Western Europe in the latter half of the 1990s. Under New Labour, Britain has relaxed the previous conservative obsession with guarding Britain's national "sovereignty" and its constant harking back to the days of British national grandeur. In essence, Blair would like to offer a pragmatic "third way" not only for Britain, but for European integration also, promoting greater levels of EU competence and qualified majority voting where practicable, but preserving national control over key aspects of policy such as defense and taxation.

Aside from Europe's defense capability, Blair has applied his government's energies toward two other aspects of European integration, economic reform in the EU and the EU's political evolution.

### **Question:**

-How has Britain's late entry into the European Community influenced the evolution of its relationship with Europe since then? **Further Reading:**

## **UK and EU Economic Reform**

The Lisbon summit of EU leaders in March 2000 was seen as an important breakthrough by the UK government in its efforts to convince its European partners of the complementarity between UK-style deregulation initiatives, including reform of labor and financial markets, and a social economic model applicable to left of center governments, all of whom wanted to find a way to match the productivity growth of America's "new economy."

In an effort to benchmark the EU against the United States, the United Kingdom has pushed aggressively at subsequent EU ministerial meetings and summits for a range of government-led initiatives that would help Europe become, "the most dynamic knowledge-based economy in the world by 2010." These initiatives include the creation or adoption of:

- Integrated financial markets by 2004;
- An EU E-commerce directive;
- An EU-wide Single European Patent;
- A pan-European diploma for IT skills;
- A strategy from promoting the biotechnology industry;
- Internet access for all schools;
- Full liberalization of gas, electricity, and transport markets by 2003;
- An Action Plan to reduce regulatory burdens on small and medium-sized firms;
- Targets for reducing unfair state aids.

Comparisons have been made between the initiatives of the Blair government and those of the Thatcher government in the mid-1980s favoring the creation of the Single European Market. The fact is, however, that implementation of much of the Lisbon agenda will depend not on legally binding directives (as with the Single European Act) or on formal treaty commitments (as was the case when EU governments sought to achieve EMU convergence), but simply on peer pressure and the sharing of best practices. Under these conditions, the pace of reform is proving frustratingly slow for the British government.

## UK and EU Political Integration

Since his rise to power and benefiting from his strong domestic parliamentary base, Blair has moved methodically into an area – EU political integration -- that has been a minefield for British politicians in the past. In this context, the Nice summit of EU leaders in December 2000 proved a significant success from the UK point of view:

- The successful conclusion at Nice of the EU's most recent Intergovernmental Conference has enabled the EU to move ahead with negotiations to complete an eastern enlargement by 2004, an important British policy priority;
- The re-weighting of national votes in the EU Council of Ministers favored the UK, but was pushed by France, allowing the UK to protect its political capital;
- The process of qualified majority voting was kept away from key areas of British concern, such as taxation;
- The British allowed the concept of "reinforced cooperation" (deepening of integration among groups of EU member states in targeted areas) to move ahead, while keeping defense out of this new procedure.

Prior to the Nice summit, Tony Blair gave a major speech in Warsaw in the summer of 2000, responding to previous speeches by German Foreign Minister Fischer, French President Chirac, and Commission President Prodi, and laying out Blair's own bold vision of where the EU should be going. Key proposals included:

- A "Charter of competencies" for the EU, rather than a legally binding constitution, defining the relationship between Europe's local, regional, national, and EU levels;
- The right for the European Council of EU leaders to set an "annual agenda for Europe," in collaboration with the European Commission;
- Team EU presidencies; and a smaller Commission;
- The creation of a "second chamber of the European Parliament;" involving nationally elected MPs. The chamber would provide political rather than legal review of the levels at which EU decisions are taken and implemented in the future;
- The emergence of the EU as a "superpower, not a superstate" on the world stage;
- The notion that the foundation of the EU should remain the democratic nation state.

On February 21, 2002 at The Hague, a few days before the official launch of the European convention that will finalize plans for a new treaty in 2004, Foreign Secretary Jack Straw called for sweeping reforms in the EU and the way the intergovernmental Council of Ministers ought to work. Britain does not accept a written constitution, as favored by Germany and France, and would rather see an EU driven by its member states, although it had indicated its willingness to accept certain concessions on further EU integration (such as in the areas of asylum and immigration policies). The Labour government's blueprint has drawn criticism from the Conservative party, and has received mixed

reviews in other EU capitals.

## Question:

-How does Britain's domestic structure of governance influence its vision for Europe's political evolution?

## UK and EMU

Whatever Blair's success in drawing Britain into the inner circle of EU strategizing through an active role in European defense and the single market, the decision of his government to remain outside the project on monetary union continues to call into question Britain's position as a truly European power and also limits Blair's political influence in EU decision-making circles.

There was little expectation that the UK could join EMU at its launch on January 1, 1999. However, more concrete hopes that the UK would join by the beginning of 2002, when the transition phase ends and national currencies are abolished, have also proved to be premature. On October 27, 1997, Chancellor of the Exchequer Gordon Brown announced to Parliament that, although the government saw no constitutional objection to the UK entering EMU, economic factors made it highly unlikely that the UK will be in a position to join until after the next legislative election, that is, after 2002. He then laid out "five economic tests," widely seen as providing political room for manoeuvre rather than an economic roadmap, which Britain would apply before deciding whether to join.

Whatever the personal convictions of Tony Blair and Chancellor Brown toward British EMU membership (and both are believed to be in favour, although holding the key to the five economic tests is an important tool in Brown's personal political arsenal vis-à-vis Blair), the lack of any rational debate about the EU outside elite circles over the past ten years and the obsessive "Europhobia" of the Murdoch and tabloid British press (key backers of Blair in the election) make the outcome of any referendum highly unpredictable. As is often observed, Blair is partly to blame for the lack of a more rational debate, having muzzled the pro-EMU business community in the lead-up to the 2001 election for fear of allowing the issue to tarnish Labour's campaign. However, it is clear that the opponents of EMU have assembled a well-organized campaign that is able to play on a combination of British political and economic fears:

- Why repeat the experience of the UK's short-lived experience of the European Exchange Rate Mechanism (ERM) from which it was evicted in 1992?
- The Eurozone is not an optimal currency area (there is little labor mobility, no federal transfers, different levels of economic development) that may eventually collapse;
- UK economic performance is way ahead of its neighbors in terms of unemployment levels, FDI attractiveness; inflation rate. Why risk it?

- Internet readiness is more important and the UK is already ahead;
- The UK will be exposed to the pensions meltdown awaiting most continental European economies after 2010;
- Euro membership will spill over into EU-harmonized taxation, a U.K. bogeyman;
- Euro membership will spill-over into an EU economic government and, then, an EU, federal superstate, another bogeyman;
- The UK has more similarities and closer economic ties to the United States than to the EU.

It is important to understand that the United States remains an alternative political and economic pole in the minds of Eurosceptics and the media. British conservative politicians such as John Redwood have called for the UK to join NAFTA and abandon the EU, echoing the views of a number of U.S. politicians and commentators such as Newt Gingrich and Bill Safire. Even Condoleeza Rice, in an interview with the Daily Telegraph in July of 2000, said a Bush administration, while not wanting to drive a wedge between the UK and EU, would be open to how to expand NAFTA across the Atlantic.

Despite the large obstacles to Euro membership, the government's delay in joining EMU exposes Britain to two important risks in the near-term.

1. First, Britain may pay an economic price.
  - British companies will have to continue to hedge against currency instability for the bulk of their export business.
  - With the continuing over-valuation of the pound relative to the Euro, British exporters may see a further erosion in the price competitiveness of their exports.
  - Exclusion from EMU may also provide foreign investors with an excuse not to continue to use Britain as a favored direct investment location in the near future.
  - UK fiscal and monetary policy may end up being tied to targets which the British government will have played no role in establishing, but from which it might feel politically unable to disengage, at least so long as it is attempting to shadow the Euro so as to maintain the option to join.
2. Second, Britain will certainly pay a political price. At a time when France and Germany are looking to redefine their bilateral relationship under the post-cold war leadership of Chirac and Schroeder, there should be a real opportunity for Blair's government to take the leadership role in the EU that it has claimed. However, it will be difficult for Blair to craft a durable leadership position for the UK outside EMU on any of the issues central to the EU's political and economic integration, such as EU enlargement and structural economic reform.

Instead, the EU's most important new political initiatives are likely to emanate from within the Euro-club, with proposals, bargains, and coalitions coordinated at a bilateral Franco-German level or among the Euro-11 before the British government has a real opportunity to react. French and German proposals for certain forms of tax harmonization and majority voting on taxation may be an unpleasant foretaste of the future for the Blair government.

On the other hand, unlike joining the European Community, which was interpreted at the time as an economic decision, EMU confronts the British public with the "bogeyman" of far greater political centralization of power in Brussels. The most worrying trend from Blair's perspective was seeing how the entry of EMU was immediately followed by a rapid push by Socialist governments in Europe for a start to corporate and withholding tax harmonization, a source of great concern to a tax-averse British public and "new" Labour party.

The choice of when to join does not lie entirely in Blair's or Brown's hands. Britain has always found it difficult to converge its economy with those of its EU partners due to its higher levels of non-EU trade, its tendency to make more home loans on variable interest rates than its partners, and the fact that it is the only oil exporter in the EU. Economic pragmatism as much as political ambivalence is at the heart of Britain's continuing hesitation about acceding to the single currency.

## **Current State of Play on the EMU debate**

Poll figures have shown that the percentage of voters opposed to UK membership of the monetary union has held steady at around two thirds of the voting public. At first sight, therefore, the Blair strategy of holding back on a formal decision and date to join EMU makes sense. After 2002, any turbulence that is likely to have surrounded the early phase of EMU will have subsided, thereby making a referendum on whether to join less controversial. The British public will also become accustomed to seeing and using the Euro. Moreover, the reality of exclusion may also increase demands from UK business for Britain to join, as it did in the case of EC membership in 1960s. Conservative party "heavy-weights" such as former Prime Minister Edward Heath, Michael Heseltine, and Kenneth Clarke have all come out in favor of Britain preparing now "to join a successful single currency." Under these conditions, the underlying pragmatism of the British public -- a majority of which already supports an EU role in areas as diverse as trade, environment, and crime fighting -- may translate into majority support for British EMU membership in a referendum. It is worth noting that a 1971 Gallup poll found a majority of 59-23% against membership of the European Community. The British electorate still voted in favor of EC membership in the 1975 referendum four years later.

## UNITED KINGDOM

While public opposition remains high, so does the percentage of people, 68%, who believe they will be using the Euro by 2010.

Earlier in 2001, Blair indicated to Parliament that the government would make a decision on whether to hold a referendum on EMU entry within two years of the new parliament. The defeat of the conservative party in the 2001 summer elections with its strong anti-Euro message has called into question the solidity of the anti-EMU movement's appeal. Having been re-elected and riding high on the post-September 11 wave of personal popularity, Blair strengthened his rhetoric at the Labour Party conference in October in favour of joining the Euro.

To support Blair's rhetoric, the British economy appears to be converging steadily with its EMU partners. Interest rates, from being double in the UK to the Eurozone rate in 1999 (at 6% to 3%), are now only one percent apart. Inflation in the UK, at around 1%, offsets a less over-valued exchange rate. The IMF concluded recently that UK-EU economic divergence from 1987-98 was largely a result of interest rate decisions, not structural divergences. And leaders of Britain's manufacturing businesses have made it plain to the new government that they expect a decision soon. Nick Scheele, Ford's European chairman until September 2001, said his company's investment in the UK is based upon the assumption that the UK will join the Euro by 2006, reflecting the fact that 60% of the UK's manufactured exports go to the Eurozone.

However, the choice for Blair remains a very risky one. On the one hand, it is hard to tell whether the British economy's convergence is structural and sustainable or temporary. Within the Treasury and the Bank of England, there is the fear that inflation may once again slip out of control if the UK is forced into a "one-size-fits-all" Eurozone monetary policy. The UK economy also remains very sensitive to short-term interest rate shifts – with both companies and households still holding a large amount of floating interest rate loans (in 1999, this included 73% of all mortgages). Eddie George, Governor of the Bank of England, has expressed his concern that the UK and Eurozone economies may not converge but "pass like ships in the night."

Ultimately, Prime Minister Blair has to show to the British public that the EU is becoming more like the UK before he can confidently try to convince the public to support Euro entry. However, the more successful Gordon Brown's management of the domestic UK economy, the harder it is for Blair to make the case for the UK joining the Euro. While the British people are indeed pragmatic, they will need to hear a convincing case about why not joining would be a problem for the UK. That case cannot be made based on the performance of the British economy in 1999-2001. Can it be made in the next two years?

Strategic Defense Review (1998).

Tony Blair's speech in Warsaw (October 6, 2000)

## CONCLUSION

There are those that argue that unless a majority of British people are able to unite around a new sense of national identity, Britain will face an uphill task not only in holding together the United Kingdom and in building a new basis for social cohesion, but also in meeting the external challenges of economic globalization. The Blair government certainly appears to have set out consciously to “re-brand” Britain not as the fusty, former imperial power and keeper of great traditions, but rather in the image of “Cool Britannia,” a vibrant country that can draw on its ethnic and national diversity, its creativity and eccentricity, as well as on its heritage as an economic “hub” between the Western and Eastern hemispheres to try to engineer a gradual shift both in internal and external perceptions of Britain in the new millennium. The results will take time to show. However, judging by the declining legitimacy of Britain’s institutions over the last decade and the longer-lasting decline in national self-confidence, an effort to re-brand Britain is probably worthwhile.

Just as important, the concept of Britishness depends upon an external context. Britishness was never inherited, but learned in the eighteenth century and was bound up with the creation of the British empire. It connoted a sense of imperial mission, of “Britannia ruling the waves,” and of enemies (France and Spain) that sought to challenge British global interests. All Britons, whether they were English, Scots, or Welsh, were involved in promoting and protecting Britain’s interests against external aggressors, most recently against Britain’s newest enemy, Germany, a crucial episode in the conflict being the heroic “Battle of Britain.” With the loss of the empire from 1950 onwards and the forging of ever-closer economic and cultural ties with Britain’s traditional European enemies, the concept of Britishness has lost its external moorings. Margaret Thatcher’s efforts to re-galvanize the British spirit by appealing to new enmities (limited to Argentina over the Falklands) and old (France and Germany after 1990) were backward looking; an effort to recreate the past. Ultimately, the international and domestic context in which Britain found itself in the last decade of the twentieth century could not support this campaign and her efforts failed.

Tony Blair is attempting to create a new sense of Britishness: one that mixes in some of the old (Britain as a world player; with a strong sense of history and belief in the strength of its institutions of governance) with some of the new (Britain as a partner to European integration and a nation not afraid to modernize its institutions and society). He has made a good start, but there is a long way to go.

## SELF STUDY GUIDE

NATIONAL FOREIGN AFFAIRS  
TRAINING CENTER

School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The **Self-Study Guide: Vietnam** is intended to provide U.S. government personnel in the foreign affairs community with an overview of important issues related to history, geography, politics, religion, culture, economics, and international relations. The guide serves only as an introduction and should be used as a self-study resource. Vietnam is far too complex and diverse a society to be covered in any depth using only the text in this guide. The reader is therefore encouraged to explore the questions and issues introduced using the Internet site guide and articles and books listed in the bibliography. Most of the bibliographic material can be found either on the Internet or in the Foreign Service Institute or Main State Libraries.

Professor Zachary Abuza of Simmons College prepared the first edition of this Guide in 2002. The second edition includes updated information provided by David Jensen, Coordinator for Southeast Asia Studies at the Foreign Service Institute. The views expressed in this guide are those of the authors and attributable sources and do not necessarily reflect the official policy or position of the Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and nonprofit use only.

Second Edition: December 2006

# ETHNO - LINGUISTICAL MAP OF VIETNAM

Map drawn by Chau Van Tho

## Chronology

- 258 BC Au Lac state created in northern Vietnam.
- 111 BC Au Lac became part of Nam Viet (Tonkin) province in China when conquered by Han Dynasty forces.
- 39-40 First uprising against the Chinese, led by the Trung Sisters.
- 939 Ngo Quyen defeated the Chinese, ending 900 years of Chinese rule.
- 1058 The Temple of Literature and Confucian examination system was established.
- 1284 Tran Hung Dao defeated the 500,000-man Mongol army.
- 1406 China invaded with the avowed purpose of reinstating the Tran dynasty.
- 1418 Le Loi, a southern aristocrat, led a ten-year revolt against the Ming Dynasty culminating in the founding of the Le dynasty in 1428.
- 1527 Le Dynasty was weakened by a civil war fought between two families, the Trinh in the north and the Nguyen in the south; both claimed to fight in the name of the emperor.
- 1615 Jesuit missionaries began arriving.
- 1627 French Missionary Alexander de Rhodes adapted Vietnamese language to Romanized script; paved way for French domination.
- 1771 Tay Son Rebellion.
- 1787 French Missionard De Pigneau enlisted the support of Louis XVI for the pretender to the deposed Nguyen family. French missionary activity increased.
- 1788 Le Dynasty emperor appealed to the Qing court to intervene and fight the Tay Son. Tay Son launched a preemptive strike, defeating the 10,000-man Chinese force. Le emperor fled to China.
- 1802 Nguyen Dynasty founded.
- 1847 First French military expedition clashed with Vietnamese forces. New Vietnamese emperor vowed to rid the country of Christianity.

- 1861 French captured Saigon and much of the Mekong Delta.
- 1862 Treaty of Saigon ceded 3 southern provinces to the French. Cochinchina established.
- 1863 French extended their control over Cambodia, making it a French protectorate.
- 1866 French began a two-year expedition on the Mekong.
- 1873 French attacked Hanoi. Freedom of navigation on Red River and French trading privileges negotiated in 1874.
- 1883 French seized Hanoi.
- 1883 Annam and Tonkin became French protectorates.
- 1884 Treaty of Hue. China forced to withdraw from Vietnam.
- 1885 Treaty of Tianjin. China renounced all claims to Vietnam.
- 1887 Indochinese Union founded.
- 1893 Laos became a French protectorate after Franco-Siamese conflict.
- 1911 Ho Chi Minh left for France where he became a founding member of the French Communist Party and agitated for Vietnamese independence.
- 1919 Treaty of Versailles. Ho tried, but failed to negotiate Vietnamese independence.
- 1924 Ho Chi Minh sent to Moscow for training by the Comintern.
- 1925 Ho Chi Minh founded Thanh Nien (Revolutionary Youth League) in southern China.
- 1930 Indochina Communist Party founded by Ho Chi Minh.
- 1940 Japan invaded Vietnam, but allowed Vichy French colonial authorities to continue administrating.
- 1941 Viet Minh established.
- 8/1945 Japan surrendered.
- 9/1945 Ho Chi Minh declared independence and the founding of the Democratic Republic of Vietnam (DRV) on September 2. Emperor Bao Dai abdicated.
- 10/1945 150,000 Chinese troops occupied northern Vietnam.

- 1946 Franco-Viet Minh talks held. In March, a preliminary agreement was reached. But the French high commissioner Admiral d'Argenlieu rejected the agreement. Ho and a DRV delegation left for France in May. D'Argenlieu violated the March agreement by establishing an independent government for Cochin China.
- 9/1946 Fontainebleau Conference collapsed.
- 11/1946 French bombed Hai Phong harbor. Ho told supporters to evacuate the cities. Franco-Viet Minh war began.
- 1949 Elysee Agreement signed between Bao Dai and the French establishing the state of Vietnam.
- 1950 Military and economic aid agreement negotiated between the newly established People's Republic of China and the Viet Minh.
- 1952 France gave Cambodia and Laos independence.
- 5/1954 French forces defeated at Dien Bien Phu. In Geneva Accords, Vietnam was divided at the 17th Parallel with elections scheduled in two years.
- 1955 Diem defeated Bao Dai in a referendum and established Republic of Vietnam (RVN). President Diem announced that national elections will not be held. US supported Diem; began supplying aid and training Diem's army. Hanoi launched a violent land reform campaign, causing an economic crisis in North and mass flood of refugees to South. Hanoi ordered followers in the South to wage a "political war" in south, but not to fight.
- 10/1957 Insurgency began.
- 1958 Diem launched a half-hearted land reform campaign in the South. By 1960, three-fourths of the land still remained in hands of 15 percent of population.
- 1959 Communist network in the South devastated. LDP Central Committee in Hanoi, alarmed by how quickly Diem consolidated his power, changed its strategy in the South and authorized armed struggle.
- 11/1960 Attempted military coup on Diem and his brother Nhu who became more dictatorial.
- 12/1960 Hanoi founded the National Liberation Front (NLF), a Communist-led shadow government/resistance movement, in the South. Dubbed the Viet Cong, by 1961 the NLF had 300,000 members and controlled one-third of the South.
- 4/1961 Kennedy advisor, Walt Rostow, called for a proactive policy in Vietnam.

- 5/1961 500 US soldiers and military advisors sent to Vietnam. US began covert attacks on North Vietnam.
- 11/1961 Max Taylor, head of US MAG, called for the dispatch of an 8,000-man task force to assist RVN forces in a "combat support role" to "boost morale."
- 1963 Hanoi began to actively supply Viet Cong and infiltrate its own troops to the South.
- 5/1963 Diem's forces fired on Buddhist protestors in Hue, causing monks to self-immolate themselves to protest Diem's authoritarianism. In August, Diem launched raids on Buddhist pagodas across the country, arresting 1,400 monks. US Ambassador Lodge began to meet secretly with generals to plan coup.
- 8/1963 Lodge received intelligence that Diem and Nhu were secretly meeting with Viet Cong to negotiate a settlement.
- 10/1963 US cut off aid to South Vietnam to force Diem to reform.
- 11/1963 Diem and Nhu assassinated in a military coup. President Kennedy also assassinated in same month. President Johnson committed himself to not "losing" South Vietnam.
- 12/1963 US began to formally link Viet Cong activity to Hanoi and decided that Hanoi must be punished for aggression.
- 1/1964 General Nguyen Khanh launched another coup, with US support.
- 8/1964 Gulf of Tonkin Incident. US began bombing of North Vietnam. Gulf of Tonkin Resolution passed, which gave President Johnson the authority to take "all necessary measures in support of freedom" in Southeast Asia.
- 2/1965 LBJ ordered sustained bombing of the North to deter them from aiding Viet Cong. Coup launched against Khanh by General Nguyen Van Thieu.
- 4/1965 LBJ ordered a massive increase in US force levels to 184,000 troops (up from 23,300 in 1964) and authorized them to engage in combat operations. By end of 1965, there were 200,000 US troops.
- 12/1965 US army commander Westmoreland requested an increase to 443,000 men. The JCS approved 542,000 men for 1967.
- 1966 China, engulfed in the Cultural Revolution, increased aid to Vietnam.
- 9/1967 Nguyen Van Thieu was pressured by the US to hold elections. Although they were rigged, Thieu only took 35 percent of the vote.

- 12/1967 LBJ announced willingness to seek a negotiated settlement and suspended the bombing of the North as a good will gesture. Hanoi rejected Johnson's 14-point peace proposal.
- 2/1968 Tet Offensive. Though costly for Communist forces, the anti-war movement in the U.S. gained momentum.
- 3/1968 LBJ ordered a temporary halt to the bombing, and offered a total cessation "if American restraint was matched by restraint in Hanoi."
- 4/1968 Hanoi announced willingness to meet; first direct talks were held in Paris in May.
- 10/1968 Talks continued, but President Thieu resisted making concessions, waiting to see what position the newly-elected U.S. president would take.
- 11/1968 Nixon elected President. He announced during campaign that he "had a secret plan to end the war," but was determined he would not be first US President to lose a war.
- 5/1969 Viet Cong representatives in Paris offered a 10-point peace proposal that called for unconditional US withdrawal, establishment of a coalition government that would not include President Thieu, holding of national elections, and establishment of an independent and permanent government structure in the South. Nixon's counter-proposal called for the simultaneous withdrawal of US and North Vietnamese troops, and the holding of an internationally-monitored national election.
- 6/1969 Nixon's Midway speech announced the withdrawal of 25,000 US troops as a goodwill gesture, and a policy of "Vietnamization" of the war. Troop levels fell from 542,500 in 1969 to 474,000 in January 1970, to 139,000 men in December 1971.
- 9/1969 Ho Chi Minh died. Power was consolidated by the hardliner, Le Duan.
- 4/1970 Nixon realized that this was his last chance. The US would need to launch a major offensive, as it was withdrawing most of its forces. Bombing of the North was intensified. Neutral Cambodia was invaded to close the Ho Chi Minh Trail and eliminate Viet Cong sanctuaries.
- 2/1971 "Vietnamization" of the war was put to the test as the South Vietnamese army was defeated by the North in a series of battles. US secretly reentered negotiations with Hanoi in Paris. Kissinger and Le Duc Tho met 12 times.
- 7/1971 Kissinger went to Saigon to meet with Thieu.
- 10/1971 Thieu was re-elected with widespread electoral fraud, but believed he had mandate to negotiate with the North. Talks broke down and the US resumed bombing of the North.
- 2/1972 Nixon met Mao in Beijing.

- 3/1972 Hanoi for first time openly sent its forces across the 17th parallel, taking several provinces. US retaliated by bombing Hanoi and Hai Phong.
- 4/1972 Nixon secretly arrived in Moscow and demanded that the Soviet Union pressure Hanoi to stop the invasion of the South. On 25 April, peace talks resumed in Paris.
- 5/1972 US mined Hai Phong and other northern harbors.
- 9/1972 Peace talks resumed. Hanoi made a major concession by dropping demand that Thieu be removed before a cease-fire could be established, but refused to withdraw its forces. Thieu rejected this agreement.
- 12/1972 Peace talks broke down. Nixon ordered a massive bombing campaign to push Hanoi back to the negotiating table.
- 1/1973 Negotiations resumed. Washington halted bombing and mining. Agreement to end the war was signed. Cease-fire began on 27 January.
- 2/1973 Kissinger met with North Vietnamese Prime Minister Pham Van Dong in Hanoi.
- 6/1974 Large-scale fighting resumed.
- 4/1975 Saigon fell to North Vietnamese on 4/30/75. Two weeks earlier, Phnom Penh fell to Khmer Rouge.
- 5/1975 Vietnamese currency abolished in the South as part of the "socialist transition."
- 1976 Vietnam formally reunified. Socialist Republic of Vietnam was founded.
- 12/1976 With the founding of the Lao People's Democratic Republic, Hanoi began to talk about an "Indochinese Federation", angering Cambodia.
- 3/1977 Pol Pot, convinced of Hanoi's plot to annex Cambodia, began massacring ethnic Vietnamese.
- 4/1977 Ethnic Chinese property seized in Saigon. About 133,000 refugees fled to China.
- 6/1977 Hanoi tried to negotiate a peaceful settlement of the border war with Phnom Penh. China lashed out at Hanoi.
- 7/1977 Viet-Lao Treaty of Friendship and Cooperation approved.
- 9/1977 Pol Pot made high profile visit to Beijing, which pledged full support to Khmer Rouge.

- 12/1977 Vietnamese forces launched an attack into Cambodia in retaliation and then withdrew.
- 2/1978 Hanoi decided to establish and fund an anti-Pol Pot regime in Cambodia.
- 5/1978 China announced the termination of all aid projects in Vietnam. Hanoi, fearful of a "fifth column", began to "sell" exit visas for ethnic Chinese, starting the "boat people" crisis. Some 250,000 immediately fled; more followed later.
- 6/1978 Hanoi joined the CMEA Soviet trade bloc.
- 11/1978 Hanoi signed a 30-year Treaty of Friendship and Cooperation with the Soviets; massive economic and military aid began flowing to Hanoi from Moscow.
- 12/1978 Vietnam invaded Cambodia, driving Khmer Rouge into Thailand. Hanoi established a puppet government led by Khmer Rouge defectors.
- 3/1979 China invaded Vietnam to "teach Hanoi a lesson for its ungrateful and arrogant behavior."
- 1982 The Coalition Government of Democratic Kampuchea, nominally headed by Prince Sihanouk but dominated by the Khmer Rouge, was established with American, Chinese and ASEAN support to fight the Vietnamese. The VCP's 5<sup>th</sup> Party Congress held in midst of economic crisis. Some Chinese styled economic reforms were implemented.
- 3/1985 Mikhail Gorbachev came to power in Soviet Union.
- 7/1986 6th Party Congress. Nguyen Van Linh was rehabilitated and appointed General Secretary (Le Duan died shortly before). *Doi Moi* launched and a liberal foreign investment code promulgated.
- 1988 Foreign Minister Nguyen Co Thach unveiled Resolution 13 which radically redefined Vietnam's security policy. Thach called for the withdrawal of troops in Cambodia and the need to better ties with the ASEAN states.
- 7/1988 Jakarta Informal Meeting linked Vietnamese withdrawal to end of external support for warring Cambodian factions.
- 9/1989 Hanoi completed withdrawal from Cambodia.
- 10/1991 Paris Peace Accords signed, ending the Cambodian conflict; at same time, Soviet aid program terminated and most of Soviet forces stationed in Cam Ranh Bay withdrawn.
- 6/1991 VCP's 7<sup>th</sup> Congress. Do Muoi elected General Secretary, Vo Van Kiet became Prime Minister, and Le Duc Anh President. In wake of socialism's demise in Eastern Europe, political reform was thoroughly rejected.

- 11/1991 China and Vietnam renormalized diplomatic relations.
- 1992 Vietnam became an observer in ASEAN.
- 1994 President Bill Clinton lifted economic embargo on Vietnam.
- 1995 Vietnam became a full member of ASEAN; diplomatic ties between the US and Vietnam were established.
- 1996 VCP's 8<sup>th</sup> Party Congress. Political stalemate and factional infighting caused policy gridlock.
- 1997 Ambassador Douglas "Pete" Peterson arrived in Hanoi as the first U.S. Ambassador to the Socialist Republic of Vietnam.
- 2000 President Clinton visited Vietnam.
- 4/2001 VCP's 9<sup>th</sup> Party Congress. Nong Duc Manh elected General Secretary.
- 12/2001 U.S.-Vietnam Bilateral Trade Agreement came into force.
- 2002 Elections for National Assembly produce a larger, younger, better educated legislature.
- 2003 An outbreak of Severe Acute Respiratory Syndrome (SARS) is confirmed in Hanoi, but the Vietnamese government moves swiftly to contain the problem.
- 2004 Outbreak of avian influenza (bird flu) emerged. The government's quick response helped contain the threat, but did not eliminate it.
- 2005 Prime Minister Phan Van Khai made official visit to the U.S. The National Assembly passed the country's first anti-corruption law in response to growing domestic criticism.
- 4/2006 VCP's 10<sup>th</sup> Party Congress. Nong Duc Manh re-elected General Secretary. Nguyen Tan Dung became new Prime Minister and Nguyen Minh Triet the new President.
- 11/2006 Vietnam hosted APEC Leaders Meeting. President George W. Bush attended.
- 12/2006 Vietnam approved as 150<sup>th</sup> member of the World Trade Organization (WTO).
- 12/2006 U.S. restored permanent normal trade relations with Vietnam.

## The Natural Setting

### 1. The Land

Vietnam's total landmass is 331,114 square kilometers (127,243 square miles), and includes a 4,200 square-kilometer territorial sea zone. It measures some 3,444 kilometers from its northernmost border with China to its southernmost tip in the Gulf of Thailand. Vietnam is only 600 kilometers at its widest point and 50 kilometers at its narrowest.

The country has a rugged and diverse topography. Two-thirds of Vietnam is covered in mountains and forests. The highest point is Fan Si Pan, which is 3,144 meters. The remaining third of the country includes plains, midlands, mangrove swamp, and forests. About 20 percent of the land is under cultivation, mainly with wet rice paddy. The paddy, and hence the majority of the population, is concentrated in the two major river deltas, the Red River Delta in the north and the Mekong Delta in the south.

The capital is the northern city of Hanoi and other major cities include: Ho Chi Minh City, Hai Phong, Hue, Da Nang, Nha Trang, Can Tho and My Tho.

Vietnam has a long frontier. Its inland border stretches 4,639 kilometers and abuts three states: China (1,281 km), Laos (2,130 km), and Cambodia (1,228 km). Vietnam has had territorial disputes with both Cambodia and China. A border treaty was concluded with Laos in 1977. In December 2000, after years of negotiations, China and Vietnam concluded an agreement on the demarcation of their land border. In November 2005, Vietnam and Cambodia ratified an agreement which reaffirms the basic boundary line mapped by the French in 1954. This agreement also sets a deadline of December 2008 for completing full demarcation, including the positioning of border markers.

Vietnam has a 3,444-kilometer coastline, and claims a 200-mile continental shelf and exclusive economic zone, and a 12 nautical mile territorial sea.

Vietnam has outstanding maritime claims in both the Gulf of Tonkin and the South China Sea. After 10 years of negotiations, China and Vietnam agreed in December 2000 to the demarcation of the Gulf of Tonkin. Vietnam claims both the Spratly and Paracel Island chains in the South China Sea. China seized the Paracel Islands in 1974 from the Republic of Vietnam regime. Vietnam currently occupies several reefs and atolls in the Spratly Islands, though China seized a number in 1988 in a brief naval skirmish. Vietnam has continued to claim the Spratly Islands, which are also claimed in their entirety by China and Taiwan, and in part by the Philippines, Malaysia and Brunei. Since its membership into ASEAN in 1995, Vietnam has downplayed its claim and *de facto* adopted a policy of maintaining the territorial *status quo*. Vietnam has used ASEAN as a platform to put pressure on China to sign a code of conduct in the South China Sea, and has rejected China's offer of joint development.

Vietnam has had successful negotiations with Thailand regarding the demarcation of their shared maritime boundary, and an effective dispute resolution mechanism is in place to adjudicate disputes over fisheries and natural gas exploration. These agreements have come at the expense of Cambodia, with whom Vietnam also has a maritime boundary dispute. Vietnam is a coastal state and has many important ports, including Hai Phong and Vinh in the north, Hue, Da Nang, Cam Ranh, and Nha Trang in the center, and Ho Chi Minh City and Can Tho in the south. Vietnam's long coastline and adjacent plains make the country susceptible to annual typhoon flooding.

## **2. Plants, Animals, and the Environment**

Despite decades of war, Vietnam's ecology is highly diverse. There are approximately 12,000 species of plants, 270 species of mammals, 770 species of birds, 180 species of reptiles, and 80 species of amphibians. Several of these species are unique to Vietnam. About 365 species of animals are threatened with extinction, of which 67 are endangered. The government has pledged to defend its bio-diversity, but poaching and logging are endemic.

Although nearly three-quarters of Vietnam's land area is covered in forests and mountains, its forests are being felled at an unsustainable rate. Forested land fell from 44 percent of land area in 1943 to less than 20 percent today (2006). Much was destroyed or has not recovered from the war, when 72 million liters of herbicides destroyed over 2 million hectares of forests. Throughout the 1990s, Vietnam lost about 110,000 hectares of forest annually due to illegal and legal logging. Slash and burn agriculture, practiced by many of the ethnic minority hill tribes, contributes to deforestation as well as soil erosion and flooding. There have been some official attempts to reforest. In the 1990s, the government had an ambitious target of reforesting 100,000 hectares per year; the target is currently twice that.

Vietnam's fisheries are also in jeopardy of being over exploited. There are over 300,000 fishermen and the government considers aquaculture products as a key export commodity. Water pollution also threatens marine life populations.

Vietnam's rapid urbanization has caused a number of environmental concerns. Urban infrastructure development has been unable to keep pace with rapid rural-urban migration, and safe water and sanitation are at low levels. Lax environmental enforcement, especially with regard to industrial waste, has served to attract foreign investment.

## **3. The Climate**

Vietnam's climate is mostly tropical. In the north, the climate is sub-tropical, averaging 17.2 degrees Celsius and 29.2 degrees Celsius in winter and summer, respectively. The monsoon season in the north lasts from mid-May to mid-September. The southern climate is tropical with two distinct seasons: dry and rainy. The average summer temperature is 29.7 degrees Celsius and the average winter temp is 24 degrees.

The average amount of rainfall is 1,800 mm in Hanoi, 2,900 mm in Hue and 2,000 mm in Ho Chi Minh City. Heavy or prolonged monsoon rains can result in serious flooding. Tropical storms are common in the autumn and monsoons and typhoons frequently devastate the central region.

### ***Study Questions***

1. In what way has Vietnam's history been shaped by its geography?
2. What is the likely impact of Vietnamese economic development on the environment and natural resources?

## The People

### 1. Demographics

With a population of more than 82 million (2004 estimate), Vietnam has one of the largest populations in Southeast Asia. It is an agrarian nation; about 80 percent of the population lives in the countryside. The country is densely populated, with an average of 250 people per square kilometer. Most of the population lives within the two delta regions, the Red River Delta in the north and the Mekong River Delta in the south. The Red River Delta area is the most densely populated region in the country. For example, Thai Binh province has a population density of over 1,000 people per square kilometer, over four times the national average. The mountain regions are sparsely populated; though they comprise almost two-thirds of the country's territory, only 12 percent of the population inhabit them. There have been repeated attempts since 1975 to force people from the coast to migrate to the mountainous regions and border areas.

Vietnam has become a more urbanized state, both as economic policies that encourage industrialization have taken hold and as the growing socio-economic gap between the poor countryside and the urban centers draws migrants from the over-populated interior of the country. Despite the growth in urban areas around the country since 1986, the two largest cities, Hanoi and Ho Chi Minh City (Saigon), account for about 50 percent of the urban population.

Vietnam's population exploded in the second half of the 20th century. The population in 1945 was 20 million. From the 1940s to 1960s, the birth rate was 4.6 percent and the overall population growth rate was around 3.4 percent. After the war, in 1979, the birth rate fell to 3.25 percent, though the overall growth rate remained an alarming 2.63 percent. Since the economic reform program *doi moi* was implemented in late 1986, the government has attempted to implement a two child policy. The population growth rate in 2004 was estimated at 1.02 percent.

Vietnam's population is very young; over 60 percent the population is under the age of 30, meaning that Vietnam is on the verge of a large demographic bubble. Vietnam is already struggling to cope with the 1.3 million new entrants to the workforce every year.

Fifty-percent of the population is female, though that rate is much higher for older age groups because of the war. There is a problem, as in other Asian countries such as China, of female infanticide due to strong cultural preferences for male offspring.

### 2. Ethnic Groups

Vietnam has more than 50 individual minority groups, though about 85-90 percent of the population are ethnic Vietnamese. Other major ethnic groups include: the Chinese, Khmer, Cham, Hmong, and Thai. The smallest ethnic groups are on the verge of cultural extinction, with only a few hundred members left. With the exception of the Chinese and Khmer, most of the ethnic minorities live in the mountainous regions of the country.

Vietnam's more than two million ethnic Chinese, concentrated mostly in southern Vietnam, constitute Vietnam's largest minority group. Long important players in the Vietnamese economy, the Vietnamese of Chinese ancestry have been active in rice trading, milling, real estate, and banking in the south and shop keeping, stevedoring, and mining in the north. Restrictions on private sector economic activities following reunification of the north and south in 1975, together with a subsequent general deterioration in Vietnamese-Chinese relations, sent chills throughout the Chinese-Vietnamese community. In 1978-79, about 450,000 ethnic Chinese left Vietnam by boat as refugees (many were officially encouraged and assisted) or were expelled across the land border with China.

The second largest ethnic minority grouping, the central highland peoples (formerly termed Montagnards or mountain people), comprise two main ethno-linguistic groups sometimes called the Malayo-Polynesian and Mon-Khmer. About 30 such groups of various cultures and dialects are spread over the highland territories.

The third largest minority is the Khmer Krom (Cambodians), which numbers about 600,000 and is concentrated near the Cambodian border at the mouth of the Mekong River. Most are farmers. Other minority groups include the Cham (remnants of the once-mighty Champa Kingdom which was conquered by the Vietnamese in the 15 century), Hmong, and Thai.

The government's policies towards the ethnic minorities have changed over time. For example, following the partition of the country in 1954, the North Vietnamese government established two "autonomous zones" in the mountainous north and northwest of the country, the region from which the Viet Minh launched their anti-colonial struggle against the French. These zones were enshrined in the 1960 Constitution. Following the reunification of the country in 1975-76, the Government abolished the "autonomous zones." Having fought so long for national unity, the government in Hanoi wanted to centralize control, and it had no desire to share power with ethnic minorities. Hanoi took a harder line towards these groups because many of them in the Central Highlands region (the Hmong and Montagnards, in particular) served as mercenaries and scouts for the Americans during the war. Ethnic tensions were exacerbated in the late 1970s when the government forcibly resettled hundreds of thousands of internally displaced peoples. The government settled these migrants in "New Economic Zones," which consisted of land in the border regions inhabited by ethnic minorities that the government sought to reclaim, cultivate, and bring under more effective central control.

Ethnic tensions resurfaced in the 1990s. Large-scale hydroelectricity projects forced the government to relocate hundreds of thousands of people. In addition, the large-scale cultivation of coffee in the Central Highlands region has led to the government's encouragement of large-scale migration to the region, through land allocation and other economic incentives. The net result has been that in provinces such as Kon Tum and Gia Lai, where ethnic minorities once comprised a majority of the population, these groups are now in the minority. Land allocation to ethnic Vietnamese plantation owners has also compromised the traditional slash and burn system of agriculture of the hill tribes. In early 2001, ethnic tension peaked again as thousands of hill tribesmen demonstrated in the provincial capital of Buon Me Thuot.

The election of Nong Duc Manh, an ethnic Tay, to the post of General Secretary of the Vietnam Communist Party in April 2001, was thought to ameliorate some of the ethnic tensions. Yet as a majority of the ethnic minorities are evangelical Christians, they often feel persecuted on religious grounds as well (see below).

### **3. Healthcare**

Recent improvements in healthcare have allowed Vietnam's population to live longer and healthier lives. Despite its status as a developing country, the quality of life for Vietnam's population is relatively high. The Democratic Republic of Vietnam regime was quick to establish a nation-wide network of health care in 1954, that despite little funding, penetrated to the local level and did much to improve people's lives. Life expectancy, which was only 40 years in 1950, had increased to 68 for males and 74 for females by the year 2005. The infant mortality rate has correspondingly fallen from 45/1000 live births in 1995 to 26/1000 live births in 2005. In 2005, the death rate had fallen to 6.26 deaths/1,000, while the birth rate remained high at 21.62-births/1,000 population. The total fertility rate in 2005 was approximately 1.94 percent.

Despite some development successes, Vietnam remains a poor country, with annual per capita income in 2005 of about \$640 (or \$2,700 in purchasing power parity). Moreover, per capita caloric intake has fallen in many areas, and more than 40 percent of Vietnamese children are malnourished. Sanitary conditions are still poor and only about 40 percent of the total population have access to clean water. Apart from malnutrition, the most common affliction, Vietnam also has high rates of malaria, dengue fever, typhoid and cholera. About 220,000 Vietnamese are living with HIV/AIDS (2003 estimate), representing an adult prevalence rate of 0.4%.

Vietnam has a strong network of basic healthcare services. Ninety percent of the total population, and nearly 100 percent of the urban population, has access to basic healthcare. Yet, the government spends relatively little on it; about 85 percent of healthcare spending comes from individual citizens. Investment in healthcare has not kept pace with the growing population, and the number of hospital beds and nurses per 1,000 people has declined in recent years, though the number of doctors has increased.

### **4. Education**

Vietnam has an excellent primary school system, and the country boasts developed country-rates of adult literacy. Adult literacy totaled over 90 percent of the population in 2002, 87 percent for females and 94 percent of males.

Yet investment in education has not kept pace with population growth. Although primary education is universal, there is a shortage of qualified teachers, and most are underpaid. Within schools, pedagogical tools and equipment are lacking, while facilities are in poor condition, if they exist at all.

A disproportionate amount of educational funding goes to urban and sub-urban areas.

Educational opportunities for ethnic minorities are minimal to the alarm of the international community.

There are over 100 institutions of higher education, 55 are clustered in Hanoi and Ho Chi Minh City, which adds to a rural-urban education gap. Less than 2 percent of the population has received tertiary- or graduate-level education.

## **5. Labor Force**

The labor force is around 43 million (2004 estimate), but growing by around 1.3 million people a year. Most of the labor force is unskilled: 63 percent are engaged in agriculture, while industry and the service sector employ the remaining 37 percent.

### ***Study Questions***

1. What are the challenges posed by Vietnam's youthful population?
2. What is Vietnam's policy towards its ethnic minorities?

### ***Suggestions for Further Reading***

- Jameson, Neil, *Understanding Vietnam* (Berkeley: University of California Press, 1995).

## Culture

### 1. Traditional Confucian Culture

Historically, Vietnam was constantly under Chinese domination or the threat of it. One of the mechanisms Vietnamese leaders used to assuage the Chinese was to adopt Chinese political and cultural institutions. This process of Sinicization imposed Confucian culture at every level of Vietnamese society. The imperial system established a powerful mandarin class, selected through a Confucian examination system.

The rigid teachings of Confucianism emphasize proper social relationships, a rigid code of conduct that defines the rights and duties of individuals within a hierarchical society. Confucianism defines proper behavior based on social roles. The family is the microcosm of society. Confucian doctrines have also established a set of rigid guidelines of behavior, conduct, and duties. The five principle relationships (*ngu luan*) are: ruler-subject; father-son; husband-wife; elder brother-younger brother; and friend-friend. The hierarchical relationships have established a pecking order that creates inequality in traditional society. If everyone accepts one's position and fulfills one's duties, this would lead to social harmony. It is an asymmetric system of prescribed rights and duties.

At the heart of Confucianism is a respect for authority, as benevolent and sage leaders rule unchallenged, legitimized by the "mandate of heaven." Only when the leader fails to provide for the nation do the people have the right to rebel.

### 2. The Role of Women

Traditional Confucian teachings have prescribed roles for women as daughters, wives, and mothers. Vietnamese women are expected to follow the "three submissions" (*tam tong*) to male authority. A woman must obey her father during childhood, her husband during marriage, and her eldest son when she reaches widowhood. Women are taught the four virtues (*tu duc*), a code of ethics for proper conduct and behavior. *Cong*, or labor, is the art of "mastering cooking, sewing, and embroidering." A woman's physical attractiveness (*dung*) is "to be only attractive to one's husband, but not enticing to others." Women are also expected to have appropriate speech, (*ngon*) by being "self-demeaning and rigidly polite rather than assertive or imaginative." Finally, one's proper behavior (*hanh*), is to be "honest and loyal to one's superior."

The status of women changed little under French colonialism, though more entered the commercial workforce while daughters of the elite were educated. Ho Chi Minh, however, saw women as being a revolutionary force and argued that the Confucian family system was one of sources of Vietnam's backwardness. Ho recruited women into the Indochinese Communist Party (ICP) and recognized the necessity of the women's involvement in the war effort. The Trung sisters, two of Vietnam's venerated heroines who expelled the Chinese in 1 AD, were emulated as national heroes and symbols of patriotism.

Once in power, the ICP focused on equality of sexes by expanding rights and addressing issues of women. In the 1960's, the Family and Marriage Act established the legal marriage age at 18, and

women had the right to choice of partner and to remarry without losing the claim to their children and property.

Many women were eager to join the ICP, which was an escape from the traditional prescribed roles and provided the opportunity for a modern, anti-feudal approach to women's roles by rejecting traditional authoritarian ideology of Confucianism, especially the social hierarchy.

Once the war against the Americans started, women's issues were diverted and were never fully re-addressed, although women's participation in both fighting and economic production was crucial to sustaining the war effort. For the first time, women dominated factory work, and by the late 1960s, over 40 percent of local level leaders were women. Yet, after reunification, patriarchal culture re-emerged. Women's status declined as the veterans returned home, and women were displaced and resumed their traditional roles within the home.

Although women are granted full equality under the constitution, Vietnam remains a patriarchal society, and women are under-represented in the higher echelons of management, business, and government.

Confucianism, which considers the scholar-official as the top of society, looks down on the merchant class. Consequently, Vietnamese women are often times found working in the informal business sector of the workforce. Rural women work the farms and are involved in animal domestication. They also supplement their income by engaging in sideline production of small handicrafts and local trading.

Women have benefited from the opportunities of the reform era. They are an important component of the urban white-collar workforce and now attend higher education in higher rates than their male counterparts.

### **3. Family Life**

Vietnamese society is centered on family life that consists of a multi-generation household. The parents are the supreme authority in this single and well-integrated hierarchically structured unit. "The sense of family [has] included the deceased and those not yet born in a single fabric of spiritual unity and material well-being."

In Confucian systems, children are forever indebted to their parents. This debt (*on*) can never be repaid and must be manifested through filial piety and respect. This continues after death when ancestors are worshipped in family altars within the homes and on special holidays when graves are visited.

At a young age, a girl performs household chores in preparation for life with her future in-laws. Girls were traditionally given limited education because they were considered as a liability since they will "marry out" of the family and become a "possession" of the husband's family. Therefore, little money and time is typically invested in the future of the girls reiterating the cultural preference for sons. Once married, women must earn the respect and loyalty of her new

family. Her main purpose is to continue the family line by having a male heir. The eldest son is expected to carry on the family line and care for his widowed mother.

#### **4. Language**

Vietnam's official language is Vietnamese. It is a Sinic-based language, though it uses a Romanized script. It is a difficult language with five tones and distinct regional differences. French is spoken primarily by the older generation. Russian is widely spoken by those trained in the former Soviet Union from the 1950s through the 1980s. English is now the official second language of the country. Among the country's minority groups, Chinese, Khmer, and tribal languages are spoken.

#### **5. National Holidays**

September 2 is the country's Independence Day, which celebrates Ho Chi Minh's Declaration of Independence from French colonial rule in Ba Dinh Square, Hanoi, on September 2, 1945.

The most important holiday is Tet, the lunar New Year. Tet falls between the end of January and the middle of February, depending on the year, and lasts for 3-4 days. The holiday embodies Vietnamese culture, and its importance is difficult to over-state; it has the components of a national day, a holiday of thanksgiving, and a New Year celebration rolled into one. During Tet, the country shuts down, as people spend 3-4 days visiting with friends and family. Since the economic reform program was implemented in 1986 and the people have become wealthier, Tet has become more elaborate and commercialized, as gift giving is now the norm.

Other official holidays include: May Day (May 1st), Armed Forces Day, and Women's Day. In accordance with the socialist regime, all holidays are non-secular.

#### **6. Religions**

There is a paradox about religion in Vietnam today. On the one hand, there are more religious worshippers in Vietnam today than at any other time. About 80 percent of the population is considered at least nominally Buddhist, often practicing an amalgam of Mahayana Buddhism, Taoism, and Confucian traditions that sometimes is called the country's "triple religion". There are also an estimated 6 to 8 million Roman Catholics, officials of Cao Dai and Hoa Hao religions claim more than three million adherents each, and estimates of the number of Protestant Christians, located primarily in the northwest and central highlands, vary from an official government figure of 500,000 to claims by the churches of 1.6 million or more. Ancestor worship, Buddhist festivals, folk religions, and cults around historical figures are also commonplace. It appears that there is a significant growth of believers across the country.

On the other hand, while the government has shown little concern about individual faith, it is clearly concerned about the growth of organized religion, its authority structure, nation-wide network, and cadre of adherents. While promising freedom of religion for individuals, the

government has gone out of its way to control religions and prohibit any autonomous religious activity. There is deep-seated historical mistrust of religion. It was in the name of missionary freedom that France invaded and colonized Vietnam, and the government sees the Catholic Church as a vestige of colonialism.

Religion has always been politicized in Vietnam. Buddhists were active in the anti-war movement in South Vietnam, and Catholics in the North were often allies of the French against the Viet Minh. The Hoa Hao and Cao Dai sects raised their own armies and fought the Communists. The Catholics were closely allied with Ngo Dinh Diem's regime.

The Vietnam Communist Party fears the growth of organized religion and strives to maintain control over all religious activity. The VCP believes that religions pose a threat to their monopoly of power. Religions, with their nation-wide network of churches and adherents, a hierarchical authority structure, and charismatic and morally upright leadership who are able to disseminate information and mobilize their congregations, are a potential challenge to the VCP's monopoly of power. While freedom of religion for the majority of individual practitioners is being realized, the state seeks to control the six official religions, their leadership, and their organizations. Religious leaders who circumvent party control are persecuted and often imprisoned. Moreover, religion is perceived as a key component of peaceful evolution, and the VCP is convinced of the subversive role that the Catholic Church played in the collapse of Polish and East German Communism. The VCP sees religion as a primary mode through which foreigners can interfere in Vietnam's internal affairs, whether through direct control of church organization and scripture, or through proselytizing. The Vatican, for example, often clashes with Hanoi over the right to appoint Bishops. As the Vietnamese government considers religion to be an arm of the state, the appointment of church leaders is not a suitable role for the Vatican.

The government has also prevented churches from engaging in social work. An example that portrays the party's fear of organized religion was its reaction to the attempts by the Unified Buddhist Church of Vietnam to distribute relief aid to the victims of flooding in the fall of 2000. Confronted by the worst floods in 40 years, the government, while courting international relief aid for the nearly four million affected people, shunned relief support mobilized by local Buddhist temples and waged an all out campaign against the monks trying to contribute to relief efforts. While Australia, the UN World Food Program, and the International Committee of the Red Cross were all active in relief aid for the 190,000 people in need of emergency assistance, there was little that the international community could do for the approximately four million people who lost homes, livestock, or crops. Yet, at the domestic level, the state feels that if it were to lose its monopoly on the distribution of goods and services, its political authority will dissipate. Such civic organizations cannot be countenanced.

As a result of this profound fear, the Vietnamese government goes out of its way to control religion in several ways (note: Vietnam's 1992 constitution does not guarantee 'freedom of religion' in the fullest sense, but rather 'the freedom to believe or not believe in a religious faith'" -- Article 70). First, religion is controlled through its incorporation as an organ of the state and through the denial of its autonomy. For example, the VCP tried to co-opt the UBCV after reunification in 1976. When church leaders refused to submit to party control, the UBCV

was banned, and an official church, the Vietnam Buddhist Church, was then established under the party's mass-organizations umbrella organization, the Vietnam Fatherland Front. The UBCV has requested official recognition since 1981, but has been rebuffed. It is the same for the other religions as well. Each church has an officially sanctioned and elected ruling body that does the state's bidding; for the Catholics, it is the Bishops' Council of the Vietnam Catholic Church. In 1999, the Hoa Hao were forced to organize a leadership council under state control.

Second, as the state controls all religion, it also controls seminaries, and maintains sole responsibility for the ordination, appointment, and promotion of clergymen. As such, the state is able to apply a political litmus test to ensure that clergymen remain loyal to the Communist regime that they serve. Third, the government appropriated all church properties beginning in 1954 in the north and 1975 in the south. As all religions are organs of the state, all their properties belong to the state. Only 5-10 percent of all Buddhist properties in the south have been returned. To this end, we have seen the spread of "house churches" (*tin lanh*). Fourth, all church publications, from texts, to prayer books, to the writings of the monks and priests must receive official permission and the state has broad interpretive powers regarding church publications.

Vietnam does not ban religion. But the Communist Party forces it to operate in a bureaucratic maze, and any deviance is dealt with harshly.

### ***Study Questions***

1. How has the status of women changed throughout history? Have the promises made to women by the VCP gone fulfilled? In what ways has economic reform contributed to or hindered women's progress?
2. Does freedom of religion exist in Vietnam? Why does the VCP go out of its way to control religion?

## History

### 1. Early History

Until recently, the early history of Vietnam, as that of the other states of Southeast Asia, was shrouded in mythology and a lack of scholarship. But in recent years, a much clearer picture of this early period has been emerging, thanks to academic research in a variety of disciplines. The first major historical marker that we now see clearly is the Kingdom of Van Lang, a feudal state founded in the first millennium BCE in the Red River Valley. Van Lang was populated by the ancestors of the Vietnamese, the Lac, who manufactured the celebrated Dong Son drums during their flourishing Bronze Age civilization. In 258 BCE, a South China war lord, Thuc Phan, conquered Van Lang and combined it with Au Viet, the hilly upland region along the Sino-Vietnamese border, thereby creating Au Lac. It was the first Vietnamese state combining the lowlands of the Red River Valley with the surrounding uplands extending northwards toward the Chinese border.

Au Lac did not long endure, not at least as an independent state, for it became a tributary and then an integral part of Nam Viet, a Cantonese kingdom that included Viet peoples living along the southern coast of China and the northern coast of Vietnam bordering the South China Sea. Then, in 111 BCE the dynamic and expansionist Han dynasty seized Nam Viet and integrated Au Lac into their imperial system as the province of Giao-chi.

The Chinese ruled Au Lac for just over 1000 years with, needless to say, major consequences for Vietnam. Among them were: (1) the implanting of many aspects of Chinese civilization, among the most important of which were the use of Chinese as the language of government and literary expression; (2) the dissemination of Chinese art and cultural forms; (3) the use of Confucian classics as the core of the education system; and (4) the migration of Chinese into Giao-chi, where they formed a Sino-Vietnamese ruling class which drew its wealth and power from a dyked and canal-fed, wet rice agriculture. However, in evaluating the effect of Sinication in Au Lac, it is important to be aware that it most manifestly did not result in a Confucian culture, as Chinese culture at the time was not Confucian but more complex, including many Hindu and Buddhist ideas that were brought to China from the sub-continent via the overland trade route. It is important to recognize also that Chinese influence was limited to Giao-chi. In the center and south of Vietnam, the situation was quite different. There the trading and sea-faring Chams were in the process of “localizing” the many Indian and Islamic ideas and institutions with which they had become familiar while conducting an extensive trade with the Indian sub-continent and Arabia.

This Chinese political and cultural invasion had two important consequences. First, it generated a millennium-long resistance by all classes and segments of the society that from time to time erupted in dramatic events, such as the revolt of the aristocratic Trung sisters in 40 CE. After the great Tang dynasty weakened and then was overthrown, the Vietnamese defeated the Chinese in a celebrated naval battle on the Bach Dang River in 938 and in 967. The Vietnamese emperor Dinh Bo Linh declared northern Vietnam independent in 967, naming it Dai Co Viet.

In the ensuing 600 or so years, politics in Dao Co Viet centered on dynastic struggles at home and struggles on its northern and southern borders, events which were, to be sure, interrelated. The dynastic struggles in Vietnam resulted in the rise of the Ly dynasty in 1009, the Tran in 1225, and the Le in 1426, the founder of which, Le Loi, renamed the country Dai Viet (or Great Vietnam). A subsequent Le emperor, the great Le Thanh Tong, (1460-1498), replaced Buddhism, which had been dominant under the preceding Tran, with Confucian institutions, e.g. the Confucian legal codes, the Confucian examination system, and a Confucian-inspired strict hierarchical government system. While these initiatives most surely were partly responsible for the success of the Le at home and on the northern and southern borders (of which more below), they were not enough to ensure its continuing dominant position. In 1527, the Le dynasty was overthrown by Mac Dang Dung. Although the Le did succeed later (in 1592) in ousting the usurping Mac and in replacing them on the throne, the Le ruled in name only. Two powerful, lordly families exercised the real power; the Trinh in Hanoi and the Nguyen in the South, both of which, along with the Le, were ousted by the Tay Son rebellion in the late 18<sup>th</sup> century.

Vietnam's border problems in the North were essentially defensive, to hold back one after the other of aggressive Chinese dynasties. They did so by an astute strategy of resistance and recognition. The Mongols three times invaded Dai Viet in the 13<sup>th</sup> century; three times invaded Hanoi; and in each case they were later forced to withdraw. Each time the Vietnamese, in an effort to establish a *modus vivendi* with their powerful neighbor, agreed to a tributary relationship. Later, in 1406, the Ming seized Hanoi, but they were driven out by the Vietnamese in an all-out war of resistance led by Le Loi. Once again the two sides established a tributary relationship.

In the south, the issue was Vietnamese expansion, not defense. During the Chinese period, the Vietnamese and Chams had fought off and on over trade and territory. Then, after independence, the Vietnamese began a centuries-long campaign to subdue their rivals to the south, a campaign which would yield rich results, such as access to land, people, and maritime commerce along the South China Sea. In 1252, Dai Viet invaded Champa in response to numerous Cham raids; in 1307, Dai Viet acquired Cham territories north of present-day Da Nang; and in 1471, Le Tang Tong, continuing what has often been referred to as the *nam tien* or the "March to the South", led Vietnamese into Vijaya, which, after the fall of Indrapura some years earlier, had become the capital of Indianized Champa. The southern-based Nguyen lords, who conquered all of Champa and most of the Mekong Delta, undertook the last stages of this campaign. In the wake of military conquest came the principal agents of Vietnamization, i.e., the migrating peasants in search of lands and Vietnamese government officials, who each in their own way extended the reach of Vietnamese culture and society, quickly laying the base for a regional state.

## **2. The Colonial Era**

In 1627, the swashbuckling French Jesuit missionary, Alexander de Rhodes, led a mission to Vietnam. The Jesuits had trouble in the North with the Trinh Dynasty, which was suspicious of the Christians and unfavorable to the Romanization of the Vietnamese language. The Nguyen Dynasty of the South was more accommodating, however, and showed interest in Western guns and trade. Strengthened by this new weaponry, the Nguyen Dynasty continued its march south

along the coast to the fertile Mekong Delta. By 1750, Champa was defeated, and the entire Mekong delta region had been conquered from the Cambodians.

In 1777, the peasant-led, Tay Son Rebellion defeated the Nguyen and Trinh Clans, as well as the Le Dynasty. Nguyen Anh, the pretender to the Nguyen clan, which ruled the South, believed himself to be the rightful heir to the throne. Anh joined forces with a French priest, Pigneau de Behaine, who appealed to France to intercede on Anh's behalf. In 1787, a reluctant France agreed to send 1,650 soldiers, weapons, and ships. In return, Vietnam would cede to France the port of Danang and Paulo Condore Island, and make commercial privileges "to the exclusion of all other European nations." After Louis XVI reneged on the deal a few days before the masses stormed the Bastille (July 1789) sparking the French Revolution, Pigneau went to India where he convinced French merchants to give him money, guns, troops, and ships by exaggerating the wealth and trade potential of Vietnam. Though he returned to Vietnam with only a few hundred soldiers, this proved adequate to capture Saigon. Anh then moved north to Hue and Hanoi, which fell in 1802. France built forts and ensconced itself in Saigon, while Nguyen Anh declared himself Emperor Gia Long, and consolidated the Nguyen Dynasty. He established his court in the central city of Hue. For the first time in centuries, Vietnam was a unified entity. But an independent and unified Vietnam was short-lived, due to French colonial expansion.

Gia Long ruled from 1802-1820 and was succeeded by his son Minh Mang, who ruled from 1820-1841. Minh Mang, a Confucian, was xenophobic towards the West and its missionaries. In 1825, he was so concerned about the growing number of converts that he issued an edict declaring Catholicism heretical, and in 1833 ordered the arrest and execution of missionaries. This was the excuse that France was waiting for – the justification for intervention.

In 1840, Minh Mang sent a diplomatic mission to France, though by this point, the European powers were set in their imperialist ways. In 1841, the British launched the Opium War, pressuring France to acquire its own colonies. France was interested in Indochina, but only as a back door route to China. In 1843, a French fleet was permanently moored in Vietnamese waters to protect missionaries and French commercial interests. Under the pretext of protecting missionaries, France sent an expedition force to Vietnam. A small group landed in Danang on August 31, 1858. In 1861, the French captured Saigon and pushed south through the Mekong Delta. In 1862, Emperor Tu Duc signed the Treaty of Saigon, which ceded three southern provinces around Saigon and Paulo Condore to France, guaranteed freedom of religion, opened three ports to Europeans, and forbid Vietnam's transferal of any other rights or territory to another European power.

The French new territory, officially known as Cochin China, was ruled under a French legal code. French rule in Cochin China was brutal, and from the outset was challenged by wide-scale peasant protests. But Cochin China began to adopt a very different political and legal culture. The ceding of Cochin China had a lasting impact, manifested in the failed 1946 negotiations between Ho Chi Minh and the French, who argued that the region was French territory rather than a part of Vietnam.

In 1863-1864, the French, interested in using the Mekong to trade with China, established a “protectorate” over Cambodia. In 1867, France seized the three southernmost provinces of Dai Viet and incorporated these into Cochin China. The 1866-1868 exploration of the Mekong convinced the French of the benefits of an Indochinese empire, though they concluded that the Mekong was un-navigable and thus could not be used to reach the Chinese interior. France then set its sights on the Red River in Tonkin. In 1873, Admiral Dupre declared the Red River open to trade and unilaterally lowered the tariffs to favor European traders. This caused an outrage among Vietnamese merchants and justified a small army led by French merchants to seize Hanoi. The French sent an official, Philastre, to sign a new treaty. In return for the French withdrawal from Tonkin, in 1874, Emperor Tu Duc recognized French suzerainty over all of Cochin China (including the territory seized in 1867) and granted them trading rights on the Red River.

The French were again denied access to the Red River, and the new French government responded. Prime Minister Jules Ferry argued that “colonial policy is the daughter of industrial policy” and was the first Prime Minister to make imperialism one of his central platforms. In 1882, French defeated the Nguyen army and seized Hanoi, and then the French parliament authorized five million francs for a full-scale expedition in Tonkin. In 1883, the French Navy arrived at the mouth of the Perfume River outside of Hue. The following year, the Treaty of Hue was negotiated, but not signed. Annam and Tonkin became French protectorates. In 1885, the Vietnamese revolted in what became known as the Battle of Hue, though they were defeated.

In 1887, the French founded the Indochinese Union, composed of Cochin China, Annam, Tonkin, and Cambodia. This later included Laos, which the French gained as a protectorate after negotiating a treaty with Siam in 1893.

By 1895, the Indochinese protectorates had fallen into terrible budget deficits, due in part to mismanagement and because of the squabbles of the *residents superieurs*, who separately ruled the four protectorates and Cochin China, over scarce government resources. Until 1897, Vietnam was never ruled as a single colonial entity. The French divided the country into three regions: Cochin China, Tonkin, and Annam. In 1897, the new Governor General created a self-sufficient Indochinese Union, something that would become a profit-making venture for France, free of subsidies from French taxpayers. Doumer’s first priority was to centralize control of Indochina, concentrating power in the hands of the Governor General.

### **3. The Anti-Colonial Struggle**

What was fiscally sound for the French put a huge burden on the Vietnamese peasantry. There were sporadic revolts against French Colonial rule: for example, the 1908 uprising in Hanoi; the massive anti-tax revolt in Annam; the 1916 rebellion in Cochin China and Annam; and the 1930 uprisings in Tonkin and Annam. Organized anti-colonial struggle developed in the 1920s and 1930s. The most important groups were the nationalist VNQDD, which modeled itself on the KMT in China, and the Indochina Communist Party, founded in 1930 by Ho Chi Minh. The origins of the ICP date back to 1925 when Comintern official and Vietnamese nationalist leader Ho Chi Minh founded the Revolutionary Youth League in southern China. Hobbled by factionalism, the group was defunct by May 1929. After uniting feuding Communist groups that

operated in southern China, Ho founded the Indochina Communist Party in 1930. The group operated clandestinely, as French colonial authorities imprisoned many of its leaders. The ICP grew, however, into a pre-eminent, anti-colonial force.

To widen its appeal, Ho created in 1941 a broad nationalist united front, under the ICP's leadership, known as the Viet Minh. The ICP was dissolved, however, to assuage fears that Communist forces would not dominate the new coalition government. Viet Minh troops waged a guerilla war against the Japanese and Vichy French troops. Following Japan's surrender, Ho's Viet Minh marched into Hanoi and declared the founding of the Democratic Republic of Vietnam (DRV) on September 2, 1945. However, it did not control a majority of the territory in the North, as much was in the hands of rival political parties.

Despite Ho's declaration of independence and the establishment of a Viet Minh-dominated National Assembly, nationalist Chinese troops continued to occupy the north while the French returned to reclaim their colonial possession. In early 1946, Ho signaled his willingness to negotiate with the French. Although the French had defeated the Viet Minh in the south, they were interested in an overall political settlement. The talks were intense, as both sides knew that without a settlement, there would be war. Jean Saintaney, the French negotiator, was under pressure from French businessmen to demand a separate Cochin China. Ho compromised for a referendum at a later date. Under the 1946 Preliminary Agreement between the French and the Viet Minh, France would recognize the DRV as a "free state having its own government, parliament, army, and finances, forming part of an Indochinese Federation" and the "French Union." Ho agreed to allow the stationing of 15,000 French troops to replace the 180,000 KMT forces.

But the agreement came to naught as the High Commissioner for Indochina, Admiral d'Argenlieu, refused to endorse the agreement and invited the Viet Minh to Dalat for "further talks" regarding Cochin China. At an impasse, Ho left for Paris and, in his absence, d'Argenlieu violated the agreement by declaring a Republic of Cochin China in the name of France. In Paris, the French government yielded nothing, especially regarding Cochin China and the Fortainbleau Conference ended in failure on September 13, after 8 weeks of talks. Ho sent Pham Van Dong and his delegation back to Hanoi, where he remained until the 19th after initialing the *modus vivendi* which maintained an independent Cochin China. Knowing that he would be under fire from Viet Minh hardliners, Ho returned to Hanoi uttering, "I have just signed my death warrant."

It was clear from the start that the French had no intention of fulfilling the agreement, and violent confrontations between the returning French troops and the Viet Minh erupted immediately. When the Viet Minh refused to disarm and decamp in Hai Phong, D'Argenlieu dispatched French warships to bomb the city. Ho ordered the Viet Minh to the jungles to begin a long guerilla war.

The French were always looking for political alternatives to Ho Chi Minh and the Viet Minh. The man upon whom they increasingly relied was the last emperor, Bao Dai. Bao Dai, installed on the throne by France in 1932, had abdicated in 1945, giving his "Mandate of Heaven" to Ho. He remained a national symbol, however, and served as an advisor to the Viet Minh for one year

before departing for Hong Kong. Fearful of a Bao Dai/Viet Minh alliance, the French courted the emperor, offering to dissolve the Republic of Cochin China and establish the State of Vietnam. Anti-Communists lobbied Bao Dai to sign the agreement to marginalize Ho and the Viet Minh, but the protocol fell far short of independence. On March 8, 1949, Bao Dai and the French president signed the Elysee Agreement, which established France's recognition of some Vietnamese autonomy, but preserved French control over defense, foreign policy, and finance.

Despite the establishment of a puppet government, the French were bogged down in a guerilla war. From 1946-1950, the Viet Minh controlled much of the countryside, especially in northern Vietnam. The Viet Minh established an effective local administrative system.

The Viet Minh were no match for the superior French forces. It was not until the Chinese Communist Party's victory in China in October 1949 that the tide turned, when Ho successfully negotiated with Beijing for military aid. With this aid, Viet Minh forces defeated the French at Dien Bien Phu in 1954.

#### **4. Geneva Agreement**

Following their defeat at Dien Bien Phu, the French were desperate to negotiate a political settlement that would somehow protect their commercial interests in Cochin China. France was under intense pressure from the US to not negotiate with Ho and to find a non-Communist alternative. After secret talks with the Chinese, a settlement was reached and forced on the Viet Minh leadership.

To save face for the French, and minimize the possibility of American intervention along its southern border, the Chinese forced the Viet Minh to give up much of the territory it had captured. Although in 1954 the Viet Minh controlled most of the country, it was pressured to accept the temporary division of the country into two zones that would be unified through a national election. Contention arose over the location of the dividing line and the timing of the national elections.

Pham Van Dong, the head of the Viet Minh delegation, argued that the country should be divided along the 13<sup>th</sup> Parallel, a boundary that encompassed most of the territory occupied by the Viet Minh at that time. Dong wanted to hold elections as soon as possible to capitalize on Ho Chi Minh's enormous nationwide popularity. Likewise, he did not want to give any southern leaders time to consolidate their rule. France demanded that the country be divided along the 18th Parallel to reflect its traditional claim over Tonkin. Likewise, the French wanted a five-year period before national elections to allow for the southern government to consolidate and legitimize itself and for France to protect its commercial interests. A compromise was brokered by the Soviets: division at the 17th Parallel, along the Ben Hai River, with national elections to be held in two years (1956). A period of 300 days was allowed for regrouping, during which almost 130,000 people moved north, while as many as 900,000 people (mainly Roman Catholics) moved to the south. France won more at the negotiating table than it could on the battlefield, while the Viet Minh had all of their military victories nullified.

## 5. A Nation Divided

The elections were never held, and the country remained divided. Two diametrically opposite socio-economic and political systems were established in the respective halves of the country – the Democratic Republic of Vietnam in the North, and the Republic of Vietnam in the South.

In the North, the LDP was the sole political force and implemented an authoritarian political system and Stalinist economic program. The LDP's land reform program, implemented in two phases between 1954 and 1960, was brutal and hampered production. Over 15,000 people were killed during the process. At the advice of Chinese advisors, Maoist-style "people's courts" were established and "class labels" were applied to all members of society to identify and liquidate the landlord class. Wide-scale violence and peasant unrest led the LDP to sack its General Secretary and revise its policies. The economy was industrialized through massive amounts of Soviet and Chinese assistance. Caught in the middle of the Sino-Soviet dispute, Hanoi walked a diplomatic tight rope, seeking to maintain good relations with both Moscow and Beijing. The LDP also imposed a strict system of control over its writers and artists, beginning in 1954. There was an inevitable conflict of priorities between the desire to implement a Socialist revolution in the North, and the policy of 'completing the revolution' in the South.

In South Vietnam, an anti-Communist, but authoritarian regime was established under Emperor Bao Dai. His Prime Minister, Ngo Dinh Diem, outmaneuvered him, and declared his presidency in October 1955. Economically, culturally, and militarily, South Vietnam under Diem moved out of the French orbit and into the US sphere of influence. The RVN soon became dependent for its survival on US aid.

From 1954 to 1963, Ngo Dinh Diem and his brother Nhu dominated the politics of South Vietnam. Coming from a family of Roman Catholic mandarins, Diem was anti-French and anti-Communist. He became Prime Minister at the behest of the US in June 1954. His position was initially insecure. By October 1955, however, he was strong enough to hold a referendum, the result of which enabled him to depose Bao Dai and to proclaim himself President of the Republic of Vietnam. He also repudiated the Geneva declaration and rejected plans to hold elections. During the next few years, he attempted to destroy the Viet Minh (or, as he termed it, Viet Cong) network in the South. Many Communists and their sympathizers who had remained in the South in 1954 were imprisoned. In May 1959, the Communist leadership in Hanoi was alarmed at the devastation of their southern network and authorized a political and limited military campaign in the South. In December 1960, the Communists created the National Front for the Liberation of South Vietnam (NLF), to unite opposition to Diem, which was already mounting.

Diem had alienated almost every sector of society. The hunt for Viet Cong led to repression in the countryside. His failure to implement meaningful land reform, combined with his policies that angered the rural population (such as establishing strategic hamlets) drove the peasantry into

the arms of the NLF. Favoritism towards the Catholic Community and repression of Buddhist monks vexed the majority Buddhist community, while students and intellectuals were under suspicion of being supporters of the NLF.

Determined to prevent any Communist advance in Southeast Asia, President Kennedy provided US troops (numbering 8,000 by the end of 1962) to act as advisers to the South Vietnamese army. US confidence in Diem declined, and in November 1963, he was killed in a military coup with tacit US approval. However, the new government was equally unable to defend itself against a growing rural guerrilla movement whose ranks were swelling with peasantry spurred by the lack of meaningful land reform. During the latter half of 1963, Hanoi adopted a more offensive strategy. By the end of that year, the situation of the Saigon government was precarious. President Kennedy's successor, Lyndon Johnson, committed the US to a policy to defend South Vietnam at all costs.

The failure in Vietnam was not a military but a political one, as no legitimate government in the south with a broad base of popular support was ever formed. The junta that replaced Diem lacked legitimacy and was fraught with factionalism and political rivalry. Soon afterward, a second military coup occurred in January 1964, led by General Nguyen Khanh, who himself was overthrown in February 1965 by a group of younger officers led by the air force commander, Air General Nguyen Cao Ky. A nominally civilian government under Phan Huy Quat was followed, in June 1965, by a new military regime, with Lt.-Gen. Nguyen Van Thieu as Head of State and Nguyen Cao Ky as Prime Minister.

## **6. The American War**

Hoping to capitalize on this political turmoil, the LDP ordered the infiltration of North Vietnamese troops into the south of the country in 1963. This provoked a concurrent escalation of American troops dispatched to reinforce the Saigon Government. An incident involving US ships in the Gulf of Tonkin in August 1964 enabled President Johnson to obtain unrestricted authority from the US Congress, and he used the power granted to him to deal with the Vietnamese situation without any formal declaration of war. The number of US forces in Vietnam increased from 23,000 at the beginning of 1965 to more than 500,000 by March 1968; in addition, contingents were sent from the Republic of Korea, Australia, the Philippines, and Thailand. As a result, the conflict escalated into a war of major proportions. The Communists sent regular North Vietnamese troops to the South, and became increasingly dependent on aid from China and the USSR. The US commenced aerial bombardment of the North in March 1965.

A measure of political stability returned to Saigon while Nguyen Van Thieu held the presidency from October 1967 until 1975. Yet his regime remained unpopular and illegitimate, unable to implement any meaningful reforms for the majority of the population.

In January-February 1968, the Communists launched a major offensive in urban areas to coincide with the lunar New Year (known as *Tet*). It was on a larger scale than any previous operation, and included attacks on Saigon, Hué, and many other towns. There was also heavy fighting just south of the 17th parallel. The *Tet* offensive, although a military defeat for the Communists, forced the US government to reconsider its policy. Faced with a major financial crisis and increasing opposition to the fighting, President Johnson decided against a further expansion of the war. Discussions between American and North Vietnamese representatives began in Paris in May. In October, Washington and Hanoi agreed to extend negotiations, and the US suspended its bombing raids against the North. However, heavy bombing remained an essential component of US strategy in the South, and the talks failed to produce a cessation of armed conflict.

In January 1969, after Richard Nixon's inauguration, the informal talks in Paris were transformed into a formal conference between representatives of the US, North Vietnam, South Vietnam, and the NLF. In June 1969, the NLF was supplemented by the creation of a new provisional revolutionary government of South Vietnam. During 1969-70, the conflict continued; although the US began to withdraw its own troops, fears that the North Vietnamese might take advantage of the withdrawal led the US, ironically, to intensify the war. The most spectacular was the invasion of Cambodia in April 1970, following US-supported moves to overthrow the Government of Prince Sihanouk in Phnom-Penh. Equally important was the 'Lam Son' operation of February 1971 in Laos, which damaged North Vietnamese supply lines even though it ended in South Vietnamese retreat. By this time, the Communist war effort in the South was dependent on the presence of North Vietnamese regular troops.

In March 1972, with US forces reduced to about 95,000, the North Vietnamese launched a new offensive, which led to some of the most intense fighting of the war. The US government reacted by renewing its bombing of the North and by mining Haiphong and other harbors. By September it was clear that the situation had reached an impasse, while in the US itself there was mounting pressure to bring the war to an end. Secret meetings in Paris between President Nixon's foreign policy adviser, Dr Henry Kissinger, and Le Duc Tho of the Vietnamese Politburo, beginning in 1969, showed some progress following Dr Kissinger's visit to Moscow in September 1972. However, for reasons that remain unclear, in December, US planes conducted the heaviest bombing raids of the war against North Vietnam. Only after that was the cease-fire agreement finally signed in Paris in January 1973.

The Paris Agreement provided for the complete withdrawal of all US troops from Vietnam, together with the return of US prisoners of war, by the end of March 1973. That part of the agreement was fulfilled. However, the remaining terms of the agreement, including provisions for political freedom in the South and the creation of a National Council of Reconciliation and Concord, were ignored during the next two years. For the US, the war was over. Since 1961, America had suffered 45,941 combat deaths and over 10,000 deaths from other causes in Vietnam, as well as 150,000 casualties. In the same period, nearly 2 million Vietnamese on both sides, both combatants and civilians, had been killed in the war.

For the Vietnamese, however, the war was not yet over. The Paris Agreement provided for a cease-fire, without any requirement that North Vietnamese forces be withdrawn from the South. In July 1973, the US Congress made illegal any further US military action in Indo-China. The international commission set up to supervise the cease-fire was unable to prevent frequent outbreaks of fighting between the two sides, while the North Vietnamese were now free to undertake a final offensive. Following the fall of the entire province of Phuoc Long in January 1975, the pace was accelerated. By the end of March, the Communists controlled Hué and Danang and were advancing southwards along the coast. In April, they threatened Saigon. Thieu resigned, to be succeeded for a few days by his Vice-President and then by General Duong Van Minh. On 30 April, the last members of the US embassy and other personnel were evacuated and the Communists entered Saigon, which they renamed Ho Chi Minh City.

#### COST OF US INVOLVEMENT IN VIETNAM: 1960-1975

YEAR	TROOP LEVELS <sup>1</sup>	KILLED HOSTILE	KILLED NON-HOSTILE	WOUNDED HOSTILE <sup>4</sup>	WOUNDED NON-HOSTILE <sup>5</sup>	POWs	MIAs <sup>6</sup>	WAR SINC

## 7. Reunification and Stagnation

The period from the fall of Saigon in April 1975 to mid-1976 was one of transition. The NLF's wartime platform, which established that following the war's conclusion, South Vietnam would continue to be administered by its own administration, independent from the DRV, and the transition to socialism would be gradual, was abandoned. The war ended suddenly and on Hanoi's terms without any need for negotiation with a South Vietnamese regime. To that end, Hanoi believed that they had every right to formally reunify the country under its control and begin the rapid socialization of the southern economy.

In May 1975, revolutionary committees were created at all levels in the South. The South had its distinct problems – its 'national democratic' revolution was still incomplete, whereas the North was already in the stage of 'socialist' revolution. A first priority in the South was to bring the economy under control. Private banks were closed, and the traders who had dominated the Saigon economy under Nguyen Van Thieu were accused of hoarding commodities, and their stores were confiscated. Their savings (in piastres) were rendered valueless by the introduction of a new currency that could be regulated more easily. The state took steps to control, if not to own, capitalist enterprises left behind by foreign investment while foreign banks and enterprises were no longer allowed. Former members of the South Vietnamese army and civil service were obliged to undergo 're-education' courses, in camps where study was combined with labor. More than 300,000 Saigonese officials were sentenced to long-term re-education.

In November 1975, a reunification conference was held in Ho Chi Minh City, presided over by Truong Chinh (representing the North) and Pham Hung (representing the South), which formally decided that reunification should take place through elections to be held throughout the country during 1976. Accordingly, a single National Assembly was elected in April, and when it met on 2 July, it declared the inauguration of the Socialist Republic of Vietnam, with its capital in Hanoi. The Assembly also established a committee to draft a new constitution. The new government included a few members of the former provisional revolutionary government of South Vietnam, but it was dominated for the most part by the existing Political Bureau of the Vietnam Workers' Party, which was renamed the Communist Party of Vietnam at the fourth Party Congress in December.

In 1976, Vietnam joined the IMF and the World Bank, and in 1977, it sought Western investment in Vietnamese industrial projects. That year there were moves towards the 'normalization' of relations between Vietnam and the US, which abandoned its opposition to Vietnamese membership of the UN, a body Vietnam joined in September 1977. Normalization talks broke down over Vietnam's demand for war reparations, which the US Congress had forbidden.

But despite these tentative overtures to the capitalist world, Vietnam became closer tied to the socialist camp. By 1978, a new phase of economic transformation led to the abolition of private

trading and street markets in the South and the unification of the currencies (March-April 1978). These changes were accompanied by a program to convert agriculture to a system of cooperatives, to transform private industry in the South, and to step up the 'redeployment' of labor from cities to the New Economic Zones (NEZs).

Important political changes occurred during 1980-81, starting with a government reshuffle in January 1980. In December 1980, after four years of debate, a new constitution was adopted, under which a newly-elected National Assembly met in July 1981 and appointed both a State Council (a collective presidency) and a new Council of Ministers. Truong Chinh became President of the former, and therefore Head of State, while Pham Van Dong remained Chairman of the Council of Ministers (Prime Minister), with slightly reduced powers. Le Duan, still dominant in the Communist Party, was not included in either of the principal state organs. The party's fifth Congress, twice postponed, was held at the end of March 1982. It became clear, from the reports of preparatory congresses at provincial level, that the party was divided and that some elements in the leadership were being blamed for the country's severe economic failures. When the Congress met, a number of prominent figures were dropped from the new Politburo (including Vo Nguyen Giap) and others from the Central Committee. A number of younger men were promoted, but the generation of the 1950s had still not relinquished control.

## **8. The Third Indochina War**

Throughout the war years, Vietnam was entrenched in the socialist camp. Dependent on both the USSR and China to support its war effort, Vietnam walked a tight rope following the 1959 Sino-Soviet split. But relations with China broke down following the Sino-American rapprochement in 1971, and Hanoi considered the Shanghai Communiqué to be a betrayal. Beijing wanted America off its borders and therefore put pressure on Hanoi to negotiate an end to the war. Following the 1973 Paris Accords, Beijing warned Hanoi that "the broom of the north should not sweep the south," an explicit warning not to renew the war in the South. Yet one year after the signing of the Paris Peace Accords, Hanoi's troops had begun the Ho Chi Minh campaign to conquer the south. Saigon fell on 30 April 1975, angering China.

Two weeks earlier, Phnom Penh fell to the Khmer Rouge, and in December 1976, Hanoi's Communist allies in Laos, the Pathet Lao, took over Vientiane. Hanoi immediately set out to establish the Indochina Federation, ostensibly under its control. China wished to maintain direct relations with Cambodia and Laos independent of Hanoi, thereby thwarting Soviet ambitions in the region. The Lao acquiesced to Hanoi, but the xenophobic Khmer Rouge, who believed that the Vietnamese had territorial designs on Cambodia, refused to join. Almost immediately, the Khmer Rouge launched violent attacks across the border into Vietnam to regain the Khmer Krom region of the Mekong Delta, ceded to Vietnam by the French. Vietnam appealed to Beijing to control their clients, but Beijing stepped up the flow of military aid and diplomatic support for the Khmer Rouge.

Vietnam rejected ASEAN, which it considered to be a tool of the American imperialists, and demanded that the other Southeast Asian states join with the “progressive nations,” i.e., the three Communist Indo-Chinese states, to establish a new regional grouping under Hanoi’s leadership.

Disputes over sovereignty in the South China Sea also hampered relations. China seized the Paracel Islands in 1974 from a contingent of RVN troops, angering Hanoi. In 1977, the Chinese Government presented a memorandum stating that Vietnam had not honored agreements made in the 1950s concerning Sino-Vietnamese borders (both on land and in the Gulf of Tonkin).

The final irritant was Vietnamese policy towards ethnic Chinese residents (also known as ‘Hoa’ people), which had become so severe that vast numbers of them were taking to ships in the South China Sea. The ethnic Chinese dominated trade and money lending in South Vietnam and were hence targeted in the drive to socialize the economy; China, however, saw it as a politically motivated attack on its nationals. Vietnamese authorities did not prevent their departure, but charged large sums in gold or Western currencies for exit papers. More Chinese also crossed into China at this time. By mid-1979, it was estimated that there were 200,000 refugees from Vietnam in China, and perhaps another 200,000 had reached other countries of Southeast Asia, Hong Kong, Taiwan, or Australia. Many thousands more were thought to have drowned at sea. As a result of a UN conference in July, Vietnam agreed to an “Orderly Departure Programme,” sponsored by the UN High Commissioner for Refugees (UNHCR); by June 1992, about 354,500 people had left the country in this way. Illegal departures continued nonetheless.

Until this point, China maintained its economic aid to Vietnam. Between May and July 1978, however, it abandoned all projects, leaving the Vietnamese more dependent on the USSR and Eastern Europe. Alarmed at the rapid deterioration of ties with Beijing, especially after its retaliatory strikes against Cambodia in early 1978, Hanoi openly sided with the Soviet Union. In November 1978, it joined the Soviet trading bloc, CMEA, and signed a 30-year Treaty of Friendship and Cooperation with the Soviet Union, an explicit anti-Chinese security treaty. The Soviets soon after established a naval and SIGINT base in Cam Ranh Bay. This facility, the largest Soviet military base outside of the USSR, was located directly across the South China Sea from the American naval base at Subic Bay and the Clark Air Force base in the Philippines. By 1984, there were several thousand military and civilian advisers from the USSR in Vietnam.

From September 1977, the potential brewed for military confrontation between Vietnam and Cambodia (or Kampuchea, as it was known between 1976 and 1989). It became clear in late 1978 that the Chinese were unable or unwilling to escalate their own military involvement, and it was impossible for the Cambodians to hold out indefinitely. In December 1978, the Vietnamese invaded Cambodia in support of the Kampuchean National United Front for National Salvation, a group comprised of Khmer Rouge defectors. The Vietnamese gained control of Phnom Penh and other major Cambodian centers during the early part of 1979, enabling a pro-Vietnamese Government under Heng Samrin to take power (although Pol Pot forces continued to resist in more remote areas). In February 1979, this Government signed a treaty of friendship with Vietnam, comparable to one already signed with Laos, and accepted the continuing presence of Vietnamese forces.

Infuriated by the arrogant behavior of its former client state, China launched a punitive attack on Vietnam on February 17. This pedagogical war was brief but costly, particularly for the Chinese, who suffered 20,000 casualties and the sacking of the five provincial capitals along its the border during two weeks of combat. The Chinese declared victory and withdrew in March. Negotiations held in April and May produced no formal agreement, but it was decided in May to exchange prisoners of war. Throughout the 1980s, daily armed skirmishes occurred along the border.

Despite an annual average of \$1 billion in Soviet military aid, Vietnam spent up to one-third of its national budget on defense and security. With over one million men under arms, Vietnam had one of the largest standing armies in the world.

The Khmer Rouge was not eliminated, however, and with Thai and Chinese assistance, it regrouped and rearmed. During the 1980s, Vietnam had between 100-200,000 troops in Cambodia, but it was never able to stamp out the Khmer Rouge guerilla forces. An annual cycle evolved; in the dry season, the Vietnamese were able to capitalize on mechanized armor and greater mobilization and firepower. In the rainy season, with mechanized armor all but incapacitated, the Khmer Rouge regained lost territory.

Although the Cambodian people were grateful that the Vietnamese unseated the Khmer Rouge, the Vietnamese were seen as an illegitimate occupying force. The Communist KPRP regime that the Vietnamese installed lacked popular legitimacy as well, and its economic policies kept the country impoverished.

In the early 1980s, tension between Vietnam and Thailand led to greater involvement of ASEAN member states in the Cambodian question. In 1982, ASEAN brokered an alliance between the Khmer Rouge and two non-Communist guerilla movements. The Coalition Government of Democratic Kampuchea, nominally headed by Prince Sihanouk, retained Cambodia's seat in the United Nations, which routinely criticized Vietnam for its illegal occupation of the country. The guerrillas established base camps along the border between Cambodia and Thailand, but in early 1985, the Vietnamese captured and destroyed the bases of all three resistance groups. Nonetheless, it was never able to defeat the guerrillas. In 1984, Vietnam announced that it anticipated total withdrawal from Cambodia within 5 to 10 years. In August 1985, the official deadline was established as 1990. However, there was little reason to believe that the governments in Hanoi and Phnom Penh genuinely desired a compromise with the forces of Democratic Kampuchea, who continued their attacks within Cambodia during 1986. Meanwhile, the Chinese maintained pressure on Vietnam's northern frontier, forcing a dispersal of Vietnamese forces.

With the adoption of the economic reform program in December 1986, Vietnam sought to improve its foreign relations. The new economic policy of export-led growth and courting of foreign direct investment (a law on foreign investment was passed in 1987) necessitated improved ties with Western countries, Japan and ASEAN. Extricating itself from the Cambodian quagmire was the foremost goal. The Jakarta Informal Meetings created a formula whereby, in return for Vietnamese withdrawals, foreign aid to the guerillas was phased out. In September 1989, Hanoi completed its unilateral withdrawal from Cambodia, though foreign observers never

monitored the troop pull out and reports continued that Vietnamese troops continued to fight along side their Cambodian allies.

The collapse of Communism in Eastern Europe had a profound effect on the leadership in Hanoi. This, coupled with its failure to resolve the Cambodian civil war, forced the Vietnamese leadership to seek détente with China. A secret summit between the leadership of the two Communist parties was held in Chengdu in September 1990. In October 1991, one month following the Paris Accords which ended the Cambodian civil war and established a UN peacekeeping force, the Chinese and Vietnamese re-normalized relations.

## **9. Doi Moi and Economic Reform**

The ongoing quagmire in Cambodia, combined with economic mismanagement and a disastrous campaign to collect agriculture in the south, led to a severe economic and food crisis. The death of General Secretary Le Duan in mid 1986, allowed for a leadership transition. At the VCP's 6th Congress in December 1986, Nguyen Van Linh, purged from the Politburo in 1982, was appointed Prime Minister. Linh was brought back to the party's Secretariat in early 1986 in recognition of the success of his economic reforms in Ho Chi Minh City. Linh implemented Chinese-style agricultural production contracts and other market-based reforms. His economic reform program, known as *doi moi*, or renovation, entailed linking Vietnam to the global economy, by courting foreign investment and adopting a development strategy based on export-led growth.

Yet Linh faced difficulty in pushing through his reforms. The recalcitrant bureaucracy feared that the market reforms that he was espousing would dilute their power. So Linh called on journalists and writers to expose corruption to pressure the bureaucracy to push through economic reforms. There was a real loosening of ideological constraints, and great literature emerged that attacked the regime and provided the first accurate portrayals of life for the ordinary North Vietnamese soldiers and civilians before and after the war. This literature reflected the malaise in society and antipathy towards the corrupt and entrenched regime.

This ideological liberalization, known as *coi moi*, was short-lived. The collapse of communism in many countries had a sobering impact on the Vietnamese leadership, creating an ideological backlash and bringing closer ties with China, a fraternal socialist state. At the 7<sup>th</sup> Party Congress in 1991, the VCP adopted Chinese-style economic reforms, but rejected any movement towards political pluralism. Shortly thereafter, relations with China, which had been strained by the Cambodian crisis, were normalized.

In the first half of the 1990s, the economy raced ahead, and there was considerable excitement as Vietnam was poised to become the next Asian "tiger" economy, but stasis quickly set in. The Asian financial crisis hit Vietnam hard. Compounding the economic crisis was a political statement that prevented a robust response. Political factions were never more divided and there was complete gridlock in the policy-making process.

In June 1996, the Party held its 8<sup>th</sup> Party Congress, and the top three leaders, Prime Minister Vo Van Kiet, President Le Duc Anh and General Secretary Do Muoi, all refused to step down from their posts without concurrent moves by the others. Although Kiet and Anh did resign in September 1997, there was no consensus on who would replace Do Muoi. In the end, the conservative head of the VPA's General Political Department, Le Kha Phieu, was elected as a compromise candidate. Phieu hoped that he could bridge the rift between advocates of economic reform and ideological conservatives, but he was unpopular and endeared himself to neither faction.

Widespread peasant unrest in Thai Binh province in 1997 to 1998 posed a real challenge to the Vietnamese leadership. Over 2,000 police were dispatched to the province to put down the unrest. Although the leadership condemned the systemic corruption that was the cause of the peasantry's anger, more arrests were made of peasants than of corrupt cadres. The incident prompted several senior party leaders, including General Tran Do, to speak out about the party's loss of legitimacy and the need to "broaden democracy." Do was expelled from the VCP in January 2000.

Economic stagnation hurt the party's legitimacy, already under attack because of rampant corruption. Le Kha Phieu launched a major two-year campaign to eradicate corruption in May 1999, though the crusade was a failure. Although several thousand cadres were disciplined, reprimanded, or expelled from the party, most were low-level officials, while senior party officials remained immune from criticism.

Political gridlock continued, and in October 1999, the politburo rejected a long-negotiated trade agreement with the United States. Although the politburo approved the agreement ten months later, the leadership remained divided.

Large-scale peasant unrest again shook Vietnam in February 2001, this time in the politically sensitive Central Highlands, an area predominately populated by ethnic minorities. The Communist party leadership blamed the unrest on the United States and FULRO, an ethnic minority organization that allied itself with the US during the war. In reality, the unrest was in response to corruption, the large-scale relocations of ethnic Vietnamese to the Central Highlands, and the loss of land used for slash and burn agriculture to coffee plantations.

At the VCP's 9<sup>th</sup> Congress in April 2001, the Central Committee ousted General Secretary Le Kha Phieu, despite his endorsement by the Politburo. Central Committee members, the largest group of which are provincial-level officials, were dismayed at the ongoing economic recession. In Phieu's place, the Central Committee elected the reformist Nong Duc Manh, the head of the National Assembly and long-rumored illegitimate son of Ho Chi Minh. The Central Committee elected a smaller Central Committee (135 members down from 170) and politburo (15 members down from 19 members).

During his first term in office, Nong Duc Manh fostered continued progress toward economic reform measures favoring a greater role for the private sector, while retaining VCP control over political matters to maintain support from conservatives within the party. Under his leadership,

the Party decided that Vietnam needed to open up more to the world, in part to create new jobs to avoid social unrest and in part to respond to concerns about China's growing involvement in the region. Party leaders decided that WTO membership was critical. They also encouraged closer links with the U.S., including exchange of military visits, allowing U.S. ships to visit Vietnam, and setting the stage for high level visits between the political leadership of both countries.

Efforts were also made to clamp down on growing concerns about corruption. The party began disciplining government employees for corruption and put senior officials on notice that they were not beyond the reach of the law. Seven members of the Central Committee and the Minister for Agriculture and Rural Development, for example, were sacked in May 2004 for allowing a swindle in a firm supervised by his Ministry.

At the tenth Party Congress in April 2006, Nong Duc Manh was re-elected as Secretary General of the Party, in a move widely seen as a vote of confidence for his success in maintaining party unity. During the Congress, he emphasized that corruption was damaging the party's leadership authority and that intensifying the fight against corruption would be a top priority in his second term.

### ***Study Questions***

1. How has Vietnamese history affected its behavior in the 20th Century?
2. What were the domestic causes of the Vietnam War?
3. How has Vietnam's policy towards Laos and Cambodia affected its overall relations with the region?

## **Government and Politics**

Vietnam is a one-party socialist state. The Vietnam Communist Party dominates all power and tolerates no opposition. Constitutionally, Vietnam is a republic, and Marxism-Leninism/Ho Chi Minh thought is the official ideology.

There are four key problems with politics and governance in Vietnam. First, Vietnam's system of governance is hampered by its inheritance from the world's three great bureaucratic cultures: the Chinese, French, and Soviet Stalinism. Second, the country is fraught with inter-locking directorates in which the VCP permeates almost every level of administration. Despite attempts since 1987 to separate the functions of the party and the state, the VCP still micro-manages the government. Third, the country is hampered by weak communications and infrastructure, which makes organization and policy implementation difficult. The country also has strong natural tendencies towards decentralization. Fourth, corruption is endemic, both because of low salaries, but also because of unclear property rights.

### **1. The Vietnam Communist Party (VCP)**

The VCP is the leading organ of state and society. It is an elite organization with only some 2.3 million members despite a concerted effort to recruit new and younger ones. The party maintains its dominance of society through a system of interlocking directorates whereby at every level of the government, the military, and state-owned enterprises, there is a corresponding party organization that wields ultimate power. There has been an effort since 1986 to eliminate dual hats and end party interference in government business. Nonetheless, senior government officials are all senior party officials, and party membership is seen as a requisite for career advancement.

According to Party statutes, the highest body is the VCP's National Congress, which is held every five years and was most recently comprised of 1,176 delegates from different party cells throughout the country and various bureaucracies at the Tenth Party Congress in April 2006. In between Party Congresses, power is vested in the VCP's Central Committee. The Central Committee, currently at 160 members (with an additional 21 alternate members), has ranged from between 35 and 170 members over the years. The Central Committee usually meets at least twice a year, with each plenum focusing on a specific issue. At the end of each plenum, a communiqué is issued and passed down through the party apparatus for study and implementation.

The Central Committee has become younger and better educated. The composition of the Central Committee has changed, and the largest portion of members are provincial leaders. The military has a bloc representation on the Central Committee of between 11-13 percent of seats.

The Central Committee has a number of specialized Commissions with full-time staff members. The most important of these is the Organization Commission, which makes all decisions regarding personnel and appointments.

The Central Committee elects the elite decision-making body, the Politburo. The Politburo currently has 14 members, down from a high of 19 members. It is the ultimate decision-making body in the body, and though it usually does not get involved in the day to day implementation of policy, it sets major ideological guidelines and its Secretariat oversees day-to-day policy implementation. The Politburo always includes the Minister of Defense, the Minister of Interior, and the Head of the Central Committee's Organization Commission.

Heading the Politburo is the VCP General Secretary. Although collective leadership is the hallmark of Vietnamese politics, the General Secretary is considered *primus inter pares* and is able to set the overall ideological tenor.

Beneath the Central Committee is the VCP Secretariat that is responsible for the day to day administration of the party and policy. The Secretariat was previously abolished in 1996, as there was too much overlap with the Politburo, and was replaced with a five-man Standing Board of the Politburo. This new arrangement was later deemed inadequate, however, and The Secretariat was reinstated at the 9<sup>th</sup> Party Congress in 2001.

Each of the country's 61 administrative units has a party committee and is ruled by a powerful party secretary. The deputy party secretary is the head of the provincial government, though the party secretary occasionally holds both positions simultaneously. The party system is replicated beneath the provincial level at the district and the village level.

## 2. Government

Vietnam has been governed by four constitutions since its founding in 1945. Each one reflected a different set of national security and historical circumstances. The 1946 Constitution was a vague document that established a broad-based unity government in order to harness all political support for the anti-colonial effort. The 1960 Constitution was enacted in North Vietnam to legalize the radical transformation to a socialist economy; the document was explicitly socialist and anti-American. The 1980 Constitution was enacted to deal with the reunified country and legalized the Communist Party's political leadership. The current constitution, enacted in 1992, reorganized the government. Article 4 established the VCP as the leading organ of the society, though the VCP is now supposed to operate within the framework of the law. The constitution also reflects the regime's fear of Communism's collapse in Eastern Europe, stating that it is the military's constitutional duty to defend not only the country, but also the socialist regime. Yet the 1992 Constitution also legalizes a multi-sector economy, including the private sector.

According to the Constitution, the National Assembly is the highest political decision-making body in the country, yet it has traditionally been nothing more than a rubber stamp for party decisions. It has fought to expand its role and autonomy since *doi moi* was implemented in 1986. Until then, the 450-member Assembly was solely a rubber stamp.

Under General Secretary Nguyen Van Linh, the National Assembly was authorized to hold substantive debate over issues. In 1988, 36 percent of delegates voted against the party's

candidate to become Prime Minister, Do Muoi, instead supporting the southern reformist Vo Van Kiet. In the mid-1990s, they began to televise the Assembly's biennial sessions.

By the late 1990s, the NA had become far more powerful and assertive, often challenging the party and government's line, though it still does not have true autonomy. In a way, it has been able to flex its muscles out of necessity, as economic reform makes a comprehensive set of laws necessary. The National Assembly cannot introduce legislation – only debate, alter, amend and pass bills.

The Communist party has traditionally controlled membership in the National Assembly. Although “independent” candidates have been eligible since the 9<sup>th</sup> National Assembly in 1992, the party must first vet them and all elections are directed by the party's umbrella organization for mass organizations the Vietnam Fatherland Front. Less than 20 percent of the delegates are not party members.

The National Assembly technically elects the Prime Minister, who is the head of government. The Assembly must approve cabinet appointments and it has forced many cabinet ministers to resign. Yet in reality, the Politburo and Central Committee first decide all of these decisions. A system fraught by “interlocking directorates,” members of the government derive most of their power from their party position. All senior government officials are party members. Almost all of the 21 Cabinet ministers are members of the VCP Central Committee.

Beneath the Prime Minister is a varying number of Deputy Prime Ministers. The Deputy Prime Ministers are each in charge of certain sectors (e.g., the former foreign minister Nguyen Manh Cam became Deputy Prime Minister in charge of foreign affairs and foreign economic relations). A Deputy Prime Minister has oversight of several ministries.

There are currently 18 ministries. These are vertical organizations, and coordination is weak. Most have representation in each of the provinces. In addition to the line ministries, there are several state-level national commissions and committees, such as the Central Bank and the State Inspectorate, whose heads have ministerial rank.

As established in the Constitution, the Head of State is the President, who is also the Commander-in-Chief of the Armed Forces. From 1991 to 1996, the President was the former Minister of Defense Senior General Le Duc Anh. He was far more powerful than his successor Tran Duc Luong. On paper there was no difference. But in reality, Anh controlled promotions and patronage networks throughout the military. He had a vast power base. Luong was installed without a power base, and has no authority over the military. Thus, the post of Presidency became more ceremonial.

The country is divided into 64 administrative units, 59 provinces and five centrally controlled municipalities (Hanoi, Ho Chi Minh City, Hai Phong, Can Tho, and Da Nang). The number of administrative units has changed over time to meet different needs and challenges of the central government. France divided the country into 61 provincial units. Following division in 1954, both the DRV and RVN governments sought to centralize control over their respective halves of

the country, though they approached the task in different ways. In the south, the number of provinces proliferated, to keep them poor, small and dependent on the central government. In the north, where the leadership sought to impose central planning, it consolidated the number of Provinces. After reunification in 1975, the number of provinces again was reduced to thirty-four. Yet these provinces were too large and were able to withstand pressure from the central government. Since 1991, the central government has broken down the provinces and the number has increased to 61 units.

A governor and a provincial-level People's Committee rule each province. This committee is indirectly elected by district-level people's committees which, in turn are indirectly elected by local-level (wards in cities, villages in the countryside) people's committees.

### **3. Vietnam People's Army (VPA)**

The Vietnam People's Army (VPA) is one of the key political institutions in the country. In addition to its role in defending the country's territorial integrity, it has important political and economic functions as well. According to the 1992 constitution, the VPA holds a legal obligation to defend the socialist regime against subversion attempts, and the Communist Party's control of the VPA is assured through the "dual hat system" and corresponding network of political commissars and party cells at every level of the military. The VPA has a bloc of 10-13 percent of Central Committee seats and nearly all of the officers are members of the VCP.

The VPA has approximately 500,000 troops: about 410,000 army, 13,000 navy, 30,000 air force, and 40,000 border defense personnel. Over half of the army has been demobilized since withdrawal from Cambodia in 1989. During the 1980s, in addition to an average \$1 billion in annual military assistance from the USSR, Vietnam spent over 30 percent of its budget on its security forces. Since then, the VPA's budget, like its size, has been cut in half.

It augments this decline in revenue by engaging in economic activities. In addition to producing most of its own food and manufacturing much of its own equipment and material, the VPA has vast economic holdings in civilian products, including manufacturing, hotels and tourism, and transportation. Revenue from these ventures amounts to nearly 50 percent of its budget.

Most of Vietnam's military equipment is from the former Soviet Union and dates back to the 1980s. Vietnam has had a hard time maintaining much of these weapons. During the 1990s, Vietnamese defense officials made several trips to the former Soviet Union to purchase spare parts and limited amounts of advanced weaponry, including S300 surface to air missiles (akin to the US Patriot Missiles), 6 SU-27 fighters, and 2 Tarantul-class missile attack vessels. Vietnam has also purchased coastal patrol craft from Australia and South Korea. In 2001, it entered into negotiations with India to establish a joint venture to produce naval vessels, though nothing to date has come of this.

In short, Vietnamese military planners are woefully aware of shortcomings in their arsenal, especially vis-a-vis the rapid military expenditures among China and the ASEAN states.

Vietnam's has lagged far behind, but until the economy becomes more developed, the VPA will continue to receive limited funding for new arms acquisitions.

#### **4. Judiciary**

The judiciary is weak and is subject to influence by higher authority. The Vietnamese legal system blends Marxist legal concepts, in which the judiciary's *raison d'être* is to defend the socialist state, with remnants of the old French civil code. Through personnel appointments and ideological directives, the Vietnamese Communist Party indirectly controls the judiciary. The Ministry of Justice was shut down from 1961 to mid-1980s when the advent of economic reform necessitated the massive codification of laws.

Vietnamese trials do not meet international standards. Trials are usually closed. There are few lawyers and judges have rudimentary legal training, often appointed to their position on the basis of political criterion. Verdicts seldom go against state interests, though this causes problems with the international business community.

#### **5. Mass Organizations**

The VPA exerts its control down to the grass roots through a network of mass organizations that are controlled through an umbrella organization, the Vietnam Fatherland Front. The most important mass organizations are the Vietnam Peasants Association, the General Confederation of Trade Unions, the Vietnam Woman's Union, the Ho Chi Minh Youth League, and smaller organizations such as the Vietnamese Writers Association. As discussed below, all religious organizations must be legalized and part of the Vietnam Fatherland Front. By controlling each of these organizations, the VCP is further able to penetrate grass-roots level of society.

#### **6. Political Dissidence and Pressure for Reform**

Vietnam is a repressive regime, but it is not a police state. Since the introduction of economic reforms in 1986, there has been a gradual liberalization, especially in the arts, though political and religious dissent is still dealt with harshly.

Calls for political reform within Vietnam are interesting for a number of reasons. First, they come not from outside the polity, but from within and often from the highest echelons. The leading dissidents are not disenfranchised malcontents, but are often life-long party members who have impeccable revolutionary credentials. And unlike outsiders who have nothing to lose by challenging the state, the Vietnamese dissidents have everything to lose – their positions and status, including those of their children and family. The major exception to this has been a few southern dissidents, many of whom gained their political consciousness protesting the Republic of Vietnam regimes, and members of both the Catholic clergy and the outlawed United Buddhist Church of Vietnam, who have protested against the government's control of religion. Unlike Eastern Europe, where the forces of change were autonomous groups in society, those in Vietnam are still weak. There is no independent labor movement, even an underground one. Moreover, the size of the urban proletariat is relatively small.

Because most of these dissidents are party members, they appear to be a nascent loyal opposition, rather than a subversive counter-revolutionary grouping. These dissidents do not want to be dissidents. Having dedicated most of their lives to the revolution, wars of liberation, and the party, they are patriotic, and many remain loyal to the party, though are unhappy with its policies implemented since reunification. And even if they are more critical of the party, few deny the important role that it has played in the nation's independence.

Most dissidents see themselves as a loyal opposition within the party who want to raise issues and policies that will strengthen Vietnam and rejuvenate the party. In the Confucian-Marxist tradition, the intellectuals are bound to the state and career advancement is linked to loyalty to the regime. Their demands are thus reasonable and moderate. For these individuals, serving as a loyal opposition and making demands on the party and government is not only a right, but also a duty.

The dissidents have thus far been unable to gain a wider following because they represent such diverse interests and have few bases of institutional support. Dissidents, which include life-long Communists, supporters of the old Saigon regimes, Buddhist monks, and intellectuals wanting freedom of expression, often mistrust one another. Thus divided, Hanoi has been able to isolate and control them.

### ***Study Questions***

1. What political reforms have been implemented in Vietnam?
2. How has the National Assembly's power changed over time?
3. What is the political role of the Vietnam People's Army.

## **Foreign Affairs**

### **1. Post-Cambodian War Foreign Policy**

Hanoi's resolution of the Cambodian civil war brought immediate improvements in relations with other Asian states, particularly with Japan and the ASEAN member states. Following withdrawal from Cambodia, these countries began investing in Vietnam and became key export markets for Hanoi. This influx of foreign exchange was essential, because in 1991 Vietnam lost all subsidies from the former USSR. Diplomatic ties expanded rapidly, starting with Australia, Japan, and other European states. In February 1993, President Mitterrand of France became the first Western head of state to visit Vietnam. Vietnam joined ASEAN in 1995. In that same year, it also normalized diplomatic relations with the United States. Since then, Vietnam has strived to maintain an omni-directional foreign policy, eschewing a formal alliance with any one country.

### **2. The United States**

Relations between Vietnam and the US remained an exception to the general improvement in Hanoi's relations with the outside world during 1991-94, owing largely to the lingering problem of the more than 2,600 US servicemen listed as 'missing in action' (MIA) during the Vietnam War. In October 1990, however, the Vietnamese Minister of Foreign Affairs, Nguyen Co Thach, met leading US officials in Washington (the first visit there by a Vietnamese delegate in 15 years) to discuss the UN peace plan for Cambodia and the possible release of information concerning the MIAs. The meeting represented a significant move towards the establishment of diplomatic relations between the two countries.

In early 1991, a US representative was stationed in Hanoi to supervise inquiries into the MIAs, the first official US presence in Vietnam since 1975. In April, the US proposed a four-stage program for the establishment of normal diplomatic relations with Vietnam, conditional on Vietnamese co-operation in reaching a diplomatic settlement in Cambodia, and in accounting for the remaining MIAs. In March 1992, relations improved further when the US Assistant Secretary of State, Richard Solomon, visited Hanoi, the most senior US official to do so since 1986. In exchange for enhanced co-operation on the MIA issue, Solomon announced that the US would grant Vietnam \$3 million in humanitarian aid, though the embargo remained in place and despite criticism from US allies in the region. In October 1992, following the discovery of more than 4,000 photographs of the remains of MIAs, discussions took place between the Vietnamese Minister of Foreign Affairs and the US Secretary of Defense, Richard Cheney.

Expectations that a Democratic administration under President Bill Clinton would lead to the early normalization of relations between Vietnam and the US were not realized. Nevertheless, in July 1993, the US did withdraw its long-standing opposition to loans to Vietnam from the IMF, the World Bank, and the ADB. The resumption of large-scale external aid was expected to give impetus to the improvement of the country's infrastructure, regarded as essential for its economic development. However, despite increased Vietnamese efforts to assist in the search for MIAs and the stationing of US diplomats in Hanoi from August 1993, President Clinton announced in

September a renewal of the embargo against Vietnam, which he later lifted in February 1994.

In May 1994, Vietnam and the US agreed to open liaison offices in their respective capitals; the US opened its office in Hanoi in February 1995. President Clinton announced the restoration of full diplomatic relations on 11 July. In the following month, US Secretary of State Warren Christopher visited Hanoi to inaugurate the new US embassy there. In April 1996, a US commercial office was opened in Hanoi. In May 1997, Ambassador Douglas “Pete” Peterson arrived in Hanoi as the first U.S. Ambassador to the Socialist Republic of Vietnam.

In April 1997, US Secretary of the Treasury Robert Rubin visited Vietnam and signed an agreement settling a US \$150 million debt issue outstanding since the end of the Vietnam War. During the course of his visit, Rubin stated that Vietnam would be required to undertake a series of measures, such as protecting intellectual property and agreeing to a trade accord, before the US would grant Most Favoured Nation (MFN) trading status (now referred to as Normal Trade Relations or NTR). Although an agreement on intellectual property rights was signed, negotiations on a trade agreement initially made little progress in the face of US demands that Vietnam open its markets, remove various trade barriers, abandon investment licensing, and grant ‘national treatment’ to US banks, law firms, and advertising agencies.

In late June 1997, US Secretary of State Madeleine Albright made a brief visit to Hanoi, where she signed an agreement on copyright protection and urged Vietnam to initiate *doi moi 2* (renewed reforms). In March 1998, however, Vietnam’s co-operation with the US on a resettlement program for Vietnamese boat people resulted in President Clinton’s decision to waive the Jackson-Vanik Amendment to the 1974 Trade Act. This amendment prohibits the US from trading with or providing investment funds to countries that do not permit free emigration. As a result of the waiver, the Overseas Private Investment Corporation (OPIC) and the Export-Import Bank were permitted to commence operations in Vietnam. (Note: OPIC provides special insurance cover for US firms doing business in Vietnam, while the Export-Import Bank provides loans to US companies to assist their exports to Vietnam.) During 1998, Vietnam and the US intensified negotiations on trade and aviation agreements. In late September 1998, Deputy Prime Minister and Minister of Foreign Affairs, Nguyen Manh Cam, made an official visit to the US at the invitation of the US Secretary of State.

In February 1999, President Clinton affirmed that Vietnam was ‘fully co-operating in good faith’ in all areas of bilateral relations in which the US itself sought progress (particularly in the area of joint searches for the remains of MIAs). Vietnam also intensified its co-operation with the US on immigration issues. Following some initial difficulties, the Vietnamese Government gave permission for refugees in overseas camps to return to Vietnam for processing, in preparation for emigration to the US under the Resettlement of Vietnamese Returnees Program. It also expedited the processing of former re-education camp detainees. Improved Vietnamese cooperation in these areas led to President Clinton’s agreement to the second waiver of the Jackson-Vanik Amendment. As a result, US export promotion and investment support programs

offered by the Export-Import Bank, OPIC, the US Department of Agriculture, and the United States Trade and Development Agency were permitted to recommence.

In 1999, Vietnam and the US also made substantial progress in their negotiations of a Bilateral Trade Agreement, and considerable progress was achieved in particular during the eighth round of negotiations held in mid-June. During negotiations, Vietnam was reluctant to grant the US access to certain protected sectors, such as telecommunications. The most contentious issues during the final round of negotiations were those of non-tariff barriers and tariff reduction schedules. Vietnam sought an eight-year time frame for the full implementation of the agreement, whereas the US insisted on a time frame of four years. On July 25, Vietnam and the US announced a final agreement in principle upon the terms of the Bilateral Trade Agreement. However, following a tense meeting between US Secretary of State Madeleine Albright and the General Secretary of the Communist Party Le Kha Phieu, hopes that the trade agreement would be signed at the APEC summit, held in the September in Auckland, New Zealand, were dispelled. In October, the Politburo rejected the trade accord. The Vietnamese Government attempted to renegotiate certain provisions of the agreement, although the US refused, offering only to clarify certain aspects. The US made efforts to continue discussions on the issue, with a series of high-level visits in the first half of 2000.

US Secretary of Defense William Cohen travelled to Vietnam in April 2000, after the Vietnamese authorities had twice postponed his visit. Although the visit represented progress in improving bilateral military links, the Vietnamese Government was reluctant to support Cohen's suggestion that Vietnam and the US were potential allies against 'growing hegemony' in the region and to allow port visits of US naval vessels. The US praised Vietnam for its cooperation regarding the search for MIAs, although Hanoi made little progress in appealing to the US Government for aid to locate the remains of some 300,000 servicemen. Cohen's visit coincided with the 25<sup>th</sup> anniversary of the fall of Saigon, which the Vietnamese celebrated throughout April. The anniversary generated some tension, following the assertion by US Senator John McCain that he and other captured US servicemen had been tortured. A resolution by the US Congress condemning the Communist regime in April also prompted hostility. The continued effect of Agent Orange used in South Vietnam during the war remained a contentious political issue; the US Government agreed to conduct joint research, but refused to pay reparations.

In July 2000, newly-appointed Trade Minister Vu Khoan, travelled to Washington at the invitation of US Trade Representative Charlene Barshefsky. As expected, the bilateral trade agreement was finally signed. Vietnam was accorded Normal Trade Relations, lowering tariff rates on exports from about 40% to 3%. The US ceded to Vietnamese demands that foreign companies would only be allowed to become minority partners in the telecommunications sector. In return, Vietnam accepted a three-year period of introduction for other components of the accord, as opposed to the four years that had been previously negotiated. The agreement laid the foundations for Vietnamese membership of the World Trade Organization, which ultimately occurred in 2006.

President Clinton visited Vietnam in November 2000, the first visit by a US President since the country's reunification in 1976. Clinton received a chilly reception from the leadership; General Secretary Le Kha Phieu gave the president a 45-minute lecture on US imperialism, the Vietnam war, and the triumphs of socialism. In contrast, however, the US President received a warm welcome from the general Vietnamese public.

Relations between the former adversaries have become deeper and more diverse in the years since political normalization. The two countries have broadened their political exchanges through regular dialogues on human rights and regional security. They signed a Bilateral Trade Agreement (BTA) in July 2000, which went into force in December 2001. In 2003, the two countries also signed a Counter-narcotics Letter of Agreement, a Civil Aviation Agreement, and a textile agreement. In November 2006, President George W. Bush came to Vietnam to represent the US at the annual meeting of the Asia Pacific Economic Cooperation (APEC) forum, which was hosted that year by Vietnam. In December 2006, the US Congress agreed to extend Permanent Normal Trade Relations to Vietnam, thus ending the need for annual reviews.

As of April 27, 2005, the US Government listed 1,836 Americans still unaccounted for in Southeast Asia, including 1,398 in Vietnam. Since 1973, 747 Americans have been accounted for, including 523 in Vietnam. The US considers achieving the fullest possible accounting of Americans missing and unaccounted for in Indochina to be one of its highest priorities with Vietnam.

Since entry into force of the BTA in 2001, increased trade between the U.S. and Vietnam, combined with large-scale U.S. investment in Vietnam, demonstrate the maturing U.S.-Vietnam economic relationship. In 2005, Vietnam exported \$5.93 billion worth of goods to the U.S. and imported \$0.86 billion of U.S. goods. Similarly, U.S. private sector direct investment in the Vietnamese economy increased by \$147 million in 2005 alone. Direct flights between Ho Chi Minh City and San Francisco also began in December 2004.

### **3. China**

Vietnam's China policy is complex. On the one hand, China is a fraternal socialist state, an ideological comrade, a model for political and economic reform, and a close ally during the war years. On the other hand, China is a country that has a several thousand-year history of domination of Vietnam. This has created a legacy of mistrust and antipathy towards China. Despite ideological solidarity, China has been a potential threat to Vietnam's territorial integrity. The slow pace of negotiations over numerous territorial disputes between the two countries, along their land border, over the Gulf of Tonkin, and in the South China Sea, has reinforced Hanoi's suspicion of China's intentions towards Vietnam and Southeast Asia in general.

Several confrontations between the nations have reinforced Vietnam's fears over Chinese aggression in South China Sea. There was the 1988 clash in which two Vietnamese naval vessels were sunk by the Chinese military. In another incident, a Chinese oil rig was towed into waters claimed by Vietnam in Gulf of Tonkin. Also, China awarded an oil concession to a US firm on Vietnam's continental shelf. After a decade of talks, negotiations were concluded in late 2000 to demarcate the land border and the Gulf of Tonkin. No agreement has been reached on the South China Sea.

To manage this complex relationship, Hanoi has adopted a two-pronged approach. On the one hand, it reinforces ideological and historical ties to China, citing fraternal socialist identity and the dilemmas that both countries face as they justify continued Communist rule in the face of market reforms and the decline of the ideological basis of their rule. On the other hand, Vietnam has striven not to become dominated by China, and it has adopted an "omni-directional" foreign policy that seeks to balance the historical ties to China. In 1995, Vietnam joined ASEAN in large part to "balance" its relations vis-à-vis China. Although ASEAN is not a formal alliance, Vietnam believed that China deemed its relations with ASEAN too important for its own development to risk a confrontational policy against one of its members. In short, there would be a "trans-ASEAN" cost that would moderate China's Vietnam policy.

Under the tenure of General Secretary Le Kha Phieu, there was a tilt towards China. There was an economic rationale for his behavior. Vietnam was interested in learning from the China's reform experience, especially with regard to dealing with the private sector and reforming or privatizing state owned enterprises (SOEs). Phieu also believed that closer ties with China would help resolve their longstanding territorial and other bilateral disputes. Phieu came under attack for this, however, because most Vietnamese policy makers do not believe that China will reward Vietnam for its quiescence; they believe that, for Beijing, such behavior is expected of a former vassal state.

Under the new leadership of General Secretary Nong Duc Manh, Vietnam has pursued a more balanced relationship with China. It has expanded its trade relations with other East Asian neighbors as well as with countries in Western Europe and North America. As mentioned above, it has also encouraged closer relations with the U.S. in political as well as economic areas.

#### **4. Russia**

Ties between Russia and Vietnam cooled following the demise of the Soviet Union. Vietnam was aghast at the Soviet Communist Party's dissolution and the voluntary surrender of power and most bilateral contacts. All aid programs and trade subsidies from Moscow ceased. Russia demanded repayment of Hanoi's outstanding loans, but a dispute arose over the valuation of the ruble-denominated debt. The Russians demanded nearly \$11 billion. Relations further soured, as Russia became the key arms supplier to China, improving Beijing's military capabilities.

In June 1994, the Prime Minister and the Minister of Defense traveled to the former USSR to re-negotiate the 1978 Treaty of Friendship and Cooperation. The new document stipulated bilateral

consultations in the event of a crisis and no defensive obligation. Vietnam and Russia also reached an agreement on \$180 million of arms and spare parts. The Russians were interested in “maintaining and developing” their naval and SIGINT base in Cam Ranh Bay, whose lease expired in 2002, but negotiations snagged on Vietnam’s demand for an increase in annual rent for the base.

Ties improved in 1998 when a Russian firm and PetroVietnam received a joint license to build a US \$1.1 billion petroleum refinery at Dung Quat in central Vietnam. Bilateral relations further improved in March 2001 with the visit of President Vladimir Putin, which was the first visit ever to Hanoi of a Russian head of state. Putin nearly erased all of Vietnam’s debt to the Russia, with the objective to ensure Russia’s affordable use of Cam Ranh Bay. Nonetheless, in mid-2001, Vietnam rejected any Russian attempt to renew the lease and announced their plans to develop the facility into an export-processing zone.

## **5. Laos and Cambodia**

Although Vietnam pulled its troops out of Laos in 1989, Vietnam continues to wield considerable influence in this small, neighboring nation. There is no country with which Vietnam has a more comprehensive bilateral relationship. Ties cooled in the early 1990s when Laos sought to improve ties with China. But the Lao regime’s more open policy led to factional infighting and a renewed sense of maintaining political allegiance to Hanoi. Vietnam stepped up military assistance to Laos in 2000 and reportedly re-introduced troops to help the Lao confront a resurgent Hmong insurgency, though it publicly denied this. In recent years, Vietnam has built several new roads into Laos in order to link Vietnamese ports more closely with the land locked, but resource-rich Laos. Ideologically, the two states remain close, and there is a plethora of bilateral exchanges each year from all political, economic, cultural and military organizations.

Vietnam’s relationship with Cambodia has been more complex. Despite his installment in Cambodia by the Vietnamese, Cambodian Prime Minister Hun Sen has exercised considerable independence from Hanoi, and on occasion has angered his former patrons by taking a hard line position on the issue of Vietnamese settlers in Cambodia. The Vietnamese Government was concerned by the Cambodian National Assembly’s adoption in August 1994 of a new immigration law, which, it claimed, contravened international agreements on human rights and would lead to discrimination against the Vietnamese minority in Cambodia. While this approach has upset Vietnam, it is politically popular for Hun Sen who has condoned pogroms against ethnic Vietnamese. Border disputes have been another ongoing irritant in the bilateral relationship, but these may have been resolved, at least for now, in a border agreement reached by the two governments in November 2005.

Although Vietnam’s relationship with Laos and Cambodia differ, Hanoi continues to concentrate its diplomatic resources in maintaining cooperative relations with these strategic border states. It remains wary, however, of growing Chinese influence in both Laos and Cambodia.

## **6. ASEAN**

In July 1992, Vietnam signed the 1976 ASEAN Treaty on Amity and Co-operation, and was granted observer status at its annual meeting of foreign ministers. In July 1994, Vietnam became a founding member of the ASEAN Regional Forum, a security discussion group. In July 1995, at ceremonies in Brunei, Vietnam became ASEAN's seventh member. On the same occasion, Vietnam announced its intention to join the ASEAN Free Trade Area.

Vietnam's accession to ASEAN occurred several years before most observers expected. The primary reason was China's aggressive stance over the South China Sea and Spratly Islands. China's claims overlap both the continental shelf and claims by the Philippines, Malaysia, Brunei, and Indonesia, as well as Vietnam. Many in ASEAN saw the wisdom of bringing Vietnam in to help shore up its collective position vis-a-vis China.

Vietnam's membership into ASEAN has not been without controversy. At the 31st annual ASEAN ministerial meeting in July 1998, Vietnam opposed a Thai and Philippine initiative to modify ASEAN's long-standing policy of non-interference in the internal affairs of member countries. Angering the original members of ASEAN, Vietnam established a caucus of new members, Myanmar, Laos, Cambodia, and Vietnam, all of whom single-party authoritarian regimes. Many analysts have argued that this grouping of countries has often limited ASEAN's ability to develop a more united effort in promoting democracy in the region.

## **7. Japan**

In September 1993, full diplomatic relations were re-established between Vietnam and Japan. By the mid-1990s, Japan had become Vietnam's largest aid donor and principal trading partner. It remains the largest aid donor, the leading source of foreign direct investment, and the second largest market of Vietnamese exports, after the US. In 1999, the Vietnamese Prime Minister, Phan Van Khai, made an official visit to Japan. Each country extended "most favored nation" trading status to the other, and Japan pledged continued assistance programs in Vietnam.

## **8. Other Western States**

Australia was the first Western country to restore diplomatic relations with Vietnam. Beginning in 1995, Australia began consultative dialogue on human rights. In 1997, Australia opened a regional security dialogue with defense officials in Hanoi; the first formal dialogue took place in May 1998. The Vietnamese Prime Minister, Phan Van Khai, paid an official visit to Australia in March 1999. During that visit, Australia announced it would increase its official development aid to Vietnam; a separate agreement on co-operation in the areas of education and training was also signed.

In February 1993, President Mitterrand of France became the first Western Head of State to visit Vietnam since its reunification. He was followed in early 1995 by the French Minister of Foreign Affairs, and in early 1997 by the Chief of Staff of the French army. In November 1997, President Jacques Chirac of France made an official visit to Vietnam, which was hosting a

summit meeting of French-speaking countries.

Vietnam has always had close relations with the Scandinavian countries, in particular Sweden, which was the only Western country to maintain diplomatic relations with the DRV regime during the war. Sweden has also concentrated much of its bilateral development assistance in the Southeast Asia region to Vietnam.

### ***Study Questions***

1. Why is Vietnam's relationship with China so complex? How does Hanoi "cope" with China?
2. What benefits does Vietnam enjoy from its membership in ASEAN?
3. What are the prospects for improved relations with the United States?

## **The Economy and Infrastructure**

Despite rapid economic growth in recent years, Vietnam is still a relatively poor, densely populated country. Its economy remains based on agriculture, primarily wet rice cultivation, with around 60 percent of the labor force working in agriculture. Vietnam continues to be a leading exporter of agricultural products, such as coffee, rice, pepper, and cashew nuts. However, the relative importance of agriculture to the economy declined to about 21 percent of nominal GDP in 2005, down from about 40 percent in 1991. Vietnam's industries have been growing by more than 10 percent annually, and industry (including construction) contributed about 41 percent of GDP in 2005, compared to around 23 percent in the early 1990s. By this measure, Vietnam is a rapidly industrializing economy. Industry is relatively diversified, and all sub sectors have expanded over the past decade, with particularly rapid growth in steel products, garments, footwear, cement, and car and motorcycle assembly. Mining (mainly oil and gas) accounted for around 10 percent of industrial GDP in 2005. The services sector has grown steadily over the past decade, but its share of GDP has fallen, dropping to around 38 percent in 2005 from 44 percent in the mid 1990s.

### **1. Colonialism to Communism**

In 1945, Vietnam inherited an economy from the French that was poor, underdeveloped, exploited, and geared to serving the colonial regime. The French, who had colonized Vietnam from the 1860s, changed landholding patterns, created millions of landless peasants and day laborers who worked on French-owned plantations, and imposed taxes that kept the peasantry in a cycle of indebtedness. State monopolies and limited attempts to industrialize also distorted the economy, which was then shattered by nine years of anti-colonial war between 1946 and 1954.

Following the 1954 Geneva Peace Accords that divided Vietnam at the 17<sup>th</sup> parallel, the two competing regimes implemented different economic policies. In North Vietnam, the Communist regime under the Lao Dong Party (LDP) socialized the economy. In the countryside, the LDP implemented a two-phase land reform program to redistribute land and abolish "landlordism". The implementation of this policy was marked by mass violence as Maoist "class labels" were applied. After two years, massive peasant unrest caused the party to slow down the implementation of land reform. Despite an increase in the amount of collectivized land, per capita agricultural output fell. The state monopolized the harvest and marketing of the rice, paying the peasantry below-market prices for their crops, so that the urban proletariat could receive subsidized food.

The urban economy of the North was also socialized in a strategy of Stalinist industrialization. Private enterprise was abolished, trade was monopolized by the state, and the North began a process of heavy industrialization with massive amounts of Chinese and Soviet aid. Between 1955 and 1965, North Vietnam received \$457 million and \$364 million in Chinese and Soviet aid, respectively. Central economic planning was adopted and the country was put on Soviet-style five-year plans. All economic resources were directed to the war against U.S.-backed South Vietnam after 1963, causing economic dislocations.

In South Vietnam, the economy was a quasi-capitalist system. Unlike in the North, land in South Vietnam was inequitably distributed. This infuriated the peasants who supported the Communist-backed Viet Cong National Liberation Front, which promised land reform. The South Vietnamese regime's base of support came from the landlord class, which resisted land reform and the peasants suffered under absentee landlordism, high rates of landlessness, and high taxation.

The South Vietnamese regime was dependent on U.S. economic aid, which by 1963 amounted to more than \$1 billion. But unlike North Vietnam, South Vietnam invested little of that aid in industrialization; the economy remained overwhelmingly agrarian. As in the North, the war caused massive dislocations. The government became increasingly dependent on U.S. aid, having lost much of its own revenue. The economy was also racked by inflation and smuggling, and was dominated by an enormous black market.

## **2. Reunification, the Socialist Transition, and Economic Malaise**

Following reunification under North Vietnam in 1976, Hanoi socialized the southern economy. Private enterprise was abolished, land was collectivized, and wholesale, retail, and foreign trade were nationalized. The ethnic Chinese, who dominated the South Vietnamese commercial sector, were persecuted and fled en masse. Additionally, radical currency reform wiped out capital holdings. There was a postwar economic malaise following the loss of Chinese aid in 1978, the imposition of an international trade embargo after Vietnam's December 1978 invasion of Cambodia, and the huge domestic expenditures (amounting to one-third of Vietnam's budget) for the Cambodian occupation.

Vietnam joined the Soviet-led trade bloc, the Council for Mutual Economic Assistance (CMEA), in 1978 and received approximately \$1 billion in Soviet economic aid annually during the 1980s. Much of the aid was wasted, however, and the country suffered huge trade deficits. The leadership believed that the collectivization of agriculture in the South would lead to net gains in output, but there were food shortages as output could not keep pace with the postwar baby boom. In 1982, agriculture in the South was partially de-collectivized, and Hanoi began to experiment with Chinese-style agricultural production contracts. By 1986, triple-digit inflation and severe food shortages had wracked the economy.

## **3. *Doi Moi***

The 6<sup>th</sup> party congress of December 1986 adopted an economic reform program known as *doi moi*, or renovation. Agriculture was completely de-collectivized, and fifteen-year contracts for individual production units were granted. As a result, Vietnam went from a net importer of rice to the world's third largest exporter within a year. Vietnam also became the world's second largest producer of coffee robusta. Market forces were introduced and central planning was eliminated for all but essential commodities. Vietnam rejected a model of heavy industrialization in favor of sectors in which its economy had a comparative advantage: agricultural commodities (rice, coffee, rubber); natural resource (oil and natural gas) exploitation; and labor-intensive manufacturing. The labor market was freed up. Foreign investment was courted, and the

government marketed the country as an offshore center for manufacturing. Currency reform eliminated the inflationary forces caused by an overvalued currency and the black market. Having withdrawn from Cambodia in 1989, Hanoi began to renew ties with the international community. Embargoes were eased, and bilateral and multilateral lending and development assistance resumed. This was essential, because Hanoi lost all Soviet aid and subsidies by 1991.

Since 1989, real GDP growth has averaged almost 8 percent a year. GDP in 2005 reached \$53.1 billion. Inflation, which was in the triple digits in 1986, was brought down to a low of 3.6 percent in 1997 and is currently 8.4 percent. Per capita income more than doubled from \$220 in 1994 to \$638 in 2005, with a related reduction in the share of population living in acute poverty. However, regional differences in average income are wide, with \$638 per capita for the whole country on average, but about \$1,800 in Ho Chi Minh City and much lower than average in poorer provinces of the central and northern highlands.

#### **4. The Internationalization of the Economy**

The most significant change in the Vietnamese economy in recent years has been its moves toward greater internationalization. Since 1987, when Hanoi passed a Law on Foreign Investment, Vietnam has adopted a strategy of growth that is based on the integration into the international economy through export-led growth and foreign direct investment.

Vietnam's principle exports are, in order of importance: petroleum; textiles and garments; footwear; marine products; furniture; electronic parts; rice; coffee; and rubber. Its principle imports are: machinery and parts; refined petroleum; steel; and textile inputs. The direction of trade has shifted away from CMEA states. Vietnam's principle markets are: the US; Japan; Australia; and China. China is the leading source of imports, followed by Singapore, South Korea, and Japan.

Vietnam has sought to attract foreign investment in its industrial sector. The Government sees foreign investment as an intrinsic part of its reform program for state owned enterprises (SOEs). Unwilling to privatize or close SOEs for fear of exacerbating unemployment, the government forced the larger SOEs to take over the weaker ones. Hence, the number fell from 12,000 to less than 6,000. But these SOEs remain inefficient and dependent on subsidies; over half are in the red financially.

Vietnam has participated in international economic and trade forums. Following its membership into ASEAN in 1995, Vietnam pledged to reduce its tariffs in accordance with the AFTA by 2003. In 1996, Vietnam began the application process for WTO membership, which was completed and approved in December 2006. In November 1998, Vietnam became a member of the Asia-Pacific Economic Cooperation forum (APEC), and in November 2006, Vietnam hosted the annual meeting of APEC leaders, which included U.S. President Bush.

Tourism has become an important and growing source of revenue. There were a record 3.5 million tourist visitors to Vietnam in 2005, up from 1.6 million in 1996.

While the country has moved toward a more market-oriented economy, the Vietnamese government still holds a tight rein over major sectors of the economy, such as the banking system and state-owned enterprises. The government has plans to reforming key sectors and privatizing state-owned enterprises, but implementation is slow. Greater emphasis on private sector development is crucial for job creation. Urban unemployment has been rising in recent years, and rural unemployment (estimated to be between 25 and 35 percent during non-harvest periods) is already at critical levels. Layoffs in the state sector and foreign-invested enterprises combined with the lasting effects of an earlier military demobilization further exacerbate the unemployment situation.

The entry-into-force of the Bilateral Trade Agreement (BTA) between the U.S. and Vietnam in December 2001 was a significant milestone for Vietnam's economy and for normalization of U.S.-Vietnam relations. Implementation of this agreement, which includes provision of trade in goods, trade in services, enforcement of intellectual property rights, protection for investments, and transparency, is fundamentally changing Vietnam's trade regime and helping liberalize its economy. The BTA gave normal trade relations (NTR) status to Vietnamese imports in the U.S. market. Bilateral trade between the two countries has expanded dramatically, reaching \$6.8 billion in 2005.

## **5. The Limits of Incomplete Reform**

### ***Agriculture***

Agriculture remains the primary source of livelihood for about 80 percent of the country's population, though its share of GDP has fallen from 42 percent in 1989 to 21 percent in 2005. The initial reforms that de-collectivized agriculture improved the standard of living in the countryside; beginning in the late 1990s, however, there was widespread unrest as a result of corruption, inequitable distribution of land, and the many new taxes and fees.

Paddy rice production (wet rice cultivation) dominates agricultural output. The introduction of the contract system led Vietnam from being a net importer of rice to the world's 2<sup>nd</sup> largest exporter in 1997, behind Thailand but surpassing the US. Vietnam exported 3.6 million tons of rice in 2005, earning over \$1 billion in revenue.

But agriculture has become more diversified. Vietnam is now the world's largest exporter of robusta coffee, which is used for instant coffee. It also exports large quantities of peanuts, rubber, tea, maize, and cassava. Large-scale animal processing, such as exists in Thailand, has not occurred in Vietnam. Animal husbandry remains a household-based industry.

Lack of land and credit hinders rural growth, as well as poor access to markets and inefficient farming techniques. Under-employment in the countryside also remains a problem and migration to the cities is putting inordinate pressure on urban infrastructures.

### ***Industry***

The Vietnamese economy slowed down in the mid-1990s, hampered by its half-capitalist, half-socialist system. Vietnamese authorities slowed implementation of the structural reforms needed to revitalize the economy and produce more competitive, export-driven industries. Although the government pledged to reform inefficient SOEs and liberalize trade, it failed to implement a comprehensive solution. Although the number of SOEs has been halved, these firms continue to pose a considerable economic burden. Privatization is subject to political sensitivities, while the country's dynamic private sector is denied both financing and access to markets. There is concern over high rates of unemployment. Complicating SOE reforms is a banking crisis, brought on by large debts and non-performing loans. In addition, the revenue base remains small and tax collection sporadic.

### ***Infrastructure***

Vietnam is hampered by a weak physical infrastructure. There are only 126,000 km of roads, according to official statistics, less than half of which are paved. Over 10 percent of the country's villages are inaccessible by road for at least one month a year. A second north-south highway is currently under construction via the Central Highlands along the Ho Chi Minh Trail. This project has been criticized for its dependence on forced labor and negative environmental impact. Vietnam is in desperate need of more investment in its highway infrastructure.

There are 3,260 km of railways, though the rail system is overburdened and outdated. Vietnam has several important ports, including Hai Phong, Quang Ninh, Da Nang, Ho Chi Minh City, and Can Tho, which handled 34 million tons of freight in 2005, up from 4.5 million tons in 1993.

In 2005, Vietnam's total electricity-generating capacity was 53.3 billion kilowatts. More than eighty percent of this was hydroelectric, while the remainder was obtained from fossil fuels. Electricity consumption nearly matches production. More dams are being constructed and the government's goal is to double existing hydroelectricity output. This has caused ethnic tensions as over 100,000 people have undergone forced migration make way for the reservoirs.

Vietnam's telecommunications sector has been expanded and upgraded since 1991. In 2005, there were 5.7 million telephone lines. Between 2000 and 2005, the penetration rate of mobile phone subscribers rose tenfold to ten subscribers per 100 popular, although this remains low compared with around 12 in Thailand and 28 in China. Internet services, which became available in mid-1998 in both Hanoi and Ho Chi Minh City are expensive, but there were about 4.3 million users in 2005.

### ***Study Questions***

1. What problems does Vietnam face as it moves from a centralized economy to a market-based one?
2. How can Vietnam alleviate its growing unemployment crisis?
3. Which sectors of the economy have benefited from *doi moi*?
