The only railroad in Ethiopia connects Addis Ababa and the port of Djibouti. Construction on the narrow gauge track, which runs for 423 miles in Ethiopia, began in 1897 and reached Addis Ababa in 1917. Ethiopia tried to become less reliant on the railroad in the 1960s. When it closed during the Ogaden War with Somalia in 1977-78, Ethiopia realized it needed to improve the road to the Eritrean Red Sea port of Assab. Following the outbreak of hostility with Eritrea, the closure of the border and the loss of access to Assab, Ethiopia realized again how important the railroad was to its survival. As a land-locked country, Ethiopia has no port. Its reliance on Djibouti during the war with Eritrea and the tendency of Djibouti to be overtaxed caused Ethiopia to consider other alternatives until such time as Eritrean ports again become available. As a result, Ethiopia is making increased use of the Gulf of Aden port of Berbera in Somaliland and is exploring with Sudan the use of Port Sudan on the Red Sea. As a legacy of the period when Ethiopia controlled Eritrea and had ports on the Red Sea, it still has a merchant marine of 12 ships, including 7 cargo vessels, 1 container ship, 1 petroleum tanker and 3 roll-on/roll-off ships. Ethiopian Airlines (EAL) is one of the largest and most efficient in Africa. It is a government-owned operation that began in 1946 with guidance from TWA. An all-Boeing wide-bodied fleet, EAL provides service throughout Africa and has flights to Asia, Europe and the United States. Ethiopia has also developed an extensive domestic network of flights and airports. It has 11 airports with paved runways, many of them recently completed or expanded. It has 74 other airports with unpaved runways. Due to its size, mountainous topography and limited road network, air travel is an important way to get around Ethiopia. The telecommunications system in Ethiopia is rudimentary. It remains under government control. There are under 400,000 telephones in the country and several thousand cellular phones, mostly in Addis Ababa. The government domestic phone system relies on open wire and microwave radio relay. The international system has an open wire to Sudan and Djibouti and microwave radio relay to Kenya and Djibouti. There are three Intelsat satellite earth stations, 5 AM radio broadcast stations, two short wave and 25 television broadcast stations, all under government control. There are about 400,000 television sets. All Internet service comes over the government-controlled telephone line. There are several thousand Internet subscribers, nearly all of them in Addis Ababa.

## FOREIGN TRADE

The value of Ethiopian exports totals almost a billion dollars, a figure that has risen steadily in the 1990s. The increased value of exports has been greater in services than in merchandise, although the latter still constitutes more than half the total. Five products—coffee, hides and skins, oil seeds, pulses and fruits and vegetables—account for about 80 percent of export earnings. Coffee alone provides about two-thirds of the merchandise export earnings. The export of manufactured goods accounts for only about four percent of the total by value and has been declining in recent years. Most Ethiopian exports go to Germany, Japan, Djibouti, Saudi Arabia, France, UK and Italy. As a percent of GDP, imports are running at over 20 percent and the trend was upward during the 1990s. Capital and consumer goods account for two-thirds of the total and semi-finished products for most of the rest. The dollar cost of imports is about 1.25 billion if the extraordinary military purchases during the conflict with Eritrea are excluded. Major imports include fuel, fertilizer, vehicles, machinery, electrical products, metal and metal products and cereal. The principal sources of supply are Saudi Arabia, Italy, United States and Japan. Russia and the

former Soviet Republics were important sources of military equipment during the conflict with Eritrea.

### **Self-Study Questions for Further Exploration**

- To what extent has the EPRDF followed its economic policy precepts?
- How completely has the EPRDF accepted free market mechanisms?
- How would you rate the EPRDF's economic performance over the last ten years?
- What will be the likely impact on its future economic performance of Ethiopia's \$3 billion expenditure on the conflict with Eritrea?
- What are the prospects for diversifying the production of cash crops?
- Why is there so little industrialization in Ethiopia?
- Why does the government continue such tight controls over telecommunications, thus limiting its expansion by the private sector?
- Why does so little of Ethiopia's trade occur with neighboring countries?

## **POLITICS AND GOVERNMENT**

### **THE 1994 CONSTITUTION**

Following the overthrow of the Derg regime in 1991, transitional authorities created a constitutional commission and promulgated the new federal constitution late in 1994. It formally became the law of the land in 1995 after approval by newly elected representatives. This constitution is a sharp departure from previous Ethiopian constitutions. It creates a federal multi-party system of government and accords extraordinary importance to the ethno-linguistic groupings in the country. Chapter 2 states that “all sovereign power resides in the Nations, Nationalities, and Peoples of Ethiopia.” It goes so far as to allow the right of secession by any Nation, Nationality or People of Ethiopia. This possibility is the most controversial part of the constitution. Some argue that this concept will permit disparate groups to live together while others believe it constitutes the seed for the disintegration of Ethiopia.

The handling of land ownership was one of the most hotly contested aspects during the deliberations of the constitutional commission. The constitution declares that “the right to ownership of rural and urban land . . . is exclusively vested in the state and the Peoples of Ethiopia.” As a result, land is not considered a market commodity. It is seen as the common property of the extended family, ethnic group, clan, etc. This has become an especially controversial issue in urban areas where private individuals and investors

often prefer to own land. It is possible to obtain long-term leases, but not outright ownership. Another important change in this constitution is the provision that mandates the equality of Ethiopian languages. This provision has led to the use of several languages other than Amharic in the school system, as a medium on radio and television and in the written press.

Interpretation of the constitution is left not to the courts but to the House of Federation in the legislative branch. The process includes a Council of Constitutional Inquiry consisting mostly of legal experts that submits its findings to the House of Federation for a final decision. A process that originates at the regional or federal level can amend the constitution. When the initiative comes from the regions, a third of the regional councils must support a proposal by majority vote. In addition, either of the federal houses of Parliament can initiate a constitutional amendment by a two-thirds vote. Ordinary constitutional amendments then require a two-thirds vote in a joint meeting of the federal houses as well as a majority vote in two-thirds of the regional councils. The constitution permits the declaration of a state of emergency by the Council of Ministers followed by approval of the House of Peoples' Representatives.

## **EXECUTIVE BRANCH AND EPRDF**

National legislative elections take place every five years. They were held in 1995 and 2000 and are not scheduled again until 2005. They elect members of the bicameral Parliament, which consists of the House of Peoples' Representatives (lower chamber) and House of Federation (upper chamber). The House of Peoples' Representatives nominates the President, who is then elected by a two-thirds vote during a joint session with the House of Federation. The nominee does not have to be a Member of Parliament. The President, Negasso Gidada since 1995, holds office for six years in order to serve as a bridge from one five-year Parliament to another. Although the President serves as chief of state, his role is largely ceremonial. President Negasso is from Oromia.

The Prime Minister is the head of government and, together with the Council of Ministers, holds the highest executive powers. The Prime Minister is a member of and elected from the House of Peoples' Representatives for a five-year term. Meles Zenawi has held this position since 1995. The Prime Minister is the chief executive, chairman of the Council of Ministers, and commander-in-chief of the armed forces. The Prime Minister appoints most senior officials to the federal government and is in charge of the country's foreign policy. There is a Deputy Prime Minister who has no constitutionally specified task except to carry out responsibilities specifically entrusted to him by the Prime Minister. Prime Minister Meles is from Tigray Region and Deputy Prime Minister Tefera Walwa is from Amhara Region.

Upon nomination by the Prime Minister, the House of Peoples' Representatives appoints the members of the Council of Ministers or cabinet. The Council of Ministers is responsible to both the Prime Minister and the House of Peoples' Representatives. Each minister is in charge of a government ministry such as justice, education or foreign affairs and is, therefore, responsible for routine government business under the purview of that ministry. The key task of the ministers is the formulation of the federal budget. The ethnic background of ministers and deputy ministers generally reflects the ethnic composition of Ethiopia.

Real executive power on key policy issues lies with the ruling political party, the Ethiopian People's Revolutionary Democratic Front (EPRDF). It is an umbrella organization for a number of essentially ethnic-based political parties, most of which played a role in overthrowing the Derg regime. The major parties that comprise the EPRDF are the Tigray People's Liberation Front (TPLF), the Amhara National Democratic Movement (ANDM) and the Oromo People's Democratic Organization (OPDO). There are numerous other smaller parties in the EPRDF. Neither the decision-making process nor the deliberations of the secretive EPRDF are well understood by outsiders. What is clear, however, is the preponderant role played by the TPLF, the Ethiopian organization most responsible for the fall of Mengistu Haile Mariam. Although many Ethiopians resent the heavy influence of the TPLF in determining government policy, there is grudging appreciation for the fact that the TPLF more than any other group ridded the country of the Derg.

It is apparent that the policies of the EPRDF and, especially, the TPLF have been adapting to new circumstances, especially in the area of economic policy. As noted earlier, the EPRDF has slowly moved away from some Marxist-Leninist concepts to a greater willingness to embrace market economics. Simmering policy differences within the EPRDF, particularly the TPLF, came into the open in 2001. There was a split in the TPLF with Prime Minister Meles leading the group remaining in power and another group of senior TPLF officials leaving the party. There were several reasons for this schism. From the beginning of the conflict with Eritrea, there were policy differences on how tough to be towards Eritrea. Meles tried to be more conciliatory; others took a harder line. Meles is thought to be more willing to institute liberal economic policy reforms than were those who broke with the TPLF. There are also differences in the amount of transparency and openness that the two factions are willing to allow in the TPLF and EPRDF. The faction that has the support and loyalty of the security forces will ultimately come out on top—at least over the short term.

## **OPPOSITION POLITICAL PARTIES**

Political parties that are not part of the EPRDF have existed in Ethiopia since the fall of the Derg in 1991. In fact, one important group, the Oromo Liberation Front (OLF), initially aligned itself with the EPRDF but broke away after about a year. Its leadership is now in exile and the OLF is trying to overthrow the EPRDF government. Other parties have continued to operate inside Ethiopia. They include the All-Amhara People's Organization (AAPO), Coalition of Alternative Forces for Peace and Democracy (CAFPD), Ethiopian Democratic Union (EDU) and Ethiopian National Democratic Party (ENDP). There are a number of other smaller parties, some of which come and go. Most of the opposition parties boycotted the 1995 and 2000 elections.

Although Ethiopia's constitution specifically calls for a multi-party state, it is a difficult environment for an opposition party to succeed. The EPRDF is in firm control of the government, radio, television and much of the written media. There are opposition papers, some of which are outspoken in their criticism of the government. But the opposition parties are not allowed to compete on a level playing field and are often subject to harassment by local officials. It is equally true, however, that the opposition parties are weakly financed, usually poorly led and almost always disorganized. Nor is there any unity among the

opposition groups. This situation does not bode well for the development of a meaningful and vibrant multi-party system.

## PARLIAMENT

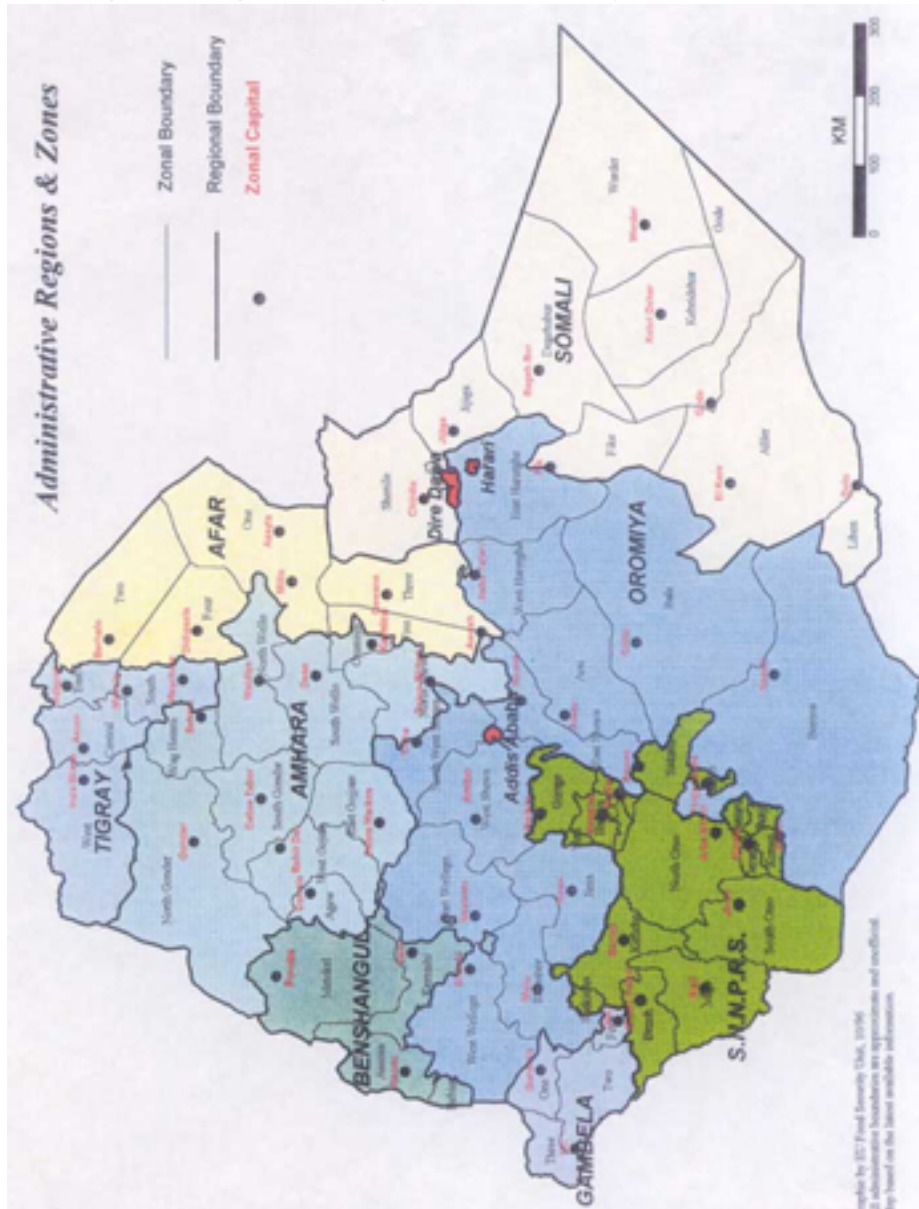

The people directly elect the 548 members of the House of Peoples' Representatives (lower house) from single member districts for five-year terms. Ethiopia has universal suffrage for persons 18 and over. State assemblies choose the 117 members of the House of Federation (upper house) for five-year terms. In the 2000 elections, EPRDF candidates won 483 of the 548 lower chamber seats. Regional parties won 46 seats, independents 8 seats and the remainder is not specified. Members of Parliament are immune from any legal or administrative action based on an opinion expressed or vote cast. They also have partial immunity from arrest. The House of Peoples' Representatives is the more important of the two organizations. It can enact laws dealing with utilization of land, natural resources and interstate commerce; interstate roads, postal and telecommunication services; enforcement of constitutionally established political rights; nationality, asylum and other specified issues. The constitution also assigns it a variety of other responsibilities. The House of Federation is designed to represent the many different ethnic groups in Ethiopia. Its most important function is its power to interpret the constitution. It has a mandate to promote equality among the various ethnic groups in the country and determines the amount of subsidy the federal government gives to the regional governments. The principal law emanating from the House of Peoples' Representatives is the proclamation. The only requirement is that it not contradict the constitution. Proclamations can originate in the Council of Ministers or internally in the House. The House also publishes the official gazette of Ethiopia known as the *Negarit Gazeta*. Many observers of Ethiopian politics are quick to dismiss Parliament as a "rubber stamp" of the Council of Ministers and the EPRDF. Although it clearly is not a strong legislative organization, it is too facile to conclude that it is unimportant. There are some outspoken members, particularly independent Somalis, who do not shrink from criticism of government policy. The Lower House has initiated controversial investigations. It is also questionable whether a truly unpopular policy could be forced through Parliament. Everything considered, however, it is not yet a very exciting body.

## JUDICIAL SYSTEM

Ethiopia's federal system of government has two sets of courts and jurisdictions. There is a three-tiered federal system. At the bottom are the Federal High and Federal First Instance Courts, which are established as necessary by the House of Peoples' Representatives. At the top of the structure is the Federal Supreme Court, which is established automatically by the constitution. Each region or state also has a three-tiered system of State Supreme, High and First Instance courts. Unlike the federal courts, the constitution automatically constitutes all three of these courts at the regional level. The intention is to create Federal High and Federal First Instance Courts in areas of high population density and intense economic activity where it may be necessary to supplement the regional courts. Ethiopia established a special system and proceeding for trying persons accused of crimes during the Derg regime.

The Federal Supreme Court has the highest and final jurisdiction over federal matters and the State

Supreme Court has similar jurisdiction over state matters. The Federal Supreme Court has the constitutional authority to review and correct any decision of a “basic error of law.” The State Supreme Court has the same authority for matters that fall under its purview. The Prime Minister nominates the President and Vice President of the Federal Supreme Court. The House of Peoples’ Representatives approves them. Except for violation of disciplinary rules or gross incompetence, federal judges cannot be removed from duty until they reach the mandated retirement age. The judiciary is generally independent. The greatest problems facing the judicial system are a shortage of judges and prosecutors, inadequate funding and huge backlogs in the court system.

## ETHNIC FEDERALISM

Ethnic federalism is the most radical and controversial policy instituted by the current government. The EPRDF created ethnic federalism in part to ensure that Ethiopia not continue the policy of “Amhara domination.” (The Amhara have not always dominated in Ethiopia, but they have been in control throughout much of Ethiopian history.) Ethnic federalism has important implications for all aspects of

social and political development in the country. Each region or state has its own executive branch headed by a president and supported by functional department heads. There are also regional legislatures and a judicial system. Perhaps unique in Africa, regional governments can raise their own revenue.

For administrative purposes, Ethiopia is divided into nine ethnically based regions or states and two chartered cities. The regions are Afar, Amhara, Benishangul/Gumuz, Gambela, Harar, Oromia, Somali, Southern Nations, Nationalities and People's Region (SNNPR) and Tigray. The two chartered cities are Addis Ababa and Dire Dawa. (See map of administrative areas.) The residents of Afar, Somali and Tigray Regions are almost exclusively of the Afar, Somali and Tigrayan ethnic groups respectively. Amhara Region and Oromia are populated 85-90 percent by Amharas and Oromos respectively. The remaining administrative units contain a wide mix of smaller ethnic groups, especially SNNPR. It is a mistake, therefore, to suggest that the regions represent a single ethnic unit.

The regions are, in turn, divided into 64 zones, which are roughly equivalent to American counties. Each zone has its own administrative apparatus that reports to the regional government. The zones are subdivided into 550 districts, known locally as *weredas*, which also have administrative responsibilities. The districts are further subdivided into thousands of *kebeles* or neighborhood/rural organizations. The *kebeles*, a holdover from the Derg period, create and monitor the local militias. Ethiopia is a very large and populous country; it has created an elaborate and expensive federal structure of government. The advantage, if one assumes that it provides good government, is that it brings administration directly to the people. It has been a huge challenge, however, to fund adequately this infrastructure and to find sufficient numbers of trained and honest bureaucrats to fill the local government positions. It is too soon to tell if this grand experiment will succeed. It is a Herculean and innovative undertaking.

### **Self-Study Questions for Further Exploration**

- Are there reasons to believe the 1994 constitution will hold up longer than the 1955 and the 1987 constitutions?
- To what extent do the political parties that make up the EPRDF have strong support among the people they claim to represent?
- What keeps the opposition political parties from uniting in common cause?
- What will it take for Parliament to become a powerful force in Ethiopian politics?
- How can Ethiopia ensure there are enough judges and prosecutors to fill positions in the judicial system?
- Do the different ethnic groups have different views on the desirability of ethnic federalism?

## **NATIONAL SECURITY AND FOREIGN POLICY**

### **NATIONAL SECURITY**

Ethiopia has faced attacks from outside for many centuries. Islamic forces from the Somali lowlands in the 15<sup>th</sup> century, “Gran the Lefthanded” from the Sudan in the 16<sup>th</sup> century and Egyptian troops and then the Mahdist forces from the Sudan in the 19<sup>th</sup> century all tried to overrun the Ethiopian highlands. The Italians made an unsuccessful effort in the late 1800s and finally succeeded in the 1930s. The last attempt by outsiders to seize a large part of the country occurred in the 1970s when the Somali government

briefly occupied most of the Somali inhabited part of Ethiopia. Ethiopia has learned from these experiences and, as a result, maintains a strong national security force. Ethiopia also benefited, especially in earlier times, by the fact that the core of the country is located in topographically inhospitable highlands. Foreign invaders paid a high price whenever they entered the rugged mountains.

Eritrea caught Ethiopia off guard when it occupied in 1998 a tiny piece of Ethiopian-administered territory near Badme on the border between the two countries. The previous Derg regime had kept at least 250,000 Ethiopians under arms. The EPRDF significantly downsized the force level after it defeated the Derg in 1991. It probably had at the outbreak of the conflict with Eritrea less than 100,000 regular military personnel, few of whom were anywhere near the border with Eritrea. During the two-year war with Eritrea, the Ethiopians built up their forces to about 350,000 and significantly increased military expenditures. Now that the war has ended, Ethiopia is demobilizing some of these troops, but it is a safe bet the numbers will not go down to the pre-conflict levels. Following the military defeat of Eritrea, Ethiopia has shown that it has one of the largest and most powerful military organizations on the continent today, including a modern air force. But the senior level of the defense force underwent a purge following a split in the TPLF. It remains to be seen how this will affect the overall efficiency of the military organization.

## NEIGHBORS

Ethiopia is located in a tough neighborhood and, from time to time, has been a tough neighbor itself. The Horn of Africa has been one of the most conflicted parts of the world for the last 50 years. There is constant pressure on finite arable land. Water is scarce in the lowlands. Strategic materials such as minerals and oil are in short supply throughout the region. (Sudan is now producing a significant amount of oil.) The people who live in this part of Africa are proud, familiar with adversity and not reluctant to take up arms against a neighbor. National boundaries divide ethnic groups on virtually every section of Ethiopia's frontier. It should come as no surprise that the end of colonial rule in the region resulted in a significant number of conflicts. They probably would have broken out earlier were it not for the presence of colonial troops.

Somalia became an independent state in 1960, created by the amalgamation of British Somaliland and Italian Somalia. Somalia announced at independence that it intended to incorporate into its territory Somali-inhabited areas in neighboring Djibouti, Kenya and Ethiopia. This policy has resulted in periodic conflict between Ethiopia and Somalia ever since. There were full-scale wars in 1964 and in 1977-1978, when Somalia occupied most of southeastern Ethiopia. What was previously known as Italian Somalia has been a failed state since 1991. There have been a few incidents near the border but there has been no large scale fighting between the two countries since 1991. In the meantime, Somaliland broke away from Somalia and established cordial relations with Ethiopia.

An even more troubling relationship is the one with Eritrea. Ever since Eritrea became a province of Ethiopia in 1962, some Eritrean groups have fought to achieve independence. This effort succeeded when the EPRDF and the Eritrean People's Liberation Front toppled the Mengistu government in 1991. The

new EPRDF government accepted Eritrean independence. Relations were cordial until conflict unexpectedly broke out in 1998 after Eritrea invaded a small piece of territory administered by Ethiopia. An all out war ensued that ended in an Ethiopian military victory in 2000. In spite of the fact that Ethiopia was once heavily dependent on the Eritrean ports of Assab and Massawa for handling its imports and exports, it may be many years before relations return to normal.

Ethiopia's thousand mile border with Sudan has the advantage of passing through territory which is isolated from their respective capitals and, until the recent discovery of oil in Sudan, is not strategically important. As a result, occasional problems between Sudan and Ethiopia have not developed into serious border conflicts. Perhaps because the border is isolated, however, groups whose goal is to overthrow the government on the other side periodically use the territory as a base. Consequently, the Sudan People's Liberation Movement has for many years operated from inside Ethiopia while various anti-Ethiopian organizations periodically use Sudan as a base. Ethiopia's greatest current concern with Sudan is that it might serve as a base to export Islamic fundamentalism. For the moment, however, relations are good and Ethiopia intends to purchase oil from Sudan and make use of Port Sudan for its commerce.

Since achieving independence in 1963, Kenya has had cordial relations with Ethiopia. The only surprise is that the relationship has not been closer than it is. This is partly explained by the nature of the Kenya-Ethiopia border. As in the case of Sudan, it is far away from both capitals and not particularly strategic. Land transportation links between the two countries are poor, thus limiting trade. Kenya and Ethiopia have traditionally cooperated in countering the irredentist threat from Somalia. But there is also occasional conflict along the border, which divides the Boran ethnic group in both countries. Cattle raiding is a serious problem among the Boran and results in occasional incursions by Ethiopian forces into Kenya. Ethiopia has also had a generally good relationship with tiny Djibouti, although that border divides the Afar and Somali tribes in both countries. Djibouti port is important for Ethiopian trade and was critical during the Ethiopian-Eritrean war.

As the major source of water for Egypt, Ethiopia is a key player in the nine nation Nile Basin Initiative. The Blue Nile and other rivers originating in the Ethiopian highlands provide 86 percent of the water reaching the Aswan Dam. Ethiopia would like to use more of its water for hydropower and irrigation than is currently the case. This requires careful discussions with Egypt and the other Nile Basin countries. If not handled appropriately, there is a potential for conflict with Egypt. Ethiopia is also a member of the Intergovernmental Authority for Development (IGAD), which brings together Sudan, Eritrea, Djibouti, Kenya, Somalia and Uganda. As a result of the governmental breakdown in Somalia and the Ethiopia-Eritrea war, IGAD has been relatively inactive in recent years.

## **AFRICA**

When the nations of Africa created the Organization of African Unity in 1963, they located the headquarters in Addis Ababa. Following suit, the UN Economic Commission for Africa established its headquarters in the Ethiopian capital. Until his overthrow in 1974, many Africans looked to Emperor Haile Selassie as the "symbol" of independent Africa. Ethiopia has played a less prominent role in Africa-

wide politics since 1974. Neither the Derg regime nor the EPRDF government has chosen to emphasize Africa-wide activities. They have focused instead on internal issues and the immediate region described above. Because of its long independent history and large population, however, Ethiopia remains a major figure in African politics. Nearly every African country has a resident embassy in Addis Ababa today.

## **WESTERN EUROPE**

Ethiopia has a long relationship with many Western European countries and a major assistance link with the European Union. Catholics from Portugal were among the first Europeans to develop close ties with Ethiopia. Explorers and emissaries from Great Britain, France, Spain, Italy and Germany were not far behind. There is a rich history of European contact with Ethiopia, a surprising amount of which is documented in written works. In the early 20th century, important advisers from Sweden, Switzerland and Austria joined other Europeans by taking positions in Ethiopia. Businesspersons and emigrants from Greece also arrived. Although the European presence, except for the period of Italian occupation, was never large, Europeans were instrumental in certain aspects of Ethiopia's development.

Today, the countries of Western Europe are primarily partners in trade and economic development. The most important ones are Italy, Germany, United Kingdom, Netherlands, Sweden, Norway, Finland and France. Ethiopia has put behind it the hostility that existed during the occupation of the country by Fascist Italy. Most of the West Europeans have an embassy in Addis Ababa and relations are generally cordial with all of them. There was considerable friction in some of the relationships during the Eritrean-Ethiopian war and many of the Europeans, especially the Scandinavians, remain concerned about Ethiopia's policies on human rights.

## **RUSSIA, CHINA AND JAPAN**

Imperial Russia began contacts with Ethiopia in the late 19<sup>th</sup> century, driven in part by the desire of the Russian Orthodox Church to establish relations with the Ethiopian Orthodox Church. The Russians persisted in spite of friction with the Italians. The Russians had a legation in Addis Ababa during the early part of the 20<sup>th</sup> century. A number of prominent explorers and scientists visited Ethiopia until the Bolshevik Revolution; the last Imperial Russian charge d'affaires in Addis Ababa mortgaged the legation in 1919 to raise funds to leave the country. The Soviet Union returned to Ethiopia as a major force in the 1970s during the Marxist-Leninist Derg regime; Ethiopia effectively became a Soviet satellite. Moscow provided the Derg with about \$3.5 billion in military assistance during this period. With the breakup of the Soviet Union, Russia returned to a normal relationship with Ethiopia although it was a major supplier (for cash) of military equipment during the Ethiopian-Eritrean conflict.

China has managed to maintain a cordial relationship with Ethiopia since the end of World War II. Although the amount of its assistance is not huge, it has been appreciated. China has a significant diplomatic presence in Addis Ababa and, in its quiet way, seems to be influential with the current government. Ethiopian diplomatic contact with Japan began in the 1920s at the League of Nations. The Japanese sent a delegation to the coronation of Haile Selassie in 1930 and exchange visits began soon

after. There were important trade ties and camaraderie between the emperors of both countries. The outbreak of World War II again interrupted the relationship, which was renewed when Haile Selassie made an official visit to Japan in 1956. The overthrow of Haile Selassie set back the relationship, although trade and assistance links blossomed after the EPRDF took power.

## UNITED STATES AND CANADA

As compared to Western Europe, the U.S. link with Ethiopia is relatively recent although unofficial ties go back to 1868 when New York Herald journalist Henry Stanley accompanied the Napier Expedition to Maqdala. Retired American officers from the Civil War in the service of the Egyptian Khedive joined Egyptian forces in an unsuccessful attack on Ethiopia in the 1870s. By the end of the 19<sup>th</sup> century and the beginning of the 20<sup>th</sup> century, the U.S. sold most of the cotton cloth imported by Ethiopia. The official relationship began in 1903 when Robert Skinner, then American Consul General in Marseilles, led an official delegation to Addis Ababa where he established diplomatic relations and signed a Treaty of Commerce.

The U.S. tried to maintain a continuous diplomatic presence in Addis Ababa after 1903 but there were numerous interruptions. The U.S. mission in Aden followed Ethiopian affairs on those occasions when no one occupied the U.S. legation. The U.S. never recognized the Italian occupation of Ethiopia in 1936-41 and withdrew its diplomatic mission soon after the Italians took over. The apex of the U.S.-Ethiopian relationship occurred in the post World War II period and until the overthrow of Haile Selassie in 1974. The US signed a Mutual Assistance Agreement with Ethiopia in 1953 and established a huge and important communications station outside Asmara, now capital of Eritrea. During the 1950s and 1960s the largest U.S. official presence anywhere in Africa was in Ethiopia. At one point, Ethiopia had the largest Peace Corps program in the world.

The fall of Haile Selassie and rise of the Marxist-Leninist Derg regime in the mid- 1970s put a quick end to this extensive and important relationship. During much of the Derg period, the U.S. downgraded its small embassy to the charge d'affaires level. Military assistance stopped and economic aid, except for emergency humanitarian support, came to an end. This situation reversed itself soon after the EPRDF came to power. Although U.S. programs did not return to the levels of the Haile Selassie government, Washington did institute a significant aid program and reinstated a small military assistance program. The Peace Corps returned briefly, only to depart after the outbreak of conflict with Eritrea. The U.S. continues to provide the single largest amount of emergency assistance in times of need. Policy disagreements with Ethiopia as it pursued the war with Eritrea temporarily set back the relationship. There are also concerns on human rights issues. But American-Ethiopian ties at all levels are strong; more than a quarter million Ethiopians now live in the United States.

The Canadian relationship with Ethiopia is of fairly recent origin. Ethiopians perceive Canada as a non-threatening source of advice and assistance. Canadian aid to Ethiopia as compared to American aid is not large, but it is significant and Ethiopia is one of Canada's aid concentration countries. Many Ethiopians have immigrated to Canada and many others have studied there. Canadians are well respected in Ethiopia.

## Self-Study Questions for Further Exploration

- With one of the strongest defense forces on the African continent, should neighboring countries fear Ethiopia?
- Alternatively, will Ethiopia's defense forces be put to greater use in African peace keeping operations?
- What can be done to reduce conflict in the Horn of Africa?
- Should U.S. programs in the region put more emphasis on conflict prevention?
- Once stability and a national government return to Somalia, will there likely be a revival of Somali irredentism?
- With Ethiopia providing 86 percent of the Nile water reaching the Aswan Dam, what does this mean for Ethiopian-Egyptian relations?
- What is keeping Ethiopia from playing a more important Africa-wide role today?
- With a history of attacks against Ethiopia, how has Rome managed to maintain cordial relations with Addis Ababa?
- Which country will have the most enduring relationship with Ethiopia—Russia, China or Japan?
- What are the most important American interests in Ethiopia?
- What effect does the Ethiopian-American community have on U.S. policy towards Ethiopia?

[Introduction](#) | [Geography](#) | [History](#) | [Culture](#) | [Social Issues](#) | [Economics](#) | [Political Setting](#) | [Foreign Affairs](#)

The Reader's Guide: Guatemala is intended to provide U.S. government personnel in the foreign affairs community with an overview of important Guatemalan issues related to history, geography, politics, religion, culture, economics, and international relations. The guide merely serves as an introduction and should be used as a self-study resource. Guatemala is far too complex and diverse a society to be covered in any depth using only the text in this guide. Therefore, the reader is encouraged to explore the questions and issues introduced using the Internet site guide and articles and books listed in the bibliography. Most of the bibliographic material can be found either on the Internet or in Foreign Service Institute or Main State Libraries.

Various members of the staff of the Federal Research Division of the Library of Congress contributed to the preparation of this study. Todd Conklin wrote the chapter on the Economy. Rexford Hudson wrote the chapters on Government and Foreign Affairs, and Helen Chapin Metz served as project manager and compiled the remaining chapters. Marilyn L. Majeska edited the study.

The views expressed in this guide are those of the authors and attributable sources and do not necessarily reflect official policy or position of the Department of State or the National Foreign Affairs Training Center. This publication is for official educational and nonprofit use only.

First Edition September 2000

# Introduction

Guatemala is a country with varied terrain and great contrasts in climate. Historically, Guatemala has inherited a legacy from the Mayan culture of the first five or six centuries A.D. Subsequently, beginning in 1549, the area that constitutes present-day Guatemala became the seat of Spanish government for all of Central America. In the more recent past, in the 1960s, following the rule of several military figures and a worsening economy, various guerrilla groups entered into a civil war against the government. Finally, in December 1996, the warring factions signed eleven peace accords. In addition to setting forth constitutional changes, the accords specifically respect Indian culture, languages, religious customs, and agricultural rights. Mayan Indians are believed to constitute at least 50 percent of the population, although some prefer to consider themselves ladinos, a term encompassing all others, including Mayas who have shed their Indian cultural identification.

Religion plays a major role in Guatemala, a Roman Catholic country, and entails the observance of saints' days and other practices. Over the years, Mayan Indians have grafted prehispanic cultural practices onto European Catholicism. Since the 1980s, Protestantism, particularly as observed by evangelical sects, has made significant inroads among the Guatemalan population. Guatemala has a high population growth rate and the second youngest population in Latin America. The social and economic structure is skewed, with some 200 ladino families at the top, a relatively small middle class consisting mainly of ladinos, and most of the population, ladino and Indian, living in relative poverty. Guatemala suffers from a high illiteracy rate, which handicaps economic development. Despite its having the largest gross domestic product in Central America, Guatemala is plagued by high unemployment and under-employment rates. Guatemala's economy relies heavily on the export of coffee, sugar, and bananas. The country, however, imports almost all of its industrial goods, thus maintaining a trade deficit. In addition to agriculture, the economy draws revenue from tourism and construction.

After a series of autocratic rulers, and aided by the signing of the peace accords in 1996, Guatemala is currently striving to engage in more democratic government, committed in principle to eliminate human rights abuses, respect the rights of minorities, and limit the power of the military. By adhering to such principles, Guatemala seeks to improve its standing in the world community, and particularly its relationship with the United States, its major trading partner and source of aid. In practice, however, there is considerable public distrust of government, of the military, and of promises made by various political parties. Time will demonstrate the success of the government in carrying out the needed reforms in various fields.

## Chapter 1. Geography

### Location and Size

Guatemala is located southeast of Mexico, a country that constitutes its principal border. It also abuts Belize to the east (including the Gulf of Honduras), Honduras and El Salvador to its southeast, and the

northern part of the Pacific Ocean to its west (see map). Guatemala's boundaries encompass approximately 108,780 square kilometers, an area slightly larger than the state of Tennessee.

## Climate

Although Guatemala lies entirely within the tropics, its varied terrain provides great contrasts in climate. Heat and humidity characterize most of the lowlands while cold, frost, and occasional snow are common in the highlands. The climate and associated vegetation depend largely on altitude, which ranges from sea level to almost 4,200 meters, and proximity to one of the coasts. The *tierra caliente* (hot country) extends from sea level to about 750 meters; it has average daytime temperatures of 29E to 32EC. The *tierra templada* (temperate country) extends from 750 meters above sea level to about 1,660 meters; daytime temperatures average from 24EC to 26.6EC, and nighttime temperatures average from 15.5E to 21EC. The *tierra fría* (cold country) extends above the 1,660-meter level and has daytime averages as high as 26EC and nighttime averages of 10EC and occasionally lower.

The prevailing winds are the rain-bearing northeast trades that blow inland from the Caribbean. As a result, the northern lowlands, parts of the highlands, and the Caribbean coastal region have humid conditions for most of the year. From November through April, the rest of the country has a distinct dry season, except for a strip of the upper piedmont on the Pacific slope between 1,000 and 1,600 meters

above sea level; there the rainfall conditions are similar to those along the Caribbean coast. The dry season is called *verano* (summer) and the wet season *invierno* (winter).

## Topography and Drainage

Guatemala's topography varies greatly but can broadly be divided into four main areas: the Pacific coast, the highlands, the Caribbean coast and river valleys, and Petén. The Pacific coast has no natural harbors, and its offshore waters are quite shallow. The Canal de Chiquimulilla, which runs along the coast for about 100 kilometers, is part of a coastal lagoon that has been dredged to allow small craft traffic. The coastal plain is predominantly savanna interspersed with forests, which line the rivers flowing from the highlands. Farther inland tropical forest covers the foothills and lower slopes of the highlands. The soils are well drained and fertile. Monsoonal winds blowing from the Pacific bring rain to the area but are often destructive to crops, and the pronounced dry season requires irrigation. Farther inland the plain becomes a steeper ascent to the highlands through upper piedmont. Rainfall is heavy, especially in the western section, where high quality coffee is grown.

The highlands, or mountainous area, constitutes about half the country. The dominant mountain range is the Sierra Madre, which runs roughly parallel to the Pacific coast from the border with Mexico to that with El Salvador. There are fourteen major volcanoes in this range. Guatemala is situated in an exceptionally seismic zone in which five major tectonic plates meet: American, Caribbean, Cocos, Nazca, and Pacific. Earthquakes, therefore, are frequent and at times violent. An earthquake in February 1976 was perhaps the most destructive to date, affecting more than 8 percent of the national territory and killing some 30,000 people.

A number of rivers flow from the Sierra Madre to the Pacific Ocean. They are navigable for only short distances, but they have considerable potential for hydroelectric power. The range has two lakes, Lago de Atitlán, considered one of the world's most beautiful, and Lago Amatitlán, just south of Guatemala City.

The Caribbean coast along the Gulf of Honduras is flat and open to storms. However, the Bahía de Amatique, on which Puerto Barrios is located, is sheltered. The climate of the coastal area, including the valleys that extend inland, is humid and tropical throughout the year. Tropical rain forest covers much of the region.

The fourth area, Petén, constitutes about one-third of Guatemala's territory and extends into the Yucatan Peninsula. It is a rolling limestone plateau, between 150 and 225 meters above sea level, covered with tropical rain forest interspersed with wide savannas. Because of the porous soil, much of the drainage is underground. However, when the rains are particularly heavy, the numerous small lakes overflow and flood the land.

## Chapter 2. History

For several centuries a center of Mayan culture, one of the most advanced pre-Columbian civilizations of the New World, the area that is now Guatemala became the seat of Spanish government for all of Central America beginning in 1549. During the colonial period and the early days of independence, the captaincy general of Guatemala consisted of the present-day republics of Central America—Guatemala, El Salvador, Honduras, Nicaragua, and Costa Rica—plus the present-day Mexican state of Chiapas. The present-day boundaries of Guatemala date only from 1838.

### Preconquest Guatemala

The earliest archaeological evidence of permanent settlement dates from the second millennium B.C. Such settlements have been excavated on the outskirts of Guatemala City, in the highlands, and in the hot rain forest area of northern Guatemala known as Petén. Major achievements of Mayan culture, however, are found in the lowlands, dating from the classical period of the first five or six centuries A.D. Mayan civilization was noted for its accomplishments in the fields of architecture, mathematics, astronomy, and chronology. Reasons for the decline of Mayan civilization are obscure, but by the time of the Spanish arrival in the sixteenth century the various political entities in the highlands, which included Mexican invaders, were in continuous war with each other.

### Early Settlement

In 1523 Hernán Cortés, the viceroy of New Spain, sent Pedro de Alvarado, accompanied by Spanish troops and their Mexican auxiliaries, to conquer the region that included present-day Guatemala. Although the Spanish force was outnumbered by the local armies, their horses and firearms gave them an easy victory. By July 1524 Alvarado had established a capital, which he called Santiago de los Caballeros, on the site of present-day Antigua Guatemala (leveled by earthquake in 1773; subsequently Guatemala City was established adjacent to it). Initially, the conquering Spanish soldiers were given *encomiendas* (tracts of land) along with numbers of Indian laborers. In return for the labor of the Indians, who were treated as slaves, the landowners were to convert them to Christianity. The New Laws of 1542 (which were never enforced) gave rights to the Indians, however, and stated that thenceforth no Indians would be

enslaved. Indians who had not been enslaved prior to the New Laws were resettled in villages where they were liable to tribute but left to rule themselves. However, the Indians revolted and killed the Spanish friars who had been placed among them, leading to another conquest by Spain. A new *audiencia* (Spanish colonial governmental authority) of Guatemala was established in 1570. The governors of Guatemala were subject to the Viceroyalty of New Spain based in Mexico City; for some 250 years, relatively stable Spanish colonial rule prevailed.

## Independence

In the eighteenth century, the liberal ideas of the French enlightenment penetrated Guatemala. The liberal movement had the support not only of intellectuals and urban professionals but also of agriculturists and merchants excluded from Spain's trade monopoly who would benefit from free trade. Following Mexico's declaration of independence on April 10, 1821, the acting president of the *audiencia*, Gabino Gaínza, proclaimed Guatemala's independence on September 15, 1821, designating himself president of the Federation of Central America. The following years found Guatemala and other areas of Central America in a state of confusion; the situation led eventually, in 1838, to the autocratic rule in Guatemala of José Rafael Carrera. By the time of his death in 1865, Carrera had revoked all the liberal legislation of his predecessors. Carrera, a rigorous Roman Catholic and a political reactionary, was the first of a series of four caudillos (dictators). The second caudillo, Justo Rufino Barrios (1873-85), was known to many as the "Great Reformer." He stripped the Roman Catholic Church of many of its privileges, established a national school system and civil code, and introduced private property rights into Indian villages. The third caudillo, Manuel Estrada Cabrera (1898-1920), was noted for the corruption of his regime and its favoritism toward the wealthy. The fourth caudillo, Jorge Ubico (1931-44), ruled, through repression, in favor of the economic elite and executed or exiled his potential enemies.

In the interval between the rule of Cabrera and Ubico, Guatemala enjoyed prosperity, democracy, and government competence under José María Orellana (1921-26) and Lázaro Chacón (1926-30). In 1945, following the overthrow of Ubico by a military junta and the adoption of a new constitution, Juan José Arévalo won the presidency in a free election. A social democrat, Arévalo implemented long-overdue structural reforms such as a social security system and a labor code. In 1950 he was succeeded by Jacobo Arbenz Guzmán, who encouraged the participation of Indian peasants in an agrarian reform program directed particularly against the U.S. United Fruit Company. Some 100,000 peasant families benefited from the redistribution of about 884,000 hectares of land. Arbenz also encouraged student and labor activists. As a result of these measures, the new administration of President Dwight Eisenhower, which in 1953 was stressing "containment of communism," decided that Guatemala posed a grave threat to Western Hemisphere security. The U.S. Central Intelligence Agency in 1954 devised Operation Success to create an "invading army" of foreign-armed Guatemalan exiles to overthrow Arbenz and substitute Carlos Castillo Armas.

## Counterrevolution

Castillo Armas launched a thorough counterrevolution designed to demobilize the Indian population, most

of whom were disenfranchised, and to reestablish ladino (a term used to include all non-Indians; see chapter 3) hegemony. Land reform laws were annulled, and expropriated land was returned to its former owners. The new constitution outlawed left-wing parties and made various political crimes punishable by death; many political prisoners were executed without trial. Castillo Armas was assassinated in 1957; his regime was followed by several regimes of an oppressive, authoritarian kind. Even after presidential elections were resumed in 1966, the armed forces dominated the three presidencies, and the country suffered excesses at the hands of extreme right-wing groups. The army backed Fernando Romeo Lucas García in 1978, who for almost four years instituted a reign of terror that led to opposition even from the middle class.

As a result of these oppressive regimes, which were dominated by the military, and of resentment over unequal land distribution, as well as the example of Fidel Castro Ruz's success in Cuba in 1959, a guerrilla insurgency began to develop in the 1960s. The early poorly organized stages of the movement were put down by the use of U. S. counterrevolutionary techniques. In the late 1970s, however, political violence resumed, in part as a result of the social dislocation caused by the 1976 earthquake. Labor unions began voicing political demands, strike activity picked up (numerous workers had lost their jobs), and an active guerrilla insurgency reappeared. Active in both urban and rural areas, the insurgency succeeded in recruiting within the Indian population. In May 1978, in an attempt to put down an Indian demonstration, government troops massacred more than 100 men, women, and children. By the early 1980s, almost the entire leadership and many members of popular organizations that opposed the government were dead, in exile, or operating clandestinely in antigovernment political or guerrilla organizations. The principal guerrilla groups came together in February 1982 to form the Guatemalan National Revolutionary Unity (URNG).

## New Constitution

Meanwhile, in March 1982 a military junta led by Efraín Ríos Montt overthrew the newly elected president. Ríos Montt was himself overthrown the following year by another general. Then, in July 1984, elections were held for a Constituent Assembly to draft a new constitution. Under the new constitution, which became effective on January 14, 1986, Mario Vinicio Cereno, the first civilian president since 1954, took office in January 1986. Cereno needed to keep army support to prevent a coup while simultaneously reining in human rights abuses, curbing the insurgency, developing the economy, and improving Guatemala's standing in the world community. In the face of these various challenges, Cereno adopted a cautious stance and failed to achieve hoped-for reforms or changes. His successor, Jorge Serrano Elías, another civilian, assumed the presidency in 1990, again facing human rights issues and peace negotiations with the insurgents. In its 1992 report to Congress on human rights the U.S. Department of State for the first time blamed Guatemalan security forces (specifically, the armed forces) for most 1991 human rights abuses.

In January 1993, Serrano stated his commitment to signing an agreement with the URNG. However, on May 25, 1993, faced with increasing popular and military opposition, he dissolved the legislature and Supreme Court, stating that he would rule by decree. The consequent cutting off of foreign aid and popular discontent caused the army to remove Serrano from office on June 1, 1993. Ramiro de León

Carpio was promptly elected to complete Serrano's term, pledging a war against poverty and government corruption. In March 1994, de León signed a human rights agreement, which led to the entry in September of a United Nations mission, the Human Rights Verification Mission in Guatemala (MINUGUA), to supervise the process. MINUGUA's March 1995 report outlined continuing human rights abuses by the security forces. De León also failed to conclude peace with the URNG because the URNG withdrew from negotiations as a result of the government's violation of the human rights agreement.

Alvaro Enrique Arzú Irigoyen of the National Progressive Party, a pro-business party backed by technocrats and professionals, assumed the presidency in 1996. In March 1996, a temporary cease-fire was signed with the URNG; finally, on December 26, 1996, after a thirty-six-year civil war and some 100,000 dead, a series of eleven peace accords were signed in Guatemala City. Under the accords, constitutional changes and legislation placed the armed forces and the intelligence services under the control of an elected body. However, the guerrilla forces were disappointed at the limited amnesty, and the Commission for Historical Clarification established in February 1997 was not allowed to bring charges against those guilty of human rights abuses. Furthermore, right-wing elements of the military and the landed gentry strongly opposed many proposed political and social reforms.

### **Issues to Explore:**

- 1. The major continuing problems not settled by the peace accords and the Commission for Historical Clarification and ways in which Guatemala might deal with them**
- 2. The implications of Guatemala's tradition of military rule and its effect on the success of democratic governments in the country**

## **Chapter 3. Culture**

### **Language and Dialects**

Spanish is the official national language of Guatemala, but only about 50 percent of Indians have indicated some proficiency with Spanish. The Mayan Indians speak some twenty distinct indigenous

languages. Of these, one of four languages—QuichJ , Kakciquel, Kekchi, or Mam—is spoken by 75 percent of all Indians. Ten other languages are spoken in only a small number of municipalities; the Ixil language, for example, is spoken in only three municipalities of northern Quiché. Another six Mayan languages do not extend beyond a single municipality.

## Ethnic Composition

Official projections place Guatemala's population in 1998 at 10.8 million (the Department of State *Background Notes* gives the estimated 1999 population as 11.1 million; the most recent census in 1994, which reported a total of 8.3 million persons, did not cover remote areas). An estimated 65 percent of the total population are Indians of Mayan origin living primarily in Guatemala's highlands in the north and west. In addition, small numbers of Xinca live on the Pacific coast near El Salvador. The remainder of the population are ladinos, a term that as currently used includes Caucasians, mestizos, black Caribs, or Garifuna (descendants of fugitive slaves and Carib Indians, found on the Caribbean coast), and Mayans who have shed their Indian cultural identification.

The figures for the population's Indian ethnic composition are considered debatable, however, given the above definition of ladino. Government censuses have recorded a steady decline in the overall percentage of Indians; the percentage dropped from some 70 percent in 1880 to 50 percent in 1964 and to 37 percent in 1989. Critics question the accuracy of these figures, however, noting that the census required participants to self-identify as either Indian or ladino. In a society that discriminates against Indians, it is likely that many Indians concluded that it was safer to be listed as ladino. Thus, more than half of all Guatemalans may be ethnically Indian.

## Religious Beliefs

In principle, Guatemala is a Roman Catholic country that follows the religious observances of that faith and claims some 80 percent Catholic adherents. In practice, however, contemporary Mayan religious practices involve an unusual grafting of selected European Catholic concepts onto a prehispanic culture. As Joaquín Noval has observed, the Maya venerate a vague hierarchy of supernatural beings with a distant God on top. Between God and man stands a number of other important religious forces, including Jesus, the Virgin Mary, various Catholic saints associated with community and family, and spiritual entities such as the wind, rain, sky, and mountains.

Of the various concepts assimilated by the Maya, *cofradía* is of special significance. Introduced during the Spanish colonial period, *cofradía* originally referred to labor guilds, each with a patron saint. In the Mayan context, *cofradía* serves to direct civil and religious community life through the annual celebration of the patron saints of respective villages. Beginning at about age fifteen, and continuing over the next thirty years, village men assume increasingly burdensome and expensive *cofradía* posts. This effort culminates in responsibility for organizing and financing the village fiesta, an activity that can consume an entire year's income. Upon completion of the final post, the individual joins the ranks of the village elders, who are entrusted to organize communal affairs.

In addition to Roman Catholics and Mayan religious adherents, since the 1980s Protestantism, particularly evangelical sects, has made inroads among the Guatemalan population. In the 1980s, as many as one-third of the population were thought to be evangelicals, but this number subsequently declined and the number of current members is not available (see also *The Role of Religion*, chapter 4).

## **National Holidays**

The celebration of holidays, many of which have a religious association, assumes an important place in Guatemalan culture, especially for the Mayan Indian people. The fixed holidays are:

January 1 New Year's Day

May 1 Labor Day

June 30 Army Day

August 15 Assumption of the Blessed Virgin Mary (the patron saint of Guatemala)

September 15 Independence Day

October 20 Revolution Day (commemorates 1944 revolution)

November 1 All Saints Day

December 25 Christmas Day

December 31 New Year's Eve

Easter, which in 2001 falls on April 15, is a movable holiday. Furthermore, each town and village has its own fiesta day.

## **Issues to Explore:**

- 1. The impact of religious beliefs on Guatemalan culture and society**
- 2. The role of language in maintaining separate Guatemalan ethnic groups**
- 3. The degree to which Guatemalans share a common culture, given the differences between ladinos and Indians**

## Chapter 4. Social Issues

### Population Growth

Guatemala's population growth rate exceeds that of Latin America as a whole. The country's population more than tripled between 1953 and 1993, from some 3 million to slightly more than 10 million. The increase resulted from gains in life expectancy (the UN estimates that in the year 2000 Guatemalan life expectancy will be 68.1 years, almost the Latin American average) and extraordinarily high fertility rates (in 1985-90 the rate was 5.8 children per woman of child-bearing age—the highest in the region; the Latin American average is 3.4). The result was the second youngest (after Nicaragua) population in Latin America. In 1990, 45.4 percent of Guatemalans were less than fifteen years of age compared with a Latin American average of 35.8 percent. Between 1950 and 1990, Guatemala's population density increased from 27.3 to 84.5 residents per square kilometer. This number far exceeded the Latin American average of 21.5 residents per square kilometer and was surpassed only by El Salvador, Haiti, Cuba, and the Dominican Republic. Although the UN forecasts a decrease in Guatemalan fertility rates to 3.6 and 2.7 by 2010 and 2025, respectively, the projected total population is 15.8 million by 2010 and 21.7 million by

2025. In summary, these figures represent catastrophic levels, and the rapid population increase has already placed enormous strains on Guatemalan society and overwhelmed the delivery of essential services.

### **Issues to Explore:**

1. **The implications for Guatemalan society of the large youthful population**
2. **The implications for Guatemalan society of the high fertility rate and the population density**

### **Ethnic and Social Diversity and Social Structure**

As outlined under "Ethnic Composition" in chapter 3 above, almost all Guatemalans are characterized either as ladinos or as Mayan-speaking Indians. Most ladinos live modestly, but almost all elites are ladinos. Indians, on the other hand, are largely poor, uneducated, and subject to social discrimination. Evidence of the historic legacy of such discrimination is found in one of the substantive peace accords, part of the settlement between the Government of Guatemala and the URNG—an umbrella organization grouping four insurgency movements. Signed in March 1995, the accord on Indigenous Rights calls for recognition of Guatemala's ethnic, cultural, and linguistic diversity and for the right of indigenous people to live by their own cultural norms.

Guatemala's tiny upper class historically has consisted of some 200 ladino families, linked through a network of alliances and marriages, who control most commercial, agricultural, financial, and political affairs. Since the 1870s, ladinos have lived in towns and municipal capitals throughout the Indian-populated highlands, where they control local administration and commerce. In the 1990s, however, the ladino presence was most prominent in four of Guatemala's eight regions: the Southeast (the departments of Santa Rosa, Jalapa, and Jutiapa), the Northeast (the departments of El Progreso, Izabal, Zacapa, and Chiquimula), Metro (the department of Guatemala representing Guatemala City), and Petén. Ladinos average some 90 percent of the population of each of these regions—98 percent in the case of the Southeast.

In contrast to the ladino concentrations indicated above, Indians comprise more than 80 percent of all residents in the North (the departments of Alta Verapaz and Baja Verapaz) and the Northwest (the departments of Huehuetenango and Quiché) and almost 50 percent of those living in the Southwest (the departments of Quetzaltenango, San Marcos, Totonicapán, Sololá, Retalhuleu, and Suchitupéquez). Ninety percent of residents of the North and Northwest, mainly Indians, barely survive because of their low incomes. The plight of Indians in the North and Northwest was worsened as a result of the political violence of the late 1970s and the early 1980s and the actions of the government military. The violence caused many to flee to other areas, particularly Mexico.

The some 200 ladino families that historically have constituted Guatemala's upper class derive their wealth primarily from key agricultural exports such as cotton and sugar; their landholdings are among the most concentrated in Latin America. A few such upper class families obtain their wealth from industrial

activities, which are mainly located in Guatemala City. Since 1970 key military leaders, enriched by ownership of large portions of land in the Northern Transversal Strip where they have established huge cattle ranches, also have entered the elite upper class.

The middle sector is mainly urban and ranges from business people and professionals to public employees, office workers, and organized labor. As formal sector workers, this group qualifies for Guatemala's modest retirement and disability programs. Only about 5 percent of the workforce belongs to unions, a figure probably overstated because it includes small farmers whose "unions" operate as cooperatives. The lower class is largely unorganized and works primarily in the agricultural sector or in the urban informal market.

Although ladinos control the coffee, cotton, and sugarcane *fincas* (landed estates devoted to agriculture) of the coastal plain and the *boca costa* (the upper piedmont slopes) near the Pacific, most ladino farmers engage in subsistence agriculture on plots too small to support their families. In the 1990s, some 75 percent of ladinos lived in poverty, but in instances where they occupy the same economic stratum as Indians a wide cultural gulf separates the two groups.

The principal cultural differences between Indians and ladinos relate primarily to such areas as religion, education, and rural as opposed to urban life. In the sphere of religion, Indians traditionally have combined aspects of prehispanic cultural beliefs with the tenets of European Roman Catholicism. The *cofradía* system (see Religious Beliefs, chapter 3), for example, has helped differentiate Indians from ladinos both as regards religious beliefs and placement in a rural as opposed to an urban social structure. Education, which is relatively limited in rural areas, also constitutes an overarching distinction between the two cultures.

### Issues to Explore:

1. **The impact of ladino/Indian differences on Guatemalan economic development**
2. **The impact of ladino/Indian differences on Guatemalan social structure**
3. **The impact of ladino/Indian differences on Guatemalan politics**

## The Role of Religion

Since independence, religion has played a complex role in Guatemalan society. During the nineteenth and first half of the twentieth century, religion, particularly the dominant Roman Catholic Church that historically was part of Guatemala's Hispanic heritage, was a critical element in recurring conflicts between liberals and conservatives. The Catholic Church hierarchy strongly supported the conservative cause.

Yet despite its national importance, the church has had a weak institutional presence in Guatemala, especially in the countryside. Beginning in the 1940s, however, church leaders sponsored the Catholic Action movement to develop rural communities, strengthen the church in areas rarely visited by priests,

and enforce a more orthodox belief system among adherents of folk Catholicism. In conjunction with other significant changes, such as population growth and land scarcity, Catholic Action unintentionally helped undermine the authority of village elders and set the stage for the phenomenal expansion of the Protestant evangelical movement. By the mid-1980s, the latter movement contained an estimated one-third of the national population. During the late 1980s and early 1990s, however, the Catholic Church, which had evolved into a strong critic of human rights violations by the military, experienced a resurgence of membership and a detente with evangelical congregations.

In its program of expansion beyond Guatemala City, which began in the 1940s and 1950s, the Catholic Church used foreign missionary orders to set up social action programs, including schools, clinics, and credit cooperatives. In addition, Catholic Action catechists traveled the countryside spreading an orthodox Christianity at odds with the *cofradía*-grounded folk Catholicism of the highlands. Meanwhile, the position of village leaders had been undermined by their inability to continue providing for the stable egalitarianism that had formed the basis of rural life. As the population swelled in the absence of meaningful land reform, landholdings became increasingly subdivided and incapable of meeting the most basic needs of families. The situation led to migration to Guatemala City and elsewhere. The evangelical movement stepped into the leadership void, offering Guatemalans an ordered social existence and personal salvation. Evangelicals also, however, preached social change, condemning village fiestas as alcohol-filled and sinful events.

The earthquake of 1976 is considered pivotal in the expansion of the evangelical movement. Evangelicals responded to the resulting devastation with a massive outpouring of assistance while concurrently stressing the importance of religious conversion. Moreover, when the military targeted rural Catholic leaders who criticized the government, killing or kidnapping many, evangelicals, who took no political stance, filled the void. In 1982-83, Guatemala's head of state, General Efraín Ríos Montt, an evangelical, speaking to Guatemalans in his weekly radio and television addresses, urged them to convert to Christ, thus providing support to evangelical efforts.

Most Guatemalan evangelicals are also Pentecostals, emphasizing baptism in the Holy Spirit as expressed in speaking in tongues. Among the problems that evangelicals continue to face are local leadership struggles and disputes that have led to ongoing fragmentation of groups. The Roman Catholic Church, in turn, must balance the interests of folk Catholics, orthodox Catholics, and the rapidly expanding Catholic charismatics, who often have more in common with Pentecostal adherents than with their local congregation.

### Issues to Explore:

1. **The differences in the roles played by the Roman Catholic Church in urban as opposed to rural areas; the influence of each role on Guatemala's present situation**
2. **The relationship/similarity of factors responsible for the rapid growth of the evangelical movement in Guatemala with such occurrences elsewhere in the region**

## Education

Guatemala faces daunting educational challenges. According to the United Nations, the average Guatemalan has only four years of schooling. The illiteracy rate of 31.7 percent is the second highest in Latin America. Illiteracy is higher in rural than in urban areas and higher among women than men. As part of the peace process and in an effort to conquer educational shortcomings, the government is implementing programs to encourage community- and parent-managed primary schools and increase bilingual education in Spanish and one of the major Mayan languages (see below). To stimulate improvements, the annual budget for education in 2000 has been raised 20 percent over the 1999 amount to US\$457 million (Q3.5 billion). According to the Ministry of Education, in 1998 some 1.8 million students attended 13,631 primary schools, of which 10,765 were public schools. At the secondary level, 259,807 students in 1998 attended 1,645 secondary schools of which 1,408 were private; the secondary student total represented a 10.4 percent increase over 1994.

Education in Guatemala consists of preschool, primary, secondary, and university levels, with a special bilingual program for Indian students. The bilingual program provides instruction from preprimary through the fourth grade in the four most widely spoken Mayan languages. A one-year preschool program exists for five- and six-year-olds. Children between the ages of seven and twelve follow a theoretically mandatory six-year primary school curriculum. Secondary education consists of a three-year basic cycle for those between the ages of thirteen and fifteen and a three-year diversified cycle for those aged sixteen to eighteen. The recently privatized but state financially supported University of San Carlos, founded in 1676, has a central campus in Guatemala City and eleven smaller campuses in the principal provincial capitals. In 1998 San Carlos had more than 88,000 students while the four private universities had some 53,000. (According to *The World of Learning, 1998*, in 1997 the University of San Carlos had 70,431 undergraduates, 768 postgraduates, and the other four Guatemalan universities had a total of 37,464 undergraduates.)

Several reasons account for the considerable numbers of secondary and university students. Secondary schools and universities are located almost exclusively in urban areas the populations of which have been steadily increasing as a result of rural to urban migration. In addition, most secondary and university students are ladinos, who are to be found primarily in urban areas. And lastly, secondary and higher education is viewed more and more as necessary for remunerative employment.

Great disparities exist in school enrollment, reflecting strong regional, gender, and ethnic biases. For example, primary school attendance for boys and girls in Guatemala City is about 90 percent, whereas in some areas it is less than 40 percent. In general, more boys than girls attend school and average a longer attendance. The urban bias in Guatemalan education is particularly pronounced at the secondary level. More than 90 percent of all secondary students live in urban areas, with Guatemala City alone representing about 50 percent.

### Issues to Explore:

1. **Ways in which Guatemala can best reconcile differences between urban and rural education**
2. **Ways in which Guatemala can best reconcile differences between the education of male and female students**

## Indian Culture

The degree to which Indians have maintained their indigenous culture varies widely with reference to individuals and different geographic areas. A significant factor influencing the retention of Indian culture is the degree of isolation from ladino culture. Self-identification has proved to be a useful concept in evaluating the individual's relationship with what has been called the "Mayan cosmic vision." In its ideal form, such a vision contains numerous interlocking components: a syncretic belief system (see Religious Beliefs, chapter 3), a community-based egalitarianism, an emphasis on subsistence agriculture, the use of a Mayan language (see Language, chapter 3), and a distinctive style of dress, especially for women.

The *cofradía* system (see Religious Beliefs, chapter 3) helps both to tie the individual into the community and to level wealth within the community. Through their active participation in fiesta tasks, villagers learn that they function as members of a larger group and are subordinate to that group. The individual has a responsibility to promote the group's interests, not his own. *Cofradía* reinforces these notions by requiring those with above-average resources to invest their surplus in community-enhancing activities. Although participants receive prestige, power, and the respect of their village, their actions also effectively prevent the formation of a stratified local community.

Indian life in its most authentic form is intrinsically rural in nature, emphasizing village life and the predominance of the community. Roughly 80 percent of all self-identified Indians live in rural Guatemala. Land represents a spiritual link to one's ancestors and constitutes a Maya's most important possession. Milpa (cultivation of a small field that is cleared from the forest, cropped for a few seasons, and abandoned for a fresh clearing) provides not only the means to the staple of the Mayan diet, corn, but also helps establish the rhythm of communal life. Mayan plots generally are non-mechanized and employ very low technology.

Although important, language (see Language and Dialects, chapter 3) by itself is not critical to defining Indian life. Some Indians in Quetzaltenango, for example, continue to maintain Indian culture without an understanding of the Indian languages spoken in their region, Quiché and Mam.

In the past, a distinctive style of dress served as yet another means of differentiating Indians from ladinos. Although some men, especially in Solalá and Huehuetenango, continue to wear Indian dress, most men wear Western garb similar to that worn by ladinos. In contrast, most Indian women wear a long skirt with a sash and a distinctive blouse (*huipil*).

Indian identity is easiest to maintain in conditions of relative isolation from the dominant ladino culture. In 2000, however, few Indian communities can truly be described as isolated. Since the 1880s, Indians in the Altiplano have migrated to the *fincas* (landed agricultural estates) of the Southwest in search of

seasonal labor. Many have settled permanently as salaried employees, severing ties to traditional values. During the second half of the twentieth century, numerous internal and external factors have further weakened Indian self-identification. Internally, rising population pressures have generated subdivision of already minuscule plots and growing landlessness for many Indians. As Indians have migrated permanently to Guatemala City, their adherence to the customs of their village community has lessened. Externally, Guatemalan social forces as varied as the Roman Catholic Church, Protestant evangelical pastors, and the military—all dominated by ladinos—have impinged on Indian communities, interjecting new concepts that have ruptured the homogeneity of Indian life.

Still, numerous examples abound of the resilience of Indian culture. The lifestyles of the Chortis of Chiquimula and of the Pocomes Orientales of Jalapa are evidence that the Maya tradition can be preserved even in regions where ladinos are a clear majority. The selection of Rigoberta Menchú, a Mayan woman, as recipient of the 1992 Nobel Peace Prize represented an historic event in Guatemala and has helped solidify a more assertive Indian national presence. Menchú's Committee for Peasant Unity has organized Mayas (and poor ladinos) and has led strikes in the Southwest to demand increases in the minimum wage. In March 1995, the government and the guerrilla umbrella organization Guatemalan National Revolutionary Unity (URNG—see chapter 6) reached agreement on a comprehensive accord to respect Indian culture, language, religious customs, and agricultural rights. Time alone will demonstrate the commitment of the government to implement this accord and the strength of the Mayan Indians' desire to maintain their traditional culture.

### Issues to Explore:

1. **Ways in which the Guatemalan government can best preserve the positive aspects of Mayan Indian culture**
2. **To benefit the present situation of the Mayas, are there cultural elements that need to be changed**

## Chapter 5. Economics

### Overview

Guatemala's economy ranks as the largest in Central America, with a government-estimated gross domestic product (GDP) of about US\$23 billion (all statistics, unless otherwise indicated, are late 1990s figures; the Economist Intelligence Unit gives 1999 GDP as US\$18.3 billion). Despite its comparatively large GDP, Guatemala is perpetually in economic peril. Unemployment and under-employment levels are extremely high. Official statistics estimate that the unemployment rate is at 9 percent while the under-employment rate is between 30 percent and 40 percent. Official statistics are skewed, however, because they include only persons belonging to the Social Security Institute, many of them civil servants. This cohort represents only 28 percent of the total population. The International Monetary Fund (IMF) estimates that currently more than two-thirds of Guatemala's working-age population is under-employed; the IMF also estimates the unemployment rate to be much higher than the official statistic of 9 percent. Further, the IMF notes that even though Guatemala has made progress in improving social conditions and economic stability over the course of the 1990s, "extreme poverty continues to be widespread and the income distribution is highly skewed."

Guatemala's external debt, which is listed by the Central Bank as US\$2.6 billion (14 percent of GDP), is one of the most manageable external debts in the region. Despite the low external debt, the overall budget deficit expanded sharply in the late 1990s because an extremely low tax burden (9.6 percent of GDP), combined with expansionary fiscal and monetary policies, came up against decreasing revenues. The gradual economic progress and hope of the early and mid-1990s were decreasing by the end of 1999, despite some improvement in Guatemala's economic landscape in the latter half of the year.

High crime rates, endemic official corruption, and political unrest make Guatemala unattractive to foreign investors. In addition, the government's political and economic policies have been poorly thought out, inconsistently applied, and poorly executed. As a consequence, the rate of inflation has risen sharply, productivity has collapsed, and economic output has slowed. Without a significant influx of foreign capital and a consistent economic policy, Guatemala will remain in its current state of poverty into the foreseeable future. Many Guatemalans combat the bleak economic outlook with their feet: the country has one of the highest rates of outward migration in Latin America.

## Agriculture

The agriculture sector accounts for one-fourth of Guatemala's GDP, two-thirds of all exports, and employs more than half of the labor force (60 percent). The performance of the economy relies heavily on exports of coffee and sugar. Money earned from the exportation of coffee alone (US\$586 million) is equivalent to one-quarter of Guatemala's total export earnings. Guatemala is the fifth largest exporter of coffee in the world. In addition to coffee, sugar has become one of Guatemala's most dynamic traditional crops; export earnings of sugar are 12 percent (US\$315 million) of Guatemala's total export earnings. Guatemala's other top agricultural products/exports are bananas, corn, black beans, rice, and cardamom.

The uneven distribution of agricultural land remains a severe problem and parallels the economic divisions among Guatemalans. A mere 2.5 percent of the country's farms, with an average area of 200 hectares (ha) each, occupy more than 65 percent of all agricultural lands. The remaining 88 percent of the country's farms, with an average of 1.5ha each, occupy only 16 percent of the land. As a result of the distribution pattern, the majority of Guatemalan workers are limited to farming only 1.5ha of land and consequently fall below the poverty level. In general, the economic future for Guatemala is not bright. Changing weather patterns are adversely affecting crop production, and the country is still recovering from Hurricane Mitch, which struck in 1999 and wreaked havoc in the sector. Short-term improvement is not likely.

## Foreign Trade

The United States is the main destination for Guatemalan products and accounted for more than half of all exports throughout the 1990s. The agricultural sector produces the top exports: coffee, sugar, bananas, and cardamom. Central America accounts for 30 percent of all Guatemalan exports. El Salvador is the largest Central American export market, taking in US\$340 million over the course of 1998. Guatemala

traditionally holds a trade surplus over its Central American neighbors. However, in terms of the rest of the world, the increase in Guatemala's exports has been outpaced at an even greater rate of growth by the amount of goods imported. In 1998 Guatemalan exports totaled US\$2.9 billion, while the total dollar amount of imports was US\$3.3 billion. The two nations responsible for the majority of imports are the United States (42.8 percent) and Mexico (9.9 percent). Industrial equipment comprises the majority of imports; fuel, machinery, grain, fertilizers, and motor vehicles are consistently on top of Guatemalan yearly import lists.

Between 1999 and 2000, Guatemala signed a significant number of trade agreements. In 1999 it signed a trade agreement with Cuba to promote bilateral trade. Another 1999 free trade treaty involved Chile, El Salvador, Nicaragua, Costa Rica, and Honduras—a market of more than 50 million people. In early 2000, Mexico and the United States signed trade agreements with Guatemala, enabling Guatemala to trade freely in almost the entire Western Hemisphere. As a result of the trade agreements, foreign direct investment in Guatemala appears to be increasing. It is estimated that by 2002 thousands of new industrial jobs will have been created by the new agreements. Yet, despite the agreements and analyst predictions of new jobs, the value of goods exported from Guatemala in 1999 actually decreased by US\$75 million from 1998. Guatemala remains an agrarian nation, depending mainly on exports of coffee, sugar, and bananas for its income and importing nearly all of its industrial goods. As long as this balance of trade continues, the country will continue to run a trade deficit.

## Commerce and Industry

Since 1997 the construction industry has witnessed strong and steady growth. This growth has largely been the outcome of the peace accords signed with the nation's insurgent organizations. These accords required the government to strengthen the nation's infrastructure and build affordable housing for all citizens. These investments have helped revitalize the once moribund construction industry.

Tourism also strengthened throughout the 1990s and now ranks alongside sugar as the second highest foreign exchange earner after coffee. From 1998 to 1999, the number of tourists increased by 10 percent to 636,276. North America accounted for the largest share of tourists (39 percent), followed by Central America (35 percent), and Europe (18 percent). However, the momentum gained by tourism during the late 1990s was lost by the events of 2000. A number of highly publicized kidnappings, homicides, and crimes against foreigners have greatly diminished Guatemala's appeal to tourists. The weakness of the judicial system and high levels of corruption among public safety agencies only add to the problem.

Foreign franchises also make a significant contribution to the economy. At present, there are more than 150 different foreign franchises comprising more than 450 units. This segment makes up more than 85 percent of Guatemala's industrial market. United States firms account for 90 percent of all foreign franchises. Mexico, Spain, Great Britain, Chile, Canada, France, and Israel help make up the remaining 10 percent. Along with the typical U.S. food chains, foreign franchisers are responsible for hotels, clothing, cosmetics, advertising, candy, security, and restaurants. As a result, foreign nations control the Guatemalan economy in almost every aspect other than agriculture.

Another rapidly emerging sector is the in-bond manufacturing facilities (*maquiladoras*), most of which are engaged in manufacturing clothes, personal hygiene items, and small electronics. This segment is significant because it provides employment to two of the most marginalized segments of Guatemalan society, women and the middle-aged. However, the same factors that have hampered other economic sectors, for example, official corruption, high levels of crime, poor labor rights, and economic changes, have precluded significant growth here as well.

### Issues to Explore:

1. **The ability or the desire of Government of Guatemala leaders to make a positive impact on Guatemala's economic condition**
2. **The political consequences of the state of Guatemala's economy**
3. **The implications of the Guatemalan economy for the nation's role within the Central American region and the world**

## Chapter 6. The Political Setting

Since a revolution in 1944 ended a century-old tradition of strongman rule, Guatemalan politics have been a struggle between contrasting forces of society—democracy and dictatorship, civilian and military, Indian and ladino, Christian fundamentalism and Marxism-Leninism, war and peace. Although the country has had civilian government and formally has been a presidential democracy since 1988, the army has remained the dominant political actor.

General elections for president, members of the Congress (*diputados*), and mayors (*alcaldes*) throughout the country were held on November 12, 1995, followed by a presidential runoff election held on January 6, 1996. In that election, Alvaro Enrique Arzú Irigoyen of the National Advancement Party (Partido de Avanzada Nacional—PAN) defeated Alfonso Antonio Portillo Cabrera of the Guatemalan Republican Front (Frente Republicano Guatemalteco—FRG) by a vote of 51.2 percent to 48.8 percent in a free and fair election. Arzú's narrow margin of victory was equivalent to 32,000 votes, and the abstention rate was 63 percent.

In late 1996, the country's thirty-six-year civil conflict ended when the Arzú administration signed peace accords with the guerrilla organization, the Guatemalan National Revolutionary Unity (Unidad Revolucionaria Nacional Guatemalteca—URNG). The accords called for implementing the constitutional reforms proposed in 1995 concerning the multiethnic, multicultural, and multilingual composition of the state; the role of the armed forces and the police in society; and the strengthening of the judicial system. On October 26, 1998, Guatemala's Congress approved the forty-seven constitutional reforms. However, in a national referendum on May 16, 1999, the proposed reforms were defeated by a wide margin. Their rejection was blamed on a lack of information and mistrust of the political establishment by the electorate; only 18.6 percent of the 4 million registered voters took part in the referendum. Although ordinary laws could be enacted to accomplish many of the reforms, the constitutional reforms nonetheless held great symbolic value for the peace process.

Although the Arzú administration achieved respectable economic growth in addition to restoring peace, the country's socioeconomic conditions have deteriorated since the end of the civil war. In addition, economic benefits have been distributed unevenly, markedly increasing unemployment, crime, and poverty. Despite improved conditions since 1996, much of the country has yet to benefit from the peace accords. The decline in the value of the currency, the quetzal, during 1999, added to popular pressure for a change of leadership.

In the first round of the presidential election on November 7, 1999, which had an unusually high voter turnout of 53.4 percent, Alfonso Portillo of the FRG failed to gain a majority, garnering 48 percent of the vote. However, in the runoff election held on December 26, 1999, which had a voter turnout of 40.86 percent, Portillo won the presidency over the favorite, Oscar Berger Perdomo of the governing PAN, by drawing 68.3 percent of the vote. Portillo even defeated Berger in the PAN's traditional stronghold of Guatemala City.

Portillo's wide margin of victory in the December 1999 elections has been attributed to a well-managed campaign that portrayed him as a charismatic, populist leader, as well as to a large protest vote against the ruling PAN. Born in 1951, Portillo, a trained economist and lawyer, was once a dedicated Marxist

academic and a member of the centrist Guatemalan Christian Democracy (Democracia Cristiana Guatemalteca—DCG). Although his views have evolved, they remain wide-ranging and discordant; he continues to advocate both class warfare against the A oligarchies and cooperation with establishment institutions such as the military and business.

## The Governmental System

### Overview

Guatemala has been governed under various constitutions since becoming a republic. Since World War II, the countrys constitutions have been short-lived. The constitution of May 31, 1985, which became effective on January 14, 1986, provides for a separation of powers among the executive, legislative, and judicial branches of government. The country is divided into twenty-two administrative departments (*departamentos*). The twenty-two departments are further subdivided into 331 municipalities (*municipalidades*). Guatemala has universal and secret adult suffrage. Beginning at age eighteen, voting is compulsory for literates who are not serving on active duty with the armed forces and voluntary for illiterates. Presidential and congressional elections are held concurrently every four years.

President José Serrano Elias (president, 1991-93) suspended the constitution on May 25, 1993. However, it was reinstated on June 5, 1993, following Serranos forced resignation and Congresss selection of Ramiro de León Carpio, the former human rights ombudsman, as interim president. A referendum on constitutional reform was held on January 30, 1994. Although voter turnout was only 17.5 percent, 83 percent of voters approved the reforms. Under the November 1993 constitutional reforms, new congressional elections were held, the number of congressional representatives (*diputados*) was reduced from 116 to eighty, and the justices of the Supreme Court of Justice (Corte Suprema de Justicia) were replaced and their number increased from nine to thirteen. In addition, the terms of office for president and congressional representatives were reduced from five to four years and for Supreme Court justices from six to five years.

There are no legal impediments to women's participation in Guatemalas politics and government, but women are underrepresented in the political arena. Nevertheless, women hold some prominent political positions. Voters elected nine women to Congress in November 1999, women hold two seats on the Supreme Court, and one on the Constitutional Court. There were two female ministers in the Arzú government, and there is one, the minister of culture, in the Portillo government.

## The Executive

The executive branch consists of the president, vice president, and the Council of Ministers (Consejo de Ministros). The president is both the chief of state and head of government. The president is directly elected under universal suffrage by absolute majority for a single term of four years and cannot serve a successive term or prolong the four-year term. Beginning with the 1995 elections, the president began serving a four-year term. Alfonso Portillo took office as president on January 14, 2000. His vice president

is Juan Francisco López Reyes. The vice president, whose duties include presiding over Congress and participating in discussions of the Council of Ministers, also serves a four-year term. The president appoints the members of the Council of Ministers. Portillo's cabinet appointments include several allies of General Efraín Ríos Montt, who is the most influential figure in the FRG and leader of the Congress.

## The Legislature

The legislative branch consists of a unicameral Congress (Congreso de la República), whose members were traditionally elected by proportional representation. Under the constitutional reform of November 1993, 75 percent of the members of Congress are elected directly by the people through universal suffrage, and 25 percent are elected on the basis of proportional representation. The reforms reduced the term of the legislative deputies from five to four years, with unstagged terms. Congress can and does act independently of the executive, but fragmentation along party lines and a weak support and staff structure result in a legislature that is relatively weak.

As a result of a revision by the Supreme Electoral Tribunal (Tribunal Supremo Electoral), the new Congress elected on November 7, 1999, now totals 113 members, as opposed to the eighty members agreed to by Congress in 1993. Ninety-one of the members were elected according to departmental representation and twenty-two by national listing. Although the sixty-three seats won by the FRG are short of the two-thirds majority required to pass constitutional amendments, they are more than the fifty-seven votes required for a simple majority. The FRG's gains represent the largest congressional majority of any party in contemporary Guatemalan history.

## The Judiciary

Guatemala has a U.S.-style civil law and Supreme Court system in which legislative acts are subject to judicial review. The judicial branch consists of the Supreme Court, the Court of Constitutionality (Corte de Constitucionalidad), the Supreme Electoral Tribunal, the Court of Appeals (Corte de Apelaciones), and local courts. The Court of Constitutionality is presided over by the president of the Supreme Court.

The Supreme Court and local courts handle civil and criminal cases. The Congress appoints the members of the Supreme Court based on a selection list submitted by the bar association, law school deans, a university rector, and appellate judges. Using a similar procedure, Congress also appoints members of the Court of Appeals. There are ten civil courts of appeals and two labor courts of appeals. On October 13, 1999, Congress elected magistrates to fill all seats on the Supreme Court and Court of Appeals. The Supreme Court nominates all lower judges. Other judicial offices include the Office of the Attorney General, the Office of the Public Prosecutor, and the Commission of Human Rights. Judges serve five-year terms. The death penalty is authorized for murder and kidnapping.

Guatemala has not accepted compulsory International Court of Justice (ICJ), that is, World Court, jurisdiction. A mid-1999 survey revealed that 88 percent of Guatemalans considered the administration of justice in the country inadequate. Although the judiciary is independent, judges and other law

enforcement officials are subject to intimidation and corruption, and the inefficient judicial system frequently is unable to ensure fair trials and due process. Efforts to reform the judiciary are ongoing, but the climate of impunity persists. Intimidation of witnesses, victims, prosecutors, and judges continues to be a problem. Allegations persist that Guatemalan security forces infringe on citizens' privacy rights.

Vigilantism and escalating crime have been consequences of the inefficient judicial system. In August 1999, a UN investigating commission concluded that the Guatemalan judicial system needed substantial reform. Human rights organizations claim that the inefficiency, incompetence, and corruption of the Supreme Court that was replaced in October 1999 had left Guatemala's justice system in its worst state ever.

## Key Political Parties

Guatemala's constitution guarantees the free formation and growth of political parties whose aims are democratic. The November 1999 elections involved thirteen political parties, including two two-party coalitions. Four parties and both coalitions won seats in the legislature, led by the FRG with a sixty-three-seat majority, followed by the PAN with thirty-seven seats, and the New Nation Alliance (Alianza Nueva Nación—ANN) coalition, which included the URNG party, with nine seats.

### *Guatemalan Republican Front (FRG)*

The Guatemalan Republican Front (Frente Republicano Guatemalteco—FRG), founded in 1988, won the presidency and a clear majority in the Congress in the 1999 elections. The FRG is a loose-knit alliance of conservatives, Pentecostal Protestants, evangelicals, Indians, members of the middle class, and reformist politicians. It includes both President Portillo and Ríos Montt, president of the Congress.

### *National Advancement Party (PAN)*

The National Advancement Party (Partido de Avanzada Nacional—PAN) is a conservative, pro-business party founded in 1985 as a committee to advance the independent candidacy of Arzú for mayor of Guatemala City. In the November 1999 elections, the PAN won only thirty-seven congressional seats, as compared with forty-four in 1995. Although Arzú has continued to use the PAN as a vehicle for furthering his political ambitions, Oscar Bergers emergence as the PAN's presidential candidate in the 1999 election reflected the party's growing tendency to develop an identity independent of Arzú.

## Left-Wing Groupings

The URNG registered as a political party on December 20, 1998, and competed in the November 7, 1999, general elections as part of the New Nation Alliance (ANN). The left-wing ANN was formed in 1999 as an alliance of the Authentic Integral Development (Desarrollo Integral Auténtico—DIA), the Unity of the Democratic Left (Unidad de Izquierda Democrática—UNID), and the URNG. The ANN placed a distant third in both the November 1999 presidential and congressional elections. DIA-URNG candidates won a

respectable 11 percent of the vote and nine seats in the Congress. The ANN's prospects remain good for becoming the nation's third political force. Its 1999 presidential candidate, Alvaro Colón Caballeros, emerged as a charismatic leader. The pro-URNG New Guatemala Democratic Front (Frente Democrático Nuevo Guatemala—FDNG) won no seats in 1999, and therefore lost its registration status. As a result, many of its supporters have since joined the ANN, with which the FDNG is likely to merge.

## Interest Groups

### *The Military*

The military has been involved in all major political developments since 1964. The army controls the armed forces and much of the security apparatus. As a result of stipulations in the 1996 peace agreement, the military was reduced in strength from nearly 40,000 members in mid-1996 to approximately 30,000 by 1997. The military also manages substantial economic resources, including holdings in banking, manufacturing, and transportation. The military lost some influence as a result of its role in the political turmoil of 1993, and, as a consequence, presidents have been able to exploit divisions within the military to limit its political effectiveness. The rapid turnover of defense ministers has also prevented any single individual from gaining personal control over the armed forces. In 2000 President Portillo appointed Colonel Juan de Dios Estrada Velásquez, a junior officer, as minister of defense, bypassing twenty higher-ranked officers. The post had been held for decades by the ranking military general. (The constitution requires the minister of defense to be either a colonel or a general.) Although there is a growing trend to hold lower-ranking officers and enlisted men accountable for major human rights violations, most of the military still attempts to resist civilian control of its internal affairs. However, most officers are reluctant openly to confront civilian authority.

### *Economic Associations*

After the army, the private sector has remained the best-organized and most powerful political interest group in the country. Business chambers or associations, most of which are conservative and often support extreme right-wing political parties, represent the interests of the large exporting producers. These interest-group associations have been the most important vehicles of political influence used by the private sector. Since 1957, the influential Coordinating Committee of Agricultural, Commercial, Industrial, and Financial Associations (Comité Coordinador de Asociaciones Agrícolas, Comerciales, Industriales y Financieras—CACIF) has served as the powerful umbrella organization of these groups, which include the owners of large plantations and ranches. Throughout the 1990s, Guatemalan governments found themselves at odds with the CACIF over its strongly pro-business policies and its opposition to many economic policies.

### *The Church*

Although Roman Catholicism is Guatemala's predominant religion, the Roman Catholic Church has not sought to develop its potential for influence. It has significant influence on some causes, such as issues

concerning agrarian reform, human rights, and social inequalities, but is neither outspoken nor radical. Most of its 600 priests are foreign nationals. However, support of the church is widely considered as necessary for a government to have legitimacy. The church has helped to publicize past human rights abuses and pressed for negotiations and accommodation with the URNG guerrillas. The church's relations with the government were severely strained as a result of the assassination on April 26, 1998, of a bishop, Juan José Gerardi Conedera, who had authored an extensive study of human rights violations during Guatemala's decades of civil conflict. Members of the Presidential Staff (Estado Mayor Presidencial—EMP), the notorious presidential guard, were suspected of involvement in the murder.

### ***Labor Unions***

The constitution and the Labor Code provide workers with freedom of association and the right to form and join trade unions. Unions may and do form federations and confederations and affiliate with international organizations. According to the Ministry of Labor, only 2 percent of the 3.5 million-person work force belong to labor organizations. The approximately 1,300 registered unions and 400 company-sponsored "solidarity organizations" are independent of government and political party domination. The government does not control unions. However, in its Fourth Report on the Peace Process, the United Nations Mission for Guatemala (Misión de Naciones Unidas para Guatemala—MINUGUA) noted that "genuine trade union freedom does not exist" because of anti-union violence. Workers have the right to strike, but Labor Code procedures for having a strike recognized as legal are cumbersome. Although the public sector historically has been the scene of frequent strikes, almost always called without legal authorization, there were no public sector strikes during 1999. Trade union leaders and members generally did not suffer labor-related violence in 1999.

### **Prospects**

President Portillo and his FRG can be expected to dominate the government until the next general elections, scheduled for November 2003. The main elements of the Portillo administration's agenda are reform of the fiscal system, revision of the privatizations carried out under the Arzú administration, revision of the Armed Forces Code and dissolution of the Presidential Staff, restoration of economic stability, curbing of the perceived privileges of large businesses, and compliance with the peace accords and the recommendations of the Truth Commission.

Although Portillo has vowed to keep the promises that he made during his electoral campaign, these promises were extravagant and contradictory and he is unlikely to fulfill them. For example, he will be expected to explain the April 1998 murder of Bishop Juan José Gerardi, to make the judicial system more effective and fair, and to reduce the high levels of crime. He will struggle to satisfy most of the expectations that he raised. His invitation to work with all social and political forces to reach consensus on national issues (a Agovernability pact) is unlikely to have much effect because most leading figures are skeptical. Previous presidents have suggested similar projects to no avail. Despite its 1999 electoral defeat, the PAN could still thwart the FRG by forming a majority coalition with other parties in the Congress, although not before the November 2003 elections. In the meantime, the PAN could frustrate the FRG administration's legislative agenda.

Furthermore, Portillo, who campaigned as the people's champion against the excesses of the ruling elite, faces a dilemma. Should he move too rapidly in attempting to curb the military and punish violations of human rights, the military and other members of the establishment, particularly the powerful business interests, could retaliate. Decisive actions by Portillo to enhance social justice may also disrupt relations with international financial institutions that have conditioned aid on austere economic reforms. The chance of a military coup is quite small, however, because the officer corps has been purged substantially, the civil war was resolved peacefully, the FRG government is sympathetic to the military's interests, and the business sector and international community would strongly oppose a coup. Nevertheless, should Portillo move too slowly he could alienate many of the FRG's dispossessed voters and strain relations with the United States and other developed countries, as well as with international human rights organizations.

Perhaps the key to determining whether Portillo succeeds or fails in implementing his proposed changes is Efraín Ríos Montt, who, as leader of the ruling FRG, is president of the Congress. Most of the FRG's congressional members are loyal to Ríos Montt. Ríos Montt, a former dictator who seized power in 1982, serves as a symbol of the previous status quo. Although he is constitutionally banned from running again for president, he has the power to shape the Portillo administration's future changes. Portillo claims to have reached a governability agreement with Ríos Montt, but it remains to be seen if Portillo is able to balance the conservative forces within the FRG, represented by Ríos Montt, with his own more liberal stance.

### Issues to Explore:

1. **The prospects for building consensus on issues of national importance, including implementation of as yet unmet peace accord commitments, in view of the electorate's having voted out the ruling party in the past several elections**
2. **How the army would react if the government attempts to neutralize the military's traditionally assertive political role through revision of the Armed Forces' Code, appointment of a civilian minister of defense, additional purges of senior officers, and prosecution of senior officers for human rights violations**
3. **How the business elite would respond if the government attempts to make the elite's traditional protector, the army, submissive to the masses**
4. **The prospects for reforming the judicial system, which is considered corrupt and inadequate by most Guatemalans, and the consequences of failing to do so**

## Chapter 7. Foreign Affairs

### Guatemalan-U.S. Relations

Relations between the United States and Guatemala traditionally have been close, although at times strained by human rights and civil/military issues. The United States has long been the most important actor in Guatemalan foreign relations. After 1954, when the United States supported the counterrevolutionary invasion, the United States became the key foreign ally of successive Guatemalan governments, largely through the provision of economic and security assistance. The U.S. government suspended military aid to Guatemala in 1977 following an upsurge in death squad activity and the publication of the U.S. Department of State's first human rights report. Modest training assistance was reinstated in 1983. Relations between Guatemala and the United States deteriorated considerably in 1990. U.S. military assistance to Guatemala was again suspended in December 1990 as a result of the murder in June of American citizen Michael Devine, a hotel owner and longtime resident of Guatemala, by members of the Guatemalan armed forces. The soldiers responsible for Devine's murder were tried, convicted, and imprisoned, but the officer who led the killers escaped from detention in May 1993. The United States views his capture and imprisonment as fundamental to improved relations with the Guatemalan military.

U.S. government and business interests have long exercised substantial influence in Guatemala. The

United States provides economic assistance and is Guatemala's largest trading partner, providing 44 percent of the country's imports and receiving 31 percent of its exports. U.S. official assistance to Guatemala since 1986 exceeds US\$1 billion. The United States also plays an important role in Guatemala's relations with international financial organizations, such as the International Monetary Fund (IMF) and the Inter-American Development Bank (IDB).

Several contentious issues have divided the two countries. Under the short-lived administration of José Serrano (president, 1991-93), U.S. influence was instrumental in the initiation of investigations of human rights violations and in the reduction of labor abuses. The United States played a critical role in the events of May and June 1993, when it moved quickly to oppose President Serrano's attempts to suspend the constitution and impose dictatorial rule. Suspending all aid and threatening to end Guatemala's most-favored nation trade status, the United States brought about the fall of Serrano and the installation of de León as president. The United States continued its attention to human rights abuses under the de León administration. Although some elements in the Guatemalan military and security forces have fiercely resented the U.S. role, Guatemalan governments have preferred to accommodate the United States rather than risk U.S. sanctions or damage to the important tourism industry. More than 150,000 U.S. citizens visit the diverse attractions in Guatemala each year. In 1995, the U.S. government eliminated Guatemala's access to International Military Education Training (IMET) funds over human rights concerns. Guatemala later became eligible for expanded IMET, and a program resumed in 1997.

The United States, as a member of "the Friends of Guatemala" along with Colombia, Mexico, Spain, Norway, and Venezuela, played an important role in the UN-moderated peace accords of 1996, providing public and behind-the-scenes support. The United States strongly supports the six substantive and three procedural accords, which, along with the December 29, 1996 final accord, form the blueprint for profound political, economic, and social change. Tangible support for the implementation of the accords has come from a number of sources. Development assistance through the U.S. Agency for International Development (USAID) is concentrated in programs to strengthen democratic institutions, improve health and education, and protect the environment. The United States also provided up to US\$25 million in FY 1998 Economic Support Funds, including a grant of US\$5 million. The aid was directed toward the most immediate needs associated with the implementation of the peace accords, such as demobilization of the former combatants. To address the issue of impunity, USAID and the U.S. Department of Justice have funded programs to strengthen the courts, the Office of the Public Prosecutor, and the civilian police. Other U.S. federal agencies, such as the Departments of Agriculture, Labor, and the Treasury, have programs either in place or in the planning stages to support specific aspects of the peace accords.

Guatemalan-U.S. relations worsened significantly in 1996, when the United States revived accusations of past human rights abuses, including the murder of Michael Devine in 1990 by members of the Guatemalan Army and the death of a guerrilla commander married to an American lawyer. The conclusion of the peace accords at the end of 1996 eased tensions, and the United States pledged more than US\$50 million in additional assistance. In May 1997, President Arzú met with President Clinton and his counterparts from Central America, Belize, and the Dominican Republic to celebrate the remarkable democratic transformation in the region. The leaders reaffirmed their support for strengthening democracy, good governance, and promoting prosperity through economic integration, free trade, and

investment. They also expressed their commitment to the continued development of just and equitable societies and responsible environmental policies as integral elements of sustainable development.

The direct role of the United States in Guatemalan affairs has declined since the Central American conflicts have ended, and U.S. aid levels have diminished. In 1998, Guatemala became the first government outside the United States to file a lawsuit against U.S. tobacco manufacturers in an attempt to recover the costs of treating tobacco-related illnesses. The rape and robbery of several U.S. college students in early 1998 badly soured relations. In February 1999, three of five defendants in the case were sentenced to twenty-eight-year prison terms. In late 1998, Guatemala and its Central American neighbors asked the United States to give greater access to their products under the Caribbean Basin Initiative and to grant them parity under the North American Free-Trade Agreement (NAFTA) to help their economies recover from the destruction caused by Hurricane Mitch.

Current U.S. policy in Guatemala includes supporting the institutionalization of democracy; encouraging Guatemalan respect for human rights and the rule of law; supporting broad-based economic growth and sustainable development; cooperating with the Guatemalan government to combat narcotics trafficking; supporting Central American integration and regional peace efforts, including the dialogue process with the Guatemalan insurgency that ended successfully in 1996; maintaining mutually beneficial trade relations; and supporting a solution to the Belize dispute acceptable to the parties involved.

## Regional Relations

Guatemala is a member of the Organization of American States (OAS). The country's major diplomatic interests are regional security and, increasingly, regional development and economic integration. The Central American Ministers of Trade meet on a regular basis to work on regional approaches to trade issues. In March 1997, Guatemala hosted the second annual Trade and Investment Forum, under the sponsorship of the U.S. Department of Commerce. The two-day event highlighted the growing relationship that Guatemala has with its closest trading partners and offered regional opportunities to foreign investors. In March 1998, Guatemala joined its Central American neighbors in signing a Trade and Investment Framework Agreement (TIFA). Guatemala also originated the idea for, and is the seat of, the Central American Parliament (Parlacen). Guatemala participates in several regional groups, particularly those related to the environment and trade. For example, President Clinton and the Central American presidents signed the Central American-USA Pact (Conjunto Centroamerica-USA—CONCAUSA) agreement at the Summit of the Americas in December 1994. CONCAUSA is a cooperative plan of action to promote clean, efficient energy use; conserve the region's biodiversity; strengthen legal and institutional frameworks and compliance mechanisms; and improve and harmonize environmental protection standards.

Guatemala's long-laid claim to Belize caused problems with Britain and later with Belize following its 1981 independence from Britain. Relations have since improved. In 1986 Guatemala and Britain re-established commercial and consular relations; in 1987 they re-established full diplomatic relations. In December 1989, Guatemala sponsored Belize for permanent observer status in the Organization of American States (OAS). In September 1991, Guatemala recognized Belize's independence and established

diplomatic ties, while acknowledging that the boundaries remained in dispute. Although Belize has recognized Guatemalan diplomatic representation at the ambassadorial level for several years, the Guatemalan government did not accredit the first ambassador from Belize until December 1996. Although Belize continues to be a difficult domestic political issue in Guatemala, the two governments have quietly maintained constructive relations. In anticipation of an effort to bring the border dispute to an end, in early 1996, the Guatemalan Congress ratified two long-pending international agreements governing frontier issues and maritime rights.

Having recognized British sovereignty over Belize, Guatemala is trying to settle disputed territorial issues through direct talks. Instability has increased on Guatemala's border with Mexico because of the insurgency in the Mexican state of Chiapas and the Mexican heroin producers operating in Guatemala. The repatriation of an estimated 40,000 Guatemalan refugees who had fled to Mexico during the 1980s was completed in early 1999, with another 22,000 choosing to remain in Mexico.

## Other Foreign Relations

Guatemala is a member of the United Nations and many of its specialized agencies, as well as numerous other international organizations. As part of an agreement on human rights negotiated with the insurgents, the UN deployed an observer mission, the MINUGUA (United Nations Mission for Guatemala), to Guatemala in November 1994. The MINUGUA has become a significant source for curbing potential human rights abuses. Despite criticism from the government and business community, the MINUGUA has continued its activities since the December 1996 peace agreement. In January 1997, a consultative group of international donor countries and financing institutions pledged US\$1.9 billion to help implement programs in fulfillment of the peace accords. The group included the World Bank, the IDB, the Central American Bank of Economic Integration, the United States, the European Union, Spain, and Germany. UN Secretary General Kofi Annan promised support for recovery from the civil war when he visited Guatemala in July 1998. However, the international donor community will condition further financial assistance in the peace process on fiscal reform. Guatemala maintains relations with Taiwan, long an important supplier of training and technical assistance to the Guatemalan Army, at the risk of losing trade with China.

### Issues to Explore:

- 1. Implications for Guatemala's relations with the United States, other developed countries, and international organizations should the Portillo government and/or successor governments fail to carry out its promised reforms and the terms of the peace accords**
- 2. Possible actions that could be taken by the United States and the international community should the army and business sector block the reform efforts called for by the peace accords**

This Self-Study Guide on Haiti is intended to provide US government personnel in the foreign affairs community with an overview of important issues related to the history, geography, politics, religion, culture, economics, and international relations of Haiti. The guide merely serves as an introduction and should be used as a self-study resource for further exploration of information and issues. With this in mind, each reader is strongly encouraged to undertake independent reflection using the self-study questions for further research identified at the end of each section. Included in the guide as research tools are a bibliography of publications on Haiti and an index to useful sites on the Internet. For more detailed bibliographic information, readers can consult “*A Reader’s Guide to Haiti*,” prepared for the Foreign Service Institute in September 1999.

Dr. Robert Maguire, Director of Programs in International Affairs at Trinity College in Washington DC and the Trinity College Haiti Program, prepared this first edition guide on Haiti. The views expressed in this guide are those of the author and attributable sources and do not necessarily reflect official policy or the position of the Department of State or the National

Foreign Affairs Training Center. This publication is for official educational and nonprofit use only.

## Introduction

Haiti's size on the world stage has been compared with an accordion: sometimes, when the instrument's bellows are open, it is large; sometimes, when they are closed, it is small. Over the past three hundred years the nation located on the western third of the Caribbean island of Hispaniola has on numerous occasions occupied a position at the center of the world stage, highly disproportionate to its small size and population. At other times, it has stood at the edge of that stage, marginalized or isolated through external imposition and/or internal choice.

By the mid-eighteenth century, the French colonial possession was renowned as one of the world's most productive slave-based plantation economies. By the early twenty first century, the independent state had become notorious for its grinding poverty, political strife, and extreme internal social and economic polarization. In between, Haiti emerged in 1804 as the Western Hemisphere's second independent nation, forged from a successful revolt of slaves. Cast subsequently as a pariah state by the world's slave-holding powers and as a beacon of liberty and hope for oppressed peoples worldwide, the new country was plagued by a severely damaged post-revolution economy, harsh international sanctions, and successive internal power struggles leading largely to decades of misrule. The proud and promising, but troubled nation entered the twentieth century under the watchful eye of an expansionist United States, which invaded its southern neighbor in 1915, occupied it until 1934, and has cast a long shadow over Haiti ever since. During the Cold War era, the harsh Duvalier family dictatorship (1957-1986) received tacit support from the US. In the post-Cold War/Duvalier era, US support for Haiti's quest to develop more democratic governance ultimately resulted in its leading a 1994 multinational military intervention that removed a defacto military government and restored an elected president.

Haiti has emerged from its past as a country of contradictions. Its two-century quest to forge an independent nation from the ruins of a successful revolution has evolved into a country alarmingly dependent on external resources to make ends meet and fraught with severe internal dichotomies along lines of geography, ethnicity and race, culture, and access to power and resources. From its early promise as a beacon of liberty and hope for the world's oppressed, Haiti has become a place from which oppressed and impoverished citizens flee, seeking a better life elsewhere.

How are we to understand Haiti? Is it a nation victimized by others because of its glorious past? Is it a country being destroyed by its own internal dichotomies? Is it a place that can still achieve its early promise if only the halts of inept governance and severe strife can finally be removed? Or, is it, perhaps more realistically, a combination of all of this? This study guide is not intended to answer these questions. Rather, it is designed to provide background information that can open paths toward further research. Those who follow those paths will reflect on issues and questions that can help them better understand Haiti's multidimensional past, present, and, certainly, future.

## Geography and Population

### Location and Physical Geography

Haiti is not an island. Rather, it is located on the western third of the island of Hispaniola, bordered on the north by the Atlantic Ocean, to the west and south by the Caribbean Sea, and to the east by the Dominican Republic. Its closest, non-contiguous neighbors are Cuba, Jamaica, the Turks & Caicos Islands, the Bahamas, and the United States. Haiti's southern coast is the first landfall traveling due north from Columbia. Occupying a land mass of 10,714 square miles, Haiti is roughly the same size - though not the same configuration - as the state of Maryland. The country's shape is likened to that of a crab's claw, with northern and southern peninsulas reaching from its main body toward the west. Settlements at the ends of the northern and southern claws are closer to Cuba and Jamaica, respectively, than to Haiti's capital, Port-au-Prince. In addition to its mainland, the country is composed of several offshore islands, principal among them being La Gonave and La Tortue.

Haiti is mostly mountainous and rugged. Approximately 63 percent of Haiti's territory is composed of lands having slopes greater than 20 percent. Conversely, less than 20 percent of the territory has land with slopes less than 10 degrees. Two mountain ranges, the Massif de la Hotte and the Massif de la Selle, which includes Pic la Selle the country's highest peak (c.2,900 feet), run in a west to east direction along the southern part of the country. Another range, the Massif Central, gives rise to the Central Plateau. Smaller mountains extend towards the north and west. Plains and river valleys, although limited in size, are the most productive agricultural land and the most densely populated areas. The Northern Plain, the Artibonite River Valley, and the Cul-de-Sac Plain, just north of Port-au-Prince, are the country's most extensive areas of low-lying land. Haiti's rivers are numerous but short, mostly not navigable, and often flow with significant irregularity.

As a rule, Haiti's tropical climate is humid and characterized by daily variations of temperature that are greater than annual variations. Temperatures vary with altitude, however. The mountain village of Kenscoff located to the interior of Port-au-Prince, for example, has an average temperature of 60 degrees, whereby the coastal capital averages 79 degrees. The country's location on the leeward side of Hispaniola and its mountainous terrain also combine to create weather conditions that vary considerably. Rainfall patterns range from less than 12 inches a year in the northwest to more than 120 inches in the southwest mountains. Tropical storms, hurricanes, droughts and floods are not infrequent. The country has no active volcanoes. While Haiti has not experienced a major earthquake in more than 50 years, mild tremors are felt on occasion.

Much of the country's natural vegetation has been removed during the past three centuries through clearing for agriculture, grazing, and the exploitation of timber. This process has accelerated in recent decades with increased population pressure. Haiti's virgin forests have been reduced to less than 6 percent of the land area, as forest resources are sought for

firewood and charcoal production. Subsequently, an estimated 6,000 hectares of top soil are washed away annually as food crop cultivation and grazing have moved into higher and steeper elevations. Irregular river flow, flash floods, salinization of fresh water supplies and landslides have resulted from the extensive removal of surface vegetation in Haiti's mountainous watersheds. As Haiti's natural vegetation has disappeared so have the habitat and shelter of its wildlife. Wild boars are no longer present. The number of avian species present in Haiti has dwindled significantly. Many remaining species are endangered, including the country's flamingos, which are hunted without restriction.

### Human Geography

Haiti is densely populated. Exact population data, however, is unavailable, even though the government attempted to undertake a census in 2001-2002. The estimated population in 2000 was 8 million, with an annual growth rate of about two percent. Haiti's population is a young one with approximately 40 percent under 15 years of age. The average life expectancy is 51 years. Emigration and the ailments of poverty function in tandem to limit Haiti's population growth. Haiti's growing prevalence of HIV/AIDS infections, estimated at 5 percent of the population, may have begun to have a negative impact on population growth.

About 60 percent of Haitians live in rural areas and are dependent on agriculture. Migration to cities, especially Port-au-Prince whose metropolitan area population now exceeds 1.5 million, has increased considerably in recent decades. Thirty years ago, the percentage of the rural population was closer to 75 percent. As Port-au-Prince expands, its settlements climb up already deforested mountainsides, spread onto marshy seaside lands, and occupy former agricultural lands, particularly in the Cul-de-Sac Plain north of the city. Despite significant off-the-land migration, rural populations continue to grow. Throughout the country, the plains and valleys are densely populated. While most hillsides and steep mountains are dotted with homesteads and cultivated plots, some areas of extreme erosion and drought have been abandoned.

Although only 30 percent of Haiti's surface is considered suitable for agriculture, more than 40 percent is under cultivation. Most farms, very small and severely undercapitalized, are worked by their owners. With few areas irrigated, most farmers depend on rainfall, a risky business in the best of times and a terribly risky business today with numerous micro-climate areas becoming drier as a result of deforestation. Rural settlements, generally dispersed, are sometimes organized along roads. Peasant homesteads, usually small wooden framed houses with a roof of corrugated iron, are often grouped in extended family clusters, called *habitation*. Household furnishings are sparse. Individual means of transportation are virtually nonexistent. Peasant women usually market food crops that are produced by men, following by foot, donkey or truck (*tap-tap*) the periodic markets usually organized twice a week in local towns and villages.

Municipalities, also referred to as *bourg*, are scattered throughout the country. As administrative, political and commercial centers, most have a police station, a court of justice, a town hall, small shops or depots lining the principal thoroughfare or surrounding a central square, and a Roman Catholic church. Real urban life, however, is limited to Port-au-Prince and to five or six large towns, all of which are a small fraction of the size of the country's capital. Although settlements characterized by large villas, often hidden behind high walls, have grown up in the hillsides surrounding the capital, those areas are also occupied by expanding slums, or *bidonvilles*. Shantytowns have also expanded onto the coastal areas west and north of the city, and toward the Cul-de-Sac Plain, where many of the country's small middle or professional class also have been building homes. The vast majority of Port-au-Prince residents live on meager incomes and the signs of poverty are ever present in this highly congested city and its equally congested suburbs.

### Political Geography

Haiti is divided into a three geopolitical units: *departements*, of which there are nine; *communes* (or municipalities) of which there are 133, and *sections communales*, of which there are 565. Haitians living overseas - or the Diaspora - are often referred to as being part of the country's Tenth Department. Departments correspond roughly with American states; municipalities with counties; and communal sections with towns or districts.

Department names relate either to their location or one of their major geographic features. The dominant settlement in each department is its capital city, as follows:

<u>Department</u>	<u>Capital City</u>
West ( <i>Ouest</i> )	Port-au-Prince
South East ( <i>Sud-Est</i> )	Jacmel
South ( <i>Sud</i> )	Les Cayes
Grand Anse	Jeremie
Center ( <i>Centre</i> )	Hinche
Artibonite	Gonaives
North East ( <i>Nord-Est</i> )	Fort Liberte
Nord ( <i>North</i> )	Cap Haitien
North West ( <i>Nord-Ouest</i> )	Port-de-Paix

Haiti's two largest off shore islands, Isle de la Gonave and Isle de la Tortue, are part of the West and North West departments, respectively.

Geography and Population *Self-study questions:*

1. What are current political and economic implications of Haiti's geographic location, particularly given its proximity to Cuba, Jamaica, the Bahamas and the United States? What are the implications of Haiti's location due north of northern South America?
2. Only a few islands in the world are occupied by two independent nations, with Hispaniola, occupied by Haiti and the Dominican Republic, being one of them. It is fair to say that in most cases of shared-island occupation, relations between the two neighbors have not always been smooth. Identify current issues linked to the shared occupation of Hispaniola. Think in terms of both challenges and opportunities.
3. A small country with a rugged topography, Haiti has been - and to a great extent still is - a nation of small farmers. What is the impact of the three factors of size, topography, and dominant land use on the country's prospects for development?
4. Current estimates place Haiti's population in 2025 at 12 million. What impact will the country's continued population growth most likely have on internal migration patterns and the environment? What prospects are there to modify this impact, particularly in view of continued population growth?

## History

### European Contact and The Colonial Period

Within little more than 100 years of the 1492 landfall by Christopher Columbus, the original Arawak Indian population of the entire island, estimated by some to have been as high as one million, had virtually disappeared as a result of warfare, brutal treatment and rampant disease. Throughout this post-Columbus period, the Spanish settlement on La Isla Espanola was sparse and concentrated mostly in its eastern end, particularly around the port town of Santo Domingo. By the early seventeenth century, French pirates, or *bucaniers*, occupied the western side of the island, particularly La Tortue Island off its northwest coast, using their location as a base for attacking Spanish shipping. By mid-century, the French had begun to establish plantations in mainland coastal areas for the cultivation of sugarcane, coffee, cocoa, indigo, tobacco and cotton, and for the extraction of precious tropical hardwood. In 1664, when French settlers founded the town of Port-de-Paix in the northwest, the French West India Company took possession of the French settlements.

In 1697, by the Treaty of Rijswik, the western third of the island was formally ceded to France by Spain and was renamed Saint-Domingue. The colony's population increased greatly during the 18th century, particularly as a result of the massive importation of black Africans to work as slaves on the expanding plantations. By 1789, 500,000 of a total population of 556,000 were slaves. The remainder of the population was composed of 32,000 whites and 24,000 free blacks or people of color (*gens de couleur*). Fueled by slave labor and state-of-the-art infrastructure development paid for by massive amounts of French overseas investment, Saint-Domingue became the most prosperous colony in the New World, sending such volumes of sugar, molasses, rum, coffee, cocoa, indigo, cotton and hardwood to France as to require more than 700 ocean-going vessels annually to haul off the colony's products.

### Revolt, Revolution, Independence

The highly disproportionate number of slaves among the colony's population, combined with their harsh treatment, was a recipe for revolt. On August 24, 1791, in place called Bois Caiman on the northern plain, slaves rose in rebellion, led by a now legendary vodou priest named Boukman. Over the next several years marauding slaves set fire to fields and attacked plantations, spreading fear throughout the colony. In order to maintain its beleaguered colony, France abolished slavery there in 1794. Inspired at least in part by the ideals set forth by the leaders of the French Revolution, however, the winds of dissatisfaction in what had become the world's wealthiest plantation colony, did not settle, particularly among the colony's people of color who had allied themselves with the leaders of the French Revolution.

In May 1801, Toussaint Louverture, a former slave, became Saint Domingue's governor general and remained loyal to the French. Shortly thereafter, however, Napoleon sent a 30,000

strong expeditionary force from France to restore the old regime, including slavery. Led by his brother-in-law, General Charles Leclerc, the force also included several exiled mulatto officers. Other mulatto officers, however, including Alexandre Petion, did not join the French. In May 1802, after several months of struggle against the expeditionary force, Louverture came to terms with Leclerc. The French, however, abrogated the agreement, captured Louverture through deceit, and imprisoned him in France, where he died on April 7, 1803.

Subsequently, two other of Haiti's "founding fathers," Jean-Jacques Dessalines and Henry Christophe, led the black army against the French in what became a razed earth campaign to expel them and avoid the reinstatement of slavery. Demoralized by their opponent and decimated by disease, particularly malaria, the French were defeated, surrendering on November 9, 1803 and withdrawing from Saint Domingue on November 18. On January 1, 1804, the revolutionary leaders proclaimed independence from France and restored the Arawak name, Haiti, to the hemisphere's second independent nation. The Haitian blue and red flag was by removing the white stripe from the French tricolor. From the beginning of the revolt, French colonists and some people of color had begun fleeing the colony, with many going either to Cuba or to Louisiana. At independence, the few whites that remained in Haiti were expelled, leaving the country in the hands of a population composed largely of former slaves. Indeed, at independence, it is said that over half of Haiti's population was African-born.

### The Post Independence Period

The war of independence had largely destroyed Haiti's state-of-the-art plantation infrastructure and, with it, its economy. Christophe managed to improve the shattered economy temporarily by enacting a policy of 'military agriculture' that forced former slaves to work on the plantations along the northern plain. The stigma of plantation labor, however, inspired most laborers to resist the recuperation of large-scale, commodity-based agriculture. They opted, rather, either to retreat from the plantations and establish small subsistence farms in isolated locales, or to occupy the remnants of plantation land, mixing food crop and cash crop cultivation with animal husbandry. As such, Haiti's peasantry was constituted.

While foot soldiers and their families retreated from slavery and plantation agriculture, the country's leaders set upon each other. On October 17, 1806, Dessalines who had previously assumed the title Emperor Jacques I, was killed while trying to put down a mulatto revolt. Christophe then took control of the country, but civil war soon broke out between Christophe in the north and Petion, based in Port-au-Prince, in the south. In his northern kingdom, Christophe built a spectacular palace, Sans Souci, as well as an imposing fortress, the Citadelle Laferriere, also by way of forced labor. In the south, Petion took a different approach toward economic recuperation. He granted land to former slaves and encouraging them to engage in mixed crop agriculture. Peasant coffee cultivation was a particularly important source of revenue to the state and for a new class of largely French-speaking, educated mulatto businessmen, or *commerçants*, who resided in the coastal cities and controlled the country's commerce.

Upon his death in 1818, Petion was succeeded in the south by another mulatto, Jean-Pierre Boyer. In 1820, Christophe suffered a stroke. With mutinous soldiers and a population angry over his attempt to re-institute plantation labor moving toward his palace, the revolutionary leader committed suicide, allowing Boyer to unify the country. In 1822, Boyer invaded and conquered Santo Domingo, which, having declared itself independent from Spain the previous year, was engulfed in struggle with the Spanish crown. He immediately abolished slavery in the former Spanish possession. With Haitians entering Santo Domingo and Spanish whites and Creoles leaving the Haitian-occupied country in large numbers, the racial configuration of the eastern two-thirds of Hispaniola was fundamentally changed. The occupation continued until 1844, when it was expelled by a popular uprising.

### An International Pariah State

Issued shortly after independence, the Haitian constitution declared that any person of African origin or descent would gain freedom and citizenship there. As such, the hemisphere's second independent nation quickly became an international pariah when European colonial powers, joined by the United States, officially shunned the black republic, hoping to isolate from their own slave-based economies its 'virus' of freedom-from-slavery. Haiti's southern neighbors replicated this pattern. Simon Bolivar, fighting for independence in South America, visited Haiti in 1815 and 1816, finding respite from his Spanish adversaries and receiving material support from Petion. Under US pressure, however, Bolivar betrayed the friendship of Haiti in 1826, when he led the new republics of Latin America in joining with the United States to exclude Haiti from the hemisphere's first region-wide meeting of independent states held in Panama.

In 1825, France grudgingly recognized Haitian independence return for an indemnity of nearly 100 million francs, to be paid at an annual rate until 1887. By 1838, the young republic, having transferred to its former colonial owner more than 30 million francs that could have been used for national recovery, suspended payments. The United States finally recognized Haitian independence in 1862, as it was about to grant its own slaves freedom. Other republics in the Western Hemisphere slowly followed suit, commencing with Brazil's recognition of Haiti in 1865 and ending with Peru's in 1938.

### Political Turbulence and the US Occupation

Between 1843, when Boyer was overthrown by a military coup, and 1915, when the United States invaded the country, Haiti was plagued by political unrest. Of 20 leaders during this period, 16 were either overthrown or assassinated. Political rivalries tended to be framed by geography and skin color. Attempts to establish enduring political parties and develop stable government were weakened not just by rivalries, but also by the exclusion of women, rural dwellers and the poor from the political process at the behest of deeply engrained, Port-au-Prince-based *classe politique*.

A leadership pattern characterized as *politique de doublure*, or politics by understudy, emerged during this period. Under this framework, a black political leader, usually with a military background and often a regional strongman, after forcing himself upon Port-au-Prince and gaining the presidency of the country, would develop a mutually beneficial relationship with the capital's political and commercial classes, who then became his advisors, or 'understudies.' Such arrangements were often quite tenuous, however, as some presidents turned against their advisors, while others were abandoned by them once their grip on the palace weakened. Under this system of governance, the Haitian treasury was successively depleted by rulers with a tenuous grip on power who were eager to gain the material trappings of that power, and whose desires were eagerly accommodated by their understudies within the country's commercial class.

As US political and economic interests expanded into the Caribbean at the end of the 19th Century, Haiti's political instability offered a rationale for increased US involvement in its domestic affairs. In 1905, when the United States took Haiti's customs into receivership, US business interests gained a secure financial foothold in the sovereign republic and valuable concessions from its government. In 1915, with political unrest in Port-au-Prince and the specter on the horizon of intervention by Germany to protect its own economic interests in Haiti, United States marines were dispatched to Port-au-Prince. While US authorities justified their action on the grounds of the Monroe Doctrine and humanitarian concerns, many Haitians believed the US rationale for invading their country was to protect and expand its business interests, and to establish a military base at Mole St. Nicolas in Haiti's far northwest. After the invasion, Haiti signed a treaty with the United States - originally for 10 years, but ultimately extended through 1934 - establishing US political and financial domination. In 1918, Haiti received a new constitution that permitted foreigners to own land in the black republic for the first time since independence.

One effect of the US occupation was the nominal re-establishment of the mulatto elite in control of the government. Another was the dissolution of the old revolutionary Haitian army and its replacement by a Marine-trained *Garde d'Haiti*. Many black Haitians resented the occupation, which they believed excluded them from public office and subjected them to daily racist indignities at the hands of the marines. Causing further resentment was the revival of a practice from Christophe's time by which the US Marines organized *corvee*, or forced labor, groups for public infrastructure projects such as road-building. Resentment grew quickly to resistance, with several thousand guerrilla fighters called *cacos* engaging in armed skirmishes with the US Marines. With their protégés in the newly formed Haitian national security force at their side, US Marines eventually dealt the *cacos* a fatal blow when their leader, Charlemagne Perault, was captured and killed in 1919.

Having tamed the resistance, US forces turned more fully to the exercise of 'nation building,' putting energy and resources into public works programs that oversaw the construction of health clinics, bridges, roads, electrical systems and urban sewage systems. In the Haitian countryside,

evidence of this infrastructure remains today, particularly in the form of the military outposts constructed throughout the country and occupied jointly by US Marines and the *Garde d'Haiti*.

### After the Occupation

In August 1934, facing increased pressure at home and in Haiti, President Franklin D. Roosevelt withdrew the marines, ending the longest foreign occupation in US history. The national infrastructure of military occupation was handed over to the Haitian Guard. Governance of the country was handed to President Stenio Vincent who had been elected to that position by a national assembly reconstituted in 1930. A plebiscite extended Vincent's term to 1941 and amended the constitution so that future presidents would be elected by popular vote.

In 1937 troops and police in the Dominican Republic, with popular support, massacred thousands of Haitian laborers there, while thousands more fled across the border into Haiti. Haitians had been recruited and drawn to work as cane cutters in the DR's plantation sector that had expanded significantly under the 1915 - 1924 US occupation of that country. The massacre drew upon a deeply rooted enmity between the two countries that had its roots in the 1824-1844 Haitian Occupation. Dominicans, with their Spanish culture and greater admixture of European blood looked disdainfully upon black Haitians. Haitian labor, however, had become necessary to the Dominican economy.

In 1946, Haitian workers and students protested in opposition to Vincent's successor, Elie Lescot, who had altered the constitution to extend his term in office. Three ranking officers in the reconstituted Haitian army (*Force Armee d'Haiti - FAd'H*), which had emerged from the occupation-era Haitian guard, led a *coup d'etat*, seizing power and overseeing the election of Dumarsais Estime to the presidency. When Estime sought to extend his own term in 1950, the same three officers again took control. Soon after, one of them, Colonel Paul E. Magloire, was elected president in a plebiscite overseen by the army. Magloire in turn sought to remain in power, but in December 1956 the army forced him to resign from office.

### The Duvalier Dictatorship

In 1957, against a backdrop of political and social unrest, Francois Duvalier, or "Papa Doc" - a former employee of a US medical aid project - was elected president with the tacit support of the army. Duvalier espoused black nationalist rhetoric, promising to end domination by the mulatto elite and to put political and economic power into the hands of the black masses. In July 1958, following an unsuccessful attempt by the army to remove him from office, Duvalier organized a private paramilitary force - the *Tontons Macoutes* - sanctioned to terrorize the population and provide a counterweight to the FAd'H. His control firmly established, Duvalier had himself elected president-for-life in 1964.

Under the dictatorship of Francois Duvalier, Haiti became, in effect, a police state and a pariah state, increasingly isolated from the world community. By the late 1950's, Duvalier's political opponents and the country's professional class - often one and the same - had begun to flee the country in growing numbers, heading for self-imposed exile in the United States, Canada, France, and French-speaking Africa.

By the eve of his death in 1971, Papa Doc had led Haiti along a path of destruction. The country faced a diminished economy, the withdrawal of most international aid, the collapse of what had been a vibrant tourist industry, a considerable 'brain drain,' and a largely traumatized population. Nevertheless, having successfully established control over the army by bestowing power and privilege in the hands of loyal supporters, Duvalier was able to orchestrate a transition of power to his 19 year-old son, Jean-Claude.

The regime of president-for-life Jean-Claude "Baby Doc" Duvalier immediately sought to distance itself from the repressive reputation of Francois and gain international respectability. Promising an 'economic revolution,' the new president and his handlers, most of whom had been integral players in his father's regime, managed to present an improved face of Haiti, to which there was a positive response. International aid - particularly from the United States - revived. Some Haitian professionals returned. Even the tourism sector experienced a modest revival. While superficially repression appeared to decline, the population, as a whole, experienced few expanded civil liberties and political opposition to the government remained taboo. Matching the more quiet, but continued, political repression was growing poverty among the citizenry. As a result, by the late 1970's the new facade of economic development was matched by the images of increasingly desperate poor people setting to sea in precariously overloaded sailboats to seek refuge in South Florida.

In 1980, Jean-Claude Duvalier married a mulatto, Michele Bennett, and transferred to his wife and her family and associates many of the privileges and prerogatives that had belonged to his father's inner circle. Subsequently, a rivalry grew between the 'dinosaurs' of Papa Doc and the 'technocrats' brought into government by Jean-Claude. Many of the latter were mulattos. While trying to maintain international economic support, the regime followed an uncertain path, appearing to lift political controls only to restore them brusquely as soon as dissent was expressed. As internal repression continued, Haitians in communities throughout the country began to organize grassroots groups seeking to improve their member's social and economic status. These groups, usually aligned with churches or non-governmental organizations, began to emerge as a new challenge to the regime.

### Duvalierism without Duvalier

In late 1985 and early 1986, the government attempted, without great success, to repress countrywide demonstrations against high unemployment, poor living conditions, growing economic disparities, and the lack of political freedom. With his power base eroded as a result of internal rivalries, and popular unrest blanketing the country, Duvalier and his wife fled Haiti

for France on February 7, 1986 aboard a US military aircraft. A five-member civilian-military council, the National Council of Government (CNG), led by Lieutenant General Henri Namphy assumed control of the government while the country became engulfed by popular explosions of what Haitians called their second independence. Concurrently, the *dechoukaj*, or uprooting, of the physical trappings of the dictatorship took place. The Tontons Macoutes disappeared. As the Duvalier paramilitary force dissolved, the army quickly regained its dominant position. Against this backdrop of hope, unrest and transition, the CNG authorized a national commission to draft a new constitution that was then ratified in a popular referendum in early 1987. The elections mandated by that document were scheduled for late the same year.

Violence led by pro-Duvalier elements and the Namphy-led army, plagued the country during the lead up to the November 1987 elections. On election day, voter massacres in Port-au-Prince carried out by gangs allied with the FAd'H forced their cancellation. In early 1988, Leslie Manigat, an exiled intellectual with political ambitions, was chosen President in an election run by the army. Most voters had stayed home. Only months later, Namphy overthrew Manigat and then, in return, was sent into exile in September 1988 in a coup led by junior officers of the FAd'H but orchestrated by another General, Prosper Avril, who was installed as president.

Facing mounting opposition at home and pressure from abroad, Avril left the country in early 1990 when he failed to move the country toward elections. Avril was succeeded by a prominent judge, Ertha Trouillot, according to constitutional guidelines. Careful oversight from within Haiti and by the international community resulted in the political acquiescence of the army, enabling Trouillot's provisional government to hold successful national elections in December 1990.

The runaway victor of the 1990 presidential race was Jean-Bertrand Aristide, a Catholic priest and charismatic personality who had gained a massive following among the country's urban and rural poor as an outspoken critic of the Duvalier and military regimes. Throughout the post-Duvalier period, Haiti had been plagued by a struggle between those vying to impose "Duvalierism-without-Duvalier" and those seeking political, social and economic reform, with various international actors, including the United States, perceived as playing influential roles in Haiti's struggle to cast off its authoritarian past. It was in this context that Aristide's victory, sanctioned by international observers, was seen as a glowing victory of the reformers.

Aristide was inaugurated on February 7, 1991, exactly five years after the demise of the Duvalier dictatorship. As an outspoken opponent of Duvalierists, the army, and the socio-economic status quo, he was despised by most of the country's elite's and the military. His efforts to initiate political, economic and social reform were interrupted in late September when a violent military *coup d'etat* forced him and his government into exile, turning Haiti once again into a police state and an international pariah. Over the next three years, turmoil engulfed the country as an estimated 3,000 - 5,000 supporters of Aristide and his government were murdered, and countless others cowered in fear of the *defacto* regime. Tens of thousands took

to boats going north, fleeing violence and repression not seen since the darkest days of Duvalier rule.

Although the coup reversed the gains of those seeking reform, those gains were not erased. The coup leader, General Raoul Cedras, and his co-conspirators succeeded in grasping power, but they failed either to consolidate their hold on it or to gain the national and international legitimacy they desperately sought. The strength and depth of Haitian support for the Aristide government, the legitimacy granted to it as a result of the 1990 elections, and the refusal of international actors to abandon Aristide and embrace the defacto rulers ultimately enabled Haiti's nascent process of change to get back on track.

Following three years of international attempts to unseat the defacto government through combinations of negotiations and economic sanctions, in September 1994, a United Nations-sanctioned and United States-led multinational military force entered Haiti, much to the delight of the vast majority of Haiti's population, and forcefully escorted the leaders of the defacto military government from power. Shortly thereafter, President Aristide and his elected government was restored to power. The government was restored to a country deeply traumatized by the attempted return to past. It was also restored to a country whose overall human, institutional, economic and physical infrastructure had disintegrated considerably from the indignities of the recent period of military mis-rule.

In the presence of international peacekeepers, trainers, program-planners, economists, and election monitors, Aristide completed his five-year term of office. Some of the trauma of the past was treated when the Haitian army was dissolved, a new national police force was created, national elections were held, and attempts to rebuild the shattered country got underway. Yet, when Rene Preval was inaugurated as Aristide's successor in February 1996, Haiti remained a country whose future was very much burdened by its past.

History *Self-study questions:*

1. At the time of Haiti's independence, more than 50 percent of its population had been born in Africa. What impact might this have had on the evolution of Haiti's post-independence social, economic and political path, and how might this have contributed toward contemporary differences between Haiti and other Caribbean nations whose independence came much later?
2. In addition to becoming an isolated, international pariah state following independence, Haiti was also forced to deplete its treasury to pay the indemnity demanded by France and required for Haiti's ultimate diplomatic recognition by other nations. What impact did these factors have on Haiti's ability to pursue a path toward economic development in the aftermath of independence? What was their long-term impact on the country?
3. Today, Haiti is the home of an elite *classe politique* known more for its ability to resist change than for embracing it. How might Haiti's historical path have contributed to this phenomenon?
4. In 2004, Haiti - and Haitians - will celebrate the country's 200th anniversary of independence. In the context of celebrating the bicentennial, what historical issues ought Haitians stress, particularly given that this will be a golden opportunity to communicate them to the rest of the world?
5. The Haitian army has a long legacy of active involvement in Haitian politics, often serving as the arbiter of who gets to - and stays - in power. Today, Haiti does not have an army; rather, it has a recently created national police force (HNP) under civilian jurisdiction. A new national police force created under the US Occupation rapidly transformed itself into the Haitian Armed Forces (FA'dH) and re-instituted the army's role as political arbiter. Are conditions different or similar today regarding a potential parallel evolution of the HNP? Identify key indicators to help determine whether or not the HNP is evolving in the same way as the FAd'H.

## Government and Politics

### Political Dynamics

Since the inception of the Haitian state, the country's political system has displayed certain enduring dynamics. Traditionally, Haitian politics have been the domain of the army and urban elites. Other potential political actors, with the occasional exception of the Catholic Church, have been excluded from political life. As the country's twin power-brokers, the national security forces and the urban elites usually developed mutually beneficial alliances to achieve their political and economic objectives. Political analysts have referred to this alliance as the aforementioned *politique de doublure*, with elites in the background, pulling the strings of power.

Typically, Haiti's leaders have been anointed or self-anointed, as opposed to rising to leadership based on ideas, work, or merit. As a rule, political movements led by charismatic leaders have dominated the country's political life. Political parties have tended to be either absent or bereft of longevity or large constituencies of supporters. Without exception, Haitian politics have focused on one office - the presidency. For generations, individuals have aspired to this single jewel in the country's political crown. Elective offices other than the presidency have little or no importance in and of themselves. Rather, they exist for little more than rewards, patronage, and prestige.

The quest for political power seems to have given rise to two enduring political axioms. The first is win - and win big, with the means justifying the end. The second is should one lose, the task becomes to undermine the winner, with the means once again justifying the end. In a political system based upon these twin axioms, layered over with the politics personality, not platforms, and with a pattern of little tolerance for dissent, there is no tradition of political negotiation, grace in victory, or being part of a 'loyal opposition.'

Patterns of political leadership in the *Republique d'Haiti* have resembled those seen in a dynastic monarchy. Leaders have a long history of attempting to extend their terms in office at will. Many have succeeded. Some, including most recently both Francois and Jean-Claude Duvalier, have given themselves lifetime mandates as *President-a-vie*. Limits on power, particularly as prescribed by the country's constitution or laws, have been ignored by the will of force, symptomatic of the well-known Haitian proverb, "Laws are made of paper, and bayonets are made of steel." Free and fair elections have been a rare commodity, and, until recently, the peaceful transfer of power from one officeholder to another was virtually unknown.

Since the 1986 ouster of the Duvalier dictatorship, the 1987 ratification of a new constitution, and the 1994 dissolution of the army, however, these patterns have begun to change, albeit slowly. Although the jury remains out in terms of how far changes in Haiti's political dynamics

will go, whether they will be sustainable, and if they will result in enduring democratic governance, some changes are worth noting. For example, significant changes have occurred in political participation. Since 1986, those traditionally excluded from meaningful participation in Haiti's political life - the urban and rural poor - have begun to exert an independent political voice. That participation was especially seen in the 1990 election of Jean-Bertrand Aristide. Since then, improvements in political participation have included the election to local and national offices of Haitians from modest backgrounds. As a result, some erosion of the traditional power of the urban elites who compose the country's *classe politique* is in evidence.

The successful transition of elected presidents experienced in 1996 from Aristide to Preval, and in 2001 from Preval to Aristide, represents another change in Haiti's political dynamics. The deeply enrooted "presidentialitis" of Haitian politics and the corresponding limited balance of powers within the Haitian political system remains evident, however, in spite of the 1987 constitutional make-over of how government in Haiti would be created and function. Political parties, though evident in large profusion on the political landscape, remain either weak institutions dominated by self-anointed leaders, or structures more akin to the manifestation of the successful political movement of a charismatic figure than a durable political institution. The former is characteristic of the so-called parties grouped at present under an opposition organization called the *Convergence Democratique (CD)*, whereas the latter appears to apply to the ruling party, *Fanmi Lavalas (FL)*, created by Jean-Bertrand Aristide.

### The Constitutional Framework

The 1987 Constitution, overwhelmingly approved by popular referendum, declares the intent to establish and maintain democracy in Haiti through the lens of ideological pluralism, electoral competition, and the separation of powers. Mindful of the political dynamics outlined above and the perfidious abuse by leaders of past constitutions, the framers of the 1987 version incorporated articles stipulating that it can be amended only with a two-thirds majority approval by two consecutive sessions of the National Assembly. They also ban a sitting president from initiating and enacting amendments during his term of office, along with the practice of amendment by popular referendum. The constitution was applied - or suspended - selectively by military governments between 1987 and 1994. With the reinstatement of democratically elected government in 1994, the constitution has also been fully reinstated. Since 1994, governmental actions as a rule have been bound by the constitution and justified, at times not without controversy, by what is written in that ambitious and complex set of laws. Significantly, debate around the legitimacy of a government's actions now tends to revolve around considerations of their constitutionality.

Key constitutional provisions seek to reshape Haiti's governmental system and counteract certain political traditions. Specifically, the constitution reduces presidential power through various checks and balances and decentralizes government authority, creating elected councils for local government. It specifies provisions for an independent judiciary, abolishes the death penalty, and focuses on the protection of civil rights through restrictions on the arrest and

detention of citizens. The 1987 document calls for a career civil service based on merit, separates the police from the army and placing the former under civil jurisdiction, and recognizes both French and Creole as official languages.

Among constitutionally mandated institutions to operate or oversee certain key governmental functions, the creation and functioning of the one mandated to organize and run national elections has proven particularly problematic. Specifically, the constitution calls for a Provisional Electoral Council (CEP) to conduct elections, paving the way for the creation of a permanent CEP from members nominated by elected officials in departmental-level institutions following the inauguration of the first democratically elected president. Although the latter event occurred in 1991, successive attempts at organizing a CEP according to constitutional guidelines have failed. As a result, Haiti remains without a permanent electoral council, and attempts on numerous occasions to reconstitute even a provisional council have been so fraught with political power struggles that elections have repeatedly been thrown off their constitutionally-mandated schedules due to the inexistence of a functioning CEP.

### Governmental System

Haiti's complicated system of decentralized governance is premised on the composition and functioning of a series of executive and legislative bodies that correspond to the country's three principal geopolitical units: departments, municipalities, and communal sections. At each geopolitical level, the executive and legislative units are in juxtaposition to provide a system of checks and balances.

Starting at the smallest of the units, voters in each of the 565 communal sections elect to four-year terms a three-member **Communal Section Administrative Council (KASEK)** and a seven-to twenty-five member **Communal Section Assembly (ASEK)**. ASEKs serve a parliamentary function, charged with advising and assisting the KASEKs. The KASEKs are responsible for administering the affairs of the communal section and, as such, serve as the executive branch of local government. ASEKs also nominate justices of the peace and appoint a representative to the Municipal Assembly, the next highest legislative level of government. At this writing, both ASEKs and KASEKs are constituted nationwide.

Each of Haiti's 133 municipalities has both a **Municipal Assembly** and a **Municipal Council**. The assemblies are composed of one member per communal section, plus a town delegation whose members are elected to four-year terms. Municipal assemblies serve an essentially parliamentary function, overseeing the three-member Municipal Council whose members are elected to a four-year term and function in an executive role. The president of the Municipal Council serves as mayor. At this writing, Municipal Councils are constituted nationwide, with Municipal Assemblies not yet fully constituted all over the country.

The legislative and executive bodies for each of Haiti's nine departments are the **Departmental Assembly** and the **Departmental Council**, respectively. The assembly is constituted first,

comprised of one member from each Municipal Assembly within the department. The Departmental Assembly in turn elects three people to serve four-year terms on a Departmental Council. Members of the council do not have to be chosen from among assembly members. In addition to its role in electing members to the council, the Departmental Assembly nominates candidates for the CEP and judges for the courts of appeal and the courts of first instance. It also selects a representative to serve on the **Interdepartmental Council**. The nine members of the Interdepartmental Council become members of the **Council of Ministers**, which also includes the prime minister and his cabinet of ministers. Representatives of the departmental assemblies who become members of the Council of Ministers carry ministerial rank and voting rights on issues of governmental decentralization and development. At this writing, neither Departmental Assemblies nor Departmental Councils are fully constituted nationwide. As a result, there is not yet a fully functioning Interdepartmental Council.

The **executive branch** is headed by a **president** elected by popular vote to a five-year, non-renewable term. Presidents can be elected to two, non-consecutive terms, however. The president names a **prime minister** who, once confirmed by the National Assembly, heads the government. He or she selects a council of ministers or cabinet and appoints secretaries of state. The president presides over the Council of Ministers, which must be composed of no fewer than 10 members. At this writing, there are 16 ministries in the government of Haiti, including the portfolio held by the Prime Minister. They are: Agriculture, Natural Resources and Rural Development; Commerce and Industry; Culture; Economy and Finance; Environment; Foreign Affairs; Haitians Living Overseas; Interior and Territorial Collectivities; Justice and Public Safety; National Education, Youth and Sports; Planning and External Cooperation; Public Health and Population; Public Works, Transportation and Communication; Social Affairs; and Women's Affairs. The president also appoints representatives to coordinate and control public service functions in each department, excluding public safety. At this writing, the President of Haiti is Jean-Bertrand Aristide. The Prime Minister is Yvon Neptune.

The **legislative branch** is headed by the **National Assembly** composed of a **Senate** and a **Chamber of Deputies**. Three senators from each department are elected to staggered six-year terms, with one-third of the 27-member Senate coming up for election every two years. The eighty-three deputies are elected from smaller electoral districts determined by population distribution. Large urban areas can be represented by no more than three deputies. Deputies are elected to four-year terms.

The **judicial branch**, also decentralized, is based on an ascending order of courts, beginning at the municipal level. The lowest level court in the system is the **Court of the Justice of the Peace**. Justice of the peace courts are located in each of Haiti's municipalities. Each court has at least one judge. Justices of the peace hear civil law cases, including those that involve limited sums of money, and landlord and tenant disputes. They also hear criminal cases where the penalty does not exceed six months in jail. **Courts of First Instance** are either civil or criminal tribunals located in major cities. Cases heard by these courts include those sent by the inspector general of the Haitian National Police. **Courts of Appeal** are one step above the

Courts of First Instance. Located in Port-au-Prince, Les Cayes, Gonaives, and Cap Haitien, the appeals courts have a president and four or five judges. They hear both civil and criminal cases, including appeals from the courts of the justice of the peace. Haiti's highest court, the **Court of Cassation**, or Supreme Court, consists of a president, vice-president and ten judges. It generally functions in two chambers with five judges each. When hearing appeals or pleas concerning the unconstitutionality of laws or decrees, however, the highest court convenes in a single chamber.

The several specialized courts that complete the judicial system are a Superior Court of Auditors and Administrative Disputes and special courts to oversee matters concerning property rights, juveniles, and labor conflicts. The Senate may constitute itself into a High Court of Justice to preside over crimes of state treason, embezzlement or abuse of power involving high state officials. In 1996, a School of the Magistrature opened in Port-au-Prince to provide judicial training for current and new judges. Haiti has derived the formal aspects of its legal system from Roman law, the Napoleonic Code, and the French system of civil law.

### Current Political Issues

Enactment of the twin axioms of Haitian politics mentioned above have thrust the country into a prolonged political crisis characterized by legislative gridlock, bitter feuding among political actors, electoral controversy, and thus far ineffective attempts at crisis resolution. The ability of the Government of Haiti to enact constitutional election mandates, build public institutions, reform the state, govern effectively, and respond to citizen's needs has been severely hampered as a result.

The roots of the current crisis go back to January 1997, when the leader of the governing Lavalas political movement and then-former President Aristide announced the formation of a new political party, the Lavalas Family (FL). Immediately, the movement splintered into two camps: those who gravitated to the FL and President Preval; those who stayed loyal to the previous vehicle of Lavalas mobilization, the OPL (renamed Organization of People in Struggle from Lavalas Political Organization), and Prime Minister Rosny Smarth, whose block still held the majority of seats in the National Assembly. The rivalry between the two camps quickly became bitter.

Successively, 1997 and 1998 saw tarnished off-year legislative elections, the resignation of Smarth, the inability of the divided Senate to confirm Preval's several nominations, and the failure of the National Assembly to legislate. Although the Senate eventually confirmed Jacques Edouard Alexis in December 1998, the action came too late for steps needed to organize the legislative elections required in late 1998. When the terms of most legislators elected in 1995 expired in early 1999, Preval cited constitutional provisions and issued a decree dismissing the entire Chamber of Deputies and most of the Senate. The detractors of Preval, Aristide, and the FL labeled this move as a "political coup d'etat."

Political negotiations during 1999 eventually led to enough compromise between the feuding groups for the creation of a CEP to organize the now-delayed elections. Following two postponements, elections for 19 Senate seats, 72 Chamber of Deputy seats, all of the country's 133 Municipal Councils, and all of its 564 KASAKs and ASEKs were held on May 21, 2000. In all, 30,000 candidates from 37 political parties or groups ran for the 7,500 offices up for grabs. Turnout at the polls was high among voters, political parties, and domestic and international election observers, including an observation mission from the OAS. Approximately two-thirds of all registered voters cast ballots.

A pall was cast on the apparent successful electoral exercise almost immediately, from two different camps. First, even before the announcement of preliminary results, representatives of four of the five political parties that nominated candidates for offices across all nine departments (*the OPL, Espace de Concertation (EC), the Assembly of Progressive National Democrats (RNDP)* and *the National Christian Movement of Haiti (MOCHRENA)*) began to cry foul. The fifth party, *FL*, did not join the chorus, particularly as it already appeared that it had fared well in the vast majority of the races. Perhaps *FL* had done too well, suggested the OAS, the second camp to sound an electoral alarm. Challenging the methodology used by the CEP to tabulate votes in the Senate races that gave all 19 Senate seats to the *FL*, the OAS stated that as many as 10 seats should move to second round run-offs, according to the electoral law.

The controversy over the disputed Senate seats heightened as the opposition parties joined the chorus, several members of the CEP resigned citing governmental intimidation, and the government refused to abide by the OAS requests for run-offs, in spite of the efforts of that organization - joined by the Caribbean Community (CARICOM) - to find a way out of the emerging electoral morass. Escalating the crisis further was the automatic suspension of assistance by the European Union following this type of electoral dispute, along with the suspension of bilateral aid by the US government. Not long afterward, these were followed by similar steps taken by such international financial institutions as the World Bank. Nevertheless, toward August 2000, the government ratified the results of the disputed May 2000 elections, giving the *FL* virtually unfettered power at all levels of government in Haiti.

The next political marker on the horizon was the presidential election scheduled for late 2000. With the *FL* nominating Jean-Bertrand Aristide as its candidate, the four protesting parties came together to join a united front - called the Democratic Convergence (CD) - and attracted a handful of minor parties to their side. The coalition opted to boycott the presidential elections. In late November, without the presence of OAS monitors, Jean-Bertrand Aristide easily won his second term as President of Haiti. The *FL* also won all nine Senate seats contested in the same election.

As the February 7, 2001 Presidential Inauguration approached, the crisis deepened. The boycotting CD, ignoring Aristide's entreaties for participation in the event, chose to stay away and name from within its own ranks a "provisional president," who almost immediately surprised

many Haitians by calling for the recreation of Haiti's army. On inauguration day, with few international leaders in attendance, Aristide gave an address that set forth a detailed plan for national development and called for Haitians to work together for the achievement of the plan, supported by the international community. The CD responded by issuing its call for a clean slate, or "zero option," with the resignation of the government and the entire electoral process beginning again from square one.

With the political temperature in Port-au-Prince rising, various international actors extended their involvement toward a hopeful resolution of the crisis. In late 2000, the Clinton Administration dispatched former National Security Advisor Anthony Lake, who met with Aristide and came up with an eight-point plan for addressing the crisis. Upon its ascension to office in January 2001, the Bush Administration endorsed the eight-point plan. Concurrently, the Assistant Secretary General of the OAS, often in the company of CARICOM officials, shuttled back and forth to Port-au-Prince, also seeking a way to resolve the political gridlock. By mid-June, with the government responding to several of Lake's eight points and committing itself to a resolution of the electoral dispute through the resignation of the senators in disputed seats followed by new elections, the OAS cautiously spoke of the impending resolution of the crisis.

Now cast as *the* opposition group, the CD, however, maintained its hardened position, refusing to accept government offers for ending the crisis. In August 2001, political violence in the form of an attack by suspected former members of the Haitian army on several police stations put a damper on the resolution of the crisis. Following an armed assault on the Presidential Palace in mid-December and a subsequent anti-CD explosion by FL-partisans that resulted in burning and looting of CD-affiliated properties, any immediate hope for crisis resolution came to an end.

As Haiti moved into 2002, it confronted the specter of growing political violence and chaos around the country, putting it on the brink of social, economic and political disaster. The government lacked resources to govern and increasingly perceiving itself on the defensive as the dispute over a handful of senate seats seemed to snowball so that no steps it took or actions it proposed seemed sufficient to break the log jam. Remaining a thorn in the government's side were a twin - and some claimed entwined - set of opponents: the politicians affiliated with the CD, which held fast to its zero option strategy, and the apparent partisans of the old guard seeking change through violence.

With feelings of desperation and insecurity spreading among the populace, and people expressing greater and greater frustration with the overall political process and all the country's political actors, the OAS, again with crucial support from CARICOM, took action. In early 2002, it passed Permanent Council Resolution 806 that provided the organization a mandate to work more actively toward the resolution of the political crisis by independently inquiring into the events of December, seeking reparations to damages done to organizations and individuals who suffered damage as a result of those events, and establishing a special OAS Mission in Haiti for strengthening democracy there.

In September, the OAS followed CP. Res. 806 with CP. Res. 822. This resolution took an even more active role, setting forth a road map for crisis resolution with a specific mandate and deadline for setting up a CEP to lead toward elections. CP. Res. 822 also tackled security-related issues related to climate for elections, including the increasing spread of weapons among Haiti's people. The new resolution also de-linked the suspension of international aid to the government of Haiti from the mired political process.

By the middle of 2003, however, resolution to the crisis had not been achieved. CP. Res. 822 remains the operational framework for crisis resolution, in spite of the fact that the immediate deadline for the formation of the CEP was missed when hard core opposition groups, expressing security concerns, refused to match government actions of nominating representatives to the body. Increased episodes of sporadic political violence, particularly in the area of the Haiti - Dominican Republic border, once again threatened to untrack diplomatic efforts toward crisis resolution. On a more positive note, in mid-May the Government of Haiti achieved an agreement with the IMF that holds the promise of enabling multilateral funders to recommence operations in the country and provide the government with much needed support. Some analysts believe that a renewed flow of development assistance to the government will play a positive role not only in helping to fend off an approaching humanitarian crisis in Haiti, but also in resolving the long-festering political crisis.

Government and Politics *Self-study Questions*

1. Haiti's penchant toward "Presidentialitis" in politics will be difficult to overcome. How might this enduring characteristic of Haitian politics be weakened or overcome, particularly in view of the fact that this is a key goal of the 1987 Constitution?
2. Immediately following the ouster of Jean-Claude Duvalier, a huge cry arose across the country Haiti - largely excluding Port-au-Prince - for the effective decentralization of the state. How did the 1987 Constitution respond to this national desire? What has been the track record for achieving it thus far? Is decentralization a good idea? What are - and remain - the principal constraints to decentralization of the Haitian state?
3. In view of the strong legacy in Haiti of political movements as opposed to political parties; of self-nominated and charismatic leadership; and of the twin political axioms elaborated in the text, is working to form US-type political parties the best insertion point for international actors seeking to help Haiti strengthen its democratic institutions? Why or why not? What other insertion points might be considered?
4. Another legacy of Haitian politics has been the system of *politique de doublure*. Do the relationships of Haiti's current political leadership with the country's elites follow a similar or different pattern to the phenomenon of 'politics by understudies?' What is the pattern?
5. What are the factors of Haitian politics that have been contributing to the country's long-standing, current political impasse? In view of those factors, what might be the most effective strategies for international actors seeking to help Haiti out of its political morass?

## Economy

### Agriculture

Haiti's largest single economic sector is agriculture. Today's agricultural economy grew out of a slave plantation system during the colonial period that was based on the export of agricultural products and precious hardwoods. Little processing of these products or manufacturing took place in the colony. Haiti's economy was transformed into a mixed agricultural economy following the revolution, when slaves abandoned the mostly destroyed plantations. In that mixed economy, small farmers, or peasants, often working multiple farm plots of an acre or so in isolated hilly areas, produced cash crops, particularly coffee, along with food crops using slash and burn methods of farming. Agricultural commerce, particularly the export of coffee, was controlled by a small group of merchants based in coastal cities and towns. Working through intermediaries, they purchased peasant-produced coffee and other crops like cacao and cotton, exporting them to Europe and North America.

Though few large plantations survived the revolution, sugarcane remained an important crop, grown both by small holders and by some large holders, particularly following the US Intervention in 1915 and the removal of the Haitian constitutional ban on foreigners owning land. In addition to a post-intervention investment in sugarcane, US companies also established large holdings for bananas, rubber and sisal. Following World War II, however, Haiti's banana and rubber ventures collapsed. Sisal production declined in the 1980s. While sugarcane is still cultivated, mostly on smallholdings, two or three large operations continue, struggling to remain solvent. Most of Haiti's peasant-grown sugarcane is processed in small, primitive grinding operations and transformed into cane syrup, coarse brown sugar, or country rum (*clairin*). A commercially produced rum under the label *Barbancourt* is exported worldwide.

Haiti's leading agricultural export today is mangoes, a seasonal crop. Like coffee, mangoes are a peasant-produced crop, bought and exported by coastal-based merchants and their intermediaries. The more significant basis of Haiti's agricultural economy today is the production of food for domestic consumption, produced on smaller and smaller plots by peasants who plant mostly corn, beans, sorghum, rice, and tubers. Rice is also planted in large, irrigated holdings in the Artibonite Valley. Livestock, particularly chicken and pigs, are also produced, usually on small farms and in limited quantities. Haiti's pig population is still rebounding from its extermination in the 1980s as a result of an African swine fever outbreak.

Although agriculture still engages some 45 percent of the working population, the country does not produce enough food to feed itself. Haitian agriculture, particularly that of the small farmer, has suffered severely from lack of investment and assistance. Some 90 percent of Haiti's government agronomists are based in Port-au-Prince. What little assistance Haiti's small farmers receive is more likely to be provided by foreign non-governmental organizations than by the Haitian state. The vast majority of Haitian farmers work their land using only a machete and

a hoe, depending on rainfall in an environment increasingly devastated by deforestation, erosion, and resultant changing microclimate patterns. Farmers, with little or no access to agricultural credit, except at usury interest rates often reaching 20 percent per month, have begun to move off the land in large numbers. A surprising amount of Haiti's limited quantity of low-lying land appears fallow, sometimes a result of emigration by the middle class owners. Much precious farmland in the area of Port-au-Prince has been lost to urban expansion.

### Industry and manufacturing

Like agriculture, Haitian industry and manufacturing grew out of the raw product-exporting plantation system, where investment for product transformation occurred principally in the colonizing country. Following the revolution and the creation of Haiti's decentralized peasant society, Haitian manufacturing developed in small towns and villages where craftsmen produced practical articles from local materials. The legacy of this decentralized, homegrown manufacturing is seen in a portion of today's Haitian craft sector, which remains located in villages and towns nationwide.

Another portion of today's economically important craft sector, however, is situated in factories in Port-au-Prince, where it comprises a segment of the country's industry and manufacturing sector. That sector, composed principally of light assembly operations, grew mostly in the 1980s as a result of international aid, Haiti's proximity to US markets, its cheap and ample labor, and preferential investment and trade arrangements. The size of the light assembly sector has ebbed and flowed according to economic and political developments. Under the dictatorship of Jean-Claude Duvalier, the sector was stable, employing an estimated 60,000 - 80,000 workers. Following the ouster of Duvalier, and particularly during defacto military rule from 1991 - 1994 when an international embargo was placed on Haiti, the sector declined precipitously, employing as few as 7,000 workers in 1994. Today, while the sector still largely based in Port-au-Prince is on the rebound, it has not reached levels of previous development largely on account of the country's deteriorated infrastructure and lack of investor confidence. Recent industrial park investment by Dominican Republic business interests in the Haiti-DR border areas, however, raise the prospect of both the decentralization and expansion of the light assembly sector.

One element of Haitian manufacturing that seems to boom constantly is the construction sector. Fueled in large part by remittance money sent by family overseas and by revenue from such nefarious activities as drug trafficking, Haiti appears to be a country with a permanent housing boom - from cinder block pillboxes to hillside mansions. This labor intensive sector offers Haitians a great deal of formal and informal employment, and fuels thriving cement and building materials import and manufacturing operations.

## Other Sectors

Haiti's mining sector, somewhat robust for two decades when based on bauxite, collapsed in the 1980s when deposits were exhausted. Today it is small and undeveloped. Mining ventures are limited principally to some extraction of gold and copper deposits in the north of the country, and small growth in the domestic sea salt sector in response to growing international demand for natural products. Haiti's large deposits of high quality limestone have begun to attract the attention of investors as demand for that product expands in international markets. Haiti has no oil or natural gas deposits.

The country meets its energy needs through high-cost importation of oil and gas, and through some hydroelectricity production, notably at Peligre along the Artibonite River. Much of the population's basic energy needs are met through the consumption of low-grade kerosene, also imported, and of charcoal, produced from Haiti's dwindling national fuel wood supply. Although charcoal production has become a major cause of Haiti's environmental deterioration, alternate sources of energy have not been successfully introduced.

Given the country's rugged and natural beauty, cultural uniqueness, and geographic location, Haiti should have a vibrant tourism sector. For brief periods in the mid-20th century, the sector showed signs of flourishing. In more recent times, however, political unrest and repression, poverty, the fear of AIDS, and the general un-development of facilities and the transportation infrastructure of the country have combined to limit this sector. Tourism in Haiti today has become mostly the domain of Haitians overseas returning home for periodic visits. As that population grows, becomes economically established and ages it offers great promise for the revitalization and growth of tourism in Haiti.

While surrounded on three sides by water, Haiti has only a limited and primitively developed fishing sector. Small fishermen fish coastal waters from sail and rowboats, using hand cast nets and woven fish traps. The quadruple detriments of limited investment, over fishing waters nearest the coast, use of sailboats - and the country's most skilled watermen - to achieve migration goals, and environmental degradation of fishing grounds because of land-based erosion have worked together against the development of Haiti's fishing industry

## Commerce and Trade

A tremendous contrast in Haiti's commercial sector exists between its formal and informal sectors. The former, represented by licensed business and banking services found mostly in Port-au-Prince and the country's secondary cities, is quite limited when compared with the informal sector of higglers (*madan sara*), small producers, hustlers and various service providers that dominate Haiti's economy. The under-capitalized informal sector that provides at least some form of employment and revenue to vast numbers of Haiti's citizens has been estimated recently as having at least 6 or 7 times the capital assets of the country's formal sector. Unfortunately, however, because these assets are not recognized as a source of

collateral for investment capital, they are not effectively used as a motor for Haiti's economic development. Recently, however, a number of the country's commercial banks have 'discovered' the informal sector and its reliability as a customer for credit, making loans as small as \$100 to informal sector business people.

The split of Haiti's economy between formal and informal sectors is symptomatic of the division in Haiti between its economic 'haves' and 'have nots.' Various estimates usually state that some 67 percent of the country's economy is controlled by four percent of its population, with a corresponding 20 percent of the economy allocated to 70 percent of the population.

Haiti's principal formal trading partner for both exports and imports is the United States. Haiti also has strong trading ties with the Dominican Republic, although as much as 2/3rds of the commerce that flows across the shared border is not recorded. Haiti maintains trade relations with Europe, particular France, and has recently become a full member of the Caribbean Community (CARICOM), which holds the promise of heightened trade between Haiti and the mostly English-speaking CARICOM members. Haiti's membership in CARICOM is also already resulting in heightened advocacy for, involvement in, and support of Haiti by CARICOM members in various international fora. Haiti benefits from preferential US trade agreements through its inclusion in the Caribbean Basin Economic Recovery Act (CBI). In early 2003, legislation for the Haitian Economic Recovery Opportunity Act (HERO) was introduced in the US Congress to provide Haiti with a broader range of trade preferences, similar to those recently accorded Africa's most underdeveloped countries.

#### Development Assistance and External Aid

Given Haiti's status as the poorest nation in the Western Hemisphere, it has been the recipient of considerable amounts of development assistance and external aid, particularly during the period of Jean-Claude Duvalier's rule and for several years following the 1994 restoration Aristide's elected government. Aid has come in the form of loans and grants from bilateral and multilateral donors, including the World Bank and the Inter-American Development Bank. The United States and the European Unions are Haiti's major bilateral partners, although both have suspended direct assistance to the government since 2000, as have the multilateral donors. The suspension of aid has devastated the government's ability to provide services to citizens since an estimated two-thirds to three-quarters of the government's investment budget is supported by foreign aid.

Canada and Taiwan are also important donors, as are the governments of France and Germany. Much assistance has also entered Haiti through non-governmental organizations and religious groups. This assistance tends to support smaller scale projects in diverse locations in the country, many of which, however, do not sustain them selves when the assistance ends.

Perhaps the most significant - and sustainable - form of development assistance and external aid received by Haiti comes from Haitians themselves, in the form of the country's vast number of

Haitians living overseas, or Diaspora. Conservative estimates of the annual value of money sent home by family members reaches \$600 million. The estimate increases annually. Remittances are used to cover such basic individual and family needs as health care, education, food, and lodging. In addition to sending money, Haitian's overseas also send goods, or arrive laden with them on their visits home.

Economy *Self-study questions*

1. When Haitian peasants migrate to the Dominican Republic and become involved in agriculture there, they have a reputation as successful farmers. Yet, in Haiti, peasants usually fail to support themselves and their families successfully from their farming efforts. What might be some of the key reasons for these differences? What ought to happen in Haiti to help make farming - and farmers - improve their chances of success? Or, is Haiti just too far gone to be worth major investment in small-farmer agriculture?
2. In view of Haiti's dilemma of depending on charcoal as a cheap and ready energy source vis-à-vis its environmental deterioration and the disappearance of fuel wood supplies, what should - and can - be done?
3. Throughout rural Haiti, cocaine is called 'manna' as in something wonderful that has come down from heaven. The quality of life of many Haitian villagers has improved dramatically because they have intentionally - or unintentionally - gotten their hands on some manna and sold it for a relatively handsome sum. Has drug trafficking become such an important element of the economic survival of Haiti - and individual Haitians - that a successful attempt to stem the flow would result in considerable unrest and suffering among Haitians? Might Haitian officials be reluctant to join forces with the US in cracking down on drug trafficking because of the detrimental impact its success might have on Haiti's economy and society? If so, what steps might the US take to mitigate against this?
4. In The Mystery of Capital, Hernando De Soto's book on worldwide informal economies and the need to 'formalize' their assets so they can be used as collateral for loans and investment, examples from Haiti abound. What might be the economic impact in Haiti of the loosening up of the hundreds of millions of dollars currently tied up in poor people's hands because they have been excluded from the formal economy? Is formalization a realistic option for the Haitian poor?
5. Although the US Congress has yet to pass HERO - and its passage is far from assured - what impact might additional trade preferences for Haiti, particularly in the apparel industry, have on the country's economic well-being? While Haiti may be helped by this kind of individually-received preference, will it be hurt if it is simply lumped in with other countries in regional - or hemispheric - trade pacts, or has to compete with them (such as NAFTA), particularly in terms of its ability to penetrate the US market? If so, why is it in the long-term interests for the US to enter into trade agreements that otherwise might hurt Haiti?

## Culture

In distinct contrast with the cloud cast over Haiti by its problems of political instability and economic underdevelopment, the country is brightened by a dynamic, authentic, and well-developed cultural life. The cultural expression at the root of today's Haitian society has emerged to a great extent from the interplay over time of two distinct cultural hearths: French and African. Initially, they stood apart, separated by language, skin color and power. The drums and chants of the slave had little in common with the violin and waltz of the colonists. To a certain extent, the two expressions - African and French - still stand apart, especially as a function of social status and class. To a certain extent, things French still have a higher status than things non-French, or Haitian. Yet, to perhaps an even greater extent, the parallel French and African cultural heritage of Haiti has merged into a vibrant Creole culture that is uniquely Haitian.

Fundamental to that merger and uniqueness is Haiti's national language - Creole (*Kreyol*). Born as a language of command between French-speaking overseers and African slaves with diverse linguistic backgrounds, it has evolved into a Haitian language, sharing its roots with both French and the language of African ancestors. Perhaps ten percent of Haitians speak French today. All Haitians speak Creole. It is not at all untypical for conversations that begin in French to transition to Creole once the ice is broken or the topic is truly engaged.

Haitian culture today is far from static. It continues to evolve, not just as a function of its French and African roots, but also as a function of the country's larger presence on the world stage and, most importantly, as a function of the influences of its sons and daughters living overseas, particularly in the English-speaking United States.

### Literature

Haitian literature is still almost exclusively written in French, though efforts are being made to translate works into Creole and to establish Creole as a literary language with its own novels, poems and plays. Haiti has had some writers of international status, including Jean Price-Mars, who evaluated African heritage in Haitian culture; Jacques Roumain, a poet, essayist and novelist; Jacques-Stephen Alexis, who wrote novels about Haitian society; and Rene Depestre, noted for elegant French poetic creations. As an indication of the cultural interplay today between Haitians at home and Haitians overseas, however, the best known contemporary Haitian writer, Edwige Danticat, was transplanted to New York from Haiti as a child. Her works often examine the impact of her Haitian roots on her experience of emigration and being an immigrant.

For a society with a high degree of illiteracy, Haiti supports a number of publishing houses in Port-au-Prince. Self-published works are common. It is said that Haiti publishes a higher number of books per capita than its more literate Caribbean neighbors.

## Art

Haitian paintings have received worldwide attention since the 1940s when a school of naive or primitive artists developed in Cap Haitien and Port-au-Prince. Multitudes of artists - mostly self-taught - have followed in the footsteps of Haiti's primitive masters, whose paintings grace the walls of top rate museums and galleries around the world. The primitive influence is also seen in wood carvings, metal sculpture and tapestries, particularly the sequin studded vodou flags that have become very popular in recent years. Although formal galleries abound in and around Port-au-Prince, individual artists often display their wares on street corners and by hotels. It is not uncommon to see an artist walking through a crowded street carrying a painting. Haiti's streets are routinely decorated with ambulant art, as one of the most vivid expressions of the country's artistic tendencies is seen on the multitude of brightly painted passenger vehicles - the crowded *camionettes* and *tap-tap* - each bearing a different motif and message according to the interests and expressions of the owner and the artist.

## Music

Haiti's *camionettes* and *tap-taps* are also known for blasting pulsating rhythms of Haitian music as they move slowly in congested city traffic. Prospective passengers often listen before they decide to climb onboard, preferring to choose a vehicle vibrating with their favorite rhythm - be it *kompa* or *rasin* - or their favorite musician or band - be it Sweet Mickey, King Posse, Koudjay, Boukman Eksperyans, or one of a multitude of others. Or, showing an eclectic taste, prospective passengers may wait for a vehicle blasting out ragga dance hall music or reggae from neighboring Jamaica, or the sounds of Haitian and Haitian-American rappers, particularly the Haitian refugee - or '*Fugee*' - from New York City, Wyclef Jean, giving their verses in varying mixtures of Creole and English.

The interplay of music between Haiti and Haitian-Americans, though a relatively recent development, has its roots in the travels of Haitian orchestras to New York beginning in the 1960s, shortly after large numbers of Haitians began arriving in the United States. The concert path expanded to other venues, such as Boston and South Florida, and today goes up and down the US east coast. Over the course of time, individual musicians - and complete bands - made the US their home. Now they are joined by a new generation of Haitian-American musicians - sometimes from their own families - who have begun reversing the migratory path by traveling to Haiti to perform.

Haiti's music - and musical culture - has been, and remains, diverse. Without a doubt, the single greatest influence on Haitian music has been the drum - and drumming - brought over from Africa. In the aftermath of the Haitian revolution, the drum that had been silenced by the French slave owners could be silenced no more. In addition to the pulsating urban rhythms already mentioned, Haitian music includes the quieter, acoustic sounds from the countryside, where accordions, guitars, drums and bamboo flutes take over from electric instruments that cannot

find electricity. It also includes the slow Haitian meringue sounds popular along the border, in the north of Haiti, and with an older generation.

### Recreation

Although the intense poverty of Haiti can rob its citizens of opportunities for relaxation and recreation, numerous recreational occasions and activities do exist, and elicit the participation of millions of Haitians. Foremost among them is the Lenten carnival - widely celebrated annually regardless of whatever else may be going on in the country. Intensely held over the three or four days preceding Ash Wednesday, carnival itself is preceded by weeks of small street parades led by *ra-ra* bands in cities, towns and villages throughout the country. Especially during the summer months, Haitians travel around the country to villages celebrating their patron saint day. Manifesting the syncretism that has occurred between Catholicism and Vodou, village festivals usually also have a vodou undercurrent. In sports, most Haitians are true fanatics of the national sport - soccer. Time stops in homes with a radio or a t.v. when a soccer match is broadcast. Villages around the country with only a small stony field to offer are worn clean of grass by dedicated players. Finally, a different kind of sport - cockfighting - is popular throughout the countryside, particularly to gambling enthusiasts. \_

Culture *Self-study questions*

1. Haitian cultural expression, particularly at musical and sporting events and during carnival, tends to be highly participatory, with even the most distant spectators displaying animated expressions of involvement. How do you see this as different from participation at US cultural events? How will you feel in this highly participatory cultural environment?
  
2. Often, Haitian bands are quite large, with a number of ‘hangers on’ who seem to do little than play a hand-held percussion instrument. In view of the steady and large migratory flow of musicians to and from Haiti, coupled with the fact that over time many Haitian musicians have found ways of remaining in the US, what will be your approach to trying to determine whether or not a visa applicant is an essential member of the band or more of a member of the band’s entourage?
  
3. A Haitian craftsman once told me that it seems that the more difficult things get in Haiti, the more beautiful, creative, and fanciful are the expressions of its craftsmen and artists. Why do you think this may be the case?
  
4. How do you think Haiti’s African heritage has influenced various aspects of the country’s cultural expression? Why do you think Haiti’s cultural expression is much more deeply African than that of other Caribbean countries?

## Social Issues

The first thing often told to foreigners by Haitians is that Haiti is really two countries: the Republic of Haiti and the Republic of Port-au-Prince. This is a short hand way of explaining that their homeland has been a country of great social and economic division and dichotomy. By the 1980s, these divisions had become so systematized and marked, that leading scholars referred to the country as one practicing a form of “Caribbean apartheid.” As these dichotomies evolved, distinctions of social status had become so pervasive that they touched on such factors as location or geography, language, religious practice, health care, skin and facial features, and marital status. The social dichotomies of Haiti even reached into how one’s status was identified on a birth certificate.

As a result of this dichotomization of society, an individual fell into the category of being someone who was either “official” or “tolerated.” Some of the specific dichotomies of Haiti’s Caribbean apartheid, with the ‘official’ feature first have been:

- Location/Geography: *moun lavil* (city dweller) - *moun andeyo* (hick)
- Language: French - Creole
- Religious Practice: Catholic - Vodou
- Health Care: Hospital/Western Medicine - Healer/Traditional “Leaf”  
Medicine
- Skin/Facial Features: Light/European - Black/African
- Marital Status: Marriage in Church - Informal Union (*plasaj*)
- Birth Certificate: Citizen (*citoyen*) - Peasant (*peyizan*)

That Haiti became a place of such rigid contrasts is not surprising when one considers the social divisions during the colonial period, based heavily on race. In Haiti, by French practice, individuals, if not ‘pure’ black or ‘pure’ white, were neatly fit into one of 64 categories according their racial mix going back at least four or five generations. Strict rules of behavior, exclusions, inclusions and privileges that even included prescribed articles and colors of clothing were applied according to one’s racial admixture. With independence, only one element of this racial hierarchy disappeared - that at the very top, as the whites were expelled. All else, with its systems of inclusions and exclusions, remained in place.

Leaders for social change in Haiti in the 1970s and 1980s, focused on the necessity of changing the poor’s own deeply engrained, negative and inferior perceptions of themselves - a kind of blame the victim complex. Church leaders at this time spoke of the need to restore the poor’s sense of personal dignity and self-worth. By the late 1980s, the change sought by social leaders had begun. The ouster of the Duvalier dictatorship followed by a new constitution that validated the legitimacy of Creole and empowered all Haitians with an equal right of inclusion at the ballot box put important change in motion, threatening the status quo. That change was starkly represented in 1991 by new popularly elected leadership that used Creole in official functions

and that ultimately did away with the dual birth certificate system. For those on top of the system, this kind of change was perceived as more than a menace. In 1992, a respected Haitian sociologist attributed the violent military coup d'état that ousted President Aristide to the fact that those accustomed to managing the country toward their own well-being could not accept the fact that the vote of their servants counted the same as theirs.

Social change may be the slowest of all change. As a rule, throughout Haitian history, the poorer, blacker, and less urbane an individual, the lower his or her status. The richer, lighter, and more urbane an individual, the higher his or her status. In Haiti, today, the engrained social and economic dichotomies, while not changing much over 20 years, have nevertheless begun to change. Those whose lives have improved due to the changes are not content to go backward. As such, conflicts over issues of social change have been at the root of much of Haiti's stormy political and economic history in the recent past.

### Women

In Haitian households, women are sometimes referred to as the *poto mitan*, or weight bearing center post, of society. Particularly in poor and middle class families, it is the woman who takes responsibility for raising the children, tending to health and education issues, engaging in commerce, and managing the household and family finances. In upper class families, it is usually the woman of the house who manages the servants. In rural areas, women and men play complementary roles, with men assuming primary responsibility for farming and women assuming primary responsibility for marketing.

Women of all walks of life have played critical roles in recent years in the country's public life. A woman who served as Provisional President, Supreme Court Judge Ertha Pascal Trouillot, led the country to its first free and fair elections in 1990. For years, women have held top management positions in the country's private banks. Women's associations and organizations have been active in urban and rural Haiti for decades. Women of all classes played key roles in fomenting social change initiatives since the 1980s. In recognition of the important role played by women in Haitian society, the government created a Ministry for Women's Affairs for the first time in 1995.

### Civil Society

During the post-Duvalier era, this expression has come into widespread use, but its use varies widely according to the diverse points of reference of those who employ it. As a rule, organized civil society refers to the array of organizations that are not of the government. Civil society organizations can be rural or urban; local, national or international; narrow or broad in their constituency, aims, and activities. As a rule, they are durable, democratically structured, and formally organized, and, as a result, often seek and receive some form of formal legal recognition. This distinguishes organized civil society from more informally organized groups and associations that tend to emerge in response to specific contexts and then melt away later.

Hence, this also distinguishes most civil society organizations from Haiti's so-called popular organizations, which tend to be less formally organized and lack democratic structure. Such popular organizations as the gang-type *zenglendo*, *san maman*, and *chimeres* have a tendency to engage in non-democratic or criminal activities, and either ascribe themselves - or are ascribed to - political and other leaders or groups. In Haiti, organized civil society is commonly composed of professional associations, trade unions, business and trade associations, poor people's organizations, women's associations and groups, small farmer's associations and grassroots groups, neighborhood and community associations, and church-sponsored associations or groups.

Organized civil society at Haiti's grassroots became extensively developed starting in the 1970s, when associations and organizations comprised of poor people throughout rural and urban Haiti began to be formed, in large part as a result of organizing efforts undertaken by the Catholic Church. With the fall of Duvalier, these associations grew and multiplied, in some cases to regional or national organizations, including several peasant movements. As this happened, they became outspoken leading forces for social, economic, and political change, developing alliances and liaisons with others seeking this goal, including some rising populist political leaders.

Haiti's grassroots civil society organizations played an instrumental role in the election of Aristide in 1990. With Aristide's election, numbers of civil society leaders either left their organizations to join government efforts, or became clearly allied with them. As a result, grassroots civil society organizations were at the brunt end of reprisals meted out by the Haitian army and its allies following the late 1991 coup d'état. Between 1991 and 1994, the grassroots component of Haiti's organized civil society suffered and was weakened considerably. It has still not fully recovered from this traumatic period.

In more recent years, Haiti's organized civil society, like the society writ more large, has tended to become politically polarized. In the past several years, certain elements of the country's civil society have attempted to play the role of broker of political disputes, but without great success, at least in part because of this polarization. As Haiti's political landscape became more complex after 1986 and again after 1994, and civil society became a more high profile actor in the country's political life, major elements of that element of Haitian society became politicized.

### Education

Education is officially compulsory for children between the ages of seven and 13. Because of lack of school facilities and staff, the difficulties confronted by many families to cover school costs for all children in the family, and the occasional need for children to stay away from school and work at home, only an estimated 50 percent or lower of the children in this age group actually attend school. Estimates of adult illiteracy range from around 80 to 40 percent. One reason for this range is due to the fact that increasing numbers of Haitians are becoming at least partially literate in Creole, for which there has been a standard orthography for only 20 or so

years. Measuring literacy rates in Creole is a very inexact science. Most schools around the country are either church-run or private schools, of extremely varying quality. Public schools tend to be under-equipped and ill staffed. Haiti's curriculum traditionally has been based on a French model. The leading private schools, in Port-au-Prince, have produced an educational elite, while most of the society remains un- or under educated. Haiti's State University is small and underdeveloped. A number of private universities, including a Catholic university, have been established in recent years. Haitians who can afford to send their children to the United States, Canada, or France to attend university.

### Health and Welfare

Haiti has the highest rate of infant mortality in the Americas, and the lowest average annual adult life span. Malnutrition is rampant and diets are notoriously insufficient. Infectious diseases abound because of improper shelter, unsafe water, unsanitary living conditions and limited health care services. Malaria is quite common. The incidence rate of AIDS, now estimated at 5% of the population, is among the highest outside of sub-Saharan Africa. In recognition of the growing problem of AIDS in Haiti, the country has become one of only two Caribbean countries slated for inclusion in the special \$15 billion international AIDS assistance program recently authorized into US law. The country suffers from a chronic shortage of health care personnel - in both cities and in rural areas. Many rural areas are served only by international medical missions of volunteer doctors that visit infrequently. Typically, government's track record for providing for the health and welfare of its citizens has been miserable.

### Labor Force

Statistics on Haiti's labor force, like many statistics about Haiti, are difficult to gather. An estimated 60 percent of Haitian workers remain engaged in farming despite a marked shift away from that sector by migrating farm families in recent years. Services and government employ the bulk of the remaining labor force, with manufacturing following. Unemployment is estimated at between 60 and 70 percent. Some two thirds of Haitian workers participate in the country's informal economy. Given the limited opportunities for employment in Haiti, significant numbers of laborers have sought work in the Dominican Republic or elsewhere, including the Bahamas. As many as 500,000 Haiti and 'Dominico-Haitians' now reside in the Dominican Republic.

Haiti's minimum wage, fixed in Haitian gourdes, is now worth the equivalent of little more than \$2.00 a day. Since 1986, the exchange rate of the gourde to the US dollar has risen from 5:1 to as high as 40:1 in recent times. The minimum employment age in all formal sectors is fifteen years. In rural areas, children enter the agricultural economy at a young age, working on the family farm. In urban areas, children enter the informal economy at a young age, engaging in activities that can augment family income. Some children, particularly those sent to the cities from rural families ostensibly for their education, are used as low paid or unremunerated servants, especially in middle and lower class households. Called *restavek* (stay with), these

children can be subject to the kind of abusive treatment often experienced by human beings who are trafficked.

### Religion

The official religion of Haiti is Roman Catholicism, but the constitution allows the free choice of religion. Some 75 percent of the population is Roman Catholic, and about 15 percent is Protestant. The Catholic clergy is now strongly “Haitianized” through the appointment of priests, nuns and bishops. During the 1980s, the groups of clergy pushed the Catholic Church toward playing a high profile and progressive social and political role, through its radio station, leadership training programs and national adult literacy program. When he was elected President, Jean-Bertrand Aristide was a member of Haiti’s Catholic clergy. He has since left the church. In recent years, the social and political role of the Catholic Church has diminished. However, the Conference of Catholic Bishops, as the presiding body of Haiti’s Catholic church, occasionally issues statements related to national social, economic and political issues. The Vatican is represented in Haiti by a Papal Nuncio, who also serves as the ceremonial head of the Haitian church.

A majority of Haitians are believers of vodou, a religion whose gods (*loas*) are derived from West African religions. For many years, clergy in Catholic and Protestant churches spoke out against vodou. Most practitioners, however, do not find any contradiction between vodou and Roman Catholicism. Catholic antipathy toward vodou has cooled considerably in recent years. A great deal of religious syncretism has occurred between the two religions. Francois Duvalier used certain vodou symbols extensively during his repressive rule in order to surround himself with a cloak of power. In early 2003, the Haitian state, for the first time ever, granted formal recognition to vodou as an organized religion.

A number of Protestant sects are found in Haiti. Methodists, Episcopalians and Presbyterians established churches in Haiti in the early 19th century. New sects, including Baptists, Seventh-Day Adventists, and Mormons came to Haiti during and after the US Occupation. In 1999, leaders of several more conservative Protestant churches created a Christian political party (MOCHRENA). A few Haitians have embraced Islam, evidenced by the presence of a mosque in Port-au-Prince.

Social Issues *Self-study questions*

1. As a country once labeled by many as having a form of “Caribbean apartheid,” Haiti begs comparison with South Africa. What is it about Haiti’s social structure led it to be susceptible to being compared with South Africa. What developments in Haiti over the past 15 years indicate that it is either making a transition away from its own version of apartheid or failing to do that?
  
2. Since independence, the Haitian state has not developed or enacted a social contract with the Haitian people. Investments by the state in such key contract areas as education, health, and welfare have been minimal. Still today, Haiti has a government that describes itself in populist terms and presents itself as seeking to develop and enact a social contract with the nation. What do you see as the principal obstacles to the Haitian state developing and enacting out a social contract with the Haitian people?
  
3. What might be the social - and political - implications of the formal recognition as a religion recently granted to vodou?
  
4. A recent development in Haiti responding to Haiti’s political impasse has been the emergence of an organization portrayed as an umbrella group of some 164 civil society organizations that will help work toward a solution of the impasse. While many have responded favorably to this development, others have responded negatively or skeptically, expressing doubts about its sincerity and objectivity. What criteria would you use to determine whether-or-not such an umbrella group claiming to be representative of civil society is indeed representative? What criteria would you use to try to determine the umbrella group’s sincerity, objectivity, and potential for making a positive and lasting contribution to crisis resolution?
  
5. *Restavek* has received a great deal of attention lately as a social issue, with some claiming that the practice is an insidious form of human trafficking and slavery, while others claim that in Haiti’s desperate reality it is simply a strategy used by the poor to try to gain access to education for their children and, hence, offer them a future. While there are cases of abuse, the latter group argues, one should not throw the baby out with the bath water of this traditional practice. What social reforms might occur in Haiti towards dealing with the problem of *restavek*? Which actors should play the lead roles and what should those roles be?

## Foreign Affairs

In recent years, Haiti has occupied the world stage quite disproportionate to its small size. This was particularly the case between 1991 and 1996 when the Haitian army's coup d'état resulted in international sanctions, intense multilateral diplomacy, a refugee crisis, and ultimately, a military intervention and peacekeeping operation sanctioned by the United Nations and led by the United States. The intense attention given to Haiti at this time also included active participation in crisis resolution by the Organization of American States, member states of the Caribbean Community (CARICOM), and a grouping within the UN referred to as the Friends of Haiti, composed principally of Argentina, Canada, France, the United States, and Venezuela. During UN peacekeeping operations in Haiti between 1994 and 1999, the governments of 34 countries contributed personnel to the relatively small Caribbean country.

Previously, Haiti had received some prominence on the world stage, mostly as a result of its successful revolution in 1804 and especially by other oppressed populations in the Western Hemisphere and Europe. Governments of slave holding countries, however, either ignored or decried Haiti in the first half of the 19th century. The advent of the US Civil War allowed President Lincoln to grant US recognition of the nation of free slaves, more than 50 years after its independence. The US and Europe's great powers became intensely focused on Haiti in the early 20th century mainly because of the country's strategic location. In 1915, the US invaded Haiti, in part to pre-empt a similar German action, and occupied the country for 19 years. Subsequently, and until the 1980s, Haiti was fairly isolated from the world community, stemming from its cultural and linguistic uniqueness, its economic underdevelopment, and international condemnation of the Duvalier dictatorship.

### Relations with the United States

Haiti has maintained a long-standing relationship with the United States, its northern neighbor and primary trading partner for both imports and exports. The US is also Haiti's most important single source of bilateral foreign assistance and the primary target for Haitian emigration. Many US non-governmental organizations and religious groups are active in Haiti. The Haitian private sector is closely tied to the US economy.

Diplomatic interest by the United States in Haiti has been uneven. Washington's late 19th and early 20th century interest in its neighbor arose chiefly because of the country's proximity to the Panama Canal and Central America. Haiti borders the Windward Passage, a narrow waterway on which maritime traffic could be easily disrupted. During and after World War I, the US occupied Haiti and a number of Caribbean and Central American countries. During the Cold War, Washington viewed Haiti as an anti-Communist bulwark, partly because of the country's proximity to Cuba. Francois Duvalier exploited US hostility toward Cuba and its fears of communist expansion in the Caribbean basin in order to deter the US from exerting excessive pressure on his own dictatorship.

Since the 1980s, US interest has been particularly focused on curbing illegal Haitian immigration. Washington has also viewed Haiti as a transshipment point for narcotics destined for US markets. Given the country's poverty, legacy of public sector corruption, and underdeveloped public security capacities, Haitian coasts today are particularly vulnerable to international traffickers seeking to land their product there for transfer to proximate US ports of entry, notably Puerto Rico and Florida.

From the 1970s until 1987, US assistance to Haiti grew. Between 1987 and 1994, however, the flow of aid to Haiti was disrupted on several occasions, notably during the 1991-1994 period of defacto military rule. Following the intervention and restoration of legitimate government in 1994, the US added a pledge of \$458 million to the \$2.342 billion pledged by other bilateral and multilateral donors as part of a five year plan for the rehabilitation and development of the country. Unfortunately, little more than half of those funds were disbursed over that period, largely on account of the inability of the Haitian government to meet disbursement conditionalities. Since the political turmoil of 1999 and thereafter, US bilateral assistance has diminished, channeled principally through non-governmental organizations. Aid to the government of Haiti has been minimal, ceasing altogether following the May 2000 election controversy.

#### Relations with the Dominican Republic

The second-most important country to Haiti is the neighboring, the Dominican Republic (DR). An enormous amount of trade, much of it informal, crosses the border, mostly going toward Haiti. The Haitian economy has proven to be a desirable market for Dominican products. During the 1991-1994 period of international economic sanctions against Haiti's military government, the flow of goods into Haiti from the DR provided a lifeline for the defacto rulers. In terms of long-term impact that flow facilitated sustained market penetration of Dominican products as never before.

Until recently, political relations between Haiti and the DR have been strained. Since the 1920s, large numbers of Haitians crossed into the DR both informally and under contract in search of work. The resultant, perceived "blackening" of the Dominican population motivated dictator Rafael Trujillo to carry out a notorious massacre of Haitians in 1937.

From the early 1950s until 1986, Haiti provided the DR with cheap, mostly agricultural, labor through formal intergovernmental exchange. With the issue of the status and treatment of those laborers a prickly one between the two countries, that arrangement ceased with the ouster of the Duvalier regime. The troublesome issue of the recruitment and treatment of laborers has not gone away, however. In 1991, for example, US Congressional hearings focused on the abusive treatment of Haitian children in Dominican cane fields. Periodically, particularly under former Dominican President Joaquin Balaguer, Haitians were periodically rounded up and transported back to Haiti.

Although the issue of Haitians in the DR remains a difficult one, since the mid 1990s, official governmental relations have improved. The two governments now explore cooperation on such cross-border issues as the environment, drug trafficking, and economic development. Haitians continue to flow into the DR, pushed by conditions at home and pulled by opportunities in the DR, particularly, in recent years, in its construction sector. Today, an estimated 500,000 Haitians or people of Haitian parentage live in the Dominican Republic.

### Relations with Other Countries

Ties with other Caribbean nations, limited until 1995, became more robust thereafter when Haiti restored relations with Cuba and then became a full member of CARICOM. Historically, Britain and France strove to limit contacts between their Caribbean dependencies and Haiti. Haiti's cultural and linguistic distinctiveness also prevented close relations with Caribbean neighbors. Haitians migrated to Cuba to cut cane for decades prior to the advent of the Castro government. When Castro came to power, many Haitians remained in Cuba. Today, Creole is Cuba's second language with many Cubans of Haitian descent living in the eastern half of the island.

Considerable Haitian labor migration to the Bahamas occurred in the 1970s and 1980s. Since the late 1990s, relations between Haiti and the Bahamas have become strained over the continued migration of Haitians to the Bahamas. Subsequently, the Bahamas enacted programs for the return to Haiti of undocumented and new immigrants. Other Caribbean relations have not been strained.

In 1994, CARICOM troops were the first international contingent to land in Haiti. In more recent years, CARICOM governments have been particularly active in pushing the OAS to work aggressively toward a resolution of Haiti's political and economic difficulties. Haiti's relations with Spanish-speaking countries in Central and South America, limited historically, have expanded in recent years, as Haiti became part of a broader movement away from military rule in the hemisphere. Relations intensified in the 1990s as Venezuela, Argentina and Chile played leading roles in the international effort to restore democratic governance to Haiti following the 1991 coup.

Other countries important to Haiti include the primary donor countries of Canada, France, Germany and the Republic of China (Taiwan). Relations with France also remain important on account of historical and cultural ties. Increasingly, European assistance to Haiti has been coordinated under the auspices of the European Union, which by 1998 was the largest single donor of aid to Haiti. Haiti has enjoyed a supportive relationship with Canada, particularly the French-speaking province Quebec, home of a significant number of Haitian émigrés.

Haiti's membership in international and multilateral organizations includes the UN and its associated organizations (Haiti was a founding member), the OAS, the Inter-American

Development, the World Bank, the Lome Convention, the International Monetary Fund, and the World Trade Organization.

### Foreign Affairs Self-study Questions

1. In the aftermath of the successful military intervention of Haiti in 1994, the consensus among US actors was that the US would not engage in an exercise of 'nation-building' in Haiti - in spite of the welcoming atmosphere given by most Haitians, but rather it would execute an exit strategy based largely upon an electoral calendar. In retrospect, what could - and should - have been done differently?
2. Some have come to think that 'with friends like these, who needs enemies,' with regards to the role international actors have played in Haiti at various times since the ouster of Duvalier in 1986. In retrospect, what have been the strengths - and the weaknesses - of international involvement in Haiti over the past 17 years? How would you address the weaknesses?
3. One salubrious effect of the 1991 coup d'etat is that it resulted in bringing the country out of its isolation, particularly among its Caribbean neighbors. How have developments over the past 10 years or so validated this statement? What do you see as the direction of Haiti's relations with its various Caribbean neighbors?
4. One of Haiti's special Caribbean neighbors is the country with which it shares a border - the Dominican Republic. In spite of the upswing in relations between the two countries over the past 10 years, there remain many obstacles to the relationship, with immediate and longer-term challenges to be confronted - individually and together. Outline the improvements in Haiti-DR relations over the past 10 years and indicate the obstacles. What are some actions that can be taken now to begin confronting both the immediate and long-term obstacles in those relations? What positive role can the US play in this regard?
5. Some characterized the 1994 UN intervention in Haiti as a US move wearing a UN fig leaf. How do you view the relationship today between the US and the OAS with regards to Haiti, particularly regarding the latter's involvement in seeking a solution to Haiti's enduring political crisis?
6. One long-stated foreign policy objective of the Aristide government is for Haiti to be treated as a partner among equals in its international relationships. Why has the Government of Haiti had to make this a stated objective of its foreign policy, and what are the chances that it will succeed?

## Haitians Overseas

Large scale, non-agricultural emigration from Haiti began in the 1950s, with France, Quebec in Canada, the United States and, to a lesser extent, French-speaking Africa as the principal destinations. At first, those leaving were members of Haiti's educated upper and middle classes, seeking a better standard of living abroad. Skilled professionals migrating to Africa helped to establish some of the first United Nations technical missions there. Migration to the US of doctors, lawyers, teachers, engineers, and others was principally to New York and, to a lesser extent, Boston and such other cities as Chicago and Philadelphia. Not long following the rise to power of Francois Duvalier in 1957, Haiti's "brain drain" grew in size. Opportunities for professional advancement in Haiti, already limited, decreased as political repression increased.

During the 1960s, semi-skilled Haitians from the middle and lower urban classes joined the exodus, leaving in increasing numbers. The flow continued during the 1970s and 1980s, in the US principally to the New York City area, and in Canada and France principally to Montreal and Paris, respectively. In the US, as increasing numbers of Haitians established themselves in New York, family members and friends from back home visited them. Between 1956 and 1985, the US government issued over one million entry visas to Haitians. It is estimated that some 50 percent of these visa holders overstayed their time with the hope of establishing permanent residence in the US

A new phase of migration from Haiti to the US began in 1972 when several sailboats carrying Haitians arrived in South Florida. Participants in this new migration phase - called "boat people" - were more likely to be poorer Haitians who could not afford the exit visas or the airplane tickets of the "Boeing people," or better off Haitians who continued to migrate further north. Many boat people were from rural areas. They sold valuable possessions, including farm animals and land, to raise the amount charged for the 700-mile trip to Florida. When they arrived in South Florida they did not, as a rule, travel very far from their point of entry. As a result, from the 1970s, Haitian enclaves in Miami and nearby South Florida cities began to grow in number and size.

During the 1970s and 1980s, as political repression continued and the country sank deeper into poverty, some 50,000 to 80,000 migrants arrived in Florida. In 1981, up to 1,000 Haitian boat people arrived in South Florida every month. Some arrived directly from Haiti while others reached indirectly, usually through the Bahamas. An unknown number perished at sea. Incidents of Haitian bodies washing up on South Florida beaches were not uncommon.

Haitians seeking entry into the US were viewed by the government as 'economic migrants,' and, as such, usually returned to Haiti when intercepted at sea by the US Coast Guard under the terms of an interdiction agreement between the US and Haitian governments. Many Haitians who arrived in the US managed to slip past authorities. Those who did not were often detained in the Krome prison facility in South Florida. Being black, mostly poor, and speakers of Creole

- a largely unknown language, placed Haitian immigrants in a difficult position in the United States. During the 1980s when the US Center for Disease Control named Haitians as one of several source populations for the new and frightening AIDS disease, the US Haitian population experienced particularly difficult times.

In 1990, the flow of boat people temporarily ceased following Aristide's election and the widespread expectations that it would lead to decreased repression and increased economic opportunity. By late 1991, however, Haitians were once again taking to the high seas and heading north, in larger numbers than before on account of the renewed violence and repression in Haiti that came with the military coup that ousted the Aristide government. During late 1991 and early 1992, some 37,000 Haitian boat people were interdicted on the high seas by US authorities. Thousands more fled in between 1992 and September 1994, as the violence and repression continued. With the removal of the military regime that September, however, the outpouring came to an almost complete halt. When economic and political conditions once again began to deteriorate in Haiti after 2000 and hope for improved conditions diminished, a small, but steady stream of boats were once again being interdicted in the high seas or discharging their poor, desperate passengers on one of South Florida's beaches.

The Haitian Diaspora in the United States continues to grow by more than the occasional boatload of refugees who manage to elude government authorities. Family and friends of Haitians already established in the US continue to arrive by air, many seeking permanent residence. Most importantly, the US Haitian Diaspora is growing through its own internal growth, as a second or third generation is born and raised within Haitian-American families throughout the United States.

In the past two decades, Haitians have moved beyond the traditional destinations of metropolitan New York City and South Florida, branching out to other cities up and down the East Coast and beyond. Presently, for example, Atlanta is experiencing a significant boom in its Haitian population. As they have become established in the US, Haitian-Americans have joined the ranks of other US immigrant populations that sought opportunity where it was found. Current census data indicate varying numbers of Haitian-American populations in all 50 states.

Haitian-Americans have begun to make a discernible mark as a US immigrant group, both in terms of their numbers and their talents. Several currently hold elected state office in Florida and Massachusetts, and others serve as mayors and city council members in South Florida communities. As increasing numbers of Haitian-Americans join the US political process, their voice to influence US policy toward and programs in Haiti grows louder. Haitian-American physicians, entrepreneurs, philanthropists, entertainers, sports figures, diplomats, and community activists are all joining elected officials as leaders in their fields.

With the growth of Haiti's US Diaspora has emerged a two-way flow, with first, second, and even third generation Haitians returning 'home' to visit family and friends, and to get to know their roots. Many Haitian-Americans seek ways to reconnect to Haiti in a way that can

contribute to the country's development. The US Haitian Diaspora sends cash transfers to Haiti of at least \$600 million annually, an enormous sum and enormously important source of support for those who have remained in Haiti.

Parallel to the growth of the Haitian Diaspora in the US has been the emergence of interest by the Haitian government in "Haitians Living Overseas." As part of that interest in the so-called 'Tenth Department,' the government has begun to take steps aimed at attracting members of the Haitian Diaspora to Haiti in celebration cultural events, particularly the two hundredth anniversary of Haitian Independence throughout 2004, and as investors in the Haitian economy.

### Haitians Overseas *Self-study Questions*

1. Historically, the large-scale immigration of populations from any single country to the United States have had positive - and negative - impacts both in the sending country and the US destination. What are the positive and negative impacts - in Haiti and the US - of the considerable migration to the US of Haitians?
2. Many Haitian-Americans have expressed an interest in gaining voting rights in Haitian elections. To date, however, the Haitian government has not moved toward the exercise of that option. Why do you think this has been so, and what impact might Haitians Living Overseas have on the electoral - and political - process in Haiti?
3. The track record of Haitian-American investment in Haiti has been mixed. While many Haitians have tried to invest in the country, few have been able to sustain their investment. Why do you think this has been the case? What might be done to improve it?
4. In recent times, particularly when Jean-Claude Duvalier fled Haiti in 1986 and when Jean-Bertrand Aristide was elected in 1990 and then restored to office in 1994, some Haitians of the Diaspora endeavored to return home. Few ended up staying. What do you think this was the case? Can you foresee a time when significant numbers of Haitians in the Diaspora will try to return home again? If so, when and why; if not why, not? What conditions would have to exist in Haiti to attract large numbers of Haitians to return and to be able to remain in Haiti?
5. For the most part, over the past 25 years or so, Haitians have been characterized as 'economic migrants,' not 'political refugees.' Why do you agree or disagree with that assessment? How should people taking boats for South Florida be classified today?

## About the Author

Dr. Robert Maguire became the Director of Programs in International Affairs at Trinity College in Washington, DC in September 2000 following a career with the US Government as a specialist in Latin America and the Caribbean, grassroots development, democratization, and political economy. He is best known for his work on Haiti, which has spanned more than two decades, mostly as Caribbean Foundation Representative for the Inter-American Foundation (IAF). In 2000, Maguire accepted a temporary position at the Department of State as Haiti specialist in the Bureau of Western Hemisphere Affairs.

Dr. Maguire has also worked on Haiti issues as a visiting scholar at Johns Hopkins University and as the Director, since 1994, of the Georgetown University (now Trinity College) Haiti Program. Since the early 1990's, he has served as the Haiti Seminar Chair at the Foreign Service Institute. Among his publications are *Bottom-Up Development in Haiti* and *Haiti Held Hostage: International Responses to the Quest for Nationhood, 1986 to 1996*. He has traveled to Haiti more than 100 times and extensively within Haiti, and is fluent in Creole.

Maguire, a former Peace Corps Volunteer in Dominica, West Indies, has earned a Ph.D. in geography from McGill University, an M.A. in Latin American & Caribbean Studies from the University of Florida, and a B.A. in Social Studies Secondary Education from Trenton State College. At Trinity College he is responsible for the overall creation, development and administration of academic programs and curricula in international affairs, and teaches occasional courses in world geography, the Caribbean, geopolitics, and international migration.

## A Self-Study Guide

George P. Shultz National Foreign Affairs Training Center

School of Professional and Area Studies  
Foreign Service Institute

U.S. Department of State

The *Self-Study Guide: Indonesia* is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important Indonesian issues related to history, geography, culture, economics, government and politics, international relations and defense. This guide should serve as an introduction and a self-study resource. Indonesia is far too complex and diverse a society to be covered in any depth using only the text in this guide. The reader is encouraged to explore the questions and issues raised in the guide by referring to the books, articles, periodicals and web sites listed in the bibliography. Most the bibliographic material can be found on the Internet or in the National Foreign Affairs Training Center Library, the Main State Library, or the major public libraries.

The first edition of the *Self-Study Guide: Indonesia* was prepared by Dr Greg Fealy, a research fellow and lecturer in Indonesian politics at The Australian National University, Canberra, and a former C.V. Starr Visiting Professor in Indonesian Politics at the Johns Hopkins School of Advanced International Studies in Washington, D. C. He has also worked as an Indonesia analyst at the Australian Office of National Assessments. The views expressed in this guide are those of the author or of attributed sources and do not necessarily reflect official policy or the position of the Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and non-profit use only.

## THE LAND

Indonesia is the world's largest archipelagic nation. It stretches some 5,000 kilometers across the equator and comprises, according to a 2003 government survey, 18,000 islands and islets, about 6,000 of which are inhabited. These range in size from Kalimantan (Borneo), which is almost as large as Alaska, to tiny islands little bigger than a football field. The five main islands are Kalimantan, Sumatra, Papua (Irian Jaya), Sulawesi and Java. It also has 30 minor archipelagos. Indonesia's total area is 5,193,250 square kilometers, of which 2,027,087 square kilometers is land and 3,166,163 square kilometers is sea. It is the sixteenth largest nation in the world in land area.

Indonesia lies in a region of great geological instability. It sits astride three major continental plates – the Australian, Indian and Pacific – and has at least another 17 significant plate fragments within its borders. Tectonic forces result in frequent tremors and earthquakes. It also has high levels of volcanic activity. Most of Indonesia's active volcanoes can be found in an arc running from West Sumatra, down through Java and Bali, and terminating in the Maluku archipelago (Moluccas). Java, alone, has 112 volcanic centers, of which 15 are active.

Indonesia's chief weather pattern is that of the equatorial double monsoon (rainy season). The western monsoon brings heavy rain falls; the eastern monsoon brings a relatively dry season. The climate changes roughly on a six-month cycle. The wet season is from about November to March and dry season is from June to September. The intervening periods experience mixed weather conditions. Average temperatures in Indonesia are generally classified by geographical position: 28°C for coastal plains; inland and mountain areas 26°C; and higher mountain areas 23°C, depending on the altitude. Average humidity ranges from 70% to 90%.

The archipelago has abundant mineral wealth. It has tin, gold, copper and nickel in large quantities as well as extensive coal reserves. There are vast deposits of oil and gas, found in subterranean basins. The soils and agriculture of Indonesia vary enormously. In small areas of the archipelago, such as Bali, Java and north Sumatra, volcanic activity has produced rich soils capable of supporting intensive agriculture, particularly that of wet-rice production. Other parts of west and central Indonesia have less favorable agricultural conditions; the least fertile land is found in the east of the archipelago. The poorer regions usually have dry-field and swidden agriculture. Forests are another major resource. Indonesia has the second largest rainforest reserves in the world, after Brazil, but widespread logging in Sumatra, Kalimantan and Papua in recent decades has greatly depleted this resource.

The name 'Indonesia' is a combination of two Greek words: "Indos" (India) and "Nesos" (islands). Curiously, the term was first coined by an English anthropologist in the late nineteenth century and was picked up by "native Indonesians" studying in The Netherlands in the 1920s. It was then adopted by the nascent nationalist movement in the

late 1920s in preference to the other common non-Dutch term for the archipelago, “Nusantara” (Malay for “archipelago”).

## **THE PEOPLE**

Recent statistics put Indonesia’s population at somewhere between 203 and 230 million. In truth, no one knows the exact number of Indonesians, and most figures represent an informed estimate based on incomplete census data and statistical surveys carried out by government agencies. The most widely quoted and probably the most accurate figures are those from the Central Bureau of Statistics (BPS). The Bureau’s 2000 national census put Indonesia’s population at 206,264,595. In early 2002, BPS revised this figure upwards to 216.9 million. The World Bank estimated Indonesia’s population in 2002 to be 211.7 million. Regardless of the precise figure, Indonesia has the world’s fourth-largest population after China (1.274 billion), India (1.029 billion) and the United States (286 million).

Indonesia is ethnographically highly diverse. Scholars estimate that it has between 150 and 300 ethnic groups (depending on how they are classified). By far the largest ethnic group is the Javanese, who are thought to make up about 40% (85 million) of the total population. Javanese are concentrated in Central and Eastern Java. They are the most politically dominant of ethnic groups, with four of Indonesia’s five presidents being Javanese. The next largest grouping is the Sundanese of West Java who constitute about 15% of the population (30 million). Other major ethnic groups are the Madurese of East Java (6% or 13 million), the Minangkabau of West Sumatra (5% or 11 million), the Balinese (2.6% or 5.8 million) and the Bugis of South Sulawesi (2.3% or 4.8 million). Indonesia also has significant “foreign” minority communities (often referred to as *nonpribumi*, meaning “non-native”). The largest of these are the Chinese, who are said to number about three million, and the Arab community, most of whom are of Yemeni extraction.

Archaeological evidence suggests two major sources for Indonesia’s ethnic groups: Melanesian and Austronesian. The Melanesian (Papuan) migration began about 5000-7000 years ago and spread across much of the archipelago. Melanesians were later displaced in the western and central parts of Indonesia by Austronesians, a seafaring Mongoloid people from Taiwan or South China, who appear to have begun settling in the region from about 4000 BC. Little is known of the interaction between the Melanesians and Austronesians but it is thought that genetic mixing in many areas resulted in the modern-day ethnic diversity of Indonesia. The dark skin, curly hair and broad facial features of the Melanesians is more evident in eastern Indonesia, most notably in Papua, whereas the “Han”-like appearance of the Austronesians, including paler skin, Mongoloid eyes and straight hair, is apparent in western and central ethnic groups.

This racial legacy has also influenced the linguistic development of Indonesia. About 350 languages are present in contemporary Indonesia: 200 Austronesian and 150 Melanesian. The main local language groups are Javanese, Sundanese, Acehnese, Balinese, Sasak (Lombok) and Buginese (South Sulawesi). Since independence in 1945, Indonesia’s

national language has been Bahasa Indonesia, which is based on Malay but also has significant borrowings from Arabic, Dutch, English and Portuguese. Although there is no official policy to eradicate local languages and dialects, the use of these among the younger generations is in slow decline.

Indonesia's current population growth rate is 1.6%, one of the lowest in Asia. For much of the archipelago's modern history, however, the population grew at an extraordinarily fast rate. For example, in 1939, Dutch officials put the population at 70 million. This figure had blown out to 97 million in 1961 and by 1981, it was 155 million. Thus the population had more than tripled in 42 years. The figures for Java, which is about the size of Alabama, are even more striking. It was estimated to have about three million residents in 1800, 28 million in 1900, 41 million in 1961, 83 million in 1971 and 108 million in 1990. Today, Java has one of the highest population densities in the world: 945 people per square kilometer (the US has 30 people per square kilometer, Japan 317 and South Korea 409). Although Java forms just 7% of Indonesia's land area, it is currently home to about 60% of the nation's population. See Table 1 for information on the population distribution across Indonesia.

Life expectancy in Indonesia is 67 years, compared to 77 years in the US. Infant mortality is 42 per one thousand and maternal mortality during childbirth 395 per 100,000 births; these are among the highest in Asia. The official statistics for the number of HIV/AIDS sufferers is put at 52,000 (1999), though widespread under-reporting suggests that the real figure is far higher.

In terms of religious identification, Indonesia has the largest Muslim population of any country. In the 2000 census, 88% of Indonesians (about 191 million) declared their faith to be Islam. Indeed, there are more Muslims in Indonesia than in the entire Arab world. Some care is needed in interpreting this figure as all citizens are required to nominate one of five state-recognized faiths. Many Muslims may have only a nominal adherence to the faith. Other religious affiliations are: 6% Catholic (13 million adherents); 3% Protestant (6 million); 2% Hindu (4 million) and 1% Buddhist (2 million).

**Table 1: Population by Province (2000 BPS Census)**

	<b>Province</b>	<b>Population</b>
1	Nanggroe Aceh Darussalam (Islamic Region of Aceh)	3,930,905
2	Sumatra Utara (North Sumatra)	11,649,655

### Questions and Issues

1. Indonesia's ethnic diversity and dispersed archipelagic geography are often cited as reasons why the nation is vulnerable to fissiparous tendencies. Is this necessarily the case? Are there examples of other nations with similar ethnic and geographical features which have proven internally stable and socially cohesive?
2. A recent UN-sponsored report painted a bleak picture of Indonesia's environmental problems. It pointed to serious air pollution and contamination of ground water, accelerating depletion of forests and worsening shortages of potable water in many parts of the archipelago. Added to these problems were poor government monitoring and enforcement of environmental laws. Given Indonesia's population pressures and economic problems, is there any prospect of an improvement in the country's environmental outlook?

### HISTORY

<sup>1</sup> The central government has embarked on a program of partitioning Papua into three provinces: Irian Jaya (in the north); Central Irian Jaya and West Irian Jaya. Central Irian Jaya was proclaimed in Manokwari in early 2003 with little fanfare. West Irian Jaya was proclaimed in September 2003 and immediately sparked violent clashes between supporters and opponents of partition. Jakarta responded by suspending any further implementation of partition. Thus at the time of writing, the number of Papuan provinces remains uncertain, but it seems likely that by late 2004, Indonesia will formally have 32 provinces.

## Pre-colonial History

The Indonesian archipelago has had well developed and organized societies since the 7<sup>th</sup> century BC. Many of these early Indonesians lived in permanent settlements with irrigated rice fields, domesticated animals, and copper and bronze implements. They were animists who believed that all animate and inanimate objects had a distinctive life force or soul and that the spirit world had control over natural events. In the more fertile areas such as Java and Bali, towns and kingdoms began to develop based around wet-field rice cultivation (*sawah*). More elaborate social and religious structures emerged as society became more organized around intensive, systematized production of rice and other crops. In dry-field (*ladang*) agricultural regions, communities were more mobile and less socially organized.

The opening of shipping routes between South Asia and China around the 1<sup>st</sup> century AD and rising Indonesian participation in trade led to a spread of Indian cultural and religious ideas within the archipelago. Earlier historians believed that Indian conquerors, traders and missionaries had been primarily responsible for this Indianization of Indonesia, but more recent research points to local communities, and especially elites, initiating and encouraging this process. Undoubtedly as societies in the archipelago became more complex and wealthy, leaders were in need of more sophisticated concepts of kingship and state structure. Hindu, and later Buddhist, philosophy provided new forms of legitimacy and hierarchical organization. Rulers began to promote themselves as incarnations of Hindu deities and adopted rituals glorifying their position as intermediaries between the divine and profane worlds. Submission to the authority of the ruler came to be seen as essential to ensuring the material and spiritual wellbeing of society. By the 3<sup>rd</sup> century AD, Hindu and Buddhist kingdoms could be found across the western part of the archipelago. Despite the growing sophistication of state structures, political instability remained the rule rather than the exception, and the rapid rise and fall of states was a feature of the early centuries AD.

Larger, more stable kingdoms began to emerge from the 8<sup>th</sup> century. The most important of these was the maritime empire of Srivijaya, which was centered on the Palembang region in modern-day South Sumatra. The Buddhist Sailendra kingdom emerged in Central Java in the same century, a lasting monument of which is the massive Borobudur temple. The largest Javanese empire was that of Majapahit, which reached its high point in the 14<sup>th</sup> century under the rule of Hayam Wuruk. The last of the powerful Java-based pre-colonial states were the sultanates of Banten, in West Java, and Mataram, centered in Central Java. Islam came to the archipelago in the thirteenth century and was spread by traders, mystics (Sufis) and religious scholars. As with Hinduism and Buddhism, Islam brought new means of political legitimation as well as a strong legal code in matters of commerce – an important advantage in the trading communities in littoral regions.

## The Colonial Period

The first European power to have colonial ambitions in the archipelago was the Portuguese. They came to Southeast Asia in the early 16<sup>th</sup> century primarily seeking to

control the lucrative spice trade emanating from Maluku. After capturing the vital port city of Melaka, on the Sumatran side of the Malay peninsula, the Portuguese soon established fortified bases in various Moluccan islands and succeeded in gaining a large share of the spice trade. Portugal's successes in the region were short-lived; local forces proved militarily superior and the Portuguese were also under growing pressure from Dutch, British and Spanish forces.

The Dutch soon became the dominant colonial power in the archipelago. They defeated the Portuguese in Maluku in 1605, thus gaining substantial control of the spice trade, and established a fortified settlement at what is now Jakarta in 1617. This latter site, named Batavia by the Dutch, became the chief trading port for The Netherlands in the archipelago. Their paramount interest in the region was economic rather than political. The Dutch East India Company (VOC), which controlled Dutch operations in the archipelago, initially sought to avoid territorial conquests, regarding them as expensive and an unnecessary distraction from the core activity of making money. Over time, however, the Dutch became gradually involved in conflicts within "native" states, and increasingly sided with local rulers or aspirants who could best safeguard or promote their colonial interests.

During the late-18<sup>th</sup> and 19<sup>th</sup> centuries, the Dutch built a genuine colonial state, the Netherlands East Indies (NEI). As much as possible, they sought to leave in place the local aristocracy and traditional structures, thereby minimizing the cost and disruption to "native society and culture". Local rulers were, however, closely supervised by Dutch officials and colonial control over social, political and religious affairs was extensive. Compared to their British and French counterparts, the Dutch were half-hearted in their proclaimed commitment to a "civilizing mission". Education, health and welfare for the masses were neglected until the early 20<sup>th</sup> century and there was little political participation allowed for non-Europeans. For most of the colonial period, the Dutch were more interested in wealth extraction than they were "enlightenment". It is perhaps for this reason that Indonesians today have little warmth or sense of allegiance to the Dutch.

### Japanese Occupation, Independence and Revolution

The three years of Japanese occupation of Indonesia were a watershed in the archipelago's history. The Japanese began attacking areas in eastern Indonesia in early January 1942 and by March 8, had forced the surrender of all Dutch forces in the colony. Many Dutch fled the colony but those remaining were interned in camps. The speed of the Dutch military collapse destroyed earlier assumptions about European superiority and Indonesians looked on in distaste as many of their former colonial masters hastily departed the country.

The Japanese propaganda and mobilization campaigns were to have a profound effect on Indonesian consciousness. The Japanese popularized a strident anti-European ideology and promoted the ideal of "Asia for the Asians". Moreover, they provided military training and intensive political indoctrination to many hundreds of thousands of Indonesians and used nationalist Indonesian leaders such as Sukarno and Hatta to

promote anti-colonial and pro-Japanese views. They also allowed Indonesians to fill senior bureaucratic and military positions as well as offering the prospect of independence. After three centuries of Dutch restrictions and perceived paternalism and condescension, these policies had an exhilarating effect on many Indonesians. Japanese rule also proved oppressive and harsh, particularly for those who were suspected of not supporting the war effort. Especially during the latter stages of the war, there was widespread deprivation and growing social unrest. Despite this, Indonesians tend to regard the Japanese occupation less critically than they do Dutch rule.

In early 1945, the Japanese allowed prominent Indonesians to begin formal preparations for independence, including the drafting of a constitution. As the war entered its final stages, Japanese officials were determined that Indonesia would not be “returned” to The Netherlands as a colony. Accordingly, news of Japan’s surrender on August 15, 1945 was suppressed within the colony to enable Sukarno and Hatta to proclaim the establishment of an independent Republic of Indonesia on August 17. The new state was based on Pancasila (literally, “five principles”), that is: a belief in God; nationalism; humanitarianism; democracy; and social justice. This religiously neutral state philosophy was a defeat for Muslim groups which had wanted Indonesia to be an Islamic state.

The declaration of Indonesian independence was dismissed by the Dutch as invalid according to international law, and they immediately set about resuming control of their former colony. Initially the task of securing the archipelago fell largely to British and Australian forces, but by late 1945, large numbers of Dutch officials and troops began to arrive in Indonesia. It was widely expected that newly established Republican forces would quickly succumb to superior allied armies and that the Dutch would soon regain full control. But the Republicans fought with tenacity, often reverting to guerilla campaigns in areas where Dutch authority was re-established. These caused extensive disruption and made it almost impossible for the Dutch to ensure the security of rural areas and transport links. Also unexpected was the success of Indonesia’s diplomatic campaign to gain international recognition of its claim to independence. Key members of the educated elite, such as Sutan Syahrir, emerged as astute and articulate advocates of the Republic’s case in international fora. By 1948, international opinion was beginning to turn strongly against the Dutch, with the United States, Britain and Australia increasingly sympathetic towards Indonesia’s claim and critical of The Netherlands tactics in reasserting their authority. For their part, the Dutch were also realizing the difficulty and cost of taming the archipelago. Eventually they relented and sovereignty was formally transferred to the Republic on December 27, 1949. Despite this, Indonesians still regard August 17, 1945 as their date of independence.

### Parliamentary and Guided Democracy

From 1950 to 1957, Indonesia had a European-style parliamentary system. Governments required a majority in parliament and were answerable to it; the president’s role was largely ceremonial. The system proved unstable, with six cabinets in just seven years. The main political fault line was between what Herbert Feith called “administrators” and “solidarity makers”. The administrators had a technocratic and economically rationalist

approach to policy; the solidarity makers were more populist and favored greater government intervention in social and economic matters. This cleavage cut across secular nationalist and Muslim politics.

Growing public disillusionment with parliamentary politics and worsening regional unrest provided an opportunity for Sukarno and the army, both of which were seeking a greater political role, to press for a more centralized and authoritarian system. Sukarno called this “Guided Democracy” and he claimed that it was more culturally appropriate to Indonesia than Western-style “50% plus one” democracy. From 1957 to 1960, he and the army, with support from the rapidly expanding Indonesian Communist Party (PKI), gradually dismantled constitutional democracy and replaced it with a presidential, executive heavy system. Sukarno claimed that Guided Democracy brought together the three main streams within Indonesian politics and society: nationalism, Islam and Communism (encapsulated in the acronym “Nasakom”). In reality, communal tensions rose to dangerous levels throughout the early 1960s. This was especially true of the PKI on one hand, and the army and Islamic groups on the other.

An abortive coup launched by leftist middle-ranking army officers and small sections of the PKI on September 30, 1965, provided the spark which ignited massive intra-communal violence. The coup was quickly put down by the army, led by then Major-General Soeharto, one of the few senior commanders in Jakarta not kidnapped and murdered by the coup plotters. The army and Muslim groups blamed the coup attempt on the PKI and moved systematically and ruthlessly to eliminate communism as a force. Killing squads slaughtered up to 500,000 PKI members and suspected communists and several hundred thousand others were detained for long periods without trial. Communism was also banned.

### Soeharto’s New Order

When Soeharto first achieved national prominence following his crushing of the coup attempt, few expected that he would soon become president, let alone one of the longest-serving heads of state of the twentieth century. Prior to the coup, Soeharto had avoided involvement in politics and lacked many of the attributes found in successful political leaders. Unlike the charismatic and extroverted Sukarno, Soeharto was a dull public speaker, had not displayed any skills in political organization and was cautious and understated in manner. But it soon became apparent that he was a masterly tactician and manipulator of those around him. He gradually out-flanked Sukarno and eventually replaced him as president in 1967. He also moved methodically against his opponents and potential sources of dissent, either coopting them into his New Order regime through the use of rewards or punishing those who defied him. His leadership style within government was often likened to that of a Javanese sultan: ministers would have to compete among themselves for his attention and favor, and his method of running government was highly personalized. Ministers’ portfolios would often overlap, enabling him to play cabinet members off against each other. Displaying loyalty and subservience to the president was just as important as performing competently in one’s portfolio.

The hallmarks of the New Order regime were stability and development. Restoring Indonesia's ravaged economy became a key priority for Soeharto. He abandoned the leftist orientation of Sukarno's Guided Democracy and welcomed Western investment and expertise. He gave extensive powers to a group of technocrats, commonly referred to as the "Berkeley Mafia", to formulate and implement policies for economic rehabilitation and growth. The regime argued that political order was an essential pre-condition for economic recovery and set out depoliticizing society while entrenching the position of the New Order's electoral vehicle, Golkar. The number of "non-government" political parties was limited to eight in the late 1960s and these parties were forced into uneasy amalgamations to form just two parties: the Muslim United Development Party (PPP) and the secular-nationalist and Christian Indonesian Democratic Party (PDI). PPP and PDI were subject to tight electoral restrictions and constant regime intervention. Elections were highly orchestrated affairs designed to ensure the legitimacy of the regime. All public servants were obliged to vote for Golkar and the bureaucracy and the military often pressured communities to support the government party. In the six general elections of the New Order, Golkar gained sweeping majorities, its lowest vote being 61% and its highest 74%.

In the 1980s, the regime underwent a number of significant changes. Soeharto's personal domination reached its peak and there were few effective brakes on his exercise of executive power. Moreover, he began to indulge the increasingly avaricious tendencies of his family and close circle of cronies. This created tensions with the Armed Forces, as it found itself marginalized by the growing economic and political activities of the Soeharto family. The military's disaffection prompted Soeharto to shore up his support by cultivating Islamic community support. His regime had previously regarded Islam as a possible threat to its dominance and had firmly repressed it. From the late 1980s, Soeharto began making concessions to Islamic sentiment and appointing devout Muslims to senior positions, something he had been reluctant to do previously.

The Soeharto regime began to falter in the late 1990s. The Asian financial crisis of 1997 provided the trigger for a series of events which would eventually bring the president down. The value of the rupiah plummeted, many Indonesian companies were unable to repay their foreign debts, there was a run on banks, resulting in the closure of 16, and unemployment rose sharply. Amid all this, Soeharto, now 76, fell ill, causing widespread speculation as to his capacity to steer Indonesia through the crisis. Mounting student demonstrations from April 1998 and demands for the president to resign put the government under growing pressure. On May 21, after most of his senior ministers and the military withdrew their support, Soeharto announced that he would stand down. He was replaced the next day by Vice-President B. J. Habibie.

Despite the crisis which precipitated the New Order's demise, the regime's economic record was impressive. Indonesia averaged 7% growth from 1965 to 1980 and 5.5% growth from 1980 to 1990. Only Thailand had better growth in Southeast Asia during this period. There was also a consistent reduction in the levels of malnutrition and poverty from 1965 to 1997. Agricultural output also grew at 3-4% throughout this period, one of the highest levels anywhere in the Third World. By the late 1980s,

Indonesia had achieved self-sufficiency in rice production, something deemed impossible in the mid-1960s. Population growth was another remarkable achievement, with Indonesia shifting from one of the highest birth rates in Asia in 1965 (2.6%), to one of the lowest (1.5%) in the early 1990s. There was also a marked improvement in the quality of health and educational services. Against these positives, the regime presided over massive environmental destruction, widespread human rights abuses, endemic corruption and political stagnation.

### The Post-Soeharto Era

The catch-cry of the student protests which helped to unseat Soeharto in 1998 was “reformasi” (“reform”). The post-New Order has thus acquired the label “Era Reformasi”, a reference to the supposed implementation of sweeping political and economic reforms. There is much debate among Indonesians and foreign scholars regarding the extent of these reforms. In terms of legislative, electoral and constitutional reform, the changes have been significant. Most of the restrictions on the media and political parties were lifted within months of Soeharto’s fall. Indonesia’s first free and fair general elections in 44 years were held in mid-1999, with surprisingly little violence and intimidation. There have been a series of revisions to the original 1945 Constitution which have vastly improved the protection of human rights, provided a better balance of powers between the key institutions of state, introduced direct presidential elections for the first time in Indonesia’s history and eliminated unelected military and police representation from national and regional legislatures. A number of anti-corruption bodies have also been established, including the Wealth Audit Commission (KPKPN) and the Anti-Corruption Commission (KPK). The nation has also embarked on one of the most radical decentralization processes ever attempted in the world. Underway since January 2001, this policy will see extensive devolution of authority over political and economic affairs to the district level (i.e., largely bypassing the first tier of regional government, the provinces). The military has also been brought under a measure of civilian control.

Many aspects of the political and bureaucratic culture, however, have changed little. Corruption and cronyism are still pervasive and may even have worsened since the end of the New Order. Many political parties remain elite-driven and lack genuine grassroots participation. Few of the major human rights abusers and corrupt officials of the New Order have been successfully prosecuted (Soeharto’s son, Tommy, and key crony, Mohammad “Bob” Hasan, are two of the rare exceptions to this – both are serving long prison sentences). The justice system continues to be shot through with corruption; a majority of verdicts are decided by money rather than their legal merits. Added to these problems has been the emergence of new social blights such as bloody intra-communal conflict, particularly between Christians and Muslims, and rising vigilantism.

Of the three presidents of the post-Soeharto era – Habibie, Abdurrahman Wahid (popularly known as “Gus Dur”) and Megawati Sukarnoputri – only Habibie is likely to be remembered by historians as a significant reformer. An eccentric but intellectually gifted aeronautical engineer, Habibie strived to shake his reputation as Soeharto’s

“golden boy” by embarking on a whirlwind of legislative reforms. Many of the above-mentioned reforms were initiated by the Habibie administration. Often poorly thought out and badly drafted, they nonetheless provided a basis for change. His successor, Abdurrahman Wahid, was a controversial and erratic president. Despite a well-deserved reputation as a social and political reformer in the 1980s and early 1990s, by the time he became president health problems had diminished his leadership capacities and he quickly squandered the political goodwill which accompanied his initial election. He was dismissed as president in July 2001 and replaced by his vice-president, Megawati.

Megawati restored much-needed stability to Indonesian politics after the tumult of the Wahid presidency, but she is widely criticized for excessive caution and hesitancy. She remains an unlikely political leader. She lacks oratorical flair and dislikes the Machiavellian maneuvers that characterize much of Indonesian politics. She frequently complains of the unpleasant burdens of high office and shies away from confrontation. The Indonesianist, Harold Crouch, once observed that she prefers to “reign rather than rule”. Critics often claim that Megawati’s chief source of legitimacy is the fact that she is Sukarno’s eldest daughter, but this ignores her role as an opposition leader during the later Soeharto period. Megawati’s quiet but determined resistance to the regime’s dictates endeared her to many Indonesians. Her perceived decency and political simplicity were also attractive after three decades of New Order rule. Despite a sharp fall in her public standing throughout 2003, she is still the leading candidate in the 2004 presidential election.

### **Questions and Issues**

1. Both Sukarno and Soeharto asserted that the failure of parliamentary democracy in the 1950s was due to the incompatibility of Western-style democracy with Indonesia’s culture. Do you agree? Are contemporary Indonesian society and values more suitable to democratic consolidation?
2. Jeffrey Winters has written that the overthrow of Soeharto’s New Order was “probably one of the shallowest regime transformations in a major country in the 20<sup>th</sup> century” and that the reform movement “peaked and collapsed on the same day, May 21, 1998”. Is this an accurate summation of the reform process?
3. Does the experience of the Soeharto regime prove that rapid economic development and modernization is only possible in an authoritarian system?

### **CULTURE**

Indonesia has a rich and highly diverse cultural life. Some of its art forms, such as the *gamelan* orchestra and plays using shadow puppets (*wayang*), are internationally famous and have become distinctive cultural markers. But many aspects of the nation’s complex cultural life are poorly understood by the outside world. Globalization and the spread of national electronic media have eroded some local cultures, but overall, the breadth of

cultural expression in Indonesia remains one of the sources of fascination for close observers of the country.

Indonesia has a strong literary tradition and many of the nation's more famous authors have had their works translated and published in English. The best known of Indonesia's living authors is Pramoedya Ananta Toer. A controversial figure, he was a leading member of the Communist Party's cultural arm, Lekra, in the early 1960s, and was jailed without trial for 14 years by the New Order, spending much of this time on the bleak prison island of Buru. It was there that he composed his masterful historical quartet of novels, generally referred to as the *This Earth of Mankind* series (the other three novels being *Child of All Nations*, *House of Glass* and *Footsteps*). The regime banned all of Pramoedya's *oeuvre*. This was not lifted until 1998 and his works have now become best sellers within Indonesia. Other notable works of his include: *The Fugitive*, *Story from Blora*, and *The Sparks of the Revolution*. Literary scholars have on several occasions nominated him for the Nobel Prize in Literature.

Other leading Indonesian writers include: the poet and novelist Sutan Takdir Alisjabana; Marah Rusli, who wrote one of Indonesia's most popular stories, *Sitti Nurbaja*; Mochtar Lubis, whose novel *Twilight in Jakarta* paints a vivid picture of life in the capital during the Sukarno years; and the poet Chairil Anwar.

Indonesia's musical culture contains a number of distinctive forms. The *Gamelan* is undoubtedly the best known of these. The generic term *gamelan* refers to a great variety of ensembles in Java and Bali, differing in style, size and function. This is a highly developed musical form with subtle rhythmical and melodic structures. At a more popular level, there are musical types such as the gentle Portuguese-influenced *Keroncong*, which features singers, guitars and syrupy melodies, and the Indian-derived "Islamic" rock known as *dangdut*. This latter form enjoys high popularity at the grassroots and is often earthy and suggestive in style. Leading *dangdut* performers include: Rhoma Irama, Camelia Malik, Elvie Sukaesih and the raunchy Inul, whose gyrating "borer" dance attracted controversy and eager young male fans in approximately equal measure. Also ubiquitous in Indonesia is karaoke and many an unwary guest to an Indonesian function has found themselves having to sing unfamiliar tunes to the good-natured amusement of their hosts and fellow guests.

Indonesia's film industry is relatively small, given the size of the country. One problem is that films and television programs from India, China (especially Hong Kong) and the United States flood the market, often available at much cheaper cost than a locally produced program. Nonetheless, certain types of visual entertainment are flourishing. On television, the Indonesian version of the soap opera, usually known as *sinetron*, dominates prime-time programming on local free-to-air networks. The quality of *sinetron* varies markedly: some have thoughtful scripting and good acting and production standards; others are clichéd and formulaic, often peddling maudlin or sexually titillating content to attract viewers. A small number of good quality films are produced each year, but much of Indonesia's cinematic output is cheaply produced and largely devoid of aesthetic value.

Sport is another popular Indonesian pastime. Indonesia is one of the world's leading nations in badminton and it also has a number of moderately successful tennis players and boxers (boxing is one of the higher-rating sports programs on the television). Probably the most widely followed sport is soccer, though the poor standard of the domestic competition and Indonesia's lack of success at the international level are constant sources of vexation among the soccer-following public. (A common joke asks how it is that Indonesia can't find 11 decent footballers out of 200 million people!) English and European soccer broadcasts draw large audiences in Indonesia.

### **Questions and Issues**

1. Given the high penetration of Indian, Chinese and American films and television programs, can Indonesia still be said to have a vibrant and distinctive cultural life?
2. Does the popularity of sexually suggestive cultural forms indicate that Islam, the religion of 88% of Indonesians, is not a powerful force on the nation's cultural life?
3. Will globalization and modernization lead to greater homogenization of Indonesia's popular culture?

### **SOCIAL ISSUES**

Indonesia has faced a number of pressing and controversial social issues in the five years since the end of the New Order. These include high levels of inter-religious violence (mostly between Muslims and Christians), a divisive debate over the role of Islam in society and politics, the threat of terrorism, hostility towards minorities, particularly the Chinese, and the rising incidence of crime and vigilantism.

#### Islamic Law

The role of Islam in the state has long been a contentious issue. When Indonesia was founded in 1945, Islamic leaders wanted a clause inserted in the constitution requiring Muslims to carry out the Shari'ah (Islamic law). The clause was part of the Jakarta Charter, a compromise agreement worked out between Muslim and secular nationalist leaders, which was initially included in the draft constitution but later omitted after non-Muslim communities threatened to secede. The issue re-emerged in the late 1950s and late 1960s, when Islamic parties again sought unsuccessfully to gain constitutional recognition of the Shari'ah. Soeharto's New Order emphatically opposed any attempt at comprehensive implementation of Islamic law, branding such moves to be not only divisive but also subversive. For 30 years, the issue virtually disappeared from public debate.

The end of the New Order brought with it a revival of the campaign for wider enactment of Islamic law. Several Islamic parties, including PPP and PBB, proposed the re-insertion of the Jakarta Charter into the constitution, though this was soundly defeated in

the MPR sessions dealing with constitutional amendments. In various regions of Indonesia, Shari'ah law began to be implemented in a more zealous manner. The most obvious case was Aceh, where wide-ranging Islamic law came into force in early 2003 as part of a Jakarta-sanctioned special autonomy package. In a number of districts of West Java, Sumatra and South Sulawesi, Shari'ah has been implemented in a de facto manner by local Islamic groups. This often includes the formation of vigilante squads to enforce the wearing of Islamic dress (usually targeting women) and attack "places of iniquity" such as nightclubs and red-light districts. There are also recently established, high-profile organizations such as MMI (Indonesian Mujahidin Council) and KPSI (Committee for the Implementation of Islamic Shari'ah) which are campaigning for full enactment of Islamic law.

Attempts to further Islamize Indonesian law have had a polarizing effect within society. Non-Muslims are strongly resistant but are also fearful of speaking out. Some of the most trenchant opposition to Shari'ah law activism comes from the liberal Islam movement. Figures such as Nurcholish Madjid, Abdurrahman Wahid, Ulil Abshar-Abdalla and Syafii Maarif use Islamic teachings to rebut arguments that Muslims and the state are obliged to carry out the Shari'ah. They uphold the notion of a religiously neutral, "deconfessionalized" state and espouse Islamic devotions as a matter for the private sphere, not the public sphere.

## **Terrorism**

Indonesia has long been said by regional and foreign intelligence agencies to have terrorist groups based within its territory. But for most Indonesians, the magnitude of the threat was not apparent until bombs tore through two crowded Bali nightclubs on October 12, 2002. In the worst terrorist attack since 9/11/01, 202 people died, including 88 Australians, 38 Indonesians, 32 Britons, 9 Swedes and 7 Americans. Another 350 were seriously injured.

The Megawati government, which had previously been reluctant to act against suspected terrorist groups, took a number of dramatic steps. For the first time in Indonesian history, it allowed dozens of foreign police and intelligence officers into the country to assist local officials with their investigations. It also introduced anti-terrorism laws which gave wide powers to the police and legal system to pursue and prosecute suspected terrorists.

Investigators very quickly uncovered evidence that Jemaah Islamiyah (JI), a clandestine group founded by two Indonesian Islamic scholars of Yemeni extraction in Malaysia in the mid-1990s, had carried out the attacks. A string of arrests and revelations soon followed indicating the extent of JI operations and the intensity of its anti-Western animus. At the time of writing, over 100 arrests have been made and almost 30 men have been tried and found guilty – three of them sentenced to death by firing squad. The head of JI, Abu Bakar Ba'asyir, was also jailed for four years, though charges that he was directly involved in decision-making regarding terrorist attacks were unproven.

The terrorism issue has several controversial elements to it. The first is that, although most Indonesians would appear to accept the severity of the local terrorist threat, they also are skeptical about the motives behind the U.S.-led “war on terror”. Public opinion polls repeatedly show that a majority of Indonesians believe that the West is using the terrorism issue to further its strategic and economic interests. Many surveys also suggest that the public believes the U.S. has had some role in orchestrating the “JI issue”. While Indonesian officials continue to pursue terrorists with rare vigor and dispatch, the government is wary of the political costs in being seen as too compliant to Western demands for further action, such as tighter supervision of the Islamic education sector. Second, many Indonesian Muslims are worried that local security agencies will use the “war on terror” to justify a return to the repressive “Islamophobic” policies of the Soeharto era. Third, there is much rivalry between the police, intelligence agencies and the military over who should lead the anti-terrorism campaign. The police have primary responsibility for domestic security and anti-terrorism operations and their success in investigating the Bali bombing has won wide praise. But TNI and BIN, the main civilian intelligence agency, are resentful of the resources and plaudits going to the police and have been pressing for a greater role.

### Minorities

The role and status of minorities has been a contentious social and political issue since the founding of the Indonesian state. This is particularly so for the largest minority community, the Chinese. Resentment and hostility towards the Chinese remains dangerously high in many sections of “indigenous” society and physical attacks on the Chinese and their property have occurred regularly since at least the eighteenth century and continue today. During the Soeharto era, the Chinese were accorded a privileged economic position which helped to further concentrate wealth disproportionately in Sino-Indonesian hands. However, the regime kept the Chinese politically and culturally isolated: Confucianism was banned, as also were public celebrations of Chinese festivals; the use of Chinese characters in public places was prohibited; and there were few prominent Chinese politicians. The position of the Chinese has improved over the last five years. Confucianism is no longer proscribed and Chinese New Year festivities are now publicly celebrated. Chinese have a higher political profile. Despite this, discrimination and insecurity remain a fact of life for most Sino-Indonesians.

### Rule of Law and Vigilantism

Faith in Indonesia’s law enforcement and justice systems is low. Both the police and judiciary have low professional standards and are notoriously corrupt. Police often demand payment to investigate a case and prosecute an offender; judges more often than not decide a case based on who pays the greater bribe rather than who has the stronger case in law. Not surprisingly, communities have, in recent years, been given increasingly towards vigilantism. Almost daily, suspected miscreants are set upon by local communities, often viciously so. Victims are frequently killed in the attacks and police rarely appear interested in apprehending their assailants. Undoubtedly, such attacks indicate a belief within grassroots communities that the only certain form of “justice” is

that which they can dispense summarily by themselves. But the cycle of violence and lynch-mob mentality engendered by vigilantism is a serious obstacle to developing a respect for the rule of law and fundamental rights within Indonesia.

### **Questions and Issues**

1. Does the frequency of attacks on Chinese and their property indicate socio-economic resentment on the part of “native” (*pribumi*) Indonesians or outright racism? Why have other “distinctive” minorities such as Arabs and Indians not suffered similar violence?
2. Former president, Abdurrahman Wahid, once said that “Islamic politics has failed and most Indonesians are happy about that”. He argued that Muslims want Islam to be a private matter rather than a matter of state enforcement. Does history support his view?
3. What constraints does the Indonesian government face in prosecuting its campaign against terrorism?

### **ECONOMICS**

Until the 1997 financial crisis, Indonesia had recorded almost three decades of impressive growth. When Soeharto came to power in 1966, Indonesia had some of the worst economic indicators in the world. After eight years of ruinous mismanagement under Sukarno’s Guided Democracy, per capita Gross National Product (GNP) had fallen to about \$30 per annum. Daily food consumption was less than 1800 calories per head and malnutrition was widespread. Inflation was running at about 500%, foreign reserves were exhausted and the value of the rupiah had plummeted. Many economic commentators regarded Indonesia as a basket case.

Soeharto quickly set about rehabilitating and modernizing Indonesia’s economy. He appointed a group of US-trained “technocrats” led by the economist Widjojo Nitisastro to draw up new policies and oversee their implementation. The IMF was also invited to advise on economic policy. Vigorous anti-inflation measures were introduced, targets for balanced budgets were set, new foreign exchange regulations stimulated imports and concessions were offered to foreign investors in order to attract new capital. This was a major reorientation of economic policy based on direct foreign investment and the integration of Indonesia’s economy into the global capitalist system. Western donors and Japan rescheduled Indonesia’s heavy debt repayments and injected large quantities of aid. Foreign investment also flowed into the country with the oil industry being a particular focus. The oil boom of the early 1970s proved a windfall for the regime, with well over half of the government’s revenue coming from the petroleum sector. Strong export markets for nickel, timber and copper also swelled the state’s coffers.

The success of the New Order’s policies was apparent in Indonesia’s GNP growth rates: from 1965 to 1980 these averaged 7% per annum; during 1980-90, they were 5.5%.

Between 1965 and 1996, per capita GNP rose from \$30 to \$950, the highest income growth of any Southeast Asian country. There was also a consistent reduction in both the absolute number and percentage of Indonesians living in poverty.

The 1997 financial crisis brought a dramatic, and for many Indonesians, traumatic end to the boom. As large sums of foreign capital began flowing out of the country from September 1997, the value of the rupiah fell sharply, leaving many corporations with large US dollar loans highly exposed. Confidence in the financial sector was shaken by a run on the banks and an IMF-induced government closure of 16 banks. By January 1998, the rupiah had dropped to Rp17,000 per one US dollar. Economists have calculated that during this period, Indonesia suffered the most severe economic reversal of any country since the Great Depression. Certainly poverty levels rose from 11.3% in 1996 to 24.3% in 1998 (based on the World Bank criterion of a daily income less than US\$2).

Since that time, the Indonesian economy has gradually stabilized and regained some of its momentum of the pre-1997 period, though this recovery has been slowest of all the major East Asian economies affected by the financial crisis. Only in early 2003 did per capita GNP income return to the 1996 level, and the incidence of poverty and unemployment has also fallen consistently. Although Indonesia has been tardy in overcoming the effects of the crisis, its economy is now performing better than most of its regional counterparts. GNP grew by 3.8% over the year to June 2003; only Thailand had a better growth figure within ASEAN. Inflation had been brought down to 6% (from 14% in early 2002), and the exchange rate remained steady at about Rp8400/US\$1. Domestic consumption continues to drive economic growth. Investment, however, remains at about two-thirds the level preceding the 1997 financial crisis and international investors are reluctant to commit capital to Indonesia. The political uncertainty surrounding the 2004 general and presidential elections is likely to deter investment at least until 2005.

### **Questions and Issues**

1. Was the strong economic growth of the Soeharto era due to good policy making or was the New Order the beneficiary of booming resource exports such as oil, gas and precious metals?
2. When the 1997 financial crisis hit Indonesia many politicians and community leaders blamed “predatory” international capital markets and bad IMF policies for the nation’s plight. Is there any justification for such a view?
3. Economists predict that Indonesia needs annual GNP growth of over 5% to generate work for its burgeoning labor force. Is there any prospect of such growth rates being achieved in the short to medium-term? If not, will Indonesia suffer increasing social unrest?

## **GOVERNMENT AND POLITICS**

### Structure of Government

According to the Indonesian Constitution, there are five principal organs of state: the People's Consultative Assembly (MPR); the Presidency; the Parliament (DPR); the State Audit Board (BPK); and the Supreme Court (MA).

Indonesia's existing political system is a predominantly a presidential system but it also has elements of a parliamentary system. Major changes will come into force in 2004, but under the existing system, the president is elected by and answerable only to the supreme decision-making body, the MPR. The president selects and leads the cabinet and has wide executive powers. Parliament can censure a president and call for the MPR to initiate dismissal proceedings but it has no direct power to remove a president. In practice, parliament's powers of legislative obstruction and censure mean that a president's authority can be greatly undermined if he or she loses majority support in the legislature. The MPR's other tasks include: setting the Broad Guidelines of State Policy (GBHN), monitoring the performance of other organs of the state such as parliament, the BPK and MA, and amending the constitution.

The present parliament has 500 members, 462 of whom are popularly elected and 38 are appointed representatives of the Armed Forces (TNI) and the Police. The MPR has 695 members, comprising the 500 parliamentarians, 130 regional representatives (each of the 26 provincial parliaments in 1999 elected 5 delegates) and 65 community and professional group representatives. From 2004, parliament will have 550 members, all of whom are elected (i.e., guaranteed military and police representation will be eliminated). The MPR will also undergo extensive changes. A new Regional Representative Council (DPD) will be established comprising four members for each province (i.e., with the current 31 provinces, it will have 124 members). The DPD will have powers of legislative review in matters pertaining to regional affairs. Once the DPD is formed, the MPR will comprise the 550 members of parliament as well as the DPD.

During the Guided Democracy and New Order periods, Indonesia's power structures were highly centralised and rigidly top-down. All important decisions were made in Jakarta and regions were expected to implement without demur the central government's policies. Since the enactment of decentralisation laws in January 2001, Jakarta has surrendered extensive authority to district level government and legislatures. The central government, however, retains control of five main areas of policy: defence and security; monetary controls; foreign affairs, religious affairs; and justice. All other fields, including health, education, the environment and infrastructure, are now the responsibility of the approximately 420 district administrations.

Indonesia has a five-year electoral cycle and has used three different election systems in its history. The seven elections from 1955 to 1997 used a proportional system with provincial boundaries as electorates. For the 1999 election, a convoluted mix of proportional and district representation was used. Each province formed an electoral region but the allocation of seats was tied to a party's performance in districts (*kabupaten/kota madya*) within the province. For example, if a party won 25% of the vote in a province it was (theoretically) entitled to one quarter of the seats. It would then

gain seats in those districts where it recorded its highest vote. (In practice, the system had many anomalies and outcomes did not always reflect the intention of the legislation.)

The 2004 elections will be by far the most complex in Indonesia's history. There will be five electoral processes using three different systems, including a new electoral mechanism for parliamentary elections. The five processes are: national, provincial and district legislative elections; the DPD election; and the presidential election. The legislature and DPD elections will all take place on the same day: April 5.

Parliamentarians will be chosen by an open-list proportional representation system using newly drawn electorates. Voters can pierce either a party symbol or the box of an individual candidate. Members of the DPD will be elected by a single non-transferable vote system and each province forms one electorate. DPD candidates stand as individuals rather than party representatives. The first round of the presidential election will take place on July 5 when electors vote for a pair of presidential and vice-presidential candidates. To be elected, a "package" of candidates must win over 50% of the vote nationally as well as gain at least 20% of the vote in 50% of provinces. If no pairing of candidates meets these requirements in the first round, the top two pairs go through to a second round to be held on September 5. The constitution requires the new president to be installed by October 22, 2004.

### Political Parties

Indonesian politics has often been characterized in terms of *aliran* (literally, "streams"). The three major historical streams were secular nationalism, Islam and communism/socialism, with a range of parties representing each stream. The major nationalist party in the early decades of independence was the Indonesian Nationalist Party (PNI). Although Sukarno was not formally a member, he was widely regarded as the guiding light of the party. PNI emerged from the 1955 election as the top-ranked party with 24% of the national vote. Always an ideologically diverse party, PNI suffered splits between its leftist and more conservative-technocratic wings during Guided Democracy. The New Order regime forced it to join other nationalist and Christian parties in PDI in 1973. Megawati became the chair of PDI in early 1994 but was later removed by the regime in 1996. Following Soeharto's downfall, Megawati loyalists led by her husband, Taufik Kiemas, formed the Indonesian Democratic Party of Struggle (PDI-P) as a new vehicle for political secular nationalism and PNI-inspired ideals. PDI-P won 34% of the vote at the 1999 general election, making it by far the largest party. PDI-P is the most heterogeneous of Indonesia's current major parties. It includes members of the "greater PNI family" (i.e., older generation PNI people as well as younger "family" members who remain active in PNI-affiliated community and professional groups), technocrats and businessmen, retired military officers and former student and NGO activists. The party has few ideological preoccupations apart from an unelaborated commitment to maintaining Indonesia's secular nationalist orientation.

The Islamic stream is the most complex of the three. It has two major sub-streams: traditionalism and modernism (sometimes referred to as "reformism"). Traditionalist Muslims are those who adhere closely to one of the four main Sunni law schools, usually

the Syafi'i school, which predominates in Southeast Asia. They also tend to have more heterodox religious practices. The largest traditionalist organization is Nahdlatul Ulama (NU), which has its base in East and Central Java. NU claims to have about 35 million members, making it one of the largest Islamic organizations in the world. Modernists place greater emphasis on the Qur'an and the example of the Prophet Muhammad (Sunnah) than on the classical law schools as a basis of doctrine and ritual. They are less tolerant of non-Islamic elements in their religious life. The largest modernist organization is Muhammadiyah, which claims a membership of about 30 million.

Shortly after independence, traditionalist and modernist Muslims agreed on a united front for political Islam. They established the Masyumi party for this purpose. Tensions between traditionalists and modernists led NU to split from Masyumi in 1952 and form its own political party. This left Masyumi a largely modernist party. At the 1955 election, Masyumi was the second-largest party, with 22% of the vote, and NU the third largest with 18%. For much of the 1950s, NU and Masyumi regarded each other as rivals and formed coalitions with non-Islamic parties. Masyumi trenchantly opposed Sukarno's Guided Democracy and was eventually banned by the president in 1960. NU served as the only significant Islamic party in Guided Democracy.

The Soeharto regime was determined to minimize the threat of Islamic parties to its dominance. Accordingly, it imposed onerous restrictions on political Islam. It prevented the rehabilitation of Masyumi and would only allow a new modernist-based party with a new name, Parmusi. NU was also subject to growing pressure from the regime to comply with its wishes. At the 1971 elections, NU gained 18% of the vote, virtually the same as in 1955, but Parmusi's vote was only 5%. In 1973, as part of the regime's "party simplification" policy, NU and Parmusi were forced into an amalgamation with two smaller parties to form the United Development Party (PPP). For much of the New Order, the PPP functioned as the main opposition party.

After the demise of the New Order, there was a proliferation of Islamic parties. Twenty-one of the 48 parties contesting the 1999 election were in some significant way Islamic. The traditionalist and modernist streams both experienced unprecedented fragmentation. NU launched a separate but endorsed party, the National Awakening Party (PKB), under the effective leadership of Abdurrahman Wahid, a former NU chairman. There were also three other, much smaller NU-based parties. A sizeable number of NU members remained loyal to PPP, particularly after NU's Hamzah Haz became the party's first non-modernist chairman in late 1998. The modernists were spread even more widely. Some continued within the Parmusi component of PPP; others remained in Golkar (discussed below). Still others joined the former Muhammadiyah chairman Amien Rais in forming a new "pluralist" party, the National Mandate Party (PAN). A final group sought to revive Masyumi and founded the Crescent Moon and Star Party (PBB). Overall, most Islamic parties were disappointed with their support at the general election. NU's PKB got 13%, PPP was down to 12%, Amien Rais's PAN 7% (far less than expected), and PBB a meager 2%. In total, the 21 Islamic parties got 39% of the national vote, 4% below the combined Islamic vote at the 1955 election.

The communist stream during the late 1950s and early 1960s was probably the largest single component of the electorate. Although the PKI's vote at the 1955 election was 15%, at regional elections across Java and some outer islands in 1957-8 it averaged 27% of the vote. This made other parties and the military fearful that the Communist Party would soon be in a position to dominate Indonesian politics. But the post-1965 coup arrest and slaughter of PKI members, combined with the rigorously enforced ban on communism, virtually eliminated the PKI as a force. In the 1999 election, only one party, the People's Democratic Party (PRD) had a genuinely leftist agenda; its vote was a fraction of one percent.

Golkar (literally "Function Groups") represents a major anomaly in the *aliran* analysis of Indonesian politics. Formed in the early 1960s by the military as a vehicle for anti-communist groups, Golkar was transformed into the government party in the late 1960s. It became the chief instrument in the New Order regime's corporatizing agenda, in which they sought to incorporate as many social and political groupings as possible within Golkar. Not surprisingly, the party was dominated by the military and bureaucrats, but many technocratically-inclined young professionals, including modernist Muslims, also flocked to the party. Following 1998, Golkar partially reformed itself, driving out some of the more prominent Soeharto-era figures and installing the Soeharto-era minister Akbar Tanjung as chairman. Although the party's vote dropped from 78% in 1997 to 22% in 1999, Golkar's performance was stronger than many analysts had expected. Golkar remains the most disciplined and professional of Indonesian parties and is likely to improve its position in the 2004 general election.

**Table 2. 1955 Election Results**

Ranking	Party	National Vote (%)	Seats in Parliament
1	PNI	24	57
2	Masyumi	22	57
3	Nahdlatul Ulama	18	45
4	PKI	15	39

**Table 3. Election Results, 1977-97**

Ranking	Party	1977	1982	1987	1992	1997
1	Golkar	62	64	73	68	74
2	PPP	29	27	16	17	22
3	PDI	9	8	11	15	3

**Table 4. 1999 Election Results**

Ranking	Party	National Vote (%)	Seats in Parliament
1	PDI-P	34	153
2	Golkar	22	120
3	PKB	13	51
4	PPP	12	58

5	PAN	7	34
6	PBB	2	11

### Questions and Issues

1. Should a country as diverse as Indonesia have a strong presidential system allowing firm central control of the state or a decentralized parliamentary system which permits representation of the widest range of community and interest groupings?
2. Is it likely that democratic elections will ever deliver a majority party or even a strong majority coalition?
3. Is the *aliran* concept still useful in analyzing political trends in Indonesia?

### FOREIGN AFFAIRS AND DEFENSE

#### Foreign Policy

The underlying principles of Indonesia's foreign policy have remained remarkably constant through most of the post-independence period. Two related concepts – non-alignment and a “free and active” (*bebas dan aktif*) stance – provide the central underpinnings of Indonesia's approach to international relations. The origins of this foreign policy philosophy can be traced back to the tumult of the Revolution (1945-49) and Indonesia's struggle for international recognition of its independence struggle. Leftists within the Republican government wanted Indonesia to be aligned to the Soviet Union, which at that time strongly supported the Indonesian cause in the UN. The more pragmatic and conservative Republican leaders were wary of provoking the Dutch and antagonizing the United States, which was then ambivalent on the question of Indonesian independence. In this environment, two of the seminal figures in Indonesia's foreign policy formulation made key speeches setting out what soon became the guiding principles: former Prime Minister Syahrir proposed to parliament in February 1948 that the country pursue a non-aligned stance; and Vice President Hatta, in August of the same year, argued forcefully for a “free and active” approach in dealing with other nations. Hatta's speech, in particular, was seen as laying the cornerstone of Indonesian policy. He stated:

Have the Indonesian people fighting for their freedom no other course of action open to them than to choose between being pro-Russian or pro-American? Is there no other position that can be taken in the pursuit of our national ideals? The government is of the opinion that the position to be taken is that Indonesia should not be a passive party in the arena of international politics but that it should be an active agent entitled to determine its own standpoint with the right to fight for its own goal – the goal of a fully independent Indonesia.

While Indonesia's foreign policy has swung in varying degrees towards the Communist Bloc and back to the West, in response to both domestic and international conditions, governments have still upheld their commitment to a non-aligned and active approach.

An early manifestation of Indonesia's foreign policy preoccupations was the 1955 Asian-African Conference held in Bandung. Twenty-nine states, many represented by their heads of states (including Chou En-lai, Nasser and Nehru), attended the conference. Although there were important differences of opinion between some of the states on international issues, the conference nonetheless captured a growing spirit of common struggle and assertiveness among former colonies. The conference was also seen by Indonesians as a triumph of diplomacy and confirmation that the nation could play a significant role in world affairs. The Asian-African conference has also been credited with paving the way for the formation of the Non-Aligned Movement in 1961. Indonesia was to be an important player in NAM.

During the early 1960s, Indonesia's foreign policy veered leftwards. Sukarno, in particular, became increasingly critical of the West, accusing it of having neo-colonial designs upon recently independent nations. He famously told the United States in 1964 to "go to hell with your aid" and he withdrew Indonesia from the United Nations. He also pursued a low-level military confrontation with Britain opposing the formation of Malaysia. Indonesia became more closely aligned with the Communist Bloc nations and Sukarno trumpeted a prospective alliance between Beijing, Pyongyang, Hanoi, Phnom Penh and Jakarta.

Soeharto dramatically changed Indonesia's foreign policy. A staunch anti-communist, he abandoned Sukarno's leftist orientation and drew Indonesia closer to the West and Japan. Indeed, gaining Western aid and investment were critical parts of the regime's blueprint for economic recovery. Soeharto was determined to integrate his nation more closely into international markets. Despite Soeharto's pro-Western and anti-communist disposition, the New Order was careful to maintain a broadly independent stance. Soeharto played a pivotal role in founding and guiding the Association of Southeast Asian Nations (ASEAN) in 1967, partly because he wanted a regional counterbalance to superpower involvement in Southeast Asia. He also remained active in the NAM and allowed Indonesia to be one of the founding nations of the Organization of Islamic Conferences (OIC). There were also strains in the regime's relations with Western nations, especially over human rights issues and Indonesia's policies in East Timor.

In the post-Soeharto era, Indonesia's attitudes towards the West have cooled somewhat. Many Indonesians were shocked by the severity of the 1997 financial crisis, believing that the IMF had left the country vulnerable to the predatory tactics of international money traders. The separation of East Timor in 1999, after an internationally supervised plebiscite and military intervention, hardened opinion that the West was seeking to divide and weaken Indonesia. The war on terror is also seen by many as having a concealed agenda to undermine Islam and Indonesian independence from US foreign policy imperatives.

## Defense and the Military

For most of Indonesia's history, governments have seen the main threat to security as being internal rather than external. As a result, the primary preoccupation of Indonesia's Armed Forces is in maintaining national order and unity; outside threats occupy a secondary importance.

Indonesia's Armed Forces (TNI; ABRI during the Soeharto era) see themselves as holding a unique position in the history of the nation: unlike most armed forces, which are a creation of the state, TNI believes that it was vital to the birth of the Indonesian state. Subsequent events tended to confirm TNI's self-perception as the central pillar of the state. These include: its role in militarily opposing the Dutch during the 1945-49 Revolution, the crushing of a series of regional rebellions during the 1950s and early 1960s, its putting down of the 1965 coup attempt and more recently, its campaigns against separatist movements in Papua and Aceh.

There are several key concepts within TNI doctrine. The first is Sishankamrata (The System of Overall People's Defense and Security), which sets out that the military and the people are inextricably linked and will work together to ensure the nation's security. Its origins can be found in the Revolution when, according to TNI histories, the close cooperation of ordinary civilians with TNI brought about the defeat of the Dutch. Thus, there was no boundary between civilian and military life and TNI has also seen itself as being a community-based rather than barracks-based force.

The second key concept is that of *dwi-fungsi* (dual function). Effectively, this doctrine asserts that TNI is both a socio-political and a military force. TNI argued that *dwi-fungsi* grew out of the military's traditional "alliance" with society and also its guardian role of national unity. During the New Order, *dwi-fungsi* was used to justify extensive military involvement in virtually all the key institutions of state. Indeed, the military had a parallel structure to that of the civilian state apparatus which extended down to the virtually every village in the archipelago. The military counterparts of civilian officials could intervene and control a wide range of decision-making processes. The system was known as the "territorial system" and it is a crucial element in TNI functioning. Since 1999, TNI has formally abandoned *dwi-fungsi* but the replacement doctrine retains many of the same features. Some elements of the territorial system have also been dismantled but the essential structure persists and TNI is determined to preserve the system given that decentralization has shifted many political and economic resources to the regions.

TNI's total number of personnel is 298,000, some 230,000 (72%) of which is army. Indeed, the Army is by far the dominant service in TNI, both historically and contemporaneously. Since the 1960s, all but one of the TNI commanders-in-chief has been from the army. The operational capacity of the Armed Forces is limited. It is poorly equipped and levels of training and morale are low. (Recent reports suggest that less than 30% of the Navy's ships are seaworthy and only 93 of the Air Force's 222 aircraft are operational). Standards among the territorial units (those recruited from and based in a specific area) tend to be particularly poor. Only the Special Forces, which

comprise Kostrad (green berets) and Kopassus (red berets), are reasonably well trained and resourced. Human rights abuses are commonplace and few perpetrators are ever prosecuted. TNI gains only about 30% of its income from the budget; the remainder is generated from “private” sources. These sources can range from large TNI-controlled enterprises, to gun-running, drug distribution and protection rackets.

### **Questions and Issues**

1. Indonesia’s historical dependence on external economic assistance has meant that rarely has it been able to pursue its avowed “free and active” foreign policy. Discuss.
2. Despite its claim to be the guardian of national unity, TNI’s frequent human rights abuses and economic predations have created deep hostility in some regions and fueled separatist sentiment. Discuss.

## **TIMELINE**

- 1945 – August 17: Sukarno and Hatta proclaim Indonesia's independence.
- 1949 – The Netherlands formally hands over sovereignty to Indonesia.
- 1955 – Indonesia's first general election is held; four major parties are PNI, Masyumi, NU and PKI
- 1957 – President Sukarno begins the transition to "Guided Democracy" by appointing himself as "citizen Sukarno" to form an extra-parliamentary "business cabinet".
- 1959 – Constituent Assembly deadlocked on drafting the new constitution; Sukarno decrees the dissolution of the Assembly and proclaims the return of the executive-centered 1945 Constitution; Guided Democracy now in place.
- 1960 – Sukarno purges parliament of opponents and installs unelected military and "community group" representatives; bans the Masyumi party.
- 1963-4 – bloody clashes between Communists and Muslims in Java over the Communist Party's attempts at land reform through seizures of larger farm holdings.
- 1965 – September 30-October 1: coup attempt launched by middle-ranking leftist army officers and sections of the PKI; quickly put down by Major-General Soeharto.
- 1965-66 – massacre of PKI members and suspected communists by military, Muslim and nationalist groups; at least several hundred thousand are killed and an equal number detained without trial.
- 1967 – Soeharto installed by the MPRS as acting president, though he effectively holds full authority; Sukarno formally stripped of the presidency in 1968.
- 1971 – first election of the New Order regime; "opposition parties" subject to intense intimidation and intervention; the regime's Golkar party wins a large majority.
- 1974 – "Malari" riots break out in Jakarta following student protests against the New Order's policies; 8 killed and 800 arrested.
- 1975 – Indonesian "volunteers" invade the former Portuguese province of East Timor.
- 1984-5 – regime forces all social and religious organizations to accept Pancasila as their sole ideological foundation or face dissolution.

- 1990 – Soeharto endorses the formation of a government-sponsored Muslim Intellectuals' Association (ICMI), signaling a rapprochement with Islamic groups; ICMI becomes a major vehicle for Muslim career advancement and regime cooptation of Islamic groups.
- 1991 – Soeharto takes the pilgrimage to Mecca.
- 1997 – financial crisis hits East Asia; the rupiah plummets in value and Indonesia forced to accept IMF rescue package; Soeharto suffers a minor stroke in December.
- 1998 – May 21: Soeharto announces he will stand down and hand over power to Vice-President B. J. Habibie.
- 1999 – June 7: Indonesia's first free and fair elections in 44 years are held; contested by 48 parties, 19 of which win seats in the national parliament.
- 1999 – October 21: Abdurrahman ("Gus Dur") Wahid elected as president by the MPR; Megawati elected as vice-president the follow day.
- 2001 – July 23: Abdurrahman Wahid declares a state of emergency and attempts to shut down parliament and the MPR; his order is ignored by the police and military and he is dismissed as president by the MPR; Megawati is installed as president and Hamzah Haz as vice-president.
- 2002 – October 12: terrorist bombing of 2 nightclubs in Bali; 202 people die and 350 injured, making it the deadliest terrorist attack since September 11, 2001.
- 2003 – August 5: terrorist car-bombing of the Marriott Hotel in Jakarta; 12 people die.

## INTERNET SITE GUIDE

### Official Sites

- Indonesian government official website (only in Indonesian, at present): [www.indonesia.go.id](http://www.indonesia.go.id) (another English-language site, [www.ri.go.id](http://www.ri.go.id), is currently under construction).
- Indonesian Department of Foreign Affairs (Deplu): [www.dfa-deplu.go.id](http://www.dfa-deplu.go.id) (English and Indonesian)
- Central Bureau of Statistics website contains a wealth of information on Indonesia's society and economy (English and Indonesian): [www.bps.go.id](http://www.bps.go.id)
- Indonesian parliamentary website offers quite good coverage of legislative processes in the DPR (mainly in Indonesian): [www.dpr.go.id](http://www.dpr.go.id).
- Indonesian National Human Rights Commission (Komnas HAM): [www.komnas.go.id](http://www.komnas.go.id). (Indonesian).
- Indonesian Election Commission (KPU) offers detailed information on Indonesia's election system and preparations (mainly in Indonesian): [www.kpu.go.id](http://www.kpu.go.id).
- Useful private website listing important Indonesian government and political sites: [www.gksoft.com.govt/en/id.html](http://www.gksoft.com.govt/en/id.html).

### Newspapers, magazines and online sources

*The Jakarta Post* - the leading English-language newspaper in Indonesia -  
<http://www.thejakartapost.com>

*Inside Indonesia* – topical and informative magazine on Indonesian current affairs and society - <http://www.insideindonesia.org/>

*Far Eastern Economic Review* - the best of the English-language magazines devoted to Asia – quite good coverage of Indonesia but now subscription only –  
<http://www.feer.com>

BBC's Asia Pacific and East Asia Today services are consistently good –  
<http://www.bbc.co.uk/hi/english/world/asia-pacific>; and  
<http://www.bbc.co.uk/worldservice/eastasiatoday/>

*Gatra* – Indonesian-language current affairs magazine at <http://www.gatra.com>

*Tempo* - authoritative and probing current affairs magazine – <http://www.tempo.co.id>  
(available in both English and Indonesian)

*Kompas Online* - rather staid but usually the most reliable and accurate newspaper -  
<http://www.kompas.com> (has selected articles available in English).

*Media Indonesia* – <http://www.mediaindo.co.id>

*Republika Online* - the most influential 'Islamic' daily - <http://www.republika.co.id>

*Suara Merdeka* - Semarang daily with excellent website and archive access –  
<http://www.suaramerdeka.com>

*Jawa Pos* - East Java-based daily, usually with good quality journalism and links to its  
many local *Radar* offshoots – <http://www.jawapos.co.id>

The Self-Study Guide: Israel is intended to provide U.S. government personnel in the foreign affairs community with an overview of important issues related to the history, geography, politics, religion, culture, economics, and international relations of Israel. The guide merely serves as an introduction and should be used as a self-study resource. Israel is far too complex and diverse a society to be covered in any depth using only the text in this guide. Therefore, the reader is encouraged to explore the questions and issues introduced using the Internet site guide and articles and books listed in the bibliography. Most of the bibliographic material can be found either on the Internet or in Foreign Service Institute or Main State Libraries.

Dr. Bernard Reich, Professor of Political Science and International Affairs and former Chairman of the Department of Political Science at George Washington University in Washington, DC prepared this first edition guide on Israel. The views expressed in this guide are those of the author and attributable sources and do not necessarily reflect official policy or position of the Department of State or the National Foreign Affairs Training Center. This publication is for official educational and nonprofit use only.

First Edition  
February 2001

## **INTRODUCTION**

Israel is an independent Jewish state, small in size and population, located at the southwestern tip of Asia on the eastern shore of the Mediterranean Sea. It achieved independence in 1948. Since Biblical times, Jews of the Diaspora have hoped that they would return to Zion, the "promised land," where the ancient Jewish state had been located, as described in the Bible. Over the centuries, Zionism focused on spiritual, religious, cultural, social, and historical links between Jews and the holy land. Political Zionism, with the establishment of a Jewish state as its goal, and Jewish immigration to Palestine both developed in nineteenth century Europe, partly as responses to anti-Semitism. The defeat of the Ottoman Empire during World War I and its dismemberment during the subsequent peace conferences led to British administration of Palestine (under a League of Nations Mandate) and set the stage for the eventual independence of Israel.

Israel has achieved rapid development and impressive accomplishments in the social and scientific arenas. It has been the region's most politically and socially innovative state and has achieved prosperity for its people. Israel has built a democratic system unlike that of any other in the Middle East and has melded immigrants from more than seventy countries into a uniquely Israeli population. In a country almost devoid of natural resources, its people have achieved a high standard of living.

Israel's development has occurred despite the fact that it has been in a state of war since independence and continually must be ready to defend its existence. Despite peace treaties with Egypt and Jordan, an aborted agreement with Lebanon, and a series of interim agreements with the Palestine Liberation Organization (PLO) and periodic U.S.-sponsored talks with Syria, Israel's pursuit of permanent peace with its neighbors is far

from complete. The continuing Arab-Israeli conflict and the potential for conflict with elements of the broader Muslim world remain central tests of Israel's foreign and defense policies.

## **GEOGRAPHY**

Israel is a small country whose land borders (except with Egypt, Jordan, and the sea) are not permanent and recognized and whose size has not been determined precisely due to the absence of permanent and comprehensive peace. Within its current frontiers (established by armistice agreements signed in 1949 at the end of the first Arab-Israeli War), Israel is less than 8,000 square miles (some 20,700 square kilometers) and is bounded on the north by Lebanon, on the northeast by Syria, on the east by the West Bank, Jordan, and the Dead Sea, and on the west by the Mediterranean Sea. The country is 264 miles long and, at its widest, is some 70 miles.

Israel may be divided into four main natural land regions: the coastal plain, the highlands of Judea and Samaria, the Rift Valley, and the Negev Desert. The coastal plain lies along the Mediterranean and is composed of a generally narrow and sandy shoreline bordered by fertile farmland varying up to 25 miles in width from the northern border to the Israel-Egypt border in the southwest. Most Israelis live in the coastal plain and most of the industry and agriculture are located there. A series of mountain ranges run north-south from the Galilee to the Negev. The mountains of Galilee stretch southward to the Jezreel Valley, south of which are the mountains and hills of Samaria, Judea, and the Negev. Upper Galilee is the highest part of the country. Lower Galilee's hills are more broken. The highlands of Galilee are where most of Israel's Arabs live in a triangular-shaped area that includes the city of Nazareth. Mount Meron, Israel's highest mountain, is here. The Judean hills include Jerusalem. There is also the Carmel mountain range near Haifa.

The Rift Valley is part of the Great Syrian-African rift—the deepest valley on earth. In Israel, it includes the Jordan Valley, which is located between the mountains of Judea and Samaria in the west and the mountains of Jordan to the east; the Hula Valley between the mountains of Galilee and the Golan Heights; the Jezreel Valley between the mountains of Galilee and Samaria; and the Arava, a long and arid valley running from the Dead Sea to the Red Sea. Portions of the Arava were ceded to Jordan in the 1994 Peace Treaty and then leased back to Israeli farmers. The Dead Sea, a saltwater body, is part of the Rift Valley area and is the lowest land area on earth, about 1,286 feet below sea level. The Negev is an arid area of flatlands and limestone mountains that stretches southward from the Judean Desert, which lies between Jerusalem and the Dead Sea.

The Jordan River, the longest of Israel's rivers, flows north-south through the Sea of Galilee (also known as Lake Kinneret and Lake Tiberias) and empties into the Dead Sea. Most of Israel's other rivers are small and generally seasonal in nature, except for the Kishon (which is about 8 miles long and flows east to west and empties into the Mediterranean north of Haifa) and the Yarkon (which is about 16 miles long and flows east to west and empties in to the Mediterranean at Tel Aviv).

Israel's climate generally is Mediterranean in nature—marked by hot and dry summers and cool but relatively mild winters. There is sunshine from May through mid-October and no rain falls during this season. Periods of hot and dry weather brought by easterly winds occur at the beginning and end of the summer, usually in May and September. The hot, dry, sandy, easterly wind of Biblical fame is commonly known as *khamisin*, from the Arabic for "fifty." The rainy season begins about mid-October, but it is only in December

that rainy days become frequent. Winter weather alternates between short but heavy rainy spells and sunshine. March and April are cool, with occasional rains of short duration. Nevertheless, there is a variation of climate by region, partly as a consequence of differences in altitude. North of Beersheba, Israel has a Mediterranean climate, but the Negev is generally arid and cultivation there is impossible without irrigation. The Jordan Valley is hotter and drier than the coastal plain. Tiberias and the Jordan Valley enjoy warm temperatures and little rainfall. In the hilly regions (including Jerusalem and the Upper Galilee), temperatures drop toward the freezing point, and brief snowfalls are not unusual.

## **SOCIETY**

At independence, Israel had some 806,000 citizens (650,000 Jews and 156,000 non-Jews). Israel's population by January 2000 stood at 6.2 million, some 80 percent of whom were Jews. Israel's non-Jewish population has quadrupled since 1948, mostly as a result of high rates of natural growth. The Jewish population has increased more than fivefold since independence with more than 2.6 million Jewish immigrants, many of whom came from Arab and Islamic countries of the Middle East and North Africa. Beginning in the late 1980s, some 750,000 immigrants from the former Soviet Union added substantially to Israel's population while smaller but more dramatic immigrations came from Ethiopia. Under the Law of Return, any Jew, with some specific exceptions, may immigrate to Israel and receive citizenship. Immigrants are provided with housing and language and vocational training to speed their integration into the mainstream of Israeli society.

Israel's Jews are of a single religious faith and share a spiritual heritage and elements of historical experience. However, ethnically and culturally, they are heterogenous. The Jewish population is composed of immigrants from numerous countries and reflects a variety of ethnic and linguistic groups, degrees of religious observance, and cultural, historical, and political backgrounds. No single ethnic group constitutes even 20 percent of the total Jewish population, although one of the largest is of Moroccan origin.

The two main groups in Israel's Jewish population are the Ashkenazim (that is to say, Jews of central and east European origin) and the Sephardim or Orientals (Jews who came to Israel from the countries of the Middle East and the Mediterranean area). Although the overwhelming majority of the Jewish population was of Ashkenazi origin at independence, Israeli society is now almost evenly split between the Ashkenazim and Jews of Sephardic origin, who are also referred to as "Edot Hamizrach" (eastern or Oriental communities). Increasingly, ethnic divisions are becoming less relevant as the instances of cross-cultural marriages grow and as native-born Israelis identify themselves not as Ashkenazi or Sephardic but as "Sabra".

Geographically, Israel is an Oriental country, but its culture, society, and political system remain primarily Western in nature and orientation. The early Zionists laid the foundations for an essentially European culture in Palestine and subsequent immigration accelerated the trend. The Western immigrants created and developed the structure of land settlement, institutions, trade unions, political parties, and educational systems in preparation for a Western-oriented Jewish national state. Future immigrants from non-Western countries had to adapt to a society that had formed these institutions.

After the Holocaust and the creation of Israel, whole Jewish communities were transported to Israel from the countries of the Middle East and North Africa. This massive Oriental immigration created a situation in which a large portion of the population had societal and cultural traditions different from those of their Western coreligionists who constituted the majority and dominant element in Israel. The religious traditions of Judaism provide a common core of values and ideals, but there are major differences in outlook, frames of reference, levels of aspiration, and other social and cultural components. Although steps have been taken to alleviate the situation, Israel continues to suffer from ethnic-cultural cleavages and a socioeconomic gap and consequent inequalities within the Jewish community.

Israel's non-Jewish citizenry, constituting about 20 percent of the total population, consists primarily of the Arabs who remained in what became Israel after the 1948-1949 Arab-Israeli War and their descendants. The Arab population is composed primarily of Muslims (about 80%) and is predominantly Sunni, although some 11 percent are Christian (mostly Greek Catholic and Greek Orthodox) and some 9 percent Druze.

Although their legal status is the same as Israel's Jewish population, Israel's Arab citizens are confronted by problems qualitatively different. Between 1948 and the mid-1960s, activities of the Arab community were regarded primarily as concerns of Israel's security system, and most of the areas inhabited by the Arabs were placed under military control. The restrictions were gradually modified, and in 1966 military government was abolished. Although Israeli Arabs vote, sit in the Knesset, serve in government offices, have their own schools and courts, and prosper materially, they face difficulties in adjusting to Israel's modern, Jewish and Western-oriented society. The Arabs tend to live in separate sections of major cities. They speak Arabic, attend a separate school system, and generally do not serve in the army. The Arab and Jewish communities in Israel have few points of contact, and those that exist are not intimate; they are separate societies that generally continue to hold stereotypical images of each other which often are reinforced by the tensions and problems generated by the larger Arab-Israeli conflict. There is mutual suspicion and antagonism, and there is still a Jewish fear of the Arabs—a result of wars and terrorism.

Israel is a Jewish state; nevertheless, it guarantees all of its citizens—in law and in practice—freedom of religion and conscience and considerable autonomy under the *millet* system (in which the population was divided by religious allegiance) derived from the Ottoman Empire. At the same time, there have been tensions and often open clashes between the religious and secular segments of the Jewish community and between the

Orthodox and non-Orthodox denominations. At issue are the authority and power of the Orthodox and ultra-Orthodox religious authorities and their desire to mould Israeli society in their preferred image. Debate has focused on the appropriate relationship between religion and the state, between the religious and secular authorities, and between the Orthodox-dominated religious establishment and non-Orthodox movements (i.e., Conservative and Reform/Progressive Jewry). At the core of this debate is the contentious question of "Who is a Jew?" The issue has had philosophical, theological, political, and ideological overtones with specific practical dimensions in connection with immigration, marriage, divorce, inheritance, and conversion as well as in registration of identity cards and in the official collection of data and information. The question relates to the application of legislation such as the Law of Return, the Nationality Law, and others passed by the Knesset. Despite ongoing efforts, no permanent solution to the enduring "Who is a Jew" controversy has occurred.

## **HISTORY**

The new state of Israel came into being on May 14, 1948, with the termination of the British Mandate, but its creation was preceded by more than fifty years of efforts by Zionist leaders to establish an independent Jewish state in Palestine.

The modern history of Israel may be dated from the Jewish immigration to Palestine in the second-half of the nineteenth century from Europe, especially Russia and Poland. The practical and modern effort to establish a state began with the founding of the Zionist movement and the creation of the World Zionist Organization by Theodor Herzl at the end of the nineteenth century. Waves of state-sponsored anti-Semitism ("pogroms") in eastern Europe and incidents such as the "Dreyfus Affair" in western Europe were important contributing factors in the development of modern political Zionism. Zionist aspirations were given impetus with the issuance of the Balfour Declaration (1917) in which the British Government expressed support for the establishment of a Jewish national home in Palestine. Jewish immigration to Palestine grew throughout this period, but with the advent of the Nazi regime in Germany and the Holocaust, the numbers escalated rapidly in the 1930s. With the end of World War II there was pressure for the remnants of European Jewry to be permitted to immigrate to Palestine despite British restrictions. The Arab reaction to the effort to create a Jewish state was negative and frequently violent.

On November 29, 1947, the United Nations General Assembly adopted the Partition Plan (Resolution 181) which called for the division of Palestine into a Jewish state and an Arab state (linked by an economic union) and for an international administration for Jerusalem. The Plan was accepted with reluctance by the Zionists but denounced by the Arab world which prepared for war to ensure that all of Palestine would be an Arab state. Between November 1947 and May 1948 the Arab community in Palestine, with the active encouragement of the neighboring Arab countries, waged a campaign of terror against the Jewish settlement ("yishuv") in an effort to prevent implementation of the partition plan. This Arab terror provoked small militant elements of the Zionist community to launch violent reprisals against the Arabs as well as against symbols of a British Mandatory Authority that was accused of siding with the Arabs. With the British withdrawal from Palestine in May 1948, the new Jewish state proclaimed its independence. David Ben-Gurion became the Prime Minister of the State of Israel and Chaim Weizmann was elected President. The new government was soon recognized by the United States and the Soviet Union, as well as by many other states. The Arab League declared war on Israel, and the neighboring Arab states announced that their armies would enter the former Palestine Mandate, ostensibly to "restore order." A long and bitter war ensued between Israel and armies from Egypt, Jordan, Syria, Lebanon, and Iraq with assistance from other Arab League members.

In the spring of 1949, armistice agreements were signed between Israel and each of the bordering states (Egypt, Syria, Jordan, and Lebanon) which established a frontier (armistice line) between Israel and each of the neighboring states and portions of these areas were demilitarized. Peace negotiations to resolve the Arab-Israeli conflict were to follow, but did not. As a consequence of the war, Israel encompassed more territory than had been allocated to it by the Partition Plan. At the same time, portions of the territory allocated to the Palestinian Arab state came under Egyptian (the Gaza Strip) and Jordanian (the West Bank) control. Jerusalem was divided between Israel and Jordan. Under the terms of the armistice with Jordan, Israelis and other Jews were to be accorded access to Jewish holy places in Jerusalem's Old City and in the West Bank. However, this did not occur; rather, the Jordanians permitted holy places to be desecrated and destroyed.

Israel has fought six major wars (in 1948-1949, 1956-1957, 1967, 1969-1970, 1973, and 1982) with the Arab states to secure its position, but formal peace has eluded Israel with all but Egypt and Jordan. In addition, Israel has signed a series of interim agreements with the PLO and has held sporadic substantive talks with Syria under U.S. sponsorship. But a comprehensive peace agreement with all of its neighbors appears still far away.

Soon after its independence, Israel moved to function as a regular state. Elections for a parliament (Knesset) were held January 25, 1949, and regular parliamentary and presidential elections have been held, as required by law, since then. But, Israel's progress in its domestic life was not matched by comparable developments with the Arab states; frequent border incidents and clashes characterized the early 1950s.

Tensions continued to increase and the situation was exacerbated by external (primarily Soviet) arms supplies and Palestinian terrorist incursions into Israel and Israeli retaliatory raids on *fedayeen* bases in Egyptian-controlled Gaza. In the summer of 1956, Egyptian President Gamal Abdul Nasser nationalized the Suez Canal and tensions grew. In late October, Israel invaded the Sinai Peninsula to destroy hostile Egyptian military positions and to reopen the blockaded Strait of Tiran. In a brief war, Israel captured the Gaza Strip and the Sinai Peninsula. Following a British and French ultimatum (coordinated in advance in top-level secret tripartite—British, French, and Israeli—meetings), their forces were interposed between Israel and Egypt along the Suez Canal. Eventually Israel was forced by U.S. pressure to withdraw from Egyptian territory and from the Gaza Strip. The United Nations Emergency Force (UNEF) was stationed on the frontier between the two states and helped ensure quiet along the border for the next decade. The sea lanes through the Strait of Tiran to Israel's port of Eilat were opened to Israeli shipping. But the hope that peace talks might follow was not realized. Although the other Arab states did not join in the 1956-1957 hostilities, they made no effort to reach a peace agreement with Israel and their territories often became bases for attacks across the border into Israel. Israel maintained its military posture and capability to deal with the Arab threat.

In 1966 and 1967, Israel again focused on the problems associated with the Arab-Israeli conflict. Border incidents became more serious and escalation toward conflict began in late 1966 and early 1967 as clashes between Israel and Syria contributed to regional tensions. In May 1967, President Nasser of Egypt demanded the partial removal of U.N. forces from Sinai and Gaza, mobilized the Egyptian military, and moved troops and equipment into demilitarized areas. Nasser also announced the closing of the Strait of Tiran to Israeli shipping. Other factors also contributed to the growing tensions. Finally, on June 5, 1967, Israel launched a preemptive military strike against Egypt. Other Arab states joined in the hostilities that spread to include Jordan, Syria, and Iraq, among other Arab participants.

The Six Day War of June 1967 substantially altered the nature and parameters of the Arab-Israeli dispute. The realities of Arab hostility, the nature of the Arab threat, and the difficulties of achieving a settlement became more obvious. The issues of the conflict changed with the extent of the Israeli victory: Israel occupied the Sinai Peninsula, the Gaza Strip, the West Bank, East Jerusalem, and the Golan Heights. Israel adopted the position that it would not withdraw from those territories until there were negotiations with the Arab states leading to peace agreements that recognized Israel's right to exist and accepted Israel's permanent position and borders. The Arab response to these terms of reference were the "three nos" adopted at the Khartoum, Sudan, meeting of the Arab League in September 1967: no peace with Israel, no recognition of Israel, no negotiations with Israel. Throughout the period between the Six Day War (1967) and the Yom Kippur War (1973), the focal point was the effort to achieve a settlement of the Arab-Israeli conflict and to secure a just and lasting peace based on United Nations Security Council Resolution 242 of November 22, 1967, which recommended an exchange of land for peace between Israel and the Arab states. Although some of the efforts were promising, peace was not achieved and there was little movement in that direction. The 1969-1970 War of Attrition (launched by Egypt against Israel along the Suez Canal in April 1969)

marked the fourth round of hostilities between Israel and the Arabs; it was also unique in the sense of involving direct military engagements between Israelis and Soviet pilots flying Egyptian aircraft. It was also in this period that a restructured PLO emerged under the leadership of Yasser Arafat and posed new challenges to Israel's security, in the form of terrorist attacks inside Israel and on Israeli and Jewish targets internationally.

On October 3, 1973, Egyptian and Syrian military forces launched surprise attacks on Israeli positions along the Suez Canal and in the Golan Heights. Despite initial Arab advances on both fronts, Israel pushed Syria back beyond the 1967 cease-fire line and crossed the Suez Canal to take a portion of its west bank. The war increased Israel's dependence on the United States, as no other country would provide Israel with the vast quantities of modern and sophisticated arms required for war or for the political and moral support necessary to negotiate peace.

The 1973 War was followed by renewed and intensified efforts to achieve Arab-Israeli peace. An extended process of "shuttle diplomacy" launched by United States Secretary of State Henry Kissinger resulted in two disengagement of forces agreements in the Sinai (January 1974 and September 1975) and one disengagement agreement involving Israeli and Syrian forces on the Golan Heights (May 1974). However, efforts at building comprehensive peace out of these partial agreements did not succeed. A major step in this regard occurred in 1977 with the announcement by Egyptian President Anwar Sadat that he was prepared to negotiate peace directly with the Israelis. His November 1977 visit to Israel ultimately led to the Camp David Accords in September 1978 and the Egypt-Israel Peace Treaty signed on March 26, 1979 (both witnessed by U.S. President Jimmy Carter). "Normal relations" between Egypt and Israel began officially on January 26, 1980, when Israel completed its withdrawal from two-thirds of the Sinai Peninsula, as called for in the peace treaty, and land, air, and sea borders between the two states were opened. In late February, embassies were opened in Cairo and Tel Aviv, and on February 26, Ambassadors Eliahu Ben-Elisar of Israel and Saad Mortada of Egypt presented their credentials.

Despite the peace treaty with Egypt and its implementation, Israel's other borders remained tense and problems often emerged. The frontier with Lebanon had been relatively quiet between the 1948-1949 war and the early 1970s, when the PLO was forced out of Jordan and ultimately took up positions in Lebanon. Cross-border PLO terrorist raids into northern Israel and Israeli retaliations (such as 1978's "Operation Litani" to push PLO forces out of firing range of northern Israel) escalated tensions. The PLO's presence in Lebanon exacerbated an already complicated balance among that country's indigenous political and military forces, an arrangement that broke down completely in 1975 with the start of civil war in Lebanon. In order to protect its interests, Syria became increasingly involved militarily in Lebanon. The continued presence in eastern Lebanon of surface-to-air missiles (SAM) that had been moved there by Syria in the spring of 1981 remained an Israeli concern, as were PLO attacks against Israeli and Jewish targets worldwide despite a U.S.-arranged cease-fire in the summer of 1981. On June 6, 1982, Israel launched a major military action against the PLO in Lebanon ("Operation Peace for Galilee"). The military objective was to ensure security for

northern Israel, to destroy the PLO infrastructure that had established a state-within-a-state ("Fatahland") in Lebanon, to eliminate a center of international terrorism, and to eliminate a base of operations from which Israel could be threatened; the success of the military operation also involved the early neutralization of the Syrian SAM emplacements in eastern Lebanon. But the political objectives of the operation were not so precise. In many respects, the results were ambiguous. Under U.S. and international protection, the PLO was permitted to withdraw most of its forces from Lebanon in August 1982. Israel's northern border was temporarily more secure, but the Israeli troops that remained in Lebanon became targets of Iranian-backed Hezbollah terrorists and others, and numerous casualties resulted. A May 1983 agreement between Israel and Lebanon that would have facilitated a withdrawal of Israeli forces was abrogated a year later by Lebanon under pressure from Syria. In 1985, the bulk of Israeli forces were withdrawn unilaterally from Lebanon but a narrow "security zone" north of the border was manned by Israeli soldiers and members of the Israeli-backed South Lebanese Army (SLA). The costs of the War in Lebanon were high, as have been the costs of Hezbollah's continuing war of attrition against Israeli and Israeli-backed targets in the security zone.

With the departure of the PLO forces from Lebanon, attention focused on divisions among Israelis over the status of the West Bank and Gaza Strip. Although the internal debate over these territories had been a core issue since they were occupied by Israel in the 1967 Six Day War, their status took on new immediacy in the wake of the Palestinian rioting in the West Bank and Gaza that began in early December 1987. However, while it prompted extensive public debate, the *intifada* did not facilitate agreement among Israelis about a clear policy option for addressing the complex set of disputes with the Palestinians, a problem exacerbated by the continuation of a widespread Arab consensus on avoiding relations with Israel.

The August 1990 Iraqi invasion of Kuwait and the participation of Arab confrontation states in the multilateral coalition that fought the Persian Gulf War (January-February 1991) caused the first discernible cracking (since the Egypt-Israel Peace Treaty) in the Arab consensus concerning Israel. This helped create the atmosphere for the Madrid Middle East Peace Conference (October 1991) that set in motion bilateral and multilateral processes of negotiations cosponsored first by the United States and the U.S.S.R. (later Russia). These negotiations, while unprecedented in their scope, did not generate any immediate substantive progress. Such progress was produced through secret back-channel communications—and then formal negotiations—involving Israelis and PLO representatives in the spring and summer of 1993 that were held under the good offices of the foreign minister of Norway. The exchange of letters of recognition between Prime Minister Yitzhak Rabin and PLO Chairman Yasser Arafat (September 9, 1993) and the signing of the Israel-PLO Declaration of Principles (September 13, 1993) set in motion a series of interim agreements affecting parts of the West Bank and Gaza Strip. However, these interim agreements—first with the PLO and then with the Palestinian Authority (elected in January 1997)—did not ameliorate the protracted debate among Israelis over the final political status of the West Bank and Gaza Strip or the Arab and Jewish populations there. To the contrary, the internal debate was exacerbated by widespread terrorism against Israelis in the spring of 1996 by Muslim extremist groups, such as

Hamas and Islamic Jihad, and by secular Palestinian groups opposed to the Oslo Accords—terrorism that the Palestinian Authority under the leadership of Yasser Arafat seemingly was unable or unwilling to combat.

Despite their inherent instability and uncertainty, the Israel-PLO interim agreements established an atmosphere in which substantive progress involving Israel and other Arab parties could be achieved. Principal among these was the Common Agenda for future negotiations signed with Jordan on September 14, 1993, which laid the groundwork for the Washington Declaration (July 25, 1994) and the Israel-Jordan Peace Treaty (October 26, 1994). There were also diplomatic and/or commercial openings with a number of Arab countries, including Morocco, Tunisia, Oman, and Qatar; the secondary and tertiary aspects of the Arab economic boycott of Israel were officially suspended by the Gulf Cooperation Council (GCC); and periodic high-level talks, under U.S. sponsorship, were held with Syria about security arrangements on the Golan Heights and related issues. While some of these developments were important in and of themselves, all were part of a long-term process that has yet to provide Israel with permanent peace and normalized relations with all of its neighbors. Militating against this goal were a number of factors, including the continued threat of terrorism emanating from the West Bank and Gaza Strip; a protracted war of attrition waged by Iranian-backed Hezbollah and other Muslim extremist groups against Israeli forces in southern Lebanon; the continued domination of Lebanon by Syria, as well as Syrian support for groups opposed to the Arab-Israeli peace process; threats by a number of Arab countries to link normalizing of relations with Israel to the depth of Israeli political and territorial concessions in interim and final-status agreements with the Palestinian Authority; and the long-term strategic threat to Israel posed by active efforts by several Arab and Islamic regimes to acquire and deploy weapons of mass destruction and the long-range ballistic missile capability to deliver those weapons on targets throughout Israel.

## **GOVERNMENT AND POLITICS**

Israel is a parliamentary democracy but has no formal written constitution. A series of Basic Laws has been enacted since independence that guide Israel's actions and which

are intended, in time, to form portions of a consolidated constitutional document. Pressure has been building recently for the promulgation of a written constitution with a bill of rights.

The President is the head of state and is elected by the Knesset (parliament). The President's powers and functions are primarily ceremonial and his or her actual political power is very limited. The Prime Minister is head of government and, as the chief executive officer, wields considerable power. He or she is now chosen through direct popular election. The Prime Minister forms the Government (or Cabinet) whose members head the ministries. The Prime Minister determines the agenda of Cabinet meetings and has the final word in policy decisions, although such decisions are often arrived at through bargaining and compromise among the coalitions of parties that, since independence, have constituted Israel's governments. Decisions by the Government determine the direction and policy of the state.

Legislative power resides in the Knesset, a unicameral body of one hundred twenty members that is the supreme authority in the state. The Knesset's main functions are similar to those of other modern parliaments and include votes of confidence or no confidence in the government, legislation, participation in the formulation of national policy, approval of budgets and taxation, election of the President, and general monitoring of the activities of the executive branch. All members of the Knesset are elected at-large in a national and general election in which seats are apportioned by a complex system of proportional representation.

The judiciary consists of secular and religious court systems. The Supreme Court is the highest court in the land and hears appeals from lower courts in civil and criminal cases and acts to protect the rights of Israeli citizens. While it does not have the power of judicial review, the Supreme Court has in recent years adopted a more activist role, both in invalidating administrative actions it regards as contrary to the law and in commenting on broader social issues. Each major religious community has its own religious courts that have jurisdiction over matters of personal status such as marriage and divorce, alimony, probate, and inheritance.

Israel has a large number of political parties that represent a wide spectrum of views, positions and interests. There are also religious and special-issue parties that focus on a particular subject or theme as well as political parties that represent the interests of Israeli Arabs and other minority and ethnic communities.

## ECONOMY

Israel's economy has made impressive progress and the economic well-being of its people has improved significantly since independence when Israel was a poor country with weak agricultural and industrial sectors and a dependence on imported consumer goods, raw materials, and food. Economic growth was stimulated by a massive influx of immigrants and large governmental and private capital flows from abroad. Although virtually bereft of natural resources and faced with substantial burdens of immigrant absorption and of defense, Israel achieved relatively prosperous economic levels by the late 1980s with a standard of living comparable to that in many Western European countries. Life expectancy is among the highest in the world; Israel has maintained a substantial level of social services for its population; and its gross national product (GNP) has made dramatic progress. Nevertheless, Israel's economy remains dependent on foreign assistance and is burdened with an extraordinarily heavy debt-repayment responsibility.

Israel's economy grew rapidly after independence. Between 1950 and 1972, the country maintained a real economic output rate of nearly 10 percent per year and its output per worker nearly tripled. This was accompanied by significant increases in the standard of living. Inflation became a problem as the economy reached double-digit inflation in the

early 1970s and triple-digit inflation (more than 400%) by the 1984 election. It was subsequently brought down to some 15 percent by 1987 through the efforts of the 1984-1988 National Unity Government. Balance of payments problems also marked the economy in the 1980s.

Israel lacks substantial natural resources—it has limited amounts of various chemicals, such as potash and phosphates, and water supplies—but this has been offset by the unusually valuable asset Israel has in its human resources. Massive immigration created problems in Israel's early years, but it also endowed Israel with a motivated and skilled labor force. Israel has developed its own highly regarded educational and scientific establishment. Illiteracy is virtually nonexistent, and Israel's population is one of the most highly educated in the world. It is in the forefront of scientific accomplishment in fields such as irrigation and water usage, energy technology, and medical-scientific research.

Israel's only significant domestic energy source is solar power; it has no coal or hydroelectric power potential and possesses very little oil and natural gas. Energy requirements are met largely by crude oil and coal imports, and nuclear power is under study.

Israel has lacked the capital necessary for its economy to function efficiently and since 1948 it has relied on foreign capital inflows to finance the economy and for current expenditures. External sources have included loans, grants, contributions, outside investments, United States government aid, the sale of Israel Bonds, German reparations and restitution payments, and donations from Diaspora Jewish communities. These sources have permitted Israel to pursue a policy of rapid economic and demographic expansion.

The country's economy today is a mixture of state and private enterprise. The service sector remains large because of government and quasi-government activity, including the machinery to integrate large immigrant populations and the trade and transport functions connected with a high level of foreign imports. However, in the 1990s successive governments set as a priority the privatization of state-owned institutions and the opening-up of the economy to increased competition and foreign investment.

Agriculture (most often associated with the kibbutz) traditionally has occupied a position of prominence in Israel and in Zionist ideology greater than its economic contribution has warranted. Its central place in Zionist ideology, dominant role in the settlement of the country, important function in absorbing new immigrants, and security aspects have assured agriculture its priority in Israel's economic policies. The government has been involved in developing, subsidizing, and controlling agricultural activity, including fishing and forestry, since independence. The agricultural sector uses modern scientific methods and has significantly expanded the area under cultivation through irrigation drawn basically from the Jordan River. Agricultural research is extensive, and farmers are quick to adopt improved techniques and respond to changes in market conditions. Israel has become self-sufficient in food production and is an exporter of various foods,

including citrus and other fruits, vegetables, and poultry products. In spite of its rapid growth, agriculture's prominent position has gradually eroded to the point where it contributes only about 5 percent of the GNP and it is a diminishing source of employment primarily because of improved techniques and mechanization. Farm organization is predominantly cooperative, with the moshav (an agricultural settlement run on cooperative lines) being the most popular, while private farming is primarily the domain of non-Jewish sectors, mostly Arabs and some Druze.

Industry became an important, diverse, and fast-growing sector of the economy that contributed about one-third of the GNP by the late 1970s and also became a major source of employment and of commodity exports. The manufacturing-sector output is similar in range, sophistication, and quality of products to that of smaller industrialized countries. Textile manufacturers produce a range of goods including knitwear and high-fashion clothing and there are also plastics, electronics, high-technology scientific and optical equipment, and food processing. The cutting and polishing of diamonds remains a major export industry. Israel's defense industries are dominated by government-owned plants, of which Israel Aircraft Industries is the largest. The mineral and chemical industry depends heavily on the Dead Sea, which is the country's leading mineral source and includes magnesium chloride, potassium chloride (potash), table salt, chlorine, and calcium and magnesium bromide. The Israel-Jordan Peace Treaty and interim agreements with the PLO both included provisions for the joint exploitation of minerals extracted from the Dead Sea region as well as tourism and manufacturing in the region.

Government policy supported industrial development with an export orientation to ease the country's chronic balance-of-payments problem. Emphasis was given to science-based industries with a large value added by domestic manufacturing, particularly since the 1960s. This was the kind of export (e.g., chemicals, metal products, machinery, and electronic equipment) that, along with polished gem diamonds, grew most rapidly in the 1970s. Diamonds are the only product in which Israel has more than a peripheral share in any foreign market, although Israeli-manufactured arms and weapons systems have become very popular internationally and have become an important dimension of the country's export policy.

The foreign markets for Israeli products, and even the pattern of industrial growth, were shaped by the Arab boycott that precluded the possibility of Israel developing close trade links to the economies of its immediate neighbors. Instead the country had to seek more distant markets. The peace agreements with Egypt and Jordan, and the accords with the PLO, led to a partial suspension of the Arab boycott in the early 1990s, which resulted in only modest improvements in the level and quality of commercial interaction between Israel and its neighbors. It is also a fact that there is limited compatibility between Israel's advanced industrial economy and those of its Arab and Muslim neighbors.

Israel's exports reached about \$23.5 billion in 1999 and included such products as manufactured goods including high-tech electronics and computer software, diamonds, citrus and other fruits and other agricultural products, chemicals, plastics, rubber products, mining and quarrying, textiles, processed foods, wood products, paper, and

jewelry. Tourism is also an important earner of foreign exchange. Israeli imports, valued at more than \$30 billion in 1999, included raw materials; machinery; equipment and vehicles for investment; consumer goods; rough diamonds; fuels; and ships, aircraft; and other military equipment. Israel's major trading partners include the United States and the European Union. The establishment of free trade agreements with the U.S. and the EU were important for Israel's export market. Israel also has signed free trade zone agreements with Canada, Turkey, and several countries in eastern Europe, and it has made important economic inroads in the former Soviet Union and Asia. Israel's economy is fully interconnected with the global economy, to the extent that economic trends elsewhere in the world, such as in Russia and Asia, have a direct bearing on the well-being of the Israeli economy.

## **ISRAEL IN THE INTERNATIONAL COMMUNITY**

Since independence, Israel has sought positive relations with the members of the international community. It has joined and participated in the work of international organizations (despite longstanding efforts by the Arabs and their supporters to isolate and ostracize Israel at the United Nations and in other international fora) and it has sought to establish and maintain friendly relations with as many states as possible. Within the framework of this broad effort, there has been a particular focus on relations with the United States and the Soviet Union (and subsequently, with Russia).

Israel had a variable relationship with the Soviet Union and the members of the Eastern bloc since before independence. Although the Soviet Union supported the United Nations Partition Plan of 1947 and Israel's independence in 1948, relations deteriorated rapidly and the Soviet Union shifted to a pro-Arab position, including providing economic assistance and arms to front-line Arab states such as Egypt and Syria by the mid-1950s. Since 1967, when the Soviet Union and the Eastern bloc states, except Romania, broke diplomatic relations with Israel, the questions of a Soviet role in the Arab-Israeli conflict

and the peace process and the status of Jews in the Soviet Union were central themes in Israel-Soviet relations. Under Mikhail Gorbachev a thaw developed and relations between Israel and the Soviet camp improved in a number of spheres. Formal diplomatic relations between Israel and the Soviet Union were restored in October 1991 in conjunction with the start of the Madrid Middle East Peace Conference under joint U.S. and Soviet sponsorship. Moscow permitted the migration of Soviet Jews to Israel, a process that ultimately swelled to some 750,000 Jewish immigrants in the 1990s.

Israel has seen Europe and the developing world (especially Africa and Latin America) as important components of its overall policy. It has sought to maintain positive relations with Europe based on the commonality of the Judeo-Christian heritage and the memories of the Holocaust. The European Union is also an important trading partner for Israel given the long-standing refusal of its immediate neighbors to engage in normal commercial relations. Israel's approach to the developing world has focused on its ability to provide technical assistance in the development process. Despite substantial effort in those sectors, the growing centrality of the United States as the primary facilitator of assistance to Israel, as well as of mediation in Arab-Israeli peacemaking, has caused Israelis to focus increasingly on solidifying relations with the United States.

## **THE SPECIAL RELATIONSHIP BETWEEN ISRAEL AND THE U.S.**

The special but central and complex relationship between Israel and the United States has been more significant. The relationship revolves around a broadly conceived ideological factor. Moreover, it is based on substantial positive perception and sentiment evident in public opinion and official statements and manifest in political-diplomatic support and military and economic assistance. However, the U.S.-Israeli relationship has not been enshrined in a legally binding commitment joining the two states in a formal alliance. Undergirding the relationship is a general agreement on broad policy goals. The two states maintain a remarkable degree of parallelism and congruence on such objectives as the need to prevent major war in the Middle East, to achieve a negotiated resolution of the Arab-Israeli conflict that does not endanger Israeli security, and to strengthen Israel's economic and social well-being. Nevertheless, there have been instances of noncongruence of policy between Washington and Jerusalem on specific issues which have derived from various differences of perspective; for example, disputes with the Begin and Shamir governments over West Bank settlement activity, and differences between the Netanyahu government and the Clinton Administration over the depth and pace of Israeli redeployment in the West Bank. These differences aside, the United States is an indispensable ally that provides Israel with economic, technical, military, political, diplomatic, and moral support. It was seen as the ultimate protector against the Soviet Union in the Cold War and, since the demise of the Soviet Union, against militant Islamist terrorism and rogue regimes, and it is the primary (if not sole) guarantor of Israel's qualitative military advantage over its regional adversaries.

Over time the United States has changed from a power of limited direct support for Israel to the world's only superpower linked to Israel in a free trade area and a crucial provider of political, diplomatic and strategic (security) support as well as economic aid.

There is a widespread misperception that United States support for Israel has been a major element of United States Middle East policy since the creation of the state. United States economic and military assistance was far more substantial to other regional states (such as Turkey, Iran and Greece — in part reflected by the Truman Doctrine of 1947) than to Israel until the Kennedy-Johnson and, later, Nixon years. United States diplomatic-political backing for Israel in the United Nations and elsewhere is marked by the post-1967 war efforts reflected in Johnson's Five Principles of Peace speech of June 19, 1967 and, United Nations Security Council Resolution 242 (which is substantially similar in its approach to peace). A well-developed strategic link derives from the Reagan administration and the president's perception of Israel as a "strategic asset" and the subsequent Memorandum of Understanding (1981), although the Nixon administration certainly identified value in support of King Hussein during Black September (1970). United States military aid and military sales to Israel were negligible in amount and unimpressive in content until the Kennedy administration sold Israel Hawk missiles and the Johnson administration sold Israel modern jet aircraft. It is useful to recall that the well-regarded Israel Air Force of the 1967 war was primarily equipped with modern French jet aircraft, not those of the United States. The first Phantom (F-4) jet aircraft arrived in Israel only in 1969. Total United States military aid to Israel was less than \$1 million until the Kennedy tenure and increased dramatically to substantial levels first with the Nixon administration and then in the wake of the Camp David Accords (1978)

— the so-called "Camp David dividend". Indeed Israeli efforts to secure a formal relationship with the United States in the mid-1950s was rebuffed by the Eisenhower-Dulles administration and it was Britain and France that collaborated with Israel in the Suez War (without US knowledge). It was also then that the Eisenhower administration forced Israel to withdraw from the territories it occupied in the conflict under pain of sanctions.

Israel's special relationship with the United States — revolving around a broadly conceived ideological factor based on positive perception and sentiment evident in public opinion and official statements and manifest in political and diplomatic support and military and economic assistance — has not been enshrined in a legally binding commitment joining the two in a formal alliance. Despite the extensive links that have developed, the widespread belief in the existence of the commitment, and the assurances contained in various specific agreements, the exact nature and extent of the U.S. commitment to Israel remains imprecise. Israel has no mutual security treaty with the United States, nor is it a member of any alliance system requiring the United States to take up arms automatically on its behalf.

The United States commitment to Israel has taken the generalized form of presidential statements (rather than formal documents), which have reaffirmed the U.S. interest in supporting the political independence and territorial integrity of all Middle East states, including Israel. These statements do not, however, commit the United States to specific actions in particular circumstances. The arrangements has been codified in the Sinai II accords of 1975 and in the MOUs since 1981.

It has largely been assumed by both parties that the United States would come to Israel's assistance should it be gravely threatened; this perception has become particularly apparent during times of crisis. Despite this perception and the general feeling in Washington (and elsewhere) that the United States would take action if required, there is no assurance that this would be the case. Israeli leaders continue to be interested in military and economic assistance as the primary tangible expression of the U.S. commitment and have been particularly cautious about potential U.S. participation in a conflict, fearing that combat losses might lead to a situation analogous to that in Vietnam. Thus, the exact role of the United States in support of Israel, beyond diplomatic and political action and military and economic assistance, is unclear.

The United States is today an indispensable if not fully dependable ally. It provides Israel, through one form or another, with economic (governmental and private), technical, military, political, diplomatic, and moral support. It is seen as the ultimate resource against potential enemies, it is the source of Israel's sophisticated military hardware, and its interest in lasting peace is central to the Arab-Israeli peace process. Although there is this positive relationship, there is also an Israeli reluctance, bred of history, to abdicate security to another party's judgment and action. Israel will continue to consider its perceptions of threat and security as decisive. In Israel's elite and collective popular judgement, the special relationship must be sustained. It has been a vital foundation of Israel's security and foreign policy for years. Based on shared democratic values and

similar conceptions of the world there have been concerns about threats from terrorism and dangerous (now called "rogue") states.

The two states maintain a remarkable degree of parallelism and congruence on broad policy goals. The policy consensus includes the need to prevent war, at both the regional and international levels, the need to maintain Israel's existence and security and to help provide for its economic well-being. At the same time, however, there was, is, and will be a divergence of interests that derives from a difference of perspective and overall policy environment. The United States has broader concerns resulting from its global obligations, whereas Israel's perspective is conditioned by its more restricted environment and lesser responsibilities. Israel's horizon is more narrowly defined and essentially limited to the survival of the state and a concern for Jewish communities and individuals that goes beyond the frontiers of the Jewish state.

Despite these areas of shared interests and concerns, and generally positive nature of the relationship, congruence is not always assured and Israelis also recall a series of negative episodes. They have other interests as well, and their perspective of the world emanates from different positions. Full accord being unattainable, there is nevertheless a need to reduce strains and discord in the relationship. There was and will be discord on issues relating to the Arab-Israeli conflict, and particularly the future of the Palestinians.

There has also been a divergence on methods and techniques to be employed, as well as discord on specific issues.

The general consensus on major issues does not ensure agreement on all aspects or specifics of each problem. As the dialogue has increasingly focused on details, rather than broad areas of agreement, there have been disturbances in the relationship. Both parties understand that this is inevitable but seek to minimize the areas of discord. Strains are probably inevitable given the extensive nature of the issues in the dialogue.

The objective of securing the special relationship that exists between Israel and the United States has developed over the years and is now a central focus of foreign policy objectives. This was not always so to the extent it now is. Today Israelis see the relationship as among the loftiest goals of policy. Sustaining and enhancing the relationship is a prerequisite for domestic political success.

Israel has developed a multifaceted and intense special relationship that is both vital and natural. It encompasses both the strategic imperatives of the Jewish state and the ideological connection. In the earliest days of Israeli independence, some argued for non-alignment in the cold war, but the central and dominating concept of David Ben-Gurion, and most of the political elite, was that Israel clearly stood with the West. From those early days Israel has emerged as a "major non-NATO ally" and a country clearly linked with the US for its political and strategic support as well as more clear economic and ideological reasons.

Changing administrations in Washington, and of governments in Jerusalem, have all affected the nature and content of the links between the United States and Israel within the broad parameters of the enduring special relationship. The patterns of agreement and discord established from the outset have manifested themselves subsequently — broad areas of concern on the more strategic and existential issues, accompanied by disagreement on the specifics of many of the elements of the Arab-Israeli conflict and on the means to achieve congruent objectives.

At Israel's birth the United States seemed to be a dispassionate, almost uninterested, midwife — its role was essential and unconventional but also unpredictable and hotly debated in U.S. policy circles. Today, more than fifty years later, some of the policy debate continues, and there are periods of discord in the relationship. Some of this reflects personality and related differences between U.S. and Israeli leaders. But there is little doubt about the overall nature of U.S. support for its small and still embattled ally.

In all relationships there are limits to the ability of one party to influence the other and limits beyond which a state will not go (and concessions it will not make) given its perception of its national interest. As with other states, Israel has imposed limits ("red lines") for its behavior and policies and there is an ultimate "independence" of action that Israel ascribes to itself. Many have assumed that because of the overwhelming importance of the United States to Israel (and especially because of the vast amounts of aid and political-diplomatic support) that the United States retains the ability to "influence" Israel to move in certain directions and adopt certain policies. There are a wide range of actions that Israel is likely to take at the suggestion of the United States. At the same time Israel is able to forestall such suggestions for a variety of reasons relating to the nature of the American political system (including checks and balances, the role of public opinion, the importance of lobbying groups, etc.) and others that are a direct consequence of Israel's self-perception. For Israel, as for other states, core values and vital national interests are not subject to compromise or policy modification, even under substantial external influence from an important and close friend. Reflecting the perspective of numerous Israeli leaders, before and since, Yitzhak Shamir noted in the Knesset in September 1982: "on the fundamental life-and-death issues ... we have no choice but to stand by our position firmly, strongly and clearly, even against our great friend the United States." For the Jewish state the ultimate decisions on peace, security and well-being remain in the decisions of its senior decision-makers.

Readings on the Israel-United States Special Relationship –

#### A Select Bibliography of Books

The U.S.-Israel relationship has been the subject of extensive writing by scholars, academics, politicians, journalists, and other observers. Also, many of the participants in the diplomatic and other connections between these two states have written memoirs and other works that provide interesting, although not always wholly accurate, accounts of the linkage. These are important sources and tell us a good deal about what happened, how these two states interacted, and -- often -- why.

The list which follows is a select one -- it contains only books and monographs written in English. The reader is reminded of a vast periodical literature and is referred to the bibliographical indexes just noted as well as to the bibliographies and notes in the works cited below for guidance to that literature. In addition to scholarly studies, it includes works that advocate a particular approach in the relationship and those that are highly critical of it, the latter group include some that are of the conspiracy theory genre. In sum they help to explicate the special relationship between the United States and Israel.

## **ISRAEL FACES THE FUTURE**

At the heart of Israel's agenda for the future is the continuing Arab-Israeli conflict, with its dimensions of potential conflict and of peace, but placed within the context of numerous territorial and political disputes still to be resolved. Israel's need and desire for peace is not a subject for debate among Israelis, although the means to that end are. Nevertheless, the quest for peace remains a central theme of national life and Israelis are preoccupied with survival and security.

Israel has fought six major wars and countless skirmishes with the Arabs, has built an impressive and highly sophisticated but costly military capability, and holds a strategic edge over its neighbors. Despite, or perhaps because of, its battlefield successes and the specter of future combat, Israelis continuously recalculate the increasingly sophisticated military balance between themselves and the Arab and Islamic worlds and concerns about

weapons acquisitions, force structure, and capability, as well as willingness of Arab and Islamic nations to engage in battle with Israel, are never far from the center of attention. Factors in these assessments include the post-Gulf War build up of conventional weapons by several of Israel's immediate neighbors as well as the transfer of nonconventional (nuclear, biological, and chemical) weapons and weapons technology and long-range missiles by extra-regional actors (such as Russia, China, and North Korea) to militant Arab countries (such as Iraq, Libya, and Syria) and to Iran. The possibility of war with potentially high levels of casualties and other unbearable costs remains a matter of deep public concern.

For most Israelis, the prospects for a future in which they will live in peace with their immediate and more distant neighbors in the Middle East seems to lie at a point beyond the immediate future. This perception was not significantly affected by the process of negotiations ensuing from the Madrid Peace Conference or by the completion of interim agreements with the PLO or the signing of the peace treaty with Jordan, despite the fact that each of these events may be viewed as part of a long-term process that will lead to a comprehensive resolution of the Arab-Israeli conflict. Israelis also hope that an eventual end of the conflict with the Arabs will allow them to address a multitude of domestic challenges—relating, *inter alia*, to the role of religion in the state, social and economic disparities among Jewish Israelis, and the political status of Israel's non-Jewish citizenry—most of which were subsumed during the first fifty years of statehood to the more immediate challenge of protecting the state against existential external threat.

## **ISRAEL – DECLARATION OF INDEPENDENCE (1948)**

### DECLARATION OF THE ESTABLISHMENT OF THE STATE OF ISRAEL

ERETZ ISRAEL [the Land of Israel] was the birthplace of the Jewish people. Here their spiritual, religious and political identity was shaped. Here they first attained to statehood, created cultural values of national and universal significance and gave to the world the eternal Book of Books.

After being forcibly exiled from their land, the people kept faith with it throughout their Dispersion and never ceased to pray and hope for their return to it and for the restoration in it of their political freedom.

Impelled by this historic and traditional attachment, Jews strove in every successive generation to re-establish themselves in their ancient homeland. In recent decades they returned in their masses. Pioneers, *ma'pilim* [immigrants coming to Eretz Israel in defiance of restrictive legislation] and defenders, they made deserts bloom, revived the Hebrew language, built villages and towns, and created a thriving community, controlling its own economy and culture, loving peace but knowing how to defend itself, bringing the blessings of progress to all the country's inhabitants, and aspiring towards independent nationhood.

In the year 5657 (1897), at the summons of the spiritual father of the Jewish State, Theodor Herzl, the First Zionist Congress convened and proclaimed the right of the Jewish people to national rebirth in its own country.

This right was recognized in the Balfour Declaration of the 2nd November, 1917, and re-affirmed in the Mandate of the League of Nations which, in particular, gave international sanction to the historic connection between the Jewish people and Eretz-Israel and to the right of the Jewish people to rebuild its National Home.

The catastrophe which recently befell the Jewish people—the massacre of millions of Jews in Europe—was another clear demonstration of the urgency of solving the problem of its homelessness by re-establishing in Eretz-Israel the Jewish State, which would open the gates of the homeland wide to every Jew and confer upon the Jewish people the status of a fully-privileged member of the comity of nations.

Survivors of the Nazi holocaust in Europe, as well as Jews from other parts of the world, continued to migrate to Eretz-Israel, undaunted by difficulties, restrictions and dangers, and never ceased to assert their right to a life of dignity, freedom and honest toil in their national homeland.

In the Second World War, the Jewish community of this country contributed its full share to the struggle of the freedom- and peace-loving nations against the forces of Nazi wickedness and, by the blood of its soldiers and its war effort, gained the right to be reckoned among the peoples who founded the United Nations.

On the 29th November, 1947, the United Nations General Assembly passed a resolution calling for the establishment of a Jewish State in Eretz-Israel; the General Assembly required the inhabitants of Eretz-Israel to take such steps as were necessary on their part for the implementation of that resolution. This recognition by the United Nations of the right of the Jewish people to establish their State is irrevocable.

This right is the natural right of the Jewish people to be masters of their own fate, like all other nations, in their own sovereign State.

**ACCORDINGLY WE, MEMBERS OF THE PEOPLE'S COUNCIL, REPRESENTATIVES OF THE JEWISH COMMUNITY OF ERETZ-ISRAEL AND OF THE ZIONIST MOVEMENT, ARE HERE ASSEMBLED ON THE DAY OF THE TERMINATION OF THE BRITISH MANDATE OVER ERETZ-ISRAEL AND, BY VIRTUE OF OUR NATURAL AND HISTORIC RIGHT AND ON THE STRENGTH OF THE RESOLUTION OF THE UNITED NATIONS GENERAL ASSEMBLY, HEREBY DECLARE THE ESTABLISHMENT OF A JEWISH STATE IN ERETZ-ISRAEL, TO BE KNOWN AS THE STATE OF ISRAEL.**

**WE DECLARE** that, with effect from the moment of the termination of the Mandate, being tonight, the eve of Sabbath, the 6th Iyar, 5708 (15th May, 1948), until the establishment of the elected, regular authorities of the State in accordance with the

Constitution which shall be adopted by the Elected Constituent Assembly not later than the 1st October, 1948, the People's Council shall act as a Provisional Council of State, and its executive organ, the People's Administration, shall be the Provisional Government of the Jewish State, to be called "Israel."

THE STATE OF ISRAEL will be open for Jewish immigration and for the Ingathering of the Exiles; it will foster the development of the country for the benefit of all inhabitants; it will be based on freedom, justice and peace as envisaged by the prophets of Israel; it will ensure complete equality of social and political rights to all its inhabitants irrespective of religion, race or sex; it will guarantee freedom of religion, conscience, language, education and culture; it will safeguard the Holy Places of all religions; and it will be faithful to the principles of the Charter of the United Nations.

THE STATE OF ISRAEL is prepared to cooperate with the agencies and representatives of the United Nations in implementing the resolution of the General Assembly of the 29th November, 1947, and will take steps to bring about the economic union of the whole of Eretz-Israel.

WE APPEAL to the United Nations to assist the Jewish people in the building-up of its State and to receive the State of Israel into the comity of nations.

WE APPEAL—in the very midst of the onslaught launched against us now for months—to the Arab inhabitants of the State of Israel to preserve peace and participate in the upbuilding of the State on the basis of full and equal citizenship and due representation in all its provisional and permanent institutions.

WE EXTEND our hand to all neighbouring states and their peoples in an offer of peace and good neighbourliness, and appeal to them to establish bonds of cooperation and mutual help with the sovereign Jewish people settled in its own land. The State of Israel is prepared to do its share in common effort for the advancement of the entire Middle East.

WE APPEAL to the Jewish people throughout the Diaspora to rally round the Jews of Eretz-Israel in the tasks of immigration and upbuilding and to stand by them in the great struggle for the realization of the age-old dream—the redemption of Israel.

PLACING OUR TRUST IN THE ALMIGHTY, WE AFFIX OUR SIGNATURES TO THIS PROCLAMATION AT THIS SESSION OF THE PROVISIONAL COUNCIL OF STATE, ON THE SOIL OF THE HOMELAND, IN THE CITY OF TEL-AVIV, ON THIS SABBATH EVE, THE 5TH DAY OF IYAR, 5708 (14 MAY, 1948).

135 Jews are expelled from "Palestine", a name given to Judea by Rome.

395-638 Byzantine rule.

638 Arab Muslim armies conquer Jerusalem.

c. 636-1072 Arab rule.

1072-1099 Seljuq rule.

1099 Jerusalem captured by the Crusaders.

1099-1291 Crusader rule with interruptions.

1187 Jerusalem is captured by Saladin.

1291-1516 Mameluke rule.

C. 1517-1917 Ottoman Turkish rule.

1882-1903 First Aliya.

1894 Dreyfus trial in France.

1896 Publication of *Der Judenstaat* by Theodor Herzl.

1897 First Zionist Congress is held in Basle, Switzerland. The World Zionist Organization is established.

1904 Herzl dies.

1904-1914 Second Aliya.

1917 November 2 The Balfour Declaration is issued.

1919-1923 Third Aliya.

1920 The British Mandate over Palestine is granted at San Remo although it is not formalized until 1922. Herbert Samuel is appointed High Commissioner for Palestine. The Histadrut and Hagana are founded.

1922 July Palestine Mandate ratified by League of Nations.

1924-1928 Fourth Aliya.

1925 Hebrew University is inaugurated on Mt. Scopus, Jerusalem.

1929 Arab riots take place in Jerusalem and massacres occur in Hebron and Safed.

1929-1939 Fifth Aliya.

1935 The Revisionist movement, headed by Vladimir Zeev Jabotinsky, secedes from the World Zionist Organization and establishes the new Zionist Organization.

1937 Peel Commission Report; first proposal to partition Palestine..

1942 May Biltmore Program promulgated by Zionists at conference in New York.

1945 November Anglo-American Committee of Inquiry established.

1947 Great Britain turns the Palestine issue over to the United Nations. The United Nations Special Committee On Palestine (UNSCOP) examines the problem and recommends solutions.

November 29 The United Nations General Assembly adopts a resolution (UNGA Res 181 (II)) providing for an independent Jewish state in Palestine to be united economically with an independent Arab state. An international regime is to be established in Jerusalem. US and USSR support the partition plan.

1948 May 14 Proclamation of the independence of the State of Israel. US extends *de facto* recognition. Ben-Gurion becomes first Prime Minister of Israel.

May 15 The British Mandate for Palestine is terminated; Arab armies of Egypt, Iraq, Jordan, Lebanon, and Syria invade and the first Arab-Israeli War (Israel's War of Independence) officially begins. The United States and the Soviet Union recognize Israel.

December 11 UNGA adopts Resolution 194.

1949 February 16 Chaim Weizmann is elected the first President of Israel.

February 24 Armistice Agreement with Egypt.

March 10 The first regular Government is established under David Ben-Gurion as Prime Minister.

March 23 Armistice Agreement with Lebanon.

April 3 Armistice Agreement with Jordan.

May 11 Israel becomes a member of the United Nations.

July 20 Armistice Agreement with Syria.

December Abdullah annexes that part of Palestine occupied by the Arab Legion (West Bank) and East Jerusalem. (Annexation ratified by Jordanian parliament in April 1950).

December 13 A resolution to transfer the Knesset and the Government to Jerusalem is adopted.

1953 Ben-Gurion resigns as Prime Minister. Moshe Sharett becomes Prime Minister.

1956 October 29 Israel moves against Egyptian fedayeen bases and prepares for attack in the Sinai Peninsula to eliminate commando bases. Israel invades Sinai. Sinai/Suez (second Arab-Israeli war) War begins.

November 5 France and the United Kingdom invade the Suez Canal Zone.

November 7 Egypt, France, and the United Kingdom accept the cease-fire.

1957 January 22 Israel evacuates all of Sinai except Gaza and Sharm El-sheikh.

March 1 Israel agrees to evacuate Gaza and Sharm el-Sheikh.

March 8 UNEF forces take over from Israel the garrisoning of Sharm al-Sheikh and the administration of the Gaza Strip.

1960 April 26 Israel's National Water Council approves a plan for laying a giant conduit to carry water from the Sea of Galilee to southern Israel.

May 23 Adolf Eichmann is kidnaped from Argentina for trial in Israel.

1961 April 11 The Eichmann Trial opens in Jerusalem.

1962 May 31 Adolf Eichmann is executed.

September 27 The Foreign Ministry announces that the United States has agreed to supply Israel with Hawk ground-to-air missiles for defense. First direct sale of significant American weapons to Israel.

1963 June 16 David Ben-Gurion resigns from his post as Prime Minister and Minister of Defense.

June 26 A new government, with Levi Eshkol as Prime Minister, takes office.

1964 January Palestine Liberation Organization (PLO) is created in Cairo. Ahmed Shukairi becomes first chairman.

1965 January 1 Fatah is established and launches its first attack against Israel

1967 April 7 During an air clash six Syrian MIG 21s are shot down by Israeli planes.

May 22/May 23 UAR President Gamal Abdul Nasser announces an Egyptian blockade of the Gulf of Aqaba, cutting off Israel's access to the Red Sea through the port of Eilat.

June 1 Prime Minister Levi Eshkol forms a broadly-based "National Unity Government" in which former Chief of Staff Moshe Dayan becomes Minister of Defense.

June 5 Hostilities commence between Israel and the Arab states in the Six Day (third Arab-Israeli) War.

June 10 The USSR breaks diplomatic relations with Israel. Other Soviet bloc European countries, except Romania, follow suit.

June 12 In a policy speech to parliament, Israeli Prime Minister Levi Eshkol declares that Israel could not return to the prewar situation and demands that the Arabs make peace with Israel.

August-September Arab Summit Meeting at Khartoum, Sudan declares no recognition, no negotiation, and no peace with Israel.

November 22 The United Nations Security Council adopts Resolution 242.

1969 The War of Attrition (the fourth Arab-Israeli War) begins along the Suez Canal.

March 7 Golda Meir becomes Prime Minister.

1970 August 7 The War of Attrition is ended by a cease-fire.

September Jordan civil war between armed forces and the PLO. PLO is ousted from Jordan by Hussein's army.

1972 May 30 Japanese gunmen, acting for the PFLP, shoot up Lod Airport.

September 5 Munich Olympics massacre of Israeli athletes by Black September terrorists.

1973 October 6 The fifth Arab-Israeli (Yom Kippur or Ramadan War) begins.

November The Agranat Commission established.

November 11 Israel-Egypt cease-fire is signed at Kilometer 101.

December 21 Geneva Peace Conference is convened.

1974 January 17 Egypt-Israel Disengagement Agreement is signed at Kilometer 101.

April 22 Yitzhak Rabin becomes Prime Minister.

May 31 Israel and Syria sign a Disengagement Agreement in Geneva.

October 28 Arab League summit meeting at Rabat, Morocco declares the PLO as "sole legitimate representative of the Palestinian people".

November 13 Yasser Arafat addresses the UN General Assembly. PLO is later granted observer status.

1975 September 4 Egypt and Israel sign Sinai II disengagement agreement.

November 10 United Nations General Assembly resolution declares Zionism to be a form of racism.

1976 July 4 Israeli commandos free hostages at Entebbe Airport, Uganda.

1977 April Rabin resigns as Prime Minister. Shimon Peres is selected as Labor Party leader.

May 17 Election for the Ninth Knesset. Likud, under the leadership of Menachem Begin, emerges as the largest party.

June 21 Begin forms the government coalition with himself as Prime Minister, the first non-Labor government in Israel.

November President Anwar Sadat of Egypt announces to the Egyptian National Assembly his willingness to visit Israel to discuss peace; the Israeli Knesset overwhelmingly approves an invitation to Sadat. Sadat arrives in Jerusalem and addresses the Israeli Knesset. Negotiations begin.

1978 March Following an attack on an Israeli bus, Israel launches (on March 14) Operation Litani against Palestinian bases in Lebanon.

September 5-17 Sadat, Begin, and Carter meet at the Summit at Camp David, Maryland. The Camp David Accords are signed on the 17<sup>th</sup> at the White House in Washington, DC.

December 10 Nobel Peace Prize is awarded jointly to Sadat and Begin

1979 March 26 The Egypt-Israel Peace Treaty is signed in Washington.

1980 February Egypt and Israel exchange ambassadors.

July 30 The Knesset adopts a Basic Law reaffirming united Jerusalem as Israel's capital.

1981 June 7 Israel destroys the Iraqi Osirak nuclear reactor near Baghdad.

June 30 Election for the Tenth Knesset. Likud secures the largest number of seats. A Begin coalition government secures a vote of confidence from the Knesset in August.

June 6 War in Lebanon (sixth Arab-Israeli war) begins.

November 30 The United States and Israel sign a Memorandum of Understanding on Strategic Cooperation.

December 14 Israel extends its "law and jurisdiction" to the Golan Heights.

1982 April 25 Israel completes its withdrawal from the Sinai Peninsula and returns it to Egypt.

June 6 Israel invades Lebanon. War in Lebanon (Operation Peace for Galilee). Israel launches an attempt to destroy PLO bases in Lebanon.

1983 May 17 Israel and Lebanon sign an agreement concluded with the assistance of United States Secretary of State George Shultz.

September 16 Menachem Begin resigns as Prime Minister.

October Yitzhak Shamir forms a new government and takes office as Prime Minister.

1984 March 5 Lebanon abrogates the May 17, 1983 agreement with Israel.

1985 January Israel announces its intent to withdraw unilaterally from Lebanon.

July The Israel Defense Forces completes its withdrawal from Lebanon. A security zone is established in southern Lebanon astride the Israeli-Lebanese frontier.

1987 December 8 An Israeli truck hits a Palestinian car in Gaza killing four people. Anti Israeli violence erupts throughout Gaza.

December 9 An Arab uprising (intifada) begins in the West Bank and the Gaza Strip challenges Israel's authority in the territories.

1988 February Hamas is created in Gaza

November 15 The Palestine National Council (PNC), meeting in Algiers, declares an independent Palestinian state and issues ambiguous statements concerning acceptance of UNSC Resolutions 242 and 338.

December 13 Arafat, at press conference, recognizes Israel's right to exist, accepts UNSC Res. 242 and 338, renounces terrorism. US announces that it will begin a dialogue with the PLO in Tunis.

December 22 Prime Minister Yitzhak Shamir presents his coalition government to the Knesset. It is approved by a vote of 84 to 19 with three abstentions.

1989 March 15 Egypt takes control of Taba.

1990 January Soviet Jews begin to arrive in Israel in large numbers.

March 15 The Knesset passes a motion of no-confidence in the government led by Yitzhak Shamir by a vote of 60 to 55.

June 11 The Knesset approves Yitzhak Shamir's government composed of Likud and right-wing and religious parties.

June 20 President George Bush suspends the US dialogue with the PLO.

September 30 Consular relations are reestablished between Israel and the Soviet Union.

November 5 Rabbi Meir Kahane, leader of the Kach Party, is assassinated in New York.

November 25 The cabinet approves Gen. Ehud Barak to replace Lt. Gen. Dan Shomron as chief of staff of the IDF when Shomron's tenure ends in April 1991.

1991 October 18 Israel and the Soviet Union restore diplomatic relations.

October 30 Peace conference organized by the United States and the Soviet Union meets in Madrid, Spain.

December 10 Beginning of Washington rounds of bilateral Arab-Israeli negotiations.

December 16 United Nations General Assembly repeals the "Zionism is Racism" resolution.

1992 June 23 Election for the Thirteenth Knesset. Israel Labor Party wins under leadership of Yitzhak Rabin.

January 1993-February Deputy Foreign Minister Yossi Beilin discloses existence of Oslo talks to Peres, who in turn informs Rabin. Oslo negotiators begin drafting declaration of principles for interim Israel-PLO agreement.

March 23 Benjamin Netanyahu is elected leader of the Likud Party, replacing Yitzhak Shamir.

May Rabin agrees to upgrade Oslo talks to official level.

July 25 Israel launches bombardment of Hezbollah bases in southern Lebanon ("Operation Accountability"); US brokers cease-fire and agreement between Israel and Lebanon (acting on Hezbollah's behalf) to avoid firing on the other's civilian populations.

August 20 Israeli and PLO officials initial Declaration of Principles in Oslo.

August 30 Israel cabinet approves Declaration of Principles with no amendments allowed.

September 9 Rabin and Arafat exchange letters of mutual recognition on behalf of Israel and the PLO.

September 13 Israel-PLO Declaration of Principles is signed by Peres and the PLO's Mahmoud Abbas (Abu Mazen) on the White House lawn in Washington. Prime Minister Rabin and PLO leader Arafat shake hands.

September 14 Israel and Jordan sign Common Agenda for future negotiations. Rabin meets with King Hassan II in Morocco.

September 23 Knesset approves DOP by vote of 61-50 with 8 abstentions.

1994 April 29 Israel-PLO economic cooperation agreement signed in Paris.

May 4 Israel and the PLO sign the Cairo agreement for establishing self-rule in Gaza Strip and Jericho.

June 16 Israel and Vatican establish full diplomatic relations.

July 25 Washington Declaration on Israel-Jordan peace is signed; Rabin and King Hussein address joint session of US Congress.

August 3 Knesset, by vote of 77-9 with 4 abstentions, approves resolution reaffirming Jerusalem's status as the "eternal capital of Israel, and Israel alone".

August 29 "Early empowerment" agreement on transfer of civilian authority in parts of West Bank and Gaza Strip is signed.

October 26 Israel and Jordan sign Peace Treaty; King Hussein subsequently makes first official visit to Israel where he and Rabin formally exchange copies of the treaty.

November 27 Israel and Jordan establish diplomatic relations.

December IDF Chief of Staff Ehud Barak and his Syrian counterpart, Hikmat Shihabi, meet in Washington to discuss security arrangements for the Golan Heights and related matters.

December 10 Yitzhak Rabin, Shimon Peres and Yasser Arafat receive the Nobel Peace Prize in Oslo, Norway.

December 26 Rabin becomes first Israeli prime minister to visit Persian Gulf Sultanate of Oman.

1995 March 14 Israel and Syria agree to resume direct peace talks involving Israel's Ambassador to Washington, Itamar Rabinovich, and his Syrian counterpart, Walid al-Moualem.

October 24 US Congress passes "Jerusalem Embassy Relocation Act", requiring transfer of Embassy to Jerusalem by May 1999.

November 4 Yitzhak Rabin is assassinated by Yigal Amir in Tel Aviv; Peres becomes Interim Prime Minister; inquiry headed by retired Supreme Court President Meir Shamgar finds serious lapse in security around Rabin but no evidence of conspiracy.

November 22 The Knesset votes its confidence in the new government of Shimon Peres by a vote of 62-8 with 32 abstentions.

1996 February 20 David Levy announces the establishment of his new political party, Gesher (Bridge).

May 29 In the first direct election of the prime minister, Benjamin Netanyahu defeats Shimon Peres by less than 1% (50.4% to 49.5%),

though among Jewish voters there is an 11% differential (55.5% to 44.5%). Concurrent election to 14th Knesset is held.

1998 January 4 David Levy resigns as foreign minister and withdraws his Geshet faction from the governing coalition to protest stalemate in peace process and proposed budget cuts.

November 17 The Knesset ratifies the Wye River Memorandum by vote of 75-19, with 9 abstentions and 14 absent.

November 18 Foreign Minister Sharon and Palestinian Authority minister Abu-Mazen (Mahmoud Abbas) formally launch final-status negotiations.

December 22 Dan Meridor quits Likud, announcing intention to run for prime minister as head of a new centrist political party. This proposed party ultimately is subsumed within the new Center Party headed by Yitzhak Mordechai.)

December 28 Ze'ev Binyamin Begin quits Likud, announcing intention to enter race for prime minister as head of New Herut (Herut Hahadasha) Party. This party subsequently is incorporated into new right-wing National Union coalition, with Begin as its candidate for prime minister.

1999 March 25 Azmi (Ahmed) Bishara becomes first Israeli Arab to declare his candidacy for Prime Minister.

May 15-16 On the eve of general elections, Azmi Bishara, Yitzhak Mordechai, and Ze'ev Binyamin Begin, withdraw from prime ministerial race, creating 2-way contest between Benjamin Netanyahu and Ehud Barak.

May 17 Israel Labor Party/One Israel leader Ehud Barak defeats the Likud's Benjamin Netanyahu in the direct election for Prime Minister, receiving 56.08% of the popular vote (1,791,020) compared to 43.92 (1,402,474) for Netanyahu. In elections for the 15<sup>th</sup> Knesset, One Israel wins 26 seats, Likud 19, and Shas 17.

July 6 The Knesset approves Ehud Barak's government and policy guidelines and he is sworn in as prime minister. Barak presents his seven party, 75-member governing coalition and its program before the Knesset for ratification; in his inaugural speech as Prime Minister, Barak urges Israel's Arab neighbors to resume pursuit of peace initiated by his mentor, Yitzhak Rabin. Labor MK Avraham Burg is elected speaker of the 15<sup>th</sup> Knesset.

September 2 Ariel Sharon is elected leader of the Likud Party.

September 4 Barak and Arafat sign agreement at Sharm el-Sheikh, to implement outstanding elements of the October 1998 Wye River Memorandum, a target date for completing final-status peace negotiations is set for September 2000.

September 13 Foreign Minister David Levy and Palestinian negotiator Abu Mazen formally launched the final status peace talks between Israel and the Palestinians.

October 28 Mauritania establishes diplomatic ties with Israel, becoming the third Arab country (after Egypt and Jordan) to do so.

November 8 Israel and the PLO begin permanent status talks in earnest in Ramallah.

December Evidence is uncovered of President Ezer Weizman's having received substantial financial gifts; Weizman resists growing pressure to resign.

December 8 President Clinton announces agreement of Israel and Syria to resume formal talks.

December 15-16 Barak and Syrian Foreign Minister Farouk al-Sharaa meet with Clinton in Washington.

2000 January 3-10 Barak and Sharaa and their respective delegations meet with U.S. mediators in Shepherdstown, West Virginia. Clinton presents a 7-page document designed to "bridge" differences between Israeli and Syrian positions on key issues, and to serve as a blueprint for a comprehensive peace treaty.

### **Bibliography – A Selected Guide to Further Reading**

The academic and scholarly literature on Israel is massive, although uneven in both areas and subjects covered and quality of analysis and style. The following selected list records some of the major and more useful works available for further reading.

## SELF STUDY GUIDE

GEORGE P. SHULTZ NATIONAL FOREIGN AFFAIRS TRAINING CENTER

School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

## Self-Study Guide to Jordan

The **Self-Study Guide: Jordan** is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to Jordanian history, geography, politics, economics, culture, religion, media, and international relations. The Guide should serve an introductory self-study resource.

The topic is far too complex to be covered in depth using only the text in this Guide. The reader is encouraged to explore the questions and issues introduced, using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of this Guide was prepared by Dr. Jenab Tutunji, Adjunct Professor of Political Science, George Washington University. The views expressed in this Guide are those of the author and attributable sources and do not necessarily reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by Dr. Tutunji.

All sources used for graphics and extended quotes are from the public domain, from sites that explicitly say “can be used for non-profit or educational use,” or are from the author’s own materials.

This publication is for official educational and nonprofit use only.

First Edition

September 2002

## Table of Contents

### [Historical Timeline](#)

- I. [Geography](#)
- II. [History](#)
  - i) [Archaeology and Antiquities of Jordan](#)
  - ii) [Modern History of Jordan](#)
    - a) Ottoman Period to 1910
    - b) Arab Revolt and the Founding of the Amirate of Transjordan
- III. [Culture and Social Issues](#)
- IV. [Economics](#)

## V. [Politics](#)

- i) [Parliament and the Struggle with the Crown](#)
  - a) The 1952 Constitution
  - b) King Hussein and the Constitutional Experiment
- ii) [Civil War](#)
- iii) [Return to Constitutional Government in 1989](#)
  - a) Defensive Democratization
  - b) Relations with the Islamists

## VI. [Foreign Affairs](#)

- i) [Relations With the Palestinians and Israel](#)
  - a) The 1948 Arab-Israel War
  - b) The June 1967 War and Its Aftermath
  - c) Showdown With the PLO in 1970
  - d) Pursuit of Peace: Enlisting the Partnership of the PLO
  - e) Jordan-Israel Peace Agreement
- ii) [Relations With Arab States](#)
  - a) Reign of King Hussein
  - b) Beginning of the Cold War 1952–58
    - 1) Baghdad Pact and the Parting With Glubb
    - 2) Arab Radicals and the Turmoil of 1956–58

- c) Union With Iraq and Its Breakup
- d) Pursuit of Economic Development and Strategic Rents 1975–90
  - 1) Alliances with Syria and Iraq
  - 2) Eclipse of Jordan’s Pan-Arab Role in 1988
  - 3) Arab Cooperation Council: An Experiment In Integration

iii) [Relations With the United States](#)

- a) Response to Arab Radicalism: The Beginnings of the Relationship
- b) The 1970 Crisis
- c) The Gulf War
- d) Reconciliation

VII. [Reign of Abdullah II](#)

## Historical Timeline

Up to 8500 BC      Paleolithic Age, gradual settling and cultivating of hunting and gathering nomads.

8500–4500 BC      Neolithic Age, widespread agriculture, first large settlements and first pottery c. 5500 BC.

4500–3200 BC      Calcolithic Age, appearance of metal working.

3200–1950 BC      Early Bronze Age, emergence of “city states” surrounded by huge defenses and change to village and pastoral life.

- 1950–1550 BC Middle Bronze Age, re-emergence of urban life in strongly defended cities.
- 1550–1200 BC Late Bronze Age, continuance of city states and dominance by the Egyptian Empire.
- 1200–539 BC Iron Age, establishment of kingdoms of Edom, Moab and Ammon.
- c. 950 BC Israelites conquer region. United Israelite Monarchy under Saul, David and Solomon.
- 854 BC Assyrians invade region.
- 850 BC King Mesha of Moab gains control of the region.
- c. 580 BC Babylonians invade region. Jews deported to Babylon.
- c. 500 Nabataean Arab tribes establish presence in region.
- 539–332 BC Region falls under Persian Empire, rule by Persian governors until region is conquered by Alexander the Great in 330 BC.
- 332–63 BC Hellenistic period., rule by Ptolemies and Seleucids.
- 63 BC–AD 324 Roman and Nabataean period.
- 63 BC Conquest by Roman General Pompey.
- 106 BC Nabataean kingdom, with capital at Petra, conquered by Rome. With the Roman conquest, Jordan becomes part of the Roman Province of Arabia.

- c. AD 200 Ghassanid Arab tribe establishes presence in region.
- AD 324–640 Byzantine period, official conversion to Christianity under Roman Emperor Constantine. Region experiences population explosion.
- AD 629–636 Arab Islamic conquest of the region.
- AD 661–750 Ummayyad Dynasty established, area ruled from Damascus which becomes seat of caliphate.
- AD 750–1258 Abbasid Dynasty rules vast Islamic empire from Baghdad.
- AD 945 Buyids, a dynasty of military leaders from the fringes of the Caspian Sea, seize power and rule from behind the throne in Baghdad
- AD c. 1071 Seljuk Turks rule in Baghdad while Abbasids remain titular caliphs. Centralized rule begins to disintegrate.
- AD 1099–1100 Crusader conquest, establishment of Crusader Kingdom of Jerusalem which lasts from AD 1099 to 1291.
- AD 1187 Ayyubid Dynasty founded by Salah al-Din, who re-establishes Arab Muslim rule in Jordan after defeating the Crusaders at Karak. Ayyubids rule Syria until 1260.
- AD 1258 Baghdad sacked by Mongols. Abbasid dynasty ends.
- AD 1260 *Mamluk* army from Egypt prevents expansion of Mongols into Syria (and Jordan). *Mamluks* rule Syria until defeated by Ottomans.
- AD 1518 Ottomans conquer greater Syria.

AD 1831–1841 Egyptian Khediv Muhammad Ali's son, Ibrahim Pasha, conquers Syria, introduces administrative changes, but the Ottomans regain control in 1841.

AD 1867–1880 Wave of village settlement in Jordan involving local peasants.

AD 1880–1893 Ottomans extend direct rule to Jordan 1880-1890 and take direct control of northern Jordan, extending rule to Karak and southern Jordan in 1893.

AD 1887–1910 Second wave of village settlement in Jordan (until 1906) by Circassians, Chechens and Turkmen fleeing Russian persecution and massacres. Alarmed by this, Bedouin leaders encourage settlement on tribal lands by sharecroppers, constituting a third wave, ending in 1910.

1900–1908 Hijaz Railroad is built and runs through Jordan, connecting the western Arabian peninsula to Constantinople.

1910 Rebellion in Karak against encroachments of centralized Ottoman state in December 1910 is suppressed, but Karak remains frontier town in contrast to northern provinces which were incorporated into Ottoman domain.

1917–1918 Great Arab Revolt against the Ottomans. Forces of Sharif Hussein, accompanied by T.E. Lawrence, conquer Aqaba, but progress of the revolt in Jordan is stretched out from July 1917 to September 1918.

1918–1920 Transjordan ruled by Sharif Hussein's son Faisal from Damascus.

1920 San Remo Conference in April grants Britain mandate over

Iraq and Palestine and France mandate over Syria. Britain announces to tribal leaders in August that Transjordan is included in Palestine mandate, but *Um Qais* treaty is signed giving assurances Transjordan would not be colonized by Zionists. Faisal is declared King of Syria but is ousted by British.

1921                      British offer throne of Iraq to Faisal. Churchill meets with Faisal's brother, Abdullah, convinces him to give up claim to Iraq in exchange for Syria. On April 1, Abdullah declared amir of Transjordan.

1922                      Arab Legion, British officered Transjordan army, is founded.

1922                      Saudi invasion of Transjordan fails.

1924                      Second invasion by Saudi Arabia fails.

1927                      Saudi Arabia acknowledges in Treaty of Jidda that Ma'an and Aqaba are in fact part of Transjordan.

1928                      Anglo-Transjordanian agreement signed giving Britain special prerogatives. Organic Law promulgated. Legislative Council elected.

1930                      John Bagot Glubb appointed commander of Arab Legion.

1941                      Britain uses Arab Legion to help quell pro-Axis Gilani rebellion in Iraq.

1946                      Treaty of alliance with Britain recognizes Transjordan's nominal independence. Britain undertakes to defend Transjordan. Abdullah changes his title from amir to king.

1947                      P.M. Abul Huda and Glubb secure agreement of British

Foreign Secretary Bevin for Arab Legion to seize area allocated to Arabs under U.N. Partition Plan.

1948                      New Anglo-Transjordanian treaty signed reducing Britain's prerogatives but London keeps the use of two airbases and boosts its subsidy to the Arab Legion.

1948-49                  First Arab-Israeli war. Arab Legion secures control of West Bank, including Jerusalem. Jordan and Israel sign armistice agreement.

1950                      Parliamentary elections held in Transjordan and West Bank. Parliament then votes to unite the East and West Banks under the name of the Hashemite Kingdom of Jordan under King Abdullah. Palestinians granted rights of citizenship.

1951                      King Abdullah assassinated. His eldest son, Talal, crowned king despite illness.

1952                      Parliament removes Talal from office due to incapacitation. His son, Hussein, becomes king but a regency council rules in his place for a few months because he is underage. 1952 constitution states Jordan is a hereditary constitutional monarchy.

1953                      King Hussein sworn into office and assumes duties.

1954                      Parliamentary elections.

1955                      Riots break out to prevent Jordan joining Baghdad Pact.

1956                      King Hussein relieves General Glubb of his duties. Army is "Arabized."

- 1956 Parliamentary elections.
- 1956–1957 Constitutional experiment. Nabulsi becomes Prime Minister because of support in Parliament and charts Arab nationalist policies in collision course with King. Coup attempt against King. Hussein dismisses Nabulsi and declares martial law. Jordan reverts to conservative policies.
- 1957 U.S. replaces Britain as source of military and financial support for Jordan.
- 1958 Jordan forms federation with Iraq. British troops sent to Jordan following revolution in Iraq and civil war in Lebanon. Federation breaks up.
- 1961 Parliamentary elections.
- 1962 Parliamentary elections.
- 1964 Palestine Liberation Organization created.
- 1967 Parliamentary elections.
- 1967 Arab-Israeli war. Israel occupies West Bank, including Jerusalem.
- 1970–1971 Jordanian army clashes with PLO. Syrian tanks enter Jordan but are repulsed. Army drives PLO guerrillas out of Jordan, never to return.
- 1973 Arab-Israeli war.
- 1974 Rabat Arab summit declares PLO sole legitimate

representative of the Palestinian people.

1974 King Hussein dissolves lower House of Parliament and suspends Parliament indefinitely.

1975 Beginning of decade of rapid, planned economic growth.

1978 National Consultative Council created.

1978 Camp David accords signed. Jordan joins other Arabs in severing diplomatic ties but maintains economic exchange with Egypt. Baghdad Arab summit pledges significant sums in aid to Jordan and other “confrontation states.”

1980 Iran-Iraq war begins. Jordan supports Iraq and enters into economic cooperation deals with Baghdad.

1980 Arab summit held in Amman.

1984 King dissolves National Consultative Council and recalls Parliament. By-elections in East Bank.

1984 Jordan resumes full diplomatic relations with Egypt.

1985 King Hussein and Yasser Arafat agree on framework for peace, sign agreement in February for joint diplomatic initiative, and acceptance of confederation with Jordan.

1986 King Hussein calls off dialogue with PLO in February.

1986 By-elections in East Bank.

1987 King Hussein and Israeli Foreign Minister Peres reach

agreement in London on international conference, but Prime Minister Shamir torpedoed Hussein-Peres accord.

1987 Arab summit in Amman brings about Arab reconciliation but emphasis on Iran-Iraq, not Palestinians.

1988 Jordan gives up responsibility for West Bank and cuts administrative links.

1988 Jordan joins Iraq, Egypt and North Yemen in forming Arab Cooperative Council.

1988 Jordan requests standby credit arrangement with the IMF and acquiesces to structural adjustment program.

1989 Riots break out in southern towns in protest against cuts in government subsidies. Demands for reform.

1989 Parliamentary elections. Return of the constitutional experiment in the form of “defensive democratization.”

1990 Following Iraq’s invasion of Kuwait, 900,000 third country nationals flee Kuwait to Jordan which assists in massive repatriation. 240,000 Jordanian citizens return from Kuwait.

1990 U.N. economic sanctions on Iraq cause severe hardship in Jordan. Arab Cooperation Council incapacitated.

1991 Jordan refuses to join military coalition against Iraq, causing severe strain in relations with U.S.

1991 2000 civic leaders endorse National Charter on Jordanian

Political Life prepared by royal commission and it is signed by the King.

1993 Parliamentary elections.

1994 On June 7 Jordanian and Israeli delegates sign three “common-sub-agendas” in Washington; “Washington Declaration” signed by King Hussein and Israeli PM Rabin at White House on July 25; peace treaty signed on October 26.

1996 President Clinton designates Jordan a major non-NATO ally of the U.S. in November.

1997 Parliamentary elections

1999 King Hussein dies in early February.

2000 King Abdullah II crowned on June 9.

2001 Economic Consultative Council recommends major privatization drive.

2001 Congress ratifies free trade agreement signed with Jordan in 2000.

## Section I

# Geography

Was it destiny that made Jordan Israel’s eastern neighbor, giving it the longest border with Israel in comparison with any other country? The word destiny naturally comes to mind in view of the profound impact this accident of geography has had on Jordan’s history and politics. Many unavoidable

consequences have followed.

To the north lies Syria, to the east Iraq, and to the south Saudi Arabia. Along with Israel, these are Jordan's immediate neighbors. A visitor to Amman will find himself within easy reach of Damascus, which still retains some aspects of the ancient city that it is—particularly its medieval Islamic heritage—tucked away here and there, such as old covered souks or markets; the same can be said of Cairo, although the latter is really only accessible by air. The holy cities of Jerusalem and Bethlehem are close by to the west. Lebanon, with which Jordan does not share a common border, but which is only 6 or 7 hours away by car, has a deserved reputation as a tourist attraction.

Most of the East Bank of the Jordan River consists of arid desert. Northern Jordan consists of a plateau, most of which is between 700 and 1,000 meters above sea level, which has a temperate climate and where the nights are cool, even in summer. Rainfall is light (although snow storms have become much more common than in the past), and most agriculture is rain-fed, except in the Jordan Valley. On the plateau, almost on the same parallel as Jerusalem, lies the capital Amman, a site once occupied by Rabbat Ammon in Biblical times, and later by the city of Philadelphia, relics of which can be seen in the amphitheater (now restored) in the middle of the downtown area.

This plateau slopes westwards down to the Dead Sea, the lowest point on earth, at 400 meters below sea level, which is fed by the Jordan River. The Jordan River runs for about 160 kilometers from Lake Tiberias to the Dead Sea. The plateau slopes south as well, providing a spectacular panorama of colorful hills and valleys stretching mile after mile to distant horizons, leading to Petra, the ancient Nabatean city carved out of rose-colored rock, and further south to Aqaba, a port on the Red Sea where Jordan has a short stretch of coastline. A 380-kilometer-long rift valley runs from the Yarmuk River in the north to Aqaba in the extreme south. The highest point in Jordan is Jabal Ramm, which is 1,754 meters above sea level.

Jordan has an area of 89,326 square kilometers (34,489 square miles). The main cities are Amman (population 1.6 million); Irbid in the north (about 750,000); Zarqa, which lies east of Amman (about 625,000); and as-Salt, lying to the West of Amman on the road to the Dead Sea (about 275,000).

## **Section II**

# **History**

## **Archaeology and Antiquities of Jordan**

In archaeological terms, Jordan sits at the crossroads of the Near East. In ancient times, it served as a major communications and trade route, in contact with great empires whose capitals were far away. Its geographic location—east of the Jordan River, with major settlements dating from ancient times dotted along major trading routes between Arabia to the south and Syria in the north—made control of Jordan a strategic necessity. Each of the great empires has occupied this area in succession, each leaving their cultural, social, and political influences on the local populations, and more often than not, acquiring uniquely local interpretations in turn as expressed in local crafts and industries.

Jordan's archaeological history extends back in time to the Paleolithic and Neolithic periods—c. 1200000–8500 BC and c. 8500–4500 BC, respectively. Although there are only flint and basalt tools left behind from the Paleolithic period to indicate human settlement, the Neolithic period is more clearly marked by evidence of building, skeletal remains, clay statues and busts, along with evidence of small-scale trade in pottery, jewelry, and ancestor worship.

It was during this period that pottery originated and was systematically fashioned into clay vessels. The largest, most important Neolithic sites in Jordan today are at Ain Ghazal in Amman and Beidha in southern Jordan. In the 1990's, excavations at Ain Ghazal uncovered a number of figures constructed of clay surrounding bundled straw, depicting human forms with some facial detail. These early statues may have been part of a burial custom intended to represent deceased persons.

The Chalcolithic (copper-stone) period that followed from c. 4500–3200 BC saw the use of copper in the manufacture of tools. Agricultural communities developed in this period as well, with sheep and goat breeding and cultivation of wheat and barley. These more sociologically systematic activities led to the development of a more urban character by the end of that period.

Jawa, a town built by an agricultural community in the eastern desert, is an example of this new urban character of the Chalcolithic period. This town's remains show evidence of water collection and diversion to basins for animal and human use. By the Early Bronze Age (c. 3200–1950 BC), urban development also included defenses and fortifications, and the first "city-states" had come into being. Most famous of these are Bab edh-Dhra' (southern Dead Sea area) and Jericho in the Jordan Valley. These cities had massive walls, towers, and fortifications, intended as much to withstand earthquakes and other natural disasters as well as attacks by enemies.

Most of the Early Bronze Age towns were destroyed or abandoned by 2300 BC, giving way to the Middle Bronze Age, when people moved away from large sites on hills and settled in smaller villages. By the Late Bronze Age (c. 1950–1200 BC), there was a sharp decline in settled occupation. In about the 13th century BC, the area was invaded from the north by the Hyksos—said to be a military aristocracy from north Mesopotamia, though this is currently in dispute—who also went on to invade and conquer Egypt. The Hyksos influence was clearly seen in the new, distinctive type of fortifications they brought, exemplified at sites such as Amman (the Citadel), Irbid, Pella (Fahil, in the Jordan Valley), and Jericho.

During the Middle Bronze Age, crafts and local industries had advanced considerably. Copper, used originally during the Chalcolithic Age to make tools, was now mixed with tin to produce bronze to make

weapons and ornamentation. Pottery had also evolved with the invention of the potter's wheel to fashion sophisticated shapes.

Also during the Middle Bronze Age, contact with Egypt grew significantly. The Egyptian presence in Jordan can be seen in the numerous mentions in inscriptions found in various towns, as well as in artifacts of Egyptian or Egyptian-inspired origin.

The real change in Jordan during the Late Bronze Age occurred when the Egyptian pharaoh Tuthmosis III set up an empire in Canaan—straddling modern-day Palestine, Jordan, and Syria. This occurred in about the middle of the 13th century BC. Several hundred years later, during the reign of pharaoh Ramesses II, the Egyptians found themselves at war with the Hittites for control of Syria. The battles, lasting some 16 years, culminated in a peace treaty between the Egyptians and the Hittites in 1259 BC.

Considerable evidence of dealings, trade, and communication among the peoples of the Asiatic component of the Egyptian Empire and their African “home” are evident in many sites in the Canaanite city-states of that period. Important sites are Pella and Tell es-Sa'idiyeh in the Jordan Valley. Objects found at these two sites, as well as in Deir 'Alla, show clear Egyptian influence. During this period of relative peace, there was also significant trade between Jordan and several Mediterranean and Aegean city-states.

Recent excavations at Tell es-Sa'idiyeh unearthed some remarkable burial customs. There is evidence of some type of mummification and interesting use of pottery and bronze, used to cover or contain the bodies.

The end of the Late Bronze Age is marked by the collapse of many Near Eastern and Mediterranean kingdoms at the hands of the Sea Peoples—marauders probably from the Aegean and Anatolia—around 1200 BC. These included the Philistines, who settled on the coast of southern Palestine and later battled the Israelites. The Israelites had destroyed many towns in their conquest of the land of the Canaanites, including Jericho, Ai, and Hazor, and eventually overcame the Philistines to found a united Kingdom of Israel around 1000 BC.

Following this period, three new kingdoms arose in Jordan: Edom in the south, Moab in central Jordan, and Ammon in the north. These were the first kingdoms to develop in this area that went beyond city-states. The development from city-state to kingdom was probably made possible by the increased wealth in the region, attributed to growing trade in gold, spices, and precious metals. The wealth eventually attracted peripheral attacks from desert tribesmen and later conquest by Israelites, Aramaeans, and Assyrians. Eventually, the overall victors were the Assyrians, whose conquest of the area, including Israel, was accomplished by 721 BC. Ammon, Edom, and Moab retained their independence by buying off the Assyrians with tribute and enjoyed a period of relative prosperity.

The most important existing site of this period is at Buseirah in southern Jordan. Buseirah is the modern name of Bozrah, the capital of Edom. Bozrah was a substantial administrative center fortified by a town

wall. The city was divided into Upper and Lower Towns by an enclosure wall, with an “acropolis” in the Upper Town containing public buildings on an artificially built-up platform. An early 7th century building on this acropolis had an imposing entrance flanked by the plinths of two columns, the whole suggestive of a temple. The Lower Town is made up of “ordinary” residences. The capitals of Ammon and Moab—Rabbath Ammon and Dhiban, respectively—had similar layouts and features.

The Assyrian Empire fell in 612 BC to an alliance of Medes from Persia and the Chaldean kings of Babylonia. The Babylonian Empire lasted till 539 BC, when it fell to the Persians under Cyrus. This empire grew to become the largest ever known in the Near East, extending into Egypt in the west, Asia Minor in the north, and India in the east. Their clashes with the Greek states of Sparta and Athens are well known from the classic histories of Theucydides and Herodotus.

During the Persian Empire, the Ammonites, Edomites, and Moabites persisted under tutelage, with the Persians appointing an Ammonite governor for the area west of the Euphrates River. Locally, the Ammonites and Moabites frequently fought. The site of Tell Mazar in the Ammon territory, first constructed in the 8th century, was often destroyed and rebuilt as a result of these battles until the 4th century. Remains in this city suggest rooms surrounding central courtyards in houses that may have also been used for private industry. These include many domestic and industrial artifacts—utensils and such. During the late Persian occupation, many silos and other grain storage pits were built, either to support armies or for storage against the threat of famine.

In 330 BC, the Persian Empire gave way with Alexander the Great’s sack of Persepolis in Persia, ushering in the Hellenistic Period in the Near East. The Greeks founded new Hellenistic cities in Jordan, such as Um Qais, and renamed others, such as Amman (Philadelphia) and Jerash (Antioch). While Greek became the official language, the spoken language continued to be Aramaic.

The finest Hellenistic site in Jordan is “Iraq al-Amir,” in a valley just west of Amman. This site was the estate of the Tobiad family, the Ammonite governor’s family that reigned during the Persian Empire. One of the structures on this site is believed to be a temple because of the architecture and the finely sculpted lions and eagles.

During the Hellenistic period, a new Arabic-speaking people known as the Nabataeans were settling near Petra in southern Jordan. Thought to originate from Arabia, the Nabataeans were originally nomadic herdsmen and merchants who came to control the major trade routes between Arabia and Damascus. As traders, they handled trade in animals, spices, incense, iron, copper, fabrics, sugar, medicines, perfumes, and gold with far-flung markets in China, India, the Far East, Egypt, Syria, Greece and Rome.

Famous for their imposing city Petra, the Nabataeans displayed great water engineering ability, irrigating their land with ingenious systems of dams and canals. Nabataea reached its peak in 9 BC–40 AD under King Aretas IV. In addition to the fine architecture found at Petra, other Nabataean sites are Khirbet et-Tannur, Wadi Rum, and Lehun in Jordan.

Petra pre-existed the Nabataeans—there is evidence of Bronze Age settlement there—as well as of the Edomites. After the Romans conquered the Near East during the first century AD, Petra maintained its independence, coming under Roman control almost 50 years later in 106 AD. The city continued to flourish under the Romans and well into the Christian period. Nevertheless, it remains most famous for the Nabataean remains and artifacts.

The Roman province of Arabia, which encompassed Jordan, came into being with Pompey's conquests of 64–63 AD. The Greek cities in Jordan—Philadelphia (Amman), Pella (Fahil), Gadara (Um Qais), and Gerasa (Jerash) formed 5 of the 10-city federation known as the Decapolis. These cities were laid out with colonnaded streets and were provided with theaters. Latin became the official language, while Greek remained the main spoken language of the educated elites. Aramaic continued to be the language spoken in the street.

Jerash is probably the best-preserved Roman provincial city in the Near East. The most current archaeological evidence suggests it dates from the 2nd century BC, with its golden age in the 2nd and 3rd centuries AD. It was designed by Roman architects and underwent expansions over several centuries. Among its monuments are theaters, a bath, a gymnasium, beautifully preserved, colonnaded streets, and temples to Zeus and Artemis. Jerash is located in a hilly, forested area northwest of Amman, an easy car ride away.

The major cities of the Roman period continued to flourish into the Byzantine period, which dates from 324 AD, when the emperor Constantine I founded Constantinople on the site of modern Istanbul as the eastern counterpart to Rome. A Christian community had already been in existence in Jordan since 66 AD, when the city of Pella had received fugitives from Jerusalem during the Jewish revolt against Rome. Under Byzantine control, the area and its Christian communities experienced a rise in prosperity and a population explosion. Many temples were destroyed or converted to churches. New churches were built everywhere; most were of the basilica type, with semi-circular apses to the east end of a church. Many of the churches had ornate mosaic floors with pictures of people, animals, and towns. Perhaps the most famous of these is the map of the Holy Land, an impressive Byzantine mosaic in a small church in Madaba, just a short drive south of Amman. Another famous site of floor mosaics is in the Church of the Deacon Thomas on Mt. Nebo, on a ridge overlooking the descent into the Jordan Valley just west of Madaba.

Jordan was conquered by the Bedouin armies of Islam that swept northwards from the Arabian Peninsula to defeat the Byzantines at a great battle on the Yarmuk River in 636 AD during the rule of Omar, the second *khalifah* (successor to the Prophet). In 661, after a brief period of rule from Mecca, Jordan came under the rule of the dynastic Umayyad caliphate, which moved the seat of government to Damascus. Jordan experienced a period of prosperity under the Umayyads, as it was close to the capital and was on the pilgrimage route to Mecca. It was during this period that Jordan acquired its Arabic name of al-Urdun.

The Umayyads did not destroy earlier cultural sites, and the major Byzantine cities continued to be occupied. Culturally, the major change was the replacement of Greek with Arabic as the main language, and the replacement of Christianity with Islam as the major religion. Christian communities continued to

exist after the major conversions, and churches continued to be built well into the 8th century.

The Ummayyad caliphs built a number of castles in the desert (all of which can be visited) at Mashatta, Kharana, Qastal, Tuba, Amra, and elsewhere. Although originally thought to have been built primarily as hunting lodges, these castles are now believed to be an important part of the frontier defensive line and were likely used as administrative outposts as well as residences of the Ummayyad rulers. These castles not only exemplify Ummayyad architecture, but also include many beautiful ceiling and wall frescos, representing scenes from nature as well as hunting and social scenes.

The Islamic dynasties that succeeded the Ummayyads had no direct impact on the architecture or artifacts of Jordan. The next major influence was the invasion of the European Crusaders, who wrested the area from Fatimid Egyptian control in 1099 and established the Kingdom of Jerusalem. Between 1099 and 1187, the Crusaders and Arab defenders built several castles running along strategic lookout points on a north-south axis from Anatolia to southern Jordan. The Crusader castles in Jordan are all in the southern region, at Kerak, Shobak, and Petra. In the north, the Arabs built castles at Ajlun, overlooking the Jordan Valley, and Salt, on the road to Jerusalem.

Salahuddin (Saladin), the Kurdish founder of the Ayyubid dynasty, finally defeated the Crusaders in 1187. From that time on, Jordan was again in Arab hands. Under the Ayyubids, and later the Mamluks, Jordan prospered because of its key geographic location between Egypt and Syria and its location on the pilgrimage route to Mecca. During this period, the castles were rebuilt, and a fort was added at Aqaba to aid pilgrims in their travels as well as to encourage trade and communications. Much later, the Ottomans continued constructing forts along the pilgrimage routes to protect pilgrims from raiding desert tribes of the Peninsula and to provide sources of food and water.

Modern Jordan has been the scene of both local and foreign archaeological activity since the early 20th century. By mid-century, Jordan had a fully active Department of Archaeology and Antiquities that worked to uncover and preserve archaeological sites. Foreign archaeological institutions play an important role, with centers in Jordan that attract archeologists from all over the world and help provide a lively exchange of information about discoveries and artifacts with academics, naturalists, and archeologists everywhere. Most notable among the foreign institutions active currently in Jordan are the American School of Oriental Research, the British Institute at Amman for Archaeology and History, and the Swedish-Jordan Expeditions. The University of Florence and the University of Sydney also have teams currently at work in Jordan. All in all, there are between 50 and 75 excavations going on at various sites at one time—both in existing sites as well as in newly discovered sites.

## Suggested Bibliography for Further Reading

Information about excavations currently proceeding in Jordan can be found on the Internet at <http://archaeology.about.com/library/atlas/bljordan.htm>. There is an extensive bibliography on the archaeology and antiquities of Jordan, in addition to articles in various archaeological journals, such as *Biblical Archaeologist*, *Levant*, and the *Journal of Field Archaeology*. The short bibliography that follows

lists only books that have historical interest or that may be considered “classics” on the subject.

Bartlett, J.R., *Edom and the Edomites* (Sheffield: Sheffield Academic Press/Palestine Exploration Fund, 1989).

Browning, I., *Jerash*. (London: Chatto and Windus, 1982).

\_\_\_\_\_, *Petra* (London: Chatto and Windus, 1989), 3rd edition.

Glueck, Nelson., *Deities and Dolphins: The Story of the Nabataeans*. (London: Cassell, 1966).

Homes-Fredericq, D. and H.J. Franken, *Pottery and Potters, Past and Present: 7000 Years of Ceramic Art in Jordan*. (Tubingen: Attempto Verlag, 1986).

Kenyon, Dame Katherine Mary, *Archaeology in the Holy Land*. (Warminster, England: Aris & Phillips, 1979), 4th edition.

Lankester Harding, G., *The Antiquities of Jordan*. (Kent: Lutterworth Press, 1967).

Piccirillo, Michele, *Mount Nebo: New Archaeological Excavations, 1967-1997*. (Jerusalem: Studium Biblicum Franciscanum, 1998).

### *Questions for Further Study*

- Archaeological evidence shows a rich history of pottery use and development in Jordan. How did the local artisans use local clays to make household utensils? What methods were used in Neolithic times to make statues and other items depicting human figures? (See Homes-Fredericq and Franken, *Pottery and Potters, Past and Present: 7000 Years of Ceramic Art in Jordan*, 1986.)
- What artifacts—pottery, jewelry, textiles—characterize the Islamic era in Jordan? (See Bienkowski, Piotr, *The Art of Jordan*. Wolfeboro Falls, U.S.A.: Alan Sutton Publishing Inc., 1991)

## **Modern History of Jordan Ottoman Period to 1910**

Jordan came under Ottoman control along with much of the Arab Middle East in 1518, their attention having been turned from their conquests in the Balkans. Until the 19th century, the Ottomans exercised little control of Transjordan, confining direct activity to sending occasional military patrols through the area to safeguard the pilgrimage route. Starting in the 1840s, the Ottoman plan to extend their authority encompassed the northern provinces of Jordan, centered around Irbid, Ajlun, and Salt. In 1868, this plan was expanded to include areas further south, originally centered around Ma'an, but later relocated to Karak.

The Ottomans realized that, in order to establish their authority in frontier zones like Jordan, certain administrative and demographic realities had to be changed on the ground. Among these was replacing local leadership with professional bureaucrats and establishing village settlements in agricultural areas. This in turn promoted higher productivity, generating tax revenues for the state. The new settlements thus established would be linked together and to regional markets by a road network. The Ottoman state thus came to integrate frontier districts through the extension of its bureaucratic network and linkage with regional markets.

The settlement policy that the Ottomans undertook was intended, in the first instance, to populate the lands between administrative centers with cultivators. In the 19th century, these administrative centers were largely in northern Jordan, abutting the southern Syrian districts, which were administered by Damascus, and the Levant districts administered by Jerusalem and Nablus. The settlement policy effectively developed a close link between community identity and the villages they established as well as affording them title to the land they cultivated.

Three distinct waves of village settlement in Jordan occurred between 1867 and 1910. The first, between 1867 and 1880, involved local peasants who radiated out from older settlements to establish new villages for reasons of economic gain or to resolve local disputes. The second wave spanned the years 1878 and 1906, and involved mostly refugee communities, including Circassians, Shishan (Chechens), and Turkmen. These were Muslim communities that had fled Tsarist Russian persecution and had sought protection from the Ottomans.

The third wave was partially a reaction to the second. Bedouin tribes had become alarmed at what they saw as expropriation of their traditional domain through resettlement of refugees. To counteract this, they encouraged settlement by sharecroppers on their lands in plantation villages. These "rented" villages also served as a framework for the bureaucratization of the land through registration and settlement title.

Subsequent developments resulting from the initial village settlements included the development of better and more extensive communications—roads and telegraph, as well as the Hijaz railway completed in 1908—and rapid urban development in towns located along major trade routes, such as Salt and Karak. Urban-based merchants from Damascus, Nablus, and Jerusalem gained significantly from the trade in Jordan's major surplus commodities—wheat and barley—which in turn had been made possible by the Ottoman village settlement policy. The effect was an unprecedented prosperity for both village and urban areas in northern Jordan.

The experience in Karak and points south took a different turn. The Ottomans took direct control of Karak in 1893, along with the southern portions of Jordan. In this area, the village settlement policy was not pursued diligently. Consequently, the demographic balance was not altered sufficiently to help develop stronger ties of loyalty to the sultan or the state, and local tribes were not motivated to register their land and obtain title. Strong loyalty to the state, as had resulted in the north, never took place. Instead, most Ottoman attempts to bureaucratize or otherwise extend direct administrative control in the region were met with various degrees of resistance.

In December 1910, the people of Karak led a violent but ill-fated revolt against the Ottomans. Earlier, the Young Turk Revolution had instigated a new centralizing initiative to impose a common rule of law across all the territories of the Ottoman Empire. In the frontier zones, this was manifested in a new intolerance for local particularism, and was expressed in swift and violent suppression of any dissent. Among the actions taken against local communities included demands for registering all citizens, confiscation of weapons, and forced conscription of young men.

The regional government representative in southern Syria requested that residents of Karak demonstrate their loyalty to the state by registering and turning in their weapons. The residents of Karak took this to be a precursor of a conscription campaign—as had happened in areas further north. The leading shaykh in Karak, Qadr al-Majali, meanwhile agitated to resist this request by the Committee for Union and Progress through rebellion. The actual revolt took place on December 4, when Ottoman census takers were attacked and killed, followed by an attack on Karak itself the following day. The revolt spread to Tafila and led to Bedouin raids on stations of the Hijaz Railway. The ensuing battle resulted in substantial loss of life and property in Karak, including the obliteration and burning of local government and municipal documents and attacking civilians in their homes. Although victorious in the short term, the insurgency was squelched with a vengeance just 10 days later by the Ottoman army sent to rescue besieged officials and their families.

In the wake of this revolt, the Ottomans reasserted their presence in Karak but allowed it to remain a frontier town. This was in contrast to the districts in northern Jordan. Ajlun and Salt had been incorporated into the Ottoman domain. Eight years later, at the conclusion of the first World War, the experience of Ottoman rule in northern Jordan made that region amenable to centralized government. However, this rebellion was an attempt by an outdated tribal system to defend itself against the encroachments of a centralized state, it was not an expression of Arab nationalism and should not be seen as the precursor for the Great Arab Revolt led by Sharif Hussein of Mecca.

### *Questions for Further Study*

- Do you believe that the complex network of social and economic relations that characterized the inhabitants of Transjordan during the Islamic centuries can be reduced to a simple contraposition of desert and sown land, pastoralist and farmer, nomad and settler? (See Jeremy Johns listed above.)
- Historians of the Near East describe the Ottoman period between the early 16th century and the early 19th century as a time when few, if any, dramatic events took place in Transjordan and its environs. What does that tell us, and how did that relate to events and conditions in other Ottoman domains in the region? (See Eugene Rogan listed above.)
- What role did the ethnic and religious minorities play in Jordan's modern history? What lingering impact did they have on contemporary Jordan? (See Gubser, Peter Jordan, *Jordan: Crossroads of Middle Eastern Events*, 1983.)

## **Arab Revolt and the Founding of the Amirate of Transjordan**

Sharif Abdullah, the second of four sons of Sharif Hussein of Mecca, began his political career as a delegate to the Ottoman Parliament from Mecca. He came to act as his father's representative in negotiations with the Ottoman authorities and later with Great Britain. In February 1914 he met with Britain's plenipotentiary minister to Egypt, Lord Kitchener, and later with Ronald Storrs, the Oriental Secretary of the British consulate in Cairo. These meetings eventually led to the famous Hussein-McMahon correspondence, under which Sharif Hussein reached an understanding with Britain's representatives that he could count on Britain's support against the Turks, and he came to expect British help in creating an Arab kingdom in the Fertile Crescent, with some vague qualifications, over which he and his descendants would rule. These promises, of course, conflicted with the then still secret Sykes-Picot agreement and with the Balfour Declaration.

The forces of Sharif Hussein, accompanied by T.E. Lawrence (Lawrence of Arabia), recruited the support of the Huwaytat tribe in the south, and, with this help, succeeded in occupying the Port of Aqaba on the Red Sea. However, the course of the Arab Revolt in Transjordan was neither spectacular nor swift, lasting from July 1917 to September 1918. Tribes in the south tended to support Sharif Hussein's son Faisal in exchange for gold, driven primarily by food shortages and hunger, whereas tribes whose territory lay north of Karak in Transjordan and south of Damascus, where grain was more abundant, were less desperate and were inhibited from participation by the presence of the Turkish Fourth Army. These tribes preferred to straddle the fence until Faisal seemed assured of victory.<sup>[1]</sup> Ultimately, it was Allenby's victory that broke Turkey's military hold and swept Faisal into Damascus.

From November 1918 to July 1920, Transjordan formed part of the Arab Kingdom of Syria. As part of the post-war settlement at the San Remo Peace Conference in April 1920, France was given the mandate over Syria and Britain secured a mandate over Iraq and Palestine (the latter was only formalized by the League of Nations on September 23, 1922 and incorporated the Balfour Declaration). Britain's plan, a consequence of its promises to the Hashemites, was to make Abdullah, the second son of Sharif Hussein of Mecca, King of Iraq, and Amir Faisal, the third son of Sharif Hussein, King of Syria. Prince Faisal had been acting as a military governor based in Damascus. He gained favor with the nationalists, and, in response to their insistence, refused to toe the line laid down by the French and the Zionists at the Peace Conference. The Syrian National Congress, which claimed to represent Palestine and Transjordan as well, proclaimed Faisal king in March 1920. The nationalists suffered a rapid military defeat in their confrontation with the French, and Faisal was ousted.

With the retreat of the Turkish armies, tribal violence broke out in Transjordan. Faisal's government in Damascus could not bring the situation under control. Herbert Samuel, the high commissioner in Jerusalem, proposed that British forces occupy the portion of Transjordan lying west of the Hijaz Railway. This may have been due to his sympathy with Zionist appeals to bring that area within the sphere of the Balfour Declaration. Fearing Syrian control of Transjordan after Faisal's departure, Whitehall decided on a move to keep the area, which it perceived as a link between Iraq and Egypt, under British authority. Samuel met with tribal leaders and notables from Karak, al-Balqa, and Salt in August 1920 and told them that Transjordan would be included in the British mandate over Palestine, allowing for a measure of autonomy in the 'Ajlun, Salt and Karak areas. The sheikhs of 'Ajlun, encouraged by members of the *Istiqlal Party* that supported Faisal, put forward a list of demands in September, including assurances that Transjordan would not be colonized by the Zionists. Major Somerset, acting for Samuel, signed the so-called Um Qais treaty, agreeing to these provisions.

Amidst the chaos, Samuel recruited members of the local Circassian population to form a troop of cavalry and machine gunners to send to Amman to control Bedouin raids on settled areas and to collect taxes. Later, Frederick Peake (to become Peake Pasha) expanded this force and turned it into the nucleus of the Arab Legion. In February 1921 Abdullah arrived in Ma'an in Transjordan, leading a force of Hijazi troops with the intention of restoring Faisal to the throne of Syria.

In December 1920, Britain created a Middle East Department within the Colonial Office under the direction of Winston Churchill, who was colonial secretary. Churchill organized a gathering of Britain's high commissioners for Iraq and Palestine and prominent Arabists in Cairo in March 1921, which, under Churchill's leadership, decided to offer the throne of Iraq to Faisal. From July 1920 to March 1921, Transjordan had been left without an indigenous government and fell under the authority of the British Mandate government in Palestine. Following the Cairo conference, Churchill met with Abdullah in Jerusalem and convinced him to give up his claim to the Iraqi throne in favor of his brother. Churchill also promised to use his good offices with France to attempt to convince Paris to accept Abdullah as King of Syria. In the interim, Abdullah was encouraged to remain in the southern part of Greater Syria east of the Jordan river (Transjordan) and to establish his own amirate with British help. On April 1, 1921 Abdullah was declared amir of Transjordan and was granted a monthly subsidy of 5,000 pounds Sterling.

Britain was represented by a permanent resident in Amman in lieu of a high commissioner who exercised a great deal of power and acted as a plenipotentiary ambassador and supervisor of governmental affairs and head of a team of advisors to the various government departments.

On February 20, 1928 an Anglo-Transjordanian agreement was signed confirming Britain's supreme authority and assigning special prerogatives to the British resident in the areas of legislation, foreign affairs, and fiscal policy. A subsequent amendment allowed the amir to appoint consular representatives in foreign countries. British subsidies increased from an average of 100,000 pounds Sterling in the 1920s to about 2 million pounds Sterling in the forties.

A small army was created in 1921 under Captain F.G. Peake and dubbed the Arab Legion. Peake was replaced by Major John Baggot Glubb (who later became a major general but was generally referred to as Glubb Pasha, a title bestowed on him by the amir). A Transjordanian Frontier Force was also set up under the 1928 treaty but fell under the command of the high commissioner for Palestine. In 1940 a Desert Mechanized Regiment was added to the Arab Legion, making the Legion one of the most effective fighting forces in the Arab world. The Arab Legion had about 40 British officers and was funded by subsidies from London. Because of this Amir, Abdullah was able to play a significant role in Palestine and Iraq and Syria which was out of proportion to Transjordan's size and resources.

The Legion proved its worth in defending the fledgling emirate against incursions by King Abdul Aziz ibn Saud in 1922 and a subsequent and more significant attack in 1924 (which was also directed against the Hijaz, where it was more successful). In 1925 Ibn Saud defeated Abdullah's elder brother Amir Ali, who had assumed the title of King of the Hijaz, and Ibn Saud claimed that the southern part of Transjordan, including Ma'an and the Port of Aqaba, was still part of the Hijaz; but Abdullah's forces established their presence in the Ma'an and Aqaba areas, claiming they had long been part of Transjordan. These areas were only formally incorporated into Transjordan under the 1927 Treaty of Jidda with Ibn Sa'ud.

The Arab Legion was used by the British during the Second World War against the Rashid Ali Gilani rebellion in Iraq and against the pro-Vichy regime in Syria. By 1948 the Arab Legion had grown into a force of about 10,000 and was to play a crucial role in saving a large part of Palestine and its Arab population from being incorporated in the emerging Jewish state.

The agreement with Britain was amended in 1941 but little changed in the pattern of British administrative and political control. In 1942 the Prime Minister of Iraq, Nuri as-Sa'id, floated the idea of a federation between Iraq and Greater Syria consisting of Syria, Lebanon, and Transjordan. This was vehemently opposed by Egypt, Saudi Arabia, Syria, and Lebanon, which valued their republican status. In May 1941 British Foreign Secretary Anthony Eden issued a statement favorable to the idea of Arab unity. Egyptian Prime Minister Nahas Pasha proposed the idea of a league of Arab states. Transjordan was one of the seven founding members of the Arab League in March 1945. On March 22, 1946, Amir Abdullah signed a treaty of alliance with Britain under which London recognized Transjordan's independence, diplomats were exchanged; Britain undertook to defend Transjordan against foreign aggression; to continue subsidies; and to and train the Arab Legion; and to maintain troops in the country. Both sides

agreed to consult on matters of foreign policy affecting their common interests. On April 25 of the same year, Abdullah assumed the title of king. In August 1947, the U.S.S.R. vetoed Jordan's admission to the United Nations on the grounds that it neither possessed true independence nor the requisite resources to be independent. On March 15, 1948, a new Anglo-Transjordanian treaty was signed that reduced the prerogatives assigned to Britain, but the latter continued its subsidies to the Arab Legion and retained two airbases in Amman and Mafraq. An Anglo-Transjordanian Joint Defense Board was established. In 1949 Britain increased its subsidy to 3.5 million pounds Sterling

Perhaps the most notable aspect of King Abdullah's reign is that he was a pragmatist with a vision. The vision was that of a united Fertile Crescent and Arabian Peninsula (or, at least the Hijaz) under Hashemite rule, and failing that, a greater Syria united under his rule, through which he was willing to include a homeland for the Jews enjoying autonomy but not full independence. Bowing to reality, Abdullah abandoned the idea of regaining the Hijaz, but he remained intent on enlisting the help of Syrian political refugees, former members of the Independence or Istiqlal Party, who had supported Faisal and the Hashemites, who flocked to Amman in droves, and whom he employed in his administration, to wrest Syria from the French. Even after Syrian independence, he continued to intrigue for the formation of a Greater Syria.

But Abdullah's vision dated back to the early part of the century; it preceded and was incompatible with more radical and populist notions of pan-Arabism, such as Ba'thism. It also exacerbated Arab rivalries, challenged the bids for hegemony of larger and more established Arab states, notably Egypt, and invited intrigues against him. Iraq, although ruled by Hashemites, often competed rather than cooperated with him under the regency of Abdul-Ilah. British residents, particularly St. John Philby and Henry Cox, drove a wedge between Abdullah and followers of the Istiqlal Party. After the death of his brother Faisal, Abdullah advocated a Fertile Crescent union under his personal leadership. However, the assassination of Abdel Rahman Shahbandar, a Syrian nationalist and loyal Abdullah supporter, in 1940 effectively signaled the demise of his base of support in Syria. Still, Abdullah brought up the subject of Greater Syria in July 1941, after the ouster of the Vichy government from Syria, when he declared the aim of his policy to be the union of Arab lands, and again in 1942 and 1944 and in speeches from the throne in 1946 and 1947, and introduced it as an Arab League agenda item in 1947. In 1943 and 1947, when Syrians were going to the polls, Abdullah appealed to them directly to accept unity under his leadership. Hopes were revived with the Husni al-Za'im coup in Syria in March 1949, seeing as Za'im initially favored a closer union with Jordan and Iraq; but he did an about face and started courting Egypt and Saudi Arabia. A few months later, Za'im was overthrown by Col. Hinnawi, who embraced the idea of a Fertile Crescent Union with the support of Nazim al-Qudsi's People's Party. The issue had become a high priority for the Syrian Constituent Assembly by the end of 1949, but a coup by Col. Adib Shishakli brought these plans to naught.

Abdullah has been described with a great deal of justification as a falcon trapped in a canary's cage. He sought to bend British influence to the task of achieving his brand of Arab unity, but Britain thought Abdullah was poorly placed to exercise pan-Arab leadership, and it was more concerned with not antagonizing Cairo and avoiding a break-up of the Arab League. However, Britain found itself cooperating with Abdullah as the mandate over Palestine drew to an end.

## Questions for Further Study

1. What was the significance of the Hussein-McMahon Correspondence for the Arab Revolt under Sharif Hussein and the formation of Transjordan? (See Albert Hourani listed above, as well as *A Peace to End All Peace* listed above, for that question and for a general history of the creation of the modern Middle East. Also see Mary Wilson listed above.)
2. What were the motives that determined the attitudes of the Bedouin tribes in Transjordan towards the Arab Revolt? (See Tariq Tell listed above.)
3. How did Amir Abdullah establish himself in Transjordan? (See Mary Wilson listed above.)

## Section III

### Culture and Social Issues

The most recent published statistics of the population in Jordan date from 1999, which set the total

population of the East Bank at 4,839,000. This figure includes residents of Jordan, including Palestinians who have Jordanian passports and Palestinian refugees, but excludes Jordanians resident or working abroad, as well as Palestinians with Jordanian citizenship, who are residents of the West Bank or Gaza Strip.

In addition, Jordan hosts a substantial Palestinian refugee population that entered the East Bank in two major waves: in 1948 as a consequence of the creation of the State of Israel, and again in 1967 when Palestinian refugees in the West Bank and Gaza fled the Israeli occupation. According to the United Nations Relief and Works Agency (UNRWA) for Palestinian refugees in the Near East, about 224,000 people were admitted to the East Bank immediately after the 1967 war, joining the original 400,000 who had been refugees since 1948. By 1986, UNRWA cited 826,128 registered refugees living on the East Bank, 205,000 of them living in refugee camps. A recent estimate of the total Palestinian refugee population—including UNRWA-registered and non-registered—is 1.25 million.

United Nations statistics projected an annual growth of 3.6 percent in the early 1980's, rising to 4.11 percent from 1990 to 1995, with a steady decline to about 2.88 percent by 2020. These growth rates reflect both overall improved health care—leading to higher life expectancy—as well as a high birth rate of 6.0 births for each woman over the span of her reproductive years. This birth rate is expected to decline in 2000 to 4.2 births due to several factors. Women, particularly in urban areas, are deferring motherhood or practicing “spacing” of children. In addition, educated women have tended to marry slightly later than uneducated women and have tended to practice modern methods of contraception.

Jordan's population is largely concentrated in the northwest of the country, mostly in urban areas. The bulk of the population is centered in the governorate of Amman and the smaller urban areas of Irbid, Salt, and Zarqa. According to World Bank figures, some 70 percent of the population lives in urban areas. The rest are scattered in small towns and villages in the Jordan Valley, as well as in towns and villages strung along a north-south axis in ever-diminishing numbers, starting south of Amman and ending at Aqaba on the Red Sea.

Palestinian refugees live mostly in camps in or near major cities, including the capital. Although camps originally consisted of emergency shelters, they developed rapidly into units of concrete and galvanized steel structures, initially consisting of two rooms per family. Until the 1980's, refugees were allowed to own the structures—thus making it possible for them to expand their living quarters whenever they could afford to—but could not own the land where these structures were located. Once this became possible, improvements in these urban areas expanded as rapidly as the new and additional structures.

In addition to Palestinians and Palestinian refugees, Jordan is home to a number of ethnic and religious minorities. These include religious minorities—several Christian sects and denominations—as well as ethnic communities of Armenians, Circassians, and Shishans. While Jordan's official religion is Islam, the constitution, adopted in 1952, promulgates the basic rights of freedom and equality before the law for all citizens, regardless of race or religion. In practice, both religious and ethnic minorities enjoy free religious and cultural expression. The largest and oldest community is that of Jordan's Christians, who trace their origin to the earliest days of Christianity in the Near East. As is the case with all Christian sects

in Jordan, Christian communities apply their own church and religious laws to social affairs, such as marriage, divorce, inheritance, and other “personal status” laws.

Residents of towns and villages in agricultural areas, notably in the Jordan Valley and in the irrigated northwest, are mainly occupied in agriculture and animal husbandry. Jordan has experienced a steady decline in the population in these areas, as young people continuously seek better opportunities in the cities. In an attempt to reverse this migration, the government has encouraged development in the Jordan Valley. These plans have been somewhat successful, attracting substantial numbers back into the Valley.

About 2 to 3 percent of the population are nomadic and semi-nomadic Bedouins living mainly in the *badiya*, an area on the periphery of the cultivated lands edging the eastern desert, with a portion living in or around the Jordan Valley in the area near the northern city of Irbid.

The Bedouin as a social group are a constituent of the tribal system in Jordan that predominated before World War II and continues to play an important role in modern-day Jordan. The basic form of social organization in Transjordan was tribal, and social relations among various nomadic and semi-nomadic tribes and between them and villagers—many of whom were themselves tribally organized—were based on trade and the exchange of tribute for protection.

In 1983, Peter Gubser classified Jordanian tribes along a continuum of nomadic, semi-nomadic, semi-sedentary, and sedentary. Bedouins were a fully nomadic group whose livelihood was based on camel herding. Although Bedouins upheld a highly independent existence, they interacted with settled communities by trading animals and their products for goods they did not produce. Government policy has encouraged settlement by providing schooling, medical services, and the development of water resources. This has resulted in moving Bedouin communities more rapidly towards the sedentary end of the continuum. Despite the diminishing numbers of nomadic and semi-nomadic Bedouins, their tribal social structure, in its idealized form, continues to be adhered to.

Tribal social structure was based on the ramification of patrilineal ties among men. Within this structure, a preference for endogamy—marriage among paternal cousins in the first instance and then in descending levels of relatedness—is prevalent. Endogamy gives rise to a network of kin relations that are both maternal and paternal at the same time.

Tribes in Jordan were composed of groups of related families claiming descent from a supposed founding ancestor. Within this overall loyalty, descent from intermediate ancestors defined several levels of smaller groups within each tribe. The structure resembled a pyramid composed of ascending levels, each of which was both a political and social group. At some point, each unit automatically contained within it all units of the lower level. Despite the near-disappearance of the nomadic way of life, tribal social structure and organization have not been transformed drastically. Tribal organization actually played an important role in the settlement process, helping with land allocation, among other things. Leadership patterns have changed significantly, however, as government-appointed officials have assumed many of the tasks formerly associated with the position of shaykh. In the end, tribal social structure was weakened; individual titles to land, which can be rented or sold to outsiders, and individual employment dilutes

lineage solidarity and cohesiveness.

Observers in the 1980s noted that a process of detribalization was taking place in Jordan, whereby the impact of tribal affiliation on the individual's sense of identity was declining. Sedentarization and education were prime forces in this process. Smaller groups, such as the extended family and clan (*hamula*), were gradually replacing tribes as primary reference groups.

The *hamula* is the principle social structure for people who live in the villages and small towns of Jordan. In common with tribal structure, the *hamula* traces its origins to a common, relatively distant ancestor. The *hamula* ordinarily had a corporate identity; its members usually resided in a distinguishable quarter or neighborhood, and it acted in concert in village, and often regional, political affairs. The *hamula* was the repository of family honor and tended to be endogamous.

Immediate kin groups existed below the level of the *hamula* and above that of the household. In many cases, a group of closely related households, descendants of a relative closer than the founder of a *hamula*, formed entities called lineages or branches. A still smaller unit was the *luzum*, a close consultation group, usually composed of several brothers and their families.

Social control and politics in the village traditionally grew out of the interactions of kin groups at various levels. Social control over individual behavior was achieved through the process of socialization and a system that imposed sanctions for unacceptable behavior. Respected elder males from various *hamail* (plural of *hamula*) provided leadership in villages. They often made decisions by consensus. With the formation and consolidation of the state, traditional leaders lost some power, but they continued to mediate conflicts, and state officials often turned to them when dealing with village affairs. Nevertheless, other social changes have conspired to erode the structure, and consequently the power, of the traditional *hamail*. The decline in significance of agriculture as a way of life, and the migration of increasingly better-educated young people to the cities, has decreased the traditional elders' authority. Despite this trend, family relations and obligations remain strong. The young defer less frequently to their elders in decisions about life choices than has been the custom, but respect for parents and elders remains evident.

In the cities, *hamula* structure and dynamics is hardly in evidence and is overshadowed by the extended kin relationship dynamic. Until recently, extended families lived within the same household or within close proximity. Modern economic realities have made this less common, and more families are beginning to live in nuclear households.

Jordanians continue to rely on extended kin relations for a variety of purposes, including financial support; job information; social connections; access to strategic resources; marital partners; arrangements, protection, and support in the event of conflict; child care and domestic services; and emotional sustenance.

Formally, kinship was reckoned patrilineally. Because the family was central to social life, all children were expected to marry at the appropriate age. Marriage conferred status on both men and women, and

the birth of children further enhanced this status. This was particularly true for women, who then felt more secure in their marital households.

Traditionally, the individual subordinated his or her personal interests to those of the family. Typically, children lived with their parents, even as young adults, until they were married. Children were expected to defer to the wishes of their parents. Marriage was a family affair rather than a personal choice. In more traditional households (tribal or hamulas), arranged marriages were preferred. In the more modern urban areas, more and more young, educated adults are meeting in the workplace and initiating marriage proceedings themselves.

In Islam, marriage is a civil contract rather than a sacrament. Representatives of the bride's interests negotiate a marriage agreement with the groom's representatives. The future husband and wife must give their consent. Young men often suggest to their parents whom they want to marry. Although women do not initiate a marriage, they usually have the right to refuse a marriage partner of their parents' choice.

The social milieu in which a Jordanian lived significantly affected the position of the wife and her degree of autonomy. In rural agricultural areas and among the urban poor, women fulfilled important economic functions. Such women enjoyed a modicum of freedom in their comings and goings within the village or neighborhood. Although casual social contact between the sexes of the kind common in the West was infrequent, segregation of the sexes was less pronounced than in traditional towns.

Among the traditional urban bourgeoisie, women fulfilled fewer and less-important economic functions. Women's responsibilities were more confined to the home. Among the new urban middle class, women occupy a variety of positions, some of them contradictory. Some women of this class were educated and employed, and enjoyed a fair measure of mobility within society. Others, also educated and skilled, lived a more sheltered life with minimal mobility.

Status within the household varied considerably depending on sex, age, and type of household. In principle, men had greater autonomy than women. Their movements in public were freer and their personal decisions were more their own. Within the household, however, younger males were subject to the authority of older and more senior males, particularly in decisions about education, marriage and work. Older women exerted substantial authority and control over children and adolescents, the most powerless sector within a household.

Segregation by gender was tied closely to the concept of honor (*'ird*). In most Arab communities, honor inhered in the descent group—the family, and to some extent, the lineage or clan. Honor could be lost through the failure of sisters, wives, and daughters to behave properly (i.e., modestly) and through the failure of men to exert self-restraint over their emotions towards women. On the one hand, the segregation of women worked to minimize the chance that a family's honor would be lost or diminished. On the other hand, the education of women and their participation in a modern work force tended to erode the traditional concept of honor by promoting the mingling of sexes in public life.

Some of the most marked social changes have affected women's roles. In urban areas, young women have begun to demand greater freedom and equality than in the past, though traditional practices still broadly govern their lives. This may be largely attributed to women's educational achievements in the last 50 years and women's increased participation in the work force, giving them a greater degree of autonomy than ever experienced.

Jordan's experience with public education evolved from providing free and compulsory education for children between the ages of 6 and 15 to building three universities and encouraging the development of community and technical colleges. The latter were a recent development in response to the perceived need of specialized skills and technologies in the workplace—traditionally not available in the academic mainstream university curricula. In addition to the public education system, Jordan boasts numerous private schools, several private community/technical colleges, and at least one private university. While a few of the private schools were founded by missionaries, a number of newer schools are not associated with missionary or other philanthropic organizations.

In the 1980s, Jordan faced high rates of unemployment among educated young people, particularly in the professions of medicine, engineering, and teaching, as well as in skilled technical labor. Expansion of vocational and technical training helped counteract this trend, along with the development of 2-year community colleges that allowed students to earn transferable credits in short-term skill training for later university study.

## Questions for Further Study

- What is the social impact of traditional tribal social behavior on urban and village (i.e., non-Bedouin) family relationships and behavior?
- What role does the informal sector play in the modern Jordanian economy? (See Miles Doan, "Class Differentiation and the Informal Sector in Amman, Jordan," *International Journal of Middle East Studies*, 24, 1 (February 1992), 27-38.)
- How has the economy changed the traditional role of Jordanian women in agriculturally productive areas and in urban areas? What differences, if any, exist between these evolving roles among women of different classes and educational levels in urban areas? (See Layne, Linda, *Home and Homeland: The Dialogics of Tribal and National Identities in Jordan*, 1994.)
- What health policies have been most instrumental in improving life expectancy for Jordanians, and what is the impact on Jordan's demographic profile?

## Section IV

### Economics

Jordan is a small and poor country with limited natural resources, a high birth rate, a small market that hampers investment, both domestic and foreign, and an underdeveloped economy. It has promising human resources, and Jordanian citizens working abroad, notably in the Gulf region, have helped compensate for chronic balance of trade deficits. Budgetary support and foreign aid (both U.S. and Arab) have also helped narrow down the deficits. Jordan has pursued a long-standing policy of soliciting economic benefits from political exchange; i.e., it has sought economic advantage from its political alliances, so that it can be said that the country depends on "strategic rents." However, Jordan suffers from regional economic downturns and from conflicts in the region; both inter-Arab and Palestinian-Israeli conflicts.

Whereas the Jordanian government is a staunch advocate of free enterprise, the government has assumed a large role in the ownership of very large enterprises, notably mineral extraction companies, whose financing needs (in the hundreds of millions of dollars) exceed the capabilities of the local private sector. The government has also long felt the need to involve itself due to the lack of adequate local entrepreneurial skills. The reasoning behind this is not fallacious,<sup>[2]</sup> however, and a series of 5-year economic development plans have produced remarkable results. By the late 1980s, Jordan had a mixed economy of about 40 semipublic corporations, of whose combined paid-up capital the government held a 40 percent share,<sup>[3]</sup> GDP growth averaged nearly 16.5 percent between 1972 and 1975, fell to a

respectable 8.5 percent between 1976 and 1979, and reached 18 percent in 1980, according to UN figures. Manufacturing has grown steadily, from 4 percent of GDP in 1970 to 15 percent by 1987. The share of agriculture has declined steadily. There is not enough water to satisfy the demands of household use, industry and agriculture simultaneously.

There have been several distortions in the Jordanian economy. In 1986, for example, the government consumed over 26 percent of GDP, which was the fourth highest figure in the non-communist world. Private consumption, at 87 percent of GDP, was among the highest in the world. Public and private consumption combined amounted to 113 percent more than GDP. The excess of imports over exports as a proportion of GDP was the highest in the world, at -44 percent. The government employed about 40 percent of the workforce (67 percent of all services sector employees) in the late 1980s but contributed only 18 percent of GDP. Public and private services have traditionally accounted for between 60 and 65 percent of GDP. [4] In 1996 the structure of gross domestic production was as follows: public administration and defense accounted for 18.6 percent of GDP; finance 18 percent; manufacturing 16.2 percent; transport and communications 13.9 percent; trade 11.3 percent; construction 8 percent; agriculture accounted for 5.5 percent of GDP; mining 3.6 percent; and other services 4.7 percent. [5] Mineral extractive industries, which formerly the public sector owned, account for the major share of valued added in manufacturing. Phosphates were long regarded as the kingdom's primary natural resource. Total phosphates production by the semi-publicly owned Jordan Phosphate Mines Company was 6.7 million tons in 1986; 5.7 million tons were exported as raw rock and the rest turned into fertilizer at the \$450-million facilities built by the government near the Port of Aqaba port, which turned out mono- and diammonium phosphates, phosphoric acid, and other chemicals. "Jordan was the third ranked phosphate exporter in the world, after Morocco and the United States, and it had the capacity to produce over 8 million tons annually. In 1986 phosphate sales generated US\$185 million in income, which made up 25 percent of export earnings and gave Jordan a 10 percent share in the world market." [6] The other principal mining industry was potash, produced at the semi-publicly owned Arab Potash Company's \$480-million facility on the Dead Sea.

Between 1972 and 1983 Jordan's GNP grew at an average of approximately 10 percent annually. This was made possible through Arab aid in the form of intergovernmental transfers which jumped from \$72 million in 1973 to \$1.2 billion (in 1981 dollars) at the 1978 Baghdad Arab summit. It has been argued that Arab aid, the remittances from over a third of a million Jordanians (mostly of Palestinian origin) working in the oil-producing Gulf region, and commodity exports were the principal components of Jordan's economic prosperity during the seventies and the early eighties. Remittances increased from \$15 million to \$900 million between 1970 and 1981, while commodity exports, mainly to the Gulf region, rose from \$58 million to \$735 million in the same period. These three components accounted for 84 percent of Jordan's GDP in 1981. [7]

However, during the mid-1980s, a producers' oil crisis led to a severe decline in oil revenues and intergovernmental transfers. Markets for Jordan's goods in the Gulf also dried up. A huge cement plant built near Aqaba, intended to supply the Saudi market, turned from an asset into a huge liability. Jordanian Cabinets, which had grown dependent on Arab aid, had become accustomed to turning a blind eye to the economy's structural weaknesses and borrowed money to make ends meet. At the end of 1987, GNP

shrank by 2.4 percent, and the ratio of debt to GNP rose to 70 percent. In 1988, servicing the national debt cost Jordan nearly \$900 million, and by 1989, the kingdom's debt burden had reached \$8.3 billion. Meanwhile, Jordan's special relationship with Iraq had also changed from an asset to a liability: Iraq owed Jordan \$600 million by the end of 1988. There were runs on the Jordanian dinar, which lost a third of its value during 6 months in 1988 (the dinar, which had an exchange rate of about 3 dollars in the seventies and early 1980s, was trading at about JD1.4 to the dollar in 2001). In April 1988, Jordan requested a standby credit arrangement with the IMF and had to acquiesce to a structural adjustment program. This required Jordan to reduce governmental spending and imports and to boost governmental revenues and exports. The medium-term macroeconomic goals were to register a 4 percent rate of economic growth by 1991; reduce inflation from 15 percent to 7 percent by 1993; and to wipe out the current account deficit by that year (including foreign budgetary support in the calculations).<sup>[8]</sup> Government subsidies for food items and exports had to be cut or eliminated.

Budgetary support from Gulf states which had run between \$550 million and \$1.3 billion a year during 1980–1989, fell to \$393 million in 1990 and \$164 million in 1991 following the Gulf War. Jordan, a rentier country (deriving a fixed income from returns on investments), had entered the post-rentier stage, which was to last from 1990 to 1994.

GNP for 1994–1998 in current prices were JD 4.246 billion, JD 4.56 billion, JD 4.711 billion, JD 4.946 billion, and JD 5.18 billion.

The following section examines the most recent economic developments in Jordan.

## GDP Growth

Economic growth, which was negative in real terms in 1998, scored a healthy rate of 3.1 percent in 1999 and 3.9 percent in 2000, according to government figures, despite the *intifada* <sup>[9]</sup> in the West Bank and Gaza, which has had severe repercussions for Jordan's tourism industry and has depressed foreign direct investment (FDI). The government hopes that GDP growth will continue at a real annual growth rate of 3.5 percent. Current per capita income is about \$1,700. The Economist Intelligence Unit predicts that GDP growth will be a more modest 2.8 percent in 2001, followed by 3.8 percent growth in 2002 and 4.4 percent in 2003.<sup>[10]</sup>

## Trade and Current Account Deficits

Despite the traditional chronic trade deficit, exacerbated by rising oil prices, the external current account balance recorded a surplus in 2000 due to U.N. payments to compensate countries negatively affected by the Gulf war, and in view of an increase in workers' remittances. The trade deficit for the first 4 months of 2001 was JD609.6 million (\$859.8 million).

The Economist Intelligence Unit expected exports to increase to \$2.1 billion and imports to increase as

well to \$4.4 billion, so that the trade deficit would rise by 7 percent in 2001 compared to 2000, increasing to \$ 2.3 billion; and then to \$ 2.5 billion in 2002 and \$2.7 billion in 2003. The EIU estimates the expected current account deficits to be 2 percent of GDP in 2001, amounting to a modest \$175 million; and to rise to 4.3 percent of GDP, equal to \$399 million in 2002; and the trend should continue with an increase to 4.4 percent of GDP, or \$438 million, in 2003.

## **Budgetary Deficit**<sup>[11]</sup>

The government's budget deficit still amounted to about 7 percent of GDP in 2000, but would be zero if income from privatization of government equities are included. The Central Bank's official foreign exchange reserves rose by \$800 million to \$2.8 billion by the end of 2000, which is sufficient to cover 8 months of imports, according to the Jordan Letter of Intent to the IMF. The plan is for the budget deficit to shrink to 3 percent of GDP before grants and to decline to zero by 2005 after grants, which would bring it down to figures similar to those accepted internally by the EU. The government is introducing a value added tax (VAT).

## **Debt Burden, Inflation, and the Exchange Rate**

External government debt amounted to 190 percent of GDP after the Gulf War but was whittled down to 81 percent of GDP by 2000, and the government hopes to bring it down to 50 percent of GDP by the end of 2006. Gross government debt was 101 percent of GDP at the end of 2000 and should be reduced to 65 percent of GDP by end of 2006, according to its letter of intent to the IMF; but this may be overly optimistic. The debt burden is still formidable and is a drag on the economy. The government currently has an external debt of \$7.2 billion.

The unemployment rate is 20 percent. Inflation is low and was running at an annual rate of 2.3 percent in September 2001 but should rise in 2002, according to the Economist Intelligence Unit, in view of the anticipated expansion of public and private spending, a rise in world non-oil commodity prices, and a strong euro. The EIU estimated average consumer price inflation to be 2.8 percent in 2002, and 3.5 percent in 2003.<sup>[12]</sup>

The Jordan Dinar is nominally pegged at JD0.709 to the U.S. dollar.

Standard & Poors has revised upwards Jordan's long-term foreign currency issuer credit rating from stable to positive in view of the government's reduction of fiscal imbalances and the country's structural reform program. S&P "predicts that Jordan's accelerating reform programme should boost long-term growth prospects, improve the efficiency of the economy and enlarge the role of the private sector."<sup>[13]</sup> The U.S. credit rating agency noted that Jordan's total debt burden was still too high, amounting to 126 percent of GDP and interest payments were put at 4.8 percent of GDP.<sup>[14]</sup>

## **Economic Growth and the Government's Liberalization Plans**

Three slogans emerged from King Abdullah II's First Economic Forum in Aqaba where the King met with businessmen and government officials to formulate the broad lines of an economic development strategy: globalization, information technology and privatization. A Cabinet headed by Ali Abu Ragheb since June 2000 has been charged with overseeing economic reform, and the Cabinet was reshuffled in October 2001 to streamline it and introduce new blood. A 20-member Economic Consultancy Council, which is a policymaking body, was established by King Abdullah II in December 1999 to promote the development of information technology, tourism, fertilizers, and the service industry. But bureaucracy and vested interests still pose a hurdle to liberalization.

Jordan joined the World Trade Organization (WTO) in April 2000; this step, combined with the IMF structural adjustment plan, are serving to modernize the economy and the trend is to look to the private sector for innovation and growth. Among other things, WTO membership is expected to benefit the mining industry (potash, phosphates and fertilizers), which is responsible for 20 percent of export revenues. However, tariffs, which at one time reached as high as 120 percent, have come down to 30 percent and are expected to be reduced to 20 percent by 2011. WTO rules include trade-related investment measures (TRIMs), and Jordan now permits foreigners to own 100 percent of businesses in Jordan. However, the combined effect of the intifada in the West Bank and Gaza and the terrorist attacks on the United States in September 2001 have led to a decline in direct foreign investment (FDI) in Jordan from about \$600 million in 2000 to an estimated \$200 million in 2001.<sup>[15]</sup>

In 1997 Jordan signed a Euro-Mediterranean Association Agreement that aims to create a free-trade zone between the EU and Jordan by 2010 and to establish a framework for political, economic, trade, and financial cooperation. A groundbreaking U.S.- Jordanian Free Trade Agreement came into Force in December 2001. Under a previous arrangement made with the U.S. in 1996, Jordan has set up 5 qualifying industrial zones (QIZs) in various areas of the kingdom, and 25 more are in the pipeline. Goods can be exported to U.S. markets from QIZs free of customs duties and excise tax on condition that 35 percent of the value of the products is manufactured within the zone and 8 percent of the value of the product is Israeli made. These are meant to be a reward for Jordan's cooperation with the peace process. Incidentally, these zones employ a sizeable number of women, which has led to the economic empowerment of Jordanian women. Apparel exports, mainly from such zones, amounted to \$276 million in 1999. The QIZs have provided a boost for Jordan's exports, which were expected to rise by 11 percent in 2001, compared to the year 2000, but imports were expected to rise by 13 percent in the same period.

The current focus of the development effort is a 380-square-kilometer special economic zone (SEZ) in the Red Sea port of Aqaba, which was inaugurated by King Abdullah II on May 17, 2001. The zone will include a QIZ, which will benefit from customs exemptions, low taxes, and streamlined labor procedures. The government expects that it will attract foreign investors seeking to take advantage of duty-free access to the U.S. market and that it will lead to \$6 billion in investments and may even double per capita income by 2020.<sup>[16]</sup> This project has been criticized because it allows foreigners to purchase land, and it is feared that it might be a venue for Israeli infiltration of the economy. Government statements have stressed that this is baseless, and trade unions are said to be pleased with the prospect of 70,000 jobs being created. In June 2001, the Aqaba Special Economic Zone Authority (ASEZA) shortlisted six

companies to set up the master developer for the zone (which has been dubbed Aqaba Inc.), and bids were submitted near the end of August. Activities in the zone are to center on industry and tourism. ASEZA has been headed by former Tourism Minister Aqel Biltaji since the Cabinet reshuffle. The Authority will put up land and build infrastructural facilities and regulate activities in the zone. So far, the main investors are Jordan Projects for Tourism Development (JPTD, a joint venture by Zara Investment Company and Abu Jaber Investment Company), along with Egypt's Orascom Projects and Tourism Development.<sup>[17]</sup> JPTD began work on the marina area of the Tala Bay Resort in Aqaba in June 2001. The company has a 2.7 million-square-meter site on Aqaba's south beach.<sup>[18]</sup>

Jordan is trying to develop computer related skills among the young and teach English to students from a very early age. A Reach Initiative is meant to provide 30,000 information technology-related jobs within the next 5 years, and to advance to \$550 million in annual exports to Europe and the U.S. and to create \$150 million in foreign direct investment by 2004.

Global One Communications (Jordan), the leading local internet service provider, was bought by Jordan Telecom for \$12.8 million in January 2001. Meanwhile Jordan Mobile Telephone Services (Fastlink) is hoping to challenge Jordan Telecom's monopoly of fixed-line and international services and plans to invest \$130 million in telecommunications projects to help develop ASEZA.<sup>[19]</sup>

## Privatization

In January 2001, an ad hoc committee, which had been set up by the Economic Consultative Council (ECC) 4 months earlier, endorsed a plan for the privatization of the Jordan Phosphate Mines Company (JPMC); 69.3 percent of the equity is held by the Social Security Corporation.<sup>[20]</sup> JPMC lost JD80 million in 2000 and now has a cumulative debt of JD350 million, but did expect a profit of about JD1 million in 2001. The ECC also recommended the privatization of the other major mining company in Jordan, the Arab Potash Company (APC), which, unlike JPMC, is profitable. The government owns 52.9 percent of APC.

The ECC further recommended the privatization of Aqaba port under a plan by which port facilities and services would be sold off, but the government would retain ownership of the port and exercise a regulatory function. The public sector has invested JD400 million in the port, which is underutilized.

In addition, the ECC wants the postal service and power generation and distribution companies restructured and privatization to begin within a year. The latter include the Central Electric Power Generating Company, the Electric Distribution Company, and the Irbid District Electricity Company.<sup>[21]</sup>

The government is already engaged in privatizing a number of publicly held corporations. In 1998 the government sold a 33-percent stake in the Jordan Cement Factories Company; the following year France Telecom bought a 40-percent stake in Jordan Telecoms for \$508 million, and Jordan is now trying to sell off 49 percent of the shares of the Royal Jordanian Airlines, but this is encountering difficulties in view of the company's JD840 million debt. The National Assembly passed a privatization law in May 2000,

under which 15 percent of privatization revenues should be spent on infrastructural development or setting up a social safety net. The government announced plans for \$423 million in additional spending in 2001, partly in view of the 20-percent unemployment rate, but it is not clear where the money will come from.

## Pharmaceuticals

Jordan has a thriving pharmaceuticals industry, which produces about \$260 million a year in medicines and related products, of which \$180 million go to exports. The industry employs 8,000 people. Some Jordanian firms in this sector will experience difficulties as a result of intellectual property right protection under the WTO, but others are already operating under license.

## Tourism

Tourism, which now contributes 11 percent of GDP, enjoyed a big boost from the peace agreement with Israel, with the number of visitors growing by almost 50 percent during 1994-96. Over 100,000 Israelis visited Jordan in 1997. Forty four percent of investments in Jordan are in the tourism industry. The tourism sector has attracted JD424 million in investments over the 3-year period ending in 2000, 38 percent of which is foreign investment.<sup>[22]</sup> Jordan has 293 hotels with 16,600 rooms, most of them in Amman. However, the outbreak of the intifada and the deterioration of relations with Israel, alongside events in the U.S., has severely hurt package tours that take in Jordan, the holy places in the West Bank, and Israel. Tourism from Israel has also dried up. In November the Jordan issued \$250 million in long-term bonds, guaranteed by the central bank, to help the hotel industry, which was suffering from a severe liquidity crunch, to reschedule its debts. This was reportedly a first in the Arab world.<sup>[23]</sup>

## Amman Stock Exchange

The Amman Financial Market opened on January 1, 1978. All Jordanian public shareholding companies capitalized at over JD100,000 (about \$290,000, according to the exchange rate at the time) had to be listed, although smaller companies could also qualify. In addition to the shares of such companies, government and private corporate bonds, other securities, and debt instruments were traded on the market. Corporate bonds were quite rare, however.

In 1997, the Temporary Securities Law was enacted to restructure the market. The privately operated Amman Stock Exchange (ASE) was created; transactions were to be settled by the new Securities Depository Center; and an oversight and regulatory role was assigned to the Jordan Securities Commission (JSC).

A total of 134 companies were listed on the ASE in November 2000, with a total market capitalization of JD 3.4 billion. At the end of August 2000, foreign investment accounted for 42 percent of market capitalization, but only 6 percent was non-Arab portfolio investment. A few American and European emerging market funds tried to enter the market in the mid-nineties, but found the Amman Financial

Market ill prepared to handle their requirements. Only 20 percent of Jordanians own equity in the market. This is due to low incomes as well as the fact that mutual funds were only introduced recently in Jordan. The government does not issue treasury bills, but the monetary authorities have been issuing certificates of deposit that suck up liquidity at the expense of capital markets, indicating a lack of coordination among various agencies.<sup>[24]</sup>

Executive Chairman of the JSE Bassam Saket sees his organizations' task to be to prepare a new culture of investment and to ensure greater transparency and that disclosure requirements be observed. Many firms are still not complying. New rules governing trading and listing were introduced in 2000, and a brokers' guarantee fund was established. Electronic and remote trading were also introduced. There were hopes that the government would conduct privatization transactions through the ASE, but important deals, such as the Jordan Cement Factories Company and a 40-percent share in the Jordan Telecommunications Company, were sold off directly by the government.

The ASE general weighted price index, which stood at 167.4 in 1999, declined 15 percent during the first three quarters of 2000 and was not initially particularly affected by the outbreak of the intifada in October; nevertheless, it resumed its decline and closed the year at 133.1. The total value of trading for the year 2000 was JD334.5 million (\$472.3 million), down from \$549.4 million in 1999 and from \$655 million in 1998. Foreign investment declined in 2000, with a net outflow of \$16.6 million compared to a net inflow of \$21.8 million in 1999, but foreign investment still accounted for 41 percent of market capitalization.<sup>[25]</sup> By August 15, 2001, the index was up 13 percent since the beginning of the year, closing at 150.69 points following a rally in anticipation of favorable earnings reports by blue chip companies. The index did dip sharply after the tragic events of September 11 in the U.S., but by October 24 it had climbed back above pre-9/11 levels to reach a 20-month high as foreign funds grabbed up blue chip Arab Bank shares in anticipation of a share split early in 2002.

Arab Bank shares account for 40 percent of total market capitalization on ASE. The bank was founded in 1930 in Jerusalem. Management of the highly conservative Arab Bank changed hands this year, as Abdul Majid Shoman retired as CEO and his son, Abdul Hamid Shoman, who is also part of the conservative camp, took over as CEO and deputy chairman of the board. His uncle Khalid Shoman, who is known as something of a modernizer, resigned as deputy chairman. But observers noted that the Arab Bank was facing stiff competition and had to find new sources of noninterest income.

## **Recent Economic Cooperation With Egypt and Syria**

### **15-Year Gas Supply Deal With Egypt**

Jordan's Energy and Mineral Resources Ministry signed an agreement in June 2001 with al-Sharq Gas Company, which is based in Egypt, to supply Jordan with 1,000 million cubic meters of natural gas a year for 15 years, starting in 2003. There are plans to construct a 370 kilometer gas pipeline in Jordan from Aqaba to Khirbet al-Samra near Amman, where an independent power project (IPP) is to be located, and to other power plants as well. Arthur D. Little is the consultant for the project, and Tractebel of Belgium is negotiating a contract to build the IPP. The ministry was accepting tender bids in December 19, 2001

for the build-own-operate gas pipeline contract. The capacity of the pipeline will be 10,000 million cubic meters a year, with a view to extending the delivery of gas to Syria, Lebanon and perhaps Turkey as well. In December 2000, Egypt, Syria, and Lebanon signed a memorandum of understanding for a regional gas pipeline.<sup>[26]</sup>

## Wahdeh Dam Project

Jordan has invited international contractors to prequalify for a contract to build a \$200 million, 100-meter dam in association with Jordanian and Syrian firms that will provide 50 million cubic meters of water from Syria to Jordan annually. The project, which has been delayed, is being financed by the Islamic Development Bank in Jeddah, the Arab Fund for Economic and Social Development in Kuwait, and the Jordanian government.<sup>[27]</sup>

## Questions for further study

1. What economic changes do you think Jordan's membership in the WTO will bring in the long run?
2. In what ways do you think Jordan's economic progress is threatened by the new *intifada*?
3. What do you think are the prospects for the development of an information technology in Jordan?
4. Do you predict success for the privatization effort?
5. What do you think Jordan needs to do to attract foreign portfolio and direct investment?

## Section V

### Politics

By 1927, British officials had prepared a draft constitution for Transjordan based on the Iraqi constitution (also the handiwork of British civil servants), which unfortunately excluded some of the protections built into the Iraqi model, and was designed to be subservient to the prerogatives of the mandatory power built into the agreement with Amir Abdullah, placing ultimate control in the hands of the British representatives. Earlier, in 1923, a committee of Transjordanian officials had begun work on a constitution which, when work on it ended, resembled the British version but was not based on the supremacy of the agreement with Britain. The constitution created an elected unicameral legislature, an "executive council" or Cabinet that was not accountable to the legislative council and had no provisions for judicial review. Abdullah had to request a modification that allowed the legislative council to approve the budget. The British draft was promulgated in 1928. In response, an unofficial group of Transjordanians authored a National Pact that acknowledged the authority of the amir but would have made the Cabinet responsible to the national assembly. The National Pact was not adopted, but the issues it raised came to constitute a leitmotif in Jordanian political life.<sup>[28]</sup>

To placate Palestinian fears of autocratic Hashemite rule following the annexation of the West Bank, King Abdullah promised constitutional reform but did not follow through; he dissolved the first Parliament after the union because it proved to be obstructionist once its members found that these reforms were not forthcoming. King Abdullah was assassinated before new elections could be held.

## Parliament and the Struggle With the Crown

### The 1952 Constitution

The new Parliament or National Assembly (*Majlis al-Umma*) was in favor of radical constitutional revisions, and there was a constitutionalist bent to the Jordanian statesmen who were wielding power in the interregnum between Abdullah and Hussein. This made possible the adoption of a more liberal constitution. In 1951, the Cabinet submitted to Parliament a list of revisions to the constitution. Parliament and the government compromised on the principle that a simple majority was sufficient for a vote of no-confidence in the government. A High Court was established, as well as provisions for limited judicial review.

The issue of succession from Abdullah to Hussein is a very interesting chapter in Jordan's history. It provides a very rare example in the Middle East of commoners arranging the rules and procedures of succession to the monarchy so that a smooth transition was effected from King Abdullah to his eldest son, Talal, as an interim measure, until Talal's eldest son, Hussein, was old enough to ascend the throne. Talal, who was suffering from schizophrenia, was unfit to serve, but he was made king for a brief period to ensure the legitimacy of the succession. When the time came for him to abdicate, this was effected through proper parliamentary procedures, peacefully and according to the book.<sup>[29]</sup>

The 1952 constitution states that Jordan is a constitutional hereditary monarchy, based on primogeniture. Jordan has a bicameral Parliament (*Majlis al-Ummah*, loosely translated as National Assembly), consisting of an elected lower house (*Majlis al-Nuwwab* or House of Deputies) and a Senate or upper house (literally *Majlis al-A'yan* or House of Notables) appointed by the King. The King promulgates laws through royal decrees that must be cosigned by the Prime Minister or the Cabinet Member concerned. The King may veto legislation, and royal vetoes require two-thirds of each House of Parliament to override them. The King appoints the Prime Minister and the judges. He is supreme commander of the armed forces. Cabinets must submit their programs to the lower house for approval, which requires the approval of two-thirds of the members. Elections for the lower house are supposed to be held every 4 years by secret ballot. Women were enfranchised in 1973.

Jordanian laws are based on the principles of both Islamic law (the *shari'a*) and European laws, showing influences of Ottoman, French, and British law. Under the constitution, the judiciary is independent, and formerly this was largely true, but the independence of the courts have been gradually undermined. There are civil, religious, and special courts in Jordan. Civil courts exist at four levels: magistrate's courts, courts of first instance, courts of appeal, and a supreme court called the Court of Cassation. The King appoints the president of the seven-member Court of Cassation, who fills the function of chief justice.

Religious courts consist of *shari'a* courts for Muslims and ecclesiastical courts for Christians.

The constitution bars discrimination on the basis of race or religion; bans compulsory labor; and requires due process to be followed in the case of arrest, imprisonment, or confiscation of property. However, an order from the Prime Minister (rather than a court) may satisfy due process in the case of arrest. Freedom of opinion, the press, and worship are guaranteed within limits. Censorship, or rather self-censorship, of the press is often practiced, however. During the period of martial law (from 1967 to 1989), newspapers were often closed down by order of the government for a few days at a time as a financial penalty for violating censorship restrictions. The Ministry of Information (which no longer exists) often laid down general guidelines for the press. Television and radio are government owned and operated.

## King Hussein and the Constitutional Experiment

General elections were held on October 21, 1956 under the 1952 constitution and the Political Parties Law of 1955, according to which the Cabinet had the authority to license all political parties. These were the freest elections in the history of Jordan, before or since, under the explicit orders of the King. Given the change in the electorate due to the incorporation of the West Bank, it led to the victory of Arab nationalist parties, notably the National Socialist Party led by Sulaiman al-Nabulsi, which won 11 out of 40 seats in the lower house. There were 3 communists, 2 Ba'thists, 4 Muslim Brethren, 4 Arab Constitutionals, 2 other parties that won one seat apiece, and 14 independents. The pro-Nasserist Arab Nationalists (*qawmiyeen*) did not contest the elections and remained outside Parliament.

On 27 October 1956, Sulaiman Nabulsi was charged with forming a Cabinet, and he named a Ba'thist from the West Bank, Abdullah Rimawi, as minister of state for foreign affairs. The 11-man Cabinet included 7 National Socialists, 1 Ba'thist, and 1 communist. As one distinguished commentator put it: "Thus, of all the countries in the Arab East, Jordan became the first to have what it is customary to call a "popular front" government, i.e., a liberal-socialist-communist coalition which, in the Middle East context, was dedicated to the struggle against domestic conservatism and Western influences, while favoring closer links with the Arab countries and the Soviet bloc."<sup>[30]</sup> Amman became a center for pan-Arab conferences and Jordan played an important role in founding the Federation of Arab Labor Unions.

There was an irreconcilable conflict between the goals of Nabulsi and those of the King. Nabulsi, being a pan-Arabist, wanted to end what he perceived as the artificial existence of Jordan and unite with other Arab countries, most immediately, Syria. The new Prime Minister favored the replacement of Britain's subsidy with Arab aid, notably from Egypt, Syria, and Saudi Arabia. Nabulsi also wanted to establish the principle of the independence of the Cabinet to formulate foreign policy.

The significance of what the government was attempting can be gleaned from a cabinet resolution read by Rimawi on February 26, 1957 defining Jordan's position at an upcoming conference. The resolution rejected the Eisenhower Doctrine (military and economic support for Middle East states whose independence was threatened by international communism) and upheld the principle of positive neutrality. The prelude to the government's audacious position on foreign policy issues was even more

striking: “We hereby announce . . . the Government’s policy . . . On this basis the government won the confidence of the Chamber of Deputies.”<sup>[31]</sup> The significance of this statement cannot be overestimated: “The inference that Jordan was a parliamentary state does not contradict the text of the 1952 constitution (amended in 1954), even though the constitution did not state that policymaking devolved on the ministers rather than on the King. But as everyone knew, this assumption negated all that Jordan had stood for as a body politic since its birth, and just as important, no officeholder had ever before dared to make it in public.”<sup>[32]</sup>

Jockeying between the King and the Cabinet continued. When the Cabinet retired the director of security and replaced him with their own man, Hussein acted. On April 10 he ordered Nabulsi to resign. By maintaining personal contacts with Cairo and Damascus, Hussein had managed to silence their hostility at a crucial time.

That was not the end of the constitutional experiment; the King was still willing to play along. But the next 3 weeks were a period of severe crisis. Army officers in Zarqa, east of Amman, had mounted a plot against the King with the connivance of the chief of staff, Ali Abu Nuwwar. Hussein managed to foil the plot bloodlessly through a demonstration of personal courage. Then, for the first time, he invited a Palestinian, Hussein Fakhry al-Khalidi, to form a Cabinet, which included Nabulsi as foreign minister. This Cabinet lasted 9 days but significantly allowed a Patriotic Congress to convene in Nablus in the West Bank on April 22. This was attended by the Qawmiyeen or Nasserists, the National Socialists, Ba’thists, and communists—in other words, all the opposition. The Muslim Brothers by this time were supporting the King. The congress issued a proclamation signed by 23 members of the lower house that espoused federation with Egypt and Syria, a purge of the administration, and respect for the constitution and called for a general strike and demonstrations on April 24. Some demonstrations took place accompanied by violent clashes between the leftists and the Muslim Brotherhood. Khalidi resigned, so none of the congress’ resolutions were carried out.

After soliciting and receiving assurances of American support, on the evening of April 24 the young King assembled a group of senior politicians among his grandfather’s supporters and sought and received their approval for a declaration of martial law. Shortly after midnight on April 25 martial law was declared. The King had exerted his authority and finally put an end to the constitutional experiment. Jordan would rely on U.S. aid. In effect, the United States had stepped into Britain’s shoes as Jordan’s sponsor.

This assertion of independence by Parliament and the Cabinet had been spectacular but short-lived, and it ended with a victory for King Hussein and the prerogatives of the crown (see detailed discussion of the international dimension of the challenge of Arab radicalism in the next section).

## Civil War of 1970–71

In 1964, Egyptian President Abdel Nasser was instrumental in creating the Palestine Liberation Organization (PLO), which was not entirely independent from the Arab regimes that had set it up and

financed it, and the Palestine Liberation Army, which consisted of regular brigades subject to regular military discipline, stationed in Syria and Egypt. Independent Palestinian organizations, such as the Palestine Liberation Movement (Fateh),<sup>[33]</sup> which was established in several stages ranging from the late fifties to the early sixties, and the Popular Front for the Liberation of Palestine (PFLP), and its offshoot, the Democratic Popular Front for the Liberation of Palestine (PDFLP, later the DFLP), as well as many other small organizations, had already taken shape or were in the process of being formed. Following the defeat of Arab armies in the June 1967 war, their mission became to liberate their homeland, Palestine (now Israel), through guerrilla action.

Whereas conventional warfare worked to the Israeli army's advantage, guerrilla warfare, it was thought, was far better suited to Arab limitations and Israeli vulnerabilities. These organizations went through a soul-searching period in which theoretical debates took place concerning the nature of guerrilla warfare, wars of national liberation, people's wars, etc.<sup>[34]</sup> They hit upon the practice of guerrilla action (*al-'amal al-fida'i*), since guerrilla warfare was actually beyond their capabilities; but that did not prevent them from employing grandiose names such as "mass armed struggle" or "revolutionary war." A sanctuary or base for guerrilla operations against Israel was needed. The countries surrounding Israel—Jordan, Syria and Lebanon—were the natural choices, Jordan being preferred because it offered the longest border with Israel and because Palestinians constituted over half the population. Whereas Fateh espoused the doctrine of noninterference in the affairs of the regimes in the host countries, the Marxist organizations, the PFLP and the breakaway PDFLP were inspired by Vietnam and, in the case of the latter, the thoughts of Mao Zedong, to the extent that its founder, Nayef Hawatmeh, was satirized as Nayef Zedong by members of other organizations. To the PDFLP and the PFLP, Amman had to undergo an apotheosis as the Arab Hanoi or little Hanoi. Unfortunately these concepts were divorced from social, economic and political reality.

Palestinian nationalism (or more accurately protonationalism) and the emergence of Palestinian institutions were driven by "armed struggle." The principle of "armed struggle" shaped the form and function of Palestinian institutions. The proliferation of guerrilla organizations, and the ongoing formation of militias and administrative and decisionmaking institutions, however, created a dualism of power. "The guerrilla movement now had its own military police, security apparatus, revolutionary courts, information offices, media, trade union movement, and, of course, full-time armed forces and 'liberated zones' in the refugee camps."<sup>[35]</sup> The military and paramilitary bodies that emerged, designed as they were to further the goal of armed struggle, were incompatible with Jordanian sovereignty. Many of the men who staffed these organizations were recruited from refugee camps in Jordan; the Palestinian refugees could escape the dismal world of the camps and strive for a better future for themselves and their families by joining the guerrillas, those who sacrificed themselves for their people.

In April 1969, the guerrilla groups united to form the Palestine Armed Struggle Command, which, due to internal differences, excluded the PFLP. "In the years which followed 1969, Fateh strengthened its hold on all parts of the PLO apparatus, while Fateh's own native-born vigour and resilience expanded the PLO's hold over all aspects of Palestinian public life, knitting together the dispersed and demoralized Palestinian communities into a reformed and distinctive national group under the leadership of the PLO."<sup>[36]</sup>

The concentration of the presence of the *fida`iyeen* (guerrilla organizations dedicated to the liberation of Palestine) on Jordan soil, and the high percentage of Palestinians in the population, presented a challenge to the regime and to many indigenous Jordanians. The prospect of turning Amman into an Arab Hanoi was anathema to the regime. Nevertheless, it was difficult for King Hussein to resist support for efforts by the Palestinians to regain their homeland; and personally, the young King may well have been swept away initially by the tide of popular sentiment: at one point he said in a much publicized speech: "We are all *fida`iyeen*." Those words would come back to haunt him.

The guerrillas became contemptuous of the authority of the government, which was "reactionary" after all, and, according to the radicals, had to be superseded by something better, more progressive. Armed *fida`iyeen* started to throw their weight around under the presumption that they had the mantle of legitimacy. They flaunted their independence (and rebelliousness) and thought that the regime could not take them on for fear of the Arab reaction. The guerrillas had also infiltrated the armed forces, which had recruited many Palestinians alongside the traditional Bedouin troops, and thought they army would split in the event of a confrontation with the King.

As a final resort, the guerrillas thought they could count on Iraqi troops that had been stationed in Jordan following the war and had received assurances from Iraq's defense minister. The radical guerrilla groups, particularly the PDFLP and the PFLP, sought a confrontation with the authorities, and there was a debate among the radicals whether to maintain the duality of authority or to overthrow the regime. Fateh was against attempting to replace the government because it thought this would invite Israeli intervention, but this fear apparently did not daunt the less cautious and much weaker radicals (Fateh had a militia of around 10,000, whereas the PFLP and PDFLP commanded only a few hundred), and even Fateh commanders in Jordan were militants. The Marxist groups counted on Fateh to come to their aid in a showdown and acted recklessly. The Jordanian Communist Party split, with the majority supporting the radical Palestinians.

But the *fida`iyeen* lacked unity and discipline and their forces were not integrated. By contrast, the government was well organized and better capable of planning, its troops were more disciplined and better armed. Malcolm Kerr offers the following insight into the mentality of the elements within the army and the general population who were alienated by the methods and attitudes of the Palestinian guerrilla organizations: between 1968 and 1970 "they had built up a reservoir of special resentment against the arrogant attitudes of the Palestinians. The political tension was mixed closely with social differences between the proud men of tribal background, trained under the paternal eye of the British, whose whole life and livelihood had been based on loyal service to the Hashemite crown, and the slick urbanites, the socially mobile, ideologically facile, irreverent young men who led the resistance movement. Transposed on to the Jordanian stage, it was the police of Chicago or Paris face to face with student demonstrators."<sup>[37]</sup>

But fearing a split in the army, the government brought back Ma'n Abu Nuwwar (in keeping with the King's tradition of forgiving and coopting former adversaries) to reactivate the army's Mobilization and Moral Guidance Branch; a Special Branch (*shu'bah khassah*) consisting of loyal Bedouin recruits under

the command of the King's uncle, Sharif Nasir bin Jamil, and his cousin, Sharif Zeid bin Shaker, who commanded the armored brigades. The so-called Popular Resistance (*al-muqawamah al-sha'biyah*) was formed, which came under the direct command of the King. A third armored brigade was formed in 1969, and army strength increased from 60,000 to about 75,000. The King received the support of the southern tribes, indigenous East Bankers, and even Palestinian businessmen who perceived the need for law and order. The King met several times with tribal and clan leaders and rallied support in the army.

Clashes broke out in February 1970 and again in May and June. The PFLP tried to capture the radio station, and Fateh even fired rockets at one of the King's palaces. Still, Hussein tried to compromise on several occasions. On June 11, he offered Arafat the post of Prime Minister at the head of a Cabinet of the Fateh leader's choice. Arafat declined, but still a Cabinet was formed under 'Abdel Mun'im al-Rifa'I, and Mashhur Haditha replaced Sharif Nasir at the head of the army. Both new appointees enjoyed the trust of the Palestinian guerrillas.

On July 22, Abdel Nasser agreed to the Rogers Plan, involving a cease-fire in the war of attrition that had been going on in the Suez. Jordan concluded a cessation of hostilities agreement with Israel 4 days later. This sent alarm bells ringing at PLO headquarters, and the radicals started plotting a coup against Hussein. The PFLP came to believe that an offensive against the government would induce large segments of the population and the army to rally behind the rebels, on the model of the Bolshevik revolution,<sup>[38]</sup> and now advocated a direct assault on the monarchy in an overall offensive.<sup>[39]</sup> The King reinstated bin Shakir as army commander.

George Habash's PFLP had a penchant for "external operations," which generally meant hijackings, although Fateh frowned on this. On September 6, the PFLP hijacked a Pan Am flight, flew it to Cairo, and blew up the plane on the tarmac after evacuating the passengers. A Swissair aircraft and a TWA plane were also seized and flown to a desert air strip in Jordan, where a BOAC flight was also diverted 3 days later, and the passengers were held as hostages. The army surrounded the air strip. The PFLP's organ, *al-Hadaf*, announced the group's actions to be a blow at the peace process.<sup>[40]</sup> Arafat suspended the PFLP's membership in the PLO Central Committee. But the Palestinian leadership vacillated: "Fateh had long raised the slogan of noninterference in domestic Arab politics, but its problem (Salah) Khalaf summarized, was that it had in fact 'interfered, but not intervened', and 'defied [King] Husayn's authority without seriously trying to seize power.'"<sup>[41]</sup> On the other hand, some hawks, such as PLO "foreign minister" Faruq Qaddumi, thought the King was a "paper tiger" and could be toppled "in half an hour."<sup>[42]</sup>

Iraq warned Jordan against taking on the guerrillas and said it would intervene to defend the *fida'iyeen* and the refugee camps.<sup>[43]</sup> Again the King compromised. Mashhur Haditha was reinstated as army chief of staff, and the King had to intervene personally to prevent an attack on the guerrillas by mutinous troops. The King now faced a challenge from the right by East Jordanian hardliners who were ready to invite the King to step aside if he could not lead them against the guerrillas.<sup>[44]</sup> Finally, Fateh called for a "revolutionary nationalist government" on September 11.

Faced with these challenges, and by increasing hostility to the guerrillas from the indigenous East Bank population, which verged on the threat of rebellion against the King if he failed to act, Hussein acted. The Jordanian army began its offensive on September 17, massing between 30,000 and 35,000 troops in the Amman governorate. The government had a master plan to use the special Bedouin forces it had created to attack centers of guerrilla strength in Amman and to sever their ties with other cities, cutting off supplies and reinforcements. Iraq failed to intervene but Syria did, sending in a force of 200 tanks, which the King was able to defeat by deploying his air force while Syria failed to do so (see section under Foreign Affairs, below.)

Arab mediation led to several cease-fires, none of which endured. The government had set a course of action for itself, from which it was not ready to deviate unless the PLO was prepared to change its ways. Still, the King exhibited a willingness to compromise on several occasions, to appease both domestic and Arab criticism. There were many pauses in the offensive. A subsequent protocol on October 13 restored many of the former prerogatives and freedoms the guerrillas had enjoyed. The United States, which was clearly sympathetic to the King, resupplied Jordan with the equipment it had lost. The army resumed what has come to be termed a “creeping offensive.” By March 1971 the army regained Irbid; by April the guerrillas agreed to evacuate Amman and assembled their forces in ‘Ajlun. Government forces attacked and overran Palestinian positions in ‘Ajlun between July 13 and 16. The PLO left Jordan, never to return as an armed force.

The Palestine Red Crescent estimated a death toll of 3,650 and over 11,000 wounded even before the final assault, and the Palestinian guerrillas had lost their principal Arab sanctuary. Jordan was censured and ostracized for a while. Kerr offers a perceptive retrospective analysis: “Who had really won the civil war, and what did it signify? The violence was deeply disturbing to the Arab public, the more so because the victims were already the objects of general sympathy. King Hussein’s army had killed more Palestinians in 1970 than Moshe Dayan’s had done in 1967. The poignancy of this was not lost on Palestinians living in the West Bank under Israeli occupation. What did it foretell of prospects for them and their aspirations if they were ever returned to Hashemite sovereignty?”<sup>[45]</sup>

## **Return to Constitutional Government in 1989**

### **Defensive Democratization**

At the 1974 Rabat conference, the PLO was accepted by Arab governments as the sole legitimate representative of the PLO. This created a constitutional problem for Jordan: Was the West Bank still part of Jordan? In practice, the area was under Israeli occupation, and now the question of the legitimacy of representation had been raised. Who did West Bankers in the Jordanian Parliament represent? Could new elections be held? Should West Bank deputies vote on laws affecting the East Bank only?

Martial law had been declared in 1967 and remained in force until a new Parliament was formed after the 1989 elections. The official explanation for this situation is that war justified martial law, and the occupation of the West Bank prevented the holding of new elections there, and it would have been

unconstitutional to hold elections only in the East Bank, so that normal constitutional practices had to be suspended.

There have been five amendments to the 1952 constitution: in 1974, 1976, and 1984. The first two amendments allow the King to dismiss the Senate and to postpone lower house elections for a year. In 1974 the King dissolved the lower house and suspended Parliament indefinitely. In 1978, feeling the need for participation by the public in government, the King created an appointed body, the National Consultative Council, which debated laws and made recommendations to the government. This body had no legal powers or authority, but the government made a point of almost never going against the wishes of the NCC. The Prime Minister and the Cabinet regularly attended the weekly NCC sessions.

Writing in 1981, one scholar noted: “Although most of the laws that have been promulgated since the establishment of the Council have been initiated by the government, nevertheless, all of them have been deliberated in the appropriate Council committee, and then voted on and passed with or without amendment by the Council as a whole. Neither the government nor the King have so far vetoed any amendment recommended by the Council.” In response to a proposed amendment by a prominent NCC member, the following text was adopted: “Members can debate and offer advice on matters of public policy, each member having the right to question the Prime Minister or the concerned Cabinet minister on any such topic.”<sup>[46]</sup> Although strictly an advisory body, the NCC gathered authority as it went along.

In 1984, King Hussein dissolved the NCC and recalled the suspended Parliament. The 1976 amendment empowered the King to postpone parliamentary elections indefinitely, while the two 1984 amendments allowed elections to be held in the East Bank alone and empowered serving deputies to choose replacements for deputies who died in office, in order to fill vacant seats from the West Bank. Thus the government’s justification for the hiatus in parliamentary life was that circumstances beyond the government’s control had forced a situation upon it. In 1988, Jordan gave up responsibility for the West Bank, and it became sensible as well as constitutional to resume parliamentary life in the East Bank.

Other explanations stress economic factors, specifically the nature of Jordan as a rentier state and the need to respond to economic crises. One noted characteristic of rentier states is the depolitization of society: Since the state does not depend primarily on taxes to sustain the government’s budget, the operative maxim could be phrased as “no representation without taxation.” The state may be benevolent, but it is decidedly paternalistic. It tends to discourage the emergence of independent political parties and pluralist interest groups with the power to contest government policies.

By the end of the 1980s, strategic rents were drying up, and the government’s need to borrow from abroad had led to a budget deficit of \$8.3 billion. Per capita GNP had fallen by a quarter since 1985 to under \$1,500 in 1989; consumer spending had been declining since 1986; and remittances by Jordanians working abroad, which exceeded a billion dollars annually for about a decade up to 1987, had dropped to \$623 million by 1989 as a result of the Iran-Iraq war. The kingdom sought to reschedule its debts, and this led to a structural readjustment agreement with the IMF in 1988, which was initially kept secret, and included an austerity package involving reductions in government subsidies.

Subsequent government's had been ignoring the structural imbalances in the economy, and the public did not even know the full extent of the problem. The structural adjustment program called for price increases on petroleum products, alcoholic beverages, cigarettes, soft drinks and detergents. Automobile registrations and licensing fees were increased. Subsidies on barley, bran, olive oil and powdered milk were reduced. The immediate objective was to reduce the budget deficit from 23.7 percent of GDP in 1988 to 19.6 percent in 1989.<sup>[47]</sup>

The program was met with public protests directed against both the austerity measures and governmental corruption. Riots broke out in the south in April 1989, beginning in Ma'an and spreading to surrounding areas. The unusual aspect of these riots was that they occurred in areas of traditional bedrock government support; the protesters were not radicals or leftists or Palestinian refugees but were East Bankers of Bedouin descent. Palestinian refugee camps remained quiet, and the largely Palestinian middle class and left-leaning professional associations were content to petition the crown to replace the government. The Muslim Brotherhood simplified the complex economic causes by placing the blame on governmental corruption. Zeid Rifa'i's government was forced to resign and was replaced by a Cabinet headed by Sharif Zeid Ibn Shaker, who was known for his integrity. Rifa'i had been known for his antiliberal policies and close control of the press, and the new Cabinet chose a path of liberalization to placate citizens who had to bear the burden of economic austerity.

The government responded to the clarion call of unrest among part of its core constituency with political liberalization.<sup>[48]</sup> The first parliamentary elections since the 1967 war were announced to be held before the end of 1989, and the King appointed a 60-member commission to draft a National Charter. Glenn Robinson has argued that these measures amounted to "defensive democratization," by the state, preemptive liberalization in view of anticipated demands for political reform, and not as a result of agitation by groups in civil society. "Defensive democratization, even in the absence of democratizing social pressure, is a state strategy to maintain the dominant political order in the face of severe state fiscal crisis. Such fiscal crises, particularly in rentier states, are only loosely related to general economic problems in a country."<sup>[49]</sup> Rents, derived from outside the country, dried up, leading to protests, and the King opted for a program of defensive democratization in order to forestall and preempt even more serious challenges to the crown further down the line without making fundamental changes in the structure of power and the elite.

While the liberalization is real in comparative terms, and may allow for the emergence of political parties and greater freedom of the press, the King maintains an ultimate veto power over policy issues. The function of Parliament, which was freely elected, was to sanction or legitimize government policies and give its blessings to the IMF's structural reforms.<sup>[50]</sup> Parliament was also needed to legitimize the peace agreement with Israel, which the King would have anticipated in view of his April 1987 agreement with Shimon Peres in a secret meeting in London to convene such a conference.<sup>[51]</sup> King Hussein had been saying since the late seventies that he wished there were a way for the public to participate in the decisionmaking process so that it would better understand the government's calculations and motives and so that citizens might share in the responsibility for the decisions rather than criticizing everything the government did while they maintained their distance. Ahmad al-Lawzi, who was Prime Minister during

the early seventies and had extensive experience as a Senator, believes that liberalization should in fact be dated back to 1984.<sup>[52]</sup> Although the elections were free, the rules of the electoral game were such as to minimize the influence of opponents of the regime, particularly during the 1993 elections.

The notion of defensive democratization is supported by Ryan. In a study of the Arab Cooperation Council, formed by Jordan, Egypt, Iraq, and North Yemen on February 16, 1989 (see section on the ACC under Foreign Policy, below), Ryan argues that the Council primarily represented a format for economic cooperation and that Jordan had worked to create it in order to deal with the looming fiscal crisis. Although it antedated the unrest in the south, the Jordanian government could see the threat of unrest, although it may not have predicted where it was going to break out. At any rate, the intention was to shore up support for the regime by catering to the interests of the business elites, an important source of support for the regime, in the belief that economic stability would promote social peace.

Political liberalization and the ACC went hand in hand. "The liberalization effort, in fact, opened the way for interest groups to form together as informal policy coalitions in efforts to affect the policy process to a greater extent than before. These developments enhanced the role of the commercial bourgeoisie in particular, which found that some of its interests matched those of the Jordanian regime. One aspect of this policy convergence was the push for greater market access not only for Jordanian labor but also for Jordanian exports."<sup>[53]</sup> The export industry, in which Palestinian interests were well represented, stood to benefit, as did the construction industry, which provided a lucrative employment opportunity for retired army officers, and which sought foreign markets for the export of its services. Economic alliances and political liberalization offered an opportunity to coopt key groups in society.

According to Robinson, this move towards democratization is not in any imminent danger of getting out of hand, because the Palestinian economic elite are reticent about further liberalization that might work to the advantage of East Bankers and are content with the IMF-backed structural adjustment (which promotes privatization); the IMF plan preserves the position of the private sector dominated by Palestinian businessmen and firms, who may be threatened by attempts to redistribute resources towards the state sector, which is dominated by East Bankers.<sup>[54]</sup>

The lower house of Parliament was expanded to 80 seats, of which 68 seats were assigned to representatives of Muslims of Arab origin: nine for Christians, two for Circassians, and one seat was to be filled either by a Circassian or a Chechen.

Political parties had not been legalized before the 1989 elections, so the largest single bloc of seats went to the Muslim Brotherhood. The Brotherhood was the only organized group to contest the elections, but they could not run officially under the party name. Nevertheless, 20 Brethren and 12 other independent candidates affiliated with the Brotherhood were elected, adding up to 32 seats. Representatives of tribal groups and centrists won 35 seats. Thirteen leftists were elected, a remarkable change from the 1950s. The government now faced a problem: the combined strength of the Islamist and leftist candidates amounted to a parliamentary majority. The King called on Mudar Badran, who had good relations with the Brotherhood, to form a cabinet. Badran declared an amnesty for political prisoners; lifted harsh

controls on the press; and froze martial law. He chose to coopt the Islamists and formed a cabinet that included three independent Islamic deputies but no members of the Brotherhood. Parliament convened in November 1990. Badran reshuffled his Cabinet to include three Muslim Brethren, with the ministry of education going to one of them. The new minister of education announced that schools and school events would be strictly segregated according to sex. This meant that fathers could not attend the graduation of their daughters or mothers attend ceremonies for their sons. This went against Jordanian family values and offended the sensibilities of nonfundamentalist Jordanians and such a large section of the middle class that the minister was forced to resign.

Despite their parliamentary strength, the Islamic deputies were unable to impose their political agenda on the three subsequent Prime Ministers: Taher al-Masri, Zayd ibn Shaker, and Abdul Salam al-Majali. Parliament did endorse structural adjustment programs that had been agreed with the IMF, however. According to Robinson: "Parliament could only act within the political parameters set by the King and enforced by his chosen Prime Minister . . . Parliament had little real power to substantially change policies or course. In the end, Parliament's primary task was to legitimate King Hussein's political agenda."<sup>[55]</sup>

The National Charter, a truly progressive document, was approved by Parliament and signed by the King in June 1991. In line with the charter, political parties were legalized in September 1992. The Press and Publications law, which was enacted in April 1993, removed some restrictions on the press, but shackled press freedoms in other ways, such as prohibiting material that was offensive not only to the crown and the armed forces but to other Arab states, diplomats, etc. The conservative Parliament was more concerned with defamation than with press freedom. Apparently, the Muslim Brotherhood and tribal deputies did not favor an overly emancipated or outspoken press. The tame Jordanian press, however, failed to mount opposition to Jordan's 1994 peace agreement with Israel, opposition which the Brotherhood led. Of course, an important source of control of the press lay in the fact that the government indirectly owned 60 percent of the shares of *al-Ra'i* newspaper, 35 percent of *al-Dustur*, and 75 percent of *Sawt al-Sha'b*.

The government also retained the ability to circumvent parliamentary channels in certain areas. For example, the Cabinet enjoys the right, subject to the King's approval, to promulgate laws by decree when Parliament is out of session in "matters which admit of no delay." Such laws must be submitted to Parliament at the next session. However, there is an interesting nicety here: Instead of requiring Parliament to endorse the laws passed by decree, the constitution states that the law will remain valid unless it is repealed by Parliament.<sup>[56]</sup>

## Relations With the Islamists

The Muslim Brotherhood, while critical of corruption in government, had been an important source of domestic support for the government in its confrontations with leftists and radicals, as noted, during the Nabulsi episode. It has served as a counterweight not only to leftist groups, but also to more extremist Islamist organizations, such as *Hizb al-Tahrir al-Islami*. East Bankers were the grass roots mainstay of

the Brotherhood, which included in its leadership scions of established political families. However, the Islamists were opposed to a peace agreement with Israel that involved full normalization and did not satisfy Palestinian national aspirations, as conservative Palestinians were rather well represented in the Brotherhood.

Following the 1989 liberalization, the Muslim Brotherhood found itself in a strong position to compete, because it was about the only group in Jordanian civil society that was organized and in a position to mobilize mass support, a strong advantage it enjoyed over other groups and newly formed parties. The Brotherhood and Islamic groups affiliated with it formed the Islamic Action Front (IAF). The government, wary of Islamist opposition to peace with Israel, sought to strengthen its hand against the IAF. In preparation for the 1993 elections, the Cabinet changed a rule that allowed voters to cast ballots for all the seats in a multiseat district, so that the new principle became “one-person, one vote.” This forced voters in such districts to choose between voting on a clan basis or an ideological one, thereby undermining support for IAF candidates. In addition, the existing electoral districts over-represented the southern regions of the country, which consisted predominantly of indigenous Jordanians, and tended to vote on a clan basis. The IAF threatened to boycott the elections but later relented. Voting on November 8, 1993 was fair and free; the government did not interfere in the elections, although it did manipulate voting rules to its advantage. The number of Islamic deputies in the new Parliament declined from 32 to 22, 16 of them members of the IAF.

Only 41 percent of all eligible voters and 54 percent of those registered to vote participated in the 1989 election, and 45 percent of eligible and 56 percent of registered voters participated in the 1993 elections. Nevertheless, Robinson remarks that “Jordan’s political-liberalization program, initiated in 1989, represents the longest sustained such opening in the Arab world today.”<sup>[57]</sup>

A very interesting point that Robinson makes is that the success of the IAF is linked to Palestinian politics. The IAF performed best in districts with a heavily Palestinian population. Islamic deputies also opposed the Madrid-Oslo peace process, which gave voice to Palestinian opposition to the process. But because of East Bank sensitivities about the disproportionate number of Palestinians among the business elite, East Bankers felt this should continue to be counterbalanced by overrepresentation of Palestinians in the bureaucracy and governmental institutions. Indigenous Jordanians also felt misgivings concerning the possibility that Palestinians may want to retain political rights in Jordan as well as enjoy rights in a Palestinian state that may emerge from the Oslo process, in which case Palestinians would be doubly enfranchised, so to speak.

Palestinians running as independents or as members of a leftist party aroused controversy, except in the case of the Muslim Brotherhood. “the Muslim Brotherhood is the only party in Jordan that effectively integrates Palestinian interests without the political baggage of Palestinian ethnicity. No other organization that overtly espouses a Palestinian nationalist agenda and that is seen to be a legitimate political player in Jordanian affairs by East Bankers exists (or has existed) in Jordan.”<sup>[58]</sup>

Satloff argues that there was a struggle between the traditionalists and “Young Turks” within the Brotherhood. The radicals have “urged the leadership to consolidate the ‘Palestinization of the

Brotherhood and have goaded the leadership into heightening the role that jihad against Israel has in the pantheon of Brotherhood political priorities.”<sup>[59]</sup> The radicals seem to have gained the upper hand, and have been bent on challenging the regime. The government has responded by encouraging the formation of a coalition of secular and leftist groups. “Most significantly, this has included the return of the Fatah wing of the PLO to domestic politics—with the regime’s blessing, no less. In mid-July [1990] the Jordanian Communist Party, Nayif Hawatmeh’s Jordanian People’s Democratic Party, George Habash’s Popular Front for the Liberation of Palestine, and Fatah joined together to form the “Jordanian Arab National Democratic Coalition,” a political movement aimed at winning back the Palestinian support that had been ceded to the Islamists over the previous year.”<sup>[60]</sup>

The Jordanian government has also resorted to some underhanded tactics in its attempt to control the Islamists, in response to some of their legitimate complaints against corruption in government and the acceptance of kickbacks by senior politicians. A prominent Islamist, Laith Shubailat, was arrested on trumped up charges on more than one occasion for causing trouble on this issue. He was tried and convicted but pardoned by the King, who was seeking reconciliation.

Relations with the Islamic Resistance Movement ( Hamas ) were another sensitive issue. Hamas had been allowed to maintain spokesmen and representatives in Jordan. King Hussein even intervened with Israel when Mossad agents tried to assassinate the main Hamas representative in Jordan, Khalid Mishal, by injecting him with lethal poison on a street in Amman in September 1997. Infuriated, the King forced the Israeli government to provide the antidote and to release the invalid founder of Hamas, Sheikh Ahmad Yassin, who had been languishing in an Israeli prison for 8 years. However, in 1999 the government cracked down on Hamas, declared it illegal, and closed its offices in Jordan. Twenty-one members of the organization were arrested, and its chief representatives in Jordan, who were abroad, were prevented from returning. Later, most of them were pardoned and deported, along with four high-ranking members of the organization.

Most recently, the government said it had uncovered a plot by a group with connections to the al-Qa’ida organization, who were attempting subversion, and put them on trial.

## Questions for Further Reading

1. What was the impact of the British mandate on Jordanian society and politics? (See Amadouny, Bocco and Tell, Kirkbride, Kingston, and Wilson, listed above.)
2. How was the transition from Abdullah to Hussein and the forced abdication of Talal brought about peacefully and constitutionally? (See Satloff for a thorough account and Kirkbride, above.)
3. To what extent did Jordan function as a constitutional monarchy? (See Brown, Khoury, Wiktorowicz, Robinson, and the two Satloff references above.)
4. How did the Palestinian presence in Jordan influence politics in the Nabulsi episode, the civil war of 1970, democratization since 1989, and in the question of peace with Israel? (See Dann, Sayigh, Robinson, Satloff and al-Khazendar, above. Al-Khazendar is the least scholarly, but covers some useful territory).
5. How do you perceive the Islamist challenge to the Jordanian regime? (See Robinson and the Satloff's "Jordan's Great Gamble.")
6. What do you think are the major challenges facing Jordanian politics in the near future?

## Section VI

### Foreign Affairs

Jordan's foreign policy is determined to a large extent by its size and economic resources, its geographic location and the politics and rivalries in the region, its population mix, and the pragmatic orientation of its

monarchs.

Jordan is a small country with limited economic resources. It stands in need of a powerful patron or ally and either economic aid or a relationship that allows it to collect economic rents, often in the form of budgetary support or open markets.

Jordan is surrounded by neighbors more powerful than itself: It is the Arab country with the longest border with Israel, its neighbor to the west; to the north lies Syria; to the east Iraq, to the south Saudi Arabia, and to the southwest Egypt, although there is no direct link with the last country. Jordan is therefore embroiled in the Arab-Israeli conflict and in inter-Arab rivalries; its stability has repeatedly been threatened by the forces of Arab and Palestinian nationalism. Slightly over half the population is of Palestinian origin, which leads to volatility, but this is offset by the pragmatic politics of the Hashemite dynasty that has ruled Jordan since its creation.

This pragmatism should be understood in the sense of a rational choice approach to policymaking: namely, the choice of the best policy alternative or the policy that maximizes benefits for the country and perhaps the regime. National security is the top priority, but when that is not threatened then economic security and budgetary support tend to rise to the top of the list. In other words, Jordan is a country of a type that generally conforms to traditional realist doctrine. Exceptions are few and are explainable in terms of domestic constraints. It is important to understand, nevertheless, that national security is not restricted to coping with external threats, but often involves considerations of domestic stability. Furthermore, one must also allow room for one other determinant of foreign policy: namely, the will of the sovereign, which almost invariably follows the rational course of action, but on rare and often crucial occasions, asserts itself in defiance of what a cautious policy choice would indicate, such as the decision by King Abdullah I to cooperate in the partition of Palestine, perhaps the decision by King Hussein to participate in the 1967 war, and his decision not to get involved in the Gulf War. Sometimes these decisions are ultimately imponderable because the long-term consequences of actions are unknown. It is significant, however, that when King Hussein was dying and had to make an irrevocable decision about who his successor was to be, he chose his son Abdullah, not least due to the fact that Abdullah had exhibited courage and determination, in place of his brother Hassan, who enjoyed considerable experience but tended to err on the side of caution. Personal courage and a willingness to challenge public opinion are qualities that Hussein felt were indispensable for a successful king

## **Relations With the Palestinians and Israel**

### **The 1948 Arab-Israeli War**

When King Abdullah's ambition to become King of Syria was thwarted (see section on History, above) his imagination was captured by Palestine. In May 1938, Abdullah had sent the Woodhead Commission of Inquiry (which was looking into the idea of partition,) a 12-point plan under which Transjordan and Palestine would become parts of a United Arab kingdom in which the Jews would enjoy autonomy and have proportional rights of representation; Jewish immigration would continue but be restricted; and the

British mandate would remain in force for another 10 years. Although this proposal was not accepted, it affords a good idea of King Abdullah's thinking. On November 29, 1947, the General Assembly of the United Nations voted to recommend the partition of Palestine between Jews and Arabs.

It has been pointed out that there were not one but two partition plans: one being the UN plan, the other the result of an understanding between the Zionists and Abdullah, under which a Jewish state would be created and the rest of Palestine annexed by Transjordan. The Arab Higher Committee for Palestine, under Hajj Amin al-Husseini, rejected the UN partition plan, and the Arab League offered its military help.

Abdullah knew that the *Haganah* (Israeli underground military organization) was quite capable of taking over the entire territory of Palestine unless the Arab Legion intervened—he did not place much trust in the other Arab states. But the Arab Legion was too small to dominate the entire country, and it had British officers and was financed by Britain. Logically, he concluded that he could not blatantly violate Britain's wishes. The best hope for the Arabs was for the Arab Legion to occupy that part of Palestine allotted to the Arabs and to avoid attacking the area set aside for the Jews because neither Britain nor the United Nations would countenance it. On the other hand, he did not wish to hand over the Arab area to Hajj Amin al-Husseini because he believed that an Arab state under the Mufti (Islamic state officials) would mean economic strangulation for Jordan and its annexation by Syria or Iraq or Saudi Arabia.<sup>[61]</sup> By contrast, Egypt wanted to prevent a union between Transjordan and the Arab portion of Palestine at all costs, and backed a government by the Mufti for that reason.

Abdullah had met or conferred with representatives of the Jewish Agency either directly and through intermediaries, including Golda Meir, the acting head of the political department in Moshe Sharett's absence, after the UN vote in 1947, whom he met again on May 10, 1948. He proposed an autonomous Jewish state as part of a kingdom over which he would rule. There was no written agreement and he never committed himself to an independent Jewish state, but his interlocutors felt that his acceptance of such a state, though unspoken, was unambiguous,<sup>[62]</sup> although doubts were to arise subsequently. There was no understanding concerning Jerusalem, which was to have been internationalized according to the UN plan.

Tewfiq Pasha Abul Huda, who had served as Abdullah's Prime Minister for much of the interwar period, was dispatched, along with Glubb Pasha, the head of the Arab Legion, to meet with British foreign secretary Ernest Bevin in London. The meeting took place on February 7, 1947 in secret without the knowledge of other members of the Jordanian delegation or the Cabinet. Abul Huda secured Bevin's approval for the entry of the Arab Legion into the area allocated for the Arabs under the Partition Plan. According to the record of the meeting, Bevin asked for clarification from Tewfiq Pasha that the Arab Legion would not enter the Jewish area. Glubb reported in his memoirs that Bevin commented concerning the entry of the Arab Legion under the stated circumstances: "It seems the obvious thing to do." Bevin cautioned Glubb that if the Jewish area were attacked, Britain would come under pressure to reconsider its subsidy to the Arab Legion and to reconsider the position of British officers seconded to the Legion.<sup>[63]</sup> The meeting represented a major turning point in British policy towards Palestine; from then on, Britain, which had declined to enforce the UN partition plan, cooperated closely with King Abdullah to engineer the expansion of his kingdom to most of the Arab area.

For David Ben Gurion (Prime Minister from 1948–53), King Abdullah's offer was not satisfactory, but it had the advantage of averting a war between the Haganah and the Arab Legion. Abdullah came under a lot of pressure from the Arab League to engage in and even lead an all out-war against the Jewish forces. He resisted demands to allow Arab forces to enter Palestine through Transjordan.

But the Arab Legion entered the zone allocated to the Arabs. Glubb followed an essentially defensive strategy in view of the small size of the forces under his command, but he was more aggressive in the case of Jerusalem, where he competed with Jewish forces for control of the old city and won. Other Arab armies, except for the Iraqis, suffered humiliating defeats. Abdullah was singled out by Arab League members, notably Egypt, as well as many Palestinians, for criticism for the loss of certain areas such as Lydda (Lod) and Ramlah, and he was accused of collaboration. Egypt tried to expel Transjordan from the Arab League and managed to pressure Abdullah into not signing a peace accord with Israel, although all combatants signed an armistice. Abdullah complained that he had only joined the Arab League to please Sir Alec Kirkbride, the British representative, and found himself having to cope with a series of ridiculous decisions by irresponsible politicians.<sup>[64]</sup>

The outcome of the intervention by the Arab Legion was that it was left in control of what came to be known as the West Bank of the Jordan. Abdullah wanted to annex the West Bank, but he sought an arrangement that would earn the consent of the Palestinian population and enjoy a significant measure of legitimacy. In September an all-Palestine government under the leadership of Hajj Amin and Ahmad Hilmi Pasha had been established in Gaza with Egyptian backing. It claimed to be the sole legitimate Arab government for Palestine. In October 5,000 delegates of Palestinian refugees met in Amman and asked for Abdullah's protection. In December Palestinian notables and political leaders from the West Bank convened the Congress of Jericho, which called for immediate union with Transjordan.

The Parliament in Amman approved this plan, and the West Bank was annexed. In March 1949 the military administration of the West Bank was terminated, and the area came under direct civil administrative control from Amman. On April 26, 1949 the country's official name became the Hashemite Kingdom of Jordan, and the following May the King formed a Cabinet that included Palestinians. The Transjordanian Parliament was dissolved, and elections were set for April 1950 to elect a new Lower House of Parliament that would include 20 East Bank members and 20 members from the West Bank.

The elections were held on schedule, and King Abdullah appointed a new 20-seat upper house that included seven Palestinians. On April 24, both houses voted to unite the East and West Banks "without prejudicing the final settlement of Palestine's just cause." All residents of the West Bank and all Palestinian refugees in Jordan were given Jordanian citizenship.

King Abdullah was assassinated as he entered the Omari Mosque in the Aqsa Mosque compound in Jerusalem for Friday prayers on July 20, 1951 with his grandson Hussein by his side. He had been branded a traitor and collaborator. The assassin belonged to the Hajj Amin al-Husseini organization, Sanctified

Struggle, but the Jordanian Cabinet was convinced that Egypt was involved in planning the assassination. Abdullah was succeeded briefly by his son, Talal, and then by his grandson Hussein. The conflict and competition between the Hashemites and Palestinian nationalists became a constant theme in Arab politics until the end of the century.

## The June 1967 War and Its Aftermath

The legacy of the quarrel between the Hashemites on the one side and Palestinian nationalists and Arab radicals on the other was to lead to the unmitigated catastrophe for the Arabs in the form of the June 5, 1967 war. The rise of the Palestine Liberation Organization in 1964 (which was essentially controlled by Egyptian President Abdel Nasser), under the leadership of Ahmad Shuqairi, opened up a vituperative verbal war over the airwaves, pitting Cairo and Damascus against Amman. The Arab Cold War was in full swing. Meanwhile, Fateh had begun commando raids against Israel, largely from Syrian territory but also from Jordan. Abdel Nasser concluded a mutual defense pact with Syria in 1966 in the hope of restraining the Ba'thist regime in Damascus.

Israel carried out a particularly cruel raid against the village of Samu' in Jordan in retaliation for Fateh's actions. The Palestinians and Arab radicals lambasted Hussein for not defending his Palestinian citizens against Israel, casting doubts on his nationalism. Jordan capitalized on the opportunity to taunt Egypt for not coming to its aid; in particular, Amman implied that Abdel Nasser was hiding behind the skirts of the United Nations Emergency Force (UNEF) in Sinai and Gaza. On April 7 Israel shot down six Syrian MIGs over Mount Hermon. The Arabs became convinced that Israel meant to attack Syria. Hussein came under very harsh verbal attacks, and Egypt and Syria charged that the Hashemites were going to be responsible for another disaster by not forming a common front with the other Arab countries neighboring Israel.

The Voice of the Arabs in Cairo started taunting Jordanian soldiers, casting aspersions and questioning their honor. Shuqairi was in full cry. Hussein became convinced that if Jordan did not join its Arab brethren in their hour of need, the army might mutiny and go to war anyway; if not, he would be left holding the blame for another Arab defeat because Jordan remained on the sidelines. The Hashemite regime would not survive that. On May 30 he flew to Cairo and signed a bilateral defense pact with Egypt. An Egyptian general, Abdel Mun'im Riyad, was made commander of the Jordanian front. On June 5 war broke out, and the West Bank was lost.

Was King Hussein short sighted? He himself later said he was convinced the Arabs could not win. He no doubt hoped war would not break out; Abdel Nasser had decided not to instigate hostilities. Hussein may have thought that once hostilities broke out, Israel would find a pretext to occupy the West Bank regardless of what he did. Had Israel not fired the first shot, after all? Was he not bound to Egypt by a defense pact? On top of that, his honor was at stake. Ultimately, one has to agree that domestic political vulnerabilities were the driving force behind the King's decision.<sup>[65]</sup> As it was, he lost half his kingdom, but kept the other half.

Following the very humiliating Arab defeat, the PLO, Fateh, the Popular Front for the Liberation of Palestine, and other *fida`iyeen* lamented the failure of regular Arab armies and decided that they had to pick up the torch. An entirely new approach, guerrilla warfare, was required, given the apparent invincibility of the Israeli army. Palestinian organizations began a series of raids into the West Bank with the intention of eventually establishing a presence in the Israeli-occupied territories. This was overly optimistic and they found themselves hard put defending themselves in their sanctuaries as Israel adopted a policy of punitive retaliation that was very costly to the host countries. On March 21, 1968 Israel decided to adopt a radical solution and wipe out a major base for Palestinian guerrilla activity in the town of Karameh in Jordan.

In what Israel dubbed “Operation Inferno,” 15,000 troops, supported by artillery, armor, and aircraft, crossed the Jordan River with the objective of eliminating the Karameh guerrilla base and its occupants. Since Israeli troops movements could not be kept secret, the guerrillas had advance warning. There were an estimated 300 to 400 *fida`iyeen* in the base, and to their credit, they chose to stand and fight, except for the PFLP, which withdrew its men in the face of the hopeless odds. Apart from the small force made up primarily of Fateh guerrillas, Israel faced the entire Jordanian First Infantry Division reinforced with armor, notably tanks, from the 60th armored brigade. The battle was joined, and the intervention of the Jordanian armed forces prevented Israel from achieving its objective. Israel actually appealed for a cease-fire in order to withdraw its forces, and Jordan refused, so they had to be withdrawn under fire.

The *fida`iyeen*, under the personal leadership of Yasser Arafat, fought bravely, but it was the intervention of the Jordanian army that prevented a total rout. Nevertheless, Fateh seized credit, and as relations with the Jordanian regime deteriorated, the Palestinian organizations assumed sole credit for the victory, which entered the annals of Palestinian political mythology.<sup>[66]</sup> The small force of guerrillas became heroes who set the standard of sacrifice (*fida*) for Palestinian nationalism. Their glory shed its glow on other guerrillas. Even the name of the base, Karameh (dignity), lent itself to the formation of myth.

There was a conscious attempt to mobilize the Palestinian masses and to give a new identity to the Palestinians in exile, notably those living in wretched refugee camps: Henceforth they could think of themselves not as hapless refugees but as freedom fighters. They would grasp their destiny in their own hands and move out from under the tutelage of Arab regimes. However, for the PFLP and particularly the PDFLP, the task could not be achieved without a transformation of the “reactionary” Arab regimes into “revolutionary” governments that would dedicate their resources to the battle for liberation. The guerrillas vastly exaggerated their achievements, engaging in actual fabrication at times to sustain their public image in the Arab world, particularly among Palestinians. The reality was that Israeli retaliation was exacting a huge toll; 100,000 farmers and villagers were driven out of the Jordan valley, and Israeli strikes had reached the outskirts of the important Jordanian towns of Irbid and Salt.

## Showdown With the PLO in 1970

The next major challenge to the authority of the crown came in the wake of the 1967 war and built up to a major confrontation between the government and the PLO in 1970. Jordan and Egypt had declared their

acceptance of Security Council resolution 242 of November 22, 1967 (which established provisions and principles that would lead to a solution of the conflict); Syria, Iraq, Algeria, and the PLO rejected it. An alliance of convenience was formed between Abdel Nasser and Hussein, both of whom were eager to regain territory lost in the war. A split arose within the Arab world as to the path to be pursued to undo the damage inflicted in 1967.

Traditional warfare had failed to resolve the deeply rooted conflict with Israel; the choice now was between diplomacy and a people's war of liberation (inspired by the successful Algerian struggle with France; those who supported this approach thought that the model would be exported to Palestine). Saudi Arabia, Kuwait, and Libya (until the overthrow of the monarchy in 1969) were concerned with the possibility that Egypt might drift closer into the arms of the Soviet Union and Jordan and farther away from the West.

At the Khartoum Arab summit in August 1967 (6 months before the Karameh battle), King Hussein and King Faisal of Saudi Arabia were reconciled with President Abdel Nasser, and Kuwait, Saudi Arabia, and Libya agreed to pay an annual subsidy of \$392 million to Jordan and Egypt, two-thirds of which was to go to the latter. In the December 1969 Rabat Arab summit, Abdel Nasser let it be known that Egypt would chart its own path toward the restoration of lost territory, given the unreadiness of other Arabs to fight Israel.

Palestinian guerrilla organizations established their own institutions and commanded their own militias in Jordan. They created a dual structure of authority in the country. The leftist organizations within the movement, the PFLP and the PDFLP sought out ways to challenge the authority of the Jordanian government. Hawatmeh, the leader of the PDFLP, advocated that Amman should come to play a role comparable to that of Hanoi in the Vietnam war. An incident between the commandos and the army in November 1968 was resolved on the basis of an agreement granting the *fida'iyeen* a measure of autonomy. Clashes between the *fida'iyeen* and the army became frequent and threatened to get out of hand in June 1970, but Hussein and Arafat concluded a cease-fire, which the PFLP sought to undermine. Fateh did not want to intervene in the affairs of host Arab countries, but was dragged into the quarrel.

An inter-Arab conciliation committee, headed by President Ja'far al-Numairi of Sudan, was established. On July 23, 1970, Egypt accepted the Rogers Plan, which was based on Security Council Resolution 242. Jordan and Israel followed suit. These events sounded alarm bells for the Palestinian guerrillas, and Arafat complained of a sell-out. Abdel Nasser closed down the outspoken Voice of Palestine Radio, which had been operating out of Cairo. On September 6, the PFLP carried out several hijackings, making use of a desert airfield in Jordan. Arab states voted for a Security Council resolution condemning the actions, and the PFLP was expelled from the Unified Command of the Palestinian Revolution. The group's leader, George Habash, went on an extended trip to North Korea.

Rightist groups in Jordan called for a showdown with the guerrillas. Abdel Nasser had advised Hussein against a confrontation with the Palestinian groups until after an understanding was reached with Israel on the implementation of resolution 242. The King tried to bring former Prime Minister Sulaiman Nabulsi out of retirement, but the latter refused on the grounds that he too opposed the Rogers initiative. By

September 11, 1970, even Fateh was ready for a confrontation, and called for a revolutionary nationalist government in Jordan (as explained in the section above under Politics); nevertheless, the Unified Command of the Palestinian Revolution signed a new agreement with the government on September 15 regulating the activities of the guerrillas. This was merely a bid by each to win public opinion over to its side; the Palestinians were preparing for a general strike that would be an invitation for King Hussein to step aside, a naïve expectation by the guerrillas, as they had clearly severely underestimated how far they had alienated indigenous Jordanians. A military government was formed on the 16th, and the Jordanian army began its offensive on September 17.

Iraqi had stationed forces in Jordan and had pledged to come to the aid of the PLO in the event of a showdown. However, when the Jordanian army moved against the *fida'iyeen*, Iraq simply moved its troops out of the way. Baghdad had received a message from the United States to keep out of the civil war in Jordan, according to President Ahmad Hassan al-Bakr in a subsequent conversation with Fateh's Salah Khalaf.<sup>[67]</sup> In fact, President Nixon was quoted by the *Sun-Times* of Chicago on the evening of September 17 to the effect that the United States "was prepared to intervene directly in the Jordanian war should Syria and Iraq enter the conflict and tip the military balance against Government forces loyal to Hussein."<sup>[68]</sup> Syria, on the other hand, did intervene, sending two armored brigades and a mechanized infantry brigade under the command of its Ninth Infantry Division into northern Jordan on September 19 and 20 and engaged in fierce combat with the Jordanian 40th Armored Brigade. Syria also sent in battalions belonging to the Palestine Liberation Army (PLA, normally stationed in Syria), which reached Irbid by the 21st, but Syria claimed that only PLA units were involved.

King Hussein appealed to the United States for help. On the 20th, Secretary of State Rogers called on Syria to halt its "invasion" of Jordan." Still, it would be difficult to get U.S. troops into Jordan on time. Kissinger conferred with Yitzhak Rabin, then Israel's ambassador to Washington, and plans were laid for Israel to come to the King's aid. Israel threatened to use the Israeli air force against Syria. King Hussein was loath to be rescued by Israel and strongly preferred U.S. help. Eventually, the King decided to rely on his own resources and used his tiny air force against the Syrian armor. On September 20 and 21, 120 Syrian tanks were destroyed and Syria suffered 600 casualties. Hafez al-Assad, who was commander of the Syrian air force, decided not to commit his aircraft to the battle (and soon afterwards seized power in Damascus.) The Syrian threat had been dealt with successfully.

Abdel Nasser had cautioned the King against miscalculating, but the silence from Abdel Nasser had become deafening. Now he acted by sending PLA battalions stationed in Egypt to Syria in a largely symbolic gesture. Jordan accepted a cease-fire on September 25, but this was not immediately implemented. Abdel Nasser pressured Jordan to accept an Arab peacekeeping mission headed by President Numeiri of the Sudan. Kuwait and Libya suspended payment of aid to Jordan pledged at the Khartoum conference. Libya severed diplomatic relations with the kingdom. Numeiri flew to Amman but was not particularly successful in his mission, and, on returning to Cairo, accused the Jordanian government of waging "a war of extermination against the Palestinian people."<sup>[69]</sup> On September 25, President Abdel Nasser publicly complained of "the existence of a deliberate desire on the part of the Jordanian authorities not to respect the cease-fire . . . the total non-respect of all the promises made to us; the putting into effect of a plan aiming at the liquidation of the Palestinian resistance, despite all the

declarations to the contrary; the frightful carnage now under way in Jordan, in disrespect of all Arab and human principles.”<sup>[70]</sup> The King signed an agreement with Arafat in Cairo on September 27 at a mini-Arab summit arranged by Abdel Nasser. The Egyptian leader died the next day of a heart attack. .

Biding its time, the Jordanian army engaged in what has been termed a creeping offensive, and by July 1971 the last strongholds of the guerrillas had fallen. Meanwhile, the political landscape had changed. Abdel Nasser had been replaced by Anwar Sadat, and the adventuresome Salah Jadid and Nuriddin al-Atassi were replaced by the stable and cautious Assad in Syria. Relations between Jordan and Israel improved. “Jordan came to be treated as a regional partner of the United States . . . Aid and arms to these U.S. partners would serve as a substitute for a costly American military presence in the region or unpopular military intervention.”<sup>[71]</sup>

Syria, Iraq, Algeria and Libya severed relations and Syria and Iraq instituted a land and air blockade on Jordan. On March 15, King Hussein announced a plan to create a United Arab kingdom to include both the East and West Banks of the Jordan. In an interview with the Egyptian magazine *Rose al-Yusif* on August 16, 1971, Arafat expressed the opinion that King Hussein had launched the crackdown on the PLO in order to have a clear field for himself to negotiate peace terms with Israel.<sup>[72]</sup> Early in the following year, rumors of talks between King Hussein and Israeli Prime Minister Golda Meir gave rise to fears that Israel and Jordan may settle on the 1968 Allon Plan. The DFLP, renamed the PDLFP (Popular Democratic Front for the Liberation of Palestine) and other groups launched a sabotage campaign against Jordan from Syrian territory. In March, the Fateh Revolutionary Council established a Jordan Affairs Bureau under Salah Khalaf to organize an armed insurrection against the King; however, Jordanian intelligence was largely successful in mounting counteroperations, and by June this phase of conflict was over.

Wasfi al-Tal, the chief Jordanian hardliner who was serving as Prime Minister and apparently conspiring against the King,<sup>[73]</sup> was assassinated during a trip to Cairo in November 1971 by Black September, a secret organization that actually belonged to Fateh. In December, Black September tried to assassinate Jordan’s ambassador to London, Zaid Rifa’i. In January 1973 the Palestine National Congress abandoned its call for the overthrow of King Hussein. However, the following month Jordanian authorities captured a 17-man Black September team that had infiltrated into the country with orders to take the U.S. ambassador and Jordanian Prime Minister hostage or to attack the royal palace and the Parliament building. In March Black September tried to secure their release through an operation in Khartoum, involving an attack on the Saudi Embassy, which culminated in the deaths of two U.S. ambassadors and a Belgian diplomat.<sup>[74]</sup>

The PLO, which moved its base of operations to Lebanon, engaged in some heavy self-criticism for its failure in Jordan, notably its lack of effort at building solidarity with the East Bankers. Paradoxically, the PFLP and DFLP refused to shoulder any responsibility. In 1974, an Arab summit in Morocco recognized the PLO as the sole legitimate representative of the Palestinian people.

## **Pursuit of Peace: Enlisting the Partnership of the PLO**

The 1978 Camp David accord between Sadat and Begin alienated the rest of the Arab world, even the soft-liners blamed Egypt for acting without consulting its Arab friends, and there was a universal protest in the Arab world that without Egypt's weight on the Arab side of the scales, the imbalance of power with Israel had become insuperable. Jordan did not condemn the accord, but tried to distance itself from it while adopting a conciliatory position towards Cairo, maintaining trade relations with it (although it had followed the Arab consensus in formally breaking ties), and working slowly to form a basis for reintegrating Egypt into the Arab fold. Jordan had been promised \$1.25 billion in aid annually to help it stand fast against the temptation to follow in Egypt's footsteps. The PLO, in particular, regarded the accords as a disaster.

Israel's massive invasion of Lebanon in 1982 created problems for U.S. diplomacy. The resulting September 1982 Reagan Initiative opposed indefinite control of the West Bank and Gaza by Israel, but it also opposed the creation of an independent Palestinian state. Secretary of State George Shultz, who had replaced Alexander Haig, put together a plan involving Israeli territorial concessions (land for peace) and some form of self-rule in the West Bank and Gaza in association with Jordan. Washington started courting Hussein to play the role of Israel's principal interlocutor. In December the King met with President Reagan and Shultz in Washington. Washington promised arms and the use of its leverage with Israel to freeze settlement activity. Hussein declared the initiative "the most courageous stand taken by an American administration ever since 1956."<sup>[75]</sup> He tried to drum up Arab support for the plan. However, the Arab reaction was the so-called Fez Plan, which, while indicating flexibility, followed the more traditional Arab line, based on a Palestinian state in the West Bank and Gaza. Only Egypt and Jordan supported the Reagan Initiative, and Syria was vehemently opposed to Jordanian-PLO participation in peace talks, and openly challenged Arafat's leadership and sharply criticized Hussein.

King Hussein felt he was still constrained by the 1974 Rabat summit recognition of the PLO as the sole legitimate representative of the Palestinian people; he knew he would be exposed if he acted without the PLO. It was encouraging that Arafat was more willing now to cooperate with the U.S., since the organization had lost its base in Lebanon. Israel would not deal with the PLO, nor would the U.S. in view of promises made to Israel by Kissinger.

The PLO was invited to reopen a number of offices in Jordan, but no armed PLO presence was tolerated. The King made it clear he was not trying to displace the PLO leaders, and he proposed the formation of a joint delegation to any future peace talks and recommended a federation of the West Bank with Jordan as a feasible final settlement. Arafat understood that Hussein was an indispensable go-between with Washington, but the organization was split, with hardliners feeling definitely hostile to the King's diplomatic initiative. After all, the Black September organization (operating within the PLO) had only recently been assassinating Jordanian officials in revenge for 1970. Furthermore, there was rivalry between the PLO and Jordan in the West Bank, and each had been carefully cultivating its own base of support. Jordan cultivated its own clients and sympathizers among West Bank mayors. The Baghdad summit had set up a joint Palestinian-Jordanian committee to dispense \$150 million in aid to the West Bank and Gaza, which strengthened Jordan's position. In general, however, neither the King nor the leaders of the other organizations within the PLO commanded the loyalty of Palestinians in the occupied

territories as Arafat did. The leader of Fateh was ahead by a very wide margin when it came to public support.. On the other hand, some of the East Bank political elite did not cherish the prospect of the reintegration of the West Bank, and the King was advocating a federal union. Talks with the PLO dragged on for months, but the King broke them off in April 1983 as he despaired of forming a joint negotiating position.

Jordan restored full diplomatic relations with Egypt in September 1984. Amman found Egypt to be necessary to counterbalance Syria. As the Iran-Iraq war was bleeding Iraq dry, Jordan needed a strong ally against the anti-peace talks camp. Jordan hoped to form an alliance of “moderate” states, including Egypt, Saudi Arabia, the Gulf states, and Iraq. Meanwhile, the King worked to resume the dialogue with the PLO. In November 1984 Amman hosted a meeting of the Palestine National Congress, and the King urged acceptance of Security Council Resolution 242. In February 1985, the King and Arafat signed an agreement for a joint diplomatic initiative, which envisaged the formation of a joint delegation to peace talks to be based on the exchange of territory for peace. The agreement also included acceptance for confederation with Jordan. An Arab summit in Morocco in August failed to endorse the agreement, partly due to vehement opposition from Syria. In August 1985 the Reagan administration refused to meet with Palestinian members of the joint Jordanian-Palestinian delegation. Furthermore, Jordan was aiming for an international peace conference, and the U.S. was opposed because it did not want to admit the Soviet Union into the game. Israel’s Labor and Likud parties both opposed the Hussein-Arafat accord. Nothing came of the agreement, and in February 1986 the King called off his dialogue with the PLO. The organization abrogated the agreement in April 1987. By that time, Washington had come to appreciate the King’s need for an international conference.

By the end of 1985, Shimon Peres, who had become Israel’s Prime Minister, began to make positive remarks about an international peace conference. This was encouraging to Hussein. The King’s calculations were that he needed either PLO or Syrian backing for a peace conference. In the mid-eighties, King Hussein had tried to improve relations with Syria because of a felt need for Arab support to initiate peace talks with Israel. In April 1985 he appointed Zeid Rifa’i, who had become identified as the architect of good relations with Syria, Prime Minister. In a letter to Rifa’I, which was published by the press on November 10, the King admitted Jordanian support for the violence perpetrated by the Muslim Brotherhood against the Syrian regime.<sup>[76]</sup> Jordan tried to mediate between Damascus and Baghdad.

The King also held secret contacts with Israeli leaders, which intensified in 1986. In April 1986 he met with Defense Minister Yitzhak Rabin in Austria. In April 1987, the King held secret talks in London with Peres, who was Foreign Minister in the coalition Cabinet under Prime Minister Shamir. On April 11 agreement was reached concerning the rules governing an international conference, including provisions for three committees: a Jordanian-Palestinian-Israeli committee; a Syrian-Israeli committee; and a Lebanese-Israeli committee.<sup>[77]</sup> The conference would be opened by the five permanent members of the U.N. Security Council and attended by all regional actors who had accepted resolution 242. This was to facilitate the beginning of the negotiations and to lend legitimacy to them. The plenary sessions, however, could not veto the results of bilateral negotiations.

The King also sent an emissary to Secretary of State Shultz to inform him that Syria was prepared to

attend an international peace conference. However, Shamir rejected the agreement Peres had concluded. Later Shamir met with Hussein, and he informed Shultz that the meeting had allegedly gone well. Shultz consulted extensively with the Israelis and presented the outcome to the King, who rejected them, partly because he was about to host an Arab summit. The November 1987 Arab summit in Amman provided an opportunity to achieve reconciliation at the level of heads of state. However, the focus of the summit was the Iran-Iraq war land, not the Palestinian issue. Progress towards peace had to await the convening of the Geneva conference following the Gulf War. Shamir had torpedoed the Hussein-Peres accord, although it contained the germ of ideas that flowered later in the Madrid conference.

Much later, with the Oslo agreement in tatters following a year of Palestinian *intifada*, Shimon Peres was to appear before the Knesset Foreign Affairs and Defense Committee on December 17, 2001. In the midst of recriminations, MK Moshe Arens, a Likud stalwart, took Peres to task because the latter had “brought Arafat and his cronies from Tunisia and imposed them on the local population. You [Peres] have to admit your mistake. All of Oslo was one big mistake.” To which Peres replied: “You and Shamir did the worst thing, canceling the London agreement with Hussein in 1987. We could have had an agreement with Hussein, but you in your zealotry and blindness did not allow it.”<sup>[78]</sup>

## Jordan-Israel Peace Agreement

Jordan had pursued peace talks with Israel for many years. Peace with Israel was thought to serve the strategic interests of the country, and King Hussein, who had long lamented the loss of the West Bank in 1967, had entertained ideas of undoing that catastrophe through negotiations. Although that ended when Jordan relinquished responsibility for the West Bank in 1988, King Hussein continued to feel compelled to do what he could to secure the return of the holy city of Jerusalem and the territory of the West Bank to Arab hands. When the Madrid Conference convened on October 30, 1991, a joint Jordanian–Palestinian delegation was in attendance alongside the Syrian, Lebanese, and Israeli delegations. In Israel, the Labor Party led by Yitzhak Rabin won a stunning victory at the polls on June 23, 1992. Shamir, who opposed territorial concessions, was gone.

Progress was rather swift and not too difficult on the Jordanian-Israeli bilateral track at the negotiations, although there was stalemate with the Palestinians, Syrians, and Lebanese. Meanwhile, the PLO was conducting separate negotiations between January and August 1993 at Oslo, which led to the exchange of letters between Rabin and Arafat, the Declaration of Principles, and the Cairo agreement and Oslo II.

These developments presented both an opportunity and a challenge to Jordan. It was a challenge because Jordan had been left out in the cold; it was no longer needed as an intermediary, since the Palestinians and Israelis were dealing directly with each other. An important advantage had been lost, and possibly, along with it, Israel’s “Jordan Option.”<sup>[79]</sup> The opportunity was that Jordan was now free to proceed with a peace deal of its own, which it could not have done before. The PLO’s actions, unlike Sadat’s, legitimized Jordan’s conclusion of a separate peace agreement, even if the Oslo process did not yet fully work its course—recognition of Israel by the PLO was sufficient.

Jordan's actions can be seen as the rational pursuit of national interests, or the attempt to maximize advantage. The opportunity had presented itself, dramatically lowering the cost of an agreement. Economically, Jordan was strapped. The outcome of the Gulf war was disastrous for Jordan, and on top of that, the deficit in the government budget in 1991 was JD95 million, and the national debt had climbed to over \$8 billion. Riots broke out in the south in April 1989 in response to the IMF-inspired austerity measures. The liberalization measures and the return to constitutional government through the process of "defensive democratization" (as explained above in the section on Politics), kept the political coalition that backed the government in place and allowed the King to legitimate the peace treaty, sweetened by the promise of economic benefits to follow peace and the normalization of relations. Palestinian and Islamic opposition was contained.

Hussein and Rabin had met in London on May 19, 1994. On June 7, Jordanian and Israeli delegates signed three detailed "common-sub-agendas" in Washington. On July 6, King Hussein flew to Cairo to solicit President Mubarak's support. On July 18-19, Jordanian and Israeli negotiators met on the border between them and agreed on a number of economic projects. President Clinton was happy to sponsor the peace agreement between Jordan and Israel. The "Washington Declaration" was signed at the White House by the King and Rabin on July 25, 1994. King Hussein characterized this event as "the crowning achievement of all my years." Prime Minister Abdel Salam al-Majali initialed the first draft of the treaty on October 17 and he signed the peace treaty on October 26. The treaty was debated by both chambers of the National Assembly during November 5-8. Despite the displeasure of the Islamic Action Front, the leftists, and Arab nationalists, it was passed and was ratified by King Hussein on November 10, 1994.

## **Relations With Arab States**

### **Reign of King Hussein**

The incorporation of the West Bank and its Palestinian population into Jordan altered the nature and dynamics of domestic politics for the long run and of foreign policy for the next 14 years. Dissent from the new Parliament had caused Abdullah to dissolve the lower house in May 1951. But the new Parliament was assertive and eager for constitutional change. Some of the leading Jordanian politicians who had overseen the transition from Abdullah to Hussein, surviving Talal's brief but unstable reign, also appreciated the value of constitutional government. The constitution of 1952 marked the end of the patrimonial monarchy in the style of Abdullah and ushered in an era of (limited) parliamentary democracy and institutional government unparalleled in the history of the kingdom. It only lasted 5 years (although formal parliamentary life did not end in 1957), but it laid down the principles of popular participation in and contestation of governmental policies, principles which were then substantially shelved for 31 years between 1957 and 1989. Young King Hussein who was declared King in August 11, 1952 but ascended to the throne in May 1953 on reaching the age of 18 (by the Islamic calendar), learned a valuable lesson concerning the need to placate popular sentiment and the cost of opposing it.

The other important development lay outside the borders of Jordan: The July 1952 Free Officers coup in Egypt, which led to the rise of the Nasserist brand of Arab nationalism, and the growing assertiveness of

the Ba' thist brand of pan-Arabism in Syria. These were forces favoring Arab unity (which implied the merger of Jordan with Syria) and independence from former colonial ties (which threatened Jordan's relationship with Britain). After the Free Officers came to power in Egypt, conflictual relations with Jordan continued as balance-of-power politics continued, but dynastic rivalries gave way to ideological conflict. Abdel Nasser assumed the mantle of leadership of the Arab world. His ultimate goals were Arab unity and independence. He also dedicated himself to championing the Palestinian cause.

## **Beginning of the Arab Cold War 1952–58**

### **Baghdad Pact and Parting With Glubb**

The interplay of the above-mentioned forces set the stage for three important challenges to Hussein's rule and the stability of his regime during 1956-58. The first revolved around the issue of Arab independence from the former colonial powers. This concerned a move initiated in 1954 by Turkey and Pakistan, who entered into a treaty to form the nucleus of a defensive Northern Tier alliance against the Soviet Union that would form a bridge between NATO and SEATO. A Turkish-Iraqi alliance followed on February 24, 1955, which Britain joined on April 4. Scarcely 11 days later, President Abdel Nasser of Egypt attended a conference in Bandung with India's Nehru, China's Zhou Enlai, and Yugoslavia's Tito, which witnessed the birth of the nonalignment movement. Egypt sought liberation from its entanglement with Britain, and the door to friendship with the Socialist bloc was opened with Abdel Nasser's "Czech" arms deal in September 1955. Thus, two opposed trends vied for the allegiance of Arab states of the Middle East. Egypt signed mutual defense pacts with Syria (October 20, 1955) and Saudi Arabia (October 27, 1955), forming pincers around Jordan. Saudi Arabia's actions appear to be an anomaly, but are to be understood not in terms of global politics but through the lens of local rivalry between the house of Saud and the Hashemite dynasties in Iraq and Jordan. In fact, regional politics were at least as significant as the issue of Arab independence, seeing as Middle Eastern politics often revolved around the traditional rivalry between Egypt and Iraq. Personal competition between Abdel Nasser and Iraq's Nuri as-Sa'id also complicated the equation.

On January 12, 1955, Iraq and Turkey announced that they were about to conclude a military alliance and were inviting other countries to join what was to become known as the Baghdad Pact. Britain dispatched Sir Gerald Templer, chief of the imperial general staff, to Amman; Abdel Nasser countered by sending Egypt's chief of staff Abdel Hakim 'Amer and Colonel Anwar Sadat in December. The Egyptians were more persuasive and popular with the press. Nevertheless, the King formed a new Cabinet under Hazza' al-Majali, whose policy was to negotiate Jordan's accession to the Baghdad Pact. On December 16 rioting broke out against the new government's policy and escalated the following day, even extending to traditional bastions of support for the King. Majali resigned and the King dissolved Parliament, but that decision was reversed on January 5. Further riots followed, spurred on by the "Voice of the Arabs" radio broadcasts from Cairo (and it was charged, financed by Saudi Arabia), and martial law was declared and the army brought in to quell the riots, which grew quite violent, and were unprecedented in Jordanian history. On January 8, 1956 Samir al-Rifa'i, who had replaced Abul Huda as Jordan's perennial Prime Minister, formed a new cabinet and declared Jordan would not be joining the Baghdad Pact. On March 1, King Hussein dismissed Glubb Pasha, which put at risk the 12 million pound Sterling British subsidy, but

was greeted with unprecedented popular enthusiasm and received the blessings of Egypt, Syria, and Saudi Arabia.

This last move ended Jordan's status as a British dependency, marking its "emancipation from British tutelage."<sup>[80]</sup> This was also the beginning of Jordan's transition, shortly thereafter, to the status of an ally of the United States. Among other things, it led to the "Arabization" of the Arab Legion, which was renamed the Jordanian army, through the replacement of its British officers.

## Arab Radicals and the Turmoil of 1956–58

On 27 October 1956 Sulaiman Nabulsi was charged with forming a Cabinet. There was an irreconcilable conflict between the goals of Nabulsi and those of the King. The new Prime Minister was quoted by the *New York Times* as saying: "Jordan cannot live forever as Jordan."<sup>[81]</sup> Nabulsi wanted to dissolve the kingdom, which he, along with the Arab nationalists, regarded as an artificial entity, within a greater Arab union, most immediately with Syria. Hussein was attached to the independence and continued separate existence of Jordan.

A major task awaiting the new government was the renegotiation of the Anglo-Jordanian treaty. The problem that presented itself was the need for a foreign subsidy. One view on this, advocated by Samir al-Rifa'i, was to maintain some form of link with Britain that would allow for the continuation of the 12 million pounds sterling subsidy, perhaps for the lease of military bases. Nabulsi favored replacing the sum with an Arab subsidy, as this would encourage independence from the former colonial powers, which, not incidentally, were supporting Israel, and it would foster inter-Arab cooperation.<sup>[82]</sup> On January 19, 1957, an Arab Solidarity Agreement was signed under which Egypt, Saudi Arabia, and Syria pledged to pay Jordan an annual subsidy of 12.5 million Egyptian pounds, roughly equal to the support Jordan had been receiving from Britain. The two Houses of Parliament approved the accord.

The previous day, a State Department release stated that Jordan had made informal contacts to inquire if Washington would increase its subsidy to the kingdom from \$8 million to an annual \$30 million, which would have been equal to the promised Arab subsidy. On January 5 the Eisenhower administration, which was worried about Soviet penetration of the Middle East, had announced a plan of military and economic support for Middle Eastern states whose independence was threatened by international communism and who had appealed to Washington for help. Congress passed the so-called Eisenhower Doctrine on March 7.

The significance of what the government was attempting can be gleaned from a cabinet resolution read by Rimawi on February 26, 1957 defining Jordan's position at an upcoming conference. The resolution rejected the Eisenhower Doctrine and upheld the principle of positive neutrality. The prelude to the government's audacious statement made the claim that the government, under the authority given it by Parliament, was empowered to formulate foreign policy, implying that the Cabinet could disregard the Crown's wishes.

On March 24 Nabulsi announced that Jordan wanted to extend diplomatic recognition to the People's Republic of China, and on April 3 he said he wanted full diplomatic relations with the U.S.S.R. A tug of war between the King and the Prime Minister characterized those fateful days. When the Cabinet retired the director of security and replaced him with their own man, Hussein acted, forcing Nabulsi to resign on April 10. By maintaining contacts with Cairo and Damascus, Hussein succeeded in keeping Abdel Nasser and Quwatly on the sidelines, and he even made a convert of King Saud, who was impressed by the King's anticommunist attitude.

The constitutional experiment was not yet over, and the next 3 weeks were a period of severe crisis. The King had to quash an army coup in the offing in order to save his throne (see section on politics for details.)

The King had been publicly blaming his troubles on the communists for the benefit of Washington and Saudi Arabia. According to Richard B. Parker, who served in the U.S. Embassy in Amman in the mid-fifties " . . . Hussein turned to the Americans. In a message passed through the second ranking CIA man in Amman, he said that he was prepared to impose martial law, suspend the constitution, and speak out forcefully against the Syrians and the Egyptians; he wanted to know if he could count on the United States if either Israel or the Soviet Union intervened. Dulles proposed to respond affirmatively . . ." [83] The United States also responded forcefully. Within 3 hours, the White House press secretary declared that President Eisenhower and Secretary Dulles regarded "the independence and integrity of Jordan as vital." [84] The Sixth Fleet was already on its way to the eastern Mediterranean as a signal to the Soviets regarding both Lebanon and Jordan, and Dulles had informed Israeli ambassador Abba Eban of Washington's concerns. The next day, April 25, martial law was declared. The King had exerted his authority and finally put an end to the constitutional experiment. The U.S. had stepped into Britain's shoes, and Jordan had gained an ally in Saudi Arabia. Shortly thereafter, the dependable and astute Samir al-Rifa'i resumed the post of Prime Minister. Hussein emerged as the sole master of Jordan and stayed in that position until his death 32 years later.

## Union With Iraq and Its Breakup

On February 1, 1958, the merger of Syria and Egypt into the United Arab Republic was declared. Jordan joined with Iraq in a federal union on February 14, largely as a defensive measure. On July 14, a revolution led by General Abdel Karim Qassem overthrew the monarchy in Baghdad and wiped out the Iraqi branch of the Hashemites. The federation ceased to exist overnight. This was perceived in Washington and London as a major crisis, as the small states of Jordan and Lebanon appeared to be on the verge of being overwhelmed by pro-Moscow radical Arab nationalists and leftists. President Camille Chamoun of Lebanon, who had a local rebellion on his hands by the country's most senior Muslim leaders (whose electoral defeat he had cleverly engineered), appealed to the United States for help under the Eisenhower Doctrine. The United States responded by landing 14,000 troops in Lebanon, with the Sixth Fleet and its 70 ships standing by. British paratroopers landed in Jordan on July 17. Diplomacy was successful in defusing the crisis, and the U.S. discovered that Abdel Nasser was willing to cooperate. Washington ceased to perceive Egypt as an appendage to the U.S.S.R., and relations with Cairo actually

improved for several years.<sup>[85]</sup>

In September 1960, Jordanian Prime Minister Hazza' al-Majali was assassinated by plotters, who then sought refuge in Syria. The Arab Cold War was back on.

## **Pursuit of Economic Development and Strategic Rents, 1975–90 Alliances with Syria and Iraq**

From the mid-seventies to the early eighties, King Hussein concerned himself with alliance formation, improving relations with Jordan's neighbors and with economic development. As Crown Prince Hassan was fond of putting it, Jordan's policy could be summed up as "doing good things in bad times." Alliance formation was designed to secure economic cooperation; find markets for Jordan's products; or solicit economic grants from oil-producing countries. This was a period of low security threats, both internally and externally; under those circumstances the main aim of foreign policy became to secure budgetary support.

Brand argues that "foreign policy, in general, and alliance formation, in particular, may well constitute an integral part of the state-building or regime-consolidation process. In this way, national security at its most basic may, in fact, be budgetary security . . . Thus alignments and alliance decisions may be made, not to balance power or external threats as the realists and neorealists have long argued, but rather to help balance the budget . . . Thus, state or regime behavior may be described most accurately as budget stabilizing, stability promoting, or regime ensuring."<sup>[86]</sup>

This is a valuable insight, one with which most Jordanian analysts and even government officials would have readily agreed, with the proviso that it is not generalizable; in other words, in Jordan's case, national security and economic security go hand in hand; however, in the long run it may not be possible to satisfy both, in which case national security trumps economic security, or a way is found to satisfy both at the same time. Better put, national security issues determine where to look for economic and budgetary security, as we have seen in the several crises the country has gone through. If the same source (such as the U.S.) can satisfy both needs, all the better.

It is misleading to isolate a period in which national security concerns are not dominant and argue, for the sake of originality, that budgetary security is all important, as Brand does: "The Arab-Israeli conflict and the kingdom's large Palestinian community have certainly played a major role in shaping Jordan's history. But . . . other, more basic, factors have played a driving or *determining* role in the King's foreign policy decisions: without access to sufficient budgetary resources, *all else becomes a secondary consideration*."<sup>[87]</sup> This line of argument, while original, is misleading and in fact fallacious in the long run. Imagine King Hussein adopting this approach during the clash with the PLO in 1970 or the conflict with radical nationalists in the late 1950s. In both cases King Hussein chose courses of action dictated by national security (of the domestic variety, emphasizing regime survival) irrespective of whether they alienated (Arab) budgetary supporters.

It so happens that in both cases the King managed to locate a more satisfactory source of budgetary support (the United States) that was consistent with national security. There are no examples of Jordan preferring budgetary security to national security. On the other hand, during the Gulf War, Jordan prioritized national security (domestic stability) over budgetary security (aid from Kuwait, Saudi Arabia, and the United States). Whereas one cannot pay the army or purchase the loyalty of Bedouin tribes with empty coffers, the state can borrow money to get through hard times, which could last for a few years (as in 1989-94), but the Jordanian state could disappear overnight if the regime neglects security considerations. The art of statecraft in Jordan is how to balance the dictates of security and economics, while prioritizing the first.

This is not to belittle the relevance of Brand's thesis for the time period in question, which suggests that one should not try to interpret Jordan's alliances in terms of local balance of power politics, but rather in terms of the need for lucrative economic exchange and budgetary support. Regional balancing in the interest of national security, although attempted on occasion (as in the 1958 federation with Iraq), was not particularly fruitful during the Cold War, as the superpowers could trump any combination of regional partners, and besides, tended to intervene to prevent the outbreak of hostilities between their clients. Furthermore, Israel's military power is such that inter-Arab alliances are not particularly effective if Israel enters the game, since that becomes the decisive factor from the military perspective. The optimal solution for Jordan was to maintain good relations with the United States, as that tended to diminish the Israeli threat, as we saw in 1970, for example. It also tended to encourage the cultivation of peaceful relations with Israel.

That is not to say Jordan was not free to seek regional alliances for economic or budgetary reasons; it certainly did that. Good examples are to be found in the rapprochement with Syria (1974-77) and with Iraq (1979-). But apart from budgetary considerations and national security, regional alliances were very useful to muster support for Jordan's political initiatives and provided important sources of legitimacy and political support, specially when Jordan faced formidable opposition from other Arab states or the PLO. This was part of the art of statecraft that Hussein had learnt from his mentor, King Abdullah. Whether Syria opposed, supported, or remained neutral to peace initiatives that Jordan considered vital sometimes made the difference between the failure and success of the King's enterprises, as did Abdel Nasser's public criticism or his silence during crucial periods during the Nabulsi episode and the showdown with the PLO in 1970, as mentioned previously. But this is political rather than military balancing.

But to return to the topic of economic advantage, diplomatic relations with Syria, broken over the showdown with the PLO in 1970, were resumed on October 4, 1973. Jordanian Prime Minister Zeid Rifa'i initiated contacts with President Assad in March 1975. Some joint cooperation committees were established, and a follow-up visit by King Hussein in April led to a more substantive accord on trade. Assad flew to Amman in August and a Higher Joint Committee headed by the Prime Ministers of the two countries was created. This helped convince Saudi Arabia to convene a meeting of donors in the Gulf to resolve the issue of unpaid aid pledges to Jordan at the 1974 Rabat summit. Jordanian and Syrian officials were meeting regularly, and by the beginning of 1977 there were press reports that a federation between the two countries was contemplated. This never came to pass, possibly due to Saudi opposition.

Nevertheless, the benefits of improved relations with Syria consisted of more sustained Gulf aid and economic exchange with Syria.

An example of Jordanian-Syrian joint ventures was an industrial holding company to fund joint manufacturing projects, which was to have a capital of \$60 million, to be augmented by loans worth \$120-\$180 from abroad.<sup>[88]</sup> A free-zone company was established, and cooperation was advancing in many fields, including the coordination of academic curricula.

However, relations between Syria and Jordan cooled while those between Jordan and Iraq improved. Iraq was capable of offering Jordan significantly greater economic advantage, grants, cheap oil, and markets for Jordanian goods. The Syrian regime began experiencing problems with Muslim fundamentalists, and relations between Damascus and Baghdad deteriorated sharply. Damascus first accused Amman of not doing enough to prevent saboteurs from entering Syria from Jordan, and by May 1980 Damascus was accusing Amman of supporting groups responsible for anti-regime violence in Syria. When Jordan found it could not maintain good relations with both, it chose Iraq because that relationship was more lucrative.<sup>[89]</sup>

Iraq was instrumental in securing other Arab aid for Jordan. The November 1978 Baghdad summit set up \$9 billion in aid for Egypt (\$5 billion), Syria (\$1.8 billion), Jordan (\$1.2 billion), the PLO (\$150 million), and the West Bank economy (\$150 million). Saudi Arabia pledged to pay \$1 billion a year. Saddam Hussein promised to make up for any shortfall in payments to Jordan, and itself pledged \$520 million for 10 years.

As war with Iran became more likely, Iraq wanted to establish a secure source of supplies through Aqaba on the Red Sea. In 1979, Iraq paid JD15 million for a road linking Aqaba with Azraq, a link on the road to Baghdad; ID3 million for the development of Aqaba Port; and another ID4 million for expanding the free zone there. Baghdad put up \$25 million to establish a joint land transport company. As the war progressed, Iraqi dependence on Aqaba increased. Jordanian firms were granted multimillion construction contracts in Iraq, and Baghdad informed the Jordanian Chamber of Commerce and Industry that it would buy virtually anything Jordan could export to it.<sup>[90]</sup>

At the beginning, Jordan received a substantial aid from Baghdad. But, as the war depleted Iraq's resources, the benefits declined. After the Gulf war, the Jordanian government found itself subsidizing Jordanian exports and services to Iraq. The main advantage that Baghdad continued to offer was to supply most of Jordan's petroleum needs at well below market prices. Despite the economic boycott of Iraq, the Security Council made special provisions allowing this trade to continue.

## **Eclipse of Jordan's Pan-Arab Role in 1988**

During the mid- to late eighties, Jordan's foreign policy had several goals: to enlist Palestinian support for a peace agreement, to shore up Arab support for Iraq in its war against Iran; and to restore good relations with Syria. At the 1987 Arab summit in Amman, King Hussein was able to push through a resolution of

support for Iraq against Iran, gaining the readmission of Egypt to the Arab fold while neutralizing opposition from Syria. The fact that the summit was held in the Jordanian capital and the success of Jordanian diplomacy was a triumph for King Hussein, which highlighted the central role Jordan was playing in Arab politics. It also altered traditional priorities by downgrading the importance of the Palestinian problem and promoting the conflict between Iraq and Iran to the top rank. This suited Jordan very well in view of the need to compensate for the decline in the strategic rents in the form of Arab aid it derived from supporting Iraq (which had declined with the drop in oil prices and needed to be reinvigorated) and trade with Iraq (which Iraq was having trouble paying for—a condition which may have been ameliorated through increased Arab aid to Iraq.) However, the winding down of the Iran-Iraq war upset these calculations.

Almost simultaneously, the first Palestinian *intifada* in the West Bank and Gaza Strip against Israeli occupation broke out at the end of 1987 and came to occupy center stage by 1988. In 1986 the King had broken off efforts to enlist PLO support for a peace conference leading to a federation of the regained Palestinian territory with Jordan. In 1987 Shamir had torpedoed the King's deal with Peres that could have led to a peace agreement. U.S. Secretary of State Shultz's initiative on March 1988, which allowed a central role for Jordan, had failed. An Arab League summit in Algiers in June 1988 restored the Palestinian issue to its former status as the foremost Arab cause, and the PLO circulated a document that affirmed its position as the legitimate interlocutor for the Palestinians in peace talks with Israel, a position that was endorsed by the summit. In a speech on July 31, King Hussein severed virtually all legal and administrative ties with the West Bank. Referring to the 1974 Rabat summit that had recognized the PLO as the sole legitimate representative of the Palestinians, the 1982 Fez summit that had endorsed the creation of an independent Palestinian state, and the 1950 text of the resolution that had united the West Bank with Jordan "without prejudice to the final settlement of the just cause of the Palestinian people," he declared that "Within this context we respect the wish of the PLO, the sole legitimate representative of the Palestinian people, to secede from us in an independent Palestinian state." The King added: "Since there is a general conviction that the struggle to liberate the occupied Palestinian land could be enhanced by dismantling the legal and administrative lines between the two banks, we have to fulfill our duty and do what is required of us."<sup>[91]</sup> This did not, however, affect Jordanian citizens of Palestinian origin who remained an integral part of the state, the King added.

A good assessment of the significance of this act is provided by Satloff: "Jordan's disengagement from the West Bank brought to a close an era of fast-paced, high-profile political and diplomatic activity in the international arena. The end of the Iran-Iraq War and the onset of the *intifada* together deprived the kingdom of the environmental conditions that had allowed it to assume such an extroverted identity in the mid-1980s. Instead, the kingdom turned inwards, and a series of domestic problems that had been percolating beneath the surface inside the East Bank came to brew with the divorce from the West Bank. The economy topped the list."<sup>[92]</sup> (See section on Politics, above)

## Arab Cooperation Council: An Experiment in Integration

In addition to Iraq's military difficulties, the producer oil crisis in 1985-86 led to a shortfall in Arab aid to

Jordan. At the Baghdad summit, seven countries: Algeria, Libya, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates had pledged \$1.25 billion in annual aid to Jordan over a 10-year period. Algeria and Libya never paid, and by 1984 the contributions of Qatar and the UAE had become ad hoc. A year later Kuwait suspended its payments. Iraq had its own problems. Only Saudi Arabia met its obligations at the rate of about \$360 million a year. Total aid to Jordan in 1980 was \$1.3 billion, of which \$750 million was Arab money. Arab aid declined to \$670 million in 1983; \$320 million in 1984. By 1988, Jordan was receiving \$474 million in financial aid and another \$260 million in soft loans and development aid, for a total of \$734 million from all sources.

As aid to Jordan dried up with the decline in oil revenues in the mid- to late eighties, Jordan, Egypt, Iraq, and North Yemen convened in February 1989 to form the Arab Cooperation Council (ACC), the main objective of which was to capitalize on gains from economic integration. Although this assemblage later constituted of joint defense pact, and issues such as “strategic depth” were considerations behind the formation of the alliance, these were secondary to economic considerations, particularly from Jordan’s perspective. Its purpose was to open up markets for Jordanian exports of goods and services and labor (notably to Iraq), such as pharmaceuticals, agricultural products, cement, and fertilizers, and to create opportunities abroad for Jordan’s construction firms in order to alleviate the country’s economic difficulties and consolidate the base of support for the regime. Although technically the ACC preceded the riots in southern Jordan that served as a stimulus for political liberalization (see section on Politics), it served the same policy objectives and can be seen as an attempt at preempting unrest. Economic cooperation involved establishing joint projects in manufacturing and agricultural production. Integration meant not only “cooperation in industry, agriculture, transportation, communications, and labor flow,” but also “greater coordination in social affairs, including education, health and cultural exchange.”<sup>[93]</sup> One dividend Jordan derived from the formation of the ACC was the resumption of aid from the Gulf countries as they grew concerned over the possible significance of the new alliance. The ACC was also envisaged as a nucleus for greater pan-Arab cooperation. Jordan did not seek to use the alliance against other Arab countries, in fact, it went to pains to reassure Syria that the alliance was not directed against it. That was not necessarily true of Iraq’s attitude. Egypt found that the ACC was instrumental in readmitting Iraq into the Arab fold at the 1989 summit in Amman. Unfortunately, Egypt and Iraq were somewhat distracted by the rivalry between them, which broke into open conflict with Iraq’s invasion of Kuwait and the outbreak of the Gulf war. The ACC collapsed under the weight of that war.

The lessons to be drawn from the ACC venture tend to reinforce Brand’s emphasis on the role of economics as a determinant of foreign policy. Ryan, however, offers a more balanced view of the interplay of the various state motives: the “examination of the rise and fall of the ACC suggests the need to move beyond standard military-security explanations of inter-state alliance dynamics, in order to incorporate a more complex model that takes into account domestic politics and political economy as key elements influencing policy makers. Jordan’s experience with the ACC underscores the importance of focusing on the changing dynamics of its domestic politics, as well as on the economic underpinnings of its regime stability.”<sup>[94]</sup> Incidentally, Ryan’s view, and to a certain extent Brand’s perspective too, are a reflection of the Jordanian insiders’ view; they are based to a large extent on the views of Jordanian functionaries derived from interviews with foreign ministry officials and former Cabinet Ministers and Prime Ministers.

Ryan goes on to remark that the demise of the ACC represents “the triumph of the Westphalian state system,”<sup>[95]</sup> meaning that the motive of individual state sovereignty tends to trump integrationist schemes and pan-Arab unity.

## **Relations With the United States**

### **Response to Arab Radicalism: The Beginning of the Relationship**

Relations between Jordan and the United States have proven to be enduring. They are based on the fact that Jordan has always been a pro-Western state, and, from Washington’s perspective, a force for moderation that is strategically located in relation to Israel. The West Bank, which is integral to any solution of the Israeli-Palestinian dispute, was part of Jordan from 1949 to 1988. Up until 1993, particularly as neither Israel nor the United States were willing to talk to the PLO, Jordan was the principal available interlocutor. Any resolution of the Arab-Israeli dispute had to involve Jordan. In addition, Jordan exercised control over the activities of the PLO on its soil, which led to the bloody showdown in 1970. Even after signing its own peace treaty with Israel, Jordan has remained involved in the dispute as one of the only two Arab states able to mediate with Israel.

During the Cold War, Jordan was clearly in the Western camp. It bolstered the security of the oil-producing states and even lent its armed forces and the expertise of retired army officers to the maintenance of security in the Gulf and the suppression of a rebellion in Oman. That particular advantage that Jordan offered more or less ended with the Gulf War, although military cooperation with the United States has resumed since, and cooperation in intelligence matters between Washington and Amman appears to be strong. Despite occasional attempts by the United States to adopt a more positive relationship with Arab nationalism, at which times an alliance with Jordan may have seemed a liability to the development of better relations with Abdel Nasser’s Egypt, such reconciliation efforts with Cairo never got very far, and in the final analysis Egypt, Syria, and Iraq (after 1958) appeared to be far closer to Moscow than to Washington. Radical Arab nationalism was perceived as a threat to the conservative regimes in the Arabian Peninsula, and Jordan was instrumental in blunting the menace of that radicalism to Washington’s interests.

For Jordan’s part, the United States was a powerful patron, and an alliance with Washington was vital for Jordan’s national security needs on many occasions. Washington also provided much needed budgetary and military aid to Jordan, although financial aid from the U.S. paled in comparison with the support provided by Arab states in the Gulf during the seventies and eighties. Still, Jordan’s working relationship with Washington and its overall policy orientation was instrumental in securing aid from oil-producing states during that period. In general, the United States could offer a combination of military and financial support to Jordan that was unmatched.

The relationship between the United States and Jordan was first formed when King Hussein was casting about for a substitute for Britain. The Nabulsi government, in accordance with its ideological convictions,

sought to forge an agreement with Egypt, Syria, and Saudi Arabia to compensate for the British subsidy (see section on the constitutional experiment under Politics and the section on Arab radicalism under Foreign Policy above.) Jordan was already receiving modest sums from the United States

On January 19, 1957 the agreement was signed. The day before Parliament endorsed the agreement, a State Department release said that Jordan had made informal contacts to inquire if Washington would increase its subsidy to the kingdom from \$8 million to an annual \$30 million, which would have been equal to the promised Arab subsidy. On January 5 the Eisenhower administration, which was worried about Soviet penetration of the Middle East, had announced a plan of military and economic support for Middle Eastern states whose independence was threatened by International Communism and who appealed to Washington for help. Congress passed the so-called Eisenhower Doctrine on March 7.

As the struggle with the Nabulsi cabinet progressed, the King had been publicly blaming his troubles on the communists for the benefit of Washington and Saudi Arabia. According to Richard B. Parker, who served in the U.S. embassy in Amman in the mid-fifties “ . . . Hussein turned to the Americans. In a message passed through the second-ranking CIA man in Amman, he said that he was prepared to impose martial law, suspend the constitution, and speak out forcefully against the Syrians and the Egyptians; he wanted to know if he could count on the United States if either Israel or the Soviet Union intervened. Dulles proposed to respond affirmatively . . .”<sup>[96]</sup> The United States also responded forcefully. Within 3 hours, the White House press secretary declared that President Eisenhower and Secretary Dulles regarded “the independence and integrity of Jordan as vital.”<sup>[97]</sup> The Sixth Fleet was already on its way to the eastern Mediterranean as a signal to the Soviets regarding both Lebanon and Jordan, and Dulles had informed Israeli ambassador Abba Eban of Washington’s concerns. The next day, April 25, martial law was declared. The King had exerted his authority and finally put an end to the constitutional experiment.

On April 29 the U.S. made a much publicized \$10 million payment to Jordan (from funds under the control of the International Cooperation Administration, in other words, not from funds connected to the Eisenhower Doctrine). In June, the United States granted another \$10 million for the army and a further \$10 million in budgetary support<sup>[98]</sup> Saudi Arabia also paid its first installment of promised aid. Ironically, it was learned many years later that the CIA secretly began payment of millions of dollars to the King in early 1957.

Cooperation with the United States continued for the better part of those years. U.S. budgetary support increased to \$40 million in 1958; remained constant through 1963; and was gradually phased out by 1967. It resumed in 1971 and continued through 1990; was terminated during the Gulf War; and resumed a second time in 1994 after Jordan’s peace agreement with Israel. Jordan became one of only five countries to receive direct U.S. military assistance.

Courage and decisiveness were traits that Hussein demonstrated time and again alongside the pragmatism he had learned from his grandfather. This pragmatism dictated a close relationship with the United States, because Jordan needed protection (from Israel and other Arab states), and it needed aid. King Hussein’s style and personality were a factor in his relationship with the United States: “However we evaluate it,

there is one aspect of the policy process that stands out clearly: the importance of the personality factor on both sides. Eisenhower's avuncular response to Hussein's courage assured favorable replies to the King's request for help . . . There is a quality about Hussein that strikes a responsive chord in Washington . . . and that is about all he has had in the way of assets in the power game."<sup>[99]</sup>

One question that arises in relation to Jordan and the United States is: How can this square the fact that Washington had decided at the time that U.S. interests would best be served by cultivating the friendship and cooperation of Abdel Nasser and Arab nationalist forces and that Jordan was expendable? Specifically, National Security Council (NSC) directive 5280/1 of November 4, 1958 states:

"A. Recognizing that the indefinite continuance of Jordan's present political status has been rendered unrealistic by recent developments and that attempts on our part to support its continuance may also represent an obstacle to our establishing a working relationship with Arab nationalism . . .

D. Encourage such peaceful political adjustments by Jordan, including partition, absorption or internal political realignment , as appears desirable to the people of Jordan and as will permit improved relations with Jordan's Arab neighbors . . ."<sup>[100]</sup>

Parker offers a satisfactory answer to the Jekyll-and-Hyde aspect of this relationship: "I and former diplomats I contacted, who were intimately connected with U.S.-Jordanian relations at the time, recall that there was never any question of the unswerving support of the United States to King Hussein and the viability of Jordan. They commented that there were people who talked about the policy advocated in NSC 5820/1, but it was never seriously promoted as policy, even though Eisenhower signed off on it. This may say something about the relevance of NSC discussion to the policy followed on the ground."<sup>[101]</sup>

## The 1970 Crisis

As the showdown with the Palestinian guerrilla organizations operating in Jordan loomed, King Hussein again turned to the United States for help. (See section on the Civil War of 1970-71 under Politics and the section on the Showdown with the PLO in 1970 under Relations with the Palestinians and Israel under Foreign Affairs.)

First, Jordan needed help to neutralize Iraq. Later, when 200 Syrian tanks invaded the kingdom, Hussein issued a call for help to Washington. Iraq had stationed forces in Jordan and had pledged to come to the aid of the PLO in the event of a showdown. However, when the Jordanian army moved against the *fida'iyeen*, Iraq simply moved its troops out of the way. Baghdad had received a message from the United States to keep out of the civil war in Jordan, according to Iraqi President Ahmad Hassan al-Bakr in a conversation with Fateh's Salah Khalaf.<sup>[102]</sup> In fact, President Nixon was quoted by the *Sun-Times* of Chicago on the evening of September 17 to the effect that the United States "was prepared to intervene directly in the Jordanian war should Syria and Iraq enter the conflict and tip the military balance against Government forces loyal to Hussein."<sup>[103]</sup> Syria, on the other hand, did intervene, sending two armored

brigades and a mechanized infantry brigade under the command of its Ninth Infantry Division into northern Jordan on September 19 and 20 and engaged in fierce combat with the Jordanian 40th Armored Brigade. Syria also sent in battalions belonging to the Palestine Liberation Army (normally stationed in Syria), which reached the town of Irbid by the 21st, but Syria claimed that only PLA units were involved.

King Hussein appealed to the United States for help. From the perspective of Washington, “the Jordan crisis at its peak had much more to do with U.S.-Soviet relations than with the Arab-Israeli conflict or the Palestinians.”<sup>[104]</sup> The U.S. was disturbed by Israeli complaints that Abdel Nasser was violating the terms of the cease-fire on the Suez Canal, presumably with Soviet connivance. Relations between Washington and Tel Aviv were at a nadir in the spring of 1970, and the State Department viewed Israel as an obstacle to good relations with the Arab states. On the other hand, National Security Advisor Henry Kissinger convinced Nixon that the U.S.S.R. was boosting its presence in Egypt and that this had to be stopped. Kissinger argued that Moscow must not be allowed to help Abdel Nasser regain the Sinai; that arming Israel would frustrate Moscow’s designs; and that Israel would be a valuable strategic ally of the United States in the region. Nixon had met with Israeli Premier Golda Meir on the 17th and promised her \$500 million in additional military aid and more F-4s. Now, he maintained, this attack on Jordan by another Soviet client required a response. Rather than rely on U.S. capabilities, which would have involved a costly delay, Kissinger turned to Israel. Perhaps his preferred option was to demonstrate the value of Israel to the United States.

The U.S. had already placed the 82nd Airborne Division on semi-alert status on September 10 in view of the hostage situation and had sent C-130s to Turkey. Ships of the Sixth Fleet had left port; the aircraft carrier Saratoga was ordered to the eastern Mediterranean; and the carrier JFK, stationed in the Atlantic, was ordered to the Mediterranean, as was the helicopter carrier the Guam, which was stationed in Norfolk. Now the alert status of the 82nd and the units in Germany was raised and the Sixth Fleet was ordered to proceed further east.

On September 20, Secretary of State Rogers called on Syria to halt its “invasion” of Jordan, and Under Secretary Sisco told the Soviet ambassador that the attack on Jordan “could lead to the broadening of the present conflict.”<sup>[105]</sup> Messages exchanged with the Soviet Union implied that Moscow was trying to restrain Syria. Still, it would be difficult to get U.S. forces into Jordan on time. Kissinger conferred with Yitzhak Rabin, then Israel’s ambassador to Washington, and plans were laid for Israel to come to the King’s aid. Israel and the U.S. arrived at a joint plan of action that was approved by Nixon on the 21st. Moshe Dayan threatened to unleash the Israeli air force against Syria. King Hussein, on the other hand, preferred to be rescued by the U.S. Eventually, the King decided to use his own tiny air force against the Syrian armor. On September 20 and 21, 120 Syrian tanks were destroyed and Syria suffered 600 casualties. The Syrian threat had been dealt with successfully.

“Jordan came to be treated as a regional partner of the United States. Jordan’s special task on behalf of American interests, in King Hussein’s view, would be to promote stability in the small oil-producing Arab states of the Gulf after the British departure at the end of 1971. Nixon and Kissinger gave the King some encouragement and boosted aid to Jordan accordingly. In true Nixon-doctrine style. Israel, Jordan, and Iran were emerging in official Washington’s view as regional peacekeepers. Aid and arms to these

U.S. partners would serve as a substitute for a costly American military presence in the region or unpopular military intervention.”[\[106\]](#)

## The Gulf War

When Iraq occupied Kuwait in the summer of 1990, the threat of war loomed. President Bush pushed Iraq’s president, Saddam Hussein, into a corner: He offered him a choice between military defeat or a humiliating retreat from Kuwait. King Hussein tried his best to find a diplomatic solution; he wanted to prevent a recourse to force at all costs, because he realized that a confrontation between the U.S. and Iraq would lead to the destruction of Iraq. He was looking for a solution that would allow Iraq to withdraw without losing face. His goal was to maintain Arab unity and keep lines of negotiation open. This failed, and the Arab world split, with Egypt and Syria joining the military alliance against Iraq and others supporting Iraq politically.

Of course, Jordan had a vested interest in trying to salvage the Arab Cooperation Council, an essentially economic alliance that included both Iraq and Egypt alongside Jordan and North Yemen, if possible. However, once the initial mediation efforts failed, it must have been obvious that Jordan stood to lose all the budgetary support it had been getting from Kuwait and Saudi Arabia if it did not line up on their side. Jordan tried to remain neutral and condemned the occupation of Kuwait, but it was accused of backing Iraq, since the Bush administration’s position seemed to allow no room for neutrality.

Jordan refused to allow Israel to use its air space to attack Iraq or to allow Iraq to move Scud missiles into Jordan to attack Israel or other states. There was tremendous pressure from public opinion in Jordan not to join the war against Iraq, partly because of the large percentage of Palestinians among the population who saw Saddam Hussein as their champion against Israel, and partly because of Jordanian business interests tied to Iraq. Iraq was the biggest customer for Jordan’s exports (23.2 percent) and its primary source of oil imports. On top of that, the force of Arab nationalism worked more to Iraq’s advantage than against it. But by not committing to the U.S.-led alliance, Jordan alienated not only the United States but also Saudi Arabia and Kuwait, whose largesse had kept government coffers filled for many years in the late seventies and the eighties.

Thus King Hussein believed that the destruction of Iraq went against Jordan’s long-term strategic interests, and he had wide domestic support for adopting a neutral position; in addition, domestic pressures also militated against his joining the anti-Iraq coalition.[\[107\]](#) In the final analysis, King Hussein’s gut instincts were not to join in the war against Iraq. Arguably, this was one of those situations where the personal preferences of the sovereign may have had a significant role to play, which would further restrict the generalizability of a monocausal economic explanation. Jordan had to suffer the consequences; the King was ostracized for years by the Kuwaitis and the Saudis, although relations with the U.S. improved dramatically after the 1994 peace treaty with Israel.

Jordan also had to absorb the huge flood of (mainly expatriate) refugees from Kuwait and later from Iraq. In addition, tens of thousands of Jordanian citizens who had been working in the Gulf, notably in Kuwait

(most of them Palestinians), were expelled. This exacerbated the economic crisis, seeing as Jordan had been receiving almost \$1 billion a year in remittances from those workers. There was a time lag before the effect was felt, however, as many returning Jordanians also repatriated their life's savings with them. This fueled the construction industry in Jordan, as most of the money went into housing. But when it was exhausted, Jordan found itself heavily indebted and suffering from a high level of unemployment.

## Reconciliation

Thus the period from late 1990 to late 1993 was the nadir of relations between the United States and Jordan. President Bush was somewhat flexible, but members of Congress sought to punish Jordan. Congress suspended aid to Jordan in fiscal year 1991, and FY 1992 aid was also held (except for military training and food aid) up until 1993, and beginning in 1993, the U.S. President had to certify that Jordan was in compliance with the embargo against Iraq; that it supported the peace process with Israel; and that aid to Jordan was in the U.S. national interest, in order to satisfy the conditions attached to aid appropriation acts and for the aid to be released. The beginning of the Geneva peace talks after the war provided an avenue for cooperation between Washington and Amman, but it was really following the signing of the Declaration of Principles between Rabin and Arafat in Washington that Jordan started pushing hard for the conclusion of a peace agreement with Israel and for full rehabilitation with the U.S. President Clinton was pleased to do what he could to help produce the peace treaty that was signed in 1994. Since then, Washington has offered Jordan rewards and incentives to normalize relations with Israel. The stipulation that the President had to vouch for Jordan's good conduct were removed. Israel was instrumental in convincing Congress to write off most of Jordan's debts. Relations with the United States improved considerably after 1994.

U.S. aid to Jordan since 1951 through 1997 amounted to about \$3.9 billion, divided into \$2.1 billion in economic aid and \$1.8 billion in military aid.<sup>[108]</sup> In fiscal 1991, total U.S. aid to Jordan was a mere \$56.3 million; in 1992 it rose to \$70.6 million; it dropped to \$44.5 million in 1993; and to \$37.2 million in 1995. In 1996 total U.S. economic and military assistance rose to \$137.3 million; it increased further to \$152.1 million in 1997; to \$202.8 million in 1998; and amounted to \$198.1 million in 1999. Between 1994 and 1996, at the request of President Clinton, Congress appropriated \$401 million to go toward forgiving Jordan's debt of \$702 million to the United States. In 1996, the U.S. offered Jordan 16 F-16 fighters and 50 M60A3 tanks in military aid. These were paid for by an annual \$220 million allocation in the form of foreign assistance, and other hardware is being paid for through a special \$100 drawdown authority as part of the 1996 Foreign Operations Appropriations Act. President Clinton designated Jordan a major non-NATO ally of the United States as of November 1996, partly in recognition of King Hussein's services to the peace process.<sup>[109]</sup>

In 1997, the U.S. administration created a Middle East Peace and Stability Fund through which Jordan was granted an additional \$100 million in 1997. In 1998, Jordan received \$150 million in economic aid and \$75 million in military assistance. Washington has arranged for the creation of qualified industrial zones in Jordan from which goods that contain an Israeli-produced component can be shipped to the United States duty free. In September 2001 President Bush finally signed the trade agreement with Jordan

after it cleared Congress. The agreement, negotiated under the Clinton administration and signed in October 2000, did not have an easy passage through Congress because conservatives objected to provisions that set a precedent in establishing a connection between trade and environmental protection and trade and labor rights. Another novel feature of the agreement is that it covers electronic commerce. It also provides for the protection of intellectual property rights and contains procedures for dispute resolution. The Free Trade Agreement (FTA) entered into force on December 17, 2001. Washington has also increased both financial and military aid to the kingdom.

## Section VII

### Reign of Abdullah II

King Hussein died at the age of 63 after a struggle with cancer on February 7, 1999. In January, he had named his oldest son Abdullah heir apparent to the throne instead of his brother Prince Hassan, who had been the crown prince since 1965 (Prince Hassan had been assigned that position because none of the King's sons was old enough to assume the duties of monarch). King Abdullah II was crowned on June 9. He faces a daunting task in steering the country through a minefield of regional and international conflicts.

The new King has embarked on a course of modernization and economic liberalization. He is more concerned with economic issues than his father and more savvy about them. Jordan joined the World Trade Organization (WTO) in April 2000 and entered into a free trade agreement with the U.S., and another such agreement with the European Union (the second with the EU) is being finalized.

Maintaining good relations with the United States is one of the top priorities of Abdullah II, as is controlling the damage caused by the unraveling of the Oslo peace process and the crisis occasioned by the second *intifada* which broke out shortly after his first year as head of state and was still going strong a year later. The precipitous deterioration of relations between the Palestinian Authority and the Israeli government of Ariel Sharon is a major concern for the young monarch. Since over half the population of Jordan consists of Palestinians, Israel's recourse to combat tactics to quell the *intifada* from the very beginning, when it was still a form of civilian protest, has generated a great deal of resentment and popular indignation in the kingdom. Since the United States is perceived as being less than evenhanded in the Israeli-Palestinian conflict, angry demonstrations have targeted the U.S. as well as the Israeli embassy in Amman, and riot police have had to be called out to protect the embassies and restore order.

Jordan has had to play a balancing act between the United States and Iraq, as well. Jordan has been at the forefront of countries calling for the easing of economic sanctions on Iraq in order to alleviate the suffering of the people of that country, which is keenly felt by the man in the street in Jordan. Before the economic sanctions were imposed on Iraq, Jordan was exporting about a billion dollars' worth of goods to Iraq; and since the end of the Gulf War Jordan has been granted special permission by the United

Nations to trade with Iraq. Half the oil that Jordan imports from its eastern neighbor comes at reduced prices, which amount to budgetary support for the kingdom. Trade with Iraq is very important to Jordan, and Amman has a vested interest in the economic revival of Iraq.

U.S. Secretary of State Colin Powell has proposed “smart sanctions” against Iraq, which are designed to reduce the burden of suffering born by the Iraqi people, by lifting the economic sanctions, but this would involve the creation of a special fund under UN supervision into which all oil revenues would be deposited. Iraq opposes this as a perpetual infringement on its sovereignty and has threatened to cut off the supply of oil to Jordan (and Turkey and Syria) if its neighbors cooperate with the smart sanctions regime. That would amount to the elimination of Iraqi subsidized oil sales that are vital to Amman, which is coping with economic restructuring due to the burden of foreign debt. At the end of 2001, Iraq was supplying Jordan with \$650 million in crude oil (although at that point Jordan wanted to renegotiate the deal in view of the drop in international oil prices.)

On the other hand, the U.S. has pledged \$450 million in economic assistance and \$250 million in military aid to Jordan through 2001. There are also plans to reduce the size of the Jordanian army and turn it into an efficient rapid intervention force with the help of the U.S. Jordan stands to benefit a great deal from the access to the U.S. market afforded by the qualified industrial zones. This creates an additional dilemma, as goods produced in these zones qualify for special treatment only if they have an Israeli-produced component. The deterioration of relations with Israel will affect the QIZs.

Jordan may be too closely identified with the United States. The Hashemite kingdom has condemned the September 11, 2001 attacks on the U.S. more vehemently than any other Arab country, and it is prosecuting members of the al-Qa’ida organization for terrorist acts planned in Jordan. It has volunteered to send peacekeeping forces to Afghanistan. Jordan is a non-NATO ally of the United States, and in September 2001 Congress admitted it to a list of only four countries to sign a free-trade agreement with the U.S. To balance the perception that the King is toeing Washington’s line and to justify this relationship to the Jordanian public, the government needs the United States to intervene more forcefully and even handedly in the Palestinian-Israeli dispute and to ease the burden of suffering imposed on the Iraqi people by the Security Council’s economic embargo. Jordanians have been waiting for a long time for a “peace dividend” to materialize since signing the 1994 treaty with Israel. Their expectations are largely unmet.

Domestically, Abdullah II has increased the freedom of action of the country’s intelligence services in view of the domestic disturbances. Their interference is strongly resented by the public. However, as part of the King’s modernization drive, the Ministry of Information is being scrapped and replaced by a higher media council, which should have a positive effect on the freedom of expression. But will this lead to more vociferous opposition from the Islamist opposition, which includes many Palestinians in its ranks, and which is opposed to the normalization of relations with Israel?

Abdullah II has worked to improve relations with Saudi Arabia, Kuwait and the Gulf. In this regard he has the advantage of not carrying the baggage of his father from the Gulf war.

## Questions for Further Study

1. Do you think Jordan has indeed followed a rational course in foreign policy? What exceptions can you think of?

2. How important are budgetary support and economic advantage in determining the kingdom's foreign policies? (See Brand, Baram and Curtis (MEJ) above.)
3. What do you believe King Abdullah I's overall effect has been on the Palestinian problem? Did he lay the foundations of Jordan's relations with Israel? (See Shlaim and Glubb, above).
4. What would have happened if King Hussein had followed a more conciliatory policy towards Arab radicals inspired by Abdel Nasser and the Ba'th? (See Kerr and Dann, above).
5. Do you think King Hussein followed the best course in dealing with the PLO in 1970? (See Sayigh, Kerr and Quandt (1978) above).
6. Do you think King Hussein was truly adept at striking alliances and shifting alliance partners so as to derive strategic rents (economic or financial advantages from the exploitation of one's strategic position)? (See Brand, Ryan, Klieman, Sahlieh, A. Lesch and Quandt above.)
7. How would you characterize Jordan's relations with the United States? (See Parker, Satloff, Klieman, Quandt and Prados, above).
8. What causal effect would you assign to the personal preferences of King Abdullah I in the position Jordan adopted in relation to partition in 1948, and what role did King Hussein's own values play in determining Jordan's position in the Gulf War? (See A. Lesch.)
9. What do you think are the major problems which King Abdullah II will face? (See the Financial Times special supplement on Jordan).

## **A Self-Study Guide**

George P. Shultz National Foreign Affairs  
Training Center

School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The *Self-Study Guide: Laos* is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important Laotian issues related to history, geography, culture, economics, government and politics, international relations and defense. This guide should serve as an introduction and a self-study resource. Laos is far too complex and diverse a society to be covered in any depth using only the text in this guide. The reader is encouraged to explore the questions and issues raised in the guide by referring to the books, articles, periodicals and web sites listed in the Bibliography. Most of the published material can be found on the Internet or in the National Foreign Affairs Training Center Library, the Main State Library, or the major public libraries.

The first edition of the *Self-Study Guide: Laos* was prepared by Dr. Arthur J. Dommen, a former foreign correspondent in Laos and historian of Indochina who lives in Bethesda, Maryland. He is the author of two books and many articles on Laos and has lectured on Laos at the National Foreign Affairs Training Center. He has worked extensively with the archival materials in Record Group 59 and in the Nixon Presidential Materials at the National Archives II in College Park, Maryland, a good place to start for exploring the long and tortuous relationship of the United States and Laos. A selection of these documents can be found in the *Foreign Relations of the United States* volumes covering at this writing 1947-1968 (see Bibliography). But for longer Foreign Service Despatches and Airgrams reporting on political parties, election laws and results, economic trends, aspects of Lao society, Pathet Lao organization, and other matters the original documents should be consulted. Also, the “Yellow Books” of the Foreign Broadcast Information Service (FBIS) was an indispensable source on radio broadcasts relating to Laos until it ceased publishing these daily texts in the 1990's for budgetary reasons; fortunately, they are on microfilm and may be consulted at the Library of Congress.

The views expressed in this guide are those of the author or of his own or documentary sources, and do not necessarily reflect official policy or the position of the Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and non-profit use only.

## THE LAND

Laos (officially the Lao People's Democratic Republic; in Lao: SathalanaLat Paxathipatai Paxaxôn Lao) is a landlocked country located on the Indochinese Peninsula. It is bounded on the north by China, on the northeast and east by Vietnam, on the south by Cambodia, on the west by Thailand, and on the northwest by Myanmar (Burma). Laos extends about 650 miles (1,050 kilometers) from northwest to Southeast and has a total area of approximately 91,400 square miles (236,800 square kilometers). The capital is Vientiane (Lao: Viangchan).

Dominating the landscape of Laos are its inhospitable, forest-covered mountains, which in the north rise to a maximum elevation of 9,245 feet (2,818 meters) above sea level at Mount Bia (Lao: Phou Bia) and nearly everywhere make surface travel difficult and air travel dangerous, particularly in the rainy season. The principal mountain range lies along a northwest-southeast axis and forms part of the Annamese Cordillera, but secondary ranges abound.

Three notable landscape features of the interior of Laos may be mentioned. In the northern province of Xiangkhoang, the Plain of Jars (Lao: Thônġ Haihin; the name derived from large prehistoric stone jars littering the plain) consists of extensive rolling grasslands and provides a hub of communications. The central provinces of Bolikhamxay and Khammouan contain karst landscapes of caverns and severely eroded limestone pinnacles. Finally, in the south the Bolovens Plateau, at an elevation of about 3,600 feet, is covered by an open woodland and has generally fertile soil. The only extensive lowlands lie along the eastern bank of the Mekong River.

The general slope of the land is downhill from east to west, and all the major rivers—the Tha, Beng, Ou, Ngum, Kading, Bangfai, Banghiang, and Kong—are tributaries of the Mekong (Lao: Menan Kong). The Mekong flows generally southeast and south along and through western Laos on its way to the South China Sea, forming Laos's boundary with Myanmar and most of the border with Thailand. The course of the river itself is severely constricted by gorges in the north, but by the time it reaches Vientiane, its valley broadens and exposes wide areas to flooding when it breaches its banks. Near the Cambodian border, the Mekong forms a series of rapids and waterfalls. A few rivers in eastern Laos flow eastward through gaps in the Annamese Cordillera to reach the Gulf of Tonkin; the most important of these is the Ma, which rises in Xiangkhoang province and flows through Vietnam.

Soils in the floodplains are formed from alluvium deposited by rivers and are either sandy or sandy clay with light colors or sandy with gray or yellow colors; chemically, these are neutral to slightly acidic. Upland soils derived from crystalline, granite, schistose, or sandstone parent rocks generally are more acidic and much less fertile. Southern Laos contains areas of laterite (leached and iron-bearing) soils, as well as basaltic soils on the Bolovens Plateau.

Laos has the typical monsoon climate of the region, though the mountains provide some variations in temperature. During the rainy season (May to October), the winds of the southwest monsoon deposit an average rainfall of between 50 and 90 inches (1,300 and 2,300 millimeters),

with totals reaching 160 inches on the Bolovens Plateau. The dry season (November to April) is dominated by the northeast monsoon. Minimum temperatures average between 60 and 70 degrees Fahrenheit (16 and 21 degrees Centigrade) in the cool months of December through February, increasing to highs of more than 90 degrees Fahrenheit (32 degrees Centigrade) in March and April, just prior to the onset of the rains. In the wet season the average temperature is 80 degrees Fahrenheit (27 degrees Centigrade).

Laos has tropical rain forests of broad-leaved evergreens in the north and monsoon forests of mixed evergreens and deciduous trees in the south. In the monsoon forest areas the ground is covered with tall, coarse grass called *tranh*; the trees are mostly second growth, with an abundance of bamboo, scrub, and wild banana. The forests support a rich wildlife, including elephants, gaurs (wild oxen), deer, bears, tigers and leopards, monkeys, and a large variety of birds.

## **THE PEOPLE**

The population of Laos in 2003 was estimated at 5.66 million. Laos is predominantly rural and agricultural. More than 75% of the population was rural in 2002, living in villages ranging from ten to 200 households, or up to about 1,200 persons. The numerous isolated valley communities preserve a variety of different traditions and dialects. Villages usually are located close to rivers and roads that give people access to itinerant traders as well as to each other. Most villages are laid out around a main street or open area, farmlands being adjacent to the residential areas. Every village, if it can, has a Buddhist temple and supports at least one monk. The temple compound usually includes a public building that serves as a school and a meeting hall. Village leadership is usually divided, the headman having authority in secular matters and the monk in religious. The hill peoples usually are organized on tribal lines and live in smaller groupings. They are hunters and gatherers of forest products, as well as farmers, but their practice of shifting cultivation prevents them from establishing permanent settlements. Hill peoples living close to lowland areas tend to acquire the languages and cultures of their neighbors and to engage in limited trade with them; those living at higher elevations remain unacculturated.

Urban life in Laos is limited mainly to the capital, Vientiane, the former royal capital, Louangphrabang, and four or five other large towns. With the exception of Louangphrabang, which is hilly, all these towns are located in floodplains of the Mekong. Their populations are predominantly Lao, with smaller groups of Chinese, Vietnamese, and Indians. Compared with the cities of Thailand, Malaysia, or Vietnam, those of Laos are small and provincial.

Laos is an ethnically diverse country. Before the Indochina wars, sources commonly identified more than 60 different population groups. The 1985 census listed 47 such groups, some numbering only a few hundred persons. More recently, these peoples have been officially grouped under three names: Lao Loum ("lowland Lao"), Lao Theung ("Lao of the mountain slopes"), and Lao Soung ("Lao of the mountain tops"). Aside from this rather crude attempt to

"Laocize" minorities for political ends, such a grossly oversimplified scheme bears little relevance to the reality of these people's linguistic and cultural diversity, even if individuals in the remotest villages are taught today to identify themselves to visitors using this nomenclature. The language spoken by the Lao of Vientiane, for example, bears closer resemblance to that spoken by the Thai across the river than to those spoken by the Black Tai (Tai Dam) and Red Tai (Tai Deng) of Houaphan province, who are officially also Lao Loum but who would more accurately be called Lao-Tai. The Lao Loum also include the Tai Phuan of Xiangkhouang province, the Lue of Oudômxay province, and the Phu Tai of the south. Altogether, the Lao Loum comprised 66% of the population of Laos in 2000.

The Lao Theung are of Austroasiatic origin and are the indigenous inhabitants of Laos, having migrated northwards in prehistoric times. Ethnic groups within this broad category include the Kammu and Lamet in the north, the Katang and Makong in the center, and the Loven and Lawae in the far south. The Lao Theung comprised about 23% of the population in 2000.

The Lao Soung comprise Miao-Yao or Tibeto-Burmese speaking peoples who have continued to migrate into Laos from the north within the last two centuries, and made up about 10% of the population in 2000. Ethnic groups here include the Hmong (formerly called Meo or Miao), Man (or Mien or Yao), Akha and Lahu.

The predominant religion of Laos is Theravada Buddhism. Buddhism was the state religion of the Kingdom of Laos, and the organization of the community of monks and novices, the clergy (*sangha*), paralleled the political hierarchy. Today Buddhists constitute about 49% of the population, concentrated among the lowland Lao. About 42% of the population are animists, particularly concentrated among the Lao Theung and Lao Soung, although among lowland Lao there is both a certain syncretistic practice of, and tolerance for, animist customs. Christians constitute at most 1.5% of the population. Other minority religions include the Baha'i Faith, Islam, Mahayana Buddhism, and Confucianism.

In the constitution of the LPDR, freedom of religion is provided for; however, the government restricts this right in practice, particularly with respect to the minority religions. After some heavy-handed attempts in the aftermath of 1975 to take over the *sangha*, which it perceived as a rival grassroots organization, and the resultant flight of many monks abroad, the government has tread carefully. Although monks are still required to study Marxism-Leninism and attend certain party meetings, the government has patronized a revival of Buddhist culture and merit-making in recent years. At the same time, in spite of the regime's public opposition to "superstitious" beliefs, these practices and beliefs have gradually returned.

Laos has the lowest population density of any Southeast Asian country, with 61.9 persons per square mile (23.9 persons per square kilometer). Environmental factors make for a low average life expectancy, 52.0 years for males and 55.9 years for females. A high birth rate (36.0 per 1,000 population) is offset by a high infant mortality rate (90.8 per 1,000 population). Major causes of death are malaria, pneumonia, meningitis, diarrhea and tuberculosis. There has been a considerable out-migration of people from Laos since the mid-1970's, including most of the educated and professional elite. An estimated 250,000 migrated to the United States from 1975

to 1996, including about 130,000 Hmong. Approximately 100,000 migrated to other countries, including Australia and France. More than 28,900 Hmong and lowland Lao have repatriated to Laos. Some 3,500 of these came from China and the rest from Thailand.

Table 1–Area and population

Provinces	Capitals	Area (sq. mi.)	Area (sq. km.)	Population (1996 est.)
Attapu	Attapu	3,985	10,320	87,700
Bokeo	Houayxay	2,392	6,196	114,900

## HISTORY

### Early Period

The original inhabitants of Laos were Austroasiatic peoples who lived by hunting and gathering before the advent of agriculture. Trading was an important source of livelihood from earliest times. Traders used routes through the mountains, especially following the rivers. The Lao excelled at river navigation using canoes, which brought products like gum benzoin, cardamom, sticklac, and many foods to the hinterland. Traders who specialized in overland routes were the Yunnanese, the Shans, and the Burmese, using mules and horses, oxen, and elephants as beasts of burden.

Later, following the scattering of the Yueh ruling class in southern China after 333 B.C., one branch of these migrant peoples settled in a mountain range known as the Ai Lao, which is taken as the origin of the term Lao. These people brought the dragon ancestor myth and associated tattoos, and in turn adopted the confederative organization of the settlements they found among the indigenous people, which were known by a term already related to the much later *muang*. The ancestral couple known by the names Pu Ne and Na Ne, whose round faces still appear in folkloric ceremonies, if they have any basis in historical fact, probably lived in the 1<sup>st</sup> century A.D. A ruler, Khun Borom, is associated with the Lao legend of the creation of the world, which the Lao share with other people of the region like the Shan, and involves a huge gourd from which the commoners emerged. The current regime in Laos has connected its simplistic three-way ethnic categorization of the country to the gourd. As a 1996 publication of the Ministry of Information and Culture explains:

The gourd myth that has been told among the Lao illuminates historical realities with regard to the origins and national harmony in our country, Laos: The first group to be born are the Lao Theung; they are the eldest. Then, the Lao Loum followed, the younger of the two. And the last people are the Lao Soung, the youngest of the three.

From the 3<sup>rd</sup> century A.D., there is evidence of a number of princely fiefdoms in central Laos based on wet rice cultivation and trading with the Menam valley and the coast of Vietnam. Theravada Buddhism reached Laos in the 7<sup>th</sup> and 8<sup>th</sup> centuries through the Mon kingdom of Dvaravati centered on the lower Menam valley.

The 8<sup>th</sup> and 9<sup>th</sup> centuries were marked by the contending powers of the Nan Chao kingdom in Yunnan and the Khmer kingdom of Kambuja-desa, which, under its ruler Indravarman I expanded north to establish an outpost at Xay Fong, site of present-day Vientiane. The then ruler of Vientiane, a man of high religious merit named Canthaphanit, moved north to Muang Sua, present-day Louangphrabang, where he had a long and peaceful reign. In the meantime, the seacoast kingdom of Champa, an enemy of the Khmers, expanded into southern Laos and maintained a presence on the banks of the Mekong until 1070.

### Lan Xang

A second expansion of Kambuja-desa at the end of the 12<sup>th</sup> century under Jayavarman VII brought brief Khmer suzerainty over Muang Sua. The invasion of the Mongols, who in 1253 destroyed Nan Chao, forced the Khmers to retreat and acknowledge Mongol suzerainty in 1285. Intending no doubt to consolidate their communications, which were threatened by Vietnamese

encroachments from the east, the Mongols arranged the kidnapping of two sons of the pretender to the throne of Muang Sua and sent them to Angkor, where the younger son, Fa Ngum, married one of the Khmer king's daughters. In 1349, Fa Ngum, at the head of a 10,000-man Khmer army, set out northbound on a series of conquests that would create a large kingdom, centered on the Mekong valley, to be known as Lan Xang. After a series of battles, Fa Ngum and his consort entered Muang Sua and were acclaimed by the population, whose ruler, Fa Ngum's father, had either committed suicide or fled. On June 24, 1354, Fa Ngum was crowned king at the future site of Vientiane, where he had won a victory over the local ruler. From his capital at Muang Sua, Fa Ngum reigned over a kingdom that extended on both banks of the Mekong from the border of China to that of Cambodia. Through relations of vassalage, he also extended his sway over principalities in the mountains adjoining Vietnam.

The first eight years of Fa Ngum's reign (1354-1362) appear to have passed uneventfully. Many Buddhist pagodas were constructed. This period was followed by six years of troubles (1362-1368). Fa Ngum's lamaistic Buddhism came into conflict with the gentler Theravada Buddhism espoused by the majority of his people. Forgetting the lesson of tolerance he had been taught as a young man, Fa Ngum severely repressed popular agitation that had anti-Mongol overtones, and many pagodas were torn down. A daughter of the ruler of Ayutthaya arrived at Muang Sua, as had been promised by her father, and became Fa Ngum's second wife. She arranged for a religious and cultural mission to come to the capital in 1373 and bring a hundreds-year-old statue of the Buddha from Sri Lanka, called the phrabang. In the same year, Fa Ngum, bowing to popular sentiment, withdrew and his son assumed the regency. He died in 1393. Mongol overlordship of the middle Mekong valley was at an end.

The kingdom founded by Fa Ngum lasted in its approximate borders for another 300 years. His descendants remained on the throne of Muang Sua, renamed Louangphrabang, for almost 600 years after his death. There were, to be sure, internal intrigue and external interventions during this long period, notably a massive Vietnamese invasion in 1478, followed by other invasions by the Siamese and Burmese. However, from 1633 to 1694, Lan Xang was ruled by a peaceful ruler, Souligna Vongsa, who brought stability and peace to the kingdom. It was during this period, regarded as Lan Xang's golden age, that European visitors first published accounts of Laos.

At Souligna Vongsa's death in 1694 the kingdom was left without a clear successor, and it split into three kingdoms. These were a reduced kingdom of Louangphrabang, a kingdom of Viangchan which included Vientiane and the surrounding area, and a kingdom of Champasak in the far south. The rulers of these three kingdoms, following personal ambition rather than statesmanlike motives, repeatedly appealed for foreign help from their Vietnamese, Siamese, and Burmese neighbors, leading eventually to the occupation of Viangchan by a Siamese army in 1779. The Siamese were now overlords of both banks of the Mekong. They enthroned Chao Nanthasen as ruler of Viangchan (1781-1792), but he earned the enmity of the Siamese by engaging in secret overtures to the Vietnamese, according to a treasure trove of official documents discovered in 1974 at the Vietnamese border post of Quy Hop. The Lao, for their part, were enraged by measures, which included tattooing, applied to the Lao who had been settled on the right bank by the Siamese after their first occupation of Viangchan. War broke out

anew when the Lao ruler, Chao Anou, after having failed to obtain relief by diplomacy, invaded the Khorat plateau. The Siamese marched again, overwhelmed Chao Anou's army, and occupied Viangchan again in 1827. This time the Siamese razed the capital and deported its entire population to the right bank. The Viangchan kingdom was no more. Sporadic resistance against the Siamese on the left bank continued for years, led for some time by the *latsavong*, or first prince of the old Viangchan kingdom.

Elsewhere the situation was hardly better. The kingdom of Louangphrabang had fallen into a pitiable state. Its ruler, Manta Thourath (1817-1836), was a vassal of Siam, which removed his viceroy, Oun Keo, to Bangkok as a hostage. Louangphrabang was able to maintain a precarious suzerainty over the Phuan principality centered in Xiangkhoang, where the Vietnamese under their emperor Minh Mang had also been active and had established a garrison in the fortified town of Khang Khay. Beginning in 1869 bands of warrior horsemen displaced from China after the failure of the Taiping rebellion wreaked havoc on the Plain of Jars. These were the Hos. Another people who arrived from southern China were the Hmong, who grew crops of dryland rice and maize at high elevations where they were not a threat to lowland dwellers. Further south, the Siamese installed outposts between the Mekong and the mountains, and removed entire villages to the right bank. Finally, the kingdom of Champasak was, like Louangphrabang, a vassal of Siam.

### The French Protectorate

The French established themselves in Vietnam in the 1850's. Their interest in Laos was mainly as a route to China and they stuck mainly to the rivers. The expedition of Ernest Doudart de Lagrée, which visited the ruins of Viangchan in April 1867 and that of Reinhart and Mourin d'Arfeuille in 1869, traveled up the Mekong and did not penetrate into the mountains. In the dry season of 1881-1882, however, an Alsatian missionary, Father Charles Blanck, who had been charged by his apostolic vicar with the task of evangelizing all the "savages" of the uncharted lands lying between Nghe An and the Mekong, traversed the mountainous region from Kam Keut in the south to Muang Ngan in the north. At Muang Ngan, Blanck met the ruler of the Phuan principality, Prince Khanti, who had taken refuge in a fort built by the Vietnamese in 1836 against the Siamese, the rest of his kingdom having been terrorized by the Hos. In an article published in Paris in 1884, Blanck wrote that the Phuan ruler had been a sub-vassal of Annam and had received the regalia of appointment from an Annamese mission. Blanck thus became the first French observer to report, on the basis of first-hand information, the relations of vassalage that bound a left-bank principality to Annam. His article may have alerted the French government to the possibilities flowing therefrom, as they had guaranteed Annam the integrity of its territorial domains, whatever these were. The French accordingly put a researcher to work in the very complete archives of the Hue court. The court, however, was occupied for the moment by the disorders left at the death of the childless emperor Tu Duc in the previous year. The unfortunate Khanti was arrested in 1886 and placed under house arrest in Bangkok, where he died in 1893.

The Siamese conducted campaigns against the Hos in northern Laos for five consecutive years beginning in 1882. The first three campaigns were half-hearted affairs, entrusted to armies

made up of peasant recruits who had to go home again by rice-planting season each year. The campaigns of 1885 and 1886, however, were more serious. A Siamese force advanced as far as Muang Thaeng (Dien Bien Phu). By 1887, the Hos had been put to rout.

In the midst of these campaigns, the French consul general in Bangkok notified the government in June 1885 that a vice-consul had been appointed and a vice-consulate would be created in Louangphrabang in accordance with a most-favored-nation rights clause contained in a Franco-Siamese treaty of 1856. The vice-consul, Auguste Pavie, an official of the Cambodian posts and telegraph service, was duly designated in December. A new Franco-Siamese convention of May 7, 1886 acknowledged the role of Siamese officials in Laos for purposes of administrative dealings without implying French recognition of Siamese claims to sovereignty. After numerous frustrations and delays, Pavie arrived in Louangphrabang on February 10, 1887, accompanied by 10 Cambodians and a Siamese “minder.”

The resident Siamese commissioners granted Pavie’s request for an audience with the aged king, Oun Kham. A few days later, the Siamese commander of the recent campaign arrived and paraded his army down the main street. He described to Pavie in glowing terms how the entire region was pacified, and how he had taken a large number of hostages as a guarantee against further troubles. Pavie had not gone far on an exploratory trip to the north when he was warned that the ruler of the Sipsong Chuthai principality, whose sons had been taken away by the Siamese, was on the warpath. He therefore returned to Louangphrabang, finding the Siamese had decamped. He was just in time to pluck the king to safety from the ransack of the town and the murder of the viceroy, Prince Souvanna Phouma, the son of Oun Keo. The grateful King told Pavie that, because Siamese protection had proved worthless, he wished to place his kingdom under French protection.

Urged on by a strong colonial lobby in Paris, the French in Indochina sent three armed columns across the mountains into central and southern Laos to evict the Siamese. In a classic example of gunboat diplomacy, the French sent two warships to force the passage of a fort at the mouth of the Menam and anchor in the river with their guns trained on the royal palace in Bangkok. The Siamese accepted a list of demands presented by the French, and under a treaty of amity between the two countries of October 3, 1893, Siam renounced all claim to territories on the left bank of the Mekong and to islands in the river. Thereupon, Pavie was able to grant the aged Oun Kham’s wish for a protectorate over his kingdom, and was present at the investiture of a new king and viceroy, Boun Khong, son of the murdered Souvanna Phouma, at Louangphrabang on April 19, 1895. The rest of France’s new possessions were to be administered by posted French officials called *résidents*, who were on an equal footing with the Lao provincial governors, or *chao khouengs*. Vientiane was made the administrative capital. Further conventions with Siam in 1904 and 1907 ceded to French control the right-bank territories of Xaignabouri and Bassac. With adjustments of the eastern border, about which arguments among French officials continued on grounds of ethnic affiliations, Laos came to assume the shape we know today.

### The Coming of Independence

The principal impact of World War II on Laos was the coming to power of the Pibul Songkram government in Thailand (the name adopted by Siam in June 1939) which, with secret Japanese backing, broadcast to the Lao to rise up against the French and mounted air raids on the towns along the Mekong. Under a peace convention of May 9, 1941, mediated by Japan (which had negotiated troop-stationing rights in Indochina in return for preservation of French sovereignty and administration), the Vichy government made territorial concessions to Thailand, including the ceding back of control over the portions of the right bank. In an attempt to assuage hard feelings, Marshal Henri Pétain signed a treaty with King Sisavang Vong on August 29, 1941, regularizing the protectorate and including Viangchan, Xiangkhoang, and Louang Namtha within the kingdom of Louangphrabang. The treaty also reinstated the position of viceroy, which had been abolished at Boun Khong's death in 1920.

The new viceroy, Prince Phetsarath (the son of Boun Khong by his second wife), was born in 1890. He prepared for a career in administration, and rose to the post of director of the Laotian civil service by 1919. In 1923 he was promoted by the governor general to be inspector of political and administrative affairs, and in this capacity organized a consultative assembly made up of district and province chiefs. He also reorganized the administrative system of the Buddhist clergy, or *sangha*, setting up a system of Pali schools for the education of monks. The French were eager to counter the pan-Thai irredentism propagated by the Pibul regime, and fostered Lao nationalism in the form of the Lao Nhay, or Lao Renovation Movement, which sought to provide Laos with its own personality with respect to its neighbors and to inculcate a sense of *patrie* (homeland).

Japanese troops moved into Pakxe, Savannakhet, and Thakhek on the evening of March 9, 1945, when Japan put an end to French administration all over Indochina. The following day they moved into Vientiane and Xiangkhoang. The Japanese quickly imprisoned French officials and their families. Hmong guerrillas operating under French command delayed the Japanese on the roads to Louangphrabang, where they did not arrive until April 7, after the French had gone. The Japanese suggested the king proclaim the independence of Laos, but Sisavang Vong demurred, replying that he had told French representatives to whom he had granted an audience that his attitude toward France would not change. Compelled by the Japanese, the king issued the proclamation demanded, but secretly entrusted Prince Kindavong, a younger half-brother of Phetsarath by Boun Khong's fifth wife, with the mission of representing him in Allied councils. The choice of collaborating with the Japanese or going into the jungle to join the active Franco-Laotian resistance, which was receiving supplies by air drops from B-24 Liberators of the British Force 136 flying from Assam in India, split many families of the Lao elite, including that of Phetsarath.

Upon the Japanese surrender, Phetsarath, in his capacity as prime minister and taking advantage of the isolation of Louangphrabang, sent out from Vientiane a telegram to all *chao khouengs* informing them that the king's independence proclamation was still in force. He followed this up with a message to the king requesting a royal proclamation of the unity of Laos. Receiving word of a royal proclamation that the French protectorate over the kingdom of Louangphrabang continued, and not having received a favorable reply to his request, Phetsarath took matters into his own hands, issuing a proclamation of unification and announcing that a

Congress of People's Representatives would soon meet to decide all political, economic and social questions. Bolstered by assurances of support from French representatives of Charles de Gaulle's provisional government parachuted into Laos, the king accused Phetsarath of exceeding his authority and stripped him of his position as prime minister and his title of viceroy. The king was also fearful of the consequences of the Allied decision at the Potsdam Conference to have Chinese Nationalist troops enter Indochina north of the 16<sup>th</sup> Parallel to receive the Japanese surrender. Family ties are always important in Laos, and Phetsarath's position was made delicate in that he was married to a sister of Sisavang Vong; in actual fact, Phetsarath's main quarrel appears to have been with the crown prince, Savang Vatthana. In the midst of these dramatic developments, a team of the U.S. Office of Strategic Services (OSS) landed at Vientiane from Kunming to report on the situation of Allied prisoners of war, and received petitions for Lao independence during its brief stay. The OSS team offered encouraging advice, but could promise nothing officially. The American position, communicated to De Gaulle by President Truman, was that the United States had raised no question concerning French sovereignty over Indochina.

Events in Vientiane now raced ahead. A provisional revolutionary government, called the Lao Issara, was proclaimed on October 12, a date still observed in Laos as the country's independence day. This government was composed of men whose families became prominent in Lao politics. The prime minister was Xieng Mao, the minister of interior and justice Chao Somsanith, the minister of finance Katay Don Sasorith, the minister of defense Sing Ratanassamay, the minister of education Nhouy Abhay, the minister of economy Oun Sananikone, and the minister of public works Prince Souvanna Phouma. A half-brother of Phetsarath by Boun Khong's sixth wife, Prince Souphanouvong, arrived from Vietnam, where he had been in touch with the Viet Minh (which had seized power in Hanoi in August), and was made minister of foreign affairs as well as commander in chief of a yet-nonexistent Lao independence army. Souphanouvong brought assurances of armed Viet Minh support against the French. Phetsarath himself, having announced his withdrawal from politics, became an adviser to the new government.

In an effort to give their government some semblance of legitimacy, the Lao Issara leaders hastily named a People's Committee of 34 members, which elected a Chamber of People's Representatives. This Chamber notified Sisavang Vong that, having failed to heed an ultimatum to abdicate, his "total destitution" had been voted. Franco-Laotian guerrillas, however, entered Savannakhet and moved north, reinforced by units of General Leclerc's expeditionary force in Saigon. Their advance met with stiff resistance at Thakhek from an entrenched mixed force of Viet Minh and Lao, and Souphanouvong himself was wounded by a strafing Spitfire and evacuated across the river before the French entered the town. The Lao Issara ministers abandoned Vientiane and moved to Louangphrabang where they implored the king to resume the throne, a request to which Sisavang Vong graciously acceded. A royal ordinance sanctioned the unity of Laos. The French entered the town as Phetsarath and the Lao Issara ministers fled across the river. The king then signed an ordinance declaring null and void all acts to which he had given his sanction under duress, and promised his people a democratic constitution.

With the French again in control, they took the first step to normalize the situation by establishing a Franco-Laotian joint commission in June 1946 to discuss future relationships. The commission produced a document confirming the existence of a unified Laos under sovereignty of the king of Louangphrabang, but in which the French retained major political, military and economic powers. A Franco-Siamese agreement signed in Washington on November 17, 1946, restored the right-bank territories to Laos. On December 15, 1946, in the face of guerrilla harassment in the form of raids from across the Mekong, 44 delegates to Laos's first popularly elected Constituent Assembly were chosen. Over the following months these delegates worked out, under French supervision, a constitution that was promulgated by Sisavang Vong on May 11, 1947, in fulfillment of his promise to his people. The constitution conferred equal citizenship upon all the races of Laos. The date became Laos's national day. On November 26, 1947, the 33 deputies of Laos's first National Assembly invested a government headed by Prince Souvannarath, a half-brother of Phetsarath by Boun Khong's fourth wife. France transferred its remaining powers. A modest royal army was formed, to be trained by the French. On February 7, 1950, the United States and Britain recognized Laos as a member of the French Union under the 1946 French constitution. Later that year, the United States opened a legation in Vientiane.

The Lao Issara exiles who had settled in Bangkok were having problems. First, a Thai government much less sympathetic than its predecessor to the anti-French resistance in Laos was brought to power in a *coup d'état*. Second, Phetsarath, still enjoying the position of supreme adviser, had a falling out with Souphanouvong over the latter's willingness to entertain close relations with the Viet Minh. The American historian Christopher Goscha, who has studied the archives in Hanoi, provides proof that the Viet Minh in this period were hoping to recruit Phetsarath to their cause. But Phetsarath was not only strongly anti-French, he was also anti-Vietnamese from his experience with the large numbers of Vietnamese with whom the French had staffed their administration in Laos, and he feared a Vietnamese takeover of the Lao Issara. Thus, when the French opened negotiations with the Bangkok exiles and offered an amnesty, the majority of the ministers accepted and flew back to Vientiane, leaving Phetsarath and Souphanouvong behind.

Souphanouvong was announced on the Viet Minh radio as presiding over a Lao resistance government formed at a congress held in the Viet Minh-held area of Vietnam in August 1950. This government included two Lao-Vietnamese *métis*, Kaysone Phomvihane and Nouhak Phoumsavan, as well as Phoumi Vongvichit and Tiao Souk Vongsak. Illustrative of the intended wide appeal of a new front also created by the congress, the Neo Lao Issara (Free Laos Front), was the naming of its militant wing as the Pathet Lao (Lao Nation). However, the reality of power remained with the Viet Minh, who made deep incursions into northern and central Laos in 1953 and 1954, stretching French airlift capacity to the limit.

In elections for a four-year term to the National Assembly held in August 1951, the Progressive Party, which had been formed by the returned Lao Issara ministers led by Xieng Mao, Katay Don Sasorith, and Prince Souvanna Phouma, a younger brother of Phetsarath, won 15 of 39 seats. A government headed by Souvanna Phouma, the first of many led by the prince who became Laos's indispensable man, was invested in November. Following further negotiations, the Lao signed a treaty of amity and association with France on October 22, 1953,

which removed the last strictures on independence. It was thus as the representative of a fully sovereign kingdom that a delegation from the royal government attended the 1954 Geneva Conference. The leader of this delegation, Foreign Minister Phoui Sananikone, declared that the royal government was prepared to offer integration of the Pathet Lao rebels into the body politic of Laos and guarantee them the rights and freedoms provided for in the constitution. Phoui also declared that Laos would not join any military alliance, allow foreign military bases, or request military aid “except for the purpose of its effective territorial defense.”

The armistice agreement for Laos, signed by the commander of French Union forces and the Viet Minh deputy defense minister, provided for the withdrawal of Viet Minh forces from Laos and the regrouping, “pending a political settlement, of the fighting units of Pathet Lao” in the border provinces of Houaphan and Phongsali. These favorable terms owed much to the diplomacy of Chinese Premier Zhou Enlai, whose large delegation overshadowed the much smaller Viet Minh delegation headed by Pham Van Dong. These friendly relations appeared to be cemented in April 1955 when Zhou Enlai at the Bandung Conference brought together the Lao delegation and the North Vietnamese delegation and Zhou and Dong gave the Laotians verbal assurances of non-interference in a neutral Laos. With the prospect of renewed peace and unity, Laos became a member state of the United Nations in December 1955.

It should be pointed out that, in the wake of the Geneva Conference, all members of the Lao elite (with the exception of the king, whose views will be discussed below) saw negotiations as the only realistic means of dealing with the problem posed by the Pathet Lao. The consolidation of the Viet Minh in a viable state in North Vietnam made a military solution unrealistic, as the Pathet Lao, many of whose recruits were members of minority tribes inhabiting the border region, would slip across the border if pursued into a permanent sanctuary, only to infiltrate back through the mountains to resume their guerrilla war when conditions permitted.

Accordingly, the Lao elite in Vientiane fully expected, even before the negotiations began, that the settlement would include a coalition government integrating the Pathet Lao into the body politic. Such a solution would depend on a foreign policy of neutrality and good-neighborly relations with North Vietnam and China. Even when the negotiations proved much more arduous than foreseen, a coalition solution based on genuine sharing of power at all levels was still advocated by most Lao leaders. This approach to the problem, however, depended on two critical assumptions: (1) that the Pathet Lao were first and foremost loyal nationalists who had opposed the French rather than the agents of a Marxist-Leninist revolution led by the Vietnamese Communists; and (2) that Laos would be able to adhere to strict neutrality in foreign affairs. Later on, as they saw their country become a battleground anew, many among the nationalists would come to see these assumptions as having been misplaced.

### The First Coalition

Elections were held in December 1955, with 239 candidates contesting the 39 seats at stake. The Pathet Lao, seeing their advantage in stringing out the negotiations with the royal government that had begun at the end of 1954, boycotted the election. The Progressives again

emerged as the largest single party. The U.S. legation had been raised to embassy level following Geneva, and Ambassador Charles W. Yost warned that the Pathet Lao were embarked on a campaign of recruitment. The Eisenhower Administration was suspicious of neutralism in Southeast Asia, whether in a constitutional monarchy with democratic elections like Laos or in states ruled by one man like Prince Norodom Sihanouk and President Sukarno, and tended to equate neutralists with pro-Communists. On instructions from the State Department's Office of Philippine and Southeast Asian Affairs, Yost put the royal government on notice that any participation of Communists in the government, which he saw as inherent in the coalition strategy, would lead to a reconsideration of American support.

The investiture in March 1956 of a new government headed by Prince Souvanna Phouma as Prime Minister gave the signal for a renewed effort at negotiations. The Prime Minister believed that he could negotiate in good faith with his half-brother, Prince Souphanouvong, to achieve the political settlement foreseen at Geneva. There were many difficulties, however, created by the Pathet Lao claim that the armistice agreement gave them the exclusive right to administer the two provinces of Houaphan and Phongsali. An International Control Commission (ICC) had been established to supervise the implementation of the agreement. The Indian chairmen of the ICC in the post-1954 period successively avoided supporting the royal government's claim to sovereignty over the whole territory of Laos. Instead, the Indians consistently attempted to find compromises between the two sides, as if the two parties were on the same footing, and at other times declined to take a stand at all on such issues as requests for on-the-ground inspections, arguing that the ongoing direct negotiations took precedence over ICC interventions. It was not until 1956 that the Canadian delegation, in the face of objections from the Poles, forced through a resolution affirming the principle of sovereignty. Another difficulty were the *démarches* by the then U.S. Ambassador in Vientiane, J. Graham Parsons, who, in accordance with his instructions from Washington, fought against a coalition at every step and objected to Prince Souvanna Phouma's acceptance of invitations to visit Peking and Hanoi. Souvanna Phouma was determined to persevere, however, and by the end of 1956 the outlines of a settlement began to emerge.

On October 22, 1957, final agreement was reached on re-establishment of the royal administration of the two provinces, formation of a coalition government, and supplementary elections to the National Assembly to be held in May 1958. Souphanouvong symbolically returned to the royal authority in the person of Crown Prince Savang Vatthana, the administration of the two provinces. A governor from the Lao civil service was appointed in Houaphan and a Pathet Lao governor in Phongsali, each with a deputy of the opposing camp. Mayors and other provincial officials were equally divided between the two parties. Two Pathet Lao battalions, totaling 1,500 men, would be integrated into the royal army, with the remainder being sent home. Souphanouvong and Phoumi Vongvichit became ministers of the royal government.

A shock came when the political party formed by the Pathet Lao, the Neo Lao Hak Sat (NLHS) (Lao Patriotic Front), together with its ally, the Santiphab (Peace) Party, won two-thirds of the seats contested in the supplementary elections. During the electoral campaign, a main theme of the NLHS's propaganda was that U.S. aid went to create many institutions in the capital

but did not reach the villages. Laos at this point was receiving more U.S. aid per capita than any other country in the world. Certain abuses in the commercial import program were being investigated by Congress. But the election victory was mainly due to the failure of the old-line parties to agree on limiting the number of their candidates, thereby splitting their votes and allowing the NLHS candidate to win a seat with a minority of the total votes cast in many constituencies. The change in climate in the summer of 1958 was further marked by the announcement that with the holding of the elections the royal government had fulfilled its obligations under the Geneva Agreement, and had requested the adjournment *sine die* of the ICC. The establishment of diplomatic relations with Taipei and Saigon also set a precedent unwelcome in Peking and Hanoi.

A major concern of U.S. policymakers had been the inadequacy of training and equipping the royal army following the departure of all French troops except for a small training mission at Xenobong. Thus, without fanfare, the United States, in December 1955, established a disguised military mission in Vientiane, the Programs Evaluation Office (PEO), with staff whose names had been removed from the Pentagon's rosters of active service personnel. A possible threat soon appeared. North Vietnamese security forces in December 1958 occupied and claimed as their own a strategic sliver of territory abutting the Demilitarized Zone in the face of protests from Vientiane. This action coincided with the decision of the Vietnamese Communist Party to launch armed resistance against the government of South Vietnam. When then Ambassador Horace H. Smith showed Savang a message from the State Department declining to meet the crown prince's request for a guarantee of Laos's borders on grounds of imprecise demarcation and the complex history of the border areas, Savang told Smith bluntly he was dissatisfied with the reply. Savang claimed the maps establishing Laos's borders were precise and definite, but he accepted the U.S. right to decide whether or not to act in the matter. This incident was soon followed by the fleeing of the Pathet Lao battalions to the North Vietnam border, the resumption of guerrilla warfare during the summer of 1959, and an appeal by the royal government to the United Nations for a fact-finding mission, whose final report was, not surprisingly, inconclusive with respect to proof of foreign intervention. The government ordered the arrest of the NLHS deputies to the National Assembly. The first coalition was at an end.

### Toward Full-Scale War

In October 1959, Phetsarath and King Sisavang Vong died in Louangphrabang within two weeks of each other. Phetsarath had been allowed to return to Laos from Thailand and had his title of viceroy restored in the euphoria over national reconciliation leading to the coalition, but had played no further political role. Crown Prince Savang Vatthana immediately succeeded his father, but remained uncrowned, a propitious date for the coronation ceremony not being found.

With the mandate of Prime Minister Phoui Sananikone approaching its end in December 1959, General Phoumi Nosavan, an ambitious general, and his supporters in the Committee for Defense of the National Interest (CDNI), a group formed in 1958 reportedly with financing from the U.S. Central Intelligence Agency (CIA), moved to force the king to grant them power. They put on a show of force and Radio Vientiane broadcast communiqués alleging a Communist plot.

However, Smith and the ambassadors from the United Kingdom, France and Australia secured an audience with the king and stressed the need to observe constitutionality. The crisis passed, and an interim government headed by Kou Abhay took over until new elections could be organized. The events in Vientiane of those days smacked of the way in which General Sarit Thanarat, a cousin once removed of Phoumi's, had recently seized power in Thailand. Temporarily rebuffed, Phoumi bided his time as minister of defense in the new cabinet.

The elections held in April 1960 were so fraudulent as to bear condemnation by the Western powers. Changes had been made to the electoral law, financial support for anti-Communist candidates was arranged, civil servants were enlisted as campaign workers, and ballot tampering was widespread. Prince Souvanna Phouma was elected without fraud and became president of the new National Assembly. A new government headed by Chao Somsanith was invested in June. The NLHS had not been allowed to run candidates. The Front's deputies in prison outside Vientiane escaped on a dark, rainy night in May, following a plan prepared by the Front's chief for the province of Viangchan, for which he afterwards was awarded a medal. The king held Phoumi responsible for the escape, which worsened relations between the two.

The question of responsibility for training the royal army had led to differences between the French and the Americans. With De Gaulle in power in Paris once more, the French determined to resume their prerogative of training, which they had acquired at Geneva and had never surrendered. The differences were papered over in a temporary arrangement negotiated between Paris and Washington. On August 6, however, General Phoumi threatened the chief of the French military mission with a demand for the withdrawal of all French instructors. Encouragement in this course seems indicated by the fact that French military intelligence at Xeno had intercepted a message from Sarit to Phoumi urging him to seize power at all cost, according to a message from the French Embassy in Vientiane that I found in the archives of the Quai d'Orsay. On August 9, Captain Kong Le led his Second Paratroop Battalion, which happened to be in Vientiane between campaigns, in a real *coup d'état* against the royal government, whose ministers were away in Louangphrabang conferring with the king. Circumstantial evidence suggests that, rather than being a case of simple discontent on the part of Kong Le's soldiers, the action may have been planned between Phoumi and Kong Le as a way of Phoumi's seizing power. In that case, the plan went awry. Phoumi immediately flew from Louangphrabang, but unable to land anywhere in Laos, landed at Ubon, where he informed an emissary from the U.S. Embassy in Bangkok who met him that he planned to "straighten things out."

Negotiations between Vientiane and Louangphrabang followed in which the cabinet ministers tendered their resignation and were allowed to return to Vientiane. A new cabinet headed by Prince Souvanna Phouma was duly invested by the National Assembly and immediately offered conciliation to General Phoumi, who set up his headquarters in Savannakhet. General Phoumi, however, had solicited and received secret support from Sarit and U.S. Chargé d'Affaires Leonard Unger, the United States being unwilling to risk jeopardizing its close links with Sarit by rebuffing Phoumi's request. Aid to Phoumi was supported by a recommendation of the Joint Chiefs of Staff in Washington, and a channel to his

headquarters was opened through the PEO. Thailand immediately imposed a blockade on Vientiane.

In Vientiane, Ambassador Winthrop G. Brown, who had arrived at post only days before the *coup*, received cables from the State Department instructing him to find a way of getting rid of Kong Le. Prince Souvanna Phouma's government, having respected constitutionality, was recognized as legal by all governments except Thailand. Brown was placed in a difficult position by the Pentagon and CIA support for General Phoumi, but worked out a compromise with the prime minister to the effect that he would raise no objection to the aid so long as Phoumi did not use it against Vientiane. Phoumi on his U.S.-supplied radio transmitters was issuing a stream of communiqués alleging Pathet Lao threats to various royal army outposts around the country; these were false, as the Pathet Lao remained quiescent at this stage, and Phoumi with his new equipment took no action against them.

The stalemate continued thus for several weeks. A visit to Vientiane by former U.S. Ambassador Parsons, now Assistant Secretary of State for Far Eastern Affairs, did nothing to dissuade Souvanna Phouma from his intention of opening negotiations with the NLHS with a view to restoring the coalition. Parsons perhaps had an exaggerated impression of Kong Le's power to influence events. The Pentagon, however, was thinking not just of finding a face-saving way for Kong Le to leave the scene. In a meeting with two high-level officials, Assistant Secretary of Defense John N. Irwin II and Vice Admiral Herbert D. Riley, chief of staff to the commander in chief Pacific, and a CIA representative in Ubon on October 17, General Phoumi received assurances that the United States was backing him "all the way." He opened his attack on Vientiane in the early days of December, using artillery fire freely, especially targeting the headquarters of the French military mission. Kong Le opened counterbattery fire using artillery pieces flown in to Wattay by Soviet Ilyushin-14's from Hanoi, further internationalizing the conflict. Hundreds of innocent civilians were killed. The American embassy was damaged. Ambassador Brown kept a diary, which is in the National Archives. Before the battle erupted, Prince Souvanna Phouma fled Vientiane to safety in Phnom Penh, although he and Prince Norodom Sihanouk had never been close.

Kong Le finally was forced to withdraw in good order up the Louangphrabang road. Soviet planes continued to airdrop supplies to his retreating column as it made its way northward to the Sala Phou Khoun junction and then turned eastwards toward the Plain of Jars. General Phoumi was slow to pursue, and by the time he mobilized his force it was too late to mount a defense of the Plain of Jars, where the Phoumist garrison with their PEO advisers had evacuated by air. The Plain was soon transformed into an armed camp by Kong Le's Neutralist troops and those of the Pathet Lao, who announced they had formed an alliance in support of Souvanna Phouma. The Prince maintained he had not resigned and was still Prime Minister. Early in the new year, he established his capital at Khang Khay, where he inaugurated the headquarters of his Neutralist Party (Phak Pen Kang). He was recognized as legal prime minister by all the Communist powers, and the Soviet Union, China and North Vietnam established missions at Khang Khay.

General Phoumi as Deputy Prime Minister formed a new government in Vientiane in early January with Prince Boun Oum of Champasak as Prime Minister. This government, after many debates and royal ordinances intended to regularize the actions of the past months, was duly invested. However, only the United States and Thailand accorded it formal recognition. The French position was that they were willing to work with the Boun Oum government as a de facto government but were unwilling to go to the extent of supporting that government as a juridically legal government. The French maintained their embassy in Vientiane, and Ambassador Pierre-Louis Falaize treated the situation as one where the government had simply left town. This forced him to resort to extraordinary means to communicate with Souvanna Phouma, such as traveling from Vientiane to Khang Khay via Phnom Penh, as General Phoumi did not allow any direct flights. Falaize and Brown formed an effective team together, working to tamp down the dangers of the situation as best they could. One of Brown's early concerns was to dissuade the Boun Oum government from appealing for Western military intervention; the kingdom, as a protocol state of the Southeast Asia Treaty Organization, was within its rights to appeal for assistance in the event of aggression.

As Brown and the State Department had been warning to little avail, the first days of January saw the commitment of significant numbers of North Vietnamese "volunteer" troops to the fighting for the first time. They joined Kong Le's troops in clearing Routes 7 and 13 as far south as Vang Vieng, compelling General Phoumi's ill-led troops to fall back in disarray. A number of PEO advisers were captured. Elsewhere, Tha Thom fell, followed by Laksao, Nhommarath, Mahaxay and Kam Keut. The general himself went nowhere near the fighting front. Marshal Sarit, after talking boldly about fighting the Communists in Laos, committed some security forces, who had a long history of association with the CIA, to advise and support Colonel Vang Pao, the leader of a Hmong guerrilla force operating on the fringes of the Plain of Jars. Taking advantage of split loyalties among the Hmong clans, the Pathet Lao had recruited a rival of Touby Lyfoung, the traditional Hmong leader in the French time, Faydang Lobliayao. Likewise, in the south the Pathet Lao adroitly enlisted the support of Sithon Kommadan, the son of a renowned rebel leader who had been killed by the French.

From his refuge in Phnom Penh, Souvanna Phouma wrote in February to President John F. Kennedy. The Prince had bitterly criticized Parsons in an earlier interview, but with the incoming of a fresh team in Washington, he hoped for more cordial relations. After some hesitation caused by concern for the impact on the beleaguered Boun Oum government, the administration responded to the overture, and in March Kennedy's ambassador at large, W. Averell Harriman, had tea with the prince on neutral ground at an official's house in New Delhi. The two men got along well. Souvanna Phouma recorded in his diary: "I believe I made a good impression on him." It was the beginning of a long friendship.

Following its defeats on the battlefield, the Boun Oum government lost little time in suing for a truce. The Neutralist radio station called for a meeting in the village of Ban Namone on the road between Vientiane and Louangphrabang. Like the truce-talks village of Kaesong in the Korean war, Ban Namone was 15 kilometers inside Communist-held territory. The radio instructed the Vientiane government to send an emissary under a white flag to meet a Pathet Lao representative near Ban Hin Heup on the front line. At this first meeting on May 1, a provisional

local ceasefire was put into effect. Two days later, one formal ceasefire order to the Pathet Lao forces was signed by General Khamtai Siphandon and another to the Neutralists was signed by Kong Le.

The talks began in the bamboo schoolhouse in the village of Ban Namone. The three delegations were headed by Pheng Phongsavan acting on behalf of the Souvanna Phouma government as chairman, Nouhak Phoumsavan for the Pathet Lao, and Sing Rattanasamay for the Boun Oum government. The delegations were flown in by helicopter. The atmosphere was convivial, with much exchange of news of families divided by the front line. But the Pathet Lao, with its strong backing from North Vietnam, was in a stronger position than it had ever been. At the same time, in faraway Geneva, an international conference convened under the leadership of the 1954 co-chairmen, the United Kingdom and the Soviet Union. The Kennedy Administration accepted only to participate in a 14-nation conference, of which Laos was one, but the Soviets insisted that the Ban Namone precedent be followed and the three Laotian factions, including the Pathet Lao, be seated. A face-saving formula, under which the issue of Laotian representation would be held in abeyance pending formation of an agreed government delegation, the participants would be free to recognize the Laotian government of their choosing in the meantime, and the conference would be allowed to go forward, was accepted all around. All Laos's neighboring states were represented at Geneva, as were the three ICC members and the co-chairmen, along with the United States and France.

### The Second Coalition

The powers who had gathered at Geneva put together in relatively short order the principal features of an agreement neutralizing Laos. What took longer, and delayed the signing of the agreement, was getting the Laotian factions to decide on the composition of a new provisional coalition government that would assume power until elections for a new National Assembly could be organized and a government invested. The talks at Ban Namone had ended in September, and it was up to the three princes (Souvanna Phouma, Souphanouvong and Boun Oum) to pursue the negotiations, which they did in Laos and in various world capitals. All the while sporadic violations of the ceasefire were occurring, the overall effect of which was to enlarge the territory under the control of the Pathet Lao and their North Vietnamese backers. Harriman, who headed the U.S. delegation, placed the blame for the delay on General Phoumi, whom he suspected of maneuvering to involve U.S. troops in Laos and with whom he soon lost all patience and in the end treated very roughly, even cutting aid to Phoumi's troops.

Finally, the three princes met on the Plain of Jars on June 12, 1962, and signed an agreement fixing the composition of the Provisional Government of National Union (PGNU) and setting the rules by which it would operate. General Phoumi and Souphanouvong were deputy prime ministers and the remainder of the cabinet seats were allocated according to a complicated formula that differentiated between the Khang Khay Neutralists and the Vientiane Neutralists. The three princes next gathered in Vientiane. While Boun Oum tendered his resignation to the king, Souvanna Phouma lunched informally with Ambassador Brown, who was preparing to leave Laos on completion of his two years. The same afternoon, Souvanna Phouma presented the PGNU to the king, and the traditional investiture ceremony was held at Wat Sisaket. With a

few contrivances, constitutionality had been preserved, in accordance with the king's expressed wish. The documents of the Geneva Conference were signed on July 23. They consisted of a Declaration on the Neutrality of Laos, which incorporated a PGNU statement to this effect (signed by the foreign ministers of 13 participants) and a Protocol comprising 20 articles dealing with the nuts and bolts of neutralizing Laos (signed by all 14 participants). But the second coalition was different in several respects from the first. It was a coalition at the top and not a coalition from top to bottom.

The PGNU being provisional, the three princes had agreed at one of their meetings in Zurich that "in the transition period" (length unspecified) to the formation of a permanent government, each faction would continue to exercise administration in the territory it controlled. This in effect gave the Pathet Lao exclusive control over a vast portion of Laos resulting from the fighting, and in which they had established their administration. The outcome was that the Prime Minister was prevented from traveling in the Pathet Lao-administered areas. Further, a "troika" provision for decision-making within the PGNU had also been written into the agreement by the three factions, vastly reducing Souvanna Phouma's freedom of action in even minor matters. This came as a particularly nasty surprise to the United States and its friends in the conference, because for months, Souvanna Phouma had been grandly assuring everyone that he would be able to handle all problems. The ICC, which was to resume its work of supervision of the implementation of the agreement, was so hamstrung by the clauses referring to its degree of autonomy and the approval of its reports to the co-chairmen that its effectiveness soon proved minimal. Furthermore, the modalities for integrating and demobilizing the armies of the three factions were left to the PGNU to sort out, without any mandate of authority to the ICC. With respect to the procedures for the withdrawal of foreign military personnel from Laos, the gap between expectations and reality was just as wide; in the end, the provisions for withdrawal were so ambiguous as to be virtually meaningless. While the United States withdrew its several hundred military personnel, North Vietnam made no transparent move to withdraw its "volunteers" (thought to number about 12,500), in spite of several visits to Hanoi by the Prime Minister, from which he invariably returned with "assurances" from the North Vietnamese leaders.

The last structural flaw concerned the seemingly unobjectionable undertaking in the Declaration by the signatories not to use the territory of Laos to interfere in the internal affairs of other countries. In view of Hanoi's doctrinal insistence that Vietnam was a single country, it believed it had not signed away its inherent right to use the network of trails through eastern Laos, known as the Ho Chi Minh Trail, to transport war material into South Vietnam. (Hanoi's leaders, ever inventive, explained to their Pathet Lao allies that they were borrowing the Trail.) Finally, Harriman had reported early in the conference that he had been given assurances by the chief Soviet delegate, Georgi M. Pushkin, that Moscow would ensure compliance with the agreement by the Communist bloc in exchange for similar "policing" of its allies by the United States. The emerging Sino-Soviet conflict in the 1960's deprived Moscow of its ability to fulfill this pledge, as Khrushchev informed Harriman on a visit to Moscow. Pushkin himself died soon after the signing. Consequently, complaints of alleged violations of the agreement ended up on the desks of foreign offices in London and Moscow, where they remained unacted upon. When the delegates of Thailand and South Vietnam pointed out some of the flaws in the agreement and

intimated their intention not to sign, Harriman, with the anger for which he was well known, threatened them with dire consequences, and in the end they signed.

Cabinet meetings in Vientiane were marked by sharp exchanges among the three factions on the many issues of running day-to-day affairs. The Prime Minister received precious support for his stand in these arguments from the new U.S. Ambassador, Leonard Unger. Agreement was reached between the two men on continuing delivery of supplies to the Phoumist troops. As for the Neutralist army, concentrated on the Plain of Jars, it had been placed in dire straits by the siphoning off of its Soviet bloc supplies (which arrived by way of Hanoi) by the Pathet Lao. Accordingly, Souvanna Phouma and Unger agreed that the United States should make good the shortfall. The Hmong guerrillas under Vang Pao were also to be supplied, and for this purpose were to be considered members of the royal army. Many of the Hmong outposts could only be reached by air, and Unger arranged for the continuation of the operations of Air America after the deadline for foreign troop withdrawal had passed, with only the stricture that Air America would not be authorized to transport troops. Souvanna Phouma faced down Pathet Lao accusations, made to Tony Yared of The Associated Press by Phoumi Vongvichit among others, that Air America should be subject to the withdrawal of foreign forces provision and that the Hmong were “bandits” within the Pathet Lao zone of control. As there was no map showing the ceasefire lines, however, this argument was difficult to sustain, and the Hmong guerrillas continued to be a thorn in the side of the Pathet Lao. Another argument arose over the activities of the National Assembly, whose legality was not recognized by the Pathet Lao. Pulling itself together after nearly a year of inactivity, the Assembly began meeting again and receiving reports from the Prime Minister and Deputy Prime Minister Phoumi Nosavan. An important turning point in the standing of the Assembly came when it elected Phoui Sananikone as its president.

The issue that finally led to a showdown between Souvanna Phouma and the Pathet Lao was the latter’s attempt to subvert the Neutralist army. By propaganda radio broadcasts and other means, the Pathet Lao induced a number of Neutralist officers to defect and join the Pathet Lao, calling them “Patriotic Neutralists.” In this, the Pathet Lao took their cue from the way Ho Chi Minh had succeeded in splitting the nationalist parties in his coalition government in Hanoi in 1946. Souvanna Phouma was well aware of this history, and he resented the Pathet Lao machinations on the Plain deeply. At the end of 1962 the dissidents were responsible for shooting down an Air America plane ferrying supplies to the Neutralists, and in early 1963 the situation was worsened by a series of retaliatory assassinations, including that of the coalition’s foreign minister, Quinim Pholsena. Souphanouvong and Phoumi Vongvichit used these acts as a pretext for withdrawing from Vientiane. Meanwhile, two junior ministers belonging to the Prime Minister’s own party fled to Phnom Penh. By April 1963, open warfare between Kong Le’s troops and the Pathet Lao and their North Vietnamese backers broke out on the Plain. The crisis was dramatized by an incident in which the Pathet Lao fired on two ICC helicopters that landed on the Plain. However, in the new ICC chairman, Avtar Singh, the Pathet Lao were dealing with someone who took his peacekeeping responsibilities seriously, and the ICC maintained a presence in the conflict zone, over the loud objections of the Polish delegate, Marek Thee, who later published a memoir boasting of his close liaison with Hanoi’s Laos specialists.

The situation on the Plain remained in an uneasy calm. But, after Souvanna Phouma's visits to Peking and Hanoi and the breakdown of a summit meeting of the factions on the Plain in April 1964, an attempted *coup d'état* by rightist officers in Vientiane upset the precarious balance. The rightists proclaimed themselves against the Geneva Agreement, against the coalition, against the ICC, and wanted to take the offensive against the Pathet Lao. They placed the Prime Minister under house arrest. Pheng Phongsavan took refuge in the Soviet embassy. The attempted *coup* was dismantled thanks to the intervention of Unger and the other Western ambassadors, who dissuaded Souvanna Phouma from making good on his threat to resign and informed the military officers involved that their seizure of power would mean the certain and immediate termination of Western support for the government. The rightists' timing had been poor, as the United States was trying to cope with the chaos caused by one *coup* attempt after another in South Vietnam following the overthrow of President Ngo Dinh Diem the previous November. President Lyndon B. Johnson was heard at this time to make a famous expletive remark about these *coups*, and he was not about to see the chaos spread to Laos.

But the attempted *coup* and the adjustments the Prime Minister made to meet the complaints of the rightists, such as his move to merge the Neutralist army with the Phoumists, led to the Pathet Lao's adopting the position that the coalition had ceased to exist. General Phoumi, who had gradually lost influence within his own faction, left the scene shortly thereafter. Kong Le, for his part, also departed. He had been sadly disillusioned by the perfidy of the Pathet Lao and by the ever larger intervention of the North Vietnamese, and he despaired of Laos ever becoming a neutral state so long as the war escalated.

### Full-Scale War

Thus, despite a further futile round of negotiations among the three factions in Paris in August, the war began in earnest in the summer of 1964. French policy at this time was strongly influenced by the head of the Asia and Oceania desk at the Quai d'Orsay, Etienne Manac'h, who according to the Mitrokhin archive, had been in secret contact with the Soviet KGB since his posting in Turkey in 1942 and whose three volumes of memoirs reflect strong anti-American sentiment. The French began floating suggestions in diplomatic circles that the future of Laos depended on Souphanouvong, and the visits of the new French ambassador, Pierre Millet, to the Plain and his friendly discussions with Souphanouvong, no doubt on instructions from the Quai, displeased Unger's successor, William H. Sullivan. As a result, the French-American split continued.

The North Vietnamese rotated entire divisions into Laos during the dry season, and their presence now averaged 40,000 troops, both in the north and manning the Ho Chi Minh Trail in eastern Laos. The Neutralists were obliged to give up the last of their positions on the Plain, leaving the task of harassing the enemy as best they could to Vang Pao's Hmong. American air strikes against North Vietnamese positions in Laos also began in the summer of 1964, concurrently with the bombing of North Vietnam, by planes from bases in Thailand, South Vietnam, or aircraft carriers in the Gulf of Tonkin. The post-Khrushchev Soviet leaders, blithely ignoring their responsibility as co-chairman of the Geneva Conference, supplied North Vietnam with the trucks to keep the traffic on the Trail flowing. Special forces troops from South

Vietnam were landed across the border into Laos in raids to disrupt this traffic. Souvanna Phouma took the position that by adopting neutrality as its foreign policy a state did not forfeit the right of self-defense, and the royal government was within its rights to seek military assistance from the United States, an action that had the full support of the king.

On the U.S. side, there was no declaration of war or even a “Gulf of Tonkin Resolution,” but only Secretary of State Dean Rusk’s statement to the Senate Foreign Relations Committee that the United States considered that if the Geneva Agreement was broken by the other side, that relieved the United States of itself observing the agreement. The French nevertheless criticized the bombing as a violation. In spite of President De Gaulle’s Delphic pronouncements about the neutralization of Indochina, he could not see his way to support the one genuine neutralist government in Indochina. Souvanna Phouma could denounce Hanoi’s violations of the 1962 Geneva Agreement to the North Vietnamese ambassador in Vientiane and from the speaker’s podium at the United Nations General Assembly to which he traveled every year, in press conferences, and in white books showing photographs of captured North Vietnamese prisoners. Thus the United States, which had done its best to undermine Souvanna Phouma when the Pathet Lao were weak and could have been contained, if not defeated, by political action aimed at separating them from their foreign mentors, found itself waging war in Laos against the now-undisguised North Vietnamese aggression. Laos had become another front of the Vietnam War.

From 1965 to 1973, the war seesawed back and forth in northern Laos. It was a war characterized by short, but often very sharp, engagements fought between the two sides rather than by sweeping troop movements, but cruel nevertheless in view of the rudimentary facilities to evacuate and treat the wounded. The Hmong, particularly, suffered from the war, which was dubbed the “secret war” but which in fact was far from secret, as their front-line positions came under attack and they had to move their families to safety, abandoning their crops and livestock. Isolated outposts everywhere depended on the planes and helicopters of Air America to resupply food and ammunition and, in the worst cases, to escape under frontal assault by North Vietnamese regulars. A group of American fliers called the Ravens provided spotter coverage for Vang Pao’s tiny air force based at Long Chieng. The Hmong, in return, went to the rescue of countless downed American fliers, saving many of them from capture. The ground offensives and the bombing created refugees, whose number reached 378,800 in October 1973 and whose care in camps around Vientiane added to the burden on the royal government. Along the Trail, meanwhile, the bombing assumed huge proportions, eventually resulting in tonnages that exceeded World War II tonnages. The air campaign was directed by the air attaché’s office at the embassy in Vientiane. In cases where civilians became victims of air strikes by error, the embassy was rigorous in paying compensation.

During these years Souvanna Phouma, ever the optimist, puffing on his pipe, maintained vacant the cabinet seats allotted to the Pathet Lao, and by adroit contortions managed to preserve the framework of the PGNU. When the National Assembly, in one of its displays of its prerogatives, rejected his budget in debate in September 1966, he obtained a vote in the King’s Council dissolving the Assembly. Elections were held in 1967, and again on January 2, 1972, bringing in 41 new faces out of 59 deputies elected. The Pathet Lao, as usual boycotted the elections and called them illegal. The Prime Minister stayed in contact with Souphanouvong,

occasionally using the ICC and the Soviet and North Vietnamese ambassadors as messengers. Powerless to stop the war, he endured the attacks on his person of the Pathet Lao radio, which called him traitor, capitulationist, and tool of the U.S. aggressors, and a campaign of denigration by anti-war activists in the United States, many of them in academia, one of whom called him “a savage and voluntary Asian rightwinger.” This courageous figure, who never ceased opposing the subversion of his small country by an armed minority at the command of a foreign power, reminds one of Jan Masaryk, who was caught up in the dramatic events of Czechoslovakia twenty-seven years earlier. When asked for his reaction to a reported statement by Abram Chayes, an adviser to Senator George McGovern in the 1972 American presidential election, that if North Vietnam demanded it a Democratic administration would permit Souvanna Phouma to fall, the Prime Minister replied politely that it was under the Democratic administration of President Kennedy that the United States helped Laos to acquire the status of neutrality and that this implied a certain moral responsibility. But Souvanna Phouma was not partisan when it came to American politics. Informed by Ambassador Sullivan on the eve of the election that Richard Nixon might win, he said in that event he would resign, remembering his bitterness at the Eisenhower Administration’s treatment of him. Sullivan did his best to persuade him that candidate Nixon was a “new” Nixon.

### The Third Coalition

In October 1972, after a lapse of eight years, negotiations resumed between the royal government and the Pathet Lao. The latter referred to Souvanna Phouma’s party to the negotiations as the “Vientiane government,” a demeaning way to signify its refusal to recognize the authority of the king or the National Assembly. Souvanna Phouma successfully resisted a Pathet Lao attempt to introduce a “Patriotic Neutralist” delegation composed of officers who had defected from Kong Le on the Plain of Jars in 1963 as a separate party to the talks. Souvanna Phouma once again turned to Pheng Phongsavan, his old negotiator from the Ban Namone talks, as his chief negotiator. Phoumi Vongvichit was named “special adviser” to the Pathet Lao delegation, and these were the two men who signed the final agreement.

The timing of the resumption of talks coincided with the accord reached in the secret negotiations in Paris between President Nixon’s national security adviser, Henry A. Kissinger, and Hanoi politburo member Le Duc Tho for a draft peace agreement in Vietnam. The Paris draft included a clause on withdrawal of foreign troops from Laos. The government of South Vietnam, while not a party to the secret talks, had drawn Kissinger’s attention to the fact that a peace agreement in which North Vietnam would be permitted to maintain its troop presence in neighboring Laos after a ceasefire, an American troop withdrawal, and a political settlement involving elections in South Vietnam, would not be worth much. However, Kissinger failed to get the North Vietnamese to set a date certain for a foreign troop withdrawal from Laos. The North Vietnamese argued that they had to defer to the sovereignty of the Pathet Lao, who would decide if and when they wished their allies to withdraw. Souvanna Phouma instructed his ambassador in Paris to impress on the American negotiators the extreme importance of obtaining a commitment from the North Vietnamese to withdraw their troops from Laos. However, Article 20 of the Paris Peace Agreement, which was signed on January 27, 1973, made no mention of a deadline connected to the obligation of the signatories to withdraw their troops from Laos.

By then, the Laos negotiations had progressed quite far, with agreement to set up a new provisional coalition government representing two factions rather than three. Pheng Phongsavan kept the American Embassy informed of progress in the negotiations. In return, then Ambassador G. McMurtrie Godley kept the royal government up to date on issues of importance to the United States (such as the release of American prisoners and an accounting for the missing) that should be included in the draft text. The Agreement to Restore Peace and Reconciliation in Laos was signed on February 21, 1973. It provided for a ceasefire effective at noon on the following day covering all actions on the ground and in the air originating both within Laos and from foreign countries. The withdrawal of foreign forces from Laos was addressed in an article that stipulated they had to be withdrawn within sixty days of the date of establishment of the provisional coalition government. This was the closest Kissinger (in his talks in Hanoi earlier that month, in which Laos figured prominently) had been able to extract from his ever-smiling hosts a date for withdrawal. Also the parties were to furnish information on those missing in action.

In accordance with an unwritten understanding Kissinger had with Le Duc Tho to the effect that the release of American prisoners had to include all Indochina, the Pathet Lao released, in a ceremony at the Hanoi airport, nine captured Americans within the time allotted by the Paris Agreement for POW releases. This left the fate of the approximately 350 military and civilian personnel listed as captured or missing in Laos, of which 215 were lost under circumstances that the United States believed that some information should be available, a mystery.

With Phoumi Vongvichit absenting himself from Vientiane for months at a time, the Pathet Lao delayed the formation of the PGNU by linking it with military issues that they said had to be settled first, like the neutralization of the capitals Louangphrabang and Vientiane. In a new round of secret talks in Paris in May and June 1973 designed to “improve” the Paris Peace Agreement, Kissinger and Tho, who professed himself unable to commit his allies to anything, reached a written understanding stating that they “had been informed by the Laotian parties that the PGNU would be achieved by July 1.” Finally, on September 14, 1973, a protocol was signed by the chief negotiators providing for the structure, composition and functions of the PGNU and a National Political Consultative Council (NPCC). The PGNU and NPCC were finally formed on April 5, 1974, launching Laos’s third coalition government.

### The People’s Republic

When Phoui Sananikone sent his usual letter to the cabinet for transmittal to the king requesting the traditional royal presence at the opening session of the National Assembly on May 11, the Pathet Lao prevented action, citing the rule providing for unanimity of decision-making. In July, when seven deputies initiated a petition to be signed in the National Assembly building against the continued presence of North Vietnamese troops beyond the sixty-day deadline for withdrawal set by the Vientiane Agreement, Souvanna Phouma ordered the building cordoned off. He announced that the two sides in the PGNU had unanimously agreed to ask for dissolution of the Assembly. The next day, the Prime Minister suffered a heart attack,

incapacitating him for several months. The Pathet Lao effectively blocked the holding of new elections, required by the constitution. Thus, the last freely elected legislature passed into history.

On the Indochina battlefield in March 1975, North Vietnamese divisions from their well-established bases in southern Laos launched an attack on Ban Me Thuot in what was to be the launching of their final campaign to take over South Vietnam. This violated both Article 20 of the Paris Agreement and the withdrawal clause of the Vientiane Agreement. Later that month, the Laos ceasefire was violated at the road junction of Sala Phou Khoun as the Pathet Lao and their North Vietnamese backers drove southwards as far as Muong Kassy. As usual, the Pathet Lao claimed infringements of the ceasefire by “ultra-rightist reactionaries.” Vang Pao’s Hmong soldiers awaited their fate at their base of Long Chieng. The United States, having failed to react to the massive North Vietnamese invasion of South Vietnam, could hardly go to the defense of the Hmong, for to do so would re-involve the United States in the war and bring into question its sincerity in signing the Paris Agreement which had been praised by President Nixon as ending American involvement. A hastily improvised airlift of American planes evacuated 2,500 Hmong, including Vang Pao’s six wives and many of his officers, to safe haven in Thailand. Vang Pao was spirited away in great secrecy. Because he feared a stampede, Vang Pao’s CIA minder drove him out of the valley to a rendezvous with a waiting helicopter. About 40,000 Hmong, including soldiers, village headmen, and civil servants, were left behind, leaderless and without orders or instructions about how to care for themselves and their families in the new situation.

In Vientiane, a campaign of intimidation against rightist members of the government and officers of the royal army, who felt isolated by the departure of the last Americans from Phnom Penh and Saigon, gathered speed. Souvanna Phouma tried at first to ban the demonstrations, but then gave in and sided with their aims. On May 8, some 3,000 young people and teachers carrying placards and chanting staged a march past the American Embassy. Laotian and American guards could not get the gate shut, and several demonstrators climbed the fence. A few stones were thrown and an attempt was made to lower the flag, but a student leader sitting on the fence and Pathet Lao policemen, who patrolled the city under the neutralization terms of the Vientiane Agreement, shouted at the demonstrators to move on, and they obeyed. Five rightist cabinet members resigned after this. Demonstrators also took over the offices of the U.S. Agency for International Development. On June 26, AID closed its mission for the first time since 1951.

In spite of appeals from AID workers that Laotian colleagues and acquaintances were at risk as a result of these dramatic events, the embassy refused facilities for evacuation of non-Americans. Laotian officials and their families, abandoning their houses and belongings, fled by their own devices, hiring boats for nighttime river crossings or bribing Pathet Lao guards not to open fire. When non-essential staff and dependents had been evacuated, the American community, which had numbered more than a thousand, was reduced to a skeleton embassy staff of about one dozen. The Chargé d’Affaires, Christian A. Chapman, decided to maintain the embassy in the face of all provocations rather than close it, and his decision was approved in Washington. Chapman’s decision, in view of the uncertainty about how the new regime would

treat official Americans and the total control of the access to Vientiane by land, water, and air by the Pathet Lao and their foreign allies, was a courageous one. The previous year, an American tourist, Charles Dean, had been captured by the Pathet Lao and executed.

Armed Pathet Lao bands arrived in Pakxe and Savannakhet to take over law enforcement duties from rightists. On August 23, the Pathet Lao completed their seizure of local power with the takeover of the Vientiane city administration by a revolutionary committee. As 1975 drew to a close, signs multiplied that events were accelerating. In October, the NPCC established new screening procedures for electoral candidates that effectively eliminated all persons who had not supported the Pathet Lao. The NPCC also announced that elections to a new National Assembly would be held on April 4, 1976. In the last week of November, the NPCC and PGNU were convoked to meet at Vieng Sai, the Pathet Lao headquarters in Houaphan. While demonstrators in Vientiane demanded the end of the PGNU and the abolition of the monarchy, Souvanna Phouma and Souphanouvong flew to Louangphrabang and obtained the abdication of King Savang Vatthana “in response to the aspirations of Lao nationalities throughout the country.” A hastily convened National Congress of People’s Representatives met on December 1 and 2 in the deserted gymnasium of the former American school in Vientiane, at which the leaderships of the new state and government were proclaimed. Souphanouvong was President and Kaysone, who appeared for the first time in Vientiane, was Prime Minister. Laos had joined the socialist camp.

### The First Years of the LPDR

The new regime was under the control of the Lao People’s Revolutionary Party (LPRP), a Marxist-Leninist party that had been founded on March 22, 1955, in the post 1954 Geneva Conference period, but had hitherto remained clandestine. Its general secretary was Kaysone. The names of the other six members of the politburo were also made public for the first time. Important positions in the party and government overlapped so as to ensure complete compliance with the party’s decisions, reached at secret meetings of its central committee, which was made up of old-line revolutionary leaders. The first years were marked by the party’s steps to ensure control over the country and the people in whose name the revolution had been fought.

Ex-King Savang Vatthana never had anything to do with the new regime, so far as is known. He received the meaningless title of adviser to President Souphanouvong. He lived quietly in the royal palace in Louangphrabang as a private citizen until March 1977, when he, Queen Khamboui, and Crown Prince Say Vongsavang were spirited away by helicopter to Houaphan, officially for their own safety, but in reality to prevent the monarch from being used as a symbol of resistance to the regime. It was still a period of instability, and pockets of resistance, mainly among the Hmong, continued to operate. Imprisoned in Seminar Camp 01, the Crown Prince died on May 2, 1978, and the King eleven days later of starvation. The Crown Prince had insisted his father share their meager rations. The Queen died on December 12, 1981. All were buried in unmarked graves by a small stream outside the camp’s perimeter, according to an eyewitness. No official announcement of their deaths was made. More than a decade later, during an official visit to France in December 1989, Kaysone confirmed reports of the king’s death in an innocuous aside that attributed it to old age.

But the party did not dare abolish the Buddhist *sangha*, of which the king had been the supreme patron, although it did modify the traditional position of this body so as to shape it also into an instrument of control. In March 1979, the Venerable Thammayano, the 87-year-old *Sangha-raja* of Laos, the country's highest-ranking abbot, fled by floating across the Mekong on a raft of inflated tire tubes. After a few initial experiments on a local level in which monks were denounced as parasites threatened to cause popular agitation against the regime, monks were not directly ordered to work. But a monk was not eligible for a government rice ration unless he worked, by gardening or in some other productive task, such as teaching handicrafts or addressing meetings on behalf of the government. Ordinary monks were not forbidden to preach, but their sermons were commonly tape recorded and monitored for signs of dissidence. As a result of these pressures, the number of monks in Laos decreased sharply after 1975. Spirit worship continued, but its existence was officially denied.

The seminar camps were the centerpiece of the new regime's program for those it had defeated. The party's Marxist-Leninist dogma did not allow any respite in the class struggle, and those who had made themselves the lackeys of the foreign aggressors during the national liberation phase of the revolution or were members of the feudal class were the presumed saboteurs and subversives of the socialist phase that was just getting under way. As long as they remained free, they would spy on the security forces of the people's regime, and might even prepare the way for a return of the Americans. The work of building the camps had begun even before the proclamation of the LPDR. Known only by their numbers to the people who built and occupied them, there was Camp 01 at Sop Hao, Camp 03 near Na Kai, now given the Pali name Vieng Xai, meaning "Victorious Town," Camp 05 near Sam Teu, and Camps 04 and 06 near Muang Et, all in Houaphan. There was also a camp at Muang Khoua on the Nam Ou and other camps in the center and south. There are no official figures on the numbers sent for reeducation; the entire network of camps was kept a secret from the outside world with the only news of them being brought out by former inmates and their families. Published estimates have put the number variously at 30,000, 37,600, and 50,000.

In July 1975, the first groups of high-level officials of the old regime, including *chao khouengs* and *chao muangs*, were transported to the camp sites and set to work constructing them. They had received letters signed by Souvanna Phouma ordering them to attend an important meeting in Vientiane. They arrived in full dress uniform. After an overnight stay in Vientiane, they were flown to the Plain of Jars, where a festive atmosphere prevailed. The officials, about 70 in all, were given a party, with food and a movie, and with Vietnamese advisers present. They were then flown on to Houaphan, separated into small groups, and organized into work parties.

In August and September 1977, an incident occurred at Camp 05 in which a group of 26 "reactionary" high-ranking officials and military officers were accused of plotting a revolt and were arrested. They were taken away to Camp 01. They included Pheng Phongsavan, the minister who had signed the Vientiane Agreement; Touby Lyfoung, the Hmong leader; Soukhan Vilaysan, another of Souvanna Phouma's ministers who had been with him in the Lao Issara and had risen to be secretary-general of the Neutralist Party; and Generals Bounphone Maekthapharak and Ouane Ratikoun. All died there. Others were more fortunate. Tiao

Sisoumang Sisaleumsak, one of two ministers who had held Souvanna Phouma's government together at Khang Khay in the dark days of early 1961; General Sengsouvanh Souvannarath, who had taken command of the Neutralist army in 1966; and Sing Chanthakoummane, who as a young lieutenant in the Second Paratroop Battalion and had taken part in Kong Le's *coup*, were held in seminar camps for 15 years or more before being released. All resisted the efforts to indoctrinate them.

Souvanna Phouma accepted his fate calmly and with the dignity of adviser to the government whose title had been bestowed upon him. He did not end his life like Jan Masaryk who was pushed out of his bathroom window in the Czernin Palace in Prague in the dead of night by the goon squads of the new regime, but died a natural death of old age in 1984. He no doubt owed much to the tacit protection of his half-brother, who died in 1995.

Many Hmong fled south to make the hazardous crossing of the Mekong. Remnants of Vang Pao's army, determined to remain in Laos, took to the mountains once again, evading the Pathet Lao as best they could, and resisting with whatever weapons they had left. The government began a campaign of extermination against these remnants, using helicopters armed with biological weapons supplied by Hanoi from stockpiles in the Soviet Union's large biological warfare program.

Over the succeeding years, various groups using high-sounding names abroad have announced resistance activities against the LPDR. Some have invoked the backing of Vang Pao, others have said they were carrying on the struggle in the name of the royal family. The resistance has remained a shadowy affair. Occasionally bombs have exploded near markets in Vientiane, and buses have been ambushed on the Luangphabang road with loss of life, including those of foreign tourists. The political goals of such incidents, if any, have remained murky.

## Questions and Issues

1. Discuss how the American close relationship with Sarit constrained U.S. policy in Laos in the late 1950's, especially considering the broader history of Lao-Thai relations.
2. In the context of the Eisenhower Administration's suspicion of neutralist regimes in Southeast Asia, discuss the State Department's failure to cultivate Crown Prince Savang Vatthana's staunch anti-Communist sentiments, specifically the failure to respond positively to his request for a guarantee of Laos's borders on the pretext that these were undefined.
3. On the eve of the outbreak of full-scale war in Laos in the summer of 1964, what foreign country was in the best position to guarantee the independence of the Kingdom of Laos? What event, or series of events, prevented this country from assuming this role? Discuss in the light of postwar power relationships in the region.
4. Discuss the moral dilemmas raised by the Kennedy Administration's commitment to arm the Hmong in 1961 and the war's toll on Hmong fighters and their families.

## CULTURE

In areas that do not impinge on politics, the peoples of Laos carry on their everyday lives in much the same manner as they did before the advent of the new regime and its revolutionary rhetoric. The traditions of Buddhism and the *boun* (festival), which are historically associated with the village but now extend to urban life as well, dominate the lives of the lowland Lao. The merit-making ritual of giving alms to monks during their morning rounds never disappeared despite the regime's attempts in the early years to regulate it and to accuse the monks of being "parasitic" like the old "feudal classes."

Among the upland peoples, who are sometimes grouped under the collective descriptor "animist," traditional rituals also persist. The Hmong, for example, do not feel the same attachment to the village as a spatial or social unit in the way the lowland Lao do. To the Hmong, the primary foci of social identification are the household, the group of close relatives (*kwv tij*), and the clan, irrespective of any temporary or even permanent settlement. Their social identity is thus fixed through the concepts of patrilineal descent groups ("lineages" and clans), the actual units of which, however, are dispersed nowadays on a truly cosmopolitan scale. The Hmong are divided into about 18 clans. The Hmong cosmos is inhabited by a large number of different spirits (*dab*), the most important categories of which are household spirits, medicine spirits, nature spirits, and shamanic spirits. Among the Hmong, an important ritual is the celebration of the New Year, at which a chicken or pig is usually sacrificed to the household spirit, and whose altar (*dab xwm kab*), is usually placed on the wall opposite the main door.

The traditional ritual of the *baci*, in which strings are tied around someone's wrist (*mat kaen*), not to be removed for fear of bad luck, has indeed been elevated in Laos today to the place of a national custom. The *baci* is associated with transitions, namely births, marriage, entering the monkhood, going away, returning, New Year, and welcoming or bidding farewell to foreign guests. Official sanction to the *baci* ceremony was first given at the Lao New Year in 1980 when it was announced that the administrative committee of Vientiane province held a *baci* and those attending included the highest leaders of the LPDR. Today it retains an important place in state ceremonies of all kinds. This is the more ironic in that the structure of the ritual language contained in the ceremony is replete with royal references and style.

The official calendar of the LPDR contains the following holidays: New Year's Day (January 1), Pathet Lao Day (January 6), Army Day (January 20), Women's Day (March 8), Lao People's Revolutionary Party Day (March 22), Lao New Year (April 13-15), May Day, Children's Day (June 1), Lao Issara Day (August 13), Liberation Day (August 23), Freedom from the French Day (October 12), and National Day (December 2). These primarily affect state organization, the bureaucracy, and schools. For holidays celebrated by particular ethnic groups, the state grants leave to its officials concerned, who live mainly in the capital and urban areas. In rural areas, the traditional calendar centered on the *wats* and determined by the agricultural cycle remains in operation beyond the reach of the state.

Members of the household work the land together, although there is a separation by tasks. In wet rice cultivation (*naa*-cultivation), men do the plowing and preparation of the seedbed, controlling water flow to the fields, and threshing of the crop. Women do the transplanting and weeding, and are responsible for carrying the sheaves of rice to the threshing place. In upland rice cultivation (*hai*-cultivation), men handle the cutting and clearing of the fields, while women do the sowing and weeding. Activities in wet rice cultivation begin with the onset of the rains in April or May and end with harvesting in October and November. Activities in upland rice cultivation begin with burning off vegetation and clearing fields at the end of the dry season in February and March when the air is full of smoke; harvesting takes place in November. Cultivation of secondary crops is interspersed with rice cultivation; gardening on river banks, for example, follows the dropping of water levels at the end of the dry season.

In addition to strictly agricultural activities, the daily lives of rural people center around a number of other necessary activities, like fetching water from wells, often located near *wats*, and important economic enterprises like gathering and foraging. Among forest products are counted small game, birds and eggs, fruit, honey, spices, medicines, resins, latexes, dyes, fuel wood and charcoal, as well as structural materials like rattan, bamboo, wooden poles and various fibers. Gathering and home processing of forest products are importantly associated with women.

The receding into the past of the struggle against the imperialists and feudalists, the collapse of European communism, and the introduction of a mixed economy in which private initiative is encouraged, have all deprived of any meaning the construction of a socialist state in Laos as a goal worthy of attainment. Accordingly, the regime has had to seek alternate sources of legitimacy to Marxism-Leninism. Not surprisingly, this search has taken the form of a retraditionalized nationalism that is meaningful to the people.

In a move of great symbolism, the That Luang, or Grand Stupa, built originally by the 16th Century King Setthatirath and destroyed and pillaged several times, only to be rebuilt each time with loving care, replaced the hammer and sickle as the centerpiece of the national emblem over each ministry and on official documents and on a new 1,000-kip note in 1991, the year of the adoption of the new constitution. The That Luang, on the outskirts of Vientiane, is the site of the great fair and festival held every November between the thirteenth and fifteenth day of the twelfth month in the Buddhist calendar. On these days, thousands of people stream toward the stupa to pay homage. The king used to preside over the festival, but today it is the leading figures of the LPDR who officiate. In January 2003, a four-meter-high statue of Fa Ngum was formally unveiled at a ceremony in Vientiane at which a number of party leaders were in attendance and were observed to fall to their knees in veneration of the kingdom's founder. The day of the ceremony was a national holiday.

The New Year celebration in Louangphrabang, although shortened from two weeks under the old regime to three days now, still takes place with much pomp and color. The parading of the Prabang, the holy relic and palladium of the former kingdom Lan Xang, which was brought to the royal capital during the reign of its founder, Fa Ngum, remains a central feature. Government officials, dressed in *sampots* and led by the Foreign Minister and the Governor of the province, line up on the steps of the former royal palace, now a museum. After appropriate

rituals by members of the *sangha*, the Prabang is carried down the steps by attendants and placed in its palanquin for the procession to Wat May amid crowds lining the streets. The That Luang festival has always included a traditional game of hockey (*tiki*). It is played with bamboo sticks and a ball made of roots. In its effort to keep up with the outside world, traditional contests like this one, as well as the boat races on the Mekong, have been "modernized." Football has become a popular spectator sport. Laos has participated in the summer Olympic Games.

The replacement of the hammer and sickle as official emblem has also coincided with: (1) the overhaul of billboards that used to proclaim the glory of socialist construction, (2) the allowing of the loudspeakers that used to blare out propaganda from telephone poles in the capital to fall into gentle dereliction, and (3) a concerted attempt to present the regime's leaders as being good fathers, acquirers of merit, and supporters of Buddhism who are entitled to receive high Buddhist funeral ceremonies--in short, more human beings than the stylized portraits of heroic and seemingly immortal leaders of the recent past. The current attempt to re-legitimize the regime bears many of the marks of a scissors-and-paste effort with its selective evocation of the six centuries of the Lao monarchy. It also raises interesting questions about the justification of the 30-year-long struggle for power by the party, and all the sacrifices that it entailed.

The press and broadcasting, plus now the Internet, are judged by the regime to be in the sphere of political activity and thus are subject to control. In a country that used to have many newspapers identified with contending political parties and factions, there is today a severe limitation on publishing. Total circulation of daily newspapers in 2000 was about 21,000. The largest circulating daily newspaper is the party's official organ, *Pasason*, published in Vientiane. The party's quarterly journal, also published in Vientiane, is *Aloun Mai*. The official news agency is Khaosan Pathet Lao (KPL). Radio broadcasting is by far the most widespread medium of mass communication. The National Radio of Laos broadcasts in a number of languages, principally Lao, English, and French. Not subject to government control are the Lao-language broadcasts of the BBC, the Voice of America, and Radio Free Asia, which contain news of events in Laos. There is also a government-run television station, which competes with Thai television stations broadcasting from across the river. Laotian sensitivity to the latter was indicated on May 14, 2004, when the Ministry of Information and Culture issued an order prohibiting all Thai television channels and videos from being shown in public places like airports, bus stations, hotels, restaurants and markets.

## Questions and Issues

1. The anthropologist Carol Ireson has studied the economic role that forest products play in the well-being of women in rural Laos. Fishing is also an important economic activity. Discuss the social effects of deforestation and large-scale development schemes like hydropower projects.

## SOCIAL ISSUES

In the past, the teaching in Laos of much cultural lore and reading and writing took place in Buddhist *wats* and was available only to men. The French introduced modern education into Laos with the opening in 1902 of elementary schools in Vientiane and Luang Prabang. By 1969/1970, there were about 200,000 elementary public school pupils and another 25,000 private school pupils. A 1968 study concluded that the rate of literacy, defined as the fourth-grade reading level, among men between 14 and 45 years of age was 50 to 60%. The rate among women between 14 and 35 was about 25%. In the youngest age group surveyed, 14-24 years of age, the literacy rate was 75% for men and 29% for women. Figures for 1995 show that overall literacy for the population over 15 years of age was 56.6%, with the rate for men being 69.4% and for women 44.4%. There were reported to be 7,896 schools for primary age (6-10) children with a total enrollment of 786,335 students in 1996-1997.

The new regime's primary concern in education was political, and the main objective was to spread knowledge of the party's policies. Political education became an important part of the curriculum in schools and other institutions. Party cadres led sessions at every level in which attacks on the old "neo-colonial" regime and American imperialism, celebrations of the patriotic struggle for independence, and exhortations to defend the country against "traitors" and to build socialism featured prominently. Most books dating from the old regime were destroyed, foreign books were no longer available, and the standard text published by the Committee for Social Science Research of the Ministry of Education in 1989 (the three-volume *History of Laos from 1893 to the Present*), renders the country's modern history simply as a struggle for independence led by the party against foreign aggressors and their local puppets. Historical research outside this very narrow scope was discouraged by equating it with opposition to the LPDR.

With the collapse of communism in Europe and the return to Laos of young people who had been sent to Eastern Europe for higher education, a reassessment occurred and the education system was reoriented. In higher education, the biggest reform was to reorient language training from Russian and East European languages to English and French. Then textbooks were revised. The standard history text was rewritten to tone down ideological rhetoric. Since 1994 new primary texts have begun to appear with important changes in subject matter. A new third grade reader omits mention of socialism, and a new fifth grade reader emphasizes serving the people in peacetime rather than extolling wartime heroism. Stories emphasizing the importance of respecting teachers and elders, of being a well behaved family member and a good citizen, and of observing good hygiene, as well as animal stories intended to convey moral lessons had never quite disappeared, but are now given greater space. A new curriculum discouraging the rote learning associated with the system followed after 1975 came into operation throughout Laos in September 1996. A new university was inaugurated in November 1996 years after the break-up of the royal government's university by the new regime.

Despite some hopeful signs, the education system of the LPDR still suffers from the backwardness manifest in inadequate teacher training and facilities stemming from inadequate investment in schools and educational human capital on the part of the government for many years running. Building village schools has never appeared as attractive to the ministries in Vientiane as large, centralized, capital-intensive development projects, whether in the field of agriculture or industry. The majority of the young people in Laos today have only an imperfect

knowledge of their country and the world beyond the borders. This is particularly true of the history of the former regime and of the kings of the ancient past. Whatever they know comes from what their parents and elders may have told them. However, it is in the schools where young people first come in contact with the state, where they salute the flag and sing the national anthem, and where they see the photographs of their current rulers. This knowledge, while imperfect, does enable them to identify themselves as the "Lao" of the "Lao People's Democratic Republic." This is, in the final analysis, what their government wants.

Medical care is also limited by inadequate communication networks and lack of human and financial resources devoted to the health sector. In 1996, there were 1,167 physicians for the whole country (1 per 4,115 inhabitants) and 10,364 hospital beds.

HIV/AIDS prevalence has remained low in the LPDR, with estimates of around 0.05% of the total population. Findings of the national second-generation surveillance in 2000-2001 showed that 6 of 811 (0.9%) female service workers in entertainment sites were HIV positive. Another study involving 108 female sex workers showed a total STI infection rate of 54%, which is higher than anywhere else in Southeast Asia. Although much of Southeast Asia was adversely affected by the spread of Severe Acute Respiratory Syndrome (SARS), there were no reported cases of the illness in Laos.

## Questions and Issues

1. Discuss the present-day prospects for educating young Laotians in the history of their country.

## ECONOMICS

Laos is included on the United Nations list of the world's least developed countries. The urban-based, free market economy of the years 1954-1975 was sustained by large amounts of foreign, notably U.S., aid, with the Chinese minority playing an important commercial role in

what was essentially a small urban-based monetary economy. In 1975 the new regime, with its Marxist-Leninist doctrine and support from the Soviet bloc, attempted to replace this economy with a socialist one. The attempt was a failure and led to severe disruptions, especially in rural areas with the attempt to collectivize agriculture. The attempt to instill socialism was abandoned in 1986 when private markets were introduced. With the collapse of the Soviet Union, the sources of aid shifted once again. The economy today may accurately be described as post-socialist, and comprises state and private sectors co-existing side by side. In 2003, the Constitution was revised to formally recognize private property and the legitimate activity of the private sector on an equal footing with the state enterprise sector. The country is still heavily dependent on foreign aid and investment. A large number of nongovernmental organizations, including some from the United States, have been assisting the government, mainly in the fields of rural development and public health.

Gross Domestic Product (GDP) in 2001 was estimated at US\$1.6 billion, making GDP per capita about US\$300.

Laos has mineral resources of iron, copper, manganese, lead, gold, silver, tin, gypsum, oil, and natural gas. Tin has been mined commercially since colonial times, and gypsum has become important; the other minerals have been worked only in primitive and unsystematic ways. There are in fact over 500 recorded mineral occurrences distributed more or less evenly over the whole country. Foreign companies have shown interest in exploration and development of minerals, including barite, gold ores, precious stones, and oil and natural gas. Laos also has considerable hydroelectric power potential. Laos's forest resources have also provided for several important wood processing industries, although timber extraction has been periodically banned by the government for environmental reasons.

Agriculture is by far the principal occupation in Laos and in 2001 contributed 50.9% of GDP and employed three-fourths of the labor force. With an estimated land area of 23.68 million hectares, fewer than one million hectares, or less than 4%, are cultivated. Rice accounts for about 80% of cultivated land, including about 422,000 hectares of lowland wet rice and about 223,000 hectares of upland rice. In addition, about 800,000 hectares are used for pasture or contain ponds for pisciculture (i.e., fish reared by artificial means). Agricultural production is subject to large year-to-year fluctuations due to weather; alternating droughts and floods have severely affected lowland wet rice production in particular.

Rice yields are low, averaging about 2.25 tons per hectares, reflecting the absence of high-yielding varieties and the low use of other inputs like fertilizer. In upland rice production, no modern inputs are used at all, the soil being fertilized by the residues of vegetation cleared and burned off to establish the field, or swidden, and the crop is entirely rainfed.

Principal non-rice crops include cardamom, coffee, cotton, fruit, maize, mung beans, peanuts, soybeans, sugarcane, sweet potatoes, tobacco and vegetables. The only crop produced for export in substantial quantities is coffee, grown mainly on the Bolovens Plateau. Opium is also produced in hill areas, although opium poppy cultivation for export is illegal. Today, Laos

remains the third largest producer of opium after Afghanistan and Myanmar, producing about 180 metric tons in 2002.

The main activities of the country's small manufacturing sector, which accounts for about 18% of GDP, are food processing (rice milling and beverage production), saw milling, manufacture of building materials, production of a variety of light consumer goods (small tools, cigarettes, detergents, insecticides, matches, rubber footwear, salt, and clothing), and more recently a thriving garment export sector accounting for 26% of exports in value. Energy production, entirely in the hands of the state, is important for export. Electricity produced from dams on the Ngum River north of Vientiane and at Xeset near Salavan in the south and sold to Thailand accounts for 32% of exports in value. Four additional projects are under construction and a further eleven projects are being assessed for their environmental effects. However, criticism of international donors for construction of big dams and their effects on human, fauna and flora populations, as well as their economic viability, has slowed the planning process. The Asian economic crisis beginning in 1997 also reduced Thailand's demand for electric power. In Laos, the debate has centered on the Nam Theun 2, a projected dam on the Na Kay plateau in central Laos. Handicrafts also provide an important source of income generation. Further development of the mineral sector is contingent upon the willingness of private companies to invest; lack of adequate data, a trained labor force, dependable infrastructure, and legislation are inhibiting factors here. The sale of aircraft overflight rights is a major contributor to foreign exchange earnings.

Laos's main sources of imports in 2000 were Thailand (52.0%), Vietnam (26.5%), China (5.7%), Singapore (3.3%), and Japan (1.5%). Laos's main export destinations are Vietnam (41.5%), Thailand (14.8%), France (6.1%), Germany (4.6%), and Belgium (2.2%).

Until March 1988 the government controlled all banking activities. In that month Decree 11 on the reform of the banking system was passed, separating commercial bank functions from state bank functions. The Vientiane branch of the old State Bank became the central monetary agency. In June 1990, the Central Banking Law was passed, establishing the Central Bank to replace the State Bank. Under this law, the Central Bank assumed responsibility for regulation and supervision of commercial and regional banks; maintenance of foreign exchange reserves; issuance and supervision of money for circulation; licensing, supervision, and regulation of financial services; and management of the monetary and credit system. Other branches of the former State Bank were transformed into autonomous commercial banks to promote private investment. By 1991, Laos had seven commercial banks, including some joint Lao-Thai ventures. Responsibility for the debts of state-owned enterprises was transferred to the commercial banks, giving them enormous liquidity problems. To alleviate these, the government in 1989 allowed foreign banks to begin operations in Laos. The value of Laos's currency, the kip, declined by half in 1998 alone as a result of the Asian economic crisis. Tourism has been a growing sector, appealing mainly to Thailand, but also to Europe, the United States, and other foreign countries.

Laos still has a rather primitive transportation network. Rivers and roads are the main avenues of communication, supplemented by air transport. Of an estimated 13,494 miles

(21,716 kilometers) of roads, 24 percent are paved and 30 percent gravel, although passage on even the main roads during the rainy season is often difficult. In 1996 there were 16,320 passenger cars and 4,200 trucks and buses. There are about 4,600 kilometers of navigable waterways, including 1,330 kilometers of the 2,030 kilometers of the Mekong in Laos.

Navigability of the Mekong for international commerce is impeded by the Khone Falls, a series of interlocking falls and cataracts spread across some 11 kilometers near the border with Cambodia, and by smaller falls on the river between Vientiane and the China border. Both public and private trade associations handle river traffic. Lao Airlines, the national airline, services domestic and foreign points from Wattai Airport at Vientiane.

Telecommunications have seen a remarkable improvement of their capacity in recent years. There is an Internet server in Vientiane, but it is subject to strict government control. There were 18,000 Internet users in 2002. The country also had 15,000 personal computers and 55,200 cellular telephone subscribers in that year.

## Questions and Issues

1. Laos has accumulated considerable experience over the past three decades in the design of projects and programs aimed at reducing opium poppy production. Nevertheless, the problem persists, proving that it knows no ideological boundaries. Discuss some of the factors involved.

## GOVERNMENT AND POLITICS

Since its establishment in December 1975, the Lao People's Democratic Republic has been effectively controlled by the Lao People's Revolutionary Party. This self-described Marxist-Leninist party, in alliance with the Vietnamese party, secretly led the revolution that ended in the seizure of state power and the abolition of the monarchy. Top government positions are held by high-ranking party members, who constitute a Central Committee with a Politburo at the head. The current president of the LPDR, Khamtai Siphandon, is also general secretary of the party.

The LPDR constitution adopted in 1991 states in Article 3 that the “people’s rights to be the masters of the country are exercised and ensured through the functioning of the political system with the Lao People’s Revolutionary Party as its leading organ.”

The main institutions of the LPDR today, besides the cabinet, are an array of mass organizations, led by the Lao Front for National Construction; the National Assembly, whose members are elected to five-year terms; and a judicial system headed by a Supreme People's Court. These institutions are subject to party control and have an interesting history. In view of the confusion caused by the not unnatural tendency of Western scholars to assume that when Marxist-Leninist regimes like the LPDR speak of elections they are speaking of the kind of elections familiar to Westerners, it is extremely important to analyze what the regimes themselves say about elections. The election law of the LPDR adopted in 1991 states in Article 2 under Chapter I “Overall Principles”:

All Lao citizens, regardless of sex, ethnic origin, religious beliefs, social status, domicile, or professions, who are 18 years and older, have the right to cast votes; and those who are 21 years and older, have the right to stand as candidates for the election as members of the National Assembly.

In Article 7 under Chapter II dealing with candidates standing for election, the law states:

Candidates standing for election as members of the National Assembly must be fully qualified, as follows: by having a patriotic spirit, and a spirit of cherishing the popular democratic system and fulfilling responsible tasks; by maintaining a certain level of knowledge on the party’s line and policies and the state’s laws, and being capable of putting them into actual practice; by gaining trust from the people; and having good health.

In Article 8, the law further specifies:

The Lao Front for National Construction and other mass organizations, with the coordination of the electoral committees and various state and party organizations of various services at various levels, are in charge of proposing and confirming names of the candidates for the election as members of the National Assembly.

In Article 9, the law states that “documents of verification” for each candidate must be submitted to the national-level electoral committee not later than 14 days before election day. These documents include, notably, besides birth date the date of joining the revolution. The effect of these conditions is to disqualify any candidate who has not demonstrated a patriotic spirit by joining the revolution. Obviously, the earlier the date of joining the revolution the higher the candidate’s qualifications are considered, and for those too young to have taken part in the national liberation struggle (1950-1975) joining the revolution means serving meritoriously in one of the party’s front organizations, such as the ones for school-age children and revolutionary youth.

The difference in these qualifications with those of Western-style elections will be obvious, and there is not the slightest chance that the LPDR's election law will suddenly be transformed into a liberal election law, whatever Laotian exile groups may think. For Marxist-Leninists, it is a matter of dogma that defining voters and candidates for election who are patriotic is their prerogative. That this question of who votes and who gets to be a candidate must be left ambiguous in the party's propaganda during the struggle to seize state power is a source of the confusion among Western observers.

The LPDR's first attempt to institutionalize some sort of mandate from the people it claimed to represent was the Supreme People's Assembly, which was not elected at all but was appointed by the National Congress on December 2, 1975. Its twice-yearly meetings were reported in the controlled press, but it rapidly faded into obscurity. Perhaps because the regime wished to bolster its popular credentials, it suddenly announced in 1988 that elections would be held for a new SPA. Elections were held on June 26, 1988 for 2,410 seats on district-level people's councils, and on November 20, 1988 for 651 seats on province-level people's councils. On March 26, 1989 elections were held for 79 seats on the SPA. The second SPA had as its task the completion of the draft constitution, preparations for which had been talked about for years. The constitution was at last approved by the SPA on August 15, 1991 and was officially adopted. The leading role of the party, enshrined in the constitution, was manifest in the fact that 65 of the 79 members of the SPA were party members. Elections for the third SPA, now renamed the National Assembly, were held on December 20, 1992, with the participation of 93.3% of eligible voters. Elections to the National Assembly were also held in 1997 and 2002.

Two significant trends emerged in LPDR politics in the postwar period. The first was the preponderance of the military in positions of power in the party and government. By 1994, the party leader and prime minister, the ministers of national defense, interior, and agriculture and forestry, and the chairman of the National Assembly were all generals. The other trend was the noticeable under-representation of ethnic minorities in government-controlled institutions. This was somewhat surprising in view of the important role played by ethnic minorities during the struggle for power, which might have argued for their representation at least commensurate with their population numbers. Official explanations of this phenomenon are hard to find. However, the authors of the previously-cited 1996 official history draw the conclusion that "The specificity of the living conditions and the relations between various ethnic groups engender favorable conditions for national harmony" and refer to "the population of Laos, with the Lao-Thai speaking community [i.e. the ethnic Lao] as its core, in a multi-ethnic structure."

The country is divided into 16 provinces, one municipality, and one special region (see Table 1). Provincial governors wield considerable power and enjoy a large measure of autonomy in such matters as approval of economic development projects. Decree 64 of April 23, 2003, established committees for investment and cooperation at the provincial level, which were authorized to license foreign investment projects valued at \$2 million or less.

## **Questions and Issues**

1. The National Assembly is the institution of the LPDR that is most likely to bring about new ways of doing things in the LPDR. Do you agree or disagree? Discuss your reasons.

## **FOREIGN AFFAIRS**

The last American ambassador to the Kingdom of Laos, Charles S. Whitehouse, departed on reassignment in April 1975. The embassy remained open with a Chargé d'Affaires and a skeleton staff. Ambassadorial relations with the LPDR were not restored until 1992. The first U.S. ambassador to the LPDR was Charles B. Salmon, Jr.

The normalization of relations represented by the naming of an ambassador followed positive steps to resolve two issues of vital importance to the United States, which were pressed by many visiting delegations to Vientiane. The first of these was the POW/MIA issue, on which the LPDR's agreement in 1984 to start hosting search parties for U.S.-financed on-site excavations of aircraft loss sites was a breakthrough. On POW's, no similar progress was registered, however. The LPDR's repeated affirmation that it was not holding any POW's was reluctantly accepted as fact. The harsh conditions in which American prisoners endured during the war made long survival unlikely in any case, even disregarding the fact that the Pathet Lao regarded such prisoners as criminals and denied them the application of the provisions of the Geneva Conventions. In spite of many rumors, often propagated by unscrupulous individuals seeking pecuniary gain, no POW's ever emerged from the jungles of Laos after 1975.

The second issue of importance was the drug issue. By war's end, Laos had become a major producer and exporter of opium and heroin, much of which found its way to the United States. To meet this illegal trade, the United States in the postwar years financed a series of projects designed to offer Laotian farmers alternative sources of crop revenue. Some of these joint projects, as other development projects, were implemented by non-governmental organizations (NGO's).

An issue of importance to the LPDR is the removal of unexploded ordnance left over from the war. More than 12,000 people, many of them children, are estimated to have lost their lives due to explosions of ordnance littering the countryside. The United States has contributed to efforts to remove such ordnance.

The United States responded quickly and generously to the exodus from Laos provoked by the coming to power of the LPDR. These people, who had tied their lives to the royal government and its American backers and who saw little future for themselves under a regime that made class struggle and the distinction between patriots and lackeys of foreign imperialists its hallmark, began new lives relatively easily thanks to their education and their professional skills. Their children acquired American citizenship and went into professions in the United States, including the military, and a son of the Na Champask family was among the soldiers

killed in Iraq in 2004. The first wave of Laotian refugees was followed by a second composed largely of rural people with little or no education but who saw no hope for themselves and their families under the exploitative agricultural policies instituted by the new regime soon after its takeover with the aim of turning Laos into a proletarian dictatorship on the Marxist-Leninist model. Many among this second wave, either because they lacked qualifications for resettlement or because they feared journeying to a strange land, remained bottled up in camps along Thailand's river border with Laos.

Strong family ties, particularly among the Hmong, eased the resettlement process. Large and cohesive Hmong communities sprang up in California, Minnesota, Wisconsin, and other states. The continuing resistance of the Hmong who remained in Laos, however, created a major political problem for Thailand and the United States, which were seeking to improve relations with the LPDR. The LPDR's campaign to eliminate the resistance produced a continuing flow of asylum seekers across the river. Anti-Communist Hmong in the United States raised funds among the expatriates and funneled them to Thailand where they served to finance armed resistance activities across the river. These activities reached a peak in the early 1990's, and the backflow of Hmong seeking escape from the fighting in Laos strained the resources of the Thai government.

From 1992 to 1994, following a tripartite agreement among the LPDR, Thailand, and the United Nations High Commission for Refugees (UNHCR) for repatriation of the Hmong in Thailand, the State Department spent nearly \$3 million to send Lao and Hmong refugees back to Laos. The living conditions of the repatriates were difficult to verify on the ground. Several prominent Hmong who voluntarily returned to Laos in those years disappeared. In 1994, the Thai government announced its intention to close the last camp along the border, at Ban Napho, which, according to one Congressional report, had assumed the aspect of a concentration camp. The Pathet Lao had seized intact the personnel files of Vang Pao's army in Long Chieng;, without orders to destroy them, the officer in charge of the files had simply locked them and pocketed the keys when he left the valley. And of course from the LPDR's viewpoint there was no statute of limitations on crimes against the people. Thus, thirty year after the end of the war the Hmong in the camp were still bearing its tragic consequences. The problem was compounded by the fact that the UNHCR personnel responsible for screening inmates were mainly young people who lacked any background in the history of the thirty-years war. They screened out thousands, making them automatically ineligible for resettlement, even if they had been willing to go to strange lands. Accordingly, many Hmong broke out of the camp, fleeing to the hills of northern Thailand or to a temple at Saraburi, Wat Tham Krabok, which seemed to offer sanctuary. By 2004, some 20,000 Hmong and Lao were living in squalid conditions and under tight security at Wat Tham Krabok. An agreement in December 2003 to make an exception and admit 15,000 of the refugees at the temple for resettlement in the United States was welcomed by Hmong leaders in the United States.

Although the Kennedy Administration's decision in January 1961 to arm the Hmong (one of its first actions on taking office) was not written into a formal commitment, the participation of succeeding administrations in attempts to repatriate Hmong refugees left stranded in exile raised moral issues. This was particularly the case with the Hmong, who had been abandoned

literally from one day to the next by the CIA, which managed the program to support the “secret war” from its Langley headquarters. The CIA station chief in Laos, who went on to become the division chief managing the program at CIA headquarters at the time the abandonment occurred, had been awarded the Order of the Million Elephants, Laos’s highest honor for a foreigner, by King Savang Vatthana.

Over the years in Washington, the Hmong veterans of the Laos war and their families adopted the American custom of organizing themselves to lobby Congress on the plight of refugees and on other matters of concern, such as passage of a bill in Congress at the initiative of the Bush Administration seeking to grant Normalized Trade Relations (NTR) to the LPDR, a move favored by American business leaders.

As the LPDR skillfully managed its bilateral relations with the United States, it also moved in the direction of becoming a responsible member of the community of nations in the post-Cold War period. The LPDR inherited Laos’s seat at the United Nations. It joined the Association of Southeast Asian Nations (ASEAN) in July 1997, and expects to host the ASEAN summit in Vientiane in December 2004. In a move to meet criticisms from human rights groups, the LPDR introduced in 2002 a decree intended to formally protect religious freedom.

Thailand moved rapidly to improve its relations with the LPDR in the late 1970's following a change of government in Bangkok. However, political relations continued to be strained by a border dispute (in fact, a dispute over old French maps of the border dating back to the beginning of the 20<sup>th</sup> century), which led to clashes in the 1980's, and by the continuing armed resistance. In an attack on an immigration checkpoint at Ban Vang Tao ethnic Lao rebels briefly hoisted the royal flag before falling back on their base in Thailand. The LPDR exerted heavy pressure on the royal Thai government to extradite 16 Lao who had taken part in the attack. The Thai courts ruled that the 16 should be granted political asylum. However, the 16 were returned to the LPDR in the dark of the early morning of July 4, 2004.

Relations with Vietnam are based on mutual security concerns and reflect the legacy of the close ties during 30 years of war in Indochina from 1945 to 1975. Observances of important anniversaries, such as the founding date of the party, and exchanges of delegations are marked by joint communiqués extolling the “relation of friendship and special unity between Vietnam and Laos.” This relation is said to be an “objective law.” Historically, Cambodia has also been included in this triangular relationship.

With the People’s Republic of China relations also continue on a close and friendly course, with numerous exchanges of visits. China also has a more dominant commercial role in Laos than does Vietnam.

The LPDR maintains friendly ties to Myanmar (Burma), whose leaders see eye-to-eye with those of the LPDR on the need to repress internal political dissent. Another state with which the LPDR maintains close relations is the People’s Democratic Republic of Korea (North Korea).

An agreement with Russia on restructuring the LPDR's debt levels was agreed during Prime Minister Bounyang Vorachit's visit to Moscow in 2003. The debt was accumulated during the immediate post-1975 years when the Soviet Union was the LPDR's main foreign aid donor. The agreement principally entails a 70% write-down in the aggregate debt level, to the equivalent of US\$380 million, and thereby effectively reduces the LPDR's aggregate long-term debt burden by about half.

### **Questions and Issues**

1. Laos's relations with the six countries that adjoin it reflect the impact of history as well as of ideological differences and similarities. Discuss.

## TIMELINE

- 1354 - Fa Ngum crowned ruler of Kingdom of Lan Xang.
- 1478 - Vietnamese invasion.
- 1713 - Lan Xang splits into three: Louangphrabang, Viangchan, Champasak.
- 1779 - First occupation of Viangchan by Siamese.
- 1827 - Second occupation of Viangchan by Siamese.
- 1887 - Louangphrabang destroyed, King Oun Kham requests French protectorate.
- 1893 - October 3: Siam gives up left bank of Mekong under Franco-Siamese treaty.
- 1895 - April 19: French protectorate of Kingdom of Louangphrabang declared; French administer rest of Laos directly.
- 1941 - May 9: Convention signed ceding right-bank territories back to Thailand.
- 1941 - August 29: King Sisavang Vong signs treaty of protectorate with France.
- 1945 - March 9: Japanese occupy towns of Laos; Franco-Laotian resistance movement develops; Sisavang Vong quarrels with Prince Phetsarath, viceroy.
- 1945 - September: OSS mission lands at Vientiane to investigate POW situation.
- 1945 - October 12: Lao Issara government formed in Vientiane.
- 1946 - French reoccupy Laos, Lao Issara government flees to Thailand.
- 1946 - November 17: Franco-Siamese agreement restores right bank territories to Laos.
- 1946 - December 15: Constituent Assembly meets.
- 1947 - May 11: Sisavang Vong promulgates constitution unifying Laos under his rule.
- 1949 - Lao Issara government in exile breaks up, most return to Vientiane under French amnesty.
- 1950 - February 7: U.S., UK recognize Kingdom of Laos as member of French Union.

- 1950 - August: Prince Souphanouvong announces Lao resistance government (Pathet Lao) supported by Viet Minh.
- 1951 - August: Elections for National Assembly.
- 1953 - Viet Minh invade Laos.
- 1953 - October 22: France signs treaty conferring full sovereignty on Kingdom of Laos.
- 1954 - Viet Minh again invade Laos; Geneva Agreement signed covering Laos; royal government declares its readiness to reintegrate Pathet Lao.
- 1955 - April: Laos attends Asian-African Conference at Bandung.
- 1955 - June: Negotiations open between royal government and Pathet Lao.
- 1955 - December 14: Laos becomes a member of the United Nations.
- 1955 - December 25: Elections for National Assembly; U.S. establishes PEO to provide assistance to royal army.
- 1957 - October 22: Agreement reached for first coalition government with Prince Souvanna Phouma as prime minister.
- 1958 - May: NLHS, political party of Pathet Lao, wins seats in supplementary elections for National Assembly.
- 1958 - December: North Vietnamese occupy territory abutting DMZ; royal government protests.
- 1959 - NLHS deputies arrested, guerrilla war resumes on North Vietnam border.
- 1959 - December: Deaths of Phetsarath and Sisavang Vong, Savang Vatthana ascends throne.
- 1959 - December: Government crisis; king intervenes at urging of Western ambassadors; caretaker government formed.
- 1960 - April 24: Elections for National Assembly, considered fraudulent.
- 1960 - August 9: *Coup d'état* in Vientiane led by Captain Kong Le; new government headed by Prince Souvanna Phouma invested..
- 1960 - December: In battle of Vientiane, Kong Le driven out.

- 1961 - January: Prince Boun Oum and General Phoumi Nosavan form government backed by U.S., Thailand; Kong Le allies his force with Opathet Lao, captured Plain of Jars.
- 1961 - North Vietnamese take part in fighting; truce talks open at Ban Namone; 14-nation conference opens in Geneva; neutralization backed by Kennedy Administration.
- 1962 - June 12: Three princes reach agreement, second coalition government invested with Souvanna Phouma as prime minister.
- 1962 - July 23: Geneva Agreement signed.
- 1962 - November: U.S. transport plane shot down at Plain of Jars, anti-aircraft crew revealed to be dissident Neutralists.
- 1963 - April: Fighting breaks out between Neutralists and Pathet Lao on Plain of Jars; foreign minister assassinated in Vientiane.
- 1964 - April: Attempted *coup d'état* in Vientiane by rightist officers.
- 1964 - August: Attempted negotiations fail; U.S. air strikes begin at royal government's request.
- 1967 - January 1: Elections for National Assembly.
- 1972 - January 2: Elections for National Assembly.
- 1972 - October: Negotiations between royal government and Pathet Lao open in Vientiane.
- 1973 - February 21: Vientiane Agreement signed, ceasefire takes effect.
- 1973 - March: Pathet Lao release nine U.S. POW's in ceremony at Hanoi airport.
- 1973 - September 14: Protocol signed in Vientiane giving effect to Vientiane Agreement.
- 1974 - April 5: Third coalition government invested with Prince Souvanna Phouma as prime minister.
- 1975 - March: Fighting breaks out, violating ceasefire.
- 1975 - May: Anti-government demonstrations, orchestrated by Pathet Lao, in Vientiane.
- 1975 - June 26: U.S. AID mission closes.
- 1975 - August 23: Pathet Lao complete takeover of principal Laotian towns.

- 1975 - December 1-2: National Congress of People's Representatives meets in Vientiane, LPDR proclaimed, King Savang Vatthana abdicates, Souphanouvong becomes president.
- 1977 - July: LPDR and Vietnam sign 25-Year Treaty of Friendship and Cooperation.
- 1984 - Death of Prince Souvanna Phouma.
- 1986 – Private markets introduced in the economy at the Fourth Party Congress.
- 1988 - June 26: Elections for district-level people's councils.
- 1988 - November 20: Elections for province-level people's councils.
- 1989 - March 26: Elections for Supreme People's Assembly.
- 1991 - August 15: Constitution adopted.
- 1992 - December 20: Elections for first National Assembly.
- 1994 - April: Friendship Bridge across the Mekong with Thailand opened.
- 1997 - Elections for Second National Assembly.
- 1997 - July: Laos becomes full member of ASEAN.
- 2002 – February: Elections for Third National Assembly.

## SELF STUDY GUIDE

**George P. Shultz  
National Foreign Affairs  
Training Center  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State**

The **Self Study Guide for Liberia** is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to Liberian history, geography, politics, economics, culture, religion, media, and international relations. The guide should serve as an introductory self-study resource. The topic is far too complex to be covered in depth using only the text in this guide. The reader is encouraged to explore the questions and issues introduced using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of this guide was prepared by Ambassador Robert E. Gribbin. The views expressed in this guide are those of the author and attributable sources and do not necessarily reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by Ambassador Gribbin. All sources used for graphics and extended quotes are public domain, from sites that explicitly say “can be used for non-profit or educational use,” or are from the author’s own materials.

This publication is for official educational and nonprofit use only.

## **Liberia Time Line**

- 1815 - The American Colonization Society formed in the United States with the objective of resettling freed slaves in Africa.
- 1822 - USN Captain Stockton secures land at Cape Mesurado; the first settlers arrive.
- 1847 - Americo-Liberians declare the independent state of Liberia with its capital in Monrovia.
- 1862 - Liberia recognized by the United States.
- 1926 - Firestone rubber plantations established.
- 1943 - President Franklin D. Roosevelt stops by after the Casablanca Conference.
- 1944 - William Tubman elected President of Liberia.
- 1971 - William Tolbert replaces Tubman, begins reforms and liberalizations.
- 1980 - Master Sergeant Samuel K. Doe leads a coup d'etat that puts native people into power for the first time; Doe's rule deteriorates into corruption and violence.
- 1985 - Doe wins a rigged election; result endorsed by the international community.
- 1989 - Charles Taylor leads a Christmas Eve invasion by rebels of the National Patriotic Front of Liberia (NPFL); Liberia's civil war begins.
- 1990 - Fighting in Monrovia causes death and destruction; U.S.Embassy evacuated; Doe's murder by rebels videotaped; West African ECOMOG force arrives to restore order.
- 1992 - Interim Government of Liberia led by Professor Amos Sawyer, backed by ECOMOG controls Monrovia; Taylor reigns over "Greater Liberia."
- 1995 - Warlords form a council in Monrovia to rule until elections.
- 1997 - Charles Taylor elected President.
- 2001 - Taylor and Liberia sanctioned by the United Nations; arms embargo imposed, sale of diamonds banned and leadership travel prohibited.
- 2002 - Rebels from LURD (Liberians United for Reconciliation and Democracy) expand insurgent activities in the northwest.
- 2003 - Taylor indicted for war crimes by Sierra Leone's Special Court; LURD and MODEL rebels push Taylor's forces back into Monrovia; Peace talks ensue in Accra; ECOWAS mobilized to insert peacekeepers with U.S. support; Taylor resigns and departs to Nigeria.

# Chapter 1

## Introduction

Liberia is a land of unrealized dreams and dashed expectations. Almost everything that could have gone wrong there during the last twenty years has. Anarchy and unrestrained violence characterized politics, which concomitantly accompanied a downward economic and social spiral. Public executions on the beach, drug crazed young thugs sporting Mickey Mouse masks terrorizing citizens at road blocks, rampant theft of national resources, corruption, nepotism, abuse of human rights, tribalism, blood diamonds and warlords; are all images of contemporary Liberia. Sadly, the nation today is a shadow of its former self and, even worse, only a vague image of what it might have been. Yet, despite all its pains, Liberia remains a land of hope. The people, both at home and abroad, hope that political violence, tarnished institutions and a collapsed economy can somehow be reversed and that all Liberians – many for the first time – will be able to participate fully in national life. Although hope may give succor to patriots, reality is that the situation is desperate and under current circumstances only likely to improve marginally, if at all.

Why has Liberia stumbled so badly? What factors gave rise to the current crisis? Who is to blame? What needs to be fixed? Is there any real basis for hope? These are among the topics that will be addressed in this study guide. We will look at the country's unique history of founding by freed slaves from America, its "special relationship" with the United States, its fractured ties with neighboring African states, its failing extractive economy and finally its own indigenous revolution against the ruling oligarchy and the subsequent descent into despair. We will look at warlords and discover how they rule through manipulation, intimidation and sheer terror. We will also identify positive elements and strengths in Liberian society that offer encouragement that the underlying resilience of the people might yet prevail.

## The Setting

Liberia sits on the underside of the hump of West Africa. It possesses 370 miles of coastline on the Atlantic Ocean. It is well in the tropics and suitably fits the western image of Africa - a wet, lush, jungle-like terrain. Although there are distinctive wet and dry seasons, Monrovia, the capital, receives 180 inches of rain a year. Rainfall tapers off slightly as one moves inland or eastward along the coast to only about 100 inches a year (Washington, in comparison, gets 30 inches). Humidity averages between 70 and 90 percent.

In size the country occupies 43,000 square miles. It is about the size of Tennessee. The coastal plain gives way to an inland plateau broken with hills and valleys that ultimately rises to the small mountains of Guinea highlands whose crests reach 4,000 feet and which form the border with Guinea. Nine rivers, none of which are navigable for any distance, drain directly into the sea. The Mano River in the west forms the boundary with Sierra Leone and the Cavalla River in the east constitutes the border with the Cote

d'Ivoire. Liberia's ports of Monrovia and Buchanan sit at the mouths of the Saint Paul and the Saint John rivers respectively. The nine parallel river valleys each running from northeast to southwest constituted effective barriers to east/west road and rail construction, a situation that prevails today. Roads tend to run upcountry rather than along the coast. Thus travel from Monrovia to Greenville in the southeast or Harper, near the Ivorian border, requires a long interior loop. Liberia's two rail lines, both of which are currently inoperative, were built to export iron ore; one from Bomi Hills to Monrovia and the other from Yekepa on the Guinea border to Buchanan.

Initially all of Liberia was covered in dense forest. Gradually forest gave way to human habitation, first to traditional villages and their surrounding agricultural lands and then to plantations. Food crops include upland rice, cassava, yams, taro, peanuts and various vegetables. Plantation crops include rubber, coffee and cocoa. Much of Liberia today reflects these uses. Over a million acres are devoted to rubber production. Beginning in the last century the forest was also harvested for timber for export. This exploitation turned into a major industry that continues apace. However, small areas are being preserved as national parks in order to protect unique species of plants and animals, including pygmy hippopotamus and chimpanzees.

## **The People**

The population of Liberia is estimated at about 3 million. In addition to the Americo-Liberians, who are descendants of the freed black slaves who colonized the area and who never numbered more than five percent of the population, over a dozen separate ethnic groups reside in Liberia. They include Kpelle, Kissi, Kru, Mandingo, Bassaa, Gio, Krahn, Mano and Mende among others. Although they live in close proximity with one another, affinity or antipathy between tribes is a traditional function of kinship, territory and cultural similarity. Historically some groups have gotten along with each other and contested against others. All groups are fairly distinct and take pride in their language and customs. Tribal identities are an understandable reality in modern African politics, but in Liberia's case have also become the basis for the conflict.

About a quarter of Liberians are Christian and about a quarter are Muslim. The remainder do not profess any world faith, but continue to practice ancestral beliefs. Thus, the role of traditional leaders, both secular and religious, is important. Religious orientation also factors into political differences.

On account of political violence during recent years, the population of Monrovia mushroomed several fold to about half a million. Elsewhere within the country tens of thousands of people are displaced. Neither the city's nor the nation's infrastructure is able to cope effectively with such a surge. Thousands more have fled to neighboring countries. Living conditions have deteriorated nation wide as evidenced by lower school attendance rates and the virtual disappearance of rural health services. The first prerequisite for re-establishment of social services is peace and the second is finding the resources necessary. Most peoples' hopes for the resumption of "normal" life are predicated on achievement of these two objectives.

### **Issues to consider:**

1. What are the initial images you conjure up when thinking about Liberia? Are they ones of poverty and underdevelopment? Traditional culture relatively untouched by the outside world? A staid urban society governed by 19<sup>th</sup> century American values? Or a land of terror and conflict run by warlords run amok? What else?
2. Geography, which either separates or unites people, plays an important role in shaping a nation's economy and polity. Keep this in mind as we study Liberia. How has the relative isolation – one from another – of Liberia's tribes and their exclusion from the modern economy for over a century contributed to current difficulties?
3. When learning about Liberia, think about blame. Who bears the blame for the tragedy of Liberia?

### **Web Sites:**

## Chapter 2

### Colonization

Liberia's origins lie in the United States in the early 1800s. Slavery was, of course, prevalent in the South, but the number of freed slaves was slowly growing. The system had no place for them. In fact, they constituted a threat to an orderly society of owners and slaves. Following the establishment of a colony for freed blacks in Sierra Leone in 1786 by British philanthropists and the independence of Haiti in 1804 an idea began to percolate in America to the effect that returning freed Negroes to Africa would solve a number of looming issues. The idea was attractive to different elements of society for different reasons. Many slave owners wanted the freedmen removed from their midst. Other slave owners saw colonization as a humane method to manumit their slaves without antagonizing their neighbors. Racial theorists judged that removal of blacks was the only way to maintain white racial purity. Abolitionists saw colonization as a means of freeing slaves. Christians saw colonization as a mechanism to spread the faith to the heathen of Africa. Freed blacks themselves viewed departure as an opportunity that would by far surpass their plight and poverty in America. Slaves jumped at the chance to be free, even on the condition of departure for Africa. Thus for a variety of reasons, the idea of returning Negroes to Africa found fertile ground in early America.

#### Back to Africa

In 1816 a group of prominent Virginians led by Associate Justice of the Supreme Court Bushrod Washington, George's nephew, formed the American Society for the Colonization of Free People of Color, later shortened to the American Colonization Society. The society secured a grant of \$100,000 from Congress and sent a team to West Africa to secure land for a colony. Searching east of Sierra Leone, Eppharim Bacon and the Rev. Andrus were not initially successful in negotiating with local chiefs, but in 1821 U.S. Navy Captain Stockton of the *Alligator* (whose wreck in the Florida Keys is a national historical site) compelled Chiefs George and Peter at Cape Mesurado to sign a treaty establishing the desired colony. The first colonists soon named the settlement Monrovia in honor of President James Monroe.

Over the next thirty years thousands of black Americans left for Liberia. Although the American Society for Colonization supervised and governed Liberia, most funding for settlers came from state affiliates since the U.S. Congress refused to grant further funds for the undertaking. Societies in Virginia, Maryland, Mississippi, New York and Pennsylvania subsidized new colonists, who in some instances founded settlements - Harper by Maryland, Greenville by Mississippi - that were independent of Monrovia and not incorporated into Liberia as such for fifty or more years. By 1867 a total of 12,097 persons had been transported to Liberia from America. In addition almost 6,000 Africans seized from slave ships in the Atlantic were also landed at Monrovia. The settlers from America became known as "Americo-Liberians" and those from Atlantic slave ships, "Congos." By the 1980s the term "Congos" was used by indigenous people to refer to both groups.

Life for American settlers in Africa was harsh. Many died from tropical diseases and some from early conflict with local tribesmen. Additionally, the Americo-Liberians had no understanding of tropical agriculture and few ideas of how to build a flourishing society. Coming from several generations in America, they were no longer African by culture. So essentially, they reproduced the society they knew, that of the ante bellum South. Each settler was granted ninety acres upon which to build a dwelling. They introduced plantation agriculture and used “Congos” or local tribesmen for labor. Education, proper dress – they abhorred native nakedness – and firm Christian beliefs became the mainstays of society. Over the years the gulf between the two groups- Americo-Liberian settlers on one hand and native tribes people on the other widened and jelled into a system of exploitation of the latter group by the former. Political, economic and commercial power rested within an oligarchy of settler families and was maintained by family links and social ties, including Masonic lodges. The elite proclaimed a national slogan of “Love of Liberty Brought Us Here,” but they shared no liberty with the native inhabitants. Instead a code of separation was observed. Tribesmen were deemed to be heathen savages suitable only for manual labor and to be kept in line by force of arms.

In early years Liberia was run by white men, ministers of the cloth by training, appointed by the American Colonization Society, but in 1841 Joseph Jenkins Roberts took over management of the territory’s affairs. Since Liberia was not technically a colony of the United States, and besides was operated by Negroes, nearby colonial powers – Britain, France and Germany - and their citizens cast covetous eyes on the region. Encroachments and blatant non-observance of Society authority occurred. However, in 1843 U.S. Secretary of State Upshur informed his British counterpart that the U.S. objected to any “despoiling” of Liberian territory. U.S. Naval squadrons operating in the Atlantic gave substance to the Secretary’s pronouncement and the Europeans kept their distance.

### **Independence Declared**

The lack of territorial sovereignty under the ACS and the continued threat of a British takeover led the Americo-Liberian elite to declare independence in 1847. Joseph Jenkins Roberts became the first president. Ironically Britain recognized Liberia in 1851, but the U.S. – on account of rising tensions that would lead to civil war, especially the desire not to have a Negro ambassador in Washington – did not recognize the new nation of Liberia until 1862.

Liberia’s economy was fragile and the new government was barely able to make ends meet. In 1871 President Roye negotiated a \$500,000 loan from England on terrible terms, then pocketed much of what was borrowed. He was impeached and removed. Then probably murdered. Again in 1906 Liberia was grievously in the red and sought foreign help. U.S. President Taft sent a Commission of Inquiry that indeed found much malfeasance. In what was perhaps the first restructuring conditionality levied upon Africa, the Commission recommended budgetary and financial reforms, a take-over of customs by the U.S. in exchange for a loan, training of an effective police force and the

establishment of a U.S. Navy coaling station in exchange for a loan. Ultimately, the U.S. did not take over customs, but other reforms were partially implemented. Throughout this era Liberia suffered in comparison to her colonial neighbors where France and Britain financed roads, railways and ports, not to mention a few schools and hospitals. Liberia also faced a continual series of native uprisings for which the police – there were no colonial troops available - were inadequate to quell. On at least two such occasions in 1871 and again in 1915, U.S. naval warships arrived with soldiers to re-enforce Monrovia's rule of the hinterlands.

### **Issues to Consider:**

1. We have listed some of the motivations for sending slaves back to Africa, but have skirted the question of was it moral or ethical? While we ought not to make judgments of the previous times based on current mores, what do you think? Do you see similar sorts of issues arising in contemporary immigration issues?

### **Web sites:**

[www.prodigy.net/jkess3/History.html](http://www.prodigy.net/jkess3/History.html) is an excellent site that covers Liberia history in a lively and readable fashion, with much emphasis on revealing anecdotes.

[www.loc.gov/exhibits/african/afam002.html](http://www.loc.gov/exhibits/african/afam002.html) contains lots of interesting detail on the American Colonization Society.

[www.geocities.com/athens/atrium/3770/](http://www.geocities.com/athens/atrium/3770/) Another good history site.

### **Bibliography:**

Liebenow, J.Gus. Liberia - The Quest for Democracy. Bloomington: Indiana University Press, 1987. [DT 631.L53] This is the most comprehensive and best documented history of Liberia from its origins up into the Doe years.

Reef, Catherine. This Our Dark Country: The American Settlers of Liberia. New York: Clarion, 2002. Almost a coffee table book, this volume contains many interesting old photographs.

## Chapter 3

### The Early Twentieth Century

By the 1920s Liberia's financial situation was again desperate, but this time the private sector came to the rescue. Harvey Firestone, a newly minted American industrial baron, was looking to break the British monopoly on rubber, which came mostly from Malaysia. He scoured the world and decided that Liberia was well suited from soil, climatic and labor perspectives to grow rubber. Also, it was no one's colony, so was politically unencumbered. In exchange for securing a \$5 million loan to the government up front plus annual rents, plus a promise to build a modern port, Firestone obtained a concession of a million acres and a guarantee of 50,000 labors per year. Thenceforth Liberia and Firestone names were forever intertwined.

Firestone proved to be a cash cow for the government and a relatively good citizen to boot, at least under the terms of the day. While it never overpaid its workers, it did provide health services and housing for many of them and schools for their children. And it did progressively better over time.

#### Forced Labor

The labor crisis that nearly destroyed Liberia had to do with the Spanish island of Fernando Po (part of Equatorial Guinea today). In the 1920s labor was badly needed there for sugar and coffee plantations. For several years since World War I, Americo-Liberian elites including President King, Allen Yancy, who was to become Vice President and Secretary of State Edwin James Barclay had been privately contracting for labor for the island. They began to use the coercive powers of the state to fulfill their quotas. Young men were taken by force and shipped away, never to return. Non-compliant villages were burned and their chiefs beaten. The feared Frontier Forces and government-backed thugs ensured that quotas were met. It was reminiscent of the slave trade. Foreign missionaries as well as conscientious Liberian administrators brought abuses to light and an international scandal ensued.

The outcry brought Liberia to the world's attention. Racist critics reveled in the fact that a black ruled state in Africa – one of only three black run nations in the world – was engaged in slavery. Humanitarians urged a quick end to the abuses and justice for the perpetrators. The League of Nations established a Commission of Inquiry to investigate. (In retrospect the Commission should be viewed as a precedent setting multinational human rights investigation – the precursor of today's *special rapporteurs* empowered by the UN Commission on Human Rights.) The Commission found the facts of the case to be as stated: an abusive forced labor system deprived thousands of young Liberians of their basic rights. But the Commission went much further; it recommended basic policy reforms that, if implemented, would radically change how Liberia dealt with its indigenous citizens. The Commission urged that primary schools be established for the tribes, that the authority of traditional chiefs be re-established, that the civil service be

reorganized on a merit basis and that the government better train and control its police force.

As a result of the investigation President King and Vice President Yancey were forced to resign. However, Edwin James Barclay, formerly the Secretary of State, who too bore some of the responsibility for the labor scandal succeeded them in power. The standard bearer of the True Whig party, Barclay narrowly won election over more reform-minded candidates. Only Americo-Liberian men - at most only one to two percent of the total population - had the right to vote, so the results were certainly not representative of the nation's sentiment, even if that could have been measured. Nonetheless, President Barclay promised to implement the recommendations of the Commission of Inquiry. He did squash egregious labor recruitment, but other reforms languished.

In the United States in the 1920s the Pan African movement spearheaded by Marcus Garvey, W.E.B. Dubois and others was drawing attention and adherents. Among its precepts was a back-to-Africa call. Americo-Liberians in Monrovia feared an influx of new immigrants so adopted a constitutional amendment that precluded non-Liberian born citizens from holding high office. This amendment, by showing that newcomers would not be welcome, effectively deterred new immigration and preserved the Liberian fiefdom from external challenge.

Up into the 1930s, as Monrovia sought to expand its control of the interior, the government's heavy handed tactics and oppressive demands were resented and rejected by tribesmen, often by force of arms. A series of skirmishes and depredations ensued, some of the most rebellious of which were called the Kru wars. Government forces were ultimately victorious and by the beginning of World War II, all of Liberia was finally under the firm authority of Monrovia.

### **Tubman's Rise to Power**

In the early 1940s, in an attempt to widen the governing circle from a very narrow set of families, President Barclay brought a bright young man named William V.S. Tubman into government. Tubman was from the second or third circle of Americo-Liberians; folks who had mixed more in the multiethnic stew of the growing nation. Tubman was nonetheless a loyal Americo-Liberian, member of the right Church, Masonic Lodge, etc. In 1944, presumably judging that Tubman would be the most easily manipulated of possible candidates, the True Whig old guard ran him for the presidency. Tubman, however, proved to be his own man from the very beginning. He campaigned on a platform of "assimilation and unity." Once elected, he redeemed his promise of a new deal for the native peoples. He delivered new freedoms, the franchise, educational and training opportunities. By creating new counties in the north - Grand Gedeh, Nimba, Bong and Lofa - tribesmen entered the Legislature for the first time as participants. Tubman would later extend voting rights to women.

President Tubman reigned for 32 years. He led Liberia from the doldrums of neglect into a bit role as a World War II and Cold War player. He presided over the nation's destiny when the winds of political liberation and independence swept across Africa. He carefully kept the most radical influences at bay. Personally conservative and always cognizant that his real constituency lay in the oligarchy of Americo-Liberian families, nonetheless, Tubman was enough of a politician to open progressively additional opportunities for tribesmen to participate in national life. Additionally, he had the luck to preside over the epoch when iron ore was found and exploited. Those riches immeasurably enhanced his personal political power as well as national security. A leadership cult grew up around him. Throughout Tubman measured others by one criterion: loyalty. He remained supreme and those retainers whose loyalty never faltered prospered, but woe to those who challenged his leadership. Not that he condoned or used violence to enforce his will, but rather that he controlled political and economic opportunities.

Tubman was bolstered by augmented official American interest. During WWII the USG built the harbor that Firestone had long promised as well as a modern airfield near Harbel, about forty miles from Monrovia. During the cold war years Liberia was a reliable American ally in the confrontation with the Soviet Union in the United Nations as well as in Africa. By the 1960s the U.S. presence in Monrovia expanded to include a large embassy with regional communication and intelligence responsibilities, the VOA transmitter site for Africa and an Omega maritime navigation antenna (still the tallest manmade structure in Africa). American investment via Firestone was augmented by majority ownership of LAMCO, the chief exploiter of iron ore. There is no doubt that ideological and commercial concerns figured most prominently in U.S. policy towards Liberia during this era. Tubman, like counterparts throughout Latin America, was "our" dictator.

### **Issues to Consider:**

1. Think of the irony that Liberia, founded by immigrants from America, effectively rejected further new immigrants in the 1920s. Had the nation's relative isolation and inner focused political system become so selfish that new influences and people were feared?
2. President Tubman was the man for the times. He certainly laid the groundwork for the development of a more modern state and he presided over what were probably Liberia's best years. Yet the seeds of future disasters were inherent in his administration. What were they?

[DT 634.G47] A straightforward account of Liberia's first rulers with emphasis on the 1900-1930 period during which the internal "colonialism" was most pronounced and relations with the U.S. and European powers quite complex.

## Chapter 4

### The Extractive Economy

Liberia's economy in the 19<sup>th</sup> century was chiefly subsistence. Slaving died out about mid-century just as the territory declared its nationhood in 1847. Slavery was an anathema to the settlers from their first days, but it had figured in the activities of the interior tribes. Easy sources of ivory and gold were also depleted. Americo-Liberians replicated economically as well as socially and politically the systems they knew from America. Those systems comprised plantation agriculture and mercantile trade. Crops grown for export included palm oil and over time coffee and cocoa. Camwood and tortoise shell were also collected for export. However, overall the oppressive climate, difficulty of internal movement, the lack of sufficient labor and limited markets conspired to keep Liberia only limping along economically. In contrast to neighboring French and British colonies that towards the end of the 19<sup>th</sup> century benefited from capital improvements, mainly railways, financed (usually at a loss) by the metropole, Liberia enjoyed no such largess from the United States.

#### Rubber

World War I brought few benefits to Liberia, but after the war as the industrialized economies took off, the need for raw materials expanded. The American tire company Firestone searched the world for suitable land and climate for rubber production. It chose Liberia for a major operation, imported the right variety of rubber tree from Southeast Asia and began production in 1926. Rubber gave Liberia new economic hope. Although firmly in the hands of the American parent company, revenues from rubber production accrued to the government and provided the wherewithal, for the first time, to improve the national infrastructure. Iron ore deposits were also discovered. Exploitation of them, along with railways to reach them, began after WWII. The war also directed American government attention to Liberia, the result of which was construction of a major airfield, Roberts Field, near Harbel and building the port of Monrovia. Monrovia was not blessed with a good natural harbor, so laying of a vast breakwater to enclose new wharves was necessary. It was hoped that Monrovia might become an important transshipment point for the west coast of Africa.

Rubber and iron became the mainstays of the economy in the fifties, sixties and seventies. Liberia also opened a ship registry that permitted ship owners to use Liberia as a flag of convenience in order to escape onerous taxes or operating conditions – usually mandatory labor regulations - imposed by their home states. Liberia was careful to ensure that ships under its flag met universal safety regulations. Structurally, Liberia's economy was considered to be an enclave economy. That is, those in the enclave of rubber, iron and ships including the government and those dependent on it prospered whereas others – the vast bulk of the population simply were not involved. By and large the wealth of the country was extracted to the benefit of external owners and a small local elite. A merchant class composed of Lebanese and other expatriates expanded their control of daily commerce. The majority of the population engaged in some cash

cropping, but mostly lived subsistence lives growing rice as their chief food. The economic disparity between the haves and the have-nots was great and certainly factored in the social and political cleavages that were to occur.

### **Poised for Growth or Failure?**

By 1960 when most of the rest of Africa became independent, Liberia was functioning well. Per capita income was over \$100, which placed it in the upper ranks of African states. Other minerals were being discovered notably diamonds and gold which along with timber would begin to figure in export statistics. Unlike neighboring states, having experienced no independence euphoria and transfer of power from colonial authorities to indigenous peoples, Liberia also escaped the inflationary cost of new government. Then too, Liberia also did not benefit from injections of foreign assistance linked to newly acquired independence. It just plodded along. However, new ideas about economic and social responsibility permeated even Liberia in the post-independence era and efforts were undertaken to improve social services such as the health and educational systems. As the economy expanded it was necessary to educate and bring into the mainstream children of the indigenous peoples. Obviously, this had been slowly happening for decades, but as those folks matured they too began to think about throwing off the “colonial” yoke of the Americo-Liberians.

Driven by enclave exports, Liberia’s economy expanded slowly in the seventies. Government spending became more ostentatious culminating in a construction binge related to Monrovia’s hosting of the OAU summit in 1979. Under the rubric of economic development, external lenders and donors, especially the United States, helped finance an expanded portfolio of projects – including some straightforward budgetary support. Warning signs were evident that without greater diversification and participation of a greater percentage of the population in modern economic activities that Liberia’s economy could not be sustained.

### **Issues to Consider:**

1. The nations of Africa that harbor vast mineral riches – especially oil in Nigeria, Angola, Congo (Brazzaville) and Gabon, but also including copper and precious metals, Democratic Republic of the Congo, Zambia and Zimbabwe – have not been very successful in investing their wealth for the benefit of their citizens. Liberia too is guilty of non-performance. What common factors do you see in these failures? Corruption? External ownership? Financial naiveté?
2. Is it fair for the west to ask that Africa redistribute national wealth? If so, why? Has that ever been done in the United States?

## Chapter 5

### Tolbert to Doe

William Tolbert took over the presidency in 1971 and served until murdered in 1980. Being president was not a revelation for Tolbert; he had served as vice-president for the previous 19 years. He was, nonetheless, more modern and better attuned to the needs of the nation; especially the still poorly represented and poorly regarded native peoples. Tolbert was a mild populist. Although thoroughly Americo-Liberian, he spoke Kpelle and reached out to masses. He equalized salaries, which raised the status of native people. He lowered the voting age to 18 and reined back on the blatant nepotism that characterized settler control. He was aware that the changes that independence wrought in other African states, essentially the empowerment of the people, had not occurred in Liberia. While he sought to be more progressive, he was basically conservative and caught even more in the interlocking web of Americo-Liberian relationships that had defined Liberia's politics for 150 years.

Since the 1960s, not particularly because of either Tubman or Tolbert, but more on account of the simple evolution of society and the economy, a growing number of indigenous people were brought into the governing system. First this happened through education. Settler families had a long tradition of adopting (and fathering) children who with their mixed parentage expanded the settler class. The most elite families sent their children abroad to school, but missionary run and other church schools catered to thousands of others. Before long higher education, accomplished at Episcopal run Cuttington College or at the University of Liberia, was no longer a monopoly of the ruling class. Country sons and a few daughters joined the nation's intellectuals. While most were content to be absorbed into the ruling order, they displayed skepticism about it and many agitated for change. Because overt political opposition was squashed, revolutionary thinkers operated through "movements." Two radical organizations, the Movement for Justice in Africa (MOJA) and the Progressive Alliance of Liberia (PAL), both born in the seventies, grouped reformers and revolutionaries who sought reorientation of the paternalistic system of the True Whig Party, including a more independent foreign policy, i.e. a shift away from lockstep with the U.S. to policies more in line with other African states.

#### Pressure on the Oligarchy

In addition to increasing political agitation, the seventies also brought a downturn in the economy. The oil shock of 1973 registered as did lowered production of iron ore as the deposit began to play out. Government spending, however, continued apace. Lower revenues and higher outlays were incompatible and the pain was felt – especially for urban dwellers in the wage sector. Tolbert's effort to counter his critics including a less U.S. oriented foreign policy antagonized the U.S., but generated little new local support.

Liberia volunteered to host the Organization of African Unity summit meeting in 1979. In accordance with continental custom this meant an enormous outlay of public

funds for new buildings, villas for chiefs-of-state and public works. Although proud that Africa's spotlight would fall on them, Liberians found the consequences to be devastatingly inflationary. This was manifested in April 1979 when the price of rice, Liberia's staple food, was raised. This was doubly galling because the Tolbert family controlled much of the rice trade. Protest riots occurred on April 14 in Monrovia followed by widespread looting. This event demonstrated the vulnerability of the regime and encouraged opponents to continue to muster support by tapping long-standing grievances. A sense of inevitable change arose, but the Tolbert machine tottered on. Coup rumors were ripe in the days leading up to the first anniversary of the rice riots and, in fact, one did occur.

## **Revolution**

On April 12, 1980 a group of seventeen soldiers, including Master Sergeant Samuel Doe, Sergeant Thomas Quiwonkpa and Sergeant Weh Syen raided the executive mansion where they unexpectedly found President Tolbert (he usually spent the night at his farm). Tolbert was butchered in cold blood. Ten days later, thirteen members of his government were stripped to their underwear, staked to posts on the beach and executed. The days of settler oligarchy were over. The new rulers were tribesmen from the interior. By and large the population rejoiced at the change. Radical intellectuals tooted it as Liberia's genuine revolution and saw in it the coming democratic empowerment of the people. These intellectuals made common cause with their country brothers, whom they saw as the muscle for their political philosophies.

The soldiers, however, did not reciprocate. They tasted power and enjoyed it. Samuel Doe soon emerged as Chairman of the People Redemption Council (PRC). The junta's initially brutality, lack of goals and subsequent internal divisions led to instability. Doe intuitively grasped that a pro-American stance would position him well against rivals Weh Syen and Quiwonkpa. Over the next few years – during the height of the cold war - Doe became ardently pro-American and subsequently reaped the benefits of U.S. support.

Doe also quickly began to play on tribal considerations as a key mechanism to hold and expand power. Some of this orientation to tribalism was ingrained. All country Liberians maintained connections to the village. Even though distant because of government service, migration to the city or contract labor, men were expected to provide projects and patronage to the home folks as they were able. Doe and other members of the PRC gravitated to this tradition and to those they could trust. The political/economic/social struggle was no longer couched in terms of indigenous people collectively versus settler elites, but in terms of tribal contests among the native people for the largest share of the pie. Securing access to be pie became bitter and very violent. Doe assembled a Krahn entourage to protect him. During his ten years in office, Doe had killed or exiled all but a handful of the seventeen who formed the initial PRC junta. He claimed that more than thirty-five assassination plots were aimed at him and that God had intervened on many occasions to save his life. Such claims of invincibility convinced many Liberians that Doe did indeed possess mystical protection.

## **Political Tribalism**

Doe rallied his Krahn tribesman against his enemies, most especially Thomas Quiwonkpa, a Gio tribesman, who having been chased into exile by Doe in 1982 returned in 1983 at the head of an insurgent force. Quiwonkpa's raid against Yekepa town in Nimba County unleashed retaliatory actions by Krahn forces aimed indiscriminately at Gio and Mano ethnic groups. From the perspective of historical hindsight, this marked the beginning of Liberia's civil war that over the next twenty-three years – off and on – would engulf the nation.

A watershed event that alienated the educated elite against Doe occurred in August 1984. While Doe was readying a new constitution that would reauthorize active politics, President of the University of Liberia Amos Sawyer publicly and artfully suggested that Doe resign to facilitate new elections. In response the army cordoned off the University. Sawyer and other faculty members were arrested. In demonstrations that followed, students were beaten, raped and killed. This event caused a irrevocable split as many who had supported Doe or at least been neutral towards him, now turned unabashedly against him.

Doe's record as chief executive was deplorable. He had little notion of how to govern. He readily co-opted the civil service, but the corruption and patronage ingrained in it only became more pronounced with the intrusion of tribalism. A succession of American ambassadors strove to educate Doe in the modalities of both domestic and foreign policy, but aside from confirming his firm adherence to U.S. positions – anti-Soviet, pro-Israeli, anti-Libya – achieved little success. Under the Reagan Administration's view of the world that was enough. Money flowed. Some funds were earmarked for development, but Doe's military, the Armed Forces of Liberia (AFL) received weapons, munitions and other equipment. Those weapons certainly helped put down coups and otherwise sustain operations against a variety of insurgent forces. U.S. aid during the Doe era totaled over \$500 million. However, in addition to economic and military support, the mere fact that the U.S. backed Doe – despite his obvious flaws – intimidated what might have been more legitimate opposition. The culminating affront was the 1985 election, which Doe stole, finally claiming a victory of 50.9 percent. The U.S. endorsed the result.

Following the election in November 1985 Quiwonkpa led a group of insurgents into Monrovia where they briefly held sway to much public jubilation. However, having been tipped off, perhaps by the U.S. embassy, Doe's forces regrouped and overwhelmed the invaders. Quiwonkpa's corpse was mutilated and a retaliatory blood bath against "Gio men" ensued. Thousands were slaughtered. In order to balance the ethnic equation the Doe regime made alliances with the Mandingo people from Liberia's northwest. Like the Americo-Liberians, the Mandingo were mostly migrants. However, they came from the Sahalean region to the north. They were Muslim traders and relatively wealthy. Foremost, they had no vested territory, but were scattered among other people. Both the Krahn and Mandingo saw their alliance as one of opportunity and they combined efforts

against the Gio and others. Even though its economic fortunes declined, its administration corrupt, its popular support minimal and its U.S. backing slipping, the Doe regime retained power through application of violence. There was no immediate threat to Doe, but preparations were being laid.

Charles Taylor seized control of Quiwonkpa's National Patriotic Front of Liberia (NPFL) in 1985. Taylor himself was an enigmatic figure. Son of settler father and a native mother, Taylor spent the seventies in the U.S. receiving a university education. He returned to Monrovia in 1980 and inveigled from Chairman Doe the position of chief of the General Services Administration, the organization that had responsibility to procure and purchase items for the government of Liberia. It was a lucrative post, but full of intrigue as personalities clamored for lucre. Reading the writing on the wall, Taylor fled only later to be charged by the government with the embezzlement of \$600,000. Taylor was arrested in Massachusetts on that charge at the request of the government of Liberia and held for deportation. He spent 16 months in detention before escaping under murky circumstances in September 1985. Over the next few years, he pitched up in Ghana, where he was twice briefly imprisoned, Cote d'Ivoire, where he touched base with Liberian exiles, Burkina Faso, where he made friends with Blaise Compoare (soon to become president) and Libya, where he oversaw the training of about a hundred NPFL fighters led by Prince Johnson.

### **Issues to Consider:**

1. Was revolution inevitable? Was Doe automatically the leader? President Tolbert tried to ride the cyclone, but his reforms – even if he wanted to do more, he was constrained by the Americo-Liberian oligarchy – were inadequate. Is he to blame? Even if change was pre-ordained, why Doe – the worst choice? Why didn't more reasonable leaders do more? Are they to blame? America gets lots of blame for Doe, but we will look at that in a separate chapter.

2. Tribalism rears its ugly head even uglier during the Doe years. African leaders know that politics is not just about common ideals and goals, it is about identity. Identity in Africa means tribe, particularly as group leaders maneuver to obtain as much of the national pie that they can for themselves and their followers. Tribalism is a key, perhaps the key factor in Liberia's 23 years of civil war.

## Chapter 6

### Civil War in Earnest

Charles Taylor's force of about 100 Libyan trained NPFL soldiers crept across the Cote d'Ivoire border on Christmas Eve 1989 to seize the town of Butuno in Nimba County. Although it seems that this was to be part of a multi-phased invasion, only the Butuno event succeeded. Taylor's announced intent – he spoke regularly over the BBC – was to oust Doe and to free the Liberian people from his tyranny. Taylor's political/military genius, if it could be called that, was to couch the civil war in ethnic terms, i.e. a struggle against the Krahn, Doe and all the oppression they had wreaked on the Gio, Mano and other peoples. This call appealed to the citizenry, especially in non-Krahn regions, all of whom had felt Doe induced terror or lack of opportunities as impediments to their lives. Taylor also skillfully marshaled traditional authorities to the NPFL cause. Zoes (religious chiefs), chiefs and elders accepted the necessity for the struggle. Some leaders saw the cause as righteous, others were intimidated by peers and others still were bought off – or a combination of all three motivations. In any case traditional leaders joined the effort and with them came their communities, including youth who were instrumental as fighters.

Throughout the hinterland, the NPFL made progress. Although there was a hard-core base of real soldiers, most of the NPFL troops were a rag tag collection of new recruits with only minimal training. They were, however, fairly well armed because weaponry from Burkina Faso and Libya traced clandestine routes to the front. NPFL fighters were often barely more than children, uneducated and poorly disciplined. They frequently dressed bizarrely in women's attire, wigs or masks believing that such masquerading rendered them more powerful as well as invulnerable to enemy fire. Such fighters employed many talismans and other protections, including cannibalism. Their cruelty was widely reported as they tortured and mutilated victims, disemboweled pregnant women (often betting ahead of time on the sex of the fetus) and killed indiscriminately. The fact that such a force could quickly overrun Liberia said something about them and the fear they inspired, but it also said that the regular army, the Armed Forces of Liberia (AFL) were woefully inept.

#### **Doe's Forces Collapse**

If the premise that the AFL ever was a satisfactory military establishment, that occurred prior to Doe's 1980 coup d'etat. Since then the AFL was riven with factionalism and violence that characterized Doe's progressive elimination of all opposition, real or imaginary. By late 1989, the AFL was poorly armed (only the elite presidential guard had a full inventory of weapons and ammunition), poorly organized, poorly deployed and poorly led. It was a military best equipped to terrorize innocent civilians – a task that it did well. Thus, the AFL posed little real opposition to the NPFL's steamroll over ninety-five percent of the nation. By July 1990 NPFL troops were poised to attack Monrovia. Libyan-trained elements led by Prince (just a name, not a title) Johnson encircled the city from the west while Taylor's forces approached from the north

and east. Soon the rebels entered the city where fighting intensified. Prince Johnson, who had been operating independently of Taylor, seized Bushrod Island, the port and the western approaches. Taylor's forces, commanded by former U.S. Marine Elmer Johnson, came into Sinkor (the eastern section of Monrovia) from the east. Doe's troops were squeezed back onto capital hill and the executive mansion. Before they left Sinkor, an AFL detachment under Captain Tally Yonbu attacked the 2,000 civilians who had taken refuge in St. Peter's Lutheran Church in Sinkor and in an orgy of death killed about 600 of them.

### **U.S. Embassy Evacuated**

A U.S. Naval squadron with 2,000 marines embarked stood offshore for two months during the carnage in Monrovia, but only evacuated U.S. and third country nations when the strife became too egregious. American diplomats tried to negotiate cease-fires and to arrange a suitable exit for President Doe. Taylor did accept to halt his advance in the expectation that Doe's departure would be arranged. Doe repeatedly agreed to depart, but always reneged on actually doing so. Meanwhile, Prince Johnson broke away from Taylor and declared the establishment of the Independent National Patriotic Front of Liberia (INPFL). Monrovia settled into three bristling armed camps.

### **Video Taped Torture**

Since the U.S. itself would not intervene, it prevailed upon the Economic Community of West African States (ECOWAS) to mount a peacekeeping operation. The resulting force was dubbed Economic Community of West African States Cease Fire Monitoring Group (ECOMOG). The first elements of the largely Nigerian force deployed to Monrovia via sea in early September and set up headquarters, with Prince Johnson's blessing, inside the free port. On September 9, 1990, apparently with the hope of allying with newly arrived ECOMOG chief General Quainoo, President Doe decided to pay a visit to ECOMOG headquarters at the port. ECOMOG soldiers disarmed Doe's security contingent, but were overwhelmed by an INPFL patrol that soon arrived. Prince Johnson gleefully took Doe into custody and had him tortured while being video taped. Doe's ear was cut off and the tape apparently shows Johnson taking a bite out of it. Badly beaten, Doe died within several hours. His mutilated corpse was displayed in the city as clear evidence of his demise.

ECOMOG's mission was to secure the country so that an Interim Government of National Unity (IGNU) could be established to stabilize Liberia prior to truly democratic elections. IGNU was created in October 1990 with Professor Amos Sawyer as President. With Doe's death, the dissolution of what remained of the AFL and Prince Johnson's forces well contained in the ECOMOG zone, ECOMOG consolidated security throughout most of Monrovia. The problem was that Taylor never accepted the ECOMOG mission and he roundly rejected the IGNU. Forced from the city, Taylor retreated to "Greater Liberia," i.e. everything but Monrovia, which he governed from Buchanan or Harbel. It was during this exile that Taylor perfected his warlord techniques: quick recourse to violence, use of tribalism, control of zoes and chiefs, fanatical loyalty and, on the

economic side, the system of direct payments to him personally – not to any government - for exploitation of natural resources of rubber, timber and diamonds. With regard to such exploitation, there were plenty of available partners. Long-term Lebanese and Indian merchants, plus a host of unsavory businessmen eagerly competed for favor. Payoffs were cheaper than taxes.

By October 1992 Taylor was ready to try again to seize Monrovia. His attack dubbed “Operation Octopus” caught ECOMOG unprepared and nearly succeeded. Some of Prince Johnson’s IPNFL forces joined the attackers. The city was shelled by mortars and rockets, but ECOMOG troops reinforced by revived AFL soldiers and supported by Nigerian air power regained the initiative and retook lost ground. ECOMOG was emboldened by its success and began a process of gradually expanding its territorial control. Since 1990 the war settled into a pattern of ECOMOG/AFL/IPNFL versus Charles Taylor. ECOMOG, however, had a limited mandate. Its leaders and troops were not enthusiastic about real fighting. They preferred not to confront the enemy, but instead to profit –usually personally – from the circumstances. Before long the West African forces were engaged in a wide variety of questionable activity – protection, arms dealing (to all comers), abuse of humanitarian goods, black market sales and the like.

Elsewhere in Liberia other warlords emerged. Most notable was the United Liberation Movement for Democracy in Liberia (ULIMO), which soon split into a Krahn faction led by Roosevelt Johnson and a Mandingo one led by Alhaji Kromah. The two ULIMOs encroached on NPFL turf in the northwest. Along the southeastern coast still another faction, the Liberian Peace Council (LPC) led by George Boley challenged Taylor’s control. Clearly the nation was falling to pieces, but by 1994 the prospects for peace brightened on account of a series of meetings, conferences and regional mediations designed to construct a framework for elections. When Sani Abacha replaced Nigerian President Babangida in 1993, Nigerian animosity towards Taylor (and he towards them) declined. A United Nations observer force (UNOMIL) was created in 1993 to oversee the implementation of the Abuja peace accords (the thirteenth such agreement since 1980).

### **City Pillaged Again**

In mid 1995 Taylor and other warlords came to Monrovia, which was still controlled by ECOMOG, to constitute a Council of State. The city was understandably tense with various warlord contingents moving about and there was much political maneuvering among the politicians. Taylor apparently convinced ULIMO-J leader Johnson to resist ECOMOG disarmament deadlines. This led to a pitched battle at Tubmanburg in December 1995 during which Nigerian forces lost several armored vehicles and artillery pieces. Soon after, seizing on factional unrest and murders in the capital, Taylor declared that his forces would restore peace. Under that rubric and called “Operation Pay Yourself” by the fighters, NPFL troops began to sack and pillage Monrovia. Thousands of innocents and supposed enemies died in the fighting. Humanitarian organization offices, homes and vehicles were looted. U.S. embassy personnel were evacuated again. ECOMOG personnel were unwilling or unable to halt the violence. When it ran its course, the city and much of the countryside was again

under Taylor's sway. Under these circumstances elections took place a year later in July 1997. Taylor's only serious opponent was Ellen Sirleaf Johnson, who while she appealed to intellectuals and remnants of the True Whig constituency, had little attraction for rural voters. In sum, Liberians voted, probably out of fear, for peace. They voted for Taylor, knowing full well that if he did not win, then civil war would surely resume.

The 1997 election brought relief and a sense of normalcy to the beleaguered land, but there was no rush by the international community to reengage to help rebuild the shattered economy. No one trusted Taylor who was widely viewed as a clever, ruthless warlord who had shot his way to power. Humanitarian activities that had been badly set back by "Operation Pay Yourself" slowly resumed, however, and they provided some succor to the severely affected.

### **Warlord Taylor's Style**

Taylor ruled as he had for years through cronies, loyal sycophants, and trusted retainers. He proclaimed his tribal connections by taking the name "Ghankay" that reaffirmed his standing with zoes and chiefs. He used patronage and rewards to keep them in his debt. Whereas Doe had made the Krahn tribe supreme, Taylor's accession marked the rise of the Gio and Mano ethnic groups. Once in the presidency Taylor inherited the national army, the AFL – his long-term enemy. He did not disband the institution, he merely ignored it. Military and police power were vested in his NPFL militia, especially the Anti-Terrorist Unit composed of the most brutal loyal fighters. There are no Constitutional provisions for private armies so technically the ATU and other security elements of the NPFL operated outside the realm of law.

Liberia's once competent civil service was in shambles. Political patronage and graft rather than merit had become the criteria for survival. Institutions of government including Parliament and the courts were also driven by selfish and political considerations. Civil society too was in disarray. However, the bar and journalist associations continued to struggle valiantly to keep an independent voice, but critics were regularly silenced by intimidation, imprisonment or assassination. Church leaders had throughout the decades of civil war tried to provide a moral compass for the nation and they kept to that worthwhile goal, but they too were conditioned not to be unduly strident, especially when criticizing anyone with power.

While government revenues rebounded slightly with relative peace, collection mechanisms had become corrupted and much of the economy operated outside the formal sector. Taylor continued the practice of having exploiters of timber and diamonds settle with him directly rather than via government agencies. The regular stream of revenue from Liberia's ship registry, at the insistence of the international community, was audited and devoted purely to legitimate national obligations, similarly with payments for rubber exports. Despite such income, the government is for practical purposes bankrupt and without any recourse to legitimate international financing.

## **External Adventures**

Taylor's involvement in Sierra Leone's civil war has come back to haunt him. Taylor met Foday Sankoh, the leader of the Revolutionary United Front (RUF) in Liberia in 1989 and provided him with support during Sierra Leone's civil war beginning in 1991. Additionally, Taylor marketed diamonds secured from Sierra Leone's diamond fields. He then provided weaponry and munitions that permitted the brutal civil war in neighboring Sierra Leone to flourish. Taylor permitted RUF rebels to use Liberian territory and provided them refuge when their fortunes waned. For these activities Taylor was sanctioned by the UN Security Council in May 2001. Accused of trafficking in blood diamonds he was branded an international pariah and prohibited from international travel. The Security Council also imposed an arms embargo on Liberia designed to curb Taylor's disruptive activities in the sub-region. In addition in May 2003, Taylor was formally indicted for war crimes by the Sierra Leone tribunal. Obviously this is embarrassing to Taylor, but it also has ramifications for Liberia in that it poisons all international dealings with the nation.

In 2002 another Liberian organization, Liberians United for Reconciliation and Democracy (LURD) emerged to challenge Taylor's rule. LURD is the lineal descendent of ULIMO-K and counts Alhaji Kromah among its leaders. LURD engaged in insurgent tactics in Liberia's northwest where it controls territory and extended its reach to Monrovia's outer suburbs. In 2003 MODEL (Movement for Democracy in Liberia) yet another warlord type organization manifested itself in the southeast. By mid-year the two fighting groups were converging on Monrovia, displacing citizens and causing expatriate evacuations. Charles Taylor felt the pressure. As is the pattern, a series of regional peace talks have outlined proposals for peaceful settlement of conflict, including a key provision that Taylor step down as president before the end of the year.

### **Issues to Consider:**

1. We told the story of Liberia's civil wars in terms of personalities because history is obviously recorded in that fashion, yet the Does and Taylors of Liberia are sadly not unique. Other warlords have played in the saga and new ones- Sekou Conneh of LURD, for example – are waiting in the wings. There are no guarantees that the next one will be an improvement. The question then becomes how to break the cycle?
2. Along with war, Liberia has also given diplomacy a poor reputation. It took thirteen agreements before the Abuja Accords finally led to the 1997 elections. The 2003 all party peace talks in Accra mediated by former Nigerian President General Abubakar began in mid-June and continued into August. Truly, every group wanted to win at the table what could not be won on the ground. Traditional political parties and exiles, neither of whom were involved directly in the fighting, combined forces to out maneuver the less sophisticated (and less desirable) warlord delegations, but since the fighters fight, they must be satisfied with any agreement if it is to have a chance of success.

## Chapter 7

### Economic Downslide

The economic downturn coincided with political change. By the 1980s iron exploitation was no longer profitable and exports began to fall. Rubber production leveled off. Master Sergeant Doe who took over via coup d'etat in 1979 offered little in the way of confidence to economic players and nothing to potential investors. It soon became evident that Doe had no economic plans, but rather intended to milk the nation's resources for his and his Krahn tribesmen's benefit. Some of the educated economic and political elites began to exit – they were only the first in a long-running brain drain that has siphoned many of Liberia's most capable citizens into exile.

Doe's misrule and mismanagement of the economy – despite U.S. Cold War motivated efforts to prop it up – drove the economy downward. Iron ore production stopped and then civil conflict brought much rubber collection activities to a halt as well. From 1990 just after Charles Taylor's invasion, civil strife that led to the partition of Liberia into zones controlled by various warlords, meant that the economy stalled. Easily exploited items such as diamonds and timber became the mainstays of Taylor's military machine. With Taylor's election to the presidency in 1997, the return of relative peace permitted resumption of Firestone's production and export activities. Life in most rural areas returned to normal – except the northwest that has experienced insurgent warfare organized by the LURD (Liberians United for Reconciliation and Democracy).

Liberia's economy today is stalled at a low level (GDP per capita \$170). The prospects for respectable growth in the short term are non-existent and dim over the longer haul. Rubber production is expected to decrease as producing trees age and few seedlings are planted. By definition timber resources are finite and trees are being harvested without provisions for re-planting. Gold and diamonds are mined as artisanal products, and while industrial production hopes are high, the reality of that is years into the future; similarly for hopes for petroleum riches offshore. Liberia's manufacturing sector plus its once thriving commercial sector were badly damaged by war, pillage and neglect. Liberia's infrastructure has crumbled. There is no electricity or water in Monrovia. Roads nationwide are in a dismal state of repair.

Taylor's approach to economics has been essentially to look after himself first. He discovered in his warlord days he could reap the profits from exports as if he were the government. Consequently, he sold timber on the "gray" market to Taiwan and France. He cornered the diamond trade, first from Liberia and subsequently from Sierra Leone. He used the proceeds from these operations to buy arms and to pay his troops. Once in government he did not re-orient these economic arrangements so that the government of Liberia might properly tax, control and manage national resources. As a result, President Taylor has done well, but the state is bankrupt.

## **No Aid for Tyrants**

International assistance is small. Western donors and the UN family copy the U.S. in providing mostly humanitarian aid and channeling that through NGOs. No donor or IFI has any major project underway or in the planning state. The World Bank and IMF have halted programs. Capping off international concerns is the UN sanctions regime currently in place. Although carefully targeted at impeding arms transfers, outlawing blood diamonds and embarrassing senior personnel by prohibiting travel, sanctions also send a strong “hands-off” message to the world.

Not surprisingly in light of the economic turmoil, government revenues have shrunk, while spending, especially on defense, has risen. The resulting deficit is ignored. It is essentially financed over the short term by non-payment of obligations – salaries, debts, etc. because Liberia has little recourse to legitimate international borrowing. Of course the financial crisis makes the government vulnerable and renders the overall crisis more severe. Other than squeezing the orange harder - and pocketing most of what leaks out – the government has no clear idea of how to escape from the downward spiral.

### **Issues to Consider:**

1. Most of the Americo-Liberians, and virtually all of the elite, have left Liberia for refuge and greener pastures in the U.S., Europe or elsewhere in West Africa. This brain drain has robbed Liberia of its most able people. What are the consequences of this loss? Will Liberia be able to rebuild without them? Should they be urged to return if peace is restored?
2. Sanctions are imposed usually in order to achieve a political objective, in Liberia’s case to express distain with and to punish Charles Taylor for destabilizing Sierra Leone. On the other hand, sanctions are often said to have a deleterious impact on innocent civilians. Are innocents directly harmed by sanctions on Liberia? Indirectly?

## Chapter 8

### Culture, Society and Witchcraft

What was it about Liberian society that permitted the culture of violence to flourish? Clearly there were elements conducive to the rise of warlords, but were they aberrations or more deeply rooted in everyday life?

Historically tribalism as thought of in current political science, that is an overarching identity that groups people together on the basis of culture, language and custom in order to pursue political goals, did not exist in Liberia. Rather many hundreds or more individual villages were governed by elders, sometimes chiefs. Although the people of the hinterlands displayed characteristics that have come to define tribes, especially languages, they themselves were not much aware of those factors. Instead they defined themselves by lineage, clan and village. Inter-ethnic competition was the rule rather than rivalry with distant strangers. In general terms the people of the east – nowadays the Krahn, Grebo, Kru and Sapo (largely defined by language) lived village by village without wider political links and without much hierarchical rule, even within the villages. Age group sets tended to have responsibility for specific functions. Other tribal groups – the Bassa, Kappelle, Manno and Gio – displayed greater hierarchical organization, particularly on the religious side. With them secret initiation societies, the Poro, for men, and the Sande, for women were directed by traditional religious leaders called Zoes. Actually the societies were only secret from those who were not yet initiated or from the other gender. They were not selective. All boys and girls participated. At the age of puberty they went off to special bush camps where they learned more of the traditions and beliefs of their ethnic group. Initiations involved some hardship and some physical trials. Masks, which manifested various spirits, especially the powerful spirit of the forest were intrinsic to the process. A hundred years ago bush school took several years, but in more modern times it is a function of months. Upon return from the bush camps, the youths were deemed to be adults entitled to full rights, marriage for example, in society.

#### The Spirit World

In general indigenous Liberians believe in two worlds: a spirit world of unseen forces and the outward visible world of everyday life. They judge that influences move back and forth between the planes and that there are always explanations for events. Nothing just happens. The mystery is to try to determine why or to try to influence outcomes. Spirits on their own, especially the major spirit of the forest – called the bush devil by Christian missionaries - are not necessarily intrinsically good or evil, but can have favorable or unfavorable consequences depending on the circumstances. Thus, spirits are to be warily considered, properly placated and respected. Even the onslaught of world religions of Christianity and Islam that promulgate monotheistic views are not incompatible with traditional beliefs. In fact, many Liberians have a foot in both camps. They go to church or mosque, but still respect the old ways.

Offerings or sacrifices are methods of placating the spirits or of assuring a better outcome. The ultimate sacrifice is human. In war or conflict when killing occurred, the victor could take on the power of his enemy by ingesting part of his body, his heart or his liver, and thus his spirit. This aspect of traditional beliefs appears to have been rarely practiced, but the idea was always there. However, when civil warfare raged from 1990 onwards, many fighters, especially their leaders who sought to solidify control of their troops, reportedly engaged in the practice. An even more clandestine practice, that of ritual killing, is also regularly reported in Liberia. In some areas – especially in the southeast - this has meant the abduction of children for this purpose, but during the heyday of violence witchdoctors, called “heartmen” are reportedly to have scrutinized potential victims prior to ripping their living hearts from their bodies. He who commissioned the deed then consumed such hearts in whole or part. Again the power of the dead was transferred to the living, but also this was a mighty means of intimidating inferiors by enhancing one’s reputation. Obviously the climate of violence, which so reduced the value of life was conducive to the commercialization of ritual killing via the heartmen.

### **Tradition or Aberration?**

During the civil war several elements from traditional culture could be readily discerned among the contesting armies. First was the utilization of youths. Liberia was not the first conflict zone where child soldiers held sway, but it was certainly among the most notorious. Charles Taylor claimed that his “Small Boy Units” were composed of war orphans who joined his forces in order to have “family.” There is undoubtedly an element of truth in that, but child soldiers were loyal, fearless and unlikely to challenge the leadership. Consequently, they were good front line fodder. Youth were available not just because they were orphans, but also because traditional village controls were dissolving. Many elders interviewed about the phenomena of child soldiers lamented that children no longer respected the old ways. They were correct; things began to fall apart generations ago when youths were dragooned into forced labor on rubber plantations. Education, migration to the towns and cities and a growing taste for modern consumer products added to the disillusionment with village life and the erosion of age-old strictures. The civil war provided opportunities for youths to see a wider world. The incentive for most was not the war itself or the political goals of its leaders, but the adventure and the prospects for personal gain via roadblocks, intimidation, looting or payment after victory. Since traditional warfare was for plunder – mostly for women and livestock – this motivation was understood. Although perhaps over several hundred thousand Liberians served at one time or another in this or that warlord’s army, most were half-hearted part-time soldiers who came and went. Often the bulk of these ranks did so with the blessing of their elders who were more susceptible to the political, i.e. appeals to tribalism, or other blandishments offered by the warlords. Many of the fighters, however, became disillusioned by the violence and sought to return to regular lives. Sadly many others were caught up in it and subsequently lost any sense of morality or ethics that they might have earlier imbibed.

In 1990 international reporting from Liberia made mention of the bizarre dress of rebel irregulars. Youths dressed in wedding gowns, rubber Mickey Mouse masks, or sporting outlandish wigs waved their AK-47s in journalists' faces. Others appeared with faces painted white. Rather than aberrations, such masquerading and masking grew very much from the culture of the spirit world. When so decked out, the individual was protected from having to assume responsibilities for his actions and also from devious actions of others. As the decade wore on, the ruthless and brutal children shifted more to Ray Bans, tennis shoes, fatigues and other accouterments from American popular culture. They were enamored of the violence displayed in inner city Hollywood movies and in the Kung Fu exports from Asia.

Warlord Charles Taylor was adept at securing the support of traditional leaders. The independent or loosely associated villages that existed prior to the 19<sup>th</sup> century arrival of freed slaves, gradually came under the authority of the settler government based at Monrovia. Often times this submission was coercive and maintained by force of arms, but by the mid-twentieth century Monrovia's control was reality. Rule was effected both by sending administrators from the capital, but also by patronage appointments of locals to positions of power. Even though the native peoples were largely excluded from national politics, they had ample scope to connive and inveigle at their local level. The chief opportunity there was via a nominated position. Chiefs had the responsibility of collecting taxes, including the hated hut tax, but also were expressly permitted to withhold a percentage of revenues as salary and for local purposes. Many such persons ingratiated themselves with True Whig administrations and became rich in the process.

During his presidency Doe did not solidify ties with rural leaders, but instead antagonized them, especially the non-Krahn. Taylor, in turn, played his anti-Krahn card well and solidified the support of the tribal chiefs and religious leaders. They, in turn, were instrumental in delivering the up-country vote to Taylor in the 1997 election.

### **Issues to Consider:**

1. Violence has plagued Liberia for a generation. A whole generation has grown up knowing only sporadic war, internal displacement, food shortages, disrupted schooling, and roadblocks run by arrogant youths. Many have been afflicted by rape, abuse and death. When a culture of violence has wormed its way so deeply into a national psyche, can the society be healed? Similarly can those who have only practiced violence as a way of life- child soldiers and other fighters who have binged on drugs and alcohol to sustain atrocities and conflict – be reformed? If so, what will this take?

## Chapter 9

### **The Modern Order: Religion and Civil Society**

Modern religion is a force to be reckoned with in contemporary Liberia. Remember that spreading the Gospel was a key motivating factor in the establishment of the colony. Not only were the settlers imbued with Christian virtues as a necessity for civilized life, they insisted that the church, clothes and an education was the only path by which natives could aspire to join their ranks. American and some European missionaries arrived to ensure the adherence to the faith by the settlers, but also to spread the word to the heathens. They achieved good success. Many thousand natives soon professed the cross and began to profit from the educational and health services provided by the missionaries. More than anything else, Christianity provided the path by which native peoples became assimilated into settler culture.

Even though the barbarism of the civil war was an affront to Christian doctrine, the churches soldiered on attempting to use their good offices to militate conflict. While this had little demonstrable effect on the course of the war, churches undoubtedly provided solace to its many victims. Mainline American Protestant denominations Baptists, Methodists, Episcopalians and Lutheran plus the Roman Catholic Church are widespread and were the mainstays of the settler community. They are increasingly joined by Evangelical congregations that appeal to more recent converts, especially those seeking redemption after the war. Charles Taylor, for example, is a professed born again Christian.

With the collapse of government and government services nationwide, the people rely even more on churches as the purveyors of education and health care. To their credit churches have stepped forward to do what they can.

#### **Islam**

Islam too spread readily in Liberia throughout the last century. Mandingo traders brought the Koran with them when migrating south. People in small communities throughout the nation, but especially in the northwest have subsequently adopted Islam. Sadly, religious and political cleavages tend to follow the same divisions. Many LURD adherents, for example, are Mandingo and thus Muslim. The extent to which religion becomes a political issue in a post-Taylor Liberia remains to be seen.

#### **Masons**

In addition to Christianity, a mainstay of Americo-Liberian society was membership in the Masonic Lodge. Such memberships provided the ruling elite expanded connections and relationships within their controlling oligarchy. In fact, Masonic identity ironically substituted for the tribal identity that the Americo-Liberians had long lost and avidly distained. There is little evidence of a vibrant Masonic system in Liberia today,

but the ruins of Africa's largest Masonic shrine brood over Mamba Point hill as a relic to this bygone era.

### **Civil Society**

In contemporary Liberia the associations of civil society loom importantly in national life. Trade unions, women's groups, bar associations, journalists' associations, regional groups, human rights activists, market ladies, football clubs and benevolent associations have sprung up by the hundreds. Obviously they fill needs in society for cooperative undertakings to focus on legitimate issues such as violence against women or children's rights, but such groups also offer employment opportunities enhanced by the possibility of obtaining external grants. In a like fashion, hundreds of store-front churches cater to the spiritual needs of their congregations. Like the established churches, many such religious groups have successfully linked up to overseas sources of support. Finally, political parties compliment the constellation of active local organizations. Seventeen parties, for example, were represented at the Accra peace talks. Several of the parties are large with national constituencies, but others are small linked only to prominent personalities. As with other organizations, political parties also seek to establish links with overseas partners for training, equipment, conferences and travel.

In the aftermath of civil war competent civil administration and the rule of law have evaporated, in their stead are corruption and nepotism. Infrastructure has collapsed and the economy has failed. Poverty is overwhelming. Disease is rampant. The political system has degenerated into ethnic strife and warlord gangs have the run of the streets. Truly Liberia is a failed state. The challenge for Liberians and for the international community is to create from this rubbish a system conducive to security, peace and a long slow climb towards prosperity. The alternative is a vortex of violence and anarchy that will destabilize the entire West African region and provide a base of operations for malefactors of all sorts – criminals, terrorists, hoodlums, opportunists and their ilk.

### **Issues to Consider:**

1. Modern religions, that is Christianity and Islam, preach accommodation and understanding. However, the savagery that has been unleashed in Liberia seems to carry atavistic roots incompatible with the thesis of "love thy neighbors." While we can explain actions in terms of traditional beliefs, such explanations do not justify such violence. Who is to blame here?
2. Coping, making do, and finding a bright side in the face of despair is a skill that many Liberians have elevated to an art. Yet it is still a dog eat dog existence. Part of the rehabilitation of Liberia will require optimism, but also an ability to incorporate personal concerns into a quest for the greater good. Will the people be up to that challenge?

## Chapter 10

### Regional and International Considerations

As noted previously in the 19<sup>th</sup> Century Liberia was coveted by European colonial powers that were held at bay by the United States. Nonetheless, surrounding territories became either French (Cote d'Ivoire and Guinea) or British (Sierra Leone) colonies. Liberia was a black ruled republic, but as we have noted, not an African ruled state. Thus, Liberia had little natural appeal to the early generations of African nationalists. Liberia was firmly in the lock of the conservative True Whig Party whose American slave descendants frowned upon any challenges to the system. Additionally, perhaps fearing for its own standing with the U.S. and European powers, Liberia made no effort to reach out to these budding continental politicians. Consequently, leaders like Kwame Nkrumah from Gold Coast (now Ghana) and Nnamdi Azikwe of Nigeria found no support or succor for their independence efforts in West Africa's only black-ruled state. So when independence did sweep across the region in 1960, Liberia was largely irrelevant to the process. In fact, Liberia's indigenous people had to wait another twenty years prior to realizing their majority role in the nation's political affairs. However, Liberia did stand firm from the very beginning in opposition to apartheid in South Africa. And during the Cold War era of the early sixties was a voice of moderation suggesting to new African states that the western model of capitalism and democracy ought not to be discarded out of hand. In this same vein Liberia played a constructive role in the founding of the Organization of African Unity.

#### Cold War Policies

By the 1970s, however, most of Africa saw Tolbert as a dinosaur, but in accordance with the OAU principle of non-interference in the internal affairs of other nations were not inclined to any action. Nonetheless, African leaders were startled and embarrassed by the brutal murder of Tolbert and the public executions of his ministers. Consequently, they largely ostracized President Doe seeing in him the worst example of pathetic inept leadership. President Houphouet Boigny of the neighboring Ivory Coast was especially irritated with Doe's actions because his adopted child's husband (Tolbert's nephew) was killed in the takeover. The cold war stakes for Doe were won by the U.S., but by the nineteen eighties, the Soviet Union was not interested in new African clients. Libya, however, was and saw anti-Doe plots as a useful means to challenge America and Israel (which trained Doe's elite presidential guard). Thus, Libya opened its military/political camps to anti-Doe elements. Most prominent among them were Charles Taylor's NPFL troops. Other radical minded leaders, especially Blaise Compaore who killed incumbent President Thomas Sankara and took over in Burkina Faso, also was a stalwart Taylor supporter. He became the mechanism by which Libyan financed arms were funneled to the NPFL. Cote d'Ivoire too, influenced by Houphouet's disdain for Doe permitted weapons clandestinely to transit its territory. Finally, France, which was always aware of relative Francophone versus Anglophone influences in West Africa, was quietly supportive of anti-Doe moves. On the other hand, Doe established a solid relationship with President Babangida of Nigeria that solidified his Anglophone

credentials. Thus the stage was well set for lots of international intrigue when the Liberian civil war began in 1990.

As the Cold War waned, by 1989 the U.S. was distancing itself from President Doe, but not inclined to play any king-making role. Then, as previously, the U.S. opted for constitutional change via elections. Taylor was relatively unknown, but what was known – a Libyan backed escaped criminal – did not recommended him. When Taylor proved so able in the first months of the war, the U.S. and Nigerian counter weight to him was ECOMOG and the Interim Government of National Unity led by Amos Sawyer. ECOMOG was created to impose the constitutional solution, but the force itself soon became part of the problem. By 1992 the civil war had become a stand off between ECOMOG, i.e. Nigeria, and Taylor. That stalemate was not to be broken until Sani Abacha became Nigeria's president in 1993.

### **Destabilizing Neighbors**

Meanwhile Taylor too was sowing a bit of regional dissension. He transshipped weapons and munitions to the Revolutionary United Front (RUF) of Sierra Leone beginning in 1991 both in recompense for diamonds that he marketed for them, but also so as to create a diversion for ECOMOG and a little payback for Nigeria. On account of Sierra Leone's civil war, tens of thousands of refugees sought safety in Liberia. They were (and are) housed in refugee camps that are often adjacent to camps for Liberia's tens of thousands of internally displaced persons. However, to the east and north, tens of thousands of Liberians ethnic Krahn and Mandingos crossed to the Cote d'Ivoire or Guinea respectively to find safety from NPFL thugs. As the tables have turned again in the region in 2003, those tribesmen have become the forces for LURD and MODEL.

Liberia is also apparently involved in the crisis in Cote d'Ivoire. Houphouet was replaced constitutionally by Henri Bedie who was then ousted in a coup by Robert Guei (from the area of his nation near the Liberian border, General Guei had ethnic ties to the Gio people who are key Taylor supporters). Guei, in turn was replaced by Laurent Gbagbo in a 2000 election. In late 2002 northern Ivoirian troops mutinied and subsequently took control of half of their country. The mutineers had support from Burkina Faso and certainly numbered in their ranks some Liberian soldiers-of-fortune. In 2003, however, a second rebel group arose in Cote d'Ivoire with links to the late General Guei, who was killed in Abidjan during the outbreak of fighting in September 2002. It is presumed that Taylor provided clandestine support to those rebels.

### **UN Sanctions**

On account of his activities to support the RUF, the Sierra Leone rebel group that became infamous for severing the limbs of innocents, the United Nations Security Council levied sanctions against President Taylor and his key cadre of NPFL supporters. They were singled out by name and forbidden to travel internationally. The sale of diamonds, many of which were smuggled out of Sierra Leone for the purchase of arms, was banned and an arms embargo imposed. However, the Council declined to prohibit

the export of Liberian timber (most exports are to Taiwan and France), the sanction that many believed would irreparably cripple the NPFL regime. In May of 2003, the Sierra Leone Tribunal indicted Taylor for war crimes. This combination of censures indeed intensified the pressure on Taylor to step down.

**Issues to Consider:**

1. The Liberian crisis does not operate in a vacuum. There are many cross border tribal and political links and consequent much clandestine maneuvering. Indeed there is often a bit more to any situation than meets the eye. Warlords inside Liberia receive support from neighboring states and in turn support allies there. Motivating factors include greed, tribalism, world politics and even ideology. How do these factors ensure that the cycle of violence continues?

## **Chapter 11**

### **Liberia in 2003**

The current crisis began building anew in early 2003. Essentially, it arises from discontent with Charles Taylor as manifested militarily by the organization Liberians United for Reconciliation and Democracy (LURD) and later on by MODEL (pronounced “Mo-dell” – Movement for Democracy in Liberia.) Each of the two groups is the lineal descendant of a previous warlord/tribal groups. LURD has a Mandingo orientation that comes from ULIMO-K of the earlier civil war and MODEL groups many Krahn who were previously aligned with Master Sergeant Doe. Their respective tribal orientations are reflected in their territory. LURD moved towards Monrovia from the northwest and MODEL from the southeast. Each group in turn also enlisted external support; LURD from Guinea and MODEL from the Cote d’Ivoire. Such support has to be viewed as “payback” from those states to Taylor who constantly maneuvered against them.

By late April the insurgents had taken great swaths of territory and were pushing hard on the capital. Taylor’s theretofore vaunted Anti-Terrorist Unit and the Armed Forces of Liberia offered little resistance as they fell back on Monrovia. The Special Court in Sierra Leone indicted Taylor for war crimes in May. Even though he was in Accra, Ghana when the announcement was made, he was permitted to return to Liberia unimpeded. However, the pressure on him to leave office intensified considerably, both from within because opponents recognized his vulnerability and supporters saw the writing on the wall. From without, West African chiefs-of-state collectively advised him to resign. Taylor indicated that he might step down for the good of the nation. That admission coupled with his considerably weaker position – both militarily and politically – kicked off a double track process designed to oust him from office.

#### **Attack on Monrovia**

First LURD and MODEL redoubled their efforts to seize Monrovia by force in order to install themselves in power. By July LURD pushed into the western suburbs of the city, crossed the Po River, occupied Bushrod Island and the Freeport. The Government of Liberia forces resisted these incursions. Fighting between the two was fierce, particularly at the bridges across the St. Paul and Mesurado Rivers to downtown Monrovia. Despite LURD use of mortars - virtually all rounds from those guns fell indiscriminately on civilian targets, including within the U.S. Embassy compound – it was not successful in entering the central city. Similarly, LURD moves to encircle Monrovia and cut the road to Gbarnga were not successful.

In the course of this fighting thousands of persons – mostly non-combatants – were killed or injured. Bullets bounced indiscriminately around and mortar shells – preponderantly from LURD positions - rained down from the sky. The city was already swollen to over a million; about 600,000 of them internally displaced people from the long series of wars. With LURD’s capture of the Freeport and the food supplies there – both commercial and for relief purposes – the price of food tripled. Similarly, warfare

cut the daily flow of foodstuffs from surrounding farms to city markets. During the same period the half-working water supply system for the city was irreparably damaged. International relief personnel evacuated and their good works with victims of war – food, health services, etc. – halted. Monrovia’s medical infrastructure that was already near the point of collapse due to neglect and shortage of personnel was further strained by the carnage and overwhelmed by disease. Dozens of dead bodies rotted where they fell or in makeshift morgues. Cases of cholera were reported. Citizens cowered in their homes, sought refuge in churches, stadiums, and the U.S. embassy’s Greystone housing compounds, but nowhere were there guaranteed protection from violence.

Meanwhile MODEL had consolidated its control of the far southeast, but in order to improve its bargaining position in late July, Model forces captured the key port of Buchanan. Taylor’s forces (like Doe’s before him), probably several thousand fighters at the most, were squeezed from both sides into Monrovia. None of the combatant forces displayed much flair for battle or organized warfare, although all of them were competent killers, raiders and looters. Both LURD attacks and Taylor’s responses seemed to be driven by ammunition supplies. Whatever side had the goods went on the offensive.

### **Peace Talks**

The second track of the effort to oust Taylor was political. The three combatant groups –LURD, MODEL and GOL (government of Liberia) – joined by civil society and political party representatives convened in Accra under the aegis of ECOWAS to sign a cease-fire and to organize an orderly transition to a post Taylor era. ECOWAS mediator Nigerian General Abubakar led the delegates to an early acceptance of a cease-fire, which was continuously broken by the fighters, and a long thrashing through of political arrangements through which all parties would share power as Liberia evolved to a truly democratic state. Although the general framework was a government along the lines of the existing constitution, the all-consuming details would determine the nexus of power. The rebel delegates especially did not wish to give up at the conference table what they might win on the ground. The GOL, i.e. Taylor’s cohorts, sought to protect their influence and the others maneuvered for personal and political places in the new raiment.

### **ECOWAS Action**

The anguish of Liberia as it slid yet again into the maw of violence and despair was felt in the region and indeed around the globe. Liberia’s neighbors through their collective organization ECOWAS decided to act. With the blessing, encouragement and support of the United States, European nations and the United Nations, ECOWAS mounted a peacekeeping force dubbed ECOMIL. Deployment of the first Nigerian units of that force began on August 4. Ghanaian, Malian and Senegalese troops would later join. ECOMIL’s objectives were to occupy Roberts Field airport and the Freeport, supervise the cease-fire – which the belligerents agreed to honor once the force was in place - and protect the initial transition government. Charles Taylor to vowed that he would resign as president on August 11.

The United States indicated that it would actively support ECOMIL and indeed American interest helped convince ECOWAS to move ahead. However, long unanswered was the question of whether American combat troops would actually participate in the effort on Liberian soil. President Bush cautioned in July that Taylor's departure was a necessary condition. By early August a U.S. Naval task force was offshore. Elsewhere in the region, U.S. military personnel and contractors helped plan, prepare, train, equip and transport ECOMIL forces.

On August 11, under the stern eyes of ECOWAS Chairman President Kufuor of Ghana and other African leaders, Taylor did resign. Vice President Moses Blah was sworn in as president and will serve until the transition government takes over. Taylor departed that same afternoon for Nigeria. Taylor's departure led immediately to the U.S. Naval Task force popping up on the horizon. U.S. aircraft dominated the skies and 200 Marines arrived ashore. They helped secure Roberts Field Airport; embedded liaison teams within ECOMIL units, and helped assess the state of the port. Meanwhile, the ECOMIL force continued to grow as a second Nigerian battalion arrived and a mixed Ghanaian, Senegalese, Malian battalion followed. The joy of Taylor's departure coupled with hard negotiating on the ground by U.S. Ambassador John Blaney and the ECOMIL commander succeeded in agreement for LURD forces to withdraw from the Free Port on Bushrod Island.

Taylor's departure also energized the peace talks in Accra. Mediator Abubakar and President Kufuor facilitated a final peace agreement that was signed by all parties on August 18. The agreement provided for a transition government to be installed on October 14 led by persons not associated with the belligerents. Businessman Gyude Bryant was chosen Chairman Wesley Johnson Vice Chairman. Warring parties, however, were allocated various cabinet positions and seats in Parliament. By late August 2003, plans were advancing to blue hat ECOMIL on October 1 and place it under UN control.

As this Self Study Guide goes to press in early October 2003, the situation in long-tortured Liberia remains tense and fluid, with its future far from certain. We have seen the August 18, 2003 Comprehensive Peace Accord, the deployment of ECOMIL forces, the September authorization of a UN peacekeeping operation (via UNSCR 1509), and the departure of the U.S. military presence as of October 1. In spite of these events, low-intensity fighting between rebel and government forces, particularly involving irregulars (militias) of the parties to the conflict, continues to flare up in various parts of the countryside.

The "Love of Liberty" may have brought freed American slaves to the West African coast in 1822, with Americo-Liberians declaring in 1847 the independent state of Liberia with its capital in Monrovia. It remains to be seen, however, just when the many fine and decent Liberians of today, scores now huddled in fear amongst the rocky outcroppings and disease-ridden squalor of Monrovia, will again be able to experience the peace, security, and happiness which are so overdue in their bleeding country.

**Issues to Consider:**

1. The International community responded very slowly to the crisis and much blame for inaction or failure to move ahead more quickly was assigned to the U.S. The U.S. in turn moved hesitantly, preferring that ECOWAS, under-funded, under-equipped and poorly prepared for real peacekeeping duties, step to the fore. African leaders picked up the ball and have pressed ahead, ever hopeful that the U.S. will join more fully in the execution of the operation. What are the policy merits of greater involvement? Both for Liberia itself and for U.S. relations elsewhere in Africa? What are the relative merits of less involvement?

# MALAYSIA SELF-STUDY GUIDE

GEORGE P. SHULTZ NATIONAL FOREIGN AFFAIRS TRAINING CENTER

School of Professional and Area Studies

Foreign Service Institute

U.S. Department of State

The Self-Study Guide: Malaysia is intended to provide U.S. government personnel in the foreign affairs community with an overview of important issues related to Malaysian history, geography, politics, economics, culture, religion, media, and international relations. The guide should serve as an introductory self-study resource. The topic is far too complex to be covered in depth using only the text in this guide.

The reader is encouraged to explore the questions and issues introduced using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of this guide was prepared by Dr. Pamela Sodhy, an adjunct professor at Georgetown University and a former Associate Professor of History at the National University of Malaysia. The views expressed in this guide are those of the author and attributable sources and do not necessary reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by Dr. Sodhy. All sources used for graphics and extended quotes are public domain, from sites that explicitly say “can be used for non-profit or educational use”, or are from the author’s own materials.

This publication is for official educational and nonprofit use only.

First Edition  
October 2002

## **INTRODUCTION**

The purpose of this self-study guide is to provide basic background information on Malaysia for persons being assigned there. The guide tries to present the information in a way that individuals can obtain a better understanding of the country and, as a result, have a more productive and pleasant tour of duty. You are encouraged to think about the questions raised at the end of each section and pursue those that interest you, drawing on resource materials cited in the paper. Various websites that contain current information relevant to many of the questions raised below follow at the end of the paper.

## **GEOGRAPHY AND CLIMATE**

### **THE TERM MALAYSIA**

The term Malaysia has been in common usage from September 16, 1963 when the eleven states of

Peninsular Malaya -- Johor, Kedah, Kelantan, Malacca, Negeri Sembilan, Pahang, Perak, Perlis, Pulau Penang, Selangor, and Terengganu -- federated with Singapore and the two North Borneo states of Sabah and Sarawak to form the Federation of Malaysia. The Federation, however, no longer includes Singapore as it withdrew in August 1965 to become an independent republic. Malaysia now encompasses the present thirteen states in the Federation and the Federal Territories of Kuala Lumpur and Labuan. The term Malaysia was first coined in the 1830s to describe a geographical region comprising the Malay peninsular, Singapore, Borneo, Sumatra, and Java. In the twentieth century, the term was also used in reference to the Malays, the main indigenous group in the region. For example, in 1937 the American scholar, Rupert Emerson, when writing on both Malaya and Indonesia, chose Malaysia as the title for his book

## LOCATION AND SIZE

Malaysia lies near the equator between latitudes 1° and 7° North and longitudes 100° and 119° East. Throughout its history, the nation has occupied a very central and strategic location in Southeast Asia as it is situated not only between India and China but also across the shortest sea routes from Europe and the Middle East to China and the rest of East Asia. In early times, for travel and trade between China and India, travelers and traders had to go either across the Malay Peninsula or around it through the Strait of Malacca. This strait borders the entire west coast of Peninsula Malaysia. From ancient times to the present, the Strait of Malacca has served as the main sea route for travel from Europe to China. For instance, when Malaysia was a part of the early Indianized states of Srivijaya and Majapahit, these maritime empires based their power and wealth on their control of the Strait of Malacca, in ways that included the exaction of tolls and duties from passing ships. During the early period of Western colonialism in Southeast Asia, Malaysia also featured in the lucrative spice trade as cargoes of spices bound for sale in the Middle East and Europe were shipped through the Strait of Malacca. When the British colonized the Malaysian area, they too used the Strait of Malacca as a vital waterway for their exports of primary commodities, like rubber and tin, to Britain and Europe. Moreover, for strategic and economic reasons, the British made the then Malayan island of Singapore, at the southernmost point of the Strait of Malacca, as their chief naval base and main port in Southeast Asia. At present, the oil that is shipped from the Middle East to Japan also goes through the Strait of Malacca to reach its destination.

Regarding the size of Malaysia, together the two sections -- Peninsular Malaysia and the North Borneo states of Sabah and Sarawak -- occupy an area of about 130,000 square miles. This area is ten times the size of Taiwan and larger than the two Koreas combined. In length, Peninsular Malaya is roughly 500 miles long, while Sabah and Sarawak extend over a distance of 750 miles. At their closest point, the two sections are separated by about 400 miles of the South China Sea. Despite this physical separation, however, they share much geographical unity as both sections are on the Sunda Shelf, a shallow ocean platform that is only 120 feet deep and very rich in marine resources. In addition, they share many similarities in flora and fauna.

As for borders, to its north Malaysia shares a short mountainous common border of about 250 miles with Thailand at the Kra Isthmus while to the south it is linked by causeway to Singapore. To its west, across the Strait of Malacca, Malaysia faces the Indonesian island of Sumatra for about 500 miles. To its east, in

Sabah and Sarawak, Malaysia shares a long rugged common border of 900 miles with the Indonesian territory of Kalimantan. Malaysia also has a sea border of about 375 miles with the Philippines at Sabah. As for the distance between Malaysia and some of its neighbors, Vietnam is 225 miles northeast of Kota Bharu while Burma and Cambodia are within 300 miles to the north and Australia is 1,200 miles to the south.

## **IMPORTANT PHYSICAL FEATURES**

The landform of Malaysia, in both the peninsula and the North Borneo states, is characterized by coastal plains giving way to a rugged mountainous interior. Over half the nation is covered by mountainous terrain. In the center of Peninsular Malaysia is a long, narrow, steep mountain chain, the Central Range, which extends 300 miles from the Thai border to Tampin, near Malacca. Another mountainous range, covering most of upper Kelantan, inland Terengganu, and Pahang, includes Gunung Tahan, the peninsula's highest peak at 7,186 feet above sea-level. In the interior of Borneo is the Western Cordillera and Border Range, which extends for 500 miles into Indonesia's Kalimantan region. In Sabah, this range is known as the Crocker Range, and it includes Malaysia's highest mountain, Mount Kinabalu, which stands at 13,455 feet. Mount Kinabalu is also the highest point in Southeast Asia. In Sarawak, with its lower mountain ranges, the highest point is Gunung Murud at 7,950 feet.

Along the west coast of Peninsular Malaysia from Perlis to Johor is a continuous coastal alluvial plain. The peninsula's east coast also has a lowland plain, but it is narrower, due to the Terengganu highlands. In Sabah and Sarawak, as in the peninsula, low-lying alluvial plains form a belt along the coast. Because the interior mountains have acted as a barrier to population movement, the coastal lowlands have served as the main sites of settlement in Malaysia.

The first political centers were formed on the rivers, which have their headwaters in the inland ranges. Most of the peninsula states derive their names from the main rivers. Pahang, for instance, derives its name from the Pahang River. In Sabah and Sarawak, the main rivers flow down to the sea from the highlands of the interior. The largest rivers are the Rejang in Sarawak and the Kinabatangan in Sabah. Peninsular Malaysia has a dense network of rivers and streams, but there is no single river dominating the drainage pattern. Its longest river, the Pahang River, is only 270 miles long, while the Perak River, which drains most of the northwestern area, is 170 miles long. Peninsular Malaysia's rivers and streams all flow into the surrounding seas as there are no internal areas of drainage. The peninsula has only one large natural lake, Lake Chini, which is located 50 miles from the mouth of the Pahang River. Tasek Bera is an elongated swamp whose boundaries are extended during the rainy northeastern monsoon, while Chendorah Lake is the result of the damming of the upper course of the Perak River for the generation of hydroelectric power.

## **NATURAL RESOURCES AND LAND**

Malaysia has extensive natural resources. In early times, its most important natural resources were its forest products – the aromatic woods, the resins, gums, rattans, and camphor. Later, the rain forests also became valuable for their production of high quality timber, useful palms, edible plants, and fruits.

Although the land was not generally fertile, it yielded important metals, such as gold, iron, and tin. Malaysia was well known in ancient times for its gold deposits, earning the name of the “Golden Khersonese” from Greek geographers. The tradition of yellow as a royal color can be traced to the popular use of gold for decoration and ornament in the early Malay courts. Tin was mined in Malaysia as early as the fifth century when it was exported to India. The tin was then mainly panned from the rivers. In Sarawak, iron and gold were mined as early as the seventh century. Malaysia is also rich in marine resources. The Strait of Malacca remains one of the best fishing grounds in the world. The Strait and the seas around Malaysia have plentiful supplies of fish, sharks, shrimp, sea cucumbers, edible seaweed, lobsters, and other shellfish. Some of Malaysia’s limestone caves also provide a Chinese culinary delicacy called bird’s nests, which is derived from the coagulated bird saliva found in the nests in the caves.

Under British colonialism, Malaysia became the world’s largest producer and exporter of rubber, tin, and palm oil. Other important exports included cocoa, pepper, timber and wood products. Malaysia remains the world’s largest producer and exporter of palm oil, but its rubber and tin exports have declined. After independence and with the production of oil, petroleum has become Malaysia’s largest earner of foreign exchange. Timber is now the nation’s second largest export. Other crops of significance include coconut, pineapples, sago, coffee, tea, and groundnuts. In recent years, the export of local fruits has also increased.

## CLIMATE

Malaysia is subject to maritime influences and the interplay of wind systems originating in the Indian Ocean and the South China Sea. These wind systems are known as the southwest and the northeast monsoons, and they give Malaysia its two seasons. The southwest monsoon prevails from May to September and brings heavy rainfall to the mountainous regions. For example, the mountains of northern Perak, such as Maxwell Hill, get over 200 inches a year, while the average annual rainfall for the nation is 100 inches. For the remaining areas of the country, however, this season marks a relatively dry period, with July usually as the driest month. The northeast monsoon lasts from October to April and brings the most rain. It begins by hitting the north and east coasts of Malaysia, bringing more than 120 inches of rain to the east coast of Malaysia, to all of Sarawak, and to most of Sabah. Floods are common throughout these months of the northeast monsoon. In Sarawak, this season is called *Landas*, meaning one of floods.

On the whole, Malaysia has no marked dry season, although some regional variation exists. The temperature stays mostly constant, except at cooler high altitudes, at around 80 ° F, rarely going above 90° in the day or below 70° at night. The almost daily rains keep the temperature down. The humidity, however, is high, averaging about 85%. The climate can be summed up as being uniformly warm, humid, and wet.

## VEGETATION

About 70% of Malaysia is covered with tropical rain forest, the natural vegetation in a region with an equatorial climate. The high temperatures and relatively evenly distributed rainfall provide ideal

conditions for uninterrupted plant growth. The rain forest shows some variety according to locality. The main types of vegetation under the tropical rain forest can be classified as follows: mangrove forest; beach forest; freshwater swamp forest; lowland rainforest; sub-montane forest; and montane forest. Of these, lowland tropical rainforest covers the largest area. Some modifications in vegetation do take place due to the nature of the soil, depending on whether it is sandy or lateritic, dry and well-drained, or swampy and prone to flooding. For instance, the rain forest found in the steep limestone hills of Perak and the Kinta Valley varies from that in the ordinary lowland forest in that the plant species adapt themselves to the soil as well as to the dry conditions. Likewise, in the swampy areas prone to flooding, mangrove swamp forests and peat swamp forests can be found. The mangrove trees thrive in the tidal mudflats of the deltas.

## **NATIONAL PARKS**

Regarding national parks, near Kuala Lumpur is Templer Park, which is primarily a tropical rain forest. Another much larger national park is Taman Negara, a game reserve which extends into three states: Pahang, Kelantan, and Terengganu. The wildlife there includes the following animals: elephants, tigers, tapirs, wild pigs, bearded pigs, mouse-deers, and leopards. The park also has numerous types of reptiles, birds, and insects. Within Taman Negara is Gunung Tahan, Peninsular Malaysia's highest peak. In Sarawak, Malaysia's largest state, is Bako National Park, a primary forest near Kuching famous for its wide variety of flora and wildlife unique to the region. Sarawak also has the Gunung Mulu National Park, with its many caves and limestone pinnacles, and the Lambir Hills National Park with its waterfalls, bathing pools, and rich tropical rain forest. Yet another park in Sarawak is the Niah National Park, famous for its edible bird's nests, which are harvested from the ceiling of the caves by men climbing up bamboo poles. Getting to this park requires the use of air, land, and sea travel. In Sabah, Malaysia's second largest state, can be found Kinabalu Park, a reserve with a very diverse range of flora and fauna, including the pitcher plant and the largest flower in the world, the Rafflesia. Moreover, Sabah has the Tunku Abdul Rahman Park, made up of five islands with white, sandy beaches, coral reefs, and rich marine life. Sabah and Sarawak are also the home of the manlike ape known as the orang utan ("person of the jungle" in Malay). Both states have facilities to care for orang utans that have strayed into logging camps or been rescued from captivity. These include the Orang Utan Sanctuary at Sipilok Forest Reserve near Sandakan in Sabah and the Semenggoh Rehabilitation Center near Kuching in Sarawak.

### **Self-Study Questions for Further Exploration**

- **What is strategic about Malaysia's geographical location in Southeast Asia?**
- In pre-colonial and colonial times, besides strategic location, what other factors accounted for the interest in Malaya by India, China, and Western colonial powers like Portugal, Holland, and Britain?
- How might the tropical rain forest have aided the Communists during the Emergency, the fight against Communist insurgency from 1948 to 1960?

- Why do nations have national parks? What purpose do these parks serve in Malaysia?

# HISTORY

## EARLY HISTORY

Little is known with certainty about Malaysia's early history before the 15<sup>th</sup> century due to the paucity of written records or physical remains. Stories exist, however, of the Malay peninsula as a land of gold, as part of the Golden Khersonese. Some scholars believe that the earliest organized states first emerged in the northern part of the country, with indigenous traditions that included animism, ancestral worship, the belief in cosmic rules governing the composition of the court, kingship based on custom or *adat*, and the

use of certain customs at court, such as special music. Other indigenous traditions include: the use of pole houses or houses on stilts; the wearing of the *sarong* (cotton sheath); the chewing of betel-nut; the growing of *padi* (rice) and fruit crops; navigation skills; weaving; top-making; kite-making; crafting items from iron, tin, bronze, silver, and gold; and the use of cock-fighting as a form of entertainment.

Then came Indianization, a process of Indian cultural infiltration that impacted Southeast Asia from the 2<sup>nd</sup> century C.E. until around the 14<sup>th</sup> century. Indianization saw the spread of the Hindu and Buddhist religions and Indian influence on architecture, sculpture, languages, scripts, literary works, and dance styles. Indian administrative laws and the concept of divine kingship were also adopted. The Malayan area, at different periods of Indianization, comprised part of the maritime empires of Funan (based in Indochina), Srivijaya (based in Sumatra), and Majaphit (based in Java). Chinese and Arab records also indicate that Malaysia was part of the Indianized states of Langkasuka, Tambralinga, and Chih-T'u. By the 13<sup>th</sup> century, some northern Malay states fell under the control of Siam before Indianization eventually gave way to the coming of Islam by the 14<sup>th</sup> century.

## THE COMING OF ISLAM

After originating in Arabia in the 7<sup>th</sup> century, the Islamic religion made little impact initially in Southeast Asia even though Arab traders dominated the region's carrying trade by the 9<sup>th</sup> century. Early Islam was unappealing because its tenets and practices went against indigenous traditions. For example, it demanded allegiance to one god and stressed self-reliance, whereas Southeast Asians believed in a multitude of gods and in the propitiation of spirits through rituals and ceremonies. Moreover, Islam had no religious hierarchy, placed women in an inferior position to men, and stressed harsh punishments like mutilation and death, whereas Southeast Asian society included a ceremonial or religious hierarchy to bolster the king's power, allowed women positions of influence, and settled conflict through arbitration or the payment of compensation for injuries.

Islam was spread to Java and Champa by the 11<sup>th</sup> century, but made little progress in Southeast Asia until the late 13<sup>th</sup> century. The earliest evidence of Islam in Malaysia is an inscription dating from 1303, found at Kuala Barang, Terengganu. By the 16<sup>th</sup> century, however, Islam had become the main religion in insular Southeast Asia, as a result of developments in the Islamic world and changes in Southeast Asia, which included the fall of the Baghdad Caliphate to the Mongols in 1258, the important role of the Sufis as mystic religious leaders in the regeneration of Islam, and the rise of strong, self-reliant Southeast Asian rulers at ease with male dominance. The Sufis made Islam more acceptable by synthesizing it with animist and Indic beliefs and by combining Islamic teachings with magic and healing. They made many new converts in their travels to India and Southeast Asia.

Islam's spread in Southeast Asia reached a turning point in the 14<sup>th</sup> century when the Indian state of Gujerat fell under Islamic rule. Gujerati merchants then helped in spreading Islam to Southeast Asia. The Islamic religion spread calmly and quickly throughout insular Southeast Asia through missionary work, trade, and marriage alliances. Besides blending in with local customs, Islam's teachings were simple, its five tenets being the profession of faith, prayer five times a day, fasting during the month of Ramadan,

performing the haj, and giving alms to the poor. Moreover, conversion was easy, the religion was egalitarian in nature, the promise of salvation was not dependent on caste or class, and Islam offered the shared concept of brotherhood and ties with a higher civilization. Factors accelerating the spread of Islam included the development of Malacca as a center for the spread of Islam and the threat posed by Christianity.

## THE MALACCA SULTANATE

Malaysian history may be said to date from the period of the Malacca Sultanate, founded around 1400. The Malacca Sultanate also represents the Golden Age of Malayan history, when Malacca was the seat of empire, an important Islamic religious center, and a rich and powerful entrepot. For Malays, this indigenous maritime empire evokes pride in race, religion, and culture.

Records reveal that Malacca was founded by Parameswara, a Srivijayan prince who fled Palembang, Sumatra, to escape attacks from the Majapahit empire based in Java. He first sought refuge on the island of Temasik, now Singapore, by driving out its ruler, a vassal of Siam, but he was himself driven out by the Siamese. He then sought refuge at an *orang laut* (sea people) village at Malacca. According to legend, he named it Malacca either after the *Malaka* tree, under which he rested, or after the Arab word, *malakat*, for mart. Although Malacca's land was infertile, he chose to settle there because it was on the trade winds system, its harbor was sheltered from monsoons, and it had a good command over shipping, being situated on the narrowest point in the Malacca Straits. With support from the orang laut, he established control and made Malacca safer for trade by fighting piracy in the area. The town grew further after Parameswara sought Siamese protection and allied himself with China. The Chinese navy sent several trade missions to Malacca, and the Chinese emperor bestowed titles and honors, including acknowledgment of Parameswara as a vassal king in 1409. In 1411, Parameswara accompanied Admiral Cheng Ho to China with an entourage of 500 to pay obeisance to the emperor. The Chinese connection gave Malacca protection against Siam and led to its becoming a port favored by the Chinese.

Further growth resulted when Malacca's ruler and inhabitants converted to Islam under Iskandar Shah, believed to be either Parameswara or his son. This conversion took place with Parameswara's marriage to the daughter of the newly converted Muslim Sultan of Pasai, in Sumatra, who demanded conversion from the Malacca ruler. According to Malay historical records known as the *Malay Annals*, this acceptance of Islam marks a watershed in Malacca's history. With more conversions taking place in Malacca among the elite, soldiers, and slaves, the city soon became a seat of Muslim learning, attracting Muslim scholars from around the area. With Islam came the practice of polygamy, a more patriarchal society, and a lower status for women.

Malacca reached the height of its power in the latter half of the 15<sup>th</sup> century when it enjoyed political, economic, cultural, and religious importance. Politically, Malacca was the seat of an empire that stretched over peninsular Malaya, the islands to the south, and parts of Sumatra. With its strong army and a fleet that controlled the strategic Straits of Malacca, it followed an expansionist policy. This was especially so during the time of Tun Perak, a great Malay warrior and statesman, whom the *Malay Annals* describe as the "brains of Malacca's imperialistic policy for three reigns". Under him, the Sultanate seized Pahang,

then a vassal of Siam, and expanded the empire to include Kelantan, Kedah, the Riau and Lingga archipelagos, the island of Singapore, and states along the northern Sumatran coast, such as Rokan, Siak, Kampar, and Indragiri. By the reign of Malacca's last ruler, Sultan Mahmud Shah (1488–1511), the empire comprised all of peninsular Malaysia and the state of Patani, now part of Thailand. As tributaries of Malacca, all these areas embraced Islam, giving cohesion to the Sultanate. Sultan Mahmud Shah rejected the overlordship of both Ayudhya in Siam and Majapahit in Java while continuing to acknowledge the suzerainty of China.

Malacca was also well administered. At the apex of power was the Sultan, who had a social covenant with his subjects, whereby he was not to shame them while they were not to be disloyal to him. The Sultan was assisted by four main officials. In order of importance, they were: the *Bendahara* or Chief Minister; the *Bendahari* or Treasurer in charge of all financial matters; the *Temenggong*, in charge of law and order; and the *Laksamana*, in charge of the military and the navy. Among Malacca's greatest Bendaharas was Tun Perak. There were also lesser officials, such as the *Shahbandar* or harbor master, who managed the marketplace and warehouses; checked the weights, measures, and coinage; and settled disputes between merchants and ship captains or between trading communities. Together, these top administrators reached decisions through consensus or *muafakat*, a practice continued to this day by the leaders of the Association of Southeast Asian Nations (ASEAN).

Economically, Malacca became the best port and emporium in Southeast Asia within fifty years of its founding. Rich and prosperous, it became the successor of Srivijaya and outdid it in trade. It had goods from the East and West and traders from the Middle East, India, and the Far East. These goods included spices, such as pepper, cloves, nutmeg, and mace; cotton piece goods; gold; tin; silk; birds' nests; medicines; sandalwood; pearls; porcelain; and musk. Malacca became the main collecting center, redistributing center, and purchasing point for goods. By 1512, its population had climbed to 100,000. Other reasons for Malacca's economic success included: its excellent underground warehouses safe from fire; its ability to assure the safety of traders within the Straits, due to protection provided by its loyal orang laut supporters; its codified laws and efficient legal and administrative system; and its just rulers. It also had four harbor masters or shahbandars who represented the main groups of traders from Gujerat, Java, Bengal, and China. According to Tome Pires, a young Portuguese official in Malacca: "Whoever controls Malacca has his hand at the throat of Venice" and "Malacca is a city made for merchandize".

Culturally, Malacca was also a leading state with pomp and ceremony at court. Court life and culture were a mixture of indigenous traditions, Hindu and Buddhist beliefs, and Islamic elements. For example, certain colors like yellow could only be used by the royalty, court etiquette and coronation ceremonies reflected Indianized beliefs, and all members of the royal family were of the Islamic faith. The language used at court was Malay, the *lingua franca* in insular Southeast Asia.

As for religious importance, Malacca became a seat of Muslim learning and was also a religious center from which Islam was spread to other areas, such as to Brunei, through close trade and political relations, and to Java, through Malacca merchants who bought rice from Java. From Malacca, Islam also spread to other parts of Malaysia: for instance to Pahang, where its first ruler was a son of the Sultan of Malacca, and to Trengganu, which accepted Islam on becoming a vassal state. The Malacca rulers saw in Islam a

political instrument of much value: it could be used as a cohesive force, or to form an alliance or community with other Islamic states, or as a political weapon against Buddhist Siam.

By the early 16<sup>th</sup> century, however, Malacca faced internal decay in various forms: - - weak leadership; corrupt practices among the ruling elite; rivals to the throne; murders of leaders; and factional disputes between Muslim Tamils and Malay nobility. In addition to the internal threats, there was a major external threat -- in the form of the Portuguese.

## **PORTUGUESE RULE**

The Portuguese conquered Malacca on August 10, 1511, after a siege of about a month. It was their third attempt since 1509. Despite brave resistance from Sultan Mahmud, the Portuguese finally succeeded with superior firepower, greater naval strength, and help from some of Malacca's Chinese and Indian inhabitants. Sultan Mahmud was forced to flee to Pahang and from there to Bentan in the Riau Archipelago, where he tried unsuccessfully on numerous occasions to recapture Malacca. He then fled to Sumatra, where he died in 1528. While he failed to restore the Malacca Sultanate, certain features of the Sultanate were retained in other parts of the country, as in the states of Perak and Johore, where two of his sons became the Sultans, and in Pahang, through marriage connections. Of these states, Johore became the main successor to the Malacca empire and challenged Portuguese power.

Portuguese aims in Southeast Asia can be summarized as "Gold, God, and Glory". They wanted to make fortunes, spread the Catholic faith, and bring glory to their King, who sponsored their overseas voyages. Their religious goals were partly aimed against the Muslims, as they had experienced centuries of Moorish rule in Iberia. On the economic front, rather than remain as middlemen in the spice trade, they wished to control the spice trade at its source and thus make huge profits. To do so, it was vital that they control the strategic Strait of Malacca sea lane and capture Malacca, then Southeast Asia's most important port and the collecting point for the spice trade. Portugal's role in the Far East had been sanctioned by the Papal Edict of 1493, which divided the world between Spain and Portugal along the line west of the island of Azores in the North Atlantic Ocean; Portugal was allowed exclusive rights in Asia and Africa east of the line, while Spain had rights west of the line, which restricted it to the Americas.

During Portuguese rule in Malacca, their main interest was trade, and their power was confined mainly to the town area. They built their *A Formosa* fort at Malacca and several churches, the remains of which still exist. Their use of force, when trying to convert the local people, caused resentment and united the Muslims. Some intermarriage took place, and the descendants from these unions form a small but distinct community that retains not only the Catholic religion, but also Portuguese customs, dances, language, attire, and cuisine. The Portuguese failed to establish a monopoly of the spice trade. Throughout their rule, they met with much opposition -- from Sultan Mahmud Shah and his followers, from the Muslim inhabitants and traders, and from states like Johore, Aceh and Java, their rivals in trade. With their shortage of manpower and lack of welfare facilities, the Portuguese eventually lost control of Malacca to their Dutch rivals by 1641, after 130 years of rule.

## DUTCH RULE

The Dutch conquest of Malacca began in August 1640 and ended in January 1641. Thereafter, the Dutch controlled the Straits of Malacca and ruled Malacca to the late 18<sup>th</sup> century, when they were replaced by the British. In capturing Malacca from the Portuguese, the Dutch received help from Johore, which viewed the Dutch as a useful ally against their main enemies, the Portuguese and the Acehnese. Johore assisted the Dutch by providing transportation facilities, defenses against Portuguese attacks, and moral support. Not only did this support eliminate the Portuguese threat, but Johore also received special trading privileges at Malacca, protection against Aceh, and Dutch mediation in a peace treaty between Johore and Aceh in 1641.

In going to Southeast Asia, the Dutch were motivated mainly by economic factors. Like the Portuguese, they wanted to control the spice trade at its source. Unlike the Portuguese, however, the Dutch sponsored their colonial venture through their United East India Company, a corporate enterprise founded in 1602 with very wide powers, including the right to conclude treaties, make war, and dispense justice. The Dutch soon made Batavia their center of power, neglecting the port of Malacca which fell into decline under Dutch rule. Many Dutch residents then moved to Batavia, while those remaining established a Protestant church. There were few conversions to the Protestant faith, and Dutch impact on Malacca was less than that of the Portuguese. Dutch remains in Malacca include some administrative buildings and a church. The Dutch showed some interest in the tin trade and set up a trading post for tin in Pahang.

Meanwhile, Johore's power was revived under Dutch rule as the Dutch focused their attentions on the Indonesian islands. When Johore superceded Malacca in trade, Dutch officials in Malacca urged that Johore be destroyed, but their superiors in Batavia refused as they wanted Batavia as the center for Dutch trade in Asia. Hence, Johore sent missions directly to Batavia, and Dutch officials at Batavia often sided with Johore against Dutch officials at Malacca. Johore's fortunes rose until its Laksamana became more powerful than the Bendahara and began to rival the Sultan for power. Conditions then worsened for Johore: its Laksamana lost power, while its Bendahara regained power and became regent to the young ruler, Sultan Mahmud Shah. This king turned out to be a weak and cruel ruler whose reign saw a rise in piracy, a decline in trade, and problems with his nobles. Sultan Mahmud Shah's cruel actions eventually prompted some nobles to kill him in 1699, an act of regicide that further reduced Johore's power.

As Johore's power declined, the Dutch faced increasing opposition from two growing communities -- the Minangkabaus from Sumatra and the Bugis from the Celebes. While the Minangkabaus resented Western intrusion, the Bugis were angry with having been displaced by the Dutch from the region's carrying trade. Dutch rule weakened and eventually came to an end with the coming of the British to the Malayan area by the late 18<sup>th</sup> century. Before the British replaced the Dutch, however, there was some cooperation between them, as in 1795 when France overran the Netherlands and planned to use Dutch ports in the East. To prevent French control, the British made an arrangement with the exiled Dutch government to take temporary control of strategic Dutch possessions. Hence, the British East India Company (EIC), founded in 1600, occupied Malacca in 1795, the Moluccas in 1796, and Java in 1811, but returned them to the Dutch by 1818. By then, the Dutch EIC had ended in bankruptcy, its possessions had been taken

over by the Dutch government, and the British era in the Malayan area had begun.

## **BRITISH RULE TO THE START OF WORLD WAR II**

The British came to the Malayan area mainly for political and economic reasons. They wanted to obtain coaling and naval stations, to gain advantages over rivals like the Dutch and the French, and to spread British power and influence. They also wanted access to raw materials and markets for their goods. Social considerations, such as the “white man’s burden”, and religious reasons, were less important. Like the Dutch, the British had a corporate enterprise in the form of the EIC, which was based in India. With the help of Francis Light, a British merchant captain, in 1786 the EIC secured the island of Penang from the Sultan of Kedah for use as a British naval base. In return, the Sultan received British help against the state of Selangor. In 1800, he also allowed the EIC the use of Province Wellesley, the territory on the mainland opposite Penang. By 1819, however, the British were more keen on the island of Singapore as their naval base as it enjoyed a more central and strategic position than Penang. That year, an EIC official, Thomas Stamford Raffles, obtained Singapore for the British after signing an agreement with Johore that gave annual allowances to its Temenggong and its Sultan. From the start, the British made Singapore a free port, attracting the Chinese and other traders. The Chinese flocked to Singapore, soon outnumbering the Malay population. The British then signed another treaty with Johore, which ceded Singapore to them in perpetuity.

The Dutch, however, were angry with Raffles’ acquisition of Singapore as it infringed on their treaty rights in the Riau-Johore region. In 1824, to settle their rivalry in the East and to consolidate their friendship in Europe, the two nations signed the Anglo-Dutch Treaty, which demarcated their respective spheres of influence. Accordingly, the Dutch withdrew their objections to the British occupation of Singapore, ceded Malacca to the EIC, and agreed not to interfere in the Malayan area. In return, the British ceded Bencoolen in Sumatra to the Dutch and agreed not to establish treaties with rulers south of Singapore. In 1826, with their power firmly established in the Malayan area, the British united Singapore, Penang, and Malacca as the Straits Settlements and administered them from India, an arrangement that continued until 1867. Henceforth, they were administered from Colonial Office in London until 1874, when the British government took over the functions of the EIC.

In Malaya, Britain followed a policy of non-intervention until 1874, when it changed its policy to intervention. The following reasons prompted the change: fear of other European intervention in the Malay states; the need to deal with piracy, secret societies, and succession disputes; the petitions of British merchants in Singapore for British intervention; and the 1873 petition of Chinese merchants urging greater British involvement in the country. Britain’s new policy was reflected in the Pangkor Treaty of January 1874 between the Perak chiefs and the Governor of the Straits Settlements, Sir Andrew Clarke, which established the British Residential System in Malaya. The Sultan of Perak agreed to accept a British Resident “whose advice must be asked and acted upon in all questions other than those touching Malay religion and custom”. In return, Britain agreed to protect Perak against its internal and external enemies.

In February 1874, Governor Clarke extended the Residential System to Selangor, on the grounds that

piracy had to be curbed. In April the same year, Sungei Ujong, a part of Negri Sembilan, accepted a British Resident. By 1889, the whole state of Negri Sembilan had accepted the Residential System. In 1888, Pahang also accepted a British Resident. In the meantime, in November 1875 the first Resident of Perak, J.W.W. Birch, was hacked to death while bathing, leading the British to rush in troops from India and Hong Kong to fight the “Perak War”. He was killed by several Malay chiefs for having ignored their prerogatives and their means of livelihood when he instituted new proposals for revenue collection and judicial administration. His reforms caused loss of prestige to the Sultan and the chiefs, plus reductions in their feudal dues. Three Malay chiefs involved in the killing were captured and executed, while the Sultan was exiled to Seychelles. A new Sultan was appointed, but the Resident thereafter held the real power, although that power was not clearly defined.

Other British Residents fared better than Birch as they were less arrogant, more knowledgeable about local customs and traditions, and could speak the Malay language. A popular Resident was Frank Swettenham, who wrote a memorandum in 1893 advocating unity of administration and centralization of power for the four Malay states, Perak, Selangor, Pahang, and Negri Sembilan, which had accepted the Residential System. He recommended uniformity in the judicial system, fiscal policy, and land legislation. Based on his memorandum, the British established the Federated Malay States (FMS) in 1895, with him as the first Resident-General. In 1897, the Sultans of the four states in the FMS held their first Rulers’ Conference (Durbar) in the royal town of Kuala Kangsar in Perak. Their power, however, was more in theory than in practice, and they resented this.

In 1909, several important developments took place in British Malaya. For example, Siam transferred back to Malaya the four northern Malay states of Kedah, Perlis, Kelantan, and Trengganu in return for a British loan for a railway line and the giving up of British extraterritorial claims in Siam. These states then became the Unfederated Malay States (UFMS), and a British High Commissioner was appointed to oversee them. Unlike the FMS, the UFMS had less Western influence, kept to more traditional ways, and experienced less economic development. In 1909, the British also changed the post of Resident-General to that of Chief Secretary and created the Federal Legislative Council, which caused the Sultans to lose more power.

In exploiting the country’s natural resources, the British tried to enlist Malay help, but they met with resistance for reasons that included Malay resentment of British rule, their preferring to retain their traditional lifestyles as farmers and fishermen, and their wanting to follow the Koran’s instructions to lead simple, non-materialistic lives. To get the labor they needed, the British brought in laborers from China and India, using their clout in both countries. The Chinese worked mainly in the tin mines and the Indians in the rubber estates, although some Indians also served in administrative positions. The Chinese came mainly from the two southern Chinese provinces of Kwangtung and Fukien, where dismal economic conditions motivated poor workers to seek better opportunities in Malaya. The main wave of Chinese laborers came after the founding of Singapore in 1819. The major wave of Indian laborers began in the last decade of the 19<sup>th</sup> century and continued until the 1930s. Until 1910, Indian laborers came as indentured workers, after which they came through a quasi-indentured system called the *kangany* system, whereby the *kangany* got a commission for each recruited laborer.

With the immigrant labor, the British were able to export large quantities of tin and rubber. Tin was the major revenue earner for the British until the end of the 19<sup>th</sup> century when rubber, introduced from Brazil, became more important due to the demand for rubber in the electrical and motor car industries. Rubber also supplanted earlier commercial crops like coffee, pepper, and sugar. The Chinese and Indians came as transient workers, but many chose to remain in the country. As a result, British colonialism led to a plural society and to ethnic tensions, especially between the Malays and the Chinese. The Indians posed less of a threat as their numbers were smaller. Malay-Chinese tensions had their roots in the economic imbalance from British colonialism. Some Chinese rose from very humble beginning to become extremely wealthy, amassing fortunes from the import and export trade and from property deals. The Chinese had few political rights, but many economic opportunities. On the other hand, the Malays, particularly those in the rural areas, found themselves being left behind economically.

In dealing with a plural society, the British resorted to a policy of “divide and rule”, with political power to the Malays, economic power to the Chinese, and administrative power to the Indians. British colonial rule included some “special rights” for the Malays, such as support for Malay land rights and Malay education and favorable quotas for their recruitment into the civil service and for certain business licenses. Educational facilities, however, were poor for Malays until the 20<sup>th</sup> century, and not enough training or safeguards were provided to them on the economic level, increasing the economic disparity between them and the Chinese. As more Chinese workers flowed in, security concerns also increased as they came with their secret societies and their problems with crime and opium addiction.

The Malays became increasingly concerned about the racial composition of the country when the 1921 Census revealed that Malaya was made up of 49 percent Malays, 36 percent Chinese, and 14 percent Indians. These concerns turned to alarm when the 1931 Census disclosed that Malay figures had dropped to 35 percent, while that of the Chinese and Indians had risen to 42 percent and 22 percent, respectively. In Singapore, the Chinese already made up 75 percent of the population, with the Malays at 15 percent and the Indians at around 10 percent. Not surprisingly, the Malays called for a “Malaya for the Malays” and urged the British to restrict Chinese and Indian immigration.

Hence, in the 1930s, the British carried out decentralization measures to recognize Malaya as a Malay country, despite opposition from British and Chinese business interests. Accordingly, Chinese immigration was restricted under new quotas, power was transferred from the federal government to the state government, the post of Chief Secretary was abolished in 1935 in favor of the more junior post of Federal Secretary, and the Sultans were given a more active role. Nationalism in Malaya was confined mainly to the Malays as the Chinese had loyalties to China and the Indians to India. Malay nationalism was influenced by the Islamic Reform Movement in the Middle East and by events in Indonesia. In the early 1900s, the reformist *Kaum Muda* (Young Community) Movement was formed, and in 1926 the Singapore Malay Union was established with branches in Penang and Malacca. In 1939, the Pan-Malayan Malay Associations held its first annual conference in Kuala Lumpur, a meeting noted for its anti-British and anti-Chinese themes. By 1941, more Malays wanted self-rule but Malaya, then comprising the FMS, UFMS, and the Straits Settlements, was still firmly under British control.

In the case of Sarawak and Sabah, their experience under British colonial rule was different. Sarawak was

ruled by the Brooke family from 1841 to 1945, while Sabah, then known as North Borneo, was ruled by the British North Borneo Company from 1881 to 1945. James Brooke, an English adventurer, obtained the 1<sup>st</sup> Division of Sarawak from the Sultan of Brunei in 1839 after helping the Sultan in a rebellion by the Land Dyaks. In 1841, the Sultan appointed Brooke as the Rajah and Governor of Sarawak. This appointment pleased British merchants in Singapore as it opened up trade opportunities. In 1847, the Sultan of Brunei was forced to confirm Brooke's status as Rajah in perpetuity, to cede the island of Labuan to the British, and to sign another treaty undertaking not to cede any territory without British approval. When Brooke visited England, he was knighted, appointed Governor of Labuan Crown Colony, and Consul General for Brunei.

Brooke became known as the "White Rajah" and used his own funds to administer Sarawak. He received official backing from the British authorities and was allowed to use the British Navy to fight piracy. His rule was paternalistic and informal, based on consultations with the local chiefs. He made use of local laws and customs and tried to protect the natives from undesirable outside influences, Western and Chinese. When his agent in London, Henry Wise, formed a company to exploit Sarawak and Sabah, Brooke severed ties. He expected devotion from his subjects and from his nephews, Brooke Johnson and Charles Johnson. But Brooke was not a good financier, and his fortune soon ran out, leaving Sarawak in debt.

Brooke expanded his kingdom in 1852 when he obtained the 2<sup>nd</sup> Division of Sarawak from the Sultan of Brunei. In 1854, he was cleared of wrongdoing by an official Commission of Inquiry after his former agent, Wise, accused him of having used the Royal Navy to slaughter harmless natives. In the mid-1850s, he also faced problems from Singapore merchants, who wished to exploit the area, and from the Chinese, who resented his opposition to the opium trade, his suppression of secret societies, and his restrictions on their entry into Sarawak. He expanded his territory further when he obtained the 3<sup>rd</sup> Division of Sarawak from the Sultan of Brunei in 1861. By then, however, his health had deteriorated. His original heir was his nephew, Brooke Johnson, but after a fight he made another nephew, Charles Johnson, his new heir. In 1862, Charles changed his surname to Brooke and in 1868 became the new "White Rajah" upon his uncle's death.

That year, Charles tried to purchase the Baram district from Brunei, but was prevented from doing so by British authorities who invoked the 1847 treaty. In 1874, when Charles proposed that the British should either take Brunei or put it under Sarawak's protection, the British also rejected this out of concern for Brunei. Meanwhile, his frugality enabled him to pay off Sarawak's debts. Under him, each of Sarawak's three divisions was administered by a British Resident who was assisted by an Assistant Resident and by district chiefs, British or Malay. The Residents also held councils: the Supreme Council and the State Council. In 1880, to meet the labor shortage, Charles provided funds for Chinese emigration, but prevented their control of the economy. After establishing primary schools in 1883, he added secondary schools and mission schools. In 1882, the British allowed him to buy the Baram district from Brunei, due to fears of foreign threats at a time when the Sultan of Brunei was very old. Hence, under Charles, the Baram district became the 4<sup>th</sup> Division of Sarawak.

In 1888, the British also made Sarawak a British protectorate, along with Sabah and Brunei, in order to prevent Brunei from being swallowed up by either Sarawak or Sabah. In 1890, when the local chiefs of the Limbang district of Brunei asked Charles to rescue them from Brunei's misrule, he readily obliged and ended up making Limbang the 5<sup>th</sup> Division of Sarawak. The Sultan of Brunei, however, did not acknowledge the cession and also did not take up the offer of compensation by London. Brunei continues to claim Limbang, and this territory remains a contentious issue in Brunei-Malaysia relations. Britain nevertheless recognized Limbang as a part of Sarawak in 1916. Meanwhile, in 1905, due to financial problems, the British North Borneo Company sold a part of its territory to Sarawak.

Sarawak's next ruler was Charles' son, Vyner Brooke, who succeeded his father in 1916 and ruled until the outbreak of war in 1941. He became the last White Rajah of Sarawak. Unlike his father, he was extravagant, lacked strength of character, and delegated most of his responsibilities to his more dependable younger brother, Bertram. Under Vyner, Sarawak continued to experience little economic growth due to the Brooke family's reluctance to open up the country to capitalist exploitation. He appointed a Chief Secretary for Sarawak in 1923, a Secretary for Chinese Affairs in 1929, and a Chief Justice in 1930. In 1941, Vyner also commissioned the drafting of a Constitution to mark the centennial of Brooke rule and to pave the way for eventual representative government. Major opposition to the constitution, however, came from Bertram and from Bertram's son, Anthony, who saw the measure as an attempt to exclude them from ruling Sarawak. Anthony hoped to become the next White Rajah as he had held several important government positions and as his uncle had no male heirs. They had a falling out, however, over Vyner's appointment of a new Chief Secretary for Sarawak.

As for Sabah, in 1865, as a counterweight to British influence, the Sultan of Brunei had granted this territory to an American, Charles Lee Moses, who arrived in Brunei in 1864 as the U.S. Consul. Moses got a ten-year lease to Sabah and established a U.S. Consulate in 1865. He obtained support from American and Chinese businessmen in Hong Kong who formed the American Trading Company. This venture, however, was unsuccessful and was abandoned in 1866, while the American Consulate was closed in 1868. In 1875, the Austrian Consul, Baron von Overbeck, bought over the American Trading Company, with the help of his English partner, John Dent.

Through a treaty in 1877, the Sultan of Brunei gave the American Trading Company sovereignty over Sabah in return for an annual payment. Since the Sultan of Sulu, a former vassal of the Sultan of Brunei, also claimed Sabah, Overbeck, Dent made another agreement with him in 1878, giving him a smaller annual payment to ensure their title. In 1881, Dent bought over Overbeck's share in the American Trading Company. The British Government then gave him a royal charter to form the British North Borneo Company, in part because of the threat of growing German and French interest in the area. Under the charter, the Company could administer Sabah so long as it gave facilities to the British navy, did not interfere in local customs and religion, and did not transfer its rights without the British Government's approval. The Company did not have a monopoly on trade.

In 1888, the British declared Brunei, Sabah, and Sarawak as British Protectorates, to prevent any takeover of Brunei, and made the Governor of the Straits Settlements also the High Commissioner for Brunei and the Agent for Sabah and Sarawak. In 1894, because Sabah faced financial problems, negotiations were

held to transfer Sabah to Rajah Brooke, but these plans fell through. The Company's directors then rushed through a hastily conceived program for economic development that resulted in the removal of many experienced colonial officials. In 1895, the Company appointed a new Governor, Leicester Beaufort, a London lawyer, but his five years in office further drained financial resources. His term was marked by extravagance, including his ambitious railroad project which required new and unpopular taxes. The year 1895 also saw the appointment in London of W.C. Cowie as the Managing Director of the British North Borneo Company, a position that he held until his death in 1910.

In 1900, the Company reverted to appointing an official from the Malayan Civil Service as Governor, but the Directors of the Company, especially Cowie, continued to interfere. For example, the Directors removed Governor Ernest Birch when he suggested that the Colonial Office should convert Sabah into a Crown Colony to save it from their meddling. Cowie's death led to less interference and to mainly Colonial Office supervision. In 1905, for financial reasons, the Company was forced to sell land to Sarawak. In the 1920s, some provision was made for vernacular education for the indigenous Malays, Dyaks, and Kadazans. The years from 1934 to 1937 saw the enlightened rule of Governor Douglas Jardine; he created a Native Chiefs' Advisory Council and also made advances in health and educational services. As for local reaction to Company rule, the Kadazans (Dusuns), the largest and most settled group, gave little resistance. The semi-nomadic Muruts staged a local revolt in 1915, but they soon accepted Company rule. Trouble came from the restless and aggressive Muslims on the coast, such as the Bajaus, the Sulus, and the Illanuns from the Philippines. In 1895, Mat Salleh, a part Sulu and part Bajau chief, led a rebellion which lasted until 1900 when he was killed.

Regarding economic development, this was initially concentrated in the Northeast with tobacco plantations from the 1880s. Then the West coast became more important when rubber was introduced in the early years of the 20<sup>th</sup> century. The West coast also had better transportation facilities. When Sabah experienced a labor shortage, the Company tried to recruit Chinese labor through Hong Kong, but was unsuccessful as most immigrants wanted to be traders, not agricultural laborers. Those who came returned to China. Only after 1903 did the Chinese settle in larger numbers. In 1937, however, the Company restricted Chinese emigration to Sabah, in part because of local resentment towards them. There was little profit from Sabah for the Company -- it paid no dividends in its first 20 years and produced a return of 5 percent in 1909. By 1941, due to poor communications, the labor shortage, and problems with Company policy, profits had fallen to 2 percent.

## **THE JAPANESE OCCUPATION**

With the outbreak of World War II, the Japanese began implementing their plan for a "Greater East Asia Co-Prosperity Sphere" to rule East and Southeast Asia. To conquer the Malayan area, they attacked from the north through Thailand, surprising the British, who were waiting to fight them at sea off Singapore. This attack on Malaya, on the night of December 7-8, 1941, coincided with their attacks on Pearl Harbor, the Philippines, and Hong Kong. A Japanese subsidiary force landed at Kota Bharu and put the airfield out of action, while the main army landed in southern Thailand for the invasion of Kedah. Thereafter, they seized the northern Malayan airfields and sank the *Prince of Wales* and the *Repulse*. Singapore fell on February 15, 1942, despite attempts to rally the local population for defense. The Japanese also took

over the Borneo territories with little resistance.

The Japanese interned all British officials, but treated the Malays as potential allies who could be useful to them, releasing Malay leaders whom the British had imprisoned and promoting several Malay officials to higher bureaucratic positions under Japanese state governors. With the Malay royalty, at first the Japanese wanted to substitute loyalty to the Malay rulers with loyalty to the Japanese emperor, so they cut the royal pensions, lessened the Sultans' powers, and suspended the state councils. But when they realized that the Sultans could be helpful allies, they restored their pensions and enhanced their authority on Malay religion and customs. The Japanese had mixed attitudes towards the Chinese; some were treated very harshly, while others were considered important business partners. In Singapore, the Japanese killed thousands of Chinese males and demanded a "donation" of Straits \$50 million from the Chinese community. The Indians were treated less harshly as the Japanese planned to use them for ending British colonial rule in India. Strong resistance to Japanese rule came from the Chinese, who formed the bulk of the Malayan People's Anti-Japanese Army (MPAJA). The core of the MPAJA was the Communist Party of Malaya (CPM).

As in other areas in Southeast Asia, the Japanese harnessed the economy to their war effort, causing food shortages that led to runaway inflation, ill health, and starvation. Victims of the Japanese included local women who were forced to become "comfort women" or sexual slaves. In the closing months of the war, the Japanese ordered Malay police and auxiliary units against the MPAJA in retaliation for executions of Malays as pro-Japanese collaborators. The Japanese Occupation ended in August 1945 with the defeat of Japan by the Allied Powers. Since President Franklin D. Roosevelt's Trusteeship Plan to de-colonize Southeast Asia after the war did not materialize, due to opposition from Britain and France and the need for Allied cooperation in Europe for the war effort, the British returned to Malaya after the war.

## **BRITISH RULE AFTER WORLD WAR II TO INDEPENDENCE**

The British Military Administration (BMA) was established in 1945, and it lasted until April 1946, when civilian rule was restored. The BMA was marked by the return of the four northern Malay states by Thailand and by communal clashes between the Malays and Chinese in several parts of Malaya over their different loyalties during the war.

In 1946, since the British wished to create a more unified Malayan state, they proposed the Malayan Union Plan for administrative efficiency and national cohesion. Singapore was excluded, however, because of its large Chinese population and its status as the main British naval base in Southeast Asia. The Malayan Union Plan was officially implemented on April 1, 1946, and two major provisions were the ceremonial role for the Sultans and equal citizenship for all based on birth and naturalization. Both provisions angered the Malays as they reflected a drastic change from Britain's pro-Malay policy during the pre-war years. This policy change by the British was prompted in part by the Malay-Japanese wartime collaboration and by the help the Chinese had rendered in fighting the Japanese.

Malay protests against the Malayan Union Plan led to the formation of the United Malays National Organization (UMNO) in March 1946, with Dato' Onn bin Ja'afar as president. The Malays also made

appeals to former colonial officials in Britain to scrap the Malayan Union proposal. These measures worked for the British replaced the Malayan Union Plan with the Federation of Malaya Agreement on February 1, 1948, which restored the Sultans to their former position and made citizenship more stringent for the non-Malays.

Meanwhile, the post-war years saw growing anti-communist sentiment in Malaya. The MCP went underground in 1948 and began an all-out war to replace the British in Malaya. Its Malayan Races Liberation Army tried to subvert the economy by disrupting the rubber plantations and the tin mines, the sources of Malaya's wealth. After the MCP had changed its policy from labor agitation to armed revolt, the British officially proclaimed a State of Emergency on June 18, 1948, a fight that was to last twelve years. To fight the communists who operated mainly from the jungle and who relied on the support of Chinese villagers for supplies of food, information, and recruits, the British implemented the "Briggs Plan", drawn up by General Harold Briggs the commander of the counterinsurgency forces. Under this plan, Chinese villagers were resettled in New Villages and closely monitored by an effective police force to prevent them from aiding the communists.

The plan was so successful that it was copied in South Vietnam as the strategic hamlets plan. The analogy, however, was flawed, and it failed in Vietnam as those resettled there were indigenous Vietnamese with roots to the soil and not vulnerable, immigrant Chinese as in Malaya. For the British, the first three years of the Emergency were difficult, with setbacks that included the October 1951 assassination of the British High Commissioner, Sir Henry Gurney. The second phase from 1952 to 1954, under General Sir Gerald Templer, who served as both High Commissioner and Director of Operations, was more successful as more communist guerrillas surrendered than remained in the jungle. This phase ended with the abortive peace talks at Baling in 1955 between Tunku Abdul Rahman, the Malayan Chief Minister, and Chin Peng, the Communist leader.

The early years of the Emergency also saw agitation for self-rule. Although the British had promised eventual self-rule in the 1948 Federation of Malaya Agreement, they said they could not grant it until two obstacles had been overcome -- the communal strife, especially between the Malays and the Chinese, and the communist problem, which threatened security. In 1949, to foster inter-ethnic harmony, the British established the Communities Liaison Committee, which stressed liberal citizenship laws for the Chinese in return for Chinese economic assistance to the Malays. The British also encouraged the establishment of a political party for the Chinese as the Malays already had UMNO and the Indians their Malayan Indian Congress (MIC) since 1945. As a result, the Malayan Chinese Association (MCA) was formed in 1949, comprising mainly wealthy English-speaking Chinese with strong ties to the British.

Meanwhile, a new leader arose among the Malays -- Tunku Abdul Rahman, a prince from Kedah and a law graduate from Cambridge University. He became the leader of UMNO when Dato' Onn Ja'afar resigned in 1951 to form his new inter-racial Independence of Malaya Party, after failing to convert UMNO into a multi-ethnic political party. In 1952, the Tunku suggested that UMNO and the MCA team up in the Municipal elections in Kuala Lumpur, by running Malay candidates in Malay wards and Chinese candidates in Chinese wards. Calling themselves the Alliance, they won the elections, defeating the IMP. In October 1954, the MIC joined the Alliance, and together they contested the 1955 elections for

a federal legislature, winning 51 of the 52 seats contested. This show of inter-racial solidarity helped pave the way for independence. In January 1956, the Tunku led an Alliance delegation to London, and independence was scheduled for August 31, 1957. In preparation for independence, a Constitutional Commission, made up of Commonwealth judges, drafted a new constitution for the nation that embodied many compromises to resolve contentious issues, like citizenship, the state religion, the national language, the status of the rulers, and the special rights for the Malays.

In Sarawak and Sabah, after the war the British resumed control of the Borneo territories with the help of Australian forces. A brief period of British Military Administration was followed by political reorganization. In Sarawak, Raja Vyner Brooke ceded his state to the British Crown, as he was unable to undertake the immense task of post-war rehabilitation and recovery. His brother and nephew, however, opposed this move, as did many of the Malay chiefs who feared a loss of status with the change in government. Britain then sent a Parliamentary Commission to Sarawak, and it reported that the majority of the people favored the transfer to the British Crown. Hence, Sarawak became a British Crown Colony in July 1946, administered by a Governor, who was assisted by an executive council, known as the Supreme Council, and by a legislature, called the Council Negri. But the Sarawak Malay Association continued to campaign against the cession and was behind the fatal stabbing of the second British Governor, Duncan Stewart, in December 1949. Other developments to 1957 included the 1951 relinquishment of claims to Sarawak by Anthony Brooke and the new Constitution of 1957 that Britain granted to Sarawak.

In the case of Sabah, the British Government bought over the British North Borneo Company after the war in order to undertake recovery and rehabilitation work. Sabah thus became a British Crown colony in July 1946 and was administered by a Governor assisted by an advisory council. The island of Labuan was included in Sabah, and Sabah's capital was transferred from Sandakan to Jesselton, now Kota Kinabalu. Political development was a slow and uncertain process in Sabah, due to British policy and to disunity among the various indigenous groups. Only in 1950 was a Legislative Council established, while local authorities were introduced in 1952. In the mid-1950s, Sabah's most important political leaders were Mustapha Harun, a Muslim Sulu chief, and Donald Stephens, a Christian Kadazan.

## **THE PREMIERSHIP OF TUNKU ABDUL RAHMAN**

As the nation's first premier, Tunku Abdul Rahman was praised for having obtained independence without any bloodshed. His early years witnessed the following developments: "Malayanization", when British officials were replaced by local counterparts; the signing of an Anglo-Malayan Defence Treaty; the holding of the 1959 general elections, which the Alliance Party won; the end of the Emergency in August 1960; and Malaya's membership in the Association of Southeast Asia (ASA) in 1961 with Thailand and the Philippines for economic cooperation. The Tunku's premiership coincided with the third and final phase of the Emergency, the mopping-up operations to deal with remaining communist terrorists. By 1960, around 500 terrorists remained, seeking refuge at the Thai-Malaysian border which became their base of operations. The Tunku also handed over to the South Vietnamese army some of the military equipment used during the Emergency, such as armored vehicles. During this period, roads were renamed, and English was used less, while the Malay language and Islam were promoted by the

government.

By 1961, there was also talk between the Tunku and the British about federating with Singapore, which had gained its independence from Britain in 1959, and with the British territories of Brunei, Sabah, and Sarawak to form a larger political entity. The British saw federation as a de-colonization measure for the Borneo territories, that would relieve it of further colonial responsibility in Southeast Asia and provide a way to deal with the communist problem in Singapore. Moreover, federation was also a way to balance Singapore's large Chinese population with Malaya's multi-racial society, as the inclusion of Sabah, Sarawak, and Brunei would add more Malay and indigenous peoples and thus ensure that Malays would remain in the majority.

When the Tunku announced the merger plan on May 27, 1961, he faced opposition from anti-merger groups in Singapore, Sabah, and Sarawak. In Singapore, a referendum was held in September 1962, and it was won by Lee Kuan Yew's pro-merger party, despite strong socialist opposition. The arrangements for federation included Singapore's acceptance of special rights for the Malays and under-representation in the House of Representatives, in exchange for keeping most of its revenue and autonomy in education and labor matters. In the case of Sabah and Sarawak, British and Malayan officials agreed to set up a British-Malayan Commission to assess the views of the peoples of both states. Therefore, from February to mid-April, 1962, a five-man Commission of Inquiry, known as the Cobbold Commission, assessed views in Sabah and Sarawak, interviewing 4,000 people and considering 2,200 written submissions. Its August 1962 report concluded that the people of Sabah and Sarawak favored federation. These two states, however, asked for special concessions. These compromises became known as the "20 Points" and included the following: control over immigration, English as the medium of instruction, freedom of religion, special privileges for indigenous peoples, and certain financial arrangements. Meanwhile, elections were introduced in Sarawak in 1959 and in Sabah in 1962 on the eve of the formation of Malaysia.

As for Brunei, at first its Sultan favored federation, but he changed his mind after the December 1962 revolt, led by A.M. Azahari, showed anti-merger sentiment. Two other reasons contributed to the Sultan's change of mind -- his misgivings about sharing his state's resources with less well-to-do neighbors and his increasing concern that he might not be chosen as Malaysia's first paramount ruler. The Azahari revolt was backed by the Philippines, because of its claim that Sabah was leased and not ceded to the British by the Sultan of Sulu and therefore still belonged to the Philippines. The revolt was also backed by Indonesia, as President Sukarno claimed that merger was a neo-colonialist plot by Britain to maintain its power in the region.

Meanwhile, in June 1963 it appeared that the representatives of Malaya, Indonesia, and the Philippines might reach some agreement on the merger plan when they agreed on two matters. One was the creation of a consultative arrangement for collective defense within the framework of a new regional organization for Muslim brotherhood, called MAPHILINDO. The second matter was agreement on submitting the Borneo problem to the UN for an assessment of the wishes of the people of the two Borneo states. However, MAPHILINDO soon fell apart when the Tunku signed a final agreement with Britain on July 9, 1963, setting August 31 as the date for Malaysia's formation before the UN commission had completed

its report. Because Sukarno was furious, a summit meeting was held in late July in Manila at which the Tunku agreed to postpone federation for two weeks to allow completion of the UN report.

Although the UN report disclosed that two-thirds of the population of Sabah and Sarawak favored federation, both Indonesia and the Philippines rejected these findings and broke off diplomatic relations. Malaysia went ahead and celebrated the proclamation of Malaysia Day on September 16, 1963. In Sabah that day, Tun Dato Mustapha bin Datu Harun was installed as the first Yang di-Pertua Negeri, with Datuk Donald Stephens as Chief Minister. Indonesia soon launched a Confrontation policy that lasted from 1963 to 1966, during which there were incidents on the borders of both countries and acts of sabotage and terrorism.

In the midst of the Confrontation crisis, the Tunku was forced to deal with another crisis --- an internal one with Singapore, revolving around special rights for the Malays. As leader of the People's Action Party (PAP), Singapore's premier Lee Kuan Yew called for a "Malaysian Malaysia", where "the state is not identified with the supremacy, well-being and interests of any one community or race". This led the Tunku to ask for Singapore's withdrawal from Malaysia, which took place on August 9, 1965 when Singapore became an independent nation. Meanwhile, Britain, with the aid of Australia and New Zealand, defended Malaysia during Indonesia's Confrontation. Confrontation finally ended with the coming to power of General Suharto, who replaced Sukarno as president soon after the September 1965 coup. Under Suharto, a peace treaty between the two countries was signed on August 11, 1966. Earlier, in June 1966, the Philippines had resumed diplomatic relations with Malaysia.

These peaceful developments paved the way for the formation of the Association of Southeast Asian Nations (ASEAN) in August 1967 by Indonesia, Malaysia, the Philippines, Singapore, and Thailand. This historic event occurred under the Tunku's watch, as did the tragic race riots of May 1969, after the general elections which witnessed the Democratic Action Party (DAP), an offshoot of the PAP, calling for the abolition of special rights for the Malays. Although the Alliance Party won those elections, it lost more votes to the opposition than expected. When the opposition party supporters, mainly Chinese, held rallies and parades in Kuala Lumpur to celebrate their gains, violence broke out between the Malays and Chinese. Each side later claimed that the other side had started the riots. The race riots continued for nearly two weeks, claiming hundreds of lives, mainly Chinese and Indian. The government quickly declared a state of emergency, suspended the Constitution and Parliament, postponed elections in Sabah and Sarawak indefinitely, and established a National Operations Council (NOC), with the deputy premier, Tun Abdul Razak, as director.

The race riots led to the Tunku's fall from power. Many Malays, including the present premier, Dr. Mahathir Mohamad, called on him to resign as premier and as President of UMNO. Criticisms against the Tunku included allegations that he had given in too much to Chinese demands. The Tunku then expelled Mahathir from UMNO in 1969 for breach of party discipline. Mahathir used this time out of active politics to write his controversial book, *The Malay Dilemma*, which criticized the Tunku's leadership and called for affirmative action to help the Malays. His book was published in 1970, but banned the same year by the Tunku. In September 1970, the Tunku himself was forced to resign as premier and was succeeded by his deputy.

## THE PREMIERSHIP OF TUN ABDUL RAZAK.

Like the Tunku, Tun Razak was trained as a lawyer in England. He was also of aristocratic background, as his father had been one of four major chiefs in Pahang. Much younger than the Tunku, he was in part groomed for political power by the Tunku. They had a falling out, however, after the race riots. Under Razak, the government became more assertive of Malay rights, especially after a study of the causes of the May 1969 riots concluded that Malay grievances and resentments had to be addressed and resolved. Accordingly, the NOC amended the Sedition Act of 1948 to prohibit public questioning of sensitive issues, such of the special status of the Malays, the powers of the Malay rulers, the status of Malay as the national language, and the citizenship laws, especially with regard to the non-Malays. Other amendments declared that persons violating these provisions could be barred from public office for five years and that associations challenging Malay rights could be dissolved. Under Razak, the *Rukun Negara*, or National Ideology, was also drafted, stressing five principles: belief in God; loyalty to the king and country; upholding the Constitution; the rule of law; and good behavior and morality. Proclaimed on August 31, 1970 by the Paramount Ruler, the *Yang di-Pertuan Agong*, it was aimed at restraining the demands of ethnic chauvinists.

Emergency rule lasted until February 20, 1971, when the NOC was dissolved and parliamentary government was reestablished. Parliament then amended the Malaysian Constitution to incorporate the prohibition, even in Parliament, against public discussion of sensitive issues. To address ethnic and social inequalities, another constitutional amendment gave the Yang di-Pertuan Agong the power to reserve academic places for Malays in institutions of higher learning in courses where the number of Malays was disproportionately low. Razak's new government possessed enlarged powers as the Rukunegara ideology, the Sedition Ordinance, and the "sensitive issues" amendments were added to earlier powers, such as that to issue emergency decrees, to use the Internal Security Act (ISA) to detain persons who might be security threats, to suspend state constitutions, to allocate federal revenues to states, and to allocate patronage in return for political support. Another change under Razak was the enhanced role of UMNO as the base for the nation's political system, with the other parties in the Alliance coalition providing peripheral support. UMNO and the Malays held pre-eminent positions under his administration. His key cabinet posts were held by Malays from UMNO, except for Tan Siew Sin, President of the MCA, who served as Minister of Finance. Loyal Malay supporters of the Tunku were missing, however, as Razak had eased them out of power. On the other hand, opponents of the Tunku, like Dr. Mahathir and Musa Hitam who were both expelled from UMNO in 1970, were readmitted and given high office.

In 1971, Razak implemented the New Economic Policy (NEP), which became the foundation for the nation's economic and social policy for twenty years. The NEP's two-pronged objectives and goals were stated in the Second Malaysia Plan presented to Parliament Congress in July 1971: -- to reduce and eradicate poverty by raising income levels and increasing employment opportunities for all Malaysians, irrespective of race, and to restructure Malaysian society in order to reduce and eventually eliminate the identification of race with economic function. The second aim, which became more urgent for helping the Malays, involved the modernization of the rural areas, more urban activities, and the creation of a Malay industrial and commercial community. The government aimed by 1990 to achieve 30% Malay ownership

and participation in all commercial and industrial activities. Many quasi-public bodies were formed to provide special assistance programs for the Malays, who received the most help in the public services, in education, in private sector employment, ownership of share capital, and corporate management.

Besides serving as premier, Razak was Minister of Defense, Minister of Foreign Affairs, and President of UMNO. His deputy, Dr. Ismail bin Abdul Rahman, served as Deputy President of UMNO, Minister of Home Affairs, and Minister of Trade and Industry. Another very powerful member of the Razak administration was Ghazali Shafie, the Minister with Special Functions and the Minister of Information. When Dr. Ismail died suddenly of a heart attack in August 1973, Razak appointed Hussein Onn, the then Minister of Education, as his new deputy. Hussein Onn was not only the son of Dato Onn Ja'afar, the founder of UMNO, but also Razak's brother-in-law, as their wives were sisters. With Hussein Onn's promotion, Razak appointed Dr. Mahathir, by then an UMNO Supreme Council member since 1972, as the new Minister of Education.

Under Razak, the Alliance Party built a wider and more stable base of political support and became the *Barisan Nasional*, or National Front, in 1974. This was done to reduce ethnic conflict and to help realize the goals of the NEP. Over a number of years, he made efforts to incorporate the more accommodating of the opposition parties on the state and federal levels. In Sabah, which was under Chief Minister Mustafa Harun, he succeeded in getting the United Sabah National Organization and the Sabah Chinese Association into the Sabah Alliance, which went on to win the June 1970 state elections. In Sarawak, Razak worked out a coalition government under Abdul Rahman Ya'akub that included Party Bumiputra (Malay-based), Sarawak United People's Party (Chinese-based), and Party Pesaka (Iban-based). This federally backed coalition won the June 1970 elections in Sarawak, and Abdul Rahman Ya'akub became Chief Minister. On Peninsular Malaysia, Razak incorporated two mainly non-Malay parties -- the Gerakan Party and the People's Progressive Party (PPP) -- and the Malay-based Partai Islam (PAS) into the National Front.

Under Razak, legislation was also introduced to make Kuala Lumpur a federal territory, to be governed directly by the federal government. This legislation went into effect on February 1, 1974, allowing for greater administrative efficiency, but also working against the DAP in that it isolated the non-Malay voters in the country's largest urban area. The broader based National Front then won the 1974 general elections. However, there were also student disturbances that year from radical university students unhappy with the failure of the NEP to eradicate poverty, as in the rural area near Johore Bahru, where squatters were evicted to make way for a land development scheme, and in the Baling area of Kedah, where peasants were alleged to be starving. Among the student leaders arrested under the ISA was Anwar Ibrahim, the President and founder of the Islamic Youth Movement, known by its Malay acronym, ABIM.

Also under Razak, Malaysia proposed the neutralization of Southeast Asia to avoid great power conflicts in the region. This proposal was endorsed by ASEAN in 1971 as the concept of "Southeast Asia as a Zone of Peace, Freedom, and Neutrality" (ZOPFAN). This Malaysian contribution, ASEAN's first foreign policy initiative, was used yearly in UN resolutions by ASEAN during its diplomatic offensive against Vietnam's invasion and occupation of Cambodia from 1979 to 1989. Malaysia also became the

first ASEAN nation to establish diplomatic relations with China in 1974. This was a departure from the Tunku's strongly pro-West and anti-communist stand. Meanwhile, the ties with Islamic countries, begun by the Tunku, were further strengthened, with Malaysia sponsoring the Fifth Islamic Conference of Foreign Ministers in 1974. On the domestic front, Malaysia also followed a policy of Islamization under Razak, to foster Muslim brotherhood and to fight communism.

By 1975, however, Razak had become very ill. He had leukemia, but his illness was kept a secret until his death on January 14, 1976. He was succeeded by his deputy, Tun Hussein Onn.

## **THE PREMIERSHIP OF TUN HUSSEIN ONN**

Like both his predecessors in office, Tun Hussein Onn came from an aristocratic background and was trained as a lawyer in England. Unlike them, however, he did not have as strong a political base, as he had left UMNO in 1951 with his father, Dato Onn bin Ja'afar, and only rejoined in 1969. He also began in poorer health, as he had suffered a prior heart attack. Upon assuming office as Malaysia's third Prime Minister, he faced rising apprehension in Southeast Asia about the spread of communism, as the whole of Indochina had fallen to Communism in 1975. In Indochina the "domino theory" had materialized. The ASEAN states were galvanized into action and held their first summit at Bali in 1976 where three important documents were signed: The Treaty of Amity and Cooperation, the ASEAN Concord, and the agreement to form an ASEAN Secretariat. To strengthen themselves, the ASEAN leaders also focused on improving their trade, both intra-ASEAN and extra-ASEAN. Thus, under Hussein Onn, more cooperation took place between Malaysia and its ASEAN partners. It was also under his administration that Malaysia hosted ASEAN's second summit in Kuala Lumpur in 1977.

Hussein Onn continued Tun Razak's ASEAN policy and strengthened it. He did the same with Razak's other main policies, such as the NEP, which was geared to improving the economic position of the Malays. Hence, more educational opportunities were extended to the Malays, including government scholarships to educational institutions abroad. Because of rising costs at British universities and quotas on foreign students, Malaysia began sending more students to American universities. As with Razak, emphasis was also placed on economic growth as the cornerstone for other government policies. The Third Malaysia Plan, 1976-80, under Hussein Onn's administration, achieved a growth rate of 8.6 percent. Under him, the transfer of corporate ownership to bumiputras was also speeded up. Another policy from the Razak period that Hussein Onn continued was the stress on Islamization to unite the Malays and to fight communism. This policy led to a closer identification with the Middle East, to larger numbers of students being sent there, and to more missionary activity by Muslim groups. Consequences from this policy included the rise of Islamic revival movements, greater polarization of the races, more conservative dress styles among Muslim women, and more conversions to Islam among the non-Malays. Among the Islamic revival movements, some were deemed as "deviationist" and banned, for example the Ahmadiyah movement, based in Pakistan, and some sufi and mystical sects claiming mystical powers and practising black magic, such as the Qadiani Sect, Muhammadiyyah Tariqah, and Tarikat Mufaridiyah.

As his deputy, Hussein Onn chose Dr. Mahathir Mohamad, who had been elected as one of three UMNO Vice-Presidents in 1975. In June 1979, Mahathir attracted worldwide attention when he was quoted as

saying that Malaysia would shoot on sight Vietnamese refugees attempting to land in the country. He later claimed that he had been misquoted, but his statement nevertheless led to a quick reduction in refugee arrivals. That year, Malaysia had over 70,000 Vietnamese refugees cramped at Pulau Bidong, an small island refugee camp off Terengganu. With other ASEAN states, Malaysia called for Vietnam to stop the flow of refugees, for the resettlement process to be speeded up, and for the establishment of more refugee processing centers.

Besides the Vietnamese refugee problem, Hussein Onn had to deal with factional rivalries within UMNO. His critics included the Tunku, who wrote weekly critical commentaries of Malaysian political affairs, and Harun Idris, the President of UMNO Youth, who was convicted of corruption and sentenced to a two-year prison term. He also had to deal with the MCA proposal to set up a privately funded university, “Merdeka University”, to preserve Chinese education and to provide university education for Chinese students unable to gain entry into Malaysian universities because of the bumiputra quota system. In 1978, this proposal was rejected by the UMNO General Assembly and by Hussein Onn. In addition, there was the Kelantan crisis where, despite the coalition between PAS and UMNO in the 1974 elections, rivalries existed over power and public policy. This crisis began as a land problem between PAS members regarding lucrative timber and mineral concessions. When it escalated into violence, Hussein Onn declared an emergency and sent Dr. Mahathir to offer a peace formula. The peace formula, however, was rejected, as was a second peace formula. Hussein Onn then imposed emergency rule over Kelantan for three months to stabilize the political situation before calling for new elections in March 1978. The elections then ended as a victory for UMNO and its new Berjasa partner.

Hussein Onn also had to contend with politics in Sabah and Sarawak. In Sarawak, the National Front relied on the skillful leadership of Abdul Rahman Ya’akub, who headed the minority Partai Pesaka Bumiputra Bersatu, which was mainly Malay-Muslim. Abdul Rahman Ya’akub had become Chief Minister of Sarawak in 1970 with federal support. He soon controlled a wide Malay-native-Chinese coalition and created a stable government by playing off the coalition partners against each other. In 1974, he brought into the Sarawak National Front the state’s largest party, the Sarawak National Party (SNAP), which represented the interests of most of the interior native peoples. In the 1978 general elections, he kept the coalition together, in spite of internal strains along native-Chinese and native-Malay/Muslim lines and despite the withdrawal from his party of a Malay faction. This breakaway faction revealed old conflicts between urban and rural Malays in Sarawak and became one of four opposition parties in the 1978 elections.

In 1976, the political scene in Sabah was more contentious because of strong rivalry for power between the former Chief Minister Mustapha Harun, who had “resigned” in 1976 after 9 years in power, and the new Chief Minister Faud Stephens, leader of Berjaya government. Faud Stephens was the new name for Donald Stephens, who had converted to the Islamic faith. The threat of civil violence loomed large as Mustapha planned to regain power. Earlier, he had allowed the illegal immigration of Filipinos and Indonesians to Sabah to increase the Malay-Muslim element espoused by his USNO party. His supporters also carried out bombing incidents in 1976 in attempts to get the federal government to declare emergency rule that could lead to his return to power. Instead, the government arrested thousands of his supporters. Meanwhile, Faud Stephens was killed in a plane crash on June 6, 1976 and was succeeded by

Harris Salleh, the Deputy Chief Minister and a founding leader of Berjaya. Harris was able to establish control, to implement development programs, and to provide political stability. Ethnic tensions still persisted, however, as did resentments on the part of USNO members, even after the National Front readmitted USNO prior to the 1978 general elections.

Hussein Onn then led the National Front to victory in the 1978 general elections, defeating PAS and the DAP, its main opponents. By December 1980, however, he was ill with heart trouble and had to have a coronary bypass operation in England in February 1981. He retired officially on July 16, 1981 and was succeeded by his deputy, Dr. Mahathir Mohamad.

## **THE PREMIERSHIP OF DR. MAHATHIR MOHAMAD**

The present premier differs from his predecessors in several ways. While they came from an elitist background and studied abroad in England, he is from a middle class background and was educated locally, at the University of Malaya in Singapore. While they pursued studies in law, he studied medicine. Whereas his predecessors maintained cordial relations with the former colonial power, to the point of being labeled as “Anglophiles”, he has at times spoken out bluntly and critically against Britain and other Western nations, to the point of being called “anti-West”. He has also stirred more controversy, at home and abroad. Moreover, he has served as premier far longer than any of them.

Perhaps the most distinguishing difference, however, is that he has proved himself to be Malaysia’s most visionary leader. He has devised bold visions for his country, formulated plans for their realization, and brought them to fruition. He has persisted with these plans despite criticism, opposition, and delays. His most prominent idea is probably his “Vision 2020” plan, introduced in 1991, which aims at Malaysia becoming a fully industrialized country by that date. Meanwhile, as a result of his vision and drive, Malaysia has already achieved significant economic growth and prosperity at the start of the 21<sup>st</sup> century and is regarded as a vibrant, modern, and progressive nation. It is also seen as a moderate Islamic country.

Mahathir’s two decades in power have not always gone smoothly, however. There have, for example, been several changes with his deputy premier. His first deputy was Musa Hitam, a former Minister of Education, who served from 1981 until 1986, when he resigned due to differences with the premier. Mahathir then chose a veteran Malay politician, Ghafar Baba, as his deputy, but replaced him in 1993 with the more dynamic Anwar Ibrahim, who by then was already Minister of Finance. But in 1998, the premier sacked Anwar on charges of corruption and sexual misconduct, an action that shocked and divided the Malays. As Anwar’s replacement, he appointed Abdullah Ahmad Badawi, the former Foreign Minister.

Dr. Mahathir has also faced other clashes. In his first decade in power, he clashed with the Malay rulers when he tried to limit their powers. In 1983, to continue Hussein Onn’s policy of concentrating power at the center, he introduced legislation to amend the Malaysian Constitution by limiting to 15 days the right of the *Yang di-Pertuan Agong* to delay assent to new legislation and transferring the power to declare a state of emergency from the King to the premier. After much bitter controversy, a compromise bill was

passed in 1984 whereby the King could delay new federal legislation for up to 60 days and could only declare an emergency on the advice of the cabinet. This was a victory for Mahathir, as it strengthened his position vis-à-vis the Malay rulers. His first years were also marked by disputes with Britain over fee increases in universities and the ending of British preferential trade benefits for Malaysia. This led him to launch a “Buy British Last” policy in 1981, and it lasted until March 1983.

Mahathir’s first decade as premier was also marked by other important developments. He began his premiership with measures to improve government productivity and efficiency, using the slogan “Clean, Efficient, and Trustworthy”, to achieve the NEP aims in a shorter time and with less waste. He also lifted the ban on his controversial book, *The Malay Dilemma*, and released many detainees from prison. To strengthen UMNO against PAS, he invited Anwar Ibrahim to join UMNO just before the elections in April 1982. His National Front then won a landslide victory in those elections, after which he put Anwar Ibrahim in charge of Islamic Affairs to promote the religion. To ensure that the racial restructuring objectives of the NEP would be achieved by the 1990 timetable, he focused on foreign investments and foreign trade and decided that the government needed to secure a controlling interest in several main British corporations operating in the major resource sectors of the Malaysian economy. Using stock market purchases, the Malaysian Government began to control some of the established British corporations in Malaysia, such as the Guthrie Corporation, Sime Darby, Dunlop, and Harrisons & Crosfield. Ownership of these corporations was then transferred to Bumiputra trust agencies and managed by the main parties in the National Front, especially UMNO. In addition, he called for business-government cooperation with his “Malaysia Incorporated” idea and for privatization, whereby government services and enterprises were transferred to the private sector to make it the main engine of growth.

Dr. Mahathir then led the National Front to a victory in the 1986 general elections. However, he faced problems on the economic front in the mid-1980s with a recession, due in part to the fall in commodity prices. He also faced problems in Sabah and Sarawak, because of the economic recession and because of resentment of Malay domination in politics. In Sabah, with the fall in timber prices, there was growing criticism against the authoritarian government of Chief Minister Harris. The Kadazans and Chinese criticized the Islamization policy of Harris, his pro-Muslim policy in government appointments, and his transferring Labuan island to the federal government without compensation. In the state elections of April 1985, to Mahathir’s embarrassment, Parti Bersatu Sabah (PBS) defeated the Berjaya government of Harris, with the result that the PBS Kadazan leader, Joseph Pairin Kitingan, replaced Harris as Chief Minister. Although Pairin refused at first to share power with a coalition government, he eventually joined the National Front.

In Sarawak, where the Malays dominated political life and the economy even though they made up one-third of the population, Abdul Rahman Yakub led a coalition government for twelve years, until he handed over authority to his protégé and nephew, Taib Mahmud, in 1981. Meanwhile, the Malays, Melanau, and Chinese profited from the timber boom, while the Ibans went further below the poverty line due to their lack of political power, their fragmentation, and traditional rivalries. When the timber boom ended, problems appeared in the main Malay-Melanau, Parti Pesaka Bumiputra Bersatu, while the Ibans began to unite to fight for a fairer deal for themselves. In 1983, a split within the Sarawak

National Party led to the formation of the first exclusively Dyak party, Parti Bangsa Dyak Sarawak, which joined the National Front. While the National Front won the 1983 Sarawak state elections, a bitter feud developed between Taib Mahmud and his uncle. Taib was accused of nepotism and of favoring Chinese businessmen. By 1987, a group had formed around Abdul Rahman Yakub and they wanted Taib's resignation. Taib appealed to the central government for help but Dr. Mahatir said it was a state and not federal matter. Taib then called for elections, which he won narrowly.

Meanwhile, within the MCA, there were leadership problems and discontent over Chinese education, due to the decline in the number of Mandarin-medium secondary schools. There were also problems within UMNO over Dr. Mahathir's authoritarian style of leadership. After Musa Hitam resigned as deputy premier in 1986, he supported Tengku Razaleigh Hamzah in challenging Mahathir as leader of UMNO. For security reasons, in 1987 the government arrested over a hundred people, including some members of the National Front. More problems arose in 1988, when the Malaysian high court declared that UMNO was an illegal society and Mahathir was forced to form a new party, UMNO Baru or New UMNO. May 1988 also saw Mahathir's controversial dismissal of the outspoken Chief Justice.

Dr. Mahathir's second decade as premier witnessed more important developments. It began with his controversial EAEC proposal in 1990 to counter economic blocs in the West. The same year saw Mahathir defeating his opponents in the 1990 General Elections -- PAS and Razaleigh's Semangat '46 lost to the National Front, which retained its two-thirds majority in Parliament. The next year saw the end of the NEP after 20 years and its replacement with the New Development Policy (NDP), which placed less emphasis on quotas and race. In 1993, the premier picked Anwar Ibrahim to be his new deputy premier, by-passing his then deputy. In 1994, the Constitutional Amendment Act was passed, reducing the King's powers as he was only to act on the advice of the government. The amendment removed the King's power to block legislation by withholding assent. Critics of the amendment claimed it was a setback for democracy as it strengthened executive power, while the government argued that the King is a constitutional monarch and must act on the advice of the government. This amendment followed revelations in 1992 that there had been abuse of power by the monarch. In 1995, general elections were held again, and the National Front scored another victory, although the PAS-Semangat coalition retained power in Kelantan. Meanwhile, there were problems with federal-state relations, especially with Sabah and Kelantan. Tensions arose too with Australia over negative depictions of Malaysia in films and television programs.

On the whole, however, Malaysia did well, enjoying a high annual economic growth rate of around 9 percent before the 1997 Asian Financial Crisis. It had companies around the world in Africa, China, Central Asia, Latin America, and Southeast Asia and had big projects at home, including the Multi-Media Super Corridor project and a plan to develop Malaysia as a regional educational center. Dr. Mahathir also served as chair of the Group of 15 for South-South cooperation while a Malaysian served as President of the 51<sup>st</sup> Session of the UN General Assembly. Moreover, Malaysia was to chair the 30<sup>th</sup> anniversary meeting of ASEAN.

The ASEAN Meeting, however, was a let-down as it coincided with the fall in the Thai and Indonesian currencies. Dr. Mahathir then stirred controversy when he blamed George Soros and other currency

speculators for causing the 1997 financial crisis. Meanwhile, the Malaysian ringgit fell by about 40%, the stock market and property values also dropped, while the prices of food items went up. Growth rate forecasts were adjusted from plus 9 percent to minus 1 percent. With the layoff of more workers, foreign and domestic, there was a rise in unemployment. Malaysia went on an austerity drive, cutting salaries and allowances, scaling back on projects except for the Multi-Media Super Corridor, embarking on a “Buy Malaysia” campaign, and sending less government-sponsored students for studies overseas. It also repatriated foreign workers and took steps against illegal immigrants.

Other problems in 1997 included low rubber prices; the drought which led to water rationing; the haze from forest fires in Indonesia, which adversely affected the environment and tourism and raised health concerns; and a scare about a virus which caused the deaths of some humans and horses but mainly pigs. There was fear too of social and political unrest and thus great concern when, in March 1998, fighting broke out in Penang between Hindus and Muslims over a Hindu shrine situated near a mosque. Tensions had arisen over the proximity of the two sites of worship and over plans to move the Hindu shrine. Police used tear gas to break up the fights, and the matter was resolved when the Hindus agreed to move the shrine to a different site. There was also talk of a rift between Dr. Mahathir and Anwar Ibrahim, and a book was circulated containing reasons why Anwar should not become the next premier. The rift, however, was denied by both parties until the announcement in September 1998 that the deputy premier had been sacked from his position due to corruption and sexual misconduct. Anwar had been sacked after refusing to resign.

This shocking development polarized the Malaysian population, especially the Malays, into two camps. With his supporters, Anwar held anti-government demonstrations that led to his arrest in September and eventually to his two court trials. In 1999, a controversial political satire on the Mahathir-Anwar clash was published, written by Shannon Ahmad, a literary figure of national prominence. Dr. Mahathir continued to face criticism from within the country and abroad for his harsh treatment of Anwar. General elections were then held with very short notice in November 1999 and won by the National Front, despite a strong showing by the opposition forces which banded together in a coalition party made up of Anwar’s party, the National Justice Party led by his wife, PAS, and the DAP. The Chinese vote for Mahathir helped to decide the results in his favor.

Since then, Malaysia has made a quick recovery from the financial crisis, the Anwar problem has abated, and Dr. Mahathir is enjoying support within the country and abroad. There have, however, been several security concerns. One was the hostage crisis at Sipadan in April 2000 when 21 tourists, including Malaysians, were kidnapped by members of the Abu Sayyaf, one of two Moro groups in the Philippines fighting for an independent Muslim homeland. The Abu Sayyaf brought the hostages to Jolo in the Philippines and demanded a ransom of US\$1 million for the release of each hostage. Another security concern revolved around the Al-Ma’unah cult in Malaysia which carried out a gun heist in 2001. This group has connections with the Kumpulan Mujahideen Malaysia (KMN), which in turn is believed to have connections with the Al Qaeda terrorists. Since the September 11 terrorist attacks in the United States, attention has focused on connections between the terrorists and their possible links with Malaysia.

Yet another security concern was the March 2001 clash between some Malays and Indians in Kampong

Medan near Kuala Lumpur in which six people lost their lives. This clash had racial, social, and economic overtones. It began with a fight between two households – one Malay, celebrating a wedding, and the other Indian, preparing for the burial of a family member. The fight escalated when a drunken motorcyclist kicked some chairs in the temporary shed erected for the wedding party and when the windscreen of an Indian businessman’s car was shattered by a catapult. Armed gangs then roamed the neighborhood, slashing people, and killing five Indians and an Indonesian construction worker mistaken as an Indian. That month, other incidents against Indians followed the earlier clashes. Complicating race relations since then has been rising Chinese and Indian dissatisfaction within the National Front, as they want equal rights for all the races. The non-Malays are also concerned about the calls by PAS for an Islamic state.

In the early years of the 21<sup>st</sup> century, Dr. Mahathir is placing more emphasis on information technology (IT). Instead of manually skilled workers, he now wants knowledge workers. His MSC project encompasses Kuala Lumpur, the new administrative capital of Putrajaya, the new Cybercity called Cberjaya, and the new Kuala Lumpur International Airport. Within the MSC, there are new cyber laws, policies, and practices and a state of the art communication infrastructure. He has provided special incentives for world class international companies involved in IT and multimedia to locate their R&D operations, content production, field experiments, and high tech manufacturing in the MSC. These efforts have resulted in more investments in Malaysia. Local IT companies are also located in the MSC, enhancing Malaysia’s industrial capacity in IT. In addition, a Multimedia University has been established to train the knowledge workers required by the IT firms operating in the area. The Malaysian educational system has also been revamped to have “Smart Schools”, which stress “knowledge education” for IT. There is also the Vision Development Policy to replace the NEP and its successor, the NDP, to continue affirmative action for the Malays in a ten-year long program.

In June 2002, Dr. Mahathir surprised the nation with his announcement that he would step down as premier in October 2003. His designated successor is his present deputy premier, Abdullah Ahmad Bawadi.

### **Self -Study Questions for Further Exploration**

- What are some indigenous traditions of Peninsular Malaysia? How did Indianization impact the country?
- When, why, and how did Islam spread to Southeast Asia?
- How was Malacca founded? What is the importance of the Malacca Sultanate in Malaysia’s history on the political, economic, and religious levels?
- Why did the Portuguese conquer Malacca in 1511? What were some features of Portuguese rule?

- Why and how did the Dutch defeat the Portuguese at Malacca in 1641? What were some developments during the Dutch rule in Peninsular Malaysia?
- What were British motives in colonizing Peninsular Malaysia in the late 18<sup>th</sup> century? How did they acquire Penang and Singapore?
- What is the significance of the Pangkor Treaty of 1874?
- How did the British extend their rule throughout Peninsular Malaysia and to Sarawak and Sabah until the outbreak of WWII?
- How did the British create a plural society in Peninsular Malaysia? Until 1945, what were some consequences from having created a plural society?
- How did the Japanese Occupation impact the Malaysian area?
- Trace the important post-war developments in Malaysia until independence in 1957?
- What major challenges did Tunku Abdul Rahman face during his premiership from 1957 to 1960?
- What major themes characterize the administrations of Tun Abdul Razak and Tun Hussein Onn?
- Discuss major developments in Malaysian history during the administration of Dr. Mahathir Mohamad.
- What do you consider to be the main achievements of Dr. Mahathir's administration?

How does he differ from the earlier premiers?

# POPULATION AND CULTURE

## POPULATION

As of mid-2002, Malaysia had a population of around 24.3 million people, with 57 percent living in the urban areas. As noted in the Europa World Year Book 2002, the majority of the people are found on Peninsular Malaysia, as Sabah and Sarawak each have a population of under 3 million. According to the World Almanac and Book of Facts 2002, the population density is 175 per square mile, and life expectancy is 68.48 for males and 73.92 for females. The World Factbook, prepared by the U.S. Central Intelligence Agency (CIA), lists the population growth rate as 1.96 percent for 2001.

## ETHNIC GROUPS

As a multiracial society, Malaysia has many ethnic groups. On the peninsula, the country's ethnic balance is roughly 62 percent Malay, 28 percent Chinese, and 8 percent Indian. The remaining 2 percent include Eurasians, Thais, Indonesians, Filipinos, Bangladeshis and other small nationality groups. Within the Malay category are the aborigines ("*orang asli*"), of which the largest groups are the Semai and Temiars while smaller groups include the Jakun, the Semelai, and the Negrito. In Sabah and Sarawak, there is even more ethnic diversity. In Sabah, the indigenous (*pribumi*) category is made up of the Kadazan-Dusuns (the largest at 33 percent), the Muruts, the Bajaus, and the Malays. In Sarawak, the main indigenous groups are as follows: Iban (29.6 percent); Malay (20.7 percent); Bidayuh or Land Dyaks (6.4 percent); Melanau (5.8 percent); and Orang Ulu (5.4 percent). The non-indigenous population in Sabah includes the Chinese, who form around 29 percent of the population.

According to the Malaysian Constitution, to be identified as a Malay one must profess Islam, follow Malay custom, habitually speak Malay, and follow certain conditions of birth. To be a Malay is also to be a "*bumiputra*", a term which literally means "son of the soil". This "*bumiputra*" term is now used to denote the Malays, the *orang asli*, and the indigenous peoples of Sabah and Sarawak.

If the Malays and the other indigenous groups are heterogeneous, so are the Chinese and Indians. With regard to the Chinese in Peninsular Malaysia, the main groups are the Hokkien, Cantonese, Hakka (Khek), and the Teochius. In Sabah, they are the Hakka, Cantonese, and Hokkien, while in Sarawak they are the Foochow and the Hakka. As for the Indians, the following are their main groups: Tamils, Telegus, Malayalams, Punjabis, Sikhs, Hindus, and Gujeratis.

## LANGUAGES

Because of the multi-ethnic composition of the population, many languages are used in Malaysia. The four main languages, however, are Malay (*Bahasa Malaysia*), Chinese, Tamil, and English, of which the most important is Malay, the mother tongue of the Malays. Malay serves as the National Language and is the medium of instruction in schools and institutions of higher learning. In 1967, Malay also became Malaysia's official language, following the passing of the National Language Act by Parliament. Although Malay is the official language in government administration, English is widely used in commerce and industry and among members of the urban middle class. English is presently making a comeback in Malaysian schools since the government declared in mid-2002 that math and science subjects will soon be taught in English, in line with Malaysia's "2020 Vision" policy of becoming a fully developed nation by that date.

The Malay language has different dialects, with variations in the use of words and in the intonation. For example, the Malay spoken in Kelantan is somewhat different from that spoken in Johore. There are also differences with court Malay, the Malay that is spoken to members of the royal family. Out of deference, commoners must use special words and terms with members of royalty. For example, a commoner speaking to a ruler (Sultan) would refer to himself as a "*hamba*", which literally translates as "slave", but is really meant to signify a person of lesser rank. As for the Malay script, an Arabic script, called *Jawi*, is taught in schools, while a romanized Malay script, known as *Rumi*, has become the official form.

Among the orang asli, the various groups have their own mother tongue, sometimes with several dialects. Likewise, the various indigenous communities in Sabah and Sarawak have their own languages. As a result, Malay often serves as the inter-ethnic medium of communication among the indigenous peoples of Malaysia. In Sabah, the languages of the indigenous peoples include the following: Rungus, Kadazan, Murut, Bisayah, Paitan, Bajau, Suluh, Illanun, and Lun Dayah. In Sarawak, the following are the main languages of the indigenous groups: Melanau, Bidayah, Penan, Kayan, Kenyah, Nawai, Iban, Kelabit, and Lun Bawang.

With the Malaysian Chinese, Mandarin is the language of instruction in all Chinese schools, and it also serves as the form of written Chinese used by speakers of all Chinese dialects. The most important Chinese dialects used in Malaysia are Cantonese, Hokkien, Hakka, Foochow, Teochiew, and Hainanese. Many Chinese are fluent in several dialects. While Cantonese is the most common dialect in Kuala Lumpur, it is Hokkien in Penang, Hakka in Sabah, and Foochow and Hakka in Sarawak. With the Malaysian Indians, Tamil is the mother tongue for the majority of them. Other common Indian dialects used in Malaysia include Telegu, Malayalam, Punjabi, Hindi, Gujarati, and Urdu.

## **RELIGION**

As stated in the Malaysian Constitution, Islam is the official religion, but freedom of worship is allowed. The Malay Sultan is the religious head in all the states except Penang and Malacca, where the religious head is the *Yang di-Pertuan Agong*. Each state has a council of religion to advise the state government on religious matters. However, there is also a National Council for Islamic Affairs to decide on Islamic ceremonies and observances for the whole nation.

With the Malays, religion correlates closely with ethnicity in that the Malays adhere to Islam and there are very few cases of apostasy. State laws also forbid the propagation of any other religion to Muslims. In marriages between Malays and non-Malays, it is customary for the non-Malay partner to convert to the Islamic faith and for the children from these unions to be raised as Muslims.

Among the *orang asli* groups in Peninsular Malaysia and the indigenous communities groups in Sabah and Sarawak, there are many animists, although in recent years many have converted to the Muslim faith. There are also Christians among the *orang asli* and indigenous peoples of Sabah and Sarawak, the result of the work of early Western missionaries in the area. Some of these Christians are able to trace the conversion of their families over several generations.

In the case of the Chinese, most of them are Buddhists or Taoists although there are also Muslims and Christians among them. As for the Indians, most are of the Hindu faith while others are Buddhist, Sikh, Muslim, or Christian. The small Eurasian population is mostly Christian, made up of both Catholics and Protestants. Catholic churches date back to the time of Portuguese rule and can be found in Malacca, Kuala Lumpur, Penang, Kuching, Kota Kinabalu and other big towns. Protestant influence came with Dutch rule and increased under British colonialism. Protestant churches can also be found in the main towns throughout Malaysia. The main Protestant denominations are Anglican, Methodist, and Baptist.

On the whole, Muslims account for 60 percent of the population of Peninsular Malaysia, 50 percent of that of Sabah and only one-third of that of Sarawak. On the other hand, while Christians make up only 2 percent of the population of Peninsular Malaysia, they account for 27 percent in Sabah and 29 percent in Sarawak.

## **ART, MUSIC, LITERATURE, AND FOOD**

With its multi-ethnic population, Malaysia enjoys a diversity of art forms. These include: wood carvings by the *orang asli*, the Malays, and the indigenous groups in Sabah and Sarawak; handwoven cloth, inlaid with gold or silver ( *kain songket*), by the Malays; fabric-weaving by the Ibans; beadworks in Sabah and Sarawak; sleeping mats by the Penans; and *batik* production by several indigenous groups. There is also pottery with indigenous motifs from Sarawak; basket-making, using bamboo and rattan, throughout the country; and the making of tops, kites, the *kris* (Malay ceremonial dagger), ornaments, and jewellery by skilled Malay craftsmen. In addition, one can find batik and oil paintings; Malay and Chinese works of calligraphy; tribal artifacts and jewelry; and antique furniture, especially in the historic town of Malacca.

In the case of Malaysian music, the dominant music is that by the Malays, although there is also Chinese opera, Indian classical music, and other non-Malay music. Traditional music forms among the Malays include religious songs and chants and the singing of songs set in a certain verse-style known as “*pantun*”. Among traditional musical instruments, the basic one is the drum, of which there are over a dozen types. There are also the percussion instruments, the wind and string instruments, and the ensembles, made up of the *nobat* and *gamelan* orchestras. Several of the Malay states have the *nobat* orchestra, a special royal orchestra for state ceremonial occasions, with four or five members who use drums, a flute,

a trumpet, and a gong.

With regard to Malaysian literature, a developing field, the main bulk is in the Malay language. The Language and Literary Agency (*Dewan Bahasa dan Pustaka*) oversees the development and promotion of Malay literature and is the nation's largest publisher. Early Malay literature contains Sanskrit and Arabic literary traditions, as court poetry used these scripts. Some Malay poets and short story writers also used the Arabic script as late as the 1950s. One traditional form of Malay literature is the *pantun*, with its highly structured rhyming quatrain containing internal rhymes and nuances and with its message in the final two lines. The *pantun* is still used in contemporary songs and poetry. Another traditional form is the *syair*, also tightly structured, but longer, and used in connection with history or a story. Yet another traditional form is the *hikayat*, which is a court-based prose form that relates historical and legendary events. Both the *syair* and *hikayat* are meant to be recited rather than read silently. All three traditional forms rely on oral traditions.

With British colonialism came new forms of literature, as seen in the works of Munshi Abdullah or Abdullah bin Abdul-Kadir, who had British employers. His *Tales of Abdullah's Voyage (Kisah Pelayaran Abdullah)*, about his travels, and his *The Hikayat Abdullah (1848)*, his autobiography, use Western literary forms and show his personal viewpoint when discussing Malay society and politics. His autobiography is regarded as marking the beginnings of contemporary Malay literature. By the 1920s and 1930s, the Malay press regularly published poetry and serialized short stories and novels, but it was only after WWII that the Malay literary movement began with the gathering of nationalist writers in Singapore. These young Malay writers, who wrote works dealing with social idealism and political commitment, became known as the Generation of '50s Writers (*ASAS '50*). The most well known among them include Usman Awang, A. Samad Said, and Keris Mas. Usman Awang is noted for his poetry, short stories, and plays, most of which deal with the struggles of the oppressed. A. Samad Said's novels, poems, short stories, and essays include his famous novel *Salina* (1961), which examines Malay social values and behavior in postwar Singapore through the eyes of a prostitute. Shannon Ahmad is best known for his short stories and novels, which deal with the life of rural Malays in the north, who have to deal with both a difficult agricultural landscape and an unequal society. More recently, he gained attention as the writer of a very controversial political satire on the Mahathir-Anwar split.

As for food, Malaysia is a gourmet's paradise. The main types of food are Malay, Chinese, and Indian, but one can also find other cuisine, including Western, Filipino, and Japanese. Malay food is spicy and fragrant, with many dishes using coconut milk. With Chinese food, there is a great deal of choice as the styles of cooking range from Hokkien, Szechuan, Teochew, to Cantonese. Indian food also offers considerable variety as one can choose South Indian, North Indian, or vegetarian cuisine. At public functions involving meals, chicken and lamb are usually served as meat dishes because of Islamic dietary restrictions on pork and Hindu dietary restrictions on beef. Most hotels, restaurants, and dining establishments in Malaysia also have signs stating that the food served is "*halal*", which means with meats from animals slaughtered the Muslim way.

## NATIONAL HOLIDAYS

Malaysia celebrates many national holidays to mark mainly national events and the religious festivals of its major ethnic groups. The national events are Independence Day or National Day, which is celebrated on August 31, and the official birthday of the Yang di-Pertuan Agung or Paramount Ruler, celebrated on the first Saturday of June.

National holidays connected with the Islamic faith include the following: the Muslim New Year (*Ma'al Hijrah*); *Hari Raya Puasa* (*Aidil Fitri*), which concludes a month of daily fasting; *Hari Raya Haji* (*Idil Adha*), which is celebrated on the twelfth day of the third moon of the Muslim calendar when Muslims perform the last phase of the holy pilgrimage in Mecca; and the birthday of the Prophet Mohamad, which falls on the twelfth day of the third moon of the Muslim calendar.

*Hari Raya Puasa* is a two-day national holiday, as is Chinese New Year, which is celebrated on the first day of the first moon on the Chinese lunar calendar around January or February. For the Buddhists in the population, there is the Wesak Day holiday in May to celebrate Buddha's birthday, the most important day in the Buddhist calendar. For Hindus, there is Deepavali, the festival of lights, which is celebrated in November to mark the victory of good over evil when Lord Krishna triumphed over a demon king. In early January or February, Hindus also celebrate the religious festival of Thaipusam, which commemorates the birthday of Lord Subramaniam, when some devotees undergo rites of penance. As for Malaysian Christians, they celebrate Christmas Day, another national holiday. For the people of Sarawak, there is also Gawai Day or Dayak Festival Day, which is celebrated on June 1. Other national holidays are Labor Day, on May 1, and New Year's Day, on January 1. Each Malaysian state also observes the birthday of its Ruler as a public holiday. Moreover, Federal Territory Day on February 1 is a holiday in the Federal Territories of Kuala Lumpur and Labuan.

### **Self-Study Questions for Further Exploration**

- How did British colonialism transform Peninsula Malaysia from being a land of the Malays into a multi-ethnic and multi-religious country?
- Name the main ethnic groups in Peninsular Malaysia, Sarawak, and Sabah.
- What are the main religions in Malaysia? What ethnic groups are followers of these religions?
- What are some strengths of a multi-racial society such as Malaysia?
- What are some inherent challenges within a multi-ethnic and multi-religious nation like Malaysia?
- What factors foster national unity in a nation? How can national unity be strengthened in a nation such as Malaysia?
- Discuss the richness of Malaysian arts, music, and literature.

- In what ways is Malaysia a gourmet's paradise?
- How do Malaysia's national holidays reflect the nation's multi-racial and multi-religious population?

## **SOCIAL ISSUES**

### **CLASS STRUCTURE**

During pre-colonial times, a feudalistic system existed among the Malays, with the Sultan at the apex of the power structure and the peasants at the bottom. Power depended on lineage, land holdings, material wealth, and supporters or followers. During British colonialism, part of this class structure remained as the British preserved the sultanate, even though they instituted the residential system, which gave the British Resident power in all administrative matters, except those touching upon Malay customs and religion. These two areas of Malay life continued to be under the control of the Malay ruler throughout British rule. After independence in 1957, when the country became a constitutional monarchy, the vestiges of class structure became less prominent. At present, they have mostly disappeared, except at court where royalty, rank, and protocol remain very important. At present, one's social standing in Malaysia is based more on economic means and occupation than on birth.

Among the non-Malays, class structure is less rigid, although some view the special rights in the Constitution as a form of class structure. Among the Indians in Malaysia, most have not adhered to the Hindu caste system. In general, one can argue that there is an upper class, a middle class, and a lower class in Malaysia, but this classification is based more on economic standing than on lineage. In any case, the middle class is the largest grouping, and the Malaysian Government has been working on creating a more equitable society through the NEP and its successors, the New Development Policy (NDP) and the Vision Development Policy (2001-2010).

### **FAMILY LIFE**

Family life in Malaysia depends on several variables, such as ethnicity, religion, rural or urban setting, and economic means. It is therefore difficult to generalize about family life. On the whole, however, it can be safely surmised that extended families played a very important role in pre-independent Malaysia but a smaller role since independence due to numerous changes, including the migration of people from rural to urban areas for better job opportunities. At present, nuclear families are the dominant unit, especially in urban centers, while in rural areas extended families continue to play a significant role. In nuclear families, both husband and wife usually work and depend on maids, babysitters, or childcare centers to help them take care of their young children. In urban areas, family life is often more complex, with the many opportunities for extracurricular activities for children after school and for adults after work.

Family dwellings in Malaysia also vary a great deal, from simple houses on stilts in the rural areas to apartments, condominiums, linkhouses, single family homes, and palatial abodes in the towns and cities. In Sabah, dwellings called “longhouses” are still found in the northern and interior parts. Each longhouse is divided into apartments for individual families, but they share common areas.

Despite the rise in nuclear families, most Malaysian families tend to take care of their aged parents rather than send them to old folk homes. They usually do so by sharing this responsibility between family members, with siblings taking turns to house them. With Chinese families, the usual custom is for the eldest son to play the main role in taking care of the old parent or surviving parent. Most Malaysian families also help relatives who are in need. In most Malaysian families, the young people live with their parents before marriage, although at present a growing number, especially in the cities, prefer to live on their own or to share housing with friends once they begin working.

As for marriage in Malaysia, there are now less cases of arranged marriages than in previous years. Couples are also marrying at a later age. The marriage ceremony is usually an elaborate affair and the wedding feast can drain a family financially. Among the rural Malays, a whole village often helps in preparing the wedding feast. Certain wedding traditions and customs are observed by each race. In the towns and cities, the wedding receptions are usually catered events in the form of dinners at homes, or public halls, or restaurants. It is a custom among traditional Chinese families to provide a nine-course or ten-course dinner as a wedding feast for friends, relatives, and other guests. Inter-racial marriages are increasing, and the non-Malay partner in Malay-non-Malay unions converts to the Islamic faith. Divorce is a relatively easy process among the Malays. While divorce occurs among all the races, it is especially frowned upon by the Chinese because of the importance placed on the family unit.

## **GENDER**

The Malaysian Government pays equal wages to men and women for their work. In recent years, the government has also established a Ministry for Women’s Affairs to cater to women’s issues and to mainstream women’s concerns into national development. Women now head about 17 percent of all households in Malaysia. Many Malaysian women do hold high office in the government. However, in the private sector, advancement for women has met with more obstacles, and wages for women tend to be

lower than that for men. Regional differences also exist in the status of women, especially between those in Peninsular Malaysia and those in Sabah and Sarawak, due to ethnic, historic, and economic reasons. As the 7<sup>th</sup> Malaysia Plan shows, the government is working on improving the position of women in the family, community, and workplace. There is growing concern, for example, about their under-representation at higher levels of employment and about the lack of sufficient child care facilities to support the female labor force. There is also concern that since women make up the bulk of the workforce in the textile and electronics industries they are more vulnerable to retrenchment. In both these industries, two-thirds of the workers retrenched have been women. To survive, some of these women have been forced to become petty traders or to enter the food catering business.

Gender issues crop up in Malaysian families in various ways. For example, among the Chinese there is a preference for male children since they carry the family name. Among traditional Indian families, boys are also often preferred to girls as these families still use the dowry system for girls. Yet, among some Malays, like the Minangkabaus in Negri Sembilan, a matrilineal system called *adat perpatih* is followed. Negri Sembilan is the only state in Malaysia having the matrilineal system.

## **HEALTH AND WELFARE**

One consequence of British colonialism was the introduction of modern medical care, aimed primarily at helping the European population but with some indirect benefits for the local population. Diseases, which were largely controlled under British rule, included malaria, beri-beri, cholera, and tuberculosis. By the 1930s, more attention was paid to health issues, due to rising concern about the moral responsibility that should accompany colonialism.

More progress in health services occurred after independence with the stress on rural development and with improvements in medical, dental, and other health services. To meet the staff demands of the country's expanding health services, the government established more training schools for nurses, hospital assistants, radiographers, dispensers, inspectors, and laboratory technologists. It also established medical schools to train doctors, for example at the University of Malaya, the National University of Malaysia, and the Science University. The teaching hospitals attached to these universities are now capable of performing complicated heart and other surgeries. Presently, Malaysia has become a provider of medical services to Third World nations, such as Cambodia.

By 1991, Malaysia's Ministry of Health was pushing a Healthy Lifestyle Campaign and working to support preventive and curative health programs. Throughout the country, medical treatment is provided by hospitals, dispensaries, and clinics, using modern equipment, medicines, and techniques. Disease control extends to both communicable and non-communicable diseases. One of the latest diseases to be added to the list of notifiable diseases is Acquired Immune Deficiency Syndrome (AIDS). In addition, the government runs programs on maternal and child health, nutrition, school health, environmental sanitation, industrial health, hygiene, and water fluoridation. Dental services are also provided, as are counseling and psychiatric facilities. In the rural areas, there are mobile health teams to provide health services. Malaysia also has a National Pharmaceutical Control Laboratory to keep a check on imported and locally manufactured drugs.

On the private level, Malaysia also has several top-rate hospitals, such as Pantai Medical Center and Subang Medical Center in the Kuala Lumpur vicinity. Moreover, there are numerous private clinics, nursing care facilities, dental clinics, and other medical establishments. In addition, there are the various shops for Chinese, Indian, and traditional medicines. Malaysians thus have a very wide choice in medical care.

As for social welfare, this is the joint responsibility of the federal and state governments. The welfare services provide care for the following groups in the population: the handicapped, the aged, the chronically ill, beggars and vagrants, women and children, juvenile delinquents, and drug addicts. The state governments are responsible for general welfare and relief services. Most state governments are also in charge of the reform programs for juvenile delinquents, but in Sabah and Sarawak these services come under the jurisdiction of the federal government. Voluntary agencies in the country help the state and federal governments to run some of the welfare programs, with grants-in-aid from the federal government through the Ministry of National Unity and Social Development. Many of these voluntary agencies are church or religious groups or non-governmental organizations (NGOs).

Social security measures in Malaysia include an Employment Injury Insurance Scheme, which provides medical and cash benefits to injured workers, and an Invalidity Pension Scheme, which provides protection to employees against invalidity due to disease or injury from any cause. The government plans to eventually extend social security benefits to the self-employed, especially fishermen and farmers. Other supplementary social security provisions are the Employees' Provident Fund, a pension scheme for government employees, free medical benefits for those unable to pay, and medical benefits for workers under the Labor Code.

On the whole, the country has had a good record on poverty reduction. According to the Asian Development Bank's December 1999 "Country Assistance Plan (2000-2002)" for Malaysia, the incidence of poverty in Peninsular Malaysia fell from 49.3 percent in 1970 to 9.6 percent in 1995 and 6.8 percent in 1997. Poverty is also mainly a rural phenomenon with the poorest states in the nation being Kelantan, Trengganu, Sabah, Kedah, and Perlis.

## **EDUCATION**

Under British colonialism, there were the Islamic schools, the mission schools run by Western missionaries, the private schools managed by the different races, and the government schools. There were thus religious schools, Malay schools, Indian schools, Chinese schools, and English schools. In 1956, a year before independence, the task of developing a national system of education fell on the then designated Minister of Education, Tun Razak, who drafted a report bearing his name. The Razak Report, implemented in 1957, declared education as the key to unity and economic progress and stressed that resources had to be channeled into its various aspects, such as teacher training, new school buildings, and the teaching of subjects in science and technology for modernization and progress. The Report also stated that although cultural differences among the races could be preserved by allowing the continuation of Malay, Chinese, Tamil, and English schools, a national language had to be taught in all the schools.

The 1957 Constitution had declared Malay as the national language, with the provision that English could be used for official purposes for a period of ten years, after which Malay would be the sole official language. In 1960, the Rahman Talib Report was passed, calling for the abolition of Chinese-medium secondary education in national-type schools. The Education Act of 1961 implemented this report. In 1967, a National Language Bill was passed recognizing Malay as the national language, but allowing English to be used in an official capacity. Meanwhile, the government started substituting Malay for English as the main medium of instruction in all lower and mid-level secondary schools. The language issue thus became a contentious one, especially in Peninsular Malaysia in the 1960s and 1970s. In Sabah and Sarawak, this issue was less contentious as the retention of English and the slower introduction of Malay had been conditions of entry into the Federation. Sabah made the national language the only official medium of communication in September 1973, while Sarawak decided to retain English until 1980.

Throughout this period, Razak's advice about the importance of education was followed as Malaysia continues to give high priority to education. Education receives 5.8 percent of the Gross Domestic Budget (GDP) or 17 percent of the national budget, the highest financial allocation after defense. The Malaysian Government continues to view education as a priority investment for the country's future.

Formal school education in Malaysia is now made up of six years of primary school, three years of lower secondary school, two years of upper secondary school, and two years of pre-university education. This education is provided without charge, and Malay, the national language, is the medium of instruction, while English is a compulsory subject. Upon completion of primary school, students are automatically promoted to a secondary school, where Malay is the medium of instruction. At the end of the third year, students take the Lower Secondary Assessment for entrance into the upper secondary school. Students then follow a general education syllabus where courses with an arts, science, or technical orientation are offered, after which they take the Malaysian Certificate of Education Examination. The roughly seven percent who attend technical schools sit for the Malaysian Certificate of Education (Vocational) Examination. About 15 percent of secondary school graduates enter the two-year pre-university program, which prepares them for the Higher School Certificate Examination for entry into university.

Tertiary education at the many colleges, polytechnics, and universities takes another two to five years, depending on the course. This tertiary education at government-funded institutions of higher learning is provided at a nominal fee, and the medium of instruction is Malay. There are also many privately funded colleges where English is the medium of instruction. Some of these colleges have "twinning programs" with overseas universities, whereby a Malaysian student can study locally for two years to earn an Associate Degree before transferring overseas to the twinning institution to complete the program and earn a foreign degree. Many non-Malay students, unable to gain admission into the local universities, attend such colleges.

Latest developments in Malaysian education include Dr. Mahathir's emphasis on having "smart schools" to foster computer literacy among school children. He also wants to encourage creativity among school children and to help them have a better command of the English language. To reach the second goal, Dr.

Mahathir announced in mid-2002 a comeback for English in schools, to begin with the teaching of math and science subjects in English. Meanwhile, he is also building up Malaysia as a center of academic excellence. With the rapid growth of private schools and private and government colleges and universities, Malaysia has already become a provider of educational services for the whole region. In recognition of Malaysia's new role, ASEAN recently chose Malaysia as the site for its proposed ASEAN University.

## **LABOR FORCE**

In the first decade after independence, the majority of the labor force was engaged in agriculture, but this has since changed with the emphasis by the Malaysian Government on industrialization. At present, most of the labor force is engaged in manufacturing industries, with manufactured goods making up over 80 percent of Malaysia's exports. Since these industries are labor-intensive, Malaysia has had to rely on foreign workers. The shortage of labor is especially marked in the plantation, construction, manufacturing, and the services sectors of the Malaysian economy. The foreign workers, male and female, come mainly from Indonesia, the Philippines, and Bangladesh, where wages are much lower. Many foreign female workers work in textile and electronic plants or as maids in homes. Although most foreign workers enter the country legally, some do so illegally. By 2002, Malaysia had over two million foreign workers, legal and illegal. In mid-2002, the Malaysian Government took action against illegal workers, forcing their deportation. Some of these illegal immigrants later complained of ill treatment, leading their governments to file official complaints.

In certain industries, such as the construction and plantation industries, there are more male than female workers. On the other hand, in the electronics and textile industries there are more women than men workers. Wages in the private sector are not equal for men and women workers, unlike the government sector which gives equal pay for equal work

The Ministry of Human Resources is responsible for coordinating manpower planning for the private sector, to ensure that the nation has a supply of multi-skilled, disciplined, and productive workers and that the Vision 2020 plan will be achieved. A Human Resources Development Fund was established in November 1992 to promote training for advanced skills to meet the new technological changes and industrial requirements. Besides the Workmen's Compensation Act (1952), there is the Children and Young Persons (Employment) Act (1966) to regulate the employment of young people, and the Workers' Minimum Standards of Housing and Amenities Act (1990) to stipulate all the conditions that must be met, such as nurseries for children under the age of three, if the workers collectively have more than ten children. In addition, the Ministry of Human Resources carries out both industrial safety inspections to check machinery and industrial hygiene inspections to detect and assess stress and health hazards at work. The Ministry also has a Department of Trade Union Affairs to promote the development of a democratic and responsible trade union movement.

### **Self- Study Questions for Further Exploration**

- What are some similarities and differences in family life among the major ethnic groups in Malaysia?
- How can gender equality be improved in Malaysia?
- What are some interesting aspects of Malaysia's health care system?
- What strides have been made in the educational field since independence in 1957?
- In Malaysia, in what ways can education be regarded as an investment for the future?
- What are some main welfare services that the Malaysian Government provides to its peoples? What more should be done to help the poor?
- Why has Malaysia turned to foreign labor? What are some issues that can arise with regard to reliance on foreign labor?
- What are some protective measures for workers in Malaysia?

# ECONOMY

## THE FIVE-YEAR PLANS

So far, there have been ten five-year plans -- two Malaya Plans from 1955 to 1965 and eight Malaysia Plans from 1966 to the present. Both the Malaya Plans had the following aims: economic growth; the reduction of economic disparity among the ethnic groups; and the creation of more employment opportunities. The First Malaya Plan (1955-60) stressed the replanting of rubber trees; industrialization through a Pioneer Industries policy; improvement of transportation; and the introduction of universal primary education. It helped the country record an economic growth rate of 4.5 percent from World War II to 1960 and was considered a success. The Second Malaya Plan (1960-65) dealt with remaining problems, such as the high population growth rate, the undeveloped rural areas, and the need for diversification of the economy to reduce dependence on rubber and tin exports. Its focus on rural development was helped by the Federal Land Development Authority (FLDA), which gave land to the landless, and the Rural and Industrial Development Authority (RIDA), known in Malay as the Majlis Amanah Ra'ayat (MARA), which encouraged business enterprise among the rural Malays. This plan helped record a higher growth rate of 6.5 percent.

Despite impressive economic growth, however, poverty and unemployment persisted in the rural areas. Hence, the First Malaysia Plan (1966-70) continued to stress rural development. The Plan also focused on economic growth and on the diversification of the economy to include palm oil, timber, and manufacturing. The Plan called for manufacturing to be aided by import substitution and for poverty to be reduced by better paying jobs for the Malays. The Economic Planning Unit (EPU) of the Prime Minister's Department played a major role in formulating this and subsequent Malaysia Plans. In 1970, 78.4 percent of Malaysia's exports came from rubber, tin, timber, palm oil and petroleum, while only 11.9 percent came from manufacturing. Import-substitution industrialization had a limited effect, because of Malaysia's very small domestic market.

With poverty among rural Malays remaining a serious problem and with the outbreak of race riots in 1969, the Second Malaysia Plan (1971-75) incorporated the aims of the 1971 NEP: -- to reduce and eradicate poverty by increasing income levels and employment opportunities for all irrespective of race and to accelerate the process of restructuring Malaysian society to correct economic and geographical imbalances. One imbalance then was the concentration of Malays and other indigenous groups in the subsistence agricultural sector of the economy and the concentration of the non-Malays, especially the Chinese, in the modern rural and urban sectors. The Second Malaysia Plan also called for an expanded secondary industry base, with the west coast Peninsular states focusing on manufacturing; the Borneo states, Pahang, Kelantan, Johore, Terengganu, and Perak on forestry; and the states of Pahang, Johore, Terengganu, Kelantan, Kedah, Perak, and Negeri Sembilan on agriculture and land development.

In 1973, the mid-term review of the Second Malaysia Plan included the Outline Perspective Plan (OPP), 1971-1990, within which the objectives of the NEP were to be realized. By 1975, Malaysia had a growth rate of 7.4 percent per annum.

The Third Malaysia Plan (1976-80) continued these aims, emphasizing manufacturing and an urban-industrial strategy in the belief that urban growth would hasten industrial activity. This strategy spread urban development more evenly throughout Malaysia. The Fourth Malaysia Plan (1981-85) sought to further develop the east coast and the infrastructure linking the rural areas to the towns. This plan also mirrored a shift in industrial policy, from labor-intensive industries to capital and technology-based industries. Accordingly, the states were assigned economic functions, such as high technology to Penang; mining and manufacturing to Perak; agriculture, mining, and manufacturing to Perlis and Kedah; industrialization to Selangor, the Federal Territory of Kuala Lumpur, Negeri Sembilan, and Malacca; agriculture and industrialization to Johor; forestry, agriculture, and some manufacturing to Pahang; and petroleum, gas, and heavy industry to Terengganu.

With the economic recession in the mid-1980s, the Fifth Malaysia Plan (1986-90) made further changes. Rather than an emphasis on states, it focused on regions and created six -- four in Peninsular Malaysia and two in Sabah and Sarawak. The Plan fostered the growth of joint industrial development within the regions and the creation of secondary growth centers through private sector collaboration. The Industrial Master Plan (IMP) of 1986-89 also sought to further develop the manufacturing sector, to maximize the exploitation of natural resources, and to establish the foundations for *bumiputra* participation in an advanced industrial society. Meanwhile, agriculture's share of the Gross Domestic Product (GDP)

dropped from 31 percent in 1970 to 19 percent by 1990, while manufacturing's share rose from 13 percent in 1970 to 44 percent by 1990.

By 1990, with the end of the NEP, the EPU drafted the Second OPP that became the basis for the New Development Policy (NDP), which replaced the NEP. The NDP continued the NEP's stress on stable growth, balanced development, ethnic harmony, and the removal of social and economic imbalances in society. The Sixth Malaysia Plan (1991-95), in line with the Second OPP and the NDP, was geared towards these common goals. Like the NDP, it placed greater attention on quality, requiring stricter standards for bumiputra candidates in business positions and for their products and services. By then, however, a problem was "crony capitalism", arising from personal links between the private sector and government leaders. This led, in turn, to a widening gap between the lower and middle classes and the very wealthy upper class.

Under the Seventh Malaysia Plan (1996-2000), the average annual GDP growth rate was targetted at 8.6 percent. The plan's major aim was to upgrade the economy and to make a strategic shift from low-skill, low value-added output to high-skill, high value-added output. Accordingly, improved vocational training was emphasized, to be further developed through the Human Resources Development Council and through more opportunities within tertiary education. The university system was also to be commercialized and partly privatized. The 1997 Asian Financial Crisis, however, put a spanner in the works; the Malaysian economy declined by 7.5 percent in 1998. Then it rebounded by mid-1999, posting a growth rate of 5.4 percent that year. Since then, the economy has continued to improve. Meanwhile, manufacturing has continued to dominate the export sector, with electrical and electronic products accounting for 57.1 percent of total export earnings in 1999.

The Government announced the Eighth Malaysia Plan (2002-2005) in April 2001. Its aims are: to shift the growth strategy from input-driven to knowledge-driven; to hasten structural transformation within the manufacturing and services sectors; and to strengthen socio-economic stability through the equitable distribution of income and wealth. This plans envisions a yearly growth rate of 7.5 percent, with the main engines of growth being the manufacturing and services sectors. The same year, the government introduced the Third Outline Perspective Plan (OPP3) for 2001-10, a ten-year development program aimed at creating a resilient and competitive economy.

## **THE NEW ECONOMIC POLICY**

The New Economic Policy (NEP) was introduced in 1971 in the aftermath of the 1969 racial riots. Its aims were twofold: "eradicating poverty irrespective of race" and "restructuring society to eliminate the identification of race with economic function". These aims were to be achieved by 1990, when Malays and other indigenous groups were to "own and manage at least 30 percent of the total commercial and industrial activities of the country in all categories and scales of operation and become full partners in the economic life of the nation". The objectives of the NEP were to be achieved within the First Outline Perspective Plan (OPP1) drawn up by the government for the 1971-1990 period.

The implementation of the NEP saw more emphasis being placed on the restructuring of society

than on poverty eradication. The NEP has been both praised and criticized. It has been praised for raising the living standards of the rural population, but criticized for insufficient help to the very poor and for not always awarding scholarships to the neediest students. Some also believe it spoiled the Malays. There are conflicting views too about the extent to which the 30 percent bumiputra equity ownership was achieved. There are also allegations that the transfer of state assets to bumiputra ownership created a wealthy elite within the Malay community, causing greater income disparity within that community than in other ethnic groups.

## **THE NEW DEVELOPMENT POLICY**

The New Development Policy (NDP) replaced the NEP in 1991 and formed the basis of Dr. Mahathir's Vision 2020 plan for Malaysia to become an industrialized society. Its macroeconomic and social targets were listed in the Second Outline Perspective Plan (OPP2) for the 1991-2000 period. While the NDP continued the NEP's goals of eradicating poverty and restructuring society, it had a slightly different focus in that it placed less stress on racially-based economic and social engineering and more emphasis on national unity. It kept the 30 percent target for *bumiputra* corporate ownership, but set no deadline for its achievement. Instead, it emphasized the development of skills to promote the consolidation of *bumiputra* wealth. It aimed at attaining balanced development so as to create a more united and just society.

## **THE VISION 20/20 PLAN**

This plan is perhaps the most visionary of Dr. Mahathir's ideas. Introduced in 1991, it has been adopted in principle by other countries and organizations, including ASEAN. According to Mahathir, the year 2020 represents the deadline for Malaysia to become a fully developed and industrialized nation. To him, by then it "must be a nation that is fully developed along all the dimensions: economically, politically, socially, spiritually, psychologically, and culturally". The nine strategic objectives or challenges set out by Vision 2020 are as follows: establishing a united Malaysian nation with a sense of common and shared destiny; creating a liberated, secure, and developed Malaysian society; fostering and developing a mature democratic society; establishing a fully moral and ethical society; establishing a mature, liberal, and tolerant society; establishing a scientific and progressive society; establishing a fully caring society and a caring culture; ensuring an economically just society in which there is a fair and equitable distribution of the wealth of the nation; and establishing a prosperous society, with an economy that is fully competitive, dynamic, robust and resilient.

## **AGRICULTURE**

Agriculture's share of total export earnings has declined in recent years. Whereas rubber used to be the principal export since colonial times, making up half of the country's exports in 1961, it no longer commands this position. In 1989, palm oil replaced rubber as the second largest export earner after petroleum. The rubber industry has been adversely affected by depressed prices, labor shortages, and the reduction in cultivated area. Much of the rubber land has been replanted with other crops, especially oil

palm. Despite the continued decline in production, Malaysia is presently the world's third largest producer and net exporter of rubber, after Thailand and Indonesia.

In the case of palm oil, introduced in the 1960s to diversify the economy, Malaysia has become the world's largest producer and exporter of this commodity, accounting for half of the world's production in 1998 and nearly two-thirds of international trade in palm oil. As with rubber, the bulk of crude palm oil comes from Peninsular Malaysia. In 1975, the government changed from just planting and exporting crude palm oil to also producing, refining, manufacturing, and selling oil-based products, thus leading to more palm oil mills, more palm oil refineries, and an expanding oleochemical industry in the country. The government also promoted the use of palm oil in food production in various parts of the world. When labor shortages became a serious problem, estates had to turn to migrant foreign labor, which sometimes made up 70 percent of the work-force.

Meanwhile, timber has become one of Malaysia's main exports, with Sarawak accounting for 49 percent of total production, Sabah for 23 percent, and Peninsular Malaysia for 24 percent. Another main export is cocoa, which is Malaysia's fourth most important agricultural export after palm oil, timber, and rubber. Other agricultural exports include pepper and fruits. Malaysia is now the world's fifth largest producer of pepper, which is mainly grown in Sarawak. As for rice, Malaysia is about 75 percent self-sufficient, while in fisheries it is about 91 percent self-sufficient.

## INDUSTRY

Upon independence in 1957, Malaysia had only a rudimentary manufacturing sector. However, its five-year development plans soon built up the nation's industrial base, enabling the manufacturing sector to eventually supercede agriculture as the largest contributor to GDP. In the 1960s, Malaysia's industrial policy operated through an import substitution strategy which concentrated on increasing domestic processing of natural products and on producing basic consumer goods for home consumption. In the 1970s, the government changed the focus to export-oriented labor intensive industries like electronics and textiles, which were mainly financed by foreign investment. In the early 1980s, the government introduced a second phase of import substitution, this time focusing on the car and steel industries, but led by the public sector. It set up the Heavy Industries Corporation of Malaysia (HICOM) and launched the *Proton* car project. Progress though was thwarted by the mid-1980s recession, which led to a fall in global demand for electronics and other manufactured goods. The economy recovered in 1986 nonetheless, stimulated by the renewed global demand for electronic goods.

In 1986, the government also completed the Industrial Master Plan (IMP), with recommendations for improving Malaysia's manufacturing sector for the period 1986-1995. The IMP stressed that Malaysia should target 12 key industries, all high value-added and high-skilled. Its recommendations also covered how linkages and diversification of the manufacturing base could be carried out. The government then completed a second IMP in 1996, with strategies to develop a more competitive manufacturing sector for the period until 2005. The second IMP stressed the development of dynamic industry groups and industrial clusters, the expansion of value-added activities, and the strengthening of industrial linkages. It identified the following industrial clusters or groups for further development: the electrical and

electronics group; the transport industry group; the chemical industry group; the textiles and apparel industry group; the resource-based industry group; the materials and advanced materials industry group; and the agro-based and food products group. This cluster group approach also pays attention to “downstream” activities, like distribution, packaging, and marketing, including indigenous design and branding. Malaysia is thus working towards its Vision 2020 plan of becoming a fully industrialized country by that date. Meanwhile, the manufacturing sector’s share of the GDP has grown from 8.6 percent in 1960 to 33.1 percent in 2000, while the contribution of manufactured exports to overall export earnings has jumped from 13 percent in 1970 to 86 percent by 2000.

## **TRANSPORTATION AND TELECOMMUNICATIONS**

Road, rail, and port facilities are generally well developed on Peninsular Malaysia, but less developed in East Malaysia. Malaysia’s total network of main roads is around 100,000 km, of which about three-quarters are paved. The nation’s emphasis on improving its transportation system is reflected in its five-year Malaysia Plans. In line with road development goals, Malaysia opened its 848-km North-South Highway in 1994. To alleviate traffic congestion in Kuala Lumpur, the government has also embarked on the construction of an integrated public transport system, including a Light Rail Transit (LRT) system, which began operations in 1998. Plans are presently underway to improve commuter train services.

Malaysia’s most important seaport is Port Klang, which handles almost half of the nation’s total cargo. This port is now ranked as one of the world’s leading container terminals. In 2000, a new port in the south, the Port of Tanjung Pelepas, commenced operations.

The main airline is Malaysia Airlines, formerly Malaysian Airline Systems or MAS, which provides extensive domestic and international service. In 1994, a second national carrier, Air Asia, was formed to operate both domestic and international flights. In 1998, Malaysia opened the first phase of its new and very modern Kuala Lumpur International Airport at Sepang.

The telecommunications sector has been developing rapidly in recent years. Although telecommunications was partially liberalized in mid-1994, the dominant share is still held by Telekom Malaysia, which is partly owned by the government. Greater competition exists in the more liberalized and rapidly expanding mobile telephone market. Cellular phone subscribers increased from 2.9 million in 1999 to 5.1 million in 2000. Meanwhile, more Malaysians are also subscribing to internet services.

## **FOREIGN TRADE**

Malaysia’s major exports are made up of manufactured goods, minerals, and agricultural commodities. Manufactured goods, the bulk of the exports, include electronics; electrical machinery and appliances; chemicals and chemical products; textiles, clothing and footwear; manufactures of metal; and optical and scientific equipment. The minerals exported are crude oil and liquefied natural gas while the main agricultural commodities are palm oil, sawn timber, and rubber.

The main imports are capital goods, intermediate goods, and consumption goods. The first group consists of industrial machinery and equipment, office equipment, telecommunication equipment, and transport equipment. The second group includes industrial supplies, fuels and lubricants, and parts and accessories of capital goods. The consumption goods consist of food and beverages and other durable, semi-durable, and non-durable items.

Trade has expanded greatly in recent years under Dr. Mahathir. On official visits abroad, he is accompanied by Malaysian businessmen looking for trade opportunities. As a result, Malaysia has expanded its trading links to various parts of the world, including Africa, Europe, Latin America, Central Asia, Russia, China, Myanmar, and Indochina. With its concept of Malaysia Incorporated, the nation is very business friendly. The United States is currently Malaysia's largest trading partner.

### **THE 1997 FINANCIAL CRISIS**

The Asian Financial Crisis began with the fall in the Thai baht in May 1997 and Malaysia soon felt the contagion -- the Malaysian dollar (*ringgit*) and stock market experienced downward movement from weak investor confidence and massive outflow of short-term capital. The ringgit fell from RM 2.5 to one US dollar in July 1997 to RM 4.88 against the US dollar by January 1998. The Malaysian economy contracted 7.5 percent in 1998.

To address imbalances in the economy, the Central Bank (Bank Negara) introduced a series of macroeconomic policy measures, such as the consolidation of commercial banks and financial companies to create institutions better able to survive adverse conditions. The government also instituted several fiscal measures to contain the current account deficit, for example, an immediate 2 percent reduction in government spending and the deferment of mega-projects. In addition, currency controls were instituted in September 1998 as follows: -- the ringgit was fixed at US\$1 = RM 3.80; ringgit circulating outside Malaysia had to be repatriated within one month or it would lose its value; and foreign portfolio investment had to remain in the country for at least one year. Although widely criticized in 1998, these currency controls seem to have worked for Malaysia, and some former critics of the controls are now revising earlier views. In any case, Malaysia relaxed some of the currency controls as early as February 1999 when it allowed the repatriation of principal foreign investments in Malaysian securities.

### **THE MALAYSIAN ECONOMY SINCE 1997**

Economic recovery was slow until mid-1999 when positive growth was recorded once more, driven by the manufacturing sector. By the end of 1999, the economy had grown by 5.4 percent, and all sectors were showing positive growth. By 2000, Malaysia's growth rate had risen to 8.3 percent, and both public and private sector investments reflected the return of investor confidence.

The country's growth rate was adversely affected again with the 2001 global downturn for electrical and electronic goods, which make up 60 percent of Malaysia's total exports. Currently, according to mid-2002 figures by the Malaysian Industrial Development Authority (MIDA), Malaysia's growth rate is between

3.5 percent to 5 percent, while the per capita income is US\$3,392 and the net international reserves stand at US\$30.8 billion, which is equivalent to 5.1 months of retained imports. The GDP is US\$55.3 billion, with a breakdown as follows: services -- US\$30.8 billion; manufacturing -- US\$17.4 billion; agriculture -- US\$4.8 billion; mining and quarrying -- US\$3.8 billion; and construction -- US\$1.9 billion.

Unemployment continues to be low, at roughly 3 percent, and the ringgit is still pegged to the US dollar at the rate of US\$1 = RM3.80. The banking system is made up of 25 commercial banks, including Islamic banks; 12 finance companies; and 10 merchant banks. The Kuala Lumpur Stock Exchange (KLSE), established in 1973, is now ranked as one of the largest bourses in Asia. Since 1989, the KLSE has had a fully electronic trading system called SCORE, which enables script-less trade settlement. Both the banking system and the KLSE have undergone reforms since the 1997 Asian Financial Crisis. In 2001, Malaysia announced its Third Outline Perspective Plan (OPP3), aimed at continuing the goals of the NEP and the NDP and fostering an information technology-savvy society.

### **Self-Study Questions for Further Exploration**

- What have been the major aims of the two Malayan Plans and the eight Malaysia Plans?
- When and why was the New Economic Policy (NEP) implemented in Malaysia? What is the significance of the NEP in Malaysian history?
- What are some similarities and differences between the NEP and the New Development Policy (NDP)?
- What are some important features of Dr. Mahathir's 20/20 Vision Plan for Malaysia?

Why do you think some nations and organizations have followed Malaysia's example in adopting a 20/20 vision plan?

- Why has agriculture's role in the Malaysian economy been diminishing in importance?
- Why has the role of industry in Malaysia's economy been gaining in importance?
- What have been some strides in Malaysia's transportation and telecommunications systems in recent years?
- What are Malaysia's main exports and imports? What conclusions can be drawn about Malaysia's economy from its exports and imports?
- How did Malaysia deal with the Asian Financial Crisis? How has the Malaysian economy fared since 1997?

# **POLITICS AND GOVERNMENT**

## **THE 1957 CONSTITUTION FOR MALAYA**

The actual drafting of the Malayan Constitution was entrusted to a Constitutional Commission appointed by the British monarch and the Malay rulers. The composition and terms of reference of the Commission

were agreed upon in discussions held in 1956 between the British authorities, the Malay rulers, and the Alliance leaders. The Commission, known as the Reid Commission after its Chairman, Lord Reid, was made up of two members from the United Kingdom and one member each from Australia, India, and Pakistan. The Commission was instructed “to make recommendations for a federal form of Constitution for the whole country as a single, self-governing unit with the Commonwealth based on Parliamentary democracy with a bicameral legislature”. The Constitution had to make provision for: (1) the establishment of a strong central government with some state autonomy; (2) the safeguarding of the position and prestige of the Rulers; (3) the provision for a constitutional Head of State; (4) the creation of a common nationality; and (5) the safeguarding of the special position of the Malays and the legitimate interests of other communities.

The Commission met in Malaya from June to October 1956. It invited written memoranda from organizations and individuals, visited each state and Settlement, and met with British and Malay officials, members of the Legislature, State and Settlement Councils, representatives of organizations, and private persons. It held 181 meetings of the full Commission before going to Rome to prepare its report. The Commission’s draft Constitution was then reviewed and revised by a Working Committee, comprising representatives from Britain, the rulers, and the Alliance Party. Both sides agreed on many provisions, such as that for a constitutional monarch to be elected for a five-year term from among the nine Malay rulers on the basis of seniority. They also agreed on a bicameral legislature, made up of an elected House of Representatives (*Dewan Rakyat*) and a Senate (*Dewan Negara*), with two members from each of the eleven states and sixteen members appointed by the government.

Controversy arose, however, over the issues of citizenship, language, religion, and Malay rights, and compromises had to be made. On citizenship, the compromise agreed upon allowed for strict citizenship laws that favored the Malays. On language, it was agreed that Malay would be the official national language and that English would serve as an official language for at least ten years. On religion, Islam was to be the official religion, but the freedom to worship and proselytize, except among Malays, was also guaranteed. On Malay rights, these special privileges were to be retained, but the rights of non-Malays were not to be hindered by prejudicial privileges or government intervention. The Malay rights include priority in the civil service, scholarships, educational facilities and training, land, permits for trade or business, and entry to university. The Reid Commission proposed a 15-year time limit for these special rights, after which they were to be reviewed, but the Working Committee rejected the idea of a time limit.

Although the revisions by the Working Committee evoked protests from some Chinese and Indian groups, the Federal Legislative Council ratified the draft Constitution on August 15, 1957, just in time for the transfer of power on August 31, 1957, the country’s Independence Day.

## **THE 1963 CONSTITUTION FOR THE FEDERATION OF MALAYSIA**

On September 16, 1963, the Federation of Malaysia was established when Malaya federated with Singapore, Sabah, and Sarawak to form a larger political entity. Whereas the Federation of Malaya had been made up of 11 member states, the new Federation of Malaysia had 14 members. Accordingly, the 1957 Constitution was amended in 1963 to become the new Federal Constitution of Malaysia. The

Constitution may be amended by a two-thirds majority in Parliament.

Besides including Singapore, Sabah, and Sarawak as member states, the new Constitution incorporated the substantial compromises that had been made with their entry. Singapore, for example, was allowed to keep most of its revenue and its autonomy in education and labor affairs in return for accepting under-representation in the House of Representatives. Moreover, although its citizens were Malaysian citizens, they could not participate as full citizens in Peninsular Malaysia without fulfilling strict naturalization requirements. In the case of Sabah and Sarawak, unlike other states in the new federation, they were given control over immigration, including that from the Malay Peninsular. Both states also received special funds for their economic development and the right to use English as a medium of instruction, even though Malay was the national language. Furthermore, their indigenous peoples were entitled to special rights like the Malays.

### **THE 1965 CONSTITUTION AFTER THE WITHDRAWAL OF SINGAPORE**

Singapore withdrew from the Federation of Malaysia on August 9, 1965, after its then premier, Lee Kuan Yew, had proposed a “Malaysian Malaysia”. Since this withdrawal meant that the membership in the Federation had changed from 14 to 13 states, the Federal Constitution of Malaysia was amended in 1965 to reflect this change.

### **THE 1971 AMENDMENTS TO THE CONSTITUTION AFTER THE 1969 RACIAL RIOTS**

After the May 13, 1969 racial riots, the Malaysian Government under Tun Abdul Razak decided that for security reasons there should be prohibitions against public discussion of sensitive issues. These sensitive issues include Malay rights, the monarchy, and the national language. Hence, when parliamentary government was established on February 20, 1971, after nearly two years of emergency rule, the Constitution was amended to prevent public discussion of sensitive issues. With this amendment, it has become seditious for anyone, even in Parliament, to touch on these issues.

Another amendment, aimed at addressing ethnic and social inequalities, gave the Yang di-Pertuan Agong the power to reserve academic places for Malays in institutions of higher learning in courses where their number was disproportionately low.

### **THE MALAYSIAN MONARCH**

Unlike other constitutional monarchs around the world, the Malaysian king, or *Yang di-Pertuan Agong*, is elected by a Conference of Rulers for a term of five years. This Conference of Rulers is made up of Malaysia’s nine Sultans and its four state governors, but only the Sultans attend when electing a King. The Sultans also elect another ruler as Deputy King to stand in for the King in case of illness or other absences. When the King’s term expires or he dies in office, another election is held to choose his successor, since the Deputy does not automatically ascend to the throne. At the end of a King’s reign, he returns to his home state and resumes his previous position as ruler there.

As monarch, the Malaysian King acts on the advice of the Prime Minister and his Cabinet. He also appoints the Prime Minister, the other ministers and deputy ministers, the state governors, the ambassadors, and the judges. In addition, he serves as the Head of the religion of Islam in Penang, Malacca, Sabah, Sarawak, and the Federal Territories of Kuala Lumpur and Labuan. In the other states, the Sultan or the hereditary ruler is the Head of the religion of Islam. As Head of Islam in Penang and Malacca, the King has the power to grant pardons in both these states for offenses under Muslim law. As the Supreme Commander of the Malaysian Armed Forces, he can also grant pardons for all offenses tried by court-martial or committed in the Federal Territories of Kuala Lumpur and Labuan. Moreover, he is responsible for safeguarding the special rights of the Malays and indigenous groups and the legitimate interests of the other communities.

## **THE UNITED MALAYS NATIONAL ORGANIZATION (UMNO)**

UMNO was formed in May 1946 in opposition to the Malayan Union Plan by the British. Its first president was Datuk Onn bin Jaafar, who in March 1946 helped convene an All-Malaya Congress in Kuala Lumpur which was attended by 200 delegates from 41 Malay associations. The meeting passed a resolution to form a new organization to galvanize nationwide Malay opposition to the Malayan Union. UMNO was the result, and its members included aristocrats, civil servants, Islamic leaders and radicals.

When Dato Onn resigned from UMNO in 1951, its new leader was Tunku Abdul Rahman, a Cambridge-educated lawyer. UMNO forged a political alliance with the MCA in 1952 and with the MIC in 1954. UMNO was the main party in the Alliance coalition and is presently the dominant party in the National Front, or *Barisan Nasional*. Dr. Mahathir has served as president of UMNO since becoming premier in 1981.

## **THE MALAYSIAN CHINESE ASSOCIATION (MCA)**

MCA began as the Malayan Chinese Association and was formed in February 1949 by Dato Tan Cheng Lock to serve as an anti-Communist Party for Malayan-domiciled Chinese. The British encouraged its founding as the Chinese had no prior political organization to represent their interests. Because its early members were wealthy, Western-educated Chinese, the MCA was considered an elite grouping. Its constitution called for the promotion and maintenance of inter-racial harmony in the country.

The MCA teamed up with UMNO in 1952 to contest the municipal elections in Kuala Lumpur. Together, they defeated the Independence of Malaya Party (IMP) in those elections, winning all but two seats. The success of this alliance led them to form the Alliance Party in August 1953.

Tan Cheng Lock served as president of the MCA until 1961 when he was succeeded by his son, Tan Siew Sin, the then Finance Minister, who served as president until 1974. When the Federation of Malaysia was established in 1963, the MCA became the Malaysian Chinese Association. At present, Dr. Ling Liong

Sik, the Minister of Transport, holds the post of MCA president.

### **THE MALAYSIAN INDIAN CONGRESS (MIC)**

The Malayan Indian Congress (MIC) was formed in 1945. Its leaders, like those of UMNO and the MCA, were mainly English-educated and of the middle or upper class.

The MIC joined the Alliance Party in late 1954, in preparation for elections the following year. In the general elections of 1955, the Alliance won a sweeping victory, gaining 51 out of the 52 seats in the Federal Legislature. In 1963, with the formation of Malaysia, the MIC became the Malaysian Indian Congress. The present President of the MIC is S. Samy Velu, the Minister of Works.

### **THE INDEPENDENCE OF MALAYA PARTY (IMP)**

The IMP was formed in 1951 by Dato Onn Jafaar upon his resignation from UMNO, after failing to get support from UMNO members to open the organization to non-Malay members. The IMP was thus a non-communal party to achieve racial harmony. With the IMP, Dato Onn hoped to achieve independence within seven years. It was defeated, however, by the Alliance Party in the Kuala Lumpur municipal elections of 1952 when the IMP gained only two out of the twelve seats. The IMP had a short existence, as Dato Onn went on to found a more pro-Malay party, Party Negara, in 1954. The IMP represents the country's first formal attempt at establishing a multi-racial party.

### **THE ALLIANCE PARTY**

The Alliance Party was formed in the early 1950s when UMNO, the MCA, and the MIC joined forces to contest the elections. At first, UMNO and the MCA joined forces as the Alliance to win the municipal elections of Kuala Lumpur in 1952. In October 1954, the MIC also joined the Alliance. By then, the coalition had become known as the Alliance Party, and together they won the 1955 federal elections.

They then formed the new government upon independence in 1957. After independence, the Alliance Party won the 1959, 1964, and 1969 general elections under Tunku Abdul Rahman's leadership. The Alliance Party represented a multi-racial coalition party of three communal parties, with UMNO in the dominant position.

### **THE NATIONAL FRONT**

The National Front, or *Barisan Nasional*, was the new name in 1974 for the expanded Alliance Party. The Tunku's successor, Tun Abdul Razak, called for a new name for the coalition as it had been enlarged to include many of the opposition political parties. When Malaysia held its fourth general elections on August 24, 1974, the National Front won with a landslide victory, capturing 135 out of 154 seats in Parliament. Since then, the National Front has gone on to win the 1978, 1982, 1986, 1990, 1995, and 1999 general elections, the last five under the leadership of Dr. Mahathir Mohamad.

In the 1999 general elections, the National Front comprised the following 14 political parties: UMNO; MCA; MIC; Gerakan (Malaysian People's Movement Party); PPP (People's Progressive Party); LDP (Liberal Democratic Party); AKAR (People's Justice Party); SUPP (Sarawak United People's Party); SNAP (Sarawak National Party); PBRs (Parti Bersatu Rakyat Sabah); PDS (Sabah Democratic Party); SAPP (Sabah Progressive Party); PBB (Parti Pesaka Bumiputra Bersatu Sarawak); and PBDS (Sarawak Dyak Party). UMNO continues to be the dominant party within the National Front.

## **MAIN POLITICAL PARTIES IN SABAH AND SARAWAK**

In Sabah, the main political parties include the following: PBRs, or *Parti Bersatu Rakyat Sabah*; PBS, or *Parti Bersatu Sabah*; PDS, or *Parti Demokratik Sabah*; SAPP, or *Parti Maju Sabah*; and LPD, or *Parti Demokratik Sabah*.

In Sarawak, the main parties are AKAR, or *Parti Angkatan Keadilan Rakyat*; SNAP, or *Parti Kebangsaan Sarawak*; PBDS, or *Parti Bangsa Dayak Sarawak*; SUPP, or Sarawak United People's Party; STAR, or State Reform Party Sarawak; and PBB, or *Parti Pesaka Bumiputra Bersatu Sarawak*.

## **OPPOSITION POLITICAL PARTIES**

In 1999, the main opposition parties holding parliamentary seats were the following: PAS (Pan-Malaysian Islamic Party); DAP (Democratic Action Party); PBS (*Parti Bersatu Sabah*); STAR (State Reform Party Sarawak); BEBAS (Independent Party); and PRM (Malaysian People's Party). Since then, however, the main opposition parties in Sabah and Sarawak have joined the National Front. In Peninsular Malaysia in 2002, the main opposition party is PAS.

## **PARLIAMENT**

Malaysia's Parliament comprises the *Yang di-Pertuan Agong* and the two Houses, the Senate (*Dewan Negara*) and the House of Representatives (*Dewan Rakyat*).

The Senate has 69 members, of which 43 are appointed by the Yang di-Pertuan Agong and 26 are elected by the legislative assemblies of the 13 states of Malaysia, with each state having two Senators. Appointed senators are those who have rendered "distinguished public service or have achieved distinction in the professions, commerce, industry, agriculture, cultural activities, or social services or are representatives of racial minorities or are capable of representing the interests of aborigines". They include two senators from the Federal Territory of Kuala Lumpur and one from the Federal Territory of Labuan. A Senator's term is for three years, with a maximum of two terms being allowed. To qualify as a senator, one must be a citizen resident in the country and not less than 30 years old.

The House of Representatives has 193 members, all elected to office. Of this number, 145 are from Peninsular Malaysia, including 10 from the Federal Territory of Kuala Lumpur and 1 from the Federal

Territory of Labuan; 27 from Sarawak; and 20 from Sabah. Each member serves for a maximum of five years. To qualify for election, one must be a citizen resident in the country and not less than 21 years old. The House of Representatives serves as the legislative branch of the government.

## **JUDICIAL SYSTEM**

Judicial power in Malaysia is vested in the Federal Court, the Court of Appeal, the High Court Malaya, the High Court Sabah and Sarawak, and the subordinate courts as provided by federal law.

In Peninsular Malaysia, the subordinate courts include the sessions courts, the magistrate courts, the *Penghulu* (village headmen) courts, and the juvenile courts. The Islamic courts come under state jurisdiction, and appeals from them are submitted to the Sultan of the state concerned, as he is the ultimate authority in Islamic affairs.

In Sabah and Sarawak, there is a separate system of native courts under state jurisdiction. These courts settle cases dealing with native law and custom, including Islamic law and custom, involving only natives.

The head of the judiciary is the Chief Justice of the Federal Court. The Federal Court has jurisdiction to determine the validity of any law made by Parliament or by a state legislature. It can also settle disputes between states or between the Federation and any states. Moreover, the Federal Court has jurisdiction to hear and determine appeals from the High Courts.

## **GENERAL ELECTIONS SINCE INDEPENDENCE**

Since independence in 1957, Malaysia has held 10 general elections: in 1959; 1964; 1969; 1974; 1978; 1982; 1986; 1990; 1995; and 1999.

The first three elections were won by the Alliance Party and the remainder by its successor, the National Front. Although the next election is not due until 2004, it could be held as early as 2003 because of Dr. Mahathir's plans to retire in October 2003.

## **THE ANWAR IBRAHIM CRISIS SINCE 1998**

Anwar Ibrahim rose to fame in Malaysia in 1974 when, as a student activist at the University of Malaya in Kuala Lumpur, he was jailed for 22 months under the Internal Security Act for anti-government demonstrations supporting the plight of poor farmers in Baling, Kedah. As the founder and President of the Islamic Malaysian Youth Movement (ABIM) in 1971, he attracted the attention of Dr. Mahathir, then Minister of Education. In 1982, when Anwar became the leader of UMNO Youth, Dr. Mahathir, then premier, co-opted him into the government, in part to prevent his collaboration with PAS. Anwar then rose rapidly, becoming Minister of Culture, Youth, and Sports in 1983, Minister of Agriculture in 1984, Minister of Finance in 1991, and Deputy Prime Minister in 1993. In April 1998, Mahathir also made him

Acting Prime Minister when he went abroad for a vacation.

So what made them clash? There are several reasons. According to press reports, they differed on fiscal policy after the Asian financial crisis occurred in mid-1997. There is some truth to this as Anwar favored policies, such as fiscal restraint, suggested by the International Monetary Fund (IMF) and World Bank, while Dr. Mahathir was wary of these international financial institutions and favored priming the pump to jumpstart the sluggish economy. Mahathir also believed in currency controls, and he implemented them, such as preventing the outflow of capital from Malaysia and pegging the Malaysian dollar to the US dollar.

Another reason for the rift was Dr. Mahathir's suspicions that Anwar was plotting to unseat him. For example, at a Congress of the ruling UMNO in June 1998, Anwar's supporters hit at Mahathir by criticizing cronyism and corruption but Mahathir retaliated by showing a list of all who had benefited from government contracts, including Anwar's relatives. That year also saw the publication of a book citing Anwar's misdeeds and arguing that he should not be premier. Dr. Mahathir then moved against some Anwar supporters in the press and in the Central Bank, and there were sudden resignations. By this time, they had become rivals. Other reasons include the generation gap between them (Mahathir was then 73 while Anwar was 51), and the differences in their personalities. According to Anwar in an article for the New York Times in April 1999, Dr. Mahathir had become envious of his popularity abroad. Anwar claimed that a 19-gun salute accorded to him in Washington D.C. had led to his being called a CIA mole and a US agent. According to Mahathir, however, he removed Anwar because he was unfit for office. Meanwhile, their supporters added fuel to the fire.

Dr. Mahathir then undercut Anwar's powers in June 1998 when he appointed former Finance Minister Daim Zainuddin as Special Economic Advisor in charge of economic policy. When Anwar was asked to resign but refused, Mahathir dismissed him from the cabinet, charged him with treason and sexual crimes, and expelled him from UMNO. Anwar reacted by leading anti-government demonstrations in the capital, resulting in Mahathir accusing him of trying to launch Indonesian-style protests to topple him. After a demonstration of around 30,000 to 40,000 people, the government arrested Anwar on September 20, 1998 and placed him under police custody.

While in police custody, he received serious injuries – a black eye and bruises on his neck and hands. When he appeared in court with his injuries, this led to an outcry, in Malaysia and abroad. His supporters demanded an inquiry into the injuries. The police then set up their own inquiry but when their report did not reveal who were responsible this led to further outcry, forcing Dr. Mahathir to appoint an Independent Commission of Inquiry chaired by a former Attorney General. This Commission revealed that the Police Chief had inflicted the injuries. The Police Chief was forced to resign and later faced trial and punishment.

Anwar was charged in court with 5 counts each of sodomy and corruption, with each charge carrying the maximum penalty of 14 years in jail and a M\$20,000 fine. The sexual charges included whipping as punishment. He pleaded not guilty to all charges and claimed he was the victim of a political conspiracy. His first trial began in November 1998 and lasted five months. It examined 4 corruption charges accusing

him of misusing his power in 1997 by interfering with a police investigation into allegations of sexual misconduct. In January 1999, the prosecution rewrote the 4 corruption charges, eliminating the need for government lawyers to prove the allegations about Anwar's sex crimes. Judge Augustine Paul then ruled that all evidence relating to sex was irrelevant and that testimony about a political conspiracy was also irrelevant. On April 14, 1999, the judge announced his verdict -- he found Anwar guilty of corruption as charged and sentenced him to 6 years imprisonment.

This verdict was more harsh than expected and led to larger than usual anti-government demonstrations in Kuala Lumpur. The demonstrators, mainly Malay youth, called on Dr. Mahathir to resign. To deal with the demonstrators, the police used tear gas and water cannons while the government threatened students with expulsion from university, and workers with the loss of their jobs. The remainder of 1999 and the following year saw a spate of arrests and charges against many associated with Anwar.

Meanwhile, Anwar's supporters rallied around his wife, Dr. Wan Azizah, an eye surgeon. They formed a new political party, the National Justice Party, calling for reform and justice, with Dr. Wan Azizah as President and Dr. Chandra Muzaffar, a social activist, as Deputy President. In the November 1999 general elections, this party joined with the DAP and PAS to form the *Barisan Alternatif* (BA), or Alternative Front, to challenge the National Front, but it was an abortive attempt. However, although the National Front won, it lost significant support from the Malays, around half of whom voted for the opposition. It gained 148 seats compared to 42 for the BA. Of the 42 opposition seats, PAS got 27, DAP 10, and Keadilan 5. PAS consolidated its hold in Kelantan and also gained control of Trengganu. The National Front won in large part because of the Chinese vote.

Anwar then faced a second trial, this time on sodomy charges which carry 20 years jail time and whipping. On August 8, 2000, he was found guilty of "unnatural sex acts" and sentenced to 9 years in prison. The whipping was set aside because of his age. With the earlier 6-year sentence, he will spend 15 years in prison. He is also barred from seeking office for five years from his release. When Anwar appealed against his 1999 conviction, the appeal was postponed indefinitely. In December 2000, Anwar's appeal against the High Court's rejection of his M\$100 million defamation suit against the premier was also dismissed. That month, the High Court also upheld a two-month jail term and a fine of M\$2000 against the Police Chief who had assaulted Anwar. During these developments, Anwar faced health challenges -- he was hospitalized for spinal cord trouble and continues to be in poor health. Support for him has lessened while support for Dr. Mahathir has grown.

### **Self-Study Questions for Further Exploration**

- During the drafting of the Malayan Constitution in 1957, what were some contentious issues that required compromises from the drafters of the Constitution?
- Why did the 1957 Constitution have to be amended in 1963 when the Federation of Malaysia was established?

- What is the significance of the 1969 racial riots in Malaysia? What, in your opinion, causes racial riots? How can they be prevented?
- What is unique about the position of the Malaysian monarch? What are some of the King's duties?
- Why was the United Malays National Organization (UMNO) formed in 1946?
- When and why did the MCA (Malayan Chinese Association) and the Malayan Indian Congress (MIC) team up with UMNO in elections?
- What are some interesting facts about the Independence of Malaya Party (IMP)?
- Why did the Alliance Party become the National Front in 1974?
- How many elections has Malaysia held since independence in 1957? What are some reasons that account for the success of the Alliance Party and its successor, the National Front, in the general elections?
- What led to the Anwar Ibrahim crisis of 1998? What were some repercussions of that crisis?

# NATIONAL SECURITY AND FOREIGN POLICY

## NATIONAL SECURITY

The Malaysian Government has identified communal tension as a national security concern, because of the country's delicate racial balance. The 1969 racial riots alerted the government to the potential for ethnic violence and led to remedial actions, such as poverty eradication and the restructuring of society. Since then, the few small incidents of racial violence have been quickly put down. These include the March 1998 fighting between Malays and Indians in Penang over a Muslim mosque and a Hindu shrine and the March 2001 Malay-Indian clashes in Kampong Medan, near Kuala Lumpur, over a Malay wedding celebration and an Indian funeral. In the latter case, economic and social reasons were as much to blame as ethnic tensions.

Another threat is religious extremism. In 1986, the police fought with Islamic religious extremists in Memali, Kedah, while in July 2000 the government had to deal with an arms heist in the state of Perak by another extremist Islamic group. From 2000 to 2001, the government also faced trouble from Islamic extremists in the Philippines -- these Abu Sayyaf rebels kidnapped tourists from the Malaysian island of Sipadan, off Sabah, and held them as hostages at Jolo in the Philippines until ransom was paid. Because of the September 11, 2001 bombing incidents in the United States, Malaysia now views Islamic extremism as a terrorist threat. Malaysia considers Islamic terrorism as a very serious security threat, since there appears to be some ties between the terrorists linked with the Al Qaeda network and certain local Islamic extremists. Two of the September 11 hijackers were spotted in Malaysia before the terrorist attacks in America.

Among Malaysian measures to handle security threats is the Internal Security Act (ISA), which provides for the detention of individuals and groups for an indefinite period without the process of law. This act was used by the Malaysian Government against the Memali villagers in 1985 and against Anwar Ibrahim in 1974 and 1998. Other security laws include the Essential (Security Cases) Regulations (ESCAR), enacted in 1975, which deal with arrest and pretrial procedures for those detained for undefined offenses decided only by the public prosecutor

The Malaysian Government also considers drug abuse and trafficking as national security problems and devotes considerable resources to combating them. Yet another security threat is the Spratly Islands dispute -- Malaysia claims a few islands in this grouping. Malaysia raised its claims in 1980 after establishing a 200-nautical-mile Exclusive Economic Zone (EEZ), which showed several Spratly islands within its EEZ.

For Malaysia, former security threats have included its long fight from 1948 to 1960 against communist insurgency and its handling of the Vietnamese refugee problem from 1975 to 1996. Since 1979, Malaysia has been building up and modernizing its defense forces and capabilities. The Five-Power Defense Arrangement that Malaysia made with Britain, Australia, New Zealand, and Singapore in 1971 is still in force. Malaysia is presently cooperating very closely with its ASEAN partners and with the United States to deal with the Islamic terrorist problem. In late 2002, terrorism is Malaysia's most urgent security threat.

## **PARTNERS IN THE ASSOCIATION OF SOUTHEAST ASIAN NATIONS (ASEAN)**

In 1967, Malaysia became a founding member of ASEAN, along with Indonesia, Singapore, Thailand, and the Philippines. Since then, ASEAN has doubled in size to ten members, as Brunei joined in 1984, Vietnam in 1995, Laos and Burma (Myanmar) in 1997, and Cambodia in 1999.

Of Malaysia's ASEAN partners, Indonesia is one of the closest as their historical ties go way back to the time of the Srivijaya and Majapahit maritime empires when Indonesia ruled the Malaysian area. There are also ethnic, religious, linguistic, and cultural ties as their people are of the Malay stock and mainly Muslim, share common words and terms, and have similar cultural traits. Moreover, in dealing with British colonialism, Malay nationalists looked to how Indonesian dealt with the Dutch. The Malay nationalist movement was thus influenced by developments in Indonesia.

For the most part, the Indonesia-Malaysia relationship is cordial. At times, however, tensions have arisen, as when President Sukarno launched his "Confrontation" policy against Malaysia from 1963-66, claiming that the Federation was a British imperialist plot. Under President Suharto, however, full diplomatic relations were re-established, paving the way for ASEAN's formation. Since then, other tensions have been caused by the following problems: piracy at sea; smuggling activities, especially of timber, along the Sabah-Kalimantan border; the haze problem caused by forest fires in Indonesia; President Habibie's support for Anwar Ibrahim in 1998; and their claims to the islands of Sipidan and Ligitan, which are presently occupied by Malaysia. These islands are located off the coast of Sabah and near Indonesia's province of Semporna in East Kalimantan. Bilateral discussions on the islands began in 1991, and both sides agreed in 1996 to refer the dispute to the International Court of Justice (ICJ).

The Philippines, like Indonesia and Malaysia, forms part of the Malay world in Southeast Asia, sharing ethnic, linguistic, and cultural ties. With the Southern Filipinos or Moros, Malaysia also shares strong religious ties as the Moros were converted to Islam before Spanish influence in the Philippines. In 1961, Malaysia, the Philippines, and Thailand formed the Association of Southeast Asia (ASA) for economic cooperation, while in 1963 the Philippines, Malaysia, and Indonesia formed MAPHILINDO for Malay brotherhood. Both plans for regional cooperation soon became derailed in 1963, due to Indonesia's Confrontation policy and the Philippine claim to Sabah. According to the Philippines, Sabah could not become part of Malaysia because it still belonged to the Sultan of Sulu, who had leased, not ceded, Sabah to the British North Borneo Company in 1881. When British and Malayan authorities disputed this claim, the Philippines broke off diplomatic relations. Under President Ferdinand Marcos, however, relations were restored in 1966. The Sabah claim, however, has not been resolved, only shelved.

Since then, relations with the Philippines have been cordial for the most part. Some tensions have arisen at times over Malaysia's support for the Moros -- in 1969 the Moro National Liberation Front (MNLF) was founded in Malaysia. During the administration of President Joseph Estrada, there were also some tensions over his support for Anwar. Under President Gloria Macapagal Arroyo, on the other hand, there has been increased cooperation over Malaysia's help in brokering talks between the Philippine Government and the Moro Islamic National Liberation Front (MINLF) and over their joint fight against terrorism. Nonetheless, Philippine concern rose in mid-2002 over Malaysia's deportation of Filipino illegal immigrants in the country. In earlier years, there was also concern over the treatment of Filipino maids working in Malaysia.

As for Singapore, its relationship with Malaysia is extremely close as well as sensitive. They are like Siamese twins in that they share a common history and were one country until they separated in 1965. They also share a common legacy as part of British Malaya. Singapore began as a part of Malaya and was a small Malay fishing village rife with piracy when the British founded it in 1819. Under British rule, it was soon transformed into "a Chinatown in a Malay lake". After independence in 1959, Singapore was keen to join the Federation of Malaysia and did so in 1963, after arrangements had been made to include the British North Borneo territories to balance the racial mix in the population. When Singapore withdrew from Malaysia in 1965, it kept trade and defense ties with Malaysia. These areas show cooperation in the relationship as does their agreement over water, whereby Singapore buys untreated water from Malaysia and then sells some back after it has been treated in Singapore-owned plants in Johore. However, in recent years, the agreement over water has also become a point of discord. Since Malaysia is mainly Malay and Singapore is mainly Chinese, their ethnic composition remains a built-in problem. Other tensions revolve around immigration and railway checkpoints, Singapore's land reclamation, disputed ownership of certain islands, and disparaging remarks on Malaysia by Singapore's former Premier, Lee Kuan Yew. For a time, tensions also existed over the so-called "Clob" issue, regarding Singapore-owned shares frozen by Malaysia since 1998. This issue was resolved in 2000.

Thailand, Malaysia's neighbor to the north, is both admired and feared. For example, it is admired for its past military prowess, its strong kings, and its ability to escape Western colonialism, but feared for its rule over the Northern Malay states during earlier periods of Malaya's history, its exaction of tribute from the Malay states, and its ruthlessness in war. Thailand's collaboration with the Japan during WWII also evoked both admiration and fear. Fear was dominant when Japan handed to Thailand the four Northern Malay States as reward for Thailand's wartime collaboration. Relations with Thailand improved after the war when Thailand returned the Northern Malay States to Malaya. This return was carried out at British urging after the Allied Powers defeated Japan. Bilateral relations became stronger after Malaya's independence. In 1960, when the Emergency ended in Malaya, there was security cooperation at their borders to deal with communist terrorists from Malaya who had sought refuge at the Thai border. They then became partners in ASA in 1961 and partners in ASEAN in 1967. From time to time, friction has occurred over some Malay support for Thai-Muslim separatist groups in Southern Thailand, over the demarcation of their common borders, and over overlapping claims on the continental shelf area near both countries. On the whole, however, the bilateral relationship is very cordial.

Relations with Brunei are close because Brunei is also part of the Malay world and shares many common characteristics with Malaysia. Although it did not join the Federation of Malaysia, the bilateral relationship is mainly amicable. There is, however, a problem with Brunei's Limbang claim against Malaysia. Limbang was ruled by the Sultan of Brunei until 1890 when the then White Raja of Sarawak, Charles Brooke, seized the territory, prompted by his desire to increase Sarawak's size and by requests from the local chiefs of the Limbang district to end Brunei's harsh rule. Although the Sultan did not recognize this seizure of territory, Brooke went ahead and united Limbang with the Trusan valley to form the Fifth Division of Sarawak. The British Government then offered to pay compensation to the Sultan, but the offer was not taken up. As a result, the British Government regarded the seizure as a cession by default and formally recognized Limbang as part of Sarawak. Brunei still has not formally recognized Sarawak's rights over Limbang. There is also a bilateral dispute over Brunei's 1993 declaration of its EEZ. According to Malaysia, based on the equi-distance principle of international maritime delimitation, Brunei has a smaller maritime area claim. Brunei is now amenable to giving up Limbang if Malaysia is agreeable to recognition of Brunei's claimed maritime area. Malaysia has suggested a sharing formula that divides their sea corridor, but this is unacceptable to Brunei. The dispute over Limbang thus continues.

In the case of Burma (Myanmar), both countries share a common heritage as former British colonies. While there are similarities in their experiences, there are also differences. For example, the British brought in mainly Indian immigrant workers rather than Chinese workers. During British colonialism and after, Burma thus faced an Indian problem rather than a Chinese one. Also, nationalist fervor in Burma was inspired by Buddhism, not Islam. Few bilateral ties existed after Burma's independence in 1948 until the late 1980s. During this period, civilian rule in Burma was replaced by military rule in 1962, and the country followed a one-party, socialist, and isolationist path. Malaysia's ties with Burma only became closer in the early 1990s when the military leaders opened the country to trade. At first, there were irritations over Burma's mistreatment of Muslim citizens, many of whom fled to Malaysia and Indonesia for refuge, and over the slow pace of democratic reform, even after the 1990 election victory by Aung San Suu Kyi. Then Malaysia supported ASEAN's policy of "constructive engagement" with Burma to help bring about change in the country. By the mid-1990s, Malaysia was championing Burma's admission into ASEAN, despite opposition to Burma's entry by the EU. Since this took place in 1997, trade ties have increased as has Malaysia's standing in Burma. This is partly due to the successful intermediary role played by a Malaysian UN envoy, Razali Ismail, in holding talks between the military junta and Aung San Suu Kyi. These talks led to her release from house arrest in May 2002.

With regard to Vietnam, Malaysia supported non-communist South Vietnam during the Vietnam War. It showed this support by handing over military equipment when the Emergency ended, by training South Vietnamese policemen in police administration, and by providing facilities for jungle warfare training. North Vietnam, on the other hand, was considered an enemy because it was a communist state. Yet, when the Vietnam War ended in 1975 and Vietnam was reunified, Malaysia along with ASEAN put out peace feelers, only to be rebuffed. As Vietnamese boat people began flooding the shores of Malaysia and other Southeast Asian nations, relations soured further. Malaysia was called upon to provide temporary asylum for the boat people, and did so, thinking the problem would be of short duration. But the refugees kept coming year after year, becoming a security concern as the Malaysian Government feared a "residual

problem” that would upset the delicate racial balance in the country. With other ASEAN countries, Malaysia called for Vietnam to stop the flow of refugees at its source.

In December 1978, relations worsened when Vietnam invaded and occupied Cambodia and began the Third Indochina War. Throughout the duration of this war from 1979 to 1989, Malaysia joined ASEAN in its diplomatic offensive against Vietnam. This offensive followed a carrot-and-stick approach – if Vietnam agreed to withdraw its troops from Cambodia, to stop the flow of Vietnamese refugees, and to allow repatriation of its refugees, ASEAN would offer economic and technical aid plus entry into the regional organization. With the Vietnamese economy in dire straits and with Russian aid more difficult to obtain, the diplomatic offensive worked. Vietnam also needed new friends and trading partners, especially with its new “doi moi” policy for economic recovery and renovation in 1986. Vietnam withdrew its military troops from Cambodia in September 1989, agreed to the repatriation of refugees, and was admitted into ASEAN in 1995. For Malaysia, the saga of the Vietnamese boat people finally ended in 1996 when the last remaining refugees were repatriated. By then, Malaysia was already extending economic and technical aid to Vietnam, and trade ties had grown. Malaysia has become one of the top foreign investors in Vietnam. In 2002, in view of Malaysia’s labor shortage, it is now considering allowing Vietnamese workers into the country.

In the case of Laos, Malaysia’s relationship with it has also been distant until recent years, because Laos was so closely identified with communist North Vietnam as a result of colonial, family, and ideological ties and geographical proximity. Since the end of the Vietnam War, however, Laos has improved its ties with Thailand and the other ASEAN states, including Malaysia. Malaysia’s ties with Laos have become stronger since Laos became a member of ASEAN in 1997. Besides trade ties, Malaysia also extends economic and technical assistance to Laos.

Malaysia’s relationship with Cambodia is closer than that with either Vietnam or Laos. Trade ties between them have existed since ancient times, with some records indicating that the Malayan area was once part of the maritime empire of Funan. There are also the religious ties in that Cambodia has a Muslim minority population made up of Chams, who fled there when Vietnam conquered and absorbed Champa in the 15<sup>th</sup> century. These Chams are of Malay stock and speak Malay. Because of the religious bond with the Chams, Malaysia became very concerned about them during the genocidal Pol Pot period from 1975 to 1978 when Chams were killed, tortured, or forced to eat pork. Malaysia’s concern led to its allowing Cham refugees to settle in Malaysia. Thus, while Malaysia did not offer permanent asylum to Vietnamese refugees, it quietly did so to Cambodian refugees of Cham descent. During the Third Indochina War, Malaysia was also concerned about Cambodia and joined ASEAN in its efforts to end Vietnam’s occupation of the country. When the war ended, Malaysians served in the UN peacekeeping operations in Cambodia. Since then, Malaysia has extended economic, technical, and medical aid to Cambodia and has become the top foreign investor in the country. In many ways, Malaysia acts like a mentor to Cambodia.

Malaysia’s contributions as an ASEAN member include the following: its concept of “Southeast Asia as a Zone of Peace, Freedom, and Neutrality” (ZOPFAN) in 1971; its EAEC proposal in 1990; its chairing the 30<sup>th</sup> anniversary meeting of ASEAN in 1997; and its serving as the site for the proposed ASEAN

University. It is the leading ASEAN nation with regard to educational services. One of Malaysia's diplomats, Ajit Singh, also served as ASEAN's first elected Secretary-General, while another diplomat, Razali Ismail, now serves as the UN Special Representative to Myanmar. In addition, Malaysia chairs ASEAN's Mekong Basin Project and provides technical and economic aid to newer ASEAN members like the three Indochinese nations and Myanmar under the Malaysian Technical Cooperation Program (MTCP).

## **EAST ASIA AND SOUTH ASIA**

With regard to China, historical records note that the rulers of the Malacca Sultanate paid homage to the Chinese emperor and that their countries enjoyed trade ties. During British colonialism, the ties centered on the Chinese immigrant labor that helped the British to exploit the county. In the 1930s, emigration from China was restricted because of Malay protests. By then, the Chinese civil war was raging, and both sides in that war drew support from the Chinese in Malaya. These remittances to China, for both the Kuomintang and the communists, continued after the war, but the British now took an anti-communist line as the Cold War had begun. When China fell to the communists in 1949, relations between Malaya and the People's Republic of China (PRC) declined further. Throughout Malaya's fight with communist insurgency from 1948 to 1960, relations between the two nations were difficult because of support that local Communists received from the PRC. Only with the premiership of Tun Abdul Razak did a change take place; he recognized the PRC in 1974, the first ASEAN state to do so. Since then, the trade relationship has grown. Presently, Malaysia enjoys strong trade ties with China, which is also supportive of the EAEC proposal. Moreover, China is a member of the ASEAN Regional Forum. While Malaysia looks upon China as an important trading partner, apprehension also exists over China's claims to the Spratly Islands.

In the case of Japan, the period of the Japanese Occupation during World War II saw an adversarial relationship between Britain and Japan. For the Malays, however, it was a nationalistic period as the Japanese treated them with deference and gave them important administrative positions while they treated the Chinese and the Indians more harshly. After independence, the relationship with Japan grew stronger after Dr. Mahathir implemented his "Look East Policy" in 1982 in admiration of the work ethic of the Japanese and South Koreans. He wanted to promote this work ethic in Malaysia, especially among the Malays, as his book *The Malay Dilemma* had complained that the lack of this ethic among Malays had hindered both their advancement and national development. With this policy, he hoped that the Japanese and South Koreans would be good role models as well as sources of business skills and technological transfers. He also admired the close cooperation between the Japanese government and large Japanese corporations in promoting trade through trading houses known as the *sogo shosha* concept.

His "Look East" policy led to Japanese and South Korean scholarships for Malaysian students, mainly Malay, for technical training; the introduction at university level of Japanese and Korean language courses; and the promotion of Japanese business techniques among Malay businessmen. Japanese and Korean business firms were also given special consideration in the awarding of contracts for major projects. For example, the Japanese won the contract to build the new UMNO Headquarters and Dayabumi complex in Kuala Lumpur, while the South Koreans won the contract for the bridge

connecting the island of Penang to the mainland. Later, the Mitsubishi Corporation in Japan was invited to engage in a joint project to produce the Proton Saga, Malaysia's national car project. The policy also led to more trade and investment links with both East Asian nations and allowed Malaysia more options regarding main trading partners. To some, the policy reflected anti-British and anti-Western bias by the government. The policy has been maintained over the years, although at times there have been complaints by Malaysia over inadequate technological transfers. There have also been some tensions with Japan over its weak response to Dr. Mahathir's EAEC proposal in that Japan has been hesitant in showing overt support because of security ties to the United States.

In the case of South Korea, Dr. Mahathir has admired the work ethic of its people and the Korean success in industrialization. When Malaysia's Industrial Master Plan was drawn, it was done with the objective of following the Korean pattern of industrial development. Under Mahathir's administration, many contracts have been awarded to Korean firms for construction projects, such as the Penang Bridge and many highway projects. With Malaysia's "Look East" policy, South Korea, like Japan, extended study and training programs to Malaysian students. Like Japan too, South Korea has been reluctant to show much support for the EAEC proposal. This reluctance, however, seems to have been overcome by the ASEAN + 3 meetings held recently between ASEAN and China, Japan, and South Korea.

In East Asia, Malaysia also has growing trade ties with the Republic of China (ROC) or Taiwan. The ROC is one of the top investors in Malaysia. Moreover, many Malaysian Chinese have gone there to work. There are also some educational ties between the two nations.

With regard to South Asia, Malaysia has bilateral relations with Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan, and Sri Lanka. Of these nations, the strongest ties are with India and Pakistan, since most members of the Indian community in Malaysia can trace their backgrounds to both these nations. Many Malaysian students have also studied in schools and institutions of higher learning in India and Pakistan. Both nations continue to reserve quotas for Malaysian Government sponsored students in medicine and veterinary science courses in their universities. Besides government sponsored students from Malaysia, there are also privately sponsored students.

In recent years, relations in trade and commerce with the South Asian nations have grown, especially with the members of the South Asia Association for Regional Cooperation (SAARC), i.e., Bangladesh, India, Pakistan, and Sri Lanka. These SAARC members have liberalized their economies and have become important markets for Malaysia's trade in commodities. In particular, Malaysia views trade with Pakistan as being a gateway to the untapped markets in the Central Asian Republics. Several of the South Asian nations also supply workers for Malaysia's labor needs in the industrial and plantation sectors of the economy. This recruitment of labor has become an important area of joint cooperation with South Asia. At times, however, problems have also arisen with the foreign workers over work conditions and criminal activity. The bilateral ties with the South Asian nations include security cooperation. In this connection, Malaysia has Joint Commission Meetings at Ministerial level with India, Pakistan, and Bangladesh. These meetings have helped to enhance relations in the economic fields.

## **AUSTRALIA AND NEW ZEALAND**

For the most part, relations with Australia and New Zealand have been cordial until recent years. Both nations have helped with the training of Malaysian students under the Colombo Plan and with defense arrangements for Malaysia under the Five-Power Defense Arrangement that includes Britain and Singapore. This help was given during Indonesia's Confrontation against Malaysia. Australia also stationed a battalion in Malaysia for the country's defense.

Tensions with Australia arose in 1981, however, when Dr. Mahathir did not attend a Commonwealth Heads of Government Meeting in Australia. More recently, in 1991, Mahathir considered, but did not implement, a "Buy Australia Last" policy after bilateral relations had soured over what many Malaysians believed were misrepresentations of the country in Australians films and television programs. For example, the Australian film, *Turtle Beach*, on Vietnamese refugees in Malaysia, showed the killing of Vietnamese boatpeople by Malay villagers, exaggerating the actual facts of the situation. Some skirmishes had taken place, but not to the extent portrayed by the film. A television series called *Embassy* also portrayed negatively an imaginary country that many suspected to be Malaysia.

In response, Malaysia's TV3 showed a television series, *The Ugly Face of Australia*, on the ill treatment of Australian aborigines and Asians. The government also cancelled some official visits to Malaysia by Australian dignitaries and suspended all non-essential Australian projects in Malaysia. The "Buy Australia Last" policy was averted when the Australian Government offered an apology, and both countries signed an agreement against involvement in news reports about the other side. In 1993, however, problems rose again over Dr. Mahathir's non-attendance at the APEC meeting in Seattle. This time, Malaysia reacted by banning temporarily Australian-made television shows and commercials.

## **MIDDLE EAST AND CENTRAL ASIA**

From early times, Malaysia has had close relations with Muslim nations in the Middle East. Malays recognize that the Middle East is the home of the Islamic religion and the home of the Sufis or missionaries who helped to spread the religion to Southeast Asia. The Middle East has also played, and continues to play, an important role in educating Muslim scholars from Malaysia. Many of these scholars were influenced by the teachings and reform movements in the Middle East. Malaysia places special importance on its relationship with Islamic countries and on its role in the Organization of Islamic conference (OIC). As a co-founder of the OIC, Malaysia aims at promoting the solidarity, progress, and well-being of the Islamic Ummah on the political, economic, social, and cultural levels.

On the political level, Malaysia remains deeply concerned about the situation in the Middle East and believes that a solution to the problem has to take into consideration the inalienable rights of the Palestinian people to self-determination, their right to an independent and sovereign state, and the return of occupied Arab land by Israel. On the economic level, Malaysia has emphasized the need for the Muslim countries to use the opportunities available to them in trade and commerce to strengthen their economic cooperation for their mutual benefit. Malaysia has followed this suggestion by making promotional trips to the countries to identify possible areas of cooperation in trade, investment, and tourism. On the social and cultural levels, Malaysia has called on the Muslim countries to deepen their

understanding of each other for more effective cooperation. It has also stressed that Muslims can only achieve better political and economic standing through achievements in economic development, science, and technology. Within the OIC, Malaysia is well regarded as a pragmatic, moderate, and progressive nation.

In the early 1990s when the OIC focused on the plight of the Muslims in Bosnia-Herzegovina, Malaysia participated actively in two Extraordinary Sessions of the OIC Foreign Ministers held in Istanbul and Jeddah and made significant contributions towards diplomatic and humanitarian efforts to help the Bosnian Muslims. Malaysia strongly condemned Serbian atrocities and injustice against the Bosnian Muslims and, with other OIC countries, called on Western countries to stop the Serbian aggression. To promote unity among the Muslim countries, Dr. Mahathir and Malaysia hosted in June 2002 the 27<sup>th</sup> Conference of Islamic Foreign Ministers, which focused on the problem of terrorism.

Malaysia's relations with Central Asia are more recent. These ties improved after the end of the Cold War with the decline in Russian influence. For example, in 1995 and 1996, business delegations from Mongolia visited Malaysia, while in 1997 Dr. Mahathir paid a formal visit to Mongolia. These visits led to joint-venture projects in construction and hydro-electricity and to other business dealings between the two countries. Under South-South cooperation, Malaysia also extends educational training to Mongolian officials. During the 1997 visit, Mahathir received an honorary doctorate of humanity from the National University of Mongolia at Ulaanbataar.

Dr. Mahathir also visited the Kyrgyz Republic in 1996 and agreed to help it prepare an economic report. He visited the country again in 1997 to present the completed report, a joint effort by Malaysia's Economic Planning Unit and Kyrgyz's Ministry of Finance. The report was translated into the Russian language to make it more accessible to all levels of the Kyrgyz Government. Both sides agreed to establish linkages in areas related to tourism, mining, and infrastructure development. The Malaysian premier also agreed to help train Kyrgyz officials in Malaysia. In November 2000, during the state visit of the Prime Minister of the Kyrgyz Republic to Malaysia, both countries signed an agreement covering cooperation on tourism, taxation, and air transport.

## **WESTERN EUROPE**

Links with Western Europe are also growing and are mainly educational and trading ties. For example, some Malaysian students have been sent to Germany and France for further studies and training, while some students from Europe have also come to Malaysia for further studies. Malaysia has also tried to sell its national car, the Proton Saga, to the European nations. These ties with Western Europe have increased in recent years with the Asia-Europe Meetings (ASEM) between ASEAN and the EU. In March 1998, Malaysia and the EU held a Malaysian-European Union Joint Seminar on "Europe and the Islamic World" in Kuala Lumpur.

## **RUSSIA AND EASTERN EUROPE**

Malaysia sent a trade delegation to Moscow in 1966 to sell rubber to the Russians, and in 1968 it allowed the opening of a Soviet Embassy in Kuala Lumpur. In 1969, it also promoted diplomatic and trade relations with the Eastern European communist states. In 1975, however, Malaysia became more wary of the Soviet Union and Eastern Europe after the whole of Indochina became communist states following Saigon's fall. These fears increased when Russia invaded and occupied Afghanistan in 1979.

With the end of the Cold War, however, the relationship has become closer. Trade ties have increased, and Malaysia now buys military equipment from Russia, including airplanes. On the Chechnya issue, Malaysia regards Chechnya as part of the Russian Federation and has called on the Russian Government to stop the bombings and to find a negotiated political settlement to the problem. Malaysia has expressed concern over the plight of the Chechens and has agreed to contribute US\$100,000 for humanitarian relief through the UNHCR.

In the case of Bosnia, in the early 1990s Malaysia extended aid in several ways: through participation in UN peacekeeping activities; through the giving of temporary asylum to Bosnian refugees; and through monetary contributions for reconstruction efforts and building up its armed forces. With regard to Kosovo, Malaysia sent army and police personnel as UN peacekeepers and gave medical and financial aid through relief agencies. Malaysia also spoke out strongly against Serbian aggression towards Muslims. In 1998, Malaysia made gifts of Proton cars to the Government of Bosnia and Herzegovina. Malaysia has also strengthened trade and diplomatic ties with Albania, with Dr. Mahathir paying a state visit to the country in 1995.

## **AFRICA**

Until South Africa's apartheid policy was dismantled, Malaysia spoke out strongly against it at the UN and other public forums. When Nelson Mandela became the President of the Republic of South Africa, Malaysia invited him to a five-day state visit in March 1997. This visit boosted trade and investment ties between the two countries, and Malaysia soon became involved in a big housing project in South Africa. By the time Mandela visited Malaysia again in August 2000, the trading ties had grown further to their mutual benefit.

Since the 1950s and 1960s, Malaysia has also made contact with other African nations through their membership in the Non-Aligned Movement (NAM). Trade ties were on a limited scale with these countries until Dr. Mahathir expanded trade and other links in the 1990s. Other ties with African countries have been forged through UN peace-keeping activities. Beginning with a UN peace-keeping mission to the Congo in 1961, Malaysia went on to other peacekeeping operations in Angola, Chad, Sierra Leone, Liberia, Mozambique, Namibia, and Somalia. Trade agreements have also been signed with many African nations, including Ghana, Tanzania, Uganda, and Zimbabwe. The Organization of African Unity chose Kuala Lumpur as the venue for its 35<sup>th</sup> Anniversary Meeting in May 1998. That year, Mahathir made official visits to Namibia and Mozambique while his Foreign Minister represented Malaysia at NAM's summit meeting in South Africa. More African students are now studying at Malaysian universities, while several African nations receive help under Malaysia's technical aid program.

## **GREAT BRITAIN**

The relationship with Britain is a close and sensitive one. British colonialism transformed the country from a Malay land into a multi-racial nation with its attending ethnic and religious problems and its economic disparities. In the 1930s, when the census revealed that the total non-Malay population outnumbered that of the Malays, Malay protests led the British to place restrictions on the entry of Chinese and Indian workers into the country. While the British had attempted to protect Malay political rights with special rights for the Malays, they failed to control emigration and to fend for the Malays on the economic level. A pro-Malay policy thus emerged in the 1930s to make Malaya a Malay land, but it was abandoned in the Malayan Union Proposal after the war, because of the need for greater administrative efficiency and because Malay leaders had collaborated with the Japanese while the Chinese had fought against the Japanese. Hence the British tried to make the Sultan a ceremonial ruler and offered equal citizenship rights for all. Malay protests, however, led to the withdrawal of this plan and to the 1948 Federation of Malaya Agreement, which restored the Sultan's former role and instituted more restrictive citizenship provisions for non-Malays. On the other hand, there was much cooperation between the British and the multiracial population to fight communist insurgency during the Emergency from 1948 to 1960 and over scholarship and training offers by the British Government under the Colombo Plan and other agencies.

There was also much cooperation on plans for Malaya's independence, which was achieved in 1957 through negotiations. There was further amicable cooperation for the realization of the Federation of Malaysia Plan in 1963 and when Britain defended Malaysia during Indonesia's Confrontation from 1963 to 1966. Britain's efforts on Malaysia's behalf during Confrontation drained its resources and contributed to the decision to withdraw its forces east of Suez by the 1970s.

While the relations with Britain were cordial during the Tunku and the Razak administrations, there were some tensions over rising university fees and quotas on foreign students during the Hussein Onn period. During the Mahathir period, there have been several instances of friction. For example, in 1981, Dr. Mahathir rejected an invitation to attend the Commonwealth Heads of Government Meeting in Australia and this was seen as a slight to Britain and Australia. The same year, there were also frictions over landing rights for the Malaysian Airlines Systems (MAS), over the ending of British preferential trade benefits for Malaysia, and over the high increase in student fees for foreign students, leading to Mahathir's announcement of a "Buy British Last" policy and the boycott of British goods. This boycott was formally ended in March 1983 after various concessions by the British Government, including the creation of a fund of M\$161 million to help Malaysian students studying in Britain and the transfer to the Malaysian Government of Carcosa, the residence of the British High Commissioner to Malaysia. Since then, relations have been cordial for the most part.

## **UNITED STATES AND CANADA**

The US-Malaysia relationship in earlier years was mainly economic in nature as America needed rubber and tin for its industrial growth and war efforts. After World War II, the relationship took on geo-political

dimensions because the United States viewed the country as needing protection from communism. America extended economic and technical aid to Britain and also sided with the new Federation during Indonesia's Confrontation policy from 1963-1966. During the Vietnam War, Malaysia showed its appreciation of the US war effort by handing over military equipment from the Emergency to the South Vietnamese Government and by providing training in jungle warfare and police administration to South Vietnamese personnel.

Meanwhile, with Britain's waning influence after independence in 1957, US social and cultural ties were forged with Malaysia through the Peace Corps volunteers posted throughout the nation and through educational exchanges under the Fulbright Program. With quotas and rising fees at British universities in the 1980s, Malaysia began sending more students to American universities. By the early 1990s, over 100,000 Malaysians had studied at US universities while several Malaysian colleges had begun twinning programs whereby Malaysian students can study locally for two years before transferring to a US college to complete the degree program.

At times, tensions did occur in the US-Malaysian relationship over America's tin and rubber disposal plans, due to their adverse effects on the price of Malaysia's two most important exports. By the mid-1970s, these tensions had abated, but trouble arose over Malaysia's oil palm exports. The US soybean lobby called for a duty on palm oil because of fear of competition and because of the then glut in US soybean production, but Malaysia protested the duty, viewing it as increased protectionism on the part of certain groups in America. In the mid-1970s, tensions also arose over the refugees from Vietnam; thousands of the boat people landed on Malaysian shores after Saigon's fall in 1975. The United States called on Malaysia to provide temporary asylum, and Malaysia obliged, thinking that the humanitarian assistance would be on a short-term basis. The problem, however, continued for two decades, ending only in 1996 when the last Vietnamese refugees were finally repatriated to Vietnam.

In the 1980s, other tensions in the US-Malaysia relationship revolved around US protectionist measures, such as countervailing duties on cotton textiles and apparel. There were also tensions over the General System of Preferences (GSP), until they were gradually phased out, and over Dr. Mahathir's proposal for an East Asian Economic Caucus, which the United States viewed as a trading bloc. With the outbreak of the 1997 Asian Financial Crisis, Mahathir's remarks about Jewish currency speculators, like George Soros, and his imposition of controversial capital controls caused further irritations in the bilateral relationship. On the other hand, Malaysia has been critical of the United States over its alleged negative views of Muslims and over US attacks on Iraq. More tensions resulted from the Anwar crisis, due to the Malaysian Government's treatment of Anwar, the arrests of his close associates, and the pro-Anwar statement by Al Gore during the 1998 APEC meeting in Kuala Lumpur. In addition, the United States has on occasion expressed concern over alleged human rights abuses in Malaysia, for example in connection with harsh laws, like the Internal Security Act.

In the early years of the 21<sup>st</sup> century, the tensions in the relationship are overshadowed by close cooperation in combatting terrorism. Since the September 11 attacks, the United States has sought Malaysia's assistance in tracking down the Muslim terrorists responsible for the attacks, and President George W. Bush has invited Dr. Mahathir to the White House to discuss this and other collaboration

between the two countries. Besides cooperation over counter terrorism, there is much cooperation over narcotics control, educational exchanges, and defense matters. The United States provides Malaysia with limited military assistance in the form of training programs and military sales credits, while Malaysia extends docking and repair facilities to US ships and aircraft. Bilateral trade ties have also grown. The United States is now Malaysia's largest trading partner, accounting for US\$30 billion or about one-fifth of Malaysia's total trade in 2001. About 20 percent of Malaysia's exports go to the United States, while about 16 percent of Malaysia's imports come from the United States. Around three-quarters of Malaysia's total exports to the United States consist of electrical and electronic goods. Presently, Malaysia is America's 11<sup>th</sup> largest, two-way trading partner. The United States is also the leading investor in Malaysia, with half of its investments in oil, gas, and petroleum and the other half in manufacturing, mainly semi-conductors and electronics.

In the case of Canada, the bilateral relationship is close and cordial. They have regular consultations and cooperate in the areas of trade, education, investment, defense, and technical assistance. As a member of the Commonwealth, Canada extends scholarships and training programs to Malaysia, such as Colombo Plan awards to its students and professionals in a variety of fields. In 1992, both countries also signed a Memorandum of Understanding, which allows Malaysian graduates of accountancy to undertake their articleship in Canada. In addition, Malaysia receives assistance through the Canadian Investment Development Assistance (CIDA) Program for developing industrial and business linkages between their private sectors. Their bilateral trade ties have increased, and Canada is one of ASEAN's dialogue partners. Both countries cooperate in international and trade fora like APEC, and Canada is also a member of the ASEAN Regional Forum for security cooperation in the region.

## **LATIN AMERICA**

Malaysia's ties with Latin America have developed in recent years mainly under the Non-Aligned Movement and South-South cooperation in the Group of 15 to ensure that the interests of developing countries are not marginalized. In 1997, two Cuban delegations visited Malaysia and identified possible joint ventures in construction, tourism, mining, power generation, petroleum exploration and refining, food processing, and trading in consumer items. That year, Dr. Mahathir paid a state visit to Cuba and also received the Jose Marti Award, named after a Cuban nationalist, from President Fidel Castro. He came with a delegation of Malaysian businessmen and addressed prominent members of the Cuban and Malaysian business community.

After the visit to Cuba, Dr. Mahathir also visited Chile to attend the 12<sup>th</sup> General Meeting of the Pacific Economic Cooperation Council Meeting (PECC) in Santiago. Since his first visit in 1991, trade ties with Chile had increased. Malaysian exports to Chile include the national car, natural rubber, radio broadcast receivers, and automatic date processing machines, while exports from Chile to Malaysia include copper, iron ore, fish meal, and fresh fruits. By 1997, seven agreements had been concluded with Chile on trade, investments, air links, and cooperation on economic, scientific, and technical levels. Official visits to Uruguay and Argentina were also made by Mahathir on that trip to Latin America, and several trade agreements were signed.

## Self-Study Questions for Further Exploration

- At present, what are Malaysia's major security concerns?
- Why is Malaysia's relationship with its ASEAN partners so close and complex?
- What are some interesting features about the Malaysia-Indonesia relationship?
- What are some benchmarks in the Malaysia-Vietnam and the Malaysia-Cambodia relationships?
- How has the Malaysia-Africa relationship evolved since 1957?
- What are some distinguishing features about Malaysia's relationship with Britain, its former colonial master?
- What is the nature of Malaysia's relationship with Australia and New Zealand?
- What are some areas of cooperation and tension between Malaysia and the United States?

# MOLDOVA

## A Self-Study Guide

NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The Self-Study Guide devoted to the Republic of Moldova is intended to provide U.S. Government personnel in the foreign affairs community with an overview of relevant issues which define Moldova's specificity in the variegated context of the successor states of the former Soviet Union. This Guide offers a compact digest of Moldova's history, geography, traditions and culture, economics, government and politics, as well as the place of this small state in the international arena, including its relations to the U.S. and West on the one hand, and with post-totalitarian countries in its neighborhood, such as Russia and Romania, on the other hand. This Guide should serve as an introduction and a self-study resource. The Republic of Moldova is far too complex and diverse a society to be fully covered using only the text in this Guide. The reader is encouraged to explore the questions and issues raised in the Guide by referring to the books, articles, periodicals and web sites listed in the bibliography. Most of the bibliographic

material can be found on the Internet or in the National Foreign Affairs Training Center Library, the Main State Library, or major public libraries.

The first edition of the Self-Study Guide to the Republic of Moldova was prepared by Dr. Andrei Brezianu, Chair of the Moldova/Romania course in the School of Professional and Area Studies of the Foreign Service Institute and former Chief of the Voice of America's Romanian Language Service (1991-2001). Dr. Brezianu's most recent book is the "Historical Dictionary of the Republic of Moldova" (Scarecrow Press, 2000). The views expressed in this Guide are those of the author or of attributed sources and do not necessarily reflect official policy or the position of the Department of State or the National Foreign Affairs Training Center. This publication is for official educational and non-profit use only.

First edition

March 2002

## **PART I: THE ENVIRONMENT AND THE PEOPLE**

### **1. The Land**

The Republic of Moldova is one of the smallest successor states of the former Soviet Union. Located between Romania and Ukraine, its territory covers an area of 33,700 square kilometers, between 47 00' north latitude and 29 00' east longitude. Roughly the size of Maryland, its surface --ranking thirty third in Europe-- overlaps with most of the northeastern lands of the historic Principality of Moldova (1359-1859). Stretching on a north-south axis, Moldova is a landlocked country whose lay of land is comprised between the banks of the Nistru River, a tributary to the Black Sea, and the Danube's easternmost affluent, the Prut which separates the country from its western neighbor, Romania. The country's capital is Chisinau (population: over 700,000 inhabitants).

## A Land With Several Names

From the 14th century to 1812, the Romanian proper noun **Moldova** applied to the principality of the same name, whose territory used to stretch from the Carpathian Mountains to the Nistru River, and down to the Black Sea. After 1812 --under the borrowed name of **Bessarabia**-- the eastern part of that principality was incorporated into the Russian Empire and became a province of Russia.

After that partition, the name Moldova continued to denote the western half of the principality, whose later union with the Principality of Wallachia laid the foundation of the unitary Romanian state (1859). The transnational designation **Moldavia** (adjective: Moldavian) was in use before the country's declaration of independence. Both are interchangeable.

While the re-born independent state of Moldova declared in Chisinau in 1991 bears the historic name of the Principality of Moldova, the Republic of Moldova occupies only the eastern half of that historic land: its western half --equally known as Moldova-- is a province of Romania.

## Land Features

The country's topography features a hilly plateau with decreasing elevations in the south. The relief is dominated by rolling hilly plains in the north, patches of forests in the center and ravines in the south, extending into a fertile plain that descends toward the country's ancient seaboard, lying between the estuary of the Nistru and Chilia, the northern arm of the Danube Delta, --currently the natural border separating Ukraine from Romania. Moldova's highest elevation, Mount Balanesti, 430 meters high is in the country's heartland, the Codri region.

Map of Moldova

**Hydrographic Network**

The river system of the Republic of Moldova is not very large. It includes several hundred rivers, some

permanent, some intermittent, out of which only seven have a length of more than 100 kilometers. The most important of them is the border-area river Nistru (Russian: Dnestr). 1,325 kilometers in length, it is the second largest river, after the Danube, in the western area of the Black Sea basin. The Nistru rises on the northeastern slopes of the Carpathian Mountains and drains an area of 47,739 kilometers before flowing into the Black Sea through a broad estuary known as Liman. Due to the typical canyon-like elevation of its west bank which overlooks the Podolyan plains lying eastward, the Nistru played the part of a natural frontier for most of Moldova's recorded history. It also served, for many centuries, as historic Moldova's political border to the east. After 1940, the Nistru ceased to mark a political boundary, becoming enfolded into the then newly created Moldavian Soviet Socialist Republic, whose successor state, the Republic of Moldova, now lies on both banks of the river for a total length of about 630 kilometers.

Moldova's other main rivers are the Prut --967 kilometers, the Raut --286 kilometers, the Cogalnic --243 kilometers, the Bac --155 kilometers, and the Botna -- 152 kilometers. Moldova has over 50 natural lakes with a total surface of about 50 square kilometers. The underground water reserve, mostly drinking water, is estimated at 200 million cubic meters.

### **Access to the Sea**

Historically, Moldova had access to the Black Sea across the whole length of its southern coast, chiefly through the port-city of Cetatea Alba (formerly Akkerman --in Russian; Bilhorod Dnistrovsky --in Ukrainian), and the smaller ports of Reni and Ismail, both on the Chilia arm of the maritime Danube. Moldova's current landlocked position is a consequence of Soviet-era territorial and administrative arrangements, by which the USSR awarded Soviet Ukraine the southern tip of the province of Bessarabia, turned into a Soviet republic by the Supreme Soviet of the Soviet Union which, on August 2, 1940, established the Moldavian Soviet Socialist Republic (MSSR) on most of territory of the historic province of Bessarabia (East Moldova).

A border adjustment accord with Ukraine is expected to restore Moldova's riparian status on the maritime Danube, south of the village of Giurgiulesti, the southernmost point of the country, located some 200 meters away from the river, west of Reni. A future port and oil terminal at Giurgiulesti will be accessible to seagoing ships and tankers, and will be able to reconnect Moldova to seafaring lanes in the future.

### **Vegetation Zones**

Most of Moldova's territory is covered by a slightly raised hilly plain. In the north, the treeless Balti steppe rolls southward where it gradually gives way to the thick forests zone of the Codri (Romanian: "forests"), where hornbeam, oak, linden, maple, wild pear and wild cherry are the most common trees. The rocky banks of the Nistru and the Prut valley carry a natural vegetation made up of oaks, poplars and thickets of shrubs. The forests, which historically used to cover a huge part of the country, now cover about 6 percent of its territory, out of which some 60 percent is agricultural land, with corn and wheat as the dominant crops. Vegetation grows scarcer in the south and south-east, yet vineyards, orchards and sunflower plantations coexist with patches of southern steppe vegetation. The lower south-western region of the country, near the confluence of the Prut with the Danube, is interspersed with frequent saline marshes

### **Climate**

Moldova's has a temperate continental climate. The average annual temperature is +7/10 degrees Celsius. The warm season lasts about 257-315 days a year. Sunny days account for 45 to 50 percent of the year. Winters are relatively mild, with January temperatures averaging around -4 C. Annual rainfalls range from ca. 400 millimeters in the south, to ca. 600 millimeters in the north, with most precipitations occurring in the early Summer and the Fall.

## **Soils and Agriculture**

About 75 percent of the country is covered by the proverbially fertile and humus-rich black soil (also known as "Tchernoziom"), which supports a rich variety of crops. With practically no mountains and no significant mineral deposits, Moldova's topography has traditionally favored intensive agriculture. In the northern highlands clay-textured soils are found, while in the south red-earth soil is predominant.

Agriculture is deployed on an overall surface of ca. 2.5 million hectares of farming land. Its soil basis for production includes about 68 percent arable land, about 18 percent orchards and vineyards and about 14 percent meadows and pastures. Yearly agricultural production is over 2 million tons of grain (chiefly winter wheat and corn), over 800,000 tons of fruit and berries, 1 million tons of vegetables, over 2 million tons of sugar beets, some 200,000 tons of sunflower seeds and some 50,000 tons of tobacco. Moldova's most important agricultural asset is its grape producing capacity, with an annual yield average of ca. 900,000 tons of grapes, and a wine production that accounts for about 25 percent of the country's export earnings.

Despite the small size of its territory, Moldova ranks ninth in Europe in grape production and seventh in Europe in tobacco production.

## **Mineral and Natural Resources**

Moldova's territory lies on deep sedimentary rock with harder crystalline outcroppings in the north and center, where higher elevations are found. The geological infrastructure of the Moldovan plateau rests on granitic spurs, originating from the piedmont of the Carpathian Mountains. They reach longitudinally eastward across historical Moldova's stretch of land, down to the Nistru banks. Mineral resources are scarce. Major mineral deposits and resources consist of cement components and gypsum, limestone, sand and basic raw minerals for bricks and tiles. Sparse oil and brown coal deposits were recently discovered at considerable depths in the south, but their industrial importance is poor due to the high estimated costs of extraction.

## ***Questions and Issues:***

\* What impact did the Nistru River have on Moldova's history? Reflect on the fact that Russia first established its southern border on the Nistru River in 1792, when the Russo-Turkish Treaty of Jassy made Moldova for the first time a neighbor of the Russian Empire. Was that event an important strategic landmark in Russia's imperial ambitions to move south and gain access to the mouths of the Danube?

\* What is the likely impact of the utter lack of mineral and energy resources on the economic independence of the Republic of Moldova, vis-à-vis big owners of such essential resources, such as the Russian Federation?

## **2. The People**

### **Major Ethnic Groups**

The four major ethnic and linguistic groups in the Republic of Moldova reflect specific trends of historical stratification and acculturation, from the nation's earliest times down to the present. Romanian-speaking Moldovans form the ethnic core of the country (originally the eastern lands of the Principality of Moldova, annexed by czarist Russia in 1812, as Bessarabia). According to the first Russian census, conducted in July 1817, some 87 percent of the then newly acquired province's inhabitants (419,420 out of a total of 482,630) were described as local "Moldavians". The Russian minority amounted to only 1.5 percent of the total population, some 6.5 percent were registered as Ukrainians, and 4.2 percent as Jews. Before the end of the century the natives' number had dwindled to a mere 47.6 percent of the total population which, as a whole -- mainly through internal migration from other parts of the Russian Empire-- had reached a total of 1,936,012 inhabitants. The 1897 census (which distinguished Bessarabia's ethnic populations by native language rather than nationality) had over 900,000 people registered as speakers of "Romanian" (that was the term used), 19.6 percent as speakers of Ukrainian, 8.1 as speakers of Russian and 11.8 as speakers of Yiddish.

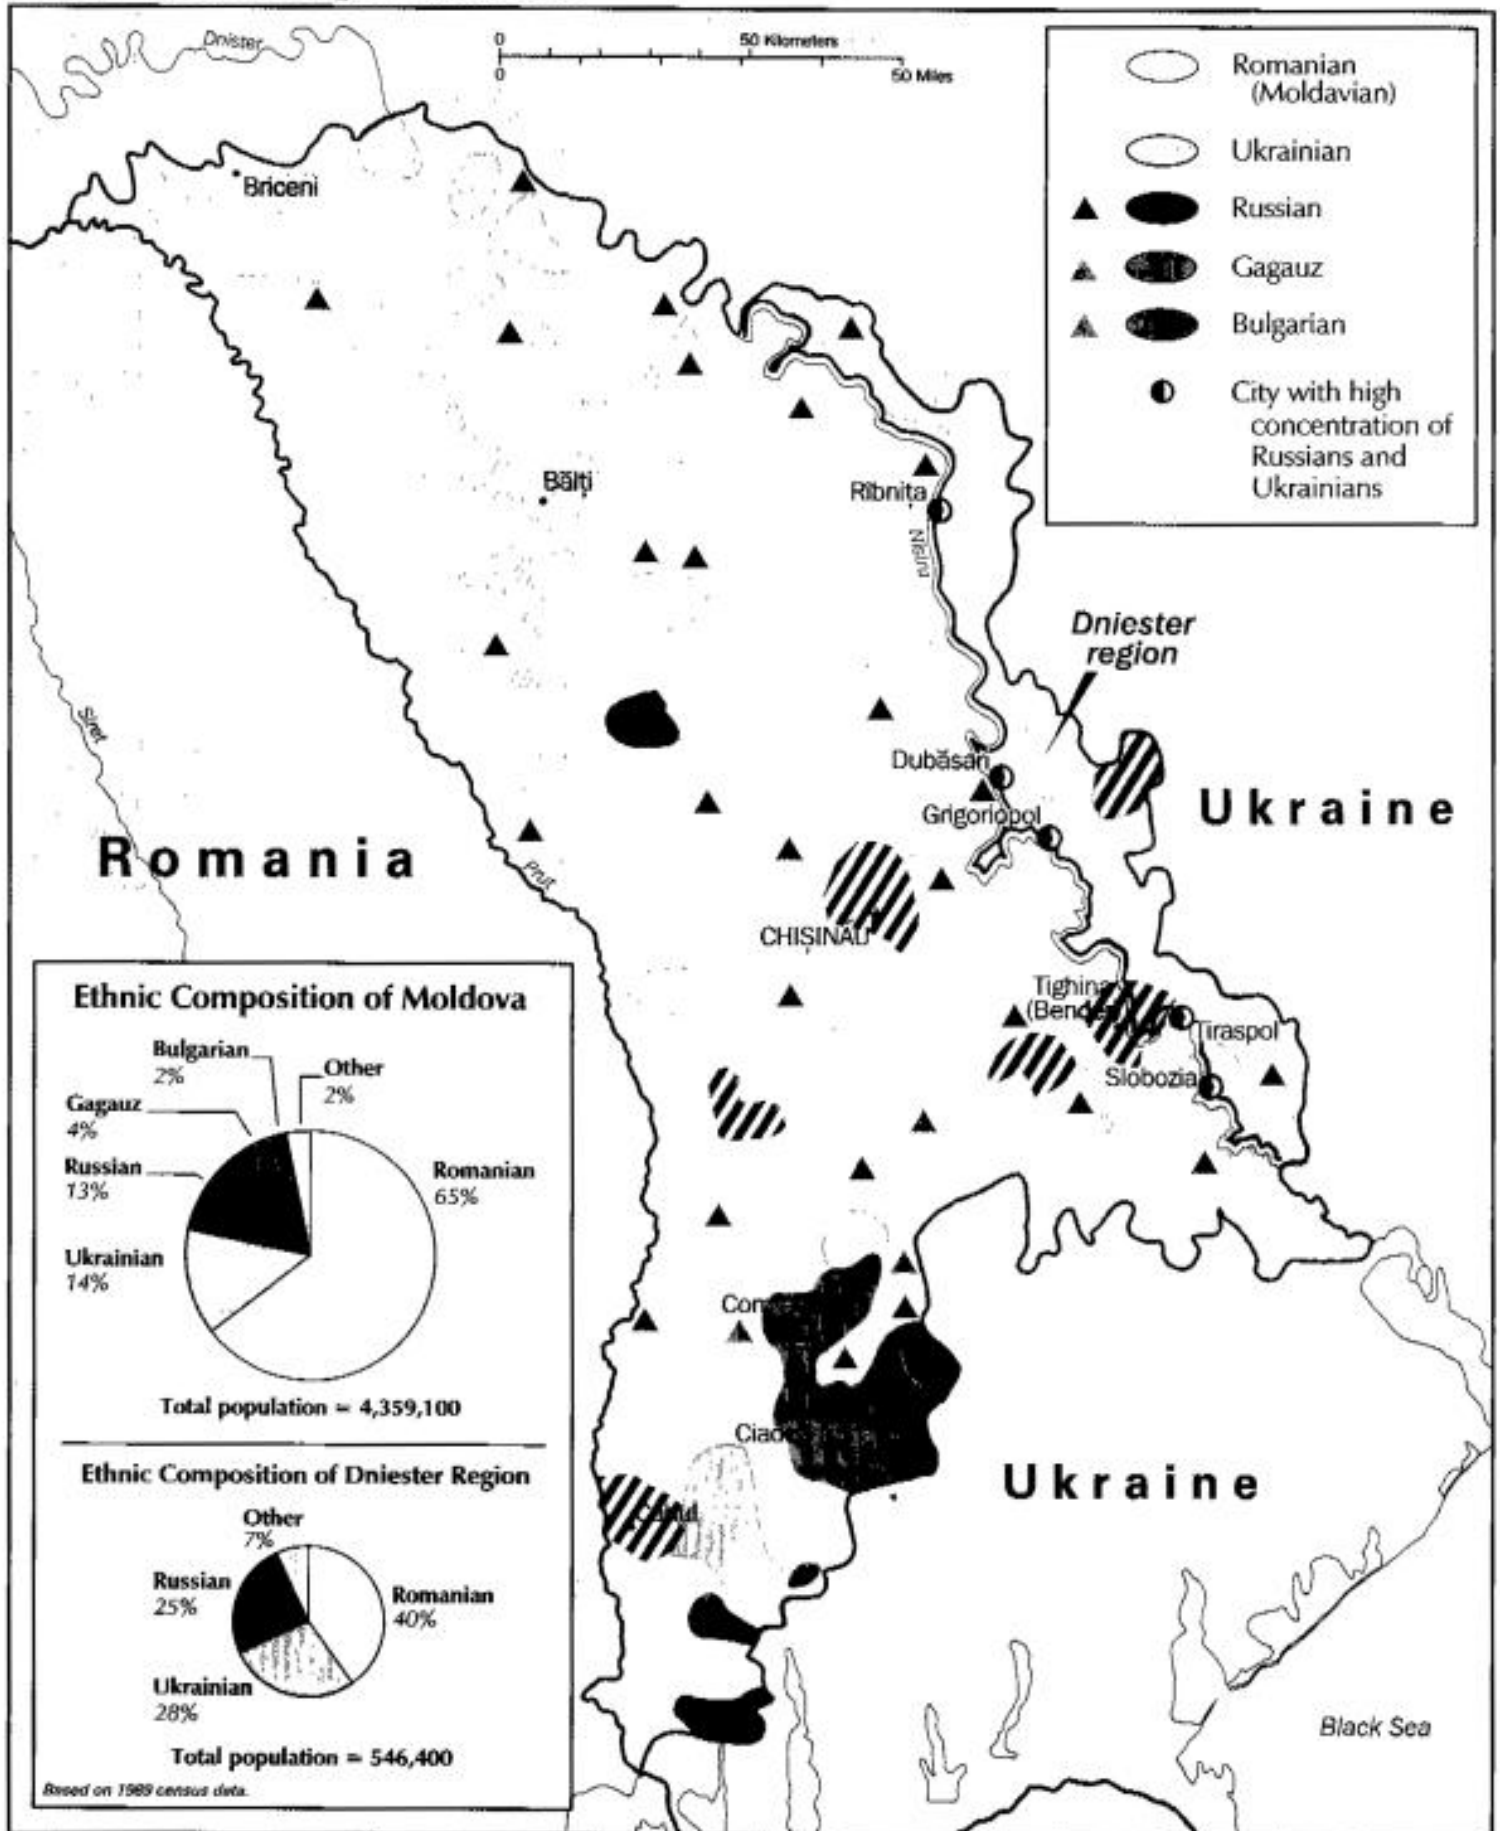

The Soviet nationality census conducted after the 1940 annexation of Bessarabia by the USSR indicated a balance of 65.5 percent Moldavians, versus 6 percent Russians and 16.4 Ukrainians.

Currently, Romanian-speaking Moldovans make up ca. 64.5 percent of the republic's population, Ukrainians being the second largest group, with 13.8 percent. Russian ethnics come in third, with 13.00 percent of the country's total population. Moldova's fourth ethnic group is the Gagauz (or Christian Turks) minority, a population which constitute about 3.5 percent of the country's population, followed by the Bulgarian minority, amounting to some 2 percent of the total.

The Gagauz and Bulgarian ethnic groups settled on the territory of what is today the Republic of Moldova at the invitation of Russia's czars during the 19th century. They display a clear-cut immigration pattern within a limited time-frame (from the beginning of the 19th century until the late 1870s).

The second significant group includes non-natives, i.e. foreign-born Russian and Ukrainian ethnics having settled in the country recently, under the policies of internal migration conducted by Moscow over the last decades of Soviet rule over the MSSR. Such non-natives of Moldova account for about 29 percent of the former Soviet republic's Ukrainian minority, and about 30 percent of its Russian minority. Most of them use Russian as their first language of communication and few speak the Republic of Moldova's official language

### Major Ethnic Groups in Moldova

A general break-down of Moldova's major ethnic and linguistic groups is as follows:

**Latin-roots People:** Romanian-speaking Moldovans: 64.5%

**Slavic-roots People:** Ukrainians:13.8%; Russians: 13%; Bulgarians: 2% (most of them having Russian as their first language of communication).

**Turkic-roots People:** Gagauz: 3.5% (speakers of a Turkic dialect, but using mostly Russian as their common language of communication).

### **Overall Ethnic Structure Today**

Total population: 4,489,657

Moldovans: ca. 2,795,000 (64.5%)

Ukrainians: ca. 600,000 (13.8%)

Russians: ca. 562,000 (13%)

Gagauz: ca. 153,000 (3.5%)

Bulgarians: ca. 88,000 (2%)

Jews and others: ca. 66,000 (2%)

(Source: *Belarus and Moldova Country Studies*, Library of Congress Federal Reserve Division, 1995)

### **National Identity:**

#### **The Moldovans**

Moldova's search for identity is to a large extent a reflection of the influences its population has been exposed to and forced to assimilate after its 1812 annexation by Russia, and, in a more special way, over the latter half of the 20th century, when the combined processes of intensive Russification and Sovietization left their imprint, most glaringly, in the area of linguistic communication.

At two essential junctures in Moldova's history --under czarist rule, and under Soviet domination-- the language issue came to play the role of one of the most powerful catalysts for both political change and national assertion. The thrust and weight of the language debate --combined with the Latin vs. Cyrillic alphabet issue-- proved of defining importance in the Moldovans' attempts to assert their own identity.

In parallel fashion, another significant factor in the Moldovan people's quest for identity has been influenced by the evolving composition of its once unitary ethnic fabric, gradually changed over time through policies of colonization, conducted in various installments under Russia's two successive rules: czarist after 1812, Soviet after 1940.

A specific trait has been Moldova's acculturation experience under these two dominations, both of which worked to transfigure the local people's inherited culture in an attempt to tone down its specifics and make it

look as close to Russia's as possible, and as distinct possible from its originary roots .

Moldova's ethnic identity uncertainties can tentatively be explained as a consequence of the fact that, right from the outset, both in its Russian and Soviet incarnations, the eastern half of historic Moldova came to be part of a huge core-empire not as a whole, rounded-out entity, but rather as a part of a pre-existing whole split into two, with twin-like identity elements left open-ended across the border in the old core-country, the Romanian province of Moldova and with Romania in general, with which it shares a common heritage of culture and folklore.

### ***Questions and Issues:***

\* To what extent do the Romanian-speaking people in the Republic of Moldova share the same ethnic identity with Moldovans living in Romania's historic province of Moldova? Try to account for the similarities and differences between the two.

\* Moldova's original identity features were forced to interact with the political, linguistic and cultural ascendancy of the the Russian Empire (1812-1917) and with the political, linguistic dominance of Soviet Russia (1940-1990). How did these two influences modify the ethno-cultural profile of the Moldovan people today?

### **Identity:**

#### **The Russophone Ethnics**

With a total population which comprises over 35 percent, mostly Russophone, non-Moldovans (including an important group of non-natives) the Republic of Moldova has been faced with several challenges over the past recent years. They have impacted negatively on the process of building a distinct and cohesive national identity, after the demise of Soviet totalitarian rule over the country.

Under Moscow's governing power, non-Moldovan ethnics used to be perceived by most of the population as exponents of the Soviet authority, engaged in achieving an in-depth acculturation process of the Romanian-speaking population of Moldova. Thus, Russians and Ukrainians, especially the more recent settlers, tended to be perceived by the local population as allies and proponents of Moscow's totalitarian policies.

Through education and the imposition of Russian as the official language of the republic, such policies succeeded in creating a situation in which most of the Soviet republic's population had to become bi-lingual. The language spoken by the majority of the population (dubbed "Moldavian") had to be written in Russian Cyrillics, in a concerted campaign to artificially distinguish it from the Romanian language spoken in Romania, with which it is in fact identical. The non-Moldovan ruling elite of the Soviet era seldom cared to learn the language of the majority, which accounts for the fact that Ukrainian and Russian ethnics rarely became bi-lingual in Soviet Moldova.

After the country's achieved independence, the Russian-speaking group came to be looked upon by many as sympathizers or holdovers of Moscow's former power. Hence, the largely shared post-1991 perception that non-Moldovans were generally pro-Moscow and anti-Western, while the Moldovan majority was as a rule and by definition pro-Western, anti-communist and anti-Moscow. Such an attitude favored rifts and disruptions of the nation's fabric and fueled two-way nationalistic feelings, especially among intellectuals. A number of non-Moldovan groups were driven to the erroneous perception that Romanian-speaking Moldovans were bent on joining Romania, ready to surrender the newly-born republic's sovereignty, and reunite with the country's next-door neighbor and cultural kin, post-totalitarian Romania. A minority group of Romanophone intellectuals and academics contributed to entertain that perception.

The early litmus-test of that simmering conflict was the dramatic secession of the Nistru east-bank districts in 1990, and the unilateral declaration of a non-recognized "Moldavian Transnistrian Soviet Socialist Republic" in September of that year (currently the internationally non-recognized "Moldavian Nistrian Republic"), with its capital in Tiraspol. The "Moldavian Nistrian Republic" claims 4,163 square kilometers under its control, including the city of Tighina (Russian: Bendery) on the west bank of the Nistru River.

Located on an enclaved sliver of land on the river's east bank, the separatist entity has preserved the Soviet era symbols of power and the expressions of public worship to Lenin and Marx. It is leftist, pro-communist, pro-Russian, anti-reform and conservative. It seceded from Chisinau over independent Moldova's first laws regarding the return to the Latin alphabet, the establishing of the language of the majority ("Moldavian") rather than Russian as the official language of the country, and the change of the republic's Soviet-style flag to a new one, almost identical to the Romanian tricolor flag. A brief civil war, which resulted in a stalemate, broke out between the separatist region and Moldova's regular army in 1992. Although officially neutral, Russia's 14th Army (currently downgraded to the status of an "Operational Group") took part in the conflict, siding with the rebels.

The Russian army headquartered to this day on Moldovan soil, east of the Nistru, remains a sizable regional force and is the only Russian military presence on foreign territory outside the Russian Federation in Europe. In conjunction with the breakaway Tiraspol authorities, it controls over 40 thousand tons of weapons and ammunition depots of the former Red Army located on the Nistru east-bank. Tiraspol is a historic Russian military settlement. The regional authorities opposed Moldovan independence in 1991-92, and soon after gained control over a narrow strip of land, bounded by the Nistru River and the border with Ukraine, in which the bulk of Moldova's industry and electricity-generating capacity was concentrated.

### **The Russophone Critical Mass On The Nistru East-Bank**

The interplay between Moldovan ethnic identity and its core-components on the one hand, and some of its political-cultural underpinnings, on the other hand, are patent in the secession of the so-called “Moldavian Nistriian Republic” (“MNR”). The ethnic and linguistic distribution in the breakaway enclave contrasts with the population breakdown of the republic of Moldova as a whole: Romanian-speaking Moldovans in the “MNR” amount to some 240,000, whereas the total amount of the Russian-speaking (Ukrainian and Russian) population is estimated at about 325,000, which gives the Russophone population a clear majority. A reflection of this specific composition is shown in the general inclination toward a return to the old political and state structures. Tellingly, a non-binding referendum on joining the Russia-Belarus union held in the “MNR” in 1998, indicated that 66 percent of the voters there supported such a union.

### **Ethnic Distribution in the Nistru East-Bank Enclave**

Total population of the Nistru east-bank region: ca.740,000

Russophone: ca. 59%

Ukrainians ca. 170,000 (28%)

Russians ca. 154,000 (25%)

Moldovans ca. 240,000 (40%)

Bulgarian, Jews, Gagauz and others ca. 40,000 (7 %)

(Source, Charles King, *The Moldovans: Romania, Russia and the Politics of Culture*. Hoover Institution Press: Stanford, 2000)

### ***Questions and Issues:***

\* Is the trans-Nistriian conflict a reflection of ethnic divisions within the Republic of

Moldova, or is it a political and ideological motivated conflict?

\* Is Russia’s military presence in the Nistru east-bank enclave an indication of

Moscow’s intentions to control and influence independent Moldova’s policies?

## Identity:

### The Gagauz Minority

Soviet Moldova's last census (1989) indicated a Gagauz (Christian Turkic population) of over 150,000 (ca. 3.5 percent of the republic's total population) concentrated in a patchwork of rural communities around the southern city of Comrat. In the context of the Soviet Union's breakdown, a separatist movement with strong pro-communist overtones developed within the Gagauz ethnic group, and in 1990 a short-lived "Gagauz Soviet Socialist Republic" was proclaimed in Comrat. Through negotiations with the Moldova's central authorities in Chisinau, a compromise was reached and the Gagauz ethnic group dropped its secessionist claims. In March 1995, the results of a local referendum secured the autonomy of the territory where Gagauz ethnics are scattered, and the Autonomous Territorial Unit of Gagauzia (Romanian: Unitatea Teritoriala Autonoma Gagauzia; Turkish: "Gagauz Yeri") was established within the unitary state of Moldova. By virtue of Gagauzia's special status, Moldovan Gagauz elect their own executive and legislative officials, and their governor, the *bashkan*, is by law a member of the Chisinau Parliament.

The autonomous territorial unit comprises three towns --Comrat (its administrative center), Ciadar-Lunga and Vulcanesti, twenty three villages, and three suburban townships. Gagauz Yeri encompasses an area that has been described as a piece of Swiss cheese, pockmarked by compact settlements whose population constitutes a multiethnic quilt which includes 5.5 percent Bulgarians, 5.1 percent Russians and about 4 percent Ukrainians, most of them living in rural communities, interspersed with Romanian-speaking Moldovan villages. In this complex patchwork, the ethnic Gagauz population forms the absolute majority in only two subterritorial units -- Comrat and Ciadar-Lunga. In the last Soviet-era census conducted in 1989, over 70 percent of Gagauz ethnics named Russian as their second language, after their Turkic mother-tongue. Until 1990 only 33 books had been published in Gagauz, most of the cultural life of the Gagauz minority being traditionally conveyed in Russian.

### *Questions and Issues:*

\* What are the main differences between Moldova's Gagauz minority and the country's Russian minority in terms of cultural status and political importance?

\* What is the explanation of the fact that the push for Gagauz separatism was solved by independent Moldova early on, while the Nistru east-bank secession continues to be unsolved?

## Identity and Nationhood

The question of Moldova's identity as a nation raises the issue of its minorities and of their historic integration into a common societal fabric, within the confines of a what is now an independent state, set apart from its former core-powers --Russia and, more recently, the USSR. The stronger profile of Moldova's former dominant elites (Russian and Soviet) on the one hand; and the less powerful and less articulate profile of the Gagauz population, on the other hand, are part of an equation in which historic Moldova's smaller core-power, Romania, continues to play its own part with a polarizing role.

The term nation denotes any sovereign state with a political autonomy and settled territory, such as the Republic of Moldova. In a narrower definition, however, a nation can also be described as a community of people sharing a common language, inhabiting a fixed territory, having common customs and traditions and having become sufficiently conscious to recognize similar interests and a mutual need for a single sovereign leadership. Applied to the issue of the differences and similarities between Moldova and what is now its western core state and neighbor, Romania, the first part of the more specific definition carries connotations that may be applied, in twinlike fashion to Moldova as well as to Romania, since the native population in both countries shares common roots, the same language and literature, and similar legacies of folklore and traditional beliefs. However the second part of the definition fails to apply in similar fashion to other fundamental concepts, such as a mutual acknowledgment of common interests and the need for a single leadership. These terms are not conterminous, since present-day Moldova's interests currently include the interests of its strong Russophone minority on the one hand, and the interests of another compact group, the Gagauz ethnic patchwork, established today as an entity in its own right in the south of the country.

The Russophone population issue at large (and its flaring point in the Nistru east-bank separatist enclave) on the one hand; and the Gagauz autonomy issue, on the other hand, contribute to set Moldova and Romania apart --if not in terms of the broader sense of nationhood, certainly in terms of statehood and separate profiles as political bodies.

Despite these clear-cut distinctive features, a minority of Moldova's society --mostly historians, writers and other members of the intelligentsia-- sometimes advocate the view that "Moldovan" should simply be a semantic label applied to regional identity, not one connoting nationhood. The debate was particularly heated in the early 90s when it gave rise to a current of thought and social-cultural initiative known as "unionism" or "pro-Romanianism". In objective fashion, the place of Russian acculturation and of the Gagauz ingraft in historic and present-day Moldova, should be part of the debate and contribute to a well-founded understanding of the Moldovan identity and its specificity in the context of post-totalitarian eastern Europe.

### *Questions and Issues:*

\* What role did Russification play in creating the overall appearance that nationhood does not fully apply to describe present-day Moldovan identity?

\* How does the following statement apply to the peculiar situation of Moldova's identity as a country: "Countries tend to bandwagon with countries of similar culture and to balance against countries with which they lack cultural commonality. This is particularly true with respect to core states. Their power attracts those who are culturally similar and repels those who are culturally different [...] Core states may attempt to

incorporate and dominate some peoples of other civilizations who, in turn, attempt to resist or to escape such control” (S.Huntington, in *The Clash of Civilizations*, p.155)

\* Comment on the following statement: “We are ethnic Romanians by inheritance but Moldovans by citizenship”. (Moldova’s president Petru Lucinschi in a Reuters interview: February 1999).

### ***Suggested Reading:***

### **Acculturation and Specific Identity:**

#### **The Moldovan Context**

Historically, Moldova’s pristine cultural traditions came to interact with the powerful political, linguistic, and cultural ascendancy of the Russian Empire for over a century (1812-1918); the same process was aggressively resumed on all planes, political, linguistic, cultural and ideological, during almost half a century of Soviet totalitarian rule (1940-1941 and 1944-1990).

The peculiar type of acculturation that took place over those periods of time explains several distinctive traits and accentuated reactions that characterize modern Moldovan culture today, and its search for a clear cut identity. It is against the backdrop of these endeavors that one can better assess the underpinnings of the strong emphasis on the Latin origin of the language, or on the pre-Russian traditions of Moldova. Powerful symbols that epitomize this revival and the rebuttal of Russian acculturation include, among other things, the bronze monument titled “To Rome” featuring the Capitoline she-wolf suckling Romulus and Remus, a statue that dominates the entrance of the Chisinau Museum of History; the Roman eagle in Moldova’s national emblem; and the Latin language motto “Virtus Romana Rediviva” (Roman Virtue Reborn) on the great seal of the city of Chisinau.

***Great Seal of the City of Chisinau (founded 1436)***

Regardless of those reactions to the past, Russia's impact over Moldova's identity (in its two core state incarnations --czarist and Soviet) is a phenomenon hard to ignore. The cultural changes that occurred in the wake of the interaction between Moldova's traditional society, and Russia's manifold influences over 150 years of attempts to forcefully assimilate Moldova are visible in the social, linguistic and ethnic fabric of Moldovan society.

But although superior in political power and cultural ascendancy, Russia failed to fundamentally modify the bedrock of Moldovan identity, and in the case of Moldova, acculturation did not result in total cultural fusion or assimilation. In the words of a high-ranking Moldovan official: "It is obvious that in numerous positions, the history of our country coincides with the history of the Romanian state of today, but nevertheless Moldova is another country" (Presidential Briefing, July 24, 2001)

***Questions and Issues:***

\* What is the explanation of the fact that Russian influence resulted in a higher degree of acculturation in Moldova's urban population, while Moldova's rural areas remained the repository of the land's ancient traditions?

### 3. Moldovan Culture

#### The Language

Moldovans speak Romanian (dubbed "Moldavian" by the land's former rulers, Russia and the Soviet Union). Romanian is the language of communication of the majority of the country's native population and the mother tongue of about 65 percent of its residents. Romanian spoken in Moldova is the same as the language spoken across a wider geographical area by some 24 million people in Romania, limited parts of Yugoslavia (Voivodina) and Hungary (the Gyula area), differentiated here and there by hues of regional accent. According to Romance Linguistics the differences in accent encountered in the Romanian language fall into three broad categories --Moldovan, Transylvanian and Muntenian. Such differences make Romanian sound regionally different, the same as English spoken in Massachusetts usually differs from English with a southern drawl, characteristic to Georgia.

For political reasons, Russia in the 19th century, and the Soviet Union in the 20th century called the language spoken in Moldova "Moldavian". The roots of the issue date back to the beginnings of the process of Russification, in the wake of the annexation of the eastern half of historic Moldova by Russia in 1812. Linguistic authority and common sense converge in the conclusion that, the same as there is no such thing as a "Mexican" or "Nicaraguan" language separate from Spanish, there is no such thing as a "Moldavian" language. The semantic fallacy of Moldavian as a separate language is exemplified by the impossibility of ever compiling a Moldavian-Romanian dictionary. Historically, Romanian is the lineal descendant of Vulgar Latin, the non-literary speech of the legionaries and colonists drawn from various parts of the Roman Empire who began the Romanization of Dacia in the second century of the Christian era. It developed from the "lingua franca" spoken around the lower Danube and the Carpathian Mountains from about the middle of the first millenium of the present era.

The frequency of the Latin element in modern Romanian amounts to about 85 percent. The non-Latin lexical elements fall into two categories: the numerically small but semantically important Thraco-Dacian substratum (connected, but not identical with elements found in Albanian); and the manifold loan-words borrowed over the course of centuries of political, cultural and ethnic contacts with other peoples. An important element in the second category is Slavonic, Church Slavonic having been for centuries the vehicle of communication in Eastern Orthodox cultures, including Romania's. However, Romanian started to absorb such borrowings long before the populations of former Romanized Dacia embraced Slavonic-rite Orthodoxy, in the ninth century. That specific process began much earlier, at the time of the Slavic populations' invasion of former Dacia and East-Central Europe, in the seventh and eight centuries. As a result of the Romanized local population's cohabitation with these early Slavic settlers, many Slav borrowings entered the basic word-stock, giving the Romanian language its specific flavor in the family of the Romance languages. Other borrowings in the Romanian language are of Hungarian, Greek and Turkish origin.

## **The Alphabet**

At the time of Moldova's struggle for independence from the Soviet Union, with the notable exception of the language issue, no other issue was more ardently debated than that of the alphabet. In the 1989 popular demonstrations for freedom, the recurring slogan chanted was: "Limba! Alfabet!" ("Language! Alphabet!"). Such unusual demands reflected the deep-seated frustration of a people whom the Soviet regime had forced to use Russian as the official language and Russian Cyrillics in the writing of their mother-tongue, a Romance language, just like Spanish or Italian, naturally suited for the Roman script.

In Moldova's cultural and historical context, the alphabet issue illustrates the unique situation of a neo-Latin language forcefully written for decades in an alien script --Russian-Cyrillic-- in order to make it look different from Romanian in writing, and thus blur and hinder communication between speakers of Romanian on the two sides of the Moldo-Romanian border.

On August 31 1989, while still part of the Soviet Union, Moldova abrogated Russian as the official language of the republic and established by law the return to the Roman script. In the Nistru east-bank districts of the Republic of Moldova, the 1989 Language and Alphabet Law was rejected and became instrumental in the secessionist movement of the trans-Nistrian enclave, where Russian-Cyrillic continues to be the only officially recognized alphabet.

### **Religion:**

#### **Moldovan Orthodoxy**

The Orthodox Church is Moldova's main religious denomination, to which over 86 percent of the population belongs. Moldova is thus one of the most homogeneous Orthodox countries in the world. Despite its many successive incarnations, the Orthodox Church represents the oldest and most enduring institutions in the country whose first metropolitan, the bishop of Cetatea Alba, was appointed in 1401. Under the Russian czarist

rule (1812-1917) ecclesiastical jurisdiction over Bessarabia was devolved to Russia's Orthodox Synod in St. Petersburg, under whose direction the local church's ties to its originary metropolitan see of Jassy, across the Prut, were severed. Russian was imposed as the language of liturgy and the Orthodox Church became one of the czarist empire's most powerful instruments in pursuing the policies of Russification.

Under the Soviet rule (1940-1990) the Orthodox Church was the target of communist atheistic propaganda. In spite of decades of atheistic propaganda and destruction of churches under the Soviet rule present-day Moldova boasts some 853 Orthodox churches and over a dozen monasteries, most of them reopened after the country's declaration of independence.

Currently Moldova's Orthodox Church is canonically split between the metropolitanate of Moldova, subject to the jurisdiction of Russia's patriarchy, and the metropolitanate of Bessarabia, which put itself under the jurisdiction of Romania's patriarchy.

### **Moldova's Other Religious Denominations**

Other religious denominations include Baptists, with some 184 communities, Adventists, with over 60 communities, Pentecostals, with about 34 communities, Roman-Catholics, with some 11 communities and Jews, with 6 communities.

### ***Questions and Issues:***

\* Does the division between Moldova's Church subject to the jurisdiction of Russia's patriarchate, and the one subject to the jurisdiction of Romania's patriarchate indicate a deeper polarization inside Moldova's post-Soviet society?

\* Do you think Moldova's Orthodox revival will contribute to moving the public spirit and the political class closer to the West, or closer to forces that would like Moldova to re-enter Russia's sphere of influence in Moscow's near abroad?

### **Moldovan Traditional Culture and High Culture**

Traditional Moldovan culture is rooted in Romanian culture from which it can hardly be separated. Beginning with the folk myths relating to Roman Emperor Trajan, the conqueror of Dacia, and the memory of his "vallum" ("Valul lui Traian" whose vestiges cut across Moldova from the Prut River to the banks of the Nistru; or the widely popular legend of Dochia, thought to evoke the name of Dacia; and continuing with such folklore

creations as the “Miorita” epic, the oral and written traditions relating to the historic cradle of Moldova in Transylvania’s Maramures, and the long history of leading figures, heroes and warriors; and ending with commonly shared literary masterpieces, all of Moldova’s major cultural landmarks are not Moldova’s exclusively. They straddle the Prut and are shared with Moldova’s next of kin, west of the border, where the same language is spoken and the same heritage has been preserved. In the realm of high culture, that is corroborated by Moldova’s pantheon of classic writers, identical to Romania’s. It includes literary and cultural personalities such as historian and polymath Demetrius Cantemir (1673-1723), cultural trailblazer and writer Gheorghe Asachi (1788-1869), humorist Ion Creanga (1837-1889), historian, playwright and novelist B.P. Hasdeu (1838-1907), cultural innovators Mihail Kogalniceanu (1917-1891) and Alecu Russo (1819-1859), playwright and poet Vasile Alecsandri (1818-1890), novelist and and historian C. Stere (1865-1936); and, last but not least, Moldova’s (and Romania’s) national poet Mihai Eminescu (1850-1889).

## **Holidays**

Traditional Moldovan culture is rooted in the peasant folklore and the Orthodox religious celebrations. Folklore calendar traditions include the New Year fertility ritual “Plugusorul” featuring the symbol of ploughing under the auspices of old “Badica Traian” (Graybeard Trajan), the early March “Days of Dochia”, a period of nine days when Winter sheds its last snows and gives way to Spring time, the Christian movable feast of Easter (Paste), with all-night church vigils and midnight mass, Saint Elijah (Sfantul Ilie) August 2 when people go on processions in the fields and pray for rain, and Christmas (Craciun) celebrated either on the western date December 25, or according to the Julian calendar on January 7.

Secular holidays include “Women’s Day”, March 8; “Labor Day” (or May Day, May 1); “Victory Day”, May 9; Moldova’s National holiday – “Independence Day”, August 27; and “National Language Day”, August 31, celebrating the 1989 passing into law the establishment of the official language replacing Russian and the return to the Latin alphabet.

## ***Questions and Issues:***

\* To what extent does the shared cultural heritage of Moldova’s and Romania’s traditions indicate a confluence and kinship, and to what extent, divergent historical paths between the two countries have created a cleavage?

\* Moldova shares with Romania both old folklore traditions and more recent higher culture achievements in literature and the arts. Which of the two posed higher barriers to Russia’s endeavors to assimilate Moldova, both under the czars and during the more recent decades of Soviet domination?

### **The Moldovan Family**

Moldovan society has preserved to a very large extent the traditional pattern of extended families living together. Historically, that mode was disrupted brutally during the Stalin-era deportations when many families were separated on their way to Siberia, Kazakhstan and other parts of the former Soviet Union. Between 1956-1961 some 15,000 Moldovan families were allowed to return from their places of deportation back to their native places in Soviet Moldova.

In Moldova's traditional society extended families tended to live together, often comprising more than one generation. Today the pattern is still alive and contributes to alleviate the economic hardships of transition. Family bonds remain strong especially between grandparents ("bunel" and "bunela") and grandchildren, as well as between mothers and daughters.

In 2001 a "National Strategy Plan for the Protection of the Family" was approved by the government of Moldova. Its full implementation is expected to take five to ten years.

## **Part II: HISTORY AND ITS LEGACIES**

### **1. Early History**

#### **Founding of Moldova**

According to ancient chronicles, Moldova was founded in approximately 1352 by Voivode Dragos, a Wallachian nobleman from Maramures who took possession of the province in the name of Hungary's king, to whom he was a vassal. Moldova's history of statehood begins in 1359, when another Wallachian nobleman from Maramures, Bogdan I proclaimed himself independent of the Hungarian Crown. But Moldova had borne its name and had been inhabited by its own local population before Dragos and his successors organized it as a principality. As far back as 1334, a Latin document already mentioned one of its cities as "**civitas Moldaviae**". Out of 755 villages mentioned in official documents before the year 1449, --607 (i.e. 80.3 percent) had had their boundaries established before Moldova became a principality under Bogdan I.

*Map of Moldova and Bessarabia before the 18<sup>th</sup> century Russian conquests and the Peace Treaty of Bucharest (1812)*

**What's in a Name:**

**Bessarabia**

Moldova's seaboard and the lowland areas north of the Danube Delta were initially under the authority of the Wallachian dynasty of the Basarabs, whose progenitor, Basarab I founded in 1330 the Principality of Wallachia, south of Transylvania. Moldova acquired the "Land of the Basarabs" from Wallachia in the 1400s, which accounts for the fact that only the southern tip of Moldova, as distinguished from the major part of its

landstretch, was traditionally known as Basarabia (Latinized form: Bessarabia), a name after 1812 extended to the entire area.

## 2. Moldova and the Ottoman Power

### A Maverick Struggle for Self-Rule

The Medieval Principality of Moldova maintained a fragile independence for some time, defending itself against the inroads of the Tatar tribes of the Golden Horde, Moldova's primal neighbors to the east; and later on, against the first Ottoman incursions from the Black Sea, the basin of which came under total Turkish control after the 1453 fall of Byzantium and the demise of the Eastern Roman Empire.

While the Ottoman Empire continued its aggressive expansion into the Balkans and eastern Europe during the 15th century, Moldova's most famous ruler, Stephen the Great (1457-1504), attempted to maintain the principality's independence. In spite of stubborn resistance and a number of small-scale victories against the Turkish invader, Moldova was eventually forced to capitulate. It surrendered the country's seashore, consented to pay an annual tribute and entered into a vassalage relation with Ottoman Turkey whose sultan became the overlord of the principality. In exchange for the tribute, Ottoman Turkey pledged not to interfere in the framework of church and state in the country. Due to that status, Moldova was never turned into a *pashalik* or Turkish province. It preserved self-rule in domestic affairs, continued to have its own reigning princes, approved and nominated by Ottoman Turkey, which almost continuously acted as Moldova's suzerain power until the mid-19th century.

During the 16th and 17th centuries, Moldova intermittently tried to shake off Ottoman suzerainty by attempting to take advantage of Turkey's conflicts with the Habsburg and Russian Empires. But being located along the direct invasion route to Turkey's provinces south of the Danube --just the same as neighboring Wallachia-- Moldova soon became an area of warfare and military occupation for a long series of intermittent Russo-Turkish Wars.

### Russia's Rise to Power

With Russia progressively projecting rising power west and south-west, Moldova first came under Russian military occupation, briefly, in 1739 and, later on, together with Wallachia, during the 1768-1774 Russo-Turkish War, which ended with the Treaty of Kuchuk Kainarji. Russia's armies again occupied Moldova between 1787 and 1791, during a war that ended with the Treaty of Jassy, which brought the border of imperial Russia to the Nistru. In 1782, in the interlude between between those two wars, Russia's Empress Catherine the Great proposed to Austria's Emperor Joseph II what is called the "Greek Project", devised to establish a Russo-Austrian sphere of influence against the Ottoman Empire in East-Central Europe and the Balkans. The plan included the creation of two buffer states: a reconstituted Dacia encompassing the twin-Principality of Moldova and Wallachia to be ruled by an Orthodox sovereign acceptable to both Russia and Austria and a restored Greek Empire south of the Danube, to be ruled by Catherine's grandson, Konstantin.

The Greek Project did not materialize and, the Danubian principalities of Wallachia and Moldova came again under Russian military occupation between 1806-1812, at the time of the first Russo-Turkish War of the 19th

century.

### 3. Czarist Russia and Moldova

#### The 1812 Annexation

The Peace of Bucharest which ended the 1806-1812 Russo-Turkish War and the third Russian occupation of the Danubian Principalities, resulted in the partition of Moldova, the eastern half of which was surrendered by Ottoman Turkey to Imperial Russia, into which it was incorporated as Bessarabia --from then on the name of the entire stretch of land between the Nistru and Prut Rivers.

The moment of the splitting of Moldova was a historic milestone, paving the way for a new course of social action, political change and over 100 years of unprecedented acculturation of its eastern half under the influence of Russia. Russian rule over the eastern half of historic Moldova was briefly interrupted over part of the annexed territory in the aftermath of the Crimean War (1853-1856), when the Congress of Paris returned three of Bessarabia's Danubian districts to the Principality of Moldova, still a vassal of Ottoman Turkey at that time. Southern Bessarabia was a component of Moldova when the principality merged with Wallachia to form -- under Moldova's Prince Alexandru Ioan Cuza (1859-1866)-- the United Principalities, the core-state of modern Romania (1862). The status of southern Bessarabia changed again after the 1877-1878 Russo-Romanian-Turkish War, when the Treaty of Berlin, while recognizing Romania's independence, compelled it to cede to Russia the Danubian three districts, and thus restored Russia's full authority over the the lands between the Nistru and Prut Rivers and the czars' empire riparian status on the Danube.

#### *Questions and Issues:*

\* Why did Russia content itself with only half of the Principality of Moldova at the time of the 1812 Russo-Turkish Peace Treaty of Bucharest?

\* What was the international importance of Russia's advent to the mouths of the Danube? Assess the importance of that move in reverse --as mirrored in the later decision of the other European powers to remove Russia from the Danube border, in the aftermath of the Crimean War.

\* Did Ottoman Turkey have the legal right to surrender the eastern half of the Principality of Moldova to Russia? Take into account the fact that, from the standpoint of international law, Moldova was not a province or possession of the Ottoman Empire, but rather a self-governing Principality, subject to Ottoman Turkey's suzerainty.

Jewsbury, George. *The Russian Annexation of Bessarabia, 1774-1828: A study of Imperial Expansion*. Boulder, CO.: East European Monographs, 1976

#### Russia's Imperial Rule: 1812-1917

Russia's czarist rule brought imperial absolutism to Moldova alongside the immigration of alien groups, encouraged by the czars to settle in their newly acquired province. Although a certain measure of economic progress and urbanization of the province's towns --including the future capital, Chisinau (renamed Kishinev)-- are recorded as a positive part of the Russian reorganization of Moldova, historians point out that the region continued to be one of the most backward areas of the Russian Empire, with a population that had one of the highest mortality rates in Europe, twice that of the Russian average. Russian governors treated Bessarabia like a colony, czarist censorship stifled public opinion, the native language of the majority of the population was banished from education and public life, ethnic tensions flared up, especially anti-semitic outbursts, that culminated in the notorious 1903 Easter massacre, which, among other things, gave the Russian word "pogrom" international circulation for the first time in history.

### ***Questions and issues:***

\* What are the basic dissimilarities between the status of Bessarabia (East Moldova) before and after 1812?

### ***Suggested Reading:***

Focas, Spiridon. "Bessarabia in the Political Order of Southeast Europe in the 19th Century". In *Acta Historica* (Rome), v. 8 (1968), pp.119-144

Seton-Watson, Hugh. *The Russian Empire, 1801-1917*. Oxford: Clarendon Press, 1990 *The Tragic Plight of a Border Area: Bessarabia and Bukovina*. Maria Manoliu-Manea, ed. Los Angeles: Humboldt State University Press, 1983

### **The Shedding of Russia's Imperial Sway:**

#### **Moldova and the Bolshevik Revolution**

Russian absolutist administration of Bessarabia crumbled in the final stages of World War I, triggered by the Russian revolutions of February and October 1917. After the flight of the last Russian governor from Chisinau and the formation of a provisional government of Russia in Petrograd, a Moldovan National Committee was organized in the capital in April 1917. It called for autonomy, land reform, and the return to the Romanian language in education, judicial and public administration.

On November 15 1917, Bolshevik Russia promulgated "The Declaration of Rights of the Peoples" of the former Russian Empire, including "the right of total separation". On December 2 1917, Moldova's general Assembly ("Sfatul Tarii"), elected from all of the province's ethnic groups and social and economic strata, convened in Chisinau. Out of the 138 members of the newly elected body 70 percent were Moldovan and 30 percent represented the province's ethnic minorities, Ukrainians, Russians, Bulgarians, Jews etc. The Chisinau Assembly proclaimed the establishment of the Moldovan Democratic Republic, as a loose constituent of the Russian Federation.

In the first days of January 1918, as the Bolshevik revolution was gaining momentum across the board, communist para-military units from across the Nistru occupied Chisinau and dispersed the fledgling republic's

governing body. Soon after, with the help of four brigades sent in from neighboring Romania, the Moldovan military units (whose core-battalions –“Cohortele Moldovenesti”-- had been formed in Odessa and Chisinau between April-November 1917) mounted a counter-offensive and forced the Bolshevik units out, throwing them back, east of the Nistru.

With Bolshevik power out, and Ukraine threatening to annex the region, Sfatul Tarii reconvened in Chisinau on January 24 1918, broke all ties with Russia, increasingly plunged at that time into revolutionary anarchy, and declared the independence of the Moldovan Democratic Republic.

Later on, on March 27 1918, as the Bolshevik revolution was plunging Ukraine into increasing disorder and misrule, Sfatul Tarii proclaimed the conditional union of the Moldovan Democratic Republic with Romania “in accordance with historical right and ethnic right, and the principle that peoples should determine their own fate”. The vote was 86 in favor, 3 against and 36 abstentions.

Eight months later, on November 27 1918, Sfatul Tarii proclaimed Bessarabia’s unconditional union with Romania which, in the meantime, alongside its western allies, had emerged on the side of the victors in World War I.

The Bessarabia-Romania union was formally acknowledged by the Peace Treaty of Versailles (October 28, 1920), ratified by Great Britain in 1921, France in 1924, and Italy in 1927. Russia’s successor state -- established on December 30, 1922 as the Union of Soviet Socialist Republics (USSR)-- refused to adhere to the Treaty’s provisions, seeking instead to pursue one of its articles that called for Romania and Russia to negotiate at a later stage on any matters of dispute, through the arbitration of the League of Nations. Such talks, held between 1924-1932, ended in deadlock over the USSR’s insistence that a plebiscite be held in Russia’s former province, a claim which Romania opposed, citing sovereignty over internal matters.

### ***Questions and Issues:***

the 1918 Bessarabia-Romania union be described as an act of annexation according to international law?

\* Assess the applicability of the principle that, under international law, annexation is validated only when consented to by the state whose territory is annexed (in whole or in part) or, in the case of territory not formerly held by another state, when consented to by the international community.

## 4. 1918-1940: The Romanian Interlude

### An Uneasy Integration

In historic hindsight, Bessarabia's 1918 union with Romania was the one critical move that prevented the tottering Moldovan Democratic Republic from becoming a Soviet republic at the end of World War I, a course followed by all other former provinces of the Russian Empire (with the exception of the Baltics). Importantly, Moldova's next-door neighbor to the east, Ukraine, united with Russia's Soviets on December 28, 1920 and was established as a full-fledged Soviet Socialist Republic in 1922.

Bessarabia's union with Romania has been viewed as part of the surge for self-determination of Central Europe's nationalities in the wake of the collapse of the Habsburg, Russian and Ottoman Empires. Though never fully secured by international treaty (not only Russia, but also Japan and the United States failed to ratify the Versailles provisions regarding Bessarabia), the 1918 union was inspired and supported by the Wilsonian principles, spelled out by American president Woodrow Wilson to serve as the basis for territorial settlements at the end of the first World War. Another cause of Bessarabia's decision to join Romania was the revulsion the majority of the local population and of the intellectual elite vis-a-vis the prospects of a Bolshevik take over in the former czarist province.

### Roadblocks in the Old Country

While part of Romania between the two world wars, Bessarabia's lot improved, as the Bucharest government sought to integrate the former Russian province into the structures of modern Romania. Agrarian reform, already voted by the Chisinau Sfatul Tarii in 1918 and endorsed by the Romanian Parliament in 1920, redistributed some 1.8 million hectares to over 350,000 farmers. Public works projects were accelerated. By 1930 literacy had risen to nearly 30 percent. New roads, bridges across the Prut, airports, modern telephone networks were inaugurated in the 30s. In 1939 a state-of-the-art radio station began broadcasts from Chisinau.

About a dozen Bessarabian politicians served with distinction as members of Romania's successive governments during the interwar period, but were never able to return to the high status they had at the top of the Bessarabian national movement in 1917-1918.

The new status of the province was not without dysfunctions and flaws. Many of these had been inherited from the czarist empire. For example, only about 90 miles of paved roads existed in the province before its union with Romania. There were 657 miles of railroads but --built for strategic reasons-- they connected Bessarabian towns and cities with Russia, not with each other.

In the 20s and 30s, 87 percent of Bessarabia's population lived outside the cities, nearly 93 percent of Romanian-speakers lived in the countryside, while Russian ethnics and Jews formed over 50 percent of the urban population. In Bessarabia's towns and cities the Romanian presence was numerically negligible. As a consequence of over one century of policies of colonization, the province was home to over 350,000 Russian ethnics, over 300,000 Ukrainian ethnics and over 200,000 Jews. The latter alone accounted for over 26 percent of Bessarabia's city residents.

At the same time, pro-Soviet, pro-Russian and pro-communist propaganda was active underground, mostly in the cities, but also in the countryside. The Romanian authorities attitude toward any appearance of subversion was, more often than not, harsh and heavy-handed. Locals of diverse ethnic background frequently complained about the patronizing and distrustful behavior of the new administration, which made Bessarabians feel in many cases like second-rate citizens of Romania. In addition, Romanian carpetbaggers offered pro-Russian and Bolshevik propagandists handy ammunition to criticize the evil nature of Romania's rule over Bessarabia.

Throughout the Romanian interlude, Soviet-trained agents were active across the province, Soviet planes episodically dropped leaflets in the countryside, and there were a number of shooting incidents along the Nistru. Bolshevik-inspired incursions, both from across the Nistru and from the Black Sea, culminated in the Tatar Bunar communist rebellion (1924).

### ***Questions and Issues:***

\* What were the main causes of the uneasy acclimatization of Bessarabia into Greater Romania between 1918-1940?

\* Which of the following three contributed most to Bessarabia's decision to join Romania in 1918: The specter of Bolshevik anarchy? Fear of looming annexation by Ukraine? Or the majority's wish to reconnect to the province's pristine cultural roots ?

## **5. A Soviet-Made Moldova On The Border**

### **The MASSR Experiment : 1924-1940**

The Soviet determination to seize back from Romania the czars' former province of Bessarabia materialized in the creation of a pilot political entity under the name of "Moldavia" abutting Romania's border with Soviet Ukraine. Under the custom-tailored name of the Moldavian Autonomous Soviet Socialist Republic (MASSR) the creation of the new body was passed into law by the Supreme Soviet of the USSR in Moscow, on October 12, 1924. Moscow's design was to establish an institutional bridgehead for the its future moves into the area west of the Nistru.

### *The Moldavian Autonomous Soviet Socialist Republic (1924-1940)*

Carved out of Soviet Ukraine on the Romanian border, the largely artificial Moldavian Autonomous Soviet Socialist Republic covered a 8,300 square kilometers area, with a population of over 560,000 inhabitants (1926 est.), mainly Ukrainian ethnics. Ukrainians formed nearly 49 percent of the total population, while less than a third (some 30 percent) were registered as “Moldavians”. Most of the latter were the descendants of a sparse Romanian-speaking rural population which had migrated there from across the Nistru in the 18th and 19th centuries. Other ethnics in the MASSR included Russians (9 percent), Jews (8 percent) and Germans (2 percent).

With its capital in Balta, later Tiraspol, the MASSR was a largely artificial political construct planned to lay the ideological, cultural and logistical groundwork for the future expansion of Soviet power into Romanian-held Bessarabia. It is no coincidence that, as far back as 1924, the MASSR declared Chisinau its “real” capital.

On August 2 1940, upon the annexation of Bessarabia, the Soviet Union dissolved the MASSR, and only a tiny strip of its territory --3,400 square kilometers in surface-- along the Nistru east-bank, was attached to the newly created Moldavian Soviet Socialist Republic (MSSR). The greater part of the short-lived MASSR --nearly 5,000 square kilometers in surface-- was then returned to Soviet Ukraine.

### ***Questions and Issues:***

\* Analyze and assess the relation between the MASSR as a pilot political construct, and today's separatist "Moldavian Nistrian Republic" on the east bank of the Nistru River.

\* Is it fair to say that the actual parent-state of the Republic of Moldova is the 1924 Moldavian Autonomous Soviet Socialist Republic, rather than Bessarabia, or the eastern half of historic Moldova?

## **6. 1940-1991: Soviet Rule Over Moldova**

### **The Molotov-Ribbentrop Pact**

In one of the most important diplomatic preliminaries of World War II, Germany and the Soviet Union concluded a 10-year nonaggression pact, signed on August 23 1939 by Viacheslav Molotov, Stalin's commissar of foreign affairs on behalf of the USSR, and Joachim von Ribbentrop, Hitler's foreign minister on behalf of Nazi Germany. Although the pact became null and void in June 1941 when Nazi Germany went to war against the USSR, the provisions of its Secret Additional Protocol shaped much of Eastern Europe's history --including Moldova's-- in the post-World War II years. Article 1 of the Secret Additional Protocol apportioned the Soviet and Nazi spheres of influence in the Baltic states --Estonia, Latvia and Lithuania (annexed by the USSR on 17-21 June 1940). Article 2 described the future partition of Poland, with the border between the USSR and the Nazi Reich running across the middle of Poland (this provision was enforced by both signatories through military occupation on 1-17 September 1939, thus triggering the beginnings of the second World War in Europe). Article 3 referred explicitly to Bessarabia. It stated the USSR interest in annexing Bessarabia from Romania, and Nazi Germany's consent to that annexation. Today's borders of Poland and Moldova's status (now, a country in its own right for the first time since the 19th century) are among the indirect lingering consequences of the 1939 Ribbentrop-Molotov Pact. The republics of Estonia, Latvia and Lithuania regained their full pre-1940 status in 1990-1991.

The incorporation of Bessarabia into the USSR was carried out through military occupation in the last days of June 1940, preceded by a 48-hour ultimatum to Romania. In the case of Moldova (Bessarabia) the territorial provisions of the Molotov-Ribbentrop Pact were eventually consented to by both the predecessor state -- Romania, and the international community, in the form of the 1947 Paris Peace Treaty. The provisions of the Molotov-Ribbentrop Pact as embodied in the status of the Moldavian Soviet Socialist Republic, a part of the USSR after 1940, became null and void on August 27 1991, by virtue of Moldova's declaration of independence which put an end to Soviet rule over Moldova.

### ***Questions and Issues:***

\* Why is the Molotov-Ribbentrop Pact still raised between the Republic of Moldova and Romania as an issue

in the on-going discussions about finalizing the basic treaty between the two countries?

\* What are the reasons for the current difference in international standing between the Baltic states --Estonia, Latvia, Lithuania-- (now restored to their pre-annexation status after the downfall of the Soviet Union), and the status of post-Soviet Moldova, which enjoys a different status from the one the land had before the 1940 annexation?

### **The Soviet Take Over:**

The incorporation of Romanian-held Bessarabia into the USSR was carried out through military occupation between June 28-July 3 1940. Thirty-two Red Army divisions took part in the operation. On August 2, 1940 the Supreme Soviet of the USSR passed into law the creation of the Moldavian Soviet Socialist Republic on most of Bessarabia's territory. Russian was declared the official language of communication and Russian Cyrillics became mandatory in the writing of Romanian (dubbed "Moldavian" and described as separate from Romanian). On August 15 1940, a Soviet decree passed into law the nationalization of all privately owned land, industries, businesses and trading companies. Confiscation of private land began immediately and the first kolkhozes (Soviet collective farms) were established in the countryside. By October 1940, 487 private enterprises had been taken over by the state in the MSSR's towns and cities.

A Constitution based on the 1936 Soviet Constitution was promulgated in February 1941. It established the Communist Party as the unique political power over the land, and the MSSR Supreme Soviet as the republic's legislative authority. In terms of social and economic initiatives, the elimination of private property continued full scale.

Over 13,000 Soviet specialists and Communist Party activists, including 500 teachers from Russia and 380 from Ukraine moved to the MSSR, assigned to instruct and teach in the new republic. On the other hand, the policy of deportations, started immediately after the annexation, continued unabated, reaching a total of over 100,000 people, mostly landowners, merchants, teachers, priests and members of the urban bourgeoisie. Only in the first months of 1941, over 20,000 persons, were deported to Kuzbas, Karaganda, Kazakhstan and other distant parts of the USSR, amid reports of atrocities and exterminations. In the city of Balti, almost half of the population of about 55,000 was deported to the interior of the USSR in June 1941. Definitive figures are hard to assess, but the number of Moldovan deportees throughout the Soviet rule is considered to range anywhere between 200,000 and 500,000. (According to the 1958 edition of the *British Encyclopedia* (vol.15, p. 662), by mid-1955, the Soviet authorities had deported about half a million persons from the MSSR).

## **World War II**

On June 22, 1941, Germany and Romania attacked the Soviet Union and a Romanian-German military coalition briefly recaptured Bessarabia between June 1941 and March 1944. The Red Army reconquered the land in the Spring of 1944. On August 23 1944, Romania overthrew the military dictatorship that had led the country to war against the Soviet Union and turned its arms against Nazi Germany, fighting as an ally of the USSR until the end of World War II.

The Paris Peace Treaty signed on February 10, 1947 restored the January 1 1941 borders between Romania and the Soviet Union, and thus sanctioned the incorporation of Bessarabia into the USSR. Except for the Romanian wartime occupation (June 1941-March 1944) the de facto incorporation of Bessarabia into the Soviet Union had been in effect since its 1940 annexation.

## **Moldova's Post-War Transformation**

The post-World War II era in Moldova's history began with the continuation of Stalin's policies launched in 1940, including the forced collectivization of the republic's farmland. Between 1944-1948 in a follow-up of the operation begun immediately after the 1940 occupation, 578 kolkhozes were created in the Moldavian SSR. They included the properties of over 100,000 farming families, accounting for 22 percent of the republic's private land. By May 1 1949 the number of collectivized farms had risen to 925. By deportations and other means of eradication of private property, the forced collectivization process was completed by the end of 1950.

Sovietization and Russification continued full-scale in the 1950s under the direct supervision of Leonid Brezhnev, whom Stalin had appointed in 1950 to serve as secretary-general of the Moldavian Communist Party's Central Committee with discretionary authority over the new Soviet Republic.

In the 1950s and 1960s a moderate process of socialist industrialization was implemented on orders from Moscow. One of its relevant characteristics was that most of the new industrial units were located in the Nistru east-bank strip of land, where from the outset, the Russophone population had outnumbered native Moldovans. Steel mills and cement factories were built in Rabnita, which became one of the MSSR's industrial centers. Energy-producing plants and other industrial units were built at Dubasari, Rabnita and Cuciurgan, on the east bank, and the city of Tiraspol became the MSSR's second industrial center after Chisinau. One of the consequences of this long-range policy is that, to this day, Moldova's industrial units, placed by the Soviet Union on the narrow strip of land on the left bank of the Nistru account for about 90 percent of the country's energy production and 28 percent of its industrial enterprises, holding only 16 percent of the country's territory and 14 percent of its population.

Apart from this territorial distribution imbalance, Soviet era planners' emphasis continued to be on the republic's agricultural potential. A "Moldavian experiment" in agriculture was launched in the early 1970s calling for a dramatic increase in the RSSM's agricultural production, which soon brought Moldova the reputation of one of the USSR's breadbaskets and its main vineyard and orchard. While holding a record low of less than 0.2 percent of the Soviet Union's territory, the MSSR ranked sixth in the USSR's food production.

## ***Questions and Issues:***

authoritarian rule over Moldova? What were the fundamental differences between them in: (a) mode of acquisition and (b) administration?

\* With the benefit of hindsight, whose interests were best served by the 1940 inclusion of the Nistru east-bank sliver of land into the Moldavian SSR : Russia's or present-day Moldova's ?

## **7. The Fall of the Soviet System in Moldova**

### **Political Context: Glasnost**

The *glasnost* policies launched by Kremlin leader Mikhail Gorbachev (1985-1991), to promote more openness in the debate of Soviet policies and more freedom of the media triggered an explosion of open discussions that ended in challenging the Communist Party's policies not only in Russia proper, but also in the other Soviet republics, more especially so in the Baltics. The *glasnost* climate exerted a huge impact on Soviet-held Moldova, where it provoked an open debate about the country's language issue and alphabet issue. A groundbreaking periodical called *Glusul* (Romanian: "The Voice") was printed illegally in the Latin alphabet by Moldovan intellectuals in Latvia. Unavailable in Moldova under Moscow's policies of Russification, Roman characters were nevertheless available in Soviet Latvia, where the alphabet issue had no direct political relevance to Soviet policies, as was the case of Moldova. Carried clandestinely, the approximately 60,000 copies of the March 1989 edition of *Glusul* was smuggled and distributed in the MSSR where it had the effect of a watershed, giving a huge impulse to Moldovan intellectuals' struggle for cultural and political emancipation from the USSR.

In the wake of Gorbachev's *glasnost* policies, as the anti-totalitarian sentiment was cresting throughout the Soviet Union, a largely symbolic proclamation of sovereignty was declared in Chisinau, on June 23 1990, preceding Moldova's further moves toward independence.

### **Moldova's New Statehood: 1991**

In March 1991 the MSSR refused to take part in a referendum on preserving the USSR. On May 23 that same year, the name of the Moldavian Soviet Socialist Republic (applied to the land after its 1940 Soviet incorporation into the USSR) was changed to the Republic of Moldova, the old vernacular form --Moldova-- superseding the long-standing use of Moldavia in foreign languages and international documents. At the same

time, the name of the the Supreme Soviet was changed to the Parliament of the Republic of Moldova. Such a dramatic pursuit of independence put the Chisinau local authorities increasingly at odds with the Kremlin, and led to growing tensions between the ethnic non-Russophone majority and the Russophone minorities in the republic. These tensions led to sporadic violence, involving mostly the Nistru east-bank districts of the republic, where Russia's 14th Army was stationed. A brief armed conflict ensued and the republic's east bank districts -- already at odds with Moldova's central government over the language, flag and alphabet issues-- declared their secession from Chisinau.

Moldova's independence was pronounced in an explosion of popular enthusiasm on August 27 1991, in the immediate aftermath of the failed communist putsch in Moscow. In a huge show of solidarity, around 600,000 people from all parts of the country gathered on that day in downtown Chisinau in front of the Soviet-era executive headquarters prompting the republic's legislative body to declare Moldova's separation from the USSR and the end of the Kremlin's rule. On December 26, 1991, the USSR itself was disbanded. As a prelude to its formal dissolution, on December 8, 1991 the three Slavic republics -- Soviet Russia, Soviet Ukraine and Soviet Belarus announced in Minsk the creation of the Commonwealth of Independent States (CIS), as a "coordinating body" meant to oversee common interests of its members in the areas of the economy, foreign policy and defense.

On December 21, the other non-Slavic republics, including Moldova, joined the CIS, under certain conditions. Moldova declined to join the political and military structures of the CIS, but adhered to its commercial and economic structures. The Baltic states and Georgia declined to join.

### ***Questions and Issues:***

\* How were the ethnic, linguistic and political elements linked in Moldova's quest for independence from the Soviet Union?

\* Did the shift in name --from **Moldavia** to **Moldova**-- carry a special connotation in the Soviet republic's efforts to separate itself from Moscow's rule?

\* Is Moldova's new statehood totally firm and secured ? Assess the weak links in Moldova's new identity, taking into account its limited statehood experience, and the Nistru east-bank districts declared secession from the central government and pro-Russian orientation.

## **Part III: THE REPUBLIC OF MOLDOVA TODAY**

# 1. Constitution and State Structures

## Moldova's Constitution

Independent Moldova's Constitution was adopted on July 29, 1994 and took effect on August 27 of the same year. It defines Moldova as a sovereign, neutral, and democratic country, and declares its permanent neutrality; it mandates a free market economy based on the protection of private property rights; and it guarantees the personal rights of all citizens of the country, regardless of ethnic or social origin, language, or religious and political affiliations. Moldova's Constitution guarantees the rights of political parties and of other public organizations. Public administration is carried out on the principles of local autonomy and government powers are based on democratic elections.

The 1994 Constitution described Moldova's system of government as semi-presidential. It called for the president's direct election by all members of the electorate over eighteen years of age.

A referendum on changing Moldova's semi-presidential system of government, as stipulated by the 1994 Constitution, was held in May 1999. In keeping with the amendments consequently brought to the Constitution, in 2001 Moldova became a parliamentary republic, whose head of state is now elected by the Parliament. Critics of the move argue that with one party's solid majority in the Parliament, and the president elected by that very same Parliament, it is possible to envisage a slide toward a brand of direct presidential rule, less likely to be challenged in a relevant way by the legislative body.

The Parliament of the Republic of Moldova

## **The Legislature**

Moldova's parliamentary system is based on a unicameral legislature. The one-chamber Parliament --a successor to the former Supreme Soviet-- has 101 seats. Deputies are elected by universal suffrage for a four-year term. The Parliament meets in two ordinary sessions per year. There are eleven permanent committees, whose tasks cover the following areas: agriculture and food processing industries; culture, science, education and youth; ecology and development of the territory; economy, industry, public finances and budget; foreign affairs; national security; health, family and social protection; human rights and national minorities; law; public communication and mass media. A number of special committees may supplement the Parliament's permanent committees. Special committees in Moldova's XVth legislature currently debate such issues as the Nistru east-bank conflict, changes in the Moldova's Constitution, and adjustments to the administrative organization of the territory. The numbering of Moldova's current legislatures reflects institutional continuity with Soviet-era legislatures (the last Soviet-era Supreme Soviet --at the time of Moldova's declaration of independence-- is considered the republic's XIIth legislature)

## **The Judiciary**

Independent Moldova's judiciary is a successor to the Soviet era judicial system and reflects in many ways practices of the former legal institutions. The General Prosecutor's office directs investigations, orders arrests and prosecutes criminal cases. A network of local courts and higher level appeals courts constitute the territorial basis of the system. The Supreme Court is the top authority on civil, criminal and administrative law. It also passes judgment on cases involving the Constitution and other litigations and special suits, such as disputes over the competence and jurisdiction powers of state bodies, including the presidency, and the other branches of government.

## **The Executive Branch**

The government of Moldova is headed by the prime-minister, nominated by the president. Currently the cabinet has fifteen ministries: Economy, Finance, Industry, Energy, Transportation, Foreign Affairs, Agriculture, Education, Public Health, Labor and Social Protection, Culture, Justice, Ecology and Territorial Organization, Defense, and Internal Affairs. Subordinate units in Moldova's government include the following state departments: Statistic and Sociology, National Relations and Language Functioning, Energy Resources and Fuels, Standards, Metrology and Technical Supervision, Information Technologies, Youth and Sports, Inter-ethnic Relations, Border-Guard Troops, Privatization, Civil Protection and Emergency Situations, Customs.

### ***Suggested Reading:***

Dawisha, Karen, and Bruce Parrot, eds. *Democratic Changes and Authoritarian Reactions in Russia, Ukraine, Belarus and Moldova*. Cambridge, U.K.: Cambridge University Press, 1997

## **Local Government**

Moldova is administratively divided into 11 territorial units --Balti, Cahul, Chisinau, Dubasari, Edinet, Lapusna, Orhei, Soroca, Tighina, Ungheni and Taraclia-- called *Judete* (singular:*Judet*), and an autonomous

territory --Unitatea Teritoriala Autonoma Gagauzia (the Gagauzia Autonomous Territorial Unit), home to most of the Gagauz (Christian Turks) minority. The chief governing authority in each *judet* is the prefect; the local governor of the Gagauz autonomous unit --in keeping with Gagauz tradition-- is called *bashkan*.

Prior to the administrative-territorial reform of 1999, the country was divided into 40 small-size districts (*raioane*). The Soviet-era territorial division is still enforced in the Nistru east-bank region where the secession of the self-declared “Moldavian Nistrin Republic” obstructed the implementation of Moldova’s 1999 territorial-administrative reform, a precondition for continued IMF and World Bank loans to post-Soviet republic.

Moldova’s leftist government which took power after the 2001 elections has given consideration to a return to the old Soviet-style administrative division of the republic’s territory.

*Administrative Map of the Republic of Moldova (2001)*

## 2. Domestic Politics

### Political Parties:

### The Comeback of the Left

Moldova’s political spectrum reflects the legacies of the Soviet-era when the Communist Party was the one and only dominant political force in the republic, exerting discretionary control over all administrative, economic, and cultural affairs of the MSSR, from the advent of Soviet communist rule to 1990. The Communist Party was formally banned in Moldova in 1991, after the aborted Moscow putsch against Mikhail Gorbachev. It was re-established in 1994 under the slightly altered name of the Party of Moldova’s Communists. Whereas its influence in public life

dwindled in the immediate aftermath of the demise of the post-Soviet era, its appeal to Moldova’s electorate rebounded dramatically after 1997, as a consequence of the failure of the center-right parties to deliver on

promises to improve the economic situation of the country and of the people at large.

Rallying 51 percent of the popular vote in the 2001 general elections the Party of Moldova's Communists came back to power as the leading force of a revived left, currently reflected in the composition of the Chisinau Parliament, where the Communists and their allies hold an absolute majority of 71 out of 101 deputies.

The former ruling center-right coalition, formed in the wake of the 1998 elections by three parties (the Democratic Convention, the Bloc for a Democratic and Prosperous Moldova and the Party of Democratic Forces) dissolved in the meantime as an opposition force, the only two center-right parties currently represented in the Parliament being the "Braghis Alliance" with 19 seats, and the Christian-Democrat Popular Party, with 11 seats.

## **Political Parties:**

### **The Extra-Parliamentary Opposition**

Moldova's extra-parliamentary opposition consists of over half a dozen smaller parties. In the wake of the 2001 defeat of the center-right formations, seven of them (the Party of Revival and Accord, the Democrat Party, the National Liberal Party, the Social-Democrat Party, National-Peasant Christian-Democrat Party, the Party for Order and Social Justice and the Party of Democratic Forces) merged to constitute the centrist Democratic Forum of Moldova. The newest emerging political formation in the country's extra-parliamentary opposition is the centrist pro-western Social-Liberal Party which made his debut in May 2001. It advocates the integration of the Republic of Moldova in the European Union and a clear break with the communist past. Its chief objectives include rallying the young generation, women and ethnic minorities under its banner and distancing Moldova from the looming prospect of closer integration with the Russian Federation and the Commonwealth of Independent States (CIS). Its political platform is center-left, youth-oriented and pro-European. It strikes one of the sharpest political contrasts with the mostly old-guard Party of Moldova's Communists.

### **Public Communication and the Media**

The lack of a free press tradition in Moldova is one of the legacies of Soviet totalitarian rule. In the Soviet era all Moldovan media were state-owned, state controlled and subject to drastic political and ideological supervision. The appearance of the Romanian-language, Latin-character periodical *Glasul*, printed illegally in Latvia and smuggled into Moldova in 1989 was a groundbreaking infringement of Soviet censorship over the media. In the immediate aftermath of the country's declaration of independence, most of the press and media outlets were privatized, but under financial pressure, they gradually got under the control of groups of interests whose views they tend to express. The Constitution and the law provide for freedom of speech and of the press, although with some restrictions. Print media express a wide variety of political views and commentary. The frequently encountered inability to distinguish fact from opinion in Moldovan journalism is still at work more often than not in public communication.

In all, Moldova's print media include over 200 newspapers (out of which some 90 in the Romanian language), and over 60 magazines (out of which about half in Romanian). Most papers have a circulation of less than 5,000. The daily circulation is about 24 copies per 1,000 persons. The main official newspapers are the Chisinau daily *Moldova Suverana*, published by the government and its Russian-language version *Nezavisimaya*

*Moldova*. The country's largest circulation papers include the independent *Saptamana* and *Flux*, *Mesagerul* published by the Party of Democratic Forces and *Tara*, published by the Christian-Democrat Popular Party. Other print media include *Sfatul Tarii* published by the Parliament, *Viata Satului* a government publication that targets rural readers. Minority-language publications include *Kishinovskye Novosti*, *Telegraf*, *Russkoye Slovo* and *Kodry* all published in Russian. Also in Russian is *Komratskiye Vedemosti* published in Comrat, the administrative center of the Gagauz Autonomous Territorial Unit where *Ana Sozu* and *Karlangaci* are also published in Gagauz. Other ethnic minorities publications include *Prosvita* and *Homin* in Ukrainian, *Rodno Slovo*, in Bulgarian and *Undser Koll/ Nash Golos*, published in Yiddish and Russian. Tiraspol separatist publications include *Rabochyi Tiraspol* and *Dnestrovskaya Pravda*, the newspaper of the Tiraspol soviet.

## **The Audio-Visual Media**

Although the number of media outlets that are not operated publicly by the state or a political party is growing, most of these independent media still are in the service of a political movement, commercial interest, or foreign country ( mostly Russia and Romania) and secure large subsidies from these sources.

There are dozens of independent radio stations, some of them re-broadcasting programs from Romania and Russia. Three independent television stations cover the Chisinau metropolitan area, and one covers the northern city of Balti. The government owns and operates several radio stations and a national television station that covers most of the country. A number of local governments, including Gagauzia, operate television and radio stations.

Moldova's national TV broadcasts daily in Romanian and Russian. As of June 1995, 89.3 percent of Moldova's households had television sets, which means one TV set per 3.7 persons. Over 15 percent of Moldova's households receive cable television. Cable receivers have access to approximately 18 hours of daily broadcasting aired by the Russian-language television radio company "Ostankino". In addition to its programs in the Romanian language, Moldova's national TV carries five hours per day of Russian-language programs, three hours per month of Ukrainian, Gagauz and Bulgarian and one and one-half hours per month of Hebrew- and Yiddish-language programs.

There are some 800,000 radio receivers in Moldova. In addition to its programs in the Romanian language, Moldova's national radio carries five hours per day of Russian-language broadcasts and one hour per month of Gagauz-, Bulgarian-, and Yiddish-language programs.

By 1999, over 90 private TV and FM radio stations with low transmitter power had obtained licenses to broadcast in the Republic of Moldova. Their operations are regulated by Moldova's Telecommunications Law, passed in December 1995. According to that law, the radio frequency spectrum constitutes a national patrimony which is administered by the State Committee on Radio Frequencies, subordinate to the government.

## **Moldova's Non-Governmental Organizations**

One of the Soviet-era legacies is the virtual absence of civic organizations within Moldova's society before independence. The endeavors to lay the groundwork for non-governmental organizations and thus contribute to building the basis for a strong and stable civil society have been relatively successful in spite of this drawback. A law on NGOs was passed by Moldova's Parliament in 1996. Today, Moldova's several hundreds of NGOs

include organizations dealing with the areas of agriculture, business, education and culture, the environment, public health, law, human rights, women's issues the media, etc. In Chisinau alone these include the 21st Century Fund, the Altair International Ecological Agency, the Anti-HIV Association, the "PRAES" Association for Social Development, the "Bluebird" Charitable Fund European School, the Eurasia Foundation, the Helsinki Committee for Human Rights, the Independent Journalism Center, the Independent Press Association, the International Center for Economic Transformations Research, the Mold-Eco Foundation, the Gender in Development (GID) Project, the Open Information Society, the Pro-Basarabia/ Pro-Bucovina Association, the Chisinau Russians' Community, the Republican Organization for the Empowerment of Moldova's Youth, the Moldovan Scientists Association, the Pro-Moldova Patriotic Movement, the Philanthropic-Social Foundation for the Protection of Disabled People and Pensioners, the Socium-Moldova Foundation, the Women's Organization of Moldova, the Association of Electronic Press, the Association of Independent Press, etc.

### **3. Economic Structure**

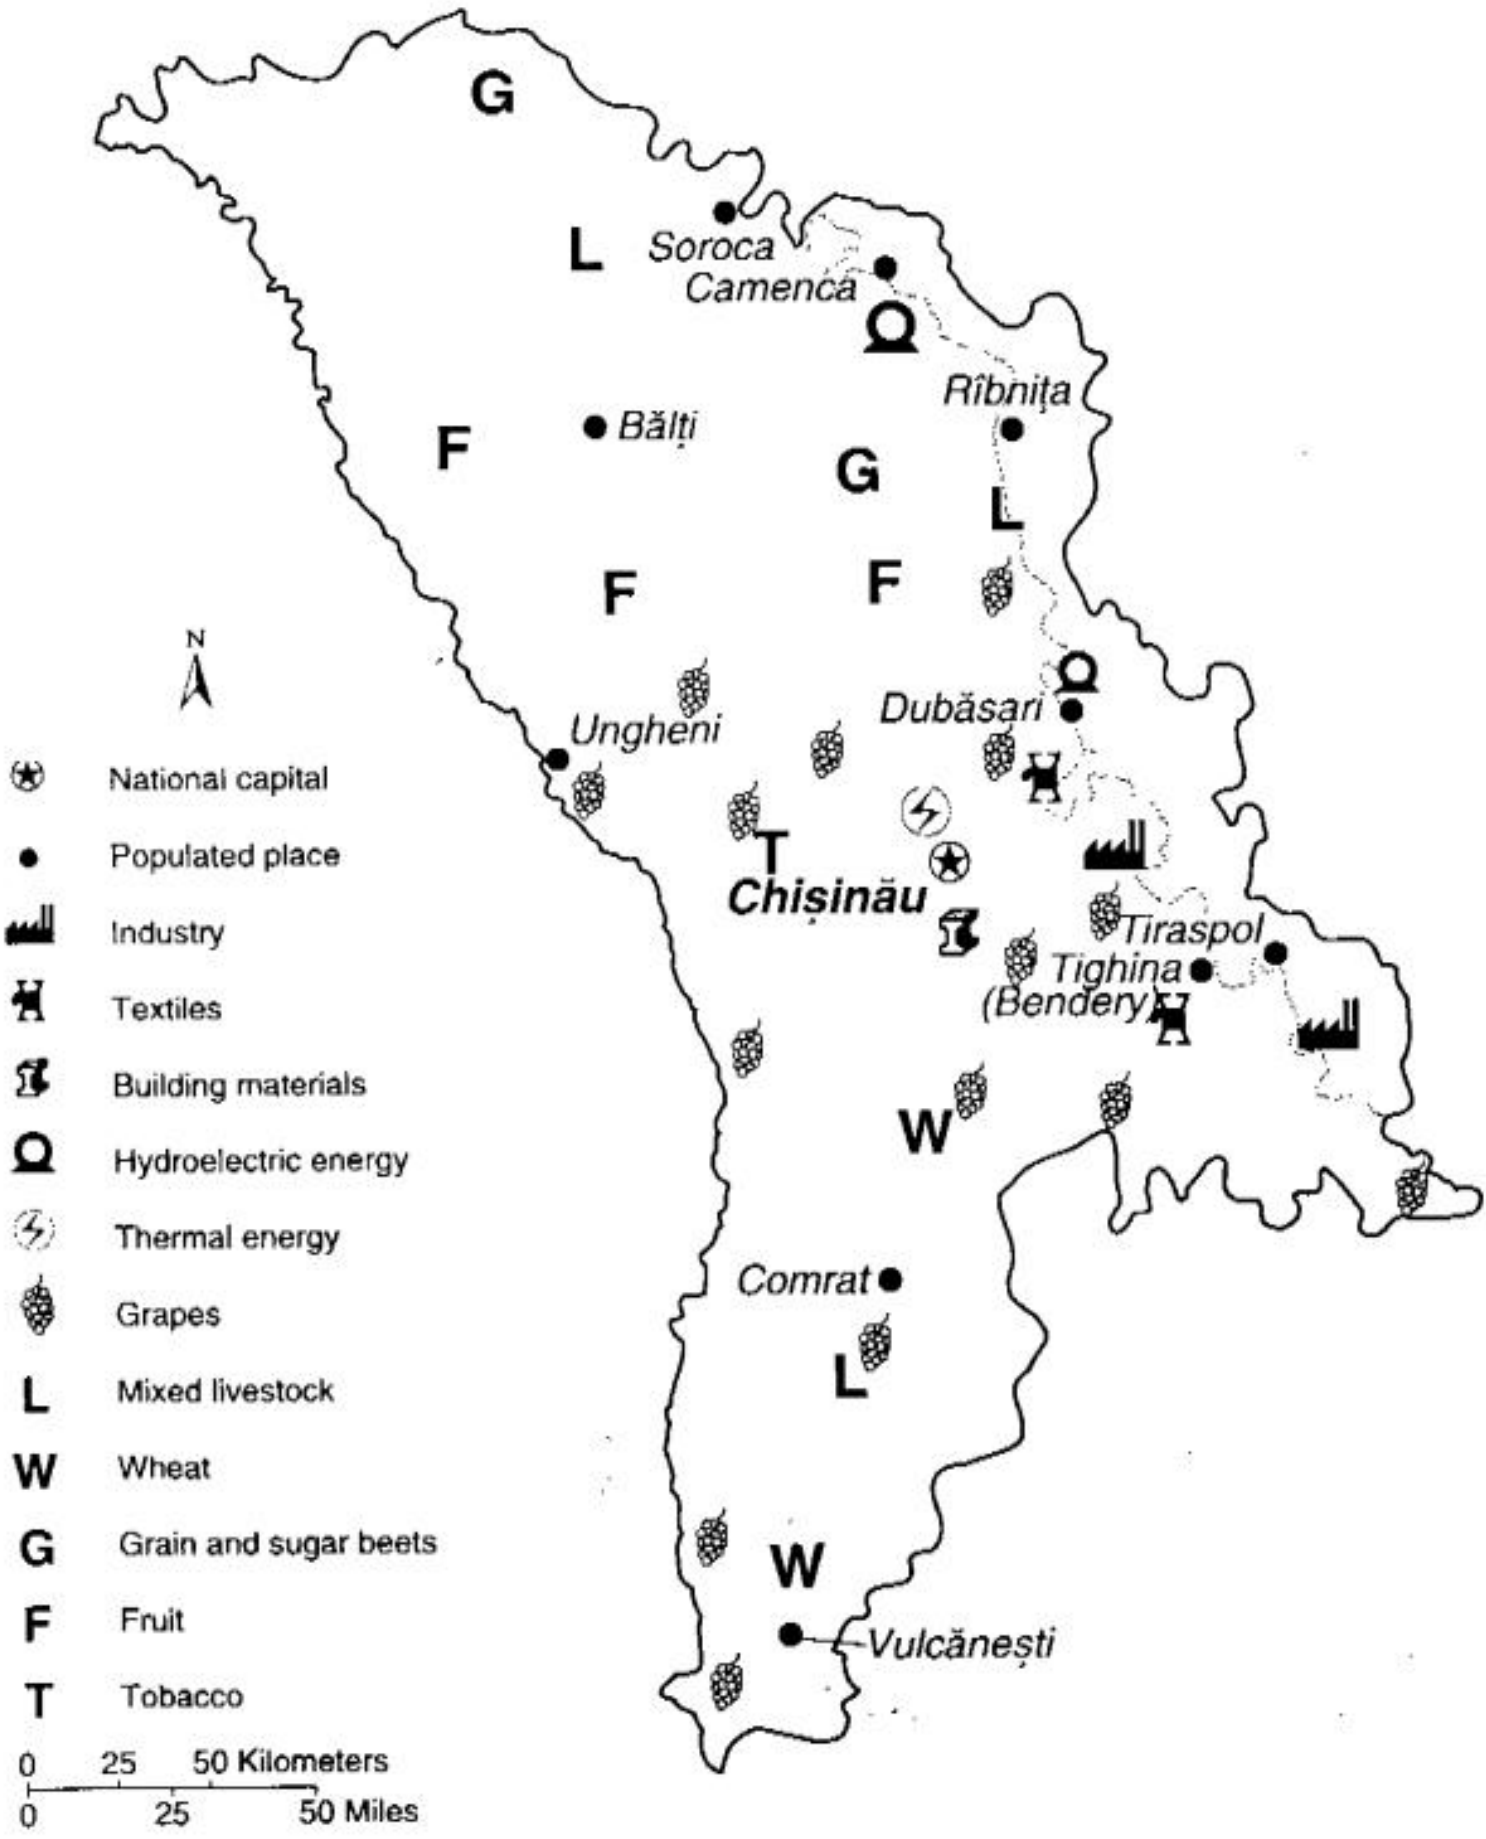

#### **General Profile**

Moldova's national economy is agro-industrial, with agriculture accounting for over 44 percent of the net material product. Its major products are vegetables, fruits, wine and liquors, tobacco, grain, sugar beets, and sunflower seeds. About 46 percent of the country's industrial sector is based on food processing, which operates in close cooperation with agriculture. Electric energy production accounts for 17.7 percent, engineering and metal processing for about 10.8 percent and light industry for about 6 percent of Moldova's total output. Moldova's economy is chronically affected by dysfunctions generated by the trans-Nistrian separatist conflict, as most of the country's industry and energy-producing units are located on the east bank of the Nistru River.

There are indications that official data fail to capture a substantial portion of the country's economic activity, with some estimates maintaining that nearly half of the country's overall economic activities are unofficial. Financial analysts say that the recorded GDP curves may be an effect of the inadequate record of exports to other successor states within the CIS, which either transit through or originate from the breakaway Nistru region controlled by the Tiraspol secessionist authorities.

A general decline of the economy translated into a dramatic deterioration of the purchasing power of the population making Moldova one of the poorest countries of Europe over the 1991-2000 period. The poor state of the economy was one of the leading factors that contributed to the left's victory in Moldova's 2001 elections when the communists were voted back to power.

Under the statistical data of Moldova's National Bank, at the beginning of 2001, Moldova's foreign debt was \$ 1,539 million, which translates into \$341.3 per head of inhabitant (up by 16.3 percent from \$293.45 in 1997).

Moldova's privatization effort has been governed by the Privatization Law of 1991, according to which all Moldovans have the right to privatize state property by using their National Patrimonial Bonds to purchase shares of major, midsized and small enterprises as well as state-owned homes. The privatization effort has been generally slow and hampered by numerous bureaucratic hurdles. It was somewhat more expeditious in the areas of housing and the return to private ownership of the land. The pace of privatization subsided amidst the political uncertainties that led to the February 2001 anticipated elections, and in the immediate aftermath of the Party of Moldova's Communists return to power as a result of these elections. The IMF froze its \$142 million, three-year lending program after the elections, as the left was swept to power and some communist deputies talked of scrapping privatization plans, introducing protectionist trade tariffs and abandoning economic reforms demanded by the IMF.

But in the first half of the year 2001, Moldova's economy displayed signs of recovery. The gross domestic product expected to rise by seven percent after increasing 1.9 percent in 2000 and dropping 4.4 percent in 1999. The International Monetary Fund was encouraged by Moldova's inchoate economic progress after the new government took over, and agreed to resume lending, if the Chisinau government met some legislative conditions, such as adopting the needed laws on bankruptcy and financial disclosure.

## **Main Economic Coordinates**

### **Agriculture**

Moldova's economy is based primarily on agriculture which, together with food production, accounts for about 50 percent of the country's GDP. Under average conditions, Moldova's yearly agricultural production is around 3 million tons of grain (chiefly winter wheat and corn), 800,000 tons of fruit and berries, 1 million tons of vegetables, over 2 million tons of sugar beets, 200,000 tons of sunflower seeds, over 400,000 tons of meat (live weight), over 1 million tons of milk, and around 55,000 tons of tobacco. Moldova is an important producer of grapes, with an annual yield of approximately 870,000 tons (1995 est.).

From the total area of the Republic of Moldova, over 58 percent are agricultural

grounds. The agriculture, beverages and food industries employ about 36 percent of the country's available labor force. Approximately half of Moldova's agricultural and food production is traditionally exported to the former Soviet republics. In the first half of 2001, the main importer was Russia, followed by Ukraine, Italy and Romania .

### **Sequels of Collectivization**

Due to the drawbacks of Soviet collectivization, chronic lack of incentives and the many malfunctions generated by the centralized system of production, Moldova's agricultural production started to display a decline ever since the late 1980s. The trend continued into the 1990s while privatization of the agricultural sector lagged behind. In April 1997 only 8.6 percent of the total land subject to privatization had been transferred into so-called joint-venture companies which de facto continued to be run by the same Soviet-era kolkhoze managers and administrators. Moldovan farmers tended to withdraw their lands and properties from

such companies in order to create, like before 1940, their own individual farms.

By 1993 Moldova had only a small number of privately-owned farms (about 500); by 1995 this number increased to almost 14,000. These small farms held only 1.5 percent of Moldova's agricultural land, but their output increased from 18 percent of the country's total agricultural output in 1990, to a significant 38 percent in 1996. In 1997 the Chisinau Parliament approved a law that for the first time since the forced Soviet collectivizations of the 1940s, made possible the sale of land, and in 1998 the World Bank approved a \$5 million credit for a Rural Finance Project meant to develop and test a banking system apt to provide financial services to small private farmers and rural entrepreneurs in Moldova. As of 2001, only 10 percent of Moldova's total agricultural land was privatized.

In the year 2000, out of the country's approximately 1,000 large collective farms, over 900 had applied for the government's land privatization program. By the end of the year 2000 approximately 630,000 landowners had received title to almost 1.7 million plots of land. In 2001, the United States expressed its willingness to further support Moldova's agriculture, stressing the need for a successful finalization of agricultural reform.

## **Industry**

The industrial sector accounted for about 23 percent of the net material product of Moldova's national economy in 1998 (down from 38.9 percent in 1993). The decline continued into the late 1990s, but signs of relative recovery were noticeable in the first half of the year 2001, when the rhythm of industrial production was 112.1 percent up from the preceding year's comparable figures in the same time-frame. Industrial growth in the first six months of 2001 was as follows: construction --143 percent; chemical industry --118 percent; machinery --123 percent; timber --123 percent; glass --106 percent; food processing --114 percent. Under average conditions, the country's industrial sector furnishes less than one third of the gross domestic product. It comprises about 600 major and midsized enterprises and provides over 250,000 jobs.

About 46 percent of the industrial sector is based on food processing which operates in close interaction with agriculture. It includes over 200 enterprises producing wines, canned fruit and vegetables, meat and dairy products, sunflower seed oil, sugar, perfumes and cosmetics. Its average potential capacity per season includes the processing of 1.4 million tons of grapes, 1.6 decaliters of brandy, over 10 million bottles of sparkling wines, 500,000 tons of sugar and 50,000 tons of tobacco.

Electric energy accounts for about 17.7 percent of Moldova's total industrial output. Engineering and metal processing, which includes agricultural machinery and foundry equipment, accounts for about 10.8 percent. Light industry, which includes refrigerators and freezers, washing machines, textiles and shoes, accounts for about 6 percent.

Most of Moldova's industry was created during the Soviet era and is strategically located on the east bank of the Nistru River, on the territory of the separatist "Moldavian Nistrin Republic". Although holding about 14 percent of Moldova's total population, the breakaway region accounts for 28 percent of the country's enterprises, 21 percent of its total industrial employment and over 33 percent of its total industrial output, which includes power transformers, military weaponry, cement and steel.

## **Energy**

Moldova's energy sector relies mainly on imported coal, oil and natural gas, with local resources accounting for a very small share of the fuel and electrical power needs of the country. The energy sources consist of a system of small hydroelectric plants on the west bank of the Nistru and on the east bank of the Prut. Local thermal power plants are providers of electricity in Balti, Chisinau and Rabnita. Moldova's largest power-producing plant is Cuciurgan, located on the east bank of the Nistru, on territory held by the breakaway "Moldavian Nistrin Republic". In recent years, Cuciurgan alone produced roughly 30 percent of Moldova's consumption of energy. The other two main producers of energy, Dubasari and Rabnita are also under the control of the Tiraspol separatist authorities which frequently resort to power outages as a means of exerting pressure on the country's central authorities. Moldova is currently exploring alternative energy sources and working on projects to develop its own energy supplies, such as solar power, wind and geothermal. Moldova also plans to take part in the building of the second reactor of the Romanian nuclear power station in Cernavoda if that project proves advantageous.

Aggravated by the trans-Nistrin secession, Moldova's lack of independent energy resources is one of the most onerous bequests of the decade-long Soviet rule over the republic.

### **Structural Challenges:**

In the wake of Moldova's accession to independence, three pivotal areas ended up in generating a vicious circle; they currently continue to pose the hardest challenges for the take off of the country's post-Soviet economy:

## **I. The energy factor**

Due to the country's lack of energy reserves and domestic resources, the Republic of Moldova is heavily dependent on a couple of important causal factors which it cannot adequately control:

The first causal element is the fact that most of the country's own energy producing plants are located on the territory of the breakaway "Moldavian Nistrin Republic". The Tiraspol secessionist leadership practices a policy of pressure and blackmail on the country's central authorities --at times in the form of electric power blackouts which episodically paralyze the capital and the rest of the country in demonstrative manner.

The second cause is Moldova's complicated relationship with its main traditional supplier of energy, Russia. Russian natural gas monopoly and main provider of Moldova's energy companies is Gazprom. For a variety of economic reasons, Moldova's payments to Gazprom have been chronically lagging behind, and the Russian firm has frequently threatened to cut supplies, unless the Moldovan firms pay off their debt. However, most of the gas supplies go to state-controlled industrial firms in the breakaway Nistrin republic, whose separatist

authorities routinely stall payment. In 1999, Moldova's total debt to Gazprom was over \$ 600 million, out of which Chisinau's owed about \$210 million, while Tiraspol separatist entity owed over \$400 million.

## II. The shadow economy factor

It accounts for about two thirds of the national economy and encompasses four distinct operating areas: the *unofficial economy*, comprising business entities and persons engaged in both legal and illegal activities for which they avoid paying taxes; *the informal economy*, representing transactions among economic factors based on personal contacts and relationships that substitute for, or replace officially documented transactions; *the fictitious economy*, encompassing off-book transactions conducted by state officials who take advantage of their positions to manipulate expenses and income in order to reduce tax liabilities; and *the criminal economy*, encompassing underground activities conducted in such areas as drug trafficking, prostitution, illegal import-export transactions, bribery, extortion and smuggling.

The internationally unrecognized political entity on the east bank of the Nistru River is the haven of most of these activities. It is in that specific context that the breakaway "Nistrin republic" plays the role of the main linchpin in the vicious circle of challenges that hampers the progress of the Moldova's post-Soviet economy.

## III. The privatization factor

Privatization is not fully transparent, ownership rights are often unclear and hard to protect legally. Whereas privatization programs continue to be under way, recent structural downturns in the areas of industry and agriculture, as well as the lack of control over the economy in the breakaway Nistru east-bank districts, continue to generate chronic dysfunctions which have resulted in the slowing down of the overall pace of reform. In parallel with the privatization efforts made throughout the 1990s, actual bureaucratic measures intermittently halted the process and, in many cases, made it ineffectual locally. Part of the explanation is the complicated political situation, with frequent changes of leadership in Chisinau, but also in the economic consequences of the political and military conflict in the trans-Nistrin region.

The disruption of traditional ties between economic units on the two banks of the Nistru River continue to exert a negative effect on the overall pace of privatization. Both unaccomplished privatization and the lack of clear cut legislation on private ownership and its guarantees constitute chief obstacles to increased foreign investments in the Republic of Moldova. In 2001, foreign investments in Moldovan companies amounted to approximately \$660 million.

*The Economist Intelligence Unit, Country Profile, Moldova 2000-2001*

## 4. Society

### **Demographic Trends**

In terms of demographics the Republic of Moldova is facing the symptoms of growing crisis, prompted and accentuated over the 1991-2001 interval by the decline of the economy and acute worsening of living conditions. According to recent statistics, life expectancy at birth is 61.0 for the male population and 69.9 for the female population. Population growth rate is around --0.02%; the birth rate stands at around 14.32 per 1,000 population; the death rate at around 12.33 per 1,000 population (1997 est.). These figures compare unfavorably with the last statistics of the Soviet era (1989) when Moldova's birth rate was 18.9 per 1,000 population and the death rate 9.9 per 1,000 population, with a rate of natural increase of 1.0 %. Social instability associated with the difficulties of the transition and the deterioration of the standard of living account in large measure for that dramatic drop.

On the other hand, migration, mostly illegal, has been on the increase. Government estimates claim that currently between 600,000 and 800,000 Moldovans are illegally working outside the country. Estimates indicate these migrants work in Russia, Romania, Ukraine and Bulgaria. There was news of occasional arrests of illegal Moldovans in South Africa and South Korea. In the year 2000 2,240 Moldovans working illegally abroad had been extradited back to the country.

## **Health**

Moldova has over 300 hospitals with a total of over 50,000 beds, to produce a ratio of 124.7 hospital beds per 10,000 people. Outpatient care is provided by some 500 medical centers. Medical staff consists of over 17,000 doctors and about 48,000 nurses and other medical professionals. Pharmaceutical supplies rely mostly on imports. A return to the state-owned pharmacies network is to be put in place by Moldova's new leftist government under the pledge that medicines prices will be subsidized by the state. In the decade after independence most pharmacies were privatized but the price of medicines spiraled out of control, creating huge difficulties for the poorer segment of the country's population needing medications.

## **Poverty and Social Safety**

According to a survey conducted by the Moldovan government for the first quarter of the year 2001, 40 percent of the country's population live under the poverty threshold. The percentage is 49 percent in the rural population of the Republic of Moldova. The monthly disposable income per person is about \$15.5 (193 Moldova lei) and 92 percent of the population lives on less than \$1 per day. A majority cannot afford to buy fish, meat, milk and other dairy products on a regular basis. Malnutrition is widespread and can be recognized in the rates of anemia for children, and the growing percentage of young men not physically fit for military service. According to the most recent surveys, infant mortality and the rate of death in childbirth are on the increase, and the overall life expectancy is decreasing.

The leading cause of other deaths stems from cardiovascular diseases, cancer, respiratory and accidents. Moldova ranks second among the countries with the highest rate of accidental deaths --including traffic accidents, domestic accidents and falls (in terms of annual deaths per 100,000 persons, South Korea ranks first, with 120.2, Moldova second, with 114.0 and Russia third, with 112.3). The number of HIV infected people has increased over the past years and a growing number of AIDS cases were recorded. In 1991 the government set up the Social Assistance Fund to provide assistance to the needy, and the Social Security Fund, composed of the Pension Fund, the Social Insurance Fund and the Reserve Fund. Nevertheless arrears in the payment of pensions have been routine, creating permanent difficulties in the daily lives of most pensioners (over 800,000

people).

## **Environment**

Moldova's environment has deteriorated markedly during the last decades of Soviet rule when, in keeping with the requirements of socialist central planning, the Chisinau leadership was directed to launch an ambitious plan, called the "Moldavian Experiment" (1971-1974) intended to boost the republic's agricultural and livestock production. One of the chief factors of Moldova's environmental degradation during the years that followed were the excessively heavy pesticide applications that polluted the soil to such a degree that over half a million acres had to be taken out of rotation. Another factor was the excessive growth of livestock industrialization (especially swine and cattle), which led to a massive concentration of offal, much larger than the bulk of animal production as such. The gradual impact of this imbalance on the environment translated over the years into ammoniacal, bacteriological, and nitrates pollution, as well as soil and underground pollution that affected underground waters.

After independence, in order to counter these developments the government took action as early as 1990, and, in 1993, specific laws were passed on environmental protection, water resources, and protection of the underground. In 1999 the World Bank contributed \$125,000 to Moldova's program for protecting and preserving the biodiversity of its environment.

## **Education**

Moldova inherited the Soviet education system, marred by decades of ideological indoctrination and governed by the requirements of socialist central planning. Beginning in 1995, the Parliament adopted a new set of regulations to reform and modernize education and make it more adequate to prepare Moldova's future workforce and decision makers, in keeping with the challenges of transition, civil society and the market economy.

A specific aspect of Moldova's education reform was the return to the local population's pre-Soviet traditions in schools, colleges and universities. To counter the effects of the decades of cultural Russification, Moldova turned to Romania with which educational cooperation has been intense after independence. Romania's Ministry of Education currently provides thousands of grants and scholarships for Moldovan students to study at Romanian universities. For the 1999-2000 academic year, several thousands graduate and undergraduate students from Moldova were scheduled to study in Romania.

## **Women's Issues**

In the context of Moldova's traditional culture, Moldovan women have suffered more than men the consequences of the country's economic decline and social disruptions, more especially in the aftermath of independence and the difficulties of transition. Moldova's government supports educational efforts to increase public awareness of the condition of women and the law provides that women shall be equal to men. However, according to statistics, women have been affected disproportionately by unemployment and social discrimination.

One of Moldova's most serious problems is trafficking in women for forced prostitution abroad. Moldovan

young women and girls are trafficked to various locations, including Turkey, Kosovo, Italy, Greece and Israel. According to certain sources, as many as 10,000 Moldovan women are currently working as prostitutes in foreign countries. The International Organization for Migration (OIM) reports that more than 50 percent of the women working in forced prostitution in Kosovo are from Moldova. To combat trafficking in persons, a Human Trafficking Task Force was established by the government in 2000 with the objective of implementing a project of the OIM on trafficking women and girls from Moldova.

## **5. National Security**

### **Moldova's Ministry of National Security**

Moldova's Ministry of National Security replaced the Soviet-era Committee for State Security, the KGB branch of the Moldavian Soviet Socialist Republic. In 1991, the local assets and personnel of the former KGB taking orders from Moscow were transferred to the new authorities in Chisinau and, in 1994, Moscow and Chisinau reached an agreement on intelligence cooperation, pledging to work together on a broad range of security issues, including exchange of information, combating terrorism and illegal arms sales. According to data made public in 1997, only 30 percent of the officers currently working at the Ministry of National Security were hired as KGB officers before 1990. The overall staff was reportedly reduced by 30-40 percent since then. With regard to public access to files of the former KGB in Moldova, the policy of the government has been to keep them secret. Only close relatives of people who suffered deportation under the Soviet rule are permitted access to the files, provided the documents contain no other names.

### **Moldova's Armed Forces**

Moldova's armed forces are part of the structural inheritance of the state system of the former Soviet Union. Under Moldova's old Soviet-style Constitution, defense was devolved to the Soviet armed forces which the Moldavian Soviet Socialist Republic was mandated to equip and provide with manpower. Under those circumstances, between 1989-1989 over 9,000 young Moldovans were drafted by the USSR to fight in Afghanistan. After 1991 the government took steps meant to create a brand new reliable army, apt to ensure the country's security, independence and territorial integrity.

Moldova has some 8,000 servicemen, organized into three motor rifle brigades, one artillery brigade and one reconnaissance and assault division. In 1994 Moldova's air force consisted of one fighter regiment, one helicopter squadron and one missile brigade.

Moldova is a member of the U.S. Partnership for Peace initiative. In 1997 the first ever Partnership for Peace exercise involving American and Moldovan troops took place in northern Moldova; the event marked the first time U.S. troops were present in the territory of a former Soviet republic. In the following years Moldova's military took part in various U.S. Partnership for Peace exercises and military applications.

Soon after the victory of the left in the July 2001 general elections Moldovan troops took part in joint military exercises with Russian troops at the Kantemirovskaya Division's training grounds in the Moscow region. Various reports have suggested that the exercise could be an indication of a new line in the government's attitude toward Russia and the CIS. Other reports indicate that the joint military exercise could also be a first

step toward the future creation of a joint Russian-Moldovan peace-keeping battalion, for possible deployment, some time in the future, on the secession-plagued east bank of the Nistru River. Such a move would politically justify and extend Russia's military presence in the troubled Tiraspol enclave, beyond the OSCE-scheduled deadline for evacuating it from Moldova by 2002.

## **6. Foreign Policy**

Moldova's foreign policy efforts have been complicated by its geographic position and its history --partly shared with its huge former ruler in the east, partly shared with its much smaller western neighbor, Romania. The uncertainties of Moldova's status are those of the one and only successor state of the USSR to inherit legacies from both an ancient root-country --the Principality of Moldova (and a modern core-state --Romania) on the one hand; and the recent legacies of a much more powerful core-state --Russia-- on the other hand. These polarizations have recently surfaced in two divergent initiatives (apparently inspired by the model of the Russia-Belarus union). While in Chisinau Moldova's Liberal Party launched a vaguely articulated project advocating a "state-union" between Moldova and Romania, in Tiraspol, the "Zubr" parliamentary group launched the idea of making Moldova and Ukraine joint partners in the Russia-Belarus state-union. Albeit vague and abstract, the concept of a "Russia-Belarus-Moldova" state-union has surfaced in a statement made in August 2001 by President Vladimir Voronin, who described it as a "possibility", taking into account the fact that --in his words--"Moldova is open to any form of collaboration with the other member states in the CIS". Voronin was careful to note that Ukraine's attitude vis-a-vis a possible "Moldova-Russia-Belarus" state-union should also be taken into account.

On the other side of the issue, a west-oriented Moldova, aspiring to become a member of the European Union featured prominently in the year 2000 on Moldova's foreign policy agenda, peculiarly during the visits the country's former Foreign Minister, Nicolae Cernomaz made to Washington and Brussels. With Cernomaz soon after removed from office, observers have wondered if Moldova's new government is not after all inclined toward cultivating stronger ties with Russia and the CIS.

The expectation that Moscow could use its critically important leverage in order to impose a durable solution to the trans-Nistriian secession conundrum has been cited as an explanation for that inclination, should a throwback in the direction of Moldova's former ruler ever materialize in the future, taking its inspiration from the yet to be defined Russia-Belarus state-union.

### **Relations with the United States:**

Related to Moldova's population and compared to U.S. assistance going to other former Soviet republics, American assistance going to Moldova ranks second among that received by other member states of the CIS. Moldova's first two Presidents (Mircea Snegur and Petru Lucinschi) visited Washington during their tenure in office and were received at the White House. In August 2001, the Bush administration emphasized its current

expectations from Moldova's new government in a letter to Moldova's President Vladimir Voronin. The letter stressed that Moldova's future is with the West, Europe, and the trans-Atlantic community, and that the United States looks forward to the Chisinau government's pledge to move ahead with democratic reform and continue the country's transition process towards a market economy.

The same was pointed out by Secretary of State Colin Powell who reaffirmed the United States willingness to further support economic reforms and democratization in Moldova, stressing the need of a successful finalization of agricultural reform. A U.S.-Moldova bilateral Agreement on Protection and Preservation of Certain Cultural Properties was signed in 2001, to protect and preserve the cultural heritage of all national, religious or ethnic groups residing in Moldova and were in one way or another, victims of genocide.

Regarding the trans-Nistrian region, the United States supports the OSCE 1999 Istanbul Summit accord demanding the withdrawal of Russia's troops from Moldova's east-bank separatist territory by 2002, and the removal and scrapping of the weapons and ammunition stockpiles left there by the former 14th Soviet Army by 2001.

Through USAID, Moldova receives from the United States a large variety of programs to support land privatization reforms, agricultural yield growth, democratization and market economy reforms.

Moldova takes part in the programs of the U.S. Partnership for Peace and is a signatory of the U.S. Cooperative Threat Reduction Agreement. In 1998, American technical assistance to Moldova stood at about \$25 million and in 2001, through USAID, the United States plans to provide an extra several million dollars contribution in humanitarian assistance to help Moldova's needy population living under the poverty threshold.

## **Moldova and Russia:**

### **The CIS Connexion**

Although Moldova signed the Minsk Agreement and the Alma Ata Declaration in December 1991, the Chisinau Parliament --strongly influenced at that time by the pro-Romanian Popular Front bloc of deputies-- dragged its feet on ratifying the documents. It was only in April 1994 that a new Parliament finally approved, with reservations, Moldova's membership in the CIS and Moldova signed the CIS charter on economic union. The Republic of Moldova declined to join the political and military structures of the CIS.

However, soon after the advent of the left and the victory of the party of Moldova's Communists in the 2001 elections, Moldova's new government signed a Military-Strategic Cooperation Agreement with Russia. After their August 2001 talks, Russian President Vladimir Putin and Moldova's President Vladimir Voronin agreed that the two countries are ready "for all forms of collaboration" within the CIS, especially in the economic and military fields.

Alongside the former Soviet republics of Georgia, Uzbekistan, Ukraine, and Azerbaijan, Moldova is part of the so-called GUUAM group of successor states that share specific economic and trade interests, somewhat distancing themselves from the main priorities existing within the broader structures of the Commonwealth of Independent States. The world after September 11, 2001 has added a new dimension to the importance of the GUUAM group. Almost overnight, one of the GUUAM member-countries --Uzbekistan, has become militarily

and diplomatically a de-facto ally of the United States by hosting American troops that take part in the war waged against Taliban-ruled Afghanistan.

However, Moldova's long-abiding commercial interests and its quasi-total dependence on energy supplies, traditionally delivered from Russia, are among the chief priorities tying Moldova to the CIS structures and, in a more special way to the Russian Federation.

Russia expressed interest in a specific part of Moldova in 2000, when the Russian Federation's Duma defined the Tiraspol enclave as a region of special strategic interest for Russia; and again in 2001, when leftist forces in Russia's legislature suggested that Moscow, Minsk, Chisinau and Tiraspol start consultations for an eventual creation of a "common state-union" that should join Russia, Belarus and Moldova in a way that would put an end to the Moldavian Nistrian Republic's secession from Chisinau.

An important component of the Moldova-Russia relation is the continued presence of Russia's military on the territory of the Republic of Moldova. Russia's former 14th Army, currently downgraded to the status of an "Operational Group, continues to be headquartered in the Tiraspol separatist enclave. The Russian army remains a sizable regional force and is the only Russian military presence on foreign territory outside the Russian Federation in Europe. In conjunction with the breakaway Tiraspol authorities, it controls over 40 thousand tons of weapons and ammunition depots of the former Red Army located on the Nistru east-bank. According to the Organization for Security and Cooperation in Europe (OSCE) the 40,000-42,000 tons of stockpile of Russian arms in the separatist region of Transnistria is a "candy store" for terrorist groups. In this connection it has reportedly been "item of interest" well before the September 11 terrorist attacks on the United States, and that the potential for misuse of the arsenal had increased since then.

The stockpile has been stored in eastern Moldova, at Colbasna close to the

Ukrainian border, since Soviet forces withdrew from Hungary and Czechoslovakia in the late 1980s and 1990s. There has been virtually no withdrawal of ammunition since then, although parts of the stockpile have been dispersed to help arm Transnistrian separatist forces, to assist local arms production, and for sale to third parties. In 1991, 2,596 railcars of ammunition and rockets were present in Colbasna. By 1994, Russia declared only 1,362 railcars were present -- apparently because the stockpile was divided in 1994 between the Russian armed forces in Transnistria and the separatist army (currently 4,500 strong). The two parts of the stockpile are now guarded by 100 Russian and 300 Transnistrian troops, with no independent monitoring of the ammunition which passes from one half of the stockpile to the other.

The Colbasna stockpile has already fuelled conflict in Moldova and elsewhere. During the 1991-92 war between the Moldovan state and Transnistria, some 15,000 firearms, 18 tanks, and nearly 100 artillery guns and armored vehicles passed to the Transnistrian army. In 1994, Transnistrian authorities sold "Grad" rocket launchers to Abkhazia (which had just fought a successful war of separation from the Georgian state). Moldovan investigations have revealed that Tiraspol, the capital of the separatist territory, also attempted to sell "Igla" ground-to-air missiles to an unidentified buyer in 1996- 97. The same report alleged that the Rabnita Steel Mills had succeeded in converting materials from the stockpile into arms for export. The stockpile is one aspect of the Russian military presence in Transnistria which has continued in the post-Soviet period despite Moldovan opposition. Tiraspol is a historic Russian military settlement. As shown above, the regional authorities opposed Moldovan independence in 1991-92, and soon after gained control over a narrow strip of

land, bounded by the Nistru River and the border with Ukraine, in which the bulk of Moldova's industry and electricity-generating capacity was concentrated.

## **Moldova and Romania**

Romania was the first state to recognize the independence of Moldova on the day it was proclaimed, 27 August 1991. However, a basic treaty between Chisinau and Bucharest has been slow in being finalized because of disagreement on a number of points, most of them related to the way of describing the nature of the relationship between two countries which, while being separate political entities, share identical origins and a common history, the same language and quasi-identical cultural legacies.

Romania's diplomatic action in favor of the Republic of Moldova played an important part in the latter's admission in the Stability Pact for South-Eastern Europe in 2001. In spite of differing views on the issue of whether the countries constitute "two Romanian states" (a view which Chisinau declines to accept) Moldova acknowledges that its relations with Romania are privileged. A controversial Treaty of Cooperation between Moldova and Romania was signed on April 28, 2000.

## **Moldova and Europe**

Moldova became a member and of the Stability Pact for South-Eastern Europe, and of the World Trade Organization in 2001, two moves which were interpreted as signals of the country's desire for deeper integration in the global economic system and in the community of Euro-Atlantic interests and shared values.

Visiting Brussels in July 2001, President Vladimir Voronin stated that "European integration remains on Moldova's top priority foreign policy agenda". Along these lines, western expectations are that, requirements fulfilled and all other conditions permitting, the Republic of Moldova could eventually become a full member of the European Union by the year 2015.

### ***Questions and Issues:***

- \* How did the organizing principles of Moldova's foreign policy evolve after the country's accession to independence, and what were the main driving factors involved in Moldova's apparent wavering between East and West?
- \* Do you think Moldova may face the risk of losing its statehood, either by inclusion in a future state-union with Russia and Belarus, or by eventually, in one way or another, joining Romania?
- \* Assess the impact of the trans-Nistrian secession in Moldova's foreign policy uncertainties.

## A Self-Study Guide

NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The **Self-Study Guide: Mozambique** is intended to provide U.S. government personnel in the foreign affairs community with an overview of important issues related to Mozambican history, geography, politics, economics, culture, religion, media, and international relations. The guide should serve an introductory self-study resource. The topic is far too complex to be covered in depth using only the text in this guide. The reader is encouraged to explore the questions and issues introduced using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in Foreign Service Institute or Main State Libraries.

The first edition of this guide was prepared by Dr. William Minter, senior research fellow at Africa Action in Washington, D.C. ## Capsule Chronology

**Early First Millennium** - settlement of Mozambique by Bantu-speaking peoples.

**Thirteenth to Fifteenth Centuries** - height of Zimbabwe civilization located in region of present-day Zimbabwe and Mozambique.

**Fourteenth to Sixteenth Centuries** - height of Swahili city-states on East African coast.

**1498** - Portuguese navigator Vasco da Gama lands in Mozambique.

**Sixteenth to Nineteenth Centuries** - Portuguese, Arabs and Africans contend for and collaborate in control of trade from the coast.

**Sixteenth to Nineteenth Centuries** - Portuguese occupy parts of Zambezi valley as well as key coastal posts, but many settlers are assimilated into African kingdoms. Most of interior remains under African control.

**Eighteenth to Nineteenth Centuries** - The slave trade is at its height in Mozambique, with slaves shipped both across the Atlantic and to Indian Ocean islands.

**1880s to 1917** - Portuguese complete their military conquest of Mozambique.

**1884-1885** - Berlin Conference at which European powers decided how to divide up Africa.

**1895** - Gungunhana, chief of the Gaza state, is defeated by the Portuguese and deported to the Azores, leading to Portuguese occupation of southern Mozambique.

**1890s to 1910s** - Southern Mozambique becomes a major source of workers for the mines of South Africa, and Lourenço Marques the key port for South Africa's mining region.

**1926** - Coup establishes dictatorship in Portugal, which lasts until 1974, under António Salazar from 1932 to 1968.

**June 16, 1960** - Mueda massacre in northern Mozambique, in which Portuguese kill an estimated 600 protesters.

**June 25, 1962** - Founding of the Mozambique Liberation Front (FRELIMO)

**September 25, 1964** - Beginning of the war for independence

**February 4, 1969** - Assassination of FRELIMO's first president, Eduardo Mondlane.

**April 25, 1974** - Coup overthrows dictatorship in Portugal.

**June 25, 1975** - Independence of Mozambique.

**April 18, 1980** - Independence of Zimbabwe

**March 16, 1984** - Mozambique signs Nkomati nonaggression pact with South Africa.

**October 19, 1986** - Mozambican President Samora Machel and 33 others die in suspicious air crash

inside South African border with Mozambique.

**October 4, 1992** - General Peace Agreement for Peace in Mozambique signed in Rome.

**October 27-28, 1994** - In Mozambique's first national multiparty elections, voters choose Joaquim Chissano as president and give legislative majority to Frelimo.

**December 3-4, 1999** - Second national multiparty elections reelect Joaquim Chissano as president and maintain Frelimo majority in parliament.

## Maps

There are many maps of Mozambique available online.

These two, from the UN's Africa Recovery magazine ([www.africarecovery.org](http://www.africarecovery.org)) and the CIA's World Factbook 2000 ([www.cia.gov/cia/](http://www.cia.gov/cia/)

publications/factbook) show the position of the country and selected cities and towns.

The map on the next page, from the government of Mozambique, shows the

provinces into which the country is divided.

Other maps show more detail and provide current information on a wide variety of subjects.

A good place to start is the Relief Web map centre:

<http://www.reliefweb.int>

<http://www.mozambique.mz/dadosbas/provinc.htm> Mozambique's ten provinces (plus Maputo city) are the basic geographical divisions within the country. The provincial divisions are significant in economic and cultural as well as political terms. They are commonly divided into "South": Maputo, Gaza, Inhambane; "Center": Manica, Sofala, Tete and Zambézia; and "North": Nampula, Cabo Delgado and Niassa. The names of the provincial capitals are shown in the list to the right of the map.

The URL on the Mozambican government website (above) has descriptions and a detailed map of each province (can be slow to download).

As in the U.S. the usage of the terms "South" and "North" is not consistent. Sometimes Tete or Zambézia is included in the "North" for example, or people may even refer to everything north of Gaza and Inhambane as "North." People may also speak of being in or going to "the capital," "the provinces" (generally the provincial capitals) or "the districts" (the next level of administrative subdivision).

## History

*Particularly recommended for additional background on Mozambican history:* Jeanne Marie Penvenne, "History of Mozambique" on [www.britannica.com](http://www.britannica.com); Malyn Newitt, *A History of Mozambique* (Bloomington, Indiana University Press, 1995). Also see additional sources in the bibliography.

## Pre-Colonial

The history of the geographical area which is now Mozambique is deeply intertwined with that of its African neighbors and of the Indian Ocean region which borders it to the east. Its rivers and ports served as gateways for trade between the interior and the sea for at least a thousand years before arrival of Portuguese ships coming around the Cape of Good Hope from the Atlantic.

Like most of Africa south of the Sahara, Mozambique is populated by speakers of Bantu languages whose ancestors brought iron technology, agriculture and cattle along with their languages from west-central Africa between 1,500 and 2,000 years ago. Archaeologists think Bantu speakers arrived in Mozambique from the North along the coast as well as from the west, intermarrying with earlier peoples who lived by hunting and gathering.

By the end of the first millennium, kingdoms featuring stone enclosures or *zimbabwes* were emerging on the interior plateau to the west of Mozambique. The peak of the Zimbabwe civilization, which overlapped the border with present-day Mozambique, was in the 13<sup>th</sup> to 15<sup>th</sup> centuries. Along with the area of central Africa in what is now the Katanga province of the Democratic Republic of Congo, this region supplied gold, copper, ivory and other goods for trade within the region and through Indian Ocean ports in Mozambique and to the north.

While trade and migration across the Indian Ocean, including routes from Indonesia through Madagascar to Mozambique, date back thousands of years, the 14<sup>th</sup> to 16<sup>th</sup> centuries saw the height of the Swahili (the word means coast) Afro- Arab city states that extended as far south as Sofala, near present-day Beira in central Mozambique.

The voyage of Vasco da Gama around the Cape of Good Hope into the Indian Ocean in 1498 was the beginning of Portuguese influence on Mozambique and the Indian Ocean region. They established control over Mozambique Island in northern Mozambique and Sofala in the center, as well as setting up trading posts as far as Tete on the Zambezi River. *Prazos* (land grants) became independent centers of Afro-Portuguese military power, contending for power and trade with other African chiefdoms and Arab and Portuguese traders.

By the 18<sup>th</sup> century, the slave trade became the most dominant part of the coastal trade. Slaves from Mozambique and its interior were sold for trade across the Atlantic, and within the Indian Ocean to both Arab destinations and French- controlled islands. Declining after the middle of the 19<sup>th</sup> century, the slave trade nevertheless continued clandestinely into the early 20<sup>th</sup> century.

## Colonialism

As seen in the previous section, the common reference to over four centuries of Portuguese colonialism is misleading. Before the end of the 19<sup>th</sup> century, colonial rule was confined to only a few enclaves. At independence in 1975 Portuguese domination was, for the most part, less than a century old, coinciding with the European occupation of the African interior by Britain, France, Belgium and Germany.

On the east coast Portugal claimed a long strip of land stretching more than 1500 miles from the German (later British) colony of Tanganyika in the north to British-controlled South Africa and Swaziland in the south. To the interior Mozambique bordered on the British-held territories of Southern Rhodesia, Northern Rhodesia and Nyasaland. By the turn of the century most of this territory had been conquered. The Gaza chiefs in the south were finally defeated in 1897. But conquest was only completed with the close of World War I. A widespread revolt in Zambézia was suppressed only towards the end of 1918.

Portuguese-ruled Mozambique had a population of approximately 10,000 whites, 12,000 mestiços (persons of mixed race) and almost 3 million Africans, according to estimates published in 1920. The least developed colonial power, Portugal lacked the capacity to administer, much less develop, the territory. From the 1890s huge portions of the country were handed over to concessionary companies

financed by British and other foreign capital.

Mozambique's dependence on other white powers was also reflected in the transport links and labor flows to its neighbors. Before the colonial powers arrived, shared languages had joined the peoples of southern Mozambique to South Africa, central Mozambique to Rhodesia, and northern Mozambique to central and east Africa. The economic bonds forged under colonialism reinforced these east-west axes, leaving north-south links within Mozambique to neglect.

The South African connection made southern Mozambique an economic dependency of the mining economy of the Transvaal and the most developed area within Mozambique. Portugal supplied the mines with migrant workers, while South Africa channeled trade through Lourenço Marques and eventually agreed to remit part of the miners' wages to Mozambique in hard currency.

In central Mozambique, Beira served as the port for Southern Rhodesia. Mozambican migrants went to work on the mines and white farms across the border, although in smaller numbers than the southern flow to South Africa. Even further north, on a less organized basis, Mozambicans emigrated to find work in Nyasaland, Tanganyika and as far afield as Zanzibar and Kenya. There was a glaring contrast between the economic opportunities available under Portuguese colonialism and in these neighboring countries.

In most areas, nevertheless, the majority continued to depend on small-scale subsistence agriculture. Their participation in the colonial economy was limited to occasional forced labor on roads or on Portuguese plantations or, later in the century, forced cultivation of cotton and other crops to serve industry in Portugal. Portuguese colonialism was not unique in coercing a labor force to serve the European economy. Its relative underdevelopment, however, meant that market incentives were less significant and force more prominent than in neighboring British territories.

According to Portuguese colonial theory, African natives (*indígenas*) could exempt themselves from forced labor by assimilating Portuguese culture and in effect becoming Portuguese. A small number succeeded in meeting the tests of income, education and life style to gain this *assimilado* status. Others, even if not assimilated, were incorporated into the colonial order with some relative advantage over other Mozambicans: chiefs used in administration, overseers, teachers in mission schools, semi-skilled workers in the ports or administration.

At mid-century, this colonial order appeared to be a stable although backward system. The Salazar regime had constructed a more integrated Portuguese empire, expanding forced cultivation and encouraging Portuguese settlement. The white population of Mozambique increased from about 18,000 in 1930 to some 85,000 in 1960. Salazar's corporatist ideology excluded dangerously liberal democratic ideas both at home and in Africa. Independence was not an issue, the theory held, because the colonies were an integral part of Portugal. Neither African protest, as in South Africa, nor nationalist stirrings, as in other African colonies, were particularly visible in Mozambique before the 1960s.

Even the *assimilado* elite, however, who to a certain extent bought into the Portuguese model of culture and politics, rejected its implications of white racial superiority. They also reacted against competition

from an increased flow of white immigrants, who were legally assumed to be 'civilized' even if illiterate. Discrimination favored whites from Portugal not only over Africans, but also over mestiços and even locally born whites.

## Nationalism and the Struggle for Independence

Mozambican nationalism emerged first of all among those who had some education, whether or not they were officially assimilados. The numbers were not large--in the late 1950s there were probably not more than a few thousand Africans and a somewhat larger number of mestiços who had completed more than four years of school. The largest cluster of educated Mozambicans was close to the capital, in the south, where Portugal had permitted Protestant missions from the US and Switzerland. Beira and the Zambezi area were other zones of concentration.

The individuals and groups who came together in June 1962 to form Frelimo reflected these diverse origins. The founding congress met in Dar es Salaam, Tanganyika--later to become Tanzania--which had just won independence from Britain. The leaders of Frelimo had the example of the successful independence struggles by Britain's African colonies. The movement's first president, Eduardo Mondlane, had served in the UN Secretariat overseeing independence referenda in West Africa. The contrast with Portugal's refusal even to consider independence was striking. It was clear that the route to independence for Mozambique would pass through war.

In September 1964 Frelimo guerrillas launched attacks in northern Mozambique, beginning the 'armed struggle.' It was, above all, Frelimo's virtually undisputed leadership of this war of national liberation that positioned it as the natural successor when the Portuguese colonial state collapsed a decade later. Tanzania and later Zambia gave Frelimo bases for diplomacy and for the guerrilla war inside Mozambique. Portuguese secret police intrigue, exploiting internal divisions, culminated in the assassination of President Mondlane in early 1969. But the leadership which regrouped around top guerrilla commander Samora Machel proved remarkably cohesive. Although rival organizations announced their existence from time to time in various African capitals, none gained significant credibility. Individual rivals to the Frelimo leadership either deserted to the Portuguese or faded into obscurity in exile.

Frelimo sought to create a broad base of international support. It declined to take sides in the Sino-Soviet dispute and won military aid both from China and the Soviet Union. In the West, religious organizations and the Nordic countries provided support for Frelimo's health and education programs. But efforts to build links with other Western governments or mainstream organizations foundered on vested interests tying the Western bloc to Lisbon.

This pattern of international support, together with the radicalizing effect of guerrilla war, reinforced Marxist ideas within the Frelimo leadership. The emerging Frelimo perspective stressed collective commitment and mobilization of the people for social justice as well as national independence. Those who opposed Mondlane and Machel were seen as opponents of the revolutionary process, as witnessed by

their pursuit of individual privilege, their resort to divisive ethnic and racial appeals, and their willingness to be wooed by the colonial authorities.

Portuguese repression ruled out open political action, so Frelimo's activities were played out in exile, in areas of guerrilla operations and in scattered clandestine cells. The war opened up 'liberated areas' in the north in Cabo Delgado, Niassa and Tete. Here the movement set up administration, health services and schools. By 1973 Frelimo forces in these areas, as well as in several other provinces, were stretching the Portuguese military. The Portuguese coup in April 1974 allowed clandestine Frelimo supporters greater freedom to operate. The movement was met with a wave of enthusiasm and applauded for defeating colonialism.

Nevertheless, most areas of Mozambique, including the cities, experienced little impact from the war of liberation. When the independence agreement was signed in September, the movement's organizational structures around the country were at best rudimentary. In this period Frelimo entrusted local organization to ad hoc *grupos dinamizadores* (dynamizing groups). These were self-constituted residential or workplace committees of Frelimo members or sympathizers. While they took their general direction from the national leadership, their membership ranged from long-time supporters to others newly engaged by the excitement of the hour or by the sense that this was the bandwagon to ride. Their activities ranged from political organization to literacy campaigns and cultural programs. As Portuguese authority receded and settlers left, abandoning or sabotaging their farms and shops, the local *grupo dinamizador* was often called on to pick up the pieces.

One month before independence, Frelimo President Samora Machel left Tanzania for a triumphal tour of Mozambique from north to south. On independence day, June 25, dance troupes from all ten provinces performed before festive crowds in Lourenço Marques (Maputo) and in each provincial capital, symbolizing national unity. The constitution promised people's power under Frelimo's leadership, solidarity with national liberation movements, and a drive to eliminate underdevelopment and exploitation. Few expected such ambitious goals to be easy, but most were optimistic. Hope was the dominant note, not just of the day, but of the years immediately to follow.

*Topic to explore:*

**Eduardo Mondlane:** First president of FRELIMO, regarded as father of the nation, graduated from Oberlin College and gained his doctorate at Northwestern University. Mozambique's national university is named after him. Among the resources you will find on the web:

## War and Peace

On June 25, 2000, Mozambique celebrated 25 years of independence. During that period, Mozambique was at war for more than 16 years, from the first Rhodesian attacks in March 1976 to the Rome peace treaty of October 1992. And implementation of the treaty took more than two years. The period since 1994 is in effect covered by later sections of this guide, particularly those on politics and economics. This section focuses on the period from 1975 through 1994, and particularly on issues of war and peace. It is also particularly brief, since there are abundant published sources covering this period.

While divisions within Mozambique would in any case have provided reasons for

tension along regional and political lines in the years after independence, the intractable war and pervasive destruction that resulted was above all the result of Mozambique's engagement in the regional conflict accompanying the end of white minority rule in Rhodesia (Zimbabwe) and South Africa. Without this context, its political history would probably have resembled more closely that of Tanzania, its close ally to the north.

The scale of war over the years and the timing of peace efforts were also related to external as well as internal factors – a relatively contained conflict in the period 1976-1980, affecting primarily central Mozambique and tied to the last stages of the war for the independence of Zimbabwe; an overwhelmingly devastating reality throughout the country from 1981 through 1989, the years of P.W. Botha's "total strategy" to defend apartheid; and a gradual transition from war to peace from 1990 to 1994, paralleling almost exactly the complicated mix of talks and covert violence in South Africa during the years preceding South Africa's first democratic election.

The Mozambican National Resistance (first MNR and then Renamo, the equivalent Portuguese acronym) was initiated by the Rhodesian Central Intelligence Organization as an adjunct to Rhodesia's attacks on Mozambique, which provided rear bases for Zimbabwean guerrillas fighting the white minority regime in that country. Throughout the war, it retained the legacy of its military origin, with most of its soldiers being recruited by force in the countryside. Increasingly, however, it also gained strength from the neutrality or sympathy of Mozambicans alienated by the government's failures, abuses of power, and repressive counter-insurgency strategies. By the end of the war, after transition to the status of a political

party, it also provided a political home for many Mozambicans opposed to the government who had not participated in the war.

[The relationship between the external and internal causes of war in Mozambique was much debated during the war and in the immediate post-peace agreement years. For an extensive discussion, see William Minter, *Apartheid's Contras* (London: Zed, 1994). For alternate views see the sources cited there, and more current works such as T. Young and M. Hall, *Confronting Leviathan* (London: Hurst, 1997). For a summary of the chronology of the war, see particularly Chapter 2 of *Apartheid's Contras*.]

The war escalated rapidly in the 1980s. At Zimbabwe's independence, Renamo forces were transferred from Rhodesia to South Africa, and participated in the expansion of covert and surrogate armies directed by South Africa's special forces against its neighbors. While Mozambique did not provide military bases for the African National Congress as it had for Zimbabwean guerrillas, it did provide political support and passage through Mozambique to the ANC. By the end of 1982, Mozambique was seeking a detente with South Africa, and in 1984, hoping for an end to South African backing for Renamo, President Machel signed the Nkomati Accord pledging that neither country would provide any support for armed groups in the other's territory.

While Mozambique kept the terms of the Accord, and won increasing diplomatic and financial support from Western countries, including the conservative administrations in London and Washington, South Africa did not. While South African material support for Renamo did eventually decrease, it was more than sufficient to ensure the continuation of the war against Mozambique's weakened defenses. Since the primary targets of attack were civilians, social services and transport in the rural areas, it was in any case impossible for an army which often lacked fuel for its vehicles to defend a territory almost twice the size of California with fewer paved roads than the state of Delaware.

In 1989, the UN estimated the economic loss to Mozambique from war over the period 1980-1988 at \$15 billion, more than five times the gross domestic product in 1988 (United Nations Inter-Agency Task Force, *South African Destabilization: The Economic Cost of Frontline Resistance to Apartheid*. New York / Addis Ababa, 1989). The same study also estimated the loss of lives directly and indirectly due to the war as 900,000 people, more than half young children.

[Among recent books in English dealing with the human reality of the war, one can particularly recommend Nordstrom, 1997. Older books include Magaia, 1988 and Human Rights Watch, 1992 (see bibliography for full references). On-line, see Alcinda Honwana, "Sealing the Past, Facing the Future: Trauma Healing in Rural Mozambique" at [http://www.c-r.org/acc\\_moz/honwana.htm](http://www.c-r.org/acc_moz/honwana.htm)].

The details of the tortuous peace process which led to the Rome agreement in October 1992 and elections in October 1994 are described in many sources available in print and on-line (see particularly [http://www.c-r.org/acc\\_moz/contents\\_moz.htm](http://www.c-r.org/acc_moz/contents_moz.htm)). The reasons for success are complicated, as indicated below in William Minter's review of several books on the topic (the review was originally published in *Peace and Change: A Journal of Peace Research*, April, 2000).

## The Mozambican Peace Process: An (Over)abundance of Lessons

by William Minter

Richard Syngé, *Mozambique: UN Peacekeeping in Action, 1992-94*. Washington: United States Institute of Peace Press, 1997.

Jeremy Armon, Dylan Hendrickson and Alex Vines, eds., *The Mozambican Peace Process in Perspective*. London: Conciliation Resources and Maputo: Arquivo Historico, 1998.

Carolyn Nordstrom, *A Different Kind of War Story*. Philadelphia: University of Pennsylvania Press, 1997.

Thomas Ohlson, *Power Politics and Peace Politics: Intra-State Conflict Resolution in Southern Africa*. Uppsala: Department of Peace and Conflict Research, Uppsala University, 1998.

Success, the saying goes, has many parents. The successful peace process in Mozambique, taking added prominence by comparison to the war still raging in Angola and other conflicts on the African continent, is no exception. The books discussed or cited in this review -- recent English-language books which have come to the attention of this reviewer -- well illustrate the point. A more comprehensive bibliography might turn up even more aspects to be considered. But the factors singled out for attention in these books are wide-ranging enough to confound any attempt to draw simple lessons to be emulated elsewhere: international mediators ranging from diplomats to tycoons to church leaders, multilateral and bilateral donors, global and regional geopolitics, as well as Mozambican political and military forces, religious groups and cultural traditions, both national and local.

Syngé provides both a chronological and analytical overview, with particular attention to the role of ONUMOZ, the \$700 million UN peacekeeping operation in Mozambique between December 1992 and December 1994. The success of the peace operation, Syngé sums up, was due mainly to "the commitment to peace of all Mozambicans; the importance placed on the political functions of the leading peace commission; the skill, patience and flexibility of the SRSG [special representative of the UN Secretary-General, Aldo Ajello]; strong financial and logistic support from the international community; and the political support of neighboring states" (p. 146). In the next paragraph Syngé quotes a 'senior UN official in Maputo' as saying "Success was achieved despite ONUMOZ and not because of ONUMOZ" (Ibid.).

Syngé's lucid account documents both successes and weaknesses. He shows how the process of implementing the Rome peace accord of October 4, 1992 was pushed along, despite a seemingly unending series of delays, to culminate in demobilization of government and Renamo troops, formation of a new national army, and multi-party elections won by incumbent President Joaquim Chissano and the ruling Frelimo Party. One of the principal goals of the process, Syngé notes, was to convert the rebel Renamo group from a force of destruction to a credible political organization, an objective at least minimally achieved by international engagement and direct funding of Renamo to replace its previous external support from South Africa. In this way, and in other steps such as two-year subsidy packages for

demobilized soldiers on both sides, the international community literally paid for peace (total demobilization costs came to about \$85 million, according to Syngé; other sources put the total as high as \$95 million, or more than \$1,000 per soldier demobilized).

Yet the weight of the UN presence during this period increased rather than diminished the country's already massive donor dependency. Short-term priorities diverted attention from longer-term requirements for reconstruction (for example, weapons collection was a notable failure). More generally, Syngé argues, the international community "effectively displaced the normal functions of government ... [and] derailed the government's own efforts to reform" (p. 149).

Syngé does draw up his list of "lessons" for successful peacekeeping [1. a credible formula, 2. manageable components, 3. a closely monitored cease-fire, 4. outside support, 5. clear rules, and 6. capacity building]. He rates Mozambique as successful in 1, 3, and 4, and less successful on 2, 5 and 6.

Syngé's first point pushes the search for factors responsible for success back into the pre-implementation phase, namely the existence of a viable peace settlement. The best resource on the process leading to the settlement is probably the edited collection by Conciliation Resources, which is also available in full on their web site ([www.c-r.org/acc\\_moz/contents\\_moz.htm](http://www.c-r.org/acc_moz/contents_moz.htm)). In addition to a comprehensive chronology and the text of the Rome peace agreement and other key documents, *The Mozambican Peace Process in Perspective* sets the agreement in historical context, with general background essays by Zimbabwean scholar (and former army officer) Martin Rupiya and Mozambican journalist Fernando Gonçalves. It also features an article on the role of the churches by two of the key participants (Anglican Bishop Sengulane and Catholic Bishop Gonçalves), a detailed account of the central role of entrepreneur 'Tiny' Rowland in the diplomacy, and Mozambican scholar Alcinda Honwana on the role of traditional ritual in healing war trauma.

Despite its modest length (100 pages in the printed edition), this collection is rich in insights which go beyond conventional wisdom on Mozambique's peace process. Thus, for example, Zimbabwe is portrayed as an important mediating force as well as in its better-known role as a military ally of the Mozambican government. And while the Italian congregation of Sant' Egidio is given credit for its well-known role in hosting the peace talks in Rome, so are the longer-term peace efforts of local Mozambican church leaders and the more material incentives provided by 'Tiny' Rowland and the Italian government in particular.

Honwana's essay stresses not only the resilience of local Mozambican communities in confronting the trauma of war but also the fact that these measures still fall short of ensuring reconciliation and a stable peace at local levels. Five years after the peace agreement, she notes, writing in 1997, in the rural areas "profound social unrest and intermittent violence pose a persistent threat ... tensions reflect both the deep social divisions spilling over from the long war and the desperate survival tactics of many Mozambicans attempting to rebuild their lives in the face of overwhelming poverty" (p. 75). The horrors experienced by many Mozambicans, particularly but not exclusively at the hands of Renamo, "cannot simply be erased from the collective memory" (p. 80).

The same issue is explored in depth in Carolyn Nordstrom's reflective and moving *A Different Kind of*

*War Story*. During extensive travel in rural Mozambique between 1988 and 1996, anthropologist Nordstrom talked with local people about their experience of war. She found not only horror stories, but also extraordinary creativity in not only surviving war but also in constructing a pervasive nationwide culture of peacemaking. Most surprisingly, she found that this culture extended throughout the country, across ethnic and political boundaries. From traditional healers through teachers and students who found ways to restart classes in the aftermath of horrendous violence, or traders who carried news as well as goods across war zones, she found a commitment to "unmaking" violence. Both soldiers and civilian victims of violence were perceived as in need of healing, both physical and mental. Common threads in the culture of healing stretched across the diversity of traditional cultures in different parts of the country. She concludes that Mozambique illustrates the opposite of the Hobbesian premise that elite-brokered agreements bring peace. Average Mozambicans, she notes, "crafted sophisticated institutions to stop violence ... and set the stage for peace. .. it was on this work that the peace accords were built" (p. 220).

In a brief but intriguing epilogue, she contrasts Mozambique with Angola. Angolans, she notes, have also crafted a wealth of cultural resources to withstand war. But, unlike Mozambique, they had not coalesced into a "nation-wide set of linked practices" (p. 230). The arenas of conflict management in Mozambique had spread from area to area, via displaced people, traditional healers, traders and teachers to form a space independent from the armed conflict. In Angola, such space was -- and is -- still embedded in a bipolar militarized political space.

The comparison Nordstrom makes rings true. Her appeal to learn from the Mozambican example to build cultures of peace from the bottom-up will hopefully find echoes in other conflicts. And yet one must also wonder whether the Mozambican culture of peace would have prevailed without the other favorable conditions -- in the Southern African region, in the international community, and in the character of the armed forces on both sides -- that were conducive to a national political settlement in Mozambique.

The final book in this review, Thomas Ohlson's *Power Politics and Peace Politics*, is a systematic attempt to explore this question by a comparison of eight peace accords in southern Africa between 1974 and 1994 -- the Lusaka (1974) and Rome (1992) accords for Mozambique, the Alvor (1975), Bicesse (1991) and Lusaka (1994) accords for Angola, the 1979 Lancaster House accord for Zimbabwe, the 1988 agreement for Namibia and the 1993 agreement for South Africa. His question in each case: what factors determined whether the peace agreement was implemented or whether there was a return to war? At the time the study was written, the Lusaka agreement in Angola had not yet definitively collapsed, and the return to war there actually confirms Ohlson's theoretical propositions even more clearly than the tables in the published book.

Ohlson lays out six key variables -- systemic conflict (Cold War), regional conflict, the role of third parties, leadership (of the parties in conflict), learning (experiences leading to negotiation being valued over conflict), and the extent to which the peace agreement satisfied the parties' goals of political participation and security. A review of Ohlson's work more generally lies outside the scope of this essay, but it is noteworthy that his review of the implementation of the Rome agreement for Mozambique finds almost all the indicators of the six variables predicting success. Writing in mid-1998, Ohlson notes that "the fact that large-scale warfare has not resumed in Angola ... has more to do with sober assessments of

military, diplomatic and economic realities than with a genuine willingness to compromise" (p. 155). As this review is written, in mid-1999, Angola is not only still missing a powerful national culture of peace. It has also not yet had the Mozambique post-Rome advantage of having a set of stable neighbors and a relatively unified international community also interested in investing heavily in peace.

The numerous ways in which the Mozambique experience is unique do not invalidate the efforts to draw "lessons" that might apply to resolving other conflicts. Each of the studies above provide insights that may be helpful in other contexts. As Armon, Hendrickson and Vines note, however, Mozambique "does not offer a blueprint for other war-torn countries engaged in the search for peace" (p. 7). Successful application of any of the lessons, if it happens, will likely less resemble transmission of "best practices" than the kind of creativity Nordstrom documents in the transmission of a culture of peace within Mozambique.

## Geography

Mozambique stretches along the Indian Ocean from Tanzania in the north to South Africa in the south, bordering to the west on Malawi, Zambia, Zimbabwe and Swaziland.

With a coastline of 2,470 km--more than 1500 miles--Mozambique is a little less than twice the size of California in area, or slightly more than all the east coast states from New York through Florida.

The defining physical features of the country are the great distance along the north-south axis and the contrast between the low areas adjoining the sea and the interior plateau, which is most prominent in the north and center.

Note: The topographical map above is taken from the Population- Development-Environment Project study of Botswana, Mozambique and Namibia, by the International Institute for Applied Systems Analysis, Austria, in partnership with institutions in the three countries. The project's report, with rich data and illustrations, is available at

<http://www.iiasa.ac.at/Research/POP/pde>.

The most important rivers are the Zambezi, which bisects the country, the Rovuma along the northern border, the Limpopo in the south, and the Save along the northern borders of Gaza and Inhambane

provinces.

The climate varies from semi-arid and subtropical in the south to tropical in the north. Seasons are divided into one rainy and one dry season a year. Vegetation is predominantly light forests and grasslands.

*Mozambique: Prepared but overwhelmed*

*Rescue efforts combine local and international expertise*

By Joseph Hanlon, co-author with Frances Christie of *Mozambique and the Great Flood of 2000* (London: James Currey, 2001).

As floodwaters rise on the Zambezi, Mozambique's navy has picked up more than 8,000 stranded people using rubber boats donated by the international community for last year's floods.

This is the second year of major flooding, and a similar pattern is emerging.

Both this year and last year, predictions of heavy rain led to flood warnings and extensive preparation by the Mozambican government, local non-government organizations such as the Red Cross, and United Nations agencies such as the World Food Programme.

But Mozambique remains one of the poorest countries in the world, and record-breaking floods soon exhaust the capacity of the government - and of neighboring countries.

International help is needed to provide fuel for the boats and helicopters, and to provide tents, food and clean water for the tens of thousands who are forced to flee to high ground.

### Media images

Dramatic television pictures and appeals for help by international agencies tend to present a picture of helplessness. But they miss the extensive preparation and organization which had already been done at local level.

Research for my book on last year's floods pointed to three months of preparation, which provided an essential foundation and infrastructure for the massive international support.

### Local input

The result was remarkably successful international cooperation, with human, material and financial international aid providing vital help to the Ministry of Health, Red Cross and local government who were already in action dealing with huge numbers of displaced people. One improvement on last year is an increased participation by the Mozambican military.

Last year the Mozambican military rescued 17,000 people, but with very few boats and no helicopters. This year, the boats donated by the international community for last year's flood were put to use quickly.

Mozambique's air force has only two helicopters, but this year, because of the advance warnings, both were serviced and ready to fly, and are now in use for rescue and reconnaissance.

The provinces of Mozambique differ significantly in size, population and other characteristics.

POPULAÇÃO, SUPERFÍCIE E DENSIDADE, SEGUNDO PROVÍNCIA, MOÇAMBIQUE, 2000

Additional tables from the 1997 census, at both national and provincial levels, are available at the web sites of the National Institute of Statistics (<http://www.ine.gov.mz>) and, in more detail, the Ministry of Education

(<http://www.mined.gov.mz/docs/censo97>).

*Topic to explore:*

Find a map that shows Mozambique's railways, such as that on page 29 of *Atlas Geográfico* published by the Mozambican Ministry of Education or one in a good world atlas (one can find maps on the web that show railways, but not clearly). What does the pattern suggest about problems of national unity in the country?

## Politics

Under the 1990 constitution, Mozambique's president and unicameral national assembly are both elected in multiparty national elections every five years. The president appoints professional members of the supreme court, from candidates proposed by the judiciary, and the assembly elects other members of the supreme court. The president also appoints the prime minister, who is the head of government.

Joaquim Alberto Chissano has been president of Mozambique since November 1986. He was first chosen by the central committee of Frelimo after the death of the country's first president Samora Machel, and returned to office in national elections in 1994 and 1999.

Pascoal Mocumbi, previously minister of health, has been prime minister since December 1994.

For parliamentary elections Mozambique uses the d'Hondt method of proportional representation, similar to that used in Australia and for the European parliamentary elections. To be included in the assembly, a party must gain at least 5% of the votes at a national level. Seats within a province are then divided among parties depending on their vote within that province

(See <http://www.mozambique.mz/governo/eleicoes/hondt.htm>).

The two major parties are Frelimo and Renamo (see history section above). As indicated by the elections results by province shown below, Frelimo has its strongest electoral bases in the south and in the northern province of Cabo Delgado; Renamo has its strongest base in the central provinces of Manica, Sofala, and Zambézia; Niassa, Nampula, and Tete are more evenly divided.

Both history and geography are important influences on political divisions, but it would be a mistake to exaggerate stereotypes based on either influence. Thus, for example, most elected representatives of Renamo joined the party after the war was over, when donors were providing subsidies to turn it from an armed group to a political party. Their common element was opposition to the ruling party, not identification with Renamo's history. And many of the strongest critics of the government today in Mozambique were active supporters of Frelimo's liberation struggle and post-independence policies, who have no sympathies for Renamo's brand of opposition politics. Within both government and opposition, moreover, there is a wide diversity of views on political issues.

### *1999 Elections*

[Source: Mozambique Peace Process Bulletin, Issue 24 - 28 December 1999

<http://www.mozambique.mz/awepa/eawep24/eawepa24.htm>]

The results announced by the CNE (National Elections Commission) for the 1999 elections were:

Joaquim Chissano	2,338,333	52.3%
Afonso Dhlakama	2,133,655	47.7%

(Percentages are of valid votes; blank votes were 6.5% and invalid votes 2.9% of a total of 4,934,352 votes.)

This compares with the 1994 results :

Joaquim Chissano	2,633,740	53.3%
Afonso Dhlakama	1,666,965	33.7%
Others	640,774	13.0%

(Percentages are of valid votes; blank votes were 5.8% and invalid votes 2.8%.)

This year there were only 2 presidential candidates, compared to 12 in 1994.

Although Renamo's leader made major gains in the presidential race, Renamo itself made only small gains in the parliamentary race; both Frelimo and Renamo increased their number of seats, but Frelimo strengthened its position as majority party. This year there were 12 parties and coalitions in the parliamentary race, compared to 14 in 1994.

The votes this year were:

Frelimo	2,005,713	48.5%
Renamo	1,603,811	38.8%
Others	522,799	12.7%

(Percentages are of valid votes; blank votes were 9.6% and invalid votes 4.9%.)

The 1994 votes were:

Frelimo	2,115,793	44.3%
Renamo	1,803,506	37.8%
UD	245,793	5.2%
Others	608,133	12.7%

(Percentages are of valid votes; blank votes were 8.4% and invalid votes 3.2%.)

### **Distribution of 250 Seats in Parliament, by Province**

Sofala	17	4
Inhambane	4	13
Gaza	0	16
Maputo Province	1	12
Maputo City	2	14
TOTAL	117	133

For additional background in English on politics in Mozambique in recent years, an invaluable source is the Mozambique Peace Process Bulletin, which has been published irregularly, in English and Portuguese, by AWEPA (European Parliamentarians for Africa). Recent issues are available at: <http://www.mozambique.mz/awepa>.

Although no political parties other than Frelimo and Renamo have gained any significant momentum, there is widespread and growing disillusionment with both parties and with “politics” in general among Mozambicans. In April 2001, the journalist Ricardo Timane, a leading figure in the Movement for Peace and Citizenship, wrote a commentary eloquently expressing this view (Timane died of a heart attack several weeks after the article was published).

An Alternative of Hope, by Ricardo Timane

Metical, April 18, 2001 [translated excerpt;

for Portuguese original see <http://www.mol.co.mz/noticias/mt010418.html>]

The hour of difficult choices has arrived. Our country is passing through a very troubled period in its history. Those in power try to hide the many problems under the rug and to paint reality with the marvelous colors of the macroeconomic situation, cooking up a beautiful dish called two-digit growth, which the majority of Mozambican citizens from Cabo Delgado to Maputo and from Manica to Zambézia neither eat nor even catch a smell of. The opposition directed by Dhlakama grumbles, shouts, and pounds on the table, but finds it too much work to come up with even a single idea or project to improve the lives of Mozambicans. At one moment it is throwing rocks at Frelimo and at the government it says it doesn't recognize; at the next moment it is kissing the check from the Planning and Finance Ministry and running to the bank to pick up the salaries for its representatives in parliament. And then it either begs or

threatens violence, depending on its whim, to make its political opponents, which it calls corrupt, divide up the cake, because after all they are brothers, as Dhlakama says. ...

... Mozambicans regardless of party need to join hands in a broad patriotic front and construct an alternative of hope for Mozambique. An alternative against exclusion, for social justice, for dignity and effective institutions, for ethics in government and for participatory democracy by and for the citizens.

*Topics to explore:* (1) Look up the Mozambique Land Act of 1997 (try "Mozambique land reform" in a search engine) to explore the role of peasant associations in lobbying for changes in the act. (2) In late 2000, the assassination of journalist Carlos Cardoso and the death of prisoners by suffocation in the northern town of Montepuez were each the subject of intense controversy in Mozambique and internationally among those concerned with the country. You will find much information on-line.

## Economics

### Colonial Legacy of Underdevelopment

Prior to independence in 1975, the economy of Mozambique depended largely on services provided to South Africa and Southern Rhodesia. The service income came from transit traffic through the ports of Maputo, Beira and Nacala, and from remittances from migrant workers in South Africa and Southern Rhodesia. A large part came from wages of over 100,000 Mozambican miners working in South Africa.

Exports were concentrated in the agricultural sectors, characterized by forced labor on approximately 4,500 foreign-owned plantations and farms and by forced sale by peasants of cash crops at artificially low prices. Roughly 80 percent of agricultural production by Mozambicans was dedicated to subsistence agriculture. The commercial retail and wholesale network linking the rural areas to national and world markets was dominated by Portuguese settlers and, to a less extent, by Mozambicans of Asian or mixed-race origin.

The major products exported at independence were cashews (15 percent in value), sugar (11 percent), cotton (9 percent), wood (7 percent), prawns (5 percent) and copra (5 percent). Although industry employed only 2 percent of the active labor forces and was concentrated around Maputo and Beira, there was significant increase in manufacturing in the last decade of colonial rule. This was oriented to the consumer market provided by some 200,000 Portuguese settlers, most of whom had arrived in the country since World War II.

Semi-skilled as well as skilled posts in both the colonial administration and the private sector were concentrated in the hands of Portuguese and, secondarily, Mozambicans of Asian and mixed-race origin. Only 20 percent of the non-agricultural work force was of African origin in 1970. Only one tenth of one percent of black Mozambicans (some 5,000 individuals) were estimated to have more than four years of schooling in 1970, out of a total population of 6.6 million over the age of six.

## Post-colonial Economy: Exodus, War, Overextended State

Between 1973 and 1975, Mozambique's gross domestic product declined abruptly from \$3.5 billion to \$2.2 billion (at 1980 prices), a drop of 37 percent. This was the result of the exodus of probably more than 80 percent of the Portuguese settler population in anticipation of or immediately following independence. In aggregate terms, Mozambique has never fully recovered to pre-independence levels, although the trend was modestly positive in the first years of independence (and significantly positive in the last part of the 1990s).

From 1981, the war had an even more negative impact than that of the settler exodus, with GDP declining to \$1.6 billion in the low year of 1985. During the period 1980-1988, the UN calculated that Mozambique suffered economic losses due to the war of approximately \$16 billion (1988 prices).

While the primary reason for economic decline was the war, the economy also suffered from over-centralized management by a state that was seriously lacking in skilled personnel and management capacity. While health care, education and banking were nationalized by decree, much of the rest of the economy also fell into government hands, as the state took responsibility for farms, factories and other businesses abandoned by settlers.

The Mozambican service sector--including rail and port services for all the interior countries as well as migrant labor to South Africa and Rhodesia--was highly vulnerable. When Mozambique implemented UN sanctions against Rhodesia in 1978, it was a crippling blow to the economy of central Mozambique. South African cutbacks on migrant Mozambican mine workers were devastating to southern Mozambique, as well as cutting foreign exchange. And the transport sector was at the mercy of sabotage during the war.

The colonial agricultural economy had been based on the coercion of the Portuguese state and a network of rural trading dominated by Portuguese settlers. Makeshift replacements failed to install a working agricultural system. Efforts to build a new system suffered both from the government's concentration on state farms (formerly Portuguese-owned) to the neglect of peasant farmers, and from the African and Renamo military strategy of targeting rural communities and the links between city and countryside. Both agricultural export earnings and food production dropped dramatically in the 1980s.

For an overview of the interaction of war and other factors in Mozambique's economic decline in the 1980s, see chapter 10 of William Minter, *Apartheid's Contras* (London: Zed, 1994). For a detailed analysis of economic policies in the agrarian sector, see Merle Bowen, *The State against the Peasantry* (Charlottesville: University Press of Virginia, 2000).

## Growth with Poverty

Since the end of the war in 1992 and elections in 1994, Mozambique has seen renewed economic growth, combined with continuing poverty for the vast majority of the population. The current context is

summarized in the October 2000 issue of the UN publication *Africa Recovery*, in an article reproduced below in condensed form.

Condensed from "Mozambique: growth with poverty," by Paul Fauvet, *Africa Recovery*, October 2000. *Africa Recovery* is available on-line at <http://www.africarecovery.org>.

Since peace came in 1992, the image of Mozambique has been transformed from that of an economic basket case to an African "success story." Despite severe flood damage this year [2000], the economy has grown dramatically, achieving some of the highest growth rates in the continent. But poverty remains widespread and the country is still heavily dependent on donor aid -- and subject to the onerous conditions attached to such assistance.

By the late 1990s, the economy had made remarkable progress, with double-digit growth rates. Nevertheless, economic growth is not a panacea. Large increases in gross domestic product (GDP) coexist with grinding poverty for the bulk of the population.

By the time President Joaquim Chissano and Renamo leader Afonso Dhlakama signed a peace agreement in 1992, much of the country's physical infrastructure -- roads, bridges, railways, sugar mills, rural shops and much else -- lay in ruins. Annual per capita GDP had fallen from \$133 in 1981 to \$90 in 1993.

Since the mid-1990s, the targets of high growth rates, low inflation and currency stability have all been met, and the government has won praise from its international partners for its tight control over public finance. The GDP growth rate peaked at 11.3 percent in 1997 and averaged nearly 10 per cent in 1996-99. This is one of the highest rates in the world, although from an admittedly low starting point.

By 1997, the inflation rate had declined to 5.5 per cent, from 54 per cent in 1995. In 1998, for the first time, average prices actually fell and the inflation rate for the year was minus 1.3 per cent, before rising again to a modest 4.8 per cent in 1999. Significantly, these price falls were concentrated in foodstuffs, on which poor Mozambicans spend the bulk of their income.

Low inflation went hand-in-hand with currency stability. In 1992 the Bank of Mozambique stopped fixing the exchange rate of the country's currency -- the metical -- and let it float according to supply and demand. The metical's depreciation against the US dollar became no more than a gentle slide, making it one of the most stable currencies in Southern Africa. This was achieved thanks in part to tight credit ceilings and control over the money supply, although this has posed difficulties for Mozambican businesses. The government has vowed that it will not resort to printing more money to pay its bills.

Despite this macro-economic "success story," 69 per cent of Mozambicans still live below the poverty line (see table). As Prime Minister Mocumbi told donors in 1998, poverty "is an atrocious reality, particularly in the countryside where 80 per cent of the population lives." This rural poverty is intimately linked with rudimentary agricultural techniques. Only 7 per cent of farmers use traction (animal or mechanical) and only 2 per cent use fertilizers or pesticides. The dominant image of Mozambican

agriculture remains that of a farmer (usually a woman, and often with a baby on her back) turning the soil over with nothing but a hoe.

Peace and adequate -- if sometimes excessive -- rains have contributed to an agricultural recovery, despite some flood losses. The 1980s spectre of famine has vanished. There is no longer a chronic food deficit.

Increased grain harvests are not due to higher productivity, however, but simply to an increase in the area under cultivation. Most peasant families have been unable to build up a reserve of food or money that would see them through a bad harvest. A disaster such as this year's floods plunges the affected areas into an immediate crisis and sends the government appealing once again for international food aid. Fragile marketing networks and the poor state of access roads add to the precariousness of small-scale farming.

In the towns, most of the social and economic safety nets that existed under the previous centrally planned economy have been withdrawn. There is no longer a basic ration of subsidized food for all and health services are no longer essentially free. The statutory minimum wage for industrial and office workers is now the equivalent of \$30 a month. The trade unions complain that workers alone are bearing the costs of the structural adjustment programmes under way since 1987. The Mozambican Workers' Organization (OTM), the main union federation, argues that more than 100,000 jobs have been lost over the past decade because of structural adjustment policies. The unions calculate that in order to meet the basic needs of an average family of five, a worker needs a monthly wage of 900,000 meticaís (\$76).

One of the government's main goals is to attract foreign investment, particularly in large enterprises that could generate thousands of jobs. The largest project is the \$1.3 billion MOZAL aluminium smelter on the outskirts of Maputo, which began production in June 2000. The main shareholders are the London-based metals company Billiton, Mitsubishi of Japan, and the South African Industrial Development Corporation. The construction phase created around 7,000 temporary jobs, but there will only be 800 full-time staff when the smelter is fully operational, probably by March 2001, when its annual output is expected to reach 250,000 tonnes. All of this will be for export, and at an anticipated value of \$400 million, the aluminum will earn Mozambique more than all exports combined in 1999.

An even larger project on the drawing board is a factory to produce steel slabs in Maputo, using South African iron ore and Mozambican natural gas. This would entail a \$1.6 billion investment and another \$600 million to build a gas pipeline. However, negotiations between the Mozambican government and the US corporation Enron stalled for more than a year over terms for exploiting the Pande gas field in Inhambane province. Agreement was finally reached in April 1999, giving Enron rights over a larger area than the government had initially wanted.

## **Focus on transport**

Despite the war, major upgrading of transport infrastructure took place in the late 1980s and early 1990s, including rehabilitation of Beira port and the rail lines from Beira and Maputo to Zimbabwe and most of the line from Nacala into Malawi.

Currently, Mozambique and South Africa are improving transport links to encourage traffic from South Africa's Gauteng and Mpumalanga provinces to use Maputo port, which is much closer to Johannesburg than any South African port. The key component of a major project called the Maputo Development Corridor, launched by Mozambique and South Africa in 1996, is a toll road from Maputo to the South African town of Witbank. Now under construction by a consortium headed by the French firm Bouygues, the road is ahead of schedule and should be ready later this year. Plans for the corridor also include dredging the Maputo port entrance channel to take larger vessels.

## Dependence on donors

Despite the macro-economic improvements, Mozambique remains dependent on huge annual injections of foreign grants and soft loans. The government collects enough domestic revenue to cover its running costs, but the capital budget is almost entirely funded by foreign aid.

Every year the government attends the World Bank's Consultative Group for Mozambique, which brings together the country's major creditors. The most recent meeting, in June 2000, brought donor pledges of \$530 million for this year and \$570 million for 2001.

Besides the bilateral creditors, both the World Bank and International Monetary Fund (IMF) exercise significant policy leverage through their lending. If they are not satisfied with Mozambique's implementation of IMF/World Bank programmes, they can suspend lending, which in turn endangers funds from bilateral sources. Prime Minister Mocumbi, responding in a parliamentary debate to opposition complaints that the government is taking orders from foreigners, acknowledged, "We are a

country that begs, and beggars have their sovereignty

curtailed." Agreements reached with the Bank, Fund and other creditor institutions have included a wide variety of policy targets and conditions. Most recently, Mozambique's policy framework for 1999-2002, agreed to with the IMF and World Bank, stipulates that the government will continue to improve the environment for private sector development and further liberalize trade and investment.

## The Case of the Disappearing Cashew Industry

Cashews, one of Mozambique's leading exports, grow on trees, which are owned by peasant families in almost all areas of the country. But the nuts must be extracted from a hard shell containing a toxic liquid. In the years immediately following independence, Mozambique's processing industry employed some 10,000 workers, mostly women. In 1976 Mozambique exported 21,100 tonnes of processed cashew kernels, worth \$33 million, 23% of export earnings

By the end of the war in 1992, marketed production of raw nuts had dropped dramatically, from 200,000 tons a year in the 1970s (when Mozambique was the world's leading producer) to about 32,000 tons a year. This was due mainly to the collapse of the rural marketing network and war-related damage to the cashew tree stock (estimated at 25 million trees). Still, in 1996-1997 a survey reported that 26% of rural families had cashew trees.

Early in 2001 the Mozambique News Agency reported that most cashew workers were unemployed. The decline of the industry has been the subject of a bitter policy dispute pitting the World Bank against Mozambican public opinion and international critics. Read the news agency report below, and excerpts from the clashing views of columnist Paul Krugman and critic Robert Naiman.

You can find more on-line, including the classic article of Mozambique specialist Joe Hanlon (<http://www.jubileeplus.org/analysis/reports/roape100400.htm>), and a recent article by Washington Post correspondent Jon Jeter (<http://www.globalexchange.org/wbimf/washpost101800.html>). For other sources use the search at <http://www.africapolicy.org/search.htm>.

### MOST CASHEW WORKERS NOW UNEMPLOYED

Maputo, 20 Jan, 2001 (AIM / Mozambique News Agency) - About 6,000 workers in Mozambique's cashew processing industry lost their jobs in 2000, according to the general secretary of the Cashew Workers Union (SINTIC), Boaventura

Mondlane, cited in Saturday's issue of the Maputo daily "Noticias".

This brings to 8,500 the number of workers who have definitively lost their jobs since the crisis in the cashew sector began to bite in 1997. In other words, the great majority of workers in this industry are now unemployed.

"We have just ended a dark year for the cashew sector", said Mondlane. Prospects for the future looked no better - he said there was no money available to reopen factories that have closed because of the liberalization of the trade in cashews imposed on Mozambique by the World Bank.

Since 1995, the World Bank had insisted that protection be removed from the local processing industry: in effect, this meant that raw cashew nuts were exported to India, for processing by child laborers who shell the nuts by hand, rather than sold to the Mozambican factories. Liberalization, the World Bank insisted, protected the interests of the peasants who harvest the nuts, who would receive a greater percentage of the cashew price.

But as the industrialists predicted, the opposite has happened. With next to no competition from the local factories, the exporters of raw nuts have been able to push prices down.

"The result of liberalization, which we are now witnessing, is a fall in the marketing price", said Mondlane. "The producers are earning less and less, contrary to the arguments of the World Bank and the government. Now that the industry has been put out of action, prices are tumbling".

This year's cashew marketing campaign in northern Mozambique looks good, but the bankrupt industries are unable to purchase nuts and reopen their plants.

With the fading of all hope for the industry, workers who had been kept on the books even though they were producing nothing, have now been made definitively redundant. The sacked workers are receiving their wage arrears and their redundancy pay. "We are not satisfied at the payment of redundancy money", said Mondlane. "Our objective is employment, and not the laying off of workers". (AIM)

*Krugman v. Naiman* (excerpts only: full text of Krugman's article and Naiman's reply can be found at <http://www.fair.org/articles/naiman-krugman.html>)

From "Reckonings: A Real Nut Case," Paul Krugman, *The New York Times*, April 19, 2000

When Seattle Man went to Washington, his activities were coordinated in large part by a Web site, [www.a16.org](http://www.a16.org). Browsing the site, I was struck by the critique of the World Bank, written by Robert Naiman ... [Naiman's] example of how bank-imposed policies inflict economic damage is the way the bank "destroyed Mozambique's cashew nut processing industry, by forcing Mozambique to remove export tariffs on raw cashew nuts."

Mozambique's cashews are grown overwhelmingly by small farmers. ... a stiff export tax levied on raw, but not processed, nuts [...] in effect prevented the farmers from selling their product on the world market, and forced them to continue selling cheaply to domestic processors.

The World Bank demanded, as a condition for new loans, that this export tax be reduced. ... Governments

frequently tax the rural poor to subsidize urban industries -- industries whose workers are very badly paid by Western standards, but nonetheless receive much higher wages than most of their compatriots. This case -- in which peasants were forced to sell their crops cheaply in order to protect the jobs of 10,000 processing workers -- fits right into the pattern. ...

The World Bank is evil, then, because it tried to end a policy that not only made Mozambique as a whole poorer, but directly hurt millions of impoverished small farmers. Its high-minded critics want to keep the prices those farmers receive low, on behalf of 10,000 politically influential workers and a handful of foreign factory owners.

From Robert Naiman letter to the New York Times, "Krugman's Sloppy Economics," April 20, 2000

Paul Krugman ("A Real Nut Case") is right about one thing: the destruction of Mozambique's cashew nut processing industry by the World Bank and the International Monetary Fund is my favorite example showing why the destructive power of these institutions must be dramatically reduced. It illustrates that the IMF and the Bank exercise colonial power over developing countries; that, like Krugman, they are sloppy economists ...

On the paramount question of democracy, Krugman doesn't contest that the IMF and the World Bank imposed their policies on Mozambique-- contrary to their claims about "negotiation" and "dialogue."

As to whether the World Bank's diktat was good economic policy for Mozambique, it is Krugman who needs to do his homework. Krugman ignores the 1997 Deloitte & Touche study commissioned by the World Bank, which found that Mozambique's peasants did not gain anything from liberalized exports of raw cashews. This single fact demolishes Krugman's entire defense of the Bank's policy. The study also found that Indian subsidies to its cashew nut processing industry made competition unfair, and that Mozambique earns an extra \$130 per ton processing its own cashews, "sufficient reason to support the processing industry against competition from India."

## Health and Education

"According to estimates in Mozambique's national Human Development Report, released last Tuesday, the country can expect to lose 17% of its educational personnel by the year 2010 due to HIV/AIDS. Predicted deaths from AIDS include 9,200 teachers and 123 senior professional staff in the Ministry of Education."

The news item above, from a Maputo newspaper (*Noticias*) of June 14, 2001, starkly poses the enormous challenge for both health and education in Mozambique. After initial successes in the first years of independence in addressing the legacy of backwardness left by Portuguese colonialism, and significant progress in the 1990s in recovering from the damages to health and education from the years of war, the country now faces another formidable challenge.

Visitors arriving in the country today, without a sense of earlier successes against long odds, may easily see only the obstacles to progress. Yet there is a hidden resource in Mozambique's well-documented determination to succeed in health and education when resources are available.

## Some Early Successes

Before independence the country had approximately 500 doctors, overwhelmingly of Portuguese origin, less than one doctor for 22,000 people. They served primarily the white population and a fraction of urban blacks; most rural communities had little or no access to modern health care. Less than 100 of these doctors stayed on after independence. But after nationalizing health care in July 1975, the new government managed to expand services, stressing preventive medicine and primary health care.

By recruiting foreign health workers from a wide variety of countries, and by training large numbers of nurses and paramedics, the new health system quickly extended rudimentary coverage around the country. A national vaccination campaign in 1976, achieving coverage of 96%, was rated a remarkable success by the World Health Organization (WHO). In 1982, the last year before war became generalized in most of the countryside, a WHO study of randomly selected rural areas found "extensive contact by mothers and their young children with rural health services." The health budget, 3.3% of state expenditures in 1974, increased to an average of over 10% over the 1976-82 period. Mozambique's poverty meant that this added up to only US\$5 per capita in 1982, the peak year. Making the most of limited resources, the Health Ministry established a formulary of several hundred basic drugs, requiring competitive bidding from foreign suppliers. The new system reduced costs of imported medicines by 40%, making it possible to provide rural health posts with relatively regular supplies.

Even in 1982, regular preventive measures were reaching less than half the population, and even fewer had access to curative medicine. The majority of doctors were still in the cities, and less than a third were Mozambican. Management, particularly in the hospitals, left much to be desired. But given the starting point and the resources available, Mozambicans rightly took pride in the achievements of their health policies.

Developments in education were also impressive. Just before independence the illiteracy rate, including whites, was over 90%. Only one percent--about 80,000 people--had completed more than four years of school, and most of these were Portuguese settlers. In 1973, only 40 of the 3,000 university students were African. By 1980, illiteracy was down to 75%. Primary school enrollment expanded from 666,000 in 1973 to 1.4 million in 1980. Secondary school enrollment went from 33,000 to 91,000 over the same period, an extraordinary pace considering that in 1973 a high proportion were white. New teacher training courses in each province increased the number of primary teachers from 11,000 to 19,000. Double shifts and classes held outdoors or under hastily constructed shelters partially made up for a lack of school buildings.

This pace of advance would likely not have been sustainable even with peace. But

with rural clinics and schools among the primary targets of attack by Renamo, the 1980s saw much of this progress reversed. During the war half the rural primary schools were burned down or forced to close, and the health network shrank by more than a third.

### *Recovery and Obstacles\**

\* condensed from Paul Fauvet, *Africa Recovery*, October 2000.

Until 1994, defense spending was easily the largest single item of recurrent expenditure in the annual budget. But after the 1994 elections, resources were shifted, and each year saw a real increase in allocations to the social sectors.

By the end of 1998, the primary school network had recovered from the damage inflicted during the war. The number of first-level primary schools (first to fifth years) equaled and then surpassed the number that had been operating in 1983. There were 6,600 such schools by April 1999, attended by 2.1 million children.

However, according to the education ministry's planning directorate, 32 per cent of primary schoolchildren attend schools that are so crowded that classes have to be given in three shifts a day. Even so, many children still cannot get a place in school. Currently, only 81 per cent of all 6-year-olds enter the first year of primary school, though this is much better than the 59 per cent figure in 1992.

The education pyramid narrows dramatically after the fifth year. There are only 440 second-level primary schools (sixth and seventh years), and just 81 secondary schools in the entire country. Most children cannot go to secondary school, since there are simply not enough places. There were fewer than 64,000 children receiving basic secondary education (levels eight to ten) in early 1999, and only 8,500 in pre-university schools. There are about 7,000 students enrolled in Mozambique's six university-level institutions (three public and three private), and 15,000 in various vocational colleges.

The school system also is characterized by high dropout and failure rates, particularly among girls. The quality of education is poor, in part because teachers remain poorly paid, despite the budget increases.

## **Illiteracy Rate by Sex and Residence in 1980 and 1997**

Sex	Residence	1980	1997
Both sexes	Total	72.2	60.5
	Urban	40.3	33.0

	Rural	77.1	72.2
Female	Total	84.5	74.1
	Urban	56.5	46.2
	Rural	88.4	85.1
Male	Total	na	44.6
	Urban	na	19.4
	Rural	na	56.4

Modern health services reach only about 40 per cent of the population. For key public vaccination campaigns, mobile brigades are sent into remote areas, with great success. Indeed, the second dose of the 1998 vaccination against polio reached 111 per cent of the national target, partly, explained Health Minister Aurelio Zilhao, because many mothers from neighbouring countries brought their children into Mozambique to be vaccinated. Mozambique is now likely to qualify for World Health Organization certification as a polio-free country. But the shortage of clean drinking water, poor or non-existent sanitation in peri-urban areas, and inadequate refuse collection facilitate the spread of disease, including cholera and malaria.

And now AIDS. At the end of 1999, UNAIDS estimates 13% of Mozambican adults as infected with HIV. This is lower than the 25% rates in Swaziland and Zimbabwe, or the 20% rates in South Africa and Zambia. (For country fact sheets see <http://www.aids.org>). But it is more than enough to overwhelm the resources of the country, even one with double-digit economic growth rates. Mozambique's leaders were among the earliest in Africa to speak frankly about AIDS.

Mozambique's Prime Minister, himself a doctor and former minister of health, had this to say in an opinion piece in *The New York Times* (June 20, 2001)

A Time for Frankness on AIDS and Africa, By PASCOAL MOCUMBI

[excerpts: For the full article, go to:

<http://www.nytimes.com/2001/06/20/opinion/20MOCU.html>

"In Mozambique, the overall rate of H.I.V. infection among girls and young women—15 percent—is twice

that of boys their age, not because the girls are promiscuous, but because nearly three out of five are married by age 18, 40 percent of them to much older, sexually experienced men who may expose their wives to H.I.V. and sexually transmitted diseases. Similar patterns are common in other nations where H.I.V. is rapidly spreading. Abstinence is not an option for these child brides. Those who try to negotiate condom use commonly face violence or rejection. And in heterosexual sex, girls and women are biologically more vulnerable to infection than are boys or men."

As a father, I fear for the lives of my own children and their teenage friends. Though they have secure families, education, and the information and support they need to avoid risky sex, too few of their peers do.

As prime minister, I am horrified that we stand to lose most of a generation, maybe two. The United Nations estimates that 37 percent of the 16-year-olds in my country will die of AIDS before they are 30.

As a man, I know men's behavior must change, that we must raise boys differently, to have any hope of eradicating H.I.V. and preventing the emergence of another such scourge."

"Today, in Africa and elsewhere, we are far from achieving these goals. Most political leaders still view adolescent sex as a politically volatile subject to be avoided. Community and religious leaders wrongly believe that sexuality education promotes promiscuity. Health providers and teachers are ill trained about sexuality and ill at ease with it. Parents know little about sexuality, contraception or sexually transmitted diseases, and many believe that early marriage will "protect" their daughters. They may themselves condone or perpetrate sexual violence as a legitimate expression of masculinity.

For the long term, we need to develop H.I.V. vaccines and provide treatment to everyone with H.I.V. We need to develop protection methods like microbicides that women can use with or without a partner's knowledge or cooperation. Above all, we must summon the courage to talk frankly and constructively about sexuality. We must recognize the pressures on our children to have sex that is neither safe nor loving. We must provide them with information, communications skills and, yes, condoms.

To change fundamentally how girls and boys learn to relate to each other and how men treat girls and women is slow, painstaking work. But surely our children's lives are worth the effort."

– Pascoal Mocumbi, prime minister of Mozambique and its former minister of health, is a physician and a board member of the International Women's Health Coalition.

## **Culture**

## **Languages**

Mozambique encompasses a wide variety of cultural traditions which have intertwined in complex

patterns of interrelationship over history—those coming from Bantu-speaking cultures in Mozambique and neighboring countries, from Islamic and other Asian influences, and from the colonial powers and settlers in neighboring countries as well as the Portuguese.

African languages spoken in Mozambique belong to the group of Bantu languages. Their similarities are roughly the same as those within the Romance group of European languages, and it is relatively easy for someone who knows one of them to acquire at least a working knowledge of another. The largest group of closely related languages is Makua-Lomwe, in Nampula and Zambézia provinces, which is spoken by approximately a third of Mozambicans. Tsonga, with variants called Ronga and Tswa, is referred to as Shangaan in neighboring South Africa, and dominates southern Mozambique, being spoken by a with a bit more than a tenth of Mozambicans. In central Mozambique Shona languages are spoken, including Ndaou and Manyika.

Mozambicans share many languages with their neighbors, including Swahili, Yao, and Makonde with Tanzanians; Nyanja and Chewa with Malawians; Shona with Zimbabweans; and Shangaan with people of the northeastern Transvaal in South Africa.

Note: the names of languages are spelled in many different ways. They may often be preceded by Xi (in Portuguese) or Chi (in English), the Bantu prefix that indicates a language name.

The national language of Mozambique, and the language of instruction in schools, is Portuguese. As such, Portuguese is being assimilated into Mozambican culture, and adapted to Mozambique, as significant numbers of Mozambicans use it as a first language. Although less than one percent of Mozambicans are of Portuguese ancestry, 1997 census results say 6.5% of those over 5 years old regard Portuguese as their “mother tongue.” In urban areas 17% say they regard Portuguese as their mother tongue; 26.1% say it is the language they speak most frequently at home.

Almost 40% of Mozambicans say they know how to speak Portuguese, with the rate rising to 81% among urban males and falling to 16% among rural females.

## Contemporary Arts

No attempt to present Mozambican music, dance, painting, sculpture, theatre and literature could possibly substitute for hearing and seeing in person. Fortunately there are at least small samples now available on the web that can give at least a glimpse of what is available in Mozambique.

The black-and-white painting to the left and the color painting on the cover of this study guide are among the prodigious artistic output of Malangatana Valente Ngwenya, generally considered Mozambique's leading contemporary artist.

You will find a page dedicated to him on the Mozambique home page

(<http://www.mozambique.mz/malangatana>) and an extended collection of photographs of making of his mural at the Center for African Studies of Eduardo Mondlane University (<http://www.uem.mz/>

malangatana). A web search will turn up numerous additional sites, many with images of his paintings.

Despite his prominence, Malangatana is not alone, but part of a wide panorama of artistic creativity in the country.

The culture page of Mozambique On-Line (<http://www.mol.co.mz/cultura>) is the best entry point for those visiting by web. Among

links of particular interest are the following:

Arms into Art

<http://www.africaserver.nl/nucleo/>

On-line exhibit of sculptures from recycled weapons, the result of a joint project by the Christian Council of Mozambique and Maputo's Nucleo de Arte.

Centro Cultural de Matalana

<http://www.matalana.cjb.net/>

Innovative web site, including children's art, from a cultural center outside Maputo.

## Caixinha de Música (Music Box)

<http://www.macua.com/caixinha1.html>

Collection of Mozambican music on the web, in Real Audio and MP3 formats.

## Child's Eye

<http://www.piac.org/childseye/silva.htm>

Exhibit of photographs of children in central Mozambique, Sérgio Silva

## Art of Mozambique

<http://www.cama.org.za/mozambiq/art.htm>

Exhibit in South Africa of several Mozambican artists.

## Mozambican musical instruments

[http://www.geocities.com/TheTropics/2962/instrumentos\\_index.html](http://www.geocities.com/TheTropics/2962/instrumentos_index.html)

Drawings and descriptions (in Portuguese) of traditional Mozambican musical instruments.

## Religion

As shown by this graph reporting on the 1997 census, from the National Institute of Statistics in Mozambique, Catholics and those claiming no religion—many of whom may hold local traditional beliefs-- each make up almost one quarter of the population of Mozambique. Muslims and adherents of what in Southern Africa are called “Zionist” or “African Independent” churches come next, with a bit over 17% each, followed by Protestants with almost 8%

<http://www.ine.gov.mz/>

In colonial Mozambique, the Roman Catholic church was the state church, with close links to the colonial state. Pressure from other European powers ensured access by Protestant missionaries to some parts of Mozambique, but it was restricted to certain areas of the country. Missions were restricted in their use of African languages in education, and the Portuguese hierarchy suspected not only Protestants but also non-Portuguese Catholic missionaries of disloyalty to Portugal. In the colonial period, the Portuguese Catholic Church was among the most conservative in the world.

Nevertheless, Catholic as well as Protestant Mozambicans were active in the liberation struggle. One of the martyrs of the struggle, a Presbyterian minister named Zedequias Mangahela, has a street named after him in Maputo. And it was Catholic missionaries who exposed the massacre of villagers by Portuguese troops in Wiryamu in Tete province in 1972.

In the years following independence, relations between the Mozambican government and the Catholic church in particular were very tense, as Frelimo nationalized church schools and medical services and integrated them into expanded national educational and health systems. The hostility intensified in 1978 after Frelimo declared itself a “Marxist-Leninist” party and many party officials displayed a dogmatic opposition not only to organized religious groups but also to traditional religious beliefs. Suspicion that some in the Catholic hierarchy supported Renamo widened the gap with the Catholic church in particular.

By the early 1980s, however, the ruling party was seeking rapprochement even with the most hostile church leaders, including cooperation in responding to the damages from war and natural disasters. At the end of the 1980s and beginning of the 1990s, Mozambican church leaders as well as the Italian Catholic order of St. Egídio played key roles in facilitating contacts between the government and Renamo, one of the factors leading to the peace agreement in 1992. [See an account of the role of the churches in the peace process in Mozambique, by two of the church leaders who were involved: “A Calling for Peace: Christian Leaders and the Quest for Reconciliation in Mozambique,” By Dínis S. Sengulane and Jaime Pedro Gonçalves ([http://www.c-r.org/acc\\_moz/sengulane.htm](http://www.c-r.org/acc_moz/sengulane.htm))]

For additional sources on religion in Mozambique, including links to the web sites for specific churches and missions, see <http://www.mol.co.mz/religiao>.

## International Relations

Mozambique's international relations have been decisively shaped by its geographical position, its history and its poverty. Through skillful diplomacy, both as a liberation movement before independence and then as the country's ruling party, Frelimo succeeded in building good will and relationships for the country that go well beyond those that might be expected on the basis of its resources or strategic interest to outside powers.

In terms of transport, labor migration, and culture, the three zones of Mozambique have been linked to different sectors of southern and eastern Africa. Southern Mozambique has an intimate connection to South Africa. Central Mozambique's ties to Zimbabwe, Zambia and Malawi are also profound. And northern Mozambique is tied to Tanzania and, to a lesser extent, to other countries of the western Indian Ocean. All its land borders are with English-speaking nations, and English is taught in Mozambican schools.

For those familiar with this context, it was not a surprise that Mozambique formally joined the Commonwealth in 1997 (<http://www.mg.co.za/mg/news/97nov1/14nov-mozambique.html>). Portuguese continues to be the official language, however, and Mozambique is also an active participant in organizations of Portuguese-speaking states, including the group called PALOP (African Countries with Portuguese as an Official Language -

<http://portal.com.pt/palop/pnn1>) Despite a series of disputes with the former colonial power in the first decade after independence, Mozambique also enjoys generally good relations with Portugal.

The history of Mozambique's war for independence and the subsequent years of engagement in the struggle against minority rule in Rhodesia (Zimbabwe) and South Africa was also decisive in shaping Mozambican foreign relations. Mozambique had particularly close ties with Tanzania and Zambia, which provided the rear base for the war for independence. Similarly, it had close ties with Zimbabwean and South African liberation movements which relied on Mozambican support. Mozambique not only played a leading role in founding the group of Front Line States and then the Southern Africa Development Community (SADC), but also continues to be one of the key actors in facilitating communication among other members and in behind-the-scenes diplomacy on regional issues. Mozambique diplomats, for example, played an important role in facilitating the Lancaster House agreement for independence of Zimbabwe in 1980.

On a global scale, Mozambique's position was also shaped by the stance taken by different actors towards the liberation of southern Africa. Before independence, with the United States and other Western countries allied to Portugal, Mozambique relied on the Soviet bloc and China as well as African support. It also continued to reach out for support in the West. The Nordic countries were an important source of support, as were churches and other non-governmental groups in other Western countries.

These international relationships, especially that between the US and South Africa as Washington pursued

the Reagan Administration's "constructive engagement" policies, shaped Mozambique's international relations in the first decade after independence. By 1983, however, Mozambique's leaders had concluded that the danger from South Africa was so great and Mozambique so vulnerable that they had no choice but to try to woo the Western countries and build new ties with even the most conservative Western leaders. The rapprochement with President Reagan, despite some in the U.S. who proposed adding Renamo to the list of Reagan Doctrine military clients, was facilitated by the good ties Mozambique already enjoyed with Margaret Thatcher's government in the United Kingdom.

By the late 1980s the U.S. had joined the Soviet Union, Sweden and Italy among the top bilateral donors to Mozambique. Mozambique had joined the World Bank and the International Monetary Fund and shifted its economic policies accordingly. It had engaged the U.S. as well as other intermediaries in the search for peace with

South Africa and with Renamo. And it had built solid relationships with a host of donor agencies and non-governmental organizations, to the extent that some quipped that the "people's republic" had given way to the "donor's republic."

For more background on the period 1975-1992 in particular, see chapter 5, "The Cold War Connection," in William Minter, *Apartheid's Contras*. The views of a key U.S. policy maker (Assistant Secretary of State for African Affairs) can be found in Chester Crocker, *High Noon in Southern Africa* (New York: Norton, 1992)

With the heavy engagement of the UN and bilateral donors in management as well as funding of the peace process in 1992-1994, and the parallel escalation of the World Bank and IMF role in economic planning during the 1990s, one of the key issues in Mozambican foreign relations was how much autonomy it was possible to maintain in such a context of dependence. Nevertheless, Mozambique continued to offer a distinctive voice in the international arena, on regional and global as well as on national issues.

*Topic to explore:* use an internet search engine and look up "Mozambique debt" or "Mozambique landmines" to find out Mozambique's role on these issues.

## Selected Bibliography

Note: This bibliography lists only a small selection of books about Mozambique, and only includes books in English.

### *History (Pre-colonial and Colonial)*

Honwana, Raúl. 1988. *The Life History of Raúl Honwana*, edit. and with an introduction by Allen F. Isaacman. Boulder: Lynne Rienner.

## **Mozambique on the Internet**

Despite all its apparent disadvantages--poverty, the damages left by war, and the use of a national language other than English--Mozambique has been one of the pioneers in Africa in use of the Internet. Under the leadership of Venâncio Massingue at the computer center of Eduardo Mondlane University, store-and-forward e-mail connections were first set up in 1992, and direct Internet access in 1994. The university provided Internet services both inside and outside the university, finding an enthusiastic response in both government and non-government sectors.

In the second half of the 1990s, with increased donor support and strong government encouragement, including the state-owned telephone company, internet access expanded rapidly with founding of new private ISPs, the development of web sites by government agencies, and extension of services to areas outside Maputo. Mozambique was one of the first African countries to have its national telephone book available on-line (in 1999)! (See <http://rovuma.tdm.mz>).

By the year 2000, Mozambique was estimated to have over 6,000 Internet subscribers, with 5 major ISPs

and access points in 4 cities.

There is a wealth of information on-line provided by Mozambican sources: government agencies, commercial media, non-governmental organizations and private individuals, as well as information about Mozambique from international agencies. Most of the Mozambican sites are in Portuguese, but many also contain sections in English. While some sites are slow to load due to limited bandwidth, this situation is improving rapidly.

As everywhere in the world, Internet sites in Mozambique change rapidly. For current information, always use a search engine as well as the sites suggested in this section. Be sure to enter “Moçambique” or “Mocambique” as well as “Mozambique” to get sites in Portuguese as well as English. Two highly recommended search engines are Google <http://www.google.com> and FAST <http://www.alltheweb.com>.

The most comprehensive guide to Mozambican sites (as well as to information on Mozambique from many international sites) is Mozambique On-Line (<http://www.mol.co.mz>). Mozambique On-Line provides current news (in Portuguese and in English), and links organized by topic, often with informative annotations. The following is a small selection of recommended sites in several sectors. Additional links can be found in the topical sections above.

# A Self Study Guide to Nigeria

GEORGE P. SHULTZ NATIONAL FOREIGN AFFAIRS  
TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The **Self-Study Guide: Nigeria** is intended to provide U.S. government personnel in the foreign affairs community with an overview of important Nigerian issues related to history, geography, politics, religion, culture, economics, and international relations. The guide merely serves as an introduction and should be used as a self-study resource. Nigeria

is far too complex and diverse a society to be covered in any depth using only the text in this guide. Therefore, the reader is encouraged to explore the questions and issues introduced using the Internet site guide and articles and books listed in the bibliography. Most of the bibliographic material can be found either on the Internet or in Foreign Service Institute or Main State Libraries.

Rhonda M. Horried, a doctoral candidate completing her Ph.D. in political science at the Maxwell School of Citizenship and Public Affairs at Syracuse University prepared this first edition guide on Nigeria during her 2000 summer internship at the Foreign Service Institute's School of Professional and Area Studies. The views expressed in this guide are those of the author and attributable sources and do not necessarily reflect official policy or position of the Department of State or the National Foreign Affairs Training Center. Special thanks are extended to Mr. Albert Fairchild and Dr. Anne Imamura.

## Important Political Events: 1960-1999

<b>1960s</b>	<b>1960</b>
	<b>October :</b> Nigeria declares independence from Britain.
	<b>1963</b>
	Nigeria becomes a republic.
	<b>1966</b>
	<b>January:</b> Attempted coup is staged, suppressed by federal troops. Still results in military government being established.

	<p><b>1967</b></p> <p><b>May:</b> Eastern region of Nigeria secedes and proclaims itself the Republic of Biafra. Civil war erupts that kills an estimated 1 million people.</p>
<b>1970s</b>	<p><b>1970</b></p> <p><b>January:</b> Civil War ends, but military rule continues for 9 more years.</p> <p>1979</p> <p><b>October:</b> Nigeria returns to civilian rule when Sheu Shagari is elected President of the 2<sup>nd</sup> Republic.</p>
<b>1980s</b>	<p><b>1983</b></p> <p><b>December:</b> Military coup topples the Shagari regime.</p> <p><b>1985</b></p> <p>Another coup is lead by Gen. Ibrahim Babangida, who promises new elections.</p>
<b>1990s</b>	<p><b>1993</b></p> <p><b>June:</b> Moshood Abiola receives 58 percent of the vote for President, but Gen. Babangida annuls the election. U.S. suspends aid. Eleven people die in riots protesting a return to military rule. Babangida relinquishes power and an interim government is established.</p> <p><b>November:</b> Gen. Sani Abacha seizes power.</p> <p><b>1994</b></p> <p><b>June:</b> Abiola declares himself president and is subsequently arrested and charged with treason.</p> <p><b>July:</b> Nigerian Union of Petroleum and Natural Gas Workers strike and the price of crude oil increases worldwide.</p> <p><b>November:</b> Wole Soyinka, 1986 Nobel Prize winner for literature, flees Nigeria.</p> <p><b>1995</b></p> <p><b>October:</b> General Abacha vows to step down in 3 years after reforms</p>

are complete.

**November:** Ken Saro-Wiwa along with 8 other political activists are hung by Nigeria's military government for killing 4 pro-government traditional chiefs in 1994. Subsequently, Nigeria is suspended from the Commonwealth.

## **1996**

**June:** Kudirat Abiola, outspoken wife of Moshood Abiola is gunned down in her car in Lagos.

## **1997**

**March:** Nobel Prize Laureate Wole Soyinka is charged in absentia with treason by the country's military government.

## **1998**

**May 7<sup>th</sup>:** Nigeria announces it has freed 142 prisoners on orders of General Abacha.

**June 8<sup>th</sup>:** Abacha dies and is quickly replaced by Maj. Gen. Abdulsalam Abubakar.

**June 9<sup>th</sup>:** Clinton Administration offers improved relations with Nigeria's new military government if it frees political prisoners and moves toward democratic reform.

**June 12<sup>th</sup>:** Nigerians riot in Lagos and demand an end to military rule. They are dispersed by troops and police.

**July 7<sup>th</sup>:** Imprisoned Moshood Abiola dies of apparent heart attack as he talks with Nigerian officials and senior U.S. diplomats.

**July 20<sup>th</sup>:** Maj. Gen. Abubakar promises that free elections will be held in early 1999 and a civilian sworn in as president on May 29.

## **1999**

**January 20<sup>th</sup>:** Nigerian and international election monitors declared that local elections in December and state elections Jan. 9<sup>th</sup> were fair.

**February 27<sup>th</sup>:** Nigerians vote for a civilian president in an election marred by claims of voter fraud and irregularities. Two days later,

	Nigeria's election commission confirms former military ruler, Olusegun Obasanjo the winner.

## **INTRODUCTION**

### **BACKGROUND INFORMATION**

#### **MAP OF NIGERIA**

Nigeria is not a nation.... It is a mere geographical expression...There are no 'Nigerians' in the same sense as there are 'English' or 'Welsh' or 'French.' The word 'Nigerian' is merely a distinctive appellation to distinguish those who within Nigeria from those who do not.

Chief Obafemi Awolowo, 1947

Nigeria is Africa's most populous country and faces many challenges in its political and economic development. It has been in a constant struggle since its independence in 1960 to build a strong federal system and reduce conflicts that arise from uneven development, religious, ethnic, regional and class differences. This guide attempts to set forth the major issues that threaten Nigeria's potential. The federal system, political competition, and the interests of the various ruling groups have posed significant barriers to Nigeria's political and economic development; they have also paradoxically acted in ways that favor development and democracy.

There are several dominant themes in Nigerian history that are essential in understanding contemporary Nigerian politics and society. First, the spread of Islam, predominately in the north but later in southwestern Nigeria, began a millennium ago. Second, the slave trade, both across the Sahara Desert and the Atlantic Ocean, had a profound influence on virtually all of Nigeria. The transatlantic trade in particular accounted for the forced migration of perhaps 3.5 million people between 1650-1860. Third, the colonial era was relatively brief, lasting only six decades or so (1900-1960), depending on the part of Nigeria under discussion, but it unleashed such profound change that the full impact is still felt in the contemporary period. Fourth is the military, which has ruled for 30 out of Nigeria's 40 years of independence.

The history of Nigerian people extends backward in time for some three millennia. Archeological evidence, oral tradition, and written documentation establish the existence of dynamic societies and well-developed political systems whose history had an important influence on colonial rule and have continued to shape independent Nigeria. Nigeria's history is fragmented in the sense that it evolved from a variety of traditions, but many of the most outstanding features of modern society reflect the strong influence of the three regionally dominant ethnic groups-Hausa/Fulani in the North, Yoruba in the Southwest, and Igbo in the Southeast.

## **GEOGRAPHY AND CLIMATE**

Nigeria takes its name from its most important feature: the Niger River. The Niger rises in the northeast mountains in Sierra Leone and flows through Guinea, Mali, and Niger before entering Nigeria from the West. In Nigeria, it goes Southeast into the Niger Delta then into the Atlantic Ocean (Oyewole, 1987:1-2). Nigeria lies at the inner corner of the Gulf of Guinea in West Africa with an area of 356, 669 square miles. It is slightly more than twice the size of California. The longest distance from the eastern to the western boundaries is 700 miles, while the distance from the northern boundaries to the Atlantic Ocean is 650 miles. Benin borders Nigeria on the west, Niger and Chad on the north, Cameroon on the east and the Atlantic Ocean on the south (Oyewole, 1987:1-3). The climate varies: equatorial in the south, tropical in the center and arid in the north. The terrain ranges from southern lowlands to central hills and plateaus. There are mountains in the southeast and plains in the north (CIA, 1999).

## **POPULATION AND ETHNIC GROUPS**

The size and population of Nigeria is one of its most significant and distinctive features. Various studies estimate Nigeria's population between 100 and 118 million; the precise figure is uncertain because there has been no accepted census since 1963. Nigeria is composed of more than 250 ethnic groups with more than 500 diverse spoken languages and various religious faiths. The official language is English, but Hausa, Yoruba, Igbo and several others are spoken. The main ethnic groups are Hausa/Fulani in the North, Yoruba (made up of the Oyo, Egba, Ijebu, Ife, Ilesha, Ekiti and Owu peoples) in the Southwest, and the Igbo in the Southeast. These three groups comprise about 60 percent of the Nigerian population. The remainder of the people are members of the ethnic minority groups which include such peoples as the Kanuri, Tiv, and Nupe in the North, the Efik/Ibibio, Ejaw and the Ekoi in the East and the Edo and Urhobo/Isoko in the West along with hundreds of other groups that differ widely in language, culture, and even physique.

Fulani- One of the major ethnic groups in Nigeria. They were the first ones to accept Islam and they did much to spread it. The Fulani are either nomadic cattle herders or town traders. During the Jihad in 1803 led by Usman Dan Fodio, the Fulani gained political control over the Hausa states. After the war, Fulani were installed as emirs in all the emirates in the northern regions. The Hausa and Fulani have acculturated each other's values and are often referred to as Hausa/Fulani (Oyewole, 1987:137).

Hausa- The largest ethnic group in the North. They are Muslim and mostly farmers, artisans, and traders. The Hausa language is widely spoken not only in Northern Nigerian but also in other parts of West Africa. It is said they possess an intense cultural consciousness and pride in themselves. When they arrived in what is now called Nigeria, the Hausa set up 7 small states where they developed techniques of efficient government, including a carefully organized fiscal system and a highly learned judiciary.

Igbo (also spelled Ibo)- They constitute the majority ethnic group in Southeast. Among them they speak many dialects, which reflects their decentralized political structure. Their largest societal unit was the village, where each extended family managed its own affairs without being dictated by any higher authority. The villages were democratic in nature and where chiefs existed their political power was restricted to local jurisdiction. They are mostly farmers and traders. Many of the Igbo are Catholic, but some also practice the Igbo traditional religion.

Yoruba- They mainly live in the Southwest. It is believed that their ancestors migrated from Egypt. There were many trade wars among them during the 19th century. They have been the most urbanized people in Nigeria and before the British arrived, they had a fairly developed large political organization and traditional and constitutional monarchy. They have also been exposed to intense westernization. About 40% of the Yoruba are Christian (protestant), another 40% are Muslim and the remaining 10% practice the traditional Yoruba religion.

## **HISTORY**

## Map of 3 Major Ethnic Group Regions

## PRECOLONIAL HISTORY

People have lived in what is now known as Nigeria since at least 9000 BC. Kingdoms emerged in the northern area, prospering from trade ties with North Africa around the early centuries AD. At roughly the same time, the southern area yielded city-states and looser federations sustained by agriculture and coastal trade.

### North and Northwest Nigeria

The northern region's first well-documented state was the Kanem kingdom around 9<sup>th</sup> century AD. Kanem profited from trade ties with North Africa and the Nile Valley, from which it received Islam. Around the 14<sup>th</sup> century, the Kanem-Bornu Empire was established. Kanem-Bornu became a flourishing center of Islamic culture and grew rich in trade of salt and textiles. The empire lasted until 1846.

The Hausa cultures emerged into seven city-states (Kano, Rano, Katsina, Zaria, Gobir, Kebbi, Auyo) in the northwestern and north central areas of Nigeria. They developed strong trading centers typically surrounded by a wall. Their economies were based on intensive farming, cattle raising, craft making, and later slave trading.

### The Fulani and the Jihad

In 1803, Usman Dan Fodio, a Fulani priest and reformer, initiated a movement to purify the practice of the Islam and to improve the economy in the North. This religious war

helped spread Islam and united Northern Nigeria under the Caliphate of Sokoto (city founded by Usman Dan Fodio).

### Southwest Nigeria

Ife is the first well-documented kingdom established by the Yoruba in the southwest around the 12<sup>th</sup> century. Ife was known for its highly skilled artisans, who made beautiful pieces from terra cotta, bronze, wood and ivory. The kingdom of Benin emerged to the East of Ife, shortly after its rise. Around 15<sup>th</sup> century, the Yoruba city-state of Oyo arose. It replaced Ife as Yorubaland's political center. Initially, because of its strong military, the Oyo controlled the trade in slaves with the Portuguese. The Slave trade had disastrous effects on the area as the groups vied for the lucrative trade in slaves, conflicts increased, and agriculture and other economic areas declined or stagnated.

	<p><u>Southeast Nigeria</u></p> <p>The Igbos (pronounced Ebo) dominated this part of Nigeria. They did not for the most part have large, centralized kingdoms like other parts of Nigeria. In the 17<sup>th</sup> and 18<sup>th</sup> century, the Aro arose to dominate Nigeria's southeastern border. The Aro were oracular priests for the region and used this role to secure large numbers of slaves. The slaves were then sold in coastal ports.</p> <p><u>Slave Trade</u></p> <p>The effects of slavery on the development of Nigeria and West Africa are many. It drained the population of a</p>
	<p>considerable number of able-bodied men and women in their prime, leaving behind old men and women. It destroyed many villages and flourishing towns, and created distrust and hatred between various ethnic groups and even within the same ethnic groups, especially as witnessed by the Yoruba civil wars (mentioned previously under Southwest Nigeria). Still important is the fact it diverted Nigeria and West African efforts away from agriculture and industries. Finally, the suppression of slave trade in the 1800s gave European Empire builders a good opportunity to intervene in local African affairs, support one group against other and finally subjugate them.</p>

## **COLONIAL HISTORY**

	<p>In 1853 the British government had two consuls in Nigeria: John Beecroft for the Bight of Biafra and Benjamin Campbell for Lagos. Nigeria was the creation of these British imperial authorities. Its boundaries were determined not on the basis of its ethnic communities, but rather on the basis of European economic interests and power politics (Oyewole, 1987:5). The British established a colony in Lagos in 1861. Lord Frederick</p>
--	--

Lugard, a British colonial administrator was responsible for the pacification and conquest of the Sokoto Caliphate as well as unifying northern and southern Nigeria. He was a major advocate of British indirect rule, which basically used local chiefs and emirs to rule the people rather than establish a entirely new administrative network.

The British divided and ruled colonial Nigeria as distinct and independent political units via a regional system of separate administrations and local authority structures. Thus, there was no central representative institution or unifying political body. Nigeria became a federation of three regions (Eastern, Northern, and Western) in 1954. The federal structure reflected the wide cultural and political differences between the country's three largest ethno-linguistic groups, the Hausa/Fulani, Igbo, and Yoruba that constituted the majority of the populations in the Northern, Eastern and Western regions, respectively. Within each regional system, the majority group tended to exercise political dominance over numerous of other smaller ethnic groups. (Forrest, 1993:17).

### **COLONIAL MAP OF NIGERIA**

### **Independence and Crisis Years**

The Federation of Nigeria became independent on October 1, 1960. Since no party had won a majority in the 1959 elections, The Northern People's Congress and the National Council of Nigerian Citizens (NCNC) formed a coalition government. After the election, Abubakar

Tafawa Balewa of NPC became Prime Minister and Nnamdi Azikiwe of NCNC became the governor-general. In 1963, it became the Republic of Nigeria and its first President was Nnamdi Azikiwe.

The first years of independence were characterized by severe conflicts within and between regions. In the Western region, a mostly Yoruba based party called the Action Group led by Obafemi Awolowo split off under the leadership of S.I. Akintola to form the Nigerian National Democratic Party (NNDP) in 1962. In 1963, the Mid-Western region (mostly Edo population) was formed from part of the Western region. National Elections in 1964 were hotly contested with an NPC-NNDP coalition emerging victorious.

The January 1966 coup staged by Igbo army officers killed Federal Prime Minister Balewa, Northern Prime Minister Ahmadu Bello, and Western Prime Minister S.I. Akintola. The coup leaders installed an Igbo, Major General Aguiyi-Ironsi as head of government. Another coup in July killed Ironsi, and named Lieutenant Colonel Yakubu Gowon as head of a new military regime. The Eastern parliament subsequently declared the region an independent republic and civil war erupted.

## **POLITICAL ECONOMY**

### **ETHNICITY AND POLITICS**

In Nigeria, politics is not just the pastime of the educated elite alone. The uneducated rural population and their uprooted urban counterparts are as keenly aware of their stake in politics as the educated elites. Politics is largely non-ideological, based more along ethnic lines and concerned with material advancement and the

accumulation of power for one's ethnic group (Wilson, 1988:21-22). Nigeria has spent most of its post independence years searching for a national identity or at least trying to get citizens to think of themselves as Nigerians. Most Nigerians still have strong regional local loyalties embedded in ethnic and religious ties.

### *Politics of Marginalization*

Minabere Ibelema claims that Nigeria's ethnic groups are fearful of domination and, that this is the root cause of all the tension and instability that Nigeria has experienced since independence. At different points in time, each of the 3 major ethnic groups claims to have been marginalized from the government. Their claims of marginalization center on 4 central concerns: participation in and/or control of government, political appointments, budgetary allocations, and leadership of government-owned industries or parastatals.

The declining economy and government corruption have exacerbated the problem as many groups feel a loss of privilege and have started seeking scapegoats among other ethnic groups. There is an inherent inequity in the federal revenue sharing system, as 85-90 percent of the government's budget comes from a relatively small region's (the Niger Delta) crude oil production.

The Igbos and the Hausa/Fulani both feel marginalized. One can understand the Igbo claim since they still feel the impact of the civil war, but it is difficult to understand the Hausa/Fulani claim as they have dominated political leadership of Nigeria since the end of colonialism. Before the civil war, many Igbo held important political and business positions throughout the country especially in the North and Niger Delta, positions many have yet to regain. Although the Hausa/Fulani have dominated national politics, the Northern region where majority live has lagged tremendously in educational and industrial development.

On the other hand, Yorubas feel cheated since they have not fully participated in political leadership despite their high levels of education and extensive involvement in national industry and commerce. As a group, the Yoruba did not vote for Obasanjo (although he is Yoruba)

because he did not denounce the military government when it nullified the 1993 elections that would have made Moshood Abiola the first Yoruba Nigerian president.

## GOVERNMENT

In 1968, Nigeria adopted a federal structure of 12 states. The number of states increased in 1976 to 19, to 21 in 1987, to 30 in 1991, and to 36 in 1996. The federal capital of Abuja, a new city on the model of Brasilia, was created in 1979 (Mabogunje, 2000:818). The Nigerian state is now governed under the 1999 Constitution that is modeled after the American Presidential system, with three branches: Executive, Legislative and Judiciary. The executive branch is headed by a popularly elected president for a 4-year term and is assisted by a cabinet. The bicameral legislature consists of a 360-seat House of Representatives and a 109-seat Senate. All legislators are elected for 4-year terms. The current President is Olusegun Obasanjo of the People's Democratic Party, and the Vice-president is Alhaji Abubakar Atiku. The three major political parties are People's Democratic Party (PDP, centrist), All People's Party (APP, conservative) and the Alliance for Democracy (AD, progressive).

State governments are run by democratically elected Executive Governors, assisted by a Deputy Governor and State Executive Council of Commissioners who are appointed by the Governor and approved by the legislative arm of government-the State House Assembly. States enact laws, which are superceded by federal laws in case of conflict.

### Nigerian Leaders since Independence

Name	Ethnicity, Religion or Region	Period in Power	Type of Government
Nnamdi Azikiwe	Igbo	1960-66	Civilian
Johnson Aguiyi-Ironsi	Igbo	1966	Military
Yakubu Gowon	Hausa	1966-75	Military
Murtala Muhammad	Hausa/Fulani	1975-76	Military
Olusegun Obasanjo	Yoruba-Christian	1976-79	Military

Shehu Shagari	Hausa/Fulani	1979-83	Civilian
Muhammadu Buhari	Hausa/Fulani	1983-85	Military
Ibrahim Babangida	Hausa/Fulani	1985-1993	Military
Ernest Shonekan	Yoruba	1993	Civilian
Sani Abacha	Kanuri (North)	1993-98	Military
Abdulsalami Abubakar	Hausa/Fulani	1998-1999	Military
Olusegun Obasanjo	Yoruba-Christian	1999-	Civilian

### Nigeria's 36 States

Abia	Adamawa	Akwa Ibom	Anambra	Bauchi	Bayelsa
Benue	Borno	Cross River	Delta	Ebonyi	Edo
Ekiti	Enugu	Gombe	Imo	Jigawa	Kaduna
Kano	Katsina	Kebbi	Kwara	Kogi	Lagos
Nassarawa	Niger	Ogun	Ondo	Osun	Oyo
Plateau	Rivers	Sokoto	Taraba	Yobe	Zamfara

Map of Nigeria's 36 States

## **DOMINATION OF MILITARY RULE**

The political future of Nigeria is tied to the future of the Nigerian military. For now the military is confined to its barracks. However, military dictatorships have dominated 30 of Nigeria's 40 years of independence. Thus, the military remains a viable and threatening alternative to civilian rule. The key will be to get the military force to defer to civilian authority and accept a subordinate role in a constitutional democracy. After so many years of military rule, many Nigerian public and private sector institutions are overly centralized, corrupted, inept, and autocratic.

Many of the country's military rulers and their associates stole tens of billions of dollars that may never be reclaimed. Far worse than this, however, was the squandering of the national budget on capital building projects that simply provided vehicles for kickbacks, but produced little of value. It is estimated, for example that \$8 billion was spent to build a steel plant in Ajaokuta in 1970s (*Economist*, 2000). It has yet to produce any steel.

### **Coup d' État (1966-1993)**

Between 1966 and 1993, Nigeria experienced 7 coups. Some people, especially the Hausa/Fulani saw the first coup in January 1966 in the North as being staged for the sole purpose of establishing Igbo domination. After the *Unification Decree* in May, 1966, abolished the federal structure to set-up a unitary form of government, this was especially the case. Violent protest subsequently erupted in the Northern Region and 6,000-8,000 Igbos were killed (this ultimately led to the civil war and declaration of the Republic of Biafra).

The second coup in July 1966 established General Gowon as national leader. The third coup in July 1975 brought in General Murtala Muhammad as head of state, and Olusegun Obasanjo, as military chief of staff. In February 1976, there was an attempted coup that resulted in the death of General Muhammad. Obasanjo stepped in to rule the country. The fifth coup in December 1983 was bloodless, and removed Shehu Shagari's civilian government and brought Major-General Muhammadu Buhari to power. A sixth coup in 1985 was led by General Ibrahim Babangida. Sani Abacha led the seventh coup in November 1993, and brutally ruled until his death in 1998.

### **Civil War**

The Nigerian civil war was the result of ethnic suspicion and leadership conflict. The Hausa/Fulani thought the Igbos were attempting to dominate the country after the January 1966 coup, so they launched a counter coup in July that killed many Igbo military officials as well as thousands of civilians in the North. Many Igbo began to feel insecure in the current Nigerian federation, especially after General Gowon emerged as the new leader. The Igbo military leadership expressed much displeasure over the selection of General Gowon. After almost a year of political and economic power moves, Lt. Col. Ojukwu proclaimed the independent Republic of Biafra in May 1967. The war ended with Biafra surrendering in January 1970.

### **Modern Economy**

Spurred by the booming petroleum industry, the Nigerian economy quickly recovered from the effects of the civil war and made more impressive advances. Nonetheless, inflation and high unemployment

remained, and the oil boom led to government corruption and uneven distribution of wealth. In the late 1970s, a crisis ensued. It was brought on by rapidly falling oil revenues, government restrictions on public opposition to the regime, restricted union activity, student movements, nationalization of land, and increased oil industry regulation.

The World Bank ranks Nigeria as a low-income country despite its tremendous agricultural and mineral resources. It is among the world 20 poorest countries on the basis of per capita income. The decline in world petroleum prices in 1981 led to a decline in earnings from foreign exchange, which led to an accumulation of arrears in trade debts and to import shortages that resulted in a sharp fall in economic activity. A series of poor harvests, an overvalued currency, and a widening budget deficit severely compounded the problem. Between 1984 and 1990, austerity measures-- including elimination of price subsidies and privatization of state enterprises--were instituted by the Buhari and Babangida governments.

### **Petroleum Domination**

The development of the petroleum industry in the late 1960s and 1970s radically transformed Nigeria from an agriculturally based economy to a major exporter of oil. Nigeria extracts about 93.1 metric tons of oil annually to account for 2.9 percent of the world production (Ejobowah, 2000). The entire production comes from the Niger Delta and adjacent off-shore fields, which host over a dozen oil companies producing what accounts for at least 80% of Nigeria's annual revenue. The largest of the companies is Shell. The Nigerian government has joint partnership arrangements with each company, and commands 55-60 percent of shares.

### **Effects of Petroleum**

The discovery of oil, rather than improving the quality of life of most Nigerians, only made it worse (Onimode, 1992). Although it led to the establishment of many projects in industry and construction, which generated employment for skilled and unskilled labor, it also led to the population drift from rural to urban areas and the decline of agriculture in the national economy. The long-term problem of neglecting

agriculture has resulted in steep increase in food prices and food insecurity. The disruptive effect of petroleum activities also directly affected agriculture productivity in the oil producing regions, since some of the shore lands were farming lands. The pollution that accompanied oil-drilling activities also affected fish production in the area.

### **Niger Delta**

Ogoniland is the center of oil production in the Niger Delta and is suffering deteriorating social and environmental conditions. As it is the center of oil production, it generates at least 80% of government revenues in Nigeria. Ken Saro-Wiwa led the struggle of the Ogoni people until his execution by the Abacha regime in 1995. Before his demise, he called for reparations from the oil companies.

Even after the election of a democratic regime, Nigeria's oil region still experiences immense problems--with unemployed youth resorting to violence and terrorist tactics against oil company personnel and pipelines. These recent conflicts are unlike actions led by Ken Saro-Wiwa, which were peaceful demonstrations limited to the Ogoni people, who inhabit a small part of the region. These recent uprisings have been violent and deadly. President Obasanjo's attempts to quell the unrest by sending in the military have resulted in condemnation by human rights groups. The Niger Delta region wants development, but the oil fields do not lend themselves well to providing arable land for farming and clean water for fishing. The Niger Delta question revolves around the federal government's control of oil resources and the distribution of oil revenue among the constituent states of the federation, and the claims of local communities to ownership of the resources.

### **Corruption and Crime**

Corruption and crime are believed to be two of the most serious challenges posing a threat to the fabric of Nigerian society. Although direct looting of the Treasury associated with previous military administrations has probably declined under President Obasanjo, routine corruption, largely responsible for the state's mismanagement of

resources is likely to continue even after the delayed anti-corruption law comes into force (EIU, 2000:7). Corruption is so widespread in Nigerian public culture that it will take major changes – including the promotion of greater openness in government, paying public servants enough to reduce the temptation for bribe-seeking and generally loosening the state’s grip on the economy – to reduce the problem.

The effects of corrupted and incompetent military leadership on the Nigerian economy are still felt throughout the society. Crime including armed robberies, thefts/stealing, burglaries and house/store break-ins, violence including murders, assault and rape constitute 73% of all crimes and offenses reported to the police between 1994-1997 (UNDCP, 1999).

### **Advance Fee 419 Scam**

At one time Nigeria criminals targeted potential fraud victims via the mail, but now it is mostly over the Internet. In all cases, it is still the same Advance Fee 419 scam that starts with a letter enticing recipients to part with information, such as bank account details, with the promise they can make huge profits by allowing money to be transferred out of Nigeria into their account.

### **Drug Trafficking**

Since the mid-1980s, Nigeria-based trafficking organizations, which smuggle large quantities of Southeast Asian heroin (primarily Thailand) into the United States, have become an increasingly sophisticated threat to drug enforcement efforts. The traffickers from Nigeria pay couriers, many of them fellow Nigerians to smuggle small amounts of heroin aboard commercial airlines. To avert suspicion, traffickers have begun to recruit couriers from every nationality. American teenage girls have been used, as well as members of U.S. military. As a result of increasing law enforcement pressure, Nigeria-based traffickers are beginning to switch from courier shipments to using express mail deliver. Once in the U.S., ethnic Nigerian traffickers sell the product to inner city gangs. To decrease their transportation costs, Nigerian traffickers have begun to cultivate heroin markets in other areas outside of Southeast Asia, such as Europe (DEA, 2000).

## **Debt**

Nigeria has over \$30 billion in loans due to official bilateral, private sector, and multilateral creditors. Much of this debt, over \$20 billion, is in arrears because Nigeria's previous government stopped paying its official bilateral creditors in the early 1990s. The government has used every opportunity to argue for debt relief, including substantial debt cancellation, and has even published a booklet, "Debt Cancellation: A Case for Nigeria," which it hopes will turn the argument in its favor. The government contends that Nigeria is too poor to meet its present debt repayment obligations of over \$3 billion a year, needs to invest in poverty alleviation and deserves compensation for its financial commitment to stabilizing the West African region.

## **Issues to Explore in Nigeria's Political Economy**

1. Federalism and Ethnic Rivalry
2. Potential for Democratization
3. Corruption by Civilian and Military Officials
4. Oil Resources and Revenue Sharing
5. International Criminal Activities: financial fraud, narcotics trafficking, money laundering, white-collar crime

## **RELIGION AND SOCIETY**

In Nigeria as well as in other parts of Africa, Islam, Christianity and strongly held traditional beliefs exist along side each other. Approximately 50 percent of the population is Muslim, 40 percent is Christian and the remaining 10 percent practice indigenous beliefs. Religious differences combined with ethnicity have contributed greatly to Nigeria's instability.

Religion has always been an important aspect of the culture and a way of life for the Nigerian people. Long before the advent of Islam and Christianity, the various people of Nigeria had their own indigenous religions, which permeated all aspects of the peoples' lives. Each ethnic or linguistic group had its own religious customs. The intersection of religion and politics can be as volatile as ethnicity and politics, and may be growing more so. Over the past 15 years, the most divisive

communal or interregional conflicts have occurred over religious matters. Some have pitted Muslims against Christians, and other members of radical Muslim sects against fellow Muslims.

### **Religious Controversy and Conflict**

Since 1970, religious controversy and intolerance in Nigeria have increased, and religious identities have become more overtly involved in political divisions. Religious tensions, especially intra-religious ones, are not new to Nigeria. Within Islam there was competition between the Qadariyya and Tijaniyya brotherhoods in the 1950s and 1960s. Later in the 1970s, there was localized conflict between the reformist Izala movement and the brotherhoods. But open conflict between Christians and Muslims had been rare in the past. Religion has on occasion been manipulated for political purposes. In general, however, religious identities – as distinct from ethnic, sectional, and class ones – have not been harnessed to mobilize political support. This has all changed since 1999. Indeed, the bloodiest conflicts that have occurred since Nigeria inaugurated a civilian government in May, 1999, have had less to do with religion rather than ethnicity. They have pitted the northern Hausa/Fulani, who are Muslim against the southern Yoruba, who are also Muslim as well as Christian. Many Hausa/Fulani claimed to be shut out of power, because the current president is Yoruba and Christian.

### **Prominence of Religious Issues**

To understand the prominence that religious issues and organizations have attained in Nigeria, a number of factors are relevant. First, there was the growth and dynamism of Islam and Christianity and the rise of fundamentalism in both Islam and Christianity. Second, there was the impact of the civil war of the 1960s and the increased influence of international tensions on domestic divisions. Third, there was the growth of state intervention in areas like education that were previously the province of religious bodies. Finally, there was the changed position of Christian populations within the northern states.

### **Islam**

Islam is the earliest external influence to reach Nigeria. It impacted principally the Northern sections of Nigeria, introduced a new way of life, and brought with it literacy in the Arabic language. Until the jihad of Usman Dan Fodio in 1803, it was mainly a religion of a small elite among the Hausa rulers. Today, it is practiced in the north among the Hausa/Fulani and some sections of western Nigeria among the Yoruba people.

### Sharia

Sharia means path or way. It is the legal structure central to Muslim identity and practice. In Northern Nigeria, it deals mostly with civil cases, but it is in the area of family law and succession that it is strongest and most important. Nigeria's 1999 Constitution allows sharia courts to decide questions of Islamic personal law where the parties are consenting

Muslims, but the Constitution forbids the adoption of a state religion. Unfortunately, the Constitution also empowers each of the 36 states to make laws on religion. Recently, some northern governors had instituted the sharia criminal code. The governors insist it will apply only to Muslims. This has led to protest from non-Muslims. A plan by the Kaduna state to introduce the system in February, 2000 unleashed mayhem resulting in the deaths of hundreds of people and reprisal killings in Southeastern Nigeria. Sporadic sharia-related violence still continues.

The sharia issue is complex. While Muslims, rich and poor, insist on their religious rights, Christians in Muslim-dominated states fear they will eventually be subjected to the legal code. In addition, to attempt to adopt an Islamic criminal system, some northern states have introduced laws (or plan to ) that are more associated with Islamic states than a multi-cultural society including banning alcohol and the separation of sexes in public (EIU, 2000:12).

### Role of Women

Women's roles are primarily governed by regional and ethnic differences. Traditionally, in the North, Islamic practices are still very common. Thus, generally, there is less formal education, early marriages-especially in rural areas, and confinement to the household (except for visits to kin, ceremonies, and the workplace, if employment is available and permitted by a woman's family or husband). Marriage is often polygamous. For the most part, Hausa women do not work in the fields, whereas Kanuri women do. Both work with harvesting and all

household members work in food processing. In the Muslim North, education beyond primary school has traditionally been restricted to the daughters of the business and professional elites.

In the South, women traditionally have economically important positions in interregional trade and the markets, work on farms as major labor sources, and have influential positions in traditional systems of local organization. The South, like North, still practices polygamy in Christian and Muslim households. Women in the South, especially among the Yoruba peoples, have received Western-style education since the 19<sup>th</sup> century.

### **Nigerian Literature**

Two of Nigeria's greatest authors and commentators are Nobel Prize Laureate Wole Soyinka and Chinua Achebe. These authors have written books, essays, poems, plays on Nigeria's post independence struggles.

Suggested Readings:

### Art and Culture

In Nigeria, culture is manifested in art, dance, language, literature, folklore, governance, music, and even the environment.

### George Landow, Brown University, "Civilizing Scars"

As in the essentially anti-Romantic arts of medieval Europe, traditional African body decoration and sculpture elevate the human above both the merely natural (in reality) and the merely realistic (in aesthetics). Scarification, tattooing, and body piercing therefore parallel the characteristic African aesthetic emphasis upon composure, balance, and calm in an important way, for both represent ways of separating the human from the less-than-human -- the animal, the natural. As Susan Mullin Vogel explains, "Scarification and other forms of body decoration were traditionally considered marks of civilization. They distinguished the civilized, socialized human body from the body in its natural state and from animals. The Chokwe say that teeth not filed to points are like the teeth of animals" [Aesthetics of African Art" The Carlo Monzino Collection, NY; Center for African Art, 1986,25;images from Willet, 189,221]

Such body modifications, she explains, largely occurs "during adolescence, often at rituals that celebrate the accession to adulthood, " and it "marks progressive stages of social integration and standing, such as parenthood, and it marks one as a member of one's group" (25).

Scarification thus functions as a multiple border marker -- separating the human form from the animal, the individual at a particular life-state from those at all other, and members of one tribal or ethnic group from outsiders.

Scarification serves as a sign of character as well, since it is "not only beautiful to look at and arousing to touch but it is also proof of stamina and courage, characteristics necessary to undergo the painful operation" (25) --something apparent in Soyinka's description of his scarification in Ake.

If changing the physical body thus combines the aesthetic, philosophical, and social much as do other African aesthetic qualities, how does African body modification relate to scarification, tattooing, and body piercing in the West, and how do both relate to elective cosmetic surgery?

Michael Connor, Indiana University "Shaping: The Blacksmith"

Forged-iron figurative sculpture is not common in Africa, but Yoruba blacksmiths pound, weld, and cast several types of very elegant standards, such as those carried by Ifa cult priests, those planted in the ground at the shrines of Osanyin herbalists, and those

pounded from hoes into a sword-like staff for the deity of agriculture, Oko. These are the same artisans who produce the everyday tools of the leatherworkers, woodcarvers, and farmers. Some of these men also know how to do ornamental and ritual brass casting using the "lost-wax" process. Most of this casting work is done on commission for the Ogbodi (or Osugbo) society. This is a secret society comprised of elders

dedicated to maintaining law and order in a community. The society worships the Earth and values the incorruptible quality of brass. It is famous for its twin ritual brasses (edan) joined from the head by a metal chain. Some of the stylistic abstraction of cast-metal art can be attributed to differences in media and technique. Some may be due to the abstract character of the Ogboni society's subject of veneration - Earth itself. Regional variation in style may also be involved. Until late in the last century, the Ogboni cult was a southern forest phenomenon, while woodcarving has long been practiced throughout Nigeria. Yet both woodcarvers and brass casters depict the figure in basically the same manner: frontal, expressionless, and with great attention to meaningful detail, especially around the head.

Occasionally, the caster will create items for other cults. The covered brass bowl with four figures in the Meyer Collection may be either an Ogboni-related medicine bowl or a container for an Ifa diviners sacred palm nuts. At least one important divination verse compares Ifa to brass, stating, "White ants never devour brass, worms do not eat lead. I (Ifa) am humble, hence I have become a god." Secular or cult prestige staffs were sometimes commissioned by chiefs or important dignitaries. As public staffs of office or chief's messenger staffs, they incorporate symbols of leadership and are sometimes

heavily ornamented with figures. The worship of the god of iron, Ogun, also requires certain brass-cast objects. Anyone who uses iron in any form should honor the god of iron. Of course, most occupations and institutions use iron, so the symbol of Ogun is widely mingled with images of most other deities. Even the woodcarver will carefully maintain a shrine to Ogun and make offerings there before felling a tree or beginning a new work. Like the Opa Osanyin herbalist, whose metal staff with birds is shown above, the blacksmiths use staffs (iwana Ogun) and swords with open-work and incised patterns (ada Ogun) to define status in their trade, to advertise a mastery of their craft, and to ornament shrines to Ogun. The senior blacksmith's staff is in the form of an iron poker with a figurative cast-brass handle. At the top of the poker sits a tilted Ogun devotee,

dressed militantly, holding weapons, and wearing the insignia of his office - an openwork headdress, bandoleers of medicines, charms, and beads.

### Health Issues

Nigeria continues to experience severe epidemics of preventable diseases and remains among the world's greatest focal points for polio cases, HIV infections, and overall population growth (USAID, 1998). Major diseases included cerebrospinal meningitis, yellow fever, Lassa fever, HIV/AIDS, malaria, guinea worm, schistosomiasis, and river blindness. The federal, state and local governments and private groups own medical establishments. In rural areas there is a shortage of medical facilities and physicians (*Nigeria*, 1992:xvii). Half of the population has no access to safe drinking water. Many walk hours every day to get water, and it often contains water-borne parasites and bacteria that leads to deadly cases of diarrhea and guinea worm (Economist, 2000).

### HIV/AIDS

HIV/AIDS is a growing problem in Nigeria. It is estimated as of June 1999 that over 5 million Nigerians are living with HIV infection. The first case of AIDS was reported in Nigeria in 1986, yet it took the government six years before it was able to carry out its first HIV sentinel survey, with assistance from World Health Organization (WHO). The national prevalence rate was then (1992) estimated to be 1.2 percent. Since then, the number of HIV infected individuals in Nigeria has increased rapidly from about 600,000 through to 1.9 million in 1994 and 2.25 million in 1996 to over 3-4 million in 1998 (USAID, 1999).

Role of Women (pre- and post-colonial periods)

## **INTERNATIONAL RELATIONS**

### **Nigerian International Relations**

Nigeria accounts for 47 percent of the region's population, and 43 percent of the region's GDP. In recent years, Nigeria has exercised a leadership role through the West African peacekeeping force, the Economic Community of West African States Monitoring Group (ECOMOG), which restored peace in Liberia and Sierra Leone. Nigeria has played a vital role in supporting regional stability through substantial peacekeeping efforts over the last decade. It is home to about 1 in 5 Africans, and the second largest economy in Sub-Saharan Africa. Nigeria is also an important bilateral economic partner of the United States, it is the United States' second largest trading partner on the continent (South Africa is first).

President Obasanjo has spent much of his first year in office travelling abroad and is keen for Nigeria to play a more active role in African economic and political issues outside of West Africa. These include leading the African campaign for debt relief and seeking a role as a mediator in the war in the Democratic Republic of Congo and the current problems in Zimbabwe.

### **Political Culture and Foreign Policy**

Akinyemi (1974) argues that Nigeria has a conservative foreign policy because of the numerical strength of conservative Northern Nigeria. Wilson (1988) believes the conservative orientation also reflects the general conservatism of the traditional cultures throughout Nigeria and their impact on popular opinion. He also states it is closely tied to the importance most groups place on business and commerce. Thus, Nigeria's foreign policy has tended to be pro-Western and conservative.

Ogunbadejo also implies that 'oil wealth provided Nigeria with the economic base, and thus the confidence, to give more substance to its foreign policy...' (1980:765). Thus, Wilson (1988) concludes that 'with its newly-found wealth and relative stability, and within the general

framework of pro-Western moderation, Nigeria sought to influence Western countries' relations with sub-Saharan Africa, and to establish itself as a leading broker in Western-African relations (35).

In its foreign relations, Nigeria sought to promote independence in the region without radicalization and to legitimize Nigeria's emergence as a leader in sub-Saharan Africa (Wilson, 1988). Nigeria achieved these objectives in negotiating Zimbabwe's independence, its search for solutions to Southern Africa conflicts, its support for MPLA in Angola against the US' wishes, and its self-proclaimed membership in the front-line group of states.

### **Economic Community of West African States (ECOWAS)**

ECOWAS is an association of West African states. It was established by a treaty and ratified by 15 states in 1975 (Cape Verde joined later) to promote trade, economic development and cooperation in West Africa. In 1978, ECOWAS adopted a non-aggression protocol and in 1981, 13 of its members signed a mutual defense pact providing for collective military response against attack from non ECOWAS countries, mediation and peacekeeping missions in the event of armed conflict between states and defense against external states that initiate or support insurgencies in within member states. ECOWAS has a mixed record in mediating disputes between member states, particularly in attempting to resolve civil wars. An ECOWAS Cease-fire Monitoring Group (ECOMOG) comprising about 8,000 troops led by Nigeria was dispatched to Liberia in 1990. It succeeded in implementing a cease-fire agreement between the main rival factions and in appointing an interim president.

### **International Sanctions**

From 1994-97, Nigeria faced political isolation, primarily on the issues of human rights and democratic processes in the country. The European Union and the U.S. imposed limited sanctions that suspended bilateral and multilateral assistance. The suspended direct flights between Nigeria and the United States, arms sales, and military assistance. It placed restrictions on travel by government officials and their family members. After the hanging of the Ogoni 9, Nigeria was suspended

from the Commonwealth and the United States recalled its Ambassador for a four-month consultation.

## Self-Study Guide to Paraguay

The **Self-Study Guide: Paraguay** is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to Paraguay's history, geography, politics, economics, culture, religion, media, and international relations. The Guide should serve an introductory self-study resource.

The topic is far too complex to be covered in depth using only the text in this Guide. The reader is encouraged to explore the questions and issues introduced, using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of this Guide was prepared by Robert E. Service former United States Ambassador to Paraguay and Karol C. Service. The views expressed in this Guide are those of the author and

# CHRONOLOGY

1524–30 Explorations of Aleixo García and Sebastian Cabot.

1537 Founding of Asunción by Juan de Salazar y Espinoza.

1609–1767 Period of Jesuit colonies (*reducciones*).

1720–35 Comunero revolt against Spanish authority.

1776 Viceroyalty of the Río de la Plata established (with authority over Paraguay).

1811 Paraguayans defeat Argentine Army under Belgrano and declare independence.

1813 First Paraguayan constitution.

1814–40 Dictatorship of José Gaspar Rodríguez de Francia.

1841–62 Dictatorship of Carlos Antonio López.

1862–70 Dictatorship of Francisco Solano López.

1864–70 War of the Triple Alliance against Brazil, Argentina, and Uruguay.

1876–77 Brazilian occupation ends; mediation of Rutherford B. Hayes gives disputed portion of Chaco to Paraguay rather than Argentina.

1878–04 Large areas of country sold in order to raise money and promote development.

1887 Liberal and Colorado Parties formed.

1904–40 Period of Liberal Party dominance.

1925–26 First Mennonite colonies in the Chaco.

1932–35 Chaco War with Bolivia (won by Paraguay).

1936–37 Febrerista revolt and government.

1940–48 General Morínigo rules with dictatorial powers Paraguay declares war

on Axis Powers in early 1945; U.S. economic and technical assistance begins.

1947 Civil war pits Colorado Party against other parties and much of officer corps.

1948–54 Six presidents, all Colorado Party.

1954–89 Dictatorship of General Alfredo Stroessner.

1955–57 Growing ties to Brazil lead to road and bridge across the Alto Paraná and to construction of Itaipú Dam. Paraguay no longer depends on Paraná River for access.

1969–1989 Opposition to Stroessner joined by Catholic Church and then by U.S. and other Governments on human rights grounds.

1989 Stroessner ousted by military coup; General Rodríguez elected to 4-year term in contested election.

1991 Treaty of Asunción joining Paraguay, Argentina, Brazil, and Uruguay in Southern Common Market (Mercosur).

1992 New, democratic constitution.

1993 Colorado Party candidate Juan Carlos Wasmosy wins election for President.

1996 General Oviedo threatens coup; resigns; launches successful campaign to win Colorado Party nomination for President.

1998 Oviedo imprisoned for coup attempt. Vice President candidate, Cubas Grau, wins election over opposition alliance candidate and pardons Oviedo.

1999 Assassination of Vice President Luis María Argaña sparks riots that force Cubas Grau and Oviedo to flee country. Senate President González Macchi assumes Presidency.

2000 Liberal Party wins election for vacant Vice President position.

2003 Next national elections.

# GEOGRAPHY

Nowadays, most foreigners arrive in Paraguay by air from São Paulo. Most of the forest has gone. Clay red is the predominant color. You cross the Paraná River near the Iguazú Falls and the Itaipú Dam, and then glide down toward the flood plain of the Paraguay River and Asunción. Now, roads connect Brazil and Paraguay, the most important of which crosses the Paraná just below Itaipú into Ciudad del Este, Paraguay's second largest city.

It was not always this easy. Until 1950, Paraguay was the hemisphere's least accessible country. Almost everyone arrived by river from the south. It is 800 miles up the Paraná River to where the Paraguay River flows in from the left, while the Alto Paraná bears off to the right. At the point where they meet there is a wooded bluff, the southernmost point of the country. Behind it is a lush, fertile, and rolling land, broken here and there by wetlands and by hills that separate broad valleys. To the east, along the Alto Paraná River, an escarpment extends down from Brazil. The lake behind Itaipú Dam, the Amambay Mountains (high hills, really), and the Rio Apá separate Paraguay on the north and east from Brazil. This is eastern Paraguay, about 40 percent of the country and the home to well over 95 percent of all Paraguayans. It used to be heavily forested. Now only scattered remnants remain. Farming, grazing, and urbanization have claimed the rest. The highest point in the country is here, less than 3,000 feet.

Continue up the Paraguay River. On the right, where the river narrows and makes a bend to the east, you pass Humaitá and then Pilar in the Department of Ñeembucú. At Humaitá (little more than a ruined church remains), the Paraguayans held off the Argentine and Brazilian forces for almost 3 years during the War of the Triple Alliance, helped by the waterlogged nature of much of the terrain. Old battlefields are reminiscent of those of our Civil War. Although Pilar has the biggest textile plant in the country, there is little other development. Ñeembucú only recently got its first paved road.

On the left the land is flat as far as the eye can see; Argentina at first, then Paraguay north of the Pilcomayo River. This is the Chaco, a gently rising, former seafloor that has wetlands along the Paraguay River and becomes increasingly arid the farther west and north you travel. A paved highway that runs past the Mennonite colonies gives way to sand well before the Bolivian border. Just north of the Pilcomayo, but on the eastern side of the Paraguay River, is Asunción, the capital and center of Paraguayan history since 1537. Farther north is the old town of Concepción, on the right shortly before reaching the Apá River and Brazil. Paraguay continues on the western side for another 140 miles to the border with Bolivia. This area, from Puerto Casado to Bahía Negra used to be a major source of *quebracho* wood (used for extracting tannin and for railway ties).

Beyond the riverbank, few Paraguayans find the Chaco an attractive place to work or live. It is the home to most of the country's remaining Amerindians, to three large Mennonite colonies, and to cattle ranches, but not much else. Almost all of the country's history and economic activity is in the eastern portion.

Rivers define Paraguay. The Paraguay River, wide, meandering, and relatively slow moving is much like the Mississippi. The Paraná to the east is more like the Columbia, and carries a greater volume of water in a more rapid descent.

Asunción is by far Paraguay's largest city, with 1.5 million people within the metropolitan area. Regional centers are Encarnación in the south across the Alto Paraná from Argentina, Villarrica, and Colonel Oviedo in the center of the eastern portion, Ciudad del Este in the east, and Concepción in the north. The country's main transportation artery goes almost due west from Asunción to Colonel Oviedo and then Ciudad del Este. Other main roads link Asunción and Ciudad del Este with Encarnación in the south. From Colonel Oviedo a paved road goes north to Pedro Juan Caballero on the Brazilian border.

Paraguay's area of 157,048 square miles is about the same as California's. It has 1,880 kilometers of border with Argentina, 1,290 kilometers with Brazil, and 750 kilometers with Bolivia. The rivers provide access to small oceangoing ships, although nowadays most waterborne cargo travels by barges to deeper ports in the River Plate Basin. Paraguay sits on the Tropic of Capricorn. About 80 percent of the country is in the Tropics, the remainder, from Asunción south in the Temperate band. If it were in the Northern Hemisphere, Paraguay would be South China, the Hawaiian Islands, or Egypt below the Aswan Dam.

The weather in most parts of Paraguay is hot and humid during summer months (December through March), warm to hot in spring and fall, and cool during the winter months of June through August. Summer days in the 100's and winter nights in the 40's are not uncommon. Snow is almost unknown; but, for those living without heating in houses that are partially open to the elements, most Paraguayans, the winter days and nights can be quite cold. Average annual rainfall is 100 inches in parts of the eastern portion. In the Chaco it tapers off to 15 inches near the Bolivian border.

Six percent of the land is described as arable. The principal crops are soybeans, corn, manioc, cotton, sugar, and tobacco. Fifty-five percent of the country is in permanent pasture, much of which is devoted to cattle. Forests and woodland now make up less than one-third of the territory.

There is very little mineral wealth apart from Limestone and clay. No known commercial deposits of petroleum, gas, or coal exist. There may be minable gold.

## Questions/Issues

1. Despite past isolation, is Paraguay's central location a plus or a minus for future development?
2. Does Paraguay have significant tourism potential?

## HISTORY

In bald outline: The Guaraní Amerindians occupied much of what is now Paraguay when Europeans discovered and began to settle the area from 1524 to 1537. After a brief stint as the center of Spanish administration of the River Plate Basin, Paraguay passed two centuries as an isolated outpost of an empire. Independence, when it came in 1811, was less a rejection of Spain than a determination by the country's first dictator not to buckle under to Buenos Aires and its local allies. In the 1860's, Paraguay fought a disastrous war against Argentina, Brazil, and Uruguay. In the 1930's, it won the Chaco War against Bolivia. Without significant mineral wealth, Paraguay has always been predominantly agricultural. Since 1870, Paraguay's experiments with democratic governance produced alternating periods of one-party rule and then almost 50 years of military dictatorship. Since Stroessner's ouster in 1989, Paraguay has made a serious effort to modernize; success has been only limited thus far.

### The Guaraní Inheritance

The first Europeans known to have set foot in Paraguay were the Portuguese Aleixo García who came overland from the coast in 1524 and Sebastian Cabot who sailed up the Paraná River in 1526. They encountered large settlements of Guaraní Amerindians who, for the most part, were friendly. The Guaranís are often linked with the Tupí Amerindians. Together the Tupí-Guaraní occupied a large part of what is now coastal Brazil, extending through Paraguay into eastern Bolivia. According to some experts, the Guaranís may have originated in the Paraguay River Basin. They practiced slash-and-burn agriculture with corn and manioc as the principal crops, and hunted and fished. The social unit was the family. Each community had a chief, but a shaman often held the real power. There was little in the way of a governing or upper class, and no central government. Related communities joined together in time of war.

More than any other country in the Americas, modern-day Paraguay is a fusion of what existed before the Spaniards and what came later. Today, there are perhaps no more than 100,000 pure Amerindians, mostly in the Chaco, few of whom are Guaranís. But most Paraguayans have some Amerindian blood

and almost all still speak some Guaraní. In the rural areas, Guaraní is still the preferred language. For an aspiring politician, fluent command of Guaraní is a plus. Contrast this to Andean or Central American countries where large indigenous populations exist side by side with mestizo and European populations—or frequently in separate parts of those countries. Although many other Latin American nations have substantial mestizo populations, in Paraguay because of limited European settlement, the mix is probably more weighted to the Native American side than elsewhere in the region.

The first Europeans did not pose an immediate threat to Guaraní life and customs. They wanted to find a passage to the Pacific Ocean or a shorter route to the mineral wealth of the Andes. The Guaraní Amerindians saw the new arrivals as potential allies in their own battles with hostile tribes. Living in a fertile area, the Guaraní appear to have been willing to share that abundance with the newcomers; in any event, personal property barely existed. Even today, what we might call theft is often viewed as simply taking something that the other person has more of than you do, and therefore is a form of social sharing. Similarly, personal enrichment by dubious means is something less than corruption if the political candidate shares his wealth with potential voters.

For more than 400 years after Spanish settlement, subsistence agriculturalists occupied abundant unowned or unworked land. Aside from the demand for Amerindian labor (see below), those in whom the Guaraní inheritance was still strong could continue living as they had. Following the War of the Triple Alliance, foreign individuals and companies bought large chunks of territory, but development was seldom intensive. Only in the past 50 years, has land become scarce, giving rise to a serious problem of landless peasants and property invasions. (See [Social Issues](#) and [Economics](#).)

### **Far Away With no Gold or Silver**

On August 15, 1537, Gonzalo de Mendoza y Espinoza built a fort above a small bay on the East Bank of the Paraguay River and called it Nuestra Señora Santa María de la Asunción. He viewed it as a base to explore for silver and gold in the direction of the Andes. For a time, Asunción prospered. In 1541, the Spanish Government abandoned Buenos Aires (Nuestra Señora del Buen Ayre) and moved its remaining settlers to Asunción. For 40 years, the small settlement 1,000 miles upriver from the coast was the center of Spanish activities in the southern part of the continent, east of the Andes. By 1560 the population was 1,500. Domingo Martínez de Irala, the first effective governor (1544–1556) encouraged the settlers to take Guaraní wives—there were as yet very few European women—to learn the local language, and to adopt some of the local customs.

The Chaco route to the Andes proved harsher and longer than explorers had hoped. They soon recognized that bringing mineral wealth to the east would not be economically feasible. Nor, were any nearer valuable deposits found. The exploratory phase had ended. After the Spanish reestablished Buenos Aires in 1580, Paraguay became an outpost of the empire, largely ignored by the Crown and not given much more attention by its nearer neighbors. The resulting isolation lasted for 400 years. Only after 1950, with commercial aviation and the building of all-weather road links to Brazil, did Paraguay become readily accessible. Looking forward, some foresee a virtue in Paraguay's central location: as a

hub for continental transport by land, air, and the rivers.

Isolation meant that the viceregal regimes (in Lima until 1776 and then in Buenos Aires) exercised only limited authority in Asunción. The early European settlers claimed with mixed success the right to choose and depose the royally appointed governors. Since Asunción had no royal troops, governors had to rely on the dubious loyalty of a locally recruited militia. Rather than more or less orderly governance maintained by a distant imperial authority, Paraguayans learned early the political value of controlling the most guns and men at the local level.

In 1811, with revolution starting to sweep through Spain's American colonies, Argentines naturally assumed that Paraguay would continue as a dependency of Buenos Aires. That it did not, that it opted for independence from both Spain and Argentina, was largely the work of one man, José Gaspar Rodríguez de Francia. After twice defeating an Argentine army, an assembly in Asunción declared independence on May 14–15, 1811. When further negotiations broke down, Argentina closed the Paraná River to Paraguay, not finally granting recognition until the 1850's. Francia's response was to close Paraguay in on itself, making a virtue of an isolation that had been the normal order of events for much of its history.

Initially, Francia was one of two consuls charged with running the country. By 1814, he had decreed a law replacing the two heads with just one, his own. In 1816, he was declared Ruler for Life with the title of El Dictador Supremo. A well-educated man, of ascetic temperament, Francia's response to Argentine hegemonic pretensions was to severely curtail the once-dominant positions of those who looked to Buenos Aires for commercial or other reasons—first the small Spanish-born elite, then the Creole elite, and eventually the Catholic Church. Many who left the country were not allowed to return. Some who entered were not allowed to leave. Francia expropriated large amounts of land that had previously belonged to the elites or the Church. At the same time, he nationalized much of the trade that continued and looked to the overland route with Brazil as an alternative to the traditional supply route up the rivers. Francia also diversified Paraguayan agriculture, thus, making the country less import. Efforts to overthrow Francia were quickly and harshly crushed. When he died in 1840 at age 74, Paraguay's independence had been solidified, but, at the cost of almost total isolation. Francia was hardly an enlightened leader, but the country had enjoyed peace and some limited internal development. This example of a hardworking, unflamboyant, dictator would echo more than a century later in the even longer rule of Alfredo Stroessner.

### The Agricultural Imperative

Lacking other alternatives, the Paraguayan economy quickly came to depend on agriculture and forest products, which still account for the bulk of exports. The *encomienda* system, originally developed by the Spaniards in the heavily populated and more developed areas of Mexico and Peru, apportioned Amerindians among Spanish settlers who, in return for labor or payment, saw to the spiritual well-being and protected their wards. In Paraguay, about 20,000 Amerindians were divided among the 320 surviving Europeans. In theory, there were two types of *encomienda*: those requiring labor from the Amerindians; and those requiring an annual payment instead. In Paraguay, which operated almost entirely on a barter

basis during the early period, almost all *encomenderos* enforced year-round servitude on the Amerindians in their charge. This system remained in effect throughout the colonial period, and its legacy is still visible in the relations between landlords and the landless in the Paraguayan countryside.

Beginning in 1609, the Jesuits set up an alternative model for organizing the indigenous population—the so-called *reducciones* or missions. Building on work that had started in Brazil in the preceding century, the Jesuits gathered Guaraní Amerindians in the interior into self-contained communities, some with as many as 6,000 members and usually administered by just two Jesuit priests. The Jesuit communities developed yerba mate as a major crop, and also traded cattle, hides, tobacco, and food crops. On occasion they provided native troops to the Crown to ward off attacks from the Portuguese, English, and French. Voltaire, in *Candide*, includes a short episode about the Jesuit state within a state.

Inevitably, the settlers from Asunción viewed the Jesuits as rivals for the control and exploitation of Amerindian manpower. In 1720, Paraguayans rebelled against royal authority when the Viceroy in Lima reinstated a pro-Jesuit governor the local inhabitants had earlier deposed. One of the issues was access to Amerindian labor, which prominent families viewed as being more and more walled off by virtue of the Jesuit settlements. When the rebellion spread to poorer elements of the mestizo community, the more prominent families reversed direction and called for imperial help to end the revolt. Ironically, Amerindian troops from the Jesuit *reducciones* helped restore order. Antipathy toward the Jesuits continued, however, and leading Asunceños were not unhappy when the Jesuits were banned from the Spanish Empire in 1767. The Franciscans maintained some of the *reducciones* for a time, but now only ruins remain.

After the War of the Triple Alliance, foreigners, and some Paraguayans, invested heavily in commercial agriculture—first cattle and forest products such as tannin—and, more recently, in cotton and soybeans. Except for Brazilian soybean interests in eastern Paraguay, foreign influence has diminished. Overall, however, economic performance continues heavily dependent on year-to-year fluctuations in agricultural productivity.

### Little Country in the Middle

Carlos Antonio López replaced Francia from 1841 to 1862 and made some progress in opening up the country to modern influences. He was selected by a popular assembly, but he ruled as a dictator. Where Francia had sealed off the country, López wanted to bring in foreign investment and technology. Paraguay's one railroad, little changed to this day, was López' idea. He began construction of the Presidential Palace in Asunción and other public buildings. López also built more than 400 schools, and he strengthened the army. In 1852, Argentina formally recognized Paraguay's independence and other countries followed suit.

At Carlos Antonio's death the Office of President passed to his son, Francisco Solano López. Solano López is Paraguay's greatest national hero, buried now in the Panteón in downtown Asunción. Many historians judge that he was a megalomaniacal tyrant. Solano López had spent numerous years in Europe,

purchasing arms and studying the ways and intrigues of great countries. He also found an Irish-French mistress, Elisa Lynch, who was to bear him five children and to be at his side throughout the War of the Triple Alliance. Solano López had some reason to believe that Brazil and Argentina had designs on Paraguayan territory, but his ambitions were not solely defensive. Paraguay had a central location; the economy, based largely on agriculture, was stable; both Francia and Carlos Antonio López had begun the work of creating a professional military; and the latter had started an iron industry. When Brazil made demands on Uruguay in 1864, Solano López sent troops to the defense of its small sister republic, marching without permission across Argentina.

The War of the Triple Alliance arrayed Brazil, Argentina, and nominally Uruguay against Paraguay. The outcome was preordained, but it took 4 years for Asunción to fall and 2 more before Brazilian troops killed Solano López at Cerro Corá near the Brazilian border. Reputedly, Solano López' last words were "I die with my country." Whatever he intended the words to mean, Paraguay almost did die with him. By most accounts, well over 50 percent of the adult men were dead. Much of the country's limited infrastructure was destroyed. The peace settlements with Brazil and Argentina lopped off about 30 percent of the prewar territory and imposed reparations.

Although the War of the Triple of Alliance was a disaster for Paraguay, Paraguayans have also found ways to profit from the country's central location. At various times they have played off Argentina and Brazil to gain economic advantage, notably in the building of the Itaipú Dam. There has always been substantial contraband back and forth across the borders, to the benefit of Paraguayan middlemen.

The Triple Alliance War largely fixed Paraguay's borders with Brazil and Argentina, but those with Bolivia, also considerably larger, were still unresolved. The Spanish had never bothered to clarify the dividing line between the jurisdictions of Lima and Buenos Aires. The Bolivians, after losing their Pacific coast to Chile in 1883 were eager to establish an outlet on the Paraguay River, and there were rumors that the disputed area of the Chaco contained extensive petroleum deposits. The Chaco War is generally dated from 1932 to 1935. In the final analysis, the lowland Paraguayans were more capable of fighting in the region than were Bolivia's Andean conscripts. Paraguay retained much of what it had claimed.

### **Men Over Laws**

Paraguay shares much the same cultural history as the rest of Latin America. Its Government and its laws, often explicitly based on foreign models, are very similar to those found elsewhere. Like every country, Paraguay has had its enlightened leaders and exemplars of civic virtue. Yet Paraguay, to the outside observer, seems to have had a harder time than most in establishing the supremacy of law over the will of those with power. Dictators have ruled for more than half the period since independence and they have been tolerated, even welcomed at times, because they seemed to promise more stability and certainty than available alternatives. Even in periods of more-or-less democratic governance, the executive branch has dominated the other two. Judges and Congressmen could be bought or intimidated. The history of political parties is that of individual leaders and factions, more than ideology. In the

economic sphere, there is a long history of foreign partnerships with the Government or influential Paraguayans that later went sour because of perceived failures of the legal system.

Various factors may play a part: The Guaraní cultural inheritance, the “thinness” of Spanish rule over three centuries, the historic isolation and poverty of the country, rural predominance, the frontier mentality until very recently, the apparent belief of many Paraguayans that they can outwit richer neighbors, indeed any foreigners, and profit as a result.

Personal relationships remain very important in Paraguay. Most businesses are individual or family owned. Historically, politics has offered one of the few avenues for upwardly aspiring Paraguayans. Many of the more successful politicians have been caudillo-type leaders who cultivate patron-client relationships, trading protection and favors for support. The imperative of power, once gained, is to make sure that supporters get the benefit of Government action (or inaction, as quite often is the case when it comes to legal issues). Although now declining in importance as Paraguay slowly diversifies, a Government job at almost any level is a plum.

The personalist nature of Paraguayan life may have reached its apogee during the 35-year dictatorship of Alfredo Stroessner (1954–89). Since then Paraguay has embarked on its most serious experiment with democratic governance, joined with neighbors in forming the Southern Common Market (Mercosur), and attempted to convince foreign investors that Paraguay is a land of opportunity. Success remains uncertain.

### Questions/Issues

1. What has to change in Paraguay if there is to be a strong and independent judiciary?
2. What is the role of other governments and international organizations in promoting political and economic development?
3. What are the prospects for significantly less corruption? What might be the key factors for such reduction?

## CULTURE

### Language

Paraguay is a bilingual country. Since 1967, both Spanish and Guaraní have been recognized by the constitution as national languages. The degree of bilingualism in the population varies with respect to education and urban-rural circumstances. Nearly all Paraguayans (about 90 percent) speak some Guaraní. About half the total population is bilingual, and 40 percent of Paraguayans speak only Guaraní. Although Spanish is the official language in Government, education, and religious activities, Paraguayans of all classes use Guaraní in their homes and, according to some linguistic specialists, in their thoughts. Fluency in Spanish is related to educational attainment and is much more widespread in urban than in rural areas. Exclusive use of Guaraní is most common in rural areas.

At various times in the nation's history, Guaraní has served as an effective nationalistic symbol and unifying force. Guaraní is closely associated with Paraguayans' sense of national identity, and it has proved to be a vital communications asset in politics, particularly in rural areas. Jesuits in the 17<sup>th</sup> century developed an orthography for Guaraní. In contemporary Paraguay, Guaraní is often used in poetry, popular music, and theater productions; it is widely used in radio broadcasts; and some newspapers contain columns written in Guaraní. For most Paraguayans, however, Guaraní is primarily a spoken language, one they have learned at home or in the countryside with little or no formal instruction. Until the 1960's only Spanish was used in schools; bilingual instruction was introduced in the late 1980's.

At least 5 percent of the population speak languages other than Spanish and Guaraní. Mennonites who speak Plattdeutsch, a German dialect, are part of this group. Other languages spoken are Portuguese, Japanese, German, Korean, and Chinese.

## Ethnic Composition

High rates of intermarriage swiftly produced a fairly homogeneous mestizo society in Paraguay. Most of the original 350 settlers were male and from Spain, but the group also included some settlers from France, Italy, Germany, England, and Portugal. An early governor encouraged the settlers to give up thoughts of returning to Europe and to take Amerindian wives. Polygamy was common among the Guaraní tribes; some chiefs had as many as 20 concubines and shared them willingly with visitors. The settlers followed this practice, and some had as many as 10 to 20 wives and concubines. Before long, the mestizos outnumbered the Europeans, and by the 18th century, they outnumbered the Amerindians. Since almost all Paraguayans are of mixed blood, the term mestizo is seldom used in Paraguay.

Ethnic minorities, chiefly immigrants from Europe, Asia, and Latin America and Amerindians who continue to pursue an indigenous way of life, comprise less than 10 percent of the total population but are of considerable importance in some areas and activities. European and some Middle Eastern immigration began after the War of the Triple Alliance. Government efforts to attract immigrants in the late 1800's brought some 12,000 new residents from Italy, Germany, France, and Spain. There was also some immigration from Argentina at that time. German-speaking Mennonites came to Paraguay from Canada, Mexico, and Russia between 1920 and 1950 and established three agricultural settlements in the Chaco where, within a generation, they converted the semiarid desert into fertile farmland. Including a few smaller communities in the eastern region, the Mennonite population is estimated at some 25,000. Japanese immigration, which began in the 1930's and continued in the 1950's, was also largely agricultural in orientation. There is some Japanese involvement in commercial farming in the eastern region and several Japanese agricultural settlements have a total population of 30,000–40,000. Immigration from Brazil is more recent and of a significantly larger scale. Repeal of land ownership restrictions for foreigners in border areas and low land prices brought 300,000 to 400,000 Brazilians to eastern Paraguay in the 1970's and 1980's. More recently, immigrants from South Korea, Taiwan, and Hong Kong, estimated at a total of 30,000–50,000 have settled chiefly in Ciudad del Este and Asunción where they are engaged primarily in the import and sale of electronic goods from Asia and other commercial activities. (See [Social Issues](#) for information on the Amerindian population.)

## Religious Beliefs

More than 90 percent of Paraguayans are Roman Catholic. Mennonites and various Protestant groups account for the balance. Freedom of religion is guaranteed by the constitution. At one time the constitution required that the President be Roman Catholic, but that is no longer the case.

Catholic rituals and communal religious celebrations are an integral part of social life in Paraguay.

Catholic rituals generally mark important transitions in life, but there is some class distinction in this participation. The costs involved in the accompanying celebrations for weddings and baptisms are often a burden for the lower classes, causing them to postpone or curtail some of these rituals. Religious fiestas are community and national events that are celebrated by all social strata. Most church holidays are public holidays.

## National Holidays

January 1	New Year's Day
March 1	Heroes Day
Variable	Holy Thursday
Variable	Good Friday
May 1	Labor Day
May 15	Independence Day
June 12	Chaco Armistice
August 15	Assumption of the Virgin, founding of Asunción in 1537
September 29	Victory at Boquerón
December 8	Virgin of Caacupé
December 25	Christmas

## Questions/Issues

1. What are the benefits and disadvantages of bilingualism: Would Paraguay be better off with just a single language, presumably Spanish?
2. If the Mennonites could make a success of the Chaco, why can't other groups or sectors of the population?
3. What should be the role of Government or nongovernmental organization policies in promoting cultural change?

# **SOCIAL ISSUES**

## **Population Characteristics and Trends**

Paraguay must make substantial investments to adequately educate and care for its population. The Paraguayan population, estimated at 5.6 million in 2000, has been increasing at 2.6–2.9 percent a year. It is a relatively young population, with 39 percent under 15 years of age; 56 percent between 15 and 64 years; and 5 percent age 65 and older. The fertility rate, 4.16 per woman of childbearing age, is above the 3.4 average for Latin America. Considerable improvements have been registered in the last 25 years in the infant mortality rate, which was 36 per 1,000 live births in 1999; this rate compares favorably with infant mortality in Ecuador (39.4), Brazil (39.8), Peru (43.0), and Bolivia (59.). Life expectancy was nearly 70 years, for men 67 years and 72 years for women.

Mobility is high within the country, and emigration has been significant. Paraguay has, thus far, avoided the massive rural-urban migration so prevalent elsewhere in Latin America. Urbanization, however, has increased in recent decades and by the late 1990's more than half (52 percent) of the population resided in urban areas. One-fourth of the total population lives in the Asunción metropolitan area. During the last 25 years, internal population migration has been focused on the eastern region of the country where new agricultural lands were opened for colonization. There was a significant outflow from the central region to the eastern departments of Alto Paraná and Caaguazú where population increases have averaged about 10 percent a year. Most of this was rural-rural migration, but there was sufficient rural-urban movement to produce significant growth in small cities and towns. As a result, by the 1980's Paraguay had more than 30 cities with at least 5,000 residents. Some of the most spectacular growth was in Ciudad del Este where the population increased almost sixfold in 1972–82.

Emigration is chiefly to Argentina and follows long-established patterns. Since the mid-1800's, great numbers of Paraguayans have sought economic or political refuge in Argentina. As many as 2 million Paraguayans live in Argentina today, mainly in the northeastern agricultural areas and in Buenos Aires. Some 366,400 Paraguayans are regarded as part of the Argentine laborforce, and they are particularly notable among the construction trades in Buenos Aires. Reportedly, there are also numerous Paraguayans living in Brazil, and about 28,000 Paraguayans live in the United States, chiefly in New York.

## **Social Structure and Income Distribution**

Paraguay is generally regarded as having a more egalitarian social structure than most of its Latin American neighbors. Differences in income and cultural levels are not as extreme as in many Latin societies, and although Paraguayan society is stratified it is not rigidly divided. There are urban-rural distinctions. It is chiefly in urban society that a middle class is evident.

The basic social dichotomy is between the rural poor and the urban elite, between a broad stratum of small farmers and landless peasants many of whom operate on a subsistence level and a narrow stratum of elite families with ties to industry, commerce, and Government. The upper class is centered in the capital; most of its members have known each other since childhood and many are interlinked by kinship and marriage. Most of the urban population falls between these extremes. There is a small middle class in the major cities and towns largely delineated by education and occupation, essentially entrepreneurs, professional and technical workers, white collar employees, highly skilled craftsmen, civil servants, and military officers. The urban poor is the larger component, comprising as much as 80 percent of the population of Asunción; included in this group are unskilled laborers, most service workers, the self-employed and family workers in small businesses, and the unemployed. Education and military service are the traditional means of advancing from lower to middle level status. Acquisition of wealth in the Itaipú boom years broadened the ranks of the elite, adding high-ranking military and Government officials and others who profited from the huge project.

Income distribution data are very limited but indicate a relatively more even distribution than in similar Latin American countries. At the upper end of the spectrum, the 20 percent of households with the highest levels of income account for 46 percent of total income and at the lower end, the poorest 20 percent of households represent 6 percent of total income. About one-third of the population was regarded as living below the poverty line in 1999. Poverty is most evident in rural Paraguay among small farmers, farm workers, squatters, and the Amerindian population where most farm at the subsistence level. More than 200,000 rural families depend on subsistence farming and are only marginally involved in the money economy. In 1999 about one-fourth of the rural population experienced extreme poverty.

## **Land Ownership and Use**

Over the last 40 years, the Government has attempted to improve conditions for the rural poor through agrarian reform, land distribution, and agricultural resettlement programs with varying degrees of success. The colonizing program in eastern Paraguay degenerated into a land grab benefiting Brazilians

as well as Paraguayans, and when the dust settled, there were still a great many landless Paraguayan peasants. By the 1990's the Government's land resources were exhausted, but rural poverty and discontent persisted. Conflicts between squatters and landowners were common, and as land values increased, relations between commercial and subsistence farmers deteriorated.

At the core of many rural problems is the clash between traditional land use practices and commercial farming. For generations, the abundance of land and sparse population allowed Paraguayans to be fairly casual with regard to land ownership and use. Nomadic farming and squatting were established practices, and custom permitted squatters to settle on the fringes of large holdings. Although this land use arrangement was considered transitory, it could last for years; in the interim squatters could be called upon by landowners to provide labor as needed. Problems developed as commercial farming expanded and land values increased, and squatters were no longer widely tolerated.

Until the 1960's few farmers owned their land; nearly half of all farmers (49 percent) were squatters in 1956. The largest landowners were the Government and foreigners. The Government had acquired about 60 percent of the land area through confiscation of church and Spanish property in the 1800's; it sold off large tracts, chiefly to Argentines, to pay debts from the War of the Triple Alliance. These sales marked the beginning of foreign ownership of large landholdings in Paraguay, a trend that has continued to the present and now includes Brazilian, U.S., and European interests. Over time, the Government used its landholdings to reward political loyalty and for colonization projects; in the 1960's land distribution became the escape valve for rural discontent in the densely settled central region.

Land reform began in the 1960's with the creation of the Rural Welfare Institute; it was empowered to issue land titles to farmers for the land they were using and to organize colonizing projects in vast tracts of untitled land near the Brazilian border. Land ownership broadened considerably under this program, and the circumstances of about one-quarter of the population were directly affected. Some 250,000 Paraguayans moved to new settlements in the eastern region. Over the next decade, thousands of Brazilian colonists also moved to the newly opened lands, and several foreign-owned agribusinesses bought large holdings in this area. As land values rose, conflicts developed. Some original settlers sold out to larger landowners, and the squatters who'd traditionally lived in this sparsely populated area were soon in conflict with the colonists, immigrants, and agribusinesses.

The latest agricultural census (1981) indicates about 14 percent of the rural population was landless but land ownership has increased; 58 percent of all farms were owned outright and 15 percent were share cropped. Most of the nation's 273,000 farms are very small; those under 5 hectares (1 hectare equals 1.43 acres) in size represent 35 percent of all farms and have an average size of less than 2 hectares; they comprise 1 percent of all farmland. In contrast, large farms averaging 7,300 hectares, constitute 1 percent of all farms, and have nearly 80 percent of the farmland.

## Family and Kinship

For Paraguayans of all classes, family and kin are the center of their social world and the focus of their

loyalties. Since authority in Paraguay is exercised along personal rather than legal or institutional lines, family and kinship ties are extremely important. These ties apply to godchildren, godparents, and members of the extended family. Assistance in times of need can be expected from extended kin, and kinship ties are important in most economic activities, from business connections to employment opportunities.

Most households are nuclear families, made up of spouses and unmarried children. About 20 percent of all households are headed by a single parent, usually a woman. Few households are intergenerational. The prevalence of nuclear families is generally attributed to the limited economic opportunities available to most families. Few Paraguayans earn enough to support more than their immediate family members.

Godparenting (*compadrazgo*) is an important means of strengthening and extending kinship ties. Parents select godparents for a child at baptism and also for confirmation and marriage; the godparents have a special relationship with the parents and are regarded as coparents. The social link between coparents can be significant; they are expected to treat each other with respect and to assist each other in times of need. Class distinctions are evident in the selection of godparents. The upper and middle classes tend to select social equals as coparents. The relationship has less practical significance for these classes than it has for the poor. Potential economic benefits and the forging of ties outside one's social circle are more relevant for the urban and rural poor who are likely to select an influential benefactor for the godparent role. In these relationships, the poorer person acquires protection from someone above his own social standing, and the benefactor is entitled to absolute loyalty in return. These kinship ties can be politically significant in Paraguay and political parties have used them to mobilize rural support.

## The Status of Women

Paraguay is a conservative male-dominated society that has been slow to grant women equal rights or access to political power but in recent decades fundamental changes have occurred. Women only gained the right to vote in 1963. Although some women have been elected to Congress, few women serve as mayors or judges or in other positions of civil authority. The principal Government organization concerned with women's issues is the Secretariat of Women in the Office of the Presidency. Recent changes in the civil code have provided women with protection in the division of marital property in separations; divorce became a legal option in 1992. A domestic violence law was enacted in 2000.

Women constitute about 20 percent of the total laborforce in official statistics. Many sources contend that women represent a larger portion of the laborforce, as much as 40 percent in urban areas and even more in most rural areas. The economic contribution of women has always been important in the countryside where women traditionally perform all domestic work and most of the fieldwork on small and subsistence farms. Services and commerce are the main sectors of employment for women in urban areas. Pay rates for women tend to be at the low end of the scale, and many working women earn less than minimum wage.

## The Role of Religion

Exception for the Jesuit missions, the Roman Catholic Church had little influence in Paraguay's formative years. In colonial times, the Paraguayan church was often without a bishop for several years at a time. The Asunción diocese was established in 1547 and greeted its first bishop in 1556. Reportedly only 20 of the first 40 bishops actually reached Paraguay. The Jesuits arrived in 1588 with the aim of pacifying and converting the Amerindians; they established their missions in remote areas, and most of their activities were conducted outside the formal church structure under special arrangements with the Spanish Crown. This did not endear the Jesuits to the local church hierarchy in Asunción, which welcomed the expulsion of the Jesuits in 1767.

Relations between church and state were antagonistic at times after independence but later during the Stroessner regime, became overtly hostile. In the early 1800's Francia confiscated church lands and closed the seminary and convents. The execution of the bishop of Asunción in the War of the Triple Alliance (1865–70) was another low point; at that war's end there were just 50 priests left in Paraguay, and the bishop was not replaced for more than 10 years. During the Stroessner era, the Catholic Church became the regime's most important opponent. Friction centered on student and agrarian affairs in the early years but then broadened to human rights and social justice issues in the 1970's and 1980's. Confrontations were frequent. When the Government expelled foreign-born clergy and periodically closed the Catholic University in Asunción, the archbishop countered by excommunicating several prominent Government officials and suspending church participation in civic religious celebrations. A papal visit in 1988 lent support to the local church in its opposition to Stroessner. During that visit, Pope John Paul II repeatedly stressed human rights, democracy, and the right and duty of the church to be involved in society. Since Stroessner's ouster, the Catholic Church has continued to support human rights and social justice but has been less militantly involved in politics.

## Amerindians

Paraguay's destitute and dependent Amerindian population poses complex social and cultural problems for modern policymakers. Traditional Government policy has been to leave the Amerindian population to the care of religious organizations. In the 1970's the Stroessner government was accused of genocide against the Amerindians, and it was chiefly Catholic and Protestant missionaries who denounced the Government's policies.

The Amerindians are not a homogeneous group; there are 17 tribal groups and at least five language families. Exactness is lacking in statistics on this segment of the population, but it is generally estimated that 50,000 to 100,000 people maintain indigenous traditions and live apart from the general Hispanic culture. This group comprises less than 3 percent of the total population but represents about 10 percent of the poorest Paraguayans. Many Amerindians are no longer economically independent; in recent decades they have lost access to the lands they traditionally used for hunting and farming and have become dependent on wage labor and the protection of missionary groups. Prejudice against Amerindians is strong in some rural areas.

Around a third of the Amerindians live east of the Paraguay River, where their traditional way of life has become less viable in recent years. For generations these Amerindians have lived in remote areas along the Brazilian border; until the 1960's they were able to practice slash and burn agriculture and hunting and gathering in this area without being disturbed. Beginning in the 1960's Government colonization programs brought thousands of Paraguayans and Brazilians to this area, and the Amerindians were forced to move elsewhere. As the pace of this development quickened, the land available to the Amerindians for their traditional lifestyle diminished. Very few Amerindians held titles for the land they utilized, and most were dispossessed as the newly arrived settlers claimed this land. Without the land they'd used to hunt and fish and grow food crops, the Amerindians were forced to move elsewhere or seek wage employment. Many of these Amerindians have become totally dependent on agricultural employment and some have taken refuge in missionary settlements. The Aché tribe suffered greatly at the hands of these settlers. Members of this tribe lived in remote forest areas; their contacts with rural Paraguayans had seldom been peaceful. The killing and enslavement of Aché members predates the colonization programs but during the 1960's and early 1970's these practices became organized activities, as Paraguayans and Brazilians mounted "Aché hunts." Governmental efforts to establish a reservation for the Aché were a total debacle, placing the Aché in even greater physical danger and subjecting them to disease. Almost all the surviving Aché now live in communities run by missionaries.

The other two-thirds of Paraguay's Amerindians live in the Chaco; their traditional way of life has disappeared. These Amerindians were hostile to the early Spanish settlers and resisted pacification. Most of the Chaco Amerindians engaged in hunting and gathering and maintained herds of sheep and goats; they avoided contact with the general Paraguayan society until the Chaco War (1932–35) and the subsequent expansion of ranching in the area and the Mennonite colonization of the central Chaco. Many of these Amerindians became dependent on wage labor provided by ranchers and the Mennonites, and by the 1970s, most Amerindians in the Chaco lived on settlements under missionary auspices or on ranches where they worked.

## Labor Force

The laborforce is currently about 1.8 million (2000) with an unemployment rate of 15–16 percent. Males account for 80 percent of the total laborforce, but it is very likely that female laborforce participation is underrepresented in official statistics. Almost half the laborforce engages in agricultural pursuits; industry (manufacturing and construction) absorbs about 20 percent; and services employ some 30 percent. This distribution has changed very little over the last 50 years. The construction sector expanded in the 1980's but overall the distribution has been fairly static, giving Paraguay the distinction of having the highest percentage of labor in agriculture in South America and also the continent's lowest percentage in services. Decades of inadequate investment in human capital are reflected in the educational attainment of the laborforce; only 41 percent has received more than a primary education.

Most of the country's labor legislation has been enacted since the 1960's, and enforcement is not universal. The 1993 Labor Code regulates working hours, holidays, child and female labor, unions, collective bargaining, minimum wages, and work safety and hygiene. Minimum wages have been in

effect since 1974 but have usually not kept pace with inflation; moreover, the rates established have generally been above prevailing wages, and it is widely reported that about 80 percent of Paraguayan workers receive wages below the legal minimum. The monthly minimum was about \$205 in May 2001; average wages were estimated to be about \$195.00 per month.

Civil service employment is governed by a law passed in January 2001; it established a merit-based system intended to end traditional clientelism in public administration. Just months after its enactment, the Supreme Court declared several articles of the civil service law unconstitutional. A limited form of social security applies to most public sector employees and to about 40 percent of nonfarm private sector employees. (See "Health and Welfare" for social security information.)

Organized labor does not have a long history in Paraguay. Beginning in the early 1900's, periodic efforts to organize unions among urban workers were met with Government resistance. The Government either co-opted these unions or dissolved them and exiled the leaders. In rural areas, church-related groups have been involved in organizing peasant groups; most of these movements have been oriented toward social protest rather than workers' rights, and they also met with strong Government opposition. The Stroessner government was openly antiunion, and it crushed Catholic efforts to organize agrarian leagues in the 1970s. Since 1989 private sector workers have been free to form unions. There are currently more than 200 unions and three labor centrals.

## Education and Literacy

Government spending on education, about 1 percent of GDP, is low by international standards. Public schools educate about 90 percent of all primary students and nearly 75 percent of secondary students. Throughout the educational system, teachers are poorly paid, and there is a general lack of qualified personnel and materials. Rural schools are often understaffed and some offer only a few grades of instruction. About 90 percent of eligible children are currently registered in the six primary grades that are compulsory for children 7 to 14 years. Unfortunately, attendance rates are low, and dropout rates are high; consequently, completion rates are low, especially in rural areas. About 10 percent of primary students repeat grades, usually the first two, and nationwide, less than 50 percent complete the primary program. In urban areas the completion rate is highest, roughly two out of three students, but in rural areas it is only one out of four students. Secondary education has separate 3-year programs for college preparation, teacher training, and technical-vocational fields. In rural areas, enrollment drops markedly at the secondary level; less than 12 percent of rural children attend secondary programs. Any major effort to broaden secondary education would require substantial investments in school construction. Paraguay has two universities, the National University of Asunción (UNA) which has about 20,000 students and the Catholic University of Asunción with close to 15,500 students. Both universities are headquartered in the capital but have campuses in several other cities as well.

The adult literacy rate is officially 92 percent, but many critics claim this statistic overstates the ability of the population to actually read and write. It appears to many of these critics that the Government uses primary school registration data to determine literacy rates. In addition, there is some doubt about

literacy levels among the 40 percent of the population that speaks only Guaraní. Literacy data in the 1982 population census are also at odds with the official rate; according to that census 21 percent of Paraguayans over age 10 were illiterate, and among the rural population 20 years and older 29 percent of the men and 38 percent of the women were illiterate.

## Health and Welfare

Paraguay made significant improvements in health care delivery in the 1970s and 1980s, and began an overhaul of the entire health care sector in 1996 (Law 1032). More than 95 percent of all health care is publicly provided. The Ministry of Public Health and Social Welfare has been responsible for all public and private health programs; the newly enacted reforms are expected to decentralize many aspects of health care and establish a National Health System. The new system will face inadequate funding, shortages of trained medical and nursing staff, and the limited scope of water and sewage service for the population.

The leading causes of death among adults are heart disease, stroke, cancer, diarrhea, and acute respiratory infections. The chief infectious and parasitic diseases are malaria and Chagas disease. The leading causes of infant deaths are diarrhea, pneumonia, malnutrition, and infections. Malnutrition and other deficiency diseases (anemia and goiter) are most prevalent in the rural and Amerindian population. Major improvements in infant and early childhood health were achieved through an extensive immunization campaign begun in the 1970s; this program brought infant immunization rates for diphtheria, pertussis, tetanus, and measles from 5 percent to more than 60 percent in 7 years. Since then most infant immunization rates have risen to more than 80 percent but about one-third of all children still have not been vaccinated against polio or measles. Advances were also made in prenatal care, and the proportion of infants receiving medical care has increased to nearly 75 percent.

Improvements in sanitation conditions, particularly in rural areas, will require major infrastructure investments. Almost 60 percent of the urban population have access to safe drinking water but only 7 percent of rural residents have this service. Sewage service is only available to 32 percent of the urban and 20 percent of the rural population. Manpower shortages may also limit further improvements in health standards. In the 1990's Paraguay had 1 doctor for 1,231 people and even fewer nurses.

Basic social security coverage is provided by six institutions; the largest are the Instituto de Previsión Social (IPS) which covers about 40 percent of private sector nonfarm employees and the Caja Fiscal which includes most public sector employees. The IPS offers old age and disability pensions, sickness and maternity benefits, and temporary and permanent disability for work accidents; the IPS operates its own clinics and hospitals for medical and maternal care. Contributions are based on a 23 percent payroll tax. Financial problems plague all the social security institutions. Pensions have been eroded by inflation and are generally below minimum wage levels. The financial position of the IPS was severely undermined by the banking crisis in the late 1990's; its reserve funds were deposited in banks that became insolvent, and it held a number of unredeemable loans.

## Questions/Issues

1. What are the implications for stability and development of continued migration from rural areas to the cities?
2. Now that Paraguay has managed to enroll most rural children in primary school, what can be done to ensure that most complete at least the primary grades?
3. Should national policy aim to integrate the remaining Amerindians, or to preserve their ways of life?
4. Given the development of commercial agriculture and its importance to the economy, is further land reform an option open to policymakers?
5. Why is the IMF so insistent that the IPS funds for health care and pensions be separated?

# ECONOMICS

## History and Overview

Paraguay has a market-based economy with a very large informal sector that includes both legal and illegal activities.<sup>1</sup> The nation's economic development has not had a

smooth trajectory. By almost any reckoning, Paraguay is ideally suited for agricultural pursuits, but there

have been tremendous difficulties in getting land, labor, and appropriate technology into balance and in maintaining a stable political and financial framework. There have been two periods in the nation's history when Paraguay registered remarkable economic growth and notable improvements in living standards; one of these was in colonial times and involved only a portion of the economy, while the other was fairly recent and had a more generalized impact. In the 1700's significant economic progress was made in the settlements or missions established by the Jesuits. This was wiped out almost overnight and subsequently, for two centuries, whenever economic advances were secured, they were dissipated in internal strife or wars with neighboring countries. Notable progress was not achieved again until the 1970's.

The Paraguayan economy changed very little from colonial times to the 1970's. The recurrent wars adversely affected manpower resources and burdened the nation's treasury, causing postponement of much needed investments in education, health care, utilities, and roads. The developmental policies favored by other Latin American countries, such as import substitution, found little favor in Paraguay which ambled along with a significant segment of its population engaged in subsistence farming and essentially outside the money economy. Commercial farming and livestock raising were mostly small scale and traditionally oriented; innovation was minimal. Very little agricultural processing or manufacturing was established. The physical infrastructure was rudimentary. Paved roads were rare, and only a small portion of the population received water, sewage, electrical, or telephone service.

Paraguay made major catch-up steps in its economic development in the 1970's and early 1980's. The prosperity of this period was spurred by construction of the Itaipú hydroelectric complex and augmented by favorable developments in agriculture. During the boom years, 1974–81, Paraguay outperformed all of its Latin American neighbors, as GDP increases averaged 8.5 percent a year and reached a level of 11 percent annually in 1977–80. Brazil and Paraguay were partners in the \$20 billion Itaipú complex, the largest

---

<sup>1</sup> All general statistics are from the late 1990's and 2000–2001 unless otherwise noted. Most data are from composite sources, chiefly International Monetary Fund staff reports, the Economist Intelligence Unit, and Central Bank of Paraguay. National statistics refer to the formal or official economy and do not expressly include activities of the informal sector; this sector is covered separately in the text, and statistics related to this sector are identified as such.

in the world at 12.6 million kilowatts. The key developments in agriculture that contributed to the boom were a major shift to soybean cultivation, the expansion of colonization, and an influx of foreign capital and technology.

As the impact of the 1970's boom reverberated through the economy, it became evident that the pace of change had quickened noticeably. However, all sectors were not affected equally, and, many underlying problems were brought to light. Considerable improvements in road construction and paving were

achieved, but the nation's physical infrastructure remained inadequate and investment in human capital sorely lagged. The Government found its obsolete and largely unenforced tax system did not bring in much additional revenue from the boom. Construction and commerce expanded. In agriculture very little technological change trickled down to small-scale farming, and problems began to loom in land use and tenure.

The 1980's and 1990's brought little sustained economic progress. When the major construction work on Itaipú was completed in 1981, the Paraguayan economy went into a

severe downturn, and for most of the decade inflation, unemployment, and rising external debt were serious problems. In the late 1980's Paraguay and Argentina began work on another major hydroelectric project, Yacyretá, which is roughly one-fourth the size of Itaipú and has had less impact on the general economy. Moderate growth was restored in the early 1990's; much of this was credit driven and came to a crashing halt with a banking crisis that began in 1995 and continued until 1998. Total losses from this crisis, estimated at \$900 million, were borne by the public sector. The Paraguayan economy has been in a sustained contraction ever since.

In 2000 Paraguay's GDP was estimated at \$7.4 billion, a decline of 0.4 percent from the previous year. Per capita income, less than \$2,000 a year, has been virtually stagnant for two decades. Unemployment is 15-16 percent in a laborforce of 1.8 million. Minimum wage is about \$200 a month; but wages average slightly less. Inflation, which reached over 40 percent in 1990, had been brought down to single digits in the latter part of the decade and was 8.9 percent in 2000.

[Sources: Central Bank of Paraguay and IMF Staff Estimates]

Agriculture (including livestock raising and forestry) has been the mainstay of the economy since colonial times although the crops, scale of activity, and acreage under cultivation have changed markedly over time. The sector has a substantial direct impact on the economy, accounting for nearly 30 percent of GDP, employing almost half (48 percent) of the laborforce, and providing more than 60 percent of export earnings. It also has a significant indirect impact, particularly in manufacturing which includes a great deal of agricultural processing, and in transportation, commerce and financial services.

Soybeans are the principal crop and the country's largest export; they are sold as raw beans and processed oil. Soybeans were first planted in quantity in Paraguay in the late 1960's, and acreage expanded rapidly. Most production is in the newly opened

agricultural lands in the east (Itapúa, Alto Paraná, Canindeyú, and Amambay Departments) and utilizes modern technology. High world prices for soybeans in the late 1970's attracted large-scale producers to this sector, including several large agribusinesses

from Brazil, the United States, and Italy. Acreage in soybeans was estimated at over 1.2 million hectares in 2001 with the harvest expected to exceed 3.1 million tons. Soybeans generally provide 30 to 40

percent of Paraguay's exports.

Second in importance is cotton, a traditional crop that has been grown in Paraguay since the time of the Jesuit missions. It is grown in the central region by small farmers and in the east by large-scale foreign producers; the latter account for most output. In 2001 Paraguay had some 300,000 hectares devoted to cotton and the harvest was estimated at 384,000 tons. Weather conditions and world price fluctuations determines the outcome of Paraguayan cotton harvests. In the mid-1990's cotton provided 20–30 percent of exports; in recent years it represented 9–10 percent of exports.

Paraguay also exports tobacco, coffee, sugarcane, and yerba mate tea; these crops account for about 2 percent of agricultural exports. The principal food crops, grown chiefly for the domestic market, are manioc (cassava), corn, beans, peanuts, sorghum, sweet potatoes, rice, and wheat.

Livestock raising contributed about 25 percent of total agricultural production and provided about 13 percent of the sector's exports in the late 1990's. Cattle ranches occupied more than one-fourth of the land area and accounted for 80 percent of all capital investment in agriculture. The chief exports are meat and hides; most of this trade is directed to Brazil and Chile. Government policies have promoted cattle production and export. Other livestock activity includes poultry and pig farming. Both the Mennonite and the Japanese agricultural colonies are important poultry producers.

Forestry activities account for 10–12 percent of agricultural production. Paraguay is an established supplier of fine timber, and its wood exports compete effectively in world markets. About one-third of the land area is forested. Timber is processed by more than 150 small sawmills for export as well as for use in the paper, construction, and furniture industries. In recent years Paraguay has officially exported as much as \$100 million annually in lumber products; some timber is also reportedly exported illegally to Brazil, perhaps as much as one-third of production. Deforestation has only been marginally addressed in national policymaking. In addition to traditional lumbering, virgin forests were cleared for the colonization of eastern Paraguay, and a great deal of wood is consumed as charcoal and fuel. The nation's largest steel mill is fueled with charcoal; the railroad is wood powered; and wood is also important in household energy consumption. The rate of deforestation in Paraguay is one of the highest in the world, causing some analysts to predict that by 2020 there will be little land available for commercial lumbering if current levels of deforestation and reforestation are maintained.

Manufacturing (15 percent of GDP) is concentrated in consumer goods; less than 5 percent of output is capital goods. More than 60 percent of manufacturing involves processing of agricultural raw materials. Food, beverage, and tobacco products account for 45 percent of output. Next in importance are wood products (about 15 percent of output); these include lumber, milled wood, plywood, chipboard, and parquet. Manufactured goods generally constitute about 35 percent of exports. Most manufacturers are small or medium scale; many of the largest and most modern factories produce oilseeds, meat products, and beverages chiefly for export. Paraguay is one of Latin America's major oilseed exporters; it processes cottonseed, soybean, peanut, coconut, palm, castor bean, flaxseed, and sunflower seedoils as well as tung oil and petitgrain oil. Most new investment in manufacturing is in offshore assembly plants

for re-export within Mercosur; eight plants, representing an investment of \$30 million and more than 2,000 new jobs, were certified in 2001. Exports from these plants are subject to the Mercosur requirement that 60 percent of the value be of local origin. Toshiba is one of the largest investors in offshore plants; it is establishing an assembly plant in Paraguay to serve the Brazilian market.

Construction (5–6 percent of GDP) has been one of the most dynamic sectors of the economy. During the building of the huge hydroelectric project at Itaipú, Paraguayan firms received construction contracts valued at \$2 billion: the sector grew at about 30 percent a year in the boom years and hired an additional 100,000 workers. Unemployment was widespread when the Itaipú project was completed; many construction workers returned to agriculture, and some may have emigrated. Growth was modest and uneven in the 1980's and 1990's, spurred chiefly by the hydroelectric project at Yacyretá, infrastructure improvements, and residential housing in Asunción and Ciudad del Este.

Services represent about 46 percent of GDP and employ some 30 percent of the laborforce. Included in this sector are transportation and communications, commerce and finance, general Government, and other services. Increased foreign investment in Paraguay's mobile telephone system prompted expansions of the communications sector in 1995–2000, and mobile telephones now account for more than two-thirds of all telephone usage. Commerce and finance account for over 50 percent of services. The commercial sector is primarily engaged in importing goods from Asia and the United States for reexport to neighboring countries. This commercial activity, which generated exports of about \$1.6 billion in 1999, is to be phased out by 2005 under the terms of the Mercosur agreement. The financial sector was restructured in the aftermath of the banking crisis that closed 15 of the 19 locally owned banks in 1995–98; ownership in banking is now predominately foreign. The only remaining state-owned bank, Banco Nacional de Fomento, is in severe financial difficulties. Among the causes of the banking crisis were lax regulation and poor supervision, but the underlying problems derived from poor banking practices, including off-the-books transactions, poor risk loans to related enterprises, and fraud.

General Government services account for about 6 percent of GDP. Several major reforms are underway in the public sector, including a restructuring of the central government administration and the social security systems. Public sector payroll and pension costs have risen rapidly in recent years, hampering efforts to control budget deficits. During the late 1990's financial difficulties also plagued the eight fully state-owned enterprises, many of which are utility companies. The largest of these enterprises are ANDE (electricity), PETROPAR (gasoline and diesel), and ANTELCO (telecommunications). There are two midsize enterprises, CORPOSANO (water and sewage) and INC (cement factory) and three small organizations involved in transportation (river ports, airports, and the railroad). For many of these enterprises, the rates they charge for their services are set by the Government once a year; and in the late 1990's there were serious lags in adjusting these rates and some rates were frozen for several years. Compensatory rate increases in early 2001 prompted public protests. Privatization of state-owned enterprises is allowed under a 1991 law; only one enterprise, the former national airline, LAPSA, has been sold. ANTELCO and CORPOSANO were slated for privatization in 2001. The Government also has major investments in the ACEPAR steel company. The cement and steel investments were made in the latter Stroessner years; both have been highly unprofitable and have added significantly to the nation's external debt.

Public sector finances have deteriorated in recent years. In the early 1990's the Government had modest fiscal surpluses, but it has run deficits since mid-decade. Paraguay's public sector deficit reached \$330 million (4.5 percent of GDP) in 2000. As a result of increasing fiscal deficits, Paraguay's public external debt has doubled during the last 5 years, to about 32 percent of GDP. Early in 2001, the Paraguayan Government sought IMF assistance in reversing these negative trends. With this aim, the Government established a series of economic targets for 2001; these include GDP growth of at least 2 percent, inflation of less than 10 percent, reduction of the fiscal deficit to \$146 million through spending cuts, personnel freezes and agency closures, and privatization of the telecommunications and water companies.

## Trade and Balance of Payments

Essentially Paraguay exports raw and semiprocessed agricultural products and imports fuels, capital goods, and manufactures. Its export base is very narrow; soybeans and soy oil represent about 50 percent of registered exports (1998); cotton and beef account for another 20 percent. This base is highly vulnerable to climatic conditions and changes in international commodity prices. In recent years exports of domestic products have run \$1.0 to 1.4 billion: total exports, including the re-export trade (see informal economy), were \$2.3–2.7 billion a year in 1999–2000. Imports have been at high levels since the 1970's; they were about \$3 billion in both 1999 and 2000. Paraguay began to experience trade deficits in the 1980's, and it has had a negative trade balance since 1994.

Since Paraguay joined Brazil, Argentina, and Uruguay in a regional customs union, Mercosur, in 1991, its trade with the member countries has increased substantially. Almost 50 percent of Paraguay's exports were shipped to Europe in 1990; by the end of the decade, the European share was about 20 percent and 60–70 percent went to Western Hemisphere countries. Paraguay's merchandise exports to Mercosur countries doubled in the last decade and represented more than 60 percent of export earnings in 2000; Brazil is the largest purchaser (39 percent in 2000), followed by Uruguay (13 percent) and Argentina (11 percent). The reexport trade, which involves chiefly Brazil and Argentina, is slated to be phased out by 2005 under the Mercosur agreement. Sourcing for imports is more diverse. About 70 percent of imports come from the Americas; Brazil provides about 30 percent, the United States, 20 percent, and Argentina, 15 percent. Asian sources supply 15–20 percent of imports and Europe less than 10 percent.

Energy-related activities, particularly, electricity exports and oil imports, are important in Paraguay's balance of payments and have a broad impact in the general economy because many sectors are highly sensitive to increases in energy costs. Increases in utility rates and in the price of diesel fuel in early 2001 set off a round of protests and demonstrations that began in the agricultural sector and moved on to reflect general discontent. Paraguay was almost totally dependent on thermal and diesel power sources before the massive investments in hydroelectric power. Today, Paraguay is a major exporter of electricity; its revenues from Itaipú and Yacyretá were \$370 million in 2000 and \$433 million in 1999. These earnings fluctuate because of the effects of climatic conditions and water volume on electricity output. In contrast, Paraguay is totally dependent on petroleum imports; it has limited refining capacity

and many derivative products are imported as well. There is some domestic production of renewable alternatives to fossil fuels; in the late 1980's it was estimated that the use of these products reduced oil imports by about 130,000 barrels a year.

The nation's balance-of-payments situation was precarious through most of the 1990's. The overall deficit in 2000 was \$265 million. The current account has been in deficit since the mid-1990's largely because of trade deficits. For the last 10 years, the service account has also been in deficit because of transportation costs associated with the re-export trade. Paraguay's transfer balance is usually positive due to remittances from Paraguayans living abroad; these amounted to \$184 million in 1999. Direct foreign investment declined steeply in 1999, from \$336 million to \$66 million, and recovered slightly in 2000 to reach \$95 million. Since the banking crisis in 1995 there have been substantial capital outflows and foreign exchange reserves have declined. The reserve cover ratio for imports fell to 2.6 months in 2000. These reserves were reduced by nearly \$100 million (from \$700 to \$608 million) in the first 3 months of 2001. The IMF has called for minimum reserves of \$1 billion to protect the guaraní from speculative activity. Reduction of the balance-of-payments deficit to less than \$100 million is another of the Government's economic targets for 2001.

## **The Informal Economy**

Unregistered and illicit trade has been a feature of economic life in Paraguay for many decades and perhaps since colonization. Legal requirements, particularly taxes and import or export duties, have always been a little lax and somewhat discretionary in Paraguay. At some point, smuggling and contraband trade became an occupation and evolved into an industry. Opportunities for extra-legal trade expanded in the 1950's and 1960's as Brazil and Argentina set high tariff rates to rein in luxury imports and to protect newly established industries. Items such as scotch whiskey, cigars, cigarettes, and perfume found their way from low-tariff Paraguay into neighboring countries. Later, as economic ties with Brazil grew in the 1970's and 1980's, some of this trade was formalized into what is currently called the reexport or tourist trade. This commerce is generally legal but is largely unrecorded because the goods imported into Paraguay are subject to little or no taxes. Bulk buyers and tourists purchase goods in Ciudad del Este and other Paraguayan border towns at advantageous prices, and import them into neighboring countries within duty free limits. Some of the products sold in this manner are manufactured in the neighboring countries; they are imported into Paraguay net of sales or value added taxes and are sold at prices that are attractive to buyers from the country of origin who bring the goods home tax free. The range of goods involved in this trade has broadened from whiskey, tobacco, and perfume to include electronic products, computers, sound equipment, cameras, household appliances, cosmetics, clothing, and other items. Part of this trade involves pirated production and has led to serious intellectual property conflicts with the United States and other countries. Paraguay's low tax and duty rates and exemptions from the common external tariff of Mercosur have fostered the reexport trade. Brazil has periodically tried to restrain this trade by lowering its duty-free limits. Mercosur agreements require Paraguay to phase out this trade by the end of 2005. It remains to be seen how and if this will be accomplished.

The informal sector also includes small-scale enterprises, the self-employed, family workers, street

vendors, and other workers or enterprises in activities outside the scope of general tax and licensing requirements. Household surveys conducted by the Paraguayan Statistical Office suggest that some 40 percent of the urban laborforce may be occupied in this manner. Most of this economic activity is legal but is not included in national accounts and census data. Some is questionable and involves counterfeit trademarks.

Criminal elements are also included in the informal sector; they are involved in drug trafficking and stolen cars and probably other activities as well. The drug trade consists chiefly of locally grown marijuana that is sold in Brazil and of transshipment of cocaine that is produced outside Paraguay. The stolen car trade is a big business and notorious in South America. Brazil and Argentina are the main sources for the stolen vehicle trade, which includes automobiles, trucks, and even limousines. The Paraguayan police estimated in 2001 that 400,000 of the country's 600,000 cars had been purchased on the black market.

By their very nature, the activities of the informal sector are difficult to measure or estimate. The reexport trade is the most easily quantified; it was estimated at \$1.6 billion in 1999, down from a high of almost \$3 billion in 1995. Some estimates place the overall value of the informal sector as high as 50 percent of GDP. Studies of the legal portion of this sector by the Central Bank of Paraguay indicate these activities may represent almost 20 percent of GDP.

## Economic Outlook

Serious economic problems in Argentina and Brazil may impede Paraguay's efforts to improve its own economy. Disruptions in the economies of its chief trading partners are bound to have repercussions in Paraguay's economic performance. Although the Paraguayan Government's economic targets for 2001 were in line with IMF guidelines, they will present a major challenge for policymakers. Bumper soy and cotton harvests in 2001 may be sufficient to restore GDP growth, but the reduction in Government deficits is more problematic. Privatization plans for telecommunications and the water company pose political difficulties and have been postponed before. Looking a little further ahead, the scaling down of the reexport trade may prompt recourse to smuggling, and it is likely to augment balance-of-payments difficulties.

## Questions/Issues

1. What is the relationship of corruption to development? *Realistically*, what can be done to reduce the negative aspects?
2. Should Paraguay continue to focus on commercial agriculture, or place a higher priority on nonagricultural manufacturing?
3. What would be the environmental impact of developing a third major hydroelectric dam on the Alto Paraná and "improving" the Paraguay River for barge traffic to/from Central Brazil?
4. How can Paraguay attract foreign investment?

## POLITICS

Paraguayan political history revolves around personal rivalries within a small elite, overwhelmingly centered in Asunción. Until recently the population was largely rural and agricultural. Even now, with about 52 percent of the population living in cities and larger towns, Paraguay is still one of the hemisphere's least urbanized countries. Historically, the great bulk of the population has been poor and uneducated, with little interest in political theories. Personal ties with a local or national leader were what counted. In return for that loyalty, a leader (still frequently called a *caudillo*) could provide protection and the occasional gift or favor, if not to the individual then at least to a family member. For those higher up the socioeconomic ladder, the rewards for support became proportionally greater.

Paraguay's location as an outpost of the empire contributed to the growth of personalism. Spanish rule was never backed up by extensive bureaucracy. The ruling court (*audiencia*) was far away in what is now Bolivia (Sucre, then called Charcas). Rather than a sizable and growing proportion of European settlers, bringing with them at least the rudiments of Western political heritage, Paraguay's was the most

thoroughly “mixed” population in the Americas. Even today, a fluency in speaking Guaraní is a strong plus for a politician. Isolation, limited immigration, and the lack of mineral wealth delayed development of alternatives to agriculture that eventually led to social and economic diversification in larger countries. It is still true, but just barely, that the party with most effective control in the countryside is likely to win a national or regional election.

While Paraguay’s postindependence political history is the story of individuals more than parties, and the country has only recently become democratic by generally accepted standards, grassroots support has had recurring importance. Local, regional, and national *caudillos* are measured by how many bonds of personal loyalty, however gained, they can muster. Through the civil war of 1947, Paraguayan politics frequently broke down into armed struggle that enlisted the support of rural and urban poor. The organized demonstration of bused-in supporters remains an important political tactic. In a crudely democratic sense, the head count behind one or another leader has always been a factor in Paraguayan politics.

For 58 years after independence, three dictators governed Paraguay. From 1869 to 1954 when Alfredo Stroessner became President, political power alternated at long intervals between one major party and the other. The country had 44 presidents with an average term of office of less than 2 years. Violence or the threat of violence forced the early departures of more than half. Since Stroessner’s forced exit in 1989, the country has for the first time experienced more-or-less fair, open, and contested democratic politics. Having had little prior practice, substantially less than almost any other Latin American country, Paraguay faces a steep learning curve.

### **The Early Dictators: "As the twig is bent ..."**

A good case can be made that Paraguay’s first dictator, José Rodríguez Gaspar de Francia, and the third, Francisco Solano López, set the frame for much of what came after—by loose analogy, the George Washington and the Abraham Lincoln of Paraguayan history. By almost any standard, Francia was an unusual person. He was one of the very few well-educated Paraguayans of his day and was personally austere. He never married and when he died, in 1840 after a quarter century of total control, unused portions of his salary reverted to the treasury. Francia’s prime objective, apart from maintaining his own power, was to preserve Paraguayan independence. Since Paraguay’s nonsubsistence economy was almost totally dependent on the river connection through Argentina, the country’s small Spanish-born and Creole elites, and affiliated church leaders, were disposed to find accommodation with the dominant neighbor, if necessary at the expense of independence. Francia maneuvered to break their power by convening an assembly of regional and local leaders to give him the dictatorial powers that then allowed him to exile many upper class opponents and to confiscate their properties. Control of the countryside outside Asunción has had continuing importance in later Paraguayan political dynamics. The rivalry between Brazil and Argentina ([See Foreign Affairs](#)) also worked to Francia’s advantage. Even so, for more than two decades Paraguay was largely shut off from the rest of the world.

Carlos Antonio López, also acclaimed by a popular assembly weighted toward rural areas, succeeded

Francia from 1841 to 1862. He was no less dictatorial but reopened Paraguay to the outside world. Fatefully, he sent his son off to Europe to buy arms. Francisco Solano López seized power when Carlos Antonio died in 1862. The War of the Triple Alliance see History ruined Paraguay, but in retrospect is the single most powerful ingredient of Paraguayan national identity, with Francisco Solano López its avatar.

Francisco Solano López now occupies the place of honor in Asunción's Panteón. For his early formative influence, Francia's bust is on display at the headquarters of the Organization of American States in Washington.

### **The Beginnings of Democracy in Paraguay, 1869–1940**

In July 1887 a group of politicians formed the Centro Democrático, which soon became known as the Liberal Party. The next month, rival politicians formed the Asociación Nacional Republicana which adopted a red banner and hence its popular name as the Colorado Party (blue is the color of the Liberal Party). Both grew out of less formal political clubs and groupings that had existed (some in exile) since the 1850's. Together they continue to dominate Paraguayan politics.

Protodemocratic politics in postwar Paraguay was an uneasy mix of occupying Governments (Brazil in Asunción, Argentina across the river), survivors of the López forces, and returned exiles, some of whom had fought against Paraguay with the allied armies. Although there remains a popular belief, encouraged by Colorado Party propaganda, that the exiles (often called legionnaires because of wartime service in the Paraguayan Legion on the side of Argentina) formed the basis of the Liberal Party, while those who had remained loyal to Francisco Solano López founded the Colorado Party, Paul Lewis in *Political Parties and Generations in Paraguay's Liberal Era, 1869–1940* has demonstrated that there is little basis in fact for that dichotomy. Legionnaires and loyalists were almost equally important in both parties.

To the extent they were ideological, both the Liberal and Colorado parties were liberal parties. Progress was to come through good government that left most economic activity to the private sector (unlike the strict controls of the Francia period or the national socialist ideas that were to come later), while encouraging international trade and foreign investment and immigration—the latter preferably from Europe.

Absent significant ideological differences, personalities assumed dominant importance. Since Paraguay had no tradition of open, freely contested elections (perhaps not very different from other Latin American countries of the period), the party in power never lost an election. Accordingly, intraparty struggles for leadership often predominated over interparty competition.

Adherents to the Colorado Party controlled Paraguayan politics from 1874 to 1904. The dominant figure was a loyalist general, Bernardino Caballero. The Liberals gained power after a 4-month armed struggle in 1904, and held on to it for most of the period to Estigarribia's death in 1940. They were, if anything,

even more faction-prone than the Colorados. During both periods, the party out of power seldom contested an election (1928 the exception). Just as the War of the Triple Alliance had ushered in Paraguay's first period of attempted democracy, the Chaco War hastened its demise.

### **The Chaco War and the Nationalist Resurgence**

A Paraguayan Communist Party began in 1928, a Nazi Party in 1931. Of more enduring importance than either was the Febrerista Party that grew out of a military-led revolt in 1936 that installed Chaco War hero Col. Rafael Franco as President for 18 months. Franco drew many of his political ideas from Italian fascism. Like other nationalists of the period he was looking for ways that the state could take the lead in promoting economic development and address the socio-economic needs of the poor majority—and thereby, not incidentally, ensure long-term political support. His administration enacted labor laws and made a start at agrarian reform. He had Francisco Solano López's body exhumed and placed in the Pantheon.

Franco departed the way he had come, the victim of a military-led revolt. The Liberals regained power for 3 years, but the balance between civilian and military politicians had shifted. During the 66 years from 1870 to 1936, active duty military had often played important roles in support of one or another faction. For the next half-century, military officers turned politician were usually in the forefront, neutralizing the political parties if they could not bend them to their own purposes.

### **Soldiers as Presidents: Estigarribia to Rodriguez**

Paraguay's military leader during the Chaco War, José Félix Estigarribia, won the presidential election in 1939. In 1940, convinced that the state had to play a more dominant role in the nation's economic and social affairs, he pushed through a new constitution (only marginally modified by Stroessner in 1967) that greatly strengthened presidential powers. Soon after, he died in a plane crash. Since the new constitution did not provide for a Vice President, and elections had not been held for the one chamber legislature, ranking military leaders took it upon themselves to appoint a successor. They saw War Minister Gen. Higinio Morínigo as an interim appointment. Instead, displaying some of the skills that Stroessner was later to perfect, Morínigo held on to office until 1948, despite a civil war in 1947 that saw much of the officer corps go over to the insurgent side.

Having backed the winning side in 1947, the Colorados returned to power for the first time since 1904. Torn as usual by factional fighting, they fielded six Presidents in 6 years, before Stroessner assumed office in 1954.

General Alfredo Stroessner was born in Encarnación in 1912 to a German immigrant father and a Paraguayan mother. He entered the military academy at 16, served with distinction in the Chaco War, and went to Brazil for advanced military training. In the 1947 civil war he was one of the few military officers who remained loyal to the Morínigo government, and played a key role in the defense of Asunción. From 1948 onward Stroessner was a factor in Colorado intraparty maneuverings, even though

many in the party distrusted him.

In May 1954, Stroessner was instrumental in the overthrow of President Chaves. To the warring party factions, the relatively nonaligned Stroessner may have appeared as the least objectionable interim alternative. He received the party's nomination for President and took office on August 15, 1954. He did not leave it for almost 35 years.

Stroessner's longevity in a political system marked by chronic instability for 85 years is attributable to a number of factors. Central were his work ethic, his attention to detail, and his political shrewdness—until age and complaisance began to exact a toll. Like Francia he avoided private ostentation. Entering office without a solid personalist base in the Colorado Party, Stroessner moved adroitly over the first 6 years to eliminate those factional leaders who could not be coopted. At the same time he took steps to ensure that the military stayed out of politics, while making Colorado Party membership a requirement for officers. Stroessner also realized that his long-term success depended on economic development and the resulting income flows that would ensure the support of those whose interests were more material than partisan, particularly the business and professional sectors. By painting himself as an ardent anti-Communist, Stroessner was able to gain the support of the United States. Through the mid-1970's the United States provided military assistance that Stroessner used effectively to combat guerrilla incursions.

Expanding economic ties to Brazil were vital to Stroessner's success (see Economics and Foreign Affairs). The overland transportation route with Brazil supplanted the river link to Argentina, and the building of Itaipú Dam sparked a decade of very rapid economic growth—and made fortunes for a number of Paraguayans who would later seek political office.

By the 1980's Stroessner's control had begun to deteriorate. After 1986, in a manner reminiscent of earlier internecine struggles, those around Stroessner began to jockey for the succession and to protect their own wealth and incomes. The so-called "militantes" backed Stroessner's son Gustavo. Opposed were the "*tradicionalistas*." Ostensibly, they favored a return to the dominance of the party over individual or family interest. More to the point, they wanted to preserve space for their own political ambitions. On February 3, 1989, military members of the "*tradicionalista*" faction forced Stroessner to resign and put him on a plane for Brazil (where he still lives as of this writing).

The fourth soldier-president was General Andrés Rodríguez. Like Estigarribia he was a transitional figure. Whereas Estigarribia's 1940 constitution paved the way for the Morínigo and Stroessner dictatorships, Rodríguez oversaw the writing of the 1992 constitution that restored democracy, perhaps for the first time in a durable form. In some ways Rodríguez was an unlikely leader for such an effort. He was a long-time Stroessner subordinate and confidant, and had made a fortune from various types of business activity, including drug trafficking.

### **Democratic Paraguay: Will it Last?**

The international environment had changed markedly by the time Stroessner departed. Brazil, Argentina,

and Chile had already or were about to return to civilian rule after long periods of military leadership. The cold war had ended. Even earlier, U.S.-Paraguay relations went sour over human rights abuses and narcotics. Democratic rule and open economies appeared to be the wave of the future.

Internally, the post-Itaipú slump continued, suggesting to many the need for a new style of political leadership. After fitful guerrilla insurgencies during the first two decades of Stroessner rule, much of the political opposition had settled for tolerated minority status (one-third of congressional seats under the 1967 constitution) while awaiting the dictator's demise. Newer generations of political leaders, within and outside the Colorado Party, were better educated and more aware of the outside world. There were parallels with other periods of major political change, particularly those that followed the War of the Triple Alliance and the Chaco War.

Rodríguez won a 4-year term as President in May 1989. During his tenure, a multiparty assembly drafted a new democratic constitution, the Liberals returned in force as a national mass-based party, and a new agglomeration of younger, more idealistic leaders captured the Asunción city government and a few offices elsewhere. In 1991 Paraguay joined Brazil, Argentina, and Uruguay in establishing the Southern Common Market (Mercosur). To his credit, Rodríguez stepped down when his term ended.

The choice of a Colorado Party candidate to succeed Rodríguez, and the continuing political aftermath, tells us much about the still-fragile nature of Paraguayan democracy. Luis María Argaña was an older style *caudillo* politician who enjoyed broad support within the party. However, Rodríguez and those around him did not trust Argaña to protect their interests. Instead, they proposed Juan Carlos Wasmosy, an Itaipú-wealthy engineer with limited party credentials who had served in Rodríguez' cabinet. Argaña probably won the party primary, but vote counting was interrupted for 3 months and Wasmosy was declared the victor. He went on to defeat Domingo Laíno for the Liberal Party and Guillermo Caballero Vargas, representing the newly formed Encuentro Nacional (National Encounter Party). Combined, the opposition parties won a majority in the Congress.

In 1998 Wasmosy's most important accomplishment was being the first civilian President since 1932 to complete a term of office, arguably the first democratically elected-Paraguayan President ever to do so. To achieve that milestone he had to survive a threatened coup in 1996 that was not unlike those that had prepared the way for Stroessner in 1954 and then forced his ouster in 1989.

Lino Cesar Oviedo, an army colonel, had played a role in the Stroessner departure. He was also instrumental in ensuring Wasmosy's win over Argaña in the Colorado Party primary of 1992-93. Wasmosy, as President, rewarded him with leadership of the army. A *caudillo*-type leader like Argaña, and, thus, almost by definition an archrival, Oviedo had used his military position like Rodríguez to amass substantial personal wealth. Far better than Wasmosy or Argaña, he had fluent command of Guaraní and a flair for the more public manifestations of Paraguayan politics. Many viewed him as the real locus of power in the Wasmosy administration.

In late April 1996, Wasmosy asked for Oviedo's resignation. The general initially refused, demanding

instead that Wasmosy and his Vice President step down. Strong support from the United States and from the other Mercosur countries enabled Wasmosy to survive. Oviedo retired and immediately launched his campaign for the 1998 election. In 1997 he narrowly won the Colorado Party primary over Argaña, and he almost certainly would have won the Presidency in 1998 had not a military court sentenced him to 10 years in prison for the coup attempt. The Vice Presidential nominee, Raul Cubas, moved to the top of the ticket (with Argaña taking his place as Vice President) and won the election with 55 percent of the vote to Laíno's 44 percent. Laíno was the coalition candidate of the Liberal and Encuentrista Parties. Once in office, Cubas pardoned Oviedo.

The victory proved short-lived. In addition to being Vice President, Argaña continued to control the Colorado Party apparatus. Dissident Colorado legislators, together with those of the opposition parties, controlled the Congress. The situation was not unlike the erosion of sharp party lines that had led to the Liberal replacement of Colorado dominance in 1904. The assassination of Argaña in early 1999 (almost certainly inspired by Oviedo) provoked massive demonstrations that led to further deaths. Cubas and Oviedo fled the country, and Senate President Luis Angel Gonzalez Macchi of the Colorado Party became President. A special election for Vice President in August 2000 gave a narrow victory to the Liberal Party's Julio Cesar Franco over one of Argaña's sons. The next presidential election is scheduled for 2003.

### **The Constitution of 1992 and the Structure of Government**

The 1992 constitution, Paraguay's sixth, is a democratic document that provides for a clearer and more balanced separation of powers than existed in the constitutions of 1967 and 1940. The Presidential term is 5 years and there is no reelection. Vice Presidents can run for the Presidency if they resign 6 months before the election. The Chamber of Deputies has 80 members, elected from the 17 Departments and the capital city of Asunción. The 45 senators are elected nationally on the basis of proportional representation. Both deputies and senators can be reelected. Congressional elections are coterminous with the presidential election, but Congress takes office a month before the presidential inauguration date of August 15.

The judiciary consists of a five-person supreme court and lesser judges, nominated by the President and confirmed by the Senate. If appointed again after a 5-year initial term, judges have tenure. The judiciary is guaranteed a budget that cannot be less than 3 percent of the overall national budget.

There are also a number of quasi-independent organs: The Office of the Comptroller, the National Electoral Commission, and the Office of the Attorney General. In theory, at least, they are to ensure the fairness of elections and to serve as checks on the abuse of power by the three main branches of government. The record to date has been mixed.

### **Political Parties**

*Asociación Nacional Republicana—ANR (The Colorado Party)*: In power since 1948, the ANR has lost

support in urban areas but continues to have the best grass roots organization in rural areas. It makes effective use of government patronage and at times still waves the banner of nationalism to set it apart from the supposedly more internationalist orientations of other parties. In most recent national elections it has polled in excess of 50 percent.

***Partido Liberal Radical Auténtico—PLRA (The Liberal Party)***: Paraguay's other traditional party, which controlled government from 1904 to 1940, with the exception of 18 months in 1936–37. Like the Colorado Party, it is mass-based and has support throughout the country. Nowadays, it is strongest in the cities and among more educated and wealthier segments of the population. It controls the Asunción city government and some other smaller cities. A Liberal, Julio Franco, won the Vice Presidency in 2000.

***Partido Encuentro Nacional—EN***: Beginning in 1991 as a loose coalition of primarily younger, democratic, reformist leaders that was able to win control of the Asunción City Government, it backed Guillermo Caballero Vargas for President in 1993, expecting to win. Then and subsequently, it has failed to demonstrate the organizational strength necessary to have significant impact in the countryside. Encuentristas tend toward the left side of the ideological spectrum, but the party is not dogmatic and includes elements of the business community.

***Partido Revolucionario Febrerista—PRF (Febrerista Party)***: The party is an outgrowth of the February 1936 revolt that made Col. Rafael Franco President for 18 months. Originally attuned to European national socialism, the party later allied with the international social democratic movement. It was part of the legally recognized opposition under Stroessner after 1964, but has never been able to return to electoral importance.

There are also very minor Christian Democratic (PDC), Socialist, Communist, and Humanist (Green) Parties.

## **Interest Groups**

Although the Colorado and Liberal Parties continue to be the most important determinants of what happens in Paraguay, both in turn respond to pressures from other social and economic sectors. The most important of these are:

### ***The Military***

Stroessner made the military, primarily the army, a pillar of his regime. Since his ouster there has been some movement back toward an apolitical role, in this following the lead of developments elsewhere in the region. Party affiliation is no longer a requirement for entry or advancement. After the Oviedo coup attempt of 1996, the military was more forceful than civilian authorities in opposing Oviedo's political ambitions. The military role in society will probably continue to decline (and, with it, budget allocations). If not managed skillfully, there will be potential for another military leader to emerge, playing on institutional interests as well as appealing to the deeply embedded Paraguayan respect for a

strong leader.

### ***The Church***

For much of the last two decades of the *Stronato* (the years of Stroessner's regime), the Catholic Church was the strongest and most vocal opposition force, particularly over human rights and the lack of social reform. It no longer has to play the lead role in those areas and conservatives within the hierarchy have become stronger. Protestant groups have made some inroads into Catholic dominance, particularly among poorer segments of the population. On balance, however, the Catholic Church remains a force for modernization and reform.

### ***The Media***

Less successfully than the Church, the media played a role in eventually bringing about the downfall of Stroessner. Freedom of expression is now a fact of life and will play an increasing role in shaping public opinion and national policy. Although ownership is for the most part in the hands of the political elites, reporters and columnists draw heavily from the ranks of the younger generations (see below).

### ***Landowners and the Landless***

Paraguay has very unequal ownership of land, and, historically, a great deal of land has been underutilized. The population will continue to expand at a rapid rate for the foreseeable future. Although many peasants are moving to urban centers, the number of landless and other rural poor is still increasing, and illegal land occupations continue. Agrarian reform efforts thus far have been limited.

Those who own the large estates are part of the political elite. Many hold political office or exercise professions other than farming. A booming economy would provide funds and the alternative occupations to carry out more far reaching agrarian reform. Barring that, the large landowners and the rural poor will continue to exercise contradictory and largely irreconcilable pressures on Paraguay's Government.

### ***Business Groups***

For much of Paraguayan history, business took a backseat to agricultural interests. Since 1950 and particularly after the start of construction on Itaipú, business organizations assumed increasing importance. Success usually required accommodation with the Government and often with the Colorado Party. That is much less the case now, but not irrelevant. The business community is at best divided over Mercosur. Most manufacturing establishments are small and fear the competition. Commercial enterprises on the other hand may benefit. One of the less gratifying results of democracy has been to make corruption and "the rules of the game" less predictable. Some businessmen yearn for a return to a strong, even if authoritarian, regime.

## ***Urban Labor***

Unlike its neighbors, Paraguay has never had a strong labor movement. The lack of extensive industrialization, the paternalistic nature of much of Paraguayan life, the pre-emptive political role of the two traditional parties, inhibited its development. The democratic opening after 1989 has, if anything, led to further fracturing of organized labor. If/when Paraguay resumes consistent economic growth, labor will become more important.

## ***The Younger Generation***

Almost despite itself, Paraguay is changing. Modern communications technology, the fact that many more Paraguayans are traveling and studying abroad, and membership in Mercosur, make it much more difficult to maintain old ways of doing things. When the *Stronato* collapsed, leadership passed to those who had been shaped by events of the preceding four decades. Now, gradually, younger politicians and other professionals, less weighted with past battles and who understand the need to modernize practices and institutions, are replacing them. Not even the Colorado Party is immune. There is hope in this, albeit little assurance of orderly progress.

## **Looking Ahead**

Paraguay's democratic tradition is 12 years old. In all its almost 200 years of independence, Paraguay has not yet had a peaceful transition of political power from one party to another. Civil-military relations remain delicate. The still high population growth rate places heavy demands on scarce resources. Particularly among the poor, rural, or uneducated that make up at least 60–70 percent of the population, the success or failure of Government is measured much less by civic and political freedoms than by material benefits, including physical security. Paraguay's economy has stagnated since the completion of the Itaipú and Yacyretá Dams and the near-collapse of the border trade with Brazil and Argentina. New investment, particularly from abroad, is discouraged by the apparent fragility of Paraguay's newfound democracy. While the 1992 constitution looks good on paper, it remains to be seen whether the country can move beyond personalist politics to institutionalized democratic rule.

## **Questions/Issues**

1. Are Paraguay's major parties likely to become more ideological over time? Would that be good for Paraguay's development and stability?
2. What accounts for the fact that General Oviedo, after attempting a coup in 1996, could then win the Colorado Party primary and almost become President in 1998?
3. Is Paraguay ready for a President from another party (other than the Colorado)?

# **FOREIGN AFFAIRS**

As a small, poor, thinly populated state between much larger countries, the central theme of foreign policy for much of Paraguay's history has been preserving national integrity and independence. Pervasive subthemes have been the perceived requirements of successive governments to maintain themselves in office and how to take advantage of Paraguay's central location and the rivalries of other states to gain economic advantage. The first predominated until the end of the Chaco War in the 1930's. Since then, the second and third, not unrelated, have been more salient.

## **Independence and Territorial Integrity**

Spain ruled Paraguay through Buenos Aires after 1776. Not illogically, the Creole elites there expected Paraguay to continue as a province of Argentina after independence. Paraguayan forces defeated Argentine invasion attempts in 1810–11. The Argentine response was to close the Paraná River system to Paraguayan commerce. Francia, making a virtue of necessity, walled Paraguay off from almost all foreign influence for the next quarter century, in the process expelling many Paraguayans with close ties to Buenos Aires and confiscating their assets. His dictator successor, Carlos Antonio López, taking advantage of political change in Argentina, finally gained Argentine recognition of Paraguayan independence in 1852. Brazil, in 1844, had already granted recognition. By the mid-1850's, the U.S. and leading European countries had also formally recognized Paraguay.

Francisco Solano López, Paraguay's third and last 19th century dictator, almost managed to undo the achievements of Francia and the first López. Fearing that Argentina and Brazil still had designs on Paraguayan territory, for which there is probably some basis in fact, but also because of his own aggressive personality, he enmeshed Paraguay in the War of the Triple Alliance. Brazil and Argentina

(Uruguay was a passive partner) eventually wore down dogged Paraguayan defenses. They occupied Asunción in 1868 and Brazilian forces did not finally leave until 1876. Most Paraguayan males of military age, and many who were not, died. The country was bankrupt. In the aftermath of the war, Brazil and Argentina annexed about 30 percent of the territory that Paraguay had previously claimed.

The lead Brazilian role in the War of the Triple Alliance laid the basis for an eventual split between the foreign policy orientations of Paraguay's two major parties. Historically, and continuing through the first half of the 20th century, Paraguay's main avenue of access to the outside world was through Argentina. The commonality of language also meant that Paraguayans went to Argentina to study or when they were in exile. Some of the latter, the so-called Paraguayan Legion, fought with Argentina in the War of the Triple Alliance. In general the Liberal Party has had closer ties with Argentina, while the Colorado Party has looked to Brazil.

Both Argentina and Brazil preferred to maintain Paraguay as a weak buffer state rather than to have it dominated or annexed by the other. To the extent that one of the two main parties had close ties with Buenos Aires, there was an incentive for the other, and for Brazil, to cultivate closer relations. But the Brazil-Colorado Party nexus did not flourish until after 1950, by which time the relative economic balance had shifted markedly in Brazil's favor.

The second major threat to national integrity was the longstanding dispute with Bolivia over the Paraguayan Chaco. The origins go back to the colonial period when, since the whole area was governed by Spain, there was little perceived need to define borders precisely, particularly so in a region of almost no population or profitable resources. After Bolivia lost its Pacific Ocean access in the war with Chile of 1879–83, some Bolivians began to look to the Paraguay River as an alternative outlet for commerce. The discovery of oil on the western side of the Andes in the 1920's led to speculation that the entire Chaco region might contain valuable deposits. Bolivian forces gradually extended a chain of forts into territory long claimed by Paraguay. The Chaco War of 1932–35 was the result. Although Argentina was neutral and played an active role in the efforts to bring about peace, it also provided or permitted critical support to Paraguay's war effort. The longstanding ties between Liberal politicians and Argentine leaders were a factor.

### **The U.S. as a Friendly but Distant Power**

Official U.S. contact with Paraguay began in the 1840's when President Polk named Edward Hopkins as a special agent in Asunción. Hopkins' interests were primarily commercial and he entered into various agreements with the Paraguayan Government that eventually went sour. In 1855, Paraguayan troops fired on a U.S. naval research vessel, the *Water Witch*, killing the helmsman. That incident, plus pressure generated on the U.S. Congress by Hopkins seeking compensation for the broken commercial agreements, resulted in the sending of 19 ships and 2,500 men to Paraguayan waters in 1859. The López government agreed to pay \$250,000 for the death of the helmsman, but Hopkins got little satisfaction.

After the War of the Triple Alliance, Paraguay resisted Argentine demands for a part of the Chaco north

of the Pilcomayo River and the matter was submitted to the mediation of U.S. President Rutherford B. Hayes. He came down on the Paraguayan side of the dispute, an outcome no doubt viewed favorably by both Brazil and Bolivia.

The United States also played a role in the final brokering the Peace Treaty of 1938 that formally ended the Chaco War between Bolivia and Paraguay. This time, however, many Paraguayans believed that U.S. pressure played to Bolivia's advantage, since Paraguayan troops had to withdraw from some of the positions they had captured.

### **Making the Most of Being a Small Country in the Middle**

Beginning with the Febrerista Revolution of 1936–37, Paraguay looked to the European models of national socialism that had also found strong support in neighboring South American countries. German immigrants were a significant part of the small foreign-born community. Morínigo broke relations with Germany and Italy in 1942 but did not declare war until 1945 and meanwhile refused to move against German economic interests. In an effort to encourage Paraguayan action against German activities, the United States began an economic and technical assistance program that eventually peaked under the Alliance for Progress. For two decades U.S. assistance was very large relative to the national budget. Many roads, schools, and other infrastructure can be traced to what was, for the times, a massive inflow of capital and expertise.

In the 1950's, Brazil and Paraguay started to develop the lines of communication that would eventually lead to much closer economic and political ties. Paraguay sought an alternative to its historic dependence on Argentina as the avenue for trade. When Perón was ousted in 1955 he went first to Paraguay, straining relations between the two Governments. Stroessner assumed office in August. He had attended Brazilian military schools. As a Colorado, he did not have any partisan inclination toward Argentina. Brazil for its part was eager to do business. Its own economic development was moving westward and it was interested in Paraguay for its resources and also as a market. A number of agreements were signed, the most important of which provided Brazilian financing for completing a road across Paraguay to the Paraná and for a bridge linking the two countries at Puerto Stroessner (now Ciudad del Este). Paraguay also gained freeport privileges in Paranaguá to supplement those it already had in Santos.

By far the most important element in the growing link between the two countries was the agreement in the 1960's to move ahead with construction of the Itaipú Dam, still the world's largest. Argentina objected strongly, but had to settle for Paraguayan agreement to build a smaller dam lower down on the Alto Paraná (Yacretá) and perhaps eventually a third at Corpus. At the same time Stroessner, not wanting to tie Paraguay too closely to Brazil, refused to convert Paraguay's electrical grid to make it compatible with Brazil's. This would have reduced the overall costs of the dam. Brazil is now Paraguay's principal trading and investment partner, and many Brazilians have settled in Paraguay.

In the 1991 Act of Asunción, Paraguay, Uruguay, Argentina, and Brazil formed the Southern Common Market (Mercosur). Paraguayan negotiators were successful in gaining advantages not equally available

to the other three.

For his first 20 years in office, Stroessner exploited U.S. preoccupation with the cold war to gain substantial U.S. military assistance, which he used to suppress the guerrilla efforts stimulated by Cuba and by more radical dissidents. Beginning with President Carter and continuing until Stroessner's ouster, U.S. policy placed increasing emphasis on human rights and democracy. Pressure from the U.S. was instrumental in encouraging and sustaining the democratization process that began in 1989.

Paraguay under Stroessner and after has cultivated relations with countries ostracized elsewhere, but with a price tag. South Africa provided substantial military assistance and some trade opportunities. It still has diplomatic relations with Taiwan and has reaped considerable economic assistance. In recent decades Japan and the European Community have moved ahead of the US as sources of assistance. Japan's assistance is directed in part to the agricultural colonists who came to Paraguay before and after World War II.

Throughout Paraguay's history, but of more than local importance only during recent decades, Paraguay and individual Paraguayans have maneuvered for economic advantage out of Paraguay's central location. Contraband has a long tradition. Many of the vehicles in Paraguay were stolen from one of the richer neighbors. When Argentina and Brazil moved to import substitution models of development, placing high duties on most imports, Paraguay developed a lucrative business in selling legitimate or pirated goods at bargain prices (see section on Economics).

Two other issues have assumed prominence in Paraguay's relations with the U.S. and other countries in recent decades: drugs and terrorism. Beginning about 1970, Paraguay has been an important transshipment country for drugs, first heroin and then cocaine. It is also an important producer of marijuana, most of which moves to neighboring countries. Under Stroessner, senior high officials profited from the narcotics trade. Direct ties to central government officials are now less likely, and the Government has recently taken a more active role in fighting the drug trade, but more needs to be done.

Over the past two decades, the border area around Itaipú, particularly in Brazil and Paraguay, has attracted a significant Arab population. An estimated 12–15,000 people of Arab descent live and work there. A small percentage are affiliated with Middle East groups that have a history of terrorist action: Hizbollah, Hamas, Islamic Jihad and al Qaeda. The Argentine Government believed that some of these groups might have had a role in the 1992 and 1994 bombings of the Israeli Embassy and the Argentine-Israeli Community Center in Buenos Aires. Since the September 11, 2001, attacks in the United States, antiterrorist coordination has received increased attention in bilateral and regional relations. The Paraguayan Government arrested two officials for selling Paraguayan passports to foreigners.

Twelve years after the end of the Stroessner dictatorship, Paraguay has had considerable success in breaking out of the pattern of *sui generis* isolation that characterized much of its history. There is still a ways to go before the country has an assured place in the democratic developing world.

## Study Questions

1. Given the relatively small U.S. investment and trade with Paraguay, will U.S. influence decline if and as Mercosur develops?
2. What would be the impact on Paraguay's foreign relations of a return to non-democratic rule?

# PHILIPPINES SELF STUDY GUIDE

NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies Foreign Service Institute  
U.S. Department of State

**The Self-Study Guide: The Philippines** is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important Philippine issues related to history, geography, politics, religion, culture, economics, and international relations. The guide merely serves as an introduction and should be used as a self-study resource. The Philippines is far too complex and diverse a society to be covered in any depth using only the text in this guide. Therefore, the reader is encouraged to explore the

questions and issues introduced using the Internet site guide and articles and books listed in the bibliography. Most of the bibliographic material can be found either on the Internet or in Foreign Service Institute or Main State libraries.

Benjamin N. Muego, Professor of Political Science and Asian Studies at Bowling Green State University prepared this Guide. The views expressed in this guide are those of the author and attributable sources and do not necessarily reflect official policy or position of the Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and nonprofit use only.

First Edition  
September 30, 2001

Selected Bibliography

## Chronology of Important Historical Events

1521	On March 15, Ferdinand Magellan discovered the Philippines and attempted to subdue Lapu-Lapu, a native chieftain in today’s Cebu province in the central Visayan region; Magellan was killed in a skirmish with Lapu-Lapu’s warriors on April 24, 1521.
1543	Spanish conquistador Ruy Lopez de Villalobos was forced out of the Philippines by the natives a year after discovering the rest of the islands and naming the archipelago after King Philip II of Spain.p
1564	Miguel Lopez de Legazpileft New Spain with four ships to colonize the Philippines.p
1565	Miguel Lopez de Legazpi established the first Spanish colony in the Philippines at Cebu in the central Visayan region, designating it as the colony’s Capital.p
1571	On May 19, Manila was founded by Miguel Lopez de Legazpi; soon afterwards, Legazpi relocated the capital to Manila in the southern Tagalog region (from Cebu, in the central Visayan region) and used the newly designated colonial Capital as a base for the further colonization of the islands.
1896	On August 26, the <i>Kamahalmala’t Kagalangalang na Katipunan ng mga Anak ng Bayan</i> (KKK), a secret society under the leadership of Andres Bonifacio committed to total separation from Spain, launched the Revolution of 1896, which eventually ended Spanish colonial rule over the Philippines.  On December 30, Jose P. Rizal, a co-founder of the non-separatist <i>La Liga Filipina</i> and author of <i>Noli Me Tangere</i> and <i>El Filibusterismo</i> (two powerful political satires that exposed Spanish atrocities in the Philippines) was executed by the Spanish authorities after a sham trial on trumped-up charges.

	<p>On January 23, the Philippine Revolutionary Army (PRA) of General Emilio F. Aguinaldo signed a truce with the Spaniards (the Pact of Biak na Bato) during which time Aguinaldo headed a delegation to Hong Kong to procure arms and ammunition for the PRA’s expected final offensive against the Spaniards holed up in the Walled City (Intramuros) of Manila.</p> <p>On February 25, Commodore George Dewey received a secret cable from Theodore Roosevelt, Assistant Secretary of the Navy, ordering the former to steam toward Hong Kong and await further orders for possible engagement with elements of the Spanish Armada, stationed in the Philippines, under the command of Admiral Patricio Montojo.</p> <p>On May 1, the Battle of Manila Bay which pitted the U.S. Navy’s modern steel-clad battleships against the antiquated and wooden-hulled ships of the Spanish Armada took place; not surprisingly, all 10 Spanish ships were sunk and 381 Spanish sailors lost their lives while Commodore Dewey’s fleet, led by the <i>USS Monocay</i> (Dewey’s flagship) sustained only 8 casualties (mainly from heat prostration) with none killed; 11 days after his “great naval victory,” Dewey was promoted to the rank of Rear Admiral.</p> <p>On June 12, General Emilio F. Aguinaldo proclaimed the short-lived First Philippine Republic, also known as the Malolos Republic (1898–1901), and sought recognition of the new government by the international community, including the United States.</p> <p>On August 12, a peace protocol was signed between Spain and the United States, allowing the latter to occupy Manila pending the conclusion of a peace treaty between them; 4 months later, on December 10, 1898, the Treaty of Paris formally ended the Spanish-American War; in accordance with the Treaty of Paris, Spain withdrew from Cuba and ceded Puerto Rico, Guam and the Philippines to the United States; the United States paid Spain \$20 million for the Philippines.</p> <p>On December 21, President William McKinley issued a proclamation extending “American sovereignty over the entire archipelago.”</p>
<p><b>1899</b></p>	<p>On February 4, the “Philippine Insurrection” (cf., “Filipino-American War,” the term preferred by Filipinos) broke out.</p> <p>On February 6, the United States Senate narrowly ratified the Treaty of Paris; the final vote tally was 57 to 27, one over the required two-thirds vote.</p>
<p><b>1900</b></p>	<p>On March 6, General Emilio F. Aguinaldo, president of the First Philippine Republic (1898–1902), was captured in Palanan, Isabela (in the northern Luzon region) by General Frederick Funston, effectively ending the Philippine Insurrection or Filipino-American War.</p>
<p><b>1902</b></p>	<p>On July 4, President Theodore Roosevelt, who succeeded William McKinley to the presidency, officially proclaimed the end of the “great insurrection” in the Philippines and commended the U.S. troops involved in the campaign for upholding America’s “lawful sovereignty over the islands.”</p>

<b>1934</b>	On March 24, the Tydings-McDuffie Act, which among other things, established the Philippine Commonwealth and set forth a 10-year timetable for Philippine Independence was enacted by the U.S. Congress and signed into law by President Franklin D. Roosevelt.
<b>1941</b>	On December 10, Japan invaded the Philippines, and the Imperial Japanese Army landed on the main island of Luzon.
<b>1942</b>	On January 2, the Imperial Japanese Army captured Manila, declared it as its Capital and became its principal headquarters and base of operations throughout Japan's 3-year occupation of the Philippines.  On April 9, USAFFE (United States Armed Forces in the Far East) troops on the Bataan peninsula surrendered to General Tomoyuki Yamashita, although a significant number of the 36,000 U.S. and Filipino soldiers who surrendered to the Japanese subsequently died during, and in the aftermath of, the infamous "death march" from the Bataan peninsula to Capas, Tarlac en route to internment camps in the metropolitan Manila area; thousands of others succumbed to disease, starvation and torture in the hands of their Japanese captors in the internment camps.
<b>1945</b>	On January 9, U.S. military forces under the command of General Douglas MacArthur began the campaign to liberate the Philippines from Japan; MacArthur entered Manila on February 4 and in spite of strong Japanese resistance, completed the recapture of the city within 3 weeks; Washington, D.C. announced the liberation of the Philippines on July 5.
<b>1946</b>	On July 4, the United States granted the Philippines its independence (cf., "restored" Philippine independence as Filipinos preferred to put it) under the terms of the Tydings-McDuffie Act of 1934; Manuel A. Roxas, a Japanese collaborator earlier exonerated by General MacArthur and a staunch U.S. loyalist, was elected president of the new republic; in a plebiscite simultaneously held with the presidential election, Roxas campaigned hard for the so-called Parity Amendment an "ordinance" appended to the 1935 Philippine Constitution, which accorded American nationals and corporations the same rights as Filipinos in the ownership of public lands and exploitation of natural and mineral resources; the amendment, which became a major irritant in post-war Filipino-American relations, expired on July 4, 1974.
<b>1947</b>	On March 14, the Military Bases Agreement between the Philippines and the United States was signed and subsequently ratified by the Philippine Senate.
<b>1950</b>	On August 30, the RP-U.S. Mutual Defense Pact, the first among a series of bilateral security agreements between the United States and a number of pro-western countries in East Asia, was signed by U.S. and Philippine authorities.
<b>1951</b>	Ramon F. Magsaysay, credited by the United States for "breaking the backbone of Philippine communism," was elected president of the Philippines; Magsaysay was the beneficiary of generous financial assistance from the United States Government and invaluable campaign advice from his CIA "handler," Colonel Edward Lansdale.
<b>1965</b>	Ferdinand E. Marcos, a much-decorated World War II hero was elected to the first of two 4-year terms as president of the Philippines, soundly defeating the incumbent president, Diosdado P. Macapagal; Marcos was elected to a second 4-year term in 1969, the first Philippine post-war president to be so honored.

1966	Along with Indonesia, Malaysia, Thailand, and Singapore, the Philippines co-founded the Association of Southeast Asian Nations (ASEAN), a regional cultural-economic-political organization, which has since expanded to include all 10 countries in Southeast Asia ( <i>e.g.</i> , Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, the Philippines, Singapore, Thailand, and Viet Nam).
1972	On September 21, Ferdinand E. Marcos declared martial law, suspended the 1935 Constitution and the writ of <i>habeas corpus</i> , shut down Congress, ordered the arrest and detention of his political opponents and other suspected dissidents and assumed plenary powers; Marcos justified his declaration of martial law as a legitimate and necessary response to an alleged Communist plot to overthrow the duly constituted government, subvert the rule of law and threaten the survival of the republic.
1981	On January 17, Ferdinand E. Marcos proclaimed as “duly ratified” the 1983 Constitution, which transformed the Philippines’ American-style unitary-presidential system of government into a nondescript hybrid “parliamentary-presidential” system purportedly modeled after the British’s parliamentary system and the French’s presidential system, particularly the latter’s strong chief executive feature.
1982	On August 21, exiled opposition leader and old Marcos nemesis Benigno S. Aquino, Jr., better known as “Ninoy Aquino,” returned to the Philippines from self-imposed exile in the United States and was shot to death, execution-style, by still unknown assailants as he disembarked from his plane at the Manila International Airport (the same airport facility that now bears his name); Aquino’s brutal assassination touched off a firestorm of protest and outrage both in the Philippines and abroad that eventually precipitated Marcos’ ouster and fall from power.
1986	On February 26, the entire Marcos family accompanied by an entourage of military and civilian aides and a handful of diehard supporters left Manila for Hickam Air Force Base in Honolulu, Hawaii (via Clark Air Force Base in Angeles, Pampanga); earlier in the day, Corazon C. Aquino, “Ninoy” Aquino’s widow and putative winner of the February 7, 1986 “snap election,” took her oath of office as president of the Philippines before Supreme Court Justice Claudio Teehankee.
1989	On September 28, Ferdinand E. Marcos died in Honolulu, Hawaii; in a controversial decision that would later haunt her presidency, Corazon C. Aquino refused to allow the return of Marcos’ remains to the Philippines for burial in spite of, among others, a “Sense of the Senate Resolution” to the contrary and the recommendation of other notable Philippine political and religious leaders; Marcos is currently buried in his hometown of Batac, Ilocos Norte, after former president Fidel V. Ramos, subsequently lifted his predecessor’s ban on Marcos’ burial on Philippine soil.
1990	On September 16, the Philippine Senate voted to terminate the RP-U.S. Military Bases Agreement (MBA); the decision to terminate the 40-year old basing agreement was undoubtedly affected by the eruption earlier in the year of Mount Pinatubo, a volcano that had been dormant for more than 6 centuries; the Mount Pinatubo eruption caused extensive damage to Clark Air Force Base and Subic Naval Base; in a bit of a paradox, two of the senators who voted for the termination of the MBA were Joseph Estrada and Orlando Mercado. They became strong supporters of the VFA (as president and defense secretary, respectively) that was ratified by the Philippine Senate in 2000.

1998	<p>On June 30, Joseph E. Estrada, former movie actor-matinee idol, city mayor (San Juan, Rizal), senator, vice-president and celebrated crime-fighter took his oath as the ninth president of the Philippines in the post-war period, after a spectacular election victory over Fidel V. Ramos’ “anointed” successor, Speaker Jose de Venecia, standard-bearer of the ruling <i>Lakas-NUCD</i> Coalition, and four other presidential hopefuls; among Estrada’s major challenges were how to cope with the consequences of the Asian economic debacle that started in Thailand in May 1997 and a daunting budget deficit inherited from the Ramos administration; Estrada’s political mettle would also be tested to the limit by the secessionist Moro Islamic Liberation Front (MILF), which resumed hostilities against the Philippine Government and defiantly demanded an independent “Moro Islamic Republic.”</p>
1998	<p>On January 12, the Visiting Forces Agreement (VFA) was signed by U.S. Ambassador Thomas Hubbard and Philippine Foreign Affairs Undersecretary Leonides Caday.</p>
1999	<p>On May 27, after protracted and often acrimonious debate, the Philippine Senate ratified the Visiting Forces Agreement (VFA) by a vote of 18-5, paving the way for, among other things, the resumption of <i>Balikatan</i> (“shoulder to shoulder”) RP-U.S. joint military exercises, which had been on hiatus since September 16, 1991.</p>
1999	<p>On October 5, Senate Minority Leader Teofisto Guingona, Jr., accused President Joseph Ejercito Estrada of illegally taking P220 million in <i>jueteng</i> (an illegal numbers game popular among rural Filipinos) bribe money from Ilocos Sur Governor Luis “Chavit” Singson from November 1998–August 2,000 and P70 million in excise taxes on cigarettes intended for Ilocos Sur; Guingona’s charges were referred to the Senate Blue Ribbon Committee for investigation; the House Committee on Public Order and security conducted parallel investigations.</p> <p>From October 11–17, calls on President Joseph Ejercito Estrada to “step down from the presidency,” were made by: Jaime Cardinal Sin, putative leader of the country’s Catholics (October 11); the Catholic Bishops Conference of the Philippines (October 13); former presidents Corazon C. Aquino and Fidel V. Ramos (October 17).</p> <p>On October 12, Vice President Gloria Macapagal-Arroyo resigned as Secretary of the Department of Social Welfare and Services—although elected as vice president under the opposition <i>Lakas-NUCD</i> coalition, Macapagal-Arroyo was invited by Estrada to serve in the latter’s cabinet and Macapagal-Arroyo obliged—and joined the call for Estrada’s resignation.</p> <p>On November 13, the 218-member House of Representatives adopted a four-point “Articles of Impeachment” against President Joseph Ejercito Estrada; although no formal vote was ever taken, 115 representatives led by former Estrada ally Speaker Manuel Villar, signed a letter forwarding the articles of impeachment to the 24-member Senate (because of Gloria Macapagal-Arroyo’s election to the vice presidency and the death of Marcelo Fernan earlier, however, the Senate membership had been pared down to only 22).</p> <p>On December 7, the trial-sentencing phase of the impeachment proceedings against Joseph Ejercito Estrada formally began in the Senate, with Hilario G. Davide, Jr., Chief Justice of the Philippine</p>

Supreme presiding; the task of prosecuting Estrada fell on the shoulders of 11 House prosecutors elected by their colleagues and a “battery of private prosecutors.”

On January 16, the prosecution lost a key “test vote” in the Senate when 11 pro-Estrada senators voted not to admit into evidence a sealed envelope that supposedly contained incriminating evidence against Estrada.

On January 17, accusing the Senate of having pre-judged the case and the 11 pro-Estrada senators of rigging the proceedings to exonerate Estrada, the prosecution team tendered their collective resignation with the Speaker of the House of Representatives and filed a “Manifestation of Withdrawal of Appearance” with the impeachment tribunal; Chief Justice Hilario G. Davide, Jr., suspended the impeachment proceedings indefinitely “until the House of Representatives shall have resolved the issue of the resignation of the public prosecutors.”

On January 19, the Secretary of National Defense, AFP Chief of Staff, the Chief of the Philippine National Police, all erstwhile Estrada supporters, and other ranking military and police officials joined the anti-Estrada forces at the so called “EDSA Shrine” and openly called for Estrada’s resignation.

On January 20, at 12:00 noon, Chief Justice Hilario G. Davide, Jr., administered the oath of office to Gloria Macapagal-Arroyo as president of the Philippines; at 2:30 p.m., Estrada and his family left Malacanang Palace, the official presidential residence.

On April 3, the Supreme Court of the Philippines in *Estrada v. Macapagal Arroyo et al*, G.R. No. 146738, held *inter alia*, that Gloria Macapagal Arroyo is the *de facto* and *de jure* president of the Republic of the Philippines.

On April 16, Joseph Ejercito Estrada surrendered to the *Sandiganbayan* (a special Constitutional court that has jurisdiction over criminal cases brought up against public officials) and posted bail for six criminal charges filed against him by the Office of the Ombudsman.

2000 On April 25, Joseph Ejercito Estrada was arrested at his residence for alleged “plunder,” a non-bailable capital offense; the scene at the arrest site was tense and chaotic as tens of thousands of Estrada’s loyal supporters camped out in front of the latter’s residence, battled a large contingent of heavily armed police and soldiers and attempted to prevent Estrada’s arrest.

On May 1, hundreds of thousands of Estrada supporters who had been holding nonstop anti-regime demonstrations at the so-called EDSA Shrine, marched toward Malacanang Palace (the official presidential residence) demanding that Macapagal-Arroyo step down from the presidency; the pro-Estrada demonstrators clashed with police and military personnel who were called in to beef up security at the presidential palace, resulting in three fatalities and at least 113 people injured; Macapagal-Arroyo declared a “state of rebellion” in the entire Metro Manila area and ordered the arrest and detention of the “rebellion” leaders.

On May 11, general elections were held throughout the archipelago; up for grabs were all 218 seats in the House of Representatives, 13 Senate seats, 73 provincial governorships and thousands of other provincial, municipal and city offices; the two main election protagonists were the People Power Coalition (PPC) of Gloria Macapagal-Arroyo and the opposition *Pwersa ng Masa* (PM) Coalition identified with deposed president Joseph Ejercito Estrada; in the hotly contested Senate elections, the PPC won eight seats while PM won five seats (one of the senatorial seats was won by Estrada's spouse, in spite of the fact that she had never before run for any elective office).

On October 1, the long-awaited "plunder" trial of Joseph Ejercito Estrada and his son "Jinggoy" Estrada at the *Sandiganbayan* got off to a rocky start; both defendants appeared in court in their house clothes, under heavy police escort and without counsel; in spite of the Estradas' refusal to accept court-appointed counsel (the "appointments" were made in open court by the presiding judge), the trial proceeded.

On November 19, the Supreme Court, on a 10-4-1 vote, upheld the constitutionality of the "plunder law" (Republic Act 7080); the constitutionality of the statute was challenged by Joseph Ejercito Estrada and Jinggoy Estrada earlier in the year for, among other things, alleged over-breadth, vagueness, and ambiguity.

# Part I

## The Environment and People

### The Land

The Philippines is an archipelago located between the Philippine Sea and the South China Sea in Southeast Asia with a total area of 300,000 square kilometers (115,831 square miles). Of the country's 7,300 islands, the largest are Luzon, Mindanao and the Visayas (the Visayas is a chain of medium-to-large islands that straddle the country's mid-section) while several thousand "islands" are in reality reefs, visible only during low tide. Only about 19 percent of the Philippines' land area is arable; the rest is mostly rugged and mountainous terrain, now mostly denuded, inhabited by indigenous peoples and transplanted lowlanders who eke out a living by swidden agriculture. The inhabitants of the coastal lowlands (especially in Mindanao, Sulu and the Visayas) are mostly small-scale farmers, fishermen, fishpond tenders, etc., or live off the sea, gathering kelp, shells and an assortment of other marine or submarine materials. The Philippines has two distinct seasons—the dry and wet seasons—with the northeast monsoon occurring from November to April and the southwest monsoon that occurs from May to October.

### The People

The Philippines is a virtually homogenous society, with roughly 96 percent of the population being Malay (91.5 Christian Malay and 4 percent Muslim Malay). Today's Filipinos are the descendants of a seafaring group of people originating from mainland Southeast Asia, who settled in what is today called the Philippines, long before the advent of Western colonialism, in the early 16th century. The ethnic Chinese comprise about 1.5 percent of the population while the proverbial "other" category, which includes "non-Christian tribes" such as the Igorots, Ilongots, Gaddangs and Negritos (Aetas) of Luzon; and the Bagobos, Bilaans and Tasadays of Mindanao, account for roughly 3 percent of the population. Because Filipinos, unlike some of their east Asian brethren, have always favored interracial marriages, the Philippines has a significant mixed-race or *mestizo* population some of whose genealogy could be traced all the way back to the onset of Spanish rule in the early 16th century. Perhaps because of their lighter skin color and "Caucasian" looks, *mestizos* (male) are highly successful movie actors and actresses specifically, and in the performing arts, generally. Mixed-race females or *mestizas* are perennial beauty pageant winners. In addition to the Spaniards (1521–1898) and Americans (1898–1946), Filipinos also heavily intermarried with the Chinese over an extended period of time, accounting for a fairly significant Filipino-Chinese *mestizo* community that has been integrated into the overall population.

## Natural Resources

The Philippines is blessed with an abundance of natural and mineral resources, *e.g.*, rich farm lands, inland rivers and lakes, abundant fishery and marine resources, adequate rainfall and as a littoral state, one of the longest coastlines in the world. In addition, the Philippines has vast deposits of strategic minerals such as iron, cobalt, copper, gold, silver and nickel, to name only a few. In recent years, commercial quantities of petroleum and natural gas were discovered in locations west of the island-province of Palawan in the southwestern part of the country. In the 1950's, 1960's, and 1970's, the Philippines was also a major producer of unprocessed timber (mostly hardwood) and other wood products like plywood. Unfortunately, however, indiscriminate logging activities by politically well-connected corporate and individual concessionaires in the 1950's, 1960's, and 1970's, have virtually depleted these forest resources and turned once dense and impenetrable jungles into virtual wastelands. In certain areas of the country, for example, heavy silting and massive soil erosion caused by the destruction of natural watersheds is believed to have seriously jeopardized the lifespan of hydroelectric power plants such as those in Ambuklao, Mountain Province; Montalban, Rizal; and Maria Cristina Falls, Agusan, in Mindanao. In spite of a "total log ban" that has been in place since the late 1980's, illegal logging apparently continues to go on, especially in Luzon's Cagayan Valley and northern Mindanao.

As with other developing countries attempting to telescope their modernization timetable into a 20- to 30-year span (*cf.*, 100–200 years in the case of highly industrialized nations like the United States), the Philippines has tended to ignore or downplay potential environmental problems related to rapid industrialization. Major waterways like the Pasig River that traverses Metro Manila and its suburbs have been so badly polluted by toxic industrial wastes and raw sewage over the last several decades; so too have inland lakes like Laguna de Bay, perhaps one of the largest freshwater reservoirs in all of Southeast Asia. In the case of Laguna de Bay, the principal culprits are wealthy and influential commercial fishermen who have crisscrossed Laguna de Bay with giant fish traps, thereby impeding the movement of

large concentrations of water hyacinth and other aquatic plants. According to marine biologists who have studied the situation thoroughly, this has choked off the lake's oxygen supply, in turn resulting in massive fish kills and slow death to Laguna de Bay itself. Parenthetically, according to a non-governmental organization (NGO) opposed to further land reclamation in Manila Bay, upwards of 5,000,000 pounds of untreated sewage is released annually into Manila Bay, one of the best natural deepwater ports in the world.

## Lingo-Cultural Groups

The Philippines' various lingo-cultural groups and the respective geographic areas where these groups are concentrated are: (1) Bicolano (the southeastern tip of Luzon); (2) Bisaya or Cebuano (central and eastern Visayas and certain parts of Mindanao); (3) Hilagaynon or Ilongo (western Visayas and certain parts of Mindanao); (4) Ilocano (northern Luzon and Cagayan Valley, half of central Luzon and certain parts of Mindanao); (5) Pampangan (Pampanga); (6) Pangasinense (Pangasinan); (7) Tagalog (southern Luzon and the national capital region); and (8) Waray (eastern Visayas and Samar). The Muslim populations of North and South Cotabato, Sultan Kudarat, Lanao del Sur and Lanao del Norte, Sulu and Tawi-Tawi speak Maguindanao, Maranaw, and Tausug, respectively. In addition, according to language specialists who have studied the Philippines' various dialects, the country has over a hundred different "linguistic dialects" that do not lend themselves to phonetic transcription. By law, Tagalog is the principal base of Pilipino, one of two official languages in the Philippines (the other official language is English). Bicolano, Bisaya, Hilagaynon, Ilocano, Tagalog, etc., are so linguistically different from each other—except for some words of Spanish origin—that Filipinos versed only in one particular language, *e.g.*, Ilocano are unable to communicate with other Filipinos who do not speak or read Ilocano. This is the reason why English remains the *lingua franca* in the Philippines especially among educated Filipinos. Parenthetically, each lingo-cultural group has its distinguishing stereotypical characteristics—both positive and negative—and putative strengths and weaknesses. For example, Ilocanos are stereotyped as dark-skinned (*maitim*), hard working, industrious and frugal to a fault, while Tagalogs are stereotyped as fair-skinned (*maputi*), well dressed, well spoken, street-wise, and given to excessive spending. Perhaps because of the Philippines' colonial past (*i.e.*, the lingering effects of *divide et impera*), archipelagic geographical configuration and the existence of natural communication barriers such as mountain ranges, rugged terrain, oceans, etc., Filipinos have always had a problem forging a distinct identity as a unified nation and one people. Internal divisions spawned by regionalism continue to hamper nation-building, more than 55 years after the Philippines regained her independence from the United States in 1946. The situation is exacerbated by a palpable state of fractiousness; a propensity towards the politics of *inggitan* (jealousy) and *lamangan*, an indigenized version of one-upmanship. Indeed, according to various commentators and students of Philippine history and social dynamics, fractiousness and the tendency of Filipinos to denigrate and downplay the achievements of others while conversely, puffing up and exaggerating their own achievements, has been one of the most difficult obstacles standing in the way of true nationhood and nation building.

## Cultural and Political Identity

According to David Joel Steinberg, the Philippines is a product of “355 years in the convent and 50 years of Hollywood.” As a group, Filipinos exhibit a highly ambivalent, if slightly confused cultural identity, that is part Hispanic, part indigenous and part American; a curious blend of conservative and modern values and idiosyncrasies. The conservative influence of the Catholic Church on institutions such as the family and social issues like birth control, divorce, etc., is all too pervasive and apparent. And so it is for example, that the Philippines is the only country in the world that continues to outlaw absolute divorce even as other predominantly Catholic countries like Italy, Ireland and Argentina, etc., have long ago legalized it. Yet for the most part, Filipinos are also steeped in the images and values of American “pop culture” as evidenced by an insatiable appetite for Western-style clothes, American music, cinema, television and fast food. Indeed, so dominant and influential has the American cultural influence been on younger Filipinos that American rock and roll and Hollywood icons like Gwyneth Paltrow, Janet Jackson, Jennifer Lopez, the Backstreet Boys, and Britney Spears, to name only a few, enjoy wide followings in the Philippines as they do in the United States and other Western societies.

Politically, Filipinos take great pride in their commitment to democracy and its underlying principles and values such as egalitarianism, fair play, due process of law, and the basic freedoms (speech, press, religion, association, etc.) and immunities and privileges of citizenship enshrined in the Bill of Rights of the United States Constitution. Perhaps because the Philippines is a former colony of the United States, all of her three Constitutions—the 1935 Constitution that governed the Second Philippine Republic (1946–1972), the 1981 Constitution that governed Marcos’ so called “New Republic” (1981–1986) after the “lifting” of martial law in 1981, and the 1987 Constitution, the basic law of the Third Philippine Republic—have either been heavily influenced by or were methodically patterned after that of the United States, and except for a brief flirtation with authoritarian rule and a nondescript “parliamentary” system in the early 1970’s and early 1980’s, the Philippine political system has remained uncannily similar to the American system after which it was modeled. Like American democracy, the one over-arching value that underlies Philippine democracy is the enduring belief in the efficacy of the ballot box and free elections as the only right way to bring about change.

## Religion and the Indigenous Culture

Philippine culture is rooted in a strong and extended kinship system and a set of overlapping indigenous values, practices and beliefs, such as *utang na loob*, *hiya* and *pakkikisama*. Like most Asian societies, kinship of the extended variety, is a major element of Philippine culture. Under the Philippines’ extended kinship system, it is not unusual for two or three generations of a given family to live under one roof and “cousins,” several degrees removed, are considered “close” relatives. The three variants of the Philippines’ extended kinship system are (1) consanguinal or kinship based on blood; (2) affinal or kinship based on marriage; and, (3) *compadrazgo* or fictive kinship that results from religious or quasi-religious rites like baptism (*binyag*) or marriage (*kasal*). Fictive or *compadrazgo* kinship is established between and among the parents of a newly baptized child or a bride and groom, as the case may be, and the respective baptismal or wedding sponsors (*ninong* or *ninang*) become *compadres* and *comadres*. The newly baptized child and newly married couple becomes the *inaanak sa binyag* and *inaanak sa kasal*, respectively, of the baptismal and wedding sponsors.

A complex system of reciprocity in bilateral and multilateral relationships, *utang na loob* (debt of gratitude) is a value, which has a profound impact on all personal and business relationships. An *utang na loob* relationship is created when one party seeks, accepts and benefits from a favor, deed or deliberate act of another party. Filipinos expect the beneficiary of an *utang na loob* to acknowledge and repay the “debt” either as soon as it is incurred or at a later time. The beneficiary (*may utang na loob*) may ignore the debt at his own peril; risk social ostracism or being labeled as an ingrate (*walang utang na loob*). In certain situations, *hiya* (shame) trumps or neutralizes an *utang na loob* obligation if repayment of the debt has the potential of resulting in a *kahihiyaan* (scandal or outrage). Some common manifestations of *hiya* are: (1) the use of, and reliance on, intermediaries and go-betweens in bilateral and multilateral negotiations; (2) false modesty and self-effacing conduct; and (3) reluctance to express emotions in public. According to the late Frank Lynch, S.J., of the Ateneo De Manila University’s Institute of Philippine Culture, *pakikisama* or “smooth interpersonal relations” as Lynch put it, is the ability to get along with others. Filipinos put a high premium on *pakikisama* and a person who gets along with others (*marunong makisama*) is universally admired and well liked. Conversely, a person who is perceived as self-centered and egotistical (*mayabang*) and uppity (*suplad[a]*) is generally shunned and avoided. On occasion, laws and regulations are ignored, “bent” or even violated in the name of *pakikisama* and may be partly to blame for rampant graft and corruption. Among some of the common manifestations of *pakikisama* are: (1) a nearly obsessive search for consensus prior to the formulation of a policy decision; (2) avoidance of conflict or potential conflict situations; (3) respect for elders and authority-figures; and (4) avoidance of public displays of anger and displeasure.

According to most estimates, 94 percent of the Philippines’ estimated 83 million people are Christian, making the Philippines the only predominantly Christian country in all of Asia. Eighty-four percent of Filipinos are Roman Catholic, although it is believed that only about 50 percent are “serious practicing Catholics” who go to Mass regularly, observe holidays of obligation and participate in the church’s holy sacraments. Indeed, Philippine Catholicism has often been characterized by religious scholars like Fr. Rodolfo Bulatao, S. J., as of a “split-level” variety; an odd mixture of church-approved religious ritual and liturgy and neo-pagan rites like the crucifixion of penitents during Holy Week and the *ati-atihan* festival in Aklan during the Lenten season, which celebrates Jesus Christ’s passion and sacrifice. The latter practices are mostly driven by superstition and perhaps to a lesser extent, commercialism, and have their roots in the Philippines’ pre-Hispanic polytheistic belief system and religious rituals and practices.

The other 10 percent of Filipinos belong to various mainstream protestant religious denominations such as Episcopalian, Lutheran, Methodist, Church of Latter-day Saints, etc., although of late, the so called “charismatic evangelicals” (mainly from the United States) have begun to gain inroads into the country’s religious landscape. Two of these protestant denominations—the Filipino Independent Church or *Aglipayans* and the *Iglesia ni Kristo* or Church of Christ—are homegrown varieties and have come to signify, rightly or wrongly, the Filipino’s struggle for religious independence. Of these homegrown churches, the *Iglesia ni Kristo* (INK), a politically monolithic organization whose members vote as a solid bloc, has the higher profile of the two and wields a strong political clout. The Filipino Independent Church was founded at the beginning of the 20th century by Gregorio Aglipay, a defrocked priest, while the *Iglesia ni Kristo* was founded in the 1920’s by Felix Manalo.

Muslims account for about 4 percent of the population, and are primarily concentrated in Mindanao and the Sulu Archipelago, although with the erection of a mosque in the heart of downtown Manila in the 1970s, small Muslim communities have since sprouted up in the national capital region as well. Although Filipino Muslims are Sunni, not Shiite nor Wahabi, the Muslim population consists of three principal sub-groups, *e.g.*, the *Magindanaws* of Cotabato, South Cotabato, and Sultan Kudarat; the *Maranaws* of Agusan, Lanao del Norte and Lanao del Sur; and the *Tausugs* who are spread out in the provinces of Basilan, Sulu, and Tawi-Tawi (a much smaller but distinct sub-group, the sea-dwelling *Badjaos*, also live in the Sulu and Tawi-Tawi area). The Moro National Liberation Front (MNLF), which fought the Philippine Government for 24 years under the leadership of current ARRM (Autonomous Rural Region of Mindanao) governor Nurallaji Misuari was primarily a *Tausug* group as is the notorious kidnap for ransom and bandit group Abu Sayaff. In contrast, the leadership and rank and file of the Moro Islamic Liberation Front (MILF) whose armed struggle for an “Islamic homeland” is currently in hiatus are primarily of Magindanaw and Maranaw extraction. Be that as it may, the MILF is a splinter group of the MNLF and its leader, Hashim Salamat, was one Misuari’s former lieutenants. Hashim Salamat and the MILF split with Misuari over the latter’s decision to negotiate with, and eventually sign a peace treaty with the Philippine Government in 1996, under the auspices of the Government of Indonesia. In spite of losing Camp Abubakar—its political and military headquarters—to government forces in 2000, after a rather costly military campaign (in terms of the number of lives lost on both sides and destruction of private property) the MILF, appears determined to achieve its goal of creating an independent Islamic republic.

The proverbial “other” category, also denominated “non-Christian tribes” in the literature, encompasses all of the country’s “cultural minority” groups. These include the various Igorot sub-groups in Kalinga-Apayao and the Mountain Province (Apayao, Bontoc, Ifugao, Ibaloi and Kalinga, etc.); the Tinguians of Abra, in northern Luzon; and the Gaddangs, Ibanags and Ilongots of Nueva Vizcaya and Cagayan Valley; the Aetas (also called Negritos) of central Luzon; and the Bilaans, Bagobos, Manobos and Tasadays, etc., of Mindanao. Except for a short period of time in the afterglow of the alleged “discovery” of the Tasadays, a supposed pre-Stone Age tribe, during the martial law period, these cultural minority groups have been largely ignored by the central government in Manila, and as a result, live under deplorable conditions. If anything, the subsequent unmasking of the “Tasaday discovery” as a hoax perpetrated by no less than the head of the Presidential Assistant on National Minorities (PANAMIN), turned the spotlight away from the cultural minorities. One group in particular, the Aetas of Pampanga and Zambales in the central Luzon region who were forced out of their mountain homes and deprived of their only means of livelihood by the eruption of Mount Pinatubo in 1990–1991, have been especially hard-hit and so far, government-led efforts to resettle them in Dau and Mabalacat, all in Pampanga, have invariably failed. Hundreds of Negritos have since died or become ill as a result of their exposure to “lowland” diseases and infections they contracted while confined in crowded “tent cities” and hastily built relocation centers. Even more importantly, however, the Negritos who have always lived in the deep jungles of Mount Pinatubo and subsisting on *camote* (sweet potato), other root crops and a wide variety of game, have been permanently displaced from their natural habitat, because even today, 10 years after its original eruption, Mt. Pinatubo continues to discharge significant quantities of *lahar* (volcanic mud with the appearance and consistency of wet cement) rendering the mountain and surrounding foothills totally uninhabitable.

## Discussion Questions on “The Environment and People”

- What common cultural, idiosyncratic and physical characteristics, if any, do Filipinos share with the other Malay countries in Southeast Asia (e.g., Brunei, Indonesia, and Malaysia)?
- Has the fact of the Philippines being an archipelago had anything to do with rampant factionalism, regionalism and the Filipinos’ general inability to come together as a cohesive national entity?
- What role, if any, has the Roman Catholic Church played or continued to play vis-à-vis the Filipino’s cultural, ideological, and political ambivalence?
- Have indigenous Philippine values, beliefs and attitudes, such as *hiya*, *pakikisama*, *utang na loob*, *inggit*, *lamangan*, etc., militated against the full flowering of Western-style democracy in the Philippines, and if so, how and why?
- Is the Philippines’ *particularistic* political culture (cf., the United States’ *universalistic* political culture) an obstacle to political and economic growth and development?
- What are the short- and long-term effects of over-population on the country’s overall quality of life and what specific measures if any, could the government and the private sector undertake to alleviate the situation?

# Part II

## History and Its Legacies

### The Philippines Under Spain

The Philippines, like all of Southeast Asia with the exception of Thailand, is a former colony; first European and then American. The first to colonize the Philippines was Spain, whose rule over the islands lasted approximately 355 years. The Spaniards took possession of the Philippines in the middle of the 16th century (the city of Manila, Philippines was established in June 1572, by Miguel Lopez de Legazpi). Earlier, in 1521, Ferdinand Magellan, a Portuguese explorer sailing under the Spanish crown, “discovered” the Philippines while looking for a new route to the East Indies in pursuit of the lucrative spice trade. Magellan was later slain by Lapu-Lapu, a native chieftain in what is today the province of Cebu, during a relatively obscure skirmish that is chronicled by a number of Filipino historians and nationalists as the first notable example of Filipino resistance to alien domination. Spanish rule over the Philippines, as in the rest of the colonial empire was, from inception to its denouement, exploitative, and oppressive.

The Filipinos were treated by the Spaniards as serfs, or in Jose P. Rizal's iteration of a classic phrase, "hewers of wood and drawers of water," and contemptuously referred to as *indios*. Filipinos were also denied participation in colonial government, except at the lowest levels and even then only in token form, for example as *gobernadorcillos* (petty governors) at the village level, whose real function was to assist the Spanish authorities in disseminating edicts from the crown and in collecting taxes. Administratively speaking, the Philippines was a dependency of the Viceroyalty of New Spain, governed through the Council of the Indies, the supreme governing body for all of the Spanish overseas empire.

A decisive element throughout Spanish colonial rule was the dominant role played by the ecclesiastical authorities in political and civil affairs. Because of the theocratic nature of the Spanish monarchy at that time, ecclesiastical authorities exerted a strong influence on political and administrative matters. The abuses and profligacy of the clergy went unchecked, for the most part, because the Archbishop of Manila enjoyed veto power over the selection of the colony's Governor General, the Philippines's highest secular official. Because of this veto power, the religious authorities were able to ensure that whoever was appointed Governor General either kept his peace or tacitly tolerated a wide variety of clerical excesses. In the Philippines, as elsewhere in the empire, the "royal patronage of the clergy" made the church the most important agency of the crown.

In fairness to the Spaniards, there were brief interludes, which proved beneficial to the Philippines, especially in the economic sphere. For example, it was during the administration of Jose Basco y Vargas (1778–1787) during the enlightened rule of Charles III (1759–1788), when a general economic plan for the development of the natural resources of the Philippines was put into effect. In accordance with the program, Basco also improved the schools and promoted the teaching of the Spanish language, a policy that was opposed by the clergy. In the political arena, the granting of Philippine representation in the Spanish *Cortes* (1810–1813, 1820–1823, and 1834–1837) even if "it did not accomplish anything for the Filipinos ... because the delegates themselves were not Filipinos but Spaniards and these Spanish delegates represented not Filipino but Spanish interests in the Philippines," proved in the long run to be meaningful in that it marked the beginning of the struggle between liberalism and constitutionalism on the one hand and conservatism and absolutism on the other. One of the more tangible results of the struggle as far as the Philippines was concerned, was the appointment of a liberal Governor General, Carlos Maria de la Torre, after the Spanish Revolution of 1858. Governor General de la Torre's Administration, albeit short lived, was one of the best liked by the Filipinos and later proved instrumental in stimulating Philippine nationalism.

Rule by the clergy or the so called "friarocracy" and its attendant evils and inequities triggered about 100 revolts that took place throughout the country beginning with the Rajah Lakandula and Rajah Sulayman revolts in 1574 and several others in the 17th and 18th centuries, such as the Diego Silang revolt in the Ilocos provinces (1762–1763), and the Cavite Mutiny of January 20, 1872, which resulted in the martyrdom of three Filipino priests: Jose Burgos, Mariano Gomez, and Jacinto Zamora. Because of the absence of a central leadership or a unifying element in these revolts, however, and because of the Spaniards' superior weaponry and organization, the Spanish colonial authorities succeeded in quelling these revolts.

In spite of the Spanish colonial government's policy of refusing the Filipinos any appreciable measure of education, there developed through the years a native *principalia* or *ilustrado* class. The members of this class, particularly the landed gentry, were native Filipinos or Filipino-Spanish *mestizos* who had attained some level of economic success. The children of the *principalia* or *ilustrado* class, who were the only ones able to avail of the opportunity for post-secondary education in the Philippines, were also fortunate enough to travel to, and study in, various European universities and locations. There, these *ilustrados* were exposed to liberal ideas, lived in a more enlightened political and social setting, and in 1889, launched an organized protest movement designed to expose Spanish abuses in the Philippines. The movement, known as the Propaganda Movement, also took on the task of educating and agitating Filipinos about their common plight and in fostering pride in their own race. This became necessary in order to counter one of the principal effects of Spanish colonialism: the near complete destruction of the Filipino's spirit and sense of dignity. As an upshot of their systematic denigration by the Spaniards, Filipinos started believing that they were an inherently inferior race relative to the Spaniards and for this reason, generally tolerated abuses perpetrated on them by their colonial masters. As an organization, the Propaganda Movement was reformist, not separatist, and it disseminated its ideas and philosophical positions both in Europe and in the Philippines primarily through *La Solidaridad* its official publication, under the editorship of Graciano Lopez Jaena.

Other notable members of the Propaganda Movement were the artist Juan Luna, who depicted conditions existing in the Philippines through highly acclaimed works like the *Spolarium*, and the polemicist Marcelo H. del Pilar whose main contribution to the movement was a strongly worded anti-friar volume entitled *La Soberania Monacal*. But perhaps the best known and most influential of them all was the physician, scientist, writer, artist and humanist Jose P. Rizal, who wrote hundreds of essays, letters, scientific tracts, and two major novels, *Noli Me Tangere* (Social Cancer) and *El Filibusterismo* (The Reign of Greed), two stirring social commentaries that exposed and satirized the abuses of the clergy in the colony, as well as the foibles and weaknesses of Philippine society—Spanish and Filipino—at that time. A recurrent theme in Rizal's writings was the thesis that the Filipino was just as good and able as the Spaniard, and if afforded the right opportunities, could excel in whatever endeavor he chose. Speaking through his principal character, Simoun, in *El Filibusterismo*, Rizal argued against complete separation from Spain by revolutionary means, because in his view, Filipinos were not yet ready for independence. In spite of his reformist stance and rejection of armed revolution as a method of effecting change, however, the Spaniards executed Rizal on December 30, 1896, after a mock trial on trumped-up charges of inciting to rebellion and plotting against the Spanish crown.

Although the intellectual foundation of the Revolution of 1896 was laid by the *ilustrado* class, the armed phase of the struggle was led by a man of the masses, Andres Bonifacio, founder and first *Supremo* of the *Katipunan*, a secret society that advocated complete separation from Spain. The first open armed clash between the *Katipuneros* and the Spanish *guardia civil* occurred on August 23, 1896, and from that point onward, the revolution spread through other parts of the country. After Bonifacio's untimely death, as a result of a factional struggle for power within the *Katipunan*, the leadership of the revolutionary movement was assumed by General Emilio F. Aguinaldo, Bonifacio's chief rival. On November 18, 1897, the first part of a truce, known as the Pact of Biyak na Bato, was signed between the Spanish Government and Aguinaldo's revolutionary forces, and Aguinaldo was exiled to Hong Kong. While in

Hong Kong, Aguinaldo procured arms and ammunition to replace the antiquated and outmoded weapons of the Filipino Revolutionary Army. When it appeared certain that the truce was headed for a total collapse, Aguinaldo returned to the Philippines and hostilities between the Spaniards and FRA resumed shortly thereafter. The remaining Spanish forces retreated to the heavily fortified walled city of Intramuros, their last remaining stronghold in the colony, as they awaited the final and decisive attack by Aguinaldo's forces. Low on supplies and ammunition and cut off from Spain by vast oceans, the Spaniards found themselves in an almost hopeless situation. It was at this juncture that the Americans arrived on the scene and decided to intervene, ostensibly at first, in behalf of the Filipinos, but as it turned out eventually, on their own behalf, when the United States decided to annex the Philippines and turn it into a colony. Ironically, the Spaniards and Filipinos were not the principal combatants in the last decisive battle of the Philippine Revolution. The protagonists were a flotilla of modern American warships led by George Dewey and the mostly wooden ships of the once "invincible" Spanish *armada* under the command of Patricio Montojo. The so called Battle of Manila Bay a "naval battle" that various historians—American and Filipino—have described as a "sham," "turkey shoot in the bay, etc.," took place on May 1, 1898, and was staged to salvage Spanish honor and provide the Spaniards with a face-saving device to abandon the Philippines and surrender to the Americans, whom they regarded as their "equals" instead of to the lowly Filipinos whom the Spaniards despised and loathed. On June 12, 1898, after successful completion of mopping up operations against remaining Spanish forces, Aguinaldo proclaimed the short-lived First Philippine Republic (also called the Malolos Republic) and as most new governments usually do under the circumstances, proceeded to seek recognition of the fledgling government by other countries.

## The Philippines Under American Rule

The United States gained sovereignty over the Philippines from Spain by virtue of the Treaty of Paris, which brought an end to the abbreviated Spanish-American War. The acquisition of the Philippines came at a time when the United States was emerging as a world power; the period of 1891–1918, characterized by Frank L. Klingberg as a period of "extroversion" in the cyclical interpretation of American involvement in world affairs. William McKinley's decision to acquire the Philippines was greatly influenced by, among others, Theodore Roosevelt, Henry Cabot Lodge, and Alfred Thayer Mahan. Although the anti-annexation forces waged a determined effort to foil the McKinley administration from acquiring the Philippines, those who favored annexation won out in the end, with the ratification of the Treaty of Paris by the United States Senate on February 6, 1899. Interestingly enough, however, the pro-ratification forces in the United States Senate barely managed to muster the two-thirds majority required to secure ratification.

Interestingly enough, Spain no longer had effective political control of her former colony when she ceded the Philippines to the United States. As previously mentioned, Aguinaldo's rag-tag revolutionary army had for all intents and purposes, defeated the Spaniards by the time the First Philippine Republic was proclaimed on June 12, 1898. Shortly thereafter, a relatively brief but brutal war, the Philippine-American War or Philippine Insurrection (depending on whose version of events one chooses to adopt) broke out between the Filipinos and Americans. The war ended in 1902, almost a year to the day from the time the United States established a civilian government in the Philippines, decided to teach Filipinos the

English language and made available to all Filipinos a system of free universal education. The latter two policies clearly set the Americans apart from their Spanish predecessors—who denied Filipinos access to education and refused to teach them the Spanish language—and to a large extent, hastened Filipino acquiescence to American rule. Soon, efforts were made to involve the Filipinos in political and governmental affairs as well.

Although the Republican Party was not as receptive to the idea of early Philippine independence as the Democratic Party, which had incorporated early Philippine independence into their party platforms for 12 years, both political parties favored eventual Philippine independence. The difference lay in the duration of the period of political tutelage necessary to prepare the Filipinos for self-government. The first proffer of political self-rule for the Philippines was formalized through the Jones Law during the Woodrow Wilson Administration in 1916. Although the Jones Law fell short of Filipino expectations, it gave impetus to the Filipinization of higher echelons of the civil service and the development of Filipino legislative leadership. This Filipino legislative leadership would later be pitted against a trenchant Governor General in the person of Leonard Wood, who took over from Francis Burton Harrison after the Republicans were returned to power in 1921. In fact, the controversy between Governor General Wood and President J. Calvin Coolidge on the one hand, and Manuel L. Quezon, Sergio Osmena, Sr., and Manuel A. Roxas, on the other, served to intensify, at least on the Philippine side of the picture, the Filipino demand for total independence from the United States.

Independent of the agitations of Filipino leaders, however, worsening economic conditions in the United States, which culminated in the Great Depression, worked to hasten the decoupling of the Philippines from the United States. A curious coalition of interest groups, such as organized labor, farm lobbies, genuine anti-imperialists and jingoist groups opposed to Filipino immigration to the United States, combined to pressure the United States Congress into enacting legislation that ultimately took the Philippines off American hands. At this time too, it had become clear to American political, industrial, economic and religious leaders, who lobbied hard for the acquisition of the Philippines earlier, that the Philippines had not lived up to expectations as a potential source of wealth, or as an *entrepot* of trade and commerce in the Far East. One area where expectations met with some degree of success was toward the goal—championed by Alfred Thayer Mahan—of making the Philippines into a naval “outpost” and “magazine” from which the United States could project her military power in the Pacific rim. All in all, however, to borrow a felicitous phrase from George F. Kennan, the Philippines had turned out to be a “minor inconvenience.”

In 1932, a Philippine Independence Mission led by Sergio Osmena, Sr. and Manuel A. Roxas succeeded in lobbying for the passage of the Hare-Hawes-Cutting Act, which set up a transitional period of 10 years (the commonwealth period) before the grant of total independence. Indicative of the American state of mind vis-à-vis Philippine independence at that particular point in time, Congress decisively overrode President Herbert Hoover’s veto of the measure. The implementation of the Hare-Hawes-Cutting Act, however, was aborted by a power struggle in the Philippines between and among Sergio Osmena, Sr., Manuel A. Roxas and Manuel L. Quezon, with Quezon ultimately emerging as the victor. Quezon denounced the Hare-Hawes-Cutting Act as both weak and disadvantageous to the Philippines in the long-term. In retrospect, however, it appears that Quezon torpedoed the Hare-Hawes-Cutting Act not for its

putative lack of merit, but because it was secured by his political rival, Sergio Osmena, Sr. Under Quezon's leadership, the Commonwealth Assembly rejected the Act and authorized Quezon to return to Washington, D.C. to negotiate a new independence bill.

Working on the assumption that the Democrats would give the Philippines a better independence bill (Republican Herbert Hoover was soundly defeated by Democrat Franklin Delano Roosevelt in the 1932 presidential elections), Quezon personally headed a second independence mission to the United States, only to find an unsympathetic United States Congress and an indifferent Roosevelt Administration, not so much because of opposition to Philippine independence as such, but because of the deteriorating economic conditions in the United States and understandable legislative-executive preoccupation with domestic affairs. In 1934, Quezon returned to the Philippines with a "new" independence law, the Tydings-McDuffie Independence Act, legislation that was nearly identical to the much-maligned Hare-Hawes-Cutting Act. In February 1935, under the terms of the Tydings-McDuffie Independence Act, the Philippines held a constitutional convention, which drafted a basic law for the Philippine commonwealth (the transition government from 1935–1945) and the future republic scheduled for establishment 10 years later. Predictably perhaps, the Filipino "founding fathers" established a governmental system meticulously modeled after that of the United States.'

## The Japanese Interregnum

The timetable for Philippine independence spelled out in the Tydings-McDuffie Independence Act was set back by World War II and Japan's subsequent occupation of the Philippines. The reorganization of the commonwealth government was ordered by General Masaharu Homma, commander-in-chief of the Imperial Japanese Forces (IJF), in a proclamation signed on January 3, 1943, just 1 day after the IJF took control of Manila. In his proclamation, General Homma announced the end of the American colonization of the country and declared that the purpose of Japan's occupation of the Philippines was to help establish an "independent" Philippine republic; a "Philippines for Filipinos," as an integral part of Japan's Greater East Asia Co-Prosperity Sphere.

The Japanese had evidently hoped that their declaration of Philippine independence would help convince Filipinos who remained loyal to the United States that it was not Japan's intention to occupy the Philippines permanently; that it was simply emancipating the country and the Filipino people from Western colonialism. Preparations for the organization of the war-time republic formally began on June 18, 1943, with the creation of a Preparatory Commission for Philippine Independence headed by Jose P. Laurel, Sr. as president and Benigno S. Aquino, Sr. and Ramon Avancena as co-vice presidents. The commission completed a draft Constitution on September 4, 1943, that was ratified in a "popular convention" 2 days later. The new Constitution established a unicameral National Assembly, whose entire membership was elected on September 20, 1943. Five days later, the National Assembly elected Jose P. Laurel, Sr., as president of the new republic, and was formally inducted into office on October 14, 1943.

The Japanese-sponsored republic never got off the ground because the Filipino people did not acknowledge the IJF as their emancipators, and, of course, because of the Filipinos' continued loyalty to

the United States. Indeed, after the fall of Bataan and Corregidor, thousands of Filipino regulars (officially known as the “Philippine Scouts,” these soldiers were an integral part of the United States Armed Forces in the Far East or USAFFE) fled to the hills from where they waged relentless guerrilla warfare against the Japanese. These same guerrilla forces provided vital intelligence and logistical support to General Douglas MacArthur, paving the way for the latter’s return to liberate the Philippines from the Japanese. The atrocities perpetrated by Japanese soldiers on the civilian population especially toward the end of the war such as impaling babies on bayonets, subjecting suspected guerrilla sympathizers to the dreaded “water torture,” mass rape, and razing entire communities to the ground, etc., in retaliation for guerrilla raids on Japanese troop garrisons or well executed ambushes of Japanese military forces in the field also alienated a large segment of the population.

## The Second Philippine Republic: Roxas to Marcos

As a result of the decision in Washington, D.C. to proceed with the grant of Philippine independence, President Sergio Osmeña Sr. reconvened the Commonwealth National Assembly, in early 1946. Elected president of the Senate was Manuel A. Roxas, a savvy politician from the western Visayas, and like the late Manuel L. Quezon and Sergio Osmeña, Sr., a member of the ruling *Nacionalista* Party. Later on, however, Roxas led a group of his *Nacionalista* party mates and a few “independents,” and formed a splinter group, which became the Liberal Party (Roxas won the presidency as the standard-bearer of the Liberal Party). But first, Roxas had to be cleared by General Douglas MacArthur of pending collaboration charges in order to become eligible to run for president. There is consensus among Philippine historians and other students of the Japanese collaboration issue that MacArthur’s exoneration and virtual endorsement of Roxas’ was instrumental in ensuring Roxas’ victory in the first post-war presidential election held on April 23, 1946. Roxas ran with Elpidio Quirino as his running mate, against the *Nacionalista* Party team of Sergio Osmeña, Sr. and Eulogio Rodriguez. Roxas and Quirino waged a long and effective campaign throughout the archipelago focusing largely on the issues of rehabilitation, democracy, and anticipated American economic assistance. In contrast, the Osmeña-Rodriguez team waged a low profile and limited campaign with President Osmeña refusing to debate Roxas on the issues.

As predicted, Roxas won the election handily. A year later, Roxas delivered on his campaign promise to secure “parity rights” for American citizens and corporations in the ownership of land, exploitation of natural and mineral resources and in the operation of vital public utilities. Under Roxas’ leadership, the Philippine Congress approved a constitutional amendment, which provided “parity rights” for American citizens and corporations (the constitutional amendment was later ratified by the Filipino people in a nation-wide plebiscite). The Roxas Administration primarily devoted itself to the task of rehabilitation and reconstruction and was greatly aided in this regard by massive financial assistance from the United States under Public Law 370 (the Philippine Rehabilitation Act of 1946) as well as benefits that accrued to the Philippines from the Philippine Trade Act of 1946. It was generally believed that the financial assistance was a *quid pro quo* for the Philippines’ passage of the parity rights amendment referred to earlier. Roxas was also responsible for the negotiation and ratification (by the Philippine Senate) of other treaties with the United States, including the RP-US Mutual Defense Treaty and the Military Bases Agreement. In fact, Roxas was perhaps the United States’ strongest Filipino advocate and supporter during those formative years. It was, therefore, ironic that Roxas met his untimely death at Clark Air

Force Base, on April 15, 1948, after delivering a stirring speech affirming the Philippines' "undying loyalty" to the United States in the event of another war.

After Roxas' death, Vice President Elpidio Quirino was sworn in as president and served the remainder of Roxas' unexpired term. In addition to the daunting problems of reconstruction and rehabilitation, Quirino also faced a communist insurgency in the hands of the *Hukbo ng Bayan Laban sa Hapon* (People's Army Against the Japanese), which transformed itself into the military arm of the *Partidong Komunista ng Pilipinas* (PKP) after World War II. Quirino suspended the writ of *habeas corpus* after the failure of a short-lived truce with the Communists. Although the suspension was only partial and temporary, the act was nevertheless roundly criticized by civil libertarians and various bar associations, as unnecessary, excessive, and unconstitutional. As with Marcos' suspension of *habeas corpus* in 1972, however, the constitutionality of Quirino's proclamation was declared lawful and constitutional by the Philippine Supreme Court in the landmark *Barcelon* case. The Quirino Administration defeated the Communist insurgency with a combined "mailed-fist" policy and a "land for the landless" program. The chief architect of the Quirino Administration's success in what Alvin Scaff described as "breaking the backbone of Philippine communism," was Secretary of National Defense Ramon F. Magsaysay. After Quirino announced his plan to run for reelection, Magsaysay was enticed by the opposition *Nacionalista* Party to become their party's "guest candidate" for president; Magsaysay went on to defeat Quirino in one of the most-lopsided election victories in the country's brief history. Ramon F. Magsaysay brought a genuine love of the common *tao* (common man) and a charismatic brand of leadership to the presidency, which enabled him to rally diverse individuals and groups behind his administration's pet projects and programs. In his resolve to eradicate poverty and ameliorate living conditions especially in the rural areas of the country, Magsaysay launched a three-pronged "community development" program, which called for, among other things, extensive land reform; the building of a network of "feeder roads" and related infrastructure; and the extension of much-needed financial assistance to farmers. Magsaysay created the Office of Presidential Assistant on Community Development (PACD) to coordinate the government's community development initiatives and recruited and trained a veritable army of workers and volunteers. Like the U.S. Peace Corps established by President John F. Kennedy some 8 years later, Magsaysay's PACD attracted thousands of idealistic young college students and recent college graduates who signed up to work in the rural areas for virtually nothing and under harsh and primitive working conditions.

Ramon F. Magsaysay was staunchly pro-American and as a populist, virtually peerless. He opened the doors of Malacanang Palace (the presidential office and residence) and for the first time ever, made government offices and the corridors of power accessible to the common people. As a political reformer, Magsaysay addressed the perennial problem of graft and corruption with remarkable zeal and to implement reforms in the area, tapped a cadre of active-duty and recently retired military officers who had worked with him at the Department of National Defense and were instrumental in ensuring the success of his (Magsaysay's) counter-insurgency campaign. Magsaysay's Jacksonian brand of populism and his charismatic personality, made him a shoo-in for reelection had he lived long enough to seek another term. After Magsaysay's tragic death in a March 1957, plane crash, various political commentators noted that Magsaysay was at the cusp of launching a nationwide grassroots-level coalition that would have challenged the stranglehold of the *Nacionalista* and Liberal parties on political power. It was widely believed that as he approached the end of his first presidential term, Magsaysay had become totally

disillusioned with “old guard” politics and the graft and corruption that the system spawned and promoted.

The death of Magsaysay thrust another vice-president, Carlos P. Garcia, a little known politician from central Visayas, into the presidency. Partly because he succeeded an immensely popular president and partly because of his own shortcomings and the greed of his relatives and friends, Garcia’s presidency turned out to be a mediocre one. Like Quirino who ascended to the presidency by the same route—the death of an incumbent president—Garcia sought and won the presidency on his own in 1957. Garcia’s victory was unconvincing however, as he only managed to poll 43 percent of the total votes cast. Indeed, Garcia could well have lost to his Liberal Party challenger, Jose A. Yulo, had it not been for the candidacy of Manuel P. Manahan, a Magsaysay look-alike and close political associate (Manahan was Magsaysay’s Customs Commissioner) and Elpidio Quirino’s younger brother Antonio, whose candidacy split the Liberal vote (especially in northern Luzon, Quirino’s political bailiwick).

The bulk of the Garcia Administration’s efforts were directed at solving the Philippines’ severe economic problems. A modest industrialization program was launched and the entry of foreign goods—especially “non-essential items” imported from the United States and Europe—was severely restricted by, among other things, the imposition of heavy tariffs and duties. Moreover, the Garcia Administration adopted a “Filipino First” policy, a throwback to the fierce nationalism of the 1930’s during the fight for Philippine independence. The resurgence of nationalism in the 1950’s no doubt inspired Garcia to play a key role in the organization of the Association of Southeast Asia (ASA), one of two unsuccessful efforts at a pan-Malayan union in the 1950’s and 1960’s, and a precursor of today’s Association of Southeast Asian Nations (ASEAN). In 1961, Garcia was defeated in his bid for reelection by the incumbent vice-president, Diosdado P. Macapagal, father of Gloria Macapagal-Arroyo, the Philippines’ current president. A president and vice-president from opposing political parties can serve together at the same time, because split ticket voting in Philippine presidential elections is the norm rather than the exception, a practice sanctioned by the 1935 and 1987 Constitutions.

Like Magsaysay, Diosdado P. Macapagal of central Luzon, was a man descended from the masses and born of very poor parents. Macapagal and Magsaysay were from Pampanga and Zambales, respectively, two adjacent provinces in central Luzon, the traditional hotbed of agrarian unrest in the country. Before his election as vice-president, Macapagal served multiple terms in the House of Representatives and in the Philippine Senate. As vice-president, however, he did practically nothing (Garcia broke a long-standing political tradition by refusing to appoint Macapagal to a cabinet post), except to tour the country at taxpayer expense, building or reinforcing political networks and where necessary, mending political fences, as it were. Although Macapagal campaigned hard on a platform of restoring the people’s faith in government and eliminating graft and corruption, Macapagal’s Administration, like that of his immediate predecessor Garcia, became mired in scandal and corruption. One of Macapagal’s legacies was the enactment of the Land Reform Code of 1963, a comprehensive, albeit watered-down, loophole-filled agrarian reform program. During the signing of the new law at Manila’s Rizal Park—amidst great ceremony and fanfare—with representatives of farm groups and peasant organizations in attendance, Macapagal declared the *kasama* form of land tenure (an oppressive and exploitative share-tenancy system heavily skewed in favor of the landlord) abolished and replaced with a leasehold system. Arguably the

new law's centerpiece was a provision calling for the expropriation of large-landed estates and their purchase by the government for resale to the tenants who tilled them, either at cost or in easy installment plans. Because of various loopholes and escape clauses in the law, however, and the shortage of government funds to pay for the program, the Land Reform Code of 1963 was never fully implemented.

It was also during Macapagal's presidency that the Philippines almost became involved in a shooting war over the Malaysian State of Sabah, claimed by the Philippines as an integral part of its sovereign territory. The dispute over Sabah notwithstanding, Macapagal was the second post-war Philippine president to steer the Philippines closer to her Asian identity and assume a leadership role in the region. Macapagal's involvement in the founding of *MAPHILINDO* along with Indonesia's Ahmed Soekarno and Malaysia's Tunku Abdul Rahman, after the collapse of ASA, was an attempt to revive the concept of *Malaya Irredenta* that would have united the Malay peoples of the region. Unfortunately, however, *MAPHILINDO* was doomed by the subsequent armed confrontation between Malaysia and Indonesia over the establishment of the Federation of Malaysia in 1963, which joined peninsular Malaysia, Sarawak (the upper half of Indonesia's Kalimantan) and Sabah into one nation. In 1965, Macapagal lost his bid for a second term to Ferdinand E. Marcos, who had been president of the Philippine Senate and of Macapagal's own ruling Liberal Party. The Macapagal-Marcos split was triggered by Macapagal's refusal to give way to Marcos for the Liberal Party nomination. After it became apparent to Marcos that Macapagal would handily win the ruling party's nomination, and in effect killing his own presidential ambitions, Marcos bolted the Liberal Party and became the standard bearer of the opposition *Nacionalista* Party, which just happened to be casting around for a candidate who had the stature to defeat Macapagal in a head-to-head contest. Jumping from one political party to another is quite common in the Philippines' particularistic political culture; a convoluted system where party labels mean virtually nothing and expediency, not ideology, determines whether one remains with his original political party or go somewhere else.

Ferdinand E. Marcos remained in office for 21 years, from 1965 when he was elected to his first of two terms, through 1986, when he was ousted in a "people power" uprising and forced to flee to Hawaii where he lived in exile until his death in 1989. Marcos' victory over Macapagal came largely as a result of the former's strong stance vis-à-vis graft and corruption and promises to weed out corrupt government officials and rebuild the faltering economy. Before 1965, Marcos had served two terms in the House of Representatives, and later, two terms in the Philippine Senate. Marcos was on his second term in the Philippine Senate and serving as that body's president, when he bolted the ruling Liberal Party to become the opposition *Nacionalista* Party's presidential standard bearer. Marcos was larger than life—legal luminary, decorated war hero, and spellbinding orator—whose life and exploits were celebrated in cinema and books. Convicted of killing his father's main political rival, Marcos prepared for the bar exams while in prison. In spite of the unusual circumstances, however, Marcos obtained the highest average score in the bar exams with record-breaking performances in political and constitutional law. Upon admission to the bar, Marcos argued his own case before the Philippine Supreme Court and won a reversal of his earlier conviction. He served as a United States Army Forces in the Far East (USAFFE) commissioned officer in World War II and emerged from the war as its "most decorated hero." His whirlwind courtship of, and subsequent marriage to, Imelda Romualdez, a former beauty queen and niece of the Speaker of the House of Representatives, no doubt added to the burgeoning Marcos mystique in the eyes of Filipinos. In 1967, Marcos succeeded where two of his predecessors (Garcia and Macapagal) had

failed, *i.e.*, successfully co-founding the Association of Southeast Asian Nations (ASEAN) along with the leaders of Indonesia, Malaysia, Singapore, Thailand and the former “republic” of South Viet Nam. Today, ASEAN has doubled in size to include all 10 nations (from the original five or six, if the “republic” of South Viet Nam is included) in the region, and has become one of the most viable and effective regional inter-governmental organizations in the world.

Like all his predecessors, Marcos discovered early on that improving the state of the economy was not an easy task. By the end of Marcos’ first term, chronic problems, such as high unemployment, double-digit inflation and government corruption had deteriorated to a new low. It was at this juncture when public dissatisfaction with the Marcos Administration turned into massive street demonstrations and protest. By the time the 1969 presidential election rolled around, talk was rife about impending revolution. In so many ways, the 1969 presidential election, which Marcos easily won, resembled the infamous 1949 electoral contest between Elpidio Quirino and Jose P. Laurel, Sr., won by the former. Widespread fraud, vote buying, terrorism and other election irregularities marred the 1949 election. The candidate who lost to Marcos in the 1969 election, Sergio Osmena, Jr., filed a formal election protest with the House of Representatives and then went into self-exile in the United States before the declaration of martial law in 1972. In the ensuing 14-year period (1972–1986), Marcos and his *Kilusang Bagong Lipunan* (KBL) or “New Society Movement” ruled the Philippines with an iron hand; by executive fiat, especially during the first 9 years of martial rule (1972–1981).

In 1981, Marcos “lifted” martial law and launched a hybrid “presidential-parliamentary” system called the *New Republic* that appeared to be part British, part French, and part Mexican. In January 1981, Marcos declared as “duly ratified” and in full force, the 1981 Constitution that served as the basic law for the *New Republic* during its brief existence. Among other things, the Philippines’ twin insurgencies—the Communist insurgency waged nationwide by the Communist Party of the Philippines-New People’s Army (CPP-NPA) and the Muslim separatist movement in Mindanao and Sulu waged by the *Moro* National Liberation Front-*Moro Bangsa* Army (MNLFBMA)—grew dramatically during the last 9 years of Marcos’ authoritarian rule. So too did public opposition to the regime, especially in the aftermath of Benigno “Ninoy” Aquino, Jr.’s brutal assassination at the Manila International Airport on August 21, 1983, on the latter’s return to the Philippines after 3 years of self-imposed exile in the United States. The beginning of the end for Marcos’ 21-year grip on power came after a February 1986 “snap election” ironically called at Marcos’ behest, resulted in the apparent election victory of Corazon Cojuangco-Aquino, Ninoy Aquino’s widow. The Marcos’ regime’s subsequent attempt to tamper with the election results ignited a “people power” uprising commonly referred to as *EDSA Uno* (*EDSA* is acronym for Epifanio de los Santos Avenue, the north-south highway between Camp Aguinaldo, headquarters of the Armed Forces of the Philippines, and Camp Crame, headquarters of the now-defunct Philippine Constabulary) where hundreds of thousands of anti-Marcos demonstrators gathered to call for an end to the martial-law regime.

## The Third Philippine Republic: Aquino to Arroyo

Corazon Cojuangco-Aquino took over the presidency on February 26, 1986, on the crest of *EDSA Uno*, the first “people power” uprising. Aquino left office on June 30, 1992,

6 “Mexican model” of a 6-year, 1-term only presidency, and as a result, Aquino was precluded from seeking reelection), with little to show in the way of accomplishments especially vis-à-vis the ailing economy and in solving the country’s deteriorating law and order situation. Although supporters and critics alike suggest that Aquino could have done “a lot more” to address the country’s chronic problems, she is generally credited with three major accomplishments: (1) the restoration of American-style democracy to the Philippines; (2) the reinstatement of Congress and the Judiciary as co-equal branches of the Executive branch; and, (3) the drafting and ratification, in record time, of the 1987 Constitution, regarded by legal scholars and experts as a “progressive” Constitution. On the debit side of the ledger, the Aquino presidency was marred by, among other things, five abortive *coups* led by the same group of AFP officers and men who spearheaded the successful military mutiny against the Marcos regime.

According to most observers, the 1989 abortive *coup* may well have succeeded in toppling the Aquino Government, had it not been for the timely intervention of the United States. Although the United States did not actually get involved in the fighting, it is generally believed that the scrambling of US aircraft based at Clark Air Force Base to undertake what were euphemistically called “persuasion flights,” did scare off the inferior *Tora Tora* aircraft used by the rebels to strafe and bomb government positions, including Malacanang Palace. Aquino was succeeded by her handpicked successor, Fidel V. Ramos, a graduate of the U.S. Military Academy and co-leader of the *coup* that toppled Marcos (the other person was Juan Ponce Enrile, Minister of National Defense at that time). As Aquino’s AFP Chief of Staff and later Secretary of National Defense, Ramos was credited for “saving” the Aquino Government and the Aquino family from the five abortive anti-regime uprisings referred to earlier. In handpicking Ramos as her successor, Aquino turned her back to House of Representatives Speaker Ramon V. Mitra, the official standard-bearer of the ruling party, *Laban ng Demokratikong Pilipino* (LDP). Ramos won the presidency by the slimmest of margins; a mere 21 percent plurality of the total vote, thanks to an electoral system that does not require a run-off election in the event that no candidate polls a majority of the total vote.

Compared to his immediate predecessor, Ramos did meet with modest success in improving the country’s moribund economy. According to experts, this was primarily the result of a three-pronged economic strategy that revolved around: (1) the privatization of government-owned corporations and divestment of stocks in corporations (*e.g.*, in the communications, transportation, steel and petroleum industry) where the government had controlling interest; (2) the easing of currency restrictions on the repatriation of profits by multinational corporations to their respective home bases specifically, and the creation of a more favorable economic climate for individual and corporate foreign investments, generally; and, (3) the passage of enabling “build, operate and transfer” legislation that opened the door for foreign corporations to participate in the Philippine infrastructure program, with little or no financial risk to the Philippine Government. During Ramos’ tenure as president, aggregate and *per capita* GDP figures improved dramatically; so too did annual economic growth rates—in real terms—and the volume of foreign investments that flowed into the Philippines. In another front, Ramos successfully negotiated an end to the MNLFBMA insurgency with the assistance of the government of Indonesia and the Organization of Islamic Conference (OIC), although an MNLFB splinter group, the separatist Moro Islamic Liberation Front (MILF) continued to battle the government long after Ramos left office and remains committed to its principal goal of an independent Islamic republic.

Joseph Ejercito Estrada (also known as “Erap”), former vice-president, city mayor, senator, movie star, and matinee idol, succeeded to the presidency after winning the 1998 presidential election over Ramos’ “anointed” successor, Speaker Jose de Venecia of the House of Representatives. Estrada’s lopsided victory over de Venecia—by far the largest margin of victory in Philippine election history on a *per capita* basis—was made possible by a massive outpouring of support from the *masa* (the masses), the millions of poor and destitute Filipinos who comprise the overwhelming majority of the population. Estrada’s campaign slogan, *Si Erap Para Sa Mahirap* (Erap is for the Poor) and his political party, *Laban ng Masang Pilipino* (LAMP), a blend of Edgardo Angara’s *Laban ng Demokratikong Pilipino* (Angara was Estrada’s vice-presidential candidate) and Estrada’s original *Lapian ng Masang Pilipino* (LMP), resonated with the masses in a big way. Unfortunately for Estrada’s *masa* supporters, however, the latter was unceremoniously forced out of office on January 20, 2001, barely 32 months into his 6-year term, and replaced by Gloria Macapagal-Arroyo, in the aftermath of *EDSA Dos*, an uncanny reprise of the “people power” uprising that toppled Marcos 15 years earlier. Interestingly enough, *EDSA Dos* was led and orchestrated by the same cast of characters behind *EDSA Uno*, e.g., the Archbishop of Manila, the Catholic Bishops Conference of the Philippines, two former presidents and the civilian and military leadership of the Armed Forces of the Philippines, with two additional notable characteristics: (1) the active involvement of the print and broadcast media in creating the climate that eventually led to Estrada’s “voluntary” resignation; and, (2) the key role played by the Philippine Supreme Court in providing the legal authority and basis for Macapagal-Arroyo’s assumption of the presidency.

Less than 5 months after taking office, Macapagal-Arroyo presided over a national election that pitted her administration’s People Power Coalition (PPC), an amorphous combination of mainstream and fringe political parties (*Aksyon, Lakas, Reporma, Liberal, Promdi*, etc.) against the opposition’s *Puwersa ng Masa* (PM), an equally loose political grouping whose senatorial slate included three pro-Estrada reelectionists (two of whom, Ponce Enrile and Defensor-Santiago lost), the deposed president’s wife, Luisa “Loi” Ejercito, a medical doctor by profession, and Estrada’s controversial chief law enforcement officer, Panfilo Lacson. Both Macapagal-Arroyo and Estrada stumped for their respective candidates, although in the case of Estrada, this ended on April 25, 2001, when Estrada was arrested and taken into custody to await trial before the *Sandiganbayan*, a constitutional anti-graft court, for alleged “plunder,” a capital non-bailable offense. Although Macapagal-Arroyo and the People Power Coalition worked hard and expended a lot of resources to register a “13-0 sweep” of the senatorial contest, only eight PPC candidates won. Parenthetically, *Puwersa ng Masa* succeeded in electing four senators—five, if an independent candidate “adopted” by PM as one of its own is added to the list—including Estrada’s wife, who had never before run for elective public office. Estrada and his supporters were understandably buoyed by Loi Estrada’s clear-cut election victory and viewed it as a “vindication” for the Estrada Administration.

Because of the post-election defection to the ruling PPC of three former *Laban ng Masang Pilipino* (LAMP) senators—the first two are a former movie actor and his son-in-law, a retired professional basketball player while the third defector was one of Estrada’s fiercest defenders during the latter’s impeachment trial—the 2001 Philippine Senate is virtually split down the middle, with the PPC enjoying a four-person edge over the opposition. Because of the Philippines’ particularistic political culture and the relative ease in which political officeholders in Congress and elsewhere jump from one political party

to another, however, it would not at all be inconceivable if the current Senate balance of power changes in the near future, especially as potential presidential candidates who are members of the body gear up for the 2004 presidential election. Indeed, since taking office in June 2001, the Senate has devoted most of its time conducting open-ended hearings on a litany of criminal allegations against three or four senators (two with the majority and two with the opposition), all of whom are reportedly considering a run for the presidency in 2004. Meanwhile, the long-awaited trial of Estrada and his son has begun, under serio-comic circumstances—the former chief executive appeared at the *Sandiganbayan* under heavy police escort in his slippers and with none of his nine lawyers in attendance—even as the Philippine Supreme Court grappled with the legality of the “plunder” law, a statute of dubious constitutionality that Estrada helped enact, when he was one of only two oppositionists in the Philippine Senate between 1986 and 1992.

Ironies and contradictions like these make Philippine politics interesting to watch, yet deeply disturbing at the same time. Estrada’s fall from grace has all the tawdry elements of a typical Filipino action movie—a virtuous hero, a heartless villain, betrayal, revenge and then, Estrada and supporters could only hope, eventual vindication. Whether it is art imitating life or life imitating art, the “villain” who turned Estrada in was, “like in the movies,” one of his “close” friends and drinking “buddies;” an unabashed self-confessed “plunderer” who took his “cut” for every peso of bribe money that he allegedly funneled into Estrada’s ersatz foundations and phantom bank accounts. Yet while the fallen Estrada languishes in “jail” (actually an air-conditioned suite at the country’s premiere government medical facility) and stripped of the office he had dreamed of occupying all his life, his chief accuser is scot-free and enjoying his newly found celebrity status as one of the hottest commodities in the country’s after-dinner lecture circuit; a highly sought after guest at political fundraisers and shindigs. Equally disturbing and ironic was the recent arrest by U.S. Federal law enforcement agents of a former head of the Presidential Commission on Good Government (PCGG)—established in 1986 shortly after Aquino took office, and tasked with the recovery of Marcos’ alleged “hidden” wealth—for allegedly selling fake gold bullion certificates to Treasury and FBI agents engaged in a sting operation.

### **Discussion Questions on “History and Its Legacies”**

- What are Spain’s principal legacies to its former colony?
- Would the Filipinos have remained loyal to the Spaniards had the latter been “getter” colonizers, taught the Filipinos Spanish language and culture and provided them access to free universal education?
- How much of the American decision to provoke a war with Spain and the eventual acquisition of the Philippines was influenced by the evangelicals of the day whose unabashed commitment to “manifest destiny” and the “white man’s burden” was matched only by Alfred Thayer Mahan’s absolute belief in the maxim of “...whoever controls the oceans and vital sea lanes, controls the world...”
- Why did the American goal of making the Philippines an *entrepot* in the Far East not materialize nor pan out?

- How did the Japanese, after a spectacular start and a wonderful slogan, *i.e.*, “Aisa for the Asiatic.” Which resonated with a large number of the Filipino elite initially, lose support so quickly and conversely, why did the Filipinos return to the bosom of the Americans?
- What were the positive legacies, if any, of Roxas, Quirino, Magsaysay, Garcia, Macapagal, Marcos, Aquino, Ramos and Estrada?
- Is graft and corruption endemic in Philippine society; a “way of life” and a mindset that is beyond cure; does it make a difference at all who is at the helm?

## Part III

### The Philippines Today

#### The Governmental System

The Philippines is currently governed by the 1987 Constitution ratified by the people on February 2, 1987, in a nationwide plebiscite. Except for a few permutations, *e.g.*, term-limits for all elective officials, a single 6-year term for the president, the party-list method of choosing a specified number of House members, etc., the 1987 Constitution closely resembles the 1935 Constitution, which governed the republic from 1946 until the proclamation of martial law in 1972. Technically speaking, the Philippines is a unitary-presidential system, headed by a popularly elected chief executive who is also the chief of state. Like the American form of government after which it was patterned, the Philippine Government consists of three co-equal branches—the legislature, presidency and judiciary—each of which is supreme within its own sphere but with the ability to check and balance the other. Under the 1987 Constitution, the president and vice-president are elected on separate tickets by a plurality of the popular vote to 6-year terms, and are barred from seeking reelection. The bicameral legislature, on the other hand, consists of a 221-member (an additional 50 sectoral members may be appointed by the president) House of Representatives (*Kapulungan ng mga Kinatawan*) and a 24-member upper chamber called the Senate (*Senado*).

Because of term limits, members of the House of Representatives may only serve for a maximum of 9 years or three 3-year terms, and represent discrete congressional districts constituted on the basis of geographical balance and population. Members of the Senate, on the other hand, are elected nationally for no more than two consecutive 6-year terms, for a maximum of 12 years. The House of Representatives turns over every 3 years while the Philippine Senate, like its American counterpart, is a continuing body and senatorial terms are staggered in such a way that only one-half of the body is elected every 3 years. The judiciary is dual and hierarchical with the regional trial courts at the bottom of the national judicial pyramid, the Court of Appeal in the middle and the 15-member Supreme Court at its apex. Complementing the national constitutional courts are provincial and local courts of limited and

specialized jurisdiction located in various municipalities, towns, and cities throughout the country. National constitutional court judges are appointed by the president on the recommendation of the Judicial and Bar Council and serve until the mandatory retirement age of 70 years. In addition, a special anti-graft court called the *Sandiganbayan* was established by the 1987 Constitution and has jurisdiction over cases involving misfeasance or malfeasance in office by elective and appointive public officials. Prosecutorial responsibility for cases before the *Sandiganbayan* belongs to the Office of the Ombudsman, a constitutional entity independent of the legislative and executive branches of government.

A cabinet whose members are appointed by the president subject to the advice and consent of the Commission on Appointments (CA), a legislative bicameral and bipartisan body, compose the rest of the executive branch. Also needing CA confirmation before their appointments become final, are other “high government officials,” including foreign service officers with the rank of ambassador and above, various commissioners (such as the Customs Commissioner and commissioners in the Commission on Elections, the constitutional body that oversees and conducts the country’s triennial elections), bureau chiefs and flag-level officers in both the Armed Forces of the Philippines (AFP) and the Philippine National Police (PNP). Law enforcement is the responsibility of the Philippine National Police, the organization that replaced the now-defunct Philippine Constabulary and the National Bureau of Investigation, the chief investigative arm of the Department of Justice. The day-to-day operations of government at the local and provincial levels are in the hands of elected governors, provincial boards, mayors, city councils, etc., in the country’s 73 provinces, 61 chartered cities and some 4,000 or so municipalities. Finally, the lowest grassroots-level administrative unit in the Philippine governmental system is the *barangay* (formerly called “barrio”), headed by an elected *barangay* captain, accountable to both the inhabitants of the *barangay*, as well as to municipal, provincial, and national officials.

## Key Actors in Philippine Politics

There are basic categories of actors in Philippine politics, *e.g.*: (1) those who favor and support the government; (2) those who are opposed to or strongly critical of it; and, (3) those who maintain a neutral position. Among the actors under the first category are the: (1) traditional political-economic elite; (2) Roman Catholic Church (RCC); and, (3) the Armed Forces of the Philippines; while the second category includes, although is not necessarily limited to, the: (1) Communist Party of the Philippines-New People’s Army; (2) Moro Islamic Liberation Front; (3) moderate political opposition; and, (4) so-called radical left-wing organizations. As in the United States, the political or ideological orientation of each key actor is not etched in steel and may shift from time to time, depending on the circumstances of the times. For example, while the Catholic Church was a staunch supporter of the Aquino regime from beginning to end (1986–1992), it was lukewarm to the Ramos Administration (1992–1998), perhaps because of the fact that Ramos—a Methodist—was not Catholic and the latter’s support of artificial contraception as a method of family planning and population control, policies vehemently opposed by the RCC. When Juan Flavio Velasco, former Secretary of Health and point-person in the Ramos Administration’s family planning program, ran for the Senate in 1995, the Catholic Church expended a lot of time, money and resources, to ensure Flavio’s defeat. Fortunately, for family planning, however, Flavio not only won in 1995, he was overwhelmingly reelected to a second 6-year term earlier this year. In like manner, certain organizations and individuals with ties to the country’s left-wing, who supported Estrada’s presidential candidacy in

1998, perhaps because of Estrada's "nationalist credentials" and 1991 "no" vote on the proposed extension of the U.S.-RP Basing Agreement, turned against Estrada in January 2001 and joined the *EDSA Dos* "people uprising," which resulted in Estrada's forced resignation from office. In the 1998 presidential election, Sin issued pastoral letters to the "flock" urging Filipino Roman Catholics to repudiate Estrada as "morally unfit" for the presidency. After Estrada's inauguration, however, Sin moderated his criticism of the Estrada Administration, became a frequent palace visitor and shortly thereafter, was awarded a commemorative medal by none other than Estrada himself.

## The Traditional Political-Economic Elite

The traditional political-economic elite includes remnants of the old-landed gentry, such as the Cojuangcos of Tarlac and the Yulos of Laguna whose flagship properties, the *Hacienda Luisita* and Canlubang Sugar Estate, respectively, have so far managed to avoid being subjected to land reform laws such as the Comprehensive Agrarian Reform Program (CARP) enacted during the Aquino Administration. Also part of the traditional political-economic elite are the entrepreneurial-business class exemplified by influential *taipan* families like the Tans, Gokongweis, Gatchialians, Roxas-Chuas, Sys, Tans, Yaps, etc., and Spanish *insulare* families like the Aboitizes, Aranetas, Elizaldes, Sorianos and Zobel de Ayalas. These wealthy families, either singly or in concert with others, bankrolled individual candidates for office or entire slates of candidates as an "investment in the future of the country." Most were content to remain in the background, although some family members did hold political office on various occasions, *e.g.*, Fernando Lopez (vice-president to both Quirino and Marcos); Gaudencio Antonino, Aurelio Montinola, Gil Puyat, etc. (all former senators); and Jose Cojuangco, Jr., Albertito Lopez, Manuel Villar, etc. (all former members of the House of Representatives). As a group, the traditional political-economic elite influenced the formulation and implementation of public policy and protected their interests through surrogates in the legislative and executive branches of government, an arrangement that worked well for decades, especially in the context of the country's vaunted *utang na loob* value system. A more recent addition to the traditional political-economic elite is the Makati Business Club (MBC), which played a key role in the overthrow of the Marcos regime in 1986, and the ouster of Estrada in 2001. The leadership and rank and file of the MBC are dominated by relatively young MBAs from high-profile American business schools like Chicago, Harvard, Stanford, or Wharton.

## The Armed Forces of the Philippines

Because of its monopoly of the organized forces of violence, well-delineated chain of command and an increasingly politicized officer corps, the Armed Forces of the Philippines (AFP) is one of the most powerful political actors in the country. Should it choose to do so, the AFP could either grab power for itself or remain in the background and play the role of a power-broker either by withdrawing support of an incumbent regime (as it did in 1986 in the case of Marcos and in 2001, with respect to Estrada) or conversely, endorsing an individual or group poised to take over the reins of government. The fact that the AFP, both at *EDSA Uno* in 1986 and at *EDSA Dos*, in 2001, seemed content to play second fiddle to Corazon Aquino and Gloria Macapagal-Arroyo, respectively, is to a large extent, attributable to the socialization of Filipinos and the AFP officer corps and rank and file into the principle of civilian

supremacy over the military. It is noteworthy, for example, that during *EDSA Dos*, the AFP leadership reportedly rejected a proposal to constitute itself into a military *junta* and serve as a caretaker government while the modalities of a peaceful transference of power from Estrada to Arroyo were sorted out. Had the top AFP leadership echelon succumbed to the temptation of grabbing power for itself, the country may very well have been plunged into chaos or even worse, a costly and destructive civil war. Yet, there is no question about the fact that Estrada's hand was forced into peacefully giving up the presidency, by the timely defection of the Secretary of National Defense, the AFP Chief of Staff and various service chiefs. Until that particular moment, the political situation was so fluid and volatile that anything could have happened.

## The Roman Catholic Church

Some 75 million Filipinos, out of an estimated population of 83 million, identify themselves as Roman Catholic and proudly point to the fact that the Philippines' is the only predominantly Christian country in Asia. James B. Reuter, S.J., of the Ateneo de Manila University, a naturalized Filipino and a long-time Philippine resident, perhaps put it best when he declared, rather breathlessly, "... because God has touched this nation," when asked to explain the success of the bloodless *coup d'etat* that toppled the Marcos martial law regime in 1986. As pointed out earlier, however, only about 50 percent of this total number may be considered devout, practicing Roman Catholics who regularly attend Sunday Mass and observe holydays of obligation; the rest are Roman Catholic in name only, roughly analogous to the *Muslim istatistik* category in neighboring Indonesia. Nevertheless, there is no question that the RCC is one of the most dominant and powerful social and political actors in the country. It is generally assumed, for example, that the "people power" uprisings, *EDSA Uno* (1986) and *EDSA Dos* (2001), materialized, because the RCC, led by Jaime Cardinal Sin and the Catholic Bishops Conference of the Philippines (CBCP), successfully mobilized and organized the Catholic faithful to march to the "*EDSA Shrine*" and join ongoing or anticipated anti-regime demonstrations. With thousands of clerical workers, parish churches and other religious-oriented institutions (schools, orphanages, hospitals, etc.) and countless lay leaders spread throughout the country, the RCC has a readymade infrastructure for mass action either in support of, or in opposition to, any government.

There are three identifiable blocs within the RCC, namely: the conservative, moderate and progressive blocs. Nominally headed by Ricardo Cardinal Vidal, archbishop of Cebu, and one of two Filipino Cardinals, the conservative bloc believes that members of the Catholic clergy should confine their activities to purely spiritual matters—ministering to the needs of their flock—and if at all possible, to stay away from secular political issues and questions. On the other hand, the moderate bloc of the RCC, with whom an overwhelming majority of the current CBCP membership is identified (some estimates put the number at 80 percent) is led by Jaime Cardinal Sin, archbishop of Manila and the other Filipino in the RCC's College of Cardinals. Unlike the highly reclusive Vidal, Sin is a high-profile religious leader who has not shied away from involvement in controversial issues and events. Indeed, as mentioned earlier, Sin had no qualms whatsoever in openly endorsing—through homilies from the pulpit and pastoral letters to the faithful—specific candidates for the presidency (*e.g.*, Corazon Aquino, Ramon Mitra, Jr., and Jose de Venecia in the 1986, 1992, and 1998 elections, respectively) or in condemning others as "morally unfit for the presidency," *e.g.*, Ferdinand Marcos in 1986, Fidel Ramos in 1992, and Joseph Estrada in 1998.

By his own admission, Cardinal Sin was also a central figure in both *EDSA Uno* and *EDSA Dos* and in countless public interviews since, seems to relish his self-appointed role as kingmaker and regime-killer, rolled into one. Citing past papal encyclicals such as Leo XIII's *Rerum Novarum*, John XXIII's *Mater et Magistra* and Paul VI's *Poppulorum Progressio*, among others, the progressive bloc contends that the Catholic clergy has a moral obligation to minister to the temporal needs of its flock or when called upon, to speak out against injustice and egregious abuses of power by government authorities and the exploitation of the poor by the country's privileged classes. During the martial law period, the progressive bloc of the RCC functioning through the Association of Major Religious Superiors of the Philippines (AMRSP) refused to temporize or enter into any kind of accommodations with the Marcos regime. Activist priests, many of whom were advocates of *liberation theology*, assisted displaced peasants organize against the government or helped set up Basic Christian Communities (BCCs), called *kristianong katilingban* in Hiligaynon-speaking areas of the country, as vehicles for social protest at the grassroots-level.

The moderate bloc of the RCC, under the leadership of Sin, pursued a policy of *critical collaboration* vis-à-vis the Marcos regime during “martial law proper” (1972–1981). In accordance with said policy, the moderate bloc of the RCC supported “correct” government programs, such as land reform, but condemned “morally reprehensible acts,” such as the torture of suspected political dissidents and the denial of basic human rights. Apparently, the *quid pro quo* for the RCC's critical collaboration policy were: (1) the shelving of legislative proposals that would have stripped religious organizations of their tax-exempt status; (2) the scuttling of bills that sought to institute absolute divorce (cf., limited or “bed and board” divorce) in the Philippines; and, (3) the discontinuation or deceleration of government-sponsored, birth-control and family planning programs. The RCC hierarchy praised the “lifting” of martial law on January 17, 1981, with no less than Sin himself urging the country's Roman Catholics to give Marcos the “benefit of the doubt” on the latter's assurance to return the country to political normalcy. Although the accommodation between the RCC and the Marcos regime was subsequently marred by the controversy over who should serve as official host—the government or the RCC—to Pope John Paul II's 1981 state visit to the Philippines, church-state relations up until January 1983, were relatively harmonious. In late January 1983, the CBCP withdrew from the Church-Military Liaison Committee, created in 1973 for the purpose of investigating alleged military abuses. A month later, on February 15, 1983, the CBCP released a pastoral letter, read in thousands of parishes throughout the country, denouncing the Marcos regime for repression, graft and economic mismanagement.

The CBCP decision followed a spate of military raids on church facilities, especially in Samar and Negros Occidental (where the BCCs or *kristianong katilingban* were most active), and the large-scale arrest of clerical workers and lay leaders suspected of involvement in “subversive” activities. In an unrelated event, Sin became embroiled in a public debate with government spokesmen and Imelda Marcos over questions of morality and art. In retrospect, two separate events served as the catalyst that moved the RCC away from its policy of critical collaboration to one of open opposition to the Marcos regime, e.g.,: (1) the brutal assassination of Benigno “Ninoy” Aquino, Jr., on August 21, 1983, as the latter returned home from self-exile in the United States, and the prolonged public outrage and anger that it provoked; and, (2) the Marcos regime's attempts to tamper with the results of the February 1986 snap election, that Corazon Aquino, Ninoy's widow, apparently won. The rest, as the saying goes, is history. Three years

later, in late February 1986, the RCC and Sin mobilized the Roman Catholic faithful to proceed to Epifanio de los Santos Avenue (EDSA) between Camp Aguinaldo (the general headquarters of the AFP) and Camp Crame (the general headquarters of the now-defunct Philippine Constabulary) to “defend” a small group of soldiers, affiliated with the Reform Armed Forces Movement (RAM), who had earlier joined Juan Ponce Enrile and Fidel V. Ramos, in a mutiny against Marcos. Heeding Sin’s entreaties and exhortations broadcast over the facilities of Radio *Veritas*, hundreds of thousands of Roman Catholic faithful—of all ages, occupations, callings and social backgrounds—did proceed to *EDSA* and at the end of the day, accomplished what many thought was impossible: overthrow a repressive regime and send it into exile without a single shot being fired in anger.

## The Technocratic Elite

One of the distinguishing features of the Philippines in relation to other developing nations in Asia and elsewhere is the presence of a large number of well-educated and highly skilled technocrats in positions of responsibility and power. This is an obvious upshot of the fact that the Philippines, with the possible exception of Singapore, has one of the largest pools of college-educated men and women in the region. It is interesting to note, for example, that even in the House of Representatives and Senate, there are a growing number of articulate and well-educated members (one House group identified with the opposition is referred to by the media as the “Bright Boys,” because its members are Ivy League graduates). This is in sharp contrast to the days when cabinet positions and directorships of government bureaus were held for the most part by old-school politicians, political lame ducks and the protégés of old-school politicians. The few technocrats who had an opportunity to work for the government generally declined to do so, because of the conventional wisdom that the old-school politicians and political kingmakers made it very difficult for the technocrats to do their jobs. During the martial law period, Marcos enjoyed great success in inducing technocrats to opt for government service instead of the private sector, so did Ramos and to a lesser extent, Estrada and Macapagal-Arroyo. It remains to be seen whether greater involvement by technocrats in policy formulation and implementation (especially with respect to the economy) will yield better results overall.

A perennial criticism of technocrats as a group—by nationalists and the public as a whole—is that they are too “elitist” in outlook, contemptuous of the “common man” and “out of touch with the real world.” In fact, this sentiment was expressed by Estrada and his followers after the latter’s ouster from the presidency; from its inception to its denouement, *EDSA Dos* was an “elitist plot” bankrolled by the entrepreneurial-business elite, e.g., the Makati Business Club, and promoted by the “elitist media” to oust a populist leader and deny his legions of impoverished and non-elite supporters their place in the sun. To prove their contention, Estrada’s supporters noted that pro-Estrada rallies attended mainly by poor Filipinos were not covered by the major print and broadcast media or if covered at all, invariably denigrated as “staged” and “paid” demonstrations. Conversely, “people-power” or anti-Estrada demonstrations, which featured political, business and entertainment celebrities and the elite, were thoroughly covered and reported. The technocratic elite is also faulted by various nationalist groups as being “too westernized” and pro-American; witting or unwitting agents of U.S. multinational corporations and the International Monetary Fund-World Bank (IMF-WB). Indeed, according to the nationalists, the various models and paradigms that have guided Philippine economic and developmental policy for nearly

two decades, have been American in origin and for the most part, heavily influenced by the IMF-WB. The nationalists and their supporters reject the technocratic notion that the key to economic growth and prosperity is industrialization—financed by foreign capital and long-term loans from the IMF-WB and other western financial lending institutions—suggesting that while such an economic strategy may, arguably, yield short-term benefits such as jobs and increased purchasing power, its long-term implications are detrimental to the country as a whole.

## **Communist Party of the Philippines—New People’s Army**

The Communist Party of the Philippines (cf., the *Partidong Komunista ng Pilipinas* or *PKP* of the 1950’s) was formally founded in 1969–1970 in Tarlac, in the central Luzon region. At the height of its power in the late 1970’s and early 1980’s, the New People’s Army (NPA), the military arm of the Communist Party of the Philippines (CPP), was believed to have had an estimated armed strength of from 25,000–26,000 armed partisans and a mass-base in excess of 2,000,000 throughout the Philippines’ 73 odd provinces. Unlike the *PKP-Huks* 2 decades earlier, the CPP-NPA conducted military operations nationwide, and its cadres were more highly ideological and better schooled on the issues and forces underlying the revolution. After the ouster of the Marcos regime in 1986, the collapse of the former Soviet Union—although not a supporter of the CPP, a Beijing-oriented communist party, the USSR-supported wars of national liberation worldwide and was indirectly helpful in fundraising especially in Europe—and the unraveling of the world Communist movement in 1990–1991, the CPP like various Communist parties in other parts of the world, experienced a steady decline in its ability to recruit fresh NPA cadres to wage war against the Philippine Government. The latter state of affairs was further exacerbated by a general amnesty program offered to “all rebels of the left and right” by the Ramos Administration in the mid-1990’s, of which thousands of NPA guerrillas and right-wing rebels (mostly former AFP officers and men who participated in the five abortive *coups* against the Aquino regime) took advantage. The net effect of the Ramos Administration’s amnesty program on ongoing insurgent movements like the CPP-NPA and the MILF was to hurt their recruitment efforts and further decimate their ranks.

Today, the strength of the CPP-NPA is believed to have been reduced to a mere 4,000–6,000 armed cadres. Even worse, the CPP-NPA has split up into two main factions, reportedly over the issue of strategy—one faction wants to shift the emphasis of the “struggle” to urban guerrilla warfare while the other faction continues to adhere to the Maoist concept of protracted guerrilla warfare waged from the countryside, designed to eventually encircle the cities—further diminishing the effectivity and solidarity of the Philippine Communist movement. The putative founder of the CPP-NPA and chief advocate of the strategy of protracted guerrilla warfare has been living in exile at Utrecht in the Netherlands—along with leaders of the National Democratic Front (NDF), the left-wing umbrella organization that has been involved in on again, off again, negotiations with the Philippine Government since the late 1980’s—after the failure of an attempt at a negotiated settlement of the Communist insurgency initiated by Corazon Aquino in November 1986. At the present time, previously scheduled peace talks between the Philippine Government and the NDF in Oslo, Norway, have been suspended by the Macapagal-Arroyo regime after a series of unexpected NPA attacks and ambushes on AFP troops and the broad-daylight assassination of the former governor of Cagayan and member of the House of Representatives this last summer. A CPP-

NPA comeback could not be entirely ruled out, however, especially if economic and social conditions and rampant lawlessness in the Philippines continues to worsen in the months ahead.

## The Moderate Political Opposition

The moderate political opposition is a loose and shifting coalition of various groups, some temporary and others more or less permanent, bound together by common opposition to Gloria Macapagal-Arroyo and her People Power Coalition (PPC). The main opposition political party around which the anti-Arroyo *Pwersa ng Masa* coalition revolves is the *Laban ng Demokratikong Pilipino* (LDP), headed by Edgardo Angara, former president of the University of the Philippines, Estrada's vice-presidential running-mate in 1998 and executive secretary during the waning months of the Estrada presidency. In addition to the LDP, the other political parties that were, in one way or the other, affiliated with the *Pwersa ng Masa* coalition are: (1) Joseph Estrada's *Partido ng Masang Pilipino* (PMP); (2) Eduardo Cojuangco's Nationalist People's Coalition (NPC); and, (3) and the Marcoses' *Kilusang Bagong Lipunan* (KBL). *Laban ng Demokratikong Pilipino* (Fight for Philippine Democracy) was organized in early 1978 to serve as a platform for various individuals who wanted to run for seats in the unicameral *Batasang Pambansa* (National Assembly) against President Marcos' handpicked slate of candidates. The LDP ticket was headed by Benigno Aquino, Jr. (Corazon Aquino's martyred spouse), who waged a valiant but futile campaign from his jail cell. All of *Laban's* 24 candidates in the Metro Manila area, some of whom were top vote-getters in previous elections, lost to Marcos' KBL.

As a political party, the Nationalist People's Coalition (NPC) was organized in 1992 to launch Eduardo Cojuangco's bid for the presidency. A former Tarlac governor, member of the House of Representatives and wealthy entrepreneur, Cojuangco was a protégé and business "crony" of Marcos. In spite of his close identification with the Marcos regime and allegations of "unexplained wealth," however, Cojuangco placed a close third to Ramos, the eventual winner, and runner-up Miriam Defensor-Santiago. To put things in proper perspective, the combined votes of Cojuangco and Imelda Marcos—the other presidential candidate closely linked to the fallen dictator for obvious reasons—exceeded the number of votes garnered by eventual winner Ramos. Joseph Ejercito Estrada, Cojuangco's vice-presidential candidate in the 1992 presidential election, was elected overwhelmingly and obtained more votes than all the other vice-presidential candidates combined. Five years later, Estrada left the NPC to found his own party, the *Partido ng Masang Pilipino*, later renamed *Laban ng Masang Pilipino* (LAMP) that became the *de facto* ruling party on June 30, 1998, after Estrada was sworn into office as the Philippines' ninth post-war chief executive. As is customary in Philippine political circles, a large number of *Lakas* (the ruling party at that time) congressional, provincial, and municipal officials defected *en masse* to LAMP and remained affiliated with the latter political party until the House of Representatives voted articles of impeachment against Estrada on November 13, 2000, when the same politicians rejoined *Lakas* and signed on to become part of Macapagal-Arroyo's People Power Coalition. The third political party that supported the *Pwersa ng Masa* coalition in 2001 was the *Kilusang Bagong Lipunan* (KBL) or New Society Movement, founded in the mid-1970s by Ferdinand Marcos and nurtured after the dictator's death in 1989 by Marcos' widow Imelda (elected to a seat in the House of Representatives in 1995), two of the Marcos children, Ferdinand, Jr. and Maria Imelda (better known as "Bong Bong" and "Imee," incumbent governor of Ilocos Norte and member of the House of Representatives, respectively), and a fairly significant number

of diehard followers concentrated primarily in northern Luzon and eastern Visayas.

## The Economy

The Philippine economy—a mixture of agriculture, light industry, and supporting services—is in a period of decline. Partly as a ripple effect of the 1997 Asian financial crisis and partly because of nagging internal political and social problems, the annual growth rate of the Philippine economy plummeted to a virtual zero in 1998 (from a healthy 5.0 percent the year before) as Ramos, credited by many for dramatic improvements in the economy during a 6-year period, prepared to leave office. Like other nations in the region, with the exception of Singapore, the Philippines has been beset by chronic economic problems, such as skyrocketing unemployment, high inflation, low *per capita* income, budgetary deficits, and since 1972, heavy foreign borrowings. These economic woes have been exacerbated over the years by government corruption in high places and in somewhat of a paradox, the so called “revolution of rising expectations” especially on the part of young college graduates cranked out annually by the country’s diploma mills in the tens of thousands, who are unable to find jobs. The latter is the principal reason why Filipino degree-holders, many of them with little or no marketable skills, leave the Philippines for menial jobs overseas—in North America, Western Europe, Southeast and East Asia, and the Middle East. Demeaning as the latter state of affairs might be to the Filipino elite and emerging middle class, the phenomenon of over a million overseas Filipino workers has been quite beneficial to the economy and the nation as a whole. Not only have Filipino overseas workers remitted badly needed foreign exchange to their families and relatives in the Philippines over the years; the government-supported program has also functioned as a safety valve and has served to defuse potential social and political unrest at home.

With an estimated *per capita* income of US\$3,800 in 2000, (cf., Singapore’s US\$26,500 on the high end, and Cambodia’s US\$1,300, on the low end), the Philippines is in the lower third of the *per capita* income spectrum. Although some of the Philippines’ economic problems were arguably triggered by exogenous factors (*e.g.*, skyrocketing crude oil prices in the late 1990s and most of 2000, a chronically depressed commodities market and the 1997 Asian economic crisis), some commentators contend that the economic downturn is the result of flawed government policies and the climate of political uncertainty that pervades the country in the aftermath of the Estrada Government’s ouster at the beginning of the year. Some of the reasons for the sharp decline in the economy’s annual growth rate (from an impressive 5.0 percent in 1997 to 3.0 and 3.6 percent in 1999 and 2000, respectively) are: (1) reliance on foreign borrowings to finance the government’s infrastructure programs; (2) the pursuit of a policy of import substitution for a prolonged period; and (3) the naïve assumption that an industrial base could be built on the shoulders of a small group of foreign investors, who were expected to plow back their earnings into the economy in the form of expanded plant capacity, hiring more workers, etc., instead of repatriating these to their home bases. As it turned out, many foreign investors were scared off by the widening Asian financial crisis and the ensuing devaluation of the local currency, that they have decided to withdraw from the Philippines (capital flight), at least for now.

The problem of high unemployment, estimated at 10 percent in 2000—a rather misleading piece of statistic since the Department of Labor and Employment (DOLE) does not make a distinction between the “partly employed” and “grossly underemployed,” on the one hand, and those who are “fully employed,”

on the other—is bound to worsen in the years ahead if the country’s population growth rate (2.03 percent in 2000) remains at current levels. Even the recent downturn in crude oil prices will not necessarily benefit the Philippines’ immediately, because of the large number of overseas workers who could lose their jobs should the Middle-Eastern OPEC nations run into cash-flow problems. A similar fate may await Filipino construction firms and workers who are involved in ongoing projects in nations like Saudi Arabia, not only because of depressed oil prices but the cloud of political uncertainty that hovers over the region. Needless to say, the forced repatriation of a significant number of Filipino overseas workers is bound to complicate even further the unemployment picture at home. More than anything, however, the most difficult task that the current government faces is how to narrow the ever widening gap between rich and poor. According to the government’s own Commission on Population and the National Statistical Coordination Board, 40 percent of the population or some 30.6 million Filipinos live below the “poverty line,” pegged at P12, 000 (US\$240 at prevailing exchange rates). While the minimum daily wage of a factory worker in Metro Manila is P255 and the “monthly living wage” is P8, 036.60—the highest in the country—this is far below P191, 878.40, the amount that a family of six must earn every year to “live decently” in Metro Manila.

## Philippine Foreign Policy

Philippine foreign policy has revolved around three basic guideposts since the birth of the Second Philippine Republic in 1946, *e.g.*: (1) active support of, and involvement in, the United Nations (UN) and its various organs and specialized agencies; (2) continuing friendship and partnership with the United States; and, (3) close friendship and cooperation with other Asian countries. As a charter member of the United Nations, the Philippines has been a principal player in the world body, especially in the General Assembly and Economic and Social Council (ECOSOC) since 1945. The late Carlos P. Romulo, one of the world’s best known diplomats of his time, served as president of the General Assembly in 1950, and for many years as the Philippines’ Permanent Representative to the United Nations. Another Filipino diplomat who served multiple terms as Philippine Permanent Representative to the world body was the late Salvador P. Lopez, who played a key role in the drafting of the Universal Declaration on Human Rights. A third Filipino diplomat, the late Rafael M. Salas, served as director-general of UNFPA until his untimely death in the mid-1980’s. During the Korean conflict, the Philippines was a full participant of the United Nations Expeditionary Force (UNEF) authorized by the 1950 Uniting for Peace Resolution and has been a participant in other UN peace-keeping efforts, including UNTAET (United Nations Transitional Authority in East Timor) tasked with overseeing East Timor’s transition to independence. The Philippines has also been an active player in the Economic and Social Council (ECOSOC), hosting UNCTAD V in 1979.

The second guidepost—continuing friendship and partnership with the United States of America—is the result of a long love-hate relationship that dates back to the turn of the 19th century, when the United States decided to acquire the Philippines from Spain after the Spanish-American War. Filipino and American soldiers fought side by side during World War II and in the campaign to liberate the Philippines from Japan in 1944–1945. Although Filipino-American relations have had some difficult moments, *e.g.*, when the Philippine Senate voted to terminate the RP-U.S. Military Bases Agreement in 1991, the special friendship between the two countries has endured and remains as strong as ever. Apparently, as pointed

out earlier, even the termination of the RP-U.S. Military Bases Agreement in 1991, and the “falling out” that ensued, has not diminished the strength of the U.S.-Philippines bilateral relationship. Indeed, two of the senators who voted against the extension of the Military Bases Agreement (MBA) in 1991, became ardent advocates of the Visiting Forces Agreement (VFA) 8 years later. In fact, no sooner had the VFA been ratified by the Philippine Senate when Defense Secretary Orlando Mercado, during a trip to the United States, started talking about the need to “revisit” the RP-U.S. Mutual Defense Treaty to determine if some language could be added to the treaty that obligates the United States to come to the Philippines’ assistance if she were to get involved in a military tussle over the Spratly Islands.

The third guidepost has assumed even greater significance as a driver of the country’s foreign policy since the founding of the Association of Southeast Asian Nations (ASEAN) in 1967, although the Bali Treaty, ASEAN’s founding document, was not signed until 1976. Since 1976, ASEAN has evolved into a viable and effective vehicle for political and economic cooperation in the region. In addition to affording Filipinos an opportunity to showcase their leadership skills vis-à-vis other countries in the region, ASEAN has provided a symbolic rite of passage, as it were, for the Philippines; from being a “tail to the American kite”—as Jawaharlal Nehru derisively referred to the Philippines at the Bandung Conference in 1955—to that of a full-fledged Asian country with roots in Asia and a distinctly Asian identity. Philippine foreign policy was fundamentally reoriented in the mid-1970s to take advantage of the triple *détente* and *rapprochement* that was going on between and among the United States, the former Soviet Union, and the People’s Republic of China. In addition to the establishment of diplomatic and commercial relations with the two socialist bloc giants, the Philippines also expanded its diplomatic presence in sub-Saharan Africa, the Middle East, and Latin America. So far, the country’s new foreign policy outlook appears to have boosted Philippine credibility abroad, especially in the eyes of developing countries, which viewed the change as much as an effort to expand the country’s international horizons as it was to lessen Philippine dependence on the United States.

## Contemporary Problems and Prospects for the Future

Until relatively recently, Filipinos were regarded by other Asians as an “aberration” of sorts—an Asian people located in Asia but whose culture, political system, language, social mores, and religion were Western, not Asian. Even Filipino names are mostly Hispanic or Western in etymology and derivation; entries in Manila’s telephone directory have a lot more in common with telephone directories in Madrid or Mexico City than Kuala Lumpur or Jakarta. Before the advent of authoritarian rule in 1972, Filipinos were told that the Philippines is the “third largest English-speaking country in the world,” the “only Christian country in Asia,” and had the “freest press in the world.” Before 1972, Filipinos told anyone willing to listen that authoritarian rule was not possible in the Philippines because of the country’s free and unfettered press and institutionalized checks and balances built into the political system itself. The Philippines is not a “banana republic,” Claro M. Recto, the great nationalist of the 1950’s used to intone whenever the issue of the country’s potential descent into dictatorship became the subject of conversation in the Senate. But “banana republic” or not, authoritarian rule did come to the Philippines in 1972 and remained in place for nearly 14 years. Today, more than 15 years after the restoration of American-style democracy in the Philippines, the country is not all that changed. The same prominent families that dominated Philippine electoral politics prior to the imposition of martial law in 1972 continue to lord it

over the political arena, to the exclusion of others. Even term-limits and an explicit provision in the 1987 Constitution proscribing “political dynasties” has not prevented the traditional political elite from putting up their spouses, children, grandchildren, in-laws, siblings, etc., regardless of qualifications, to run on their behalf. Indeed, Philippine electoral politics has become a true family affair, *e.g.*, the sons of three current members of the Philippine Senate (Barbers, Biazon, and Cayetano) are members of the House of Representatives; two senators are estranged cousins (Sergio Osmena III and John Osmena), and the brother and spouse of two more senators (Oreta and Villar, respectively) are members of the House as well.

Filipinos also love to tell foreigners that the Philippines is a free country; the “showcase of American democracy in the Far East,” even as they contend that the country needs a “strong leader” to whip it into line; a leader who could stand up to the political warlords and Chinese-Filipino *taipans* and engender a sense of national discipline, cohesion, and seriousness of purpose. The freewheeling nature of Filipinos is perhaps best symbolized by the *jeepney*, the closest to a Philippine mass transit system and an enduring metaphor for Filipino creativity, practicality, and resourcefulness. This freewheeling nature is a bit related to *abilidad*—the knack of putting one over the other person and getting away with it or the skill to surreptitiously blend into the front-end of a long line without causing a commotion. Over the years, there have been conflicting images of Filipino society by Filipinos and their friends. Some invariably speak of the Philippines as a land of delicate beauty and charm; of a friendly and hospitable people, and a society steeped in democratic and libertarian values. Filipinos who subscribe to this school of thought take umbrage at such American characterizations of Philippine politics as “wild and wooly,” “bazaar-like,” and “Dodge City East.” Whenever the foreign press characterized Philippine elections as marred by “fraud,” “violence,” “vote-buying,” and other “irregularities,” subscribers to the latter school of thought were quick to point out that Philippine elections were no more fraudulent than Chicago’s, and Philippine political bosses no more cunning nor corrupt than the old bosses of Tammany Hall. The other image of the Philippines—a very negative and unflattering one—is that of a society where corruption is a “way of life;” a violent society that puts little value on the sanctity of human life; a nation mired in grinding poverty juxtaposed with almost limitless affluence. The pejorative nickname “Dodge City East” that some Americans gave the Philippines in the 1960’s and 1970’s, invariably evoked images of gun-toting and pistol-packing citizens. Metro Manila and other Philippine cities were dirty, filled with slums, squatters and uncollected garbage; and the streets teemed with child-beggars, pickpockets, prostitutes, and a whole host of other unsavory characters.

When perceptions differ greatly, the truth usually lies somewhere in between. Although it is true that the Filipinos have many vices, they have many virtues as well; and while there is a large number of corrupt public officials out to feather their nests at the expense of the people, there are also legions of officials and civil servants who are scrupulously honest, work very hard, live within their means, and remain poor for the rest of their lives. Flawed as elections may have been during the Second and Third Republics (1946–1972, 1986 to the present) these exercises did consistently provide a mechanism for the peaceful transference of power from one elected leader to the other. If there were any violent incidents at all during elections, these usually involved over zealous and fanatical followers out to impress their political patrons and employers. And until *EDSA Uno* in 1986, the Philippines has never experienced a *coup d’etat*, if indeed *EDSA Uno* was one. In the area of the economy, it is significant to note that among the 10

Southeast Asian countries, the Philippines fared better than most of her Southeast Asian neighbors in dealing with, and recovering from, the Asian economic crisis that originated in Thailand in May 1997. Nevertheless, the Philippines continues to face serious problems, not the least of which is the restoration of the faltering economy to some semblance of health. The Philippines also faces serious law and order problems, *e.g.*: (1) the criminal activities of the Abu Sayaff, a vicious terrorist organization that has made a mockery of law and order and the sanctity of human life; and, (2) the country's kidnap for ransom gangs that prey on innocent people, especially well-to-do Chinese-Filipinos in the Metro Manila area and other large cities. Not only have these two organizations given a black eye to the Philippines in international circles, they have also caused terrible harm to the Philippines' growing tourism industry, a vital source of revenue and badly needed foreign exchange, as indicated by travel advisories warning people about the dangers of traveling to the Philippines, issued by governments of Japan and the United States.

### **Discussion Questions on “The Philippines Today”**

- Why did the Philippines choose to return to an American-style presidential system of government in 1986?
- Given the unpredictability of Philippine politics and the proliferation of political dynasties—in spite of a specific Constitutional provision that unequivocally bans them—would a parliamentary system, which allows for a change of government at any time perhaps, be more suitable?
- Are the Roman Catholic Church and the putative leader of the country's 75 million Catholics, Jaime Cardinal Sin, really influential as a political actor/kingmaker, or is the Church's avowed political clout grossly exaggerated?
- If recent intelligence reports suggest that in spite of internal schisms and dwindling finances, the Communist Party of the Philippines/New Peoples Army (CPP/NPA) is beginning to regain some of its lost luster—the number of armed cadres has reportedly jumped from 5,000 to a new high of some 11,000—is a new round of hostilities in the offing?
- Could the Philippines overcome its current economic and political problems and restore public confidence in the efficacy of government and elected officials as handmaidens of change?
- Could the country's leaders move away from the politics of scandal and self-destruction, endless recrimination and finger pointing and put the public interest ahead of everything else?

## INTRODUCTION

The *Self-Study Guide : Russiais* intended to provide U.S. government personnel in the foreign affairs community with an overview of important Russian issues related to history, culture, politics, economics, security and international relations. This guide should serve as an introduction and a self-study resource. Russian affairs are far too complex and broad to be covered in any depth using only the text in this guide.

The reader is encouraged to explore the questions and issues raised in the guide by referring to the books, articles, periodicals and web sites listed in the appropriate sections. Most of the referenced material can be found either on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of the *Self-Study Guide* to Russia was prepared by Dr. Martyna Fox, chair for Russian and Eurasian area studies at FSI. The views expressed in this guide are those of the author or of attributed sources and do not necessarily reflect official policy or position of the U.S. Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and non-profit use only.

October, 2000

# I. The Environment and The People

[|The Land|](#) [|The People |](#) [|Russian Culture|](#)

## The Land

Russia's vast and varied territory places it in a geographic category of its own. The country's size (16,995,800 square km) and location (well to the north and straddling Asia and Europe) have shaped the history of the Russian state and as well as the lifestyle and the culture of its inhabitants.

### Geography

## Land features

Although traditionally Russia has been divided into a European and an Asian part, from a topographical point of view there are far more features uniting the Eurasian landmass than dividing it. Russia comprises most of the Eurasian plain and abuts significant mountain ranges only along its frontiers: the **Caucasus** mountains in the south, the **Altai** Mountains along the border with China, the **Saian** Mountains near Mongolia, and finally, the **Verkhoiansk** and the **Kolyma** Ranges, which include Russia's twenty active volcanoes on the **Kamchatka** Peninsula. The **Ural** Mountains –the official dividing line between Europe and Asia –are just a chain of hills which never have been a barrier to human migration.

## Network of rivers

Russia's extensive river system has facilitated the economic and political coalescence of the Russian state. The great rivers of the Eurasian plain mostly follow a north-south axis: the **Don** flows into the Black Sea, the **Volga**—known in Russian culture as the "mother of Russian rivers"—flows into the landlocked Caspian Sea, and the giants of Siberia: the **Ob**, the **Yenisei**, and the **Lena**, all empty into the Arctic Ocean. Because of the gentle gradation of the Eurasian plain rivers tend to be slow and highly navigable; even more importantly, they have a dense network of tributaries forming an interlocking system of waterways unique in Europe or Asia. Development of canals during the Soviet era further enhanced the river system's prominent transportation role.

## Access to Open Seas

Historically, Russia has been a land power, that is a state deriving its resources from land, population and mineral wealth rather than from trade or access to open seas. However, over the course of its expansion Russia has gained access to two seas (the Baltic Sea in the northwest and the Black Sea in the southwest) and two oceans (the Arctic and the Pacific). These maritime outlets present geo-strategic as well as commercial challenges: they are either difficult to reach (Murmansk or Archangelsk in the White Sea for instance is ice-bound most of the year), lie within inland seas (Narva in the Baltic, Nikolaevsk in the Black Sea), or are distant from Russia's population and production centers (Vladivostok in the Far East).

## Vegetation zones

The Eurasian plain is marked by distinct vegetation and soil zones, running in roughly horizontal bands from the Far East to Eastern Europe. In the extreme north, the arctic **tundra** is a zone of permafrost plains where the climate does not allow even for the grasses to survive. The tundra does support the lichens and with it herds of reindeer. It also holds great mineral resources –such as natural gas and oil.

South of the tundra lies the largest coniferous forest on the planet: the **taiga**. This zone –never narrower than 1000 km –stretches from the Gulf of Finland to Kamchatka. Even today it is thinly inhabited, due to a harsh climate and swampy soils. However, it has historically provided Russia's great natural resources of timber and precious furs. Below the taiga lies a relatively narrow but historically important zone of mixed forests, which includes the famous Russian birch tree stands. This area has been cleared and farmed since earliest times, and all of Russia's historical capitals - Kiev, Vladimir and Moscow, lie within it.

Further south, mixed forests give way to open grasslands, called the **steppe**. Its greatest resource is the famously fertile *chernozem*, or black earth, which in European Russia supports most agricultural output. Once the domain of Turkic-speaking nomadic herders, these grasslands are now entirely under cultivation.

Finally, the dry climate of the south turns the steppe into the semi-desert along the north-eastern rim of the Caspian Sea.

## Climate

Russia's continental climate, with extreme temperatures both summer and winter (a record of  $-90^{\circ}\text{F}$  was recorded in Eastern Siberia) is further complicated by Russia's northern location. Close to 70% of the Russian Federation's territory lies north of the  $60^{\circ}$  latitude on a level with Alaska. Winters are long, especially in Siberia where in some areas the frost-free season lasts only 45 days. Consequently, the growing season is relatively short throughout Russia, presenting a permanent challenge for agriculture. In European Russia the climate is somewhat mitigated by the flow of warmer air from the Atlantic. Interestingly, in the 20<sup>th</sup> century the percentage of the Russian population living in severely cold climate

has increased due to the emergence of extraction /industrial centers in Siberia and the Far North.

## **Rainfall**

Rainfall in both European Russia and in Siberia is rather poorly distributed. Most of it falls to the north (contributing to the already extensive swamp areas between the tundra and the taiga), while too little falls to the south on the relatively richer soils of the steppes.

## **Soils and Agriculture**

Almost 88% percent of Russian land is uncultivated, with 46% covered by dense forests or woodlands. In European Russia large swaths of forests and swamps produce a type of poor soil known as *podzol*. Regions more suitable for agriculture include the Volga region, Novorossiia and Western Urals, where *chernozem* and other "brown" soils prevail. In Siberia, a belt of *chernozem* extends to some portions in the south, where an attempt was made to develop intensive agriculture during the so called Virgin Land campaign of the 1950's.

The most important grains in Russia are wheat, barley, oats, and rye, although in the past 20 years Russia became a wheat importer because much of its arable land is devoted to fodder crops. Sugarbeets, flax and tobacco are also among the most important crops. Traditional vegetable crops consist of potatoes, cabbage, peas, carrots and onions.

Overall, because of the challenging climate and soil conditions, agricultural activity in Russia remains less efficient and harvests are less reliable than in the rest of Europe.

## **Mineral and Natural Resources**

Apart from some iron and coal deposits, most of Russia's extensive natural and mineral resources are to be found in Siberia. World-class deposits of natural gas and oil have been developed in Western Siberia in the Tiumen oblast. Coal, iron, gold, copper, tin, nickel, uranium and other non-ferrous metals, as well as Yakutia's extensive diamond fields, are located in Eastern Siberia. Another area of potentially great oil and gas deposits is under development in Sakhalin.

Among other natural resources, timber and paper have been among the top export items in Russia as has been another forestry product, precious furs. Finally, the Pacific fisheries have been a staple of economic activity for the port cities of the Far East.

## **Questions/Issues:**

What impact did geography have on Russian history?

Reflect on this excerpt from Michael Florinsky's *History of Kievan Rus*. Do you agree with his

conclusions?

The historical destinies of nations, like the lives of individuals, are determined largely by their environment. It was no mere historical accident that the immense plain occupying one-sixth of the land surface of the globe became gradually absorbed within the political frontiers of the Russian state

... Unlike western Europe, the monotony of the Russian plain is not broken by ranges of mountains ...[and its] waterways ...greatly facilitated the unity of the Eurasian plain, worked against the establishment of independent political states and thus contributed to the eventual triumph of a centralized political system.

Natural resource development in the Soviet era was based on the needs of the state rather than on economic consideration. What is the likely impact of a free-market economy on the industrial cities of the Far North and Siberia?

**Suggested Reading:** Richard Pipes, "The Environment and its Consequences" in *Russia under the Old Regime*; Robin Milner-Gulland, "The Geographic Background" in *Cultural Atlas of Russia and the Soviet Union* (Facts on File, New York, 1991)

## The People

### Major Ethnic Groupings

The three major ethnic and linguistic groupings of the Russian Federation are the Slavic, the Turkic, and the Ugro-Finnic /Uralic peoples. They form the oldest ethnic core of the Russian state. In the past, their cultures and ways of life differed considerably. The earliest historical sources describe the Slavs as the settled, agricultural population of what is today Ukraine, Belarus and Western Russia. The Ugro-Finnic and Uralic peoples, by contrast, inhabited the dense forests to the north and east as hunters and gatherers. Finally, the Turkic speakers belong to different waves of nomadic herders who over the last two millennia have migrated from Far East Asia along the Eurasian steppes.

In the course of its expansion the Russian state also incorporated the Caucasian peoples of the north slopes of the Caucasus Mountains, the numerous but extremely small Paleo-Siberian groups in the Far North, and a number of largely urban ethnic minorities such as the Jews, the Armenians, the Germans and the Poles.

**Slavic Peoples:** Russian, Ukrainian, Belorussian, Polish

**Turkic:** Tatar, Bashkir, Chuvash, Kumyk, Tuvin

**Ugro-Finnic:** Karelian, Kalmyk, Komi, Mari, Mordvinian, Udmurt

**Uralic:** Samoyed, Buryat, Yakut

**Paleo-Siberian:** Chukchi, Evenki, Nentsy

**Caucasian:** Chechen, Ingush, Adygey, Cherkess, Kabardin, Avar, Lezgin

## Ethnic Structure Today

Despite its long history as a multi-ethnic state, the Russian Federation today is more ethnically homogeneous than at any point in the last two hundred years. (That is of course due to the break-up of the USSR and political independence for most non-Russians). The following table depicts the ethnic structure of the Federation for 1991-1993:

### **Total Population: 147, 022,000**

Russian 119, 866,000 (81.5%)

Tatar 5,522,000 (3,8%)

Ukrainian 4,363,000 (3,0%)

Chuvash 1,774,000 (1,2%)

Bashkort 1,345,000 (0.9%)

Belorussian 1,206,000 (0.8%)

Mordvinian 1,073,000 (0.7%)

Chechen 899,000 (0.6%)

German 842,000 (0.6%)

Udmurt 715,000 (0.5%)

Avar 544,000 (0.4%)

Jewish 537,000 (0.4%)

Buryat 417,000 (0.3%)

Yakut 380,000 (0.3%)

Kumyk 277,000 (0.2%)

The remaining nationalities average in size 0.1% of the overall population.

(Source, S. Batalen, ed. *The Newly Independent States of Eurasia. Handbook of Former Soviet Republics*(Oryx, 1993).)

## Ethnic Identity: the non-Russians

In the wake of the break-up of the USSR the issue of ethnic and national identities within Russia received much attention, largely as a result of concerns over the stability and integrity of the Federation itself. But for both Russians and non-Russians living in these territories the question of national identity is complicated by their long history of cohabitation within the Tsarist and the Soviet states.

Until the 20<sup>th</sup> century, most nationalities identified themselves through language, religion, or the way of life, rather than by ethnic criteria. Levels of national consciousness also varied considerably and the Tsarist state strove to keep any such consciousness from becoming a coherent, political identity. Ethnic (and by definition, unchangeable) identity did not come to prominence until the Soviet era, when Stalin's administrative and federal structures solidified, and in some cases imposed, particular ethnic labels. [For discussion of Stalin's nationalities policy and the Soviet administrative structure see chapter on Ethnic Legacies of the Soviet Era].

Today, ethnic Russians form either the majority or the largest minority in all administrative units of the Federation, including the ethnic republics. This further blurs the issue of local identities. Consequently, there have emerged different (although sometimes overlapping) approaches to building a national identity within the federation. One strategy emphasizes ethnic and linguistic components. It is most successful in the largest ethnically-based republics, such as Tatarstan, Bashkortostan, and Yakutia. Another approach stresses a common cultural heritage, as do the Russians, but also the Jews. Finally, there are ethnic groups mobilized by the political and economic struggle with the center to control local taxes and resources: Tatarstan, Kalmykia, Yakutia.

Only in the North Caucasus have all three strategies been fused. In the areas where this has occurred –most prominently in Chechnya –the issue of political independence from Moscow has indeed come to a head.

### **Sample of Ethnic Balance in Russia's National Republics:**

Bashkortostan population: 3,943,000

Bashkort 21.9%

Russian 39.3%

Sakha (Yakutia) population 1,094,000

Yakuts 33.5%

Russians 50.3%

Tatarstan population 3,642,000

Tatars 48.5%

Russians 43.3%

Chechnya/

Ingushetia\*\* population 1,270,000

Chechens 57.8%

Ingush 12.9%

Russians 23.1%

(note: these figures reflect population levels before the 1994-96 and 1999 conflicts)

Altai population 191,000

Altai 31.0%

Russians 60.4%

Source: RFE/RL Research Report, vol. 2, no. 20 (May 1993)

### **Questions/Issues:**

--Which of the territories and nationalities within the Russian Federation have been seen as potentially

raising the issue of independence from Moscow? What particular factors influenced each case?

**Suggested Reading:** M. Katz, *Handbook of Soviet Nationalities*

### **Ethnic Identity: The Russians**

The rise of the Russian state was closely linked to the expansion of the empire, and both preceded the emergence of any modern Russian identity. For most of their history Russians lived in a multi-ethnic state. As the "imperial" people, the Russians did not tie their identity to a defined "core" territory but rather to the empire in general. Pride in the military and diplomatic achievements of the empire took the place of a sense of ethnic solidarity. Consequently, the Russians lagged behind their subject nationalities in the development of modern national identity.

The same dynamic also characterized the Soviet era. Despite the varnish of the ethnic brotherhood, the Russians found themselves falling into the old role of the "imperial people". They continued to settle throughout the Soviet Union, frequently inter-marrying and further undercutting their own territorial roots. They were also disproportionately "Sovietized" and deprived of access to their traditional culture. Thus the strongest basis for self-identification of the Russians today remains not an ethnic background but language, religion and common culture.

### **Questions and Issues:**

-- Has the issue of Russian national identity been settled since 1991?

-- What impact can the Russian identity issue have on the direction of the country?

-- How can it influence its relations with the neighbors?

**Suggested Reading:** Geoffrey Hosking, *Russia: People and Empire*; Martha Brill Olcott and Valery Tishkov, "From Ethnos to Demos: The Quest for Russia's Identity" in *Russia after Communism*, ed. A. Aslund, M. Olcott (Carnegie Endowment, 1999).

## **Russian Culture**

### **Russian Language and Alphabet**

The Russian language (together with contemporary Belorussian and Ukrainian) belongs to the Eastern branch of the Slavic family of languages. Although still mutually intelligible, these Slavic languages have steadily diverged for the last seven centuries. Their common ancestor can still be seen in the Old

Church Slavonic –an ancient language preserved today in the Russian Orthodox liturgy.

The Russian alphabet is known as the Cyrillic alphabet. It was created in the 9<sup>th</sup> century by St. Cyril and Methodius, two Slavonic monks. They borrowed letters from the Greek, the Hebrew and from other Slavic languages to represent adequately the wide array of consonants characteristic for Russian. Today, the Cyrillic alphabet consists of 33 letters: 21 for the consonants, 5 for hard vowels, five for diphthongs and 2 for voiceless signs (soft and hard sign). As a result, Russian is a more phonetic language than English: by and large it is pronounced the way it is written. Cyrillic is not easily intelligible to Latin alphabet users. It is therefore strongly recommended that those traveling to Russia familiarize themselves with the alphabet before they set out.

**Suggested Reading:** Robin Milner-Gulland, "The Land and the People" in Cultural Atlas of Russia and the Soviet Union (Facts on File, New York, 1991)

### Russian Orthodoxy

The Russian Orthodox Church celebrated the millennium of Kievan Rus' conversion to Christianity in 1988. The Russian Church has been and remains one of the chief national and cultural institutions in Russia. It has been credited with preserving a sense of Russian identity through the dark era of the Mongol Yoke. It has also played a paramount role in shaping Russian culture, bequeathing on it some of its most recognizable symbols: from the language (alphabet) and literature (early chronicles), to architecture (the onion-shaped dome), the visual arts (the icon) and music (choir music and church bells).

Most of the Church's history in Russia has been marked by political influence and protection by the state (until 1917, the Russian emperor was also the head of the Orthodox Church). But it also experienced periods of devastating internal schism (in 17<sup>th</sup> century, with the split of the Old Believers) and persecution (under Peter the Great). The Soviet era brought not only severe limitations on all church activities, but also wholesale prosecution and killing of priests, destruction of churches, seminaries, and monasteries.

Since 1991, the Russian Church -- the largest Eastern Orthodox church in the world -- has experienced a strong revival. The Russian state has returned most of the church property and officially recognized religious holidays. Furthermore, both the Duma and the government have expressed strong support for the Orthodox Church in its attempts to safeguard its place as the foremost of Russia's "historical" religions. Consequently, with 96.7 million nominal believers, the Russian Orthodox Church remains the largest and best organized denomination not only in Russia, but throughout the Former Soviet Union.

### **Questions and Issues:**

The Orthodox Church in Russia has a long history of close cooperation with the state. How has this relationship played out since 1991?

Does the Orthodox Church deserve a special legal protection considering its persecution by the authorities during the Soviet Era?

**Suggested Reading:** Nathaniel Davis, *A Long Walk to Church. A Contemporary History of Russian Orthodoxy*(Westview, 1995).

### Islam, Judaism, Buddhism

The Russian law on religious freedom passed in 1997 specifically distinguishes Islam, Buddhism and Judaism as "historic" religions of Russia, i.e. religions whose long presence and role within the Russian state confer a special, protected status.

**Islam** is the second largest religion in Russia. Although Russian Muslims are overwhelmingly Sunni, religious traditions and practices among them vary greatly. The two largest concentrations of Muslims in Russia are among the Turkic speakers of the mid-Volga regions (Tatarstan, Bashkortostan) and in the North Caucasus (Chechnya, Ingushetia, Daghestan, Kabardino-Balkaria). The tradition of secret islamic brotherhoods (the **Sufi**orders) are particularly strong in the North Caucasus, where Islam has become a potent cultural and political unifying force. In Tatarstan, by contrast, Islamic self-identification is more cultural in character. It needs to be stressed that both traditions have evolved quite distinctly from other strains of Islam, especially those in the Middle East.

**Suggested Reading:** Shirin Akiner, *Islamic Peoples of the Soviet Union*(KPI, London, 1986); Alexander Benningsen, *Mystics and Commissars, Sufism in the USSR*(University of California, 1985).

**Judaism** –although named among the historical religions of Russia –has had a unique and difficult history in that country. Jews have been treated as both a religious and an ethnic minority. Roots of the Jewish community in Russia reach back to the rural population in today's Belorussian and Western Ukrainian territories (which the Tsarist authorities designated as the official Pale of Settlement for the Jews). However, the Holocaust in WW II destroyed these ancient Jewish communities, leaving as their only survivors the mostly Russian-speaking and assimilated urban dwellers. Consequently, Judaism in Russia today, although strongly reinvigorated, faces the challenge of rebuilding its religious institutions and reviving its traditions after decades of official non-existence.

Anti-Semitism, both official and unofficial, has also marred the history of Jewish-Russian relations. It ranged from violent pogroms in late Tsarist Russia, to professional discrimination and cultural persecution in the Stalin era. Today, open anti-Semitism remains limited to fringe nationalist groupings, although its occasional outbreaks have been public enough to be officially condemned by the Russian government.

**Suggested Reading:** Joshua Rothenberg, *The Jewish Religion in the Soviet Union*(Brandeis University, 1971)

**Buddhism** spread into Siberia from Mongolia. The largest Buddhist ethnic group in Russia are the Buriats of the Lake Baikal region, who adopted Buddhism in the 18<sup>th</sup> century. Despite the Soviet efforts to limit the number of lamas and monasteries, Buddhism has experienced a strong revival since 1991, making Russia the seventh largest Buddhist country in the world.

**Shamanism** is the original religion of the indigenous Siberian peoples. Its specific traditions vary from tribe to tribe, but generally shamanism features a spirit helper (shaman) who mediates between the visible and the spirit world. Many Shaman tribes have been forcibly converted to Eastern Orthodoxy (most notably the Yakut-Sakha), but they have managed to retain their tribal religious practices.

**Other religious groups:** The 1997 Duma law placed the **Catholic**, the **Uniate** (Eastern Rite Catholic) and the **Protestant** churches in the non-historical category of Russia's religious organizations. Although most of these denominations have been present in Russia for several centuries, they are associated with ethnic groups which have ties abroad: the Poles (Catholic), the Ukrainians (Uniate), and the Germans (Lutheran). In addition, such Protestant groups as the Baptists, the Pentecostals, the Adventists and Jehovah's Witnesses have been harshly prosecuted because of their perceived missionary zeal.

### **Questions and Issues:**

What has been the historical relationship between Russia and the Islamic world?

What has been Russia's (and Soviet Union's) attitude toward the so-called Islamic fundamentalism?

How does Russia balance its relationship with the Islamic countries and its relationship with the Islamic nationalities at home?

What are Russia's stated interests in the Islamic movements of Central Asia?

What has been the outcome of the 1997 law on religious organizations in Russia?

**Suggested Reading:** Michael Bourdeaux, ed. *The Politics of Religion in Russia and the New States of Eurasia* (ME Sharpe, 1995); John Anderson, *Religion, State and Politics in the Soviet Union and the Successor States* (Cambridge University, 1994).

### **Traditional Culture and Holidays**

Traditional Russian culture is rooted in the rich peasant folklore and the Orthodox celebrations. It was above a culture of the village and of community life. Although severely damaged during the Soviet era, this traditional culture continues to express itself, largely through the celebration of holidays.

Until 1917, the holidays were of course religious. The most important – then as well as today – is

**Paskha**(Easter), with all-night church vigils, services, and festive processions. The Russian Easter also has many pre-Christian, "rite-of-spring" elements such as special foods and brightly decorated Easter eggs.

Due to the two-week difference between pre-1917 Julian and Western Gregorian calendars, **Rozhdestvo**(Christmas) can be celebrated either on the Russian Orthodox date (January 7), or on the Western date (December 25). During the Soviet era, the authorities encouraged the celebration of New Year, often with a Santa-Claus-like figure, Grandfather Frost. Thus the Russian "winter celebration" season is longer than in the West.

Among many secular holidays introduced during the Soviet era, **International Women's Day**(March 8) and **WWII Victory Day**(May 9) have shown few signs of diminishing popularity. The old Soviet holidays of May 1 (**Workers' Day**) and November 7 (**Great October Revolution**), although no longer officially recognized, still draw some celebrants. Finally, the new Russian official holidays like **Independence Day**(June 12) and **Constitution Day**(October 7) are merely seen as days off work.

As in the United States, the observed days of many holidays are changed in order to give workers an extended weekend.

**Suggested Reading:** Suzanne Massie, *The Land of the Firebird*

### Role of High Culture and Literature

Historically, the culture of the vast majority of the Russian people was Slavic, peasant, traditional, and isolated from outside influences. Following the state reforms of Peter the Great and Russia's "opening to the West" in the 18<sup>th</sup> century, a narrow but important ruling elite (nobility, state officials) espoused West European culture and transplanted it to Russia. The true flowering of this culture took place in the 19<sup>th</sup> century, when Russian genius started to penetrate and modify the purely Western models.

This synthesis was visible in the visual arts and architecture, as well as in science and philosophy. But it was in music and literature that what the Russians call their "high culture" was born.

Starting with **Glinka** in the 1830's, Russian music was transformed by such creative giants as **Mussorgski**, **Rimsky-Korsakov**, and of course, **Tchaikovsky**. By the early 20<sup>th</sup> century, **Rachmaninov** and **Stravinsky** set the world standard for modern music. The meteoric rise of Russian music was mirrored by the achievements of the Russian ballet, as personified by the choreographic genius of **Marius Petipa**, and the dancing of **Anna Pavlova**. Again, in the early 20<sup>th</sup> century, the famous Ballets Russes created a musical, visual, and dancing sensation when performing in Western Europe. It is to these great traditions and achievements that today's **Bolshoi** Theater and the **Kirov** Ballet aspire.

Literature –both poetry and prose -- holds an especially revered place in the Russian culture. Russia's greatest poet is without doubt **Alexander Pushkin**, beloved precisely for his brilliant use of the Russian

language and Russian folk themes in Western poetic forms. His works are known universally and by heart throughout Russia; they represent one area of culture common to all inhabitants of that country. Better known in the West are the achievements of such Russian writers as **Leo Tolstoy**, **Fodor Dostoyevsky**, or **Anton Chekhov**. Intimate knowledge of their writings is a point of pride among educated Russians. They quite rightly consider these writers important contributors to world literature.

Overall, the Russian art encapsulates one of the great tensions in Russian civilization: openness to but also a wariness of foreign influences. Some of the greatest Russian achievements in art were spurred by encounters with new Western models. But it was precisely the transformation of those models into undeniably Russian works that makes those achievements worth anything in the Russian eyes

### Questions and Issues:

What was the consequence of the split between the traditional (popular) and the Westernized (high) culture in Russia?

How does "Russia's window to the West"—St. Petersburg—reflect Western influences on Russian culture?

**Suggested Reading:** James Billington, *The Icon and the Axe: An Interpretive History of Russia* (Knopf, 1966); Solomon Volkov, *St. Petersburg: A Cultural History* (Free Press, 1999)

### Soviet Popular Culture

After 1917, a chief ideological aim of the Soviet government was the destruction of the old "bourgeois" culture and the rise of a new Soviet civilization. The traditional Russian peasant culture was largely destroyed as that social class succumbed to collectivization, famine, and eventually, urbanization of the Soviet Union. The high culture of the pre-revolutionary era was treated more selectively. Some elements were destroyed during the 1920's and 30's, when Russia's old intellectual elite was lost in the purges. But other elements—either because they were deemed progressive or valuable for the prestige of the Soviet Union—were preserved and even cultivated. Ballet and classical music were consistently supported by the Soviet cultural authorities. So was most of Russia's great 19<sup>th</sup> century literature. However, all these remnants of the old Russian culture were consciously molded into a larger, Soviet "civilization," which was to be the pride of all Soviet citizens.

Another important task in building a new civilization was to create a genuinely accepted popular culture. Its most important vehicles were to be the cinema (and later television), sports, popular music, and other forms of public entertainment such as the circus or amusement parks, where the new Soviet holidays would be celebrated by the masses. Permeated by official propaganda and often appealing to the lowest common denominator, the Soviet popular culture nonetheless became a genuine social phenomenon. Its lasting power can be seen in the great popularity of exhibits focusing on the Soviet era art.

### Questions and Issues:

What can explain the appeal to the present-day Russians of the Soviet era art and culture?

What has been their attitude to popular art from abroad (such as film, music) since 1991?

To what extent does traditional Russian culture survive in today's Russia?

**Suggested Reading:** Richard Stites, *Soviet Popular Culture, Entertainment and Society since 1900* (Cambridge Press, 1992).

### The Russian Family

In the traditional Russian society extended families lived together, often comprising three or more generations. In the Soviet era, the ability to rely on one's family grew in importance, especially during times of hardship or heightened political oppression. Today, extended family arrangements can be found among 20% of the Russian population, but that is due more to the housing shortages than to cultural preference. Still, family bonds - especially between mothers and daughters - remain strong.

Most women worked outside the home during the Soviet period; they were also charged with taking care of home and family. This trend has not changed much since 1991. The rate of divorce continues to grow in Russia, creating a large segment of female-headed families dependent on the older generation.

**Suggested Reading:** Francine Duplessix-Gray, *Soviet Women: Walking the Tightrope* (Doubleday, 1989); *Women in Russia: A new Era in Russian Feminism* (Verso, 1994).

## II. History and its Legacies

[|Early History](#) | [Imperial History](#) | [The Soviet Area](#) | [The Fall of the USSR](#)

### Kievan Russia

Russia's early history was marked by migration, invasions, and domination by peoples of both Europe and Asia. Originally Slavic agricultural tribes had settled in East European territories, between the Black and the Baltic seas. [They would eventually split into the Western Slavs (Poles, Czechs, Slovaks), the South Slavs (Serbs, Croats, Slovenes, Bulgarians) and the Eastern Slavs (Russians, Ukrainians and Belorussians).] Although constantly buffeted by waves of nomadic herders from inner Asia, the Eastern Slavs managed to establish several independent city states. By the 9<sup>th</sup> century Scandinavian Vikings (known as the **Varangians**) imposed a centralized political and economic control over the Slavic settlements along the **Dnieper** River, leading to the emergence of the first Russian state centered in the city of Kiev.

Throughout its brief existence Kievan Rus remained a loose federation of cities and principalities. Its wealth was based on trade between the Baltic Sea in the north and the Black Sea and Byzantium in the south. Consequently, Kievan Rus was open to a wide range of cultural influences. Its Viking ruling elite became quickly Slavized. With the adoption of Orthodox Christianity from Byzantium in 988, Kievan Rus witnessed an impressive growth in culture, architecture, literature and law. However, its relative political and military weakness left it exposed to a new wave of nomadic conquerors who were to inundate the Kievan state after 1236.

## The Mongol Period

With the sack of Kiev in 1243, the Mongol-led armies of **Ginghis Khan** established complete control over all Eastern Slavic territories. The Mongol occupation –which was to last for more than two hundred years –was marked by ruthless exploitation of the subject population, great cost in human lives, and finally by a wholesale dislocation of the surviving Slavic population from the open steppes of the south to the isolated but better protected forests of the north-east. Under the protection of the Russian princes, new cities and settlements were built there; the most successful among them was Moscow which, by 1328, became the seat of the Grand Prince. It was under the ruthless yet determined leadership of the Moscow princes that the Northern Russian settlements built up enough military and political strength to overthrow the Mongol rule.

## Muscovite Russia

With their own empire crumbling, the Mongols were powerless to stop the growing ambitions of **Muscovy**princes. By 1472, through marriage to the niece of the last Byzantine emperor, Ivan the Great inherited the title of **Tsar**(Caesar). By 1583, his grandson, Ivan the Terrible, was powerful enough to lead a successful military campaign to conquer the Mongols' own centers of power: the **khanates**of Kazan and Astrakhan. At the same time, Ivan established a centralized and autocratic system of rule at home, eliminating any potential threats to the power of the Russian Tsar. During his *oprichnina*, for instance, his trusted henchmen killed, tortured and terrorized old aristocratic families, they but also destroyed overly independent cities like **Novgorod**. Ironically, having eliminated competitors to his power, Ivan contributed to the early death of his only son thus bringing to a tragic end the ancient Riurik dynasty. Russia was left rudderless to face increasing dangers at home and abroad.

**Suggested Reading:** Richard Pipes, *Russia under the Old Regime*(Scribners, 1974)

## Imperial History

### The Rise of the Russian Empire

After a prolonged period of civil strife, known in Russian history as the Times of Trouble, a new ruling dynasty was installed on the throne of Russia in 1613. The **Romanovs**would occupy that throne until

1917, and it was during their reign that Russia's greatest territorial growth took place. Among the most outstanding members of the Romanov dynasty was Peter the Great, who came to power in 1694. Focusing on the growing military and technological gap between his country and the rest of Europe, Peter launched a top-down, radical campaign to modernize Russia. Its government, the military, local administration, even education, were restructured to emulate Western models, even as the Tsar's own power grew more centralized and autocratic.

The reforms were to serve the purposes of Peter's activist foreign policy. Through a series of wars with Sweden, he gained access to the Baltic Sea and founded Russia's "window to the West," St. Petersburg. In wars against the Ottoman Turks and the Persians, he expanded Russia's territory to the south and south-east. At the end of his reign, Peter officially moved the capital from Moscow to St. Petersburg and declared the establishment of the Russian Empire.

### Autocracy and Serfdom

Even though most of Peter's heirs followed his dreams of imperial expansion, they shared less in his enthusiasm for introducing Western-inspired innovations at home. Consequently, even while the territories of Russia grew at staggering rates, an essentially pre-modern social and economic system prevailed throughout the country. The most important element of Russia's social structure was the existence of **serfdom**, which legally bound a large proportion of peasants to the lands on which they worked. Their forced labor supported a large and wealthy class of land-owning nobility, which in turn owed their service and loyalty to the Tsarist state. Thus, Russia's autocratic regime depended directly on the perpetuation of an inefficient and unjust system of serfdom, which eventually would undercut its economic and consequently military power. This tension -- between the requirements of autocracy and the demands of the Great Power competition -- escalated in the 18<sup>th</sup> and 19<sup>th</sup> centuries. Catherine the Great, Peter's most talented successor, engaged in successful diplomatic and military actions against Great Powers of Europe. At the same time, she imposed ever harsher requirements on the peasant population, ruthlessly putting down their repeated rebellions. In the 19<sup>th</sup> century, even as he claimed for Russia the title of the "gendarme of Europe," Nicholas I adamantly rejected the calls for the abolition of serfdom. It was only a series of military defeats that pushed Russia's autocratic rulers to adopt a modicum of reforms. Following the disastrous Crimean War, Russia launched the so called Great Reforms, including the abolition of serfdom in 1861. After the stinging defeat in the war with Japan in 1905, Nicholas II introduced a limited constitutional government as well as a series of land and economic reforms. The experiment in liberalizing Russia's political system was cut short by the decision to enter World War I -- a step leading directly to the collapse of the Tsarist rule and the Bolshevik revolution of 1917.

The confluence of state and empire in Russian history has been blamed by many historians for the social, economic, as well as political ills that besieged that country on the eve of the revolution. Frequent wars -- be they defensive or offensive -- contributed to the extreme exploitation of the population to support the fighting state. Extensive and varied territories and restive subject populations encouraged the growth of a centralized and repressive state. The needs of the state in turn consumed the elite: their loyal service to

the autocrat rewarded them with land, but precluded independent economic activities. The bulk of the population –the peasants -- were left to carry the burden of the military, the huge administration, as well as the land-owners. In the end, these imperial burdens stunted the economic, political and national development in Russia, alienating the society from the Tsarist state. Growing ethnic tensions and resentment of the Russian rule added to this explosive mixture and eventually led to the implosion of the Tsarist Empire.

### **Questions and Issues:**

What were the burdens of empire-building for the Russian society?

How were the Russian state and empire dependent on each other?

**Suggested Reading:** Geoffrey Hosking, *Russia: People and Empire*

## **The Soviet Era**

The Bolshevik coup of 1917 opened a turbulent and fateful era in Russian history. The radical ideological ambitions of Lenin and his party led to an unprecedented experiment in building a new state, a new political and economic system, a radically new society, and a new civilization –all at the same time. This experiment, "conducted on the living body of the Russian people," was to bring a staggering human cost and a host of long-term legacies borne by Russia today.

### **Ideological and Political Legacies**

Utopian or not, the early Bolshevik leaders took their ideological aims very seriously. The goal was to quickly and radically remake the traditional Russian society into a communist one, governed by the proletariat –the industrial working class. In order to achieve that aim in the absence of well developed working classes, the Bolsheviks relied on a small, highly disciplined, and determined party structure which was to act as the "vanguard" of the revolution. This decision had fundamental consequences for the political culture as well as the system of rule in Soviet Russia. For one, a distinct ends-justify-means mentality came to prevail among the builders of the Soviet state. Second, total political monopoly of the Communist Party was seen as a given. Furthermore, fanatical ideology brought with a conviction that in any situation there can be only one, ideologically-correct policy or answer to a problem, an attitude which by its nature denies the validity of political compromises. (Under Stalin this obsession with enforcing the party line would degenerate into show-trials and purges of "deviating" party members). All these elements created an inflexible political-administrative system well suited to a top-down system of command, but one singularly unresponsive to social and economic signals from below.

### **Questions and Issues:**

**Continuities between Tsarist and Soviet rule:** A long-standing debate focuses on the features of the

Soviet political system which echo certain characteristics of the Tsarist state.

Did Marxism change Russia, or did Russia change Marxism?

Is it a fair comparison between the Tsarist and the Soviet model of authoritarian rule? What were the fundamental differences between them?

**Suggested Reading:** Richard Pipes, *Three "Whys" of the Russian Revolution* (Vintage Books, New York, 1997);

### **Social Transformation: Modernization and Urbanization**

If Lenin was responsible for forging the Soviet political and ideological system, Stalin was responsible for forcibly remaking the Russian society to fit the Leninist blueprint. Taking reins over a country already ravaged by WW I, the Revolution, and four years of the Civil War, Stalin launched an ambitious program of modernization. His goals were two-fold: to fundamentally restructure the Soviet society and to put the Soviet Union on a par with the leading industrial powers.

Stalin began with agricultural **collectivization**: millions of free-holding peasants were either killed or sent to labor camps; the rest were ordered to join state-run collective farms. This assured complete government control over food production and supplies for the cities. In addition to those "class enemies" targeted by Stalin, the collectivization cost several million lives of peasants engulfed by the famine of the early 1930's. The back of Russia's peasantry was broken; and most of them had no choice but to move to the emerging urban and industrial centers.

The next two decades would witness some of the most intensive paces of **industrialization** in modern history. Focusing almost exclusively on heavy and military industry, Stalin imposed five-year plans of production which were to squeeze out every ounce of material and human resources from the country. An extensive network of labor camps –the **Gulag**–formed an important part of this economic system. The great purges, unleashed by Stalin in the 1930's on the Party as well as the government, the army, and the intellectuals, provided millions of camp laborers. (Others were killed outright in the prisons). Consequently, although its industry was now better developed than in the Tsarist times, the Soviet Union was in many ways weakened and ill prepared to face the invasion of Hitler's forces in 1941.

### **Questions and Issues:**

Did Stalin's policies help or hinder the Soviet Union in its confrontation with Nazi Germany?

What was the impact of his purges on the Soviet Army?

What was the impact of the experience of WWII on the Soviet Union as well as on Stalin's policies?

**Suggested Reading:** Alexander Dallin, ed. , *Stalin and Stalinism*(Garland Publishing, 1992);

## Post-War Era

In the post-Stalin era, the Soviet system never attained the degree of repression and fear present in the 1930's or early 50's. Nonetheless, Stalin's fundamental goals and policies were continued by his successors, **Nikita Khrushchev** and **Leonid Brezhnev**: further industrialization, development of a world class military-industrial sector, continued shift of the population from rural to urban areas, as well as construction a universal and uniform system of education and indoctrination. The only noticeable change occurred in the way the Soviet Union was governed at the very top: to avoid the potential dangers of another "cult of personality," the Soviet leadership relied on the unanimous decisions of the **Politburo**, rather than those of the First Party Secretary. This change contributed to the growing bureaucratic "stagnation" of the 1970's and 80's, but at the same time, it created a political arena for differences of opinion. **Mikhail Gorbachev** would exploit this new arena during his push for *perestroika* after 1985.

## Questions and Issues:

Industrialization and modernization were the chief aims of Lenin as well as Stalin.

How did the economic and social system they established to accomplish these aims hamper the Soviet economy in the 1970's and 80's?

What are the chief legacies of the Soviet economic and industrial structure?

**Suggested Reading:** Geoffrey Hosking, *The First Socialist Society: A History of the Soviet Union from Within*(Harvard, 1985) and *The Awakening of the Soviet Union*(Cambridge, 1990); Clifford Gaddy, *The Price of the Past: Russia's Struggle with the Legacy of a Militarized Economy*(Brookings Institution, 1996).

## Ethnic Legacies of the USSR

The Tsarist empire –famously called by Lenin "the prison of nations"–collapsed in 1917 when the weakened center could no longer suppress its subject nationalities' drive for independence. At first, the Bolsheviks encouraged and exploited these centrifugal forces. Having acquired power themselves, however, they opened a military campaign to bring Soviet rule to the very same nationalities that had bolted from the Russian empire. By 1924, the Bolsheviks succeeded in re-imposing Moscow's control over all but the Polish, Finnish, and Baltic territories. The Union of the Soviet Socialist Republics was officially brought into existence.

It was an economically and politically precarious union, however. Concessions to the national pride and aspirations had to be made by the center to preserve the USSR's fragile borders. Attributes of a sovereign national existence were extended to the largest ethnic groups; eventually, those would form the 15 so

called 'union' republics, which nominally had the right to secede from the Soviet Union. Other ethnic groups were also given distinct administrative borders within which, as the titular nationality, they were given special rights and privileges, such as education, newspapers or even local administration in their own language.

At the same time, the core of the Soviet ideology did not recognize ethnic or national identity as the fundamental organizing principle: eventually, the goal was to create a non-ethnic, Soviet identity. Uniform system of Soviet education was to be one institution working toward that goal. Meanwhile, to counter the ethnic heterogeneity of the Union, the central "Sovietizing" role was played by the Communist Party, the army, the KGB, and the centralized economy.

Thus, the Soviet system contained a fundamental tension between the totalitarian ideology and the centralizing needs of the state on the one hand, and the ethnically diverse territorial units on the other. Stalin balanced this system by fostering inequalities and tensions among neighboring ethnic groups; they had no recourse but to rely on Moscow for mediation or protection. But by the same token, any weakness in Moscow could easily upset this precarious ethnic balance. Under Gorbachev, the system came to be tested in precisely this way.

### **Territorial Units of the USSR**

**Union Republics:** the largest ethnically-based republics, with external borders, flags, anthems and other attributes of sovereignty, and the formal right to secede from the USSR; with higher educational institutions in the language of the titular nationality; and with other ethnic/or administrative units subordinate to them.

**Autonomous Republic:** ethnically-based, constituent units of the union republics, no external border, lower level of educational institutions in titular language; often the titular nationality is not in majority.

**Autonomous oblast'**

**Autonomous okrug:** the smallest ethnically-based administrative units, titular nationality in minority, some level of control over national-cultural policy.

**Oblast':** A purely administrative territorial unit

**Krai:** An administrative territorial unit, may have a portion of external border and/or diverse ethnic territories.

With the exception of the union republics (independent since 1991), the Russian Federation has retained the territorial and ethnic structure of the Soviet era.

Source: Beyond the Monolith, ed. P. Stavrakis, J. DeBardeleben, (Woodrow Wilson Center, 1997)

## Questions and Issues:

What were the best examples of Stalin's gerrymandering of ethnic borders?

How did these areas fare during the collapse of the Soviet Union?

Have any of the Stalin-drawn borders for territorial units below the union republic level been changed since 1991? How and why?

**Suggested Reading:** J. Chinn, R. Kaiser, "Nationalities Policy in the USSR" in *Russians as the New Minority. Ethnicity and Nationalism in the Soviet Successor States* (Westview, 1996); Nadia Diuk, A. Karatnycky, *New Nations Rising. The Fall of the Soviets and the Challenge of Independence* (Wiley, 1993).

## The Fall of the USSR: Causes and Consequences

### Economic Context: *Perestroika*

From his earliest 1985 campaigns against alcoholism and low worker productivity, Mikhail Gorbachev signaled a new and vigorous style of Soviet leadership. Coming to power after years "gerontocracy" and economic stagnation, Gorbachev was determined to modernize the Soviet Union and to stimulate its flagging economic performance. In order to achieve this aim, a *perestroika*—or restructuring—was required, not only in the industrial and agricultural sectors, but also in the way the centrally planned Soviet economy was managed. One of the greatest obstacles to *perestroika* was the overgrown, inflexible and corrupt bureaucracy. Gorbachev's answer to this problem was to lie in the decentralization of economic decision making.

### Political Context: *Glasnost*

As laid out by Gorbachev, *perestroika* fundamentally threatened the entrenched power of the Soviet bureaucracy and its political elite, the *nomenklatura*. A growing challenge to Gorbachev's reforms was mounted by a coalition of party and KGB "conservatives." To undercut them, Gorbachev launched a campaign of political openness, or *glasnost*. It was to allow the public and the media to voice their true opinions, to expose corruption and abuses of power. Such public openness would be a powerful political tool against the anti-reform functionaries. But once released, the budding freedom of expression was difficult to limit or to manipulate. By 1989, *glasnost*'s spread to areas that were not supposed to be open to public discussion: the fundamental tenets of socialism, the injustices of the Communist system, even the re-emerging nationalist sentiments of the Soviet Union's minorities. Gorbachev thus found himself between the rock of bureaucratic resistance and the hard place of mounting public pressure for reform. His response was to broaden the concept of *perestroika* to include experiments with limited free market,

further decentralization, and political democratization. To that purpose, sweeping electoral reforms were introduced and, between 1989 and 1990, local, republic, and Supreme Soviet elections brought a very different kind of political actors to power throughout the Soviet Union. The confrontation between the new legislators and the Soviet functionaries was to be played out in the next two years.

## National and Independence Movements

Perhaps the most important consequence of *glasnost*' was the ability of nationalist and independence movements within the republics to reach and mobilize their own populations. The most advanced and radical were the movements in the three Baltic republics, Latvia, Estonia and Lithuania. These independent countries were forcibly incorporated into the Soviet Union only in 1939-40, and consequently, had a more recent and stronger memory of a sovereign existence. In contrast to other national movements which at first focused on cultural and political "autonomy" within a reformed Soviet state, the Baltic activists pushed from the beginning for full national independence –and implicitly, for the break-up of the Soviet Union. With ethnic strife and protests spreading in the Caucasus, the Georgian, Armenian and Azerbaijani nationalists soon espoused similar goals of independence. The central authorities intervened by force in Vilnius and in Tbilisi; but although brutal, these interventions were half-hearted and only fueled further resentment of Moscow. Even in the Russian Federal Republic, where in June 1991 Boris Yeltsin was elected president, the sentiment shifted against upholding the power of the Soviet center. The republics –including Russia –now wanted to run their own affairs.

It was the danger of a break-up along the ethnic lines that led Gorbachev to negotiate the so called **New Union Treaty** in the summer of 1991. At the same time, the threat to the survival of the Soviet state (and thus of his own power) had caused him to move closer to the conservative wing. By August 1991, with Lithuania openly declaring independence, the conservatives decided that only a military/police coup could halt the dissolution of central power. When the coup failed (mainly because it could not dislodge Yeltsin and was not backed by the majority of the armed forces), the Soviet power structures imploded. Declarations of independence from all fourteen republics followed within a month; their full diplomatic recognition as sovereign states came at the end of the year as Mikhail Gorbachev resigned his post and the Soviet Union was formally dissolved.

## Questions and Issues:

What role did Gorbachev and his attempted reforms play in the collapse of the USSR? What was the role of Yeltsin?

How were the ethnic, political and economic factors linked?

What was the specific importance of the international context, such as the defeat in Afghanistan, or the U.S. defense initiative?

**Suggested Reading:** Alexander Dallin, Gail Lapidus, eds., *The Soviet System: from Crisis to Collapse*

(Westview, 1995); Michael Dobbs, *Down with Big Brother. The Fall of the Soviet Empire*(Knapf, 1997).

## III. The Russian Federation Today

[Constitution and Federal Structure](#) | [Domestic Politics](#) | [Economic Structure](#) | [Society](#) | [National Security](#) | [Foreign Policy](#)

### Presidential System

Under the constitution passed in 1993, the president of the Russian Federation wields strong executive power. The government answers to him through the prime minister who has to be confirmed by the legislature; the armed forces and the Security Council answer to him directly. The president also has wide powers of appointment, from the Central Bank governor to the chair of the Constitutional Court. Few of these appointments require parliamentary confirmation. The president also has at his disposal the so-called presidential administration, a political/ bureaucratic apparatus which rivals in size and influence the government. Finally, under Vladimir Putin, the positions of seven presidential representatives were created to supervise federal institutions in the designated super-regions. The president serves a four-year term and is limited to two consecutive terms.

## The Legislature

With a strong executive, the legislature of the Russian Federation has proven to be a fractured and weak center of power. The 450-member lower house, the **Duma**, can only challenge the president when it musters a 2/3 majority of votes – a feat it has accomplished very rarely since 1993. Constitutionally, the Duma has the power of veto over the government's budget as well as the option of rejecting the president's choice of prime minister. If it does so three times (or passes a non-confidence vote twice) it can be dissolved by the president. In addition, the president is allowed to issue legally binding executive decrees, although only in areas not yet covered by Duma legislation.

The upper chamber – **the Federation Council** – includes ex officio regional governors and heads of regional assemblies, for a total of 178 members. The Council has the power to ratify international treaties. For the most part, the Council has been unwilling to challenge seriously the executive power.

## The Judiciary

The independence of the judiciary was severely limited during the Soviet era, when the law was seen as designed to protect the interest of the state. Consequently, the authority of the Russian judiciary is still relatively weak. Its top institution, the Constitutional Court (with 19 judges) passes judgment on cases involving federal law, the constitution, statutes and state treaties. It also settles disputes over the competence of different state bodies and branches of power. In this arena, it has shown a modicum of impartiality. The Supreme Court is the highest authority on civil, criminal and administrative law. Business disputes are heard before a Supreme Arbitration Court.

Generally, Russia follows the continental model of civil and criminal law codes. Recently, some regional courts have experimented with the introduction of a jury trial system in civil cases.

**Suggested Reading:** Lilia Shevtsova, Igor Klyamkin, *This Omnipotent, Impotent Government. The Evolution of the Political System in Post-Communist Russia* (Carnegie Endowment, 1999).

## The Power Ministries

The Soviet Union's chief "power" institution was the KGB. Although its legal powers and responsibilities were never clearly defined, it performed the function of intelligence gathering, counterintelligence, as well as domestic surveillance and suppression of political dissent.

In the wake of the August 1991 coup, in which the KGB chief Kryuchkov took a leading role, President Yeltsin decided to split the KGB into several agencies, thus removing the future threat of the KGB as a decisive political player. The successor agencies took over distinct functions:

Foreign Security Service (**SVR**) -- foreign intelligence operations

Federal Security Service (**FSB**)-- domestic political, military and economic counterintelligence, teltaps, paramilitary units, surveillance, transportation security

Federal Agency for Government -- Communications intelligence

Communications (**FAPSI**)(cryptography and intercept) and government communications

Intelligence Directorate of -- intelligence collection element of

Federal Border Service (**FPS**)the border troops

Federal Protection Service (**FSO**)-- government guards and bodyguards, counterintelligence

State Technical Commission (GTK) -- denial and deception programs, information security, technical counter-intelligence arms control

[Source: CIA, unclassified]

### **Role of Provincial Governors and Local Authorities**

Beginning with the struggle between Gorbachev and Yeltsin prior to the fall of the USSR, central power in Russia devolved considerably to the regions. Since 1991 –and especially at the height of Yeltsin’s confrontation with the Duma in 1993 -- regional authorities have played a key role in the federal-level political struggles, often using the promise of support in exchange for additional rights and subsidies from the center. As a result, many regions have negotiated special bilateral agreements with Moscow which complement (and sometimes contradict) the statutes of the Federation Treaty of 1992. Resource-rich ethnic republics, such as Tatarstan or Sakha (Yakutia) have been the prime beneficiaries of these special arrangements. Today, fiscal burdens, control of local resources, level of subsidies and of political independence from the center vary so greatly from region to region in Russia that its system has been called an asymmetrical federation.

Since 1996, all regional governors have been elected through a direct vote. However, mirroring the balance of power at the federal level, most have built up strong executive powers at the expense of the local legislature. This state of political matters has proven to be all too conducive to corruption and abuse of power in many regions. President Putin’s recent efforts to re-establish the power of the central and federal authorities were depicted as aimed at precisely such local abuses.

**Suggested Reading:** *Beyond the Monolith. The Emergence of the Regions in Post-Soviet Russia*, eds. P. Stavrakis, J. DeBardeleben (Woodrow Wilson Center, 1997).

## **Domestic Politics**

## The Power of the Kremlin

From 1991, when he was first elected president of the Russian Federation, until his resignation in September of 1999 Boris Yeltsin dominated the domestic political landscape in Russia. Although under his watch important aspects of power devolved from the center to the regions, he laid the foundation for a strong presidential system in Russia. Yeltsin's struggle with the Communist-dominated legislature over the course of economic reform led to an armed confrontation in October of 1993. As a result of his victory, not only was the Duma disbanded and new elections called, but a new constitution –one tipping the balance of power in favor of the executive branch –was adopted by the end of the year.

This imbalance of power is often held responsible for the relative lack of accountability and transparency on the part of the Russian executive branch. While its size grew past the levels of the Soviet central bureaucracy, the Russian president's apparatus has come to be seen as the new, non-ideological but highly political, "party of power." In the run-up to the presidential elections of 1996, the party of power was widely perceived as cooperating with the emerging group of financial oligarchs to beat down the challenge of Gennadii Zhyuganov and the Communist Party. After Yeltsin's re-election, the dependency between the oligarchs and the Kremlin grew; it subsequently enmeshed Yeltsin's family and entourage –as well as a number of senior administration officials –in charges of corruption, favoritism, and inside-dealing.

With Yeltsin's health declining precipitously after 1996, Russia was left with a "super-presidential" system, but one in which the linchpin figure was missing from day-to-day governance. A quick succession of prime ministers and a collapse of the government's fiscal policies in August of 1998 bore witness to the instability of the political situation. Finally, in September 1999 Yeltsin and his advisers tapped the head of the Federal Security Service, Vladimir Putin, to become acting president. This solution was widely seen in Russia as the party of power's attempt to keep its hold on the executive apparatus and to protect its interests. The chief issue in Russian politics, therefore, is how long President Putin remains beholden to those who helped him come to power.

## Main Political Parties

Political parties in Russia are weak and poorly organized. While to some extent this is due to the pernicious political legacies of the Soviet system, it is also true that current laws in Russia make political fundraising and party-building difficult. Furthermore, the size and fragmentation of the country make grass-root organization a challenge. Mobilizing supporters depends entirely on the mass media, most of which are either state-controlled or beholden to the political interests of their owners. (See section on the media below).

Consequently, the political party scene in Russia is both volatile and fragmented. For instance, within months of Vladimir Putin's appointment as acting president, his supporters were able to organize a brand new pro-Kremlin coalition, the **Unity Party**, which won the second largest number of Duma seats in the December 1999 elections. By the same token, unsuccessful election contenders tend to fragment or

disappear altogether from the political scene, as did Yegor Gaidar's **Russia's Choice** after the 1993 loss. Only three parties in Russia have proven to be relatively stable and electorally successful: the Communist Party, the Liberal-Democratic Party, and Yabloko. Still, even these stalwarts remain dependent on a political personality rather than grass-root strength or popularity of their programs. As the most poignant example, the Yabloko party's name is derived from that of its leader, Grigorii Yavlinskii.

### **The main political parties represented in the current Duma:**

#### **The Communist Party of the Russian Federation (114 seats)**

Successor to the CPSU, launched in 1993 and led by Gennady Zhyuganov. CPRF remains Russia's largest party with over 500,000 members and 20,000 organizational 'cells'. Undercutting its power is the growing ideological and political incoherence and internal divisions among the social-democrats, Stalinists, and ultra-nationalists. Its estimated base of support (approx. 20 –25%) will continue to diminish as it relies on the oldest segments of the population.

#### **Unity Party (73 seats)**

The pro-Kremlin coalition founded in 1999; lacks a program and focused its campaign on the war in Chechnya and the need for strong authority in Russia. Leaders are Sergei Shoigu (Minister of Emergency Situations) and Alexandr Karelin.

#### **Fatherland –All Russia (66 seats)**

Centered around the former prime minister Yevgenii Primakov and Mayor of Moscow Iurii Luzhkov, it enjoyed strong support of regional leaders. However, its political ambitions were diminished by the ascent of the new party of power, Unity.

#### **Union of Right Forces(29 seats)**

A coalition of pro-reformist forces and successor to such parties as Russia's Choice and Democratic Choice of Russia. Its leaders include former prime ministers Sergei Kiriyenko and Yegor Gaidar, and former governor of Nizhny Novgorod, Boris Nemtsov. The Union is more pro-Putin than other reformist parties.

#### **Yabloko (20 seats)**

A liberal, Western-style party founded by Grigorii Yavlinskii in 1993. Supporting broad economic reforms, Yabloko was often the most outspoken critic of the policies of the Russian government.

#### **Liberal-Democratic Party/Zhirinovskii Bloc(17 seats)**

Headed by the flamboyant nationalist, Vladimir Zhirinovsky, the misnamed Liberal-Democratic Party has been a voice of ultra-nationalist sentiments, but tended to vote with the Kremlin on most issues. Its share of popular vote has diminished since 1993 (from 23% to 6%), but it has outlived most other parties in Russia.

**Suggested Reading:** Sarah Oates, "The 1999 Russian Duma Election," *Problems of Post-Communism* (June 2000); Michael McFaul, N. Petrov, "The Changing Role of Elections in Russian Politics" in *Russia After Communism*, ed. A. Aslund, M. Olcott (Carnegie Endowment, 1999).

### **Role of the Media**

Despite a growing role of local and regional news outlets, in the sphere of politics Russia continues being dominated by the central, Moscow-based media. Here, too, the role of the electronic media –especially of the national television networks –has become disproportionate. The nature of the ownership and editorial policies of these crucial news outlets remains murky, however.

In the Soviet era, electronic and print media were state-owned and subject to strictest political oversight by the party apparatus. In the post-1991 period, most of these outlets were allowed to be privatized, although the Russian government retained the controlling stake in all national television networks (Gusinsky's NTV is an exception as it was a privately owned entity from the outset.) Many newspapers were initially bought out by their editors and employees; soon, however, they were under financial pressure. By 1996, key print and electronic outlets were controlled by the so-called oligarchs and their financial-industrial groups, and problems with editorial independence, credibility of reporting and the use of "compromising materials" escalated.

After Vladimir Putin's nomination as acting president, a serious confrontation with the oligarchs over the control of the media began to unfold. It was spurred both by the Duma and presidential election campaigns and by the press' coverage of the war in Chechnya. The ongoing struggle between the government and the oligarchs does not bode well for the interests of free and independent media in Russia.

**Suggested Reading:** Ellen Mickiewicz, *Changing Channels: Television and the Struggle for Power in Russia* (Oxford, 1997), N. Petrov, "Putin and the media: No love lost," *East European Constitutional Review* (Winter/Spring 2000).

### **The Oligarchs, FIGs and Business Groups**

Trade-unions and broad-based business organizations have not fared well in the post-Soviet Russia. Following the pattern of the political parties, they remain under-developed and carry little political clout. By contrast, several business "empires" which emerged during the era of privatization have come to exercise a disproportionate role in Russian politics, finance, and economic policies.

These FIGs –financial-industrial groups –are generally dominated by either large banks or energy companies that have acquired stakes in industrial enterprises as a result of often murky privatization deals. Among the most powerful are:

**Gazprom:**RAO Gazprom (the natural gas monopoly), GazpromBank, media

**Oneximbank:**Svyazinvest (telecom), Sidanco (oil), Norilsk Nickel, Zil (autos), Izvestia (media); led by V. Potanin, Oneximbank managed the shares-for –loans program of 1995-96.

**LogoVAZ:**Sibneft (oil), Aeroflot, Logovaz (autos), stakes in TV6 and ORT; controlled by B. Berezovsky

**Most:**NTV, Moscow Radio Echo, Segodnya (newspaper), cable and satellite facilities. Led by V. Gusinsky

**Alfa:**Alfa Bank, oil, power generation, construction, aluminum.

**Menatep:** Yukos (oil), Rosporm holding company, stakes in ORT.

**Lukoil:**varied oil producing assets in Russia as well as within CIS.

After the financial collapse of August 1998, many of the powerful banks behind the FIGs have been undercut and struggle for survival. The energy-based groups, however, continue wielding significant influence.

### NGO's and Civic Society

One more legacy of the Soviet system lies in its destruction of the horizontal links within the Russian society such as professional and trade unions, and civic and voluntary organizations. In their absence, the effort to build a vibrant and effective civic society faces an uphill battle. While Western government and non-government assistance has borne some fruit, the number of Russian non-governmental organizations remains low. They tend to concentrate on areas of the most immediate concern for the citizens: health, environment, social issues, education. Because venues for political pressure are few, Russian NGO's often take recourse in legal action. This becomes a challenge in itself due to the weakness of the legal system in Russia.

**Suggested Reading:** A. Aslund, M. Olcott, eds., *Russia After Communism*(Carnegie Endowment, 1999).

## **Economic Structure**

### Aims and results of economic reforms

The Russian Federation inherited an economic disaster, where short-term problems such as shortages, hyper-inflation and a GDP fall of 50% (1989-1996) vied for attention with long-term structural dysfunction. Among the most serious burdens left by the Soviet economic system were the predominance of heavy industry, a moribund agriculture, the disproportionate size of the military-oriented economy, industry and infrastructure designed with no concern for profitability or efficiency, and finally, pernicious bureaucracy which controlled the centralized system of command economy.

An attempt to tackle all these issues through a radical "**shock therapy**" was the initial goal of **Yegor Gaidar**, Yeltsin's Prime Minister in 1992. His most important aims included:

**Liberalization** of prices to restore the allocative function of the market;

**Stabilization** of currency to control inflation, assure affordable interest rates and a manageable budget deficit;

**Internationalization** of the economy by lowering trade barriers, subsidies, elimination of export licenses, opening up to trade and investment;

**Structural reform** with privatization, breaking of state monopolies, and building stronger ownership rights.

Gaidar was unable to adhere to this program of reforms due to the opposition from the Duma and from the managers of the threatened state sectors. The overall aims of his program were to be preserved over the next years, but neither the pace nor the radical reach of his initial proposals were maintained.

### Questions and Issues:

What was the role of the international financial institutions in Russia? More than in any other transition economy, the role of the International Monetary Fund, and to a lesser extent, of the World Bank, have come under heavy political criticism both in Russia and in the West. While its participation in stabilizing the Russian currency and streamlining Russia's fiscal policy has been crucial, the IMF and its loans have also been blamed for reducing the financial pressure on the Russian government to continue a strong pace of reforms. The issue of international and U.S. assistance programs in the Former Soviet Union in general is the topic of a growing number of articles and books, reflecting continuing questions about the successes and failures of economic reforms in Russia.

**Suggested Reading:** N. Davies, N. Woods, "Russia and the IMF," *International Affairs* (1/1999), Janine Wedel, *Collision and Collusion: The Strange Case of Western aid to Eastern Europe* (St. Martin's, 1998).

### Privatization

The process of privatization in Russia was and remains a monumental task which involves shifting one of the world's biggest economies from state to private ownership. It has been a chaotic, poorly managed, and opaque process, whose economic and political fall-out remain among the chief problems in Russia.

Privatization in Russia occurred in two distinct phases. The first phase relied on a system of vouchers which were issued to all citizens of the Russian Federation and entitled them to a share in privatized enterprises. This process led to dispersed ownership and buying-out of shares; as a result, control of most privatized entities remained in the hands of their management.

Between 1995 to 1998, the cash-strapped Russian government reverted to selling shares in the most valuable, state-owned enterprises in order to raise revenue. However, due to a high proportion of inside deals (look above at the section on the oligarch/party of power alliance before the 1996 presidential election) many industrial assets were sold at very low prices, or even in exchange for cash loans to the government (the shares-for-loans program). By 1997, intensifying competition between the FIGs for control of the remaining assets erupted into public scandals and mutual accusations of inside deals; as a result, the government improved the transparency of the process, opened it to foreign participation, and raised the prices of auctioned assets. The pace of privatization has slowed down since 1998 due to the financial and banking collapse.

### **Questions and Issues:**

What are the assessments of the "shock therapy" and privatization programs in Russia?

Both reform programs have become targets of criticism in Russia and increasingly in the West for their lack of transparency, inability to build political and popular support, and above all, for insensitivity to their social impact. While valid, these criticisms must apply to the "gradualists" who controlled Russia's economic policies since 1993 as much as to Gaidar and other proponents of radical reform.

**Suggested Reading:** J. Blasi, M. Kroumova, *Kremlin Capitalism: Privatizing the Russian Economy* (Cornell, 1977); Anders Aslund, "Economic Reform vs. Rent Seeking" in *Russia After Communism*, ed. A. Aslund, M. Olcott, (Carnegie Endowment, 1999).

### **Main Economic Actors**

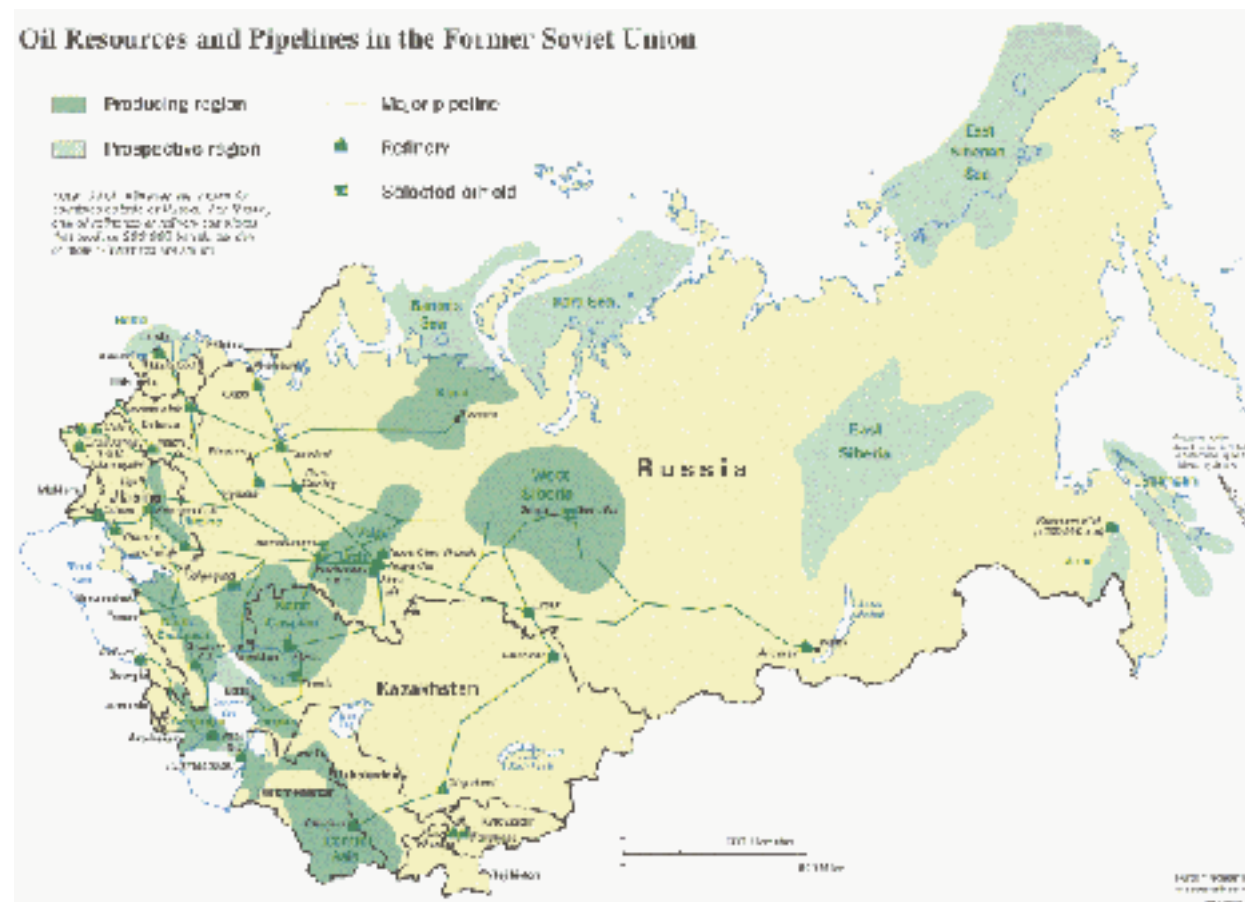

#### **Energy Industry**

Russia's exceptional endowment in natural resources helps it account for 10% of world's proven reserves of oil (and 10% of world's production of oil); 30% of world's production of natural gas, and 10% of hard coal. In addition, relatively few enterprises control the extraction and transportation of energy resources. For this reason, Gazprom (which owns production sites as well as all gas pipelines), Lukoil, and a handful of other energy producers play a disproportionate role in the Russian trade and economy.

By contrast, the huge coal mining sector remains in profound crisis, due to inefficiency, lack of investment, and physical deterioration of plants.

## Extraction Industry

Statistics for Russia's metal and mineral industries are almost as impressive as in the energy sector. Russia holds 14% of world's iron ore and 15% of the non-ferrous ores. Production is even more concentrated: Norilsk Nickel produces about 1/3 of world's nickel and 40% of its platinum. The diamond giant Almazay Rossii-Sakha controls 25% of world production. The collapse of domestic demand for these metals and minerals has led to sharply increased exports abroad.

## Manufacturing

The manufacturing base in Russia remains energy-intensive, technologically backward and heavily skewed toward defense industries. Many enterprises have become competitive (especially in the better-capitalized auto industry and in arms manufacturing), but for the most part they continue the pattern of value-subtracting production. In the wake of the August 1998 collapse of the ruble, some areas of light industry (food and paper processing) have been able to benefit from export substitution, providing a brighter spot in the industrial landscape of Russia.

## Construction

Chronic housing shortage has been a staple of Soviet life. The pent-up demand for housing construction has been hampered however by a slow privatization of the construction companies. By 1997, privately-held companies accounted for 48.7% of the construction industry. Nonetheless, the building booms that have touched Russian cities, most notably Moscow, make construction industry one of the better positioned sectors in Russia.

## **Financial Services**

The first non-state banks were formed in 1988 as the so-called cooperatives. In the early 1990's, during the prolonged triple-digit inflation, these banks experienced explosive and poorly regulated growth, reaching the number of 2,500 by 1994. Most of them began having difficulties after Russia's currency was stabilized and easy speculative profits ended. The devaluation and default of August 1998 further wrecked the sector, forcing more than half the banks into liquidation. The restructuring of the banking sector is to take place under the supervision of the Russian Central Bank and the new Agency for Restructuring Credit Organizations.

## **Agriculture, Forestry and Fishing**

The legacy of Soviet collectivization is an inefficient, mismanaged and undercapitalized agricultural sector, still completely dependent on state support. Land reform has been stalled in the Duma (land still cannot be treated as normal commodity in Russia). Meanwhile, the area under cultivation continues to shrink, and yields on major crops have declined: for instance, the output of grain declined by 59% (1990-98), that of potatoes by 29%. The harvest of 1998 has been the worst year yet. Under such circumstances, any attempt to streamline the subsidies and reward financial success in the sector has had to be put on hold for political reasons.

After a decline in production, the forest-product industry is in much better position due to a healthy growth in the export of timber, cellulose and paper.

## **Structural Challenges:**

In the wake of the 1998 financial collapse, the Russian economy has shown stronger growth as a result of weak ruble and historically high prices of oil. Underlying structural problems remain to be solved.

Among them are:

**Unreformed industrial sector:** inefficient, value-subtracting enterprises are subsidized, bankruptcies not enforced; investments is sorely lacking;

**State budget and fiscal policies:** despite cuts in social sectors, federal budget remains too large in relation to the GDP;

**Tax code:** inconsistent and unfair tax code promotes evasion, poor tax collection remains a grave fiscal problem for the government;

**Barter and non-payment** among enterprises: barter has reached 50% among Russian enterprises, 40% in their tax payment; such de-monetization of the economy is highly inefficient and builds additional debt.

**Business environment:** corporate governance is not transparent, ownership rights are often unclear and difficult to protect legally; this is one of the chief obstacles to increased direct foreign investment in Russia;

**Shadow Economy:** is growing as recovering enterprises and individuals seek to evade punishing taxation; this also includes a sizable proportion of strictly illegal activities.

## Society

### Health and Demographic Trends

The Russian Federation faces a serious demographic crisis. The combination of low birthrate (8.6 per 1000 in 1997) and high mortality rate (13.8 per 1000 in 1997) have raised the specter of a precipitous decline in Russia's population (the population has declined from 148.7 m in 1992 to 147.1 m in 1999). The roots of this crisis clearly reach back to the Soviet era, but its specific causes have been properly documented and studied only after 1991. In particular, scholars following demographic and health issues in Russia point to such factors as the falling life expectancy of males (58 in 1999, due to alcohol and tobacco-related deaths, heart disease, and cancer), worsening reproductive health of women (which contributes to higher infant mortality and poor health of the newborns), and high rate of infertility and/or abortion. A combination of severe environmental pollution, poverty and deterioration of health and social safety systems have all been blamed for these alarming trends.
