United States Department of State

*Washington, D.C. 20520*

Case No.: 200701753

**MAR 25 2010**

I refer to your letter dated March 11, 2007 regarding the release of certain Department of State material under the Freedom of Information Act (Title 5 USC Section 552).

We searched for and reviewed the self study guides that you requested and have determined that all except one of them may be released. They are on the enclosed disc. One of the guides is being released with excisions.

An enclosure provides information on Freedom of Information Act exemptions and other grounds for withholding material. Where we have made excisions, the applicable exemptions are marked on each document. With respect to material withheld by the Department of State, you have the right to appeal our determination within 60 days. A copy of the appeals procedures is enclosed.

We have now completed the processing of your case. If you have any questions, you may write to the Office of Information Programs and Services, SA-2, Department of State, Washington, DC 20522-8100, or telephone us at (202) 261-8484. Please be sure to refer to the case number shown above in all correspondence about this case.

We hope that the Department has been of service to you in this matter.

Sincerely,

*for* Margaret P. Grafeld, Director  
Office of Information Programs and Services

Enclosures:  
As stated.

**63934 Federal Register/Vol. 69, No. 212**  
**Rules and Regulations**

Subpart F – Appeal Procedures

§171.52 Appeal of denial of access to, declassification of, amendment of, accounting of disclosures of, or challenge to classification of records.

- (a) *Right of administrative appeal.* Except for records that have been reviewed and withheld within the past two years or are the subject of litigation, any requester whose request for access to records, declassification of records, amendment of records, accounting of disclosure of records, or any authorized holder of classified information whose classification challenge has been denied, has a right to appeal the denial to the Department's Appeals Review Panel. This appeal right includes the right to appeal the determination by the Department that no records responsive to an access request exist in Department files. Privacy Act appeals may be made only by the individual to whom the records pertain.
- (b) *Form of appeal.* There is no required form for an appeal. However, it is essential that the appeal contain a clear statement of the decision or determination by the Department being appealed. When possible, the appeal should include argumentation and documentation to support the appeal and to contest the bases for denial cited by the Department. The appeal should be sent to: Chairman, Appeals Review Panel, c/o Appeals Officer, A/GIS/IPS/PP/LC, U.S. Department of State, SA-2, Room 8100, Washington, DC 20522-8100.
- (c) *Time limits.* The appeal should be received within 60 days of the date of receipt by the requester of the Department's denial. The time limit for response to an appeal begins to run on the day that the appeal is received. The time limit (excluding Saturdays, Sundays, and legal public holidays) for agency decision on an administrative appeal is 20 days under the FOIA (which may be extended for up to an additional 10 days in unusual circumstances) and 30 days under the Privacy Act (which the Panel may extend an additional 30 days for good cause shown). The Panel shall decide mandatory declassification review appeals as promptly as possible.
- (d) *Notification to appellant.* The Chairman of the Appeals Review Panel shall notify the appellant in writing of the Panel's decision on the appeal. When the decision is to uphold the denial, the Chairman shall include in his notification the reasons therefore. The appellant shall be advised that the decision of the Panel represents the final decision of the Department and of the right to seek judicial review of the Panel's decision, when applicable. In mandatory declassification review appeals, the Panel shall advise the requester of the right to appeal the decision to the Interagency Security Classification Appeals Panel under §3.5(d) of E.O. 12958.

## The Freedom of Information Act (5 USC 552)

### FOIA Exemptions

- (b)(1) Withholding specifically authorized under an Executive Order in the interest of national defense or foreign policy, and properly classified. E.O. 12958, as amended, includes the following classification categories:
  - 1.4(a) Military plans, systems, or operations
  - 1.4(b) Foreign government information
  - 1.4(c) Intelligence activities, sources or methods, or cryptology
  - 1.4(d) Foreign relations or foreign activities of the US, including confidential sources
  - 1.4(e) Scientific, technological, or economic matters relating to national security, including defense against transnational terrorism
  - 1.4(f) U.S. Government programs for safeguarding nuclear materials or facilities
  - 1.4(g) Vulnerabilities or capabilities of systems, installations, infrastructures, projects, plans, or protection services relating to US national security, including defense against transnational terrorism
  - 1.4(h) Information on weapons of mass destruction
- (b)(2) Related solely to the internal personnel rules and practices of an agency
- (b)(3) Specifically exempted from disclosure by statute (other than 5 USC 552), for example:
  - ARMEX Arms Export Control Act, 22 USC 2778(e)
  - CIA Central Intelligence Agency Act of 1949, 50 USC 403(g)
  - EXPORT Export Administration Act of 1979, 50 App. USC 2411(c)(1)
  - FSA Foreign Service Act of 1980, 22 USC 4003 & 4004
  - INA Immigration and Nationality Act, 8 USC 1202(f)
  - IRAN Iran Claims Settlement Act, Sec 505, 50 USC 1701, note
- (b)(4) Privileged/confidential trade secrets, commercial or financial information from a person
- (b)(5) Interagency or intra-agency communications forming part of the deliberative process, attorney-client privilege, or attorney work product
- (b)(6) Information that would constitute a clearly unwarranted invasion of personal privacy
- (b)(7) Information compiled for law enforcement purposes that would:
  - (A) interfere with enforcement proceedings
  - (B) deprive a person of a fair trial
  - (C) constitute an unwarranted invasion of personal privacy
  - (D) disclose confidential sources
  - (E) disclose investigation techniques
  - (F) endanger life or physical safety of an individual
- (b)(8) Prepared by or for a government agency regulating or supervising financial institutions
- (b)(9) Geological and geophysical information and data, including maps, concerning wells

### Other Grounds for Withholding

- NR Material not responsive to a FOIA request, excised with the agreement of the requester

# ANGOLA

## A Self-Study Guide

GEORGE P. SHULTZ NATIONAL FOREIGN AFFAIRS  
TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The **Self-Study Guide: Angola** is intended to provide U.S. government personnel in the foreign affairs community with an overview of important issues related to Angolan history, geography, politics, economics, culture, religion, media, and international relations. The guide should serve an introductory self-study resource. The topic is far too complex to be covered in depth using only the text in this guide. The reader is encouraged to explore the questions and issues introduced using the internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the internet or in Foreign Service Institute or Main State Libraries.

The first edition of this guide was prepared by Dr. William Minter, senior research fellow at Africa Action in Washington, D.C. The views expressed in this guide are those of the author and attributable sources and do not necessary reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final edits to the draft study submitted by Dr. Minter. All sources used for graphics and extended quotes are public domain, from sites that

explicitly say "can be used for non-profit or educational use," or are from the author's own publications for which the author owns the copyright.

This publication is for official educational and nonprofit use only.

### Capsule Chronology

**Early First Millennium** - settlement of Angola by Bantu-speaking peoples.

**1483** - First Portuguese contact with Kongo kingdom.

**1485-1550** - First sugar plantations established in São Tomé and Brazil, using slaves from Angola.

**1550-1600** - Kongo kingdom weakened by slave trade and war.

**1576** - Foundation of Luanda.

**1617** - Foundation of Benguela

**1624-1663** - Reign of Queen Nzinga of the Ndongo kingdom, one of the most famous of Angolan leaders who resisted Portuguese control.

**1641-1648** - Dutch temporarily occupy Luanda and Benguela.

**1650s to 1830s** - The slave trade and associated conflicts dominate the history of Angola, their impact extending farther and farther inland from the coast.

**1830s to 1880s** - Transition from slave trade to trade in other goods, including ivory, rubber and wax. Gradual expansion of Portuguese control inland from the coast.

**1880s to 1917** - Portuguese complete their military conquest of Angola.

**1884-1885** - Berlin Conference at which European powers decided how to divide up Africa.

**1926** - Coup establishes dictatorship in Portugal, which lasts until 1974, under António Salazar from 1932 to 1968.

**1956** - Foundation of the Popular Movement for the Liberation of Angola (MPLA).

**1957** - Foundation of Union of Peoples of Northern Angola (UPNA), that became the National Front for the Liberation of Angola (FNLA) in 1962.

**1966** - Foundation of the National Union for the Total Independence of Angola (UNITA)

**April 25, 1974** - Coup overthrows dictatorship in Portugal.

**January 15, 1975** - Alvor Accords signed for coalition government and transition to independence.

**November 11, 1975** - Angolan independence declared.

**May 31, 1991** - Bicesse Accords signed.

**September 29-30, 1992** - Multiparty elections mandated under Bicesse Accords held with international observation. MPLA wins parliamentary majority, and President dos Santos wins a plurality barely short of a majority. Runoff is not held as UNITA President Savimbi decides to return to war.

**November 20, 1994** - Lusaka Protocol with new peace plan signed.

---

## Maps

The best reference maps can be found in *Atlas Geográfico*, published by the Angolan Ministry of Education with Swedish assistance in 1982. There are also a number of on-line maps available from international agencies, including maps of the current humanitarian situation. A good place to start to search for these is the Relief Web map centre: <http://www.reliefweb.int>

This map, courtesy of [www.theodora.com/maps](http://www.theodora.com/maps), used with permission, shows the position and principal topographical features of Angola.

The major river coming in from the coast south of Luanda is the Cuanza. The river flowing into Zambia in the far east is the Zambezi, which flows to the Indian Ocean on the other side of Africa..

The map on the next page shows the provinces into which Angola is divided.

### **Angola's Provinces**

See also the map from the United Nations in the Geography section below.

---

## History

### Pre-Colonial

As early as 1,000 years ago, Angola was inhabited by peoples speaking Bantu languages, engaged in agriculture with iron tools and trade over long distances. Before the Portuguese arrived on the coast in the 16th century, African states included the Kongo kingdom and Mbundu kingdoms inland from Luanda. Ovimbundu kingdoms arose later on the central plateau.

Among leaders prominent in early Angolan history were King Afonso I of the Kongo and Queen Nzinga of the Mbundu kingdom of Matamba. In the 16th century King Afonso adopted Christianity, but his efforts at a constructive relationship with Portugal were frustrated by the slave trade. In the 17th century Queen Nzinga resisted Portuguese influence for decades.

King Afonso's exchanges of correspondence with his Portuguese counterparts are among the earliest diplomatic records of the contact of sub-Saharan Africa with Europe. In 1526, in a letter to King Manuel, he deplored the effect of the growing slave trade on his kingdom:

You should know that our kingdom is being destroyed in many ways. These are the fruit of excessive freedom given by your officials and representatives to men and merchants who come here and set up stores with goods and many things which we have forbidden. These they spread throughout our kingdom and domains in such abundance that many of our vassals, whom we had in our obedience, no longer obey. All this does great harm not only to the service of God, but also to the security and peace of our kingdom and state. ...

Many of our subjects so covet the rewards and good of your kingdom ... that in order to satisfy their greed they set upon free men ... and sell these to white men in our kingdom ... And as soon as these are bought by white men, they are ironed and branded with fire and taken to be embarked. If then they are caught by our guards the whites allege that they have bought [these captives], though they cannot say from whom ...

Quoted in Basil Davidson, *In the Eye of the Storm*, pp. 73-74.

The Portuguese soon established control over the port cities of Luanda and Benguela, but they did not conquer most of the country until the late 19th century. The dominant feature of European-Angolan relations until the late 19th century was the slave trade, mostly to Brazil. It is estimated that approximately one-third of the slaves transported across the Atlantic left from the ports of Angola and the adjoining Congo region to the north.

Historian Joseph C. Miller provides a comprehensive survey of the slave trade from Angola in *Way of Death* (1988), tracing the economics and political structure of the trade which linked Angola to the markets in Brazil, the traders from Portugal and the British financiers who provided the financial backing for the complex multi-continental trading system. His work explores the dynamic interaction between violence and trade as rulers were sold guns on credit and then required to repay their debts with human beings whose capture the guns helped secure. The result, in Miller's words, "a moving frontier zone of slaving violence," based on "a political economy in which warlords drew strength from imported slave mercenaries and guns, and in which indebted patrons, elders, and dependent gentry stocked immigrant slaves against future payments on forced loans from powerful merchant princes." Rulers and peoples who resisted were defeated or marginalized, as the system favored those most able to provide the commodity most in demand at the coast: slaves.

Inside Angola the "slaving frontier" moved steadily inland, bringing with it war. In the 16<sup>th</sup> and 17<sup>th</sup> centuries the sources of slaves were primarily within a 200 kilometer distance from the coast at Luanda, and a lesser distance inland from Benguela. In the 18<sup>th</sup> century the primary source of supply moved hundreds of kilometers further northeast of Luanda, and onto the central plateau inland from Benguela. By the 19<sup>th</sup> century the supply line stretched halfway across the continent.

As seen in the previous section, the common reference to over four centuries of Portuguese colonialism is misleading. Before the end of the 19th century, colonial rule was confined to only a few enclaves. At independence in 1975 Portuguese domination was, for the most part, less than a century old, coinciding with the European occupation of the African interior by Britain, France, Belgium and Germany.

Colonial Portuguese rule in the 20th century was characterized by rigid dictatorship and exploitation of African labor. Despite theories of cultural assimilation, racial hierarchy prevailed. After World War II many new Portuguese settlers arrived, making up 5% of the population by the early 1970s.

According to Portuguese colonial theory, African natives (*indígenas*) could exempt themselves from forced labor by assimilating Portuguese culture and in effect becoming Portuguese. A small number succeeded in meeting the tests of income, education and life style to gain this *assimilado* status. Others, even if not assimilated, were incorporated into the colonial order with some relative advantage over other Angolans: chiefs used in administration, overseers, teachers in mission schools, semi-skilled workers in the ports or administration.

In the 1950s and 1960s the economy grew rapidly, with coffee, diamonds and then oil. But Portugal denied the possibility of independence, claiming that Angola was an integral part of the Portuguese nation. Angolan nationalists were not allowed to organize openly.

### *Nationalism and the Struggle for Independence*

In Luanda, the capital, the tradition of Angolan resistance to colonialism had deep roots. The relatively large number of African assimilados and mestiços provided the context for a 19th-century protest journalism, criticizing Portuguese colonialism and the way in which even educated Africans were shoved aside by new Portuguese settlers. As in other colonial contexts, most Africans with Western education accepted aspects of the colonial system. But Angolan nationalists of the 1950s and 1960s looked back to a literary tradition stressing Angolan identity and protest. It is no accident that the first president of Angola, Agostinho Neto, was also a renowned poet.

The MPLA, led by Neto, grew from this Luanda milieu, coming together as a clandestine organization at the end of 1956. Harassed by police repression, with key leaders in prison or in exile, MPLA supporters launched an armed assault on political prisons in February 1961. In response white vigilantes killed hundreds of Africans in the city's suburbs. The following month an even bloodier conflict erupted in northern Angola. Rebels linked to

the Union of Peoples of Angola (UPA, later to become the National Front for the Liberation of Angola - FNLA) killed hundreds of white settlers in the coffee plantation zone, and targeted mestiços and Africans from other parts of Angola as well. The Portuguese retaliated with vigilantes and troops, inflicting a death toll estimated at up to 50,000.

The Angolan war for independence thus exploded suddenly. It caught both the colonial authorities and the nationalist leaders unprepared. The divisions evident in that initial eruption persisted throughout the thirteen years of struggle against the Portuguese -- and beyond.

UPA had been formed in 1957 in the Belgian Congo as the Union of Peoples of Northern Angola. Led by Holden Roberto, it relied primarily on Kikongo-speaking northern Angola and on exiles in the former Belgian Congo. In the early sixties UPA also recruited student exiles from other areas of Angola, including Jonas Savimbi and his colleagues from the central plateau. The common thread was suspicion of nationalist currents in Luanda, embodied in exile by the MPLA.

Disunity was further fostered by the exile environment. Most found exile in the former Belgian Congo, itself beset by internal strife and the first major Cold War confrontation in Africa. By the end of 1963 the MPLA had been totally excluded from Congo (Kinshasa) and had set up a headquarters across the river in the former French Congo (Brazzaville). Congo (Kinshasa) was controlled by leaders supported by the United States, principally through of the Central Intelligence Agency (CIA). Holden Roberto's movement, now called the National Front for the Liberation of Angola (FNLA), was also being subsidized by the US. The US goal was clearly to build barriers against Soviet-tied radicalism, by isolating the MPLA in particular.

Disunity and geopolitical maneuvering thus undermined prospects for a sustained guerrilla offensive against Portuguese rule. The FNLA continued actions in parts of the north, as did pockets of MPLA guerrillas northeast of Luanda. The MPLA opened up a front in Cabinda from its Brazzaville base. Zambia's independence permitted the MPLA to launch an eastern front in 1966, which for some years was the most significant military threat to the Portuguese in Angola.

But there were divisions in the east as well. Breaking with the FNLA in 1964, Jonas Savimbi two years later founded the National Union for the Total Independence of Angola (UNITA), appealing primarily to Umbundu-speakers and others from southern and eastern Angola. He installed a small guerrilla operation in eastern Angola, in the same area as the MPLA. UNITA failed to win any open support from African states, but boasted of self-reliance and espoused Maoist rhetoric. By 1971, Savimbi agreed with the Portuguese military to concentrate their military efforts against the MPLA. When the Portuguese coup came in 1974, the MPLA was also suffering internal strife, exacerbated by the difficulties of guerrilla war and of coordination among exile leaders dispersed among different African capitals.

The scenario that followed in 1974-76 played out both the legacy of Angolan divisions and the Cold War dynamics that had previously focused on the Congo. In January 1975 the three movements and Portugal signed an agreement in Alvor, Portugal, calling for a transition government and elections leading to independence in November 1975. But the agreement could only have worked if all the parties, both Angolans and their external allies, agreed on power sharing and a process of confidence-building, or if some external force were neutral enough and powerful enough to hold the ring for peaceful competition. None of these conditions was met.

With Portuguese authority in Angola tattered, none of the three contenders for power held a decisive advantage. The MPLA had perhaps six thousand troops, most recent recruits. The FNLA enjoyed military superiority, with roughly twenty thousand conventional troops and the backing of Zaire. Politically, the positions of the Angolan movements roughly followed the stereotypes attached to them, although the labels oversimplified a complex and changing reality. The FNLA maintained its political base among Kikongo-speaking Angolans, including exiles in Zaire. It offered a program that combined populist rhetoric with promises of security for free enterprise, asking that its leadership be accepted into the emerging bourgeoisie along with white Angolans.

The MPLA offered a socialist vision tempered with pragmatism. Its major assets were popular support among the Kimbundu-speaking population of Luanda and its hinterland, along with a policy of nonracialism and nontribalism that gave good prospects of wider national support. It won loyalty among urban workers, students and middle-level government employees around the country, of all races and linguistic groups. Most whites saw the MPLA as a Marxist nemesis, although the participation of white and mestiço leftists in the movement also exposed it to 'black power' critiques from the other two movements.

UNITA, characteristically, had a less defined program. It sought to rally eastern and southern ethnic groups, while appealing to whites on the basis of opposition to the MPLA's radicalism. More than its rivals, it relied on loyalty to a charismatic leader--Jonas Savimbi. In 1974-1976, in military terms it was by far the weakest of the three movements.

## **War and The Search for Peace**

With virtually no interlude of peace, Angolans moved from the war against colonialism to wars that primarily pitted Angolans against each other. But the ups and down of war were decisively influenced by outside actors as well. The character of war shifted dramatically from period to period: open conventional battles in 1975-76, low-scale guerrilla warfare until 1981, massive South African intervention combined with logistical support for UNITA in the 1980s, an interval of peace in 1991-1992, UNITA assaults on inland cities in the aftermath of the 1992 election, a period of neither war nor peace along with nominal implementation of the Lusaka peace accord from 1994 to 1998, and a return to guerrilla warfare after the collapse of the peace accord from 1999 to the present.

The following sections provide brief summaries of these periods. For more detail on 1975-1992 see among other sources William Minter, *Apartheid's Contras* (1994). On the aftermath of the 1992 election see Human Rights Watch, *Angola: Arms Trade and the Violations of the Laws of War Since the 1992 Elections* (1994). For the period 1994 to 1998 see Human Rights Watch, *Angola Unravels: The Rise and Fall of the Lusaka Peace Process* (1999). For an overview of the war from 1975 to 1996, see Victoria Brittain, *Death of Dignity* (1998). A somewhat longer and very well informed account through 1996 available on-line is Karl Maier, "Orphan of the Cold War" at: <http://www.unhcr.ch/refworld/country/writenet/wriago.htm>

Two eloquent descriptions in English are, for 1975, Ryszard Kapuscinski, *Another Day of Life* (1987) and, for the late 1980s and early 1990s, Karl Maier, *Angola: Promises and Lies* (1996).

## **1975-1976**

In January, only a few days after the Alvor Agreement, the US decided at the White House level to allocate \$300,000 to support the FNLA. On January 31, the transitional government was sworn in. Within days, localized conflicts between the MPLA and FNLA began again. On February 13, the Luanda office of the MPLA splinter group leader Daniel Chipenda was attacked by the MPLA. Chipenda then joined the FNLA, and became its assistant secretary general.

Two months later, the FNLA launched a military assault on MPLA positions in Luanda, casting the die for a military resolution of the conflict. Popular mobilization and the arrival of Eastern bloc arms enabled MPLA forces to expel the FNLA from the Luanda area in July, after a series of major confrontations. By all accounts the major external involvement in this period was that of Zaire. Mobutu's regime, encouraged by the US, served as patron of the FNLA, supplying funds, arms and even troops. The MPLA had a small number of foreign military advisors, mostly left-wing Portuguese but also a few Cubans. Cuba had been assisting the MPLA since the mid-1960s.

As the conflict in northern Angola continued in 1975, a new area of confrontation opened up in the south, bringing in not only UNITA but also South African and Cuban troops. Savimbi joined Holden Roberto in receiving US support, upped to \$14 million for the two movements in July. On August 14, the transitional government established by the Alvor Agreement officially collapsed.

The US also encouraged South Africa to join the anti-MPLA military alliance. South Africa sent troops into Angola in August, linking up with forces of former MPLA dissident Daniel Chipenda and with UNITA. In October, South Africans, mercenaries and troops from FNLA and UNITA joined in a well-equipped mechanized column of more than three thousand troops to launch a lightning strike aimed at reaching Luanda before the November 11 independence day. Like the US, the South African government hoped to keep its involvement secret.

The decision to escalate and involve the South Africans was opposed by some US diplomats, who doubted it could be kept secret and predicted it would backfire by discrediting the US-backed Angolan groups and provoking further escalation. Indeed, the operation did unravel with amazing rapidity. By independence day, thousands of Cuban troops were arriving in response to Neto's plea for help. The Soviet Union provided arms sufficient to equip the MPLA and the Cubans – by some estimates over \$200 million – and by mid-December the anti-MPLA coalition had lost the military initiative.

As the US scrambled to revive the flagging fortunes of its allies with CIA funded infusions of mercenaries and additional arms, the political cover for intervention was collapsing. Revelations of South African involvement tipped African opinion decisively in favor of the MPLA. In the US congressional opposition to the intervention culminated in a December amendment barring further US covert aid in Angola. New escalation was blocked. Pretoria, feeling betrayed, withdrew its armored columns in March 1976.

## **1976-1988**

During this period the pace and extent of the war was closely tied to the fate of Namibia, where South Africa continued to resist independence despite a 1971 international court ruling that its control was illegal. South Africa justified its military intervention in Angola and support for UNITA by citing Angolan support for the guerrillas of the South West African People's Organization (SWAPO). US-led diplomatic initiatives during this period relied on "linkage" between South African concessions on Namibia and the presence of Cuban troops in Angola. This period ended with December 1988 agreements among South Africa, Angola and Cuba laying out timetables for UN-supervised independence elections in Namibia and withdrawal of Cuban troops from Angola.

From the South African troop withdrawal in March 1976 until 1981, the scale of war in Angola was relatively small. Despite two revolts in Zaire in 1977 and 1978, which involved Congolese exiles in Angola and were put down with the intervention of Western troops, Angola and Zaire moved toward detente. Large numbers of supporters of the FNLA, including FNLA troops, returned to Angola; many were integrated into the Angolan army. UNITA under Savimbi withdrew into the countryside, continued small-scale guerrilla attacks, and began to rebuild its military strength with Western-encouraged support from Morocco, Saudi Arabia, and South Africa..

The war escalated significantly in the 1980s, however, after the independence of Zimbabwe in 1980 shifted the focus of Africa's push for liberation to Namibia and South Africa itself. By that time as well, South Africa President P. W. Botha, who took office in September 1978, had begun the massive expansion of his "total strategy" of direct and indirect military intervention in the region. And the political climate had changed in Washington as well with the coming to power of the Reagan administration.

The war in Angola during this period was effectively at least two different wars, a conventional war in Angola's southernmost provinces, and guerrilla war that extended throughout the country.

The conventional war involved primarily South African troops on the one hand, who invaded and occupied large portions of southern Angola, and Angolan government troops on the other, who periodically tried to advance into UNITA and South African-controlled areas. UNITA participated in these conventional battles as well, but in a clearly secondary role to their South African patrons. For the Angolan government, Cuban troops provided rear base defensive support for the most part, but also decisively intervened in the largest confrontations in 1987- 1988.

In that set of battles – mostly around the small town of Cuito Cuanavale – South African airpower was countered by effective Angolan and Cuban defenses so that it could no longer provide effective protection to South Africa's long-range artillery and troops. Most analysts think that this was one of the decisive factors convincing the South African government that it was better to concede a timetable for the independence of Namibia. Namibia's independence in 1990 marked the end of conventional South African military intervention in Angola.

The guerrilla war during this period was also different from the classic image of a guerrilla war, given that the supply, communications and training for UNITA were provided on a large scale by South Africa, in addition to assistance from other UNITA allies and CIA support following repeal of the congressional prohibition on such aid in 1985. UNITA's "base area" around Jamba in southeastern Angola had little indigenous population and was adjacent to and integrated into South African military operations in northern Namibia. UNITA guerrilla units further afield could count on a motorized supply line by rugged trucks in much of the country and on airdrops in areas further to the north and east. In the second half of the 1980s supply lines through Zaire as well became much more significant.

As amply documented in reports by human rights organizations, both UNITA and Angolan government forces were guilty of massive abuses of the civilian population, with a strategy that involved clearing out areas in "enemy" territory and transporting the population to areas considered under "friendly" control. UNITA also systematically targeted civilian transport and all sectors of the economy. Use of landmines was widespread by both sides, but particularly developed by UNITA as a means of targeting agricultural production as well as military targets. Another strategy widely used by UNITA was the kidnapping of foreign workers, most of whom were walked for weeks or months through the bush, and later released at press conferences in Jamba.

## **1989-1992**

*Reference:* Bicesse Peace Accord (in English)

<http://www.incore.ulst.ac.uk/cds/agreements/pdf/ang1.pdf>

The 1988 agreements ended conventional South African military involvement. But South Africa, in violation of the agreement, continued to supply UNITA by air and through Zaire. Disappointing Angolan government hopes, the U.S. continued its military support

for UNITA. In its last stage of disintegration, the Soviet Union nevertheless continued to supply Angola with weapons for defense. The war continued. In May 1991, after two years of talks, the Angolan government and UNITA signed a treaty providing for a cease-fire, troop demobilization and multi-party elections. In the September 1992 elections, judged free and fair by UN observers, the MPLA won 54% and UNITA 34% in the legislative race. President José Eduardo dos Santos, of the MPLA, fell just short of 50% in the presidential contest, while UNITA leader Savimbi had 40%. [See more details below, under Politics.]

After Savimbi refused to accept the election results, Angola returned to war. UNITA, aided by supplies from Zaire and South Africa (then still under the apartheid regime), launched offensives around the country. The government responded, expelling UNITA from Luanda while armed civilians took reprisals against UNITA supporters. In 1993-94, UNITA controlled much of the countryside and some inland cities. Bitter fighting raged in most areas, causing casualties of an estimated 1,000 people a day and physical damage to both towns and countryside far above that of the previous two decades of war. At this stage, UNITA had the clear military advantage, as it had maintained its forces in war-readiness while the government army deteriorated and the new integrated "national army" was only a fiction.

Critics charged that inaction by the U.S. and the United Nations, which failed to protest UNITA's failure to disarm before the election or to react quickly when the war resumed, was in part responsible for the catastrophe. In May 1993, the United States finally recognized the elected Angolan government. In September 1993 the UN imposed an arms and fuel embargo on UNITA. New peace talks began in Lusaka, Zambia, in November 1993. A year later came a new peace treaty, including troop demobilization in exchange for a share of ministries and provincial governorships for UNITA.

## **1993-2000**

*Reference:* (1) For the period 1995 to the present, the monthly Angola Peace Monitor provides a summary of events and occasional references to other documents. It is available on-line at <http://www.anc.org.za/angola> and <http://www.actsa.org/apm>

(2) Lusaka Peace Accord (in English)

[http://www.embaixadadeangola.org/frames/ac\\_paz/ac\\_paz.htm](http://www.embaixadadeangola.org/frames/ac_paz/ac_paz.htm)

Given the recent character of this period and the greater availability of current sources in news accounts and on the web, this study guide provides only the briefest summary here. For more detail consult the references cited above, and, for analyses from different point of view, start with the sources on the next page.

The bottom line is that, despite much discussion on the "lessons" to be learned from the failure of the Bicesse Accords, and international investment in a much more costly UN operation, the second peace process also collapsed. International opinion shifted

decisively against Jonas Savimbi's UNITA army, which was preserved intact despite repeated announcements that demobilization had been completed. Sanctions on UNITA's key diamond exports (see Economics section below) were imposed as the process foundered in 1988 rather than at the beginning to facilitate implementation of the agreement. And Angolan popular disillusionment, already profound with respect to the internal belligerents, was also focused on the outside actors whose strategies for bringing peace were beset with an apparently incurable tendency to mistake words for reality.

### **Issue for Further Study**

The reasons for the successive failures of peace agreements in Angola in the 1990s are, as one would expect, hotly disputed both by the internal and external parties to the war and by those who have played some role in mediating seemingly endless rounds of negotiations (the U.S., paradoxically, at times played both the roles of belligerent and mediator). The issue is far too complex for treatment in this short study guide. Those who are interested should seek out sources in a good research library, as the sources available on-line are very limited.

Several diplomats who have written their own accounts of this period. Margaret Anstee, who headed the UN operation in Angola (UNAVEM II) during implementation of the Bicesse Accords, wrote *Orphan of the Cold War : The Inside Story of the Collapse of the Angolan Peace Process, 1992-93* (London: St. Martin's Press 1996). Ambassador Paul Hare, who now heads the U.S.-Angola Chamber of Commerce, and was U.S. special representative to the peace process from 1993 to 1998, wrote *Angola's Last Best Chance for Peace: An Insider's Account of the Peace Process* (US Institute of Peace, 1998).

There is no comprehensive analytical study to date that makes good use of Angolan as well as international sources. The Human Rights Watch report *Angola Unravels* is the most accessible and well-informed factual summary. Shorter analytical studies that are available include C. Knudsen, A. Mundt and I. W. Zartman, "Peace Agreements: The Case of Angola" (<http://www accord.org.za/publications/casestudy/2000-01/contents.htm>); William Minter, "Lessons to be Learned from the Angolan Elections: Reliable Guides or Misleading Judgements," in Rukhsana Siddiqui, *Subsaharan Africa in the 1990s* (Westport, CT: Praeger, 1997). A very well informed and carefully reasoned comparative analysis is Thomas Ohlson, *Power Politics and Peace Policies: Intra-State Conflict Resolution in Southern Africa* (Uppsala University Department of Peace and Conflict Resolution, 1998). An analysis and advocacy statement by US and European non-governmental organizations on implementation of the Lusaka process can be found at:

## Geography

Located in southwestern Africa, Angola is roughly square in shape, with a maximum width of about 800 miles (1,300 kilometers), Angola covers 481,354 square miles (1,246,700 square kilometers), including the Cabinda enclave, which is located along the Atlantic coast just north of the Angola-Congo (Kinshasa) border. Angola is bordered to the far northwest by Congo (Brazzaville), to the north and northeast by Congo (Kinshasa), to the east by Zambia, to the south by Namibia, and to the west by the Atlantic Ocean. There are 1,025 miles of coastline.

The coastal plain in Angola is narrow, mostly between 30 to 90 miles in width. From the plain the land rises sharply in a series of escarpments, leading to the interior plateau which forms the eastern two-thirds of the country. Even before the recent war-related population movements which have swelled Angola's coastal cities, the density of population in most of the country was sparse and highly uneven, with densities above 40 persons per square kilometer only in the rural areas inland from Luanda and on the central plateau around Huambo and Bié. Vast portions of eastern and southern Angola have densities of less than 5 persons per square kilometer, and the most remote area in the southeast was known in colonial times as "terras do fim do mundo" (lands at the end of the earth).

Urban population growth has been extremely high due to war-related displacement, and some estimates indicate over 50% in urban areas, as compared to only 14% in 1970. Luanda's population is estimated at over 3 million, or approximately one-fourth of the population of the country. Another 3 million are estimated to be living in other major cities of Lobito, Benguela, Huambo, Lubango, Malanje, and Uíge.

The Benguela Railway, which crosses Angola, served in colonial times as the outlet for trade of the Belgian Congo's copperbelt. But international traffic was suspended entirely due to the war in the early 1980s, and in the early 1990s the segment linking the interior to the coast were also cut. An Italian company began rehabilitation of the line in 1997.

With the continuation of war, road traffic is also precarious in Angola. Passenger as well as commercial traffic and relief deliveries depend on costly air transport. The map of the domestic routes of TAAG (the Angolan national airline), shown on the next map, is revealing both of the country's focus on the capital and of the remoteness of areas beyond the provincial capitals served by the airline..

The most recent color version of this map can be found on-line, in PDF format, at:

<http://www.un.org/Depts/Cartographic/map/profile/angola.pdf>

Angola has a tropical climate with a marked dry season. Most of the coast, except in the far north, is very dry. Vegetation over most of the country is savanna grasslands with scattered trees.

Angola's central plateau has significant agricultural potential. Indeed, Angola is potentially one of the richest agricultural countries in Africa. In the mid-1970s it was self-sufficient in foodstuffs and exported a surplus of maize. Yet the war and the failure to reestablish economic connections between city and countryside mean that this potential is not yet exploited. For the 2000/2001 marketing year, for example, the FAO estimated domestic cereal supply at 540,000 tons, leaving import requirements at 753,000 tons.

#### **Subject for Further Study: Cabinda**

With less than one percent of Angola's land area and less than two percent of its population, the enclave of Cabinda produces between 60 and 70 percent of the country's total oil production. It is separated from the rest of the country by the Congo River and by a narrow strip of land which is part of Congo (Kinshasa), and is bordered on the north by Congo (Brazzaville).

Cabindan nationalists seeking independence for the territory have had significant support in the territory since the 1960s, but have been divided into numerous factions and had little success in gaining support for their cause internationally or in gaining greater benefits for the people of Cabinda from either the colonial or post-colonial government of Angola.

FLEC (Front for the Liberation of the Enclave of Cabinda) was founded from a merger of several other groups in 1963, and small groups of guerrillas associated with the group have been sporadically active since then. FLEC successfully called for a boycott of the 1992 elections, and only 12% of potential voters participated. The Catholic bishop of Cabinda was quoted as saying that over 95% of Cabindans would vote for independence if offered the choice.

Without that option – sure to be rejected by any Angolan government – Cabindans currently give little active support either to FLEC or to the government. The provincial government receives 10% of the oil taxes paid by Cabinda Gulf. Cabindans occupy most

top posts in the provincial government, and a few Cabindans are prominent in the national government.

However, negotiations between the Angolan government and some FLEC factions have not led to a stable settlement. Nor have oil revenues been applied to significant economic development in the province. Most observers see continuation of low-scale violence as the most likely prospect.

For a short background article about Cabinda in French, see

## Politics

The politics of the post-colonial period was, and still is, fundamentally shaped by the unresolved war. Yet the issues that ostensibly defined the conflict – Cold War, the liberation of Southern Africa, and party ideologies – are little help in defining the real differences between the parties. Moreover, while party allegiances hold some relationship to ethnic and regional divisions, as seen in the 1992 election results, that too would be a highly misleading prism for understanding Angolan politics. The tangled history of the war, the extent to which political alliances are linked to private business and personal connections, and the widespread disillusionment of Angolans with all political leaders allow for no simple interpretation of the current political scene.

While no third party has effectively challenged the preeminence of the principal protagonists of the war, the Popular Movement for the Liberation of Angola (MPLA) and the National Union for the Total Independence of Angola (UNITA), neither group is a coherent unity. MPLA party loyalists are only a small fraction of those who trace their political roots to that movement. The UNITA heritage is disputed by the army following Jonas Savimbi in the bush, others who participate in parliamentary politics under the UNITA label, and still others who have joined the government while not abandoning their political heritage. The most popular political option in Angola is almost certainly "none of the above."

In formal terms the political system under the MPLA prior to the Bicesse peace agreement of 1991 was a one-party state on a Marxist-Leninist basis. In practice party membership was small and bureaucrats who were not party members also had substantial influence. Factionalism within party and state, together with the inefficiency inherited from the colonial bureaucracy, often paralyzed policy formation and implementation. The first national People's Assembly was elected in 1980, but had relatively little authority. Although the strongest influence within the state was the presidency, in practice even the president had to conciliate many internal factions.

While it is little discussed in almost all accounts of Angola, the abortive coup of May 1977 led by MPLA dissident Nito Alves, in which key party officials were killed by the abortive coup-makers, and unknown numbers were executed in the wake of the coup's failure, was decisive in solidifying a climate of suspicion and fear within party ranks, which still has profound effects in Angolan society.

UNITA's administration in zones under its control was also based on Marxist- Leninist principles, although for public relations purposes the movement exalted a commitment to Western democratic values. Control was far more consistently implemented than in zones controlled by the government, and was highly centralized in the person of Jonas Savimbi. Internal rivals and protest were ruthlessly repressed, although little information about these purges leaked to the outside world until the late 1980s.

Constitutional reforms enacted by the government during 1991 provided for a national assembly and a president, each elected by direct suffrage on a secret ballot. While separate rights and duties were defined for both branches, the constitution retained a strong role for the president. Details of the electoral system were specified in an electoral law passed in April 1992.

The electoral system provided for presidential and legislative votes during the same two-day period, with voters qualified by registration cards distributed earlier in the year. It was administered by a National Electoral Commission chaired by a former FNLA supporter and including representatives of all parties. All parties were entitled to have representatives at every level down to the local polling station; both the MPLA and UNITA were present in almost every station. A second round was required in the presidential contest if no candidate gained more than 50%. Five legislative seats were allocated to each province, for a total of 70; within each province these were allocated proportionately by the D'Hondt method. In addition, 130 were allocated on the basis of the national vote.

During the election campaign, none of the new small parties, or the historical FNLA, managed to gain much support, despite popular disillusionment with the government and fear of UNITA. (The oft-cited slogan in Luanda was "MPLA thieves, UNITA murderers." Most people may have voted against rather than for, but felt they did not really have a third choice.) Election campaigning was relatively free and open in the cities, with all parties having equal access to free television time. Freedom of movement was difficult in the countryside, however, particularly in areas under UNITA control. Peace treaty provisions mandating demobilization of troops and formation of a new national army were delayed on both sides, and systematically evaded by UNITA. During the campaign President dos Santos projected an image of peacemaker, while Savimbi's belligerent style shocked many Angolans.

The election itself was conducted in an orderly fashion, with observers of the rival parties present at polling stations, and a total of almost 800 international observers from the UN, and other private and public delegations. The observers generally rated the process free and fair, and there was a high turn-out of over 90%. The MPLA won 54% in the

legislature, as compared with 34% for UNITA. President dos Santos, of the MPLA, fell just short of 50%, compared with 40% for UNITA leader Savimbi, requiring a run-off. UNITA rejected the results as fraudulent, however, and Angola returned to war.

For Angolans of all political persuasions, the election was a time of hope, and its aftermath a profound disillusionment. Although many saw it as a vote for peace rather than an exercise in choice of leadership, and in rural areas many probably doubted the secrecy of the ballot and voted for those they feared the most, the commitment to make the process work at local levels was impressive. Although the results revealed the expected regional concentration of votes, substantial minorities in almost every province voted against their presumed "natural" allegiance, as shown in the table of provincial votes on the next page.

### **Presidential Election Results, September 1992**

Candidate	Votes	Percent of Total
José Eduardo dos Santos (MPLA)	1,953,335	49.57
Jonas Malheiro Savimbi (UNITA)	1,579,298	40.07
Alberto Neto (PDA)	85,249	2.16
Holden Roberto (FNLA)	83,135	2.11
Honorato Lando (PDLA)	75,789	1.92
Luís dos Passos (PRD)	58,121	1.47
Five other candidates (<1% each)	105,596	2.68

- MPLA - Popular Movement for the Liberation of Angola
- UNITA - National Union for the Total Independence of Angola
- PDA - Angolan Democratic Party
- FNLA - National Front for the Liberation of Angola
- PDLA - Democratic Liberal Party of Angola
- PRD - Democratic Renewal Party

In April 1997, after repeated delays, the elected UNITA deputies took their seats in the national assembly, and a Government of National Unity and Reconciliation (GURN) was officially established.. However, Savimbi refused to participate, maintained his army, and the war resumed full-scale by the end of 1998. Almost all of UNITA's historical leaders other than Savimbi had by that time opted for the city rather than the bush.

While the dominant political discourse continued to reflect the historical bipolar division between the MPLA and UNITA, and the failure to resolve the war continued to dominate the political agenda, a wider range of political views was gradually reflected in the diverse political origins of government and army personnel, in the official "opposition" within the national assembly, and, most significantly, in the cautious emergence of independent press and civil society organizations, including those linked to the churches.

### **Legislative Election Results, by Province and Party**

Province	% MPLA	% UNITA	% Others	Total Votes
Cunene	87.64	4.58	7.78	102,958
Kwanza Norte	86.26	5.62	8.12	118,493
Malanje	78.04	11.00	10.96	238,247
Cabinda	77.62	16.09	6.29	9,595
Kwanza Sul	71.90	19.96	8.14	306,098
Luanda	70.66	18.75	10.59	751,865
Bengo	69.91	17.61	12.48	78,085
Namibe	66.65	24.14	9.21	63,700
Lunda Norte	65.52	7.46	27.02*	118,578
Huíla	63.73	25.97	10.30	385,925
Moxico	58.49	24.06	17.45	113,437
Lunda Sul	53.81	3.87	42.32*	69,335
Uíge	51.88	30.20	17.92	262,474
Benguela	37.36	53.58	9.06	486,451
Zaire	31.66	25.58	42.76**	63,922
Kuando Kubango	21.75	71.54	6.71	122,735
Huambo	15.52	73.40	11.08	394,107
Bié	13.75	76.97	9.28	266,260
All provinces	53.74	34.10	12.16	3,952,265

\* The PRS won 15.66% in Lunda Norte and 41.55% in Lunda Sul.

\*\* The FNLA won 31.37% in Zaire province.

The civil society initiatives that have emerged since 1998 involve a variety of groups and coalitions, and key participants have a conscious strategy of maintaining openness and flexibility rather than creating another "party" seen as seeking power for itself. There are common themes, however, illustrated in the statement excerpted below, one of the earliest of such public statements.

## **PEACE THROUGH DIALOGUE**

Luanda, April 2, 1999

The Angolan Group of Reflection for Peace

(Daniel Ntoni Nzinga - Reverend; Carlinhos Zassala - Professor of Agostinho Neto University; Filomeno Vieira Lopes - Economist; Francisco Tunga Alberto - General Secretary, FONGA; Rafael Marques - Journalist)

[full text available at <http://www.africapolicy.org/docs99/ang9906a.htm> ]

The time has come to address, in the public fora, the promotion of dialogue as the only way to seek adequate solutions to end the Angolan holocaust. Such a dialogue must be inclusive, in regards to all the groups and different aspirations of civil society, and throw away the idea that without foreigners Angolans are incapable of talking to each other, and devise their own way to achieve national reconciliation. War, contrary to what has been announced by the government, will not end with war. It will continue to devastate the Angolan people and their poor material belongings. ...

On the other hand, it seems to be rather difficult to talk about peace and peace initiatives, without first addressing the issue of justice. The act of acting out of the truth of the facts. ...

Concerning the current situation of Angola, a lot has been said and it is enough to generate an internal wave, a wave in favour of the defenceless victims that are slaughtered every day throughout Angola. The least Angolans can do for themselves, at this point, is to abandon fear and challenge the terror so as to call upon the reason of power holders, who do not hold the truth, to answer for the Angolan holocaust.

It is unjustifiable for Angolans, who are still sensible, to continue lamenting the fate of their sisters and brothers from Malange, Kuito, Maquela do Zombo, Andulo and Bailundo, as if it was a foreign holocaust.

The sentiment being forged in Luanda, the capital of Angola, whereby all the decision making and social definition centres are concentrated, must not continue to scorn what is happening elsewhere in the country.

We have been witnessing, with deep concern and sorrow, incitation to hatred, to death penalty of those labelled as enemies, and thus, we see an Angolan sowing hatred in the chest of other Angolan, on behalf of a power that does not serve the people.

In mainly the rural areas, civilians are being killed just for the sake of having been left alive by one of the belligerents, under the accusation of being informers of the enemy. Those who sometimes refuse to join any of the warring parties often also face the same destiny.

Since the resumption of the all out war, last December, more than 700,000 people have been forced to leave their homes and are living as displaced in inhumane conditions, relying exclusively on the mercy of the humanitarian industry. The dead are no longer being counted, neither the civilians nor soldiers while material loss is also being unaccounted for. ...

War has not been serving the Angolan people. They do not want war, regardless of its motivation, because this is a war against themselves and in which they are the only defeated ones.

No one has the right to talk on behalf of the people to carry out this civil war, either with the argument of defending the sovereignty or of resistance. People have not been consulted.

It no longer matters to point the finger to who is doing the war for the power and/or for enrichment or the maintenance of individual privileges. Therefore, it is important to gather together all the civil society sensibilities, eager for peace and social justice in order to converge the utmost public interests and peaceful struggle for a common and just cause. To end with the hatred and political intrigue which foments the division and destruction of the Angolan people.

As a reminder, successive peace processes for Angola have failed one after the other due to the lack of political willingness from both government and UNITA, in tune with the immediate interests of the International community in Angola.

There is still an opportunity for the resolution of the civil war: the recourse to civil society is the only surviving factor to set the fundamentals for overcoming the war. There is an urgent need for the intervention of civil society, with its own and autonomous voice, with the absolute denial of the war idea and as the main factor of harmonising all interests, humanly justifiable, which exist in society.

The absolute promotion of an internal dialogue, and with every local stakeholder, is the only way to seek adequate solutions towards the end of the Angolan holocaust.

Since Alvor, passing by Mombaça, Gbadolite, Bicesse, Addis Ababa, Abidjan up to Lusaka, the peace talks for Angola have always been mediated and pressed by foreigners.

As Angolans, we have to abdicate the alarms of our intolerance which leads us to wars, and then having to wait for outsiders, supposedly neutral, to mediate our crisis.

Angolans must be able and bear the responsibility for developing an internal capacity for mediating the conflict, from the bottom to the top. We must show our political and civic maturity in the resolution of the conflict's causes which generate violence among us.

It is time to join hands, unite mind and hearts, and to work together towards the common goal: PEACE.

Among other related sources, see also the web site for the Catholic-initiated Congresso pela Paz:<http://www.ecclesia.pt/destaque/angola.htm>

---

## **Economy**

### **The Post-Colonial Economy**

In 1973, the last and best year for Angola's colonial economy, oil and coffee contributed 30% and 27% respectively to export earnings. One-third of the coffee production came from African farmers. Maize production was over 700,000 tons, including over 100,000 tons for export. Diamonds and iron ore also provided significant export earnings. But this system, which showed almost 8% growth rates between 1960 and 1974, still depended on administrative force for most agricultural production, and on Portuguese manpower for key economic functions in every sector except oil. Production on Portuguese-run farms provided 86% of agricultural production. Portuguese bush traders provided the commercial link tying peasants to markets. Settlers provided both markets and manpower for a growing industrial sector.

Once this economic structure collapsed, in the wake of the settler exodus and war of 1975-76, it was never restored or replaced on more than a piecemeal basis. Efforts to do so were impeded by the war and by ineffective policies, but also because there was an easily available alternative that was not affected by the settler departure. Oil production, which began in 1968 and grew rapidly, was under the control of large multinational companies--not the Portuguese. Independent Angola worked closely and cooperatively with the global oil industry, and oil revenues provided the essential resources both for defense and for feeding the burgeoning urban population. By the mid-1980s oil consistently provided over 90% of export earnings and over 50% of state revenues. Much of the rest of the economy, with the exception of diamond production, fed indirectly from oil revenues. The countryside sank into neglect.

It is an oft remarked irony that the economy of an allegedly Marxist state depended almost entirely on Western big business. And there was nothing uniquely socialist about the national oil company Sonangol, which took charge of the country's oil resources in 1976. The petroleum law of 1978 established joint ventures with private companies and production sharing agreements by which foreign companies served as contractors to Sonangol. More than twenty companies, including American, French, Italian, Japanese and Brazilian, were involved by the mid-1980s. The largest was still Cabinda Gulf, which became a subsidiary of Chevron in 1984.

The largest oil fields were off Cabinda, but other sites, mostly offshore, extended south of the Zaire River and down the Angolan coast to the Namibian border. Oil production rose steadily, from under 200,000 barrels a day in 1980 to more than 500,000 barrels a day in the early 1990s. New oil investment averaged over \$400 million a year in the 1980s, and even after the return to war in 1992 oil companies were bidding actively for exploration permits. In 1993, the Economist Intelligence Unit noted that Angola had "an excellent track record for exploration drilling successes and amicable industry-government relations." The easy money from expanding oil production was enough to compensate for falling world oil prices. While oil prices dropped from a high of almost \$39 a barrel in January 1981 to \$26 a barrel in 1985, Angolan oil revenues still grew from \$1.3 billion to \$1.9 billion in the same period. Even when prices dropped below \$20 a barrel after 1985, revenues continued to climb. But with rising payments due on earlier debt, balance of payments deficits mounted, and available funds for imports dropped drastically. The

shock both led to internal plans to move in a free market direction and accelerated efforts to reach agreement on membership in the World Bank and IMF.

The pattern, however, had been set. Under ideal conditions, perhaps, much of the oil revenue would have been invested in rehabilitating the shattered transport infrastructure, and in providing tools and consumer goods for sale to peasant farmers in exchange for food supplies for the cities. Instead, revenues went overwhelmingly for defense and to import food and other consumer goods for the cities. Despite high defense expenditures, secure land transport to rural areas became ever more elusive as conflict mounted in the 1980s. The most productive areas for grain were in the central plateau and further south in Huíla. But urban population was concentrated in Luanda, linked to provincial capitals mainly by expensive air transport.

The difficulties were real: war damage, the lack of commercial networks, and the inefficiency of state structures set up to fill the gap. But the failure was compounded by the fact that money for imports was available. Feeding the cities with imports, arguably a necessary short-term expedient, became a structural feature of the economy. The countryside became no more than an afterthought. The enclave effect of the oil sector, common to any less developed oil-producing country, was multiplied both by the disappearance of the colonial trading networks and by insurgent attacks aimed precisely at breaking the remaining links between city and countryside. Nor was there any strong countervailing force within the government to campaign against the path of least resistance: imports paid for with oil money. Little was left over for productive investment in development of any kind.

As a result, the vast majority of rural dwellers reverted to subsistence production. State farms, along with a handful of private commercial farms, continued to produce export crops but at drastically lower production levels. Abandoned Portuguese farms fell to state control, but in practice much of their land was appropriated by individual peasant families. Commercialized production of domestic staples stagnated at less than 10% of pre-independence levels. For most peasants, there was no opportunity to sell a surplus, and few goods to buy if they did sell. The state had only a fraction of the capacity needed to administer the enterprises, and only about 3% of the government budget was allocated to agriculture.

As long as they were not directly touched by war, peasant families were largely left to their own devices. But they had little access to outside goods, hampering even subsistence production. In the mid-1980s maize seed inputs were less than 10% of the quantity required. The supply of hoes also consistently fell short. Families increasingly turned to more resilient crops such as cassava, millet and sorghum. Tens of thousands fled war and sought opportunities for survival in the cities. The urban population grew from 18% of the total in 1975 to 31% in 1986. By 1990 over half Angola's population was estimated to be living in urban areas.

Although only about half of industrial enterprises came under state control at independence, leaving a substantial private sector, industrial production also plummeted.

Output in 1977 was only 18% of that in 1973. By 1985 output had recovered, but only to 54% of the 1973 total, constrained by lack of management and shortage of raw materials. Urban consumers therefore not only lacked domestic agricultural supplies, but faced shortages of manufactured goods. Even light industries such as textiles and shoes fell significantly short of recovering 1973 production levels.

Oil monies were sufficient to maintain a minimum level of imports for towns, but little more. Urban consumer demand was not satisfied, there was only a trickle left over for rural areas, and essential inputs for both agriculture and industry were in short supply. There was no hope of addressing the fundamental issues unless the link between city and countryside was restored, so that the food deficit would be met by domestic production and peasants would have income and goods to purchase from the market. State policies did not cut the link initially--that was the result of the first stage of war in 1975-76 and the Portuguese exodus. Nor is it clear that alternate free-market policies could have restored the links under war conditions. But there is no doubt that state policies failed to address the crisis. The survival mode of dependence on oil-bought imports, allocated by an inefficient bureaucracy, was one with no ready exit.

Price-controlled goods sold in state shops provided only minimal supplies to the urban population, with access pegged to employment. Salaried employees (*responsáveis*) had access to somewhat better supplies, and a small number of top officials enjoyed comfortable living standards on official rations. But, in the words of the Economist Intelligence Unit, the price control system was "so extensive and rigid, yet also so disorganized and incoherent, that it produced extreme distortions of relative values." The result was a burgeoning parallel economy, illegal and unregulated but tolerated by the state, where free enterprise and corruption ran rampant. Average citizens had to resort to the parallel economy for survival, and entrepreneurs in and out of state employment found opportunities for large profits. The goods came from resale at higher prices of purchases from state shops, from products allocated to workers at their place of work and, increasingly, from theft and fraud. Everyone had to have an *esquema* (scheme) for combining complex barter of goods and favors with transactions in Angolan kwanzas and hard currency.

Behind the facade of a state-run economy, therefore, existed another economy highly responsive to market forces. But it was only partially related to production, as peasants and rural traders found transport possible and urban vendors hawked small-scale crafts. Instead it consisted for the most part of recirculating imported goods, while draining off the energies of the work force from their formal employment. Those who made money in this free-wheeling environment included not only those with political clout but also significant numbers of Kikongo-speaking entrepreneurs returned from Zaire and Umbundu-speaking merchants from the central plateau.

Oil both saved the economy from total collapse and postponed the search for other solutions. With falling world oil prices, Angola introduced a series of economic adjustment plans between 1983 and 1990. The plans envisaged adjustments in exchange rates and prices, curbs on imports, encouragement for rural producers, scaled-back

government payrolls and a reduced role for state planning. But only the 1990 program, a year after Angola joined the World Bank, was implemented in more than a fragmentary way. Angola's balance of payments turned consistently negative beginning in 1986, with a \$300 million deficit, and was running an annual deficit of over \$900 million by 1989.

### **Current Economic Situation: Oil and Diamonds**

Angola's economy is dominated by oil, which accounted for 88% of the \$5.3 billion of export earnings in 1999. Almost all the remaining 12% export value came from diamonds, with all other commodities coming to less than half of one percent.

Angola is sub-Saharan Africa's second largest oil producer behind Nigeria. Almost all production is in Cabinda or offshore, adjacent to Cabinda as well as along the coast north and south of Luanda. Production has quadrupled since 1980, averaging 766,000 barrels a day in 1999.

While the current production comes from shallow-water wells, deep-water wells are expected to provide an increasing fraction of production in coming years, with the oil industry expected to invest as much as \$5 billion a year in new exploration and production.

In addition to royalties, foreign companies pay a "signature bonus" for the right to operate a given exploration block. In 1998-1999, for example, BP Amoco, TotalFinaElf and ExxonMobil paid a total of \$900 million for rights in deepwater blocks 31-33. Depending on such bonuses and on the international price of oil, revenue from oil may vary widely from year to year.

In 1999, oil revenues paid to the government accounted for 87.2% of government revenue and 42.4% of gross domestic product. However, these figures may even underestimate the importance of oil given that much of oil revenue coming to the Angolan national oil company Sonangol does not appear in the government budget.

Accountability for oil revenue has been a major issue both for international financial institutions and for non-governmental critics of the Angolan government.

<http://www.hrw.org/press/2000/06/ango-0623-back.htm>

Unlike oil, Angola's diamonds are not located offshore, but in the interior. Most are in the remote Lunda Norte province adjacent to Congo (Kinshasa). Control over the diamond fields has fluctuated with the fortunes of war between the Angolan government and UNITA. The diamond fields, which include both alluvial diamonds and kimberlite pipes, are infamous for their "Wild West" security environment, in which private enterprise smuggling coexists with areas controlled by the government or UNITA..

Recorded exports have increased significantly in recent years, with greater government control over key fields. In 1995 exports worth \$168 million were recorded, rising to \$629 million in 1999.

In the war in the 1990s, diamond exports provided the most important source of funds for UNITA's arms purchases. In 1998, Global Witness estimated that UNITA gained \$3.7 billion from the diamond trade between 1992 and 1998. The international community was slow to act, however, and sanctions on illegal diamond exports were only imposed in 1998. Since then, despite violations, the sanctions are generally regarded as having weakened UNITA's military capacity. Along with the role of diamonds in fueling the wars in Sierra Leone and in the Congo, the Angolan case has helped spark an international debate on "conflict diamonds."

### **Current Economic Situation: Overview**

[For the most recent statistical information on the economy, see the staff reports from the International Monetary Fund, available on the IMF web site. The September 2000 report is at: <http://www.imf.org/external/pubs/cat/longres.cfm?sk=3686.0>]

The latest economic plans for Angola have been formulated in close coordination with the International Monetary Fund, in terms of an agreement for monitoring by Fund staff. Non-governmental critics of government policy agree with the international financial institutions in the call for transparency of government finances, but are also critical of the hardship for ordinary Angolans entailed by macroeconomic adjustment measures.

Despite its current income from oil exports and new capital investment in oil, Angola still consistently runs deficits both on its current account and its overall balance of payments. In 1999, for example, a positive current trade balance of \$2.1 billion and capital account balance of \$1.6 billion were offset by a negative balance on service and transfer payments of \$3.9 billion. Angola's long-term external debt at the end of 1999 was \$8.8 billion, 43% of it in arrears.

Inflation has been reduced from its crushing levels of the mid-1990s, but was still high and widely variable - 107% in 1998, 248% in 1999, and 325% in 2000. For all but a small minority of Angolans, economic survival requires extraordinary creativity and reliance on the informal sector.

According to the United Nations Development Program, in 1999 sixty percent of Angola's population were below the poverty line. According to the same source, between 1995 and 1999, the income of the richest 10 percent of families increased by 43 percent compared to a reduction of 59 percent for the poorest families. (Cited in FAO Assessment Mission, 17 May 2000, at

<http://www.fao.org/gIEWS/english/alertes/2000/SRANG500.htm>)

Despite its oil wealth, Angola was ranked 146 out of 162 countries in the UNDP's Human Development Report for 2001.

The humanitarian situation continued to be one of the worst in the world, with large parts of the country even inaccessible to relief operations, as shown in this UN map from May 2001.

---

## Languages and Literature

As with almost all statistics concerning Angolan population, the numbers given for languages spoken in Angola rely on data that is decades out of date, and should be

taken with a great deal of caution. The "ethnic map" often seen derives from one prepared on the basis of the 1960 census, and has been recycled and updated since then without the benefit of a new nation-wide census (the 1970 census did not ask the question about language, and the 1983 census results are available only for Luanda and a few other areas).

The rough proportions are as follows. The largest language groups, all closely related Bantu languages, are Umbundu, spoken by the Ovimbundu people of the central plateau (approximately 36 percent), Kimbundu, spoken by the Mbundu people of Luanda and its hinterlands (approximately 26 percent), and Kikongo, spoken by the Bakongo people of the north (approximately 13 percent). Other Bantu languages include Chokwe, Cuanhama and Nhaneca-Humbe.

Population movement, particularly into urban areas, and the widespread use of Portuguese may have significantly altered these figures. A recent commentary notes the existence of many "pluri-ethnic" families. Particularly in urban areas, bilingualism in Portuguese and one or more African languages is common, as is the predominant use of Portuguese by people of diverse ethnic origins.

Despite the multiple conflicts afflicting the country, there is also a strong sense of national identity, or *angolanidade*. This is reflected in various aspects of culture, including dance, sculpture and literature. Literature, and poetry in particular, is closely associated with Angola's public culture, as illustrated in the extraordinarily high sales of books by Angolan authors published in the first years after independence by the Angolan Writers Union. As many as 20 books a year appeared, with some editions of 20,000 or more selling out in a few weeks.

Those interested should consult the books on Lusophone literature in the bibliography. A search on the web for "poesia angolana" or "literatura angolana" will also turn up a few excerpts, mostly in Portuguese. The novels of Pepetela, some available in English translation, are extremely popular in Angola and also recommended as accessible portraits of Angolan society.

Excerpted below, several poems by the first president of Angola.

### **Agostinho Neto**

Agostinho Neto, a medical doctor and first president of independent Angola, was also one of his country's most distinguished poets. He died in 1979. Many of his poems can be found in Portuguese on the web, or in collections of Lusophone African poetry. The most famous published collection is *Sagrada Esperança*, published in Angola by the Angolan Writers Union, and in English translation (*Sacred Hope*) by Tanzanian Publishing House and later by UNESCO. Below are brief excerpts from several of his best-known poems.

Amanhã  
entoaremos hinos à liberdade

quando comemorarmos  
a data da abolição desta escravatura

Nós vamos em busca de luz  
os teus filhos Mãe  
(todas os mães negras  
cujos filhos partiram)  
Vão em busca da vida - *Adeus à Hora da Largada*, 1957

Tomorrow  
we will sing songs of freedom  
when we celebrate  
the date this slavery ends

We are going in search of light  
your children Mother  
(All the black mothers  
whose children left them)  
are going in search of light - *Farewell at the Hour of Parting*, 1957

Latas pregadas em paus  
fixadas na terra  
fazem a casa  
Os farrapos completam  
a paisagem íntima  
A velhice vem cedo - *Civilização Ocidental*

Tins fixed to stakes  
driven in the earth  
make the house  
Rags complete  
the intimate landscape  
Old age comes quickly - *Western Civilization*

Aquí no cárcere  
a raiva contida no peito  
espero pacientemente  
o acumular das nuvens  
ao sopro da História  
Ninguém  
impedirá a chuva. - *Aqui no Cárcere*, 1960

Here in prison  
rage contained in my breast  
I patiently wait  
for the clouds to gather

blown by the wind of history  
No one can stop the rain. - *Here in Prison*, 1960

---

## Religion

Statistics of religious affiliation in Angola are highly uncertain. The 1960 census counted 51% Catholic, 17% Protestant and 32% other (traditional African religions). A web page dedicated to the Pope's visit to Angola in 1992 claims 59% Catholic, 12% Protestant, and 29% "animist," while a "World Church's Handbook" gives 29% Catholic and 41% "other Christian." Particularly in the peri-urban areas, small churches with no affiliation with major denominations have grown rapidly in recent years.

While the churches are seen as one of the important forces now working for peace and national unity, they also have a complicated relationship to the political conflicts of the late colonial and post-colonial periods. In the modern colonial period the Roman Catholic Church was the state church, and the hierarchy strongly endorsed the colonial dictatorship and the war against the independence movements. Protestant churches were strictly controlled, and suspected as disloyal. From the perspective of the far-right colonial regime, Protestantism was seen as virtually equivalent to Communism.

Among the lower ranks of the Catholic clergy, and particular among missionaries from other European countries, there was dissent to this position and some support for African nationalism. The Vatican as well symbolically took a different position when Pope Paul VI met with leaders of African liberation movements in 1970, including Agostinho Neto of MPLA. In the post-colonial period, with Africanization of the Catholic hierarchy in the country, different leaders within the Catholic Church have taken a range of stands on the country's internal conflicts.

The principal Protestant churches, founded by non-Portuguese foreign missionaries, had links with parts of the country corresponding with the three major nationalist movements, thus adding their own distinct overlapping strand to divisions within the country. The Baptists, with missionaries from Britain, had their closest links to the FNLA; the Methodists, with missionaries from the United States, their closest links to the MPLA; and the United Church of Christ, with missionaries from Canada and the United States, their closest links to UNITA.

Despite this historical background, however, it would be a serious mistake to use the links between ethnic background, religious background, and political position as fixed stereotypes. The churches are a significant social force of their own at grassroots level, and one of the most important components of popular Angolan opinion in favor of peace.

---

## **International Relations**

Like other Portuguese colonies, and like the Belgian Congo to its north, Angola as a modern territory was defined geographically by rivalries and compromises between larger powers that allowed small European countries to assume control over vast territories they lacked the capacity to govern. It is no accident that some of the most intractable post-colonial conflicts in Africa afflict these territories, which fell subject not only to their own internal divisions but also to multiple external forces.

Angola, moreover, is positioned in a fracture zone between central and southern Africa, vulnerable to geopolitical tremors from both directions. Added to the global Cold War and to the attraction of oil and diamond riches, these factors have created complex and indeed contradictory patterns of international relations.

### **The Regional Context**

At the regional level, Angola's post-colonial conflict was decisively affected by the first major Cold War battle in its neighborhood, which took place in Congo (Kinshasa) beginning in 1960. The failure of Angolan nationalists to achieve unity in their war against Portugal was at least in part due to the exile context in the Congo, where the U.S. Central Intelligence Agency and its client Joseph Mobutu promoted Holden Roberto's National Front for the Liberation of Angola at the expense of the more leftist Popular Movement for the Liberation of Angola.

In the 1975-76 war, this earlier lineup helped to determine the pattern of Cold War intervention at that time (see history section above). In the current period, Angola continues engaged in the complex divisions of its Central African neighbors, with UNITA making use of these countries as supply lines and channels for diamond sales and the Angolan government using its military forces to intervene decisively in the internal conflicts in both Congo (Brazzaville) and Congo (Kinshasa). These relationships involve a complex interaction not only of regional geopolitics but also of commercial rivalries, including foreign companies and state actors with interests in the oil wealth of the region.

Angola is also a part of southern Africa, but among the members of the Southern African Development Community it is the least integrated into the region in both economic and political terms. In contrast to Mozambique, with its economy closely linked to the English-speaking countries that surround it, Angola's significant economic ties are almost entirely outside the continent, to countries engaged in the oil sector or selling goods in exchange for Angola's oil revenues. Linguistic barriers, with French the most common second European language in Angola despite a new emphasis on English, still isolate Angola from the rest of the southern African region.

Thus, while the conflicts over the independence of Namibia and majority rule in South Africa led South Africa to decisive intervention in Angola from the mid- 1970s to the mid-1990s, the spin-off effects of southern African stability in the late 1990s has had more limited effects in Angola. Economic links with South Africa have grown, but the

pattern has resembled that of commercial deals with Angola's other external economic partners rather than effective collaboration for development. The relationship between the Angolan and the South African governments has often been tense, with not infrequent misunderstandings and suspicion from Luanda of the residual influence in Pretoria of UNITA's former military and commercial patrons. Relationships between Angola and Zambia have also been strained by charges over UNITA's use of Zambian territory.

In short, the regional context for Angola has provided little support for stability in Angola, and, in the case of the Congos, made its own large contribution to continued instability.

## **The Global Context**

From the beginning of the 1960s until the mid-1990s, Angola's history was decisively influenced by the Cold War context, as is spelled out in more detail in the history section above. The alliance of the recalcitrant Portuguese dictatorship with NATO in the 1960s and early 1970s, the complex international intervention in the key years of 1974-1976, the collaboration of Washington with Pretoria in sponsoring UNITA's war in the 1980s, and the moves toward a regional settlement in the late 1980s and early 1990s form one thread which has left its legacy long after the motivations of those involved have been decisively altered.

For more background on the period 1975-1992 in particular, see chapter 5, "The Cold War Connection," in William Minter, *Apartheid's Contras*. The views of a key U.S. policymaker (Assistant Secretary for African Affairs) can be found in Chester Crocker, *High Noon in Southern Africa* (New York: Norton, 1992)

Throughout this period, however, another thread was present which now seems to be dominant in Angola's external relations. That thread is, of course, oil, accompanied by the other commercial relationships which are associated with imports based on oil revenues. In this part of the picture, throughout the post-colonial period, even at the height of Cold War antagonism, Angola's key external partners have been the U.S. and France. Oil companies from other countries have also gained smaller stakes. Portugal, Brazil and other European countries have also played important roles in exports to Angola, with South Africa gaining a rising share in recent years.

With Angola predicted to surpass Nigeria as sub-Saharan Africa's primary oil producer, the external relations of the oil sector will likely continue to eclipse other considerations in Angola's external relations.

## **Key Oil Company Players in Angola**

### *Major Players*

Chevron, USA

ExxonMobil, USA  
TotalFinaElf, France/Belgium  
BPAmoco, UK/USA

## Angola on the Internet

As of 2001, there is less information from and about Angola available on the web than for many other African countries, in striking contrast to the wide variety of sources on the other major Portuguese-speaking country, Mozambique. What is available on Angola is primarily in Portuguese, and addressed to an Angolan rather than an international audience. Sites in Angola are heavily used, and may be very slow in loading. For web visitors in North America, consulting these sites in late afternoon or evening, when Angolan usage is at its low point, is the most recommended strategy.

Angola's leading commercial internet service provider and web portal is Ebonet (<http://www.ebonet.net>), which has news, background information and a wide variety of other features and links. Angonet (<http://www.angonet.org>), sponsored by the Canadian non-governmental organization Development Workshop, has information from Angolan and other non-governmental organizations.

# ARAB REPUBLIC OF EGYPT

## SELF STUDY GUIDE

**GEORGE P. SHULTZ  
NATIONAL FOREIGN  
AFFAIRS TRAINING CENTER**

School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

# **Self-Study Guide to the Arab Republic of Egypt**

The **Self-Study Guide: Arab Republic of Egypt** is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to Jordanian history, geography, politics, economics, culture, religion, media, and international relations. The Guide should serve an introductory self-study resource.

The topic is far too complex to be covered in depth using only the text in this Guide. The reader is encouraged to explore the questions and issues introduced, using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of this Guide was prepared by Dr. Louis J. Cantori, Professor of political science, University of Maryland, Baltimore county. The views expressed in this Guide are those of the author and attributable sources and do not necessary reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by Dr. Cantori.

All sources used for graphics and extended quotes are from the public domain, from sites that explicitly say “can be used for non-profit or educational use,” or are from the author’s own materials.

This publication is for official educational and nonprofit use only.

## EGYPT: CHRONOLOGY OF IMPORTANT EVENTS

### Ancient History

5000-304 BC Pharaonic Rule

### Foreign Rule

333-323 BC Construction of Alexandria  
525 BC-640 AD Ptolemaic, Roman, Byzantine Rule  
640 AD Arab Conquest  
1517-1914 Ottoman Rule  
1789-1801 Napoleonic Conquest  
1805-1849 Muhammad Ali  
1882-1914 British Control  
1914-1952 British Control and Interference

### Egyptian Rule

1919 Revolution Against British  
1922-1952 Egyptian Independence-Parliamentary Period

### Republican Egypt-Nasser

July 22, 1952 Egyptian Revolution Led By Free Officers Under Nasser  
1952-1954 Leadership Of Muhammad Naguib  
1952-1970 Presidency of Nasser  
July 26, 1956 Nationalization of the Suez Canal  
Oct. 29-Dec. 22, 1956 British, French, Israeli Invasion  
1958-1961 United Arab Republic(UAR) Egypt, Syria, Yemen  
1960 The Socialization Of The Economy  
September 1962 Egypt Intervenes In The Yemeni Civil War  
June 5, 1967 Israel Invades Egypt  
September 28, 1970 Nasser Dies of Heart Attack and Sadat Is President(October 15,1970)

### Republican Egypt-Sadat(1970-1981)

May15, 1971 “Corrective Revolution” –The Failed Coup  
July 1972 Soviet Advisors Ordered Out  
October 6,1973 Egypt Attacks Israel  
June 5, 1975 After Negotiations, Sadat Reopens The Suez Canal  
November, 1977 Sadat Visits Israel  
1979 Peace treaty with Israel  
October 6, 1981 Sadat Assassinated

Republican Egypt-Mubarak(1981- )

1982	Israeli Withdrawal From Sinai(1979 Peace Treaty)
1987	Second Elected Term
November, 1987	Arab Summit : Arabs Resume Relations With Egypt
1988	Egypt Rejoins Arab League
1991	Egypt Leads Arab Alliance, Iraqi War
1992	Third Elected Term
June, 1995	Attempted Assassination, Addis Ababa, Ethiopia
1999	Fourth Elected Term
2000	Parliamentary Elections
2001-2002	Intermediary Diplomatic Role In 2 <sup>nd</sup> Palestinian Intifada

## I. Preliminary

Unlike most such study guides, the present one does not present the important and complex country of Egypt in simple descriptive terms. Instead, the reader is asked to master a couple of interpretive concepts and these concepts then become the thread that is followed throughout. These concepts will not only lay bare the factors of stability and instability in Egyptian politics but they will also prove useful in the understanding of the politics of other Arab states.

The most striking feature of Egypt is the high degree of the unity of its geography, its ethnic make up, its culture and even to a certain degree its politics. This also explains its continuity of history and its stability. It also explains why it is said with some truth that practically anyone can rule Egypt.

It is also the argument of this study guide, however, that in fact Egypt is an example of a dual state. A dual state is one, which can be analytically divided into a political state on the one hand, and a social state on the other. The political state conforms to the conventional view of the state in terms of sovereignty, territorial boundaries, centralized executive authority, a ruling class, a national economy and an army. In the Middle East it is sometimes termed the mukhabarat or security state. It contains no more and probably less than twenty percent of the wealthiest of the population. It is this state that is engaged with in terms of foreign relations and US foreign policy.

The social state consists of the overwhelming numbers of the remainder of the population. To be sure, it consists of a hierarchy of classes such as peasants, workers, small landowners, small businessmen etc but it is not class divisions that are so important as are its group structures. These structures consist of the informal ones of family, peer group and high school/college/military academy graduating classes. Equally important are the formal ones reflecting the division of labor in society such as bar associations, trade unions etc. these

organizations carry out functions necessary for the maintenance of the state. They are in a licensed relationship to the political state in that there actually exists a law of organizations that stipulates the political quietism of these groups. In exchange, these groups are permitted to have a monopoly over these activities at a profit to themselves and as a refuge from the excesses of the authoritarian state. In the case of Egypt and many underdeveloped states, the political state does not penetrate the social state in terms of law or tax collection. It is also where the informal economy operates. It is this theme of the dual state that constitutes the theme of much of what follows. Related to this dualism, is also the controversy of whether Egypt is a “strong” state or a “weak” state. It can be said that the ability to sustain political order and stability makes it “strong” and its inability to develop, makes it “weak”.

## **II. Introduction**

**Unity.** The single most important thing to understand about Egypt is its unity. This unity is determined by the geography of being crammed into the spine of a single north-south river valley. This unity is also that of a single ethnic group, a single language of Arabic, a 90% Sunni Muslim population (approximately 10% of the population is Coptic Christian) itself without serious internal disunity and a common history stretching across millennia in stable epochs of long duration. In the 20<sup>th</sup> century this comes to cumulatively express itself in stable political rule and a deep, self-confident national identity.

**The Land.** In the third century BC, the Greek historian Herodotus noted that “The Nile is Egypt and Egypt is the Nile”. This remains the case today. The Nile originates 5000 miles to the south in Uganda and flows north towards Egypt where it stretches from its southern border with

Sudan northwards for 1500 miles to empty into the Mediterranean Sea. It represents a sliver of narrow green cultivation until it reaches Cairo where it then fans out into a delta possessing the richest agricultural soil on earth. In the delta, it is common to raise three crops a year on a single plot and to multiply this productivity further by planting different crops of different varieties and heights right next to each other. For all practical purposes, Egypt has no measurable annual rainfall so that its only source of water is this river.

The result of this reliance upon the river is that the country has mastered the management of a complex irrigation system for 7,000 years. One scholar has theorized that this has created a top down, politically authoritarian society that he terms a “hydraulic society “ similar to those of the Tigris and Euphrates rivers in Iraq, the Indus river in India and Yellow river in China.

**The People.** The people of Egypt at first glance appear to be as uniform as the factors of unity suggest. In physical terms they appear to have the physiognomy of the people of pharaonic inscriptions except that they are also the result of significant Arab infusions from the time of the Arab conquest of 644AD onwards. But then there is the ebony of the Nubian people south of Luxor stretching to Sudan who possibly predates the Pharaonic period. If this is not enough to dispel simple generalizations, then there are the people to the south of Cairo in the so-called Said or the “Saidi’s”. In Egyptian burlesque humor these are considered “country bumpkins” while in fact they are a nomadic people who came to Egypt perhaps in the 8<sup>th</sup> century from the Arabian peninsula. To this day, their social structure is that of the Bedouin lineage despite the fact their sedentary agricultural pursuits resemble those of the delta to the north of Cairo. It is said that even now they can trace family genealogies to present day Saudi Arabia. There is a story that one them as a labor migrant to Saudi Arabia showed up on a doorstep introduced himself as a cousin from 1000 years earlier! In fact their Arabic dialect is that of the Arabian peninsular and not that of Cairo e.g. the word for coffee is neither “gahwa”(classical) nor “ahwa”(Cairene) but is “gahwa”(Arabian peninsular).

**The Culture.** Egyptian culture in its musical, literary, poetry and cinematic aspects is looked upon with great pride by Egyptians and as worthy of emulation by other Arabs. Poetry is the main feature of Egyptian literary culture, but it is also the case that the first novel on the model of the Western format was written in Egypt prior to World War I. In all artistic and cultural forms, it is Egyptian versions of classical and modern culture that sets the example for other Arab peoples. As a result, even Egyptians at the most humble level of the society feel a strong sense of cultural pride. For example, when an American passenger speaking in Arabic expressed his admiration of Egypt to a taxi driver, the response was, “Yes, Egypt is the mother of the world”! This pride can become one of disdain as in the case of an Egyptian friend after seeing the film, “Lawrence of Arabia” declaring that he did not understand why an entire film should be devoted to a Bedouin i.e. a barbaric or Arab (Egyptian colloquial for Bedouin) people!

**History.** It would be too difficult in the short length of this self-study guide to sustain the thesis of the dual state in any detail and this is especially the case of the complex history of Egypt. At the same time however, some of its basic features are apparent even from the beginning of Egypt’s history. The first is the theme of unity already touched upon in the preceding text. This unity has two implications. The first is the relative ease with which the political state has been able to impose its authority on a homogeneous population. The second implication is that while the political state often consisted of foreign rulers who changed over time, the social state tended to remain stable and constant. One indication of this is the cumulative dialectical interpenetrating of cultural and religious traditions from one epoch to another e.g. the persistency of things pharaonic into the Greek and Roman periods and the synthesis of all into the period of Christianity and then Islam. This is so much the case that even today, the pharaonic language is preserved in the ritual of the Coptic Christian church and one is aware of the survival of pharaonic traditions in Islam e.g. the bearing of the image of the Muslim saint Abu Hagag by boat from side of the Nile to the other at Luxor, a ritual similar to one in the

ancient past when a pharaonic god was conveyed in the same way at the very same time of the year.

Throughout recorded history the civilization of the Nile Valley flourished as a result of a combination of plentiful water, good soil, and climatic conditions contributing to a long growing season. The Nile River also provided swift, efficient, and cheap transportation and became the focal point of both ancient and modern civilizations. In ancient days a series of great kingdoms ruled by pharaohs developed in the valley and made important and long-lasting contributions to civilization in the fields of science, architecture, politics, and economics. These ancient kingdoms provided a base for the development of the modern Egyptian political system. Throughout its history Egypt has remained essentially a united entity, ruled by a single government, in part because of its need for overall planning for irrigation and agricultural production.

After the sixth century B.C., Egypt fell under the influence of Persia, Greece, Rome, and the Byzantine Empire. Beginning with the Persian conquest in 525 B.C., Egypt was ruled for nearly twenty-five hundred years by alien dynasties or as a part of a foreign empire. This represented changes in the composition of the political state while the social state remained less liable to change. This foreign domination did however, leave its imprint. Christianity was brought to the Nile Valley, and in 639 AD Arab invaders from the east entered Egypt. In a process that was to take hundreds of years, the social state of Egypt was converted from the Christian society of that time to the Arab and Islamic society that it has remained ever since. Even today, however, Egypt remains 7% Coptic Christian. The period of Arab political domination, however, was broken by other powers, notably the Mamluks (1251-1517) and the Ottomans (1517-1914), with a monarchy of foreign origins ruling until 1952. This legacy of foreign control of the political state has been a significant factor in Egyptian political culture and world outlook.

In some respects, the most significant external influence came after the Ottoman Turks gained control of Egypt and made it a province of the empire in 1517. The Napoleonic invasion of 1798 and the modernization developments that followed modified this basic Ottoman influence. This assisted in the transition from the military feudalism of the past to a new system. The Western impact of the French intervention, the important reforms of Muhammad Ali (1805-1849), known as the founder of modern Egypt, and the construction of the Suez Canal in the mid-nineteenth century all contributed to the development of the modern Egyptian state.

Muhammad Ali was neither an Egyptian nor an Arab, but an Albanian who came to Egypt from Macedonia as an army commander in charge of a unit of the Ottoman army sent to deal with Napoleon. In 1805 the Ottoman sultan appointed him governor of Egypt with the title of pasha. Muhammad Ali brought significant change to the country and, to a large degree sought to gain independence from the Ottoman sultan. Under Muhammad Ali, Egypt began to develop the elements of a modern state and a more European cultural orientation. It is important to appreciate that he launched a series of ambitious domestic projects designed to improve the economy and the general condition of the state and that this was done free from the colonial inspired modernization of other third world countries in the modern period. This “self-reliance” was to have its impact upon later Egyptian political self-consciousness and nationalism. In the process, the political state was strengthened and it gained control over the social state. The political state was beginning to become organically related to the social state. Agricultural production was improved and reorganized, and a program of industrialization was inaugurated. Muhammad Ali forced Egyptian products into the European market and replaced grain production with the export crop of cotton. Turks were replaced with Egyptians in the administration and especially in the army. He stressed education and sought to improve its quality. He created a modern national army, organized on European lines in which Egyptians were increasingly being recruited even into the officer corps. During his reign, he militarily

challenged Ottoman rule to the point that his troops penetrated the Anatolian peninsula, only to have the British and French rescue the empire in the treaty of London of 1841. He created the base for a modern political system and the conditions for the rise of Egyptian nationalism. He put the elements of the political state and the social state in place.

Although European powers had been interested in Egypt for some time, the opening of the Suez Canal to world navigation and commerce in 1869 vastly increased great-power interest in Egypt. This great power interest was to interfere with the emergence of the Egyptian nation as an organic expression of a political and social state. England, the greatest sea power of the time, was particularly concerned with the canal because it provided a shorter and more efficient link to much of the British Empire, especially India. Problems associated with the operation of the canal and Egypt's financial mismanagement provided the framework for the British occupation in 1882. Foreign creditors, anxious about the funds they had entrusted to Muhammad Ali's grandson, Khedive Ismail(1863-79 ), pressed their respective governments for relief and assistance. As a result, foreign creditors controlled Egyptian finances and Ismail was deposed in 1879. Popular opposition formed against the khedive, his court, and the foreign powers. Khedive Tawfiq(1879-92 ), who succeeded Ismail, ruled a country that was heavily taxed and also under British and French financial supervision and political control.

In response to this situation, Colonel Ahmed Arabi led a group of Egyptian nationalists who, scorning the weakness of the khedive, protested British and French interference in the sovereignty of Egypt and the lack of indigenous political participation. They sought constitutional reform, liberalization of Egyptian political participation, and an end to foreign interference in the affairs of Egypt. The British and French supported the khedive. In July 1882 British forces landed in Egypt and crushed the Arabi revolt and quelled the expression of Egyptian nationalism. Although they were originally supposed to leave after the restoration of political and financial order(this was achieved in the 1890's), British forces remained in Egypt

until the 1950s, and real control over the affairs of state resided in British hands for seven decades, thereby giving Britain control over the canal. The khedive (and later king) remained the titular authority, but the British representatives (under various titles) were the final authorities on the affairs of state.

World War I added a new dimension to the commercial and strategic importance of the Suez Canal for Britain and the West. In December 1914 Britain proclaimed Egypt a British protectorate, ending the theoretical control of the Ottoman Empire, and the title of khedive was changed to that of sultan.

Opposition among Egyptians to the British intensified during World War I. Exasperation and frustration characterized the Egyptian nationalist movement. There had been some hope engendered by such events as the Arab revolt against the Ottoman sultan (portrayed so graphically in the film, "Lawrence of Arabia") and the democratic declarations of Wilson's Fourteen Points. Within Egyptian society there emerged the beginnings of nationalistic ideas of a political nature that were to spearhead the movement to remove British control and establish indigenous Egyptian rule over the country. In this post-World War I context a new political organization was formed, al-Wafd al-Misri (the Egyptian Delegation that sought unsuccessfully to attend the Versailles Peace Conference), known as the Wafd. Under the leadership of Saad Zaghlul (died 1927) and later Nahas Pasha, the Wafd sought independence from the British and self-rule in Egypt. The Wafd hoped to present its position to the great powers at the postwar conferences—especially at the Paris Peace Conference, where the fate of the Ottoman territories was to be determined. British opposition to Egyptian independence prevented the Wafd from achieving its goal.

In the aftermath of World War I, Egyptian opposition to British rule became increasingly hostile and culminated in the Revolution of 1919 led by an indigenous nationalist elite who were in effect contending with the British for the control of the political state. In order for the latter

group to be successful, they had to mobilize the social state. In the face of such pressure, the protectorate was terminated and in February 1922 the British unilaterally proclaimed Egypt a constitutional monarchy. However, the British formally reserved their freedom of action on four matters: the Sudan, the defense of Egypt against foreign intervention, the security of the canal (which remained the communications link of the British Empire), and the protection of foreign interests and minorities. In March, Sultan Fuad became the king of Egypt. Thus, by 1922 Egypt had become technically an independent country with its own king but it was a country in alliance with Britain (which provided assistance in defense and related matters). The reality was continued British control.

A constitution was written and promulgated in April 1923; a parliament was elected, and a government was formed. Domestic politics began to operate, and rivalries between power blocs and political institutions began to develop. Domestic politics reflected the rivalry between the king on the one hand and the government and parliament on the other (both of the latter were generally dominated by the Wafd, which opposed both the king and the British). The control of the political state was thus a contested one. Many of the concerns of Egyptian society, especially of the vast majority of the population who were peasants in the social state, were not effectively dealt with because the main political forces devoted their energies to conflict with each other. While there was agreement in opposing the British, the politics of Egypt for control of the political state was a triangular process of the Wafd opposing the monarchy with the British alternately playing one actor off against the other.

British influence remained paramount. British troops and officials were stationed in Egypt, mostly but not solely concerned with the canal and the security of the imperial communications system. Through them, the British were able to influence political activity and policy decisions. British-Egyptian negotiations continued, on a somewhat sporadic basis, until 1936. At that time a new Anglo-Egyptian treaty was written that altered but did not terminate the

British role. On many of the key issues little changed and British influence remained significant, although its formal trappings were modified.

World War II provided an important milestone in the political development of Egypt. Its territory was used as a base of Allied operations, notably in the German and Italian advance on Alexandria early in 1942. But the monarchy and some elements of the army (including Sadat as a young officer) were strongly against Britain as the hated occupier and in fact were sympathetic to the Germans. Britain's straightforward use of force in February 1942, when the British high commissioner surrounded the palace and forced the pro-German king to appoint Nahas Pasha and a pro-British government, highlighted British control and infuriated young nationalists. Following this incident, many nationalists, including some young officers, began to turn against the Wafd as well as the king. The war, however, sapped British strength and financial resources, and Britain was soon forced to reconsider its position throughout the Middle East, setting the stage for a major political realignment throughout the area, especially in Egypt and Palestine.

After World War II Egypt became involved in two related matters that laid the foundation for the Egyptian revolution. The first was the creation of Israel—which Egypt opposed—following the British withdrawal from the Palestine mandate in 1948, which, in turn, led to the Arab-Israeli war of 1948-1949. With some individual exceptions, the armed forces of Egypt performed poorly. The corruption and inefficiency of the government of King Farouk (whose rule had begun in 1936) were later cited as major causes for the poor performance of Egyptian military forces against the new state of Israel. The war was probably the most important single event in Egypt's political development before the 1952 revolution. It helped to complete the rupture between the king and the army, many of whose officers believed they had been sent to battle poorly equipped and ill trained. Nasser, in his memoirs, noted that he came to realize that the war was in Egypt and not in Palestine. The government in response to the political turmoil that followed the war instituted increasingly ruthless police actions. Egypt's economic crisis also

worsened as mismanagement and corruption became rampant. Who actually held authority over the political state remained contested in the midst of corruption and ineptitude.

The second issue was the continuing opposition to the British role in Egypt and the desire of the nationalists to eliminate British control of Egypt. Negotiations to revise the 1936 treaty, especially those aspects of the agreement relating to the questions of the Sudan and the canal, were unsuccessful. Throughout its existence, the Wafd opposed British imperialism and sought Nile unity, with the Sudan as a part of Egypt. Clashes between the British and Egyptian nationalists became increasingly frequent. On October 15, 1951, the government of Egypt under Prime Minister Nahas Pasha unilaterally abrogated the 1936 treaty and proclaimed Farouk king of Egypt and the Sudan.

By the beginning of 1952 the new government had become unable to govern. There developed an impasse in the relations between King Farouk and politicians of the Wafd, the most important political party in Egypt until its abolition following the 1952 revolution. This deadlocked the processes of government. Political disturbances, which had been growing in number since 1949, broke out, and mobs attacked foreign establishments in Cairo. The British protested, and clashes between British troops and Egyptians intensified. January 26, 1952, a day of great violence, came to be known as "Black Saturday"; the ouster of Nahas Pasha and the proclamation of martial law followed it.

### **STUDY QUESTIONS: II**

1. Why is Egypt "The most important country"?
2. What is there about Egypt that gives it its subjective feeling of being "The Mother of civilization"?
3. What might be said to be the "unities" of Egypt?

4. In the modern period, when did Egypt come to be ruled by Egyptians? Was it in 1805, 1881, 1919 or 1952?

### **III. The Egyptian Political and Social “Dual” State**

The control of the Egyptian political state until the Revolution of 1952 had been in political contest. The Revolution resulted in this political authority becoming consolidated and stabilized in the hands of a populist/authoritarian ruler and a ruling class. During the reign of Nasser until his death in 1970, the social state was to receive significant economic and social benefits. These benefits were to take the form of a redistribution of land and wealth. What was not to occur, despite much political rhetoric to the contrary, was economic development that would benefit the masses of the population. The benefits of massive infusions of foreign economic assistance and even some modernization of the economy were instead to go to the ruler, and to the ruling class. The ability of rulers to perpetuate themselves in power, to maintain the political and military security of the state and to provide economic benefits to themselves and their supporters took precedent. What was to continue to elude the state is the ability to mobilize and inspire the population to make sacrifices in the path of development. It was political stability that mattered.

**The Egyptian Revolution of 1952: The Formation of the Political State.** On July 23, 1952, members of a small, clandestine military organization known as the Free Officers launched a coup d'état that established a new system of government. This group of officers, whose inner circle numbered about a dozen, had been meeting secretly since the Arab-Israeli war, in hopes of

overthrowing the corrupt and unpopular monarchy. King Farouk was forced to abdicate and left the country on July 26, 1952.

The 1952 coup was swiftly and efficiently executed. A new group now was in control of the political state. The military controlled the major instruments of force, and there was no significant opposition to its actions. The guiding hand of the new system was the Revolutionary Command Council (RCC), whose titular head was a senior military officer, General Muhammad Naguib, one of the few successful Egyptian officers in the Arab-Israeli war of 1948. General Naguib had not been one of the inner circle of the young Free Officers, but he had been asked to join the conspiracy because of his rank and his fine reputation as an officer. An additional reason was probably because he was half-Sudanese by birth-the young officers still shared the dream of previous Egyptian governments: to bring the Sudan into union with Egypt.

The immediate concern of the RCC was to dismantle the corrupt structures of the monarchy and to create a new political order that would institute major social change. Since the ouster of Farouk was the major objective of the coup, the Free Officers did not have a specific and articulated plan for the ordering of Egyptian life after the coup. Their basic goal was to end political corruption and inefficiency and to prevent further humiliations such as the Arab-Israeli war of 1948-1949 and the British control of Egypt. Moreover, the Free Officers had not determined how to achieve their long-term goals of ousting the British from Egypt (especially the canal zone) and securing the linkage with the Sudan. A six-point statement of position was one that any nationalist could endorse. It proclaimed that the new regime declared its opposition to colonialism, imperialism, and monopolies and asserted its support for social justice, a strong military, and a democratic way of life. This constituted an appeal for the support of the social state.

Although Farouk was forced into exile, the constitutional monarchy was preserved at first, and a regency council was established to preside in the name of Farouk's infant son, Fuad

II. A general purge of corrupt officials was instituted, and land reform was declared to be a major goal of the RCC. At this time, the RCC said that it intended to return Egypt to a civilian government as soon as possible.

After a period of some uncertainty concerning the organization and structure of the government, the RCC decided that the changes envisaged were not possible within the existing political system. In December 1952 the constitution of 1923 and the parliamentary form of government were suspended. The following January General Naguib announced that all political parties had been banned and their funds confiscated— constitutional government would not operate for a three-year transition period. In February 1953 an interim constitution was proclaimed that provided the terms for the operation of the government during this time. This constitution noted that the people were the source of all authority, but it vested all power in the RCC for the transition period- the political state was to dominate the social state. With the abolition of political parties, the RCC created a new political organization called the National Liberation Rally to help mobilize political support for the new regime.

In June 1953 the RCC moved to the next step in the conversion of the political system. The monarchy was conclusively abolished and a republic was declared, with Naguib as both president and prime minister.

**The Patrimonial Leader( Nasser and the New State).** Gamal Abd al-Nasser (1952–1970), Anwar al-Sadat (1970-1981) and Hosni Mubarak (1981-present) can all be characterized as patrimonial or father-like leaders, both in terms of how they presented themselves and how they were perceived. Their leadership was often self-consciously styled on their resembling the father of the Egyptian national family. The principle of legitimacy of the patrimonial leader is an ascribed one; that is, it is a characteristic of both the leadership role itself and it is attributed to the leader by his followers. This principle, while strengthening the authority of the leader, also is not sufficient in itself. Each of these leaders was also operating as the leader of a regime that was

legitimized by the dominant idea of its time. For all three this was pan-Arabism, although from Sadat onwards, the political Islamism of the Islamic religious revival dialectically challenged pan-Arabism.

In the case of patrimonialism, all three leaders when addressing the Egyptian people often used the vocabulary of the family. This was especially the case with Sadat, who, in 1978, when he was negotiating the Camp David peace agreement with Israel, began a radio address by saying, “My brothers and sisters, my sons and daughters, I have terrible news to relate to you tonight. Today our sons prevented their fathers from going to work [i.e. students on university campuses were engaging in a campus boycott by way of protest against the policy].” It was Nasser among the three leaders who were able to go beyond the inherited patrimonialism of the leadership role and connect himself with the ideological principal of Arabism. In so doing he exceeded patrimonialism and by a combination of personality and ideology, his leadership became charismatic. His leadership was to cross borders and influence politics in other countries. His anti-colonialism not only helped force the British military to withdraw from the Suez Canal Zone in 1954, but led him to join the positive neutralism of the Bandung Conference of 1955 and to become a dominant leader in the Third World.

**The Formation of the New Ruling Class: Officers in Power.** The most crucial factor in the period immediately following the 1952 coup d'état (always called *the revolution* in Egypt) was the emergence of Gamal Abdul Nasser as the primary force in Egyptian national life. Although it became clear later that he had been the leader of the Free Officers movement since its inception, Nasser appeared in the public view rather slowly. When the Free Officers overthrew Farouk, attention was focused on General Naguib as the titular and apparent head of the new regime. Nasser appeared to be no more than another field grade officer in the RCC, an institution of the ruling elite. The RCC in the years ahead was to eventually evolve into a presidential cabinet but its membership was always to be long lived and to change only slowly

over time. This cabinet was composed of the Free Officers who donned civilian clothes but who retained the solidarity of their conspiratorial origins.

Slowly Nasser's role as the guiding force behind the revolution began to become clear as he emerged as the victor of a power struggle within the RCC. The struggle for control between Nasser and Naguib went through several stages, culminating in the ouster of Naguib on November 14, 1954, and in his being placed under house arrest. Thus Nasser's dominant position was secured within the system, allowing him to become the undisputed leader of Egypt and, later, of the Arab world.

As the years went on, the ruling elite remained composed of free officers. Only under the impact of the military defeat of 1967 was this to change. From that year until 1970 and the death of Nasser, the ruling elite changed to a technocratic civilian one as the army withdrew from politics.

**The Group Structure (Corporatism) of the Organic Political State.** Corporatism is the organization of the state not only in terms of bureaucratic structures but also in terms of the functional division of labor necessary for its maintenance e.g. trade unions, corporations, bar association etc. The important point is that these organizations exist only because the state authorizes them. Under Law 32 of 1964 and subsequent similar laws any such organization has had to formally apply for permission to exist. This licensing process actually is a compact(mithaq) between an organization and state. The state gets a function necessary for its existence carried out and also an understanding that the organization will not politically oppose the state. In exchange, the organization gets a monopoly of that function, including special economic rewards for its leaders. If the terms of the compact are adhered to, the organization is also free from the direct interference of the state. Corporatism is thus a form of devolution of authority.

It was Nasser who was to put in place the corporatist building blocs of the new state. Under his leadership, the state was preeminent. In the period leading until 1961 he organized the economy on the principle of state guided capitalism. After that date it became a state directed socialism. The succession of political parties that were organized were also state dominated. They were intended to rally support to the regime and also to act as instruments of control over the corporatist structures.

**The Single Dominant Political Party.** There have been several variations in Egypt's basic political structure since the 1952 revolution. With Nasser at its head, the RCC held the reins of political power. During this transition period a number of outstanding problems, including the final removal of British forces from Egypt and the canal zone in 1954, were finally resolved. In 1956 Nasser formally inaugurated a new system that consolidated power in his own hands.

On January 16, 1956, a new constitution was proclaimed in which extensive powers were concentrated in the hands of the president. The constitution also established a single political party, the National Union, which replaced the National Liberation Rally. The party, the National Assembly, and the other organs of government and politics remained under the control of Nasser, who was elected president by more than 99 percent of the vote in a plebiscite in 1956. The inauguration of the new constitution, formally approved in a plebiscite, ushered in a number of changes in the political system. Among these were: martial law was terminated, political prisoners were released, the RCC military members became civilians (with the exception of General Abdul Hakim Amer, who was minister of defense) who joined various agencies of the government. This new system was short-lived.

In February 1958 Nasser yielded to the demands of a new government in Syria that the two nations be joined to form the United Arab Republic (UAR). The union of these two dissimilar and geographically noncontiguous political units into a single state called for the

creation of a new political structure with, at least theoretically, Nasser sharing power with the Syrian leadership. The provisional constitution of the new UAR was proclaimed, and Nasser became president. Nasser received nearly all the votes cast in the presidential election on February 21, 1958. Both Egyptians and Syrians were represented in the institutions of government, but most of the actual governing was by decree of Nasser and his chief advisers and aides—especially General Amer, who largely controlled the Syrian region. In September 1961, Syria, disenchanted with Egyptian domination and Nasser's growing socialism, severed ties with the UAR and reestablished its independence. Egypt continued to be known by the name "United Arab Republic" until it became the Arab Republic of Egypt (ARE) in 1971.

With the termination of the union of Egypt and Syria in 1961, there was an intensification of Nasser's socialist programs in Egypt. A new governmental system was again devised and implemented soon thereafter, with a clear socialist focus. This process of socialist intensification was also an intensification of corporatism. Socialist measures adopted in the early 1960s included further agrarian reform, progressive tax measures, nationalization of business enterprises, and, in general, increased governmental control over the economy. A new charter and constitution were created, and a new single political party organization, the Arab Socialist Union (ASU), was formed. Elections for parliament took place. A new constitution was adopted in 1964 that provided the framework for the remainder of the Nasser tenure.

Nasser ruled Egypt from 1954 until his death in 1970. He was the first Egyptian since the pharaohs to control Egypt for any long period. During his tenure he captured the attention and imagination not only of the Egyptian people but also of the Arab world, much of the Third World, and other portions of the international community. Egypt ended British control, established a republican form of government, and began extensive political change.

The 1950s were the heyday of Nasser's rule. He succeeded in nationalizing the Suez Canal. He thwarted the objectives of Israel, Britain, and France in the 1956 Sinai War and was

able to turn military defeat into achievement—if not victory—with the aid of the United States and the Soviet Union, which insisted on the removal of foreign troops from Egypt. He secured arms and aid for the Aswan High Dam from the Soviet Union and Soviet bloc allies after the United States and other lenders decided not to provide the necessary assistance. Nasser became a leader of the Nonaligned Movement, and despite the many difficulties in implementing any form of Arab unity, he mobilized people all over the Arab world to think of themselves as members of a group larger than their own state. Nasser symbolized nascent Arab strength for many of the ordinary citizens of the Arab world.

Nasser's accomplishments in the 1950s were soon followed by difficulties. The United Arab Republic dissolved acrimoniously in 1961, Egypt became involved in the civil war in Yemen in the early 1960s (which turned out to be a quagmire from which it would be difficult to withdraw), and there were feuds with other Arab states and challenges to Nasser's role as Arab world leader. The 1967 Arab-Israeli war proved disastrous and resulted in the loss of the Sinai Peninsula (one-seventh of Egypt's land area), the closure of the Suez Canal, and the loss of a substantial portion of Egypt's military capability.

In 1956 Nasser engaged in a dispute with the United States and the West over funding for the construction of the high dam at Aswan and nationalized the Suez Canal, still owned by British and French capital. Although militarily defeated by a British, French, and Israeli invasion force, Nasser was to emerge as the political "victor" upon the force's evacuation and his ability to remain in power. It was the prestige of these accomplishments that led him to another blow for pan-Arabism when he engineered the union of not only Egypt and Syria but also briefly Yemen in the United Arab Republic(1958-1961).

This union did not last, however, and was followed by Egypt's military intervention in Yemen on the side of revolutionaries, which dragged on until 1967. Earlier in that year, still

within the framework of pan-Arabism, Nasser as the preeminent Arab leader, rhetorically tested Israel, only to have the latter inflict a devastating defeat upon him in the 1967 war.

Despite these reverses, Nasser was still the preeminent Egyptian and Arab, the most influential figure in the Middle East, and a focal point of regional and international attention. Nasser's role extended beyond that designated in the constitution. He exercised unwritten powers by virtue of his unique standing in the system, his accomplishments, and his charismatic appeal to the peasantry that formed the backbone of the Egyptian polity. He controlled all the main instruments of power and coercion, including the army, the secret police and intelligence agencies, and the Arab Socialist Union. He dominated the cabinet and the National Assembly. At the time of his death, Nasser's central role and his charismatic appeal to the overwhelming majority of Egyptians raised doubts about a successor's ability to replace him as the undisputed leader of Egypt and the Arab world. Nasser died of a heart attack on September 29, 1970, following intense negotiations he had brokered between King Hussein of Jordan and PLO Chairman Yasir Arafat, whose forces had been at war for that whole month in Jordan.

**The Egyptian Masses: The Social State.** The social state consists of those regions and local communities where eighty percent or more of Egyptians live relatively untouched by the authority of the state. The regions consist of the area to the south of Cairo called Upper Egypt where the authority of a Cairo distant in terms of hundreds of miles is in fact even more distant in terms of culture. The other major region is that of the delta to the north of Cairo. Cairo rests so lightly as a political capital, that it in fact is referred to in colloquial Arabic as "Misr" or "Egypt" as the Arabic name for the country as a whole. As far as local society is concerned, neither the French inspired modern legal system of the country is employed at the local level, nor is there a system of direct taxation. Instead, customary law is employed to settle local disputes or to attain justice in the case of, for example, murder. Taxation is indirect as for example in government international marketing of agricultural crops. Further evidence of this social state is evident in

the evasions of the well-intentioned agrarian reform of Nasser. The redistribution of land that occurred was supposed to have dismantled the landowning class when in fact research has shown that wide spread evasions occurred and local societies remained landowning class dominated. In other words, even Nasser's policies intended as they were to genuinely benefit the masses of the population left these same masses relatively untouched by the authority of the state. In the later regimes of Sadat and Mubarak this distance between population and state was to become even greater. This paradox of the Egyptian authoritarian state not being able to relate to its population except by police powers was to become even more evident.

Egypt's social and economic structure is closely linked to the Nile River, which has traditionally been an important source of revenue and a central factor in daily life. Even today wealth is still often measured in landownership and control of agricultural production. Despite the increasing urbanization that has made Cairo a city of over 21 million people, of whom perhaps half do not have permanent housing, the majority of the Egyptian population are the fallahin, the peasants. They are the backbone of the Egyptian system, even if they are relatively deprived economically and educationally, as well as in terms of life expectancy, wealth, health, literacy, and most of the other measures of well being. Both Nasser and Sadat traced their roots and publicized their connection to this group. In addition to the fallahin there are the traditional wealthy, upper-class landowners, the middle-class city dwellers, and the growing numbers of urbanized poor. The traditional supporters of the king and members of the court came from the upper class. Since the 1952 revolution, however, young men from the lower and middle classes have moved up the social ladder through the huge and growing bureaucracy and the military officer corps.

At the time of the revolution Egypt was a poor country facing a host of social and economic problems: low per capita income, unequal income distribution, disease, low life expectancy, high infant mortality, and a low literacy rate. Agriculture was the dominant sector of

the economy, and this required the use of Nile water for irrigation. Industry, which was significantly limited by poor natural and mineral resources and by the lack of sufficiently trained workers, was a minor factor.

The Egyptian revolution of 1952 was launched to deal with a political issue, but almost as crucial were the substantial economic and social problems of Egypt, which were among the earliest problems tackled by the regime. There was a two-class system—a very rich upper class and very poor lower class, with the latter vastly larger than the former. The upper class—bankers, businessmen, merchants, and landlords—controlled the wealth of the country and dominated its political institutions. It could and did prevent the adoption of reform measures that would diminish its economic and political control. Much of Egypt's land was concentrated in the hands of relatively few absentee landowners. The poor, mostly landless peasants constituted more than 75 percent of the population. They were illiterate and had little opportunity to improve their situation. Their health standards were deplorable. Education was severely limited. This disparity between the landowning rich and the poor peasantry was further compounded by overpopulation, exacerbated by the high birthrates of the poor. The population growth rate surpassed that of agricultural production increases. Moreover, the possibility of food production's keeping pace with population growth was limited by lack of control of the water resources of the Nile.

One of the goals of the revolution, announced shortly after the takeover by the Free Officers, was the achievement of social and economic justice through elimination of the corrupt system and the monopoly of wealth. Although lacking a specific ideology and well-developed programs for implementing these goals, the new government attempted to raise the standard of living of the average Egyptian, especially of the fallahin of the Nile Valley, and to reduce the poverty and disease that had permeated Egyptian society for so long.

**Anwar Sadat.** The constitution in force at that time did not call for Vice President Anwar Sadat to succeed Nasser in office, nor was there any indication that Nasser favored Sadat, or any particular person, as his ultimate successor. Sadat initially enjoyed the legitimacy of being the formal successor and of his long association with Nasser (he was virtually the only former Free Officer left in office by this time), but it was generally assumed that he would soon be replaced by one of the powerful rivals maneuvering behind the scene. In November 1970 Nasser succumbed to heart failure and was succeeded by his vice president, Anwar Sadat. Sadat was the last of the officers in power who had engineered the revolution of 1952. The manner in which he had survived was due to his near political invisibility. During the time until his ascension to power he was known in Egypt as Nasser's "lap dog" or alternatively as "Said Na'm Na'm" ("Mr. Yes Yes").

Unlike the revolutionary Arab leader Nasser, Sadat had no ideological principle of legitimacy attached to himself. In any case, the 1967 defeat had been the death knell of Arabism. In a remarkable fashion, Sadat quickly sensed that the next ideological stage in Egypt's political development was to be Islam. The 1967 war had triggered the beginning of the Islamic revival. Sadat moved to gain its support by beginning to free from prison the thousands of Islamic radicals placed there by Nasser. In addition, Sadat became a conspicuous practitioner of Islam by ostentatiously acquiring the dark callus on the forehead called a zabiba which results from repeated contact with the prayer rug. This permitted Sadat to not only play the role of father but also of a father-like imam or leader of prayer.

Sadat had to address the humiliation of the Israeli military occupation of the huge expanse of the Sinai peninsula as a consequence of the 1967 war. This occupation was not only humiliating to Egypt also was costing the country hundreds of millions of dollars annually in lost revenues from the closure of the Suez Canal and from seized oil fields.

Sadat began to boldly plot the military expulsion of the Israelis. Nasser had after 1967 invited 15,000 Soviet military advisors into Egypt to reform his military. By July 1972 they were ordered out of the country. They had completed their mission and their arrogance and the fact they restricted the military planning of Egypt meant they had to go. Sadat shrewdly planned the limited war of October 1973. The Egyptian surprise assault caught the Israelis off guard and the first two weeks saw a limited territorial gain in Sinai, which was needed to bring about serious diplomatic negotiations. On the other hand, in the last two weeks of the war, the Israelis had surrounded an Egyptian army and in effect this restored lost dignity to the Israelis.

Sadat initiated the diplomacy that eventually led to the withdrawal of the Israelis in 1982, but his nation was economically impoverished. He therefore began a program of political and economic liberalization (called infitah or the “opening” after the military success in Sinai) designed to appeal to the United States. The combination of this policy plus his willingness to break rank with the Arab states and negotiate with America’s ally Israel resulted in at first small and then later larger economic assistance. The result was to be ultimately, after two preliminary agreements, the Egypt-Israel Peace Treaty (1979) in which Israel agreed to evacuate Sinai and Egypt established diplomatic relations with Israel.

Although Sadat was elected president in an October 1970 referendum (receiving only 85 percent of the vote, as opposed to Nasser’s traditional 99 percent), the long-term stability of his regime was not yet assured.

Sadat sought to consolidate his position but did not make a major overt move until May 1971, when he suddenly purged the government of all senior officials who opposed him. This group included Vice President Ali Sabri, a prominent left-leaning figure who had headed the ASU and was regarded as Moscow’s favorite candidate, as well as the minister of war, the head of intelligence, and other senior officials. These officials were later tried for high treason.

Sadat did not enjoy the widespread adulation Nasser had evoked from the masses and had even been derided as Nasser's yes-man. His declaration that 1971 would be a "year of decision" that would result in war or peace in the Arab-Israeli conflict did nothing to improve his popularity, as the year ended with no movement toward achievement of this objective.

By 1972 Sadat had become an object of ridicule and cruel jokes, which raised doubts about his leadership. It was in partial response to domestic criticism and to the concerns and complaints of the military that he decided to terminate the role of the Soviet advisers in Egypt in 1972. Sadat soon began to prepare for the October War (the Arab-Israeli war of 1973) because he saw little progress toward a political settlement of the conflict with Israel. He achieved a formidable success in taking the Israelis by surprise and crossing the heavily fortified Suez Canal at the beginning of the war in October 1973. Although he ultimately lost the war in a military sense, with the Egyptian Third Army surrounded by Israeli troops, his initial success in the field and his mobilization of support from the conservative Arab oil producers (who, at his behest, used oil as a political weapon for the first time) made the war a political success. Sadat was able to place Israel on the defensive internationally, to secure further international support for the Egyptian and Arab positions, and to attract increased aid from the oil-rich Arab states. Of the many honorary titles he received, Sadat was said to have favored above all the phrase that came into use after Egyptian troops took the Suez Canal back from the Israeli forces that had held its eastern shore since 1967: "Hero of the Crossing."

In April 1974 Sadat produced a document called the October Working Paper, which discussed the new era ushered in by the October War. It called for extensive reform and change in Egypt and suggested that the lot of the average Egyptian would improve. It embodied his new approach to politics and economics, especially the liberalization of politics, the economic "opening" to Western aid and investment, and the restructuring of the Egyptian government toward decentralization and away from the centrally planned economy. Sadat's turn to the West,

which actually began with the expulsion of Soviet advisers in 1972, accelerated during the period after the October 1973 war, and culminated with the Egypt-Israel Peace Treaty of 1979, may all have been part of a huge economic gamble: By turning to the West, could he attract substantial aid and investment and get rid of the heavy economic burden of the war with Israel (and regain the Sinai Peninsula), while at the same time not totally alienating the oil-rich Arab states that had supported Egypt since 1967 with aid and investment?

Sadat's consolidation of political control in May 1971 was followed by changes in the political structures and processes of politics. On September 11, 1971, the present constitution was approved by general referendum. It is similar to its predecessor in continuing the strong presidential system extant in Egypt since the revolution. According to the constitution, the president of the republic is head of state. He is empowered to declare a state of emergency in the case of national danger, subject to a referendum within sixty days. Legislative power is vested in the National Assembly, composed of 444 directly elected members and two members nominated by the president; members of parliament serve a five-year term. The president may object to laws passed by the National Assembly within thirty days of their passage, but the assembly has the right to override his objection by a two-thirds vote. The president has the power to appoint vice presidents, the prime minister and his cabinet, High Court judges, provincial governors, university presidents, and even some religious leaders. He is the supreme commander of the armed forces. Although the constitution increased the powers of the National Assembly, dominant authority remained with the president, who has the right of temporary rule by decree. Presidential decrees have the power of law. The constitution includes guarantees of freedom of expression, as well as assurance of freedom from arbitrary arrest, seizure of property, and mail censorship. Press censorship is banned except in periods of war or emergency. At first, the Arab Socialist Union was declared the only authorized political party, but this was gradually modified,

beginning in 1976. Islam was declared the state religion, although freedom of religion was guaranteed.

In 1976 Sadat initiated what appeared to be a move toward a multiparty system when he announced that three ideological “platforms” would be organized within the ASU. The centrist group—the Egyptian Arab Socialist Organization—had Sadat’s personal support and won a vast majority of the seats in the 1976 parliamentary election. Sadat still refused to allow independent parties to be formed, and the three organizations never took root as genuine vehicles of political participation. Only after the violent clashes over increased prices of basic commodities in January 1977 did Sadat permit parties to be formed. The opposition from these parties was too much for Sadat to bear, however, and he soon clamped down on such groups as the New Wafd Party and the leftist National Progressive Unionist Party.

In July 1978 Sadat created the National Democratic Party (NDP) and later permitted a leftist party to organize as an official opposition. Both the Egyptian Arab Socialist Organization and the Arab Socialist Union were abolished in April 1980. An Advisory Council was established to serve the functions of the old ASU Central Committee, and in the September 1980 elections for that council, Sadat’s new NDP won all 140 seats, with the seventy remaining posts being appointed directly by the president. Sadat, like Nasser before him, wanted to create a political organization but was unable to tolerate the loss of political control that would occur if these “parties” were to become genuine vehicles for mass participation.

By 1980 domestic tension in Egypt had grown, although Sadat’s grip on power was in no way diminished. Confessional conflict had occurred between the large Coptic Christian minority and the Islamic fundamentalists, and Sadat placed restrictions on both. In the years after 1979 it became clear that there remained serious opposition to Egypt’s move toward the West and its peace with Israel, especially from Islamic fundamentalists. What may have been Sadat’s economic gamble was not paying off as well as he might have hoped: There was some Western

aid and investment, but it was not substantial, and Arab aid and investment dropped sharply. Egypt had been ejected from the Arab League for making peace with Israel and remained isolated in the Arab world. More pressing yet, there had been no significant economic progress, and the standard of living of the average Egyptian was very low and getting worse. Sadat held his course. Increasing political violence, including clashes between Coptic Christians and Islamic fundamentalists marked the years 1980 and 1981. The Sadat government reacted repressively. Sadat initiated severe repression of his opposition in September 1980, beginning with the formerly tolerated leftist party, but the major move was made almost a year later, in September 1981, when more than 1,500 Egyptian political figures of all political persuasions were arrested. Certain religious groups were banned and their newspapers closed. A number of Muslim Brotherhood leaders were arrested, and Sadat dismissed the Coptic leader, Pope Shenuda III. Many fundamentalist mosques were taken over by the government, and the security apparatus began to clamp down on universities. Foreign journalists who had criticized Sadat were expelled, along with the Soviet ambassador and other Soviet diplomats

Sadat's assassination in October 1981 by Islamic fundamentalists opposed to his peacemaking with Israel changed very little about Egyptian domestic politics.

**Hosni Mubarak.** On October 6, 1981, Sadat was assassinated by Muslim fundamentalists at a parade celebrating the eighth anniversary of his supreme military achievement: the crossing of the Suez Canal at the opening of the 1973 October War. A state of emergency was declared, and the National Assembly nominated Vice President Hosni Mubarak to succeed Sadat. Although the assassins were quickly arrested, conflict broke out in Asyut between the security forces and Muslim fundamentalists. The anti-Sadat demonstrations were limited in scope and were soon quelled. A presidential referendum was held, and Mubarak was sworn in as president on October 14, 1981.

Although Mubarak cracked down on the religious extremists associated with Sadat's assassination, he released many of the other political figures whom Sadat had had arrested a month before his death. The battle against corruption started from the top, and Sadat's brother and some of his closest associates were taken to court for corrupt practices. Unlike Sadat, Mubarak and his family maintain a low profile and live modestly.

Hosni Mubarak left the basic structure unaltered. He allowed the New Wafd to participate in the 1984 parliamentary elections, but the NDP won handily and some opposition parties failed to get sufficient votes to secure even one seat in the assembly. The NDP, still the party of the president, won 384 seats in the November 1990 election, with the main opposition parties boycotting the polls. Mubarak was elected to a third presidential term in October 1993. Parliamentary elections were scheduled for November 1995 and presidential elections for October 1999.

Despite all the changes, Egypt remained a strong presidential system with a facade of elections and party rule. The judiciary is independent, but the government can, and has, used military courts or the "state of emergency" (in force without interruption since 1981) regulations to ignore judicial decisions it does not favor. There are eleven legal political parties in addition to the NDP, the government party. Neither the other parties nor the NDP has much mass support. The greatest threat to the government is from the various Islamic fundamentalist groups. The largest, oldest, and best organized is the Muslim Brotherhood, founded in 1928 in Egypt. It was banned by Nasser in 1954 and is still technically illegal, but it is officially tolerated because its efforts to Islamize society are made from within the existing political system. This is not the case with the more radical Islamic groups that have resorted to violence to advance their cause. After the assassination of Sadat, there was a lull in these violent activities. They resumed in the 1990s, as the radical groups gained young recruits frustrated at unemployment and poverty. In October 1990 the speaker of the People's Assembly was killed. An anti-fundamentalist journalist was

assassinated in June 1992, part of a dramatic upsurge in fundamentalist violence, often directed against Coptic Christians, government officials, and, starting in October 1992, against foreign tourists. Although the attacks on tourists have abated somewhat, it has only been at the cost of brutal government suppression.

Despite all the changes, Egypt remained a strong presidential system with a facade of elections and party rule. The judiciary is independent, but the government can, and has, used military courts or the “state of emergency” (in force without interruption since 1981) regulations to ignore judicial decisions it does not favor. There are eleven legal political parties in addition to the NDP, the government party. Neither the other parties nor the NDP has much mass support. The greatest threat to the government is from the various Islamic fundamentalist groups. The largest, oldest, and best organized is the Muslim Brotherhood, founded in 1928 in Egypt. It was banned by Nasser in 1954 and is still technically illegal, but it is officially tolerated because its efforts to Islamize society are made from within the existing political system. An anti-fundamentalist journalist was assassinated in June 1992, part of a dramatic upsurge in fundamentalist violence, often directed against Coptic Christians, government officials, and, starting in October 1992, against foreign tourists. Although the attacks on tourists have abated somewhat, it has only been at the cost of brutal government suppression.

Despite the release of many political detainees, Mubarak kept a tight rein on Egyptian politics. The state of emergency remains in force, even though the emergency following Sadat’s death has long passed. Mubarak made substantial economic progress and managed to put Egypt

back into the center of the Arab world without reneging on the Egypt-Israel Peace Treaty of 1979. He faced down serious challenges to his rule, such as the February 1986 uprising by 20,000 conscripts of the Security Force, and the challenges that the Islamic fundamentalists have continued to pose, all of which were brutally suppressed. As long as Mubarak continues to retain the all-important confidence of the Egyptian military, his regime is stable.

**The Parliamentary Elections of October and November 2000.** The parliamentary elections in October and November 2000 were illustrative of his present strengths and weaknesses and the themes of the strong and the weak state. The elections were evidence of the relative strength of the state in that in the final analysis the results showed the ability of the state to continue to manufacture a desired political outcome. The government's National Democratic Party (NDP) was finally able to cobble together a majority of 388(87%) seats out of a total of 444 contested seats (10 can be appointed by the president). This percentage compared with 97% in 1995. But these figures do not show the degree of the government's declining ability to authoritatively dictate the desired outcome by the forced mobilization of the voting population. In fact, in actual voting success the NDP won only about 175 seats outright and had to pressure/bargain with 213 "independents" to persuade them to switch to the government party.

The genuine electoral contest was not with the official opposition parties but rather with further "independent" candidates who in fact were identified as the illegal, politically moderate Muslim Brotherhood (MB). They ended up with a remarkable 17 seats but these were gained despite beatings, intimidation and occasional killings. What is further remarkable about this is that the perpetrators of the violence were not the usual state security forces but rather male and female toughs hired by NDP candidate's intent upon gaining their due. In other words, even the classic exercise of coercion had slipped from the hands of the state into the hands of the state's underlings. The relative success of the MB also was further evidence of the degree of the Islamization of the Egyptian State.

**Changes in the Ruling Class.** The ruling class provides the patrimonial leader with the support necessary to make him authoritative politically. The relationship is one of political support on the one hand and economic benefits on the other. The existence of such a class in Egypt over the last 200 years of modernization has been intensely investigated by scholars in the three different time periods from the period of the great modernizer of Egypt, Muhammad Ali(1805-1849) onwards, the Revolution of 1919 against the British and in the time of Nasser. This phenomenon has been the basis of political strength over this long period and at the same time it is the basis of the strategic weakness of the state in performance terms. The developmental potential of the state is traded off for enduring political loyalty and stability. The definition of the ruling class (ayyan or khassa) is that it consists of the top 20 percent of the population that receive 48 percent of the income of the country. Accompanying this concentration of wealth is also the ruling class's ability through government and, increasingly, private-sector leadership to dominate the corporatist group structures of the society. This symbiotic relationship accounts for how in the pre-1991 period of stronger geopolitical Egyptian regional hegemonic leadership, domestic stability strengthened the leaders' foreign policy hand. On the other hand, in the post-1991 geoeconomic period, this relationship became one of a dysfunctional inability to develop and produce, thus weakening Egypt's ability to compete economically.

The idiom of expression of contemporary Egyptian politics has combined several political ideas such as a state nationalism of a Western type overlaying older ideas of pan-Arabism and pan-Islamism. Over the past fifty years, political expression by both those in power and by the organized politically disaffected has used various combinations of these ideas over the years, beginning with Nasser's Arab socialism and, now, increasingly, by contemporary militant political Islamism. The Egyptian political structure, on the other hand, has remained relatively

constant. The principal elements of the Egyptian political structure are patrimonial leadership, a powerful ruling class, and influential corporatist groups.

**Informal Corporatist Groups.** The corporatist group structure reflects the division of labor necessary for the maintenance of society. These groups consist of two categories. There are first, the informal family, peer group, and “old boy” networks, which provide the basic procreation and support functions of society. Second, there are the formal groups that carry out the labor of society, such as trade unions and bar associations. The Egyptian family (a‘ila) is classically Middle Eastern sedentary in character. It is patriarchal, extended, endogamous, and patrilocal. It is both the model of political authority as reflected in the concept of “patrimonialism” and the basic unit of allegiance in Egyptian society. Family loyalties and the authority of the father are primary. The extension of loyalty to a network of grandparents, aunts, uncles, cousins, and so on makes the range of the family extensive. The practice of arranged marriages and first cousin marriages increases family solidarity. So does the tendency of families to live concentrated in a single geographical area. At the age of puberty, the boy leaves the house of his closely-knit family and forms a play and membership peer group called a shilla. The shilla is a lifetime membership group that has responsibilities for the security of the neighborhood. On occasion, such as the 1977 riots in Cairo over the raising bread prices the shilla can become politically activated.

Those who graduate from high school, university, or military academy have alumni status as a dufaa known by the year of graduation. For example, it was the dufaa of 1938 from the Royal Military Academy that carried out the revolution of 1952. The class of 1938 served together and was promoted together on the principle of solidarity. It was they who went to fight in Palestine against the Zionist Jews in 1948. There they suffered the humiliating defeat that they attributed to the corruption of their leaders. In the words of Nasser, “The Enemy was in Egypt!”. This solidarity grouping provides a further potentially political membership group.

**Formal Corporatist Groups.** Corporatist groups are formal for at least two major reasons. The first is that they can not exist at all except with the permission of the state and by law. It is the need to formally apply for such approval that makes them corporatist groups and not civil society groups. The second reason is that in fact, once given approval to operate, they then have a familiar identity as trade unions, medical associations, engineering societies, and so on. An informal compact (mithaq) is entered into whereby the organization agrees that it will not engage in political activities and will support the state in exchange for a grant of a monopoly of its sector.

Illustrative of this point about licensing is the role of the army and that of the Islamic groups. The army is the keystone institution of Egyptian society. It is the arbiter of Egyptian politics and the guarantor of the “strong” state. Its “license,” therefore, follows from the respect the state accords it. It does not, however, seek a political role for itself. Under Nasser it possessed this role and the result was the ignominious defeat of Egypt in 1967. Thus in the “bread” riots of 1977 in protest against the threatened end of food subsidies, the army intervened, restored order, and withdrew. It was to do this again in 1986 when paramilitary troops rebelled. The segment of the army prepared to carry out this support of the regime and the defense of the constitution has been the army of combat. There is also the army of production, which significantly makes Egypt self-reliant in arms production but also produces consumer goods. The army is free from budgetary accountability and the “production” army is especially free from scrutiny is monopolistic in its activities and probably prone to corruption.

Whereas the army has found its accommodation within the system, the Islamic groups have not. The mainstream of Islam would like to be licensed and included in the system but the regime refuses to do this. Instead it lumps such moderate groups together with the extreme and violent minority.

These groups have the primary responsibility for their internal affairs, including the ability to benefit themselves economically. The internal affairs of such groups, with the exception of the professional army, are characterized by the presence of informal corporatist groups such as family, peer groups and old boy networks in elections to the presidencies and executive committees of the trade unions, bar associations, and other groups. The informal groups have acted as political parties or factions. More recently, Islamic groups, notably the moderate Muslim Brotherhood, have supplanted informal groups. This has prompted government interference in these elections and even their cancellation.

Sadat's successor, Hosni Mubarak, left the basic structure unaltered. He allowed the New Wafd to participate in the 1984 parliamentary elections, but the NDP won handily and some opposition parties failed to get sufficient votes to secure even one seat in the assembly. The NDP, still the party of the president, won 384 seats in the November 1990 election, with the main opposition parties boycotting the polls. Mubarak was elected to a third presidential term in October 1993.

**The Dualism of Egyptian Society: The Failure of Development.** The existence of a political class of great wealth and privilege suggests the possibility that Egyptian society might be interpreted in terms of class structure: for example, bourgeoisie, proletarian, and peasant classes. It is a further dimension of the politically strong and capability weak state that this is not the case. The ability of a strong executive and a cooperative political class to maintain themselves in power does not mean that they can organize the society for productive purposes or coerce or mobilize the masses of the population for greater levels of production. In other words, the quietism of the politically strong state distances itself from the masses and the weakness of the economic state creates a gap and space and not the conditions of alienation and class-consciousness.

It has been suggested that the informal sector is also Islamic. As a result, political and economic distance exists between the political and economic capabilities of the state on the one hand and the masses on the other. It is estimated that 80 percent of small businesses are in the informal sector and free from the payment of taxes but only 30 percent of the GDP is located there. This gap is reinforced by the 54 percent illiteracy rate that creates dialectical and regional differences. As noted, a further gap is in law enforcement, where sometimes the most serious of criminal acts are dealt with informally by means of customary law.

The parliamentary elections in October and November 2000, already noted above, were illustrative of these themes of the strong and the weak state. The elections were evidence of the relative strength of the state in that the state was able to manufacture a desired political outcome. But these figures do not show the government's declining ability to dictate the outcome by the forced mobilization of the voting population. In fact, in actual voting success the NDP won only about 175 seats outright and had to pressure/bargain with 213 "independents" to persuade them to switch to the government party.

### **STUDY QUESTIONS: III**

1. Was the revolution of 1952 a revolution or a military coup d'etat? Did it spring from the base of society or did it originate at the top? Did it result in profound political and social change?
2. Is the Egyptian ruling class understood best in terms of its closeness to the Egyptian political state or as an expression of the social forces of the Egyptian social state?
3. A major emphasis in American foreign policy is the promotion of democracy. The informal and formal groups of a society are said to constitute a "civil society" that constrains and puts limitations upon the state. To what extent and in what way might this be the case in Egypt?

4. The government of Egypt is incapable of delivering essential social services to the masses of the population. Islamic organizations have been able to do this. What are the political consequences of this?

5. The succession of Nasser (1952), Sadat (1970) and Mubarak (1981) has coincided with a changes in society and policies. These changes have been sweeping and dramatic. What are they?

#### **IV. Islam and Politics**

Frequent references have been made to the expression of Islamism i.e. Islam as a political ideology, in the analysis of Egypt as a dual state. The subject is so central to the understanding of Egyptian politics from the 1970's onwards, however, that it is useful to pause and comment on the sweep of Islamism over the last two decades. The first thing to appreciate is that Islamism or the political ideology of Islam is the successor to the ideology of Arabism. Arabism began to develop out of the Revolution of 1952 as the ideology of Gamal Abd al Nasser, first as an expression of Arab nationalism and anti-colonialism and then from 1961 onwards as Arab socialism. But while Nasser was able to successfully defeat British and French colonialism, he was to fall victim to the success of Israel as a colonial power in the 1967 War. This spelled the death knell of Arabism and the birth of the Islamic revival and its political ideological version as Islamism (and what might be called "Christianism" among Egypt's 7% Coptic Christian population). A cultural customary reaction to a "disaster" on the scale of Egypt's and the Arab worlds defeat of 1967 was to attribute it not to the superiority of Israeli arms but to attribute it to God's judgment on a wayward people. Both Muslim and Christian over the next decade turned spiritually inwards and the Egyptian religious revival began. When Muslim and Christian alike were to see angels over the Israeli defensive positions in the 1973 War, the religious revival was validated and reinforced.

As already noted, when Sadat succeeded to the presidency he sought to capitalize on this sentiment by relenting on that had been Nasser's crack down on religious organizations. From 1971 onwards, he was to release thousand's of them from jail while at the same time never permitting them to organize legally. Those released from jail were broadly members of the Muslim Brotherhood. This had been a major opposition group prior to the 1952 Revolution and they were to continue as such against Nasser. Sadat succeeded in gaining their acceptance of him by the majority of the group. In a speech to their leadership he once said that while their organizations remained illegal, he did permit the publication of their illegal newspaper! This was to prove the difficulty for him and for his successor, Mubarak. Both leaders recognized the power and popularity of the religious opposition, but both were and are so beholden to the ruling class that remains Nasserist, Arab nationalist and secular that neither was able to create a political space for the religious opposition. The majority of the Brotherhood now wanted to participate in politics but neither Sadat nor Mubarak was prepared to grant this. The moderate majority began to turn to the provision of social and emergency services the government was too inefficient or corrupt to deliver. These services were routine medical services , day care services etc. In the 1992 earth quake it was they who provided relief and not the government. Islam gained luster from these benefits.

An Egyptian joke made the point at the time regarding the earthquake:

President Mubarak held a cabinet meeting immediately after the calamity in which 500 people died. He asked for each minister to report what he was doing to meet the needs of the Egyptian people. As usual, it was the minister of interior who was eager to report first. "Your Excellency", he said, "My officers are busy rounding up suspects and I am confident that very soon, I will be able to report the name of the person responsible!"

There was, however, a younger generation of the Brotherhood that was to become far more militant . The result has been a long history of religiously inspired violence directed at

both presidents, that was to see Sadat killed in October 1981 and an assassination attempt against Mubarak in 1995.

How Islamism has actually progressed is quite complex and this is especially the case when attempts to answer the question of its present state. From the beginning, there was a numerically small but organizationally vicious and violent strain. This began with an armed attack upon the Cairo Military College in 1974 and was to continue as the *gemaat Islamiyya* or Islamic Group. This organization began in the university science faculties but also found “water within which to swim” in the culturally distinct area of upper Egypt to the south of Cairo and among peoples from that area in certain neighborhoods of Cairo. In fact one such neighborhood in 1992 was occupied by 14000 Egyptian troops who fought against the local population for days. The purpose was to arrest local Islamic leaders and to end their influence. When a Western journalist visited the area three years later, Islam was still strong and vibrant.

In 1997, there occurred what was to become the last violent act of militant Islamism. Fifty-four Italian tourists were killed in Upper Egypt. Two things followed from this attack. The first was a wave of populist revulsion against the tactic. The second was a very severe crackdown by the government. In addition, the government began to penetrate the internal politics of Egyptian corporatist groups. The result was that democratically elected members of the brotherhood were excluded from internal positions of authority. The combination of these two factors has ushered in a period of Islamic quietism that continues to the present time. But this quietism has not meant that the government is any less relenting against the moderate main stream Islamism of the Muslim Brotherhood. In July 2002, a runoff election for the parliament was held in Alexandria. The outcome in 2000 which saw a female member of the Brotherhood elected had been challenged by the government. In the new elections, observers noted hardly anyone actually entering a polling booth. Despite this, the Brotherhood candidate who had earlier

received thousands of votes now received hundreds and the national Democratic Party candidate of the government who had earlier received hundreds, now received thousands. Once again, an Egyptian political joke captures the essentials of democratic practices in Egypt:

President Mubarak was concerned about the ability of President Bush to be elected. He therefore sent his trusted electoral advisor to Washington to assist the American president. When he returned to Egypt he was expecting to be praised for his accomplishment. Instead, President Mubarak was very angry, saying “ I sent you to see that President Bush was elected the American president and instead you got me elected the president of the United States!”

Even the subtleties of the preceding analysis does not complete the account of Islamism in Egypt. Even while the state has been cracking down on the Islamism of the social state, it is also the case that the very political state that has been draconian in its policy has itself become more Islamized. The reason for this is that the official head of Islam in Egypt , the Shaykh al-Azhar(the leader of the great university by that name) has himself been extending his own religious authority. When asked by the government to, for example, to give a religious decree against terrorism he has exacted concessions to the expansion of his authority e.g. the right to censor books, a right formally belonging to the government. One author has termed this “Islamization by stealth”. It is apparent, that the so-called secular state of Egypt is in fact significantly Islamized, a fact not lost upon a believing population!

#### **Study Questions: IV**

1. When and in what way did Islamism come to supplant Arabism in Egypt?
2. What has been the source of militant Islam in Egypt and why has it been important?
3. What are the features of main stream Islam in Egypt and why is it important?

## V. The Egyptian Economy: Wealth and Poverty

Egypt, the “gift of the Nile,” has been dependent on that single main source of fresh water for the thousands of years of its recorded existence. There is a narrow strip of poor land along the Mediterranean coast where some crops can be grown when there is minimal rainfall. Except for this area and a few small oases, all agriculture is dependent on irrigation from the Nile. The land made inhabitable and cultivable by the river constitutes a small portion of Egypt’s overall land area (about 4 percent); therefore, agricultural production, despite the rich soil of the Nile Valley and the favorable climate, has been limited. Nevertheless, it is the main occupation of, and provides the livelihood for, most Egyptians.

The limited agricultural production does not provide sufficient food for Egypt’s increasingly large population. Egypt’s population growth rate has hovered at about 2.6 percent per year. This is one of the lowest rates in the Middle East. Even at this lower rate of growth, Egypt’s population is now moving towards 70 million in 2002, a number that is beyond Egypt’s projected capacity to feed, clothe, house, and employ.

Agrarian reform became the first and most significant domestic effort of the new regime, as demonstrated by the Agrarian Reform Law of September 1952. It limited individual landholdings to less than two hundred faddans (approximately two hundred acres), reduced the rents paid for lands, and increased agricultural wages. In an effort to redistribute existing agricultural land and to divide the wealth of the country more equitably, some lands were expropriated (with compensation) and redistributed.

Related to the Agrarian Reform Law were other measures of considerable importance, of which the construction of the Aswan High Dam was among the most significant. The purpose of the dam was to improve Egypt’s economic system by increasing the already high productivity levels of the Nile Valley lands through an improved irrigation system. The dam was designed to

increase water storage capacity, to prevent devastating floods, to add cultivable land, and to create substantial additional hydroelectric capacity. The dam also had symbolic value as an achievement of the revolution.

The Aswan High Dam has had mixed effects. Many of the anticipated benefits have been realized. There has been a significant increase in the cultivated area of Egypt and in net agricultural output; flood control has also fostered productivity gains; additional electrical power, primarily for industrial use, has been made available; navigation along the Nile, which is utilized as a major transportation artery in Egypt, has been improved; and a fishing industry has been developed in Lake Nasser. However, there are some problems. For example, the silt that fertilized the lands of the Nile Valley with the annual flood has been trapped behind the dam in Lake Nasser. This makes it necessary to use larger amounts of chemical fertilizer, which is imported and expensive. Salinity has increased in the northern portion of the river and in some of the land that was formerly drained by floods.

The 1952 revolution was of little immediate consequence to the Egyptian economy. The land reforms resulted in some redistribution of land and wealth, but the economy continued to be based on private enterprise. Although some restrictions were placed on the economy, they were directed mainly toward foreign trade and payments. By the end of the 1950s government attitudes had shifted to favor public participation in, and direct regulation of, the economy; in 1961 a series of decrees nationalized all large-scale industry, business, finance, and virtually all foreign trade. Private enterprise and free trade were replaced by Arab socialism, which was proclaimed the basis of the economic system. In practice, this meant establishing a mixed economy with a large public sector (including all foreign trade) and with the remaining private economic activities subject to various kinds of direct controls. Prices were regulated, and administrative action and decision determined resource allocation.

The system derived its socialist character mainly from the fact that the government controlled all big business. Modern manufacturing, mining, electricity and other public utilities, construction, transport and communication, finance, and wholesale trade were primarily owned by the government, whereas most retail trade, handicrafts and repair, housing, professional services, and agriculture were privately owned. The government imposed some controls on agricultural production through its control of the irrigation system and through compulsory participation in government-sponsored agricultural cooperatives. Control was also exercised over the distribution of capital goods, raw materials, and semi-manufactures as well as over prices and wages.

By 1962 the Egyptian economy and the context in which it functioned had changed considerably. Ownership of the main branches of the economy had been transferred to the government. The wealth remaining in private hands was essentially real estate and that, too, was carefully controlled. Government budgets accounted for about 60 percent of the gross national product. Inequality of wealth and income had been greatly reduced, largely through a process of agrarian reform, higher taxation, the extension of social services, and a series of nationalizations and sequestrations. The role of foreigners in the economy had been substantially reduced and, in some sectors, eliminated. Industry had made substantial progress—accounting for more than 20 percent of the GNP—and continued to increase its proportion.

Efforts to improve the economic system were severely hampered by the losses suffered in the 1967 Arab-Israeli war. As a consequence of that conflict, Egypt lost substantial revenues from the closure of the Suez Canal, the loss of some oil fields in the occupied Sinai Peninsula, and the loss of tourism. All three elements had been important to Egypt's earning of foreign exchange for its development and for the purchase of needed imports.

After the October 1973 Arab-Israeli war, partly intended to create new economic opportunities, President Sadat inaugurated the economic infitah, or open-door policy, to

encourage foreign and domestic private investment. The Suez Canal was reopened in 1975, and the Sinai oil fields were later returned to Egyptian control. Fueled less by these economic policies and more by external factors such as oil revenues, Suez Canal tolls, tourism revenues, and remittances from Egyptians working abroad, economic performance began to improve and the gross national product increased by an annual average of over 9 percent between 1974 and 1981. Major aid from Arab oil-producing states, which had been contributing huge amounts of money every year since 1967, ceased after Egypt signed the peace treaty with Israel in 1979, although U.S. aid increased greatly.

Although there had been some improvements during the Sadat era, Hosni Mubarak encountered chronic economic difficulties upon taking office in 1981: an expensive government welfare system, rising inflation, foreign exchange shortages, balance-of-payments problems, and a foreign debt estimated at about \$21 billion. Five years later the foreign debt had grown to more than \$46 billion, making Egypt the region's greatest debtor nation. The debt had risen to about \$51 billion by 1989.

Three factors have combined to make Egypt's economic picture brighter. First, by 1987, thanks to Mubarak's low-key diplomacy, ties had been restored with the Arab world; aid and investment from the wealthy Arab states had begun to return. Second, Egypt's support of the Saudi-U.S. coalition in the 1990-1991 Gulf crisis brought huge infusions of cash and debt cancellation from the Arab oil producers (\$2 billion in cash and \$7 billion in debt cancellation in 1990-1991), reducing Egypt's external debt to \$40 billion in 1990. New grants were made by the European nations, and U.S. aid rose significantly. The third factor improving Egypt's economic situation was the decision by Mubarak in 1991 to begin a massive structural adjustment program in cooperation with the International Monetary Fund (IMF) and the World Bank. The program was designed to move Egypt toward a market economy; it included a wide range of monetary

reforms, ending most subsidies on basic commodities (except bread). Progress has been made on this major program, though privatization (a sensitive political issue) is proceeding slowly.

By early 1994 Egypt's economy had shown distinct improvement. The country had a strong balance-of-payments position and was proceeding with debt reduction more or less according to its rescheduling agreements. Major government efforts at birth control had succeeded in lowering the rate of population increase from about 3 percent in 1985 to about 2.3 percent in 1993. Although cotton exports had declined, agricultural output rose by about 5 percent in 1992, with record harvests of wheat, rice, corn, and citrus fruits. Suez Canal revenues had risen. Egypt has sizable gas reserves as well as oil and is hoping to turn to gas for much of its energy requirements, given problems with hydroelectric power generation resulting from droughts upstream on the Nile. An estimated 2.5 million Egyptians working abroad continue to send remittances home, but this source of foreign exchange is vulnerable to a variety of changes in other nations and the international economy.

In late 1992 fundamentalist attacks on tourists resulted in a sharp drop in revenues from this important source of foreign exchange. Although the violence had subsided somewhat by early 1994, tourism levels were still below the years leading up to 1992. Population growth, though advancing at a lower rate, is still high; the population reached about 60 million in 1994. The same densely populated land must support increasing numbers of people every year. Furthermore, migration to the cities has created nightmarish housing shortages, especially in Cairo, where the population grew from about 7 million in 1976 to about 9 million in 1980 and to over 16 million in 1993. Life expectancy at birth has risen to about sixty, but this is still far below the figure for the developed countries. The most important single economic problem remains one that is itself a product of a host of complex economic factors: A large portion of the Egyptian people live at no more than the subsistence level.

### **Study Questions: V**

1. Egypt is frequently cited by the World Bank and the IMF along with Turkey and Tunisia as examples of success at structural adjustment, privatization and the creation of a market economy.

What is the evidence of this?

2. It is also the case, however, that perhaps this success is limited in effect to the Egyptian political state. Have these successes benefited the overwhelming majority of the population located in the social state?

### **VI. Egyptian Foreign Policy**

Napoleon once labeled Egypt “the most important country” because of its central location, between Africa and the Middle East and the routes to Asia. In the post-World War II period Egypt has become even more significant. The Suez Canal, although it cannot accommodate the largest supertankers, is a prime artery for oil. Egypt is a leader among African, Islamic, Arab, and other developing nations. It is also the primary state for the establishment of peace or the waging of war in the Arab-Israeli conflict. It has been courted by both the United States and the Soviet Union, each in pursuit of its own interests in the region and in the broader international community.

Egypt is the leader of the Arab world in a number of other respects. Its population and military forces are the largest. It has led the Arab world in communications (publishing, arts, literature, films) and other spheres. In the nineteenth century and the early part of the twentieth century, Egypt spearheaded Arab contact with the Western world and helped to develop the intellectual bases for Arab, as well as Egyptian, nationalism. It was a leader in the establishment of the Arab League. Furthermore, its Suez Canal was an important strategic and economic asset.

After the 1952 revolution Egypt emerged as an important Third World neutralist and nonaligned power, and Egypt and Nasser were increasingly relied upon for leadership in the Arab world and beyond. Egypt's foreign policy was virtually nonexistent prior to the 1952 revolution, since non-Egyptians largely controlled Egypt. Major and assertive foreign policy positions developed only after the revolution and seemed to be reactive, responding to events as they developed. Nasser's foreign policy focused, in the first instance, on the need to eliminate the British colonial presence in the Canal Zone and in the Sudan. In the second instance, there was the problem of Israel. It is in these contexts that relations with the United States and the Soviet Union emerged.

Initial successes included the agreement on the withdrawal of the British from their positions in Egypt and the resolution of the Sudan problem (although Sudan eventually chose independence rather than union with Egypt). On February 12, 1953, Britain and Egypt signed the Agreement on self-government and self-determination for the Sudan, which provided for the latter's transition to self-government and its choice between linkage with Egypt or full independence. The Suez question was settled in an agreement of October 19, 1954. That agreement declared the 1936 treaty to be terminated and provided for the withdrawal of British forces from Egyptian territory within twenty months.

Relations with the superpowers were different. Although the United States was initially helpful to the new regime and provided technical and economic aid, as well as some assistance in the negotiations with the British, there were difficulties concerning Nasser's requests for arms. Moreover, U.S. Secretary of State John Foster Dulles viewed Egypt's increasingly close ties with Communist China and the Soviet Union with suspicion. The Baghdad Pact, a Western-oriented defense alliance, conceived and sponsored by the United States, was not viewed positively by Nasser, who saw it as a threat to Arab independence and autonomy. Raids on Israel by fedayyin and counter-raids by Israel into Gaza sparked, in Nasser's view, a need for arms for defense, and his quest led him to closer links with the Soviet bloc, thus further straining ties with the United

States. The Dulles decision that the United States would not fund the Aswan High Dam was a major blow to the plans of the new regime, which decided to continue building and to secure the necessary funding and assistance from alternative sources. The Soviet Union was prepared to assist in the construction and to provide some financial aid. But in Nasser's view a more demonstrable act was needed. Thus, in July 1956, he nationalized the Suez Canal and stated that the canal revenues would go to the construction of the dam.

The crucial exchanges between Nasser and the United States set the tone for the less-than-cordial relationship that followed. While the U.S.-Egyptian relationship was deteriorating, the Soviet role in Egypt (and elsewhere in the Arab world) was improving. Soviet assistance for the Aswan Dam project and the supply of arms essential to the continued stature and satisfaction of the Egyptian military and, ostensibly, to the defense of Egypt against Israel were elements that helped to ensure the positive Soviet-Egyptian relationship.

Then came the Sinai-Suez war of 1956, when Israel, France, and Britain joined in an effort to unseat Nasser and restore the canal to Western control while destroying Egypt's military capability (especially its ability to use the newly acquired arms). The United States opposed the invasion and exerted considerable pressure on its three friends to withdraw from Egyptian territory. In assisting the Nasser regime, the United States won much goodwill in the Arab world, especially in Egypt. But this goodwill was soon dissipated when the United States became involved in the 1958 Lebanese crisis and opposed the Egyptian position.

The chill between the United States and Egypt thawed slightly during the Kennedy administration, but with the death of John Kennedy and the establishment of President Lyndon Johnson's position on foreign policy, the relationship began to deteriorate once again. By the time of the Six-Day War of June 1967, relations between the two states were poor, and the war itself precipitated the break of diplomatic relations. The relationship between the United States and Egypt remained antagonistic until the end of the October War, when President Richard

Nixon and Secretary of State Henry Kissinger established the policy that led to a rapprochement between the two states. A cordial relationship grew in the mid-1970s in virtually all the bilateral spheres, demonstrated by state visits by Sadat to the United States in 1975 and 1977 and a 1974 state visit by Nixon to Egypt.

Relations with the Soviet Union were somewhat different. Beginning in the mid-1950s, Soviet economic and technical assistance were important elements in the Aswan Dam project and in Egypt's economic development. Military assistance was another element in the developing relations of the two states. Because Nasser felt that Egypt required arms to maintain the regime and to deal with Israel, the Soviet Union became a major factor inasmuch as it was prepared to provide arms under cost and payment terms acceptable to the Egyptians. The Egyptian military soon had a Soviet arsenal. Soviet equipment provided the arms essential for the Egyptian armies in the 1956, 1967, 1969–1970, and 1973 wars. But despite the consummation of a treaty of friendship between the two countries in 1971, the Soviets were never popular with senior members of Egyptian military.

The rift between Egypt and the Soviet Union began when the Soviet Union attempted to influence the choice of Nasser's replacement after his sudden death in 1970. After Sadat's consolidation of his position following the arrest of his major opponents, Egypt's relationship with the Soviet Union deteriorated further, as the Soviet Union and its Egyptian clients began to differ on the type of equipment the Soviets were willing to provide and on Soviet attempts to constrain Egyptian military plans. This culminated in the expulsion of Soviet advisers in July 1972. Although Egyptian-Soviet relations improved somewhat during the months that followed, the relationship never returned to its former levels. After the October War, Egypt complained that the Soviets were lax in re-supplying the Egyptian military forces. Egypt increasingly turned to the West, especially the United States, and Sadat articulated the view that the United States held the crucial cards for peace in the region and could also become the source of essential

economic and technical assistance for Egypt. The relationship seemed to be a zero-sum game: Better relations with the United States spelled poor relations with the Soviet Union.

Arab nationalism has always been a key concept in Egyptian foreign policy, although its passionate espousal during the Nasser period diminished to lip service under Sadat and Mubarak. In his Philosophy of the Revolution, Nasser argued that Arab unity had to be established, for it would provide strength for the Arab nation to deal with its other problems. Arab unity was a consistent theme during the period of his tenure. Sadat retained that general theme but focused much of his foreign policy on the Arab-Israeli conflict and the future of the Palestinians. His signing of the Camp David Accords and the Egypt-Israel Peace Treaty of 1979 left him open to charges that he had forgotten the Palestinians and the rest of the Arab world in his pursuit of Egyptian interests alone. The brotherhood of the Arab people has not disappeared from the political lexicon of the Egyptian leadership. Even during the early 1980s, when Egypt remained isolated from the Arab world, Mubarak did not disown the concept. The heyday of Arab nationalism, however, had clearly passed, for a number of reasons, including perhaps Sadat's willingness to go it alone with Israel and Mubarak's ability to survive the isolation from the Arab world that followed.

Another important theme of Egyptian policy has been its leadership role in the Arab world. Developed as a part of the pan-Arab or Arab nationalist approach, this theme acquired added dimensions with Nasser's increasing interests in the Arabian Peninsula and the Gulf region in the 1960s. Increasingly, Egypt became the Arab leader in the conflict with Israel. The Arab-Israeli conflict and the wars of 1956, 1967, and 1970 (the War of Attrition along the Suez Canal) consumed Nasser's attention in foreign policy, and Egypt played the leading role in most aspects of the Arab side of the conflict. After 1967 the radical/conservative split in the Arab world was more or less healed at the Khartoum Summit, and Egypt's leadership began to encompass even the more conservative Arab states.

Following the October War, Sadat initiated a dramatic transformation of Egyptian foreign policy. He began with the assumption that the key to both his domestic and his foreign policy problems lay in closer ties with the United States, for he felt that only the United States could push Israel to relinquish territories occupied in the 1967 war (most critical for Egypt, the Sinai) and provide the technical and economic assistance the Egyptian economy desperately needed. The U.S. option thus seemed logical for both political and economic reasons.

The postwar approach began in the months following the war. In January 1974, Kissinger achieved a first-stage disengagement agreement separating Israeli and Egyptian forces along the Suez Canal and in Sinai. Relations between Egypt and the United States began to improve dramatically, and relations with the Soviet Union continued to deteriorate. After further and substantial effort, a second-stage disengagement between Israel and Egypt, known as Sinai II, was signed in September 1975. It provided for further Israeli withdrawals and the return to Egypt of important oil fields in Sinai. Nixon visited Egypt in June 1974, with the Watergate scandal at its height, and Sadat later visited the United States (October-November 1975).

In the wake of the Sinai II agreement, Egyptian policy took on a new cast. Sadat seemed to be interested in maintaining the role of the United States as the power that would help attain peace by pressuring Israel to change its policies. Movement was slowed, however, by regional developments—especially the civil war in Lebanon and by the U.S. presidential elections. The conclusion of the elections in November 1976 and the temporary winding down of the Lebanon conflict set a new process in motion. During the initial months of President Jimmy Carter's administration there was substantial movement toward the establishment of a process to lead toward peace or at least toward a Geneva conference designed to maintain the momentum toward a settlement. But the movement seemed to have slowed substantially by October 1977, thus leading to Sadat's decision to "go to Jerusalem" and to present his case and the Arab position directly to the Israeli parliament and people. In so doing he set in motion a new approach to the

Arab-Israeli conflict in which direct Egyptian-Israeli negotiations became, for the first time, the means to peace in the Middle East.

The direct negotiations were continued at the Cairo Conference and Ismailia Summit of December 1977 and in lower-level contacts over the ensuing months. Then, in September 1978, Sadat met with President Carter and Israeli Prime Minister Menachem Begin at the Camp David summit, which provided a framework for peace between Egypt and Israel and, ultimately, for a broader arrangement between Israel and the other Arab states. On March 26, 1979, Sadat signed the Egypt-Israel Peace Treaty in Washington. Implementation of the treaty, which normalized relations between the two states, proceeded as scheduled, and diplomatic relations were established. At the same time, various contacts were made, including tourist and communications links. These actions led to Egypt's expulsion from the Arab League and its isolation in the Arab world, which refused to accept Sadat's argument that the treaty and peace with Israel were in the best interests of the Palestinians and the other Arabs. Failure to achieve substantial progress toward implementation of the other Camp David framework, which provided for arrangements for the West Bank and Gaza, further complicated Egypt's and Sadat's position. Despite U.S. effort, the talks were suspended.

Sadat's assassination in October 1981 raised questions about Egypt's foreign policy direction, particularly its arrangements with Israel. President Mubarak reaffirmed and built upon the policies he inherited from Sadat, emphasizing negotiated solutions to the Arab-Israeli conflict, maintenance of the peace with Israel, and close and positive relations with the United States. The peace treaty's provisions were implemented on or ahead of schedule. Although Mubarak insisted on maintenance of the peace with Israel, he also has been critical of Israel at times. He sharply criticized Israel's June 1982 invasion of Lebanon and withdrew his ambassador from Israel following the Sabra and Shatilla refugee camp massacres in September 1982. Egypt's embassy remained in Tel Aviv, however, just as Israel's embassy remained in

Egypt, the Egyptian ambassador later returned.) Nevertheless, Mubarak worked to reduce Egypt's Arab world isolation by gradually restoring and improving relations with the Arab states. He succeeded in improving ties with the moderate Arab states, and Egypt was readmitted to the Islamic Conference in early 1984. Mubarak also shrewdly utilized the opportunity presented by the Iran-Iraq war to improve his ties with several Arab moderate states, in part through offers of assistance to Iraq. By 1987 he had succeeded in returning Egypt to the mainstream of the Arab world without making a single concession, and in May 1989 Egypt rejoined the Arab League.

Another inter-Arab conflict gave Mubarak the chance to improve Egypt's situation. Egypt played a key role in pulling together the Arab states opposed to Iraq's invasion of Kuwait. With Saudi Arabia and Syria, Egypt provided the major Arab element of the coalition that joined with U.S. and European forces in the offensive against Iraq in January 1991. Egypt sent the second-largest foreign force in the Gulf after the United States: 27,000 men to Saudi Arabia and some 5,000 to the UAE.

After the Gulf war, Egypt's relations with several of the Arab states—Syria and Libya in particular—improved sharply. Libya invited Egypt to mediate in its conflict with the United States and the United Kingdom over the bombing of the Pan Am jetliner over Lockerbie, Scotland, in 1988. Conversely, Egypt's relations with the Arab supporters of Iraq—Jordan, Yemen, and Sudan—have remained poor. Relations with Sudan deteriorated not only because of a border quarrel but also because of Mubarak's fears that the Islamic fundamentalist government in Khartoum was sponsoring the training and infiltration of fundamentalist insurgents into Egypt and other moderate Arab states (such as Algeria).

Relations with Israel under Mubarak have been correct, if not warm, but Mubarak has played a strong role in supporting and sponsoring Israeli negotiations with other key players in the Arab-Israeli conflict, principally the PLO and Syria. In Cairo in February 1994 Israeli Foreign Minister Peres and PLO Chairman Arafat signed an agreement that recorded some

progress in implementing the breakthrough agreement signed by the PLO and Israel in Washington in September 1993.

Relations with the United States have remained positive since their restoration in 1974. The personal chemistry between Sadat and Carter was an important factor in this development. Mubarak has been able to broaden and strengthen the relationship since his accession to office. Numerous exchanges of visits between U.S. and Egyptian officials (including regular trips by Mubarak to Washington) have allowed the dialogue on Middle Eastern and other issues to continue. U.S. economic and military assistance to Egypt rose to several billion dollars a year in the 1980s and to about \$2.5 billion a year in the late 1980s and early 1990s. Mubarak obtained an unwritten agreement to have U.S. aid to Egypt tied to the level of aid to Israel, although at a slightly lower level.

**The al-Aqsa Intifada and Egyptian Foreign Policy.** The road to the al-Aqsa Intifada was the result of the shortcomings of the American foreign policy of the Clinton administration. This policy began in a hapless fashion by the exclusion of the Americans from the Oslo Accords. These secret meetings also excluded the internal Palestinian leadership whose leadership of the first intifada had created the political pressure to make the diplomacy of the Oslo Accords possible. Thus the signatories to the accords had narrower concerns than the achievement of peace. Arafat was desperate to abandon the Diaspora and gain the appearance of sovereignty in Palestine, while Israel wanted to do the American bidding and give the Arabs a reward for having stood as allies against Saddam Hussein in the second Gulf War. The major issues of Jerusalem, the settlements, the right of return for the Palestinians and even the final boundaries of Israel and the new Palestinian state were to be put off until last and secondary procedural largely confidence building issues were discussed over the next seven years. At the same time in contradiction to the alleged goal of land for peace, the Israeli settlers who were eventually slated

to be theoretically removed from the occupied area or at least reduced in numbers, were in fact increased by one third.

In July 2000 at Camp David things came to a boiling point. There was the appearance of concessions by the Israelis e.g. a vaguely worded formula for a Palestinian presence in Jerusalem but there were no maps. In the absence of the maps, it became clear to the Palestinians that what appeared to be additional territorial concessions to themselves were in fact crisscrossing corridors of continued Israeli control of a non-territorially contiguous Palestine. Even an Arafat who was inclined to go along with most compromises could not accept this without risking his own overthrow. Palestine was now seething with resentment when General Sharon proved that he could visit the Temple Mount as any Israeli could and was entitled to do so. The 1000 police who accompanied him in this exercise saved his life from the violent protest that erupted.

The al-Aksa Intifada has put Mubarak and Egypt into a reactive and defensive stance. The first intifada from 1987-1992 occurred in a regional context in which Islamism had not as yet politically firmly established itself in Egypt or elsewhere with the important exception of Iran. The trend was evident but the political arrival had not yet been achieved. Mubarak had been fighting a secularist war to contain Islamism domestically. In a very complicated way his very effort to achieve the limitation of Islam actually fostered its growth. In an important study of this process, an author has termed this "Islamization by stealth". Mubarak has successfully repressed a violent minority Islamic opposition group but in the process he now has to carefully pay attention to nearly universal Islamic sympathy for the Palestinians. Partly for this reason and partly in order to carve out a negotiator role for itself, Egypt withdrew its ambassador from Israel.

The domestic pressures building upon Mubarak necessitated the withdrawal of its ambassador. From the beginning of the al-Aksa Intifada, Egypt has also attempted to accommodate to American pressure by acting as an intermediary between Arafat and the

Palestinians and the Israelis. U.S. policy under Clinton committed the Central Intelligence Agency in efforts to bring about security cooperation between the two sides. This also involved feverish peace efforts in the remaining weeks of the Clinton administration. With the election of President Bush, an American policy of hands off was initiated.

In the face of this, Egypt, in company with Jordan, proposed a peace program which called for a cessation of settlement activity in return for a reduction in violence. Evidence of further policy activism by Egypt was the support they generated at the Arab summit meeting on May 19, 2001. The former Foreign Minister of Egypt, Amr Mousa who was now Secretary General of the Arab League played an important leadership role in rallying support for the Palestinians. This was facilitated by the fact that Amr Mousa had become Secretary General of the Arab League. In that position, he was able to get the Arab states to take a position of recommending cutting off contacts with Israel. At the time there was some question whether or not this would result in any concrete action. There is increasing evidence that this action plus a similar one at the subsequent conference of the Organization of the Conference of Islamic States has resulted in increasing pressure upon the Israelis. For example, Egyptian joint energy ventures of great strategic importance to the Israelis are now beginning to come apart.

In sum, the al-Aksa Intifada has presented Egyptian foreign policy with a major challenge. This challenge goes even deeper than the political “strong state” and the economic/capability “weak state” distinctions developed in this chapter. The “strong state” after all has had important foreign policy advantages for Egypt. Now what is beginning to happen, as observed in the weakening of the capabilities of the National Democratic Party in the recent parliamentary elections, is that the popular and Islamic support for the Palestinians is so great that it threatens the very stability of the regime itself. Even the narrowness of Egypt’s political strength is under stress.

**Conclusion: Foreign Policy, Economic Rents and the “Weak “ State.** A major strength, at least from the viewpoint of the foreign policy decision-makers, is the centralization of authority in a patrimonial executive supported by an acquiescent political class. On the other hand, Egypt’s lack of economic resources severely limits its ability to influence other countries to adopt policies in furtherance of its national interests, either through diplomacy or, indirectly, through force of arms. As a result, Egypt has had to pursue a foreign policy of seeking infusions of foreign financial and military assistance to maintain internal stability and external security and to create economic growth.

During the cold war, Egypt’s ability to play one superpower against the other facilitated this effort, and with tensions running in the Middle East, it was successful in building up its military, first with Soviet and then, in the 1970s, with American arms. When President Sadat negotiated a peace treaty with Israel in 1979, Egypt exchanged peace for economic assistance, and since that time, Egypt has received the second largest amount economic assistance given by the U.S. worldwide, next to Israel itself.

Beginning in the 1970’s, Sadat began a policy of cultivating what has become a policy of long duration of very large American economic and military assistance. Essentially, he pursued a policy of force and diplomacy with Israel that began with a surprise attack upon the Israeli defensive positions along the Suez Canal in 1973 and ended with a bilateral peace treaty with Israel in 1978.

Since that time, in exchange for that peace, Egypt has been receiving the second largest economic assistance given by the U.S. worldwide, next to Israel itself. This assistance has strengthened the weak infrastructure of Egypt without, however, requiring Egypt to achieve developmental capability and economic independence.

It has been development assistance, which has increased the potential for such development without, however, achieving development. The effect is to allow the strong and

weak characteristics of the Egyptian State to coexist and continue. The non-productive Egyptian State has taken on the coloration of market economics and reform. But the show case quality of this has weakened the state in foreign policy terms, so much so that it cannot even attract foreign investment never mind exert foreign policy influence. In addition, the collection of “rents” in addition to foreign assistance also reinforced this weakness. These rents have consisted of worker remittances from Egyptian workers in the oil rich states, Egypt’s own oil revenues and Suez Canal revenues. Rents operate to keep the state afloat and to maintain the political status quo.

In the era of globalization and the appearance of the peaceful settlement of disputes in the 1990’s Egypt was a weakened player. The Oslo accords of 1993 created seven years of a peace process on the Palestinian issue while Iraq was contained by U.S. policy. In the absence of foreign policy crises, which might be useful to exert its influence and exercise regional hegemony, Egypt was the foreign policy wallflower of the region. During this period of presumed movement towards peace in the 1990’s, economic globalization became the theme of regional conferences in the Gulf and in Morocco at which Israel was a prominent attendee. The “rent” seeking Egypt of weak economic capabilities was not a meaningful player in the search for foreign investment and technology. This does not mean that Egypt was not useful to American policy when from time to time it was able to play an intermediary role in Palestinian – Israeli negotiations. It does mean, however, that it was Israel itself that emerged as a potential economic power and it was Turkey and Iran that exercised hegemonial influence.

The apex of Egyptian regional influence in the Arab world occurred in the 1960s under the charismatic Gamal Abd al-Nasser. Sadat became a pariah in the Arab world following his peace treaty with Israel, and though his successor, Hosni Mubarak, engineered Egypt’s return to the Arab fold, his priorities have centered more on domestic problems than foreign policy.

### **Study Questions: VI**

1. Egypt has always been skillful in its ability to manipulate the international system to its own benefit. This was dramatically the case during the Cold War when Egypt attempted to play America off against the Soviets. How do the wars of 1956, 1967 and 1973 illustrate this ability?
2. How has Egypt been able to collect “foreign policy rents”?
3. How and in what way has Egypt been useful to American interests?

### **VII. Conclusions**

1. Egypt as a politically strong authoritarian state is able to use political repression to maintain political stability, including the suppression of militant and moderate Islamic opposition groups.
2. It has also been able to divert wealth to the political class, including a new grouping of young businessmen. It has accomplished this through undertaking structural economic reform and directing the benefits of privatization of a segment of state enterprises to the same class. As a result, the macro figures of the economy appear positive whereas in fact, the economic capabilities of the economy have improved only slightly.
3. As a result, Egypt is in other respects a weak state. It is a state that does not develop and consequently fails to benefit the masses of the population.
4. In the era of globalization, Egypt is not a player. It can neither attract significant foreign investment nor can it play a dynamic role in seeking foreign markets. It is a state that sits on the international economic sidelines.

5. Even as a politically strong state with an important military capability, it can not assert itself in foreign affairs. The reason is that as a rentier state it must cater to the interests of the sources of its rent including its neighbors and foreign allies.
6. When it does exercise leadership in regional affairs as with its support of the Palestinians this is due significantly to reasons of regime survival in the face of an aroused Islamic opposition.
7. For the economic, political and cultural reasons indicated in this analysis, until fundamental political change occurs, Egypt is a country that is moribund between its past and its future. It can survive and it can exert marginal political pressure.
8. In foreign policy terms Egypt's survival is intimately tied to American economic and military support. For its part, America gains from this the usefulness of Egypt as an intermediary for American policy in the Middle East. In a certain respect both Egypt and America complement each other in policies of treading water. Egypt treads water in order to assure regime survival and America treads water because it lacks the resolve to compel a solution to the Israeli-Palestinian conflict. Both countries have a vested interest in the political status quo.

### **Further Reading**

A review of the background of modern Egypt and the nature of its people is essential to an understanding of its political culture as well as more contemporary works. One important book based on personal observations and steel engravings describing Egypt in the 1840's is

William Lane's Manners and Customs of the Modern Egyptians (New York: Dutton, 1923). The historical background of modern Egypt is considered in Peter Mansfield, The British in Egypt (New York: Holt, Rinehart & Winston, 1971); and Nadav Safran, Egypt in Search of Political Community: An Analysis of the Intellectual and Political Evolution of Egypt, 1804–1952 (Cambridge, Mass.: Harvard University Press, 1961). Jamal Mohammed Ahmed, in The Intellectual Origins of Egyptian Nationalism (London: Oxford University Press, 1960), provides an introduction to the intellectual foundations of Egyptian nationalism.

Among the many good studies of Egypt since the revolution are Anouar Abdel-Malek, Egypt: Military Society—The Army Regime, the Left, and Social Change Under Nasser (New York: Random House, 1968) (translated by Charles Lamb Markmann); R. Hrair Dekmejian, Egypt Under Nasir: A Study in Political Dynamics (London: University of London Press; Albany: State University of New York Press, 1972); John Waterbury, The Egypt of Nasser and Sadat (Princeton: Princeton University Press, 1983); P.J. Vatikiotis, Nasser and His Generation (New York: St. Martin's Press, 1978); Mohamed Heikal, Autumn of Fury: The Assassination of Sadat (New York: Random House, 1983); Raymond Baker, Egypt's Uncertain Revolution Under Nasser and Sadat (Cambridge, Mass.: Harvard University Press, 1978). There are three books by Egyptian presidents: Mohammad Naguib's Egypt's Destiny: A Personal Statement (Garden City, N.Y.: Doubleday, 1955); Gamal Abdul Nasser's Egypt's Liberation: The Philosophy of the Revolution (Washington, D.C.: Public Affairs Press, 1955); Anwar el-Sadat's Revolt on the Nile (New York: John Day, 1957); and Anwar el-Sadat's In Search of Identity: An Autobiography (New York: Harper & Row, 1978).

Studies of the local politics of Egypt include Iliya Harik, The Political Mobilization of Peasants: A Study of an Egyptian Community (Bloomington, Ind.: Indiana University Press, 1974); James B. Mayfield, Rural Politics in Nasser's Egypt: A Quest for Legitimacy (Austin: University of Texas Press, 1971); Amitav Ghosh, In an Antique Land (New York: Vintage, 1992)

Other aspects of Egyptian politics: P.J. Vatikiotis, The Egyptian Army in Politics: Pattern for New Nations? (Bloomington, Ind.: Indiana University Press, 1961); and Malcolm Kerr and El Sayed Yassin, eds., Rich and Poor States in the Middle East: Egypt and the New Arab Order (Boulder: Westview Press, 1982).

Egyptian foreign policy has not engendered many full-length studies. Nevertheless, several works provide a useful beginning. They include A. I. Dawisha, Egypt in the Arab World: The Elements of Foreign Policy (New York: John Wiley, 1976). More specific themes are considered in Karen Dawisha's Soviet Foreign Policy Towards Egypt (New York: St. Martin's Press, 1979); and Ismail Fahmy's Negotiating for Peace in the Middle East (Baltimore: Johns Hopkins University Press, 1983). See also, Gregory Aftandilian, Egypt's Bid for Arab Leadership: Implications for U.S. Foreign Policy (New York: Council on Foreign Relations, 1993).

Valuable studies of Egypt's economy are provided in Charles Issawi, Egypt in Revolution: An Economic Analysis (London: Oxford University Press, for the Royal Institute of International Affairs, 1963); Robert Mabro, The Egyptian Economy, 1952–1972 (London: Oxford University Press, 1974); Patrick O'Brien, The Revolution in Egypt's Economic System: From Private Enterprise to Socialism, 1952–1965 (London: Oxford University Press, 1966, issued under the auspices of the Royal Institute of International Affairs); Khalid Ikram, ed., Egypt: Economic Management in a Period of Transition (Baltimore: Johns Hopkins University Press, for the International Bank for Reconstruction and Development, 1980); Louis J. Cantori and Iliya Harik, eds., Local Politics and Development in the Middle East (Boulder, Colorado: Westview, 1984), and Alan Richards, Egypt's Agricultural Development, 1800–1980: Technical and Social Change (Boulder: Westview Press, 1983).

Some more recent studies include Robert Springborg's Mubarak's Egypt: Fragmentation of the Political Order (Boulder: Westview Press, 1989); Raymond Baker's Sadat and After: Struggles for Egypt's Soul (Cambridge, Mass.: Harvard University Press, 1990); Phebe Marr, ed. Egypt at the Crossroads (Washington DC: National Defense University Press, 1999), including chapters on foreign policy, national security and the military. On Islam in present day Egypt, see Denis J. Sullivan and Sana Abed-Kotob, Islam in Contemporary Egypt (Boulder, Colo.: Rienner, 1999) and especially, Genieve Abdo, No God But God: Egypt and the Triumph of Islam (New York: Oxford University Press, 2000). There is also the chapter by Louis J. Cantori, "Egypt: Moribund Between Past and Future" in Robert O. Freedman, ed. The Middle East Enters the 21st Century (Gainesville, Florida: University Presses of Florida, forthcoming, 2002) and also, Louis J. Cantori and Sally , Chapter 13, "Arab Republic of Egypt" in David E. Long and Bernard Reich, Government and Politics of The Middle East and North Africa, New Edition (Boulder, CO: Westview Press, forthcoming 2002).

# Australia

## A Self-Study Guide

*The Sydney Opera House, Sydney, Australia*

GEORGE P. SHULTZ NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The *Self-Study Guide: Australia* is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important Australian issues related to history, geography, culture, economics, government and politics, international relations, and defense. This guide should serve as an introduction and a self-study resource. Australia is far too complex and diverse a society to be covered in any depth using only the text in this guide. The reader is encouraged to explore the questions and issues raised in the guide by referring to the books, articles, periodicals and web sites listed in the bibliography. Most of the bibliographic material can be found on the Internet or in the National Foreign Affairs Training Center Library, the Main State Library, or major public libraries.

The first edition of the *Self-Study Guide* to Australia was prepared by Ambassador Richard W. Teare, Director of the Center for Australian and New Zealand Studies in the Edmund A. Walsh School of Foreign Service at Georgetown University and former Deputy Chief of Mission of the United States

Embassy in Canberra. The views expressed in this guide are those of the author or of attributed sources and do not necessarily reflect official policy or the position of the Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and non-profit use only.

First edition  
January 2002

## THE LAND

Australia is the largest island and the smallest continent on earth. It is also one of the world's largest nations, with an area of 7,686,850 square kilometers (2,967,910 square miles), ranking sixth in size, after Russia, Canada, China, the United States and Brazil. Its size closely approximates that of 'the Lower 48' states of the United States.

Australia is located southeast of Asia, close to insular Southeast Asia. The Pacific Ocean lies to the east and the Indian Ocean to the west; the two meet north of Australia in the Timor and Arafura seas. Because of Australia's relative isolation from Europe, mainland Asia and the Americas over millennia, the country has animal and plants species that exist nowhere else in the world. Among the animal species are the kangaroo and the emu, which appear on Australia's coat of arms, and the koala and the duck-billed platypus. That same isolation has protected the country from a number of contagious diseases. But isolation has also made travel and transportation difficult, time-consuming and expensive and has contributed to a sense of remoteness, factors that have combined to create, for Australians, what has been called 'the tyranny of distance.'

Australia is the lowest of the continents and, after Antarctica, the driest. The average elevation is 330 meters (1,082 feet). The tallest peak, Mt. Kosciusko, measures 2,228 meters (7,310 feet). The Great Dividing Range in the eastern part of the country sets off the populated coastal plain from the vast interior. The Western Plateau rises to 600 meters (2,000 feet). The Great Sandy Desert and Great Victoria Desert are largely arid, and northern portions of Western Australia and the Northern Territory are extremely hot. The northeastern part of the country, by contrast, receives heavy rainfall, and the Cape York Peninsula has jungles.

Water supply is a chronic problem for Australia. The exceptions are those areas in the northeast with heavy rainfall and those parts of the southeast served by the Murray-Darling and other river systems. Elsewhere, droughts may last for months and even years. Brush fires and forest fires are common and indeed necessary to the regeneration of some types of vegetation. The droughts sometimes are broken by brief but heavy rains, which cause temporary flooding and bring out species of amphibians that have lain dormant in the ground for long periods.

## THE PEOPLE

Australia's population in mid-2001 was estimated to be 19,358,000, with a growth rate of 0.99 per cent per year. Australia conducts a census every five years; results of the census conducted on the night of August 7, 2001, will be available in 2002. Despite the country's image as a frontier nation with a vast outback, it is in fact one of the world's most urbanized nations, with more than 85 per cent of the population living in cities, and most of those in a narrow swath of the southeastern part of the country.

Life expectancy for children born in 2001 was estimated at 79.87 years: 77.02 years for males, and 82.87 for females.

Ethnically, the population is estimated to be 91 per cent Caucasian, 7 per cent Asian, and 2 per cent Aboriginal and other.

In terms of national origin, the population is extremely diverse: 23 per cent were born in another country, and an additional 25 per cent have at least one parent who was born in another country. Immigrants from more than 140 countries have been naturalized to Australian citizenship. Government statistics show that

Australians speak more than 100 world languages and nearly 200 indigenous languages. About 15 per cent of Australians speak a language other than English at home. The top five are Italian, Chinese, Greek, Arabic and Vietnamese.

Literacy among those over 15 is estimated to be 100 per cent.

The nominal religious affiliation of the population is: Anglican, 26.1 per cent; Roman Catholic, 26 per cent; other Christian, 24.3 per cent; and non-Christian, 11 per cent.

The labor force numbers approximately 9.5 million persons, divided approximately as follows:

Finance and services, 32 per cent;  
Public and community services, 20 per cent;  
Wholesale and retail trade, 21 per cent;  
Manufacturing and industry, 22 per cent; and  
Agriculture, 5 per cent.

Most new jobs created in the last 15 years are in the services sector. An estimated 35 per cent of employed Australians now work in professional, managerial, technical or administrative jobs.

## Questions and Issues:

Australia's population is projected to stabilize at around 23 million by the year 2025, with 25 per cent of that number aged 65 and above. Some authorities say that population is much too small to provide economic or military security and that the country should aim for a population of 50 million by the year 2050. Others say the country's limited water supply and existing environmental problems argue against any such dramatic growth. Who's right?

National Geographic magazine in July 2000 described Australia as a nation "under siege" in environmental terms. Prosperity has come "at a cost: As housing and pastures expand, forests fall, woodlands thin out, and fragile ecosystems become unstable." Among the problems are overgrazing, deforestation, salinization, infestation by feral animals, fire, pollution of surface water and groundwater by mining operations, and atmospheric pollution. Can Australia cope with these problems without sacrificing economic prosperity?

## HISTORY

Aboriginal peoples have lived in Australia for at least 60,000 years. Some scholars believe it may have been even longer. The ancestors of the Aborigines probably came from Southeast Asia. At the time of European settlement they inhabited most areas of the continent, each speaking one or more of hundreds of separate languages. Religious and cultural traditions varied from one region to another but reflected

strong connection with the land. Tribes had complex social structures, simple but efficient technology, and highly developed decorative arts (see CULTURE, below). It is now well established that peoples of Asia and Oceania traded and had other contacts with the Aborigines of Australia for hundreds and probably thousands of years before the arrival of the Europeans.

European explorers of the 15th and 16th centuries reached the East Indies and many islands of the Pacific but managed to miss Australia. In 1606 a Spaniard, Luis Báez de Torres, sailed through the strait between Australia and New Guinea that now bears his name; he may or may not have sighted Australia. In the same year the Dutch sea captain Willem Jansz landed some of his men on the continent, where they found a hostile reception.

Abel Tasman, another Dutch navigator, sailed along the western and southern coasts in 1642 and discovered an island, which he named Van Diemen's Land, in honor of the governor of the Dutch East Indies. The continent became known generally as New Holland, although the Dutch established no settlements. The name Van Diemen's Land was changed to Tasmania in 1855.

The first English explorer to set foot on Australian soil was William Dampier, who landed on the northwest coast in 1688. Only in 1770, however, when Captain James Cook charted the east coast in the *Endeavour*, was Australia claimed for the British crown, under the name of New South Wales.

The British at this period had severe criminal laws and not enough space in their prisons. They had customarily sent some convicts to the North American colonies but had to end that practice with the outbreak of the American Revolution. The writer Robert Hughes in his book *The Fatal Shore* has observed that American rhetoric about refusing to accept convicts was hypocritical cant, for "the trade in black slaves had turned white convict labor into an economic irrelevance." Hughes adds that on the eve of the Revolution the American colonies were receiving more slaves in one year, 47,000, than England had sent convicts in the previous fifty years.

In the face of the new situation in North America, the British quartered some convicts on old, deteriorating ships known as "hulks" anchored in the Thames, but the numbers of prisoners continued to grow, and a longer-term solution was clearly needed. Sir Joseph Banks, the prominent naturalist who had sailed with Cook and had since become President of the Royal Society, suggested Australia as a destination for convicts.

Thus an initial group of convicts, guards and administrators, aboard eleven ships, the First Fleet, left Portsmouth, England on May 13, 1787, and arrived at Botany Bay on January 20, 1788. Captain Arthur Philip, Commodore of the First Fleet, preferred nearby Port Jackson – Sydney harbor – and landed there on January 26, the date now observed as Australia's national day.

Over the next eighty years, about 160,000 convicts were sent to Australia, more than 15 per cent of them women. Transportation to Van Diemen's Land ended in 1853, and to Western Australia in 1868. However, free settlers had greatly outnumbered convicts from the early years of settlement, and the Australian colonies flourished during most of the 19th century, thanks to the wool industry and to mid-

century gold rushes. The “bush” was vast, labor was scarce, and farming, mining and trade all contributed to general prosperity.

This is not to say that Australia was peaceful; on the contrary, life on the frontier and in the goldfields was rough, excessive drinking was common, and firearms were prevalent. In 1854 miners in Ballarat, Victoria, who complained about police repression and corruption in the courts formed a mass movement to demand justice. Some of them built a stockade near the Eureka Hotel and began to drill for battle. Troops and police cracked down, and in the ensuing fight 25 miners were killed and 30 wounded; an officer and three privates were killed, and eleven other privates were wounded. The colonial government redressed some of the miners’ grievances, but the Eureka Stockade became a powerful symbol for labor and political activists for decades thereafter.

The ‘bushranger’ or frontier outlaw became a prominent figure. The most famous and controversial of them was Ned Kelly, son of poverty-stricken Irish exiles who in 1878 killed three police constables who were hunting him. Kelly and his gang then took to robbing banks and distributing at least some of the proceeds to the poor. Kelly became a hero, a Robin Hood, to many and a dangerous enemy to the colonial government, the police and the army, and to the economic establishment. In 1880 he was betrayed, wounded, captured and hanged. He remains a compelling figure in Australian national life, most recently portrayed in Peter Carey’s brilliant novel *True History of the Kelly Gang* (2000), which purports to be Kelly’s own memoir.

At the same time, Australia was becoming more egalitarian and more democratic. The colony of Victoria introduced the secret ballot in 1855, and the term ‘Australian ballot’ carried over into American political life. The colony of South Australia granted women the right to vote in 1892, the first substantial political entity to do so. (New Zealand became the first nation to do so, one year later.)

Colonial politicians also began to see merit in the idea of unity. A series of conferences during the 1890s led ultimately the establishment of a federal government on January 1, 1901. Australia remained within the British Empire. Of the 3.8 million Europeans at that time, three-fourths had been born in Australia. The vast majority were of English, Irish or Scottish descent, and generally speaking had a higher standard of living than did people in the British Isles.

In the years from Federation through 1914, Australia made substantial progress in agriculture and manufacturing. Institutions of government and social service were established. World War I, however, was devastating for Australia. Almost 400,000 men, of a male population of less than three million, volunteered for military service. About 60,000 died, and tens of thousands more were wounded or gassed.

Men of the Australian and New Zealand Army Corps (ANZAC) landed on the Gallipoli peninsula on April 25, 1915, in an attempt to capture a Turkish stronghold and, ultimately, to control the Dardanelles. The operation bogged down. The ANZACs fought heroically and took severe casualties before they were finally withdrawn late in the year. But the experience of the campaign, and combat on the Western Front later in World War I, contributed to the formation of national spirit in both Australia and New Zealand and to the extremely close bond that endures between the two.

At the same time, many Australians of Irish descent did not wish to fight for the British crown. The government of Prime Minister Billy Hughes twice sought authority, through referendums, to conscript young men for military service, and lost both times.

The inter-war period was difficult for Australia. Servicemen returning from the battlefronts of Europe tried to reconstruct their lives. Political parties fractured. The Depression hit hard. Banks failed. Income disparity increased.

World War II, however, brought a revival of national pride and self-confidence as Australia contributed significantly to the Allied victory. At the outset, in late 1939 and 1940, Australian troops were sent to support the British in North Africa, the Middle East, Greece and Crete. With the rapid Japanese conquest of Southeast Asia in late 1941, however, and after the attack on Pearl Harbor and with the fall of Singapore imminent, Prime Minister John Curtin stated:

“Without any inhibitions of any kind, I make it quite clear that Australia looks to America, free of any pangs as to our traditional links of kinship with the United Kingdom.”

For Australia, this departure from the concept and practice of Imperial Defence was revolutionary. By February 1942, Australian troops aboard ship were steaming back toward the Pacific, at British behest, for use in Sumatra and Java to reinforce the Singapore-Malaya region. They were too late to be of help there, and British Prime Minister Winston Churchill wanted them diverted to Burma. The Australian War Cabinet disagreed. Churchill and President Franklin Roosevelt urged Curtin to reconsider, but he refused, saying:

“Australia’s outer defences were now quickly vanishing, and our vulnerability is completely exposed.”

The British acquiesced, and the troops returned to Australia. Within days of Curtin’s decision, Japanese troops landed on the north coast of New Guinea and started through the mountains, over the Kokoda Trail, toward Port Moresby. Had they reached their objectives, they could have established air bases within easy range of targets in Australia. As it was, Japanese aircraft bombed and strafed Darwin 64 times, killing 243 people on the ground.

However, the Japanese were stopped on the Kokoda Trail in bitter fighting. The tide of war began to turn with the American-Australian victory in the Battle of the Coral Sea in May 1942. With Australian assistance, American forces prevented the establishment of a Japanese air base on Guadalcanal later that year.

General Douglas MacArthur made his headquarters in Australia from March 1942 through October 1944 and from there directed the Allied campaign that gradually rolled back Japanese occupation of the islands and the Southeast Asian mainland.

Australia boomed after World War II. Many women who had gone to work in factories during the war continued to work in peacetime. Manufacturing grew. The production of wool and wheat increased. In the 1950s, mineral resources were exploited and the government undertook major public works projects, including the giant Snowy Mountain hydroelectric scheme. Many Displaced Persons from Europe immigrated to Australia, joining migrants from the traditional sources in the British Isles. Nevertheless, the 'White Australia' policy, adopted early in the century to protect domestic labor by excluding Asian immigrants, remained in force.

Australia sent troops to Malaya in 1955 to combat the communist insurgency there and in 1965 sent troops to Viet-Nam, at American request (see FOREIGN AFFAIRS AND DEFENSE).

A coalition government of the Liberal and Country (now National) parties dominated Australian political life from 1949 to 1972, aided by a schism in the Australian Labor Party. The leader of the coalition from 1949 to 1966 was the powerful Sir Robert Gordon Menzies.

The election of a Labor government under Prime Minister Gough Whitlam in 1972 brought dramatic changes in social and economic policy and in foreign affairs, including an end to the 'White Australia' policy on immigration and to Australian involvement in Viet-Nam. Whitlam, however, was dismissed on November 11, 1975, by the Governor-General he had appointed (see GOVERNMENT AND POLITICS).

Australia accepted many 'boat people' and other refugees from Indochina in the years after 1975 as country became more and more diverse, and more and more prosperous. Today, in terms of purchasing-power parity, Australia's per capita Gross Domestic Product is at the level of the dominant economies of Western Europe: Germany, France, the United Kingdom and Italy.

In 2001, Australia faces a number of issues, examined more fully in following sections:

Whether to become a republic (which would remain within the Commonwealth of Nations), and if so, how to choose its Chief of State

How to come to terms with its Aboriginal population

How to relate to its Asian neighbors, and, in particular, to Indonesia

## **Questions and Issues**

Has Australia at last overcome the embarrassment of its convict origins?

Has 'geography' won out over 'history' and made Australia an Asian country? Do Asians agree?

# **CULTURE**

Australian culture is probably not sufficiently appreciated, either at home or overseas. Australian intellectuals often criticize their countrymen for adopting a “cultural cringe” – an automatic assumption that works of art, literature, film or the like that are created in Australia cannot match those imported from overseas, particularly the United Kingdom or the United States.

But in fact Australia has developed a distinctive culture and has produced world-class works and performers in a number of fields.

Australian literature is considered to have begun with the novel *For the Term of His Natural Life* by Marcus Clarke, published in 1874, a story of life in an Australian penal colony. Another landmark of early literature is *Robbery Under Arms* (1888), the story of an outlaw gang by Thomas Alexander Browne under the pseudonym Rolf Boldrewood.

In the late 19th century, “bush ballads” – poems describing the colorful and adventurous life of the countryside – achieved widespread popularity. The leading bush-ballad poet was A.B. (“Banjo”) Patterson, whose most famous work is “Waltzing Matilda.” The poem was set to music and is regarded as the unofficial national anthem. Henry Lawson, who produced many short stories and poems about life in the bush, was the finest writer of this early period.

Notable Australian writers of the 20th century include:

-- Henry Handel Richardson (pen name of Ethel Florence Richardson Robertson), author of *The Fortunes of Richard Mahony* (a three-volume work: *Australia Felix*, *The Way Home*, and *Ultima Thule*), based on her father’s life and times, part of which he spent in the gold fields of Ballarat, Victoria;

-- Patrick White, novelist who won the Nobel Prize in Literature in 1973, best known for *The Tree of Man*, *Voss*, and *Riders in the Chariot*.

-- Thomas Keneally, author of *The Chant of Jimmie Blacksmith*; *Schindler’s Ark*, upon which the Spielberg film *Schindler’s List* is based; and many other works.

-- Peter Carey, who has written *Oscar & Lucinda*, *Jack Maggs* and *True History of the Kelly Gang*.

Others are Morris West, Colleen McCullough, Bryce Courtenay, A.D. Hope, Christina Stead, Kate Grenville and David Malouf.

The first Australian musical performer to achieve international stardom was the opera singer Dame Nellie Melba (1861-1931); the next was Dame Joan Sutherland (b. 1926). The works of composers such as Percy Grainger, Malcolm Williamson and John Antill are performed internationally, and Sir Charles Mackerras is one of the leading conductors of his generation.

In popular music, Australian performers from Helen Reddy and Olivia Newton-John to Midnight Oil and INXS have become known internationally.

The Aboriginal people had their own artistic tradition long before European settlement. The Aborigines painted on rock – many such paintings survive – and on tree bark. The years since 1970 have seen a revival of Aboriginal art in new media: traditional sand paintings have been transferred to canvas, often in acrylic paint. Many Aboriginal works are, in effect, maps of sacred ancestral lands and journeys through those lands; others show animals, often in “x-ray” style with stylized skeletal structure; and still others are designs from the prehistoric and mythic period known as The Dreaming.

White Australian painters of the late 19th century, some of whom had trained in Europe, painted landscapes and scenes of frontier life. Among the best known are Frederic McCubbin, Tom Roberts and Arthur Streeton. Prominent 20th-century painters include Russell Drysdale, Sidney Nolan, Fred Williams and Arthur Boyd.

The Australian film industry is almost as old as our own but suffered from American competition in the 1930s and nearly disappeared. Since the 1960s it has experienced a notable revival, led by directors such as Peter Weir (*Picnic at Hanging Rock, Gallipoli*), Bruce Beresford (*'Breaker' Morant, The Fringe Dwellers*) and Baz Luhrman (*Strictly Ballroom, Moulin Rouge*). Stars of stage and screen of an earlier era who were born or raised in Australia include Dame Judith Anderson, Cyril Ritchard, Errol Flynn and Peter Finch; among contemporary stars with similar links are Bryan Brown, Rachel Ward, Geoffrey Rush, Nicole Kidman, Mel Gibson, Judy Davis and Cate Blanchett.

Australia may be the most sports-minded nation in the world, with millions of active participants and even more millions of passionate fans. The oldest established sport is cricket, which gave Australia its greatest sporting – many would say ‘national’ – hero, Sir Donald Bradman, who died in 2001 and whose image was immediately placed on Australia’s 20-cent coin. Australia is known also for its four codes of football – Australian Rules, soccer, Rugby union, and Rugby league; and for swimming, surfing, and competition among life-saving clubs. Australians have also adopted North American sports such as basketball, baseball and softball, and have played in the National Basketball Association and in American baseball’s minor leagues.

Australian tennis-players, in particular, have compiled impressive records in international competition, from Rod Laver, Roy Emerson, Ken Rosewall, Margaret Court and Yvonne Goolagong-Cawley to Pat Cash, Patrick Rafter and Lleyton Hewitt.

## Questions and Issues

Can Australia conserve and promote indigenous culture? Can Australia define and preserve its own national traditions against the onslaught of American culture? Does it want to do so?

Paul Hogan as “Crocodile Dundee” did much to promote Australia but also presented an anachronistic

and unrepresentative image of the country. How should Australia present itself in the 21st century?

# SOCIAL ISSUES

## The Aboriginal Question

The primary social issue facing Australia today is the status of its Aboriginal peoples in relation to the rest of the population. The issue is often summed up under the term “Reconciliation,” which implies an obligation upon the part of the European-descended population to make amends to the Aboriginal people and to extend to them the social, education, occupation and other benefits that other Australians have long enjoyed.

The situation of the Aboriginal and Torres Strait Islander peoples resembles in many ways that of Native Americans in the United States. So does their proportion of the total Australian population: 1 to 2%. However, in the United States, New Zealand and Canada tribal land rights were recognized, to some degree, in the form of treaties. In Australia, this was not the case.

When it sent settlers to Australia at the end of the 18th century, the British government adopted the theory of *terra nullius*, meaning that, in law, Australia was “land belonging to no one.” It was, in effect, as if the Aboriginal peoples were not there, and certainly that they had no right of ownership to the continent on which they had lived for tens of thousands of years.

Indeed, the Aboriginal population – estimated at 300,000 in 1788 – declined precipitously during the 19th century as the result of disease, sporadic battles with settlers, loss of traditional lands, and other causes. Aborigines on the island of Tasmania were exterminated. Thereafter, Aborigines remained on tribal lands or have lived on the fringes of white society.

In the 20th century, the Aboriginal population stabilized and is estimated today at 350,000, or about 2 per cent of the national total, many of whom are of mixed Aboriginal and white blood.

For many years in the 20th century agencies of the Australian government sought to assimilate Aboriginal children by taking them from their own families and placing them in white homes. In many cases, however, the children – girls, in particular – were used as domestic servants, and in all cases the emotional trauma for the children and their own families was ignored. The children thus removed have become known as “the Stolen Generation.”

In the last 40 years, Australian governments and the general public have to some degree modified their attitudes toward the Aboriginal population, and over the same period the political consciousness of that population has risen, thanks in part to a militant black-power movement that began in the early 1970s.

In a 1967 referendum, an overwhelming majority of the electorate voted to remove a constitutional

prohibition of direct federal aid to Aborigines and to include them in future censuses.

In recent years Aborigines have increasingly pursued the issue of land rights through the legal system. The results have included two important court decisions, significant legislation, and continuing negotiations. Monash University Law Lecturer Pamela O'Connor summarizes major developments of the 1990s in these terms: In the *Mabo* decision of 1992, the High Court of Australia “declared that Australian common law recognizes a form of native title to land. The court held that native title exists where the indigenous people have maintained their connection to the land and title has not been extinguished by legislation or government action.” Federal legislation in 1993, the Native Title Act, “complemented the *Mabo* decision<sup>1/4</sup>[by establishing] a claims process and regulat[ing] future government acts affecting native-title land.” Then, in the case of *The Wik Peoples v. Queensland*, 1996, the High Court held that “the grant by the Queensland Government of pastoral leases over native title did not give the lease-holders a right of possession and did not extinguish native title,” because the Queensland leases were not exclusive ones. (Pastoral leases cover some 40 per cent of Australia’s land area, and in some states as much as 80 to 90 per cent. Pastoral lease-holdings include large tracts of land in remote areas – areas in which Aboriginal peoples are most likely to have maintained their traditional connection with the land.)

The process of adjustment to these landmark decisions is still going on. The Howard Government’s Native Title Amendment Act of 1998 devolved considerable authority in this realm to the state governments, and it requires claimants to prove actual connections to the land they claim. State governments continue to wrestle with the issue; there have been instances of successful negotiation and renegotiation of leases, and no consistent pattern of implementation has yet emerged.

The overarching issue of “Reconciliation” remains open in 2001. The Howard Government has declined to issue an apology to the Aboriginal peoples, apparently in part out of fear that to do so would open the federal government to monetary claims and massive litigation. The Australian Labor Party, for its part, has yet to define precisely what it means by “Reconciliation.”

It is clear that future governments of Australia will have to grapple with issues of justice for the nation’s original inhabitants.

## Immigration

The issue of immigration has also had a vexed history in Australia. The wish to preserve a predominantly European society in Australia dates back as far as the 1840s, when squatters – persons who settled without permission on Government land – sought to bring in laborers from China to replace convicts, and others opposed the idea. Chinese came to Australia in considerable numbers during the gold rushes of the 1850s, and there were anti-Chinese riots in the 1860s, although the population was only 3 per cent Asian. Later in the century, indentured laborers were imported from Melanesia to work in the sugar-cane fields of Queensland.

The historian Manning Clark has written: “Experiences between 1860 and 1900 strengthened the demand

for exclusion and discrimination. The American Civil War seemed to prove the folly and evils of using slave or semi-slave coloured labour. Political equality and the career open to talent were incompatible with a plantation economy in which the base of the social pyramid always consisted of one class. European domination of Asia was taken to illustrate the teaching of Darwin on the survival of the fittest. The workers were convinced that the use of coloured labour threatened their standard of living and their privileges. The middle classes were afraid of the threat to European civilization and to British political institutions, as well as of the evils of miscegenation.”

It was in this climate that the first Federal Parliament, in 1901, passed an Immigration Restriction Act. It enjoyed the support of all three political parties and of all but a couple of members, and it established what became known as the ‘White Australia’ policy, which was to prevail for the first two-thirds of the 20th century. Naturally, the policy tended to heighten Australia’s isolation and alienation from Asia, and it created much ill will, particularly in the years after World War II as several nations of Southeast Asia achieved independence.

Asians observed that Australia took many immigrants from Europe in the years 1945, not only from the British Isles but also Displaced Persons from Central Europe and the Baltic States and, for the first time in significant numbers, from nations of Southern Europe such as Italy, Greece and Malta.

Eventually, in the words of journalist Paul Kelly, “White Australia fell victim to decolonisation, the demise of Empire and the transformation of Australian national interests.” He notes that the Australian Labor Party abandoned its commitment to the policy in 1965 and that in 1966 the policy was abolished by the government of Prime Minister Harold Holt. But, Kelly continues, “Its interment was accompanied by funeral obsequies which revealed that the principle of a homogeneous Australia remained alive. The nation had merely decided that racially based discrimination was officially unacceptable. There was no alternative vision to replace White Australia nor any intention to permit significant non-white immigration.”

The aftermath of the Vietnam War demonstrated that the policy had indeed changed. After a slow start in 1975 and 1976, Australia by the end of 1982 had taken in about 70,000 refugees from Vietnam, Laos and Cambodia – more, in proportion to its population, than the United States or any other nation of the world.

Yet this influx generated a backlash by 1984, when the eminent historian Geoffrey Blainey ignited a national debate with his complaint that the Labor government of Prime Minister Bob Hawke was pursuing immigration policies that would result in “an Asian Australia.” The controversy re-emerged in 1988 after the issuance of a report on immigration commissioned by the Hawke government; John Howard, Leader of the Opposition when the report appeared, implied that he favored a reduction in the rate of Asian immigration, and his handling of the issue contributed to his replacement as Leader the following year.

The issue of immigration continues to cause political turbulence. Resentment of immigration, and particularly Asian immigration, was a major element in the rise of Pauline Hanson and her One Nation Party (discussed below, under GOVERNMENT AND POLITICS) in the late 1990s. Beginning in about 1999, Australia began to experience the arrival of substantial numbers of asylum-seekers, primarily from

Afghanistan. These movements appeared to reflect a belief that Australia was among the most liberal countries in granting asylum.

Many of these people traveled to Malaysia or Singapore by air, then to Indonesia, and embarked from the south coast of Java for Australia, often in unsafe vessels. By mid-2001 Australia had more than 8,000 such persons in custody and had had to house some of them on disused military bases. Some asylum-seekers rioted to protest the conditions of their confinement, and there was at least one suicide.

In August 2001, an Indonesian boat carrying more than 400 asylum-speakers began to sink. A Norwegian freighter, the *Tampa*, rescued its passengers and crew and proposed to deliver them to Christmas Island, an Australian possession in the Indian Ocean south of Java. Prime Minister Howard refused to allow the *Tampa* to enter Australian territorial waters; eventually dispatched Special Air Services troops to commandeer the ship; and had the asylum-seekers placed aboard Australian Navy vessels and taken to New Zealand and Nauru, which had agreed to accept them for processing of their claims. The tough line Howard abruptly adopted, although criticized abroad, was popular with much of the Australian population and is considered to have sealed his and his coalition's comeback, from far behind in the opinion-polling early in 2001 to a third consecutive victory in November.

Immigration will be an issue for the new Australian Federal Parliament that convenes early in 2002, just as it was for the first Parliament in 1901.

## Other Social Issues

Most other social issues in Australia are familiar ones to Americans. They include the status of women generally and the issue of equal pay for equal work; discrimination against Asians, in particular, and against other racial and ethnic minorities; the adequacy of pensions for retirees and of medical care, housing, and education for disadvantaged elements of society. Generally speaking, however, Australian society is more egalitarian than American society and lacks the extreme disparities of income-distribution found in the United States.

## Questions

Can Australia achieve reconciliation with its Aboriginal peoples without provoking serious backlash by its much larger 'redneck' minority?

How *should* Australia deal with asylum-seekers, given its location and its inability to control

departures from Indonesia, and in light of its international obligations and its tradition as a nation of immigrants?

## ECONOMICS

Australia through most of its history has depended heavily on the export of primary commodities: agricultural products and minerals. That statement applies today, even as the country develops its technological prowess and benefits increasingly from 'invisible exports' such as tourism and education.

In the 19th century, Australia's mainstays were livestock (beef and sheep, the latter raised for wool as well as for meat), wheat-growing and mining. The discovery of gold in Victoria in 1851 prompted a gold rush that accelerated immigration. Many miners who had failed in California came to Australia to try their luck.

About two-thirds of Australia is farmland, but most of this area is dry land suitable only for grazing. Only about five per cent of the farmland is devoted to crops, and only a small percentage of the cropland is irrigated. Nevertheless, thanks of mechanization and the use of sophisticated techniques, Australian farmers – only 5% of the population -- produce virtually all the food the nation needs and vast quantities of wheat, in particular, for export. Temperate-climate fruit such as apples and pears are grown throughout the country. The vineyards of South Australia and New South Wales produce excellent grapes, and Australian wines now have a substantial market share in the United States. The wet tropical climate of coastal Queensland allows the production of sugar cane, pineapples and bananas.

By 1900, Australia exported large amounts of copper, gold, silver, lead, tin and zinc, and they remained the mining industry's chief products through the first half of the 20th century. During the 1950s geologists discovered large deposits of bauxite, coal and iron ore and, during the 1960s, manganese, uranium, nickel and petroleum. Many of these mineral deposits lie in remote areas and were very expensive to develop. Much foreign capital was involved, and much of the product is exported – e.g., coal to Japan.

Today, Australia is the world's leading producer of bauxite and is a ranking producer of all the other minerals mentioned above. Australia is also the source of most of the world's high-quality opals.

Historically, Australia has imported more manufactured goods than it has exported, an unusual situation for a developed country. Australia produces most of its own consumer goods, although some of its manufacturing industries relied heavily on foreign capital – in the case of automobiles, for example, Ford and General Motors (as Holden) were among the leading original producers, although Japanese makes now dominate the market. Australia still relies on imports for capital goods and passenger aircraft. The two largest categories of imports in 1998-99 were cars, 7%, and computers, 5%.

While merchandise, including primary commodities, continues to dominate Australia's exports, the composition has changed considerably since the mid-1980s. By 1998-99, exports of manufactures (28%) and services (25%) exceeded exports of agricultural products (24%) and minerals (23%).

Japan is Australia's largest single export market, taking 20% of merchandise exports. The United States is usually second, with about 9%, followed by South Korea, New Zealand, the United Kingdom, Taiwan, China, Singapore, Hong Kong and Indonesia. (Collectively, the nations of the European Union account for 14%, and ASEAN, as a group, for 12%)

The United States is Australia's largest supplier, with 22% of the import market in 1999. Japan is second, with 14%. Germany and China each account for about 5%. (The European Union collectively accounted for 24% in 1999 and the ASEAN nations for 13%.)

Australia is thus one of the few nations in the Asia-Pacific region with which the United States regularly runs a trade surplus.

Tourism is one of Australia's fastest-growing industries. The country offers a wide range of attractions, from the sophistication of Sydney and the beauty of its harbor to the stark grandeur of Uluru (Ayers Rock) in 'the Red Center,' and from the Great Barrier Reef to Kakadu National Park. More than four millions tourists arrived in 1999 and spent more than \$5 billion. All told, tourism contributed three per cent of the Gross Domestic Product. The Government claims that its Electronic Travel Authority (ETA) system is the most advanced such system in the world. It allows visitors from the United States and 30 other countries to obtain authority to enter Australia when they book their travel, and within a matter of seconds, thus meeting the visa requirement.

Australia has 38 universities, almost all of them publicly funded. Higher education has become a significant earner of foreign exchange. In 1999, about 130,000 international students were enrolled in Australian institutions – more than in any other country except the United States and the United Kingdom – and another 27,000 were studying in Australian university branches offshore. The top eleven source-countries for students are in East Asia and South Asia, with the largest numbers coming from Indonesia, Singapore, Hong Kong and Malaysia. International education earned Australia more than \$2 billion in 1999.

Australia has long campaigned for the liberalization of international trade. In 1986 it convened "the Cairns group" of non-subsidizing agricultural producers, named for the town in Queensland where its first meeting was held, whose aim is to eliminate barriers to world trade in agriculture. In 1989, then-Prime Minister Bob Hawke proposed the establishment of the Asia-Pacific Economic Cooperation (APEC) forum, a grouping originally of 12 economies, including the United States and Canada, intended to devise and implement concrete measures for the promotion of trade throughout the region. Over the years APEC has instituted ministerial meetings in numerous fields and, beginning in 1993 at the invitation of then-President Bill Clinton, annual meetings of heads of government. Meanwhile, the forum has grown to include 21 member-economies.

Australia is also a member of virtually all the international financial institutions established since World War II, of the specialized agencies of the United Nations, and of the World Trade Organization.

Over all, the Australian economy performed well in the 1990s, with growth in productivity, reduction in unemployment, low levels of inflation, relatively low rates of interest, and modest budget surpluses. Australia managed to avoid most effects of the Asian economic crisis of 1997-98.

The Howard government introduced a Goods and Services Tax of ten per cent, on July 1, 2000, and at the same time eliminated or reduced a number of other business-related taxes. The GST is a broad-based value-added tax originally announced as applicable to almost all goods and services. However, inconsistencies in the application and implementation of the GST made it an issue in the 2001 election campaign.

## Questions and Issues:

Can Australia increase its exports of manufactured goods so as to escape dependence on the fluctuating prices of primary commodities – which still account for 55% of exports?

Can Australia go on indefinitely importing more than it exports?

## Comparative Economic Statistics

(dollar-figures are United States dollars)

	Australia	United States
Population (July 2001 estimates)	19,358,000	278,058,000
Gross Domestic Product (2000 estimates)	\$445.8 billion	\$9.963 trillion
GDP real growth rate (2000 estimates)	4.7%	5%
GDP per capita (2000 estimates)	\$23,200	\$36,200
GDP composition by sector (1999 estimates)		
Agriculture	3%	2%
Industry	26%	18%
Services	71%	80%
Population below poverty line (1999 estimate)	Not available	12.7%
Household income or consumption by percentage share (Australia 1994; U.S. 1997)		
Lowest 10%	2%	1.8%
Highest 10%	25.4%	30.5%
Inflation rate (consumer prices)(2000 estimates)	1.4%	3.4%
Labor force (Aust, Dec '99; US, 2000)	9.5 million	140.9 million
Unemployment rate (2000)	6.4%	4%
Budget Revenues	\$94 billion	\$1.828 trillion
Expenditures (1999 estimates)	\$103 billion	\$1.703 trillion
Exports (f.o.b., 2000 estimates)	\$69 billion	\$776 billion

Imports (f.o.b., 2000 estimates)	\$77 billion	\$1.223 trillion
External debt (2000)	\$220.6 billion	\$862 billion

# GOVERNMENT AND POLITICS

## Structure of Government

Australia is a parliamentary democracy. The system of government is a federal one, and an outgrowth of the colonial era. The six colonies established in the late 18th and 19th centuries – New South Wales, Victoria, Tasmania, Queensland, South Australia and Western Australia – were each linked to London. After years of discussion and several conferences in the 1880s and 1890s, they decided to federate. (New Zealand was invited to join the federation but declined.)

Federation became effective on January 1, 1901. A Governor-General was appointed as the official representative of the sovereign, Queen Victoria, but each of the states retained a Governor, also appointed by the Crown.

However, the architects of federation and drafters of the Australian Constitution were influenced also by American thought and practice. They based membership in the lower chamber of the legislature on population and named it ‘The House of Representatives.’ They decided to base membership in the upper chamber on equality among the states and to call it ‘The Senate,’ but they gave it substantially less power than that wielded by the U.S. Senate.

Today, each of the six states has 12 Senators, and the Northern Territory and the Australian Capital Territory have two Senators each, for a total of 76. The Constitution provides that membership of the House of Representatives be approximately twice that of the Senate, and the House today has 150 members: New South Wales, 50; Victoria, 37; Tasmania, 5; Queensland, 27; South Australia, 12; Western Australia, 15; Northern Territory, 2; and the Australian Capital Territory, 2.

Members of the House of Representatives are elected from single-member districts for terms of three years. Voters must rank each candidate in order of preference. If no candidate receives an absolute majority of the vote, the distribution of preferences determines the winner. This system is considered fairer than the ‘first-past-the-post’ system used in the United States, under which a candidate who is in fact opposed by a majority of voters can nevertheless be elected.

The party – or coalition of parties – that commands a majority of votes in the House of Representatives then forms the government and normally continues in office until the next election. The government must hold an election after three years but has the option of calling an election at an earlier date. For example, the Liberal-National Coalition Government of Prime Minister John Howard, elected in March 1996,

called the next election in October 1998, after two years and seven months.

The government thus formed becomes Australia's executive and is referred to as The Ministry. It typically consists of about 30 ministers, who come from both the House of Representatives and the Senate; typically, House members hold about two-thirds of the seats. A smaller number of ministers – 17, in 2001 – constitute the Cabinet, and the others are referred to as the Outer Ministry. Several other members of the two chambers are designated Parliamentary Secretaries for various ministerial portfolios and are in effect deputy or junior ministers.

The Prime Minister leads the Cabinet, and the Treasurer is, traditionally, the second most powerful member and usually the heir-apparent to the Prime Minister. When the Liberal-National coalition forms the government, the leader of its National Party component is ordinarily designated Deputy Prime Minister. A Prime Minister from the Liberal-National coalition chooses his own cabinet, with an eye to balance between the two member-parties and the sexes and among the states and age cohorts. By contrast, when the Labor Party controls government, its members in the two chambers collectively elect those of their number who will serve in the Cabinet and Outer Ministry, with strict regard to the representation of each of the party's several factions. For both government and opposition, party discipline is much stronger than in the United States.

For the Senate, each State and Territory is considered a single electorate, and voters' preferences are allocated under a system of proportional representation. This system gives small parties and independent candidates a chance of being elected – and, indeed, small parties and independent Senators often hold the balance of power in the Senate. Senators from the states serve six-year terms, and those from the two territories serve for three years. In normal circumstances, half of the Senators are elected every three years.

Each of Australia's states has its own parliament and government, headed by a Premier who is the leader of the party that holds a majority in the lower house or in a unicameral legislature. Five states have bicameral parliaments. In each case, the upper house is the Legislative Council. In New South Wales, Victoria and Western Australia, the lower house is styled the Legislative Assembly; in South Australia and Tasmania, it is the House of Assembly. Queensland, alone among the states, has a unicameral Legislative Assembly, as do the Australian Capital Territory and the Northern Territory.

State governments in Australia have considerably more power than do states of the United States. For example, the State Premiers have a say in the distribution of federal revenues, and they meet annually with the Federal Prime Minister and Treasurer to determine that distribution. State ministers responsible for such matters as transportation and the environment meet collectively, at least annually, with their federal counterpart (and, frequently, with the counterpart minister from New Zealand). Unlike governors in the United States, State Premiers in Australia seldom shift to federal politics.

Federal and state politics are often counter-cyclical. As of December 2001, the Liberal-National coalition has won three consecutive general elections and has held office at the federal level for almost six years, but the Australian Labor Party controls government in five of the six states and in the Northern Territory.

The Australian judiciary system is relatively simple. It consists of a High Court of seven members that has both appellate and original jurisdiction and is the final arbiter of constitutional questions. Below it is a Federal Court of some fifty judges who are distributed among the state and territory capitals in proportion to workload. There are also a federal Family Court and the Australian Industrial Relations Commission. States and territories have Supreme Courts and lower courts; decisions of the state Supreme Courts may be appealed to the federal High Court.

## Political Parties

The Australian Labor Party is the oldest of the country's political parties and is an outgrowth of the trade-union movement. It claims its date of origin as 1891, and in 1901 it organized on a federal basis during the first sitting of the new Parliament. In 1912, under the influence of the American labor movement, it standardized the spelling of its name as 'Labor' rather than 'Labour.' It also claims to have been the first labor party in the world to succeed at electing governments: three federal governments by 1915, and success also in each of the states. The party governed again from 1929 to 1931 and during and after World War II (see HISTORY) but then fell victim to divisions over communist membership in its ranks and was out of office at the federal level from 1949 to 1972.

The party has largely left behind its working-class base and socialist principles and has moved close to the center in terms of economic policy. It has also strongly supported defense cooperation with the United States, both in the 1940s and again in the 1980s and 1990s, although many members campaigned energetically in the 1960s and 1970s against Australian involvement with the United States in Viet-Nam.

The National Party of Australia dates its origins to the Country Party of Australia, established in 1913. Its base is in rural areas and its leanings are conservative. It has participated in governing coalitions for long periods since 1923 but generally as the junior partner.

The Liberal Party of Australia was established in 1944 and styles itself the party of "individual freedom and private enterprise," and also as Australia's most successful party since World War II. It maintains loose ties with the Republican Party in the United States, with which it has considerable ideological affinity.

The Australian Democrats date from 1977 and claim to speak for "ordinary Australians," with a reformist agenda, strong environmental concerns, and a record of opposition to many policies of the Liberal-National coalition and to some of those of the ALP. The Democrats have yet to win a seat in the House of Representatives, although they have come close, but they have recorded as many as a million votes in Senate elections and, currently hold the balance of power in the Senate, with nine seats as of December 2001 and eight from July 1, 2002.

The One Nation Party sprang to life in the late 1990s and reflects the dissatisfaction of some lower-middle-class Australians of European descent with recent political trends, such as the judicial decisions granting

land rights to Aboriginal peoples, and welfare and affirmative-action programs for Asian immigrants. One Nation's founder, Pauline Hanson, appeared to speak for an unreconciled ten per cent or more of the population that resented what it saw as the 'coddling' of recent immigrants and ethnic minorities and sought to restore what it claimed are 'traditional Australian values.'

Hanson and her followers were strongest in Queensland but had support nationwide. They drew substantial numbers of votes in the 1998 Federal election but elected no one to the House of Representatives and only one member to the Senate. In the same year, however, One Nation won 11 seats in the 89-member Queensland Legislative Assembly. By the beginning of 2001, the party had fractured in Queensland, with resignations in the Legislative Assembly, and in the state election of February 2001 it took only three seats. There were also divisions in the national leadership and allegations of fraud.

Some observers now consider One Nation a spent force. However, the party's brief success strengthened the suspicion of some Asians that Australia is, or still is, a racist nation at heart. The Howard coalition government drew considerable criticism, at home as well as around Asia, for its failure to condemn One Nation, Hanson and her policies in a forthright way. Also, it is clear that Hanson tapped a vein of nativist, racist sentiment that continues to represent a real political force. A continuing question for conservative parties at the federal and state levels is whether to accept One Nation 'preferences' – second-choice ranking – for their candidates; such preferences are often important in determining electoral outcomes.

## Recent Political History

Since the early days of World War II, control of the government has rested alternately with the Australian Labor Party on the one hand and, on the other, with the Liberal Party of Australia and its ally the National (formerly Country) Party in coalition.

ALP prime ministers led the country from 1941 to 1949. Sir Robert Menzies, who had served as Prime Minister from 1939 to 1941, returned to office in 1949 and served until 1966, a tenure that has not been equaled. Four other coalition prime ministers followed, through 1972, at which time Labor regained power under Prime Minister Gough Whitlam.

Whitlam's term of office ended in drama and controversy on November 11, 1975. In a climate of increasing inflation and unemployment, his government was losing popularity. His coalition opponents used their majority in the Senate to threaten to stop government appropriations ("supply") in the hope of forcing Whitlam to resign, thus producing a new election. Whitlam refused to resign but could not obtain legislation to fund government operations. The Governor-General, Sir John Kerr, appointed by the Queen on the advice of the Whitlam government, resolved the impasse by removing Whitlam from office and naming the Liberal Party leader, Malcolm Fraser to form a government. Fraser's coalition won the election held the following month, and the coalition remained in office until early 1983.

This event, known simply as "The Dismissal," has had a profound and lasting effect on Australian political life, greater in psychological terms than the legacy of Watergate in the United States. A major

question is whether the Governor-General acted within the terms of his ill-defined “reserve powers” in dismissing Whitlam.

Labor returned to office in 1983 and won four consecutive elections thereafter. The Liberal-National coalition won elections in March 1996, October 1998, and November 2001.

## Composition of the House of Representatives

(40th Parliament, elected November 10, 2001)

Coalition Government:	81 seats	(68 Liberal Party, 13 National Party)
Country Liberal Party:	1 seat	(Australian Labor Party)
Opposition:	65 seats	
Independents:	3 seats	
TOTAL:	150 seats	

## Composition of the Senate

	(Dec. 2001)	(From July 1, 2002, when terms begin of Senators newly elected or re-elected on Nov. 10)
Australian Labor Party:	28 seats	27 seats
Country Labor Party (NSW):	1 seat	
Australian Democrats:	9 seats	8 seats
Australian Greens:	1 seat	2 seats
Independents:	2 seats	2 seats
Liberal Party:	31 seats	31 seats
National Party:	3 seats	3 seats
Country Liberal Party:	1 seat	1 seat
One Nation Party:	1 seat	1 seat
TOTAL:	76 seats	76 seats

## The Republic issue

The Governor-General is the Queen’s representative in Australia. The first Australian-born, Australian-citizen Governor-General was appointed in 1931; another served from 1947 to 1953; and all Governors-General since 1965 have been Australian citizens (including one who immigrated in his youth). They have been nominated by the Australian government of the day and merely confirmed and officially

appointed by the crown. Nevertheless, many Australians have long believed it makes no sense that their sovereign should be a foreign monarch who resides 10,000 miles away.

Prime Minister Paul Keating in the early 1990s initiated active public discussion of the issue and announced that he would hold a referendum on the issue if he were returned to office in 1996. He was not, but his successor John Howard – a monarchist – pledged that he would carry through with a constitutional convention and, if indicated, a referendum. The convention took place in early 1998, and the referendum was scheduled for November 1999.

Public-opinion polling shows that about two-thirds of the population favors a republic in concept. However, Howard managed to bring about a stipulation that the chief of state in a republic, to be called the president, would be chosen not by direct election but from a list submitted by a bipartisan commission likely to consist mainly of politicians, and then chosen by a two-thirds majority vote of the two houses of Parliament sitting jointly. The Constitution would be amended by substituting ‘President’ for ‘Governor-General’ wherever that term occurred, but no attempt was made to define the vague ‘reserve powers’ of the chief of state, which had proved so controversial in the removal of Prime Minister Whitlam in 1975. Furthermore, Howard proposed a new preamble for the Constitution and put the question of its adoption on the referendum ballot also.

The proposed method of selection of the president would appear to have precluded the election of a strong partisan or indeed of anyone objectionable to a major party. However, many voters wanted a directly elected president and did not want ‘politicians’ so centrally involved in the process. Many supporters of direct election therefore joined with those opposed to the *concept* of a republic. In the end, the vote was 45 per cent in favor of the republic, so the proposal failed. So also did Howard’s proposed new preamble.

It appears certain that the issue will recur in the near future: The Australian Labor Party is committed to the goal of a republic, and likely successors to John Howard as leader of the Liberal Party are understood not to share his anti-republican views.

## Questions

Debate in the Australian Parliament is well-attended and often witty and vituperative – in contrast with proceedings in the U.S. Congress. What explains the differences: Tradition? Physical arrangements, with Government and Opposition facing each other?

What will be the practical consequences for domestic politics and for foreign relations of Australia’s becoming a republic?

## FOREIGN AFFAIRS AND DEFENSE

Is Australia a nation of Asia, or a European outpost in Asia? This has been an underlying question in

Australia's foreign relations for many years, and notably so since World War II. It is sometimes described as the contest between 'history,' European, and 'geography,' Asian. Even as the Asian element of Australia's population – now about 7 per cent – increases, the dominance of the English language and Australia's strong connections with North America, the United Kingdom and New Zealand tend to cause others in Asia to think of Australia as a place apart. And Australia's attitudes toward immigration, in the period of the 'White Australia' policy and since, have of course influenced Asian attitudes toward Australia.

One symbol of this 'identity' problem is that, for regional voting purposes at the United Nations, Australia is, and has always been, a member of the "West European and Others" Group (WEOG), which also includes New Zealand, Canada and the United States.

Support for the United Nations is one of the fundamentals of Australia's foreign policy. Australia is a founding member of the organization; supplied the third president of the General Assembly, Dr. H.V. Evatt, in 1948-49; and has served four terms on the Security Council. Australia also served as the administering authority of two of the eleven trusteeships under the United Nations system: Papua New Guinea and Nauru. (Australia had administered the same territories between World Wars I and II, under Class C mandates from the League of Nations.)

Even more central to Australian foreign policy, however, are these themes:

Its alliance with the United States;

Its close linkages with New Zealand in matters of economy and defense;

Its efforts to preserve peace and security in its immediate region;

Its promotion of policies intended to liberalize international trade and its maintenance of good relations with as many trading partners as possible; and

Its sponsorship of arms-control measures.

## **The Alliance with the United States**

The two nations have been closely associated in matters of war and peace since World War I, when some of the American troops on the Western Front in France fought under Australian command. The association resumed after Pearl Harbor, in the face of the Japanese conquest of Southeast Asia and incursions into the Pacific (see HISTORY). Combined Australian-U.S. operations in the Battle of the Coral Sea and in New Guinea stemmed the tide of Japanese aggression and led to the island-hopping campaign in which the Japanese were ultimately dislodged.

The experience with Japan had a profound effect on Australia. The then-Leader of the Opposition, the

Honorable Kim Beazley, stated in 2001: “For Australia’s part, the key issue of the day [in the late 1940s] was how to deal permanently with Japan. Today it is hard to comprehend that our core thinking on external affairs until the early 1950s revolved around how to deal with the emergence of Japan. Washington was never going to get to first base with Australia on the issue of containing communism in Asia unless it settled our minds on the question of Japan.”

Fearful that Japan’s signature of a peace treaty with the United States might permit a return of Japanese militarism, Australia and New Zealand pressed the United States for a treaty of mutual defense. The resulting document, the Security Treaty between Australia, New Zealand and the United States of America, or ‘the ANZUS Treaty’ for short, was signed at San Francisco on September 1, 1951, and entered into force on April 25, 1952.

Before the treaty was signed, Australia had already demonstrated its commitment by joining in the U.S.-led United Nations effort to repel communist aggression in South Korea.

Independently of ANZUS, Australia contributed troops to the American effort in Viet-Nam, initially a battalion-sized unit and later a task force of two battalions and support services, with a New Zealand artillery battery attached, that operated principally in the area immediately east of Saigon. Almost 50,000 Australian troops served in Viet-Nam; 520 died as a result of the war, and 2,398 were wounded. Over time, however, Australia’s participation in the war drew massive protests and became the cause of what is considered the greatest social and political dissent since the conscription referenda of World War I. Australian involvement was reduced in the early 1970s and terminated outright by the Labor government of Prime Minister Gough Whitlam at the end of 1972.

Meanwhile, the United States and Australia during the 1960s established Joint Defense Facilities in Australia, the most important of which were at North West Cape, Pine Gap and Nurrungar. The facilities were critical to U.S. strategic programs and operations but caused controversy in Australian domestic politics, partly on theory that their presence made Australia a nuclear target of the Soviet Union.

In their earliest days, the facilities were essentially American-run, with Australia primarily a landlord and a recipient of the intelligence information the Facilities produced. In the 1980s, thanks largely to the foresight and energy of Kim Beazley, then Minister for Defence in the Hawke Labor government, management of the Facilities became truly joint. At the same time, Beazley’s ‘demystification’ of the facilities, which demonstrated their utility in matters of arms control, helped to defuse them as a political issue. So too did the formal end of the Cold War.

In subsequent international crises, Australia contributed forces to the coalition effort in the Gulf War. The United States in turn contributed equipment, intelligence information, communications capability, and air- and sealift to the International Force for East Timor (INTERFET), the Australian-led United Nations effort to restore order in East Timor after the August 1999 referendum in which voters overwhelmingly chose independence and drew heavy retaliation from Indonesian troops and government-backed militias.

Most recently, the Australian Cabinet on September 14, 2001, in consultation with the United States,

invoked Article IV of the ANZUS Treaty, after the September 11 terrorist attacks on the World Trade Center and the Pentagon. Article IV states:

“Each party recognizes that an armed attack in the Pacific Area on any of the Parties

would be dangerous to its own peace and safety and declares that it would act to meet

the common danger in accordance with its constitutional processes.”

(Article V states that Article IV applies to “...an armed attack on the metropolitan territory of any of the Parties...”) This is the first time the Treaty has been invoked. Australia proceeded to commit troops, aircraft and ships to the U.S.-led anti-terrorism effort in Afghanistan.

The Australian-United States relationship is not ordinarily dominated, however, by great issues of national security. Rather, there is daily interaction between the two governments on a host of issues, including international trade, arms control, environmental pollution, law enforcement, transportation, taxation, and the like.

The relationship is as close and cordial as any the United States enjoys and is rivaled only by those with the United Kingdom and with Canada.

## **Relations with New Zealand**

If relations between Australia and the United States are close, those between Australia and New Zealand are closer still, in the sense that the two countries, under the rubric of the Closer Economic Relations (CER) agreement instituted in 1983, have gone much of the way toward merging their economies. Duties and other trade barriers have, effectively, been abolished. The free movement of people between the two countries, and the automatic permission to work in each other’s country, make them the most integrated labor market in the world.

Defense relations, on the other hand, have been troubled since 1984-85, when the New Zealand Labour Party government of Prime Minister David Lange in effect denied access to New Zealand ports for nuclear-capable and nuclear-powered warships of the U.S. Navy. The later enactment of that policy into law prompted the United States to suspend its ANZUS Treaty obligations toward New Zealand. It caused some political difficulty for the Hawke Labor government in Australia, because left-wing elements in the ALP strongly advocated policies similar to New Zealand’s, and difficulty for the Australian Defence Force, which – because the United States declined to exercise with New Zealand forces – was obliged thereafter to conduct two sets of exercises: high-technology exercises with United States forces, and lower-order exercises with the New Zealanders.

Australia nevertheless attempted in the 1990s to involve New Zealand in Closer Defence Relations (CDR), in parallel with CER. This process appeared to work for a time: New Zealand bought two

‘ANZAC-class’ frigates built in Australia and stationed a squadron of Royal New Zealand Air Force A-4 Skyhawks in Australia, where they regularly exercised with the Royal Australian Air Force and Royal Australian Navy.

The trend toward CDR slowed in the late 1990s with New Zealand’s decision not to purchase a third or a fourth ANZAC frigate. And defense cooperation received a body-blow in 2001 when the New Zealand government, now again under the control of the Labour Party, decided to eliminate the combat element of the Air Force (the A-4s) and to upgrade only the maritime-surveillance capability of its P3 Orion aircraft rather than to join Australia in acquiring new capabilities for anti-submarine warfare.

Nevertheless, defense ties between the two date from the fateful landing at Gallipoli in 1915 and have continued through New Zealand’s crucial contribution of an infantry battalion to INTERFET, from its outset in 1999. The close identification of the two countries on a wide array of policy issues ensures that relations will continue to be close, if at times contentious.

## Australia’s Immediate Region

Australia sees itself, correctly, as a prominent middle-ranking power in Asia and as by far the most powerful of the Pacific Island nations. It exercises leadership among the island nations through the Pacific Forum, the group of island-states which meets annually at head-of-government level, and the Pacific Community (formerly the South Pacific Commission), an organization of island-states and metropolitan powers from outside the region: the United States, the United Kingdom, and France. Australia is also a ‘dialogue partner’ of the Association of South-East Asian Nations (ASEAN), as is the United States.

Australia pays particular attention to developments in its former ward, **Papua New Guinea**, and directs a substantial portion of its foreign aid to that troubled country. It was Australian intervention that in 1997 headed off a scheme by the then-government of Papua New Guinea to employ European-led African mercenary soldiers to quash the long-running insurgency on the island of Bougainville. Revelation of the plan in the Australian media and strong action by the Australian Government stopped the scheme before the training of PNG troops by the mercenaries really began.

Australia, together with New Zealand, has been troubled by instability in other island states, notably **Fiji** and **Solomon Islands**, but has not managed to identify, much less impose, concrete solutions.

By far the most complex problem in Australia’s regional relations, however, has been **Indonesia**. A determination to “get along” with its populous northern neighbor led Australia over the years to accommodate the Indonesian leadership to a high degree. Australia acquiesced in the Indonesian takeover of the eastern half of the island of Timor after the sudden, irresponsible departure of Portuguese colonial authorities in 1975, and despite the murder of several Australian journalists by Indonesian forces.

Australia continued to court the Soeharto régime in Jakarta for another two decades. This process culminated in the signature by Prime Minister Paul Keating in late 1995 of a mutual security agreement

with Soeharto that had been negotiated in secret. Its intent, apparently, was to reassure Indonesia of Australia's continuing friendship, not least by balancing Australia's links with Singapore and Malaysia under the Five-Power Defence Arrangements (FPDA).

Keating's agreement did not last long, however. Soeharto fell from power in 1998; events following the referendum in East Timor in 1999 caused Australia to step in, by means of INTERFET; and Indonesia could not prevent INTERFET's creation and deployment but resented very strongly what it saw as Australia's intrusion into its internal affairs.

The case of East Timor has also caused recriminations in Australian domestic politics, where some Labor Party elements have criticized their elders, Whitlam and Keating, for deferring for so long to Indonesia, and where former Liberal Prime Minister Malcolm Fraser, who was caretaker Prime Minister when Indonesia invaded East Timor and elected in his own right a few days later, now calls for dramatic changes in Australian foreign policy and questions the utility of the ANZUS alliance.

No other nation looms so large in Australian thinking as Indonesia or has presented Australia with so many problems. However, Australia's relations with Dr. Mahathir Mohamad, Prime Minister of **Malaysia**, have been contentious since at least the mid-1980s, when Malaysia executed two Australian citizens on narcotics charges despite appeals for clemency by Prime Ministers Hawke of Australia and Thatcher of the United Kingdom. Mahathir attempted to establish an East Asian Economic Caucus (EAEC) that would have rivaled Hawke's Asia-Pacific Economic Cooperation (APEC) forum and would, presumably, have excluded Australia from membership. At later stages, Prime Minister Paul Keating called Mahathir 'recalcitrant,' setting off an angry reaction, and Mahathir has delighted in the political phenomenon of the One Nation Party, which he takes as evidence that Australia is a racist nation and not really part of Asia.

By contrast, Australia's relations with other Southeast Asian nations are generally very good. Australia conducts military exercises with **Singapore** – and Malaysia – under the Five-Power Defence Arrangements (the other parties being New Zealand and the United Kingdom). **Thailand** and **The Philippines** both contributed troops to INTERFET. Australia, with Indonesia, had a leading role in the United Nations effort to restore civil government in **Cambodia** and was one of the first outside nations to invest and institute aid programs in **Viet-Nam** and **Laos** after the Viet-Nam War.

Australia's relations with the **People's Republic of China** are conflicted. There is a strong desire to exploit China's huge market and growing prosperity, but there are also strong reservations over China's behavior in matters of human rights and in other fields such as intellectual-property rights. Australia shares the desire of the United States for a peaceful resolution of differences between the PRC and **Taiwan**, which is also a significant trading partner of Australia's.

Australia's attitudes toward **Japan** have changed markedly since the late 1940s and early 1950s, when Australia worried about a revival of Japanese militarism. Japan today is Australia's leading export market and second-largest supplier of imports; has major investments in Australia; and is a major source of tourists.

## International Trade

Australia's sponsorship of 'the Cairns Group' of non-subsidizing agricultural producers and of the Asia-Pacific Economic Cooperation (APEC) forum is discussed above, under ECONOMICS. Australia has supported and benefited from efforts by the United States to open markets in third countries, such as the U.S. campaigns to gain entry into Japan for beef, apples and rice. But Australia and the United States have also disputed each other's trade practices over the years. The Australians complained, for example, that the American Export Enhancement Program (EEP) – intended to head off European sales of wheat, barley, non-fat dried milk and other commodities to nations of the Middle East and South America – were cutting into Australia's share in some of its 'traditional' markets. The United States has its own complaints about Australian practices, such as a refusal to allow the importation of hides for use in automobile upholstery. In mid-1999 the United States imposed punitive additional duties – so high as to constitute quotas – on imports of lamb from Australia and New Zealand. The two exporters took their case to the World Trade Organization – and won, obliging the United States to rescind the additional duties.

More generally, however, the two countries cooperate in matters of international trade. As of mid-2001, Australia was seeking a bilateral Free Trade Agreement with the United States. Negotiations appear unlikely to begin, however, until the U.S. Executive Branch again has Trade Promotion Authority (formerly known as Fast-Track Authority) from the Congress.

## Arms Control

Australia has a length record of support for arms-control measures, including the Comprehensive Test Ban Treaty (CTBT), the banning of chemical and biological weapons, and the establishment of an international regime to control the spread of missile technology (MTCR). Australia ratified the Ottawa treaty that outlaws the production, stockpiling transfer and use of anti-personnel landmines, and the Australian Defence Force destroyed its stocks of mines several years ahead of schedule.

Australia has not hesitated to chide the United States when our actions have failed to match Australia's own – as when the U.S. Senate refused to ratify the Comprehensive Test Ban Treaty.

## Defense

Australia has a long and proud military tradition. It begins in the Sudan and the Boer War in the 19th century, but its most famous expression was in World War I, at Gallipoli and elsewhere, as the nation made enormous sacrifices. There is scarcely a town in Australia without its monument to those who fought and died in 'the Great War' of 1914-1918.

The Australian Defence Force (ADF) today comprises the Army, the Royal Australian Navy (RAN), and

the Royal Australian Air Force (RAAF). In time of peace, Australia has one officer of four-star rank, the Chief of Defence Force, a post that rotates among the services. The over-all active-duty strength of the ADF as of February 2000 was about 56,050, down from roughly 60,000 in 1995 but on its way back up.

The Army has an active-duty strength of 24,290. The core of the land force is two high-readiness infantry brigades of about 3,000 men each, one of light infantry and one mechanized. There are also armored and artillery units and a Special Air Services regiment. The Army's inventory includes 48 Leopard tanks, 127 Armored Personnel Carriers, and 84 Light Armored Vehicles. Army Aviation has a total of 130 aircraft, mainly helicopters.

The RAN has 12,800 personnel. Its primary role is maritime interdiction. It is currently developing the Collins-class diesel submarine, which will be the largest conventionally powered submarine in the world. By 2005, the Navy is to have 14 warships: eight frigates, each equipped with a Seasprite helicopter and armed with the Sea Sparrow anti-air missile system; and six Collins-class submarines, capable of launching MK 48 wire-guided torpedoes and Harpoon missiles.

The RAAF, with 13,950 personnel, has 71 F/A-18 aircraft for air combat and 33 F-111 long-range bombers. Even with recent modernization and upgrades, however, the F/A-18s will need to be replaced by 2015 and the F-111s by 2020. New generations of air-combat and strike aircraft will require very significant budgetary outlays. Also in the inventory are 19 P-3C Orion aircraft for anti-submarine warfare and maritime surveillance; 24 C-130 Hercules and 14 DHC-4 Caribou transport aircraft; and five Boeing 707s, four of them configured for air-to-air refueling.

Australia spent about \$8 billion, or 1.9 per cent of GDP, on defense in 1998. This figure was down from 2.5 per cent of GDP in the mid-1980s, and many observers believe that defense spending will have to increase in percentage terms.

The deployment of 5,000 personnel to East Timor in late 1999 stretched the Land Force very thin and led to a realization that numbers, which had been reduced, would only have to go up again.

There is also a recognition that missions such as INTERFET, like the numerous other peace-keeping operations in which Australia has participated in recent years, are now the norm, and will probably remain so.

## Questions and Issues

Australia's intervention in East Timor in 1999 was a dramatic change of policy toward Indonesia. What will be the consequences for Australia's relations in the region?

In 1999, Prime Minister Howard failed to rebut promptly an interviewer's suggestion that Australia had acted in East Timor as "deputy sheriff" for the United States and was criticized both at home and abroad. Can Australia cooperate with the United States but also act independently, when necessary, and avoid the

‘deputy’ allegation?

Can the Australian defense establishment afford to reconfigure itself for the sort of low-intensity conflict that seems increasingly likely and at the same time maintain interoperability with U.S. forces at a high and costly level of technology?

## TIMELINE

60,000 years ago - Estimated date of arrival of the first human inhabitants of present-day Australia. Other estimates range from 30,000 to 100,000 years.

1606 – First transit of the strait between New Guinea and Australia, by Spanish navigator Luis Báez de Torres; first known sighting of Australia by a European navigator, Dutch sea captain Willem Jansz.

1642 – Dutch navigator Abel Tasman sails around much Australia and discovers the island he names Van Diemen’s Land, now Tasmania. Australia begins to be known as New Holland, although there are no Dutch settlements.

1770 – Captain James Cook explores and charts the east coast of Australia, claims the area for Britain as ‘New South Wales.’

1788 - ‘The First Fleet’ of eleven British vessels, under the command of Captain Arthur Phillip and transporting mainly criminals, their warders and guards, arrives at the site of present-day Sydney on January 26 (Britain being no longer able to send prisoners to what had been its North American colonies).

1788 – Colony of New South Wales organized. Others follow: Van Diemen’s Land in 1825, renamed Tasmania in 1855; Western Australia in 1829; South Australia in 1836; Victoria in 1851; Queensland in 1859; Northern Territory and Australian Capital Territory in 1911.

1840 – Britain proclaims sovereignty over New Zealand, which is established as part of the colony of New South Wales.

1851 – Gold rush in Victoria.

1854 – Massacre at the Eureka Stockade, Ballarat, Victoria.

1878-1880 – Ned Kelly and his gang flourish in the hinterlands of Victoria.

1885 – New South Wales sends an infantry battalion, an artillery battery and an ambulance detachment – 768 men in all – to serve with British forces in the Sudan.

1890s – A series of conferences leading to Federation.

1898 – Australian volunteers fight as part of the British Imperial force against the Boers in South Africa.

1901 – Australian colonies officially federate (January 1). Federal Parliament meets for the first time, in Melbourne.

1905 – Australia assumes administration from Britain of the southeastern quarter of New Guinea and renames it the Territory of Papua.

1908 – Canberra chosen as site of federal capital, in a compromise between Sydney and Melbourne.

1912 -- American architect Walter Burley Griffin wins competition for design of the new capital city.

1914 – World War I begins. Australia immediately commits troops to the British Imperial force in the Middle East; takes over Kaiserwilhelmsland, the Germany territory in the northeast quadrant of the island of New Guinea.

1915 – April 25: The Australian and New Zealand Army Corps (ANZAC), together with British and French troops, lands on the Gallipoli Peninsula and attempts to seize it, and thus control of the Dardanelles, from the Turks. After fierce fighting and many casualties, ANZAC troops are withdrawn late in the year. During the war, the issue of conscription is twice put to referendum and loses both times.

1917-18 – Australian troops heavily engaged on the Western Front.

1919 – Australia joins League of Nations; receives Class C mandates to administer former German territories of New Guinea and Nauru.

1939 – World War II begins in Europe; Australia immediately sends forces to North Africa and the Middle East.

1941 – Japanese forces advance rapidly down Malay Peninsula, take Singapore; Japanese attack Pearl Harbor. Prime Minister Curtin states that Australia will henceforth look to the United States as its primary ally.

1942 -- Japanese forces thwarted on Guadalcanal and on the Kokoda Trail in Papua; Battle of the Coral Sea and Battle of Midway mark turning points in the war. Japanese aircraft attack Darwin 64 times; 243 persons killed. Curtin, defying Churchill, orders that Australian troops, already en route back but too late to reinforce Malaya/Singapore, return home defend Australia, rather than go to Burma..

1945 – Australia becomes a founding member of the United Nations; is assigned Trusteeships to administer the Territory of Papua & New Guinea and the island of Nauru.

- 1949 – Australia and New Zealand propose negotiation of a mutual-defense treaty with the United States, which is somewhat reluctant, and over British objections.
- 1950 – North Korean forces invade South Korea; Australia quickly agrees to join U.S.-led United Nations Command.
- 1951 – ANZUS Treaty signed (September 1); comes into effect April 25, 1952.
- 1955 – Australian troops join British and New Zealanders in opposing Communist insurgency in Malaya.
- 1956 - Melbourne hosts XVIth Olympiad.
- 1965 – Australia deploys battalion-size force to Viet-Nam, later expands it to a two-battalion task force.
- 1966 – President Lyndon B. Johnson pays state visit to Australia, the first visit by a serving U.S. President. (Subsequent state visits: George H.W. Bush, 1991-92; Bill Clinton, 1996.)
- 1967 - Prime Minister Harold Holt disappears while swimming; President Johnson attends his funeral in Canberra .
- 1972 – Whitlam Labor Government elected; last Australian troops withdrawn from Viet-Nam.
- 1975 – November 11: Governor General Sir John Kerr dismisses the government of Prime Minister Gough Whitlam, who has been unable to get “supply” (appropriations legislation) through the closely divided Senate. Kerr, who had been appointed by the Whitlam government, asks opposition leader Malcolm Fraser to form an interim government. In December, Fraser’s Liberal/National coalition wins elections; governs until 1983.
- 1983 – Australian Labor Party, led by Bob Hawke, wins election to inaugurate 13 years of ALP rule.
- 1988 – Australia celebrates bicentennial of European Settlement.
- 1989 – Prime Minister Hawke proposes the establishment of the Asia Pacific Economic Cooperation (APEC) forum.
- 1991 – Hawke is deposed by his Treasurer, Paul Keating, who, contrary to expectations, wins election in 1993.
- 1996 – Liberal/National coalition, led by Prime Minister John Howard, wins election in March; repeats in October 1998 and November 2001./

1999 – Australia organizes and leads the United Nations’ International Force for East Timor (INTERFET) to quell violence after people of East Timor vote overwhelmingly for independence in U.N.-sponsored referendum.

2000 – Sydney hosts XXVIIth Olympiad.

2001 – Australia celebrates centennial of Federation.

## INTERNET SITE GUIDE

### General Information and News

The Australian Federal Government’s web site -- [www.fed.gov.au/KSP/](http://www.fed.gov.au/KSP/) -- covers all branches of the government and has links to the sites of the state and territorial governments.

The National Library of Australia – [www.nla.gov.au](http://www.nla.gov.au) -- is Australia’s largest library and a rich source of information. Its site includes links to many other sites and other resources, such as “Australian Newspapers on the Internet.”

World-wide Web Virtual Library for Australia – [www.api-network.com/vl/](http://www.api-network.com/vl/) has links to many useful and interesting sites.

Australia Unearthed – [www.atc.net.au/market/regions/americ/unearthed/unearthed.htm](http://www.atc.net.au/market/regions/americ/unearthed/unearthed.htm) -- is a good source for tourist information.

All of Australia’s television networks and major newspapers have web sites. The newspapers include the following:

The Australian: [www.theaustralian.news.com.au/](http://www.theaustralian.news.com.au/)

The Age (Melbourne): [www.theage.com.au/](http://www.theage.com.au/)

The Australian Financial Review: <http://afr.com>

The Sydney Morning Herald: [www.smh.com.au/](http://www.smh.com.au/)

### Culture

Australia’s Cultural Network – [www.can.net.au](http://www.can.net.au) -- is the online gateway to Australian cultural

organizations, websites, resources, events and news.

Australian Humanities Review – [www.lib.latrobe.edu.au/AHR/](http://www.lib.latrobe.edu.au/AHR/) -- is a peer-reviewed interdisciplinary electronic journal on Australia, published quarterly but with regular updates between issues

All of Australia's universities have web sites. The address is usually the name of the university, dot edu, dot au, preceded by www.

## History

The Australian War Memorial – [www.awm.gov.au/index\\_flash.asp](http://www.awm.gov.au/index_flash.asp) -- is an excellent source on all aspects of Australian military history.

## Government and Politics

Index to Parliamentary Information – [www.aph.gov.au/parlindx.htm](http://www.aph.gov.au/parlindx.htm) -- offers vast amounts of information on Parliament, its members and its work.

Each of the major political parties has a web site:

The Australian Labor Party: [www.alp.org.au/](http://www.alp.org.au/)

The National Party of Australia: [www.ozemail.com.au/~npafed](http://www.ozemail.com.au/~npafed)

The Liberal Party of Australia: [www.liberall.org.au](http://www.liberall.org.au)

Australian Democrats: [www.democrats.org.au](http://www.democrats.org.au)

One Nation: [www.onenation.com.au/firstpage.html](http://www.onenation.com.au/firstpage.html)

# Self -Study Guide to Belarus

GEORGE P. SHULTZ NATIONAL FOREIGN AFFAIRS TRAINING CENTER

School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The *Self-Study Guide : Belarus* is intended to provide U.S. government personnel in the foreign affairs community with an overview of important Belarus' issues related to history, culture, politics, economics, security and international relations. This guide should serve as an introduction and a self-study resource. Belarus' affairs are far too complex and broad to be covered in any depth using only the text in this guide. The reader is encouraged to explore the questions and issues raised in the guide by referring to the books, articles, periodicals and web sites listed in the appropriate sections. Most of the referenced material can be found either on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of the *Self-Study Guide* to Belarus was prepared by Dr. Martyna Fox, chair for Russian and Eurasian area studies at FSI. The views expressed in this guide are those of the author or of attributed

sources and do not necessarily reflect official policy or position of the U.S. Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and non-profit use only.

June, 2002

## Table of Contents

### Part I

#### **The Environment and the People**

##### 1. Land

topographic feature

network of rivers

climate

soils and agriculture

natural and mineral resources

##### 2. The People

ethnic origins

ethnic structure

identity

nation-building

##### 3. Culture

language

religion (and religious minorities)

culture

### Part II

#### **History and its Legacies**

##### 1. Timeline

##### 2. Early and Modern History

emergence of Belorussian lands

Grand Duchy of Lithuania

Belarus and the Polish state

##### 3. Belarus and the Tsarist Empire

Partitions of Poland

Early Belarusian nationalism  
World War I and the Bolshevik Revolution

4. The Soviet Era  
Belorussian SSR  
Belarusians in Poland

5. The Experience of World War II  
The Holocaust on Belorussian territories  
Partisan warfare  
Belarusian dispersion

6. The Road to Independence  
Political context: Glasnost'  
Chernobyl and its impact  
Independence movement in Belarus

### **Part III**

#### **Belarus Today**

1. Constitutional Structure  
A Parliamentary Republic: 1991- 1994  
A Presidential Republic: 1994 - Present

2. Domestic Politics  
The Presidential Apparatus  
Political Parties and Opposition  
The Mass Media  
The NGO's  
The Problem of Democratization

3. Economy  
Government Policy on Reforms  
Privatization  
Agriculture  
Energy Issues  
Foreign Trade and Investment

4. Society  
Demography  
Health Issues: Chernobyl after-effects, HIV/AIDS crisis  
Women's Issues: Trafficking in Women  
Environment

6. National Security

Nuclear Weapons  
Armed Forces

## **Part IV**

### **External Relations**

#### 1. Belarus and the Russian Federation

Integration Issue

Military Cooperation

Economic Ties

#### 2. The CIS

#### 3. Belarus and its Neighbors

Relations with Ukraine

Relations with Poland

Relations with Lithuania and the Baltic States

#### 4. Belarus and Western Europe

Belarus and the European Security Structure

Belarus and the EU

Belarus and the OSCE

#### 5. Relations with the United States

Nuclear Weapons

Democratization and Technical Assistance

## **Part V**

### **Resources**

Periodicals

Web resources

### **Note on Spelling:**

In an attempt to balance the established English language spelling of adjectives referring to things Belorussian with the spelling preferred by contemporary Belarusian scholars, names of historical territories up to and including the Soviet era will preserve the traditional English spelling, while adjectives referring to the culture, language, nationality or developments in contemporary Belarus will adopt the other.

# **Part I: The Land and the People**

# 1. Land

The **Republic of Belarus** is a landlocked country in north-eastern Europe with the territory of 207,600 sq km. It borders five states: the Russian Federation to the East, Latvia to the North East, Lithuania to the North, Poland to the West, and Ukraine to the South. The capital of Belarus, Minsk, is located in the center of the country and has a population of 1,700,000.

## Topographic features

The landscape of the country is glacier-shaped. Belarus is predominantly flat, with low hills in the north-east (the highest point is 364m) and swampy lowlands in the south.

## Network of rivers

With over 20,000 small and medium rivers and 11,000 lakes, Belarus' dense network of waterways is unique in Europe. Four major rivers link it to the Baltic and the Black Sea basins: in the North, the Neman and West Dvina empty into the Baltic Sea; the Dnieper and its tributary, Pripjat', flow into the Black Sea. These rivers have been instrumental in providing access to the cultures and economies of East and West throughout the history of the region.

Today, Belarus's waterways have been augmented by a network of canals providing it with a relatively easy access to the Baltic Sea (Belarus has an agreement with Poland providing access to the port facilities at Gdynia).

## Climate

Belarus lies above 50° longitude, that is on the level of Manitoba. Yet the relative proximity of the Atlantic Ocean and the Baltic Sea tempers its continental climate. Summers, lasting up to 150 days, bring moderate temperatures between F 60 - 70°, and in winters temperatures fall to between -5 and 32°F. Precipitation is abundant, averaging 550-700 mm a year.

## Soils and agriculture

One third of Belarus' territory is covered by forests. The most impressive the Belovezha National Forest (1,450 sq km) and the Naliboki National Forest (1,400 sq km) include the last stands of primeval forests in Europe.

The country's swampy soils are poorly suited to agriculture; consequently, Belarus has specialized in raising cattle. Today, its main agricultural products include meat, dairy products, potatoes and flax.

\*(See the section on the environment for the impact of Chernobyl on agriculture in Belarus).

## **Natural and mineral resources**

Belarus has very few mineral resources, consisting of small deposits of iron ore, nonferrous metal ores, potash and rock salt.

Because it lacks coal, oil or other energy products, Belarus is dependent on energy imports from the Russian Federation. For its production of electric power, Belarus relies on 22 thermal power plants and 9 small hydro-electric plants.

## **2. The People**

In 2000, the population of Belarus comprised just over 10,000,000 people, with a density of approx. 50 persons per sq km.

### **Largest Cities:**

Minsk: 1,672,000 inhabitants

Gomel: 501,000

Mogilev: 367,000

Vitebsk: 356,000

Grodno: 302,000

(Source: EIU Country Profile for Belarus, 2001/2002)

### **Ethnic origins**

Belarusians are grouped with the East Slavic family of languages together with the Russians and the Ukrainians. However, many scholars believe that the Belarusian ethnogenesis began with the fusion of the Slavic and Baltic populations native to the area.

### **Ethnic structure**

The 1989 population census (the Soviet Union's last) provided the following ethnic breakdown for the Republic of Belarus:

Belarusians: 77.8%

Russians: 13.2%

Poles: 4.1%

Ukrainians: 2.9%

Others: 2.0%

A large percent of the ethnically Russian population came to Belarus after WW II and is concentrated in the urban and industrial centers. Ethnic Poles live in the Western part of Belarus, close to the border with Poland. The Ukrainians, by contrast, are concentrated in the south.

Other ethnic groups in Belarus include the Lithuanians, Latvians, Tatars and Jews.

## **Jewish History in Belarus**

Jews first settled in the Belorussian territories at the end of the 14<sup>th</sup> century. Early royal charters allowed them to live in the cities of Brest and Hrodna and to engage in financial operations as well as in trade and crafts. With the expansion of the Grand Duchy of Lithuania (within which Jews had achieved prominent positions), Jews from Germany and Poland arrived to settle in central and eastern Belarus. Administratively, the Jewish settlements were organized into *kahals*, or self-run religious communities. Religious and cultural life flourished, with a number of yeshivas (Brest, Mir) and religious movements achieving diaspora-wide fame.

When Belorussian territories became part of the Russian empire at the end of the 18<sup>th</sup> century, the official Pale of Settlement was established. It prohibited the Jews from living, working or owning real estate east of the former Polish-Russian border. Consequently, the Belorussian lands held one of the largest concentrations of Jewish population in Europe (1.2 million in 1897). By the end of the 19<sup>th</sup> century, most Belorussian cities had ethnically Jewish majorities: 58% in Minsk, 53% in Viciebsk, 61% in Hrodna. Despite occasional outbreaks of anti-Semitism, and the official policy of Russification, Jewish centers of life in Belarus remained vigorous in the late Tsarist empire.

This entire community and way of life was destroyed during World War II as a result of Nazi genocide. Of Belarus' 2.2 million victims in WW II, the vast majority was Jewish. Frequently, whole populations of Jewish towns and villages were exterminated on the spot; relatively few were sent to concentration camps. (See permanent exhibits at the Holocaust Museum in Washington DC).

In 1989, there were 112,000 Jews in Belarus. It is estimated that since then about 40 to 50% have emigrated. Nonetheless, in 1991, the Belarusian Association of Jewish Organizations and Communities was established to promote a renewal of Jewish cultural and religious life and to defend the rights of the Jewish minority.

## **Identity**

Belarusian identity is rooted in religion, language and folk culture. Whereas the ethnic and cultural identity of the Belarusians is quite strong, their national awareness was weakened by a history first as a 'stateless' people, and more recently, as a 'compound' state.

Contemporary Belarus comprises territories which were historically controlled by the Lithuanian/Polish

state in the west and north, and by the Russian state in the south and east. Consequently, the Belarusian population has been subject to centuries of Polonization on the one hand and Russification on the other. As a result of these pressures, cultural and political elites among the Belarusians tended to adopt either the Polish or the Russian culture as their own, leaving the task of preserving Belarusian language and culture largely to the peasants.

Another factor was the presence of many other ethnic minorities within Belarus. As has been mentioned, in the 19<sup>th</sup> century most Belorussian cities had Jewish majorities as well as influential Polish and Russian minorities. Thus, Belarusian culture had a limited geographic and class reach, and Belarusian identity played a limited political and nation-building role.

The multi-ethnic character of the Belorussian lands is well illustrated by the continued and wide-spread bilingualism: 63% of the population of Belarus is bilingual, including 70% of ethnic Belarusians. However, whereas 70% of ethnic Belarusians living in the cities considered Belarusian to be their native language, 97% of those living in the countryside did so. **Nationalism and Nation-building**

In the 19<sup>th</sup> century the Belarusian national idea was predicated on political independence, democracy, and social justice. Political independence would put an end to the cultural pressures from the outside, while democracy and social justice would allow the Belarusian identity of the peasants to replace that of the Polonized or Russified elites.

This essentially defensive nationalism was no match for the Soviet system. During the Soviet era, despite the outward symbols of statehood, Belarusian national awareness was further undercut by the official policies of Sovietization which, as a practical matter, meant once again the Russification of all spheres of public life. This process only intensified in the wake of World War II, when Belarus' population losses caused Moscow to resettle large numbers of ethnic Russians there.

The decisive point for the awakening of national awareness among the Belarusians was the Chernobyl disaster of 1986. The radioactive fallout and its calamitous consequences combined with the obtuse behavior of Moscow sparked the rise of the Belarusian Popular Front. Thus the independence movement in Belarus contained once again a mixture of environmental and social as well as nationalist elements.

The process of nation-building in today's Belarus has been complicated first and foremost by the lack of democratization. Belarusian national awareness continues to be hampered by the fact that the country's policymaking elite, centered on President Alexander Lukashenka, is more Russified than the population. Its policies (especially that of seeking a closer union with the Russian Federation) have further encouraged bilingualism and other manifestations of a dual, Russo-Belarusian culture.

## 3. Culture

### Language

The Belarusian language belongs to the East Slavic family of languages and is closely related to both Russian and Ukrainian. Belarusian contains many loan words from Polish and from Russian, reflecting centuries of cultural pressures from these neighbors. The standard literary Belarusian language, codified in 1918, is based on a central Belarus dialect and is written in the Cyrillic alphabet.

The 1920's and the early 1990's were the only periods during which the Belarusian language flourished and was promoted as the official language of the country. In the Soviet era, Stalinization and the growing predominance of Great Russian nationalism reversed the gains of Belarusian language. The official Soviet policy of Russo-Belarusian bilingualism resulted by 1992 in 60% of Belarusians preferring to use Russian in daily life, and 75% preferring bilingualism in public life.

More pernicious, however, has been the emergence of the so called *trasyanka*, (translated as “mixture of hay and straw”) which is a lexical and grammatical mixture of Russian, Belarusian, Ukrainian and Polish. *Trasyanka* is used widely in rural areas and has emerged as the “popular” language of the country.

The issue of language has become highly politicized during Alexander Lukashenka's tenure. Although the Constitution confirms in Article 17 that “the state language is Belarusian,” a Lukashenka-supported referendum reintroduced official bilingualism in 1995. Currently, the official media portray those using Belarusian as opposition members seeking to destabilize the country (the Belarusian Language Society, for instance, was expelled from its offices in 1998). The President, by contrast, speaks almost exclusively in Russian and insists that the majority of Belarusians are Russophones.

### ***Belarus* or *Belorussia*? The Spelling Dilemma**

What's in the spelling of a name? Historical, as well as the established English language usage, refers to the country as *Belorussia* or *Byelorussia*, and to its people and culture as *Belorussian*. However, since 1991, the preferred usage among most scholars of that country is ***Belarus/Belarusian*** – as in the official name of the Republic of Belarus. This shift is due to the fact that the older spelling (*Belorussia*) was perceived as Russocentric, reflecting the view that “*Belorussians*” (i.e. White Russians) were but a branch of the Great Russian nation.

Consequently, this guide will retain the older spelling in reference to the historical lands up to and including the Soviet era. But in reference to the culture, people, or contemporary developments, the current *Belarusian* version will be used.

### **Religion and religious minorities**

Belarus has historically been a multi-confessional country, reflecting both its multi-ethnic character and the varying cultural influences of the neighbors.

In 1996, there were 26 registered religious denominations:

Orthodox:	938 parishes/centers
Catholic:	373
Pentecostal:	261
Baptist:	192
Old Believer:	31
Jewish:	15
Muslim:	15
Greek Catholic:	11
Jehova's Witnesses:	11

Orthodoxy: Christianity in its Eastern Orthodox form was introduced in Belarus at the end of the 10<sup>th</sup> century from Kiev. After the Mongol invasion, the center of gravity for Eastern Orthodoxy moved to Moscow, which became the sponsor and defender of the Orthodox church in Belarus. After the absorption of Belorussian lands into the Commonwealth of Poland and Lithuania, the Orthodox church faced strong Catholic pressures. The Union of Brest, concluded in 1596, put the Belorussian Orthodox Church under the control of the pope while allowing it to preserve its hierarchy and Byzantine rite. The resulting Greek-Catholic (or Uniate) Church was the predominant church in Belarus until it was abrogated by Tsar Nicholas in 1839. After that date, the Uniate Belarusians were forcibly converted to Orthodoxy by the Russian authorities. The Orthodox Church suffered heavy persecution during the Soviet era; only during the perestroika did religious revival take place. In 1989, the Moscow Patriarchate elevated Minsk to be the Belarusian exarchate, recognizing the Belarusian Orthodox Church's separate status.

Catholicism spread to Belarus in the 14<sup>th</sup> century, after its territories became part of the Grand Duchy of Lithuania. Most of the culturally Polonized noble elite adopted Catholicism and by the 18<sup>th</sup> century 15% of Belarusians were Catholic (although subsequently those numbers have decreased). In Western Belarus, where the ethnically Polish minority is concentrated, Catholicism and Polish identity has continued to be firmly intertwined. Today, the Catholic Church in Belarus has grown considerably and is the second largest denomination after the Orthodox Church.

Protestant Denominations: Although the first Protestant communities, the Calvinists and the Lutherans, arose in Belarus already during the Reformation, for the most part they remained small. In modern Belarus, by contrast, the Baptists and the Pentecostals have been the most quickly growing denominations, despite the fact that under the Soviet rule these denominations were singled out for particularly harsh persecutions. As a result, during the 1970's, a number of Belarusian Baptists and Pentecostals emigrated to the United States.

Jews: Until the 20<sup>th</sup> century, the lands of Belarus held one of the largest concentrations of Jewish population in the world. It was also a great center of religious learning and the birthplace of several religious movements within Judaism, such as the Hassidic movement. As a result of the Holocaust in

World War II, this religious community has almost completely disappeared. Today, 15 religious Jewish communities survive.

**Islam:** Muslims in Belarus are mostly ethnic Tatars who settled in those regions in the 15<sup>th</sup> and 16<sup>th</sup> centuries. In 1996, the Muslim Religious Union of Belarus counted 13,000 members.

## **Culture**

The culture of Belarus, like its history, reflects the great role of geography and natural conditions. In a country of thick forests and wide marshes, Belarusian folk culture was deeply traditional and permeated with ancient customs and beliefs. Despite formal Christianization in the 10<sup>th</sup> century, pagan holidays survived into the 19<sup>th</sup> century, with some Christianized pagan holidays, like *Dziady* (or All Saint' Eve), celebrated even today. This folk culture and rural themes, more broadly remained the chief source of inspiration for nationally-minded Belarusian writers, such as Yanka Kupala (1882 - 1942) or Yakub Kolas (1882 - 1956).

At the same time, Belarus' geographic location turned it into a cultural crossroads: Western influences were brought in by the Polish, Jewish and Baltic elements, those of the East by the Russians, Ukrainians and even the Tatars. Most of these cultural imports were limited to the urban dwellers and social elites; still, they contributed to the emergence of an essentially inclusive and multifaceted cultural outlook among the Belarusians.

## **Questions and Issues:**

What has been the impact of Belarus' geographic location on its people?

How did the natural conditions of the Belarusian lands shape the popular culture?

What was the role of Belarus' ethnic and religious minorities in its history?

How did the outside influences shape the Belarusian language? What is its situation today?

# Part II: History and its Legacies

## 1. Timeline

- 600-700 A.D. Arrival of Slavic tribes on today's Belarusian territories
- 700-900 Merging with the Balts
- 980 Emergence of first city centers, dominated by Kiev
- 988 Christianization of Kievan lands
- 1044 Erection of St. Sophia Cathedral in Polacak
- 1236-63 Absorption of Belarusian lands into the Grand Duchy of Lithuania
- 1569 Establishment of the Commonwealth of Poland and Lithuania
- 1580's Arrival of Catholic missionaries, Orthodox resistance
- 1596 Establishment of the Greek Catholic (Uniate) Church
- 1696 Replacement of "Rusan" by Polish in official documents
- 1772 I Partitions of Poland; Eastern Belarus incorporated into the Russian Empire
- 1795 Final partition puts all Belarusian territories under Russian rule
- 1839 Forcible return of Uniates to the Russian Orthodox Church
- 1863 Anti-Russian uprising in Poland, Lithuania and Belarus followed by extensive repressions and Russification
- 1906 Publication of Belarusian weekly *Nasa Niva* – first nationalist publication
- 1915 German occupation
- 1918 All-Belarusian Congress establishes Belarusian Democratic Republic (disbanded by Bolsheviks)
- 1919 Establishment of the Belarussian Socialist Republic

- 1920 Russo-Polish war results in partitions of Belarussian lands
- 1937 Beginning of Stalinist purges and creation of the Kurapaty death camp
- 1938 World War II begins, Soviet Union annexes West Belarus
- 1940's German occupation; guerilla warfare and extermination of the Jewish communities
- 1945 BSSR one of the founding members of the United Nations
- 1986 The Chernobyl plant accident
- 1989 Belarusan Popular Front established
- 1991 Belarus declares independence in wake of August coup
- 1994 Election of Alexandr Lukashenka

## **2. Early and Modern History**

### **Emergence of the Belorussian lands**

Between 8<sup>th</sup> and 13<sup>th</sup> centuries, two important processes helped form early Belarus. First, the fusion of the Slavic and Baltic populations along the upper Dnieper and Dvina rivers lay the foundation for the Belarusan language and cultural identity. Second, the process of Christianization, started in 988, brought literacy and political contacts with the trading centers of Kiev in the south and Novgorod in the north, and eventually, the emergence of the first Belorussian city-principalities.

### **Grand Duchy of Lithuania**

Conflicts with the German religious orders settling along the Baltic coast (the Livonian Order and the Teutonic Order) brought a new era to the Belorussian lands. To oppose these Orders, a Lithuanian Duke Mindaugas began consolidating and expanding his rule over most Belorussian territories. Throughout the 13<sup>th</sup> and 14<sup>th</sup> centuries, the Grand Duchy of Lithuania, Rus' and Samogitia, as it came to be known, continued its territorial growth and came close to bridging the Baltic and the Black Seas. Since the Lithuanian ruling house converted to Eastern Orthodoxy, Belarusan language became the official language of record of the Grand Duchy; it preserved that status until 1696.

### **Belarus and the Polish state**

In 1386, the Grand Duchy of Lithuania and Poland were joined in a dynastic union. The Lithuanians officially converted to Catholicism (most of the population had remained pagan until then). Within a few years, Catholic churches began appearing on the Belorussian territories, while the Orthodox Church of the Grand Duchy and Poland became independent from Moscow in 1472. Other Western influences quickly followed, especially in political institutions and education. Growth of self-governing cities encouraged crafts and trade. Reformation itself also left a deep imprint on the religious beliefs and culture. This period came to be seen as the “golden age” of Belorussian lands.

However, further political union with Poland and the pressure of the Catholic Church increased religious tensions in Belarus. The Union of Brest, concluded in 1596, founded the Uniate Church and undermined the position of Orthodoxy in Belarus. This only added to the growing cultural cleavage between the Polonized elites and the Belarusian people.

### **3. Belarus and the Tsarist Empire**

#### **Partitions of Poland**

Continuous wars and the concomitant weakening of the Polish state in the 17<sup>th</sup> and 18<sup>th</sup> centuries led to its partition among the neighboring states. By 1795, all Belorussian territories became part of the Russian empire. In one of the first edicts directed at Belarus, Catherine II established a Pale of Settlement on its territories to prohibit the Jewish population from living or working east of the former Polish-Russian border.

#### **Early Belorussian nationalism**

In the 19<sup>th</sup> century, all religious and ethnic groups in Belarus were subject to official Russification policies, but their impact was the greatest among the Belarusians. In 1839, the Uniate Church was abolished and Belorussian Uniates were forcibly converted to Orthodoxy. Belorussian language was declared a “dialect” of Russian and the name of Belarus was officially changed to “the Western gubernias,” (although even that ancient name (translated as White Rus’). This was taken as a proof that the Belarusians were but a branch of the Great Russian nation). After a large number of Belarusians joined in the Polish uprising against Russia in 1863, severe reprisals were taken and Russification of Belarus only intensified.

As among other subject nationalities in the Tsarist empire, a nationalist movement arose among the Belorussian intelligentsia in reaction to the repressive Tsarist policies. From the outset, this movement was grounded in the revival of Belorussian language and the development of its literature (see for instance the writings of poet Francisak Bahusevic). It also developed a strong socialist and populist leaning, since the majority of ethnic Belarusians belonged to the peasant and lower classes. For example, the banner newspaper of Belorussian cultural and political life, *Nasa Niva*, was founded by the Belorussian Socialist Union in the wake of the Revolution of 1905.

## World War I and the Bolshevik Revolution

For most of the duration of World War I, the Eastern front divided Belorussian territories, with one third of Belarus falling under German control. After the Revolution of 1917, the first All-Belarusan Congress decided to establish a democratic, independent government in Belarus, but the Bolshevik forces quickly subdued this movement. Another chance was seized when the Germans occupied Minsk in 1918: in March, the same All-Belarusan Congress proclaimed the founding of the Belarusan Democratic Republic. This fait accomplis forced the Bolshevik regime in 1919 to support the creation of the Belorussian Soviet Socialist Republic as part of the Union of Soviet Socialist Republics.

Between 1919 and 1920, the Belorussian territories became a bone of contention between Poland and the Bolshevik government. As a result of the Polish-Russian war, Belarus was officially partitioned under the Treaty of Riga (1921). Poland received Western Belarus (40% of territory and 38% of population). The remaining territory constituted the Belorussian SSR.

## 4. The Soviet Era

### Belorussian SSR

The first years of Soviet rule in Belarus were marked by relative liberalism in both the linguistic/cultural and economic areas. In 1924, for instance, equal rights for the four main languages of the Republic (Belarusan, Yiddish, Polish, and Russian) were guaranteed. Belarusan language itself gained a number of institutions of higher learning, as well as numerous literary clubs and local publications. The New Economic Policy allowed for a strong recovery, especially in the agricultural sector. But collectivization imposed by Stalin after 1928 had calamitous consequences for the landholders of Belarus most of whom had middle-size holdings. Hundreds of thousands of those peasants (identified as the so called “kulaks”) were sent to camps, soon to be joined by large numbers of Belarusan intelligentsia. By the 1930’s, Stalinist purges and peasant persecution in Belarus reached catastrophic proportions. Data remain scarce, but the discoveries of mass graves in the Kurapaty Forest (by Zenon Poznyak, a founder of the Belarusan Popular Front in the 1990’s) confirm the tragic scale of Stalinist repressions in Belarus.

### Kurapaty Forest

In 1988, a team of archeologists under the leadership of **Zenon Poznyak** discovered an execution site in the Kurapaty Forest near Minsk. Used from 1937 until 1941 (when Nazi troops occupied the area), Kurapaty consisted of mass graves of 100,000 to 250,000 civilians killed by the Soviet secret police, or NKVD.

Poznyak’s discovery became a symbol of Stalinist and Soviet repression in Belarus. It helped spark the Belarusan Popular Front and played an important part in the formation of an independence movement in Belarus at the end of the 1980’s.

## Belarusans in Poland

Whereas the position of ethnic Belarusans in Poland was fundamentally better than the position of those in the USSR, between 1921 and 1939 their treatment worsened considerably. Growing authoritarianism of the Pilsudski government led to a general shift in the treatment of all ethnic minorities and decreased the Belarusian representation in the Polish Parliament. Many Belarusian schools and newspapers were closed and the Polish population was encouraged to settle in Belorussian territories. Even the economic development lagged behind that of central Poland.

## 5. The Experience of World War II

For the Belarusans, World War II began with the German attack on Poland in September, 1939. Within weeks, the Soviet troops also moved into Poland to occupy Western Belarus and Ukraine, which under the terms of the secret Ribbentrop-Molotov Pact were to be incorporated into the Soviet Union. Mass arrests and deportations followed, concentrating on ethnic Poles, but also the intelligentsia and Polish army personnel of any background. By June 1941, when the Nazi forces attacked the Soviet Union, many Belarusans welcomed them hoping for an end to the Communist persecutions.

### The Holocaust on Belorussian territories

The Nazi plans for Belarus essentially called for the elimination of both the country and its population. First, the Belorussian territories were once again fragmented: some portions were folded into other political entities (Lithuania, Ukraine and East Prussia), while central and eastern Belarus came under direct German military rule (*Weissruthenische Generalbezirk*). Second, the Nazi occupiers planned to eliminate the people itself by Germanizing about a quarter of the most “racially acceptable” Belarusans and exterminating the rest.

That, first and foremost, meant the genocide of the Jewish population. Over 260 concentration camps were established, often overlapping with the existing Jewish ghettos. Thus, in the Minsk ghetto, over 100,000 Jews were killed, in Brest 34,000, in Babrusk 20,000, in Viciebsk 20,000. Since most Belorussian cities had Jewish majorities, all of them became sites of genocide. Frequently, smaller Jewish towns or villages were surrounded and massacred on the spot.

In addition, death camps were created to exterminate not only the local population, Jewish or Belarusian, but also victims brought in from the West. The most infamous camps included Trascianiec (206,000 victims), Minsk, Azarycy, Babrujsk, Bierazavac, and Kaldyceva.

### Partisan warfare

Although a portion of the population in Belarus worked with the Germans to organize their own police force and administration structures, the majority sided with the growing resistance movement. The partisan forces were organized by Moscow and were frequently headed by either communist leaders or by

commanders parachuted in from the other side of the front. Belarus' natural conditions deep forests and marshes favored guerrilla-style warfare. At its peak, over 350,000 people were involved in the partisan movement. But this widespread support brought the price of severe reprisals: wholesale burnings of villages and massacres of their populations.

### **Belarusan dispersion**

All in all, between 1939 and 1945 Belarus lost more than 2.2 million inhabitants, with 209 leveled cities and 9,200 destroyed villages. 380,000 laborers were deported to Germany before 1945; tens of thousands of others fled with the retreating German army in fear of Soviet reprisals. Finally, in the first post-war years over 450,000 Belarusian Catholics and ethnic Poles resettled in Poland. It has been estimated that as a result of these losses, the demographic deficit for Belarus for 1939-1959 topped 6 million people.

The dispersion of the Belarusians in the wake of World War II is at the roots of the relatively large diaspora. By 1990 an estimated 3.5 million Belarusians and their descendants lived outside the borders of Belarus, including 600,000 in the United States.

### **Belarusian Diaspora:**

**Russia:** 1,200,000  
**United States:** 600,000  
**Ukraine:** 440,000  
**Poland:** 250,000  
**Kazakhstan:** 183,000  
**Argentina:** 150,000  
**Latvia:** 120,000  
**Lithuania:** 63,000

## **6. The Road to Independence**

### **Political context: Glasnost'**

Throughout the era of Brezhnevite stagnation, the Belarussian SSR was characterized by relative economic stability (the republic enjoyed one of the highest living standards in the USSR), but also a profound conservatism of the Communist ruling elite. The coming to power of Mikhail Gorbachev in 1985 however marked a new period in Soviet domestic politics. His policies of *perestroika* (restructuring) and *glasnost* (public openness) created new expectations among the Belarusians.

### **Chernobyl and its impact**

The first test of perestroika came when the world's worst nuclear disaster struck in Chernobyl on April 26, 1986. Although the power plant was located just across the border with Ukraine, the prevailing winds

carried over 70% of the radioactive fallout into Belarus, contaminating over 46,500 square kilometers, or 23% of Belarusian territory. Yet, both Moscow and Minsk authorities remained silent about the accident for several days, at one point going as far as to confiscate all Geiger counters from the population. This cover-up led to large protests and demonstrations in the Homiel region the most severely afflicted area.

Eventually, the authorities resettled 24,700 people from the 30-kilometer radius around the reactor (in the next 8 years, the number of those resettled would reach 130,000 people). But the immediate medical, social and economic cost was overwhelming.

## **Independence movement in Belarus**

As a result of the Chernobyl disaster, segments of the Belarusian intelligentsia became more politically mobilized. From 1986 through 1988, petitions were circulated demanding that not only the physical fallout from Chernobyl be attended to, but also “the cultural Chernobyl” that is the destruction of Belarusian culture and language. Nationalist and cultural groups began to emerge.

This process was further spurred by the discovery of mass graves in the Kurapaty Forest in 1988. The dual grievances: Chernobyl and Kurapaty, became the rallying cry for the emerging nationalist movements. In October 1988 the Belarusian Popular Front was formed to encourage national renewal and political reform. (See the sidebar on Kurapaty Forest and Zenon Poznyak.)

At first, the politically mobilized Belarusians remained in minority. The March 1990 elections to the Belorussian Supreme Soviet still gave 86% of seats to the Communist Party of Belarus, and 83% voted for the preservation of the Soviet Union. But unrest spreading throughout the Soviet Union found its echoes in Belarus as well. In April of 1991, a series of strikes shook the entire republic. The CPB itself was beginning to show strains and divisions. Finally, after the unsuccessful putsch in Moscow in August 1991 brought declarations of independence from Belarus’ immediate neighbors (Latvia, Estonia, and Ukraine), the Supreme Soviet in Minsk declared the independence of Belarus on August 25, 1991. On September 25, 1991, the Soviet officially changed the name of the state to the Republic of Belarus, adopting a new national flag and a new coat of arms.

## **Rise of the Commonwealth of Independent States**

Despite the declarations of independence sweeping the USSR in the wake of the August coup, both Moscow (now under Yeltsin’s leadership) and Minsk (led by the new head of the Supreme Soviet, Stanislav Shushkyevitch) were hoping to preserve some sort of union, at least among the three Slavic republics. Consequently, the leaders of Russia, Belarus, and Ukraine met in the Belovezha Forest (in Belarus) in December of 1991 to dissolve the Soviet Union and to establish a commonwealth.

By December 21, this union was joined by the five Central Asian states, Armenia and Azerbaijan, and was officially named the Commonwealth of Independent States.

## Questions and Issues:

What were the positive and the negative legacies of Belarus' relations with Poland and its culture?

What was the role of the Orthodox worship in Belarus (be it under the Uniate or Orthodox Church)?

How did the Tsarist rule impact Belarusan identity?

How successful was the policy of Sovietization and Russification in Belarus? In what areas in particular?

What was the impact of World War II on the population of Belarus?

How did Chernobyl mobilize the Belarusan population?

## **Part III: Belarus Today**

### **1. Constitutional Structure**

#### **A Quasi-Parliamentary Republic: 1991- 1994**

From August 1991 through the end of 1994, political power in Belarus was concentrated in the hands of the undemocratically elected Belarusan Supreme Soviet. (See above on the elections of March, 1991). The Communist- dominated Soviet rejected wide-spread calls for disbanding, setting instead the deadline for the new elections for the spring of 1994. Meanwhile, both the Supreme Soviet and the government of

Prime Minister Kyebich steered a very conservative course in relation to political and economic reforms. For instance, a privatization law (passed in 1993) protected the existence of collective farms, it also delayed privatization of state-owned enterprises until 1995. In the political arena, the Communists and the apparatchik allies of Prime Minister Kyebich ousted Stanislav Shushkyevich from chairmanship of the Supreme Soviet in January 1994. The opposition forces, centered around the Belarusian Popular Front, remained largely powerless to affect the scope and the speed of reforms.

## **A Presidential Republic: 1994 - Present**

On March 30, 1994, the Supreme Soviet adopted a new constitution for the Republic of Belarus. Assuming that Prime Minister Kyebich would win the presidential elections, his allies in the Soviet pushed for a strong presidential system. But in a surprise victory, an anti-corruption candidate, Alexander Lukashenka, won more than 80% of the vote in the elections of June 1994.

After an initial “grace period” from the opposition, Lukashenka and the parliament went at loggerheads over the limits of presidential power. The most important issue was the president’s right to dissolve the parliament. After a national referendum on this question was forced by Lukashenka in 1995, a hunger strike by the opposition deputies was led by Zyanon Poznyak, the leader of the BPF. In the end, the opposition deputies were forcibly removed from the building of the parliament, and the national television and radio were cordoned off and put under direct control of the Lukashenka administration. Hastily called parliamentary elections fell well short of the standard for free and fair process.

Two other questionable referenda (in 1995 and 1996) granted Lukashenka the mandate to disband the Soviet (which he did in 1996, replacing it with a handpicked bicameral National Assembly) and to adopt a new constitution granting him sweeping powers over other branches of the government. Thus the Republic of Belarus currently has two constitutions and, arguably, two parliaments, since many members of the disbanded Supreme Soviet continue operating a vocal shadow parliament, albeit outside the official political structure.

## **The Constitution of the Republic of Belarus**

Officially proclaimed on July 27, 1994, the Constitution established a presidential republic with a pluralist political system. The right to vote was extended to all Belarusian citizens 18 and older.

The national government consisted of three branches of the government: legislative, executive, and judicial. The legislature consisted of a unicameral body (the Supreme Soviet) of 260 deputies, elected every 5 years. Its duties included calling national referenda, interpreting the constitution, and scheduling parliamentary and presidential elections. The Supreme Soviet also elected members of high-level courts, the Procurator General, and the members of the board of the National Bank of Belarus. Finally, the Soviet had the power to confirm the state budget and to ratify international treaties.

The president was to be elected every five years through a popular vote. The president is both the head of

state and the head of the government. As commander in chief, the president is in charge of “taking measures to protect the country’s sovereignty and territorial integrity.”

The judicial branch consisted of three courts: the Constitutional Court (nominated by the president and appointed by the Supreme Soviet), the Supreme Court (with its lower level courts), where cases are open to all, and finally, the Supreme Economic Court.

In 1996, several key amendments were adopted through a controversial referendum. They included creating a new bicameral National Assembly (110 deputies and a senate), extending the presidential term to 7 years, giving the president the right to annul decisions of local councils, to set election dates, to appoint Constitutional Court judges, and to appoint for life 1/3 of the senators in the National Assembly. The referenda also approved re-adopting the old Soviet Belarusian flag and granting the Russian language equal official status with Belarusian.

The Belarusian Constitution also officially sanctions the system of mixed economy and pledges full employment to all citizens.

## 2. Domestic Politics

### The Presidential Apparatus

Under Lukashenka’s authoritarian rule his executive apparatus proved to be a most valuable political tool. As the head of the government, Lukashenka appoints and dismisses the prime minister, and directly supervises the Council of Ministers and the National Bank. This puts him firmly in charge of the economic and fiscal policies. As the commander-in-chief and the head of the National Security Council, Lukashenka also has complete control over the armed forces and such power institutions as the Belarusian KGB (which officially retains that acronym).

Lukashenka’s overwhelming powers of incumbency were brought to stark relief in the presidential elections of August 2001.

### Political Parties and the Opposition

Although nearly 30 political parties have been legalized since 1990, only about 2 to 5% of the population belong to any of them. Due both to the apathy of the voters and to Lukashenka’s manipulation of the electoral process, political parties have not proven to be effective political organizations.

The fundamental division among parties in today’s Belarus lies between the allies of President Lukashenka and the opposition parties. Among the most important pro-government parties are the Communist Party of Belarus, their ally the Agrarian Party, the left-leaning Party of Popular Accord and the Party of All-Belarusian Unity. The pro-reform camp includes the United Civic Party, the Social Democratic Hramada, and the Belarus Christian-Democratic Party.

The Belarusian Popular Front remains the most widely supported opposition party despite internal tensions and splits. Founded by Zyanon Poznyak in 1988, the BFP was Belarus' first political movement. The party was committed to a nationalist ethos, the defense of Belarus' independence, and support for a Belarusian cultural revival. After Zyanon Poznyak's exile in 1996, the more nationalist-minded wing split from the BFP, leaving the party's leadership in the hands of the more pragmatic and reform-oriented Vintsuk Viachorka. Since the split, the party has regained its status as the main center of opposition and proved very successful at building coalitions with other opposition forces.

The last parliamentary elections (in October 2000) only reinforced the hostility between the opposition and the Lukashenka government. The opposition was characterized by the government as "criminals plotting against the country" and was denied access to the state-controlled media. Consequently, the majority of opposition parties boycotted the elections. Most new deputies to the National Assembly have no party affiliation.

### Leading Political Figures:

**Alyaksandr Lukashenka:** a former state farm director, gained prominence as head of the Supreme Soviet's anti-corruption committee. Since his election in 1994, Lukashenka has relied on heavily censored media and a "personality cult" to maintain popularity in the country.

**Zyanon Paznyak:** a historian who uncovered the Kurapaty Forests massacre site, Paznyak was the founder of Belarus' first opposition party, the Belorussian Popular Front. An outspoken critic of the Lukashenka regime, he left Belarus in 1995 after an arrest warrant for him was issued by the authorities. Living under political asylum in the United States. Zyanon Paznyak remains a key figure in the nationalist movement and heads the Conservative Christian Party of the Belarusian Popular Front.

**Uladzimir Hanczaryk:** leader of the Belarusian Federation of Trade Unions, was the joint opposition parties candidate in the presidential elections of September 2001.

**Vintsuk Viachorka:** a veteran opposition politician, active in the nationalist movement since the 1980's, one of the founders of BPF. Since October 1999, when the more strongly nationalist wing broke away from BPF (see Paznyak's Conservative Christian Party), Viachorka proved successful at coalition-building among all opposition forces. Credited with revitalizing the opposition movement in the run-up to the presidential elections of October 2001.

### Mass Media

Despite existing legislation that guarantees freedom of the press, the state remains in firm control of the mass media in Belarus. It directly funds many publications and controls such resources as printing plants, broadcast facilities, paper supply, and distribution networks. This indirect control was demonstrated for instance in 1995 when several independent Belarusian newspapers including the most popular, *Svaboda*

were forced to move their printing operations to Lithuania. By 1997, these newspapers were banned altogether. The pro-government newspaper with the largest circulation is *Sovyet'skaya Belorussiya*. But the declining income of the population has sharply pushed down newspaper readership in general: it fell from 29 copies per 100 people in 1991 to 11 in 1999.

Electronic media, both state-owned and privately-held are under even tighter supervision. For instance, state law stipulates that radio and television must cover all statements and appeals by the president, the speaker of the parliament, or the prime minister. By contrast, officially registered opposition parties were denied access to mass media during the elections despite international pressure (even the OSCE unsuccessfully tried to negotiate a compromise over media access for the presidential elections of 2001).

In addition to the state-owned national Belarusian Television channel, several privately-owned cable outlets also exist, although they do not provide news coverage. Most Belarusian homes are however within the reach of the Russian national media, such as ORT or NTV. The most important independent radio station *Racyja* uses programs produced by independent Belarusian journalists, but is broadcast from facilities in Poland.

On May 2, 1997, the United Nations General Assembly named Belarus as one of the 10 worst offenders of freedom of the press.

## **The NGO's**

By 1996, about 900 non-governmental organizations had been registered throughout Belarus. They included educational, women's, cultural, environmental, youth, religious, and business groups. Their membership is estimated between 75,000 and 100,000. U.S. and other Western organizations have provided technical and other assistance to many of these groups, especially those working in the health, environment and social areas, such as the United Way of Belarus, or the Fund for the Children of Chernobyl.

The Belarusian NGO's, however, are not allowed by the government to take any part in the political process. Consequently, many of them resort to public demonstrations as the most direct way of publicizing group interests.

Independent trade unions in Belarus were probably the most widely supported non-governmental democratic organizations in the country. The two most important trade unions are The Free Trade Union of Belarus and the Belarusian Independent Trade Union. A number of other independent trade unions were banned in 1995.

## **The Problem of Democratization**

Lack of democratization and civic society remains the most important stumbling block not only in the political arena, but also in the economic development of the country. Lukashenka's hold on the extensive

state bureaucracy, as well as on the rural and older segments of the population, helps him retain popularity. It also enables him to push through (albeit with high degree of manipulation) national referenda which appear to give him official mandate for his policies. However, the rule of law and law-abiding state institutions are entirely lacking in Belarus, further undercutting prospects for a developed civic society and a vigorous economy.

## Questions and Issues

What were the roots of the presidential system in Belarus?

Why are political parties in Belarus relatively weak?

What is the basis of Lukashenka's popular support? What are his main constituencies?

Sources for Further Study:

## 3. Economy

### Government Policy on Reforms

Under the banner of the "Belarusan economic model," the administration of President Lukashenka has blocked fundamental reforms of the Belarusan economy. Since high employment remains a constitutional responsibility of the state, all large industrial enterprises of the Soviet era continue operating under state control and account for the bulk of the country's industrial output. Widespread subsidies and cheap credit have led to shortages of goods and a spiraling inflation (average of 114% per year in 1996-2000). These policies have also led to the suspension of the IMF financing and other IFI programs.

### Privatization

The privatization process in Belarus has been among the slowest in the former Soviet Union. It has been concentrated in housing (30% of housing units), small business, banking, service, trade, and

transportation. Yet, even in those sectors, the government frequently either remains a major stock-holder or appoints veto-wielding members to the boards of joint-stock companies. Overall, it is estimated that the private sector accounts for 15% of Belarusian GDP.

No private land ownership rights have yet been established.

## **Agriculture**

In agriculture, state and collective farms continue to dominate, with less than 1% of arable land in the hands of individual farmers.

Current agricultural output is at 65% of the 1989 levels. Part of this decline is due to the fact that Belarus' agriculture specialized in meat and dairy products and was dependent on fodder and grain deliveries from the other republics. It was thus particularly vulnerable to the economic disruptions that followed the breakup of the USSR. The continuing reliance on state and collective farms perpetuates the inefficiency of this sector and requires heavy state subsidies.

## **Energy**

Since Belarus lacks natural energy resources, it currently imports 100% of its coal and 90% of oil and gas. Belarus also has to import electricity from Russia and from Lithuania. It has recently postponed plans to build its own nuclear energy plant.

Russia serves as the main supplier of Belarus' energy needs, and provides them at a preferential rate. Even so, Belarus' energy debts topped \$250 million in 2000. Despite periodical threats from the Russian gas monopoly, *Gazprom*, Russia has generally adopted a lenient policy towards Belarus, frequently accepting write-offs or refinancing of debt.

## **Foreign Trade and Investment**

Russia remains Belarus' largest trading and investment partner, not only because of the surviving manufacturing and trade ties from the Soviet era, but also because of Belarus' position as the transit corridor between the Russian Federation and Europe. Both Belarus' agriculture and manufacture depend on Russian raw materials and energy supplies. Consequently, over 30% of its imports come from Russia, while almost 50% of Belarusian exports go there. This dependence on the relatively unstable Russian economy further undermines Belarusian economic performance. The chief non-CIS trading partners of Belarus are Germany and Poland.

Foreign direct investment remains low: the cumulative level since 1991 reached \$290 million. Foreign-owned firms employ less than 2% of the workforce and account for 9% of the industrial output. The most important investors come from Germany (12%), the Netherlands (10%), and Russia.

## 4. Society

### Demography

The demographic structure of Belarus is characterized by two negative trends: the decline and the ageing of the population. Death rates have exceeded birth rates since 1993, resulting in a population loss of 400,000 between 1993 and 2000. The after-effects of Chernobyl contribute significantly to these trends, both in lowering the fertility rate and in increasing infant, child, and adult mortality rates. Falling birth rates cause in turn the graying of the population. The population of less than working age (currently at 21%) is falling as a proportion of the total and equals now the percentage of those over working age.

Rapid post-World War II urbanization of Belarus brought the number of rural inhabitants from 57% in 1970 to just 30% in 1999.

### Health Issues: Chernobyl after-effects, HIV/AIDS crisis

Health levels have deteriorated since 1991. Life expectancy at birth now stands at 67 for all, with that for men falling to 62. This decline is attributable partly to decreased health spending (4.9% of GDP in 1999) and partly to the continuing effects of the radioactive contamination after Chernobyl. For instance, in two towns most seriously affected by the accident, Gomel and Mogilev, thyroid cancer among children rose from 2 new cases in 1987, to 50 by 1991, and 90 in 1995.

Another serious health crisis in Belarus involves increased incidence of HIV/AIDS. These cases are due to much increased intravenous drug use and spread in the heterosexual population.

### Women's Issues: Trafficking in Women

Belarus is one of the Slavic former Soviet republics where trafficking in women has become an issue. Low economic standards and expectations encourage many to seek work abroad, but women are particularly vulnerable to entrapment by organized crime.

### Environment

The chief environmental issue in Belarus remains the post-Chernobyl contamination. In addition to the 30 km exclusion zone around the Chernobyl plant, many "hot spots" were revealed throughout the late 80's and 90's, and population continued to be relocated. The more pernicious and long-lasting effects, however, have to do with agriculture: loss of arable land, impact on livestock and animal products,

finally, impact on widely-consumed forest products (berries, mushrooms).

## Questions and Issues

What was the overall impact of the Chernobyl disaster on Belarus? Look at the political, environmental, health, social, and economic areas.

## 5. National Security

### Nuclear Weapons

Belarus was briefly a nuclear power as a result of the collapse of the USSR. All tactical nuclear weapons were withdrawn to Russia by 1993 and the present Belarusian constitution declares the country to be a non-aligned and non-nuclear power. The Belarusian parliament has also ratified the START-1, the Nuclear Non-Proliferation Treaty and the 1992 Lisbon Protocol, under which it pledged to remain a non-nuclear state.

### Armed Forces

Belarus' armed forces totaled 83,100 in 2000, including 43,500 ground forces and an air force of 22,500. The additional reserves count almost 300,000 men. The defense budget in 2000 fell to \$100,000,000.

The 1996 revisions of the Treaty on Conventional Forces in Europe limit Belarus to 1,800 tanks, 2,600 armored personnel carriers, 1,615 artillery pieces, 260 combat aircraft, and 80 attack helicopters.

Among other power ministries, the Ministry of Internal Affairs controls 23,000 men, including 11,000 of its own troops and 12,000 border guards. The precise number of people working for the Belarusian KGB is not known.

## Part IV: External Relations

Belarus is and will be an important player in Eastern Europe, although not on the basis of its size or economic potential but as a result of its crucial geopolitical location. On the East-West axis, the country is situated between the Russian Federation and the NATO countries; on the North-South axis, it lies half-way between two important subregions: the northern grouping of the Baltic States and Poland, and the southern grouping of Ukraine, Slovakia, Hungary, and the Czech Republic.

## **1. Belarus and the Russian Federation**

Belarusan foreign policy has been firmly focused on Russia since Alexander Lukashenka's election in 1994. Three areas of the Russo-Belarusan relations that are particularly relevant are political, military, and economic.

### **Russo-Belarusan Integration**

First steps toward a greater integration of the Russian Federation and Belarus were taken in 1995, when Alexander Lukashenka and Boris Yeltsin signed a treaty on friendship and cooperation. Further treaties extending that cooperation came in 1996 and 1998. The latest and most comprehensive treaty the Belarus-Russia Union Treaty was signed in 1999. It envisages the creation of a supra-national union state with its own legislative bodies, and close coordination in defense, economic, and monetary policies.

The new Union bodies are to include the Supreme State Council (comprised of the leaders of both countries), a joint Council of Ministers, and a bicameral union parliament. Both countries would wield a veto and each will take turns to chair the Councils. The joint Council of Ministers would supervise the creation of a common economic space, and coordination of the fiscal, monetary, and credit policies. Tariffs and monetary systems are to be harmonized only in 2005.

The Union Treaty stops well short of surrendering either country's sovereignty to these new institutions (a step with little value for the Russian Federation). Furthermore, the accruing economic and political burdens of the current union with Belarus make it unlikely that Russia will be interested in deepening the unification process.

### **Military Cooperation**

Military cooperation with Russia was close even before the 1999 Union Treaty. It appears particularly closely coordinated in the area of air defense. For instance, Russian strategic missile forces operate a new early warning radar in Baranovichi, only 140 km from the Polish border. Russian military forces are also allowed to use other Belarusan military infrastructure, such as airfields (including for Russian strategic bombers and long-range cruise missile carriers), roads, and communication centers.

Yet, despite the fact that work is progressing on a joint Russo-Belarusan military doctrine, the Russian Federation appears unwilling to fully coordinate with Belarus such areas as the land forces; it has also not

shown interest in using Belarusian territory for the deployment or storage of nuclear weapons.

## **Economic Ties**

As detailed in the section on trade and investment, Russia remains Belarus' most important trade partner, export market, and the chief source of energy supplies. But beyond these mutually beneficial aspects lies the thornier issue of a common monetary and tariff system. Belarus' policy of cheap state credit and the concomitant inflation has made the coordination of fiscal and monetary policies a sticking point in negotiations with Russia.

## **2. The CIS**

The early mission of the Commonwealth of Independent States was to fill the institutional vacuum left by the dissolution of the USSR. The CIS was to help coordinate economic, social, and foreign policy activities through bi-annual meetings of its chief body, the Council of the Heads of State. Minsk was chosen as the seat of the Executive Committee, which was to act as the secretariat of the CIS.

However, with different CIS countries beginning to focus on other regions and international organizations, the role of the CIS became more limited. Numerous CIS agreements are signed, but few are enforced. Among the most significant agreements are the 1992 Tashkent Treaty on Collective Security, the 1995 Customs Union among Belarus, Kazakhstan, Kyrgyzstan, and Russia, and the Eurasian Economic Community agreement of 2000.

Economically, the most important CIS countries for Belarus are Ukraine and Kazakhstan.

## **3. Belarus and its other Neighbors**

### **Relations with Ukraine**

Belarusian relations with Ukraine have been largely a function of both countries' relationship with Russia. Kiev decided early on that its own relations with Minsk especially in the security area would become more limited as the integration process deepened between Belarus and Moscow. One area of successful cooperation involved the demarcation of the common border, which was completed and officially ratified by May 1997. Other areas include joint work on environmental issues (especially on the Chernobyl-related problems), and development of economic relations between border regions in both countries. Military cooperation remains on a slow track, largely because of the fundamental difference of view on NATO and its potential expansion in the region.

### **Relations with Poland**

Poland's relations with Belarus are largely colored by two factors: the common (and not often happy)

history, and the opposing strategic orientation of both countries.

At present, Poland is both a member of NATO and an applicant for the EU. With that in mind, Poland views Belarus as a major geopolitical and military issue, and second, as a potential source of political, economic and social instability in the East European region.

Polish-Belarusan security relations must thus be seen as an element of Russo-European relations and of the overall European security structure. However, a host of ethnic and border issues have a direct impact on their bilateral relations. The approx. 0.5 million ethnic Poles in Belarus remain a concern for both countries. The worsening economic and political conditions in Belarus may mean a much increased legal and illegal economic migration into Poland. At the same time Poland's efforts to prepare for the EU membership have included much stricter border controls, since the Polish-Belarusan border will in fact become the external boundary of the European Union. In the short and medium term, these border control issues are likely to create difficulties in maintaining economic and cultural ties with Belarus. A small number of regional cooperation initiatives involving Belarus, Poland, Lithuania, Latvia and Russia (especially the Kaliningrad exclave) have been promoted recently to help balance the Polish-Belarusan relationship and further the stability in the region.

### **Relations with Lithuania and the Baltic States**

Among the Baltic States, Lithuania has the most extensive relationship with Belarus, not only as a neighbor but also as a historically related entity. Yet, even that relationship is closely interwoven with the broader relations between Russia, Poland, Ukraine, and Western Europe.

As a potential candidate for NATO as well as the EU, Lithuania shares some of Poland's concerns in regard to its security relations with Belarus. It notes, for instance, that while the three Baltic States with a total population of 8 million currently have among them 15,000 military troops, Belarus boasts 113,000. Lithuania has also been concerned with the increasingly authoritarian bend of the Lukashenka administration.

Despite these concerns, Lithuania and Belarus have chosen to focus on the more pragmatic aspects of their bilateral relationship. Those include transfer of Belarusian exports through the Klaipeda seaport, sale of electric power to Belarus from the Lithuanian nuclear power plant at Ignalina, terms of transit from Belarus to the Russian exclave of Kaliningrad, and finally, the mutual readmission of refugees (specifically, the large number of Asian immigrants seeking access to Europe who have been let out of Belarus into Lithuania).

In February, 1995, Lithuania and Belarus signed the Treaty on Cooperation and Good-Neighborly Relations and the Treaty on the Border between the Republic of Lithuania and the Republic of Belarus.

## **4. Belarus and Western Europe**

## **Belarus and the European Security Structure**

Belarus' constitution defines it as a non-nuclear, non-aligned state. Although Belarus is part of the 1992 Tashkent Treaty on Collective Security, its fundamental security guarantee lies in its military relationship with the Russian Federation.

Belarus' relationship with NATO remains frozen since 1997 by the decision of the North Atlantic Assembly. Not surprisingly, Minsk has declared numerous times that it vehemently opposes expansion of NATO membership, especially to the Baltic States. Clearly, though, Minsk's views on this matter take a distant second place to those of Moscow. Russia, in turn, has hinted that further NATO expansion may result in redeployment of Russian forward forces on Belarusian territory.

As a signatory of the CFE treaty, Belarus was behind schedule in meeting its conventional arms reductions, but should meet the revisions to that treaty passed in 1996/1997.

## **Belarus and the OSCE**

Belarus and the Organization for Security and Cooperation in Europe have had strained relations since 1995. As a chief European institution charged with monitoring democracy and human rights, the OSCE has been at the forefront of criticism of the Lukashenka regime. For instance, the OSCE has refused to recognize the results of the 1996 referenda on presidential powers and most recently it proclaimed the presidential elections of 2001 seriously tainted. It has also protested the phenomenon of "disappearing" prominent opposition activists in the run up to the national elections.

## **Belarus and the EU**

The European Union has been somewhat less vocal in criticizing Belarus' domestic record, but it also limited its economic and political ties with Belarus. For instance in 1996, the Parliamentary Committee on Foreign Affairs of the European Community suspended its provisional trade agreement with Belarus in protest over the forced referendum. Perhaps the lowest point of Belarus' relations with the EU countries came in 1997, when under a pretext of sewer repairs, Lukashenka evicted EU ambassadors from their residences. Most of them were then recalled, eventually returning several months later.

# **5. Relations with the United States**

## **Nuclear Weapons**

The high point in the U.S. - Belarus relations came in February 1993, when the Belarusian Supreme Soviet ratified the START 1 Treaty and the Lisbon Protocol, committing the country to remove all nuclear weapons from its soil and thus achieving the overriding U.S. policy goal in Belarus. In January 1994, President Clinton visited Belarus largely as a gesture of gratitude to Minsk for close cooperation in solving the problem of nuclear proliferation.

## **Democratization and Technical Assistance**

In the period between 1991 and 1994, Belarus was a recipient of humanitarian, technical, economic and democratization assistance from the U.S. in keeping with the patterns for the entire Former Soviet Union. However, with the coming to power of Alexandr Lukashenka, the relationship between the U.S. and Minks became increasingly strained. The 1995 shooting of the American team of balloonists by the Belarusian air force, the controversial nature of the 1996 referenda, and finally the eviction in 1997 of the U.S. (as well as EU) ambassador from his residence all led to severe limitation of official relations with Belarus: by the end of 1997, the U.S. ambassador was recalled for consultations for almost 12 months and even the \$32 million in Nunn-Lugar funding for further nuclear cleanup was suspended.

Two additional trends which influenced the U.S. view of Belarus were human rights violations and the concomitant growth of Lukashanka authoritarianism, and also the aggressive push on the part of the Belarusian president for a deepened integration with Russia. While the latter was officially described by the U.S. policymakers as strictly a matter between the Russian Federation and Belarus, it has become clear that the U.S. no longer saw Belarus as a potential independent player in the East European region. The U.S. policy was by then described as one of “selective engagement,” where focus of U.S. contacts would lie with civic and non-governmental groups, rather than with the Belarusian government itself.

Since Lukashenka was reelected to a new term as president in October of 2001, prospects for changes in the U.S. -Belarusian have dimmed once again.

### Self Study Guide to **BELGIUM** **THE NETHERLANDS** **LUXEMBOURG**

The *Benelux Self-Study Guide* is intended to provide U.S. government personnel in the foreign affairs community with an overview of important issues related to the history, culture, politics, economics, security, and international relations of the “Benelux” countries – Belgium, The Netherlands, and Luxembourg. The guide should serve as an introduction to and a resource for independent study of the region. Readers are encouraged to explore questions and issues raised in the guide by referring to the books, articles, periodicals, and web sites cited in the appropriate sections.

This self-study guide was prepared for the Foreign Service Institute by Robert Rinehart, The George Washington University, and by Thomas Rochon, director of the Graduate Record Examinations Program at the Educational Testing Service, Princeton, N.J. The views expressed in this publication are those of the authors and attributed sources and do not necessarily reflect official policies or positions of the U.S. Department of State.

The *Benelux Self-Study Guide* is for official educational and non-profit use only.

# EUROPE

**TIMELINE**  
**For the Low Countries**  
**Belgium, the Netherlands, Luxembourg**

59-54 BC	Caesar's Gallic Wars.
57 BC	Belgica organized as a Roman province.
Late 4th century AD	Salian Franks entered Belgica as Roman allies.
431 AD	Franks united under Merovingian dynasty.
c. 496	Frankish King Clovis accepted Catholicism for himself and for the Franks.
c. 675	Pepin of Heristal invested "mayor of palace" in Austrasia.
714	Charles Martel succeeded his father Pepin in Austrasia.
732	Charles Martel defeated Arabs at Tours/Poitiers.
751	Carolingian mayor Pepin III deposed Merovingian Childeric III.
768	Charlemagne succeeded as king of the Franks.
800	Charlemagne crowned Roman Emperor by Pope Leo III.
814	Louis the Pious and son Lothair succeeded as co-emperors.
840	Oaths of Strasbourg.
843	Treaty of Verdun recognized Lothair's "Middle Kingdom."
855	"Middle Kingdom" divided on Lothair's death.
870	Lotharingia divided by Treaty of Mersen between French king and German emperor.
9th-10th centuries	Feudalism introduced in the Low Countries.
987	Hugh Capet displaced last of the Carolingian kings.

11th-12th centuries	Growth of towns; “industrial revolution” in southern Netherlands. Feudal Netherlandish states virtually independent of French king and emperor.
1060	Conrad, descendant of Siegfried of the Ardennes, recognized as Count of Flanders.
1204	Baldwin, crusader count of Flanders and Hainault, elected first Latin Emperor of Constantinople.
1294	Flanders allied with England against France.
May 1302	Matins of Bruges.
July 1302	Battle of the Spurs at Courtrai.
1305	French king recognized Flemish independence.
1308	Henry of Luxembourg elected Holy Roman emperor as Henry VII; Luxembourg dynasty held imperial title until 1437.
1338	Alliance of Netherlandish towns led by Jacob van Artevelde of Ghent.
1340	Artevelde concluded Flemish alliance with England in Hundred Years War.
1382	Flemish communes defeated at battle of Roosebeke.
1384	Margaret of Flanders and her husband Philip the Bold, duke of Burgundy, succeeded her father, Count Louis of Male.
13th-early 14th centuries	Great age of desmesne farming.
1348-1349	Low Countries hit by Black Plague.
1385-1477	Consolidation of Burgundian rule in the Netherlandish state under four dukes; flowering of Flemish art.
January 1477	Charles the Bold killed at the battle of Nancy.
February 1477	Grand Privilege restored liberties of Netherlandish states.
April 1477	Mary of Burgundy married by proxy to Austrian Archduke (later Emperor) Maxmilian of Habsburg who acted as regent for their son Philip the Handsome.

- 1500 Charles V, son of Philip the Handsome and Joan of Castile, born in Ghent.
- 1511 Erasmus of Rotterdam published *The Praise of Folly*.
- 1515 Charles V came of age as duke of Burgundy and lord of the Netherlandish states.
- 1516 Charles proclaimed king of Castile and Aragon in Brussels.
- 1519 Charles elected Holy Roman Emperor in succession to his grandfather Maximilian of Habsburg.
- 1522 Charles' tutor Adrian Florensz of Utrecht elected pope as Hadrian VI.
- 1523 Protestant Reformation introduced in the Low Countries.
- 1543 Charles V issued the Great Privilege in Brussels joining the Netherlandish states constitutionally.
- 1555 Charles V abdicated sovereignty in the Netherlands at States-General in Brussels in favor of his son Philip II, also king of Spain.
- 1545-1563 Council of Trent initiated the Counter-Reformation.
- 1559 Peace of Cateau-Cambresis ended war between Spain and France.
- 1560 "League of Magnates," led by stadtholder William the Silent, prince of Orange, and counts Egmond and Horn, began to express discontent with reforms proposed by Philip II; French Calvinist preachers arrive in the Netherlands.
- 1566 Magnates presented Request to Philip II to withdraw the Inquisition.
- 1567 Duke of Alba appointed Spanish governor in the Netherlands.
- 1568 Council of Blood convicted and executed Egmond and Horn; William outlawed.
- 1572 William recognized in Holland and Zeeland as leader of resistance to Spanish rule and re-appointed stadtholder by the Estates; Gueux seize Brill and Flushing.
- 1577 Pacification of Ghent; Union of Brussels united Netherlandish states in a "common fatherland."

- 1578 Archduke (later Emperor) Mathias of Austria invited to become governor of the Brussels union, which soon splits into rival unions of Arras and Utrecht; beginning of 70-year Dutch War of Independence.
- 1579-1586 Utrecht union allies in the southern Netherlands pacified by Spanish troops under Alessandro Farnese.
- 1581 States-General of the Union of Utrecht repudiated fealty to Philip II, creating the United Provinces.
- 1584 William the Silent assassinated in Delft; succeeded as stadtholder by his brother Maurice of Nassau.
- 1586 Johan van Oldenbarnevelt grand pensioner of Holland.
- 1588 Defeat of the Spanish Armada.
- 1588-1598 “The Ten Years” – Maurice reorganized the Dutch army and consolidated his control of the United Provinces.
- 1598 Philip II handed over title to sovereignty over the entire Netherlands to his daughter Isabella and her husband, Austrian Archduke Albert.
- 17th century Despite almost continuous war, art flourished in the Netherlands, north and south, during the “Golden Age.”
- 1602 Dutch East Indies Company chartered by States-General initiating Dutch colonial expansion in Asia, Africa, and America.
- 1609 Albert concluded 12-year truce with United Provinces.
- 1609-1621 Domestic political and religious conflict in the United Provinces; Oldenbarnevelt championed the authority of the estates against the power of the stadtholder.
- 1610 Arminians addressed Remonstrance to Holland estates.
- 1618-1619 Oldenbarnevelt and Hugo Grotius arrested; Oldenbarnevelt hanged. Synod of Dordrecht condemned Arminianism; Remonstrants suppressed.
- 1621 Death of Albert of Austria; without an heir, Southern Netherlands (Belgium and Luxembourg) receded to Spain. Truce not renewed; war resumed.

- 1621 Dutch West Indies Company chartered, promoting colonization in the Americas.
- 1628 Frederick Henry succeeded as stadtholder on the death of his half-brother Maurice; Remonstrants rehabilitated.
- 1633 Financial panic in Holland resulted from crash of the tulip market. Peace negotiations with Spain failed.
- 1641 William (II), son of the stadtholder, wed the daughter of Charles I of England.
- 1648 United Provinces and Spain agreed to the Peace of Munster. Spain recognized Dutch independence, including control of the Generality.
- 1650 Holland estates opposed William II; Amsterdam occupied by stadtholder's forces.
- November 1650 Death of William II.
- 1650-1672 Holland, Zeeland, and other provinces without a stadtholder.
- 1652-1654 First Anglo-Dutch War.
- 1653-1672 Johan de Witt grand-pensioner of Holland.
- 1664-1672 Second Anglo-Dutch War. New Netherlands lost to England.
- 1667-1668 War of Devolution; France invaded Spanish Netherlands.
- April 1668 Treaty of Aix-la-Chapelle; Spain ceded territory to France.
- 1672-1678 Second War of Devolution; United Provinces and Spain allied against France and ally (to 1674) England. French invaded Dutch territory.
- July 1672 William III appointed stadtholder.
- August 1672 Johan de Witt resigned as grand-pensioner; murdered by a mob in the Hague.
- 1674 Treaty of Westminster; separate peace with England.
- 1677 William III of Orange married Mary Stuart, daughter of Duke of York (later James II). United Provinces and England formally allied.

- 1678 Treaties of Nijmegen concluded war with France.
- 1689 “Glorious Revolution” in England. William III and Mary II ascended the English throne.
- 1691-1697 War of the Grand Alliance. United Provinces, England, Spain, Austria and allies opposed French expansion; William III headquartered in Brussels.
- 1697 Treaty of Rijswijk.
- 1701-1713 War of the Spanish Succession. United Provinces allied with England and Empire in “world war” against France and Spain. The Low Countries major theatre of military operations.
- 1702 Death of William III.
- 1702-1747 Holland and other provinces without a stadtholder. Authority assumed by grand-pensioner and States-General. Urban oligarchy dominant in United Provinces.
- 1713 Treaty of Utrecht. Southern Netherlands (Belgium and Luxembourg) assigned to Austrian Habsburgs; provincial estates governed under local leadership.
- 1722 Ostend Company founded in Austrian Netherlands.
- 1740-1780 Popular reign in the Austrian Netherlands of Maria Theresa. Beginning of “Industrial Revolution.” Traditional institutions thrived.
- 1740-1748 War of the Austrian Succession. Southern Netherlands earned title as “cockpit of Europe.” United Provinces neutral.
- 1747 William IV of Orange named stadtholder in all provinces.
- 1751 Infant son of William IV succeeded as stadtholder as William V. Provincial estates acted as regents.
- 1756-1763 Seven Years War. France and Austria allied.
- 1780 Dutch fortress at St. Bartolemy first to salute American flag.
- 1781 United Provinces declared war of Britain in support of the United States. British blockaded Holland and captured Dutch colonies.

1780-1791	Unpopular reign of Joseph II. “Enlightened” reforms imposed on Austrian Netherlands.
1783	Nassau Succession Agreement.
1787	Reform party, the “Patriots,” suppressed in the United Provinces.
1789	Brabant estates opposed reforms to centralize administration in the Austrian Netherlands. Armed uprising in Brussels and other cities.
1790	Proclamation of the “United States of Belgium.”
1791	Austrian army reentered Belgium to restore order. Leopold II shelved reforms.
1792	Austrian army defeated; French occupied Austrian Netherlands.
1795	Former Austrian Netherlands (Belgium and Luxembourg) and Liege annexed by France. United Provinces occupied by French without opposition; Batavian Republic established under dictator-pensioner Rutger van Schimmelpenninck.
1806	Kingdom of Holland created for Louis Bonaparte. Napoleon declared “Continental System” to blockade British trade. British imposed counter-blockade, paralyzing Dutch economy.
1810	The Netherlands annexed by France. British seized Dutch colonies.
1813	Napoleon defeated at Leipzig. Pro-Orange revolt against French in Holland.
March 1814	William, Prince of Orange, inaugurated as “sovereign prince” by Assembly of Notables in the Hague; assumed provisional administration of former Austrian Netherlands
1814-1815	Congress of Vienna.
June 1815	Battle of Waterloo (near Brussels). Belgo-Dutch force, commanded by Prince of Orange, fight on allied side.
August 1815	Constitution promulgated for Kingdom of the United Netherlands linking the Netherlands and Belgium in a constitutional monarchy under a hereditary ruler, William I of Orange, who also received Grand Duchy of Luxembourg in personal union.

1815-1830	Political union of the Low Countries. Protests in Belgium against economic restrictions. Belgian liberals and traditionalists found common cause against Dutch.
1819	Dutch recognized as an official language in Flanders.
1830	Revolt in Brussels and Liege. "Petitions of Grievances" against union gained wide support. Provisional government declared Belgium independent.
1831	Belgian independence recognized by European powers. Leopold I of Saxe-Coburg named "King of the Belgians."
1839	The Netherlands recognized Belgian independence. Britain guaranteed Belgium's "perpetual neutrality." Luxembourg divided: northern Luxembourg became Belgian province, grand duchy remained in personal union with Dutch crown. William I abdicated.
c. 1840	Flemish movement began to promote recognition of the Dutch language in Belgium.
1848-1849	Liberal constitutions adopted in Belgium and the Netherlands. Liberal leader Rudolph Thorbecke dominant figure in Dutch politics.
1853	Thorbecke resigned to protest opposition to restoration of Catholic hierarchy in the Netherlands
1856	Commission appointed to study the "language question" in Belgium; deliberated for remainder of 19th century.
1857	Education Act enacted in the Netherlands, recognizing the state's responsibility for inculcating "Christian and social virtues."
1860s	Liberal ministries led by Thorbecke. Social and economic reforms introduced.
c. 1860-1899	Guido Gezelle promoted the revival of Flemish as a literary language.
1868	Liberal constitution adopted in Luxembourg, enabling the grand duchy to be administered separately from the Netherlands. European powers guaranteed Luxembourg's neutrality in the Treaty of London.
1870-1871	Belgian and Luxembourg neutrality complicated by Franco-Prussian War.

1870s-1880s	Competing socialist and confessional trade unions established in Belgium and the Netherlands.
1878	Abraham Kuyper founded the Antirevolutionary Party in the Netherlands.
1879	Education Act, imposing state control of education, resisted by Catholics.
1884	Catholic party formed first government in Belgium, retaining one-party majority until 1914.
1873	Bilingualism recognized in Belgium.
1884	Berlin Congress recognized Leopold II's personal title to the Congo Free State.
1887	Election reform doubled the franchise in the Netherlands. Social reforms introduced by Catholic government in Belgium.
1888	Coalitions of Protestant and Catholic confessional parties became the dominant factor in Dutch politics.
1889	Subsidies voted for denominational schools in the Netherlands.
1893	Universal manhood suffrage and plural voting approved in Belgium.
1896	Franchise extended with restrictions in the Netherlands.
1897	Christian Historical Union broke from Kuyper's Antirevolutionary Party. Social Democrats entered the Dutch parliament.
1898	Dutch recognized as an official language in Belgium.
1899	Death of William III. In accord with the Nassau Succession Agreement, Luxembourg passed to Adolph of Nassau-Weilburg. First Hague Peace Conference convened. Proportional representation introduced in Belgium.
1901-1905	Kuyper led confessional coalition governments in the Netherlands.
1905-1909	Liberals governed in the Netherlands with Social Democrat support.
1908	Congo annexed as Belgian colony.

1914-1918	World War I. Germany invaded Belgium, August 4, 1918. One million refugees fled the country. Belgium and Luxembourg occupied for four years. Belgian army remained in the field under King Albert I. Belgium devastated by warfare.
1917	Church-related schools supported by the state in the Netherlands. Universal manhood suffrage enacted.
1918	Clear majority for confessional coalition in the Netherlands. Ruys de Beerenbrouck first Catholic prime minister. Social and labor reforms introduced. Women enfranchised.
1919	Belgium participated in Versailles Conference; received reparations, territorial concessions, and mandate to Ruanda-Urundi. Catholic party lost parliamentary majority sustained since 1884. Catholic-led coalitions characterized interwar period. Marie Adelaide, regarded as pro-German, abdicated as grand duchess of Luxembourg.
1920	Belgium abandoned neutrality. Entered military convention with France.
1921	Belgium-Luxembourg customs union formed. Dutch recognized as the administrative language of Flanders.
1925	Locarno Treaty noted the abrogation of previous treaties guaranteeing Belgian neutrality. Belgo-Dutch treaty to settle question of Scheldt navigation rejected by upper chamber of the Netherlands parliament.
1926	Confessional coalition in the Netherlands fell when Protestant parties joined Liberals in rejecting diplomatic representation in the Holy See.
1926-1939	Confessional-Liberal coalitions in the Netherlands.
1930s	The Great Depression brought massive unemployment to the Low Countries.
1934	King Albert killed in climbing accident.
1936	Germany occupied the Rhineland. Belgium reverted to neutrality; released from Locarno obligations.
1939	Social Democrats entered the Dutch government.
1939-1945	World War II.

May 10, 1940	The Netherlands, Belgium, and Luxembourg invaded by Germany after reassurances of respect for their neutrality. Rotterdam bombed. Dutch capitulated after five days, Belgium after 18 days of fighting.
1942	Japan occupied Netherlands East Indies.
1944	Convention on three-country postwar customs union agreed on in London by governments-in-exile
September 1944	Allied forces entered Belgium.
October-November 1944	“Operation Market-Garden”
December 1944-January 1945	Battle of the Bulge
1945	Governments-in-exile return. Belgium, the Netherlands, and Luxembourg charter members of the UN. Nationalists proclaimed independent republic in Indonesia.
1946-1947	Enactment of legislation contained in the “Social Pact” laying the foundation for the welfare state in Belgium
1946-1959	Confessional-Labor coalition governments in the Netherlands.
1947	The Hague Protocol on Benelux economic integration.
1948	Benelux Economic Union put into effect. Women enfranchised in Belgium.
1948-1954	Marshall Plan aid contributed the economic reconstruction of the Benelux countries.
1949	Belgium, the Netherlands, and Luxembourg charter members of NATO. Referendum in Belgium on the return of Leopold III.
1950	Leopold III abdicated in favor of his son Baudouin. Independence conceded to Indonesia in personal union with the Netherlands.
1950-1953	Korean War. Belgium and the Netherlands contributed troops to the UN action.

- 1952 European Coal and Steel Community founded.
- 1954 Republic of Indonesia broke ties to the Netherlands.
- 1958 School Pact accepted in Belgium.
- 1960 Enactment of the *Loi unique*. Belgian Congo became independent as Republic of Congo.
- 1962 Independence for Rwanda and Burundi.
- 1963 Language frontier in Belgium redefined and fixed.
- 1966 Democrats 66 established to challenge pillarization. William-Alexander born, first son born to the Dutch royal house since 1851.
- 1968 French faculties “expelled” from Catholic University of Louvain/Leuven; established New Louvain as separate university. Social Christian Party split along linguistic lines.
- 1971 Equal distribution of cabinet portfolios between Flemish and Walloon ministers mandated in Belgium. Cultural communities recognized.
- 1972 Christian Democratic Appeal formed in the Netherlands. Belgian Liberals split into separate Walloon, Flemish, and Brussels parties.
- 1974-1979 Social Christians out of office in Luxembourg for first time since 1919
- 1977 Egmont Pact authorized five-tier federal government for Belgium.
- 1978 Belgian Socialists split into separate Walloon and Flemish parties.
- 1980 Constitutional reforms prepared the way for devolution in federal Belgium.
- 1984 Brussels “Capital Region” organized. Regions assumed fiscal responsibilities
- 1991 Ruud Lubbers formed conservative Christian-Liberal in the Netherlands.
- 1993 St Michel Agreement approved. King Baudouin died.

1994	Wim Kok formed coalition with Liberals and Democrats 66. First Dutch government since 1918 without participation of a confessional party.
1995	Muslims under Dutch protection at Srebrenica massacred by Serbs.
1998	“Direct democracy” proposal failed approval in the Netherlands.
1990	Liberal-led coalition in Belgium. Social Christians denied office for first time in 20 <sup>th</sup> century.
May 2002	Pym Fortuyn assassinated. General election in the Netherlands Christian Democrats returned as largest party in Second Chamber, followed by List Pym Fortuyn.
July-October 2002	List Pym Fortuyn entered short-lived Dutch government
January 22, 2003	General election in the Netherlands
May 18, 2003	General election in Belgium
June 2003	General election anticipated in Luxembourg

## INTRODUCTION

The purpose of this self-study guide is to provide basic background information on Belgium, the Netherlands, and Luxembourg for Foreign Service officers and other personnel scheduled for assignment in those countries. The guide attempts to present information in such a way that users can obtain a better understanding of each country individually and of the “Benelux” region and to have a more productive and pleasant tour of duty. Users are encouraged to consider the questions and points for discussion at the conclusion of most sections in the guide and to pursue those of special interest by drawing on resource materials cited.

### THE BENELUX COUNTRIES AT A GLANCE

#### **Kingdom of Belgium**

*Koninkrijk België*

*Royaume Belgen*

*Königreich Belgien*

Capital: Brussels (Dutch, Brussel; French, Bruxelles)

Head of State (since 1993): King Albert II of Saxe-Coburg-Gotha

Population: 10,200,000

Languages: Dutch, French, and German

Area: 11,780 square miles (30,520 sq. km.)

#### **Grand Duchy of Luxembourg**

*Groussherzogtom Lëtzebuerg*

*Grand-Duche du Luxembourg*

*Grossherzogtum Luxemburg*

Capital: Luxembourg

Head of State (since 2000): Grand Duke Henri II of Nassau-Weilbeck

Population: 450,000

Languages: Lëtzebuergesch, French, and German

Area: 999 square miles (2,586 sq. km.)

#### **Kingdom of the Netherlands**

*Koninkrijk der Nederlanden*

Capital: Amsterdam

Seat of Government: The Hague (Den Haag)

Head of State (since 1980): Queen Beatrix of Orange-Nassau

Population: 15,800,000

Languages: Dutch and Frisian

Area: 13,250 square miles (41,865 sq.km.)

BELGIUM, THE NETHERLANDS, and LUXEMBOURG are founding members of the *United Nations* – UN (1945), *North Atlantic Treaty Organization* – NATO (1949), and the *European Community* (1956-7), subsequently *European Union* – EU.

### WHAT'S IN A NAME?

The acronym **BENELUX** was coined in the customs union agreements adopted by the governments of Belgium, the Netherlands, and Luxembourg that came into force in January 1948 in the Treaty of Benelux Economic Union, revised in November 1960. These agreements created institutional structures for the economic integration of Belgium, the Netherlands, and Luxembourg. These institutions included:

- The Committee of Ministers on which sat heads of government of the three countries, accompanied by their foreign ministers and ministers of trade, economics, finance, agriculture, and social affairs, meeting to coordinate implementation of the union treaty.
- The Council of Economic Union staffed by civil servants responsible for executing decisions of the Committee of Ministers.
- The Secretariat-General that prepared proposals submitted to the Committee of Ministers for consideration.
- The Court of Justice that handed down binding interpretations of rulings common to the three countries.
- The Inter-Parliamentary Council, an advisory body composed of representatives of the three national legislatures.
- The Economic and Social Advisory Council, drawn from representatives of non-governmental economic and social organizations.

Belgium, the Netherlands, and Luxembourg had an even longer record of cooperation predating the Benelux arrangement. The 1960 Benelux Economic Union was based on a customs union agreed to in London in 1944 by wartime governments-in-exile of the three countries and that took effect on January 1, 1948 after revision in the Hague Protocol of the previous year and ratification of the Treaty of Brussels. The customs union was itself an extension to the Netherlands of the 1921 Belgium-Luxembourg Economic Union that abolished customs duties between those two countries and adopted common trade conventions. The Benelux agreements abolished tariff duties within the union and applied a common tariff to imports that was half-way between the higher Belgian-Luxembourg rates and the lower Dutch rates. The duty-free list of imports adopted earlier by the Netherlands was reduced, thereby raising the common tariff rate. Certain domestic restrictions to trade, e.g., licenses and subsidies, remained in each country, and national production was protected by complex regulations as a buffer against the eventual liberalization of postwar European economies. Most of these restrictions were eliminated in 1950. Following the establishment in 1953 of the European Coal and Steel Community, of which the Benelux countries were members, interest shifted from agreements among neighboring countries to European integration. The prime ministers of the three countries, meeting in 1955, proposed an

initiative to expand cooperation in a European “community” that resulted in the signing of the Rome Treaty two years later.

The activities of the Benelux Economic Union have been folded into those of the European Union. In addition, the regional governments of Flanders and Wallonia have bilateral arrangements with the Netherlands in areas formally handled by Belgium under the Benelux treaty.

“Benelux” has become a convenient shorthand for the three-country region. Outside the context of activities covered by the treaty, however, the term “Benelux” is seldom used in the three signatory countries to describe their region collectively. If any one term is appropriate, geographically or historically, to describe Belgium, the Netherlands, and Luxembourg collectively, it is *The Low Countries*.

**The Netherlands** (Dutch, *Nederland*, or, literally, “The Low Country”). Also called “Holland” in English, the name of two provinces in the Netherlands (North Holland and South Holland) that as a single entity were historically the dominant region in the United Provinces. “Holland” is thus a misnomer, though one that is widely used and understood, just as “England” is often used when the more precise reference is to Great Britain.

In conventional English usage, the inhabitants of the Netherlands, the language they speak, and the adjectival form specifying things pertaining to them and their country are *Dutch*. The term is derived from the Old Germanic *duutsc*, meaning “language of the people,” and, in forms found in Middle Netherlandish as well as in Middle English, was used to describe Low German dialects, including Netherlandish, and the people who spoke them. From the late sixteenth century, “Dutch,” originally used in derision and contempt in English, was gradually restricted to Hollanders and other Netherlanders.

**Belgium** (French, *Belgique*; Dutch, *België*) from the *Belgae*, Celtic tribes that inhabited the area in antiquity. *Belgica* was a province of the Roman Empire, and the term continued to be used in classical and poetic references to the entire Low Countries into modern times. Modern Belgium is divided into two regions, Dutch-speaking *Flanders* (Dutch, *Vlaanderen*) and French-speaking *Wallonia* (French, *Wallonie*). The former placename is derived from the Latin *pagus flumensis*, or, literally, the “flooded country,” applied to the region by the Romans. The placename “Flanders,” which in its restricted meaning identifies a distinct province, now divided, is also applied to the entire Dutch-speaking region of Belgium. “Wallonia” is a survival of a primitive Germanic term *wahl* (“strangers”) by which Germanic folk described the Romanized populations, often Celtic, with whom they came into contact and which is also found, for example, in the placenames *Wales* and *Wallachia*. Dutch-speaking natives of Flanders are *Flemish* or, rarely, *Flemings*. French-speaking natives of Wallonia are *Walloons*.

**Luxembourg** (Lëtzeburgesch, *Lëtzebuerg*; German, *Luxemburg*) derives its name from the origins of its capital city as the “Little Fortress” (archaic *Lucilinburhuc*; later Germanic *Lützelburg*).

## SOCIAL and CULTURAL DYNAMICS

### LANGUAGES

*Nederlands* (conventionally called *Dutch* in English) is the Germanic language native to more than 20 million people in the Netherlands and Belgium. The Dutch language, as spoken as the mother tongue by 6 million people in Belgium, is commonly referred to in that country as *Vlaams* (*Flemish*), the language of Flanders. Flemish is not a separate language from or a dialect of the Dutch as spoken in the Netherlands. Although there is some vocabulary peculiar to Dutch-speakers in both countries, e.g., loan words used in the Netherlands that have not been adopted in Flanders and some archaic expressions used in Flanders that are not heard in the Netherlands, Standard Dutch (*Algemeen Beschaafd Nederlands*, literally “General Cultured Netherlandish”) is the accepted language spoken and written in the Netherlands and by Dutch-speakers in Belgium. Within the Netherlands, Dutch is sometimes referred to as *Hollands*. Regional variants of standard Dutch are heard in both countries, and distinct accents easily identify their speakers with particular locations. *Frisian*, a language distinct from both Dutch and German, is spoken in Friesland and is acknowledged as an official language along with Dutch in that northern province of the Netherlands.

*French* is the mother tongue of more than 4 million Belgians in Wallonia and Brussels. Although regional dialects are absent, French is spoken by most with an easily discernable “Belgian” accent. Both French and Dutch are required subjects in all Belgian schools. Most educated Flemish speak French as well as Dutch, and many are tri- or quatra-lingual, also competent in German and English. Walloons are much less likely to achieve fluency in Dutch. There are approximately 70,000 *German*-speaking Belgians in the Eupen-Malmedy region, where they enjoy protected language rights and exercise control over cultural affairs and education.

Luxembourg is officially tri-lingual in French, German, and *Lëtzebuergesch*, a Franconian dialect also spoken in the Moselle region outside Luxembourg. French is the language of administration and has outstripped the use of German in business and other venues. Education is conducted in German and French. Newspapers are published in both languages. *Lëtzebuergesch* is the language commonly spoken among family, on the street, and in the countryside, and its use in elementary school classrooms has increased.

*English* is widely spoken in all three countries.

#### Questions/Discussion

Discuss the political and social implications of bi-lingualism and multi-lingualism in the Low Countries.

Describe the relationship between language and concepts of ethnicity.

Is it necessary to be Dutch-speaking in order to be recognized as being Dutch? Explain.

Discuss the cultural importance of the widespread use of English in the Benelux countries. What is the relationship between participation in the global economy and competence in English?

Compare the affinities of the Flemish with the Netherlands and the Walloons with France.

## **ETHNICITY and POPULATION**

The notions about the ethnic composition of the peoples of the Low Countries received over generations in school textbooks and repeated in popular, scholarly, and official publications pointed to the Germanic origins of the population of the Netherlands and Flanders. The former stemmed from the indigenous Batavians and Frisians, the Flemish from the Salian Franks who entered the region in the 4<sup>th</sup> century A.D. The French-speaking Walloons were recognized as being descended from the Romano-Celts of Belgica who were not displaced by Germanic folk or assimilated by them. Luxembourgers traced their roots to a mixed Celtic and Germanic ancestry. As far as it goes, the received wisdom on ethnic origins is correct, but it does not describe accurately the evolution of ethnic identity over centuries or the increasingly diverse ethnic composition of population in the region at the beginning of the 21<sup>st</sup> century.

In Belgium, language determines ethnicity. Some “Flemish” family names are, in fact, French in origin, and many “Walloon” family names are clearly Flemish. In the 19<sup>th</sup> and early 20<sup>th</sup> centuries, for example, large numbers of Dutch-speaking workers from Flanders took industrial jobs in Wallonia, where the only language used on the job or in the street was French. Instruction in the schools attended by the children of these regional migrants was only available in French. By the next generation, the families of those workers were Walloons. Likewise, in the Netherlands, to be Dutch is to be a Dutch speaker and to conform to Dutch social values and cultural norms.

In a sense, the Low Countries have always been “countries of immigration.” Already in the Middle Ages, the region was a magnet for merchants and mechanics from Germany,

England, Italy, and elsewhere attracted by opportunities offered in trade and industry. In later centuries, the northern Netherlands provided safe refuge for religious dissidents and exiles – German and English sectaries (including the Plymouth Pilgrims), French Huguenots (many of whom were, in fact, Walloons), and Sephardic Jews from Spain and Portugal and, later, German Jews, most of whom blended into the “Dutch” population.

In the late 19<sup>th</sup> and early 20<sup>th</sup> centuries, numbers of workers came from Poland and southern Europe to find employment in Belgium’s burgeoning industrial sector and many stayed to become Belgians. The names of some well-established Luxembourgish families are Italian, Spanish, or Portuguese in origin.

The Netherlands accepted large infusions of former colonial subjects from Indonesia and Surinam. When the latter achieved independence in 1969, nearly half of the Surinamese people took the option of retaining their Dutch citizenship and passports, and several hundred thousand “returned home” to the Netherlands. The Surinamese are Dutch-speaking and have integrated successfully into Dutch society. Christian Moluccans formed the base of the Dutch army in the East Indies and fought loyally alongside Dutch troops during the Indonesian insurgency against restored Dutch colonial rule following World War II. Tens of thousands of Moluccans fled to the Netherlands after Indonesian independence in 1949. Although they are Dutch-speaking and accustomed to generations of service under the Dutch, many have found it impossible to assimilate. Now, in the third and fourth generation in the Netherlands, some refuse to accept their “exile” as permanent and continue to agitate for an independent state in their home islands. By contrast, there has been no significant migration to Belgium from former African colonies. Those relatively few Africans who have settled in Belgium come mainly from professional backgrounds.

In the decades since the 1960s, increasingly large numbers of non-European immigrants arrived in the Low Countries from North Africa, South Asia, and Turkey and elsewhere the Middle East. Many came initially as guest workers to supply much needed semi-skilled industrial and unskilled menial and service labor during a period of rapid economic expansion, but remained as permanent residents. Others benefited, especially in the Netherlands, from liberal family-reunion and asylum laws. Immigrants and their descendants make up more than 10% of the country’s population. Many have taken advantage of employment and education opportunities to become productive members of society, even when they have been reluctant to assimilate culturally.

With the introduction of freedom of movement of people across the EU, aliens from these same regions have taken advantage of porous national frontiers to enter the Low Countries and to settle there illegally, some in search of better living conditions through employment and others, according to some Dutch and Belgian observers, to gain access to the benefits of liberal social welfare programs. The situation was deemed sufficiently critical for Belgium to withdraw temporarily from the Schengen Agreement in 2001 in order to halt the inflow of aliens while authorities sought out and expelled those who had already entered the country illegally. Responsible Dutch and Belgian authorities as well as populist politicians remark on the high incidence of crime among this population; self-imposed isolation in “ghettos,” as evidenced by an absence of effort to learn the language of the host country; and the retention

of social customs, particularly regarding women, that are at variance with the norms of the host countries. The late Pim Fortuyn achieved wide support for his allegations during the 2002 election campaign in the Netherlands that aliens, particularly Muslims, posed a threat to liberal Dutch social and cultural values and were a drain on resources supporting the social welfare system. Legislation was subsequently proposed in the Netherlands that imposed restrictions on asylum rights and limits on further immigration. It also mandated compulsory courses in Dutch language and culture for applicants for permanent residence.

Belgium and the Netherlands, whose populations grew rapidly in the immediate post-war era, have birthrates well below replacement level. Maintenance of current population levels, not to mention population growth, comes from immigration and the offspring of immigrants. Luxembourg, by contrast, has one of the two highest birthrates among EU countries. With its impressive economic growth, open borders, and a multi-lingual environment, Luxembourg has become home to many from neighboring EU countries. About 90,000 people commute every day from France, Germany, and Belgium to jobs in tiny and accessible Luxembourg. Nearly 30% of permanent residents, about 125,000 people, are foreigners. Some observers predict that the grand duchy's population will double by mid-century. Steady population growth is seen as necessary to pay for the social welfare system and to fund pensions.

Amsterdam, Rotterdam, Antwerp, and Brussels, the "capital of Europe," are cosmopolitan and highly internationalized cities. Non-European migrants comprise an estimated one-third of the population of Rotterdam and one-fifth of those living in Antwerp. This has caused a backlash in the voting population of these cities. Pim Fortuyn's political party won one-third of the votes in local and general elections in Rotterdam in 2002, and the right-wing nationalist Flemish Bloc carried a quarter of the votes in Antwerp.

### **Questions/Discussion**

Discuss the concept of "national identity" as it applies to small, open countries like Belgium, the Netherlands, and Luxembourg.

In the past, what have been the most important factors in integrating migrants into society in those countries?

Suggest and discuss scenarios relating to the impact of non-European immigration on "national identity" in the Low Countries.

Predict possible political solutions or reactions to problem posed by non-European immigration.

Is there a contradiction between assertions that immigrants are a burden on the social welfare system and the contention that population growth is required to sustain funding for the system?

## RELIGION

Belgians and Luxembourgers traditionally identified themselves as either formally Catholic or as *laique* (i.e., secular, non-religious, and often anti-clerical). The Netherlands, by contrast, was historically a predominantly Protestant country, but one that had a large Catholic minority that constituted a majority in some parts of the country. Since the 1960s, these categories of religious practice and non-practice, by which one could even determine voting patterns, are of greatly diminished importance.

Belgium and Luxembourg were overwhelmingly Catholic countries, but, within Belgium, Flanders was the more Catholic region, Wallonia the more secular. To be *laique* in Belgium is not simply to be secular but to belong to a “*spiritual family*” that might be either liberal (meaning laissez-faire conservative) or socialist. In 1960, at least 80% of the Belgian people were baptized Catholics. Sixty percent attended Mass regularly in Flanders, 40% in Wallonia. There were not more than 50,000 active Protestants in Belgium, a number sustained 40 years later by Protestants from elsewhere in Europe working in Brussels. In Luxembourg, 97% were baptized Catholics.

Estimates from the same period showed that the Netherlands was 45% Protestant, 35% Catholic (and growing), and 20% unaffiliated with any religious group. About 75% of Protestants belonged to the official Netherlands Reformed Church (*Nederlands Hervormde Kerk*), Calvinist in doctrine but meant to be inclusive of the largest possible segment of the Protestant community. Most of the rest of Dutch Protestants adhered to more self-consciously orthodox Calvinist communions, whose doctrines were more demanding and restrictive. The largest of these groups was the Reformed Church (*De Gereformeerde Kerken*), to which about 10% of the Dutch people adhered. There were also small Lutheran and Mennonite communities. Catholics in the Netherlands were subject to political and social discrimination until the late 19<sup>th</sup> century. The Catholic Church, as represented by its hierarchy, was, in response, both reactive and insular-- determined to organize every aspect of the daily life of Catholics in order to maximize their power and protect them from discrimination. But there co-existed a liberal dimension to Catholic thinking and practice that manifested itself during the Second Vatican Council and became pervasive within Dutch Catholicism in the 1960s.

Defense of religious identity and community in the Netherlands -- and defense of religion and language identity in Belgium -- led in each country to the creation of what is known as the pillar system, or *pillarization* (Dutch, *verzuilen*). Members of each religious and language group formed their own schools, hospitals, labor unions, newspapers, radio and television programming groups, recreational associations, and so forth. The religious and language communities of the Netherlands and Belgium lived apart, though they generally lived peaceably. Political parties were each closely tied to one of the pillars; their role was to champion the interests of the group in governmental circles. The Dutch and Belgian governments have responded by funding all religious schools, hospitals and other institutions on a proportional basis.

Over the last forty years, the Low Countries have become progressively de-Christianized. Attendance at religious services has declined sharply, in most cases by more half from the figures cited in the early 1960s. The reduction of religious sentiment has diminished popular identification with the pillars. In Belgium, devolution of authority to regional government has also reduced the need for pillarized politics at the federal level.

### **Questions/Discussion**

Discuss the relationship between religious affiliation and “identity,” and between religion and political preferences.

Has state recognition of church-based activities had a positive or adverse affect on religious tolerance in the Low Countries?

Does state recognition compromise the independence and integrity of the churches? In the Netherlands, has it compromised or encouraged national cohesion? Explain.

How has the development of Dutch and Belgian pillars facilitated the absorption of new groups in society?

## GEOGRAPHY

The Low Countries are drained by three river systems: the Rhine, the Meuse (Maas), and the Scheldt. The three rivers form a delta in the southern Netherlands and northern Flanders, from which their estuaries empty into the North Sea. The Lek and the Waal divide from the Lower Rhine between Arnhem and Nijmegen, and flow to the sea, the former to the north and the latter to the south. Another Rhine tributary, the IJssel, leaves the Lek at Arnhem, winding north to the IJsselmeer. The Meuse, which rises in the Longres Plateau in France, flows parallel to the Waal to the north for 80 miles on the way to the sea. The Scheldt and its numerous tributaries drain the Central Plateau. Formerly, the western and eastern branches of the Scheldt's estuary bracketed the large island of Walcheren, now attached to the mainland by an isthmus.

The fact that many of Europe's great rivers drain to the sea through the Low Countries has created both opportunity (trade) and threat (flooding). Most of the Dutch provinces of North and South Holland, Zeeland, and Friesland, parts of North Brabant and Groningen, and all of Flevoland lie below sea level. Sixty percent of the population lives on land that would be submerged during high tides (not to mention seasonal flooding) if nature were allowed to rule.

A long history of catastrophic floods has created an unparalleled expertise in the Low Countries in "water engineering," including flood control dikes and the reclamation of land by draining water. From the year 1200 to the present, the Dutch have added 20 percent to the area of their country (7,000 square kilometers). Just over one third of that amount was created in the Lake IJssel project -- a vast reclamation project that turned the Zuider Zee into a fresh water lake (the IJsselmeer), and created a new province (Flevoland). Even the largest Dutch cities, Amsterdam and Rotterdam, exist by virtue of Dutch water engineering. Rotterdam, the world's busiest cargo port, would not even have access to the North Sea were it not for the Rotterdam Waterway. Amsterdam, once called "the Venice of the North" is built on marshland. The city's buildings are supported by wooden piles driven thirteen to sixty feet into the ground.

In Belgium, the Central Plateau rises gently from the Flanders Plain to elevations of up to 700 feet in Hainault and Brabant. The region is drained by the Scheldt and its several tributaries. In the watershed between the Scheldt and the Meuse, the lower Kempenland Plateau is heathland containing the coal basin that was a principal source of Belgium's prosperity. South Limburg slopes to the south and east and is cut by alluvial valleys. The Meuse-Sambre Valley stretches for more than 100 miles along the southern edge of the Central Plateau in Belgium. It varies in width from three to 10 miles, an area in which about a quarter of Belgium's population lives.

The Ardennes lies south of the valley, an undulating sandstone and limestone plateau cut by deep winding valleys formed by small rivers that flow westwards to the Meuse. Summits reach up to 2000 feet. Half the upland area is heavily wooded by oak and beech, the valleys

marked by peat bogs and heathlands. The Ardennes extends eastward to the Grand Duchy and the Belgian province of Luxembourg.

A line of ironstone hills that have a mean altitude of about 1000 feet crosses the southern two-thirds of the province and grand duchy. Known as Belgian Lorraine in the former and Bon-Pays or Gutland in the latter, the area provides lush pastureland in small river valleys and beech woods on the hillsides.

Coastal and inland plain areas of Belgium and the Netherlands have a typical maritime climate, damp, cool, and frequently overcast. Climatic conditions in the interior and upland regions in the south are transitional between maritime and continental norms. Mean average rainfall in the several geographical regions of the Low Countries ranges between 25 and 32 inches.

The Low Countries have a high population density which is especially concentrated in several urban areas and conurbations. Throughout the region, however, there is a clear demarcation between urban and rural environments. The *Randstad*, or “Ring City,” is a vast conurbation, including Amsterdam and The Hague, that houses nearly 40% of the Dutch population. The area is at a maximum 30 miles in width and stretches 110 miles from Dordrecht to Haarlem, virtually the entire length of North and South Holland. The Randstad is polycentric and built-up areas are interspersed with extensive green spaces that allow the conurbation to “breathe.”

### **Questions/Discussion**

Based on its geography, justify the use of the term “Low Countries” to describe the region.

In what ways has geography influenced the political and economic ties of the Low Countries with neighboring countries in Europe and overseas?

Explain the importance of the polders.

## FLAGS

The original colors of the Netherlands were horizontal stripes of orange-white-blue derived from the arms of the Prince of Orange. Because the orange stripe surmounting the white stripe was prone to fade and could not be easily recognized at a distance at sea, red replaced orange on the upper stripe on the Dutch maritime ensign already in the 17<sup>th</sup> century. The red-white-blue combination was eventually adopted on the national flag, probably at the insistence of the republican opposition to the House of Orange in the Estates-General. The horizontal tricolor of Luxembourg is almost identical to that of the Netherlands, from which it is derived, except for the length of the fly being longer and the shade of blue somewhat lighter.

The national flag of Belgium is a tricolor composed of vertical stripes of black-gold-red in the format of the French *tricolore*. The colors are those of the Duchy of Brabant adopted as the emblem of the 1830 revolution.

The royal and grand-ducal families fly personal standards, which in the Netherlands and Luxembourg retain the color orange from the arms of their ruling families. Each province and most cities and towns in Belgium and the Netherlands have distinctive flags, some of which have colors and design of great antiquity. The flags of Flanders (sable “Lion of Flanders” on a gold field), Wallonia (red “Cock of Wallonia” on a gold field), Brussels (blue iris on a white field), and the German-speaking community (lion and blue florettes on a white field) are displayed in their respective regions alongside or sometimes in place of the national flag. The EU flag is commonly flown on public buildings in all three countries.

### Question

What do national symbols, such as flags, contribute to an understanding of the history of the Low Countries?

### Suggested Reading

## EUROPEAN UNION

Belgium, the Netherlands, and Luxembourg were signatories of the treaty establishing the European Coal and Steel Community (ECSC), the first of the European “communities,” in 1952, together with France, Germany, and Italy. The same six nations were charter members of the European Economic Community (EEC), or Common Market, created by the Treaty of Rome in 1957, and of the European Atomic Energy Community (EURATOM) that came into force in 1958. Collectively, these institutions, headquartered in Brussels, were the European Community (EC), which evolved into the European Union (EU). The Benelux Treaty (1960) anticipated subsequent developments in the EU toward “ever closer union.”

The Treaty of European Union, usually referred to as the Maastricht Treaty, was formulated while the Netherlands held the rotating presidency of the Council of Ministers, responsible for proposing and implementing the EC’s agenda. The treaty, adopted in 1992, would provide a framework for achieving a common foreign and security policy as well as cooperation in home affairs. It also completed the “common market” and endorsed monetary union and adoption of a common currency.

The Maastricht Treaty viewed European union in terms of three “pillars.” The first pillar referred to the institutional structures of the EU and set criteria for monetary union. The second pillar embodied the Common Foreign and Security Policy (CFSP), and the third pillar covered justice and police issues, including immigration, asylum, and the movement of people across national borders. The Schengen Agreement, named for the town in Luxembourg where it was signed, sought to harmonize national implementations of third-pillar objectives. National passports are also recognized as EU passports, and EU citizens enjoy freedom of movement across the borders of member countries. The first pillar deals with areas of exclusive EU competency, while the second and third pillars cover areas that are essentially intergovernmental and are negotiable among member countries. Belgium, for example, withdrew temporarily from the Schengen Agreement for a three-month period in 2001, effectively closing its borders during that period to migrants and asylum seekers not authorized by the Belgian government in order to identify aliens residing illegally in the country.

Citizens of Belgium, the Netherlands, and Luxembourg are also citizens of the EU, sharing rights guaranteed to nationals of other member countries. EU citizenship does not preempt responsibilities imposed by member countries on their citizens.

Belgium, the Netherlands, and Luxembourg participate in the Economic and Monetary Union (EMU) that provides for a common monetary policy supervised by the European Central Bank (ECB), based in Frankfurt. The three countries adopted the common currency, the *euro*, together with nine other EU members, effective January 1, 1999 with euro notes and coins introduced in 2002.

## PARTICIPATION IN EU INSTITUTIONS

Polls over several decades have indicated overwhelming approval by citizens of the Benelux countries for closer European integration. Brussels is the administrative “capital” of the EU, and other EU institutions and agencies are located in Luxembourg and the Netherlands. Within the EU, the Benelux countries were staunch advocates of monetary union and have supported EU enlargement, social harmonization, and democratization of decision making.

Benelux heads of government and government ministers represent their respective national policies and exercise executive authority for the EU on the Council of Ministers and the European Council. Since the last EU enlargement in 1993, each of the three holds the rotating six-month presidency of the council once every seven and a half years. Belgium, the last Benelux incumbent, held the presidency during the second half of 2001. The Netherlands is scheduled for its next presidency in 2004, Luxembourg in 2005. Luxembourg’s prime minister Jean-Claude Juncker is on record contending that the presidencies of smaller countries are more focused and efficient than those of larger countries. Reservations run deep in the grand duchy about mooted reforms to the rotating presidencies that might deprive Luxembourg of its next scheduled presidency.

Votes cast by governments of EU-member countries represented on the Council of Ministers total 87 and are apportioned according to population. The Netherlands, which has just over 4% of the EU’s population, and Belgium, which has just under 3%, are both allotted 5 votes. Luxembourg, with one-tenth of one percent of the total, casts two votes, approximately ten-times the voting strength per capita of Germany. The support of smaller EU members, including the Benelux countries, is generally needed for a qualified majority of 62 votes on issues not requiring unanimity. As a consequence of further devolution of Belgian state authority, Flanders and Wallonia rather than the national government represent the interests of their regions on the council. Both are active in the EU’s Committee of Regions, Assembly of European Regions, of which they are founding members.

Each Benelux country appoints one commissioner to the 20-member European Commission, the administrative body of the EU. Tiny Luxembourg has supplied two presidents of the commission, nominated by heads of government sitting as the European Council. Approximately 15,000 European civil servants work out of offices in Brussels and Luxembourg to administer EU agencies under the direction of the commission. The European Court of Justice, the EU’s highest legal authority, is based in Luxembourg, as is the European Investment Bank, the EU’s concessionary infrastructure-financing arm.

Although the European Parliament (EP) holds plenary sessions in Strasbourg, its secretariat is headquartered in Luxembourg, while parliamentary committees meet in Brussels. The current EP, elected for a five-year term in 1999, seats 626 delegates elected from the 15 EU-member countries. Although nationally elected representatives to the EP normally campaign

on domestic rather than “European” issues, they sit in multinational parliamentary party groups, not in national delegations. Thirty-one representatives are elected from the Netherlands, 25 from Belgium, and six from Luxembourg.

The Amsterdam Treaty, concluded during the 1997 Dutch presidency, gave the EP responsibility for holding confirmation hearings for commissioners and, by a vote of two-thirds majority, the power to force the resignation of an individual commissioner or the entire European Commission. In 1999, the commission and its president, former Luxembourg prime minister Jacques Santer, was compelled to resign following an investigation of charges of fraud, mismanagement, and cronyism.

### **Questions/Discussion**

Explain the importance of European integration to smaller countries, including the “Benelux Three.”

Discuss the special position of these countries in EU institutions.

What are some of the advantages and potential disadvantages of EU enlargement for the Benelux countries?

See chapter 4, “Belgium, the Netherlands, and Luxembourg: Diversity Among the Benelux Countries,” by Jan Beyers; Bart Kerremans and Peter Bursens.

## FOREIGN POLICY

There is no “Benelux” foreign policy, despite consultations among the governments of Belgium, the Netherlands, and Luxembourg. Each of the three countries concentrates on agreements made in a European context, but each conducts its own discreet foreign policy that shares common commitments to the UN, NATO, and principles of international law. Each country focuses increasingly on alignment with the foreign and security policy dimensions of the EU and limits unilateral initiatives. Arms control and especially the non-proliferation of weapons of mass destruction are high priority considerations.

The three countries have different perceptions of their roles in international affairs, conditioned by geography, wealth, and history. While the Dutch consider the Netherlands a “medium”-sized country (as Swedes, for example, consider Sweden), Belgians unassumingly refer to Belgium as a “small” country (much as Danes do Denmark). Luxembourg’s tremendous economic clout locates that country on a level above mini-state status. Both Belgium and the Netherlands were colonial powers until the mid-20<sup>th</sup> century, and the latter was also a great maritime power whose involvement in Asia, Africa, and the Americas dates back to the 16<sup>th</sup> century. Foreign relations of the three export-oriented countries have traditionally been influenced by economic considerations.

For good reason, Belgium was called the “cockpit of Europe.” For centuries, it was the frontier between France and Germany and the real estate over which dominant powers fought for strategic advantage. Belgian and Luxembourg neutrality was violated by Germany in World War I, though the Dutch successfully remained out of the war. All three countries were occupied during World War II, and all three definitively abandoned neutrality after the war. As small- and medium-sized powers, they each emphasize multilateral approaches to the solution of international problems.

As a matter of principle, Belgium intervenes internationally only when it has something concrete and constructive to offer. An example of one such initiative was the report generated by then-foreign minister Pierre Harmel in 1966 recommending increased political consultation between NATO and the Warsaw Pact over tactical missile deployment in Europe. The Harmel Report is considered to have been an important element in the process of *détente* during that period. Belgian initiatives under the direction of Foreign Minister Louis Michel often emphasize ethical considerations, human rights, and greater reliance on international law in the formulation of foreign policy. Belgium asserts the principle of the “universal jurisdiction” of Belgian courts in cases involving war crimes and human rights violations.

Federal Belgium’s regions and communities have played a constitutional role in the formulation and implementation of foreign policy since the state reform of 1993. They have full competence in foreign relations in those fields for which they have domestic responsibility.

Dutch foreign policy has been consistently interventionist and has involved itself in a greater range of issues outside Europe. In the words of Joris Voorhoeve, Dutch foreign policy is based on overlapping considerations of “peace, profits, and principles,” with no one consideration ever excluding the others. The main elements affecting those considerations have been national security, regional integration, open markets, and support for overseas development and human rights. The Netherlands has been for many years one of the most generous per capita contributors to technical assistance and development aid. The Netherlands supports the imposition of internationally recognized legal norms. Appropriately, The Hague is the site of the World Court as well as the more recently established International Criminal Court (ICC).

### **Questions/Discussion**

Why is multilateralism the core principle of foreign policy for all three Benelux countries?

In what ways have political and economic considerations been complementary in the formulation of Dutch and Belgian foreign policies?

Discuss differences between the foreign policy orientations of Belgium and the Netherlands, and explain the reasons for them.

To what degree have the “Benelux Three” surrendered control of foreign policy to the EU?

### **Suggested Reading**

Joris J.C. VOORHOEVE. *Peace, Profits, and Principles: A Study of Dutch Foreign Policy*. The Hague: Martinus Nijhoff, 1979.

## **NATIONAL and REGIONAL SECURITY**

The national security of the three Benelux countries is firmly rooted in NATO, of which they are founding members, and in its Atlantic dimension, which they regard as remaining essential to European security. NATO is headquartered in Brussels, and the Supreme Headquarters for Allied Powers Europe (SHAPE) is based in nearby Mons. Headquarters for Allied Forces Northern Europe is located in the Netherlands.

The EU's Political and Security Committee (PSC), on which representatives of the Benelux countries participate, coordinates the common policy of the European Security and Defense Policy (ESDP) in consultation with NATO. Harmonization of EU and NATO planning and deployments is considered indispensable by the three countries, which reject any suggestion of a EU force operating independently of NATO. Regular 23-country meetings are conducted at all levels between NATO, which includes six non-EU members in its Euro-Group, and the EU, which includes four non-NATO members.

Since 2000, the EU's interim military staff and NATO have shared in-house expertise. In practice, however, the former is a secretariat, not a command staff, and it does not conduct operational-level military planning. There is no separate EU planning capability outside NATO's established planning structures.

The European Rapid Reaction Force (ERRF) was proposed at the Helsinki Summit in December 2000 with the stated aim of mobilizing 60,000 personnel from EU member countries to carry out the so-called Petersburg Tasks, including humanitarian assistance, rescue missions, disaster relief, conflict prevention, and peacekeeping missions. The Netherlands has pledged 4500 troops to the notional ERRF, Belgium about 1000.

While actively engaged on the PSC, the Benelux countries rejected creation of an EU military force independent of NATO. In 2002, however, the Belgian prime minister called for a radical rethinking of the EU's defense policy. Guy Verhofstadt proposed consideration of ESDP as a collective alliance independent of NATO. He argued in a letter to EU heads of government that NATO was becoming an American "tool box" for building coalitions in the war on terrorism and in April 2003, in reaction to the U.S. military intervention in Iraq, which it did not support, the government hosted a meeting with the heads of government with Luxembourg, France and Germany to explore further a separate EU military force

That said, total defense spending among the EU-15 decreased by 15% to under \$150 billion in the five-year period 1997-2001. ERRF lacks independent compatible information technology, access to intelligence, logistical support, and lift capacity. No common regional security concept has been agreed on by EU members.

## BELGIUM

Belgium abandoned conscription in the 1990s in favor of professional volunteer armed forces. Prior to the end of eight-month national service, conscripts comprised only one-third of active duty forces, but they provided the bulk of a large reserve force designed to fill out unit cadres. Active duty force levels have been cut by half since the abolition of conscription, reserves by 40%.

### Belgian Armed Forces, 2002

Active: 37,600

Army: 26,400

Navy: 2600

Air Force: 8600

Reserves: 100,500

Including 72,000 army reservists and 15,500 medical personnel

Defense budget (2001): \$2.2 billion

The armed forces is one of Belgium's few remaining *national* institutions.

The Belgian army is capable of deploying one mechanized infantry division composed of three brigades, each deploying one armored battalion, equipped with *Leopard* MBTs, and two mechanized infantry battalions backed by assault helicopters. Two brigades are kept at 70% strength to be reinforced by reserves, one at 50% strength. One brigade is stationed in Germany. Elite troops, including those in airborne and commando units, are highly rated for their training and effectiveness.

The navy is trained and equipped for coastal and North Sea missions under joint command with the Dutch navy. Components include three ASW frigates, 11 fast attack craft equipped with Exocet SSMs, and minesweepers.

The air force's inventory of combat aircraft consists of 72 F-16s organized in six squadrons. Flying hours available for Belgian pilots are below the NATO norm. Transport capacity is limited.

Belgium contributed a battalion-level unit to SFOR-II in Bosnia and UN observer teams in Kashmir, Western Sahara, and with KFOR in Kosovo.

Implementation began in 2002 of a plan for the gradual restructuring of the armed forces, to be completed by 2015. The plan is based on the premise that it is unlikely the armed forces will be mobilized at full strength in any potential future conflict. (See "Mission of the Armed Forces.") "Rationalization" is the keyword in the plan, which envisions Belgian components of not more than 5000 personnel and assets deployed as part of a broad coalition in crisis-management scenarios. The armed forces would be reduced by 10% to under 40,000

personnel integrated, together with a medical corps, under a single unified command. Some activities would be outsourced to the civilian sector.

## The NETHERLANDS

The Netherlands also moved to an all-volunteer force in the 1990s, reducing the size of personnel in the armed forces by half after the end of the Cold War. As in Belgium, conscripts, who normally accounted for nearly half the active force, were trained in periods of 14-17 months to provide a standing reserve of more than 150,000 available to complete units maintained by regular cadre. The army continues to rely on a small reserve component to reinforce cadre in combat and support units.

### Dutch Armed Forces, 2002

Active: 50,430

Army: 23,100

Navy: 12,130

Air Force: 10,000

Constabulary: 5200

Reserves: 32,200, including 22,000 army reservists.

Defense budget (2001): \$5.6 billion

In wartime, the Dutch army is capable of fielding one mechanized infantry division, equipped with *Leopard* MBTs, several hundred APCs, and self-propelled artillery. Combat ready units include 12 tank, armored infantry, and air-mobile battalions, supported by six artillery battalions. Two battalions are stationed in Germany. The army is backed up by territorial units from a lightly-armed Home Guard.

The Netherlands has a proud and strong naval tradition. Combat assets include two destroyers and 12 smaller frigates, armed with *Harpoon* SSMs, plus four submarines and anti-mine warfare vessels. The naval aviation branch flies ASW and reconnaissance patrol aircraft and ship-based helicopters, and a single naval patrol plane is regularly on duty with NATO in Iceland. A corps of 3100 marine infantry is organized in three battalions, one of which is integrated with the Royal Marines in a joint UK/Netherlands amphibious landing force. The Dutch navy operates under joint command with the Belgian navy with headquarters at Den Helder. Units are also periodically assigned to the base at Willemstad in Curaçao. Coast Guard craft combat smugglers and attempt to interdict drug traffic in the waters of the Netherlands Antilles.

The air force has at its disposal 108 F-16s, deployed in nine squadrons, as well as efficient reconnaissance and limited transport capability. The Netherlands intends to participate in the F-35 Joint Strike Fighter aircraft program. Flying hours for Dutch pilots are in line with the NATO norm.

The Royal Constabulary (*Koninklijke Marechaussee*) is a paramilitary police corps numbering 5200 personnel and responsible for providing internal security, criminal investigation, border

and passport control, highway patrol, transportation (including airport) security, and armed crisis intervention. Officers of the *Marechaussee* are highly respected and have a reputation for being “tough” in the execution of their duties.

The Netherlands retained a mechanized infantry battalion under UN command as part of SFOR II in Bosnia following the tragedy involving Dutch peacekeepers at Srebrenica. Dutch observers served in Ethiopia/Eritrea and others were assigned to KFOR in Kosovo. A joint Dutch-German command was prepared to take charge of the international peacekeeping force in Afghanistan at the end of 2002.

## **LUXEMBOURG**

Luxembourg’s armed forces consists of 900 personnel organized in an infantry battalion and two reconnaissance companies. One company is normally assigned to the Belgian mechanized infantry division. A small number serve abroad under UN command as observers with SFOR II and KFOR.

For legal purposes, NATO’s 17 E-3A early-warning aircraft (AEWs) are registered to Luxembourg and bear Luxembourg roundrels for identification. Luxembourg personnel were assigned to the flight and maintenance crews of the five AEWs taking part in Operation Deliberate Forge.

## **MISSION of the ARMED FORCES**

Belgian and Dutch armies, operating under NATO command, were equipped and configured to defend assigned forward areas in Germany. Mechanized divisions were trained to fight in conventional and nuclear environments. Although active and reserve forces were drastically downsized in the 1990s, combat units are still largely composed of “heavy metal” components intended to counter threats envisioned during the Cold War. The mission of the armed forces of the Benelux countries, like those of other NATO countries, has not been clearly redefined. Nor is there a commonly agreed upon assessment of threats to national and regional security. While retaining a capability for territorial defense under NATO command, Belgian and Dutch armed forces are being reconfigured gradually to meet the long-range demands of peacekeeping and crisis intervention outlined in the Petersburg Tasks.

## **DEFENSE SPENDING and PROCUREMENT**

Belgium and the Netherlands drastically reduced defense expenditures in the 1990s. Belgian spending was cut by one-third in the five-year period 1997-2001 to a total of \$2.2 billion, the lowest per capita expenditure in NATO after Poland and Luxembourg. The Netherlands’

outlay for defense was more than double that of Belgium in 2001 (\$5.6 billion) but had still dropped by 25% from the 1997 level.

Belgium has an important arms industry built around *Fabrique Nationale* (FN) of Liege. The FN 7.62 automatic rifle is standard NATO issue. Although a less aggressive exporter than in earlier decades, FN remains a major supplier of small arms throughout the world. The Dutch produce avionics and have naval shipbuilding and repair facilities. Funds available for R&D, however, are virtually nil in Belgium in 2001 and are declining in the Netherlands.

The level of equipment procurement by Belgian and Dutch armed forces is constant, but the latter was spending nearly five times as much on acquisitions in 2001 than the former. F-16s in the Belgian and Dutch air forces are undergoing extensive “mid-life” up-grades. The Netherlands has tentatively agreed to re-equip with the Joint Strike Fighter (JSF).

### **Questions/Discussion**

What is NATO’s primary mission in the post-Cold War era? Are there important secondary missions?

Discuss areas of cooperation and possible contradictions in missions assumed by NATO and those proposed for an EU security force.

What roles are the Benelux countries best able to perform within NATO and ERRF?

### **Suggested Reading**

Thomas ROCHON. *The Netherlands*. Boulder, CO: Westview Press, 1999, chapter 8.

## HISTORY

Although the region is relatively small (about the size of West Virginia), the history of the Low Countries looms large in world and European history. Both Belgium and the Netherlands were colonial powers. The Netherlands was for a century the world's most important maritime power, and Belgium was one of the homes of the Industrial Revolution. The influence of the Low Countries on the world economy is far greater than their size might indicate.

Historical issues in the Low Countries are invariably European issues, and, over the centuries, many decisive conflicts in European history have been resolved on their soil – in modern history from Waterloo to the Battle of the Bulge. The region, once part of the “Middle Kingdom,” was a meeting place of Celtic and Germanic peoples, of Roman order and barbarian hordes, and a buffer between France and Germany, aptly called the “cockpit of Europe.”

The Low Countries shared a common history until the late 16<sup>th</sup> century, but, as Johan Huizinga, the distinguished Dutch historian, demonstrated, the line of historical continuity was broken during the years of the Dutch Revolt and could not be restored. What remains, however, are the separate and vibrant national histories of three countries.

### **Celt, Roman, and German**

"All Gaul," Caesar observed, "is divided in three parts -- *Gallia, Acquitania, et Belgica*." The province of Belgica remained an integral part of the Roman Empire for 500 years, during which time the Celtic tribes that lived there, the Belgii, became thoroughly Romanized – Asterix notwithstanding! The empire's frontier was eventually planted farther east along the Rhine in *Germania Inferior*, a province inhabited by the Batavians. The region was connected to the rest of the Roman Empire by a system of roads not surpassed in Europe until the 19<sup>th</sup> century, functioned under a common legal code, and used a common language, Latin. Towns were founded that enjoyed the amenities of Roman urban life.

Germanic tribes began applying pressure on the frontier already in the 2<sup>nd</sup> century A.D. When Roman troops evacuated the province in the late 4<sup>th</sup> century, the vacuum was filled by the Franks, Germanic allies of Rome whose chieftains exercised commissions from the emperor to defend the region against their cousins, the Frisians and the Saxons. Their warlords became a ruling class on Roman territory. In 496, Clovis, king of the Franks, converted to Catholicism and was followed in that by his folk. Clovis also established the *Merovingian* dynasty of Frankish kings that in time won over most of what had been Roman Gaul and would become the Frankish lands, or France.

## The Carolingians

Succeeding generations of Merovingian kings ruled over several kingdoms. One of them, *Austrasia* (the “eastern lands”) was co-extensive with much of the present-day Benelux countries. The kings appointed officials, called “mayors of the palace,” an office usually hereditary, to administer the kingdoms in their stead. By the late 7<sup>th</sup> century, Pepin Herstal, had collected mayoralties of the Merovingian kingdoms under his control. His son, Charles Martel, who defeated the invading Arabs at Tours in 732, left his name to the dynasty – the *Carolingians*, and Charles Martel’s son Pepin III deposed the last of the Merovingian kings, a puppet whose family, always brutal, had become decadent as well. Pepin was recognized with papal approval as king of the Franks.

Pepin’s heir, Charles, known as Charles the Great or *Charlemagne*, transformed the Frankish kingdom into a European empire. Charlemagne, who kept court in the old Roman towns at Nijmegen and Aachen in Austrasia, defeated the Frisians, conquered the Saxons, and extended Carolingian dominion across Germany. On Christmas Eve 800, Pope Leo III crowned Charlemagne in Rome as emperor in succession to the western Roman emperors as a reward for subduing the Lombards in Italy.

Having built a large empire, the Carolingians fell back on the Frankish custom of sharing family property among legitimate sons. In 843, in the Treaty of Verdun, the Carolingian Empire was divided among Charlemagne’s three grandsons into three separate kingdoms – a West Frankish kingdom in what would become France, an East Frankish kingdom in Germany, and the “Middle Kingdom,” left to the eldest, Lothair. *Lotharingia*, as the kingdom was called, included Austrasia, the Carolingian heartland, as well as Burgundy, Provence, the upper Rhineland, and northern Italy, a rich but ungainly piece of real estate lacking in natural frontiers. In the Verdun treaty is found the remote political origins of France and Germany -- and the end of the political unity of western Christendom.

On Lothair’s death in 855, the “Middle Kingdom” was divided three ways. Louis the Fat, the German king, took Italy and the imperial title; Charles the Bald, the French king, annexed Provence; and the dead king’s son, Lothair II, kept the Low Countries and Alsace-Lorraine. And, when the younger Lothair died in 870, his uncles met at Mersen to split what had remained of Lotharingia between them. In doing so, they drew a line through the Low Countries and through western Europe over which their immediate descendants began fighting and over which their successors continued to fight – until 1945.

## The Middle Ages

In order to supply and maintain a ready force of mounted warriors, the Franks had, in the 8th century, introduced the practice of *vassalage* by which a warrior commended his service to a warlord in return for which the lord gave his vassal the use of property for his support in the field. This was a social and political relationship. The property involved in the arrangement was a *feudum*, hence, “feudalism.” In time, possession of property implied a vassal’s obligation to fight at the behest of his lord. The economic system that provided the wealth to

support the military obligation was *manorialism*, derived from a pre-existing Roman model, in which manors held in feudal tenure were worked, as the system developed, by peasants bound to the land in premedial serfdom. Manorialism remained the basis for the agricultural economy in much of the Low Countries into the 18<sup>th</sup> century, long after vassalage and feudalism had passed into history.

Under the Carolingians, feudal states had been established whose lords commended themselves as vassals to the king, who resided at the apex of the feudal pyramid and who, in turn, had vassals and sub-vassals commended to them. Feudal relationships in the Low Countries were complex, giving rise to continuing conflicts of interest. There were, in fact, two overlapping feudal pyramids, one in the south (Flanders and Artois) that had the French king at its apex and the other where the German emperor was suzerain. Beneath them were levels of “great vassals” – dukes, counts, and lords, and, beneath them, baronies, lordships, abbeys, and knightly holdings. There were, in addition, ecclesiastical states, ruled by their bishops as feudal lords.

#### Feudal States in the Low Countries

Duchies	Brabant Gelderland Limburg Luxembourg
Counties	Antwerp Artois Drenthe Flanders Gelderland Hainault Holland Limburg Namur Zeeland
Lordships	Friesland Groningen Overijssel
Ecclesiastical States	Cambrai Liege Utrecht

The feudal ties to the emperor in the northern Netherlands were not as strong as those to the king of France in the south, but even those links weakened and the feudal states were virtually independent of their suzerains after the 12<sup>th</sup> century. The counts of Flanders, for

example, possessed the wealth of kings, married into royal families, and held the title of Latin Emperor in Constantinople in the 13<sup>th</sup> century. The ducal house of Luxembourg produced two German emperors and two kings of Hungary in the 14<sup>th</sup>-15<sup>th</sup> centuries. The great feudal families also often married among themselves and were joined by kinship. The wars among them, also frequent, had the quality of family feuds.

Duchies and counties were often joined in personal unions, only to split in another generation and form new combinations that may not have been territorially contiguous. Titles were bequeathed, purchased, and usurped, given as dowries and, then, divided among the children of the family. The ruler might wear several crowns, but each state retained its own laws and customs, flag, coins, and legislature.

External trade began to revive along the river systems in the Low Countries in the 10<sup>th</sup> century. Merchants and craftsmen congregating at ports, in old Roman towns, and around fortresses promoted the rebirth of urban life in the 11<sup>th</sup> century at, for example, Bruges at the bridge over the Zijn, at Ghent in the shadow of the castle on the Scheldt, near the dikes on the Amstel, and at Ypres, Antwerp, Brussels, Utrecht, Doderecht, and other locations, more, at first, in the south than, later, in the north. Depending on location, trade in the Low Countries was oriented to England or France, up the Rhine to Germany, or to Scandinavia.

In the 12<sup>th</sup> century, the southern Netherlands (along with northern Italy) participated in Europe's first "industrial revolution." Sheep raising on the lowlands of Flanders, Artois, and Brabant provided the wool that fed the looms in the towns in those provinces. When demand for the raw material exceeded domestic supply, the textile industry turned to England for its wool. Towns in the northern Netherlands imported timber and naval stores from the Baltic to build ships for fishing and the carrying trade.

The "estates" – the bishops and clergy and the nobility and, only later, citizens of the towns or *communes* – were represented in the Netherlandish parliaments that met periodically in each province. Each represented a source of income for the ruler and agreed to tax themselves in return for the redress of grievances and recognition of liberties.

The communes often presented a problem for the landholding nobility because these "urban democracies" existed outside the feudal structure. Often controlled by small oligarchies, they were governed by councils independent of feudal lords and answered directly to the duke or count. Troublesome though their demands might often be, the rulers, in turn, were likely to grant the towns greater liberties because of the wealth that they generated. The towns were themselves deeply divided by class animosity, the balance of political power differing among them, however, from town to town. Class struggle was endemic. The urban patricians, who built their great gabled houses on the market square, were merchants and entrepreneurs whose fortunes equaled all but greatest of the landed nobility. The craftsmen, well organized in the guilds, owned the workshops that put out goods on contract to the patricians and vied with them for political control of the councils. On the lowest rung of the social and economic ladder was a usually turbulent urban proletariat employed by the guildsmen. In Flanders particularly, relations with the count and the nobility and among the urban classes were

complicated further in the 14<sup>th</sup> century by the wars between the suzerain, the king of France, and England, the province's most important trading partner.

When Philip IV of France tried to bring Flanders under royal control, the French king found allies among the Flemish patricians, who offered him their direct allegiance. But the old count of Flanders, Guy Dampierre, had the support of the gildsmen. The Flemish militias, pikemen and crossbowmen mobilized by the communes, utterly routed over-confident French knights at the Battle of the Spurs at Courtrai in 1302. As their reward, the communes exacted greater liberties from the count.

Jacob van Artevelde, a brewer from Ghent and political leader of his commune, negotiated an alliance of several Flemish towns – Bruges, Ypres, Antwerp, and Ghent – to proclaim armed neutrality in the war between France and England that resumed in 1345 but also concluded a commercial treaty with England to assure the supply of wool and grain. The count, Louis Nevers, loyal to his obligation to his suzerain, was defeated when he moved against the allied communes and was forced to recognize their autonomy.

The autonomy movement spread outside Flanders to towns in other parts of the Netherlands, but, ultimately, neutrality was impossible to sustain and the communes joined in a formal alliance with England, pledging their allegiance to Edward III who claimed the crown of France. The struggle of the communes to defend their autonomy became a theatre in the Hundred Years War. In 1382, the French defeated the communes at the battle of Roosebeke and restored the authority of the count of Flanders over them.

### **The Burgundian Period**

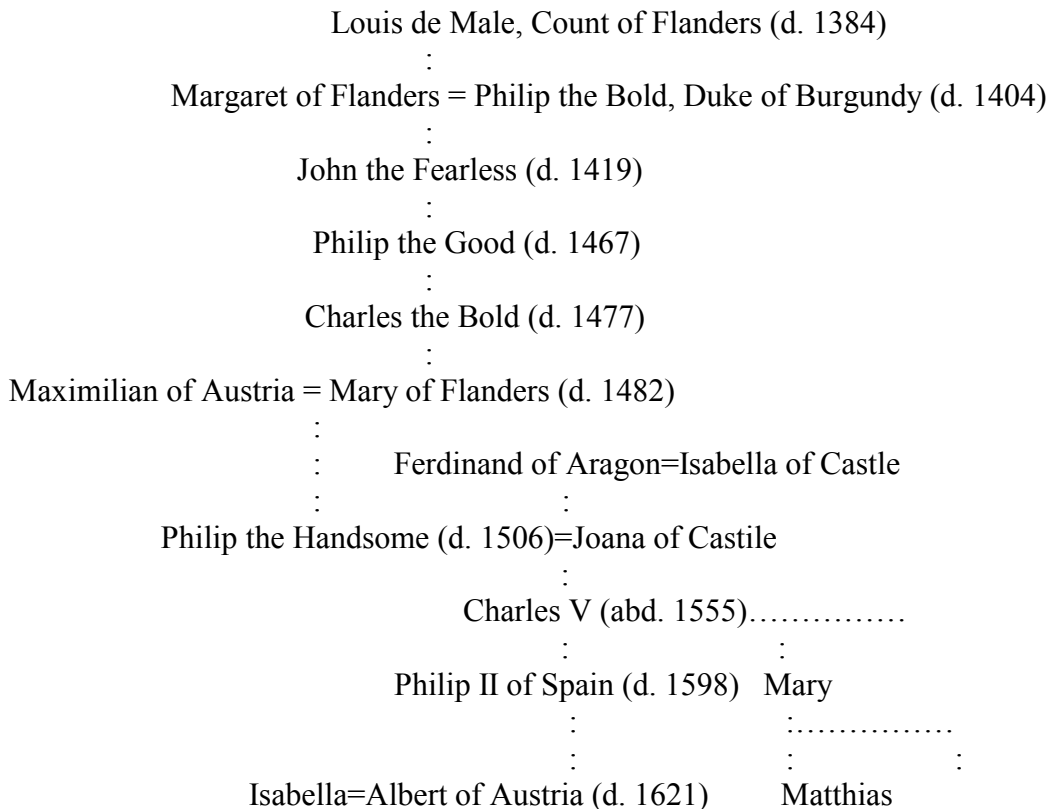

Two years later, Count Louis de Male, died, leaving as heir his daughter, Margaret, whose husband Philip the Bold, the Valois duke of Burgundy, was welcomed by the Estates as count of Flanders, thus uniting two of the richest areas in late medieval Europe. The Burgundian period gave Flanders a line of four strong rulers who, over nearly a century, acquired title to other Netherlandish states. Although they never bore a royal title, the count-dukes – Philip, John the Fearless, Philip the Good, and Charles the Bold -- had wealth, power, and prestige greater than that of all but a few kings.

The Burgundian period was the “golden age” of Flemish art. Its patronage was bourgeois, not aristocratic, and demanded an unrelentingly exact realism that featured bright colors made possible by the innovative use of oil-based pigments. In a violent world confronted by plague, war, and doubt that had strained the imagination, the Flemish “primitives,” so-called, depended on literalness in order to be seen.

Charles the Bold was killed at Nancy in 1477 in battle with the Swiss. The Estates sanctioned the marriage of Mary, his daughter and heir to the Netherlands and Burgundy, to Maximilian, heir to the Habsburg realms – Austria, Bohemia, Lombardy, and more --and the title of Holy Roman Emperor. Their son Philip the Handsome was married to Joana, daughter of Isabella of Castile and Ferdinand of Aragon, through whom their son Charles (1500-1558) inherited

the Spanish throne and colonial empire. Charles was born in Ghent and raised speaking the languages of Flanders. As Charles V, he became emperor and claimant to the Burgundian and Habsburg inheritances. His was a dominion greater even than Charlemagne's.

### Succession of the Houses of Flanders-Burgundy-Habsburg in the Low Countries

### Questions/Discussion

Consider the legacy of Romanization in the Low Countries. Did it survive the fall of the Roman Empire in that region? How?

Relate linguistic differences in the Low Countries to the events of the 4<sup>th</sup> and 5<sup>th</sup> centuries.

What effect did Carolingian dynastic practices have on European history in the 9<sup>th</sup> century – and thereafter?

Describe and compare the political connections in the Middle Ages between the Low Countries and France, Germany, and England.

How was feudalism responsible for the delineation of distinct political units in the Low Countries?

Discuss the conflict of interests among the nobility and in the towns arising from competing allegiances to local sovereigns and their suzerains.

Discuss the composition and function of the estates-general in the Netherlandish states. How “representative” were they?

Discuss and critique the Pirenne Thesis which argues that the growth of trade was the exclusive cause for the reinvigoration of urban life in the Low Countries in the Middle Ages.

Describe class divisions in Netherlandish towns.

Cite some reasons for the decline of urban “democracies” in the Low Countries from the 14<sup>th</sup> to 16<sup>th</sup> century.

Account for the rise and decline of the Valois dukes of Burgundy in the Low Countries.

### **The Age of Charles V**

The 16<sup>th</sup> century was absolutely decisive in the history of the Low Countries. The total population of the provinces in the region in 1500 was about two million, one-fourth of which was in Flanders and another fourth in Brabant. Holland had a population of about 250,000, more than half of it living in 18 incorporated cities. About 40% of the population of the southern Netherlands was urban as well.

Charles, who would eventually preside over a world empire, came of age as duke of Burgundy in 1515 and assumed the various titles of the Netherlandish states. He intended to bind the 17 states of the Habsburg Netherlands together constitutionally within the *Burgundian Circle*. Burghers in Holland wanted strong government to protect their carrying trade and approved the plan. Cities in Flanders, however, and the landed nobility there were more jealous of their ancient liberties. When Bruges and Ghent resisted, their privileges were revoked.

Like the Burgundian dukes who preceded him, Charles relied on *stadtholders*, appointed in each state to serve as his viceroy and as military commander. The stadtholders were often drawn from a corps of professional administrators. Among them were the counts of Breda in Brabant, who were from a branch of the German house of Nassau.

In 1543, the Netherlandish states were joined formally under a single constitution, called the *Great Privilege*. Each retained its own provincial government, directed by a stadtholder, and provincial estates, but they were under the supervision of a “central” government in Brussels. Hereditary succession was confirmed in all of them, so that they could not in future be divided among heirs.

Then, in 1555, Charles V – emperor, king, archduke, duke, count, and holder of many other titles – abdicated them all and retired to a monastery. He divided the vast Habsburg empire between his brother Ferdinand, who received the dynasty’s German possessions along with

the imperial title, and his son Philip (1527-1598), who became king of Spain as Philip II and received the Habsburg possessions in Italy and the *Burgundian Inheritance*, including the Netherlands.

### **The Reformation**

Despite the decay of religious institutions, there was a tradition of popular piety and prophetic mysticism in the Netherlands in the late Middle Ages. Netherlandish clerics were prominent in the Conciliar Movement, intended to reform the administration of the Church through the regular meeting of general councils of its bishops. The Brethren of the Common Life, a lay religious order, promoted reform through education. One of their students, Erasmus of Rotterdam (1466-1536), perhaps the most prominent scholar of his time, sought to put humanistic studies at the service of the renewal of the Church from within. The Netherlandish artists Hieronymus Bosch and Pieter Brueghel depict the physical and psychological turmoil of the period in their paintings.

The teachings of the French Protestant reformer John Calvin (1509-1564) found an early and receptive audience in Wallonia and among the burghers of Antwerp, who carried his message to the northern Netherlands, often as refugees from Spanish persecution. By the end of the 16<sup>th</sup> century, few towns of any size in Holland were without a *Vaalsekerke* (Walloon Church). The clarity, certainty, and absence of ambiguity in Calvin's acceptance of predestination and justification by faith appealed to tough-minded, business-like citizens of the Netherlandish towns who embraced its spiritual cost-effectiveness.

### **The Dutch Revolt**

The beginnings of the "Dutch Revolt," the 80-year War of Independence fought in the Netherlands against Spain, coincided with the introduction of the Protestant Reformation and the consequent reaction of the Catholic Counter-Reformation. Philip II stayed in the Netherlands only a short time after his accession there. He returned Spain in 1559 and never left it again. He appointed his half-sister Margaret of Parma to be his governor-general in Brussels, but it was Philip who pronounced the policies from Spain that his viceroy was expected to enforce in the Netherlands. Whatever he might have imposed on his subjects there, often from a distant court in Germany or Spain, Charles V was at least recognized as Netherlandish. Philip II was a Spaniard.

From his court in Spain, Philip II took four initiatives in the Netherlands that alienated most of his subjects, regardless of class or religion. He laid out a plan for further consolidating the Netherlands and integrating the region directly into the Spanish imperial system, including control of its trade. This required a substantial reduction of the autonomy of the town councils and the provincial estates, followed by the introduction of a system of regular taxation that would yield revenues without having to seek their advice and consent. Finally, he introduced the Inquisition into the Netherlands to stamp out Calvinism. Finally, a large

Spanish army was dispatched to defend the Netherlands from France – and to enforce the king’s will.

It was Spanish encroachment on local liberties, not religion, that was the foremost concern of the Estates-General that met to reject Philip II’s initiatives. The protest was led by the League of Magnates, including the counts Egmond and Horn, who were Catholics, and William, called “the Silent,” the stadtholder of Holland, Zeeland, and Utrecht.

William the Silent (1533-1584) was the scion of the house of Nassau. Born in Germany, he was count of Nassau-Dillenburg, inherited the county of Breda from the Netherlandish branch of the house and the principality of Orange, an imperial enclave in southern France, from another member of his multi-faceted family. Raised a Lutheran in Germany, he became a Catholic to accept Charles V’s commission to serve him in the Netherlands. Philip II conferred the stadtholderships on him in 1559. William the Silent was a successful *politique* for whom religious commitment in those fractious times served political expediency.

As Spanish attempts to enforce religious conformity increased, Calvinists in Antwerp and other towns reacted by sacking churches and religious houses with iconoclastic fury. Town officials stood by as mobs destroyed stained glass, statues, and paintings. In 1566, the League of Magnates presented the *Request* to Philip II to withdraw the Inquisition from the Netherlands and repeal the edicts against heresy. Philip responded by sending the duke of Alva as captain-general to reassert by military means both Catholic orthodoxy and his own authority in the Netherlands. Egmond and Horn were arrested by Alva and executed at the orders of the Council of Blood. William escaped to Holland and raised support there and in Zeeland. He recruited initially from two groups: from the Calvinist burghers, who, although still a minority in Holland’s cities, had at their disposal the town militias, and from the *gueux*, or “sea beggars,” fishermen, merchant seamen, and sometime pirates from Zeeland. He trusted them because they were willing to fight the Spaniards, and they followed him because they recognized in the stadtholder a soldier who could lead the resistance to Spain. William the Silent thus became defender of local liberties and the leader of the Calvinist cause in Holland and the Dutch revolt against Spain that would continue as the *Eighty Years War*. But Dutch Calvinists were iconoclasts and the *gueux* were pirates, and, eventually, because of his allies, William lost the confidence of Catholic magnates and many of the landed nobles towns in the south.

For 15 years (1566-1581), terms for peace, not independence, was the issue between William the Silent and Philip II, who was recognized as legitimate ruler even in Holland and Zeeland. All attempts at a truce failed until 1577, when an agreement on an armistice and a formal union of states was reached at the *Pacification of Ghent*. The armistice set the stage for the *Union of Brussels* the following year. Its founding document referred to the Netherlands, south and north, Catholic and Protestant, as the “common fatherland” of its people. Spanish troops, who had caused havoc by their mutinies, were paid off and prepared to return home.

The Estates invited Matthias of Austria to replace his and Philip II’s uncle, Don Juan of Austria, the victor of Lepanto, as governor. Matthias, who was 20 years old, was a younger son of the heir to the Habsburg titles in Germany. Styled “Defender of the Liberties of the

Netherlands,” the task before him was to mediate the quarrel between the Estates and Spain and to counteract the influence of William the Silent, but no settlement was possible without cooperation between the largely Catholic nobility and the now Calvinist stadtholder.

In the settlement, Catholicism was recognized everywhere in the Netherlands. Otherwise, the issue of religious toleration was left open in the southern provinces. Protestants were not satisfied with an understanding that restricted Protestantism anywhere. As the religious issue became more sharply defined, the rift opened more widely between Catholics and Protestants.

Holland and Zeeland, where William had been reconfirmed as stadtholder and captain-general by Matthias, withdrew from the Brussels Union, and, in 1579, two rival leagues were formed. In the northern Netherlands, both Protestants and Catholics adhered to the *Union of Utrecht*, pledging to resist the Habsburgs, while the estates of southern provinces joined the Catholic *Union of Arras*, submitting an appeal to Philip II to defend the Church in the Netherlands. Matthias left the Netherlands. In 1608, he would become Holy Roman Emperor and the disputed succession to imperial lands after his death, in 1618, provided a motive for the Thirty Years War.

The formation of the rival unions and the demise of the short-lived Brussels Union, whose constitution had spoken of a “common fatherland,” marked the definitive division of the Low Countries. The southern and northern Netherlands would thereafter develop in different directions.

In 1581, the States-General of the Utrecht Union repudiated Philip II, creating the *United Provinces*. Spanish troops moved to occupy the fortresses they had recently abandoned as a base for the conquest of the northern Netherlands. It was a task that even the large and splendid Spanish army could not accomplish. Nor could the Dutch expel the Spaniards from the south, where they always stumbled on the unwillingness of the Catholic people to rally to Calvinist rebels.

Finding legitimacy was a problem for the United Provinces too. It was a republic, unable to secure recognition even from its ally, England. The search to recruit a prince failed to come up with a suitable candidate. In practice, however, the government of the republic was a disguised monarchy under the rule of the stadtholder, William the Silent. When William was assassinated at Delft in 1584, his brother Maurice was elected stadtholder and captain-general to succeed him.

### **Questions/Discussion**

Assess the contribution of Charles V to the unity of the Netherlands or his blame for its disunity.

What was the role of the office of *stadtholder*? How did it compare with the office of the Frankish *mayors of the palace*?

What religious trends were evident in the Low Countries in the 14<sup>th</sup>-16<sup>th</sup> centuries that anticipated the Protestant Reformation?

Give some reasons why Calvinism might have been popular in the Netherlands. Did the belief form the temperament of its adherents, or did the temperament of the Netherlanders encourage its acceptance?

How did the religious climate in the northern Netherlands differ from that in the southern Netherlands? How important were the differences in preventing the realization of a “common fatherland” in the Netherlands?

What were the principal factors contributing to the Dutch Revolt? Did the same factors determine the progress and resolution of the conflict? To what extent and why did the southern Netherlands remain loyal?

How did William the Silent select his allies in the struggle against Spain?

Cite some advantages of prolonging the wars with Spain for the United Provinces. What was the importance of Hugo Grotius to the Dutch war effort?

What were the limits of religious tolerance in the United Provinces? Were they imposed mostly for theological reasons or were they essentially political in nature?

## **The Golden Age**

The war with Spain continued with periodic English and French interventions, the battle lines flowing back and forth with repeated campaigns and sieges. The Dutch captured northern Brabant and Limburg, a largely Catholic area organized as *The Generality*, an occupied dependency administered by the States-General of the United Provinces in which they were not represented. At sea, the long arm of Dutch naval power harried the Spanish merchant fleet, cut lines of communication, and attacked Spanish and Portuguese colonies. Partly due to French mediation, a 12-year truce was concluded in 1609 that preserved the *status quo* in the Netherlands for its duration.

In 1598, Philip II handed over title to the whole of the Netherlands to his daughter Isabella and her husband-to-be and cousin the Habsburg archduke Albert of Austria as independent sovereigns, not as the agents of Spain. An autonomous Netherlands under Habsburg rule was proposed as a solution by which the south and north could be reconciled and reunited. The consolidation of Catholicism in the southern Netherlands during the years of the truce, particularly under the influence of the Jesuits on education and the intellectual life of the country, discouraged any rapprochement with the Protestant north. Isabella and Albert were childless, and, on the archduke's death in 1621, the southern Netherlands reverted to Spain.

The truce opened the opportunity for political dissent in the United Provinces that was muted when the country was threatened by invasion, particularly opposition the ascendancy of the

*House of Orange.* The estates of each of the Dutch provinces elected a stadtholder. In Holland and Zeeland, the office had passed without debate from William to Maurice as head of the House of Orange. Maurice – or another member or supporter of the family -- was elected in other provinces as well. Each province retained its traditional estates that chose parliamentary leaders often drawn into conflict with the stadtholder. The constitutional relationship between stadtholder and estates was not always clear or consistent from province-to-province.

The estates of Holland that assembled in The Hague was typical. The Noble Great Mighty Lords Estates of Holland and West Frisia, as it was styled, was composed of 19 delegations, one representing the estate of the landed nobility and others sent by the 18 cities in Holland. (Before 1567, a twentieth estate had represented the Catholic bishops and clergy.) Each estate was led by an elected *pensioner*, and the collective body of estates was presided over by the *Grand Pensioner* chosen from their number, whose job it was to work out the sense of the estates on an issue before them and devise a resolution that could be approved by a unanimous vote. The estates of the several provinces might convene periodically in the *States-General* of the United Provinces.

After the death of William the Silent, a struggle for supremacy in Holland developed between the stadtholder, expressing a monarchical tendency, and the pensioners, upholding the republican principle. The stadtholder was accused of using the resources of Holland to protect the interests of the United Provinces at the expense of – and against the interests of Holland. Within the Holland Estates, the landed nobility and the city of Amsterdam supported the prerogatives of the stadtholder and the House of Orange against the opposition of the other city estates, led by the grand pensioner Jacob van Oldenbarneveldt. In the States-General, Holland and Zeeland were often aligned against the opposition of the other provinces. From province to province, the landed classes were opposed by the urban patricians and Orangists by republicans. These social and political conflicts, in differing combinations, were fought in every town and province.

The political conflict was further complicated by religious issues. The United Provinces was unique in its commitment to religious tolerance. Jews and Protestants of many persuasions found welcome and tolerance there. Catholics were tolerated as well, if they kept a low profile. But similar open-mindedness was not always present within the Calvinist community itself. In its quest for doctrinal certitude, Calvinism was uneasy with ambiguity and contradiction and found many ways to punish dissent within its ranks.

Jacob Hermannzen, a member of the faculty at Leiden University, who was known as *Arminius*, attempted to confront the apparent contradiction between the divine sovereignty that assumed predestination and the human freedom that presumed the existence of free will. Arminius taught that God wills all to be saved but allows man to exercise free will in accepting or rejecting the grace necessary for salvation. There were evident political ramifications to his teaching. Protesting against the overlapping ecclesiastical and political establishments, Arminius called for a “free church in a free republic.” His followers, known as the *Remonstrants*, appealed to the States-General with the support of van Oldenbarneveldt to end state oversight of the church.

Maurice had no interest in the theological aspects of the debate, but he rejected the Remonstrants on political grounds and ordered ministers to keep silent in their pulpits on the issues raised by Arminius. Many Remonstrants fled into exile. Disorder broke out in some Dutch cities, and van Oldenbarneveldt authorized town councils to mobilize the local militias. The grand pensioner, who was accused of undermining the authority of the stadtholder, was arrested and hanged for treason in 1619.

The stadtholder, freed from van Oldenbarneveldt's opposition, did not seek to renew the truce in 1621, and the wars resumed. The conflict had been profitable for the Dutch. Treasure passed through Spain as if through a sieve to finance the war in the Netherlands, much of it into Dutch coffers. Piracy against enemy shipping in time of war and the blockade of rival ports in the southern Netherlands was given legal justification by Hugo Grotius in *The Law of the Sea*. Dutch colonial expansion in Asia (Ceylon, Malaya, the East Indies), the Cape of Good Hope, the West Indies, Brazil and Surinam, and in North America often came at the expense of European enemies and fuelled the enormous prosperity of the United Provinces.

On his death in 1628, Maurice was succeeded as stadtholder by his half-brother Frederick Henry, a tolerant man who allowed the Remonstrants to return to Holland. He ruled clearly as a monarch from his illustrious court in The Hague, and his family concluded a royal marriage in England. Also a man of considerable good taste, the stadtholder was a patron of music, scholarship, architecture, and, especially, art. The art of the Golden Age, however, was not aristocratic but reflected the bourgeois culture of urban patrician patrons and was thoroughly secular. By contrast, the high baroque art of the Spanish Netherlands was ecclesiastical and aristocratic and reflected a Catholic sensibility.

Frederick Henry determined to end the wars. The Dutch were signatories to the *Treaties of Westphalia* in 1648 and made peace with Spain in 1656, concluding the *Eighty Years War*. Dutch independence was formally recognized, and the United Provinces were confirmed in the possession of northern Brabant and parts of Limburg. Spain kept Antwerp, but the Scheldt was closed to traffic to its port. The Treaty of the Pyrennes that ended the war between Spain and France in 1659 stripped Thionville and Montmedy from Spanish Luxembourg. Spain also lost the province of Artois to France.

Although a governor was appointed by Madrid to serve as viceroy in the Spanish Netherlands, the provinces and towns were administered by their traditional estates and councils with a considerable degree of local autonomy. Members of noble families were in service to the Habsburgs in Spain. Flemish and Walloon troops fought with distinction in the Spanish army in the Netherlands and in others theatres. But, in contrast with the prosperity of the United Provinces, the economy of the Spanish Netherlands was generally depressed through the 17<sup>th</sup> century, and the vigor of urban life declined.

Frederick Henry died before the conclusion of the Westphalia treaties. His son William succeeded to all of his offices as in an hereditary monarchy. The wars concluded, Holland wanted to reduce the size of the army, which it largely financed. The stadtholder refused to

accept the decision of the Holland Estates and undertook a military occupation of the province. Confrontation between the dynasty and the republic was averted only because of his death from smallpox before the birth of his son, who would also be named William (later William III).

Holland and all but two of the other united provinces were without stadtholders from 1650-1672. (Friesland and Groningen retained the stadtholdership under a cadet branch of the House of Orange.) Republicanism was ascendant during that period. Political power in the United Provinces resided with patricians in the States-General whose leading figure was the grand pensioner of Holland, Jan de Witt.

The basis of political power lay in the governing councils of the Dutch towns. Councilors or *regents* were typically elected for life from among the wealthiest individuals in the town on the theory that men of achievement were best able to govern in the interest of the town as a whole. They agreed that government must respect local liberties, both as a matter of principle and because local freedom contributed to the building of a more prosperous society. Rule by the wealthy led to government that was limited in scope and that sought to create conditions for the further growth of wealth.

During the 17<sup>th</sup> century, the Dutch developed a global trading empire that put the United Provinces in the first rank of European powers and that laid the foundations for a global economy. The Dutch were quintessential “middle men” who established multilateral trade networks in which they were carriers and warehousemen for a variety of goods whose origins and final destinations lay outside the Netherlands. The storehouses of Amsterdam and Rotterdam were filled with grain from the Baltic, timber from Norway, coals from Newcastle, copperware from Hamburg, canvas from Russia, Swedish pitch and tar, wines from France and Germany, soap from Marseilles, English leather and lead, olive oil and honey from Spain. Pasta was made in Holland from Baltic wheat, brought to Italy in Dutch ships, and exchanged there for the marble that was used to build the stately homes of Amsterdam.

These trade relations were solidified by a complex set of commercial arrangements and political ties. The Dutch controlled trade in the Baltic and, to protect that dominance, used diplomatic influence and naval power to assure that neither Sweden nor Denmark gained a decisive advantage over the other in their frequent wars that would upset the balance of power in the region. Dutch banks made loans to the king of Sweden, who put up Swedish copper mines as security, and invested in Danish agriculture. Dutch investors purchased mining and timber concessions in Sweden and Norway. Dutch interests extracted, refined, and shipped all of the sulfur produced in Iceland. Exports of caviar, tar, hemp, salmon, and wool from Russia were all Dutch monopolies. In Poland, the Dutch operated the Mint, giving them control over that country’s currency.

The greatest achievements of the Dutch commercial empire were made, however, by the East India Company, formed in 1602 as a government-sanctioned monopoly financed by private investors who traded shares in the company on the *bourse* (stock market). Directors of the East India Company quickly understood that there were great profits to be made by

organizing trade in Asia by establishing a permanent presence there, building warehouses and stations at ports of call, rather than by merely sponsoring trading argosies that shuttled between Asian and European ports. The company's early voyages had acquired tea and spices in exchange for gold and silver, but this pattern was soon replaced with a multilateral system of trade relations that capitalized on price spreads such as nutmeg that sold in India for thirty times what it cost in the *Spice Islands* of the East Indies. The Japanese, though not interested in European goods, were ready to trade copper and gold for silk, tea, and porcelain from China, cotton cloth, sugar, and opium from India, cinnamon, pearls, and nuts from Ceylon, hardwoods from Siam, and spices from the East Indies, products that found markets in Europe as well. Having understood each of the markets in which it was involved, the East India Company developed a pattern of overlapping triangular trade in Asia. Buying and selling at each port of call, the company sped up its turnover and maximized its profits.

A large portion of the domestic Dutch economy also relied on overseas trade. Shipbuilding and ancillary industries that employed sail-makers, rope-makers, lumber-cutters, smiths, and carpenters flourished in the coastal towns of Holland and Zeeland. Many goods shipped to warehouses in Amsterdam, Rotterdam, and other towns were processed there in workshops, cutting-rooms, mills, refineries, breweries, and distilleries before being shipped on to their destinations. The Dutch became leaders in the dyeing and dressing of cloth, processes that accounted for nearly half of the price of finished woollens. The tile-making industry was developed to compete with Portuguese tiles. Some towns became identified with specialized industries – clothmaking and weaving in Leiden, silk and lace in Haarlem, cheese in Gouda, tobacco in Utrecht, china and tiles in Delft, gin in Schiedam. Warehousing and insurance for cargoes contributed as much to the Dutch economy as the trade itself. Credit banking developed to handle the many currencies and notes of obligation involved in multilateral trade. Amsterdam's private banking industry created an international market in stock and commodities futures.

In the process of creating a global trading network, the Netherlands also became a colonial power whose empire at its height controlled a million square miles of territory strategically located to advance its commercial interests. For the most part, the Dutch were content to limit their contacts overseas to trade, usually operating through treaties with local rulers. However, they were also quite prepared to exert direct political and military control when it was necessary or more convenient to do so. The East India Company established outposts under its control at the Cape of Good Hope and in India. It also extended direct control over Java in order to further the intensive cultivation of coffee.

In 1624, the newly founded West India Company built the first in a series of forts as a base for fur trading along the Hudson, Delaware, and Connecticut rivers in what became the colony of *New Netherlands* in North America. The town of New Amsterdam grew up around the fort and trading post situated at the tip of Manhattan Island and became a free port and the administrative center for the colony. The company granted titles to “plantations” along the Hudson to tenants. In 1655, the Dutch seized the small Swedish colony at the mouth of the Delaware River. Earlier, in 1630, an expedition dispatched by the West India Company captured Pernambuco, the center of the rich sugar-growing district in northern Brazil and planted a Dutch colony there that was governed by a member of the House of Orange. The

company also set up stations on the West African coast for the embarkation of slaves to work on its sugar plantations in colonies in the West Indies and Surinam.

The *Golden Age* was not a peaceful period. After the peace with Spain, France became the chief threat to the United Provinces. Commercial rivalry drew the Dutch into two naval wars with England (1652-1654, 1664-1672). The Portuguese drove the Dutch out of Brazil in 1654, and, in 1664, the English took the ill-governed New Netherlands colony, renaming it New York. More ominously, Louis XIV began a series of “wars of devolution” in the 1660s intended to extend the borders of France to a natural frontier on the Rhine. In 1672, the French took Utrecht and, then, occupied large parts of the country outside Holland and Zeeland.

### **William III**

Under popular pressure, the States-General surrendered power to the young William of Orange (1648-1702) and named him stadtholder in 1672. De Witt was murdered in The Hague by vengeful Orangists. William concluded an alliance with England, Spain, and Austria that brought a temporary end to the wars and French withdrawal from the Netherlands.

The stadtholder William, who was the nephew of Charles II, contracted a marriage with his English cousin Mary. When her father, James II, was deposed by Parliament in the *Glorious Revolution* of 1688, the couple became the joint monarchs of England as William III and Mary II. William defeated James in Ireland with an army that included Dutch troops, but his main concern as the king of an adopted country was largely to obtain the resources and manpower from England to defend the Netherlands against France.

The War of the Spanish Succession (1701-1713) was the last of Louis XIV’s devolution wars. It was also the last time that the Netherlands would act as a great power in Europe. The direct line of the counts of Breda beginning with William the Silent and his brother Maurice ended in the fourth generation when William III died without an heir in 1702. No successor to the stadtholdership of Holland was elected, and the grand pensioner was again recognized as chief executive of the United Provinces to conduct the war and to conclude the *Peace of Utrecht* in 1713. Louis XIV achieved in war his aim of putting his Bourbon grandson on the Spanish throne, but the southern Netherlands remained Habsburg, passing to the Austrian branch of the family.

### **Questions/Discussion**

Characterize the aims of Dutch colonial expansion in the 17<sup>th</sup> century.

Explain the economic decline of the Spanish Netherlands in the 17<sup>th</sup> century. Was Spanish rule there a tyranny?

Explain the differences in artistic styles in the United Provinces and the Spanish Netherlands in the 17<sup>th</sup> century.

Was/were the United Provinces a republic or a monarchy? Is it more accurate to use the singular or the plural verb with reference to the United Provinces?

Give reasons for the on-going conflict between the *stadtholder* and Estates and describe political alignments in the United Provinces.

Why was the *Golden Age* “golden”?

What was Louis XIV attempting to achieve in the wards of devolution? Why was the English alliance so important to William III?

What were the consequences of the War of Spanish Succession for the Low Countries?

### **The Low Countries in the Eighteenth Century**

The United Provinces successfully defended its independence in the wars with France but emerged from the last of them exhausted and weakened. The merchant fleet had suffered huge losses. The treasury was empty and the economy stagnant. In the years following the war, the army and navy were neglected. The ruling oligarchy in the States-General was abusive of power. The United Provinces was still a rich country but wealth was poorly distributed among the provinces. Its commercial influence declined in relation to England and France, and, in the 18<sup>th</sup> century, the country lost its status as a first-class power.

The United Provinces had the right under the Utrecht treaty to garrison the “barrier fortresses” in the Austrian Netherlands in the event that war there with France threatened its security. The Dutch succeeded in remaining neutral, however, during the War of Austrian Succession (1740-1748) and the Seven Years War (1756-1763) that were fought on Belgian soil, the “cockpit of Europe.” Belgian interests, it would be pointed out, were sacrificed to those of the welfare of Europe.

Austria did not dominate the 18<sup>th</sup>-century Habsburg provinces in the Low Countries. The connection between them was that they shared the same sovereign. The Austrian emperor-archduke was represented in Brussels by a governor, while a minister from Brussels, representing the estates, had a seat on the imperial cabinet in Vienna. The provincial estates and city councils exercised a large degree of autonomy, and the Austrian Netherlands was, in practice, a decentralized collection of separate provincial and local jurisdictions operating independently of one another. It was an untidy but generally popular system.

The archduchess Maria Theresa (1717-1780) shared that popularity among her Belgian subjects. She patronized the Church and education lavishly. Belgium became a site for the beginning of the modern *Industrial Revolution*. Mills and mines in Wallonia, the energy and

entrepreneurship of its people, and state subsidies provided the basis for economic growth. Efforts to open overseas trade were thwarted by the Dutch, however.

Joseph II (1741-1792), who succeeded his mother, was an “enlightened despot,” a rationalizer and a centralizer of institutions annoyed by what to his logical mindset was the medieval chaos of Netherlandish institutions. At one point, he tried to work out a deal to transfer Belgium to France in exchange for permission to annex Bavaria to Austria. His empire-wide *Patent of Toleration* (1781) was deeply offensive to his Belgian subjects, for some because it granted recognition to Protestants but to others because it infringed on the liberties of local institutions. Religious houses were suppressed, seminaries closed, and schools secularized. Traditional institutions, courts, and local administration were reformed without local consultation. Taxes were imposed from Vienna. Commerce was regulated in onerous ways. Liberals and traditionalists united against what they saw as the destruction of their country’s autonomy.

When, in 1789, the Brabant Estates refused to consent to taxation, the Austrian army entered Brussels, setting off a general uprising that forced an Austrian withdrawal. In 1790, the rebellious estates produced a constitution for the “United States of Belgium.” Not all the provinces were equally enthusiastic, however. The Austrian army returned the following year and scattered the rebels, but the new emperor, Leopold II (1747-1792), shelved the reforms they had resisted.

The French occupied the Austrian Netherlands in 1792 after defeating the Austrian army at the battle of Jamappes. In 1795, the Belgian provinces, including Liege and Luxembourg, were annexed by France, largely to the indifference of their people. In Luxembourg, however, there was an uprising, the *Kloppelkieg*, in protest against the imposition of military conscription.

In the United Provinces, the stadtholdership, vacant in Holland and Zeeland, had continued as before in Friesland and Groningen in the hands of a branch of the Orange-Nassau family. In 1747, William (IV), the heir of that line, was elected stadtholder in all the provinces to counter a perceived threat from France. He also had a mandate to introduce political reforms. On William’s death in 1751, his three-year old son, also William (V), was recognized as “hereditary stadtholder” and the States-General assigned to act as regent during his minority. The United Provinces was clearly now a republic that had a “royal” family.

Traditionally, the Orangists were drawn from all classes – except from a patrician oligarchy that was profoundly republican. Shopkeepers and artisans of the lower middle-class, for example, had regarded the House of Orange as its protector against the patrician oligarchy. As institutional paralysis set in, however, even these groups became alienated by the inability of the stadtholder to secure reforms.

The neo-republican and democratic movement in the United Provinces gained momentum at the time of the American Revolution. Inspired by the Americans, instructed by English political ideas, and, later, sympathetic to the French Revolution, the *Patriots* called for a re-

volution, in the Lockean sense, to restore the republican and “democratic” customs that they accused the stadtholder of having nullified.

### **The Napoleonic Era**

The Dutch offered no resistance to French occupation in 1795. Delegates to a constitutional convention divided along political lines between radical unitarians and moderate federalists. The French settled the debate in favor of the *Batavian Republic*, modeled on the *Directory* in France and presided over by a committee chaired by the *dictator-pensioner*, Rutger van Schimmelpennick. It was an efficient government, federal in form but unitary in practice and centralized to a degree previously unimaginable, that eventually adopted the Napoleonic Code in Dutch courts. In 1806, Napoleon created the *Kingdom of Holland* and named his brother Louis as its king. But, in 1810, when Louis began putting Dutch interests above his brother’s imperial designs, Napoleon annexed the northern Netherlands to France.

The Napoleonic Wars were costly for the Netherlands. Huge resources were expended on Napoleon’s war efforts. The British occupied Dutch colonies and trading stations, most of which were returned in 1815 but some – Ceylon and the Cape of Good Hope – were lost permanently. Trade was cut off by the British blockade and a large part of the merchant fleet sunk or seized. After Napoleon’s defeat at the battle of Leipzig in 1813, Orangists revolted in Holland. Dutch and Belgian troops, many of them veterans of Napoleon’s army, fought on the side of the Allies at Waterloo under the command of William, Prince of Orange.

Although the French interlude in the governance of the Netherlands and Belgium was brief, it left permanent effects in the form of a centralized state. A single legal code applicable to all the provinces was developed, and the powers of local and provincial authorities were reduced. Development of a national tax code gave the central state its own resources for the first time, and also shifted the tax burden more equally among all citizens, away from the consumption taxes that had weighed heavily on the lower classes while leaving untouched the accumulated wealth of the privileged few. A system of universal education was adopted and the state set general standards to be met by public and private schools alike.

### **Questions/Discussion**

In what sense was the mood of the Austrian Netherlands “reactionary” in the 18<sup>th</sup> century? The United Provinces?

Explain the causes of the Brabant rising against the Austrians in 1789. Did it have any connection with the beginning of the Revolution in France?

Why did the Dutch submit so readily to French domination? What were some of the consequences of Dutch collaboration?

Discuss and compare the historical status of Napoleon in the histories of Belgium and the Netherlands.

## The United Netherlands

After Napoleon's defeat, the Allies brought the son of the last stadtholder back to the Netherlands to rule, not as stadtholder but as a sovereign prince – William I, King of the United Netherlands, under whom the northern and southern Netherlands would be rejoined. His kingdom was created by Britain for “the convenience of Europe,” but its creation was desired by neither the Dutch nor the Belgians. William himself actually hesitated to accept the royal title unless he understood that there had been a “popular” call for his return. He was sworn in before an “Assembly of Notables” in 1815, not crowned. The United Netherlands was a constitutional monarchy that had a written constitution providing for a centralized government and a national parliament, elected by very limited suffrage and, in which, the north and south had equal representation. It had dual capitals, the seat of government alternating between Amsterdam and Brussels. In practice, William circumvented parliament and typically governed by means of orders in council. The king was enabled to circumvent parliamentary control, in part, because his family’s wealth from its interests in the East Indies allowed him to live on his own.

In the reshaping of Europe at the *Congress of Vienna* (1815), the eastern third of Luxembourg was transferred to Prussia. The remainder was recognized as an independent grand-duchy in *personal union* with the king of the United Netherlands, although William I clearly treated the country as a province of his kingdom. Luxembourg, however, was formally a member of the German Confederation and the *Zollverein*, the German customs union. The great fortress of Luxembourg received a Prussian garrison that was quartered there until 1867.

Belgium and the Netherlands in the north were divided at this point by 250 years of history in which they had developed separately and differently in important areas – politically, economically, socially, and culturally. The northern Netherlands had a commercial and service-based economy that processed colonial goods for re-export. Domestic producers, including agriculture, were protected by restrictions on imports and colonial preferences. Belgium, by contrast, had an industrial economy whose export trade was oriented to competitive European markets. It was an emerging capitalist economy, eager to embrace free trade. Belgium produced food for the domestic market but relied on importing cheap food to feed its labor force. Belgian industry should have profited from exports to Dutch colonies, but the Dutch resisted intrusion into protected markets. The Dutch, worried about competition to their ports, also kept closed the Belgian port of Antwerp as it had been since the Eighty Years War.

Catholic and Protestant clergy alike opposed universal religious toleration and the secularization of education. The francophone elite there resented the recognition of Dutch as an official language in Flanders. Flemish-speakers in rural Flanders were reluctant to identify with the Dutch-speaking Protestant north. The Dutch clearly regarded Belgium as an extension of the Netherlands rather than as a partner. Belgians responded that, while the south accounted for two-thirds of the United Netherlands’ 5.5 million population, it shared equal representation with the north in the national parliament.

Smoldering grievances ignited in the streets of Brussels and Liege in 1830, inspired by the July Revolution in Paris. Elected officials set up a provisional government that cut Belgium's ties with the United Netherlands. Those leading the movement for separation were urban, middle-class, and French-speaking but were drawn from both liberal and traditionalist camps. Dutch troops dispatched to suppress the rebellion were driven out of Brussels by the local militia, but the Dutch commander of the fortress at Antwerp turned its guns on that city. France intervened the following year when the Dutch army threatened to invade Belgium.

The National Congress, elected after the proclamation of independence, ratified a constitution early in 1831, and, in June, elected Prince Leopold of Saxe-Coburg (1790-1865) to be *King of the Belgians*. Leopold's candidacy had been strongly promoted by Britain at a conference of the great powers in London that formally recognized Belgium's independence. As Lord Palmerston advised the conferees, "If Belgium did not exist, we would have to invent it." An Anglo-Belgian treaty of 1839 guaranteed Belgium's "perpetual neutrality."

William I refused to accept Belgium's independence and the break up of the United Netherlands. His recognition of it in 1839 was accompanied by his abdication. Many in the Netherlands welcomed both the end of the union and the departure of William I.

Luxembourg sent delegates to the Belgian National Congress in 1830, but the Prussian garrison held the fortress for the Dutch king. In 1839, the grand-duchy was partitioned, the French-speaking western portion joining Belgium and the remaining portion of the grand-duchy in the east continuing in personal union with the king of the Netherlands. Grand-ducal Luxembourg was granted a liberal constitution, allowing for a deliberative legislature, in 1848.

### **Questions/Discussion**

What were some of advantages and disadvantages for the Netherlands and for Belgium of the 15-year union?

Comment on Huizinga's contention that historical continuity in the Netherlands, north and south, had been irrevocably broken during the years of the Dutch Revolt and could not be restored.

Interpret Palmerston's dictum: "If Belgium did not exist, we would have to create it."

### **The Netherlands in the Nineteenth Century**

With the dissolution of the union with Belgium, the Netherlands experienced a resurgence of national sentiment, reflected in a literary revival, the ascendancy of liberal nationalism, and ferment within the Calvinist community. While fundamentalist orthodox Calvinists broke from the broad-based established Reformed Church, secularist liberals began redefining Dutch politics. Johan-Rudolf Thorbecke led the Liberal movement from 1849 to 1872 and

was prime minister during much of that period. He was also a leading force in adopting the liberal Constitution of 1849, which remains the Netherlands' basic constitutional document. The constitution provided for the direct election of the Second Chamber, or lower house of the States-General, which became a deliberative assembly to which government ministers were responsible. It extended suffrage and lifted disabilities on Catholics that had been in force since the 17<sup>th</sup> century. The constitution also spelled out the responsibility of state to provide education under secular auspices.

The constitutional reform brought a dramatic shift from ministries appointed by the king without reference to the legislature to ministries that required the confidence of parliamentary majorities. Thorbecke's governments were opposed by conservatives not reconciled to the new constitution and by orthodox Calvinists opposed to the extension of political rights to Catholics as well as by his personal rivals within the Liberal movement. His policies were supported by the Liberal mainstream, by moderate Calvinists, and by Catholics, who had very limited representation. The more the Liberals were able to extend suffrage, the greater were the number of Catholics who appeared on the voter rolls.

Representatives of the four "pillars," or *zuilen* – Liberal, Protestant, Catholic, and Socialist, that dominated Dutch politics by the end of the century were not initially organized as political parties but as "clubs," interest groups or associations of like-minded people. Thorbecke's Liberal constituency was largely urban and middle-class, drawn from business, professional, and property-owning circles. Within their ranks were both libertarians and social liberals. Although secular in their political ideology, most Liberals were at least nominally members of the established Calvinist church. Secularism and liberal Protestantism were not incompatible.

Protestant political "clubs" were populist and claimed to represent the "small people" in the countryside. They attracted the support of orthodox Calvinists opposed to the secularism of the Liberals, and they allied themselves with conservatives against such Liberal initiatives as the re-establishment of the Catholic hierarchy. The first genuine political party was the Protestant Anti-Revolutionary Party founded by Abraham Kuyper in 1878. Kuyper proposed progressive social programs that prompted the party's right-wing to bolt and form the Christian Historical Union. Their defection encouraged moderate Protestants to move from the Liberal to the Anti-Revolutionary Party.

The Catholics had no club or party until late in the 19<sup>th</sup> century. Although many were disenfranchised, they were a majority in some parts of the country and made up a large minority in the big cities. Those who could vote initially supported the Liberals because of the relief from disabilities they offered them in a Protestant-dominated system.

The trade union movement was established in the 1870-1880s by the separate pillars. The Catholic union was led by a priest, the Protestant union by a minister, and the socialist union by a former minister. The first socialist party was set up as the political arm of the socialist union in the 1890s. The socialist pillar was revolutionary, republican, and anti-clerical. In time, a struggle between social democrats and communists divided the movement.

The two biggest issues of the late-19<sup>th</sup> century were extension of the suffrage and control of education. The Liberals had sponsored reforms that extended voting rights to Catholics, the urban working-class, and Kuyper's "small people," all constituents of rival pillars. In 1887, the electorate was doubled in size, and, ultimately, the larger electorate worked to the disadvantage of the Liberals who had sponsored it.

The Constitution guaranteed freedom of education, but it recognized that the state, not the churches, had responsibility for inculcating "all Christian and Social virtues" in the schools. The Liberals wanted non-denominational secular education over which the state exercised a monopoly. The Protestants could not accept the idea of secular state-run schools teaching moral values, and the Catholics deserted the Liberals on the issue to support them.

After the 1887 election, the Anti-Revolutionaries and the Catholics formed a new government that enacted social legislation and provided subsidies to confessional schools, a system that continues in effect. The confessional parties regarded the Socialists as socially divisive because of their Marxist emphasis on the class struggle, but both maintained contact with them through the trade union movement. Socialists did not participate in government but their parliamentary support was accepted.

In 1896, the franchise was doubled again. Voting patterns were established that prevailed for the next 25 years. The Catholics regularly won 25-30% of the vote, the Protestant parties 20-25%, the Socialists 15-20%, and the Liberals, still the largest single party, 35-40%.

William II of Orange-Nassau, King of the Netherlands – and Grand Duke of Luxembourg – died in 1890 without leaving a male heir. Female succession was permitted in the Netherlands, where his daughter Wilhelmina succeeded to the throne, but not in Luxembourg at that time. Referring back to an 18<sup>th</sup>-century family pact, the *Nassau Settlement*, designed to meet such a circumstance, the head of another branch of the family, Adolph, Duke of Nassau-Weilburg and a Catholic, was designated as grand-duke and established a separate line of succession in Luxembourg.

### **Belgium in the Nineteenth Century**

Political developments in Belgium after independence in 1830 paralleled those in the Netherlands. Politically effective Belgians identified with one of three "pillars," or "spiritual families" – Liberal, Catholic, and Socialist – which also dictated social and professional associations. The Liberal party, founded in 1846, dominated Belgian politics until 1880s. Secular and anti-clerical, the Liberals favored a widened suffrage based on property qualifications and education, and also proposed to expand access to education in an exclusively state-supported school system. Representing a business-oriented urban middle-class constituency, they advocated an unimpeded market economy and free trade but also approved subsidies and public investment to support industrial development and infrastructure.

Catholic political organizations were approved by the hierarchy in the 1860s to lobby for a continuing Church role in education. A confessional political party was later established to promote Catholic education and to push for extension of voting rights, particularly to Dutch-speakers. Catholic politics had a very broad base, including support from all classes and in all regions of the country, although stronger in Flanders than in Wallonia. Catholic trade unions and business and agrarian associations supported the party, which, in turn, backed subsidies to protect smallholders and peasant farmers and public involvement in the economy to protect jobs and labor rights. The Catholic party was capable of winning parliamentary majorities from the mid-1880s until 1919 and led most coalition governments until 1999.

The Belgian Workers Party was organized in 1885 as an adjunct to the socialist trade union movement. It was a party of far left, stronger in Wallonia than in Flanders, radical rather than reformist, and called for public ownership and state intervention in the economy. The party proposed legislation for social welfare programs and employment security. The socialists cooperated with the Catholics in support on social reforms.

As in the Netherlands, extension of suffrage and reconciling the claims of secular and religious education were major issues. The Liberals were kept in power by middle-class electorate. Although the liberal constitutional reform of 1848 increased the voter rolls, smallholders, propertyless workers, and most of the Flemish countryside were largely excluded from them. Liberals were committed to further reforms that included the gradual expansion of the franchise in conjunction with the expansion of public education. The Catholics, who had organized initially to protect the role of the Church in education, campaigned for speedier enfranchisement to excluded classes. Enlarging the pool of voters invariably meant more Flemish and rural voters, which meant increased support for the Catholic party.

In office after 1884, Catholic-led governments extended suffrage to areas that further increased the party's base of support. Those governments also denied the state a monopoly in education and guaranteed the Church's continuing influence. The *libertie subsidie* (literally, subsidized "liberty") gave state funding to social institutions, including schools and hospitals, operated by organs of the "spiritual families," and entrusted them with responsibility for social welfare programs. The Church was the principal beneficiary of this policy. During a period of intense labor unrest and social strife, legislation was enacted regulating work-hours and child labor. In 1893, *compulsory* manhood suffrage was introduced, increasing the size of the electorate from 140,000 voters to 1.4 million in a single act. Plural voting (of up to three votes per person) was also allowed for those additionally qualified by education, taxable income and property, and family status. With the enfranchisement of rural and Flemish working-class masses, socially conscious Christian democrats, or *Daenists* (after the priest-politician Adolph Daens) gradually became the dominant faction within the Catholic "spiritual family," although not initially with the support of the Belgian hierarchy. Between 1894 and 1914, the Catholic party held at least two-thirds of the seats in the national legislature. During the same period, the Socialists overtook the Liberals as the second largest party and became leader of the opposition. Catholic governments won grudging Socialist support for social reforms inspired by papal encyclicals on the rights of workers, but the Catholic party opposed what it considered the divisive class conscious politics espoused by

the Socialists – as well as by middle-class Liberals. The Liberals, despite their anti-clericalism, allied themselves with the Catholics on many issues and, with Catholic backing, were successful in having *proportional representation* adopted in 1899.

In Belgium, there was another issue – language rights – that overlapped the others and became the most persistent concern of successive governments and a recurrent irritant to relations between French- and Dutch-speakers within each “spiritual family.” Although public business was conducted in Dutch in many Flemish cities, including Brussels, French had been the language of administration and justice in Belgium since the 16<sup>th</sup> century. The reintroduction of Dutch as the official language in Flanders in 1823 after an absence of 300 years compromised Walloon allegiance to the United Netherlands. After independence, Dutch was again downgraded in Flanders, where its use was restricted in education and prohibited in the courts. The use of French was the vehicle for upward social mobility and professional advancement. The families of the numerous Flemish migrants to Wallonia became French-speaking Walloons in the second generation. A nationalist movement, the Flemish Meeting Party, was formed in 1862 to protest conditions in Flanders and also to lobby for recognition of the Dutch language in that region. Bilingualism was introduced in Flanders with limited success in 1873 and Standard Dutch approved as an official language in Belgium in 1898. In practice, however, French retained primacy of place in the national government. It was the only language of command in the armed forces until after World War I, and restrictions on the use of Dutch in courts of law remained in force into the 1920s. Brussels, seat of the French-speaking Belgian government, had also become by the turn-of-the-century a predominantly French-speaking city whose administration was conducted in French.

Not only had Dutch disappeared from council chambers and courts in Belgium, it had also been abandoned as a vehicle for the expression of higher culture in literature. The revival of Dutch as a literary language in Flanders was the mission of the Flemish cultural hero Guido Gezelle (1830-1899). Priest, teacher, and poet from Bruges, Gezelle demonstrated the lyric qualities of his mother tongue and taught a generation of Flemish writers to take pride expressing themselves in it.

### **Colonial Enterprises**

The government of the Batavian Republic took over control of the assets of the corrupt and poorly managed East India Company in 1798. The company’s former territories, occupied by the British during the Napoleonic Wars, reverted to the Netherlands in 1815 as colonial possessions. The administration of Java, Sumatra, and the numerous island groups that comprised the Dutch East Indies was harsh and exploitative. (The excesses of Dutch colonialism in the East Indies were vividly described in the classic novel *Max Havelaar* (1860) by Edward Douwes Dekker, who published under the penname “Multatuli.”) In 1830, for example, the so-called “culture system” was imposed in an effort to graft an export-oriented agricultural economy on traditionally self-sufficient village communities. Land and labor were commandeered to produce commodities – coffee, sugar, indigo – that were delivered by farmers to the colonial government as taxes-in-kind for export to the

Netherlands. The system was successful financially but disrupted social institutions and the traditional economy. In 1870, it was abolished in favor of leasing large tracts of land to Dutch and foreign investors. By the end of the 19<sup>th</sup> century, the Dutch government had formally adopted an “ethical policy” that emphasized the Netherlands’ moral responsibility of guardianship over the welfare of its colonial subjects. The reforms devised in and directed from The Hague failed to meet the growing demands of Indonesian nationalists.

It is estimated that more than 300,000 West Africans were transported as slaves to Surinam and the Netherlands Antilles from the arrival of the West India Company after 1621 until the trade was ended in 1820. Slavery was not entirely abolished on the large plantations in Surinam that produced coffee, cocoa, cotton, and sugar until 1863. The plantation economy later depended on indentured labor brought from India. There was little development in Surinam, which became a colony directly ruled by the Dutch government in 1815, outside that which facilitated the production and export of plantation-based commodities. After the turn of the century, the focus of the economy shifted away from the plantations to rice-growing smallholders, many of them Javanese whose immigration continued until the onset of World War II. The Netherlands Antilles comprised six Caribbean islands, the largest of which, Curacao, had been taken from Spain in 1634. The Dutch islands, which had earlier prospered from the slave trade, plantation-grown sugar, and smuggling, declined during the 19<sup>th</sup> century. Economic revival occurred only after 1918 with the opening of large refinery in Curacao and, subsequently, in Aruba to handle crude from the Venezuelan oil fields.

Leopold II (1835-1909) determined that Belgium needed overseas colonies in order to compete for raw materials and markets with other major European industrial powers. Unable to engage the Belgian government in his colonial project, the king took a private initiative by sponsoring the Committee for the Study of the Upper Congo, an agency for colonialism cloaked as a scientific and philanthropic venture to explore and study a region that was still largely a blank space on the map. Between 1879 and 1884, Leopold’s agent, the explorer Henry Stanley, concluded treaties with chiefs on the right bank of the Congo that gave the committee sovereign status in the region. Congo Free State, established in the region by another of Leopold’s front organizations, the International Association of the Congo, received international recognition, including from the United States, as an independent sovereign state, a status confirmed at the Berlin Congress in 1885. Leopold extended the borders of the Congo Free State to Katanga to block claims made there by Cecil Rhodes, but he pledged to keep the region open to private traders from all countries. Local resistance was absent, but Belgian-led mercenaries fought and won military campaigns against Arab slave traders.

Leopold, who was largely responsible for subsidizing the Congo Free State, soon appealed to the Belgian government to assume some of the financial burden. A solution was found in the *regime domanial*, a system by which land declared vacant by the free state became its property and the rubber and ivory collected there by Africans drafted for compulsory labor service became its property as well. This device netted Leopold and his associates enormous revenues but ended private trade in the region that the king had agreed to at the Berlin Congress.

The excesses committed in Leopold's Congo Free State and the oppression of its people, extreme even the standards of European colonialism in that day, would within a few years enrage international opinion and embarrass Belgium. In 1902, an international congress meeting in The Hague condemned the operation and demanded that the Belgian government assume responsibility for the Congo, which was formally annexed as a colony of Belgium in 1908 as Belgian Congo. Free trade was reintroduced and the corporation, whose profits had been available to Leopold to use at his own discretion, suppressed. Economic development became largely the responsibility of private investment by large enterprises. During the first quarter of the 20<sup>th</sup> century, Belgian Congo became one of the world's leading sources of copper and diamonds. Belgian colonial policy was characterized by a high degree of administrative centralization and paternalism in dealing with subject peoples. Control was entirely in the hands of the Belgian government, exercised through the colonial affairs ministry in Brussels and responsible to the Belgian parliament.

### **Questions/Discussion**

What were the social, economic, and political aims of liberalism in the Netherlands and Belgium in the 19<sup>th</sup> century?

Trace the origins of the "spiritual families" in Belgium and the "pillars" in the Netherlands. What were the effects of expanding suffrage on relative strength of the pillarized political parties?

Discuss the importance of education as a political issue in the Netherlands and Belgium.

Explain Leopold II's motives in sponsoring colonialism in Africa.

### **World War I**

At the Hague Conference in 1904, the Dutch government took an initiative to establish a multilateral regime in the form of an international court of justice capable of preventing a European war. Both the Netherlands and Belgium were neutrals, the latter's neutrality guaranteed by treaty agreement with Britain and the other European powers. Dutch neutrality, however, was not guaranteed, and the Dutch recognized that their country could remain neutral in case of war only if *all* the great powers agreed to respect it. The Netherlands had an ambiguous relationship with Germany. On the one hand, the Dutch were fascinated with Germany's prestige and influenced by its culture. Anti-British sentiment was also rife in the Netherlands as a result of the Anglo-Boer War in South Africa and sometimes translated into sympathy for Britain's European rival. On the other hand, there existed a genuine fear of German intentions in the event of a European war. It was known, for example, that German plans for an attack on France, the so-called Schlieffen Plan, initially called for a swing through the southern Netherlands. Germany unilaterally proposed "neutral" status for the Netherlands, but the Dutch would agree to a German guarantee only if France ratified the agreement.

In August 1914, Germany invaded Belgium without a declaration of war. Britain honored its commitment under the 1839 guarantee of Belgian neutrality, referred to by the German foreign minister a “scrap of paper,” and joined its allies, France and Russia, in a declaration of war against Germany. The Belgian fortresses fell in the German onslaught and most of the country, including Brussels and Antwerp, was occupied, but the Belgian army remained in the field, under the command of King Albert I, and fought along side the Allies through the war.

The German administration of occupied territory was repressive by the standards of the time. A million Belgians fled as refugees, 700,000 to the Netherlands. Workers were deported and industrial plants were dismantled and shipped to Germany. The Germans tried to exploit differences between the Flemish and Walloon populations, largely without success, and backed down in front of demonstrations in Brussels protesting their proposed division of the country into separate zones of occupation. The Belgian people rallied behind the moral leadership of Cardinal Mercier, whose outspoken opposition to German policies made him the their spokesman. The population, however, was left destitute by the war and stalked by starvation. The American Commission for Relief in Belgium, expended nearly \$1 billion in aid contributed to provide food and medical supplies in occupied territories, and its director, Herbert Hoover, concluded agreements with both Britain and Germany to allow their shipment and distribution to the needy Belgians.

Belgium was at the table with the victorious Allies at the Versailles Conference in 1919 but was never included in the inner circle with the United States and the other great powers. In compensation for the destruction inflicted on it during the war, Belgium was awarded reparations from Germany. Adjustments were made to the Belgo-German border that ceded Eupen and Malmedy to Belgium, which also received a mandate to Ruanda-Urundi (Rwanda and Burundi), former German colonies. Abandoning neutrality, Belgium entered into a military cooperation pact with France.

When executed in 1914, the Schlieffen Plan was modified, the sweep of its right flank tightened to enter Belgium just below the Dutch border. The Netherlands maintained its neutrality but allowed Germany to use Dutch rail lines in Limburg to transport troops. The Netherlands also had difficulties with the Allied blockade, which could not discriminate between goods intended for its domestic market or for Germany on ships headed to Dutch ports. When the Dutch granted asylum to the German Kaiser, Belgium requested the return of Dutch Flanders and Limburg – lost in the 17<sup>th</sup> century – in compensation. The claim remained outstanding through the 1930s. A treaty negotiated between Belgium and the Netherlands in 1925 to open the Scheldt to Belgian traffic was rejected by the Dutch parliament.

Luxembourg was occupied by the Germans from the opening days of the war until the Armistice in November 1918. The next year, the grand-duchess Marie Adelaide, accused of pro-German sentiments during the occupation, was compelled to abdicate in favor of her sister Charlotte. In a referendum held in 1919 in response to a claim advanced by Belgium to annex the grand-duchy, however, overwhelmingly expressed their desire to remain an independent country under the House of Nassau-Weilburg. In 1922, Belgium and

Luxembourg established the Belgium-Luxembourg Economic Union, a precursor to BENELUX that linked trade and monetary policies.

### **Questions/Discussion**

Contrast the bases of Dutch and Belgian neutrality on the even of World War I. Was Dutch neutrality compromised?

Discuss the logic political coalitions in the Netherlands and Belgium in the inter-war period.

### **The Inter-War Years**

The Western Front had stretched across western Flanders from the coast near Nieuport, through Dixmunde and Ypres, to the Lys River during the entire four years of World War I and major battles were fought on that small corner of Belgian soil. Belgium had been devastated and its economy disrupted. The task of reconstruction was huge. In the first postwar election in Belgium in 1919, in which plural voting was abandoned, the Catholic party lost the absolute majority it had held since 1884. A voting pattern was established that endured for the next 20 years, the Catholics, still the largest party and strongest in Flanders, receiving 35-40% of the vote; the Socialists, strongest in Wallonia, winning 30-35%, and the Liberals and other smaller parties 25-30%. Governments, which averaged only 15 months in office during the period, were alternately Catholic-Liberal or Catholic-Socialist coalitions, always led by a Catholic prime minister. Extensive social reforms were adopted, services and benefits administered by agencies of the “spiritual families” financed under the *libertie subsidie*. Dutch was recognized as the only *official* language in Flanders, raising protests from French-speaking Belgians in that part of the country. The language controversy continued unabated and apparently defied solution. Francophone political movements and reactive Flemish movements arose that challenged parties representing the “spiritual families” in Wallonia and Flanders and that caused internal divisions in those parties. Exaggerated charges were made alleging Flemish collaboration with the Germans during the occupation. King Albert I, a war hero and national icon with whose monarchy both French- and Dutch-speaking Belgians could identify their common loyalty, was killed in a climbing accident in 1934 and was succeeded by his son Leopold III.

Following the 1918 election in the Netherlands, a Catholic-Protestant coalition government was formed, led by the C.J.M. Ruys de Beerenbrouck, the Netherlands’ first Catholic prime minister. He and the moderate Protestant Anti-Revolutionary leader Hendrikus Colijn would alternate in office throughout most of the inter-war period. Both men were deeply patriotic, Ruys de Beerenbrouck, an educator committed to social reform, and Colijn, a director of Royal Dutch Shell and editor of the newspaper *De Standaard* (who would die in a Nazi concentration camp). But the coalition was not easy to maintain. A Colijn-led government fell in 1925 when the conservative Christian Historical Union bolted the coalition in opposition to a proposal to open diplomatic relations with the Holy See. Thereafter, the confessional parties usually required the support of the Liberals to form governments, while the Social Democrats constituted the opposition. A parliamentary stalemate set in that

seemed to make elections irrelevant.. In election after election, the Catholics took 30% of the vote, the two Protestant parties divided 25%, and the Social Democrats also won 25%, while the fragmented Liberals and minor parties collected the remainder. The Protestant parties were split and found it impossible to work with the Social Democrats, and the Catholics were never comfortable cooperating with the Liberals. The Social Democrats entered the Dutch government for the first time on the eve of war in August 1939.

The Great Depression hit Belgium and the Netherlands very hard. Unemployment in both countries in 1934 reached 40%. Social insurance programs introduced during the 1920s acted as a buffer and provided some relief, but authoritarian solutions found advocates, even within mainstream democratic parties of the left and right. The Communists had very little support in Belgium and seldom attracted more than 2% of the vote in Netherlands, in both countries a testimony to the strength of the democratic socialist and confessional trade union movements. Flemish nationalists, who, in 1939, won nearly 20% of the vote in Flanders, flirted with fascism but focused on promoting Flemishness.

Leon Degrelle's *Rexist* party was francophone and fascist but portrayed itself as a "Belgian" rather than a regionalist movement. Opposed by the Church, Degrelle's attempts at an alliance with Flemish nationalists failed as did *Rexist* efforts to win support at the polls. In the Netherlands, Anton Mussert's National Socialists overtly emulated Hitler's Nazis. Its candidates received 8% of the vote in local elections in 1935, the same result achieved by the Communists. The Dutch Nazis were thoroughly discredited in the eyes of the electorate, however, when it became obvious that Germany was rearming and posed a threat to the Netherlands.

## **World War II**

Belgium and the Netherlands put trust in the efforts of the League of Nations to prevent war. Both countries cooperated in implementing proposals for disarmament, less enthusiastically with sanctions imposed by the League. Their democratic governments eyed with suspicion the challenge to democracy posed by Communists and domestic fascists and with growing concern rearmament by Nazi Germany. The Netherlands, ruler of an Asian empire, also confronted a threat posed by Japanese expansionist policies. While the Netherlands clung to a policy of traditional neutrality, Belgium, in 1936, repudiated its military cooperation pact with France and returned to neutrality for fear of being dragged in to a new European conflict. Belgium protested extension of the Maginot Line opposite its border as a provocation to Germany that would compromise its neutral status.

On May 11, 1940, Germany invaded the three Low Countries. The Netherlands fell after five days of fighting and the bombing of Rotterdam. The royal family fled into exile in England where Queen Wilhelmina appointed a Dutch government-in-exile. Her prime minister D.J. de Geer was removed from office in September, however, when it became known that he had attempted to negotiate a truce between Britain and Germany. His replacement Pieter Gerbrandy served throughout the war as head of the exiled government and also formed the first postwar Dutch government.

Belgium held out for 18 days during which its armed forces suffered 20,000 casualties. Leopold III refused to abandon his troops in the field and, after Belgium's capitulation, was held in Germany until the end of the war as a hostage for the good behavior of his subjects. The king successfully negotiated the release of Belgian prisoners-of-war but was accused of collaborating more than was necessary to accommodate German demands. Socialist leader Achille van Acker formed a government-in-exile in London. The Allies obtained access to crucially important supplies of rubber and, eventually, uranium from the Belgian Congo.

The German occupation of the Low Countries during World War II was extremely repressive. Food shortages were severe and unrelieved. Labor conscription was imposed and workers transported to Germany. Luxembourg was annexed to the *Reich* and its citizens drafted to serve in the German army. Collaboration was significant in some segments of the population, including Flemish nationalists and the fascist followers of Mussert and Degrelle. Local Nazis were placed in positions of authority, trade unions dissolved, and the economies of the three countries integrated with Germany's. Several thousand volunteers were recruited for Dutch and Belgian *SS* units. Thousands in the three countries were arrested and sent to concentration camps, where many died. Nine out of ten Dutch Jews perished in the Holocaust, and only 20,000 out of 90,000 Belgian Jews survived it.

Resistance movements were active from the start of the Nazi occupation and were increasingly effective in aiding the Allied war effort as the war continued. Dutch and Belgian units served with Allied forces throughout the war, and Dutch merchant ships sailed in Allied convoys. General strikes protesting the deportation of Dutch Jews and the retention of Dutch prisoners-of-war shut down the Netherlands in 1941 and 1943 were of symbolic value although ineffective in influencing German actions. A strike made at great risk by Dutch railway workers in 1944, however, slowed shipment of supplies and reinforcements to German forces during the Allied offensive in the Netherlands. The Low Countries were the theatre for heavy fighting in the last nine months of the war. Allied forces crossed into Belgium in September 1944. Operation Market-Garden, the failed attempt to open an early bridgehead into Germany, was conducted in the Arnheim-Nijmegen area in November, and the German offensive in the Ardennes region of Luxembourg and Belgium was halted during the Battle of Bulge in December 1944-January 1945. The Allies bombed targets in the Low Countries, and, late in the war, German V-bombs wrecked destruction on Antwerp. The Allied drive into Germany bypassed part of the Netherlands, which remained under German occupation until the end of the European war in May.

In December 1941, Japanese forces attacked the Dutch East Indies, which had been an important supplier of oil to Japan until an embargo was imposed earlier that year, defeated the Dutch naval units in the Java Sea, and completed their conquest of the islands by early spring 1942. No significant local resistance was made to the occupation, and Indonesian nationalists cooperated with the Japanese. Dutch civilians in the East Indies were imprisoned under harsh conditions for the duration of the war.

### **Questions/Discussion**

Argue the case for and against the return of Leopold III after World War II.

## The Postwar Recovery

By 1945, the productive capacity of the Dutch economy had reduced to nearly half of its 1940 level, 40% of housing had been damaged, and much of the transportation infrastructure destroyed. At the end of the war, starvation conditions existed in areas that had remained under German occupation, a consequence of deliberate deprivation of the population there. By contrast with the Netherlands, destruction of Belgium's industrial plant was relatively limited, and the United States contributed substantial loans to construction in 1945-1947. By the summer of 1947, industrial production was 15% above prewar levels, and Belgium was, for a few years, the top producer of iron and steel in Europe. Antwerp became the chief port handling supplies for Allied forces advancing into Germany and, later, for occupation forces. Belgium also benefited from a dollar surplus derived from wartime exports from the Belgian Congo. Controlling inflation and contending with labor disputes stemming from demands for higher wages were among the most pressing problems faced by immediate postwar Belgian governments. Luxembourg's industrial capacity had not been seriously impaired during the war. Problems arose, however, reintegrating manpower siphoned off by conscription into the German army and by deportation. Food and fuel shortages demanded making difficult choices in the allocation of available supplies. Price and wage controls and rationing were imposed in all three countries.

The economic recovery of the three countries in the immediate postwar years and the physical reconstruction of infrastructure depended, however, on material assistance from the United States. The European Recovery Program, better known as the *Marshall Plan*, was authorized by the United States Congress in December 1947 to fund a unified program for economic reconstruction. The Marshall Plan was administered by the United States in conjunction with the Organization for European Economic Cooperation (OEEC), established in 1948 by participating European governments working together to recommend and coordinate projects. Between 1948 and 1952, the United States disbursed more than \$17 billion to provide the means for Europeans to rebuild their war-torn countries. Belgium, the Netherlands, and Luxembourg received more than \$1 billion in assistance. In 1961, OEEC was replaced by the Organization for Economic Cooperation and Development (OECD) to assist member governments in formulating policies promoting economic and social welfare and harmonize assistance to developing countries, using experience gained earlier administering the Marshall Plan.

Belgium, the Netherlands, and Luxembourg were founding members of the United Nations (UN). Paul Henri Spaak was named first president of the UN General Assembly in 1945, and, later, while Belgian prime minister and foreign minister, served as president of the OEEC. In 1948, the three countries ratified the *Benelux* customs union, negotiated four years earlier by the governments-in-exile, and, in quick succession, entered into a series of agreements that established the basis for European economic and political integration and security during the Cold War. That same year the Benelux Three joined Britain and France in creating the Western European Union (WEU) and, the following year, became charter members of the North Atlantic Treaty Organization (NATO), of which Belgium's Spaak and Dirk Stikker of the Netherlands were early secretaries-general.

In 1952, they joined France, Germany, and Italy in the European Coal and Steel Community (ECSC), the first of the “European Communities” intended to eliminate all barriers to trade in those products. The foreign ministers of ECSC member countries met under Spaak’s chairmanship in Messina in 1955 to consider an extension of economic integration. Their negotiations resulted in the *Rome Treaties* establishing the European Economic Community (EEC, commonly referred to as the “Common Market”) and the European Atomic Energy Community (EURATOM) that entered into force in 1958. Spaak is regarded as having been instrumental in locating the headquarters for the several communities in his country’s capital, Brussels. (See “European Union”)

Although the pillars remained in tact, Dutch political parties realigned after the war and postwar politics became more fluid than had been the case in the interwar period. The Labor Party (PvdA) replaced the prewar Social Democratic party. More moderate than its predecessor, the PvdA, won recruits from the ranks of left-wing social liberals and some Protestant and Catholic progressives, while retraining its base in the socialist trade union movement. The defection of the social liberals allowed the competing prewar Liberal State and Liberal Democratic parties to merge in the center-right People’s Party for Freedom and Democracy (VVD).

Postwar politics in Luxembourg returned to its prewar three-party pattern – liberals to the right, socialists to the left, and broadly based Christian democrats occupying the center of the spectrum – similar to that in Belgium and typical of the Low Countries. The Communists, however, had a relatively larger base of support in Luxembourg than in either Belgium or the Netherlands. Governments were formed either by the Christian Social People’s Party alone or by the “Social Christians” in coalition with the liberal Democratic Party. The pattern was broken only in 1974 when the Social Christians were defeated in elections and, for the first time since 1919, were out of government. The Social Christians regained power in 1979 and have led every government since that date. Pierre Werner was prime minister from 1959 to 1984, except for that four-year interval. When Werner stepped down, he was succeeded by Jacques Santer, who remained prime minister, leading a Social Christian-Socialist coalition government, until his appointment as president of the European Commission in 1995.

In Belgium, the Catholic party, dominant since 1884, was re-founded in 1945 as the Social Christian Party, which described itself as a “conservative” party in the Christian democratic tradition rather than as a specifically “Catholic” party that maintained formal ties to the Church. The Social Christians also enlisted individual members rather than, as the old party had, counting any member of a Catholic organization as automatically a party member. The Belgian Workers Party was reorganized as the Socialist Party, still strongly anticlerical and having its strongest backing in Wallonia. The Freedom and Progress Party succeeded the prewar Liberal Party. In the late 1940s, the three “spiritual families” commanded the support of 90% of the electorate. The Flemish nationalist movement, discredited by real and alleged collaboration with the Nazis, was revived only in 1960s by the moderate People’s Union (VU).

In all three countries, measures were taken after 1945 to prosecute collaborators and war profiteers. In Belgium, it was calculated that a bare 2% of the population had been active collaborators, but 75% of the 77,000 brought to trial were Flemish. Arthur Seyss-Inquart, Hitler's notorious *Reichskommissar* in the Netherlands, was arrested, found guilty by a Dutch court of war crimes, and executed. It took some time to disarm former resistance fighters, many of whom were Communists who had joined the resistance after Germany invaded the Soviet Union in 1941 and who kept their weapons after the liberation.

Compulsory military service was reestablished to build up armed forces that were reequipped in large part by the United States after 1949 to fulfill their NATO responsibilities. Dutch and Belgian units served under UN command during Korean War. Dutch troops were also deployed to suppress the nationalists and to reassert Dutch rule in Indonesia, where the nationalists, led by Sukarno, had proclaimed independence for Indonesia in 1945 and established effective control in Java and Sumatra. The Dutch government proposed creation of a decentralized "United States of Indonesia," comprised of 15 states, in partnership with the Netherlands. The nationalists conducted partisan warfare that Dutch forces were unable to contain on the main islands. Under pressure from the UN and the United States, the Dutch, in 1949, conceded sovereignty to a federal Indonesia in union with the Netherlands and withdrew Dutch and colonial troops. In 1954, Sukarno absorbed the federated states into the unitary Republic of Indonesia and unilaterally dissolved the union.

### **Questions/Discussion**

Assess the importance of the U.S. role in the economic reconstruction of Belgium and the Netherlands in the immediate postwar period. Compare the economic situations of the two countries.

The Benelux Three took leading roles in the process of European integration. Explain why they were ideally suited to that task.

### **Dutch Politics, 1945-2002**

The socialist PvdA and the Catholic People's Party (KVP) won the largest share of the vote, about 30% each, in the four general elections held in the Netherlands between 1946 and 1956. Although together the three major confessional parties, Catholic and Protestant, received half the vote, governments formed during the period were either left-center PvdA-KVP coalitions led by a Labor prime minister, Willem Drees, or center-left KVP-PvdA coalitions headed by a Catholic prime minister, Louis Beel. These governments gradually expanded the welfare state and the role of the public sector in the economy.

A shift in coalition alignment occurred in 1959 when the KVP and PvdA broke on the issue of wage policy. While Labor backed higher pay hikes to meet inflation, the KVP argued that the increases themselves would spur inflation. Between 1959 and 1965, Catholic prime ministers led broad center-right coalition governments that included KVP together with the Protestant Anti-Revolutionaries (ARP) and Christian Historicals (CHU), sometimes joined by the VVD. The Catholic-Labor coalition was revived in 1965, but the government it

produced was short-lived, collapsing the following year when the KVP rejected PvdA demands for budget-busting increases in public expenditures.

The late 1960s was a watershed in Dutch politics. Typical of the political environment in much of Europe in that era, its center of gravity shifted to the left, and the PvdA, in particular, was radicalized in keeping with the times. Hans van Mierlo founded a new party, Democrats 66 (D66), that appealed immediately to a young and better-educated, social liberal constituency. Van Mierlo argued persuasively that the traditional pillars no longer represented social, economic, and political realities in the country. At the same time, the decline in support for the confessional parties that claimed to represent the Catholic and Protestant pillars mirrored the sharp decline in church attendance and formal affiliation with the churches. Likewise, the secular parties seemed no longer hostile or posed a threat to religious institutions, and they made gains at the expense of the confessional parties as Catholics and Protestants voted their various social and economic interests rather than support their pillars.

Twenty-four parties presented lists in the 1967 general election, 12 of which won seats in the Second Chamber under the Netherlands' no-threshold system of proportional representation. Although both parties lost seats, the KVP and PvdA, retaining 79 seats out of 150 between them, remained, by far, the largest parties. Catholic Piet de Jong formed a center-right coalition government that included his party, ARP, CHU, and VVD. As support for the three main confessional parties continued to diminish, they formed an electoral alliance, the Christian Democratic Appeal (CDA), that presented candidates on a common list in the 1972 election. The alliance parties joined the PvdA, D66, and small leftist parties under Labor prime minister Joop den Uyl in a left-center coalition government. CDA cooperation with the left floundered in 1977 over the issue of land ownership and property taxes. CDA leader Andries van Agt would have preferred to continue in coalition with the PvdA but was rebuffed and agreed instead to lead a center-right coalition with the VVD. The relationship was a rocky one. The VVD demanded spending cuts opposed by the CDA, and the CDA resisted tax cuts proposed by the VVD.

The parties of the CDA formally merged as a united party in 1980 in anticipation of elections the next year. Despite – or, perhaps, because of gains made by the VVD in 1981, the CDA and PvdA put aside deep differences between their leaders to form the next government. But disagreement between the coalition partners on economic policy, employment schemes, taxation, defense spending, and cruise missile deployment quickly eroded any spirit of cooperation that may have existed, and the government fell within six weeks of its formation. It was succeeded by a CDA-VVD coalition, led by Ruud Lubbers, that governed the Netherlands ably for next eight years. Lubbers was a young and attractive political leader, the Jesuit-educated son of a wealthy Rotterdam family, who had risen quickly through the hierarchy of the old KVP. His center-right government introduced tax reforms and market-oriented economic programs that were in tune with the Reagan-Thatcher decade, but compromises made in these areas by factions within the governing parties and divided personal loyalties placed strains on the coalition.

In 1988, after long and difficult negotiations between the two government parties – and between the government and the two parliamentary parties that required trade-offs by all sides, the government introduced a budget that made drastic reductions in spending for social entitlements to compensate for lowering taxes. However, the government significantly altered the enabling legislation in deference to opposition from the opposition PvdA, which, as the largest single party in the Second Chamber, held the largest number of seats on parliamentary committees. VVD members of parliament, who had been elected on a platform of welfare-state and tax reform, were outraged and felt betrayed by the government that they had supported and, especially, by the VVD members of that government.

The plot thickened the next year when environmental legislation that had been initiated by the VVD and had been a long time in preparation was introduced. The bill, consented to by VVD ministers in the government, included increased tax-at-pump on fuel. The VVD had carefully cultivated a “green” image, but VVD members of parliament had also campaigned on a platform in the last election that committed them not to agree to any new taxes. Finding the bill’s revenue provisions unacceptable, they voted as a bloc against the bill and, in effect, brought down the government in which their party participated.

In the general election that followed in 1990, the VVD gained seats but was left out of the next government. Lubbers succeeded in forming a CDA-PvdA coalition government, although both parties had lost seats. The CDA and PvdA suffered severe losses in local elections and, in the 1994 general election, were both clearly the losers, dropping 20 and 12 seats respectively. The PvdA slumped to 25% of the vote, the CDA to only 23%, together a loss of 40% of the votes received in the previous election. The CDA, reduced to 34 seats in the Second Chamber, was disregarded as a candidate for participation in the next government. Wim Kok, the moderate and very pragmatic leader of the PvdA, whose party was the second biggest loser in election, cobbled together, after three-months’ negotiations, a new government together with the two winners, the VVD and D66. The former had gained nine additional seats with 20% of the vote, the latter had picked up 12 with 16%. Hans van Mierlo, the founder of D66 who had campaigned to move Dutch politics beyond pillarization, was appointed foreign minister, entering the first government in more than 75 years to be formed without participation by a confessional party.

The CDA was tired, and the electorate was tired of the CDA. Lubbers had stepped down before the election from the leadership of the party that had been considered indispensable to forming any government, replaced by Eeclo Brinkman, who was colorless and not well known. Many of the party’s traditional constituency shifted their support in 1994 to the VVD, D66, or to the small, conservative Protestant parties. Among them, many elderly voters were lost when the CDA proposed reductions in pensions. Enthusiasm for its issues – for example, advocacy of “family values” -- had faded, and the party conceded to legislation further legitimizing euthanasia, drug use, abortion, gay rights, and different interpretations of “family.” To some observers, it appeared that the idea of Christian democracy as distinct from the socialist left and the liberal right was dead in the water.

The Lubbers government had decided to send Dutch troops to take part in the UN’s peacekeeping operations in Bosnia. Perceived as a commitment to defend human rights in a

war-torn corner of Europe, the decision was backed by very broad parliamentary approval. The Dutch military command was, at the time, reluctant to undertake the mission, but, in September 1994, on the Kok government's watch, a 400-man battalion was deployed to Srebrenica, a UN-designated "safe area." The unit was poorly trained and equipped to maintain a peace that did not, in fact, exist. Later the next year, shortly before it was scheduled to pull out, the Dutch garrison tasked to protect the city's Muslim population was, in effect, taken hostage by the large, well-armed Serb force besieging Srebrenica that then proceeded to massacre more than 7000 of those who had sought refuge there. Amidst recriminations within the defense ministry and armed forces, investigations were immediately launched to determine responsibility for the tragedy. A parliamentary commission concluded subsequently that the Netherlands bore responsibility for the events surrounding the fall of Srebrenica. Dutch politicians, it found, had "failed" in their responsibilities by dispatching a force inadequately prepared and supported for the mission assigned to it in Bosnia. Dutch military commanders were also signaled out for criticism of their conduct of the operation. No blame was attached to the soldiers of the Dutch battalion.

The two larger coalition partners, the PvdA and VVD, gained eight and seven seats respectively in the 1998 general election, more than offsetting D66 losses. Kok's government coalition had a comfortable parliamentary majority and won a clear mandate to continue in office. The Green Left doubled its share of the vote, but the VVD, which had a strong "green" plank in its own platform, vetoed its suggested participation in the government. It was clear during the campaign that the CDA did not want to take part in government, and its leader Jaap de Hoop Scheffer admitted that the party was "not ready" to return to office. The CDA managed to win only 18% of the vote, the total vote for confessional parties barely reaching 25%. The secular center-right received 35%, the socialist and "green" left 40%.

Kok formed a new PvdA-VVD-D66 government in only three days of bargaining. Frits Bolkestein, always considered too "Anglo-Saxon" and insufficiently "European," was gradually eased out as VVD leader into "active exile" as an EU commissioner and was replaced by Hans Dijkstal, a less argumentative figure who enjoyed better relations with Kok than his predecessor. Van Mierlo resigned from the government and party leadership because of ill-health and was succeeded by Thom de Graaf. Kok II won high marks for its skillful handling of the economy.

D66, which had attracted under 10% of the vote in the last election, introduced legislation to adopt "direct democracy" in the form of initiatives, compulsory referenda, and recalls to veto acts of parliament, a long-standing objective of the party that van Mierlo had founded to decentralize authority in the Netherlands. The VVD had also signed on to the project in the two parties' joint platform in 1998. The measure was accepted in the Second Chamber, but it was resisted in the First Chamber by a handful of VVD members and was defeated there by a single vote that deprived it of the two-thirds required for passage of a constitutional amendment. As a result, in May 1999, D66 withdrew from the government. Kok remained in office at the head of a PvdA-VVD caretaker government, planned for a new election in the autumn, but also kept open consultations with D66. A compromise was worked out that

allowed for enactment of legislation providing for non-binding “consultative” referenda, and D66 reentered the government.

In April 2002, only a month before the scheduled general election, the Kok government suddenly resigned. The Netherlands Institute for War Documentation, an academic research organization that it had tasked seven years earlier to investigate the conduct of the Srebrenica operation, had issued a report running into several thousand pages that detailed the flawed political decisions and military planning that had contributed to the disaster in Bosnia. The report sparked an acrimonious argument among ministers, many of whom were also in the cabinet in 1995, who denied or allocated blame. Jan Pronk, PvdA environment minister who had been minister for overseas development in 1995 and not directly involved in decisions bearing on Srebrenica, assumed a share of the blame as having been part of the government, and he resigned. Kok argued that the resignation of one minister unilaterally implicated the whole government collectively. The Kok government remained as a caretaker until a new government could be named after the May 2002 general election, but Kok himself stepped down as party leader and PvdA standard-bearer in the election in favor of Ad Melkert.

The 2002 election campaign focused on immigration and the integration of immigrants into Dutch society, questions of growing concern to the public that Dutch politicians had been reluctant to confront in the past. In a few months, Pym Fortuyn, a journalist and media personality, played on that concern to transform the local populist party, Liveable Rotterdam, that he founded to contest city elections into a national personalist party, List Pym Fortuyn (LPF), arguing that non-European immigrants threatened the liberal Dutch social values and cultural norms. Other parties scrambled to pick up on an issue that had struck a sensitive nerve in the country. Little more than a week before the May 15 vote, Fortuyn was assassinated (– the first political assassination in the Netherlands since Johan de Witt was lynched by a mob in 1672.) To Fortuyn’s popular appeal across the country was now added a sympathy factor for the LPF after his death.

What followed on election day was a veritable “earthquake” in Dutch political history. With nearly 80% of the potential electorate voting, the LPF emerged as the second largest party, coming from nowhere to capture 17% of the vote and 26 seats in the Second Chamber. The CDA bounced back remarkably to reclaim by a large margin its position, lost in 1994, as the largest party, winning 28% of the vote that gave the party 43 seats. The government parties were devastated: The PvdA, VVD, and D66 lost half of the vote they had received in 1998, together garnering less than a 36% share. The LPF carried constituencies as diverse as the Rotterdam-Schiedam area, The Hague, Dordrecht, the Amsterdam-Haarlem area, Breda, Zwolle, and Flevoland. The PvdA kept constituencies in Amstertdam, Utrecht, and in Friesland and Groningen. Otherwise, the CDA prevailed most other constituencies across the Netherlands. Part of the CDA’s success was attributed to a conservative backlash against the previous government’s permissive social policies. The CDA won back voters lost earlier to the VVD, while the LPF profited from defections among traditional PvdA voters, especially in working-class sections of Rotterdam.

CDA leader Jan Peter Balkenende was tapped to form a new government, coalition crafted through “quiet consensus” with the VVD to include the leaderless LPF that took office in

July. While the government ignored most of the LPF's more radical legislative proposals, it quickly introduced popular measures to restrict immigration and to require Dutch language training for those applying for residence in the country. Balkenende, a Protestant who had worked earlier in his career for a Christian radio network, had opposed legislation loosening regulations on euthanasia and drug use and, during the campaign, had adopted a tough line on immigration. Dijkstal and Gerrit Zalm, the highly regarded finance minister in the previous government, retained positions in the new government. The LPF was a one-man band now led by incompetent nonentities who began to quarrel among themselves and with other members of the government no sooner than it had been formed. There was no certainty that the LPF's parliamentary party would be disciplined enough to vote as a bloc, and some wondered if Fortuyn himself, a maverick by nature, would have wanted to be in government if he had lived. "The spirit of a dead man," it was remarked, was "hardly a sound manifesto" for a political party. Peter Langendam, an LPF minister, embarrassed the government when he accused the left of being responsible for Fortuyn's murder. Another LPF minister left office. The antics of the LPF in government cost it dearly in public opinion polls. Most analysts had given the unlikely three-party coalition no more than two years in office. That estimate proved to be optimistic. By October, Balkenende had reached the limits of his tolerance for the LPF. Regarding it as no longer workable, and tendered his government's resignation to Queen Beatrix. A general election was set for January 22, 2003.

### **Belgian Politics, 1945-2002**

In the first five years after the end of World War II, Belgium was governed by a grand coalition of the parties of the "spiritual families," Socialist-led under Achille van Acker. The state assumed close oversight of the economy, and the groundwork was laid for the welfare state with enactment of the *Social Pact*. Voting rights were extended in 1948 to women to the evident advantage of the Social Christians, who governed alone from 1950 to 1954. With the exception of the years 1954-1958 and one brief period in the 1960s, leadership of Belgian governments, formed in varying coalitions with Liberals, Socialists, and "linguistic" parties would remain in the hands Social Christians until 1999 under a succession of Flemish prime ministers – among them Leo Tindemans, Gaston and Marc Eyskens, Wilfrid Martens, and Jean-Luc Dehaene. In election after election, the Social Christians and Socialists each received over 30% of the vote, the Liberals averaging 20%.

Belgium experienced a reorientation of its economy as postwar industrial growth was focused on Flanders. Easy access to the reopened port of Antwerp and a willing work force attracted private investment from abroad for "new" industries. Meanwhile, traditional heavy industry in Wallonia was becoming increasingly redundant, the victim of worn-out plant facilities, mines that were too expensive to operate profitably, and labor unrest. Flanders soon outstripped Wallonia in output and tax revenue produced as the region already had in population. For the Flemish, the policy of equalization of public investment in the two regions meant throwing taxes raised in Flanders down a dark hole to subsidize inefficient industries in Wallonia. For Walloons, selfish Flemish arguments about efficiency and cost effectiveness meant the destruction of Wallonia's industrial job base. The debate split the "spiritual families" along linguistic lines.

Divisions between the two regions and their respective linguistic communities were also reflected in the debate over the *royal question*. Leopold III, who had chosen to remain with his troops rather than flee into exile in 1940, had been kept by the Germans first under house arrest at Laeken, the royal residence, then to the castle at Sigmaringen, where he spent of the war years, and, finally, to Austria, where the king was liberated by American forces. Not allowed by Prime Minister van Acker to return home, Leopold stayed an exile in Switzerland. His brother, Prince Charles, was named regent in Belgium. Those opposing Leopold's return, including Socialist leaders van Acker and Paul-Henri Spaak, charged that the king's authority had been compromised by his alleged collaboration with the Germans. The Socialists were joined in their opposition by the Liberals and the Communists, who had won 10% of the vote in first postwar election, and by a majority of public opinion in Wallonia and Brussels. The Social Christians and a majority of Flemish public opinion favored the king's return. It was not uncommon for Walloons to denounce the Flemish generally as well as the king as collaborators. The debate was limited, however, to discussion of Leopold's personal qualifications to be king and not – at least, by most of his opponents -- of the future of the monarchy.

A referendum was held in 1949 on the issue whether or not Leopold would return to Belgium and continue to reign as King of the Belgians. Leopold, whose cause was not helped by his abrasive personality, claimed he would feel justified in returning if the “yes” vote was 55%. Spaak set the figure acceptable for receiving him back at 67%. The results showed 57.68% of the country favoring the king's return, but there was a great and telling disparity between the vote in the two regions and in Brussels that underscored divisions between Walloons and the Flemish that were even more striking than the division among the “spiritual families.” While 72% of voters in Flanders called for Leopold's reinstatement, it was opposed by 58% in Wallonia and 52% in Brussels. Admitting that it was the mission of the monarchy to provide the symbol behind which the nation could unite, Leopold left it to the parliament to interpret the will of the Belgian as expressed in the referendum. In 1950, he abdicated, making way for his son Baudouin (Boudewijn) succeed him when he came of age the following year.

In 1952, parliament enacted an education reform proposed by the Social Christian government that formally recognized a system of Church-run “free” schools that received state support with few restrictions attached and operated parallel to the secularized state school system in which religious education was prohibited. In 1954, the new Socialist-Liberal government overturned the reform. The Socialists argued bluntly that the working class was not sufficiently sophisticated to be conscious of its socio-economic status because of the primacy of religion in the lives of many of them and that Church-run schools had been the principal means of pulling the working class into the Catholic pillar. Revocation of the education reform was, therefore, a means of attacking the opposition's political base.

Catholics protested the move in massive, well-organized rallies across the country that drew hundreds of thousands participants. In 1958, the Social Christian-Liberal government won passage of the compromise School Pact that introduced a “market solution” to funding education. Schools, whether secular or religious, were thereafter funded according to the number of students enrolled in them. The School Pact was a clear victory for Catholics over

the secular parties and demonstrated the tremendous ability of the Church and its political allies to mobilize public support.

The Belgian Congo was ruled by a highly centralized administration directed from Brussels. Despite the introduction of elected municipal councils in 1957, demands for a greater measure of local self-government were largely ignored. Protest against the slow pace of change by political groups, based on ethnic ties, exploded when French colonies were granted independence in 1958. In January 1959, Patrice Lumumba, leader of one of those groups, the National Congolese Movement, openly called for independence amid violence that broke out in Leopoldville. One year passed before the Belgian government called a conference of leaders of rival groups in Brussels later to consider the future direction of the colony. Under pressure from Congolese leaders, the government and conferees agreed to set June 30, 1960 as the date for independence. The Independent Congo Republic was proclaimed as scheduled, but conditions there rapidly disintegrated as rival leaders and regional separatists struggled for control. A multilateral peacekeeping force was dispatched by the UN Security Council as Belgian armed forces and settlers were withdrawn. The colonial episode in Belgian history ended finally in 1962 when Ruanda-Urundi became independent as the countries of Rwanda and Burundi.

In 1960, Gaston Eyskens' center-right Social Christian-Liberal government introduced an austerity budget package, or *loi unique* (single law), authorizing tax increases and decreased public expenditures for social programs, as well as cuts in subsidies to the coal mines in Wallonia. The package also included a five-year plan for industrial expansion that called for greater labor flexibility. The Socialist trade union in Wallonia called a general strike to protest the "*loi inique*" ("evil law"), and appealed to the Flemish unions to support the action. The Catholic trade union, which accounted for more than half the union membership in Flanders, refused to cooperate, and the strike failed, after a two-month work stoppage, to win concessions from the government.

Walloon trade unionists saw the Flemish refusal as a betrayal of working-class interests, but the issue developed into one less concerned with labor policy or the class struggle than with rival regionalisms. Socialist labor leaders demanded the division of Belgium and autonomy for their region, arguing that francophone Belgians could no longer trust an existing political system in which "clerical, conservative Flanders can impose its will on socialist, progressive Wallonia." Their protests contributed directly to the creation of regionalist political parties in Wallonia and in the Brussels area committed to protect and to promote francophone interests. The francophone parties picked up the argument for a federal Belgium that had already been advanced from the Flemish side by the People's Union.

In 1961, a Social Christian-Socialist coalition government came to office committed to reconciling differences between the two language communities and to solving the riddle of Brussels – a predominantly French-speaking city whose suburbs were expanding into the Dutch-speaking areas that surrounded it. In 1963, a revised language border and a bilingual solution for Brussels and its suburbs was presented for parliamentary approval. One purpose of both moves was to limit the further spread of francophone Brussels. The fixing of a linguistic frontier brought complaints from both French- and Dutch-speaking localities that

now found themselves of the “wrong” side of the border. Much publicized among these was the French-speaking town of Fourons (Flemish, Voerens) that was transferred from the Walloon province of Liege to the Flemish province of Limburg when the border was adjusted. The political response to these efforts was the defeat of the government parties in the 1965 general election and substantial gains for the regionalist parties that indicated the radicalization of voters in both regions on the language issue.

Simmering tensions between French-speaking and Dutch-speaking faculties and students at the Catholic University of Louvain (Leuven), located in the Flemish part of Brabant, boiled over in 1968 in acrimonious campus demonstrations that turned to violence. (A pontifical university established in 1425, it was the oldest institution of higher learning in the Low Countries.) In effect, the francophone faculties were “expelled” from the university by their Flemish colleagues. A decision was made reluctantly by the Church hierarchy and approved by the government to recognize the separation, to divide the university’s assets, including its million-volume library, and to establish two new and distinct universities, Leuven, a Flemish university that retained the facilities in that city, and “New Louvain,” a francophone university located nearby but across the linguistic frontier in the Walloon part of Brabant. Both claimed 1425 as their date of founding.

Nineteen sixty-eight was a turning point in Belgian politics. Bad feeling between French- and Dutch-speakers within the ruling Social Christian Party over the Louvain/Leuven affair forced the resignation of the government. The regionalist parties were further strengthened in the election that followed. A four-month cabinet crisis ensued before Gaston Eyskens was able to patch together a new government composed of divided Social Christians and the Socialists. Seven more governments would be formed in the next 12 years, and all fell as a direct result of disagreements over the language question. Provoked by the university crisis as well as differences over the platform in the general election, the Social Christian Party also split in two in 1968, and there would be thereafter two entirely separate Christian democratic parties, the Flemish CVP and the Walloon PSC. In 1972, the Liberals similarly shattered in three, separate parties being formed in Flanders, Wallonia, and Brussels, and the Socialists in 1978 broke along linguistic lines. The constellation of parties representing the “spiritual families” – Catholic, liberal, and socialist – now numbered seven, each of which would bargain separately for inclusion in government. The possibilities for including parties outside the “spiritual families” broadened to include regionalist parties, and the Communists were left as Belgium’s only bilingual party. The cabinet was divided equally between Walloons and Flemish, overlapping party affiliations, and dual ministries established, a practice formalized in the constitution in 1971.

That same year a giant step was taken toward devolution of responsibilities from the national government to sub-national authorities. A constitutional reform recognized three *cultural communities* -- French, Dutch, and German – each of which had executive and legislative councils (elective after 1984) responsible for education, culture, and other language-related policies. The revisions to the constitution were a statement of intent indicating the direction that future reforms would take.

Leo Tindemans, a conservative Flemish Social Christian, formed a six-party coalition in 1977 that linked the four Social Christian and Socialist parties together with the Flemish VU and the Brussels francophones, the Democratic Front, determined to draft a solution to the language question, demands for regional autonomy, and the status of Brussels, which, by its very nature, would be both radical and a compromise among competing interests. The result was the *Community Pact* of 1977-1978, which embodied the agreements negotiated in *Egmont Pact* calling for a five-tier system of government that included the national government, three regional governments, three cultural communities, the provinces, and the communes. It was regarded as a masterpiece of political accommodation, but it failed approval. For unitarians, it sacrificed too much of national sovereignty; for federalists, devolution under the plan was inadequate; and, for regionalists, it failed to meet all of their demands. Tindemans, a “universalist” determined to reconcile national and regional interests, failed to carry his own party with him in an intense struggle for its soul with his rival, Wilfrid Martens, a federalist. The Socialist Party split, the government fell, and a general election was called.

The 1978 election was inconclusive, and, except that the VU lost votes in Flanders because of its support for the pact, there was little change in the relative strength of the major parties. The focus of the election, however, was not state reform but rather the economy and unemployment. After three-months of negotiations that tested various formulas for coalitions, Martens succeeded in forming a five-party government that included both Social Christian and Socialist parties and the Democratic Front. It was one of nine governments that Martens would lead between 1979 and 1992 that sometimes included a regionalist party.

The devolution of responsibility from the national government to the regions and communities intended in the Community Pact was implemented incrementally. In 1980, a constitutional reform modified previous agreements on devolution, opening the way for the creation of the Brussels “Capital Region” and the shift of fiscal responsibility to the three regions – Flanders, Wallonia, and Brussels in 1984 and negotiations leading to the comprehensive *St Michel Agreement* of 1992. But the period between the failure of the Egmont Pact and the agreement at St Michel was marked by continuous contention over the linguistic-regional divide that compromised the stability of successive Belgian governments. In 1981, for example, the government’s rejection of a demand by the Walloon Socialists, a coalition partner, to return Fourons to Liege led to its resignation and a general election. Jose Happart, the mayor of Fourons, became a symbol of francophone defiance of Flemish-led national governments and polled the largest single personal preference vote in the country in the 1984 election to the European Parliament.

Government formation became more difficult. After the 1987 general election, it took a hundred days to form Martens VII, a three-party Social Christian-Flemish Liberal coalition that lasted barely three months. Its successor, Martens VIII, was a broadly based, five-party coalition that included Social Christians, Socialists, and the VU and provided the two-thirds parliamentary needed to enact constitutional reforms. That government, which survived for more the three years, failed to produce the anticipated reforms and fell when the VU walked out to protest government approval of sales by “Walloon” arms-makers to a Middle Eastern buyer. Martens IX, which reprised the four-party Social Christian-Socialist coalition,

collapsed after four days in September 1991. Walloon ministers threatened to block a telecommunication contract for Flemish companies unless Flemish ministers approved use of proceeds from television licenses to increase pay for francophone teachers in Wallonia, who were out on strike and whose pay raise had been blocked in parliament by the Flemish parties because an equivalent raise had not been asked for teachers in Flanders. Such was the state of relations between Flemish and Walloon ministers that the one would not talk to Walloon journalists and the other refused to appear on television with Flemish colleagues. The king refused to accept Martens' resignation because of the impossibility of forming a new government and asked him to carry on as a caretaker until the next general election.

The total Social Christian share of the vote in 1992 dropped six points to 25% nationally, the lowest since the modern party system based on the "spiritual families" had developed. Martens was personally discredited in the CVP because he conceded too much to the PSC, which won less than 7% of the vote. The Walloon Socialists were secure in their region despite the reaction to corruption in the party leadership, but both socialist parties campaigned on platforms that were more nationalistic and, therefore, more divergent than in earlier elections. The salient issue was neither devolution nor unemployment but concern about immigration by non-Europeans to Belgium. The xenophobic Flemish Bloc (VB), whose motto was "Fight Back," overtook the moderate VU in Flanders, while even the Walloon Liberals campaigned to "Stop the Invasion." But the election campaign was marked by indifference and disenchantment with the established parties. Twenty-five percent of voters were "undecided" only three days before the election. One consequence of voter apathy – and, perhaps, a "vote-for-Mickey-Mouse" reaction to compulsory voting – was the election of four candidates from the Van Rossem List, a personalist slate put up by a wealthy heroin addict, seeking parliamentary immunity from conviction on a narcotics indictment, who campaigned to abolish marriage and the monarchy – and to legalize drugs.

Jean-Luc Dehaene succeeded Martens, whose protégé he had been, as leader of the CVP. He was credited with having held the party together in 1987 but had stepped aside then for Martens. Dehaene had risen through the ranks of the Catholic trade union movement in Flanders and was regarded, depending on the task, as the CVP's "carthorse" or its "bulldozer." With "reluctance," Dehaene agreed to form a four-party government of "losers" with the Social Christian and Socialists that was short of the two-thirds majority required to initiate constitutional reform. Supported by the Liberals and Greens, Dehaene pushed through approval of revisions to the constitution in 1993 based on the St Michel Agreement that provided for reform of the national legislature and the five-tier solution to the questions of devolution and language policy envisioned earlier in the Egmont Pact. Equalization of funding to the regions was ended. Regional debt was absorbed for one time by the national government, allowing regional governments to start business with a clean slate. Subsequent funding would be on the basis of tax revenues received from the regions and of outstanding need.

In 1993, King Baudouin died suddenly while on holiday in Spain. Often called the "only Belgian" and whose image transcended regional and linguistic differences in his realm, the passing of a beloved king was deeply mourned by his subjects. Baudouin was succeeded by his brother Albert.

Approval of the state reform – as far as it went – was confirmed in the 1995 general election. Dehaene formed a multi-party coalition that included Social Christians and Liberals. Guy Verhofstadt, leader of the Flemish Liberals who had been budget minister in the last Martens government, was named deputy prime minister. The government was forced to confront a public debt equal to 135% of GDP and demands from the regions, which started with a clean slate but were running up their own debt, and, particularly, from Wallonia for assistance for health and education.

Debt reduction was impressive but failed to lower ratio below 100%. Efforts were made to fine tune the state reform and, especially, to clarify relationships among the five tiers of government.

The 1999 general election was viewed as a turning point in Belgian political history. The results were close, but, for the first time in the 20<sup>th</sup> century, the Liberals outpolled the party representing the Christian pillar in Flanders, the former winning 14.3% of the vote and CVP 14.1%. The Socialist and regionalist parties lost votes as well as did the Social Christians, who were excluded both from the national and the regional governments, all now led by Liberals. Verhofstadt formed a six-party government that included Flemish and Walloon Liberals, Socialists, and Greens and provided a comfortable parliamentary majority.

Political allegiances were seen as being in transition, and adherence to a “spiritual family” could no longer be taken granted. Voters had become pragmatic and unpredictable. A large floating vote had emerged, and observers anticipated that voting patterns were likely to change from election to election in future. Furthermore, the leadership of the CVP, longer regarded as the natural party of government in Belgium, was exhausted. In the months following the elections, political parties splintered, merged, attempted to rearrange profiles, and changed their names.

The Verhofstadt government unveiled an economic stability program intended to balance the federal budget in 2002 and create a surplus by 2005. Rising regional debt complicated the calculations. The *Lamberton Accords*, meant to be the capstone on the process of devolution, were approved in 2001 for implementation in 2002. Appeals by the regions pending in court stalled imposition of the accords, which were certain to be an issue in the 2003 general election.

### **Questions/Discussion**

Explain the importance of Christian democratic or confessional parties in the Benelux countries since 1945. Account for their apparent decline in the 1990s. What is likely to be their role in the current decade?

Outline the background to the “language question” in Belgium. Why is devolution regarded as an appropriate answer?

Give the rationale for *pillarization*. In what ways did it contribute to national unity? In what ways may it have detracted from national solidarity.

Account for the relative volatility of Dutch and Belgian politics in the 1990s.

What are the most important social and economic issues confronting the Benelux countries at the “turn-of-the-century”? Do they have political solutions?

## **POLITICS and GOVERNMENT**

Politics and government in the Benelux countries today share many characteristics. They are constitutional monarchies based on the hereditary succession of the monarch. They are parliamentary democracies whose legislatures are elected by systems of proportional representation that encourage multi-party participation in the political process. Governments are responsible to parliamentary majorities and are invariably broadly-based coalitions. The Netherlands and Luxembourg are unitary states, however, while Belgium is the most decentralized country in Europe.

### **The NETHERLANDS**

The Netherlands is a constitutional monarchy, whose king or queen have, since 1868, named only those governments that have majority support in the Second Chamber. During World War II, with the parliament suspended and many political leaders in prison or underground, Queen Wilhelmina signed or refused to sign decisions made by the government-in-exile based on her own judgment of what was needed. After the war, however, the monarch returned to being a purely symbolic head of state. The reigning monarch, Queen Beatrix, is greatly respected for her ability to walk the fine line of speaking out on moral issues without getting in the way of elected politicians or becoming ensnared in party disputes.

The cornerstone of Dutch government is the national legislature, the States-General (*Staten-Generaal*), which is composed of an upper house, the First Chamber (*Eerste Kamer*) and a more powerful lower house, the Second Chamber (*Tweede Kamer*). The 150 members of the Second Chamber are chosen directly by the voters in elections held no more than four years apart. The Second Chamber is called upon to handle between 250 and 300 bills in a typical 10-month parliamentary session.

There are about thirty standing committees in the Second Chamber, plus a number of other committees that make rulings on procedural matters. Committees in both chambers are formed so as to reflect party strengths in the chamber as a whole, but committee chairmanships are also spread among the political parties in accord with their parliamentary strength, regardless of whether or not the party participates in the governing coalition.

There may be as many as a dozen parties represented in the Second Chamber. Elected members of a party form a group (*fractie*) whose task is to coordinate the development of party positions on various issues. There has been a significant increase in party discipline in voting on legislative proposals. Surveys of Second Chamber members show that they view themselves primarily as representatives of their party's voters and, consequently, feel bound to vote the party line under most circumstances. Party discipline is so great that few recorded votes are taken in the Second Chamber.

Legislation passed in the Second Chamber must also receive approval in the First Chamber, which is composed of 75 members elected to 4-year terms by the members of the *Provincial States* (state assemblies). Bicameralism came to the Netherlands in 1815 with establishment of the First Chamber as a body appointed by the monarch. The original purpose of the chamber was to guarantee the Belgian aristocracy a voice in government, when their provinces in the south were merged into the Kingdom of the United Netherlands. The composition of the First Chamber was transformed in 1848 when royal appointment was replaced with election of members by the Provincial States. The number of representatives allotted to each province is proportionate to their share of the national population. Consequently, the composition of the First Chamber does not differ in regional balance from that of the Second Chamber. The balance among parties, however, reflects the compositions of the states assemblies and may differ from that the Second Chamber. (See Figure, “The Netherlands: Legislature and Government.”)

#### Provinces of the Netherlands

	<u>Provincial Capitals</u>
Drenthe	Assen
Flevoland	Lelystad
Friesland	Leeuwarden
Gelderland	Arnhem
Groningen	Groningen
Limburg	Maastricht
North Brabant	’s-Hertogenbosch
North Holland	Haarlem
Overijssel	Zwolle
South Holland	The Hague
Utrecht	Utrecht
Zeeland	Middelburg

The First Chamber does not have the right either to initiate legislative proposals or to amend them. Consequently, the choices faced by the First Chamber are essentially either to accept the bill as it stands or to reject it entirely. As a result of its limited powers, the First Chamber does not subject legislation to the same exhaustive technical and partisan analysis that goes on in the Second Chamber. The First Chamber normally meets just one day per week, and 80 percent of its members pursue a career outside politics while serving as Senator. The upper chamber may be accused of unnecessary duplication of legislative scrutiny when it accepts a law as proposed and of undemocratic interference with the directly elected Second Chamber when it rejects a law. Even so, the First Chamber does on occasion reject major pieces of proposed legislation, such as a bill to liberalize abortion in 1976 and a bill to establish referenda in 1998.

The Dutch government (*regering*) is formally composed of the monarch and the ministers. In practice, the ministers alone exercise the prerogatives of government; they are known collectively as the *ministerial council*, or cabinet. The ministerial council is composed of fourteen members, including the *minister-president* (prime minister), twelve ministers who each head one of the bureaucratic departments, and one minister without portfolio whose task is to press for interdepartmental cooperation on assistance to third world countries. Postwar ministries attest to the issues of a densely populated and increasingly affluent country; for example, Housing and Space Planning (1945); Culture, Recreation, and Social Work (1952); and Public Health and Environmental Protection (1971).

The ministers were originally advisers to the monarch, who consulted them as seen fit. Today, the responsibilities of the ministerial council include negotiating treaties and naming judges, provincial governors and mayors. Most importantly, the ministerial council develops draft legislation to submit to the First and Second Chambers of the States General.

The ministerial council is led by the minister-president, who is head of government and usually the leader of the dominant party in the governing coalition. The minister-president chairs the ministerial council, sets its agenda, and determines its schedule of meetings. He also concludes the council's deliberations on a given issue by formulating a resolution that will achieve consensus agreement among the ministers. The powers of the minister-president have grown by virtue of his role on the European Council, a body composed of EU heads of state that meets twice per year and sets the basic direction of EU policy. (See "Participation in EU Institutions.")

Even so, the powers of the minister-president remain modest in comparison with the British prime minister or the German chancellor. As head of a coalition government, the Dutch minister-president cannot shuffle ministers with the impunity of a British prime minister, nor can he command a minister to follow a particular policy, as the German chancellor often can. The Dutch ministerial council meets in advance of European Council summits to determine what the minister-president may and may not agree to during the discussions. The power of the minister-president derives not from ability to command or to decide, but it stems rather from the ability to find policy formulations acceptable to all parties in the coalition and, ideally, all ministers in the cabinet. The successful minister-president must above all be skilled in the art of identifying compromise positions. As Ruud Lubbers, who served as minister-president in three governments between 1982 and 1994, described the job, "People often argue in order to get their way; I argue primarily to find solutions that others can agree with." Unlike heads of government in most other parliamentary systems, the Dutch minister-president is still a "first among equals."

Nearly all draft laws examined in the Second Chamber are developed in the bureaucratic departments and reviewed in the ministerial council before being formally submitted to the Second Chamber. Although the Second Chamber has the right to initiate legislative proposals on most topics, it does so only about a half dozen times per year. Fewer than one hundred chamber-initiated bills have passed since 1813, though the majority of that number has been passed in the last 30 years. Ninety-eight percent of all legislative proposals in the

Netherlands are initiated by the ministerial council, compared to an average of under 60% in other European parliamentary democracies. About 95% of the 250 to 300 bills submitted annually by ministers are ultimately passed, though many of them only after being amended.

Given the dominance of the ministerial council in developing legislation, the high point of Second Chamber influence on the government comes during negotiations leading to the cabinet formation. After an election for the Second Chamber, a specially appointed negotiator, the *informateur*, makes the rounds of party leaders to determine which parties might participate in the next ministerial council. The *informateur* gathers information about likely coalition prospects and drafts elements of a possible coalition policy platform. As soon as the *informateur* develops a sense of the desired composition of a majority cabinet and the main areas of policy agreement within that coalition, he submits his report to the monarch. Perhaps the most important part of that report is the nomination of a *formateur*, who will complete the government formation and, most likely, become its minister-president. Among the immediate tasks of the *formateur* are to develop further the governing program, to achieve agreement on the specific division of ministries between governing parties, and to develop a list of the individuals who will occupy those seats.

The division of ministerial portfolios among the governing parties is often a contentious point. Ministries must be fairly divided between coalition partners, taking account of those that are more and less powerful. Sometimes a party will insist on controlling a specific ministry, or insist that a rival party not control a particular ministry. The major economic portfolios of Finance, Economic Affairs, and Social Affairs are usually divided among coalition partners, as are the major international departments of Defense and Foreign Affairs. It is typical for the entire process of identifying a coalition that developing a governing program (*regeerakkoord*) and assigning specific ministries to the coalition parties to requires two to three months after an election.

The Dutch civil service is organized into departments, each led by a cabinet minister and, in the case of the larger departments, one or two state secretaries (junior ministers). Given that ministers and state secretaries cannot know all that goes on within the department, they must rely upon senior civil servants to anticipate decisions that are important or that may become politically sensitive, and to bring these to the minister for a final decision. Civil servants draft regulations and legislation for review by the ministerial council and approval by the Second and First Chambers.

Senior civil servants are nearly always careerists who have worked their way up the organizational ladder of their departments. There is relatively little recruitment from industry, political and social organizations, or academia. By the time they reach the highest levels of a department, then, it is typical for civil servants to have spent their entire careers immersed in the department's work and perspectives. This is an effective strategy for maintaining an autonomous organizational culture within each department.

The Netherlands does not grant to its courts the power of judicial review. Statute law is, in effect, constitutional law. There is, however, an extensive consultation process before submission of a draft law to the Second Chamber, in which the Council of State (*Raad van*

*State*, established in 1531) offers advice on the constitutionality, technical legal quality, and likely effectiveness of proposed laws. Moreover, although statutes enacted by the legislature are not subject to judicial review, regulations promulgated by the civil service may be taken to court. Administrative courts hear over 50,000 cases per year.

The power of the courts to scrutinize governmental action is expanded still further by the constitutional provision that the judiciary may test laws against international treaties into which the country has entered, including the Treaty of Rome and the UN Human Rights Treaty. The courts may not declare a law invalid due to incompatibility with the Dutch constitution but they may do so on the grounds of incompatibility with international treaty obligations. Since the basic civil and political rights guaranteed in the Dutch constitution are all restated in similar terms in treaties to which the Netherlands is signatory, the power of testing laws against treaty obligations is a significant one. The Treaty of Rome and subsequent commitments to the EU have successfully been used as a means of attacking a number of laws and regulations related to equal pay for men and women, as well as equal benefits from the social insurance system.

### **Electoral System**

Election campaigns are relatively short and inexpensive in the Netherlands. The official electoral campaign lasts for just 43 days and consists primarily of sending parliamentary candidates to contact voters in workplaces and shopping areas, while the party leader (*lijsttrekker*, or head of the party list) makes one major appearance designed to produce a daily sound-bite for the evening news. Each party receives an hour of radio time every week and seven hours of television time per year, more time being given during the six weeks of an election campaign. Recent elections have also featured debates among the leaders of the different parties.

### **Political Parties**

Dutch political parties were traditionally categorized as being either secular or confessional (i.e., identified with a religious “confession,” or church) and represented one of the four pillars (*zuilen*): Socialist and Liberal in the “secular” camp, Protestant and Catholic in the “confessional” bloc. Although the pillars have lost most of their relevance, three major political parties trace their descent from this configuration.

Christian Democratic Appeal (*Christen-Democratisch Appel* – CDA) is a result of the 1980 merger of the Catholic People’s Party and two Protestant parties, the Anti-Revolutionary Party and the more conservative Christian Historical Union. The CDA occupies the broad center of the Dutch political spectrum and emerged, by far, as the largest party in the 2002 general election, attracting nearly 28% of the vote. That result, however, was considerably smaller than that which the three confessional parties, standing separately at the polls, could expect to receive 40 years ago. Party leader and Harry Potter look-alike Jan Peter Balkenende, a Protestant and a former economics professor, is largely credited with having

reversed the party's decline in the polls. Two small conservative Protestant parties well to the right of the CDA commanded less than 5% of the vote.

The People's Party for Freedom and Democracy (*Volkspartij voor Vrijheid en Democratie* – VVD), established in 1948, assimilated the members of older liberal parties. It espouses traditional European liberal values favoring free enterprise and individual initiative but also promotes social liberalism and supports the welfare state. Hans Dijkstal, who had led the VVD since 1998, was admired by some for his ability to broker compromises. For others, however, the VVD in government compromised principle with its PvdA partners more than was necessary and lost ground in 2002 as a consequence. Dijkstal was replaced as party leader by Gerrit Zalm, the popular finance minister credited with managing an unpopular government's successful economic policy.

The Labor Party (*Partij van de Arbeid* – PvdA) is a social democratic party that was the product of a post-war merger of the old Socialist Party with left-wing confessional and social liberal groups. The PvdA, which led governments in the 1990s, was the biggest loser in the 2002 election that reduced its share of the vote to only 15%. Following the election, Wim Kok's successor Ad Melkert, an unlikely leader acknowledged to be low on charisma, stepped down in favor of the telegenic, thirty-something Wouter Bos.

The program of Green Left (*Groen Links* – GL), led by Paul Rosenmöller, combines a mix of environmentalism and socialism. The Socialist Party (*Socialistische Partij* – SP) competes for support on the far left of the political spectrum under the dynamic leadership of Jan Marijnissen. Together, in 2002, the three "socialist" parties received the votes of 28% of the electorate.

Democrats '66 (*Democraten '66* – D'66) was founded (in 1966) with the distinct aim of supplanting obsolete pillar politics with programs addressing relevant issues. The party called for devolution of power from the highly centralized national government to local governments and backed enactment of legislation through popular referenda. It has been a party beloved of intellectuals and civil servants. Admitted to government in the 1990s, D'66 seemed itself to become less relevant and declined steadily at the polls as some of its objectives were accepted into the political mainstream. Party head Thom de Graaf is widely respected as a measured and rational politician has failed to reverse his party's decline in popularity.

Liveable Netherlands (*Leefbaar Nederland* – LN) came on the national scene in 2000 as a right-wing populist protest movement that entered candidates successfully in local elections. LN focused on crime and the growing presence of unassimilated immigrants as issues ignored by the mainline parties. Pym Fortuyn split from the LN in 2001 to form the "Liveable Rotterdam" in his native city, where his personalist movement won a quarter of the vote in local elections. Fortuyn won support throughout the country and fielded a list of candidates nation-wide under the label List Pym Fortuyn (*Lijst Pym Fortuyn* – LPF) in the 2002 general election. Although Fortuyn was assassinated before the election, his personalist "list" emerged from it as the second largest "party" in the Second Chamber with 17% of the vote, pulling voters from the mainline parties and overshadowing the LN. Personal

animosities among politically inexperienced LPF ministers, dismissed by critics as “people of low breeding,” forced the resignation in October 2002 of the recently installed coalition government. The issues around which the LPF was formed remain salient, but prospects for its future as a coherent political party are dim.

The waning significance of pillar-based loyalties to parties has meant that voters are more likely to embrace such issues as strength of the economy and progress on the environment. Party leaders have also become more important as personifications of the party. Modern electoral campaigns are in large part contests between the party leaders who compete as potential prime ministers, thus personalizing party choice to an unprecedented degree. Development of the media-centered campaign—including televised debates between the major party leaders—also contribute to the growing prominence of the party leader as articulators of the party’s campaign themes. Voters have responded as never before to the appeals of particular leaders. These range from the youthful and “Kennedy-like” Hans Wiegel of the VVD in 1982, to the sober, hard-working, and slightly ruffled Christian Democrat Ruud Lubbers in 1986 and 1989, to the fatherly, moderate, inclusive Labor leader Wim Kok in 1994 and 1998, to the firebrand populist Pym Fortuyn in 2002. Each of these leaders led their parties to unprecedented electoral success by attracting support outside of the traditional constituency of that party.

Members of the Second Chamber are elected by proportional representation. Parties submit lists of candidates and the voter selects one of those lists. Each party then elects to the Second Chamber the number of nominees proportionate to the total number of votes received by the party. Since it requires only two-thirds of one percent of the vote to gain one of the 150 seats in the Second Chamber, the quota for entry of a new party is just under 60,000 votes nationwide. The electoral system makes challenges by new political parties exceptionally easy to mount.

For decades after the advent of universal suffrage in 1917, the societal organizations that made up the pillars did their part to strengthen the link between pillar loyalty and party support. It was not uncommon for the faithful to be reminded from the pulpit of their obligation to vote for the “correct” party, and these reminders were particularly forceful in Catholic churches across the country. Each pillar would support its associated political party, and each pillarized party would then be represented in the Second Chamber in proportion to its weight in the population. Party strengths varied only slightly between elections. For much of the twentieth century, the three major confessional parties could count on electoral support that closely and consistently reflected the relative strengths of each religious group in society. Similarly, secular members of the working class could be counted on to vote for the PvdA, and non-religious members of the middle class consistently supported the secular, conservative VVD.

With the decline in loyalty to the pillars, the Dutch electorate began to shift their loyalties from the traditional parties. By the mid-1960s, there was a growing pool of voters prepared to shop between the parties and to choose on the basis of issues presented in the campaign rather than on the grounds of long-standing sub-cultural commitments. The electorate was subject to three basic shifts in political orientation going on at more or less the same time:

secularization, de-confessionalization, and the decline of class conflict. Each of these trends weakened the responsiveness of the electorate to party appeals based on religion and class. Even as religious belief and social class were declining in their power to structure the vote, other issues were becoming more important to the Dutch electorate. Among the most important new issues are democratization of the political system, environmental protection, women's rights, and control of immigration and reduction of crime. New political parties sought, in some cases with considerable success, to redirect people's attention to issues that had tended to be neglected in a political system oriented to the defense of religious and class interests. The most dramatic recent example of this phenomenon is the List Pim Fortuyn, which won 17% of the votes and 26 seats in the Second Chamber in the elections of May 2002.

### **The Meaning of Pillarization**

The Liberal reforms of the 19<sup>th</sup> century set the stage for the main lines of Dutch politics in the 20<sup>th</sup> century. (See "The Netherlands in the 19<sup>th</sup> Century.") Threatened by Liberal policy to secularize education and by the rise of Catholic influence, Calvinist leaders began a campaign to organize popular support to protect Protestant privileges. The Calvinists mobilized as a means of revitalizing traditions of doctrinal strictness and religious fervor and also to restore the central role of Protestant belief in the nation's governance. Catholic mobilization followed in a defensive vein, drawing on a history of discrimination to persuade Dutch Catholics, who constituted a large minority in the overall population of the Netherlands, of the necessity of retreating to a collectively organized isolation from the Protestant and secular majority. Socialist mobilization followed the same pattern, since, by the early part of the 20<sup>th</sup> century, it was obvious that a well-organized movement of the working class was seen as the only means of stemming the loss of its loyalty to the Catholic and Protestant trade unions.

By the end of the 19<sup>th</sup> century, Protestant, Catholic, liberal, and socialist associations had coalesced into four broad but ideologically integrated networks of social, professional, and political organizations. Referred to as the "pillars" of Dutch society, each was intended to replicate an entire sub-national society for adherents of a particular set of beliefs. Each group sponsored its own organizations that enabled members to conduct their lives separately from those in the other pillars. The Dutch people were, in effect, compartmentalized by choice into a series of parallel societies offered each group their own hospitals, schools, newspapers, labor unions, social insurance, business and professional associations, and political parties as well as scouts, hobby clubs, and sports teams and, eventually, radio and television programming. These organizations were legally recognized and received public financial support on an equal footing.

The most remarkable area of growth in pillarized organizations was in the mass media. By the 1950s, for example, the Catholic population of five million was served by the Roman Catholic Press Service that provided readers with 22 daily newspapers (two of them distributed nationally), another 22 weekly newspapers published in small towns, 270 weekly and monthly magazines, and 42 scholarly journals. Catholic, Protestant, and secular

journalists were each trained in their own schools. Pillarization of the print media made possible the classic Dutch story of the greengrocer who asks a customer if she prefers her vegetables wrapped in a Catholic, Protestant, or socialist newspaper. The tradition of pillarized control of the print media was extended to other mass media as they developed. Airtime on the radio frequencies was divided among associations created to produce and broadcast Catholic, Protestant, socialist, and “liberal” (or “general”) programming. After World War II, political leaders representing the pillars were able to squelch the demand for commercial television stations and, instead, extended the authority of the pillar radio associations to television as well.

The pillars completely structured social and political life in the Netherlands for the first two-thirds of the 20<sup>th</sup> century, but beginning in the 1960s their relevance began to wane. One reason for that was the pervasive secularization of Dutch society as a whole that leveled differences between the secular and confessional pillars and reduced the importance of projecting a religious identity outside of church. Democracy '66 was founded on the idea that the pillars were anachronisms. Middle-class and working-class Catholics and Protestants might more readily identify politically, for example, with the VVD or PvdA and support their economic or social policies without seeming to compromise their religious beliefs. Church affiliations also declined sharply. Secular institutions and political parties were no longer threatening, and, by the late 1960s, Dutch Catholic bishops, for example, no longer pronounced that a good Catholic had to join the Association of Catholic Unions or vote for the Catholic Peoples Party.

The revolution in telecommunications also contributed to the erosion of the pillars. Cable and satellite dishes made the monopoly on broadcast time held by the pillars unfeasible. EU directives mandated that national television markets could not be protected by governments of member countries. These changes made it impossible to continue the isolation of pillarized communities – or, for that matter, to keep viewers from watching Dutch television in preference to programming from other countries.

Even so, for most of the 20<sup>th</sup> century, political party loyalties in each pillar were so strong that election results varied little over the decades, other than the glacial shifts that occurred as Catholics, for example, became an increasingly larger part of the Dutch population. Arend Lijphart, the Dutch social scientist, has pointed out that the pillars brought a large measure of peace to a Dutch society whose deep religious, class, and ideological cleavages might otherwise have led to instability.

### **The Dutch Welfare State**

The Netherlands has become widely known for being one of those countries that has a particularly extensive and generous welfare state. Although the economy is decidedly capitalist on the production side, with full rights of private property, the welfare system gives the distribution of incomes something of a “socialist” tinge. All people are expected to work to their capabilities, but incomes have been made partially independent of the job one does—or indeed whether one works at all.

Until the 1960s, the Netherlands was a welfare-state laggard in comparison with most western European countries. Rapid growth of the welfare state began only in the late 1950s. Once begun in earnest, though, it grew rapidly. By the mid-1960s the proportion of GDP spent on social welfare transfers in the Netherlands had outdistanced other European countries. Financing for new welfare state programs after World War II came primarily from payroll deductions paid into a series of “social funds” dedicated to each of the insurance programs—sickness, disability, retirement, unemployment, widows and orphans, and so forth. In the thirty years from 1946 to 1976, the Dutch welfare state expanded from the provision of minimum income relief to the poor to the guarantee of a minimum income as well as insurance against income loss due to sickness, disability, unemployment, death of the head of household, or retirement. At its peak, the welfare state sought to give all citizens the opportunity to participate fully in the society, regardless of the job they work at or whether they work at all.

The most consequential of the universal programs was the Worker’s Disability Act in 1967, which replaced existing accident and disability insurance for on-the-job injuries with a general guarantee of income replacement in the event of partial or full disability. Benefits were related to earnings, and for workers deemed completely disabled (i.e. unable to work at all), the benefit was equal to one’s last wage. The duration of the benefits was indefinite until one reached retirement age, at which point the benefit shifted from disability to the retirement program. The high water mark of the Dutch welfare state was reached when the Worker’s Disability Act was generalized from the labor force to the entire population. This 1976 extension in effect gave all individuals the right to an income for life if they were disabled, whether or not they had ever been part of the workforce.

Although the Dutch welfare state is quite extensive, its primary emphasis is on income *maintenance* rather than income *redistribution*. As a result of this emphasis on income replacement and minimum income guarantees, the percentage of people living in poverty in the Netherlands was in 1979 the lowest in the European Union. At the same time, the Netherlands has had a relatively small decline in income inequality during the postwar period.

By the mid-1970s, the Dutch welfare state was the largest in the world if measured by the yardstick of spending as a proportion of the national economic product. At its peak, over one-half of the Dutch GDP traveled through the public sector, and about half of that amount was collected for redistribution by social welfare agencies to the sick, the disabled, the elderly, or the unemployed. This is a far higher percentage than that found, for example, in Sweden and Denmark (45% of GDP), or the United States (25% of GDP).

In the process of implementing universal social insurance programs, however, the very logic of the welfare state began to change. During the 1970s, the idea spread that government should no longer provide simply for an *economic* minimum income, but rather for a *social* minimum income. The idea of the “social minimum” entered the Dutch welfare-state vocabulary, creating a gradual shift from the original concept of the welfare state to a new concept that might be called the “social welfare state.”

In the area of general income assistance, for example, there was an increasing concern that public assistance recipients should live in a way that mirrors broader social patterns, even if on a modest scale. For example, public assistance benefits were augmented in 1964 to include a vacation allowance; if the normal Dutch family took a vacation every year, then the logic of full social participation demanded that those on public assistance also have the means to take a vacation. Local governments also decided to offer a daily newspaper to those on public assistance, again with an eye to the conditions necessary for full social participation.

In 1970, this logic was carried still further by coupling public assistance to the net minimum wage. The minimum wage itself was set at 80 percent of the net average wage. This had the effect of maintaining a constant (and relatively modest) gap between public assistance and the lowest paid jobs, and between the lowest paid jobs and the average job. A further step in development of the social welfare state came in 1976, when sickness, disability, unemployment and retirement benefits were all tied both to the price index and to changes in the wages of private sector workers. As wages rose, so would social insurance payments. As prices rose, both wages and social insurance payments would be adjusted. In 1979, this automatic indexation was extended to those receiving public assistance benefits, completing the guarantee that all citizens would share in the increasing levels of prosperity. The minimum subsistence goals of poor relief under the welfare state were now completely abandoned in favor of the far more ambitious goal of making public assistance indistinguishable from a modest working wage.

The social welfare state rests not just on guarantees of a minimum income, but also on access to education, health care, cultural events, and quality options for leisure. This has led to an extensive policy of subsidizing social and cultural organizations ranging from ballet companies, theater groups, and orchestras to stamp collecting clubs, sport associations, and youth groups. Over 80% of the price of a theater ticket is paid by the government, as is 10% of the price of a movie ticket.

One of the most striking perspectives of the social welfare-state philosophy is its redefinition of the meaning of work. With a guaranteed right to a level of public assistance not far below the minimum wage (and a minimum wage that is itself pegged to remain not far below the average wage), the monetary incentive to work is significantly diminished. Under the social welfare state, work is a form of economic and social participation as well as a means of earning money. The quality of the work experience becomes more important; the monetary rewards of work less so. The social welfare state does not imply that work is an option one may or may not choose. But it does embody the belief that a person should have the opportunity to work at a job suitable to his or her own tastes and skills.

More recently, the Dutch government has pulled back from the welfare state programs designed in the 1960s and 1970s. Retrenchment of the welfare state began in 1981 with the installation of a center-right government determined to restore budgetary balance. The previous emphasis on citizen entitlements gave way to a new focus on economic efficiency.

Under the governments of Wim Kok (1994-2002), the language of welfare- state solidarity was supplemented by an emphasis on the need to maintain incentives for work.

### **Overseas Territories**

The Netherlands Antilles (Curacao, Bonaire, Saba, St Maarten, and St Eustatius) and Aruba are self-governing overseas territories of the Kingdom of the Netherlands. The Dutch government retains responsibility for foreign affairs and defense. Queen Beatrix is represented in both territories by a governor-general who exercises executive authority in external affairs in consultation with the respective elected territorial governments. Executive authority in internal affairs, including control of police, communications, and fiscal and monetary affairs, in each territory is conducted a council of ministers, or government, responsible to the territorial legislature. The Netherlands Antilles has a 22-member legislature, the Estates (*Staten*), in which each of the five constituent islands in the territory is represented. Self government was achieved in 1954. Since 1977, each island has had a separate constitution for local affairs in addition to subscribing to the territorial constitution. Aruba separated from the Netherlands Antilles in 1980 out of concern for what its leaders considered the political dominance of Curacao. The Estates of Aruba consists of 21 members elected from constituencies on that island. A minister-plenipotentiary appointed by each government takes part in deliberations of the Dutch government when it discusses external affairs pertaining to the territories.

### **Questions/Discussion**

Give some reasons why government formation requires many weeks of negotiations while usually no more than six weeks is needed for staging a general election.

The Netherlands is a unitary state. Describe the representational base for the First Chamber. Explain in party strengths in the First and Second Chambers.

Why are relations between ministers from a party in government and its parliamentary party in the *fractie* sometimes strained?

The traditional “pillars” are said to be in decline as frameworks for political participation. Speculate on the possibility of new “pillars” developing that reflect contemporary concerns, new ideologies, or emerging divisions in Dutch society. What might some of those “pillars” be?

## BELGIUM

Between 1970 and 2001, Belgium moved through a series of constitutional reforms from being a highly centralized unitary state to a decentralized federal state in which responsibilities have devolved from the national government to three regions and three linguistic communities. Government functions are delineated on five levels and carried out by five tiers of government:

- National
- Communities
- Regions
- Provinces
- Communes

The monarch is the head of state, in whom the country's constitution vests executive authority. However, he does not properly represent the State, which is an apparatus of power, but the Country and its People, hence the title: *King of the Belgians*. He is not crowned but, on acceding to the throne, takes an oath before both houses of the legislature "to observe the Constitution and the laws of the Belgian people..." The king is nominally commander-in-chief of the armed forces. He is responsible for appointing the government on the advice of the parliamentary majority and legitimizing legislation with his signature. Of the king's two roles, political and representative, the latter symbolic role is the more important. It is sometimes pointed out that the king is "the only Belgian."

### Belgium: Tiers of Government

<u>Level</u>	<u>Agencies of Government</u>	<u>Competence</u>
NATIONAL	Prime Minister and Government Chamber of Deputies and Senate	Foreign Affairs Defense Fiscal Policy (including tax collection) Post Office Pensions Judicial Appeals
COMMUNITIES	Cultural Councils for: Dutch-speaking Flanders (*) and Brussels French-speaking Wallonia and Brussels German-speaking Eupen-Malmedy	Education Cultural Affairs Language Rights Radio and TV Science Research International relations in above areas

REGIONS	Minister-President and Council and Regional Legislature in: Brussels (bi-lingual) Flanders (Dutch-speaking) Wallonia (French-speaking)	Social Assistance Health Housing Economic Development Agriculture Trade Promotion Environment Water International relations in above areas
PROVINCES	Governor (appointed by monarch) and provincial parliaments in ten provinces, five Flemish: Antwerp, East Flanders, West Flanders, Flemish Brabant, and Limburg; five Walloon: Hainault, Liege, Luxembourg, Namur, and Walloon Brabant.	Police Courts Utilities
COMMUNES	Mayor and council	Social Services Roads Fire Departments

(\* ) Incorporated in Flemish regional administration.

The government, headed by the *premier* (prime minister), is in effect the executive committee of the parliamentary majority to which it is responsible. Governments are by necessity multi-party coalitions in which parties representing both language groups participate. Until the present government was appointed, ministers, including the prime minister, were usually designated by party bosses. The same names often appeared in successive governments holding different offices. The current prime minister, Guy Verhofstadt, and the foreign minister, Louis Michel, are both leaders of their respective parties.

Belgium's bicameral legislature was restructured as part of constitutional reforms in 1993. The Chamber of Representatives is composed of 150 members (reduced from 212) elected to a four-year term from party lists in 20 multi-member constituencies according to proportional representation. Voting is compulsory. Governments are formed by those parties capable of commanding the support of a majority in the lower chamber. Ministers must reply to questioning in the Chamber and are subject to votes of confidence. Governments may be removed by a vote of "constructive" no-confidence that requires the Chamber to propose an alternative majority.

The upper chamber, the Senate, has 71 members (reduced from 184). Forty Senators are chosen by electoral colleges elected by proportional representation from constituencies that combine several of those used to elect members to the lower chamber; 21 are appointed by the Community councils; and 10 are appointed by the Senate itself. Members of the royal family are *ex officio* senators.

Passage by the Chamber of Representatives alone is sufficient to enact legislation. The Senate, however, can intervene to demand a second reading in that body or can return bills to the lower chamber for amendment or clarification. It also exercises suspensory powers over legislation and can initiate legislation. The Senate has no role in government formation.

Constitutional changes have been proposed under the 2001Lambermont Accords that would again restructure the legislative branch. Under these proposals, the 10 provinces, plus Brussels, will constitute 11 electoral constituencies, and the Chamber of Representatives will be increased in size to 200 members to accommodate 50 elected by the three cultural communities. A 5% threshold will be imposed to discourage fragmentation of parties. The Senate will become a “Chamber of Communities and Regions,” whose members will represent the regional governments and the cultural communities. The second reading of legislation, now conducted by the Senate, will be transferred to a committee of the lower chamber. The two-thirds majority needed in both chambers to alter the constitution in this way is not presently available. Introduction of the proposal will therefore be deferred until the next parliament, seated in 2003. If approved, the constitutional revision will not be effective until the election of the following parliament in 2007.

The first article of the Belgian constitution as amended in 1993 states that: “Belgium is a federal state that consists of communities and regions.” Belgian federalism is underlaid by the principle of *subsidiarity*, which dictates that anything that can be dealt with at a lower level must not be passed on to a higher political or administrative level.

# The Institutions of Belgium

The national or Federal Government, retains responsibility in those areas that come within the sphere of national interest as well as over everything that does not fall within the express powers of the Communities and the Regions. Federal ministers are required to put their ministries at the service of the regions when requested. Constitutionally, federal, community, and regional authorities have equal status but exercise different competencies. The Lambermont Accords, approved by the Chamber of Representatives in 2001, are intended to fine-tune these relationships among the several tiers of government.

As introduced, three elected cultural councils were responsible for the administration of education and cultural affairs and oversight of language rights in Dutch-speaking Flanders, French-speaking Wallonia, and for the German-speaking population in the Walloon region. The Flemish Community Council and French Community Council also had representatives elected from bi-lingual Brussels.

Regional authorities were subsequently established for Flanders and Wallonia and in the Brussels-Capital Region, each of which elects a regional legislature. Regional governments, responsible to those legislatures, are composed of a council headed by a minister-president (prime minister). Responsibility for most areas generally defined as “domestic” was devolved from the national to the regional governments.

Belgian federalism is asymmetric. After creation of the regional authorities, the Flemish Community Council merged with the Flanders Region, and today both are administered by a single government and legislature. However, the French Community and the Walloon Region remain separate. Following the reforms of 1993, however, the French Community handed over a wide range of competencies to the Walloon and Brussels-Capital regions, retaining culture, education, and the media.

The Brussels-Capital Region and French-speaking Brussels suburbs in the province of Flemish Brabant present particularly complex and challenging situations. Language is the defining characteristic of the Flemish and Walloon regions, and those regions are not bi-lingual. French-speaking residents of the Flemish Region must specifically request documents in French from the regional or municipal governments, which are required by law to hold meetings and issue documents only in Dutch. Similar requirements pertain in Wallonia for the exclusive use of French. The Flemish Region has designated “Language Facility Municipalities” in six suburban communes on the language frontier outside the capital region, where the French-speaking deputy governor of Flemish Brabant is responsible for dealing with language disputes. Flemish authorities contend that that this arrangement serves to facilitate French-speakers learning Dutch while retaining their own cultural identity. All 19 communes in Brussels have a French-speaking majority, but each is required to appoint a Dutch-speaking alderman to its executive. The Flemish Region and Community handles Dutch-language education and cultural affairs in the Brussels Region. Members of the Brussels-Capital legislature sit on the French Community Council in Wavre, provincial capital of Walloon Brabant.

Belgium: Composition of Federal and Regional Parliaments and Community Councils

Federal Legislature

Chamber of Representatives

150 representatives elected from 20 constituencies

Senate

71 senators

40 directly elected senators

25 from Dutch-speaking electoral college

15 from French-speaking electoral college

21 “community” senators appointed by Community

councils

10 from Flemish Community

10 from French Community

1 from German Community

10 co-opted senators appointed by Senate

6 appointed by Dutch-speaking caucus

4 appointed by French-speaking caucus

Regional Parliament of Flanders/Flemish Community Council

124 members

118 from Flanders

6 from Brussels (who exercise a double mandate in Brussels

Council)

Regional Parliament of Wallonia

75 members

Brussels Capital Council

75 members

65 French-speaking councilors

10 Dutch-speaking councilors

French Community Council

94 members

75 from Wallonia

19 from Brussels

German Community Council

25 members

The ten provinces of Belgium are autonomous administrative institutions, but they are subordinate to the jurisdiction of federal, community, and regional authorities. Provincial legislative councils are directly elected and approve measures related to provincial competencies. Councils in each province elect a permanent delegation, chaired by a royal-appointed governor and responsible for day-to-day administration. In 1993, the bi-lingual province of Brabant was divided into Flemish Brabant and Walloon Brabant.

Provinces of Belgium		
Region	Province	Provincial Capital
Flanders	Antwerp	Antwerp
	East Flanders	Ghent
	Flemish Brabant	Vilvoorde
	Limburg	Hasselt
	West Flanders	Bruges
Wallonia	Hainault	Mons
	Liège	Liège
	Luxembourg	Arlon
	Namur	Namur
	Walloon Brabant	Wavre

There are nearly 600 municipalities or *communes* in Belgium, compared to almost 3000 before their consolidation in 1975. Each commune elects a municipal council that, in turn, nominates the royal-appointed mayor and elects aldermen who serve as the municipal executive. The choice of the mayor typically reflects the political orientation of the council majority. The Flemish Region has proposed direct election of mayors in Flanders after ratification of the Lambermont Accords. Critics are concerned that this plan would usher in debilitating cohabitation situations in local government. Appeals have been launched by both the French and Flemish communities challenging the constitutionality of the Lambermont Accords. Decisions on their appeals will not be made until after the next election in 2003. If the appeals are upheld, observers believe that prospects for stable regional government, especially in Brussels, could be adversely affected.

The Belgian judiciary is independent of the government and legislature, and enjoys a reputation for integrity and professionalism. The Court of Cassation is the highest court in the judicial system. It is the final court of appeal and decides constitutional questions.

## Political Parties

For most of the 20<sup>th</sup> century, Belgians identified themselves with one of three “spiritual families” – Catholic, socialist, or liberal – that determined political affiliation expressed in Christian democratic, social democratic, and liberal parties. The first was “confessional,” maintaining close ties to the Church and supporting its role in social affairs, especially education. It was broadly based, appealing from the center of the political spectrum to active Catholics of all classes, particularly in Flanders, with platforms that were socially progressive, culturally conservative, and politically democratic. Socialist and liberal parties were secular and often anti-clerical. The former considered itself a workers’ movement of the left and had its strongest support in the socialist trade unions in competition with Catholic unions. It sanctioned state intervention in the economy and advocated the introduction of the social welfare state. On these issues and others, the socialist left was closer to the Catholic center than to the liberals, who occupied the right side of the political spectrum. Liberal support was based in an urban, middle-class constituency that favored democratic reforms in a context unfettered by confessional privilege or socialist ideology. Although supporting social reforms as well, liberals would limit state intervention in the market economy. Both secular “families” supported state control of education and both were far stronger in Wallonia than in Flanders.

The “spiritual families” overlapped the language divide and, to some extent, were able to contain nationalist and regionalist movements within their established parties. Affiliation with a “family” often dictated social institutions and professional associations to which one belonged, similar to the Dutch pillars. Distinctly nationalist or regionalist parties never achieved “family” status despite their electoral successes nor have the environmentalist parties.

In the late 1960s and the 1970s, each of the three parties – Social Christian, Socialist, and Liberal -- divided along language lines. In place of three large parties, there were thereafter *seven* political parties (the Liberals split in three – Walloon, Flemish, and *Bruxellois*). These were not language-designated wings of the same party, but entirely separate political parties. Since 1994, a further realignment of political parties has occurred, and the process appears to be on-going. Existing parties have splintered and merged, been re-named or become extinct. On major social and economic issues, there is general, if sometimes qualified, agreement among political parties. (This condition does not extend, however, to regional and language issues.) The secular parties are no longer hostile to the Church, and practicing Catholics are confident that the role of Church, for example in education, is secure. Rather than referring to a “spiritual family” for direction, voters are likely to consider pocketbook issues, personality of the leadership, alienation from parties in office, and regional interests. Region is the most important determinant of political affiliation. But the parties identified with “spiritual families” still polled nearly two-thirds of the vote in the 1999 election.

The Flemish Liberals and Democrats (*Vlaamse Liberalen en Democraten* – VLD) emerged from the 1999 general election the largest of 11 parties winning seats in Chamber of Representatives – by two-tenths of one percent and one seat over the Flemish Christian People’s Party. Only rarely since the 19<sup>th</sup> century had a liberal party outpolled a Catholic

party. Party leader, now Prime Minister Guy Verhofstadt, took control of the Flemish Liberal party while still in his 20s, changed its name, and refurbished its image. He was an admirer of Margaret Thatcher and Ronald Reagan. In office, he has spoken approvingly of Tony Blair's "Third Way" position. Adopting the strategy of the francophone liberals, the VLD has reached out to confessional and nationalist voters. A Christian democratic faction formally merged with the VLD in 2002.

Verhostadt's liberal counterpart in Wallonia, Foreign Minister Louis Michel, leads the newly amalgated Reform Movement (*Mouvement Reformateur* – MR) in succession to the Liberal Reform Party and its common-slate electoral allies, the Democratic Front, the Brussels liberal party, and the Christian democratic Citizens' Movement.

The Socialist Party (*Parti Socialiste* – PS) concentrated on regional politics in Wallonia, where it traditionally was the largest party, during long periods of Catholic-Liberal coalition government. The party is led by the popular Elio Di Rupo. Although never in a leading position in the region, the Socialist Party, subsequently renamed the Socialist Party-Another Way (*Socialistische Partij-Anders* – SP.A), in Flanders held its own in successive elections and increased its share of the Flemish vote in 1999.

The Christian democratic parties suffered defeat at the polls and loss of prestige in the 1999. The Christian People's Party came second to the VLD in Flanders and surrendered the leadership position in national politics that it had maintained for decades. In an effort to sharpen its regionalist credentials, the party has changed its name to Christian Democratic and Flemish (*Christen-Democratisch en Vlaams* – CDV), following the general election. A faction left the CDV to form a new party, New Christian Democrats, which, in turn, joined the VLD. More radical changes occurred within the ranks of the francophone Christian democrats. The Christian Social Party in Wallonia morphed into the Humanist Democratic Center (*Centre Democratique Humaniste* – CDH), allowing that the party was no longer exclusively Christian. The Citizens' Movement, a Christian democratic party centered in Brussels, merged formally with francophone liberals in the Reform Movement.

Belgium has some of the most comprehensive laws in Europe to protect the environment. These laws lay responsibility on producers instead of consumers, and impose prohibition rather than regulation. "Green" parties have had a major impact on national legislation but are divided along linguistic lines, *Ecolo* from Wallonia and *Agalev* from Flanders.

The People's Union (*Volksumie* – VU) was a moderate Flemish nationalist party and an early standard-bearer for separatism that contributed to setting up a federal system in Belgium. However, the VU's moderation and the accommodations that the party made in government weakened its nationalist profile and eroded its voter base. Nationalist support passed in successive elections to the Flemish Bloc (*Vlaams Blok* – VB), a pugnacious right-wing separatist party that has pronounced xenophobic tendencies. Party leader Philip Dewinter claims that the VB is no longer concerned with state reform to increase regional autonomy within a federal Belgium. The VB instead calls for an independent Flanders within a federal Europe and has preempted the use of many of the symbols of Flemish identity. It opposes further in-migration to Flanders and proposes repatriation of foreigners already residing

there. Other Flemish parties have tried to isolate the VB and have adopted stronger regionalist profiles, but have failed to win back voters lost to it. The VB has been particularly successful in local elections, winning more than a quarter of the vote in Antwerp. The party's region-wide approval rating approaches 20%.

The VU, which shared electoral slates with the social liberal ID21, broke apart following its poor showing in the 1999 general election. The conservative wing of the VU re-formed as the New Flemish Alliance (*Nieuw-Vlaamse Alliantie* – NVA), which took over VU seats in the Chamber of Representatives. The NVA, led by Geert Bourgeois, stands to attract some voters from the VLD who are fed up with Verhofstadt for “selling out” Flanders in the Lambermont Accords, but who are unwilling to vote for an extremist VB. A left-wing faction of the VU, together with the remnants of ID21, formed a new social liberal party, *Spirit*, whose leadership expressed solidarity with the SP.A and suggested running on a common slate with the Flemish Socialists..

The National Front (*Front National* – FN) is the xenophobic francophone counterpart of the VB and claims an affinity with the French party of the same name.

## **Issues**

The six parties that formed a coalition government in 1999 under Guy Verhofstadt had won collectively 57% of the total vote in the general election that year and enjoyed a 19-seat majority in the Chamber of Representatives. Political debate since then has involved not so much opposition from the opposition CDV and its francophone counterpart as it has conflicts of interest among the coalition partners.

The Lambermont Accords, approved in 2001 and intended for implementation before the 2003 election, have been challenged in court by both the Flemish and Walloon communities, which, in turn, put pressure on government parties from both sides of the linguistic frontier to modify the agreement. Tension within the coalition on this issue increases the prospect of destabilizing it prior to the next election.

The government proposes tougher measures on crime and immigration. In 2000, for example, Belgium dropped out of the Schengen Agreement temporarily in order to close its borders to stop further immigration while measures were being taken to round up illegals already in the country. The government acted under pressure to take action to head off extreme right-wing exploitation of those issues.

The government's Stabilization Program, introduced in 2000, which aimed at balancing the budget by 2002 and creating surpluses thereafter, fell behind schedule. The government must also deal with high public debt and regional demands for additional expenditure on health care and education. Difficulties in balancing the need to increase revenue and to attract investment have also divided government parties. Liberals are committed to hard-nosed fiscal consolidation. The Socialist and “Green” parties proposed introduction of new capital gains taxes, while the Liberal parties point out that the absence of these taxes has attracted direct

investment to Belgium. The parties recognize the necessity of action to increase labor force participation, which in Belgium is well below the EU average. They also agree generally on various means of attack – reduction of employer contributions to social benefits, corporate tax reform to favor small business, and, more contentiously, modification of wage indexation.

The coalition turned down proposals by Ecolo transport minister Isabelle Durant for far-reaching restructuring of the Belgian railway system, including greatly reduced fares to encourage ridership and double-decker cars to improve capacity. The “Green” parties were isolated in support of her proposals.

Controversial legislation that also split the coalition was introduced in 2002 to extend voting privileges in local elections to resident non-EU citizens. The measure was proposed by the Socialist and “Green” parties, with the support of opposition CDH. It was opposed, however, by the VLD with support from the CDV, neither party being willing to risk tarnishing its nationalist image. The MR was also opposed, as party leader Louis Michel sought to avoid a split that might endanger government stability in the run-up to the 2003 election.

Public approval of the Verhofstadt government declined from 47% in 2001 to 40% in mid-2002. Approval was markedly lower in Flanders than in Wallonia and Brussels. Meanwhile, support for the six government parties remained collectively above 50% in Flanders, and 75% in Wallonia and Brussels.

### **Questions/Discussion**

Discuss and evaluate Belgium’s devolved five-tier system of government. What is the relevance of the federal government?

In the light of the discussion suggested above, comment on the assertion that Belgium is an example of “extreme federalism.”

Why is the growth of the Brussels suburbs such a problem?

How typically are government ministers, including the prime minister, selected?

Demonstrate the rationale for bicameralism in Belgian legislature.

What are some of the positive and negative aspects of compulsory voting?

Account for the rise of the Flemish Liberals and the decline of the Flemish Social Christians in the late 1990s.

On a case by case basis, what is the relevance in the changes in the names of political parties and the internal realignment of parties across “spiritual families” after the 1998 general election?

## LUXEMBOURG

Luxembourg is a constitutional monarchy in which effective political power is exercised by three branches of government. The Government, including the prime minister and cabinet, is responsible to the majority in the Chamber of Deputies, Luxembourg's unicameral legislature. The 60-member Chamber is elected to a maximum five-year term by proportional representation within four electoral districts, and exercises an independence of action rare in European parliamentary systems. Both the Government and the Chamber propose legislative initiatives. The third source of authority is the Council of State, which fulfils some of the functions of an upper chamber. It is composed of 21 councilors appointed by the Grand Duke on the recommendation of the Government and Chamber. The Council is called upon to offer an opinion on the constitutionality of all legislation before it is submitted to the Chamber for a vote.

The Grand Duke exercises executive authority within limits imposed by the constitution. The monarch's responsibilities include representing Luxembourg as head of state, appointing the Government on the advice of the Chamber, and signing legislation into law.

Luxembourg is a unitary state in which jurisdiction for local administration is vested in 118 communes, each of which has an elected council that in turn elects the mayor.

### **Political Parties**

Luxembourg's three largest political parties follow the pattern of the Belgian "spiritual families" – Christian democratic, social democratic, and liberal democratic. Two parties of the center-right are regarded as "bourgeois," and one party of the center-left is traditionally regarded as a "workers" party. Two are secular parties, one is confessional.

The Christian Social People's Party (*Chrëschtlich Sozial Vollekspartei* – CSV) is Luxembourg's Christian democratic party. It is the largest political party and is regarded as the natural party of government. No government can be formed without its participation, and most twentieth-century governments were led by it. The CSV retained the support of 30% of the electorate in the June 1999 general election.

Identified traditionally as a confessional party, the CSV has a close though informal relationship with the Roman Catholic Church in Luxembourg and has a long history of protecting the prerogatives of the Church in education and social affairs. Situated in the broad center of the political spectrum, the CSV attracts votes from all classes and can govern with either the social democratic left or the liberal right.

The CSV favors a strong market economy capable of supporting an extensive social welfare state. It is supported by the Catholic trade union movement as well as by professional and

business associations. In office continuously for many years, the CSV exercises patronage, for example, in public utilities employment.

The CSV benefits from a large and well-articulated party organization. Advancement within the “spiritual family” is, in fact, often a *family* affair. The CSV is led by Jean-Claude Juncker, who became prime minister in 1995 at the age of 40 in succession to Jacques Santer.

The Democratic Party (*Demokratesch Partei* – DP) is a secular, liberal party, associated in Luxembourg with the moderate political right. It combines concern for social liberalism with fiscal conservatism. Traditionally a strong advocate of the market as a directing force in the economy, it is cautious about state intervention and seeks to restrain public expenditures. Based on the support of an urban middle-class constituency, the DP averages 20% of the vote in general elections but often commands a larger share in local elections. It is a business-friendly party that has the confidence of employers associations and of professionals. The party has also gained increasing support from public-sector employees. The DP is led by Lydie Polfer, who was for 18 years mayor of the city of Luxembourg and who is more popular in public opinion than is her party as a whole.

The Socialist Workers’ Party (*Lëtzebergesch Sozialistesch Arbechterpartei* – LSAP) is a moderate, reformist social democratic party. It has formal ties to the socialist trade union movement, with whose support it can normally expect to win a quarter of the vote in general elections. The LSAP also receives significant electoral support from the middle-class. The party has been seen lacking in leadership since the retirement of its long-time chief, Jacques Poos, in 1999.

The LSAP was the junior partner in a governing coalition with the CSV for 15 years (1984-1999), and this has cost the party an independent identity and profile. Before the last election, the only distinction between it and the confessional CSV was the secular LSAP’s demand for a formal separation between the Church and state. This issue was of minor interest to most voters, and the result was a loss of four parliamentary seats that drove the LSAP into opposition.

The Left (*Dei Lenk/La Gauche* – DL) is a democratic socialist movement that has assimilated former communists and other leftist currents. It sometimes poaches on the left wing of the LSAP. Although its electoral strength is minimal, the DL exercises some influence in socialist labor unions.

The Green (*Dei Greng* – DG) is Luxembourg’s environmentalist party. It is also committed to a broad range of liberal social and life-style issues. The DG platform appeals to many young voters and to those disenchanted with the established “spiritual families.” However, support for the party seems to have peaked at under 10% of the electorate.

Symptomatic of the rise of single-issue politics, the Action Committee for Democracy and Pension Justice (*Aktiounskomitee fir Demokratie an Rentengerechtigkeet* – ADR) polled more than 10% of the vote in 1999. The “Committee” began life as a pressure group

composed of private-sector workers demanding pensions comparable to those of public-sector employees.

## **Issues**

The loss, in the “earthquake” 1999 general election, of six of the 38 seats held by the governing parties brought to an end the 15-year CSV-LSAP alliance in CSV-led coalition governments. The liberal DP was the main beneficiary of voter dissatisfaction, gaining three seats and replacing a weary LSAP in a center-right coalition with the CSV that governs with a four-seat parliamentary majority. DP leader Lydie Polfer was named deputy prime minister and appointed foreign minister in the new government. Relations between the government parties are sensitive.

Issues confronting the government include: pensions, harmonization of banking regulations with EU norms, and transportation. The previous government reduced state pensions for public-sector employees to two-thirds of salary at the time of retirement. In a reform that satisfied no one, legislation made public sector and private sector pensions equivalent. The ADR had campaigned to raise private-sector pensions to the previous public-sector level of five-sixths of one's last salary. The DP also backed the public-sector employees in their bid to preserve pensions at the higher rate. The government parties have suffered in the opinion polls on this issue.

Prime Minister Juncker has continued to press for further reform of the welfare state to cope with a population that is aging. He has emphasized the need for Luxembourg's population to double by mid-century in order to sustain economic growth and to maintain the welfare state. But Luxembourg also has a critical need for increased public investment in social infrastructure and transportation if the country is to accommodate a population of 800,000. Though Luxembourg has a reasonably high birthrate by contemporary European standards, most population growth is projected to come through immigration.

The DP torpedoed plans for a rapid rail transit system proposed by the previous government to bring cross-border commuters to Luxembourg. The environmentalist party DG backed the proposal, as did Luxembourg Railways. Retail establishments in the city of Luxembourg, where Polfer had been mayor, were worried that construction would disrupt business and prevent customers from shopping by automobile.

Despite its commitment to European integration, Luxembourg protects its “niche of sovereignty” in the financial services sector and resists imposition of a “coexistence model” for exchange of banking information. Juncker admits that diversification of the financial services sector has mitigated the need for banking secrecy. Even so, the government is determined not to give up policies that are in violation of EU norms. Ninety percent of the EU's offshore fund assets are managed in Luxembourg.

### **Questions/Discussion**

What are some of the likely factors contributing to tension between the coalition partners in the sitting Luxembourg government?

Are there advantages to having an appointed upper chamber responsible for reviewing legislation approved by an elected lower chamber?

## ECONOMICS

### BELGIUM

Belgium is Europe's most intensively industrialized country, although today the service sector is over twice as large as manufacturing in share of GDP (services, 67.1% of GDP, industry 24.7%, and agriculture 1.3%). Belgium's "social market" economy is advanced and is regarded as the most "open" in Europe. Belgium, with a GDP in 2000 of 244 billion euro (2.9% of EU GDP) and a population of 10.2 million (2.7% of EU population) is also one of Europe's wealthiest countries. With a per capita GDP of 23,921 Euro in 2000, the Belgium figure amounts to about 80% of the United States level, a figure exceeding the EU average of 70%.

Following a period of steady growth in the late 1990s, the Belgian economy in 2001 experienced its sharpest downturn since the oil shock of 1973-1974. Growth dipped that year to less than 1%. Only a slight improvement was registered in 2002, as private consumption remained sluggish. Inflation fluctuated between 2 and 3%.

Exports comprise over 75% of GDP (import ca.73%), a figure standing in contrast to its principal trading partners -- The Netherlands at 50% and Germany and France at 25%. Services comprise an increasing portion, but trade related to goods still amounts to ca. 70% of exports. Chemicals, machinery (including armaments), and transport equipment each account for about 20% of total exports, 75% of which is directed to EU countries. Belgium remains an important producer of steel. Food items and beverages also constitute a small but important niche sector for domestic and export markets.

Belgium is blessed with excellent infrastructure that links it to trade partners and to world markets beyond Europe. The ports of Antwerp, which is one of the three largest ports in the EU in terms of volume handled, and also Zeebrugge and Ostend and the river port of Ghent utilize state of the art facilities. Antwerp is a general cargo port but also handles bulk goods such as ore and oil. The petrochemical industry and automotive companies are among its best customers. Zeebrugge specializes in container transport and is an unloading berth for shipments of natural gas. It is also an important fishing port. Ferries to England and other passenger ships operate out of Ostend. Ghent connects to the North Sea from the West Scheldt by way of the Ghent-Terneuzen Canal and can accommodate ocean-going vessels. Inland navigation on an intricate system of canals connected to river routes helps Belgium retain its position in freight transport.

Belgium is also the core of a European rail and road transport system that consists of a diversified network of high-quality connections with France and beyond to Britain in the west, the Dutch Randstad to the east, and the *Ruhrgebiet* in Germany. The rail network is one of the densest in Europe. Although *Sabena*, the national flag carrier, has gone out of business, the international airport at Brussels still serves an estimated 15 million passengers annually. Traffic intensity on highways has almost doubled since 1980.

Belgian interest rates are low, both short- and long-term. The continuing fall of long-term interest rates in the late 1990s helped stimulate private investment, particularly in the construction industry.

Belgium's debt ratio reached 135% of GDP in 1993. Fulfilling the fiscal convergence criterion for monetary union set out in the Maastricht Treaty became an overriding priority for the Belgian government, which also determined to eliminate the snowball effect of interest charges on public debt. An immediate goal was set to reduce annual budget deficits to a maximum 3% of GDP. A medium-term goal was also adopted of achieving a balanced budget targeted by means of rigorous economies in public spending and tax reform. Belgium succeeded in meeting this convergence criterion in 2001 and the progressive reduction of the budget deficit continued in 2002. The debt ratio remains over 100% of GDP.

Given the very high level of public debt, fiscal consolidation remains a major priority of the Belgian government. The Stability Program for 2002-2005 aims at creating a budget surplus while improving critical services such as rail transportation. Tax reforms and the opening of previously protected markets, included in the program, are touted as incentives for attracting greater foreign investment in Belgium.

Responsibility for the country's economy, outside that part of it managed by the EU, has devolved, like most other aspects of Belgian society, to the regions. Flanders is one of the most prosperous regions in Europe. Prominent economic sectors are technology intensive, including the electronic, metallurgical, chemical, and textile industries. Three major automotive companies – Ford, General Motors, and Volvo – have assembly plants in Flanders, taking advantage of the port of Antwerp. Trade, including diamonds and services, supplies two-thirds of Flanders' GDP. Despite large corporate investment, the backbone of the Flemish economy is located in small- and medium-sized enterprises.

Historically, Wallonia's economy has relied on the exploitation and processing of its natural resources – iron and coal, stone and timber, and water. The steel industry, the manufacture of metallic, textile, and glass products, and ore extraction remain the economic bedrock of the major industrial centers of Liege and Charleroi. Converted and modernized production facilities have found opportunities for development in electronics -- including computers, telecommunications, and aeronautical equipment -- as well as chemicals, pharmaceuticals, and ceramics. Some older Wallonian industries have become redundant. Two-thirds of Wallonia is eligible for EU aid for the revitalization of those areas.

Regional budgets, which began with a clean slate at the time of devolution in 1993, have tended to generate deficits. Education and health services in Wallonia were under-funded as a result of lower than anticipated revenues. The revenue short fall was even more acute in Flanders, where the budget was kept in balance by reducing services rather than by raising regional taxes.

Unemployment was apparently stuck at an intractable rate of 7% in 2002. The salient cause has been the economy's inability to create new jobs over the long-term.

Labor costs, a large part of which consist of benefits, are high. Even mild inflationary pressure triggers indexed wage increases. The working-age population, including an increasingly larger proportion of women and young people, increased in size in the 1990s, leading to an increased discrepancy between supply and demand on the labor market. Generous unemployment compensation rather than under-demand for labor may also contribute to protracted joblessness. Worker productivity is among the highest in the industrialized countries, due in part to the continued prominence of industry. However, the rate of labor force participation in Belgium is one of the lowest in the EU.

Collective bargaining is mandated by law. Trade unions and the employers' organization conduct industry-wide negotiations or "social consultations" on wage and benefit packages. Agreements are automatically modified in accordance with wage indexation.

## LUXEMBOURG

At ca. \$44,000 (Purchasing Power Parity) in 2002, Luxembourg has the highest per capita income among EU member countries. Indeed, according to OECD figures for 2002, the country had the highest GDP per capita in the world. Per capita GDP at 125% of the United States level. The Luxembourg economy averaged 5% annual growth in the late 1990s, peaking at 7.5% in 2000. Growth dipped sharply in 2001 but rebounded to a projected rate in excess of 4% in 2002. The recovery was credited to the short-term impact of tax reductions on private consumption.

A liberal tax framework, encouraging private domestic and foreign investment, and large public investment in infrastructure, education, and services are credited with fueling dynamic growth. Recent budgets have succeeded in providing for expansionary public spending combined with tax reduction while maintaining budget surpluses. Expenditures increased in the late 1990s at a rate of 10% annually. Revenues from buoyant domestic demand and high growth have been sufficient to sustain the social welfare system, including substantial pension increases.

Heavy industry is of paramount importance to the economy, and, despite the faster growth of service industries, still accounts for the largest portion of GDP. Steel provides 25% of export income, and all manufactured goods close to 65%. Plant utilization is greater than 90%.

Financial services are responsible for 40% of GDP, and companies supplying business services report growth rates of more than 20% annually, the highest of any sector of the economy. Funds managed by Luxembourg financial institutions account for 20% of the EU's market share. This sector grew from virtually nil after the then-EC allowed funds based in one country to be sold throughout the Community in 1985. The number of funds domiciled in Luxembourg by 1987 had doubled to 800 by 1990 and doubled again to over 1600 by 2000, listing more than \$700 billion in assets and annual profits of \$3 billion.

Luxembourg has established “niches of sovereignty” in areas such as pension fund management. Enabling legislation has allowed institutions to bypass some difficulties in fund management encountered by other EU countries. Luxembourg-managed funds cater openly to German and other European investors anxious to avoid paying withholding taxes at home. Luxembourg has resisted moves for greater transparency in banking transactions and opposes exchanges of banking information based on a “coexistence model” in the name of protecting the privacy of individual investors. The government has expressed its determination to defend Luxembourg’s existing regulatory framework in the face of EU insistence on eliminating banking secrecy.

There are concerns in Luxembourg that the financial service sector has grown too large too quickly, and that the country’s economy risks becoming overly dependent upon it. The government proposed encouraging Internet banking and entrance into the mortgage bond market to reduce dependence on traditional banking houses. Mergers, consolidations, and closures during the 1990s sharply reduced the number of banks in operation.

Luxembourg benefits from a skilled, multilingual workforce, including an estimated 90,000 who cross the border on a daily basis from neighboring France, Belgium, and Germany. The “Luxembourg Model” describes the interaction between the government and its “social” or “corporate” partners. Government, unions and employers associations are responsible for negotiating wage and benefit packages. Industry-wide collective agreements automatically link wages increases to inflation, which, despite wage indexing, has been negligible.

Job growth lags at under 5% annually, however. Among other causes, labor laws make redundancies very expensive for employers. Firms, therefore, are reluctant to hire new employees if there is a prospect of future lay-offs. While registered unemployment has been low at 2-3%, a significant portion of it consists of long-term unemployed.

## **The NETHERLANDS**

The Netherlands has just 0.3% of the world’s population but enjoys 3.4% of the world economic product with a GDP of \$434 billion in 2002. This performance is made possible largely by the emphasis on trade within the Dutch economy. Two-thirds of Dutch GDP is exported, and the value of imports is 62% of GDP. Dutch multinationals such as Philips, Royal Dutch Shell, Heineken, AKZO-Nobel, and Unilever give the country a significant presence in the international economy. And Dutch firms have always maintained a relatively large share of their investment and employment outside of the country. Increased capital mobility and the integration of the European market have made it ever easier for Dutch business leaders to view their domestic operations as but one piece of an international puzzle of production and distribution. The Dutch economy is structured as a piece of a larger whole.

Dutch exposure to the international economic system is magnified by its lack of natural resources (other than natural gas). Broadly speaking, the Netherlands imports unfinished

goods, adds value to them, and then re-exports the products. The country tends to have a trade deficit with exporters of raw materials, including the United States.

The Dutch reliance on trade goes back to antiquity, but was particularly pronounced in the “golden age,” when the country was the world's leading maritime power. The 17<sup>th</sup> century economy was founded on trade, shipping, finance, and agriculture. The lack of raw materials in the country meant that Dutch investors who became involved in industrial production sent their capital abroad. By 1850, Belgium, which had been industrialized earlier, had five times as many railroad lines and steam-powered industrial enterprises as the Netherlands.

Late in the 19<sup>th</sup> century, however, the Netherlands did enter a period of rapid industrialization, centered on shipbuilding, the manufacture of engines and vehicles, food processing, and chemicals. An international butter dealer, Antoon Jürgens, bought the patent in 1871 for a product he named “margarine,” and was soon employing thousands of workers. A bit later, in 1890, the Philips brothers began to make light bulbs in the town of Eindhoven.

Because of its reliance on international trade, the depression of the 1930s hit the Netherlands even harder than it did most other countries. Unemployment averaged 25% between 1932 and 1939, with as much as one-third of the labor force out of work. The Dutch economy was also hard hit in the 1970s when its industrial base became non-competitive on international markets. In 1970, 5% of all Dutch industrial jobs were in shipbuilding. By the mid-1980s, the last of the major shipbuilding yards collapsed, unable to compete with costs that were 50% lower in Japan. Similarly, the number of textile and clothing manufacturing jobs was reduced from 60,000 to 20,000 between 1968 and 1978. The coalmining sector was completely eliminated.

The fastest growth sectors in the Dutch economy in the 1960s and 1970s were technologically advanced, capital intensive, and relatively light in the use of labor to produce value. These include such industries as chemicals, metallurgy, electronics, and oil refining. At the same time, between 1963 and 1980, the share of the labor force in traditional industries declined substantially as firms responded to escalating labor costs by moving their low-skilled industrial jobs abroad. By 1980, there were only 40% as many jobs in low-technology industrial sectors as in high-technology sectors. The industrial share of the labor force fell from 36% in the early 1970s to 27% in 1987.

This structural transformation has moved the Dutch economy into the services sector, with the remaining manufacturing activities becoming ever more capital-intensive and high value-added. Services now make up over 70% of the Dutch economy. Traditional economic activities, such as dairy farming, have increased in scale and become significantly more capital-intensive. The largest half dozen Dutch firms, which together account for over a quarter of all employment, have more employees outside of the Netherlands as they do within the country.

Although the strategy of rapidly escalating minimum and median wages is good for economic transformation and productivity, those with less education and those who work in declining industries pay the price with high rates of unemployment. Since 46% of the

unemployed in the early 1980s had only an elementary school education, the strategy of forcing high-technology industrial growth was bound to create a significant problem of structural unemployment due to the mismatch between the needs of the economy and the training of the unemployed.

Unemployment, both official and disguised, became an increasing burden on the Dutch economy through the 1970s and 1980s. The generous Dutch welfare state could be paid for when the number of income earners exceeded the number of benefit recipients by a factor of eight to one, as was the case in 1960. By 1983, there were only 2.2 workers paying into the social funds for each benefit recipient. As the earner/recipient ratio became less favorable, a financial crunch loomed on the horizon. Nearly one-sixth of the labor force claimed disability benefits in the early 1990s, a rate nearly three times that of the United States. Unemployment peaked at 16% in the early 1980s, and a growing army of workers over the age of fifty took early retirement. As a consequence, the government deficit ballooned, resulting in a doubling of public debt between 1970 and 1987. In the mid-1980s, only 52% of the population between 15 and 64 was employed.

The fight against unemployment (and against abuse of disability benefits) became the centerpiece of Dutch economic policy in the 1990s. Doctors have been required since 1993 not only to indicate the extent of disability but also whether the individual is capable of seeking alternative work. All disability beneficiaries are now reexamined periodically to ascertain that they remain unable to work; when the program was originally designed it was assumed that one remained disabled indefinitely. The maximum benefit has also been reduced from 80% to 70% of the last earned wage, making disability benefits equivalent to unemployment benefits. The duration of disability benefits has also been limited.

Even more important than reform of the disability program have been efforts to make the labor market more flexible. Since the early 1980s, unions and employer organizations have agreed to couple wage moderation with employment growth aided by increased flexibility in labor markets and an aggressive strategy of publicly funded job training. The success of these agreements has become known as the "Dutch model" or the *polder model*. Real wages grew in the Netherlands at a rate of just 1.5% per year between 1984 and 1990, and, during the 1990s, real wages grew at a rate less than 1%. Between 1982 and 1996, the Netherlands experienced 1.6% job growth per year, the same as the American rate of job creation and four times the rate elsewhere in Europe. In 1994, there were still 500,000 unemployed in the Netherlands; by 2002, however, that number was down to 170,000. This was less than half the average unemployment rate elsewhere in the European Union.

Job growth in the Netherlands during the 1990s was largely in the services sector. Moreover, a startling number of the new jobs are part-time or temporary. By 1996, 37% of all jobs in the Netherlands were part-time, more than double the rate of part-time work in neighboring economies. About three-quarters of Dutch women in the labor force work part-time, the highest rate of part-time work in the OECD countries. An additional 3.5% of the labor force works in temp jobs, also a rate substantially higher than neighboring countries. This changing profile of the labor force represents a fundamental break from the previous emphasis on high skill/high wage jobs in the Dutch economy. The average real wage in the

Netherlands compared to that of France, Germany, and Italy peaked in 1976 and has been declining since then.

In 2002, the Dutch job-creation machine began to run out of steam, and unemployment increased for the first time in a decade. Economic growth, which had run at 3.5 to 4% for a decade, slipped back to 1%. Under wage pressure from a labor force at full employment, inflation doubled in 1991 to four percent from the two percent levels that had been maintained during the 1990s. Having put so many Dutch people into the labor force over the last decade, the current challenge is to find ways to increase productivity in order to meet rising aspirations without increasing unemployment and inflation.

### **Questions/Discussion**

Define and discuss the “Polder Model.”

How has geography affected economic development in the Benelux countries?

Discuss the historical differences in the Belgian and Dutch economies and explain divergence in their development.

Account for the growth of the Flemish economy in the latter half of the 20<sup>th</sup> century and differentiate economic priorities in Flanders and Wallonia.

What are the outstanding effects of labor policy on employment in each of the Benelux Three?

Assess the importance of the financial service sector to the Luxembourg economy.

Comment of the proposition: “The Benelux countries were historically preconditioned for *globalization*.”

## APPENDICES

### **BELGIUM: Legislature and Government**

Chamber of Representatives (150 seats, elected to 4 year term in June 1999)

Party	% Vote	Seats
Flemish Liberals and Democrats	14.3	23
Christian-Democratic and Flemish	14.1	22
Socialist Party (Francophone)	10.1	19
Reform Movement	10.1	18
Flemish Bloc	9.9	15
Socialist Party – Another Way	9.6	14
Ecolo	7.3	11
Agalev	7.0	9
Humanist Democratic Center	5.9	10
New Flemish Alliance	5.6	8
National Front	1.5	1
Others	2.1	0

Senate (40 seats, elected to 4 year term, 31 indirectly elected in June 1999)

Flemish Liberals and Democrats	15.4	6
Christian-Democratic and Flemish	14.8	6
Reform Movement	10.6	5
Socialist Party (Francophone)	9.7	4
Flemish Bloc	9.4	4
Socialist Party – Another Way	8.9	4
Ecolo	7.4	3
Agalev	7.1	3
Humanist Democratic Center	6.1	3
New Flemish Alliance	5.1	2
Indirectly Elected		31

Coalition Government formed 1999: Flemish Liberals and Democrats, Liberal Reformist, Socialist Party (Francophone), Socialist Party (Flemish), Ecolo, and Agalev. Election scheduled for May 18, 2003.

Head of Government since 1999: Prime Minister Guy Verhofstadt (Flemish Liberal and Democrat)

## **LUXEMBOURG: Legislature and Government**

Chamber of Deputies (60 seats, elected to 5 year term in June 1999)

Party	% Vote	Seats
Christian Social People's Party	30.2	19
Socialist Workers' Party	24.2	13
Democratic Party	22.0	15
Action Committee	10.5	7
The Green	7.5	5
The Left	3.8	1
Others	1.1	0

Coalition Government formed 1999: Christian Social People's Party and Democratic Party.  
Head of Government since 1994: Prime Minister Jean-Claude Juncker (Christian Social)

## THE NETHERLANDS: Legislature and Government

Second Chamber (150 seats, elected to 4 year term May 2002)

Party	% Vote	Seats
Christian Democratic Appeal	27.9	43
List Pym Fortuyn	17.0	26
People's Party for Freedom and Democracy	15.4	24
Labor Party	15.1	23
Green Left	7.0	10
Socialist Party	5.9	9
Democrats 66	5.1	7
Christian Union	2.5	4
Political Reformed Party	1.7	2
Liveable Netherlands	1.6	2
Others	0.4	0

First Chamber (75 seats, elected to 4-year term by provincial councilors in March 1999)

Party	% Vote	Seats
Christian Democratic Appeal	26.0	20
People's Party for Freedom and Democracy	25.2	19
Labor Party	19.9	15
Green Left	10.4	8
Democrats 66	5.5	4
Christian Union	4.7	4
Socialist Party	3.1	2
Political Reformed Party	2.7	2
Independent (joined Liveable Netherlands)	2.5	1

Coalition government formed July 2002: Christian Democratic Appeal, People's Party of Freedom and Democracy, and List Pym Fortuyn. Resigned October 2002. Caretaker government until new government is formed following elections on January 22, 2003. Head of Government: Prime Minister Jan Peter Balkenende (Christian Democratic Appeal)

## **SOVEREIGNS of the Low Countries since 1815**

### **Kingdom of the United Netherlands**

William I of Orange-Nassau 1815-1839

### **Kingdom of Belgium** (Kings of the Belgians)

Leopold I of Saxe-Coburg 1831-1865

Leopold II 1865-1909

Albert I 1909-1934

Leopold III 1934-1950

Baudouin/Boudewijn 1950-1992

Albert II 1992-

Heir Apparent: Crown Prince Phillip, Count of Flanders

### **Kingdom of the Netherlands**

William I of Orange-Nassau 1815-1840

William II 1840-1849

William III 1849-1890

Wilhelmina 1890-1948

Juliana 1948-1980

Beatrix 1980-

Heir Apparent: Crown Prince William-Alexander, Prince of Orange-Nassau

### **Grand Duchy of Luxembourg**

William I of Orange-Nassau 1815-1840

William II 1840-1849

William III 1849-1890

Adolph of Nassau-Weilburg 1890-1905

William IV 1905-1912

Marie-Adelaide 1912-1919

Charlotte 1919-1964

Jean 1964-2000

Henri 2000-

Heir Apparent: Crown Prince William, hereditary Grand Duke of Luxembourg

# BOSNIA-HERCEGOVINA SELF STUDY GUIDE

GEORGE P. SHULTZ  
NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

Bosnia-Herzegovina has often been described as a miniature Yugoslavia, in which throughout history no ethnic group has predominated and in which all three major nationalities have vied for power and resources. The country has also proved an enigma, in that centuries of multi-ethnic coexistence were violently shattered when Yugoslavia itself disintegrated at the beginning of the 1990s. In seeking to understand the complexity of relations between Muslims (Bosniaks), Serbs, and Croats, it is important not only to examine their history, social structure, religion and culture, but also the impact of competing political ambitions once the communist superstructure began to unravel. How did ultra-nationalism become such a powerful tool for promoting social mobilization, ethnic conflict, and territorial division?

Bosnia-Herzegovina also provides us with a valuable case study of international involvement to resolve an escalating war in the middle of the Balkans. The various forms of military, political, and economic intervention have been riddled with criticisms and shortcomings. Ultimately, however, one must ask the question whether in the absence of an international protectorate and foreign economic assistance Bosnia-Herzegovina can survive as a single state. This Self-Study Guide is intended to elicit thought and debate on these perplexing issues and to engender a more intensive focus on a country that has preoccupied the international community for over a decade.

The first edition of this Self-Study Guide to Bosnia-Herzegovina was prepared by Janusz Bugajski, Director of East European Studies at the Center for Strategic and International Studies in Washington

D.C. The views expressed in this Guide are those of the author and of sources attributed in the text and do not necessarily reflect official policy or the position of the Department of State or the National Foreign Affairs Training Center. This publication is for official educational and non-profit use only.

### BOSNIA-HERCEGOVINA TIMELINE

- 1800 BC: Settlements of Illyrians, first inhabitants of what is now Bosnia-Herzegovina, traceable to the Neolithic period.
- 9 AD: Illyrians conquered by the Roman Empire.
- 6<sup>th</sup> century AD: Settlement of Slavic tribes.
- 7<sup>th</sup> century AD: Second wave of Slavs, particularly Serbs and Croats.
- 958 AD: Bosnia first mentioned by that name in a surviving document.

- 1180: Ban (governor) Kulin establishes an independent Bosnian state.
- 1326: Ban Stephen Kotromanic's conquest of Hum (later Hercegovina) unites Bosnia and Hercegovina for the first time.
- 1377: Stefan Tvrtko, crowned Tvrtko I, King of Serbia and Bosnia. Medieval Bosnia reaches its zenith under his rule.
- 1448: Stefan Vukcic, lord of Hum, declares his independence and gives himself the title *herceg* of Hum, thus the land becomes known as Hercegovina.
- 1463: Ottomans conquer Bosnia.
- 1483: Ottomans conquer Hercegovina.
- 1875: Peasant uprising against Ottoman rule.
- 1877: Russia declares war on the Ottoman Empire
- 1878: Congress of Berlin. Ottoman authority abolished. Austro-Hungarian Empire occupies and administers Bosnia-Hercegovina.
- 1908: Austro-Hungarian Empire formally annexes Bosnia-Hercegovina.
- 28 June 1914: In Sarajevo, the Bosnian capital, Gavrilo Princip, a young Bosnian Serb nationalist assassinates Austrian Archduke Francis Ferdinand.
- July 1914: Austro-Hungarian Empire declares war on Serbia. During the war most Bosnian Serbs, Croats, and Muslims remain loyal to Austria-Hungary.
- 1918: End of World War I, Austro-Hungarian Empire disintegrates. Bosnia becomes part of the new Kingdom of Serbs, Croats, and Slovenes.
- 1929: The Kingdom of Serbs, Croats, and Slovenes is renamed as Yugoslavia.
- April 1941: Following the German invasion, Bosnia-Hercegovina is divided into German and Italian occupation zones. Most of the country is incorporated in the Independent State of Croatia, a puppet state of Nazi Germany controlled by the Croatian fascist *Ustase* movement.
- November 1943: A Congress of the Yugoslav Communist party proclaims a new federal

## Yugoslavia.

- May 1945: End of World War II.
- November 1945: Communist government installed in Yugoslavia headed by Josip Broz Tito. Yugoslavia becomes a federal state of six republics, including Bosnia-Herzegovina.
- 1948: Yugoslav Communist Party breaks away from Stalin's Soviet Union and is renamed as the League of Communists of Yugoslavia (LCY).
- 1968: Muslims are officially recognized as Yugoslavia's sixth national group.
- 1980: Tito's death. Onset of political and economic crisis.
- 1990: Disintegration of the LCY and multiparty elections held in all six Yugoslav republics.
- March 1992: Referendum on independence in Bosnia-Herzegovina demanded by EU. Bosnian Serbs boycott the referendum, but 97% of the Croats and Muslims vote for independence.
- 6 April 1992: Bosnia's independence is formally recognized by the international community.
- April 1992: Full-scale anti-civil war erupts as Serbian forces target Muslim civilians to gain territorial conquest.
- June 1992: The United Nations mounts a humanitarian operation in Bosnia and approximately 7,000 UN troops are dispatched to the republic.
- May 1993: A United Nations International Criminal Tribunal for the Former Yugoslavia (ICTFY) is established in the Hague, Netherlands.
- November 1995: The Dayton peace accords are signed by the three protagonists.
- December 1995: The first United Nations High Representative to Bosnia-Herzegovina, Carl Bildt, the former Prime Minister of Sweden, is appointed.
- 16 December 1995: NATO launches the largest military operation undertaken by the Alliance, Operation Joint Endeavor, with the deployment of 60,000 IFOR (Implementation Force) troops in Bosnia-Herzegovina.
- 14 September 1996: The first post-war general elections held under the supervision of the Organization for Security and Cooperation in Europe (OSCE).

- 20 December 1996: A NATO Stabilization Force (SFOR), consisting of 31,000 troops, is activated on the date the IFOR mandate expires.
- June 1997: UN High Representative Carl Bildt is succeeded by Carlos Westendorp the former Spanish Secretary of State for European Affairs.
- 12-13 September 1998: Bosnia's second general elections overseen by the OSCE.
- August 1999: Wolfgang Petritsch, the former Austrian Ambassador to Yugoslavia is appointed UN High Representative.
- November 2000: A new round of general elections in which centrist and civic parties increase their parliamentary seats.
- May 2002: Britain's Paddy Ashdown is appointed UN High Representative.

## INTRODUCTION

The purpose of this self-study guide to Bosnia-Herzegovina is to provide some basic background information and analysis for persons being assigned there. The information is presented in such a way as to enable easier digestion. Each section concludes with several questions for further exploration and a brief list of pertinent resource and research materials. Several websites containing information on Bosnia-Herzegovina are located at the end of the guide.

## GEOGRAPHY AND CLIMATE

The Republic of Bosnia-Herzegovina lies at the center of the Balkans or South East Europe. It is bordered on the north, west, and southwest by Croatia, on the east by Serbia, and on the southeast by Montenegro. It also has a narrow outlet to the Adriatic Sea of 12 miles around the town of Ploce. The republic occupies an area of 19,741 square miles and is historically divided between the larger and more northern Bosnian territory and the smaller southern area known as Herzegovina.

The country is predominantly mountainous. Its main ranges, forming part of the Dinaric Alps, run in a northwest-southeast direction and include Pljesivica, Grmec, Vitorog, Klekovaca, Cincar, and Radusa. The highest peak is Maglic (7,828 feet) near the border with Montenegro. The southwest

part of the country contains arid limestone plateaus with caves and underground drainage. The uplands are commonly denuded of forests because of thin soil and deliberate deforestation. Cultivable land is found between ridges containing alluvial soil. Central Bosnia contains forested terrain and fertile soils are found in the northern lowlands bordering Croatia.

Bosnia-Herzegovina's major rivers include the Sava, a tributary of the Danube, which forms the northern frontier with Croatia; the Bosna, Vrbas, and Una, which flow north into the Sava; the Drina, which forms the eastern border with Serbia; and the Neretva, which flows from Herzegovina into the Adriatic. Bosnia also has an abundance of underground rivers, glacial lakes, and natural springs.

Bosnia-Herzegovina is cut off from the Adriatic climate zone by the Dinaric Mountains. Bosnia's climate is generally mild but with some sharp cold spells during the winter months. The heaviest rains in Bosnia fall in late spring. Herzegovina experiences hotter weather in the summer, with the major rainy season during the fall. The higher elevations have short and cool summers and longer and colder winters.

Approximately 40% of the country is forested with pine, beech, and oak predominating. About 14% of the land is arable and 20% is permanent pasture. Among the most common fruits are grapes, apples, plums, and pears. The diverse wildlife includes bears, wolves, wild boars, wildcats, chamois, otters, foxes, badgers, and falcons. The country's major natural resources include coal, iron, bauxite, manganese, timber, copper, chromium, lead, zinc, and hydropower. Much of Bosnia's infrastructure was destroyed during the 1992-1995 war and the country suffers from air and water pollution and inadequate sanitation facilities.

## HISTORY

### Early History

The territory of Bosnia-Herzegovina formed part of the Illyrian kingdom that stretched across the northwest Balkans; the Illyrians had settled in the area in about 1800 BC. The region became part of the Roman province of Illyricum at the beginning of the 1<sup>st</sup> century AD. Following the collapse of the Roman Empire during the 4<sup>th</sup> and 5<sup>th</sup> centuries AD, Gothic tribes conquered the northwestern and central Balkan territories. They were followed by Turkic Avars and by Slavic tribes. The Avars were defeated by the Frankish king Charlemagne in 796 AD and the Slavic populations accepted overall Frankish suzerainty.

For the next four centuries, various Slavic princes ruled the mountainous Bosnian area, including the Croatian Kingdom from the 9<sup>th</sup> century until the 11<sup>th</sup> century. At the end of the 12<sup>th</sup> century, a

powerful Serbian kingdom was founded under the rule of Stjepan Nemanja. By the middle of the 14<sup>th</sup> century, his descendant King Stjepan Dusan controlled a region stretching from the Adriatic to the Aegean seas that included parts of eastern Bosnia.

During the 12<sup>th</sup> century, Hungary conquered large parts of Bosnia and turned the region into one of its *banats* (provinces) under the control of *bans* (governors). Bosnia's rulers gained increasing independence from their Hungarian overlords with the rule of Ban Kulin at the beginning of the 13<sup>th</sup> century. During the 14<sup>th</sup> century, Ban Stjepan Kotromanic extended Bosnia's territory to include the Orthodox province of Hum, later known as Hercegovina, and much of the Adriatic coast. Krotomanic's nephew and successor Stephen Tvrtko further extended the boundaries of these territories, and in 1376 proclaimed himself King of Serbia and Bosnia. The Bosnian kingdom disintegrated after the death of Tvrtko. A rebellious Bosnian chieftain seized the Hum region early in the 15<sup>th</sup> century and established it as Hercegovina ("independent duchy").

### Ottoman Control

The Ottoman Turks invaded Bosnia in 1386 and by 1463 most of the region became an Ottoman province and remained under Istanbul's control for more than 400 years. The population of the area included Roman Catholic Croats, Orthodox Serbs, and Bosnian Slavs who converted to Islam during Ottoman rule. The conversion process was the result of several factors: a lack of allegiance to either Catholicism or Orthodoxy, an absence of well organized Christian Churches, and the promise of improved political, social, and economic positions under Turkish rule. A local Muslim hereditary nobility developed together with a class of landowners. These Muslims developed a sense of ethnic and regional identity which produced tensions with their Catholic and Orthodox neighbors. The relative independence of the Orthodox Church under the Ottoman's "millet" system of self-governing religious communities, stimulated Serbian nationalism in areas of eastern Hercegovina and north west Bosnia.

### Austrian Rule

In 1875, a large Christian uprising against the Muslim elite was put down by the Turks but it provoked Great Power intervention and the Ottomans were forced to surrender control over Bosnia-Hercegovina. At the Congress of Berlin in 1878, following the Russo-Turkish war, the dual monarchy of Austria-Hungary negotiated with other European rulers for administrative rights over the area and in 1908 annexed the two Bosnian provinces.

Bosnia became a center of nationalist agitation for political independence and cultural autonomy. Europe began to take sides in the disputes: Austria-Hungary and Germany opposed growing Serbian nationalism, while Russia and Britain generally supported it. The weakness of Ottoman rule encouraged some Slavic activists within the Austro-Hungarian Empire to press for union with kindred peoples elsewhere in the Balkans. This "Yugoslav" movement for south Slav unification was opposed by nationalist pan-Serbian and pan-Croatian groupings.

The Bosnian Muslim political emergence became more pronounced during Austrian rule between 1878 and 1918. Vienna encouraged a Bosnian national identity as a counterpoint to Serbian and Croatian irredentism and Yugoslavism, and it tolerated Islamic cultural activism. Such policies stimulated religious differentiation at a time of rising nationalism throughout the Balkans. Croatian nationalists rejected a south Slav union and sought a Greater Croatia to include all of Bosnia-Herzegovina. They considered all Bosnian Muslims to be Croats who had converted to Islam during Ottoman rule. Serbian nationalists demanded a Greater Serbia to include Bosnia-Herzegovina and claimed the Muslims as converted Serbs. Both sides tried to absorb Bosnia's Muslims and to elicit their political and ethnic loyalty in order to gain a majority in the country.

### Royalist Yugoslavia

In June 1914, the heir to the throne of Austria-Hungary, Archduke Francis Ferdinand was assassinated in the Bosnian capital Sarajevo, an act that precipitated World War One. Gavrilo Princip, the assassin, was a Serbian student from Bosnia whose Young Bosnia movement believed that Vienna's policies would deny Serbia's territorial ambitions. Most of the Bosnian Muslim and Croatian population rejected Serb nationalist claims and sought to develop Bosnia-Herzegovina into an autonomous entity within the Habsburg monarchy.

During World War One, some Croats and Serbs fought together, hoping to create a kingdom that would unite all the South Slavic peoples, while others pursued an exclusively nationalist agenda. The Muslim population remained divided as to their political allegiances. On 1 December 1918, following the defeat of Austria-Hungary, Bosnia-Herzegovina became part of the independent Kingdom of Serbs, Croats, and Slovenes under the Serbian monarchy of Aleksandar I from 1921 to 1934. When political conflicts between Croats and Serbs exacerbated national tensions, Aleksandar tightened control over the country and in 1929 he renamed the kingdom Yugoslavia ("land of the South Slavs").

Croat and Serb leaders clashed over the Yugoslav state structure, with the Croats favoring a looser federal state while the Serbs were intent on a more centralized system. Bosnia's Muslims were caught in the middle of this struggle and were pressured to support either Croatian or Serbian separatism. While Muslim leaders generally supported the centralist constitution, a growing number claimed that Bosnian Muslims should be recognized as a distinct national group. However, Serbia's royal dictatorship denied the existence of separate nations in Yugoslavia and established new administrative districts (*banovinas*) that cut across ethnic and historical boundaries. Bosnia-Herzegovina was partitioned between four *banovinas*, each with a Muslim minority, thus alienating the Muslim population from the monarchist state.

### Communist Yugoslavia

On 6 April 1941, the Axis powers invaded and dismembered Yugoslavia. Germany and Italy supported the formation of a fascist puppet state encompassing much of Croatia and Bosnia-

Hercegovina, which was headed by ultra-nationalists in Croatia. The *Ustase* leadership of the Independent State of Croatia sought to annex Bosnia and engaged in a policy of full-scale genocide against the Serbian population, while Serbian monarchists (*Cetniks*) slaughtered thousands of Muslims because of their alleged collaboration with Zagreb and their supposed "Turkish" identity. Although some Muslims engaged in anti-Serbian massacres, a significant number of Bosnians in all three ethnic groups favored the multi-ethnic communist partisan forces led by Marshall Josip Broz Tito.

At the end of the war, Tito restitched the various parts of Yugoslavia and created a federation with Bosnia-Hercegovina as one of the constituent republics. This was accomplished despite insistence by Serb activists that the region be transformed into a province of Serbia and Croatian demands for closer links with the Croatian republic. The Bosnian republic was designated as a multi-ethnic unit, thus precluding domination by any of the three constituent national groups. Such a policy was supported by Muslim leaders as a means of preserving their national and religious identity. During the 1960s, Tito's regime granted Bosnia's Muslims a distinct ethnic status, in a policy designed to place them on an equal footing with Serbs and Croats. They received their own power base in an increasingly decentralized Yugoslav communist structure.

One of Tito's objectives was to prevent either Serbia or Croatia from dominating the federation and reviving claims to Bosnian territory; hence the political and economic infrastructure of the republic was substantially expanded. Tito sought to balance Yugoslavia's national units and promote the growth of an overarching "Yugoslav" identity as well as a multi-ethnic Bosniak consciousness. He also endeavored to strengthen Muslim identity to counteract Serb and Croat ambitions and forged a distinct Muslim political base in the republic.

In the 1971 Yugoslav census, Slavic Muslims were elevated to the status of a distinct nation, equal to that of Serbs, Croats, Slovenes, Montenegrins, and Macedonians. During the 1970s, the government adopted a more tolerant approach toward organized religion, including Islam, and Bosnia's Muslims experienced a cultural and religious revival. Many Muslim leaders concluded that similarly to the other Yugoslav republics, Bosnia-Hercegovina should be defined as their national territory. This sparked opposition among Serbian and Croatian leaders who feared that they would become minorities in the republic.

Bosnia-Hercegovina became the only republic without a predominant nation as all three groups (Muslims, Serbs, and Croats) were considered equal constitutional entities, even though Croats and Serbs had their own "home" republics. The 1974 Yugoslav constitution underscored the equality of Bosnia's "constituent nations," an arrangement designed not only to prevent the dominance of one ethnic group but to avoid any compacts between two nations that would "minoritize" the third. Muslims were formally defined as a nation; thousands of people who had previously declared themselves as Serbs, Croats, or Yugoslavs assumed this definition in the new censuses.

Yugoslavia's complex system of governmental succession did not allow for effective central rule

while the republican administrations sought an accelerating devolution of powers. During the 1980s, following Titos' death in 1980, the disintegration of the ruling League of Communists of Yugoslavia and growing national and ethnic polarization aggravated the position of Bosnia-Herzegovina as a region contested between Serbia and Croatia.

Economic difficulties also fueled inter-republican competition for scarce resources and increased social and ethnic tensions throughout the federation. Political and economic liberalization in Yugoslavia was evident in the late 1980s under the government of federal Prime Minister Ante Markovic. But the unraveling of communist rule also sparked demands for republican autonomy. As political liberalization gathered pace in all six republics, in February 1990 the Bosnian Assembly passed a law allowing for political parties to be formed freely in preparation for the first post-war multi-party elections.

### Disintegration of Yugoslavia

In July 1990, the Bosnian Assembly declared the republic a "democratic and sovereign state," signaling the first step toward a looser federal arrangement but avoiding any explicit moves toward separation from Yugoslavia. The result of the November 1990 elections read like a census of the republic's population, with nationalist parties of the three major groups taking 80% of the vote in proportions reflecting their percentages of the population. Residents elected deputies to the 240-seat bicameral legislature, divided between a Chamber of Citizens (130 seats) and a Chamber of Municipalities (110 seats) as well as members of the collective presidency. Ethnic parity was to be maintained in all three institutions.

The elections were designed to balance the representation of the three constituent nations in the Bosnian presidency, government, and parliament. Each ethnic group formed its own party: the Muslim-based Party of Democratic Action (PDA), the Serbian Democratic Party (SDP), and the Croatian Democratic Union (CDU). Although non-nationalist parties won a quarter of the seats in the Chamber of Citizens they had no lasting impact on political developments and could find no coalition partners. In the final tally, the PDA gained 86 seats in the Assembly, the SDP 72, and the CDU 44; the 38 remaining mandates were shared among eight political groups.

The victory of the three ethnically based parties both reflected and encouraged national identification among citizens. The key government positions were awarded to the three ethnic groups. Alija Izetbegovic, head of the PDA, was chosen as President of the nine-member presidency, a post that was established on a rotational basis among the three ethnic components. Jure Pelivan of the CDU was chosen as Prime Minister to head the republic's government, and Momcilo Krajisnik of the SDP became speaker of the National Assembly. Although the results preserved a tri-ethnic balance in the legislature and the presidency, they also further polarized the country.

Leaders of the three national parties formed a coalition government. While the three ethno-parties

agreed to share power at the national level, in various municipalities (*opštinas*) the victorious parties proceeded to assume absolute control in local governments. The Serbian *opštinas* increasingly refused to recognize Sarajevo's authority. Beneath the facade of cooperation at the republican level, an intense power struggle was evident when parliament attempted to enact new legislation in response to the accelerating disintegration of the Yugoslav federation. It proved impossible to pass a new constitution, as the agreement of all three major parties was required. The Serbian side refused to countenance any constitutional changes propelling Bosnia toward statehood, while Muslim and Croat leaders feared that the secession of Slovenia and Croatia would leave the republic in a precarious position by strengthening Serbia's position in the shrunken federation.

As Slovenia and Croatia pressed for independence, Bosnia-Herzegovina found itself caught in the middle. Leaders of the three ethnic groups were increasingly pressured to side with either Serbia or Croatia. Serbian leaders voiced concern about an emerging Muslim-Croat alliance that would exclude Serbs from key government posts. Serb activists also calculated that Croats and Muslims would seek closer political and military ties with Croatia. Meanwhile, Muslim and Croat leaders grew anxious that local Serbian activists in league with the Socialist regime in Belgrade were planning to engineer a crisis in the republic in order to detach large areas of Bosnia from Sarajevo's control.

Serbian leaders sought to preserve a unified Yugoslav state with some measure of republican autonomy. Croatian leaders veered toward Bosnian sovereignty and independence. Caught between demands for Bosnian separatism and Yugoslav federalism, Bosnia's Muslim leaders could not afford to take a neutral position: either option would have led to confrontation with Serbs or Croats. As war raged in neighboring Croatia and the prospect of international recognition appeared as a distinct possibility, the Muslim leadership leaned toward secession from Yugoslavia and the preservation of a unitary Bosnian state. While this move largely satisfied Croatian aspirations, the Serbian leadership warned that they would not accept Bosnian independence. The slide into all-out war had begun in earnest.

### Self-Study Questions for Further Exploration

- What were the origins of the Slavic populations that settled in the lands that later became Bosnia-Herzegovina?
- What role did the three major religions (Catholicism, Orthodoxy, and Islam) play in Bosnian history?
- Have there always been conflicts between Serbs and Croats?
- Was the long era of Ottoman occupation of Bosnia-Herzegovina a period of consistent and severe repression?

- How much support was there for the creation of the first Yugoslavia among Bosnia's three ethnic groups?
- What was the extent of genocide and inter-ethnic violence in Bosnia-Herzegovina during World War Two?
- How did Marshall Tito manage to bring the warring factions together at the close of World War Two to create a single Yugoslavia and a single Bosnian republic?
- Trace the creation of a Muslim Bosniak identity during the pre-communist period and under communist rule?
- What was the impact of the 1990 multi-party elections on ethnic relations in Bosnia-Herzegovina?

## INDEPENDENCE, WAR, AND DIVISION

### Serbian Separatism

By early 1992, Serbian leaders had carved out their own jurisdictions in Bosnian municipalities where Serbs formed absolute or relative majorities and threatened civil war if Sarajevo moved toward statehood. Croatian leaders in Herzegovina also began to make preparations for territorial autonomy in the event that Bosnia-Herzegovina remained in a truncated Yugoslavia. Meanwhile, the Belgrade government accused the Bosnian Muslim leadership of planning to transform the republic into an Islamic state and with pretensions to other Muslim-inhabited areas of Serbia. The charge was vehemently denied by President Izetbegovic, who considered it a propaganda ploy designed to mobilize both Serbs and Croats against Bosnian independence.

As tensions mounted, in October 1991 Muslim and Croat deputies in Bosnia's parliament declared the republic's sovereignty and neutrality stopping just short of independence. Serbian leaders boycotted the session, declared the vote unconstitutional, and announced that they would not recognize Bosnian laws. Fearing an assault by the Yugoslav army, Muslim and Croat leaders decided to hold a referendum on independence. The ballot in February 1992 was boycotted by the majority of Serbian residents, but over 64% of the electorate turned out and voted overwhelmingly for Bosnian independence. Sarajevo promptly declared an independent state and gained international recognition. The move proved unacceptable to local Serb leaders, who launched an armed offensive within the republic with the active support of the Yugoslav army, charging that Sarajevo's policies threatened their national rights.

A series of steps were undertaken to solidify exclusive Serb control over the bulk of Bosnian territory, in an evident prelude to secession. In October 1990, the SDP set up a Serbian national council in the town of Banja Luka; a move that was condemned by the government for violating Bosnia's sovereignty by setting up parallel authorities. In April 1991, a Serb Community of Municipalities of Bosnian Krajina was declared, consisting of 14 Serb majority municipalities in western Bosnia that bordered the Serb-held territories in Croatian Krajina. Municipal governments in heavily Serb-populated areas of eastern, northern, and southeastern Bosnia also prepared to form autonomous communities avowedly to protect Serb interests against Muslim-Croatian separatism.

Sarajevo charged that the self-proclaimed communities under-mined the Bosnian administration and were the first steps toward establishing autonomous regions. In September 1991, Serb leaders announced the formation of a Serbian Autonomous Region of Eastern and Old Hercegovina; it covered eight municipalities in southeastern Bosnia inhabited primarily by Serbs. Meanwhile, the Bosnian Krajina region was declared the Serbian Autonomous Region of Krajina. Even more ominously, local Serb police forces and party radicals proceeded to establish armed "volunteer units" and steadily eliminated Sarajevo's jurisdiction in these areas.

During the fall of 1991, three more autonomous Serbian regions were proclaimed in northeastern Bosnia, northern Bosnia, and the Mount Romanija region east of Sarajevo. Leaders of the new territorial units threatened to establish a unified Serbian republic, secede from Bosnia, and remain in a federal Yugoslavia. They asserted that a declaration of Bosnian independence and the non-recognition of Serbian territorial autonomy would precipitate bloodshed. Muslim and Croat leaders declared that no autonomous regions could be formed on the republic's territory and dismissed any planned referendums on autonomy. Serbian representatives responded in February 1992 by adopting a constitution of the Serbian Republic of Bosnia-Hercegovina.

### Croatian Separatism

Although CDU leaders criticized Serbian steps toward secession, activists in Croatian-majority municipalities, in close liaison with the authorities in Zagreb, proceeded to form their own quasi-autonomous regions. They claimed that they did not want to live outside of Croatia if a large wedge of Serbian-controlled territory separated them from other republics. In November 1991, a Croatian Community of Herceg-Bosnia was established to include 30 municipalities containing a large Croatian population in western Hercegovina and central Bosnia. The community was declared a distinct political entity that would recognize the government in Sarajevo only as long as the republic upheld its sovereignty. A Croatian Community of the Bosnian Sava Valley was also established to incorporate eight municipalities in northern Bosnia. In January 1992, a third Croatian Community of Central Bosnia was formed, comprised of four municipalities. Croat leaders declared themselves in favor of union with Croatia.

Serbian and Croatian moves toward secession were accompanied by a propaganda barrage emanating from Belgrade as well as Zagreb alleging that Muslim extremists led by President Izetbegovic were intent on transforming Bosnia-Hercegovina into a militant Islamic state in which Serbs and Croats would be subject to persecution and genocide. They cited passages from Izetbegovic's previously banned *Islamic Declaration* as proof of his allegedly fundamentalist aims; the passages were taken out of context and presented as a manifesto for restructuring Bosnia into a Muslim state. Such charges were strenuously denied by the PDA, which asserted that it supported a tolerant, secular and multi-ethnic state.

### Bosnia's Independence

In December 1991, EC (European Council) foreign ministers decided to recognize the

independence of all Yugoslav republics fulfilling four fundamental conditions, including commitments to various human rights accords, guaranteeing rights to national groups and minorities, respect for the inviolability of frontiers, and agreement to settle state succession and regional disputes. In January 1992, Slovenia and Croatia were recognized as independent, while Macedonian recognition was blocked by Greece. Bosnia-Herzegovina met most of the EC requirements, but it was not granted recognition because no referendum had taken place to ascertain "the will of the inhabitants" for constituting an independent state.

In response to the EC decision, the Bosnian presidency authorized a referendum. The SDP, led by its chairman Radovan Karadzic, declared the referendum illegal because it was not approved by the full Assembly and did not have the support of all three constituent nations. Although Serbian leaders did not comprehensively disrupt the plebiscite, local officials in Serbian-dominated areas refused to cooperate. 63.4% of eligible voters participated in the referendum, and 99.7% cast their ballots for independence. The constitutionally required two-thirds majority was thereby attained as the majority of Muslims, Croats, Yugoslavs, and other minorities favored Bosnian statehood. Immediately after the balloting, a shooting incident in Sarajevo suddenly raised tensions and Serb militias established barricades around various cities in preparation for armed confrontation.

Bosnia-Herzegovina was recognized as an independent state in early April 1992. The day after recognition, the Serbian Republic of Bosnia-Herzegovina was formally proclaimed and SDP representatives withdrew from all Bosnian governmental institutions and openly recognized the authority of their own separate administrative organs. Momcilo Krajisnik, assumed the presidency of the Serbian Assembly and Radovan Karadzic the presidency of the Serbian Republic.

## Anti-Civil War

In April 1992, the political impasse in Bosnia was transformed into an outright armed conflict launched by Bosnia's Serb leaders. The Sarajevo government had already lost administrative control in most Serbian majority regions. Militarily, Sarajevo was incapable of either neutralizing the Serb forces or protecting Muslim residents. As the war in Croatia died down in early 1992, the Yugoslav army transferred much of its heavy equipment and troops into Bosnia-Herzegovina. Militia detachments had been formed in the five Serbian "autonomous regions" and a military command was already functioning parallel to the Serb Assembly.

In June 1991, the Serbian-dominated Yugoslav Army General Staff had ordered that all weapons belonging to Bosnia's Territorial Defense Forces be placed under the federal army's control. Much of this weaponry was apportioned to Bosnian Serb commanders and additional war materiel began to flow in from Serbia and Montenegro. Between March and May 1992, the bulk of the Yugoslav army stationed in Bosnia was transformed into a new Serbian army commanded by a former Yugoslav army general, Ratko Mladic.

With overwhelming firepower and material support from Belgrade, Serbian forces overran nearly

two-thirds of Bosnian territory by the close of 1992. Bosnia's Muslim forces were caught unprepared and suffered severe casualties across the republic. Serbian "ethnic cleansing" operations were comprehensively applied to terrorize Muslim communities and create "purified" and contiguous Serbian territories across western, northern, and eastern Bosnia. Over a million people were displaced from their homes.

As the conflict escalated, Croatian leaders in western Hercegovina formed their own army and government structures while nominally pledging allegiance to the government in Sarajevo. Suspicions persisted that if Bosnia were allowed to fracture, then Croatia would claim its share of about one-fifth of the republic. As Serb forces consolidated their hold over captured territories, a separate Serbian Republic was declared with the avowed aim of linking up with Serb-captured territories in Croatia and eventually joining the rump Yugoslavia. But although Serb forces controlled the major towns in about 70% of Bosnia's territory, Sarajevo remained under siege and much of the countryside became a battleground between competing guerrilla forces.

About 150,000 people were presumed dead or missing during the war and nearly two million became refugees. What began as a rebellion against Bosnian statehood by radical elements of one of the major nationalities had turned into an ethnic war purposively targeting civilians between leaders of the three communities seeking outright territorial control. Bosnia's Muslim and Serbian leaders continued to uphold diametrically opposed positions on the republic's future. While Serb spokesmen sought a far-ranging "cantonization" tantamount to partition, the Muslim leadership wanted to maintain a unitary state with extensive territorial and political decentralization but not based on ethnic criteria. The Croats increasingly veered toward partition as the Bosnian government proved unable to fully control the republic.

Serbian military objectives were twofold: to link up and expand the territories they controlled in northern and eastern Bosnia, thus creating a contiguous Serb republic between Croatia and Serbia; and to eliminate the non-Serb populations in this new political entity. A campaign of terror was unleashed against non-Serb civilians; atrocities committed by irregular forces were loudly publicized to intimidate remaining residents and escalate the war psychosis.

The systematic nature of the "ethnic cleansing" campaign indicated that the policy had been planned and approved at the highest political levels. It served several purposes: to eliminate the non-Serb population as a potential source of resistance; to provide war booty for local guerrillas and gunmen recruited in Serbia; to gain the loyalty of Serbs evacuated from other locations by allowing them to occupy captured houses and land; and to entrap non-combatant Serbs in a permanent conflict with Muslims in which the militias could pose as defenders protecting Serbs from Muslim revenge attacks.

The rapid success of Serb forces galvanized Bosnia's Croat leadership and strengthened the position of those favoring partition. The moderate CDU leader, Stjepan Kljucic, who had strongly favored an integral Bosnia, was replaced, and the more radical Hercegovinian Mate Boban, took charge of political and military operations in Croatian-majority regions. Boban criticized the

Bosnian leadership for its lack of preparedness and military incompetence while establishing a separate military structure in western Hercegovina, central Bosnia, and the Posavina region, styled as the Croatian Defense Council (CDC). Under the chairmanship of Jadranko Prlic, it made preparations to establish a separate Croatian republic with the option of joining Croatia at some future date.

Suspensions surfaced that Boban and Karadzic had fashioned a secret deal to partition Bosnia. In July 1992, Boban declared the autonomy of Herceg--Bosnia with its capital in Mostar and proceeded to consolidate a separate administrative structure. Nevertheless, the Croat side retained its membership in the Bosnian presidency and continued to provide military assistance to the beleaguered Muslim forces. In Sarajevo, Tuzla, and other large towns, a marked degree of political and military cooperation remained visible. Many urban Serbs and Croats in Bosnian-controlled territory refused to recognize either the Karadzic or the Boban leadership and upheld their allegiance to the principles of a single multi-ethnic state. By the close of 1992, a separate Serbian state was already functioning and in August 1992, a Serb Assembly meeting in Banja Luka renamed the new entity the Serb Republic (*Republika Srpska*).

### International Intervention

In June 1992, the United Nations mounted a humanitarian operation in Bosnia; it was named as UNPROFOR (United Nations Protection Force). Approximately 7,000 troops were dispatched to the republic. Their mission was largely confined to providing relief supplies to Sarajevo and other besieged cities. Food and medical aid also became a weapon in the siege of Bosnian cities. Serbian and Croatian militias periodically blocked U.N. convoys and severed essential water, electricity, and gas supplies in order to demoralize and starve out Muslim defenders. In August 1992, under the direction of Cyrus Vance, the personal representative of the U.N. secretary general, and David Owen, an EC-appointed mediator, the London Conference on Yugoslavia made efforts to find a political solution and enforce an agreement.

Following several rounds of negotiations, in October 1992, the Vance-Owen plan was formulated. It advocated the creation of a decentralized state consisting of nine largely autonomous provinces, three for each nationality, and a central region around the capital Sarajevo. In each province one of the three ethno-national groups would predominate, thus opening up the possibility of population transfers under international supervision. The central government would have only minimal responsibilities, including foreign affairs, international commerce, taxation, and national defense.

The Vance-Owen plan was only acceptable to the Croats, who stood to gain pockets of territory outside the regions they already controlled, particularly in northern and central Bosnia. The Muslims would lose land in the north and the center but would regain some territories in eastern Bosnia that had been captured by Serb forces. Serbs were outraged by the proposed maps: acceptance would have meant the surrender of nearly a quarter of the occupied territories, with extensive territorial fragmentation in eastern Bosnia and the loss of their northern corridor. The

Croatian side promptly accepted the plan while the Muslims held out until March 1993, realizing that further opposition would simply prolong the war and ensure further Serbian conquests. By accepting the plan, Sarajevo estimated that significant international pressure would be exerted on the Serbs, particularly as calls for a U.N. intervention escalated.

Fearful of international military involvement, Serb leaders adopted a dual-track approach. They continued to procrastinate in giving a final decision on the plan while launching new offensives in eastern Bosnia during March and April 1993 to eradicate the remaining Muslim pockets. Karadzic initialed the Vance-Owen plan under pressure from Serbian President Slobodan Milošević who estimated that the combined effect of tightening U.N. sanctions against Yugoslavia and the possibility of bombing assaults on Serb positions would have precipitated a major crisis inside Serbia itself. But the validation of Karadzic's signature was made contingent upon the acceptance of the plan by the self-styled Serbian parliament which in April 1993 further delayed a decision by calling for a referendum among the Serb population. The ballot took place in May 1993 and the Vance-Owen plan was overwhelmingly rejected by voters.

Western indecision was quickly exploited by Bosnia's Serb leaders who pressed on with their military offensives. By the end of May 1993, the republic descended into an all-out land-grabbing operation. Bosnian Croat forces launched offensives against their erstwhile Muslim allies in central Bosnia and proceeded to expel the remaining Muslim population from western Hercegovina. Bosnian Serbs intensified their assaults on the surviving Muslim enclaves in eastern Bosnia, reducing them to barely defensible pockets that the U.N. declared as "safe havens" but failed to protect.

On 1 March 1994, fighting between Bosnian Muslims and Croats ended when the two groups signed a comprehensive cease-fire agreement in Washington. They also created a joint federation and a new constitution was promulgated on 30 March 1994. The federation was based on territory amounting to 58% of Bosnia-Herzegovina, contingent upon the recovery of territory from the Serbs. The federation was based on eight cantons, four of which would be Muslim-dominated; two controlled by Croats; and the remaining two of mixed ethnicity. International actors calculated that a political solution first had to be found between Bosniak Muslims and Croats in order to apply greater pressure on Bosnian Serbs.

### Self-Study Questions for Further Exploration

- What major factors led to the disintegration of Yugoslavia?
- What was the position of the international community with regard to the survival of Yugoslavia as a single state?
- Describe how the 1992-1995 war in Bosnia-Herzegovina was engineered by rival nationalist politicians.

- How extensive was the campaign of “ethnic cleansing” in Bosnia-Herzegovina and what was the ultimate purpose of this policy?
- What factors propelled the international community to intervene in Bosnia-Herzegovina through a humanitarian mission?
- How effective was the Muslim-Croat federation as a functioning state?

## POST-WAR BOSNIAN POLITICS

**The Dayton Accords** Events moved quickly during the summer of 1995. Serbian forces overran the UN "safe havens" of Srebrenica and Zepa and massacred thousands of Muslim civilians. NATO forces mounted a major air-strike campaign against Serbian positions to prevent further attacks. In cooperation with Bosnian Croat units, Bosnian government forces captured large areas of western Bosnia and the Serbs suffered their first major defeat of the war.

By the late summer of 1995, the Muslim-Croat federation controlled more than 50% of the country's territory. Following lengthy negotiations mediated by U.S. assistant secretary of state Richard Holbrooke, Presidents Izetbegovic, Tudjman, and Milosevic initialed a comprehensive agreement in November 1995 near Dayton, Ohio. Officially signed in Paris the following month, the Dayton accords were intended to guarantee a lasting peace in Bosnia and to reconstruct the country as a single state consisting of two entities: the Federation of Bosnia-Herzegovina (also known as the Muslim-Croat federation), which would receive 51% of the territory, and the Serb

Republic, which would receive 49%.

The accord established Sarajevo as a unified city under the control of the central government. It also called for free elections to posts in both the central government and entity administrations, to be held in September 1996 under the supervision of the Organization on Security and Cooperation in Europe (OSCE). To ensure peace, a NATO Implementation Force (I-FOR) was placed in Bosnia in January 1996. The force consisted of 60,000 troops from more than 20 nations, including approximately 20,000 U.S. soldiers and large numbers of French and British troops. The troops were stationed primarily along the demarcation line between the Muslim-Croat federation and the Serb Republic.

The three parties complied with the main military provisions of the Dayton accords by withdrawing their weapons and troops from the zones of separation and releasing most of their prisoners of war. However, other provisions of the agreement proved more difficult as Serbian and Croatian nationalists resisted the integration of ethnically divided communities. They also delayed the return of refugees to their homes. It took several months of negotiations before the Bosnian government at the central level was finally formed. The first session of the two-chamber Bosnian parliament took place in early January 1997 after months of obstruction by Serb representatives.

## Political Structure

According to the provisions of the Dayton agreement, Bosnia-Herzegovina obtained two major administrative divisions: the Federation of Bosnia and Herzegovina (*Federacija Bosna i Hercegovina*) and the Serbian Republic (*Republika Srpska*). Brcko in northeastern Bosnia became a self-governing administrative unit under the sovereignty of Bosnia-Herzegovina, but is not part of either entity. The Dayton Agreement included a new constitution that is now in force, while the country's legal system is based on civil law

Regarding the executive branch, the chief of state is the Chairman of the collective Presidency, which has three members and rotates every eight months. The head of government is the Chairman of the Council of Ministers. The Cabinet is the Council of Ministers nominated by the council chairman and approved by the National House of Representatives. The three members of the presidency (one Bosniak, one Croat, one Serb) are elected by popular vote for a four year term; the member with the most votes becomes the chairman unless he or she was the incumbent chairman at the time of the election. The chairman of the Council of Ministers is appointed by the presidency and confirmed by the National House of Representatives

The legislative branch consists of a bicameral Parliamentary Assembly (*Skupstina*). It includes a National House of Representatives (*Predstavnicki Dom*), with 42 seats: 14 Serb, 14 Croat, and 14 Bosniak whose members are elected by popular vote to serve two-year terms. The House of Peoples (*Dom Naroda*) consists of 15 seats: 5 Bosniak, 5 Croat, and 5 Serb whose members are elected by the Federation's House of Representatives and the *Republika Srpska's* National

Assembly to serve two-year terms.

The Bosniak-Croat Federation has a bicameral legislature that consists of a House of Representatives (with 140 seats and members elected by popular vote to serve four-year terms); and a House of Peoples (with 74 seats: 30 Bosniak, 30 Croat, and 14 others). *Republika Srpska* has a National Assembly with 83 seats, where members are elected by popular vote to serve four-year terms. The power sharing arrangements at all political levels demonstrated that ethnic proportionality combined with the separatist objectives of Serbian and Croatian representatives contributing to frequently paralyzing the central government institutions.

In the judicial branch there is a Constitutional Court consisting of nine members. Four members are selected by the Federation's House of Representatives, two members by the National Assembly of the Serb Republic, and three non-Bosnian members by the president of the European Court of Human Rights. A new state court, established in November 1999, has jurisdiction over cases related to state-level law and appellate jurisdiction over cases initiated in the two entities. The entities each have a Supreme Court and a number of lower courts. There are ten cantonal courts in the Federation, plus a number of municipal courts. *Republika Srpska* has five municipal courts

### **War Crimes and Refugee Issues**

In early 1996, the International Criminal Tribunal for the Former Yugoslavia (ICTY) based in The Hague, Netherlands, stepped up its activities. More than 50 Bosnians, the majority of whom were Serbs, were indicted by the ICTY for massacring civilians during the war. Those indicted included Radovan Karadzic and Bosnian Serb General Ratko Mladic. Although several lower ranking war crimes suspects were apprehended, the more important leaders successfully evaded capture. In July 1996, the ICTY issued international arrest warrants for both men on charges of genocide and crimes against humanity. Later that month, U.S. officials secured Karadzic's resignation. Mladic was dismissed from power in November 1996 by Biljana Plavsic who had replaced Karadzic as President of the Serb Republic.

A number of trials before the International Criminal Tribunal for the former Yugoslavia have been concluded. In January 2000, five Bosnian Croats were convicted of crimes against humanity in connection with the killing of over 100 Bosniak civilians in the village of Ahmici in Central Bosnia in the spring of 1993. They received sentences ranging from six to 25 years' imprisonment. In March 2000, another Bosnian Croat, General Tihomir Blaskic, the highest-ranking army commander tried by the Tribunal, was found guilty of war crimes and crimes against humanity committed in the Lasva River valley in central Bosnia. He was sentenced to 45 years' imprisonment, the longest sentence handed down so far.

Among other trials conducted before the Tribunal were those of Bosnian Serb General Radislav Krstic, accused of planning and ordering the killing of thousands of Bosniak men and boys after the fall of the former UN protected enclave of Srebrenica. Krstic became the first person to go on

trial before the Tribunal on charges of genocide. The trial of three Bosnian Serb paramilitary commanders accused of crimes against humanity in Foca was also underway. This trial was expected to set legal precedents in prosecutions for sexual crimes against women. In October 2000, Bosnian Serb Milorad Krnojelac went on trial on charges of war crimes committed in Foca prison. The trial of Bosnian Croats Dario Kordic and Mario Cerkez also continued. Both stood accused of war crimes against the Bosniak population in the Lasva River valley in Central Bosnia.

NATO's Stabilization Forces (SFOR) apprehended and dispatched to The Hague several other war crimes suspects, including the former Serb Republic presidency member Momcilo Krajisnik, who had been secretly indicted for genocide and crimes against humanity. Some suspects died during attempted arrests by NATO troops. In 2000, the new democratic government in Croatia transferred Mladen Naletilic, a Bosnian Croat indicted for war crimes in Mostar, to the Tribunal's custody. During 2001 and 2002, NATO forces failed to capture the former Bosnian Serb leader Radovan Karadzic, despite several attempts, while General Ratko Mladic was believed to be in hiding inside Serbia protected by elements of the Yugoslav military establishment.

The Bosnian conflict left some 200,000 people dead while 2.2 million, over a half of the country's population, were forced to flee. Most of the remaining refugees have decided to stay abroad, while only 300,000 of them expressed a wish to return. Under pressure from international agencies, local authorities have pressed on with the eviction of illegal occupants, thus enabling pre-war owners to repossess their property.

The return of refugees was mandated in the Dayton agreement, but had not transpired in any significant numbers by the close of the 1990s. This was especially true regarding the return of people into areas where their ethnic group was in the minority after the war. During 1998, up to 830,000 people within Bosnia remained displaced from their previous homes. In general, the major nationalist political leaders among all three groups have sought to ensure that ethnic divisions are consolidated. Despite the assurance of security and the termination of armed hostilities, NATO had failed to guarantee the return of all refugees and the freedom of movement for all Bosnian residents.

According to figures published by the UN High Commissioner for Refugees (UNHCR), more than 60,000 registered minority returns took place during 2000 and approximately 92,000 in 2001. About 90,000 refugees were expected to reclaim their homes or move back to their villages and neighborhoods during 2002. The number of internally displaced people and refugees at the beginning of 2001 amounted to approximately 500,000 and 700,000 respectively.

The acceleration in the process of refugee returns after 2000 was primarily stimulated by the spontaneous return of displaced people to destroyed housing, mostly outside urban areas. Meanwhile, returns to town and city centres were proceeding slowly, primarily as a result of the failure to implement property legislation enabling owners to repossess their houses. In September 2000, the UN High Representative removed 15 government officials in the Serb entity from office for their obstruction of the return process. In addition, many of the spontaneous returns were

unsustainable because of a lack of funding for the reconstruction of housing and infrastructure. Refugees also faced violence from local gangs intended to discourage their return in many parts of the country. The voluntary return of most refugees would be an important indicator of the establishment of the rule of law and governmental accountability throughout the country.

## **Struggle for Power**

National elections were held in Bosnia-Herzegovina in September 1996. Six other ballots also took place for: cantonal assemblies (in the Federation), the House of Representatives in the Federation, the National Assembly of the Serb Republic, the Presidency of the Serb Republic, the House of Representatives of Bosnia-Herzegovina, and the Presidency of Bosnia-Herzegovina. The election campaign was riddled with violations that would have disqualified the ballot under normal conditions. No free movement of people existed between Muslim-Croat and Serb territories, many war criminals were on the ballot, freedom of assembly remained tenuous, and the major media outlets were dominated by nationalists who wanted to seal Bosnia's division not reunification.

The ruling Muslim, Serbian, and Croatian nationalist parties scored major victories, each capturing about 80% of the vote of their ethnic constituencies. The Party of Democratic Action (PDA) won the largest number of seats in Bosnia's central legislature. Seats on the three-member collective presidency went to Bosnia's Muslim president Alija Izetbegovic, Serb leader Momcilo Krajisnik, and Croat leader Krezimir Zubak. Izetbegovic received the most votes and thus chaired the presidency. Disputes surfaced between Muslim and Serbian leaders over the role and power of the collective presidency. The Serb side often raised questions to sow confusion and paralyze the newly constituted governing bodies.

The Serbian Democratic Party (SDP) won the majority of seats to the assembly of the Serb Republic, and Biljana Plavsic, a member of the SDP, continued as president of the entity. The PDA won the largest number of seats in the Muslim-Croat federation's House of Representatives, followed by the Croatian Democratic Union (CDU). The presidency of the Muslim-Croat federation was chosen by the federation's parliament and thus was not contested. The overwhelming victory of the country's ruling parties reflected the suppression or media neglect of opposition parties in the weeks leading up to the elections. Many observers feared that the success of nationalists would serve to ratify Bosnia's partition along ethnic lines. Instead of cementing together the two halves of Bosnia, the general elections seemed to consolidate the power of the three ethno-nationalist political forces.

The Karadzic faction withdrew its representatives from the joint Council of Ministers and blocked meetings of the Bosnian collective presidency. Their battles with Plavsic revolved around control over the army, police forces, political and economic networks, and the mass media. Police units divided into two: about half of the 20,000 officers backed Plavsic's attempt to take over Serbian institutions. The remainder, together with an estimated 3,000 "special police" troops, remained loyal to the old SDP leadership. Two rival power centers emerged in the Serb Republic. Plavsic

created her own party in Banja Luka and attracted some former Karadzic loyalists. The Serbian media also split and became the propaganda mouthpiece of two factions: Karadzic hard liners in Pale and Trebinje and Plavsic rebels controlling Banja Luka television.

In December 1996, NATO launched a new, 31,000-strong stabilization force (S-FOR) in Bosnia to replace the 60,000-member I-FOR, whose one-year mandate had expired. The S-FOR mission was to deter new hostilities and provide a secure environment for civilian peace efforts. Washington contributed 8,500 troops to the new force. In February 1998, NATO leaders decided to extend the S-FOR's mission past June 1998 while the ICTY delivered a historic verdict when it convicted Dusan Tadic, a Bosnian Serb, of crimes against humanity for participating in an ethnic cleansing campaign against Muslims. This trial marked the first time an international court had tried and convicted someone for war crimes since the close of World War Two.

### A Dysfunctional State?

During 1997, Serb Republic President Plavsic clashed with a Serb Assembly dominated by hard-liners. With Western backing, Plavsic formed a new party, the Serb People's Alliance (SPA), in August 1997. On 3 July 1997, the Serb Assembly called for Plavsic's dismissal, accusing her of betraying the Serbian cause. She responded by dissolving the Assembly and legislative elections were called for 22-23 November 1997. Following the vote, a new National Assembly was formed and nationalist predominance was gradually undermined.

18 members of the Bosnian Serb assembly were Muslims, elected by Muslim refugees voting in their home areas. These new legislators combined with Plavsic supporters in January 1998 to elect as Prime Minister the businessmen Milorad Dodik, who had only limited ties with the Bosnian Serb wartime leadership. For the first time since the war began the Bosnian Serb government was not controlled by the SDP. Dodik led a minority government dependent on the support of the PDA and the CDU; but the latter two were formally excluded from the government for fear of losing Serb support for Dodik. Dodik sought to minimize SDP influence in the Serb entity, especially by breaking that party's hold over the media. He also moved the government of the Serb Republic from Pale to Banja Luka, where Plavsic had more influence.

Nationalists on all three sides hampered the free movement of people and the process of ethnic homogenization continued. Moreover, Serbian leaders hampered the functioning of the central government in Sarajevo. Although the three-person Bosnian presidency was formed together with an executive cabinet in which all three ethnic groups were represented, the powers of the central government remained limited while the entity authorities retained substantial control.

In the Bosnian Federation, Muslim leaders complained that Croatian leaders were sabotaging the agreements and constructing their own state structure. Croat representatives claimed that their counterparts in Sarajevo were refusing to approve true power sharing institutions for the Federation. Moreover, they voiced fears that a "unitary federation" would give the Muslims a

dominant role in the midst of growing Islamic nationalism. In effect, federal institutions remained largely paralyzed and cantonal and local authorities exercised more effective control.

Croatian nationalists retained strong vested interests in a permanent division of the country. Millions of black-market dollars were earned from the war and from the subsequent peace. Politically connected criminal gangs in the Croatian territories were manipulating nationalist sentiments, instilling fear in the local population, preventing the normalization of life throughout western Hercegovina and siphoning off vital funds from the government in Sarajevo. The CDU retained a monopolistic organization that eliminated all space for a free mass media and political pluralism. As a result, ethnically separate political and military structures continued to operate within the Federation.

In the Serb Republic, President Plavsic realized that without Western economic assistance the entity faced catastrophe. In order to retain power she challenged Karadzic, Krajisnik, and other war profiteers. Her campaign against corruption struck a chord among many ordinary Serbs. Plavsic in effect challenged the monopoly of the SDP. Some observers feared that the Serb entity could dissolve into an all-out civil war and a split into two antagonistic parts: the western section based around the Plavsic and Dodik leadership in Banja Luka and the eastern Karadzic group in Pale.

Fresh elections to the Bosnian Serb Presidency and for the Serb member of the collective Bosnian presidency took place on 12-13 September 1998. The latter ballot was won by Zivko Radisic from the Socialist Party of the Serb Republic (SPSR). Nikola Poplasen, a leader of the Serbian Radical Party, won the vote to the Serbian presidency but was barred from taking office by the UN High Representative Carlos Westendorp because of his staunch opposition to Bosnian integration. A new series of municipal elections took place in April 2000, but showed mixed success in integrating Bosnia and curtailing the powers of nationalist forces. Serb nationalists won in 49 municipalities, while Croatian nationalists captured 25. The Muslim Party of Democratic Action won in 23 by itself and in 11 more in coalition with the more moderate Party for Bosnia-Hercegovina. There were some encouraging signs in that the multi-ethnic Social Democrats won in 15 municipalities and made important electoral advances.

After general elections in November 2000, a new central government took power in February 2001, consisting of a post-election coalition that excluded the nationalist parties from power. This coalition, the Alliance for Change, was centred on the multi-ethnic Social Democratic Party (SDP) and the Party for Bosnia and Herzegovina (SBiH). The Alliance also came to power in the Federation. However, the Bosnian Party for Democratic Action and the Croatian Democratic Union remained powerful. The Serbian Democratic Party won a significant plurality in the Serb Republic in the November 2000 ballot, while its coalition partner in the government, the moderate Party for Democratic Progress of Prime Minister Mladen Ivanic, remained dependent on the SDP in order to remain in office.

International agencies remained hopeful that the general elections scheduled for October 2002

would further strengthen the multi-ethnic parties and undermine the three nationalist formations. To achieve such an objective, a comprehensive package of election law reforms would be necessary and the powers of the two entity governments would need to be whittled down.

Parallel political structures in the Serbian entity and the Croatian dominated cantons in the Bosnian Federation maintained their own intelligence services, economic networks, and financial sources. Many of these sources were either illicit or deprived the central government in Sarajevo of necessary revenues from taxation or customs duties. Their activities were enhanced by the shortcomings evident in the judicial system and in law enforcement. Much needed was the merger of disparate intelligence services linked with particularistic interests into a professional organisation under central government control. In June 2002, it was announced that a common intelligence service was to be established for the all-Bosnian state institutions.

According to the U.S. State Department's Country Reports on Human Rights Practices for the year 2000, Bosnia's dominant political parties continued to exert influence over the media, while freedom of the press was restricted in both entities. Government pressures against journalists remained high although threats of physical violence were decreasing. Academic freedom was restricted and the authorities continued to impose some limits on freedom of assembly and association. Both governments and private groups continued to restrict religious practice by minorities in majority areas. Although freedom of movement continued to improve, some restrictions remained in practice. The police failed to ensure security for all refugees returning to areas in which they were an ethnic minority.

Endemic corruption, an obstructionist bureaucracy, too many layers of government, and insufficient clarity in property ownership have greatly inhibited foreign investment and stifled local entrepreneurship. Limited economic opportunities have exacerbated the emigration of many of Bosnia's best-educated and most ambitious young people. The country was clearly in need of a unified legal system to deal with business, tax, privatization, and property ownership, as well as the functioning of a single state customs service responsible to the central government in Sarajevo for gathering revenues.

Military reform was long overdue in the country, as Bosnia-Herzegovina needed a single army in order to participate in NATO's Partnership for Peace (PfP) program. The existence of three military structures (Serbian, Bosniak, and Croatian) has proved financially and politically costly while impeding the modernization, standardization, streamlining, and professionalization of Bosnia's armed forces.

### Self-Study Questions for Further Exploration

- Provide an assessment of the Dayton accords and to what degree have its principles been implemented in practice.

- What are the major differences between the United Nations UNPROFOR mission and NATO's IFOR and SFOR operations?
- What are the major post-war impediments to creating a single Bosnian state?
- Has the international presence consolidated unity or division in the country, and how dependent is Bosnia-Herzegovina on international actors for its political survival?
- What impact has the war crimes issue had on the process of post-war reconciliation in Bosnia-Herzegovina?
- How important is the return to their homes of refugees and displaced persons in rebuilding a multi-ethnic Bosnian state?
- Assess the nature and consequence of political conflicts between nationalists and multi-ethnic liberals in the two Bosnian entities.

## FOREIGN AFFAIRS

### International Protectorate

The Bonn Conference in December 1997 empowered Carlos Westendorp, the UN High Representative, to impose solutions on the three Bosnian protagonists. The High Representative was authorized to make binding decisions on how to run the central government, impose interim solutions during disputes, and fire Bosnian officials who blocked progress toward integration. Some observers considered Westendorp's new mandate to be a major step toward transforming Bosnia into an international protectorate. Westendorp complained that the country lacked human and minority rights protection, laws on foreign investment, customs rules, national political parties, and public corporations. The Bonn Document called for a sustained campaign against official corruption and efforts to break the links between nationalist politicians and criminal rackets.

The international community provided several billion dollars in aid to Bosnia after the signing of

the Dayton accords. But there were persistent complaints that funds had been misused and primarily benefited the ruling nationalists. No major boost in production was registered and the Serbian entity in particular remained pauperized and devoid of any significant reconstruction assistance because of the obstruction of nationalist politicians. The reconstruction of Bosnia-Herzegovina as a single state and the promotion of a central political authority frustrated the international community. Nationalist politicians, especially from the major Serbian and Croatian parties, persistently blocked the process of state integration. The country remained polarized along ethnic lines as nationalist parties controlled decision-making in the two entities. Exclusivist nationalist parties continued to pose as the defenders of allegedly endangered “national interests.”

International agencies favored the marginalization of nationalist hard-liners among all three ethnic groups. For example, during his term in office, Westendorp dismissed the President of the Serb Republic, Nikola Poplasen, for interfering in the country’s democratic process and for supporting partition. Westendorp also tried to intensify the state-building process by various unilateral measures such as deciding on the country’s new flag, national anthem, a joint currency, a common passport, and common national license plates.

Nationalist politicians in several cantons who openly violated the Dayton provisions were either removed from office or barred from standing in future elections. Westendorp also began to restructure the Bosnian media by wresting control of several television stations from the ruling nationalist parties. Although the High Representative did not technically command any military force, his control of major aid and reconstruction resources enabled him to enforce most of his decisions.

The degree of Westendorp’s intervention led to complaints about externally imposed solutions among various Bosnian activists. Others believed that the High Representative had not sufficiently exercised his authority or unnecessarily delayed the full implementation of the Dayton accords. Westendorp’s successor, Wolfgang Petrisch, concentrated his efforts on reforming Bosnia’s corrupt judicial system, buttressing its precarious independent mass media, and improving its educational system. International representatives also condemned the activities of the Croatian Herzegovinian ultra-nationalist networks, which thwarted the development of a functioning democracy and prevented the emergence of a competitive market economy. They criticized the Franjo Tudjman government in Croatia for supporting illicit structures inside Bosnia and for harboring designs on Bosnian territory.

Without international pressures and financial incentives, the position of Bosnia’s refugees and local minorities would be have been even more precarious. International dependence was also evident in the Bosnian economy. Real growth continued to stagnate as a consequence of numerous factors, including corruption and mismanagement, over-dependence on international agencies, and limited indigenous economic development. Since 1995, Bosnia benefited from substantial foreign economic aid particularly from the World Bank and the International Monetary Fund (IMF).

Reports also surfaced that government leaders had misappropriated large amounts of cash from

public funds or from international aid projects. The embezzled funds were believed to amount to a substantial portion of all state finances. The allegations were vehemently denied in both entities but they soured the climate for further foreign assistance and investment. International agencies also bemoaned the lack of a proper banking system and an effective tax and tariff collection agency in the country. Both factors encouraged illegitimate business activities and undermined the authority of the central government.

The survival of Bosnia-Herzegovina as a single state remained dependent primarily on the presence of NATO and other international institutions to provide physical security, state resources, economic reconstruction, institutional continuity, and territorial integrity. Hard-line nationalists calculated that international resolve would weaken over time and that their resistance to ethnic reintegration and civic democracy would eventually pay off as international organizations disengaged from Bosnia and *de facto* recognized the existence of two sovereign states.

Meanwhile, Bosnia's democrats were frustrated by the initial weak pressures exerted by international organizations on nationalist "warlords" and the slow development of civic institutions. But the civic activists and integralists were also cognizant that over-dependence on international actors could undermine the authenticity and indigenous development of Bosnia's multi-ethnic and civic-democratic institutions.

Although centrist and civic forces proved more successful in the general elections on 11 November 2000, the three nationalist parties gained sufficient representation to obstruct multi-ethnic integration. In particular, the SDP and the CDU continued to block democratic reform and governmental authority at the central level. The issue of systemic corruption and organized criminality grew in significance during the 1990s and increasingly preoccupied international actors.

In June 2002, the newly appointed UN High Representative Paddy Ashdown pledged a prolonged campaign against crime and corruption in Bosnia-Herzegovina. The country would acquire special anti-corruption bodies within the judiciary by the end of the year, and Ashdown called for the "creation of special organized crime, economic crime, and corruption panels in the criminal division and appeals division of the new State Court of Bosnia-Herzegovina."

## International Relations

In the early part of the 1990s, the Serbian and Croatian governments harbored clear designs on Bosnian territory and sponsored proxy forces in the republic to promote partition and potential annexation. Serbian President Slobodan Milosevic was closely involved in promoting the Bosnian war through military, financial, economic, political, and intelligence support to the Bosnian Serb leadership. Croatian President Franjo Tudjman likewise maintained a close relationship with the CDU political and military leaders in Herzegovina.

Following the signing of the peace treaty at Dayton in 1995, Bosnia's foreign policy has developed parallel to various international efforts in Southeast Europe. The principle pillars of Bosnian foreign policy revolve around building lasting regional security structures, and ensuring closer regional economic cooperation.

In March 1998, an agreement was signed to institutionalize regular high-level consultations between Sarajevo and Zagreb, while an agreement was reached during the summer of 1998 providing Bosnia with easier access to the Adriatic Sea through Croatian territory. Nonetheless, Bosniak Muslim leaders remained suspicious that the Croatian government still held aspirations to divide the country. A provocative speech by Croatian President Franjo Tudjman in February 1998, which called for a partition of Bosnia along ethnic lines, was vehemently condemned by Muslim leaders and by the international community.

Bosnia's relations with the Federal Republic of Yugoslavia (FRY) remained stalled. The government in Belgrade proved hesitant in unequivocally recognizing the integrity of Bosnia-Herzegovina. In addition, Yugoslav President Milosevic played off rival factions in the Serbian entity in order to maintain his influence in the country. Fears were also generated during the summer of 1998 that the brewing conflict in the Serbian province of Kosovo could have negative consequences in Bosnia by encouraging the secession of the Serb republic and the Croatian regions.

In 1999, some members of President Tudjman's ruling party in Croatia called for the creation of separate Croatian and Muslim entities in Bosnia to replace the existing Bosnian Federation. Muslim leaders considered this a move toward Croatian separatism, and Bosnia's deputy Prime Minister Haris Silajdzic declared that Tudjman should be sent to The Hague tribunal for his role in war crimes committed during the 1993-1994 Muslim-Croat war. By contrast, Croatia's democratic opposition called for the decentralization of political power rather than the creation of three entities. They believed that Bosnia's cantons (or districts) should become the main locus of political authority in which the three ethnic groups could gain greater representation.

After Tudjman's death at the end of 1999 and the election of a democratic coalition government in Croatia in January 2000, substantial progress was achieved in relations between Sarajevo and Zagreb. Croatia displayed its commitment to an integral Bosnia and thus improved prospects for eliminating separatist trends in Croatian Herzegovina. In March 2000, the new Croatian President Stipe Mesic visited Sarajevo and announced that Zagreb would no longer interfere in Bosnia's internal affairs or finance the Croatian separatists as had been the case under Tudjman's tenure.

The new Croatian government recognized the territorial integrity of Bosnia and adopted a "one-Bosnia" approach. A number of important bilateral agreements have been signed between the two countries, including cooperation on refugee repatriation, cooperation between the two Defense Ministries on regional security, and cooperation on border controls. The two sides have also signed an agreement finalizing the Bosnian-Croatian border. In sum, 76 bilateral agreements have been signed between the two states.

The ouster of Slobodan Milosevic in October 2000 generated hope that Sarajevo's contacts with Belgrade would be placed on a more constructive footing. The Yugoslav government formally recognized the territorial integrity of Bosnia-Herzegovina. This opened bilateral channels and the two states have begun to cooperate on an array of issues, including refugee repatriation, movement of people and capital, and the UN war crimes tribunal at The Hague. The two countries have forged a favorable economic relationship, particularly in the field of energy, signing a free trade agreement in February 2002. Normalization of all types of traffic remains an important precondition for unimpeded communication between the two countries. In this context, activities have been intensified with a view to the conclusion of necessary agreements.

International pressures have been exerted on the FRY (Federal Republic of Yugoslavia) government to sever military assistance to the Bosnian Serb military and to establish more cooperative relations with the central government in Sarajevo. Close personal and institutional links between the Serb Republic and the Yugoslav government in Belgrade remained a cause of international criticism as they undermined the forging of a unified Bosnian state.

Bosnia has pursued cooperative relations with the majority of EU countries, the US, and member states of the OIC (Organization of Islamic Countries), particularly Iran and Turkey. Sarajevo established cordial ties with all countries making significant contributions to its reconstruction and development as well as other member countries of the Peace Implementation Council (PIC). The priority of the government is to take steps toward European and trans-Atlantic integration, including admission to the Council of Europe, NATO's Partnership for Peace (PfP), and the World Trade Organization (WTO).

Bosnia's participation in three multilateral initiatives is of particular relevance: the EU Stabilization and Association process, the Stability Pact, and the OSCE Agreement on Regional Stabilization. In May 1999, the European Commission outlined the EU's Stabilization and Association Agreement (SAA), anchored to a common set of political and economic conditions that needed to be met for a country to move toward EU assimilation. That same year, Bosnia began actively participating in the EU Stabilization and Association Process (SAP). A road map was adopted, which Bosnia pledged to implement in full by end of 2002. SAP emphasizes the need for regional cooperation.

The Stability Pact was an attempt by the EU to implement a political and economic strategy in Southeast Europe to ensure security and growth. Under the provisions of the Stability Pact, Bosnia pledged to work towards the creation of a Free Trade Area, the establishment of a Migration and Asylum Initiative, and the resolution of refugee matters. Sarajevo agreed to participate in all negotiations on regional arms control and for achieving a regional military balance based on the lowest level of armaments. It also consented to negotiate for voluntary limits on military manpower, restrictions on military deployments and exercises, and restraints on the location of heavy weapons.

After the fall of communism and the outbreak of war, and the imposition of international economic sanctions, criminal activities turned much of the Balkan region into a hotbed for drugs and arms trafficking, people smuggling, and prostitution. Accordingly, the Bosnian authorities have promised to work actively in limiting and eliminating regional organized crime and corruption. Sarajevo is cooperating with other Balkan states in collecting and sharing intelligence data on trafficking networks. It is committed to a regional approach, through the adoption of similar standards, in the fight against organized crime. It is also a strong supporter of the Task Force on Trafficking in Women and Children of the Stability Pact for Southeastern Europe.

### Self-Study Questions for Further Exploration

- What is the legal basis for the international presence in Bosnia-Herzegovina and is the country in effect a United Nations protectorate?
- What role has NATO played in Bosnia-Herzegovina in its first out of area post-Cold War mission?
- Consider some of the positive and the negative consequences of Bosnia's dependence on international institutions?
- What would be your suggestion for creating a stronger, self-sustaining, and integrated Bosnian state?
- What role have both Serbia and Croatia played in Bosnian politics and in the country's economic development, and how has this changed since the demise of Presidents Franjo Tudjman and Slobodan Milosevic?
- How does Bosnia-Herzegovina fit into the evolution of the wider Balkan region since the disintegration of Yugoslavia?

## **CULTURE, SOCIETY, AND GENDER**

### **Ethnic Groups**

Bosnia-Herzegovina's three major ethnic groups are Muslims, Serbs, and Croats. According to the last official republican census, completed in 1991, Muslims formed 43%, Serbs 31%, and Croats 17% of a total population of 4,364,574. By mid-2001, the population estimate stood at 3,922,205 although a precise figure was difficult to establish because of the dislocations caused by military action and "ethnic cleansing" in the 1990s.

The population ratios remained roughly similar in the wake of the 1992-1995 war, although the Croatian share reportedly dipped below 15%. Also in 1991, over 5% of the population declared themselves as Yugoslavs, but this category largely evaporated as a consequence of the armed conflicts and the disintegration of Yugoslavia. During the war, the term Bosniak generally replaced Muslim as an ethnic term partly to avoid confusion with the religious term Muslim. Other smaller minorities resident in Bosnia included Romas, Albanians, Montenegrins, Jews, and Slovenes. A Jewish community had found safe haven in Sarajevo in 1492 after their expulsion from Spain. There were no religious or ethnic ghettos in the larger cities and the republic's churches, mosques, and synagogues were often located close together, indicative of the tolerant character of Bosnian society.

Bosnia-Herzegovina was in a unique position among the former Yugoslav republics, in that no single nation or nationality formed an absolute majority. By the late 1980s, Bosnia's ethnic balance was compounded by a complex territorial mix among the three major communities. In the 99 municipalities outside of the capital Sarajevo, Muslims formed absolute majorities in only 32, and few of these were territorially contiguous: the biggest concentrations were in northwestern, eastern, and central Bosnia. Serbs constituted absolute majorities in 30 municipalities, most of these in western, northeastern, and southeastern Bosnia. Croats formed absolute majorities in only 14 municipalities, the majority in the western Herzegovina region.

In 23 municipalities, no ethnic group possessed a clear majority and even in districts where one ethnic group predominated there were large minorities of one of the other two nationalities. Cities were ethnically very mixed; in the smaller towns specific groups tended to live in different quarters; while in villages one group tended to predominate.

The major language of all three ethno-religious communities was formerly known as Serbo-Croatian or *stokavian*, a dialect selected by the intellectual founders of Yugoslavia to be the chief language of the new state. There were some minor variations in pronunciation and vocabulary but these variants were more similar to each other than to the Serbo-Croatian spoken in Belgrade or Zagreb. Bosnia also had two alphabets, the Latin and Cyrillic scripts, and both were taught in schools and used in the press.

Since the breakup of Yugoslavia, leaders of the three ethnic groups have endeavored to forge their linguistic distinctiveness by adding new vocabulary and officially referring to their language as either Bosniak, Serbian, or Croatian. While Croats and Bosniak Muslims largely dispensed with the Cyrillic alphabet, Serbs discarded the Latin script.

### ***Composition of Population, 1991 Census***

Ethnic Group	Number	% of Population
Muslims	1,902,954	43.60
Serbs	1,370,476	31.40
Croats	755,071	17.30
Yugoslavs	240,052	5.50
Others	96,02	12.20
Total Minorities	4,364,574	100.00
Total Population	4,364,574	100.00

### **Major Religions**

The major distinguishing feature in Bosnia is religious affiliation. While the predominant Bosniak population is Muslim, the Serbs are overwhelmingly Christian Orthodox, and the Croats are Roman Catholics. The Muslim name, as an ethnic category and one of Yugoslavia's constituent nations, was adopted by the Communist authorities to preserve a multi-ethnic balance in Bosnia and prevent Serbian and Croatian domination.

The dividing line stemming from the Christian schism in the 11<sup>th</sup> century passed through Bosnia-Herzegovina. Bosnian historians claim that most of the local population felt no particular allegiance to either Croatia or Serbia as control over the territory was changeable and often nominal and both the Catholic and Orthodox Churches were organizationally weak. Many of the local inhabitants either belonged to an autonomous and schismatic Bosnian Church or to a heretical dualist sect known as the Bogomils. Many Bosnians converted to Islam during Ottoman rule in the 15<sup>th</sup> and 16<sup>th</sup> centuries as a consequence of weak allegiance to Catholicism, Orthodoxy, or Bogomilism, as well as opportunities for improved political position, social status, and economic benefits under Ottoman rule. The form of Islam was generally Sunni and was moderate in its orientation.

Religion has a close association with national identity despite poor attendance at religious services and other rituals. Despite the prevalence of secularism, a religious revival was visible during the collapse of communism and as a consequence of the brutal 1992-1995 war. Indeed, Muslim-Bosniak consciousness and identity expanded and solidified during the course of the conflict. However, the form of Islam in Bosnia is moderate with few if any militant or fundamentalist elements despite attempt by states such as Iran to promote more extremist Islamicist sentiments. For example, the consumption of alcohol was commonplace among all groups, without any prohibitions. Since the war however, it has been discouraged in some Muslim areas as Islamic rituals and practices have intensified.

The Bosnian Constitution provides for freedom of religion, including private and public worship. Although in general, individuals enjoyed this right in areas that were ethnically mixed or where most people adhered to one majority religion, the ability of individuals to worship in areas where their religion was in the minority was restricted, sometimes violently, according to several human rights reports.

Administrative and financial obstacles to rebuilding religious structures impeded the ability of minorities to worship and contributed to impeding their return in many areas. The absence of a police force willing to protect religious minorities and a judicial system capable of prosecuting crimes against them constituted major obstacles to safeguarding the rights of religious minorities. According to U.S. State Department reports, the Bosnian Serb government, local governments, and police forces frequently allowed or encouraged an atmosphere in which abuses of religious freedom could take place.

## **Cultural Factors**

Before the 1992-1995 war, about two thirds of the Bosnian population was rural although the dry plateaus in Hercegovina were more sparsely populated than the central and northern zones of Bosnia. The country had a traditional urban-rural divide with a good deal of mutual stereotyping between the two groups that often transcended ethnic and religious differentiation. During the 1960s and 1970s, the urban population almost doubled as many young people left the countryside for the industrial centers of Sarajevo, Zenica, Banja Luka, Tuzla, and Mostar, and were often accommodated in suburban apartment blocks.

Bosnia had an urban population that aspired to the living standard common in western Europe and was increasingly intermixed ethnically, residentially, and occupationally, with increasing cross-ethnic marriages. About one third of all urban marriages on the eve of the 1992-1995 war were between partners from different ethnic backgrounds. The rural population remained more divided ethnically and was generally poorer. As a result of the wars, ethno-religious identification has risen among all three major groups.

The largest cities had mixed populations in 1991, but the war and its aftermath made them almost homogenous. For example, Banja Luka, 55% Serbian in 1991, was almost 100% Serbian by 1993. In 1991, Mostar was 34% percent Croatian, 35% Muslim, 19% Serbian, and 10% "others" (people who registered no ethnic affiliation); but by 1995 it had been divided into an almost purely Croatian western part and a Muslim eastern part. Under the terms of the 1995 Dayton accords, Sarajevo, located in the Muslim-Croat federation, is a united city under federal Bosnian control. However, the city's population changed from 49% Muslim before the war to 90% Muslim by 1996, and the Bosniak-Muslim authorities permitted few non-Muslims to return in the immediate aftermath of the war.

Bosnia's pre-war ethnic diversity enriched its cultural life. Epic stories, a form of traditional oral literature, were still sung throughout the republic well into the 1950s. Bosnian urban love songs,

largely Muslim in origin, were popular throughout the former Yugoslavia. Ivo Andric, a Serb who was raised Catholic in Bosnia, won the Nobel Prize for literature in 1961. His novels include *Na Drini Cuprija* (1945; *The Bridge on the Drina*, 1959), in which a bridge from the Ottoman period symbolically united Bosnia's peoples. The film director Emir Kusturica, of Muslim origin, made internationally acclaimed films in Sarajevo. His film *When Father was Away on Business* was a finalist for the Academy Award in the United States for best foreign film in 1984. That film had a cast and crew that included Muslims, Serbs, and Croats. Through 1991, the Bosnian rock group *Bijelo Dugme* was extremely popular throughout Yugoslavia, playing music influenced by the various traditions of Bosnia.

The cultural mix has declined since the war. The Bosniak authorities regard Andric as having been anti-Muslim, and they closed the museum devoted to him in his home town of Travnik. Filmmaker Kusturica moved to Serbia in 1992 while his internationally acclaimed 1995 depiction of the war, *Underground*, was condemned in Sarajevo.

The most important library in Bosnia was the National and University Library in Sarajevo. It was deliberately destroyed by militant Serbian shelling in 1992. The world famous bridge in Mostar, built by Ottoman rulers in the 17<sup>th</sup> century, was intentionally destroyed by the shelling of militant Croats in 1994. Throughout Bosnia, Orthodox and Catholic churches and mosques were deliberately targeted and destroyed during the war. Among the most important losses were two mosques in Banja Luka that were on the United Nations Educational, Scientific and Cultural Organization (UNESCO) register of world cultural monuments. They were leveled by Bosnian Serb authorities in 1992.

## Social Structure

Bosnia's social structure has few traditional features remaining but mostly modern pan-European elements. The basic unit is the nuclear family, although in some areas the ancient Slavic *zadruga* or extended family remains a source of cooperation. The fairly recent trends toward urbanization, mostly since the end of World War Two, meant that many families retained relatives in both the city and the villages and could draw upon resources from both environments. Bosnian Moslems tended to maintain fewer connections between city and country, because since Ottoman times they have tended to be largely an urban population. Under the communist system, family and friendship networks were employed to gain various benefits.

Bosnia-Herzegovina had a high rate of population growth in comparison with the other Yugoslav republics. When the republic achieved independence, much of the population was young, with over a quarter under the age of 15. In addition, large numbers of Bosnians lived as guest workers in Germany, Austria, and other West European countries. Before the war, Sarajevo had a population of 526,000 inhabitants, while the other sizable cities included Banja Luka, Mostar, Tuzla, and Zenica. Since the war, according to estimates made in 2001, the population structure has altered, with 20% under 15 years old, 70% between 15 and 64 years of age, and 9% over 65

years old.

Before the 1992-1995 war, Bosnia-Herzegovina was a modern and industrialized European country with good educational, welfare, and health care standards. Education was compulsory and free for all children from ages 7 through 15. Secondary education was also free. Wartime destruction or damage to schools disrupted education for many children, although “war schools” were created in other buildings. There are officially four universities in the country, in Sarajevo, Banja Luka, Tuzla, and Mostar. The university in Mostar, however, has split into two unrelated institutions, a Croat university in western Mostar and an Islamic one in eastern Mostar.

## **Gender Issues**

Although women were guaranteed full equality and entry into the work force under the communist system, this often resulted in women performing two jobs, one at the office or factory and one at home. Polygyny as a Moslem custom was practiced only in isolated regions of the country as most marriages followed modern customs. Arranged marriage between families also largely disappeared. The size of Bosnian families, especially in the urban areas, has also been decreasing as education and living standards increased.

During the 1992-1995 war women in general were the major victims of ethno-nationalist policies. They were the primary victims of rape and displacement. It is difficult to estimate the exact number of women and girls raped during the conflict. Human-rights observers, journalists, and witnesses reported on the organized and systematic rape of at least 20,000 women and girls by the Serbian military and the murder of many of the victims. Croatian and Bosnian militias also engaged in rape and abuse but on a smaller scale. Rape was employed as a deliberate military tactic in the process of “ethnic cleansing.” Rapes were committed in a sadistic fashion to humiliate the victims, their families, and the entire community. Women and girls aged anything between 6 and 70 were gang-raped in special camps in various parts of the country. Rape was used as a strategic weapon condoned by local political and military leaders.

Since the war many Muslim women have adopted Islamic dress styles that had not been common in the cities before the war. The destruction of the economy and the loss of employment has also thrust many previously working women into traditional female roles as housewives and mothers.

After the conflict, some women became ardent pacifists and supported the process of reconciliation. A minority of women began to create independent civil organizations in order to have a greater political input in policy making. New women’s civil groups developed out of the need to help the victims of war especially given the collapse of the former state welfare system. However, they have often lacked domestic visibility and recognition for their efforts. Women’s groups received support from international agencies not only for their work with war victims but also in their attempts to increase women’s political involvement.

According to human rights groups, violence against women, particularly domestic violence, was a persistent yet underreported problem. A report by the International Helsinki Federation for Human Rights in 2000 estimated that approximately 30% of women in the country were victims of domestic violence; however, there was little reliable data available regarding the extent of the problem. Discrimination against women in employment also persisted in the country particularly in rural areas and few women occupied positions of real economic or political power. Women have been discriminated against in the workplace in favor of demobilized soldiers.

Trafficking in women from Eastern Europe and the former Soviet Union for purposes of sexual exploitation was a serious and growing problem in Bosnia-Herzegovina. There were no existing laws that specifically prohibited trafficking in persons. The country remained a major destination and transit point, and to a lesser extent a country of origin, for women and girls trafficked for sexual exploitation. Bosnia was extremely vulnerable to trafficking in persons, because of weak laws, porous border controls, and corrupt police who were easily bribed. Many of the women were smuggled through Bosnia to Italy, Germany, and other Western European countries for prostitution.

International organisations have attempted to address the problem of people smuggling and programs have been established to repatriate trafficked women who seek to return home. A number of shelters have been created to house trafficked women while they await return to their countries of origin. However, public awareness of the problem remains low and trafficking is tolerated at most levels of society.

### **Self-Study Questions for Further Exploration**

- Describe the relationships between the three religious communities in Bosnia-Herzegovina before and during communist times.
- What impact did the 1992-1995 war have on traditional customs and group identities?
- What was the impact of the 1992-1995 war on Bosnia's smaller minorities (Romans, Jews, and so on)?
- How significant are religious beliefs and institutions in structuring the values and behavior of the three Bosnian nationalities?
- How has the position of women changed in the country during and after communist rule? How has it altered in the aftermath of the 1992-1995 war?

## ECONOMICS

### Economy and War

Even prior to the 1992-1995 war, Bosnia-Herzegovina was among the poorest republics of the Socialist Federal Republic of Yugoslavia (SFRY). It ranked next to Macedonia in terms of the lowest per capita income. Its GDP was estimated at US\$ 10.6 billion, or about US\$ 2,429 per capita. The economy was industrially diversified with the majority of the population employed in the manufacturing, mining, technology, and service industries. Industries such as metallurgy, chemicals, and manufacturing constituted the most important economic sectors, accounting for about 65% of GDP. In the service arena, the most developed was the civil engineering sector.

Overall, the labor force was highly educated with a small but capable entrepreneurial class. In addition, due to its strategic geographic location and mountainous nature, Bosnia was home to

some of the largest and heavily overstaffed Yugoslav military industry. Yugoslav leader Marshall Tito had pursued the development of military industries in the republic with the result that Bosnia hosted a large share of Yugoslavia's defense plants.

The 1992-1995 war caused Bosnian's production to plummet by about 80%. In total, 70% of factories and 60% of all buildings were destroyed in the fighting. By the end of the war in 1995, Bosnia's GDP fell to less than US\$500 per capita -- about 20% of the pre-war level. Total output collapsed to between 10% and 30% of pre-war production. Most of the existing physical capital, including factories, shops, mines, and electrical power plants, was destroyed.

The war also brought about a devastating loss to human capital. Half of the pre-war 4.5 million people were displaced, almost a quarter of a million people lost their lives, and the social fabric of the Bosnian people was profoundly disturbed and forever altered. In addition, the war caused a significant brain drain, which has seen only minimal reversal, as post-war income levels remain low. The material damage was estimated to be approximately six to ten times higher than the US\$ 5.1 billion, which was earmarked for reconstruction and recovery by international donors in the "Three to Four Years Priority and Reconstruction and Recovery Program" launched at the end of 1995.

### Post-War Economic Developments

The 1992-1995 war caused production to plummet by 80% between 1990 and 1995, while unemployment soared. After the NATO mission was deployed in Bosnia, output initially recovered between 1996 and 1998, but growth slowed down again in 1999 and 2000, and GDP remains far below the 1990 level. Economic data are of limited value, however, because although both Bosnian entities issue figures, reliable national-level statistics are not available. Official data also fails to include the large share of activity that occurs on the black market.

The *marka*, the national currency introduced in 1998, has gained wide acceptance, and the Central Bank of Bosnia-Herzegovina has dramatically increased its reserve holdings. However, the implementation of privatization has been slower than anticipated. The country has received substantial amounts of reconstruction assistance and humanitarian aid from the international community but does not seem to be prepared for an era of shrinking outside aid and declining dependence.

In the year 2000, the GDP real growth rate stood at 8%, while per capita GDP only reached \$1,000 -- approximately half the pre-war level. The composition of GDP earnings by sector included: agriculture, 19%, industry, 23%, and services, 58%. Bosnia-Herzegovina continues to record one of the lowest GDPs in Eastern Europe. In 2000, the country registered the second lowest GDP in the region, placing itself just above Albania.

Bosnia's labor force approximated 1,026 million people while the unemployment rate reached

between 35% and 40% in 1999, and many individuals were forced to operate in the informal economy. Workers in the unofficial market typically receive no benefits, but those with formal employment are often paid only partial salaries, which are often distributed several months late. Pensions and other benefits are also paid only in part and are invariably delayed due to a lack of government revenues.

The major industries include steel, coal, iron ore, lead, zinc, manganese, bauxite, vehicle assembly, textiles, tobacco products, wooden furniture, tank and aircraft assembly, domestic appliances, and oil refining. Bosnian industry remained greatly overstaffed, as one reflection of the lingering socialist economic structure. Agricultural products consisted of wheat, corn, fruits, vegetables and livestock. Although agriculture is now almost entirely in private hands, farms are small and inefficient, and the republic traditionally is a net importer of food. Moreover, with the exception of Croatia, Bosnia runs a trade deficit with all of its major trading partners.

Almost seven years after the signing of the Dayton accords, Bosnia's economy is still far below the pre-war level. Many people have no regular jobs, while most young people are trying to leave the country. Most of the money entering Bosnia has come in the form of international aid -- over \$5 billion in the past six years -- while foreign direct investment has been low, and is currently in decline. Government spending is struggling to prevent investment capital from declining further as foreign investors pull out. Economic development has been largely confined to basic reconstruction requirements financed by international donors.

Higher government spending is crucial if Bosnia is to realize economic prosperity and return its war-torn economy to a pre-war level. Incoming foreign funds, in terms of credit lines to small and medium size enterprises, are far too small to boost or even sustain current development. Most of the limited economic growth has been spurred by small enterprises, while structural reforms in the large enterprises and banking sectors have so far been insignificant.

Bosnia's economy remains largely divided in a manner corresponding to its two political entities. An uneven development of the two economies, with that in the Serb Republic (SR) lagging far behind the Federation, is exerting significant pressure on social and political developments. In addition, effective monetary and fiscal policy-making is largely impossible as the Serb Republic runs its own economic programs. However, it does not have an independent monetary policy and no independent central bank, but is represented in the governance of the Central Bank of Bosnia-Herzegovina; the Main Bank in the SR is a unit of the Central Bank of B-H. Wide economic differences between the two entities have led to substantial variations in living conditions. Although efforts have been undertaken to unite the divided economy, the restricted movement of capital and labor has retarded progress.

Unemployment is a serious concern and will likely remain a major obstacle to Bosnian's economic recovery. The official unemployment rate is estimated around 35%, although, experts argue that it is in fact much higher. A large portion of those technically employed are on the employment waiting list, while others do insignificant part-time jobs. The average monthly wage remains low

in Bosnia, forcing many young educated people to leave the country in search of better opportunities elsewhere. With a growing gap between Bosnia and its neighbors (in Bosnia's disfavor) in terms of economic recovery, capital and labor flights are likely to intensify. Even though the market is well supplied, and prices are much lower than in other East European countries, the purchasing power of the population as a whole remains low.

A large portion of the labor force is engaged in material reconstruction, public administration, and international organizations, all of which offer only temporary employment or are poor stimulators for capital accumulation. For example, from June 1996 to December 1998, a total of 555 small projects, such as road and electric lines repair, and reforestation, were implemented, all of which temporarily eased unemployment as they were all labor intensive. However, these are only short-term solutions. High unemployment and low-income levels also provide a steady source of human capital to the growing Balkan illicit economy. As unemployment remains high, any efforts by the Bosnian government to combat organized crime, corruption, and reverse the illicit economic activity are significantly compromised.

Although privatization is amongst the central pillars of Bosnia's economic recovery, an effective transition to a free-market economy has been slow. Transparency and legal mechanisms accompanying privatization in other East European countries are largely missing. Oftentimes contradictory legislation has compromised transparency, providing a rich seam of corruption for some state officials. Corporate ownership and foreign private incentives are still strangled by Bosnia's socialist heritage. Investment protection laws, especially laws concerning foreign investment, are underdeveloped, and the maze of bureaucracy is a barrier to foreign investment.

Bosnia's power politics are also a major obstacle to privatization. The entity governments have made some progress on reforms in the banking and financial sectors, but privatization of the state-owned strategic enterprises remains slow. Too many layers of bureaucracy at state, entity, and local level discourage free enterprise and business development and are also proving expensive to maintain from state revenues.

While more than half of the population subsists below the poverty line, many war profiteers and political elites have dominated the privatization process. Hence, the risks associated with investment are often higher than the potential profit on investment. Significant efforts in developing a functioning capital market (such as creating institutions to monitor and support the privatization process) could help limit corruption and implant greater investor confidence. The successful development of a functioning capital market would also help to fill the legal vacuum, which currently shields corruption and other illicit activities.

The economy remains heavily dependent on international assistance. A major player in Bosnia's economic reconstruction has been the European Union's European Commission (EC). The EC has adopted a double transition strategy in rebuilding Bosnia-Herzegovina. On the one hand, it supports programs that stimulate economic growth and development; on the other hand, it runs programs that prepare Bosnian society for democratic development.

Following the signing of the Dayton accords, the EU Council of Ministers established political and economic conditionality for the development of bilateral relations with Bosnia and the country began to benefit from direct assistance. In 2000, this aid totaled some \$104 million, with a grand sum of over \$890 million since 1997. In 1999, the Stabilization and Association Process (SAP) was launched with a prospect of Bosnia's integration into EU structures. An EU Road Map set out a number of essential steps to be undertaken by the government in order to open negotiations on a Stabilization and Association Agreement. Duty-free access was also provided to the EU market for products from Bosnia-Herzegovina.

The objective of the SAP was to support Bosnia in fostering inter-entity cooperation, helping inter-ethnic reconciliation and the return of refugees, establishing functioning institutions and a viable democracy based on the rule of law, and laying the foundations for sustainable economic development. Over \$2 billion in EU funds have been committed to Bosnia-Herzegovina since 1991. Between 1991 and 2000 humanitarian aid totaled \$1,032 billion. In 2001, more than \$105 million of assistance was committed under the new CARDS (Community Assistance for Reconstruction, Development and Stabilization) Program. In addition the EU member states contributed over \$1.2 billion in aid between 1996 and 2002.

The World Bank has been the other major provider. On 28 March 2002, the World Bank approved US\$30 million for the Road Management and Safety Project for Bosnia, which aims to improve traffic flows and reduce accidents. Since joining the World Bank in 1996, commitments to Bosnia-Herzegovina have totaled approximately US\$770 million for 36 projects. There are currently 20 active projects in Bosnia sponsored by the World Bank. In sum, EU, World Bank, and IMF financing have played a major role in the reconstruction of the Bosnian economy, but the question remains open whether the country can successfully wean itself away from long-term international dependency and establish a competitive and self-sustaining market economy.

### Self-Study Questions for Further Exploration

- Compare the economic position of Bosnia-Herzegovina with that of the other republics of communist Yugoslavia.
- What impact did the 1992-1995 war have on the country's economic development?
- What kind of economy has been constructed in Bosnia since the signing of the Dayton accords?
- How significant is organized crime and corruption in the Bosnian economy and what impact does it have on the country's economic development?

## CONCLUSION

This Self-Study Guide to Bosnia-Herzegovina provides an overview of the complex history of the country, its ethnic and religious mix, its culture, social structure, gender relations, and economic system. It focuses in some depth on the fragility of the reborn Bosnian state and its continuing dependence on international institutions for national security, political cohesiveness, and economic survival. A series of questions are posed after each chapter and a relevant bibliography is provided to enable the reader to explore salient issues in greater depth. In sum, Bosnia-Herzegovina remains a challenge for the student as well as for the policy maker.

## SELF STUDY GUIDE

NATIONAL FOREIGN AFFAIRS  
TRAINING CENTER

School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The **Self-Study Guide: Burma** is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to history, geography, politics, religion, culture, economics, and international relations. The guide serves as an introduction and should be used as a self-study resource. Burma is far too complex and diverse a society to be covered in any depth using only the text in this guide. Therefore, the reader is encouraged to explore the questions and issues introduced using the Internet site guide and articles and books listed in the bibliography. Most of the bibliographic material can be found either on the Internet or in the Foreign Service Institute or Main State Libraries.

The first edition of this Guide was prepared in 2001 by Dr. Josef Silverstein, Professor Emeritus of Political Science at Rutgers University. The second edition includes updated information provided by David Jensen, Coordinator for Southeast Asia Studies at the Foreign Service Institute of the National Foreign Affairs Training Center. The views expressed in this guide are those of the authors and attributable sources and do not necessarily reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center

This publication is for official educational and nonprofit use only.

Second Edition  
March 2006

# GEOGRAPHY

## A. THE LAND

Burma<sup>1</sup> is the westernmost nation in Southeast Asia. It shares a common border with India and Bangladesh to its west, and with China, Laos and Thailand to its north and east. Burma extends south and southwest to the Bay of Bengal and the Andaman Sea. The modern state of Burma encompasses approximately 262,000 square miles; it is approximately the size of the State of Texas and about twice the size of Japan. Lying between the northern latitudes of 10 and 28, most of the land mass and population centers are in the tropics.

The country has two distinctive geographical features. First, its most prominent feature is the north-south valleys, mountains and rivers. Burma's longest and most significant river is the Irrawaddy, which flows from the northeast south to the Andaman Sea. The Chindwin River, which begins in the northwest of Burma, is a tributary of Irrawaddy. The confluence of the Irrawaddy and the Chindwin Rivers is near the town of Myingyan in central Burma. The Irrawaddy and the Chindwin are navigable for 900 and 400 miles respectively; both can be used for commerce throughout the year. The Sittang River lies in the eastern part of Burma. Its origin lies in central Burma, flows through the area east of the Pegu Yomas, and empties into the Gulf of Martaban. The Sittang is important for irrigation but only has limited commercial value as a navigable waterway, because of its changing currents and natural obstructions. The fourth important river is the Salween River; it rises in Tibet, passes through Yunnan, China, and flows southward through the eastern hill states of Burma and empties into the Andaman Sea near Moulmein. Parts of the Salween serve as the border between Burma and Thailand. It cannot be used for extensive travel because of rapids and other obstructions. The Salween is important as a means for floating teak and other commercial logs to seaports at its mouth.

Because the major lines of communications follow the contours of the land and rivers, the early important cities and towns were located along a north-south axis. Several capitals of the Burman Empire were located on the Irrawaddy River near its confluence with the Chindwin, approximately 400 miles from the sea. After the British conquest, the capital was shifted to the banks of the Rangoon River near the mouth of the Irrawaddy River and the cities along the south and southwestern coast became the loci of administration, trade and commerce.

Second, the country is naturally divided into two distinct areas: the delta and plains and the Tenasserim form lower and central Burma; the upper Irrawaddy valley and the semicircle of

---

<sup>1</sup> On May 27, 1989, the military rulers of Burma decreed that the nation's name be changed to "Myanmar." This was one of many name changes made by the military rulers to eliminate the last vestiges of British colonial rule (1824-1948). "Myanmar" is used by the government and appears in all documents and newspapers in the country. However, in international documents and in diplomatic correspondence, opponents use the name "Burma" in defiance of the regime. In this Guide, the name "Burma" will be used and the name "Myanmar" will appear only if it relates to a document or contained in a speech.

hills and mountains in the north form upper Burma. The political and cultural heartland of the Burmans<sup>2</sup> is located in central Burma. Lower Burma and the delta is the home of the Pyu and Mon peoples, who preceded the Burmans, establishing their villages and political centers in the coastal region of lower Burma. In the 18<sup>th</sup> century, the Burmans defeated the Mon and, later, the Arakanese, who lived in the southwest coastal region, and united the territories under their rule.

The Irrawaddy valley is the center of the Burman population. The greatest concentrations live in and around Rangoon and Mandalay. Thousands of pagodas erected during the Pagan era, still standing today, attest to the handiwork of the Burmans and the importance of Buddhism as their faith and inspiration.

The hills and mountains to the north, west, and east protect central and lower Burma from neighbor states. This area is the least developed in Burma and is sparsely populated by a variety of ethnic groups.

The hills and border regions are rich in minerals and timber. With only primitive roads and bridges across gorges and rivers, resource extraction and travel in these areas is difficult.

Today, upper Burma is connected to the central and southern regions of the country by river, rail, road, and air transport. China and India are accessible via traditional roads and modern air transport; prior to the Second World War the all-weather “Burma Road” was constructed, connecting China and Burma. In recent years, roads in the hill areas have been strengthened and resurfaced for all-weather use to sustain passage by heavy trucks and military equipment. The traditional homelands of many of the indigenous groups of this area straddle the international borders and the peoples have closer ties with their ethnic kin in China and India than with the lowland settlers of central and lower Burma. Following World War II, the upper and lower regions of the country united to form the modern state of Burma.

## B. WEATHER

Two-thirds of Burma lies within the tropical zone and is subject to annual monsoons. The country experiences three seasons: the wet (mid-May to mid-October), the dry (mid-October to March), and the hot (March to mid-May). During the wet season, the monsoon blows from the southwest across the Bay of Bengal, delivering approximately 200 inches of rain annually in the coastal areas of Arakan and Tenasserim. The delta plains of the Irrawaddy River receive

---

<sup>2</sup> Consistent with scholarly and popular usage, “Burman” is used as the ethnic term for the majority group, while “Burmese” is used as the political term for all the inhabitants of the country.

approximately 100 inches during the same period. The central area of Burma (the dry zone) receives approximately 25 to 50 inches of rainfall annually. The rain in this region is irregular, making farming difficult in areas without supplemental irrigation. Approximately 80 to 90 inches of rain fall annually on the Shan plateau and in the Kachin State. In far-northern Kachin, the mountains around Putao reach 20,000 feet and are snow capped most of the year.

Burma experiences a variety of temperatures from the delta and coast in the south to the high mountains in the northern Kachin State. During the cold, dry season, the temperature in lower Burma ranges between 67-88 degrees (F), in central Burma, 58-84 degrees (F), and in northern Burma, 55-76 degrees (F). Humidity is generally low during this time. In the hot, dry season, the temperature in the lower region ranges between 75-95 degrees (F), in the central region, 75-98 degrees (F), and in the north, 65-88 degrees (F). In the wet season in lower Burma, it is between 76-86 degrees (F), in central Burma, 77-91 degrees (F) and in the north, 74-87 degrees (F) with high humidity at low elevations.

### C. NATURAL RESOURCES

Burma has an abundance of natural resources. The regular seasonal rainfall and rich soils allow for extensive food production—including rice, millet, beans, and fruit—both for domestic consumption and for export. On the Shan plain in the temperate zone, fruits, vegetables, tea, and coffee are grown. Farmers in the Shan State have a sericulture industry and produce silk cloth for domestic use.

Burma's forests are high in biodiversity. These forests contain the largest stands of teak wood in mainland Southeast Asia, as well as other hard and softwoods and bamboo. These are valuable resources for export. Until recently, the forests were well managed and cutting was controlled. However, in recent decades, legal and illegal cutting of the most valuable hard woods has occurred. Forests are fast disappearing as timber firms and poachers cut other trees to access the teak stands.

Before World War II, Burma was the second largest exporter of oil in Southeast Asia. At the outset of the Second World War, Burma sabotaged machinery with the intent to deny oil to the Japanese. In the post-war period, oil never again became a major commodity either for domestic use or export. During the 1990s, natural gas was discovered in large quantity offshore in the Andaman Sea. With the application of modern technology, additional gas fields have been located. This reserve will be an important energy and revenue source for Burma in the future.

The coastal waters in southern Burma contain plentiful fish stocks. In the pre-World War II period, fish paste and salt fish were in demand both for domestic consumption and export. Today, shell fish is harvested, frozen, and packed while fleets are out to sea; once the boats return to harbor, the catch is sold throughout the world. Burma also is developing fish farms in the coastal areas of lower Burma and raising and exporting shrimp. With an expanding worldwide market faced with depleting global fish stocks, the farms are seen as a more

sustainable alternative. Also, along the coast of Tenasserim is an abundance of pearl producing oysters. The pearls are of high quality and in demand by international jewelers.

Burma is well endowed with minerals, concentrated in the sparsely populated border areas and in the hills and mountains in upper Burma. Tin, tungsten, lead, silver and copper, jade, and other precious stones are common. Tin and tungsten also are found in the Kayah State and in Tavoy, in the south. In the 1950s, coal was discovered in the western part of Burma proper and in the Chin Hills. In 2001, new large copper deposits were also discovered in upper Burma. The export of these and other minerals are an important source of income for the government, but little of this revenue reaches the local labor force. Due to the internal wars and political unrest in the minority areas, full exploration of Burma's natural resources has not yet been undertaken. But once internal security is guaranteed, Burma's abundance of minerals and other natural resources will generate income for decades to come.

### ***Discussion Questions***

1. Is it in the interests of Burma's government to encourage migration from the crowded urban areas to the sparsely populated central and northern regions of the country? What are the advantages and disadvantages of this policy?
2. Before the Second World War, Burma was the largest exporter of rice. Could Burma reclaim its market share? How?
3. If the state could only find a single sector of the economy, what would be the benefits and drawbacks of investment in agriculture versus natural resources?
4. What is the importance of the three-season pattern of weather to the economy of Burma?
5. What are the advantages and disadvantages of adopting Burmese English or some other local or international language as Burma's national language?

### ***Suggested Readings***

In the last two decades there have been no new authoritative sources on Burma geography. In addition to Item 1 in the Bibliography, consider the following:

1. Knappen Tibbet Abbett McCarthy, *Economic and Engineering Development of Burma*, Aylesbury, Hazell, Watson & Viney, Ltd., 1953, Chapter I.
2. E.H.G. Dobby, *Southeast Asia*. London, University of London Press Ltd., 1961, Chaps. 9, 10, 11.
3. Reference works: *The Far East and Australasia*; any year, beginning

with the first edition published in 1969. Also, The Encyclopaedia Americana and The Encyclopaedia Britannica.

# HISTORY

## A. EARLY HISTORY TO BRITISH RULE

Between the 11<sup>th</sup> and 19<sup>th</sup> centuries, the Burmans unified the peoples and the territory under their leadership on three separate occasions. In 1044 A. D., the Pagan Dynasty was founded on the banks of the Irrawaddy River in central Burma; the Kings expanded their authority to include their immediate neighbors. The Pagan Dynasty, which lasted until the Mongol invasion in 1287, is considered Burma's "Golden Age." During this period, its Kings brought Theravada Buddhism to the people and inspired a flowering of Mon- and Indian-influenced arts and culture. Pagodas were first introduced during this time.

The fall of Pagan was followed by an interregnum that lasted for 200 years. During that period, the Shans sought to succeed the Burmans and establish a political center at Ava, though they failed to maintain a strong and united state. Fleeing warfare, many Burmans migrated east and south during the period and established a new political center in Toungoo.

The second unification of Burma occurred from 1486 to 1752. The Toungoo Kings expanded the territory and population under their authority to an area almost the size of modern Burma. This period was marked by wars, the conquest of the Shans, and the destruction of the political center of Siam at Ayuthaya. But the wars with Siam reached stalemate. Internal power struggles led to Toungoo's decline, and the Kingdom left no great cultural or architectural legacy.

The third Burman unification came in the 18<sup>th</sup> century under a new line of Kings. The Konbaung Dynasty was established by Alungpaya in 1752 and lasted until 1886. The founder of the dynasty defeated the Mons and Arakanese and united the south with the heartland. His successors on the throne renewed Burma's wars with Siam and launched assaults beyond the western frontiers against Assam and Manipur. The rulers of the Konbaung Dynasty fought off four invasions by the Chinese. Westward expansion led to clashes with the British, the new Asiatic power. In 1824, the British invaded and won the first of three wars with the Burmans that brought a permanent end to the Kingdom.

There are three political legacies of the period of Burman rule. First, Theravada Buddhism remained at the core of the beliefs and values of the Burmans. Many ethnic minority groups remained as animists or spirit worshippers, or as converts to Christianity, and underwent different cultural development from that of the Burmans.

Second, the Burmans never established a peaceful succession to the throne nor never developed a strong and autonomous administrative system. While the King was absolute, the administrative system was weak. In day to day affairs, local authority was exercised under a patron-client system.

Third, there lacked a strong, continuous, centralized authority over the ethnic minorities in the hills and upland areas. As long as the minorities accepted the suzerainty of the Burman King, the local leaders were free to govern the lands in their traditional ways. The Burmans never sought to acculturate or assimilate the minorities.

The economy was subsistence-based, and rice was the staple crop. Foreign trade was a royal monopoly, but the Burman rulers and people had little contact with the outside world. The coastal dwelling Arakanese and Mons had foreign contacts as they traded and repaired ships. Warfare between the Burmans and neighbor states encouraged further intermingling; defeated peoples were taken captive and forced to settle in Burmese villages where intermarriage often took place.

## B. COLONIAL RULE: 1824-1948

Burma and the British fought three wars between 1824 and 1886. The British were victorious in each because of superior modern weaponry and Western military science. After each war, the British annexed large portions of Burma to their empire. The first war ended with the signing of the Treaty of Yandabo in 1826 and Burma's loss of Arakan and Tenasserim. After the second war in 1852, the Burmans lost all of lower Burma. After the third war in 1885, the British seized the remainder of the Burman Empire and exiled its king and court to India. On February 26, 1886, Burma was annexed to India.

Under foreign rule, Burma underwent vast changes. The British established a strong hierarchical administrative system that linked the central government with the villages. Authority was dictated through the village headman who served as a salaried employee of the government and its link to the people. It was based on colonial laws and recognized local customary practices.

The British rulers separated religion from government. Without political backing, authority and discipline within the religious orders broke down. Also, the demand for traditional education provided by the Buddhist monks declined as Christian missionary schools emerged and siphoned off students who wanted instruction in English and subjects the monks were unable to teach. In the 1920s, the government began to establish English-language and Anglo-vernacular schools. These changes in the roles and functions of the religious orders contributed to their loss of place and social significance in Burma's changing society.

The economy underwent major changes. Commercial agriculture replaced subsistence farming. Farmers were encouraged to move from their villages in upper to lower Burma and take up new land. To do so, they had to borrow money. Lenders – predominantly Indian – provided loans at high rates of interest and when the peasants could not pay, they were evicted. The land was given to new farmer-debtors who repeated the process. The movement of farmers contributed to social alienation and the growth of crime and discontent. The system produced

more rice and, in 1939, Burma became the world's largest exporter. It also produced indebted peasants, moneylenders, and wealthy absentee landowners.

The world depression that began in 1931 caused the world market price of rice to plummet. Burman farmers migrated to the cities where they competed with Indian laborers for employment. Often, Burmans were used as strikebreakers who were excused once labor disputes were settled. This generated hostility between Burmans and their Indian peers, causing a major race riot in Rangoon in 1936.

Early in the 20<sup>th</sup> century, the urban Burmans organized the Young Men's Buddhist Association (YMBA) to protest Westerners' violation of pagodas and shrines. This marked the political awakening of the Burmans. In 1917, the YMBA broadened into the General Council of Burmese Association (GCBA) and became fully political. In 1920, university students made their entry into politics by calling a national strike to protest plans for the new university.

In 1923, the people were given a partially elected legislative council and control of two government ministries, but no real political power. In 1930, the Saya San revolt, which sought to end British rule and restore the monarchy, erupted in the countryside. The revolt was put down with military force. At about the same time, young intellectuals in Rangoon started Thakins, a new political movement that called for the use of the Burmese language in print and speech to strengthen nationalist objectives. In 1937, Burma was separated from India and given its own constitution, a bicameral legislature and responsible government. The Governor continued to control several key departments and to administer the Frontier Areas—minority areas—without consulting parliament or his ministers. The system lasted four years and four Prime Ministers made a credible start at tackling some of the nation's worst problems. World War II and the Japanese invasion of Burma halted the political and constitutional experiment.

The Japanese invaders scored quick successes against the British and drove them from lower and central Burma and parts of the hill areas. Aiding the Japanese was a new Burman army secretly organized and trained by the Japanese before the war. The Burma Independence Army served alongside the Japanese invaders. In 1943, Japan granted Burma nominal independence, and allowed it to form a government with the pre-war leader, Dr. Ba Maw, as the Adipadi (leader). Dissatisfied over its lack of real authority, Burman military and civilian leaders formed a secret resistance movement, Anti-Fascist People's Freedom League (AFPFL). On March 27, 1945, the Burman army—now called the Patriotic Burmese Forces (PBF)—joined forces with the British and hastened the defeat of Japan in Burma.

The war disrupted Burma's society and destroyed the economy. Cut off from India and the West, the peoples of Burma returned to subsistence agriculture. As the British retreated in 1942, nearly a million Indians emigrated from Burma back to their homeland. The British reoccupied Burma in 1945.

At the war's end, the British issued a White Paper that called for the revival of the economy and society so that political progress could resume. The Burman nationalists rejected

this formula and an impasse developed. A change in British government in August 1946 led to an invitation in December to U Aung San, the leader of the AFPFL, to come to London to discuss Burma's political future.

The London meeting of Burma and British leaders agreed that the Burmans and the minorities should meet to decide on the political unification of Burma, schedule an election, and form a constitution. When the delegates returned to Burma, Aung San and AFPFL leaders met with Shan, Kachin and Chin leaders at Panglong in the Shan State, where they agreed to cooperatively devise a union of Burma.

While the constituent assembly was in session, Aung San and six members of his cabinet were murdered. The governor appointed U Nu, a close ally of Aung San, as his successor. The constitution was completed and on January 4, 1948, Burma became a free and independent state. The loss of Aung San and the failure to find a satisfactory way to divide power and create national unity through a federal union was a major cause of the civil wars that followed independence and lasted through the next half century.

### C. THE CONSTITUTIONAL PERIOD: 1948-62

Confrontation groups within the Burma Communist party (BCP) attempted to displace the government and bring about the Karen and Karenni secessions from the Union. Burman and Karen battalions defected and joined the war against the state. Ethnic battalions of Burman soldiers swelled the ranks of the army and assumed leadership ranks throughout the military. The army proved successful in the field where the opposition forces failed to form a unified military and political opposition. The Burma army reclaimed the Irrawaddy Valley and drove the enemy into the hills and jungles, making it possible for the state to take back former rebel-held areas. In 1952, when Nationalist Chinese and the BCP forces occupied parts of the Shan States, martial law was declared in the occupied areas and the military assumed control; its occupation acquired a reputation for brutality and illegal behavior toward civilians which continues to the present. Burma also sought the aid of the UN to expel the invaders.

National elections were held in 1952 and 1956. In both, the AFPFL won overwhelmingly. In 1958, the party split. To avoid a relapse to civil war, Prime Minister Nu appointed General Ne Win to form a Caretaker Government, hold new elections, and restore civilian democratic rule. The interim Government lasted for eighteen months. When national elections occurred again in 1960, U Nu's faction, the Clean AFPFL, won a landslide victory. The Stable AFPFL, the opposing faction, accepted the election results. In 1961, U Nu's announced that he would not seek a second term, sparking a power struggle within the party. The intra-party dispute provoked fears amongst the people of a repeat of 1958. On March 2, 1962, General Ne Win led a coup, dismissed the constitution, and established a Revolutionary Council (RC) that consisted of senior military officers.

#### D. MILITARY RULE—FIRST PHASE: 1962-74

The RC governed through a hierarchy of Security and Administrative Councils (SAC) of military personnel, police and civil servants. The SAC replaced the former federal system, and formed a dual hierarchy of Workers and Peasant Councils. In July 1962, it organized a political party, the Burma Socialist Program Party (Lanzin) as the first step in the creation of a new political system. Also, during this early period, it issued a political manifesto, the “Burmese Way to Socialism,” that outlined the ideas of the “new order.”

The RC isolated Burma from the outside world. It halted student exchange programs with the West, expelled aid groups, and suspended or limited cultural contacts with Western nations. In 1963, the RC nationalized the banks as the first step to implement its goals. Later, the same year, it nationalized all production, distribution, import and export. The farmers continued to plant and sell their products to the state while the private business sector came under government control and administration. Without adequate preparation and trained administrators, the economy deteriorated. To fill the void, black markets developed. Throughout this period, the government was unable to restore production, improve distribution, or win popular support. By 1964, its new economic policies, which were detrimental to the private sector, caused thousands of Indians to emigrate from the country. The RC tried to appease minority factions in 1963 though talks broke down and the opposition resumed armed conflict against the state. During this period, corruption and popular discontent took root among society.

In 1967, the Chinese Cultural Revolution led to conflict as Burma sought to prevent Chinese politics from influencing its internal affairs. Relations between the two were not restored until 1970. During that interval, China gave military assistance to the BCP, located along its border with Burma. When relations between the countries resumed, China halted its aid to the BCP; it, in turn, became involved in the illegal opium trade in the border area it occupied as a way to finance its war against the state.

Former Prime Minister Nu, whom the military arrested at the time of the coup, was released from jail in 1969. Nu then proceeded to the Burma-Thai border and organized a revolt against Ne Win. Despite support from the ethnic minorities in the area, the coup failed. Other revolts by Shans, Kachins, Karens, and Chins erupted in search of either secession or autonomy from the Union. By the end of the RC period, it was clear that the Burma army could neither successfully negotiate peace nor defeat the dissident groups. The stalemate continued until the end of the 1980s.

In 1971, the rulers announced that a new constitution would be written and civilian rule restored. Less than a year later, the members of the RC transformed themselves from soldiers to civilians and changed the RC to the Government of the Union of Burma.

The new constitution was ratified in 1973 and came into effect March 2, 1974, following a parliamentary election.

## E. CONSTITUTIONAL DICTATORSHIP: 1974-1988

The new constitution declared that the BSPP was the leader of the nation. The same article declared that Burma was to be a one-party state. The Constitution stipulated that the BSPP was responsible for selecting parliamentary candidates and advising the government at all levels.

The constitution also declared that the People's Assembly was also solely responsible for its interpretation. The state was divided into seven divisions and seven states. There were four levels of government, and all were united by the principles of democratic centralism, collective leadership and decision making.

The people had rights and duties that were not absolute. All citizens, regardless of race or sex, were equal before the law and enjoyed equality of opportunity. It established the broad principles of citizenship that could be altered by ordinary law. Basic rights, as recognized in the Declaration of Human Rights, existed but could be revoked if the Government ruled that such rights undermined the unity and solidarity of the national groups, security of the state, or the socialist social order.

Within three months following the establishment the new regime, riots occurred in Rangoon and elsewhere over food shortages. A year later, student riots broke out over a proper burial of U Thant, the retired third Secretary General of the UN. The government used violence to restore law and order. In 1976, assassination attempts were made on the life of General Ne Win. Much of the disorder resulted from the lack of jobs, food shortages, and widespread corruption in government. International foreign financial aid did little to restore stability in the economy or confidence in the government.

On August 10, 1987, Ne Win admitted publicly to "failure and faults" in the past management of the economy. Amid deteriorating economic conditions, exacerbated by poor agriculture output, economic mismanagement, and increased inflation, the government took its first steps away from socialism. In early 1988, the government ended its 25-year monopoly on rice exports. Also, it demonetized much of the currency, without replacing it, to combat the black market. The policy was misguided, however, as it only affected students who carried cash instead of using bank accounts. The students responded with demonstrations, and the government closed the universities.

In March 1988, new students/police clashes broke out at Rangoon Technical Institute and spread to Rangoon University. The police and military used extreme violence to put them down; public demonstrations followed. A major demonstration in central Rangoon led to rioting with 41 known student deaths. Again, the universities were closed.

When the universities re-opened, student demonstrations resumed, more killings occurred, and, despite the invocation of martial law, the general public joined the student demonstrations calling for the restoration of civilian democracy. At the extraordinary BSPP Congress in July, Ne Win resigned as party Chairman and recommended a national referendum on the issue of restoring a multiparty system. The Congress rejected the proposal and voted in favor of making General Sein Lwin the new Chairman. Lwin was known as the “Butcher of Burma” for his violent suppression of student demonstrations in 1962 and again in 1976. He lived up to his reputation during a mass demonstration on August 8, 1988. More than a thousand were killed. General Sein Lwin resigned and was replaced by Dr. Maung Maung, a civilian lawyer/writer and close friend of General Ne Win. He took a more accommodating stance toward those arrested for political demonstrations and promised a referendum on the political system.

At a mass rally on August 26, the daughter of Aung San, Daw Aung San Suu Kyi, spoke for the first time. Her words electrified the people and thrust her into the leadership of the movement to restore freedom and democracy.

On September 18, the military struck again; this time they overthrew the constitution they wrote in 1974 and the government they supported. The new leaders formed a ruling body, called the State Law and Order Restoration Council (SLORC), and issued their first announcement that outlined their immediate goals, which included restoration of law and order, peace, and new elections. They sent the army into the streets where the civilian demonstrators were shot and killed. Thousands of civilians were killed and more than 10,000 students fled to the hills and border areas seeking refuge.

## F. MILITARY RULE—SECOND PHASE: 1988-The Present

The new government faced worldwide criticism for using violence against unarmed and peaceful demonstrators. There were few professional journalists inside of Burma when the soldiers struck, and the information reported was based on rumors and unverified reports, with the most reliable coming from foreign embassies in Rangoon. As participants and victims of the military sought escape and refuge amongst the minorities along the borders, first-hand accounts gave a clearer picture of what had taken place inside of Burma that confirmed earlier accounts. A week after the military seized power, General Saw Maung, leader of the SLORC, announced his intention not to retain power for long. The regime’s objectives, he said, were national defense, security, the maintenance of law and order, and transferal of power following free and fair elections. However, the regime had dismissed the 1974 constitution, and abolished the legislature, judiciary, and governmental institutions. SLORC thus ruled by martial law, force and decree. It systematically used violence against all suspected of belonging to the opposition.

In November, the military altered Burma’s economic and foreign policy. On the 14<sup>th</sup>, Thailand’s General Chaovalit became its first high-ranking foreign visitor. Burma rewarded

Thailand when it entered into agreements that allowed the Thais to cut and export Burmese teak and fish in its waters. The Thais promised to round up and return “misguided” students who had taken refuge in Thailand. In August 1989, a Burmese high-ranking delegation, led by General Than Shwe, went to China and purchased US \$1.2 billion in new weapons and training. The weapons arrived a year later.

Also at this time, a number of western oil companies took advantage of the new investment law in Burma to search for oil and natural gas. Little oil was found, though commercial quantities of the natural gas were located in the Andaman Sea.

In March 1989, the BCP split when its ethnic cadres forced the Burman party leaders to flee to China. The cadres announced their rejection of Communism and formed independent nationalist groups. The SLORC sent representatives to negotiate cease-fire agreements with the new groups to allow them hold their weapons, continue to administer their own areas, and pursue local economic activity without interference. In exchange, the minorities promised not to make war on Burma or to join other minorities with whom SLORC remained at war. The offer was accepted and set off a chain of cease-fires with most of the ethnic minorities. Only the Karen, Shan, Karenni and Chin maintained armed conflict with the state. Also, in July 1989, SLORC placed Aung San Suu Kyi under house arrest, which was maintained until 1995.

The promised national election took place on May 27, 1990. Ninety-three parties contested for 485 seats. The National League for Democracy (NLD), led by Aung San Suu Kyi, won a large majority with 392 seats. The real loser was the National Unity Party (NUP), the renamed BSPP, which won only 10. The Shan Nationalities League for Democracy won the second-highest stake with 23. However, the NLD win proved to be a pyrrhic victory. The military refused to allow the new Government to assume power. SLORC issued Declaration 1/90 that stated that it was no longer bound by any constitution, ruled by martial law, and would continue to rule. To the consternation of SLORC, Aung San Suu Kyi was awarded the Nobel Peace Prize in 1991.

Just as SLORC was on the verge of silencing its opposition and begin making strides in the economy, the party underwent changes in both leadership and policy. General Than Shwe replaced General Saw Maung as the leader of SLORC. Within days, he announced an end to the war against the Karen (but they soon resumed fighting), the release of political prisoners, and the formation of a national convention to write a new constitution. These changes did not ease SLORC’s rule or alter the way the world viewed it. Both the UNHRC and the UNGA adopted strong resolutions unanimously condemning SLORC’s human rights violations and called upon it to honor the election results. SLORC ignored them.

In January 1993, the National Convention was assembled with 702 hand picked delegates. Only 99 of the elected Members of Parliament were invited to attend. The sessions were carefully orchestrated and controlled. After several months of meetings, 104 principles for the new constitution were announced. The most controversial was the maintenance of the military’s leading political role in the future state. In November 1995, the 86 delegates from the

NLD withdrew from the National Convention after SLORC rejected its appeal for democratic reforms of the Convention. In March 1996, the military adjourned the Convention indefinitely. When the NLD announced that it would draft a constitution, SLORC issued Law 5/96 to make such action illegal.

The government eased restrictions on Aung San Suu Kyi in 1992 to permit visits by her family. In 1994, it allowed U.S. Congressman Bill Richardson, the first non-family member, to visit her. On July 10, 1995, the rulers released Aung San Suu Kyi from house arrest.

The release of Aung San Suu Kyi did not bring real political change to Burma. Instead, her “freedom” was restricted, and while she made one trip out of Rangoon she was denied several others. She sought to initiate dialogue with SLORC, but was refused. She managed to “meet the people” through informal talks at the gate of her house where people assembled, but the meetings grew so large and popular that the SLORC closed off the road to block public access.

The signs of economic improvement during the first half of the 1990s did not last. Initially, there was a burst of activity to exploit natural resources and to develop tourism and industry. Tourism drew foreign investment for hotels, shopping centers, entertainment, infrastructure, and transport services. But as international boycotts proliferated, the number of visitors declined and tourism stagnated. Hotels stood empty and business in imported expensive merchandise came to a halt. Also, Burma’s inability to create and maintain a stable currency had the effect of discouraging both visitors and investors.

The SLORC went through a second political change in 1997. The name of the ruling group became the State Peace and Development Council (SPDC), to indicate that Burma was going in a new direction—from law and order to peace and development. The three leading generals, Than Shwe, Maung Aye and Khin Nyunt, continued to lead, while several of the senior members of SLORC were dropped and two were investigated for corruption. The new ruling group added the twelve regional commanders; the administration also changed personnel and added a few civilians.

A new political crisis developed in 2000 when Aung San Suu Kyi and a few NLD leaders tried to travel outside of Rangoon on party business. As before, the military intercepted her and returned her to her home. After a second try, she was placed under house arrest. Unlike the period since 1992, however, the SPDC denied access to her by all but a few NLD leaders who were not under arrest. As tensions rose over this new contest between the NLD and the SPDC, the Special Envoy of the UN Secretary General, Ambassador Razali Ismail, came to Burma to hold discussions with SPDC leaders and with Aung San Suu Kyi. As a result, secret talks between the rivals began in October. They continued the next year with no word about their subject matter and results. But changes began to take place which suggested progress—high ranking political prisoners were released, the press no longer called Aung San Suu Kyi disparaging names, attacks on the NLD stopped, and party headquarters reopened.

On May 6, 2002, Aung San Suu Kyi was allowed to leave her home, and she subsequently traveled widely throughout the country. On May 30, 2003, she and a convoy of her supporters were attacked by a group of government-affiliated thugs. Many members of the convoy were killed or injured and others remain unaccounted. Aung San Suu Kyi and other members of her party were detained, and the military government forcibly closed the offices of the NLD. Although NLD headquarters in Rangoon is still open, all the party's other offices remain closed, and Aung San Suu Kyi and NLD Vice Chairman U Tin Oo remain under house arrest.

On October 19, 2004, hard-line members of the senior leadership consolidated their power by ousting Prime Minister Khin Nyunt and removing him and his allies from control of the military intelligence apparatus. In late November 2004, the junta announced it would release approximately 9,000 prisoners that it claimed had been improperly jailed by Khin Nyunt's National Intelligence Bureau. In July 2005, Burmese authorities released at least 323 political prisoners. Those released since November 2004 include Min Ko Naing and Ko Ko Gyi, both key figures in the 1988 demonstrations.

The central government has had a contentious relationship since the country's independence with minority ethnic groups who call for autonomy or secession for their regions. In 1948, only the capital city itself was firmly in control by the authorities in Rangoon. Subsequent military campaigns brought more and more of the nation under central government control. Since 1989, the regime has signed a series of cease-fire agreements with insurgent groups, leaving only a handful still in active opposition.

In April 2005, an explosive device detonated at a busy market in Mandalay, killing at least three people. In May 2005, three large bombs exploded simultaneously in Rangoon at two crowded shopping areas frequented by foreigners and at an international trade center, killing at least twenty people and would several hundred. Both events were a significant departure in terms of targeting and level of sophistication from other bombings that had occurred in recent years. The junta blamed the bombings on political opposition groups, which they denied.

At the dawn of the 21<sup>st</sup> century, Burma stands still politically; there is no end of military rule in sight. The cease-fires between the ethnic minorities and the SPDC remain in place with no evidence of what will be the next step in majority-minority relations or how the gulf will be bridged. The past two decades brought no significant economic progress or improvement in Burma's standard of living. Burma remains perceived as a political pariah to most states in the world.

### ***Discussion Questions***

1. In what ways does the study of the history of Burma help you understand the issues in the present political impasse which confronts the nation?

2. In what ways does the present regime (SPDC) resemble the royal governments of Burma before the British conquest? In what ways does it resemble British rule?
3. Considering that Burma's history since independence has seen the pursuit of three kinds of economic policy—mixed, socialist and state capitalist—what influence has economic policy had on Burma's politics?
4. Both India and Malaysia have multicultural, multi-religious societies and were former British colonies. How do you explain the fact that they have been able to transcend these facts and become peaceful, unified states while Burma has not?
5. What was the impact of the Japanese occupation of Burma between 1942 and 1945 on the country's political institutions and processes that followed?

## PEOPLES AND CULTURES

### A. SOME GENERALIZATIONS.

The total population of Burma was estimated at 50.5 million in 2005 (according to estimates of the UN Fund for Population Activities -- UNFPA), and is growing by about 1.3 percent per year. About 31 percent of the population is considered urban while the remainder is categorized as rural. Youth between the ages of 15 and 24 constitute about 20 percent of the total population. Public funding for health and education is among the lowest in the world, under 0.2 percent and 0.5 percent of Gross Domestic Product (GDP), respectively for the 1999-2000 period.

The last official national census was taken in 1983. It was neither complete nor accurate because there were areas in the country where civil war and political unrest made it impossible for the enumerators to visit and make their count. The Census Department made estimates of the people in the uncounted localities and added those to the total counted and published the result as the nation's population. It reported that the total population was 35,307,913 million people including an estimated 1,183,005 persons in areas not counted. Because there has been no new national census, the government annually estimates population increases on the basis of a growth factor of approximately 2% and adds that to the previous year's announced population.

Burma is a multiethnic society. The 1983 census identified eight major groups:

Burman	69.0%
Chin	2.2
Kachin	1.4
Karen	6.2
Kayah /Karenni	0.5
Mon	2.4
Rahine (Arakanese)	4.5
Shan	8.5

There were several smaller groups—those with a population of less than 168,000—who were aggregated and reported as 0.1% of the total population. Today, for political reasons, the military government argues that there are 125 distinct ethnic groups and insists that all must be represented and given some local power over their own group in the future constitution of Burma.

Anthropologists find it useful to classify the peoples of Burma according to whether their culture can be identified either as plains or hill. Plains culture is defined as people living in settled communities with relatively complex social and political organization that extends beyond the family and village. Their centers of population are permanent, their religions, languages, arts and crafts are influenced by India. Religion is fundamental to their values and beliefs; it is organized beyond the village and is a permanent fixture of the society. The peoples have written languages. Their major occupation is wet-rice farming, and they supplement their incomes through household crafts such as weaving, pottery-making, and metal working as well as vegetable cultivation and animal husbandry. The Burmans, delta Karens, Mons, Rahine, and Shans fit generally into this classification.

Hill culture refers to people who live in small groups on the slopes and tops of hills, with relatively autonomous and uncomplicated political organization. Despite the number and size of some groups, there is no tendency to form into larger political organizations or challenge the dominance of the plains people. Their religions generally are animistic, although some of the hill peoples converted to Christianity during and after the arrival of European missionaries. Their economies are based on a shifting, slash-and-burn type of agriculture called *taungya*. Rice is their chief crop, mainly grown for consumption rather than trade. In addition, hill people cultivate vegetables and hunt and gather fruits and other jungle products to supplement their diets. In some of the upland areas, they grow tea. The Chins, Kachins and Karens who live in the eastern hill areas of Burma, together with numerous small ethnic groups, fall into this category.

The second largest group of the hill peoples in Burma is the Karens. This group is believed to have migrated to modern-day Burma from China in the 6<sup>th</sup> or 7<sup>th</sup> century. The Karens consist of three major subgroups: the Pwo, who live in lower Burma and the Tenasserim;

the Sgaw in the watershed between the Sittang and Salween rivers, and the Bwe in the eastern hills close to the border with Thailand. Karens have their own languages and customs, which still persist today. The Bwe were animists and Buddhists; many of the Pwo and Sgaw converted to Christianity. Historically, the Karens never were united with the Burmans, who looked down on the Karens and treated them as inferiors. In the 19<sup>th</sup> century, during the Anglo-Burman wars, the Karens aided the British and this deepened the divide between the Karens and Burmans. The separation between the two continued under British rule and into the present.

The Bwe Karens, who live in the area of the present Kayah State, formed groups larger than the village and organized themselves into feudal states. A treaty between the Burman King and the British in 1875 recognized the independence of the people of the “State of Western Karenni.” It is this treaty which the Kayahs look back upon as the basis for their claim to independence after the British transferred power to the peoples of Burma in 1948.

The Kachins and Chins are both true Hill peoples. The Kachins live in northern Burma, and the Chins are found in the west. Both live in small groups or tribes and are hunters and gatherers. Each has its own languages and traditions. As hill dwellers, they moved their villages frequently in search of new fertile ground for agriculture. Both were animists and, like the Karens, accepted conversion to Christianity by the American Baptist missionaries who lived among them. In the pre-colonial period, the Burmans governed neither group directly nor did they interfere in local affairs. Both the Burmans and, later, the Chins, were recruited for service in the army by the British due to their reputation as excellent soldiers.

In the north and eastern sector of Burma are the Shan, the largest ethnic minority in the country. They are believed to have originated in Yunnan, China and were part of a vast Tai migration to the south. The Shan are not hill peoples in the same way as the Karen, Kachin and Chin. They had a feudal social organization and lived under local hereditary chieftains, called *Sawbwas*. They lived apart from the Burmans and had their own language, written script, history and literature. The Shan cultivated rice, which was the mainstay of their diet. As Theravada Buddhists, Shan culture had many similarities to the Burmans. In the areas where the two lived in close proximity, intermingling and acculturation took place. Despite this, the Shans retained their separate identity and way of life.

After the fall of Pagan in the 13<sup>th</sup> century, the Shans united to assert their authority over the fallen Kingdom. But the unity among the Shans did not last. Wars against the Burmans continued through the beginning of the 17<sup>th</sup> century, when the Shans were defeated. They were forced to accept indirect rule and maintained their traditional ways.

Two other important ethnic minorities are the Mons and Arakanese. These groups settled in lower Burma in the coastal regions. The Mons migrated to Burma long before the Burmans arrived. They had contacts with the Indian subcontinent, and it was from India that they acquired Theravada Buddhism, developed an alphabet, and adapted Indian law to their local needs. The Mons were in contact with the Pagan Kingdom in the north, and it was from the Mon that the Burmans acquired their present form of Buddhism. In the 11<sup>th</sup> century, the Burmans conquered

the Mons, who later broke away and restored their independent status. Over the centuries, the two engaged in wars that ended in the defeat of the Mons in the 18<sup>th</sup> century. After their victory, the Burmans made a serious effort to assimilate the Mons, but to the present, separate Mon identity and culture persists.

The Arakanese were part of the original Burman migration from the Himalayan region in Asia. After this group entered the present area known as Burma, it continued southward, to establish its own Kingdom in the southwest coastal area of the country. Like the Burmans, the Arakanese became Theravada Buddhists. They came as farmers, using wet-rice techniques to grow their crop. Many also became seafarers and traders. The Arakanese developed trade with India and other seafaring nations and used money as a medium of exchange. In the 18<sup>th</sup> century, the Burmans conquered the Arakanese and moved many of their Buddhist sacred items to the Burman capital in central Burma. Despite their defeat and integration into the Burma Kingdom, the Arakanese retained their separate identity and language.

Peoples of foreign origin form a small but important segment of the population. In the 1983 census, the Chinese and Indians were aggregated together with other unnamed foreigners; the two constituted the largest portion of the 5.3% of non-Burmese. Using language as a criteria and assuming the enumerated Muslims and Hindus were Indians, the Indian Muslims composed 3.83% and Hindus represented 0.5% of the total population. Assuming the remaining foreigners as Chinese, they constituted approximately 1% of the population. Most are Buddhists of sects found in China. They blend into society through adoption of Theravada Buddhism, local languages and dress. Most reside in or near the cities and towns and are engaged in business and other urban activities. They find it easy to intermarry with Christians and animists. Since the present government of Burma seized power in 1988, there has been a steady increase of Chinese in northern Burma, especially in Mandalay. There, the city is changing as new hotels, amusement centers and businesses are built and run by the Chinese. These changes displace older buildings and occupations and give the city, which Burmans considered the center of Burman-Buddhist culture, a strong Chinese veneer.

Before the Second World War, the Indians were the largest community of foreigners in Burma; they, too, lived primarily in the urban areas. At the beginning of the war, there was a large exodus of Indians due to fear of the invading Japanese. After the war, most of those who left were prevented from returning by Burmans who were intent upon reducing their number. Most Indians in Burma either are Hindu or Muslim. Since both religions discouraged out-marriage with members of other faiths, they live apart in their own areas and use their traditional dress and languages. Before the Second World War, there were racial clashes between Burmans and Indians. In 1964, new laws that reflected Burman nationalism administered by a military government, resulted in a new Indian exodus from the country and a permanent reduction in the numbers. Those who remained have lived peacefully and accepted the laws and rules that favored the indigenous population. In recent years, with the military again in power, there have been racial and religious disputes between Burmans and Indians, which are believed to have been caused or used by government agents as a way to deflect criticism away from the government.

In its analysis of the religions of the peoples of Burma, the 1983 census reported that 89% of all the people declared themselves to be Theravada Buddhists. The Burmans and Mons were the largest groups in this category. Among the hill peoples, the Baptist and Catholic Churches had the largest numbers of converts. The form of Christianity practiced by those who converted or inherited from their parents is a mixture of indigenous religions and Christian rituals that have become the basis of their values and traditions.

Taken together, religion, physical separation and cultural differences form dividing lines between plains and hill peoples; there is no evidence that the differences have diminished since the Union of Burma was formed in 1947.

## B. IMPORTANT CHANGES IN BURMA SOCIETY

As the 21<sup>st</sup> century began, Burma was ruled by a military government that was strongly nationalistic and identified nationalism with one group—the Burmans. One of the first things it did after it seized power in September 1988 was to change many of the names and spelling of other existing names to reflect the fact that Burma is a Burman state. The rulers changed the name of the country, by dropping the English spelling of Burma and replacing it with the Burman word, *Myanmar*. It also changed the names of several cities for the same reason.

Burman became *Bamar*,  
Karen became *Kayin*,  
Rangoon became *Yangon*,  
Pegu became *Bago*,  
Moulmein became *Mawlamyaing*,  
Irrawaddy became *Ayeyarwady*.

In 1946, the British administration created a new Burma army of 10,000. It consisted of 50 percent Burmans, while non-Burmans constituted the remainder. When it was created, the units carried the ethnic name of the group of which it was composed. Today, few ethnic minorities exist amongst the officers and probably no more than 15-20 percent of the rank soldiers remain non-Burmans.

The 1947 constitution designated Burmese and English as the official languages, and local languages only could be used at the local level for education and informal communication. Today, Burmese is the only national language, and while local languages are still used in a variety of informal ways, these have no standing in law and government.

Households of single families are typical in Burman villages. Members of the same family group together and establish enclosed compounds. When couples first marry, they often

live for a short period in a parent's household. Once they can afford to live independently, they build a house in the family compound. In contemporary urban areas, families who live in apartments and houses prefer to live near family members, but this is not always possible.

In Burman society, there is near equality between the sexes. Equal education is open to both; in the professions, except in the military, both can rise to the top. In the market place, women conduct "business" with customers, and in the household they control the family money. Marriage is a secular affair; if a married couple decides to separate, divorce is a simple civil act. Property is divided and each party is free to remarry.

One of the few things that have not changed from pre-colonial times is the dress of the Burman people. Traditional clothing for both sexes is the *longyi* (sarong), *aingyi* (short fitted jacket), and open slippers. Sex difference is recognized immediately by the colors and patterns of the *longyi* and the way it is worn. The clothes are ideally suited for the hot tropical weather.

Religion is at the center of family life. Buddhism has long been the core of Burman culture. The importance of the practices of the faith is made obvious in the daily activities of the people. These include: giving food to the monks who pass the homes daily, giving to charity, giving presents to monks on auspicious days, and holding a *shinbyu*—celebration at the time a son enters the monastery. More important is the absorption of the teachings of the faith and living accordingly. To send a child to the monastery to learn from the monk-teacher is one of the most important ways the faith is passed from generation to generation. Theravada Buddhism is not a jealous faith, and one can marry outside it.

Social stability in pre-colonial Burma drew its main strength from the common faith that Burmans and many of the minorities under their rule shared. The religion had no centralized bureaucracy. In each village, there was a monastery under a semi-independent abbot. The abbot and monks were under the authority of the head of the faith that was appointed by the King. Only this head could disrobe a monk who disobeyed his vows. In most other ways, the local order and monastery was autonomous under its own organization.

Burmans have always valued education. Traditionally, there was a strong tie between education and religion as the monasteries served as schools, with the Buddhist monks serving as the teachers. The content of education was moral training—how to live and behave. The students learned to read religious tracts and to memorize the teachings of the Buddha and his disciples. Under colonial rule, the form and content of education changed. Christian missionaries opened schools in which English was the language of instruction and students were taught subjects as preparation for employment in the lower rungs of the civil service or in business. To learn about their religion and its values, they had to attend monastery schools.

The government failed to broaden the curriculum of monastery schools. As a result, it funded lay schools, opened to both sexes, which instructed modern subjects in Burmese, but the level of teaching was poor. After World War I, these were replaced by government-supported, Anglo-vernacular schools, where English and Burmese were the languages of instruction and a

more modern curriculum taught by better teachers. The missionary schools continued and offered stronger programs and preparation for university and the professions. Monks and monasteries continued to offer traditional education in the rural areas but no longer enjoyed the status and standing that their calling once gave them. Class sizes diminished, and the best students were drawn away to Western schools and a future life in the modern economic and political sectors of society.

### C. SOME RELIGIOUS AND SECULAR IDEAS IN BURMESE THOUGHT

There is no God or author of the universe in Theravada Buddhism. Buddhists believe that fixed and orderly laws govern the universe. Everything and everyone is subject to the law of impermanence and change. Man is part of the changing world of appearances, and according to the doctrine of *samsara*—the wheel of rebirth—he passes through an endless cycle of births, deaths and rebirths until he realizes the true nature of things. The Buddha expressed these ideas as the Four Noble Truths.

The Buddha also taught that man is free and can escape from the wheel of rebirth if he follows the Eight-Fold Path of right living, right thought, and right actions. Power, prestige, and material things are false and impermanent. Once man realizes the truth of the Buddha's teachings and lives accordingly, he can escape. Because man's present condition is based upon his acts in his previous existence, he can do little in this lifetime to change his condition. But by following the teachings of the Buddha and accepting the truths the Buddha taught, man can effect his future existence and ultimately escape the wheel of rebirth.

While Buddhism places full responsibility upon each person for his condition, the idea of individual freedom and responsibility did not transcend from the religious realm and become part of secular thought. Instead, Buddhism taught that government was one of the five evils that man must endure. The right to rule, to occupy the palace, and to hold the symbols of power came to the King because of the merit he acquired in previous existence. As the ruler, he was expected to follow the Ten Duties of the King and other codes of behavior. No matter how far the King departed from the Ten Duties, there was no right of revolution in Buddhist thought to justify his overthrow.

As a result of these and other beliefs, ordinary people were not concerned with the affairs of state. They did not expect the state to do anything to improve their lives and did not think of the state as a vehicle for social or economic change.

Many of these beliefs continue to the present and help explain the Burman's willingness to accept bad government, its excessive demands, and its victimization of the people through theft, war, and plunder.

Burmese thought has a second and newer root, i.e., the idea of democracy and the peoples' right to rule themselves. British colonial rule spawned an unintended revolution in

thought and action by introducing a new way of looking at the individual, government, and society. The British did not come to Burma to introduce Western ideas of liberty, freedom, and self-rule. These and other ideas entered the minds of the people as a by-product of the study of British history and ideas and the concern of colonial government for the rule of law, order, and property.

Western secular political thought rested on several important principles. First, the state and its rulers were of this world. Second, all men, rulers and subjects alike, were under law. Third, authority under law was the basis of power to govern and not the accumulation of merit in past existence. Fourth, the state and its officers could be challenged when either had transcended legal limits.

Freedom in modern Burma is not contrary to tradition; it stands at the heart of the Buddhist faith. What has been overlooked is that Burman-Buddhists learned new meanings and uses of freedom from British and other Western sources and incorporated them into their own beliefs and values.

As Burma became more involved through colonial rule and trade with the world beyond its borders, these and other Western ideas entered Burman thought and action at the same time the colonial order moved away from being a purely administrative to a participatory political system. The peoples of Burma became aware of their power to change things through the application of their modern learning, the use of the law, political organization, and agitation.

The hill peoples, who make up approximately 30% of the population and live apart from the Burmans as well as each other in villages scattered over high elevations, never were integrated into Burman society. As noted above, they continue to use their own languages and live in their traditional ways. The emergence of a strong Christian and Western orientated overlay, together with community leadership that was initially supplied by the missionaries, and later, by local ministers and lay leaders, widened the gap between the Burmans and non-Burmans. These differences grew under British rule when the minority areas were legally separated from the Burma heartland, when the minorities were able to attend university and enter the professions, the police, and the military. During the Second World War, the split between the Burmans, who organized an army under the tutelage of the Japanese to fight the British, and the minorities, was complete. Only after the Japanese-sponsored Burma army revolted and joined the British in 1945, did the two move closer together.

During the colonial experience, the Karens developed a nationalist ideology to counter that of the Burmans. Before the Second World War, Karen leaders began to call for a separate Karen state and the use of the Karen language either instead of, or in addition to, Burmese in schools, government and business. The Burman army assault upon the delta Karen, early in the war, deepened the historic rift between the two and played a major part in keeping them apart at the time the Union was being contemplated. When the time came to discuss and decide Burma's political future, the Shans, Chins and Kachins supported the idea of a Burma federation uniting

all groups while the Karens rejected it; like their distant relatives, the Kayah, they wanted a state of their own outside of the Union.

National disunity in the post-independence period traces its roots to these and other differences which, more than a half century later, remain unsolved.

### *Discussion Questions*

1. The narrative in this chapter implies that social statistics on Burma are unreliable. What are the implications of this for social scientists who study Burma?
2. What is the basis for the Burman claim to rule the land?
3. Why has there been no real assimilation and integration of the minorities in modern Burma?
4. Are Buddhism and Western thought and ideas at such variance that the two cannot blend and support democracy in Burma?
5. It is a common argument in the Western business community today that if foreigners visit and do business in Burma it will help the people to know and understand democracy better and want to live under a democratic system. In the light of this, why didn't Burma's long contact with the British and Americans have a stronger impact on the political values and attitudes of the post-independence Burma army and its leaders?

### *Suggested Readings*

There are a number of good studies cited in the bibliography that focus upon the broad general topic. For an examination of social and economic statistics, consult recent reports of the World Bank and the International Monetary Fund.

- To put the broad topic in perspective, read Bibliography Item 5 on land tenure at the beginning of the 20<sup>th</sup> century.
- On ethnic issues, see Bibliographic Item 29 on the Burman family.
- On religion and politics, consult Bibliographic Item 43.
- On ethnic politics, read Bibliographic Items 41 and 44.

## SOCIAL ISSUES

### A. NATIONAL UNITY

The basic problem in Burmese politics is the absence of national unity among the people. It takes three forms -- unity between the Burmans and the minorities, unity among the several minorities, and the place of immigrant minorities.

Unity in Burma never meant full assimilation and integration of the minorities and the majority Burmans. Throughout Burmese history, the people have lived apart, meeting at the margins where they came in contact. There, some assimilation and integration took place through the use of common languages and sharing of common culture. But even at the margins, the separate identities continued.

No government, from pre-colonial times to the present, had an integration or assimilation policy. Governments were content to leave the people alone so long as they obeyed the laws and did not interfere with each other. The Burmans, as Buddhists, were not proselytizers, and neither were the animistic ethnic minorities. Religion was identified with particular groups, and it remained that way.

At the root of ethnic pluralism in Burma was the geographic pattern of population settlement. The land was large and the total population was small; there was no overcrowding and therefore peoples lived apart and settled in the pattern discussed earlier. Even when Burmans moved from the central areas of Burma to the delta and coastal regions to live amongst the Mon and Arakanese, they retained their separate identities and cultures. There was some assimilation and intermarriage, but it wasn't forced. It also was not extensive enough to obliterate the historic identities of the several groups in Burma.

The 1947 constitution was supposed to identify the division of power between the central government and the states. The minorities thought that the constitution established a federal government, but the law never included that word and, as it turned out, it was more unitary than federal. There were no state courts. These and other restraints and omissions denied the states the local power they assumed they received when the constitution was written and adopted (for more on this topic, see Chapter on Politics below).

Within the states, the smaller ethnic minorities were not guaranteed any seats in the State Councils, nor were they assured of any powers to control the use of their languages and protection of their cultures.

These problems within the states highlighted the inequalities between the minorities and the Burmans and between the dominant minority and others in the several states.

## **B. THE IMMIGRANT POPULATION**

Under British rule, the government encouraged Indians to settle in Burma. They initially recruited farmers, but most of those who came did not remain long on the land, but instead moved to the cities and towns in search of urban employment. Later, others came to work for the government as soldiers, police and civil servants. As Burma opened up, Burmans in upper Burma were encouraged to move south, Indian moneylenders came and financed the development of commercial agriculture. Chinese also came during this period, as they had earlier, but in smaller numbers and without encouragement and support from the government.

They, too, moved to the towns and cities and became shopkeepers, merchants and bankers. Together, the Indians and Chinese formed the basis of a middle class and the beginnings of an Asian financial class. The indigenous peoples were not encouraged or assisted in moving to the cities and taking up urban jobs and adopt urban lifestyle; instead most remained as farmers.

As political changes came in the early 20<sup>th</sup> century, the Indians were provided with communal seats in the 1923 Legislative Council, and the Chinese received the same in the 1937 parliament. While Burman-immigrant relations were harmonious before 1930, afterward, as the world depression hit Burma and rice farmers lost their land, racial tension between Burmans and Indians emerged. In 1936, there was a major racial riot in Rangoon and elsewhere in urban areas. At issue were both religious matters and economic competition for jobs.

In the beginning of World War II, the Japanese invasion and the British retreat from Burma compelled a million or more Indians to seek refuge in India because of fear of being left without Burman protection. After the war, the Burman leaders blocked many Indians from returning, even though the British argued against this. During the war, the Chinese remained in their adopted land and shared the hardships of occupation with the Burmans.

Once the course of Burma's independence was set, the authors of the constitution defined citizenship broadly. There was one form of citizenship throughout the Union and all people were equal before the law, regardless of birth, religion, gender, and race. The citizenship provisions in the constitution were not absolute, however, as ordinary law could change them. Before the end of the first year of independence, parliament passed new ordinary laws to limit their original intent.

In 1954, parliament passed a Citizenship Act that outlawed dual citizenship. This was directed at the Chinese because the government in China held that their people could never surrender Chinese citizenship. This conflicted with Burma law that declared that to become a naturalized citizen, a person had to renounce allegiance to a foreign government. When the military seized power in 1962, it withdrew citizenship from the Indian population in Arakan. While it gave every person a registration card that verified his citizenship status, the *Rohingyas*, or Indians, were given foreign registration. Despite the law, many were denied cards of any kind with no explanation. An identity check in 1977 in Arakan led to the flight of over 200,000 *Rohingyas* and created an international incident involving Bangladesh, where the refugees took refuge. In the face of international pressure, the Burma government agreed to allow the return of the refugees and received them in stages.

In 1982, the Burma government promulgated a new Citizenship law that recognized three different grades—full, associate, and naturalized. Full status was awarded to those people who could prove that their ancestors settled in Burma before 1823. Associate citizenship went to those who could not offer the required proof. Naturalized citizenship went to those persons who had one parent who was a foreigner, or whose parents were a union of a foreigner and an associate citizen. Again, Indians with a long history of residency in Burma were victimized.

The severity of the law did not apply to the Chinese. Through intermarriage or assimilation, they were able to live and work in Burma and procure registration cards illegally. The law took its heaviest toll on indigenous peoples living in war zones who were not properly registered. These individuals were declared as stateless.

After the SLORC seized power, it was initially more tolerant of the Indians in Arakan and allowed them to form parties and contest the 1990 election. But in 1991, the Indian parties were dissolved, and the army began harassing people of Indian descent. This forced a second outflow of more than 250,000 to Bangladesh and again provoked an international incident. Although Burma eventually allowed more than 200,000 to return, new incidents occurred during the decade that kept Burma-Indian relations tense.

The Chinese experience in Burma under SLORC/SPDC was different. China provided weapons and aid, and recognized the SLORC when the rest of the world did not. Perhaps consequently, Burma's military rulers took no action as new immigrants flooded northern Burma and settled in and around Mandalay where they bought property, erected buildings, and transformed the former capital into a Chinese commercial city.

Although these changes disturbed many Burmese, they did not challenge government indifference nor seek to stop it. But, toward the Indians in Mandalay, the Burmese acted differently. There, incidents and rioting occurred as the Burmans accused the Indians of ridiculing Buddhism or making other attacks on the faith and the Burman-Buddhist people. As noted earlier, many saw the military actions as a way to deflect popular criticism from the rulers.

### C. OTHER SOCIAL ISSUES

Historically, there were two classes of people—the King (plus members of his family and court) and the people. The latter were divided between those who owed service (military individuals who were *Ahmudan*) and those who paid taxes in lieu of service (the *Athi*). These classes were not rigid, and intermarriage occurred. Anyone could become a member of a Buddhist religious order and gain prestige and honor through practice of the faith regardless of their origins and class standing before joining.

British rule replaced the King with a colonial administration that consisted of European members of government, military, and business. As education broadened and Burmese gained higher Western education and professional standing, they rose in the social order but remained inferior to the British elite.

In post-independence Burma, educated persons and professionals enjoyed the highest rank. But, following the seizure of power by the military, the professional officers and soldiers rose to the top of the social order, regardless of education and standing. This may be changing as the military has created special communities for military officers and their families with schools through the university only for the children of the Armed Forces. The system remains fluid as

once high-ranking soldiers retire or leave the military, they lose their standing and prestige. General Ne Win was an exception. As a leader during World War II, Ne Win had been head of the army since 1949. There is a popular belief that he had both *ana* and *auza* (power and influence)—characteristics of one whose past merit was the basis for his high standing and authority which people recognized and acknowledged. Aung San Suu Kyi, too, is recognized by the people as the daughter of the nation's founding father and has *ana* and *auza*.

In Burman society, women have equal standing with men in most matters. They control trade in the market, have equality in inheritance, exercise control over their dowries both in marriage and divorce, share governance of the household, and control the family wealth. Women have full access to education and a large percentage of medical doctors and other professionals are women. In the democratic era, they enjoyed high standing and positions in parliament, state government, and the parties. This has declined since the military came to power; there are no high ranking female military officers outside of the medical corps.

Most of the populations live without basic sanitation or running water. In 2000, the World Health Organization (WHO) ranked Burma among the lowest countries worldwide in healthcare delivery to its citizens. High infant mortality rates and short life expectancies further highlight poor health and living conditions. The HIV/AIDS epidemic poses a serious threat to the Burmese population, as do tuberculosis and malaria. In 2004, the UNDP's Human Development Index, which measures achievements in terms of life expectancy, educational attainment, and adjust real income, ranked Burma 132 out of 177 countries.

There are numerous documented human rights violations in Burma (see annual human rights reports compiled by the United Nations and the U.S. Department of State), and internal displacement of ethnic minorities is also prevalent. Several million Burmese, many of whom are ethnic minorities, have fled Burma for economic and political reasons to the neighboring countries of Bangladesh, India, China, and Thailand to seek work and asylum. More than 160,000 Burmese now live in nine refugee camps in Thailand and two in Bangladesh, while hundreds of thousands of other Burmese work and reside illegally in the countries in the region.

### ***Discussion Questions***

1. Compare and contrast the ways the democratic government of Burma (1948-62) and the military government (since 1962) treated the ethnic minorities.
2. How do you account for the differences in the way Burmese governments treated the Chinese and the Indians?
3. What was the basis for citizenship under the 1982 Citizenship Law and how does it differ from the original ideas of citizenship under the 1947 constitution?

4. Does the military form a new class in Burma's society and if so, what social class has it displaced at the top of the social order? What does its existence in 2006 tell you about social classes in Burma?
5. Why do the ethnic minorities cling to the idea of a federal union as the only way to unite the ethnic groups in Burma? Why do the military leaders reject it as a solution?

# ECONOMICS

## A. THE ECONOMY DURING DEMOCRATIC RULE

Under British rule, Burma's economy shifted from subsistence to exchange. By the beginning of the Second World War, Burma was the world's largest exporter of rice. Burma also became the area's second largest producer of oil; in addition, it earned large revenues from the export of timber and various minerals. Burma had no large industry, but it had many small factories that produced consumer goods for the domestic market. Burma had great economic potential with its variety of untapped natural resources.

During World War II, the British denied all economic resources they could to the invading Japanese by destroying oil wells, bridges, roads and transportation equipment.

The Japanese victory isolated Burma from India, its major source of manufactured and consumer goods and a large market for its rice. As a result, the Burmese people stopped growing rice for export and reverted to subsistence rice agriculture. Once the war ended, the British focused on rebuilding the economy as its first priority; this, as noted earlier, put it in conflict with the Burman nationalist leaders who wanted to recover freedom first so that they could decide how to rebuild the economy and the nation.

Burman nationalists in the prewar period were determined to end the nation's economic dependence on rice. They hoped instead to build a more balanced economy based on both agriculture and manufacturing. In 1947, Aung San called the Sorrento Villa meeting of party and other leaders to devise a two-year economic plan for the nation's development. The plan called for the state to develop industry, to provide loans to the farmers to restore agriculture, to eliminate landlordism, to end land alienation, to experiment with mechanization of agriculture, and to establish collective farms. The plan was never implemented because of internal conflict after independence that limited the reach of the government. New economic plans were formulated in the 1950s with the help of foreign advisors who were drawn from the West. The strong Leftist social objectives of the AFPFL leaders gave way to more traditional ways of farming, organization of rural society, and development of the economy's industrial sector.

During this period, the state was the exclusive buyer of rice at fixed prices and seller to the world at market prices. The differential was kept by the state to be used to modernize the economy. While the system produced rice, it also caused discontent among the farmers who had no real incentive to improve either productivity or the quality of their product. After the Korean War, the international market for food declined. Burma lost markets and had large unsold stocks of rice. The East European countries helped reduce the surpluses through barter. Imports were not always of high quality or suitable for use in tropical climates. There also was little or no variety. Burma turned to the U.S. for needed consumer goods, purchased by special arrangement for local currency that the Americans promised not to convert to dollars. This worked well for the few years it was in effect.

In the cities, the Indians and Chinese continued to dominate the sale and distribution of consumer goods. The state was their competitor through cooperatives it formed and used to import items to sell to the public. But the coops never had stocks large enough or sufficiently varied in style and quality to satisfy the public. As a result, the private sector remained dominant.

By 1957, Prime Minister Nu called for a change from socialism to a mixed economy to hasten the nation's recovery. He encouraged more involvement by cooperatives and the private sector in the economy. This was a temporary measure to create the economic basis for a future socialist state. When the military seized power in 1962, the economy was well on its way to achieving the levels of 1939, and rice exports had risen to almost 1.5 million tons annually, nearly equal to those of 1939. The harvest was completed, and the economy was moving forward.

## B. THE ECONOMY UNDER THE MILITARY: 1962-1988

Following the March 2, 1962 coup, military rulers imposed economic changes. They issued their ideology in a statement, *Burmese Way to Socialism* (see below in the chapter on Politics). The basis of the new society was said to be equalitarian; the state would work to reduce the gap in wealth and power between individuals. In January 1963, the coup leader, General Ne Win, announced that the functions of production, distribution, import and export would be taken over by the state. The next month the rulers nationalized all banks.

In contrast to its haste to socialize the urban economy, the military regime moved more slowly to reform the agricultural sector. While the state owned all the land, the farmers worked it and made the planting and harvesting decisions. The state returned to purchase the product at prices it set. The rulers sought to make the farmer more secure through elimination of rent on farmlands. Also in January, the state ended joint ventures with foreign companies and nationalized large foreign firms.

But the new system did not succeed. The bureaucracy was incompetent, inexperienced, and corrupt. In May 1964, the state circulated a new currency in an effort to break the black markets. Since the public and small businessmen did business in cash, the state action fell hardest upon the Indian merchants. As noted earlier, this led to a large exodus of those who believed that they were the real targets of the new laws. As a result of these and other actions, the economy faltered, provoking public discontent in all sectors of society. The government withdrew some of its more drastic decrees and allowed a return of a small portion of private economy activity. For the next several years, agriculture production rose and fell in response to whether or not the weather was good or bad.

In 1971, the state wrote a 20-year economic plan. During the first three years, the improvement barely kept pace with the natural increase of the population. The political changes

of 1974 did not bring improvement. Two years later, the rulers turned to the World Bank and Western nations to help improve the economy. The introduction of “miracle” rice, developed in the Philippines, brought real improvement in output. But it required good soil, fertilizer, insecticide, and tractors that had to be imported. With limited funds, Burma could not raise production to levels needed to make significant improvement in the economy. By 1987, the country was deeply in debt and faced with ever more needs and no real improvement in its income. The rulers turned to the UN and asked to be declared a “least developed country”.

### C. THE ECONOMY UNDER THE MILITARY: 1988-The Present

With the overthrow of the constitutional dictatorship and the restoration of a military rule, the economy again went through change. The new military leaders sought to woo the world with promises for an open economy. Having first created the Myanmar Holdings Corporation and the Myanmar Economic Corporation to handle the business of the state, the rulers became partners with foreign firms to develop industry and trade, and to exploit natural resources. Foreign firms rushed in to exploit the minerals, forests, and fishing resources, to develop tourism, and to improve transportation. The initial investors seeking oil onshore in Burma dropped out following their failure to locate commercial deposits. But those who sought natural gas offshore were more successful, and two pipelines later were built to bring the gas ashore from beneath the Andaman Sea to the market in Thailand.

In the early 1990s, investors from Singapore, Malaysia, and Hong Kong built hotels and created a tourism industry. They also invested in the construction of modern shopping centers. However, Japan, Germany and other European states, which in the past had helped Burma most, stayed away because of the military’s human rights record since seizing power. During the first few years, the new investments stimulated business, constructed new buildings in Rangoon and Mandalay, improved roads, and established new businesses and banks. But by the end of the decade, many investors left, either because of the difficulty of doing business or because of consumer boycotts in several countries.

At the beginning of the 21<sup>st</sup> century, Burma is a country rich in natural resources with a strong agricultural base. It has vast timber and fishery reserves and is a leading source of gems and jade. Tourist potential is great, but remains undeveloped because of weak infrastructure and Burma’s damaged international image caused by the junta’s human rights abuses and oppression of the democratic opposition. The economy has been further affected by U.S. sanctions, which include bans since 2003 on the importation of Burmese products into the U.S. and the export of financial services from the U.S. to Burma. A number of other countries, including member states of the European Union, Canada, Australia, Japan, and Korea, have joined the U.S. in applying some form of sanctions against the regime.

The regime’s mismanagement of the economy has created a downward economic spiral. The vast majority of Burmese citizens now subsist on an average income that equates, as of 2005, to about \$225 per capita. Inflation, caused primarily by public sector deficit spending,

stagnant wages, and the eroding value of the local currency (the kyat), has undermined living standards. The limited moves toward a market economy begun in the late 1980s and early 1990s have been accompanied by a significant rise in crony capitalism. A handful of companies loyal to the regime has benefited from policies that promote monopoly and privilege.

Agriculture, light industry, and transport dominate the private sector of Burma's economy. State-controlled activities predominate in energy, heavy industry, and the rice trade. The military, through its commercial holdings, also plays a major role in the economy.

Burma remains primarily an agricultural economy with about 54% of its GDP derived from agriculture, livestock, fisheries, and forestry. Manufacturing constitutes only about 9% of recorded economy activity, and state industries continue to play a large role in that sector. Services constitute only 8% of GDP.

Government economic statistics are unavailable or very unreliable. According to official figures, GDP growth has been over 10% annually since FY 1999-2000. But the real numbers are likely much smaller. Burma's top export markets include: Thailand, India, China, and Singapore. Burma's top export commodities include: clothing, natural gas, wood and wood products, and fish and fish products.

Burma remains the world's second largest producer of illicit opium, although production has generally declined in recent years. Burma also has been the primary source of synthetic, methamphetamines in Asia, producing hundreds of millions of tablets annually. The Burmese Government has publicly committed itself in recent years to expanded counter-narcotics measures.

### *Discussion Questions*

1. Why was Burma the first and only country to return unused foreign aid to the U.S.?
2. Why did the "Burmese Way to Socialism" and the command economy the soldier-rulers put in place fail to improve the lives and well being of the people?
3. It often is argued that international embargoes fail in their objective to reform internal policies of the target nation. Using Burma since 1988 as a test, is the proposition valid or invalid? Discuss.
4. How important is national unity to the development of both natural and human resources? Can it be imposed by military force or must there be a real political solution to the problems in Burma before there can be unity, sustained economic growth and development?

### *Suggested Readings*

A good place to begin is with Bibliographic Item 1; which can be examined together with Bibliographic Item 5, especially Parts I and II. The best study of the economy during the democratic period is Bibliographic Item 51, especially Parts II and III. Finally, for the current period, see Bibliographic Item 39, in which opium is examined along with the normally standard topics of economics.

# POLITICS

## A. TWO CONSTITUTIONS: LIBERAL DEMOCRATIC AND AUTHORITARIAN

Burma became independent in 1948 under the authority of a liberal-democratic constitution that guaranteed civil, political, and human rights for all. The document further established freedom for all people from traffic in human beings, forced labor and restrictions on religion. The state recognized the special position of Buddhism as the faith of a majority of Burma's citizens. The constitution recognized the right of private property and economic initiative; at the same time, it declared that all land belonged to the state and that the economy be managed through government intervention. The dialectic of socialism and liberalism remained and divided the leaders and the general population during the life of the first constitution.

The political system was modeled on the British. All power emanated from the people and was exercised by parliament and the state councils. The president became the head of state and the Prime Minister was established as the political leader, responsible to parliament. The members of the original parliament were the representatives elected to the constituent assembly who served until 1952, when a new elected government was installed.

The legislature was bicameral; the division of seats in the Lower House was based on population and in the upper house, the number of seats each state received was established in the constitution. As a result, the Burmans had a majority of seats in the Lower House and the ethnic minorities together had a majority of seats in the upper house. When important issues called for a joint meeting and decision by parliament, the number of Burmans from the Lower House was so great, they were assured of victory. The constitution included legislative lists that determined which topics were given to parliament and which were granted to the states.

The constitution created a unique federal union. The head of each state was the person chosen by the Prime Minister from the state's delegation to parliament to serve as Minister of State in his cabinet. Members of the state councils obtained their seats through election or appointment by parliament. There was no separate Burma state, as there were states for the minorities; instead, the parliament dealt with the affairs of Burma proper as national affairs in the national assembly and the peoples of Burma proper were governed by the Prime Minister. There was an independent national judiciary and a hierarchy of courts. There were no state courts and justices. Two of the states, the Shan and Karenni, had the right to secede from the Union, while the other states and the Special Division of Chins did not.

The fundamental law was flawed, but workable. There was a party system in Burma. Similar to the U.S. Constitution, it was not mentioned or recognized in the basic law. Nevertheless, the parties were the key institution which made the political system work by finding and choosing candidates to run for office, selecting leaders, developing the program to be pursued in parliament and acting as the link between the people and the government. Until 1956, the governing party, the AFPFL, was so strong that it could ignore the small, divided

opposition in parliament and govern as if it did not exist. In that election, an opposition played a responsible role in parliament. In 1958, the AFPFL monopoly of power ended when the party divided. Following the election of 1960, the two rivals continued as separate parties.

The strongest opposition parties in Burma included the Burma Communist Party (BCP) (which, after the constituent assembly, never took part in the legal political system) and the Karen National Union (KNU) (which also never participated at the legal level after 1949). The first and only parliamentary opposition of significance was the coalition of small left and right parties, the National Democratic Front (NDF), which emerged during the 1956 election. It won 30% of the vote and 48% of the seats in parliament. It had sufficient seats to force a vote of confidence and challenge the ruling party on issues of governance.

The 1958 AFPFL split made the parliament unworkable. U Nu's faction, the Clean AFPFL (later renamed the Pyidaungsu or Union Party), had a slim majority that depended on continued support from the minorities and the NDF. However, the Burman members gave overwhelming support to the rival Stable AFPFL, led by U Ba Swe and U Kyaw Nyein. In the November 1958 budget session, Nu resigned over uncertainty that his majority would hold. Nu asked parliament to replace him with the unelected army head, General Ne Win—an act permissible under the constitution—to form a Caretaker Government to restore internal peace and to hold a new national election.

The Caretaker Government lasted until April 1960. It was a non-party government whose members included civil servants and military leaders. It provided strong leadership, improved and diversified the economy, and held free and fair elections. Under its strict rule, the government was intolerant of law infractions and dealt harsh punishments to offenders. It pressured the Shan and Karenni chiefs to surrender their hereditary administrative power to popularly chosen leaders. In the 1960 election, the Stable AFPFL, the faction the Caretaker Government favored, was defeated overwhelmingly; it only won 30% of the vote and 42 seats. The Clean AFPFL won 53% of the vote and 157 seats. The NDF proved no match for either party and only gained 5% of the vote and 4 seats. During the election campaign, Nu declared that if his party were elected, he would make Buddhism the state religion. He also promised to allow the Arakanese and Mons to form states of their own.

Throughout the first decade of democratic rule, the government and people engaged in multiple wars with political and ethnic groups who sought different goals. One such group desired to obtain total power, while another preferred to secede and a third group wanted to remain in the union although with greater autonomy and the right of self-determination. From 1948 through 1952, the BCP sought to overthrow the government and replace it with a communist state. During this same period, the Karens revolted and sought to take their people out of the union, form an independent state and win British support and protection. Other ethnic and political wars erupted and the Burma government authority was temporarily reduced to control of Rangoon and several cities scattered about the state. The Union of Burma survived because the minorities fought one another as well as the Burma army. The internal wars continued throughout the 1950s, although the Burma army gradually gained control of the Burma

heartland and drove the forces in revolt into the hills and delta. During the Caretaker Period, new ethnic opposition forces in several states rose to fight the army as in an effort to obtain the autonomy which they were promised at independence. These groups gained large areas, but no complete victories. At the same time, the government was unable to defeat them.

The last government under the constitution took office on April 4, 1960. Its political goals were to establish unity and democratic governance in Burma. The split in the Prime Minister's party in 1961 overshadowed other problems of his administration. He made good on his promise to make Buddhism the state religion. But, this widened rather than healed the divisions in society, as non-Buddhists feared the effects this change might have on their religious freedom. On the question of creating new states, Nu delayed the fulfillment of his promise of statehood for Arakan. This eroded support for his leadership as it was seen as retreating from an important campaign promise. Finally, in his effort to end national disunity by peaceful means, he met with leaders of the ethnic minorities and agreed to hold a conference in February 1962 to discuss divisive issues. This frightened the military, which feared he might allow one or more groups to secede. While the promised meeting was in session on March 2, the military overthrew the government, arrested Burman and ethnic minority leaders who were in Rangoon, set the constitution aside, and ended democracy and freedom in Burma. The new military rulers said that they had to act to save the union, which was on the verge of disintegration.

The politics of this period were marked by several factors. First, Burma was governed by authoritarian rule, even under the Caretaker Government. It possessed a strong judiciary that upheld the rule of law. It had three national, democratic elections. Finally, it showed that emotionally charged political issues, such as constitutional amendments to make Buddhism the state religion, were as dangerous to the constitutional government as an actual revolution. Liberal democracy ended when the military leaders violated their oath to defend the constitution and destroyed it.

Authoritarianism replaced democracy. Between 1962 and the present, it went through three distinct forms. Initially, a small group of senior military officers formed the Revolutionary Council (RC) and governed by selective laws. Until 1974, there was no constitution and no parliament or independent court to challenge its actions.

In place of the federal system, the RC established a national centralized hierarchy of Security Administrative Committees (SACs) composed of representatives of the military, police and the bureaucracy. Although there were no civilians at the outset, they were added later. The soldier-rulers anticipated a long stay in office and issued two documents during their first year in office, "The Burmese Way to Socialism" and "The System of Correlation of Man and His Environment", which declared the philosophical and theoretical underpinnings of the new ideology that would guide their actions and identify their goals.

The immediate goal of the government was to transform the mixed economy and elected political system into a socialist command economy and a dictatorial political system. The government closed the country to foreign tourists, aid groups, and others as it sought to make the

transformation without outside help or interference. It took away freedom of speech, press, and other rights that were guaranteed in the initial constitution. The soldier/rulers shut down the political parties and mobilized the people in new and different ways. First, the government laid the foundation for a cadre political party that reflected their beliefs, views, and objectives. Second, they created two mass organizations of workers and peasant organizations with branches everywhere in the country. Their stated purpose was both to listen to and inform the people. Third, the government reduced their contacts with Western nations and encouraged connections with Eastern European countries.

The first authoritarian government ended with the promulgation of a new constitution in 1974. In place of unbridled dictatorship, Burma came under a constitutional dictatorship. The transition began in 1971, when the RC initiated the process of writing Burma's second constitution. It differed with the original in many ways. The original was authored by a national constituent assembly; a small committee of party members wrote the second constitution. Unlike the original document, which was developed in parts by several committees of the assembly and then compiled into a final draft, the second went through three drafts, each of which was submitted to public meetings for comments and criticism. Unlike the original constitution, which never was adopted by the public, the final version of the second constitution was adopted in a national referendum.

The new constitution departed from its predecessor in several important ways. The new basic law declared that the BSPP was the author and leader of the nation. It also declared that Burma was a one party state, and the BSPP was the only party. The constitution declared that it was the supreme law of the land and that only the *Pyithu Hluttaw* (People's Assembly) could interpret its meaning. Unlike the first constitution, where anyone— independent or party member—could contest for a seat in parliament, the second directed the party to draw up a list of candidates for seats and only one candidate could stand for election. The constitution empowered the BSPP to give advice to the government at all levels on most subjects.

The original federal union differed from its successor in structure; while the original was divided into four states, one special division, and a combined national government and Burma state, the new federation was divided into seven divisions and seven states. The states included the originals together with three new ones carved out of the former Burma proper, and all were given ethnic names reflecting the majority group in each.

In reality, Burma became a unitary state. There were four levels of government— national, states/divisions, townships, plus wards and villages. All were united under the principles of democratic centralism and collective leadership.

Another important difference between the two constitutions is found in the area of rights. Unlike the original document, where the rights of individuals were set forth near the beginning of the document, in the second constitution they were discussed near the end. The new constitution established no absolute rights; all were conditioned on the goals of the state. No right could be invoked if it undermined the unity and solidarity of the national groups, security of the state, or

the socialist social order. Only citizens, regardless of race or gender, were equal before the law, enjoyed equality of opportunity, had the right of inheritance, and could enjoy the benefits of their labor in proportion to their contribution.

The new law did not bring order and stability. During the next fourteen years, there was widespread unrest. Within three months of establishing the new regime, riots occurred in Rangoon and elsewhere over food shortages, mal-distribution, and other issues. At year's end, the university students clashed with the police and military over a proper burial for the late U Thant, who had been the 3<sup>rd</sup> Secretary General of the UN. In 1976, there were two attempts on the life of General Ne Win and an effort by young military officers to overthrow the government and reestablish democratic rule.

In 1987, Ne Win admitted publicly to “faults and failures” in the past management of the economy. The government moved away from state control to free the purchase, sale, transport and storage of basic foodstuffs, in the hope that this would be an incentive to farmers to release their crops for trading in the local markets. To combat the growing black market, it demonetized much of the currency without replacing it with new—in effect it confiscated the money in the hands of the people. In early 1988, the government ended its 25-year monopoly of rice exports.

With no outlets for the people to criticize government policies and actions, rioting and demonstrations began in early 1988 and turned into mass peaceful demonstrations in Rangoon and elsewhere calling for an end to one party rule. As the number of demonstrators grew and included members of the military in their marching ranks, the army violated the constitution it put in place, overthrew the government, seized power and created a second military dictatorship, which it called the State Law and Order Restoration Council (SLORC). In doing so, it used extreme violence against the people to insure the success of its actions.

Since September 18, 1988, there has been no constitution. The SLORC rules by martial law, the laws and decrees of the past that it chooses to honor and uphold, plus new decrees and declarations it announces. One of the most important was Declaration 1/90 (July 27, 1990), which briefly outlined SLORC's claim to rule. It said that: (1) the SLORC “is not bound by any constitution;” (2) it rules by martial law; and (3) it is a military government.

When the SLORC seized power, it promised to hold new elections and transfer power back to the people. It took two years for it to develop the rules and conditions for an election. Parties began to form almost immediately, but it was not until March 1989, that SLORC issued a new election law. By the time of the election, 234 parties had formed throughout the nation. Campaigning was permitted to begin in 1990 under strong and restrictive laws. The election was held on March 27, 1990; 93 parties contested, but only a few had widespread support. The junta backed the renamed and reformed BSPP, which now was called the National Unity Party. The party with most popular backing was the National Democratic League (NLD), led by Aung San Suu Kyi and several former military officers, including Aung Shwe, Tin U and Aung Gyi. The voting was free and fair, and the NLD won an overwhelming victory; it gained 392 of the 485

seats contested and 69% of the vote. The Shan National Democratic League won 23 seats and was the second largest party elected. The NUP won 10 seats.

At the time of this writing (March 2006), the military rulers have not transferred power to the people, arguing that there must be a new constitution in place to assure peace, unity and stability. During most of the 1990s, there were no talks between SLORC and NLD leaders. In October 2000, with the aid of the then Special Representative of the UN Secretary General, Ambassador Razali Ismail, talks began. But after several years of sporadic, private talks, there were no announced results, and with the exception of the release of a small number of political prisoners, no real movement toward political change.

Throughout the period of military rule, the leadership group remained at nineteen. In 1992, the original leader, General Saw Maung, was replaced by General Than Shwe, who added General Maung Aye as head of the Armed Forces. General Khin Nyunt, the head of the Directorate of Defense Services and Intelligence, who was an original member of SLORC, was the third ranking in the ruling junta. In 1997, SLORC changed its name to the State Peace and Restoration Council (SPDC) and reorganized its membership to add all the Regional Commanders and replaced a few of the original members at the top. Military generals continue to lead the SPDC.

During the past fifty years, political parties have existed and taken important part in the politics of their day. Parties, other than those associated with the military, tended to be loose coalitions of groups and individuals leading both to splits and individual defections. These parties placed heavy reliance upon their leaders and when one resigned or died, there usually was no known successor; as a result, the parties tended to split and lose their political significance.

The BSPP and the BCP were ideological parties based on strong organization and leadership. The BSPP looked to the army as a source from which to recruit both active and retired soldiers to serve in its ranks. It never inspired the people to freely join its ranks. Since its direct connection with the government was broken in 1988, it has lost its status, and as demonstrated in the 1990 election, had a small following among the people. The BCP was formed during the Second World War and recruited young intellectuals as well as ordinary citizens whom it indoctrinated with its ideology and how to lead at all levels; it relied upon them to serve its cause whether or not the party was above or below ground. Both parties exercised control from the top down, ran schools to train members, and emphasized loyalty and willingness to carry out orders without question. Since 1989, when the BCP imploded and the cadres broke away, it has moved to the underground and has played no visible part in contemporary politics. The NUP continues even though it was routed in the 1990 election. The NLD is based on open recruitment and organization with all power concentrated in the leadership. Leadership domination is necessary because of constant harassment to the party and its leaders by the military. When and where possible, it practices democracy. Ideas come from the top and, while it is possible for members in the lower levels to offer suggestions, there appear to be few ideological or strategic recommendations to the leaders. Despite the efforts of the military to

demean its leaders and break up its organization, it appears to remain the party of the people who are ready to support it if given the chance.

In the last fifty years, Burma has experienced both liberal-democratic and authoritarian forms of government. In the former case, members enjoyed relative liberty and freedom. In the latter case, they enjoyed neither and received nothing in substitution. Both constitutions were drawn up and implemented without first solving the problems of national unity so that a political society might develop and hold together in times of stress and conflict. Whenever the Burmese people have a chance to speak out, they call for the return of liberal democracy, an end to authoritarianism, and unity and equality among the people. But until national unity is achieved, no free and democratic, peaceful and united society can evolve.

## B. DRAFTING A NEW CONSTITUTION

Burma has been operating without a constitution since 1988, when the junta suspended the 1974 Constitution and abolished all state institutions, including parliament and the civilian courts. The junta claimed (after the conclusion of the 1990 election) that the 1990 election had been held only to elect representatives to a National Convention, which would draw up a new constitution. The National Convention was convened on January 9, 1993, although only 99 (14 percent) of its 702 members were elected representatives, with the rest appointed by the junta. The Convention was suspended in March 1996 shortly after the NLD members were expelled after protesting the lack of free debate and the harassment of delegates by the military.

In August 2003, the SPDC, under intense international pressure following the renewed detention of Aung San Suu Kyi in May of that year, announced a new road map for political reform, which included reconvening the National Convention to draft a new constitution, arranging a national referendum to approve the new constitution, holding parliamentary elections, and then forming a new government based on those elections. In May 2004, the junta reconvened the National Convention without the participation of any delegates from the NLD or from the largest of the ethnic-based political parties. Some NLD officials were invited to attend, but they chose not to take part after the junta refused to meet their demands, one of which was the release from house arrest of Aung San Suu Kyi and Tin O.

More than 1,000 delegates, largely hand-picked and approved by the junta, attended the opening session in May 2004. The junta placed tight restrictions on debate, with delegates not permitted to question the government's objectives or to challenge the military in any way. Convention rules stated that delegates could not protest by walking out of any meeting or make "anti-national" comments. Any criticism of the convention risked attracting a prison term of up to 20 years. UN officials and numerous national governments, including the U.S., stated that the convention could not be regarded as a credible step towards democracy unless these restrictions on debate are lifted and all political parties are fully involved.

This reconvened Convention was recessed in July 2004. Another session was held from February to March 2005. A third session, convened on December 5, 2005, was suspended on January 31, 2006. Press reports indicated that the Convention would not be convened again until an unspecified time after the October/November 2006 harvest season.

The junta has given no timetable for the completion of the Convention or the road map itself. Until the constitution is complete, no other activities under the road map, including a new election, can be considered.

### ***Discussion Questions***

1. Why did liberal-democracy fail in Burma?
2. What role did political parties play in Burma under the military?  
What role did political parties play in Burma under democratic rule?  
What role did political parties play in Burma under the present regime?
3. Can a true federal system solve Burma's political problems?
4. Can a unitary system solve Burma's political problems?
5. Is it vital for Burma to have a written constitution in order to be a well-ordered democratic society?

# FOREIGN AFFAIRS

## A. PRINCIPLES OF BURMA'S FOREIGN POLICY.

Over the past half-century, the Burma governments generally have followed several principles in developing and executing foreign affairs. The founding fathers set the original direction in the 1947 constitution, by including a section on International Relations. There were three key provisions. The first renounced war as an instrument of policy. The second accepted the generally recognized principles of international law. The third declared that all international agreements must be referred to parliament before implementation. The 1974 constitution eliminated this chapter and any discussion of international relations.

By 1949, Burma adopted a new principle to follow a nonaligned and neutralist approach to foreign policy. Although it was not added to the constitution, it nevertheless served as a guide for the next half century. In 1954, Burma and China agreed to abide by the Five Peoples' Principles, which included the principle of non-interference in the internal affairs of other states. This principle had been accepted earlier when Burma adopted the UN Charter (Art.2.7).

## B. BURMA'S FOREIGN RELATION WITH SPECIFIC COUNTRIES

When Burma recovered its independence in 1948, it began its foreign relations in a modest way. Although it recognized all nations, over the past half century its relations with China, Thailand, India, the U.S., and international organizations are among the most frequent or important in its foreign affairs.

One of Burma's first international acts was to join the United Nations; the Chinese Nationalists, who then formed the government of China, sponsored its membership. When, a year later in 1949, the Communists came to power in China, Burma was the first non-communist Asian state to extend recognition to it. But, from the very beginning of their relations, all did not go well between the two nations. In 1948, Burma-China relations encountered difficulties over disputed borders, which had not been settled between Britain and China before power was transferred to the new government of Burma. This remained a problem until 1960 when, after four years of negotiations, it was resolved. The borders were demarcated with both nations agreeing to surrender territory to each other and signing two treaties: a border agreement and a treaty of friendship and non-aggression.

In 1949, the civil war in China between the Nationalist and Communist forces led some Nationalist troops to take refuge in northern Burma. They refused to surrender their weapons and accept Burma authority in the territory they occupied. After four years of warfare with the invaders, Burma took the question of their presence in Burma to the UN and asked for help to remove them. The result was not fully satisfactory to the Burmese because the UN agreed upon a voluntary Chinese withdrawal, which the Burmese saw as not comparable to the strong stand

the world body took against “aggression” earlier in Korea. A large number of Nationalist forces remained in Burma and threatened both its sovereignty and relations with the PRC. The Burma army continued to fight on alone, neither fully defeating nor expelling the intruders from their country.

In 1954, the leaders of China and Burma, Chou En-lai and U Nu respectively, took a major step to improve the relations between their countries. They signed a treaty that established the Five People’s Principles of International Relations which were: mutual respect for each other territorial integrity and sovereignty; non-aggression; noninterference in each other’s internal affairs; equal and mutual benefits; and peaceful coexistence. This treaty was followed two years later by negotiations to resolve the border questions. During this period, Burma played a key role in cosponsoring the Bandung Conference of Asian and African states in Indonesia and extended an invitation to China to participate. China’s presence at the conference gave it a means to meet all participants and break out of the isolation the U.S. had encouraged states to follow. By entering into agreements with a few and talking to all, China reached states it previously had not been able to engage. During this period, Burma supported the PRC’s efforts to obtain membership in the UN, which the U.S was blocking; in response, China gave Burma economic and technical assistance and made large purchases of rice when the Burmese found no immediate market for their product.

All this changed in 1967 when the Chinese Cultural Revolution demonstrations came to Rangoon and local Chinese rallied at their Embassy’s prompting, leading to fighting between Burmese and local Chinese, an invasion of the Embassy, and a rupture on Burma-China relations. The Chinese government responded by giving large-scale aid to the Burma Communist Party and called for the overthrow of the Ne Win government. Tensions between the two lasted for three years, while Burma-China trade dropped nearly to nothing. In 1970, the Pakistan Prime Minister brought the leaders of the two nations together, and the impasse ended. But, if state to state relations improved, party to party connections continued and the Chinese government gave military aid to the BCP in its war against the Burma government. As the decade drew to a close, China’s policy changed, and it stopped helping the BCP; instead, it used its good offices to try and heal the internal conflicts in Burma between the BCP and ethnic groups and the state. From this point on, China’s aid to Burma grew and official visits between the leaders of the two nations restored their unity.

The 1988-89 period marked a new milestone in Burma-China relations. Against a background of internal struggle between the Burma government and the people, Burma leaders met with the Vice-Governor of Yunnan, and the two nations signed an agreement on August 1988 that opened their common border to trade. A state visit to China by Burma’s new military rulers a year later produced an agreement whereby China sold over a billion U.S. dollars in new weapons to Burma. Later, China was reported to have helped rebuild Burma defenses in the Andaman Sea and to construct new roads between the two countries which could provide China with access to the Indian Ocean. This was followed by Chinese investment in Burma and the settling of Chinese immigrants in the Mandalay area, where they engaged in trade, commerce,

and real estate construction. The increasing friendliness between the two nations disturbed Burma's neighbors in Southeast Asia and India.

Relations between Burma and Thailand have a long and often strained history, with memories on both sides of bitter wars and unresolved enmity. Following the end of the Second World War, Thailand returned to Burma the two Shan States that Japan had given to it for aiding their war effort. After Burma regained its independence, it established formal bilateral relations in August 1948; one year later, it invited Thailand and other Theravada Buddhist nations to participate in the Sixth Buddhist Council which the Burmese planned to hold between 1954 and 1956. Burma also waived its wartime claims for reparations from the Thais and apologized for the sacking of Ayuthia in the 18<sup>th</sup> century. The two exchanged high-level state visits between their leaders.

But there were other sides to their relations. The communist parties in Thailand and Burma threatened their national governments. Burma stood alone in its war against the two Communist parties that were fighting to overthrow its government, while the Thais looked for international help to defend the Bangkok government. In 1954, Thailand supported the US-supported, anti-communist, Southeast Asia Treaty Organization (SEATO), headquartered in Bangkok. Although invited, the Burmese refused to join as it was contrary to Burma's policy of nonalignment and neutrality.

Also during this period, Thailand gave secret military and financial aid to Burmese ethnic minorities to help create a buffer between the two states in an effort to keep the Communist parties of the two countries from joining together. Beginning in the late 1950s, the Chinese Nationalists who left Burma established themselves in northern Thailand, and there they organized the international trade in opium which, grown in Burma, was smuggled across the Thai border and sold abroad. This trade involved Thai businessmen who also were involved in smuggling consumer goods into Burma for distribution through its growing black-markets. The Burmese were unable to control their side of the border to stop the illegal trade.

In November 1988, Burma announced a new law that allowed foreign investment. Thailand's General Chaovalit was the first important foreign visitor after the policy announcement and its first beneficiary. In response to his visit, Burma allowed Thai businessmen and military associates to invest in the cutting and export of teak wood as well as in the exploitation its mineral resources and to fish in Burma waters. In exchange, General Chaovalit promised to "persuade" Burma students, who had taken refuge in Thailand after the military seized power, to return home.

As the newly armed and expanded Burma army grew in the early 1990s and gained control of the Burma heartland, it turned its full attention to the defeat of the ethnic minorities in the border regions. By 1993, it recovered control of significant portions of the Burma-Thai border and cutoff most of the illegal trade in and out of Thailand. At the same time, it encouraged legitimate trade across the China frontier, and China became the chief source of imported consumer goods to Burma. Thailand, in its eagerness to recover lost business, agreed

in 1994 to help SLORC by: (1) closing its borders to Burman leaders and ethnic minorities who sought to escape from Burma or to travel abroad by way of Thailand; (2) stopping arms from getting into the hands of Burma's opposition; and (3) building a "friendship bridge" across the Moei River to encourage legal trade between the countries.

In 1997-98, two events poisoned Burma-Thai relations. First, a group of Burmese students seized Burma's Embassy in Bangkok and held its employees hostage. While the world applauded the Thai government's peaceful resolution of the issue, the Burmese government was outraged that the Thai Deputy Foreign Minister negotiated with the students and allowed them to leave with impunity; it retaliated by stopping trade between the two countries. Shortly afterwards, another group of Burmese dissidents crossed the border, seized a Thai hospital, and held its doctors and patients hostage. The Thai military intervened, attacked, and killed the Karen invaders. This time, several governments and human rights groups criticized Thailand's forceful response. Many in Thailand looked favorably upon the military action and hoped it would improve relations and trade between the two countries. But it did not satisfy the Burma government which stopped all Thai fishing in Burmese waters and the exploitation of its resources. Since then, Thai fishermen have still not regained full access to Burmese waters.

In recent years, a new obstacle in Burma-Thai relations developed. In the late 1990s, methamphetamines burst upon the drug scene. Manufactured by the ethnic Wa in the Shan State and marketed in Thailand, these drugs spread rapidly in the cities and nearby countryside. Despite complaints by the Thai government to Burma and demands for an end to the trade, it continued and grew. In 2001, armed clashes between Thai and Burma armed forces erupted. Civilians were killed and, as the nations neared a state of war, the two countries turned to dialogue between leaders who visited each other's country as a way to try and defuse the explosive situation.

Burma has never developed close relations with any non-Asian state. Among Western nations, its strongest involvement was with the United States. American interest in Burma stemmed from its own close relationship with its neighbor states, Thailand and Laos, Vietnam and China

In 1948, Burma and the U.S. established formal relations. During the first few years afterward, the relations between the two were friendly. The Korean War provided the first important opportunity for Burma and the United States to be involved together in an international issue. While the U.S. took a leading role to organize collective security at the UN in behalf of South Korea, Burma supported this UN effort by sending a gift of rice to the South Koreans. Later, when the UN army crossed the 38<sup>th</sup> parallel and encountered Chinese troops, the U.S. called on the world body to name China an aggressor nation. This time, Burma refused to support the UN resolution. Later, when the U.S. blocked the PRC from occupying the China seat in the UN, Burma refused to go along and became a leading supporter of the PRC for a place at the UN. Despite these differences, the two re-established good relations. High-level meetings between the two countries occurred in 1953 and 1955.

The decade of the 1950s saw the Burmese accept U.S. economic and technical assistance as they sought to restore their economy to modernize the state. As the decade opened, the U.S. and Burma signed several agreements which did not call for any political commitment by the recipient. It was the first Asian nation to do so. This only lasted until 1953 when Burma halted the program so that it could go to the UN and lodge a complaint against the Chinese Nationalists. Three years later, the U.S. resumed economic assistance; in 1958, it began to sell small amounts of military equipment to Burma on very favorable terms.

Throughout the Vietnam War, the U.S. and Burma followed different policies. In 1955, Burma offered its country as a neutral venue for confidential meetings between the U.S. and North Vietnam. Although the offer was refused, it can be seen as consistent with Burma's basic principles of pursuing nonalignment and promoting efforts to help achieve peace in world affairs. Throughout the war and afterwards, the U.S. and Burma continued their relations on the same terms.

Only after the Burma army seized power in 1988, did their relations change. In response to the violence with which the Burma army put down the unarmed civilians, the U.S. halted all aid programs and denounced the Burma army's behavior. While the Burmese continued to argue that no nation had a right to interfere in its internal affairs, the U.S. saw Burma's behavior as a violation of many articles of the UN Charter and the Human Rights Declaration it had pledged to uphold. When the U.S. Ambassador to Burma resigned in 1991, the U.S. Senate refused to confirm a successor. The U.S. downgraded its level of representation in Burma from Ambassador to Charge d' Affaires; the position of Ambassador remains empty to this day. The relations between the two are unlikely to change until there is real political reform in Burma.

The U.S. has imposed broad sanctions against Burma since 1988. Since May 1997, the U.S. government has prohibited new investment in Burma by U.S. persons or entities. In 2003, the U.S. Congress adopted, and the President signed, a law which includes a ban on imports from Burma, a ban on the export of financial services to Burma, a freeze on the assets of certain Burmese financial institutions, and extended visa restrictions on Burmese officials. Congress renewed this law in July 2004 and again in July 2005.

In 1947, Burma and India had very close relations. This was the result of early contact between Aung San and Nehru in 1939. The closeness between Burma and Indian leaders after Aung San's death continued. Burma leaders frequently consulted their Indian counterparts on regional and world affairs. Both countries were leading nonaligned nations and took similar positions at the UN and in their individual foreign affairs. The two also had differences from time to time, but never strong enough to rupture their bilateral relations. One originated from a map attached to the 1960 Sino-Burma border treaty. The Indians complained that the map was erroneous and prejudiced against Indian interests. The Burmese responded by declaring that they did not accept the map as binding and when India and China settled their own boundary disputes, a new map would be drawn and replace the one attached to the Burma-China treaty.

After the Burma army overthrew U Nu's government, the closeness weakened following Rangoon's new policy on currency changes, which Indians in Burma felt were intended to affect them most of all. The press in India and many of the nation's leaders interpreted the law as anti-Indian, anti-Muslim, and anti-Hindu. After leaders of the two nations met and discussed the matter, India agreed that it was an internal Burma affair and halted the discussion by welcoming back Indians from Burma who wanted to return. But India never re-established the same closeness with Burma as had previously existed. Indo-Burma relations remained friendly and correct as each went its own way in international relations.

In 1988, India was the only Asian government to speak out strongly against the military seizure of power and its treatment of the peoples of Burma. India openly supported Aung San Suu Kyi and the NLD. By 1994, its policy toward Burma began to change as it became alarmed at the extent of China's involvement in Burma. Through visits to Burma by high-ranking administrators and later by an exchange of visits by leaders, the two began to draw together. Beginning in 2000, India made clear that it stood ready to counter China as a major source of aid to Burma by offering aid and loans, sales of arms, involvement in helping to improve Burma's defenses, and agreeing to construct roads between the two countries as well as within Burma. These Indian initiatives to Burma were welcomed by the members of ASEAN, who, since the mid-1990s, had become concerned about the extent of China's presence in Burma.

Burma has also been involved in world affairs through membership and activities in both the United Nations and the nonaligned movement. As noted above, it joined the UN immediately after regaining its independence. In 1961, it was a founding member of the nonaligned movement. In that same year, the tragic death of Dag Hammarskjold, the second UN Secretary General, saw Burma's representative, U Thant, succeed him. As a representative of a truly nonaligned nation in a period when the world was divided between East and West, he proved to be an ideal candidate, and his ten years as Secretary General brought credit to him and to Burma.

In recent years, Burma's relations with the UN have become more problematic. The UN General Assembly has often criticized the Burmese military government for its abusive human rights and labor practices. Since 2004, the junta has refused requests by the UN Secretary General's Special Envoy and the UN Commission on Human Rights Special Rapporteur for Human Rights to visit the country.

During the Cold War period, Burmese foreign policy was grounded in principles of neutrality, often tending toward xenophobic isolation. Since 1988, however, Burma has been less xenophobic and has sought to build regional ties. In 1997, it became a member of the Association of Southeast Asian Nations (ASEAN), and has since then participated actively in that regional forum, even hosting a number of seminars, conferences, and ministerial meetings. Burma became a member of the World Bank and the International Monetary Fund (IMF) in 1952 and the Asian Development Bank (ADB) in 1973. Since July 1987, however, the World Bank has not made any loans to Burma. The IMF performs its mandated annual Article IV

consultations, but there are no IMF assistance programs. The ADB has not extended loans to Burma since 1986, and ADB technical assistance ended in 1988.

### ***Discussion Questions***

1. Does the principle of non-interference in the internal affairs of a nation supercede Burma's obligations to its fellow members under the UN Charter (e.g., Article 1, Article 55, Article 56)?
2. What are the issues which divide Burma and Thailand; how can they be resolved?
3. What are the advantages to Burma of being physically so close to China? What are the disadvantages?
4. Why did India change its policies toward Burma after 1994; does it seem to be paying off?
5. What role does trade play in Burma-U.S. relations?

### ***Suggested Readings***

- A good place to begin is with Bibliographic Item 35 and Silverstein, J., "Burma and the World: A Decade of Foreign Policy Under the State Law and Order Restoration Council" in Taylor, R. (ed.), *Burma: Political Economy Under Military Rule*, London, Hurst and Com. Ltd., 2001, pp. 119-136.
- For a study of the military in Burma, see Bibliographic Item 45.
- For a response to question No. 1 above, consult a good text on international law, such as Sломanson, W.R., *Fundamental Perspectives on International Law* (2<sup>nd</sup> edition), Minneapolis, West Publishing, 1995..

## Notes

Notes on the legacy of Burma's past.  
Josef Silverstein

I. Traditional Burma before colonial rule.

1. Centralism under King in Burma area; local rule in hill areas under traditional systems of the peoples who acknowledge the suzerainty of the Burma King.
2. Economy: agricultural, with King monopolizing foreign trade; village economy was subsistence with very small local trade between close by villages.
3. Social system: form of patron-client. two classes: Ahmudan—based on service in military or some other service. Athi—paid taxes in lieu of service.
4. No business class.

## II. British rule.

1. Institutionalized Burmese pattern of authoritarian rule; differed in that now it is strong enough to enforce it continuously. Burma King and court removed when British took power and filled by British administrative system. No connection between church and state; weakened the religious order and left it with no central head. Buddhism never was a hierarchical and centralized religion.
2. From 1921, followed the political developments in India. Partially elected legislative council introduced. 1937 self government under a constitution introduced. Burma separated from India. Reflected the ideal of rule of law, self government, western education. Lawyers and courts as well as medicine and hospitals were open to Burmese who qualified.
3. Rise of nationalism. YMBA ; university strike; Thakin movement; responsible government and elections.
4. Indian-Burman conflict. British, Indians and Chinese dominated the emerging commercial life in the new cities and towns.

## III. World War II.

1. Japanese victory and displacement of British rule.
2. Japan helped form a Burman army, the Burma Independence Army; its leader: Aung San; participations during the War.
3. Japan gave Burma nominal independence in 1943. Dr. Ba Maw, the head.
4. March 27, 1945, Burma army changed sides and joined Allies in the final battles against the Japanese.
5. Secretly, Burma army and civilians formed secret political movement, the Antifascist Peoples Freedom League. After war, emerged to lead the nation.

## IV. Transition.

1. AFPFL, under leadership of Aung San, rejected British plans for rebuilding Burma; did not want economics before politics and wanted to be in charge.
2. General Strike in Burma. Governor Dorman-Smith replaced by Hubert Rance in August and implemented new British policy.

3. British created a new Burma army, composed half from PBF recruits and half from ethnic minorities in the British Colonial Army.
4. Aung San invited to London to discuss Burma's future with British PM Attlee.
5. Panglong Agreement between Burmans and ethnic minorities on political future of Burma.
6. Constituent Assembly elections in April 1947.
7. Murder of Aung San and members of his Cabinet; Thakin (U) Nu succeeds him as Burma's leader.
8. Burma becomes an independent state on January 4, 1948.

#### V. Constitutional Government.

1. Liberal-democratic system with goal of becoming a socialist state. Unique federal system; two states had the right to secede and three did not.
2. Leaders: U Nu, PM; Smith-Dun (Karen), head of army.
3. Civil war begins in March 1948; first against the Burma Communist Party, followed by Karen National Defense Force and later, several other ethnic groups. Smith-Dun replaced by Gen. Ne Win in 1949.
4. Faced foreign invasion from Chinese Nationalist Forces and aid to the ethnic minorities in revolt from Thailand. Government received aid from India.
5. Economy: mixed. Land was the property of the state with private use allowed. Business in private hands, large-scale industry under the state.
6. After 1950, gradually able to begin repairing war damage and expanding the economy. By 1962, Burma exported over 1 million tons of rice.
7. Politics: 3 elections; all free and relatively fair. AFPFL won the first two in 1951-2 and 1956. After second one, opposition was large enough to introduce a vote of no confidence.
8. AFPFL split in 1958; U Nu's faction won in vote in parliament with backing of ethnic and leftist parties. His opponents had the backing of the Burman members.
9. Caretaker Government formed with Gen. Ne Win as PM and no parties represented.
10. New election held in 1960; Nu's faction (now called Pyidaungsu) won on a platform to make Buddhism the state religion and resumed power.
11. Pyidaungsu lost backing as members fought to become Nu's successor as leader.
12. Nu tried to strengthen democracy in the nation and began negotiations with ethnic minorities to permanently end civil war and national disunity.
13. March 2, 1962, military overthrew the government, swept the constitution and parliament aside and created a dictatorship to replace them.

#### VI. Military Dictatorship, 1962-88.

1. A small ruling council of senior military officers under Gen. Ne Win created the Revolutionary Council to rule.
2. In 1972, the military rulers resigned from the service, changed the name of the government and continued to rule as civilians in the Government of the Union of Burma.

3. Military formed political party in 1962, called Burma Socialist Program Party and recruited members from the armed forces.
4. 1971, party given task to change into a mass organization and write a new constitution. It completed its work in 1973.
5. Revolutionary Council ruled by decree and established a police state, with no rights guaranteed or protected.
6. Burma was closed to tourists and limited in the state's international contacts.
7. Burma's private sector of the economy was nationalized in 1963 as the first step in transforming it into a socialist state.
8. Distribution system broke down, as military appointees with no economic training and experience could not operate it. Black markets rose to fill the gap in wanted and needed consumer goods.
9. Relations with China were suspended following riots and Burmese invasion of Chinese Embassy in Rangoon in June 1967. China began to give open aid to the Burma Communist Party and indirectly to a number of ethnic minorities in revolt. Relations were restored in 1970.
10. The BSPP constitution was ratified by the people in a national referendum in December 1973 and came into effect on March 2, 1974.
11. The BSPP constitution differed with its predecessor in many ways. As the authors of the law, the party stood outside and above the constitution. It chose the candidates who stood for election in parliament. As the only party allowed, no opposition could compete for power.
12. Although the name of the state still included the word union, it was a unitary state, with all power in parliament. There were four levels of government with the lower responsible to the level above.
13. The Council of State was the highest executive organ and its members were elected by the parliament. It elected its own chairman who was named President. Gen. Ne Win was the first to hold the office.
14. Unlike the first constitution, rights were not guaranteed and they were coupled with duties.
15. The government faced an economic strike and violence in 1974; it also faced the students, at the end of the year following their seizure of the remains of U Thant, who was the 3<sup>rd</sup> Sec. Gen. of the UN, because they believed that the government would not bury his remains appropriately.
16. Unrest, both in society and the military continued as there were no improvement in the economy and no legitimate outlets for protest.
17. Finally, in 1987, the government moved to free up part of the economy in order to improve conditions. But fear of helping the black market, the government demonetized several units of currency and gave the people no substitutes. This led to student demonstrations.
18. In February 1988, a student fight with civilians led to the government using force and leading to violence, the death of students, and a demonstration in Rangoon and the closing of the university.

19. The summer of 1988 was taken with a growing peaceful demonstration by the people for an end to one party rule and the restoration of democracy.
20. On August 8, the police and military killed an unknown number of demonstrators who believed that the military was about to give up power.
21. On August 26, at a mass rally at Shwedagon pagoda, a new voice spoke out; Daw Aung San Suu Kyi (Aung San's daughter) immediately was seen as the new leader of the people.
22. As the demonstrations continued and grew with additions coming from the military, the army, on September 18, seized power, displaced the constitution the government and all its institutions and replaced them with a new military junta, the State Law and Order Restoration Council.

## **A Self-Study Guide**

NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The *Self-Study Guide: Cambodia* is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important Cambodian issues related to history, geography, culture, economics, government and politics, international relations and defense. This guide should serve as an introduction and a self-study resource. Cambodian history and its relations with the United States are far too complex to be covered in any depth using only the text in this guide. The reader is encouraged to explore the questions and issues raised in the guide by referring to the books, articles, periodicals and web sites listed in the bibliography. All of the bibliographic material can be found on the Internet or in the National Foreign Affairs Training Center Library, the Main State Library, or the Library of Congress.

The first edition of the *Self-Study Guide: Cambodia* was prepared by Dr. Craig Etcheson, a Visiting Scholar at the Foreign Policy Institute of the Johns Hopkins University's School of Advanced International Studies in Washington, D.C. He was formerly an Associate Research Scientist with the Center for International and Area Studies at Yale University. He has been carrying out research on and in Cambodia since 1979. The views expressed in this guide are those of the author or of attributed sources and do not necessarily reflect official policy or the position of the Department of State or the National Foreign Affairs Training Center.

This publication is for official educational and non-profit use only.

First Edition, July 2004

## THE LAND AND THE PEOPLE

This chapter of the study guide provides an introduction to the land and the people of Cambodia. We will review the physical and political geography of the country, and briefly introduce the various ethnic and national groupings that can be found there.

### Physical Geography

Cambodia is situated in mainland Southeast Asia, 13 degrees latitude north of the equator, at 105 degrees east longitude. The country has a total area of 181,040 km<sup>2</sup>, of which some 4,500 km<sup>2</sup> consists of bodies of water, with the remaining area comprising land surface. It is approximately the same size as the U.S. state of Missouri. Cambodia has a deep-water port on the Gulf of Thailand at Kampong Som, providing the country with direct access to the Pacific Ocean.

The terrain of the country is shaped roughly like a shallow saucer, with a depressed lip in the south. The rim of the saucer is formed by modest mountains in the west, north and northeast, none of which exceeds about 1,800 meters (5,900 feet) in altitude. The basin of the saucer covers most of the country, and is essentially a large watershed draining into the Mekong River. The basin is dotted here and there with small prominences, known as *phnoms*, or "mountains."

The Mekong is Cambodia's principal river. It enters Cambodia from Laos in the north, flows in a generally southerly direction for approximately 200 kilometers (125 miles), and then jogs southwest for another 150 kilometers (95 miles) to the capital, Phnom Penh, before resuming a generally southerly flow on into Vietnam. The intricate branching of rivers and streams found in Vietnam's Mekong Delta actually begins at Phnom Penh, where the Mekong River splits off into another major waterway, the Bassac River.

In the middle of Cambodia, just slightly off-center to the west, lays a large, hourglass-shaped body of water called the *Tonle Sap*, or Great Lake. This lake is remarkable for a number of reasons. The Great Lake provides the majority of animal protein consumed in the Cambodian diet, by virtue of the bountiful fish harvests gathered from the lake and its tributaries. But how these harvests have been sustained over the centuries is even more fascinating. The Great Lake drains southward into the Mekong River though a tributary that is also called the *Tonle Sap*. During each rainy season, as the Mekong swells from run-off, it rises above the dry-season surface level of the Great Lake, and then the Tonle Sap River reverses direction and begins to flow north into the lake. In the process, the surface area of the Great Lake expands by a factor of ten, and enormous loads of silt are deposited in its bed and upon the surrounding inundated land. This unusual phenomenon provides a fertile spawning ground for fish, and annually renews the soil over large areas of central Cambodia. Thus the Tonle Sap functions as an enormous natural flood control bladder for the lower Mekong River Basin.

Viewed from the Tonle Sap River, the old imperial capital, Oudong, rises on hills in the distance; the tallest spire is King Sihanouk's funeral stupa, under construction in 2000.  
(Photo by Craig Etcheson)

The Tonle Sap River reverses its southerly course towards the sea and begins to flow north early in the wet monsoon, which typically commences in May and lasts through November. In the rainy season, it is common for there to be a brief, intense shower late in the afternoon, particularly around Phnom Penh. The dry monsoon is from December through April, during which there is rarely any precipitation. Temperatures vary little through the year, with the hottest time being in April, when the mercury often exceeds 100° Fahrenheit. The coolest period comes in December, when nighttime temperatures can fall into the 70s or below. The average total annual precipitation in Cambodia is approximately 100 to 150 centimeters (40 to 60 inches), though this varies considerably depending upon the terrain. For example, the coastal mountains in the southwest often receive up to 500 centimeters (200 inches) of rain, squeezed from the clouds as the moisture-laden monsoon air coming off the Gulf of Thailand rises over the mountains.

#### Political Geography

The previous section began by asserting a size for the land area of Cambodia; among many Cambodians, this assertion would be considered highly controversial, to say

the least. Part of the reason for this is that many of Cambodia's boundaries are not clearly demarcated. Moreover, some areas of Cambodia's land and maritime border regions are still the subject of on-going territorial disputes with neighboring countries. The issue of alleged land and maritime encroachment on Cambodian territory by Thailand and Vietnam remains a potent issue in contemporary political debate.

Over the previous several centuries, Cambodia has lost a great deal of its land and maritime area to these neighbors, including significant losses when France withdrew from the region in the 1950s. Successive Cambodian governments have never fully accepted the administrative demarcation lines drawn by French colonial authorities, but those lines became permanent international borders in the wake of the French retreat from Southeast Asia. Similarly, some Thais do not really accept their current borders with Cambodia, believing that some lands presently under Cambodian sovereignty rightfully belong to Thailand. The current government of the Second Kingdom of Cambodia remains vulnerable to criticism from domestic opponents over its relatively accommodating policy toward Vietnam on the border question. Territorial issues with Thailand also lurk just under the surface of Cambodian public opinion, and played a key role in a serious anti-Thai riot in Phnom Penh during January 2003. Those riots resulted in some \$50 million in property damage, and caused a temporary break in diplomatic relations between Cambodia and Thailand.

Cambodia's border with Thailand stretches from the western coast to the northern escarpment for a distance of some 800 kilometers (500 miles). In the northeastern mountainous region, Cambodia shares a 540 kilometer (335 miles) border with Laos. Cambodia's longest shared border is with Vietnam, in the east and the south, running some 1,220 kilometers (760 miles). To the Southwest, Cambodia borders the Gulf of Thailand. Cambodia claims a 200 nautical mile exclusive economic zone in the gulf, but much of this area is disputed with Vietnam and Thailand.

The name of the country derives from the archaic term, *Kambuja*, which may have originated with early Indian settlers to the region who came from the northwestern area of India called *Kamboja*, much as many place names in North America can be traced to European origins. The French transliterated *Kambuja* as *Cambodge*, and it entered the English language as Cambodia. Contemporary Cambodians sometimes refer to their country as *Kampuchea*, though this usage has fallen out of favor in recent years due to its association with the communist governments of the 1970s and 80s. The people of Cambodia are usually called Cambodians, although some also use the term *Khmers*, a practice that can be disconcerting to Cambodian citizens who do not happen to be of Khmer ethnicity.

### Ethnology

Cambodia's majority ethnic group is the Mon-Khmer, or Khmer, who comprised some 90% of the country's approximately thirteen million people as of 2004. In pre-historical times, the region encompassing today's Cambodia was inhabited by peoples about whom little is known. The Mon-Khmer people are believed to have migrated to the

area in the few centuries prior to the beginning of the Christian era, perhaps from southern China. Recent archaeological studies have begun to reveal more about the culture and social organization of these early inhabitants, but a reliable historical record does not begin until around the sixth century AD. According to Cambodian mythology, an Indian prince named Kundrya founded the nation, and this mythology may be rooted in the early migration of peoples from India.

Cambodia's history of repeated catastrophic wars over the centuries has caused numerous episodes of dramatic depopulation. The long slow recovery from the demographic disaster of the 1970s means that the population today is young, with a median age of about 19, and a relatively robust growth rate of 1.8%. Another lingering result from thirty years of war is the fact that according to the 1998 census, there are 93 males for every 100 females, though this effect is more pronounced in the older age cohorts of the population.

The remaining 10% of Cambodia's population is composed of ethnic Vietnamese, ethnic Chinese, Muslim Cham, and a mix of other groups (primarily Lao, Thai, and a number of traditional hill-dwelling tribes such as the Montagnard, Brao, Por, Taupou, Stieng and Jarais). The precise size of these various groups is the subject of some ongoing uncertainty because the 1998 census did not record ethnic identities. Nonetheless, the Vietnamese, Chinese and Cham groups make up the largest of the ethnic minorities. Inter-marriage between the Khmer majority and many of the minority groups has reduced ethnic distinctions, but significant cultural differences continue to exist between the various minorities and the Khmer.

The primary language spoken in Cambodia is called Khmer, and is one branch of the Mon-Khmer family of Austroasiatic languages. Unlike the Vietnamese and Thai languages, Khmer is non-tonal. Numerous dialects of Khmer are found in different regions, and native speakers can identify a person's place of origin based on the dialect. The Khmer script is derived from south Asian languages, and the language has borrowed many words from Pali and Sanskrit. In addition to Khmer, Cambodian minorities also speak various dialects of Chinese, along with Cham, Thai, Vietnamese and Lao. Many of the hill tribes of the northeast have their own languages, and do not speak Khmer.

Cambodia has a relatively poor and uneducated population. The adult illiteracy rate is around 30%, rising to 40% for females. According to the World Bank, per capita income in Cambodia hovers well below one dollar per day. As one might expect, there is a striking difference in the standards of living of Cambodia's urban and rural residents. Most rural residents engage primarily in subsistence agriculture, while many of the country's city-dwellers are interconnected with the global economy and have a correspondingly much higher level of income and standard of living.

The **general health status of Cambodia's population is also poor.** There are **numerous endemic diseases**, including **several strains of malaria, tuberculosis, Japanese encephalitis, and Dengue Fever.** Cambodia also has a high **prevalence rate** for HIV/AIDS, estimated at 2.8% in 2002. The child **mortality rate** is high and rising, with

138 deaths per 1,000 live births in 2003; the material mortality rate is also one of the highest in Asia, estimated to be 473 per 100,000 live births. The health care system remains rudimentary and insufficient to address these health care challenges, especially in rural areas. Per capita health care expenditure is estimated at only \$19. As a result, according to the World Health Organization, life expectancy in Cambodia is low, at 56 years, with a healthy life expectancy of only 46 years.

In geographic terms, Cambodia's population is unevenly distributed. The central lowland provinces such as Kampong Cham, Kandal, Takeo, Kampong Speu, Kampong Thom, Kampong Chhnang and Battambang are densely populated, with villages situated primarily along rivers and lakes. The more remote highland provinces like Monduliri, Ratanakiri, Stung Treng, Preah Vihear and Koh Kong are very sparsely populated. The following table illustrates this distribution, as well as the imbalance in the sex ratio.

#### HOUSEHOLDS AND POPULATION OF CAMBODIA (1998 CENSUS)

Province	Total Household	Total Population	Males	Females
Banteay Meanchey	111,856	577,772	283,358	294,414
Battambang	148,356	793,129	388,599	404,530
Kampong Cham	312,841	1,608,914	775,796	833,118
Kampong Chhnang	82,638	417,693	197,691	220,002
Kampong Speu	115,728	598,882	287,392	311,490
Kampong Thom	106,908	569,060	272,844	296,216
Kampot	104,993	528,405	253,085	275,320
Kandal	206,189	1,075,125	515,996	559,129
Koh Kong	24,964	132,106	67,700	64,406
Kratie	49,326	263,175	130,254	132,921
Monduliri	5,657	32,407	16,380	16,027
Phnom Penh	173,678	999,804	481,911	517,893

## **Issues and Questions**

1. Geopolitical strategists suggest that Cambodia is of minimal significance because it does not sit astride any important lines of global communication or transportation. But China recently launched a project to make the upper reaches of the Mekong River navigable by clearing a series of rapids in southern Laos, which would allow some ocean-going traffic to reach China via the Mekong, through Vietnam, Cambodia and Laos. What impact is this development likely to have on geo-strategic assessments?
2. Cambodia's population is relatively homogenous from an ethnic perspective, but lax regulation of immigration from Vietnam over the last twenty years has fueled fears among many Cambodians that the Khmer will gradually be overwhelmed by Vietnamese. These fears are reinforced by historical memory; a case in point is the formerly Khmer town of Prey Nokor, which today is known as Ho Chi Minh City. In the 1970s, such fears led to anti-Vietnamese pogroms during the Lon Nol regime, and genocide against ethnic Vietnamese Cambodians during the Pol Pot regime. What are the prospects for a repeat of such atrocities in the future?

## HISTORY

This section of the study guide provides a brief history of Cambodia. We will begin with an overview of the historical development of the country from early times through the colonial period to independence. We will then focus in somewhat more detail on the major periods since independence, which can be divided according to the regime in power.

### The Rise of the Angkor Empire

As noted above, Cambodia's pre-history is shrouded in obscurity. It is only in the last decade that new archeological research has begun to reveal a few tantalizing tidbits about what came before the rise of the Angkor Empire. The oldest surviving inscriptions date to the beginning of the 7<sup>th</sup> century, but other evidence suggests that the Mekong Basin had well-developed social and economic structures many centuries prior to that time. It appears likely that the region was dotted with small principalities or kingdoms, and that these smaller socio-political units gradually coalesced into larger political entities. For many years, historians described the emergence of the Angkor Empire as a result of the union of two kingdoms, Funan and Chen-la, the first centered on the lower Mekong Delta in present-day Vietnam, and the second to the north of the Great Lake. Recent research has raised some questions about the validity of this historical scenario, but some similar sequence of events probably did occur.

The origin of the Angkor Empire is usually dated to 802 AD, when Jayavarman II declared himself to be a *devaraja*, or "God-King," in the Kulen Mountains north of the present-day Angkor area. He thus founded a reign which would become a great empire, dominating much of mainland Southeast Asia for more than half a millennium. Through conquest and alliances, Jayavarman II quickly grew his kingdom until its borders were said to be contiguous with "China, Champa, the ocean and the land of cardamoms and mangoes," quite an expansive claim of sovereignty, indeed. He later moved his capital to Ruluos, just east of present-day Angkor. A string of successors followed, and toward the end of the 9<sup>th</sup> century, the God-King Indravarman embarked on a program of temple-building that was to pre-figure the greatest accomplishments of the Angkor Empire. Sometime around the beginning of the 10<sup>th</sup> century, Indravarman's son, Yasovarman, moved the capital to the area that is today known as the Angkor complex. Here the empire was to grow great and rich, rivaling all other civilizations before and since in the scope of its artistic and spiritual achievements.

The rise of Suryavarman I to the throne of the God-King in the early years of the 11<sup>th</sup> century marked the beginning of a distinct centralization and intensification of the power of the Angkor Empire. After a period of dynastic turmoil at the end of the 11<sup>th</sup> century, a God-King taking the name Suryavarman II accomplished the single most enduring feat of the six centuries of the Angkor Empire by constructing the temple mountain of Angkor Wat. This monument is probably the largest religious structure ever built, and it stands in testimony of the greatness of the God-King's vision.

Inner Sanctuary of Angkor Wat, the "Temple City," Towers Above Surrounding Jungle  
(Photo by Craig Etcheson)

Angkor Wat was completed in 1150 AD, shortly after the death of Suryavarman II, about a decade before the construction of the Notre Dame Cathedral began in Paris. The astounding scope of this temple still takes the breath away from visitors today. Covering an area of five hundred acres and rising to a height of 699 feet, it was designed to mimic the five peaks of Mount Meru, the sacred mountains of Hindu cosmology. The entire temple is laid out in precise dimensions reflecting Hindu understandings of cosmic time and space, from the beginning of time-until the end of time. This temple complex is adorned with thousands of stone carvings. For example, the outer gallery surrounding the central temple is adorned with more than a mile of bas relief carvings depicting scenes from Hindu mythology, and the exploits of the Angkor God-Kings.

Jayavarman VII was undoubtedly the greatest of all the Cambodian God-Kings. The details of his early history are somewhat mysterious, but he arose in a time of crisis for the Angkor Empire. In 1177, the Kingdom of Champa invaded Angkor by land, and the next year they returned by water and overwhelmed the empire, sacking the capital and putting the king to death. Jayavarman rallied an army, and in an epic naval battle on the Tonle Sap in 1178, defeated the Chams. If we are to believe his own accolades, he was ferocious in war, but magnanimous in victory. According to an inscription in the Preah Khan temple written in 1191, "to prisoners of war" Jayavarman VII "gave his own forests, thus manifesting generosity and justice." Considering that he captured the Cham capital in 1191, this "generosity" may account for the substantial population of ethnic Cham people that has lived in Cambodia for centuries.

Jayavarman VII was crowned God-King in 1181, and spent the next three decades transforming the empire. He built a system of roads throughout the land, along with rest houses, hospitals, reservoirs and other public works. Most of all, however, he built temples. Though art historians judge that the quality of some of his temples is marred by haste and haphazard design, today his many remaining monuments suggest a grandeur bordering on the megalomaniacal. Ta Prohm ("Ancestor Brahma") and Preah Kahn (the "Sacred Sword") were built to honor his mother and father, respectively. Both housed thousands of people, and perhaps one hundred thousand additional people were dedicated to the maintenance of each of these two temples. He built other new temples and embellished many older temples, but there is little doubt that his greatest artistic achievement was the Bayon. At the center of Angkor Thom, the immense "Big City," he constructed a monument with 54 gigantic towers, each of which is crowned with four faces oriented in the cardinal directions. Each of these more than two hundred faces is believed to be a representation of Jayavarman VII as the Buddha, deep in meditation, with closed eyes and an enigmatic smile on his lips. The inner and outer galleries of the central temple are decorated with bas relief carvings depicting many contemporary scenes, ranging from a pictorial account of Jayavarman VII's victory over the Kingdom of Champa, to scenes of everyday domestic life.

The only independent contemporary account of the Angkor Empire comes down to us from a Chinese envoy to Angkor, Chou Ta-Kuan, who spent a year at the court of the God-King Indravarman III from 1296-1297. His subsequent report about the Angkor Empire was translated into French in 1902, and since then successive English editions have appeared under the title, *The Customs of Cambodia*. Chou Ta-Kuan's text is wide-ranging, covering architecture, language, religion, customs, holidays, health and hygiene, commerce, food, and many other topics. He also reported on the comportment of the God-King, and it is worth quoting at length from his observations:

When the King leaves his palace, the procession is headed by the soldiery; then come the flags, the banners, the music. Girls of the palace, three or five hundred in number, gaily dressed, with flowers in their hair and tapers in their hands, are massed together in a separate column. The tapers are lighted even in broad daylight. Then came other girls carrying gold and silver vessels from the palace and a whole galaxy of ornaments, of very special design, the uses of which were strange to me. Then came still more girls, the bodyguard of the palace, holding shields and lances. These, too, were separately aligned. Following them came chariots drawn by goats and horses, all adorned with gold, ministers and princes, mounted on elephants, were preceded by bearers of scarlet parasols, without number. Close behind came the royal wives and concubines, in palanquins and chariots, or mounted on horses and elephants, to whom were assigned at least a hundred parasols mottled with gold. Finally the Sovereign appeared, standing erect on an elephant and holding in his hand the sacred sword. This elephant, his tusks sheathed in gold, was accompanied by bearers of twenty white parasols with golden shafts. All around was a bodyguard of elephants, drawn close together, and still more soldiers for complete protection, marching in close order.

[*The Customs of Cambodia*, p. 72]

The pageantry and splendor reflected in this description convey some sense of the wealth and power at the command of the Angkor Empire at its zenith.

### The Decline of Angkor

There is not a firm consensus among historians on causes of the decline of the Angkor Empire. There are several schools of thought, none of which has yet unambiguously won the day. One theory suggests that disease – the rise of malaria and the infiltration of the bubonic plague that had swept across Europe – combined with a series of Mongol invasions to sap the vitality of the empire, and open the way for its destruction. Another theory suggests that the Angkor Empire was simply outpaced by the rapid expansion of two more vital neighboring empires, the Siamese (or Thai) to the west and the Vietnamese to the east. It is perhaps more likely that both of these factors played at least some role in the eclipse of the Angkor Empire.

However, the most popular explanation for the decline of the empire is known as the Hydraulic Theory. Angkor's glory was based on the ability to control water through a vast system of dykes, canals, and reservoirs. This control enabled the empire to extract multiple rice crops from the land each year, and in turn, this surplus production allowed the Angkor to support a vast population of non-agricultural workers, including priests, soldiers, and other public servants. But as investment in imperial projects like temples and wars increased in proportion to productive work such as growing food and maintaining the hydraulic network, floods and silt gradually depleted the ability of the system to sustain the empire. In fact, historians believe that this decline had actually begun during the reign of Suryavarman II, with his extraordinary expenditure of resources to build Angkor Wat, and that the decline accelerated thereafter. These conditions could have weakened the empire, making it vulnerable to other threats, such as disease and invasion by growing neighbors.

A series of invasions from Thailand in the first third of the 15<sup>th</sup> century culminated with a catastrophic attack in 1431, during which the Thai sacked Angkor. Shortly thereafter, Angkor was abandoned, and the capital was moved south, further from the marauding Thai armies, eventually settling on the present-day site of Phnom Penh. But this move, as Cambodians say, only brought them closer to being caught between the "Tiger" and the "Crocodile," because the Vietnamese people were steadily expanding down the coast of the South China Sea towards the Mekong Delta. In the 16<sup>th</sup> through 18<sup>th</sup> centuries, Cambodia was gradually squeezed between the Thai and the Vietnamese, losing territory and autonomy. The fractious nature of Cambodia's royals, with frequent usurpations and repeated dynastic succession struggles, made it only that much easier for Cambodia's neighbors to manipulate the country. By the middle of the 19<sup>th</sup> century, Cambodia was on the verge of extinction, with large sections of the empire having been annexed by their neighbors. There were long periods when the entire country was occupied by either Thai or Vietnamese troops, or more often, both. But the world was beginning to shrink, and new imperial players were starting the territories of the Angkor Empire.

## Cambodia Becomes a French Colony

In 1863, the Cambodian royal court was under the patronage of Thailand, and some Cambodian officials of the court were chafing at Thai influence. France offered King Norodom a treaty of protection, promising to balance Thai influence in exchange for rights to extract natural resources from Cambodia. The King accepted, and although the Thai resisted, the next twenty years saw a gradual extension of French influence at the court, wresting control over economic life in the capital, and eventually, installing French *résidents* in provincial towns. A rebellion against the increasing foreign influence flared in 1884, and after putting this down, the French briefly slowed the expansion of their control, but the growth of their power over Cambodian affairs was inexorable. With the installation of King Sisowath in 1906, French domination of the affairs of state in Cambodia became complete, and thenceforth, Cambodia was a colony of France.

While the French were principally interested in extracting natural resources from their colony, French officials justified their control of Cambodia at home, to international audiences, and perhaps even to themselves, by proclaiming a *mission civilisatrice*. And indeed, France did do much to modernize traditional ways of life in Cambodia's towns. They abolished slavery, rationalized tax collection, and instituted a system of land titles, in the process utterly overturning the way that Cambodia had been governed for centuries. They brought modern technology to Cambodia, providing electrification and running water first in Phnom Penh, and then elsewhere in the provinces. The French created a network of paved roads through-out the territory, and developed a plantation economy. And they also brought additional foreign influences in the form of Chinese traders and merchants, and Vietnamese workers and supervisors. The growing population of Chinese and Vietnamese was a key impetus in the gradual emergence of nationalist sentiments among the Cambodian elite.

By 1940, Europe was at war. In June of that year, the Vichy government took power in France, which had been overwhelmed by Germany. In Southeast Asia, French colonial officials attempted to maintain their authority, but the weakness of a conquered France made this a difficult challenge. Japan was expanding its influence and control across Southeast Asia. The Thai, for their part, took advantage of the opportunity to seize large swaths of Cambodian territory. Amidst this turmoil, Cambodia's King Monivong died, and a succession crisis ensued. In a bid to increase French control over spiraling events in Cambodia, French Governor-General Jean Decoux chose a teenage prince named Norodom Sihanouk to be installed on the throne. Decoux judged that this young man would be a more pliable puppet than the heir apparent, King Monivong's son, Prince Monireth. This would prove to be a miscalculation.

## The Twilight of French Colonial Power

In asserting control over Cambodia, the Japanese had faced two problems: how to undermine the French colonial administrative apparatus, and how to circumvent the considerable symbolic power held by the Cambodian God-King, Norodom Sihanouk. Their solution to these problems was devilishly modern; they encouraged the small

liberal Cambodian elite to form a republic. This plan was enthusiastically grasped by Cambodian urban elites who saw it as a solution to their own problems of colonial oppression and feudal backwardness.

This short-lived republican scheme was summarily crushed by the French when they swept back into Indochina after the war, with the help of King Norodom Sihanouk, who understood very well how pressure for democratization was a threat to his own power. But the republican interlude during World War II had unleashed forces – and similar forces were also brewing in Laos and Vietnam – which would bring down the curtain on the French Empire in Southeast Asia in less than a decade.

Recall that in the wake of World War II, the United States was leading a drive for decolonization of European imperial possessions around the world – though this drive was not pursued in French Indochina. Thus, to appease the nationalist sentiments that had been awakened in the Cambodian body politic, King Sihanouk was forced to become more nationalist than the nationalists, so to speak. He launched a “Royal Crusade for Independence” from France, and alternately allied himself with forces on the left who sought a socialist republic, and forces on the right who sought a liberal republic, squarely retaining command of the center.

By the early 1950s, the French were beleaguered by guerilla attacks all across Indochina – in Vietnam, Laos and Cambodia – as well as peaceful political resistance. By 1954, they realized that the game was up, and sued for peace. Cambodia became an independent nation.

#### The Sangkum Period: Kingdom of Cambodia

After all that has come since, Cambodians old enough to remember the period look back on Norodom Sihanouk’s post-independence government as a Golden Age. Though no doubt it is all relative, in truth, there were many things about this period which were not so golden. The Geneva Conference of 1954 mandated elections in Cambodia and Vietnam. The United States worked with the emerging military dictatorship of Ngo Dinh Diem in southern Vietnam to thwart the holding of democratic elections there, but in Cambodia, elections went forward, though exactly how democratic they really were is another matter.

King Norodom Sihanouk abdicated the throne in favor of his father, and in the pose of “ordinary prince” – a pose no one really believed – he moved to rapidly assemble a political party to contest the elections. He named his political vehicle the “Sangkum Reastr Niyum,” or Popular Socialist Community. Cambodia’s heretofore dominant political party of the right, known as the Democratic Party, and a hastily organized party of the left, known as the Pracheachon, or People’s Party, never stood a chance against Sihanouk’s charisma – or against his aggressive security apparatus.

Claiming to have single-handedly brought Cambodia to independence from France, Sihanouk was able to reinforce the respect he already commanded among the

population from fifteen years as the nation's monarch. Among some in the peasantry, Cambodian kings were still revered as something like gods, custodians of a mystical link between heaven and earth, bringers of life-giving water, and of course, terrible in their wrath, with the power of life and death over mere mortals. The last part, at least, was all too true.

Using his control over the country's security forces, Sihanouk ruthlessly eliminated all rivals for power. Those among the Democratic Party who could not be co-opted into joining Sihanouk's party would suddenly find themselves in all manner of difficulties. Those among the Pracheachon Party who attempted to resist the charms of the Prince more often found themselves dead. So effective were Sihanouk's secret police in rooting out potential opposition that many Cambodian leftists fled for Hanoi. Those who stayed were decimated. The urban communist organization was virtually annihilated, and the rural communist infrastructure was reduced to isolated pockets.

It was in this period, in fact, that Sihanouk coined the phrase, "Khmer Vietminh," simultaneously impugning the integrity of Cambodia's left wing by associating them with the reviled Vietnamese communists, while also casting suspicion on their patriotism. Soon he shortened this epithet to "Khmer Rouge," or Red Khmer. Twenty years later, that label would come back to haunt Sihanouk and the entire world.

In 1954, the US organized the Manila Conference, out of which came the Southeast Asian Treaty Organization, or SEATO. SEATO was intended as a bulwark against the expansion of communist influence in Southeast Asia. Sihanouk refused to join, and henceforth Cambodia's relationship with the US was fraught with difficulty. Sihanouk's neutral line in the Cold War did not please the US. Nonetheless, through the 1950s and early 1960s, the US assiduously courted Cambodia with aid totaling some \$300 million, winning support among Sihanouk's military and police forces. They were unhappy when Sihanouk renounced US assistance in 1963, and two years later cut diplomatic relations with the US, on suspicion that the Americans were fomenting insurrection against him.

Sihanouk gave his security forces free reign to suppress domestic dissent from the left. But faced with growing infiltration of Vietnamese communist forces along the eastern border, he decided to turn a blind eye to these violations of Cambodian sovereignty. That would be his undoing. By 1970, a growing economic crisis and a rising nationalist resentment of Vietnamese encroachment led to a decision among the Cambodian elite to oust Sihanouk and declare a republic. The flames of the war in Vietnam were about to engulf Cambodia.

#### The Lon Nol Regime: Khmer Republic

It is an article of conventional wisdom among many in the United States – not to mention worldwide – that the coup d'état executed against Sihanouk by Lon Nol and Sirik Matak in 1970 was a CIA operation. There is no evidence to support that conclusion, though it is true that US intelligence was aware of the plot and did nothing to

discourage it. The tensions within Cambodia's political elite were sufficient to explain the origins of the coup. Sihanouk's Kingdom of Cambodia was declared defunct, and Lon Nol's Khmer Republic was born.

In the immediate aftermath of the coup, however, the United States moved quickly to support the new regime. Battalions of ethnic Khmer commandoes who had been recruited and trained by US Special Forces in Vietnam were quickly airlifted from their bases there to provide support to the new military junta in Phnom Penh. The Nixon administration was soon providing arms and other forms of support to the Lon Nol regime, and before long, the US Ambassador in Cambodia began to function as something like a proconsul. Before the end of the Khmer Republic five years later, US assistance would account for more than 95% of the Khmer Republic's total annual revenue. Cambodia became a US client regime in every sense of the term.

The coup against Sihanouk was a watershed for Cambodia's communists. Though the Cambodian communists had been waging an ineffective low-level insurgency for several years, the Soviets, the Chinese and the North Vietnamese had been content with Sihanouk's policy of neutralism, and offered no support to Cambodia's would-be revolutionaries. But when Sihanouk was overthrown and Lon Nol's regime turned against Vietnamese forces that had been using Cambodian territory to infiltrate southern Vietnam, everything changed. Suddenly Cambodia's heretofore inept communists had big-time allies.

Seeking to avenge his overthrow, Sihanouk took the fateful step of allying himself with the "Khmer Rouge," who until then had been his foremost domestic enemies. With military, economic and diplomatic support from the communist world, there began a vicious five-year civil war which would ultimately lead to the utter destruction of the entire country.

The North Vietnamese Army overran much of the Cambodia countryside in a matter of weeks, turning "liberated" areas over to the rapidly growing Cambodian revolutionary forces. Despite massive US assistance, Lon Nol's army fared poorly against the communists. Soon the Khmer Republic existed as little more than garrisons of a few major cities, with the rural areas in the hands of the revolution. Widespread strategic area bombing of the countryside by the US Air Force between 1969 and 1973 generated a terrible legacy, and a high civilian death toll.

US intelligence believed that the Cambodian communists were a wholly-owned subsidiary of the North Vietnamese. Little was known about them. Few were prepared for the degree of enmity which would develop between the Cambodian and Vietnamese communists, and fewer yet foresaw the unprecedented radicalism that the Cambodian communists would display upon victory. On April 17, 1975, the Khmer Rouge took Phnom Penh and began what has been called "Year Zero," an effort to totally remake Cambodia from the ground up.

## The Pol Pot Regime: Democratic Kampuchea

It is difficult to imagine, and more difficult to describe, how horrible life was in Cambodia during the Khmer Rouge regime. As with all utopian projects, the objective of the Khmer Rouge leadership was to transform not merely society, but to transform human nature itself. And if the nature of any particular human should prove resistant to change, there was an easy solution: death. As a result, approximately one third of the Cambodian population died in the three years, eight months and twenty days that the Khmer Rouge ruled Cambodia.

The Khmer Rouge state of Democratic Kampuchea may well have been the most totalitarian regime in the history of mankind. The Khmer Rouge envisioned something that would make Marx spin in his grave: they were going to accomplish a super-great leap forward from a feudally organized, peasant-based subsistence economy directly into full-fledged communism, skipping the intermediate stages of petty bourgeois dominance, national revolution, industrial development, capital accumulation, and socialist revolution. Robust theorists they were not.

In order to accomplish this dream, their design penetrated far beyond the transformation of economic relations and social institutions into the very seat of human consciousness itself. They aimed to forge a new type of person who could realize their communist ideals. They aimed to change the very way people think.

It began with abolishing cities, emptying all urban centers of all inhabitants and relocating everyone to the wilderness where they were to hack new settlements from the jungle. The Khmer Rouge abolished money, and along with it, both the modern and traditional economies. Markets and all forms of trade or accumulation were forbidden, even barter and foraging, except by state organizations. They abolished religion, focusing primarily on the dominant Buddhists, but also utterly obliterating the minority Muslim sect and the small Christian community. They abolished modern medicine. They abolished families, dispersing spouses to different work camps, taking children from their mothers at age five for training in party military schools. Any expressions of love or affection which were not directed to the party organization were prohibited, and the selection of marriage partners became a function of the state. Every aspect of life was totally collectivized, and all private property – right down to personal eating utensils and even such things as female sanitary supplies – was forbidden. The only permitted activity was grueling manual labor. Failure to work hard and enthusiastically twelve to fourteen hours a day, seven days a week, was punishable by summary execution.

One measure of the brutality of the Khmer Rouge regime comes out of a project being conducted by the Documentation Center of Cambodia, a non-governmental organization that has been collecting information about atrocities during the reign of the Khmer Rouge. For the last decade, this organization has been conducting a systematic survey of mass graves all across Cambodia. With approximately 80% of the countryside

carefully examined, the Documentation Center has located more than 20,000 mass graves dating to the Khmer Rouge regime, containing the remains of an estimated 1.1 million

Dr. Etcheson at Sang Prison in Kandal Province  
(Photo from Craig Etcheson Archives)

victims of execution. This was from a population of approximately seven million at the time. Perhaps an equal number died from starvation, disease, and exhaustion. Two to three of every seven people in the entire country died in less than four years. The following table illustrates the distribution of the executions.

### Mass Grave Surveys in Cambodia, 1995-1999\*

Province	Total # of Sites	Estimated # of Pits	Wells/Other Used as Graves	Prison Sites	Memorial Sites	Estimated # of Victims
Banteay Meanchey	17	567	0	4	3	40,782

The Khmer Rouge were also bad neighbors. They launched military attacks against all three neighboring countries, Thailand, Laos and Vietnam. After several years of punishing attacks in their border provinces, and failed attempts to negotiate a diplomatic solution, the Vietnamese finally decided they could no longer tolerate their former allies. They assembled a liberation force from among Khmer Rouge elements that had fled Pol Pot's purges, and on Christmas Day, 1978, launched a full-scale invasion of

Cambodia. Two weeks later, they had secured the capital, and the Pol Pot regime was ended. Pol Pot fled to the Thai border in the west with the rump of his army, and proceeded to rebuild a military machine to oppose the Vietnamese occupation, and the regime the Vietnamese had put into place.

#### The Heng Samrin Regime: People's Republic of Kampuchea/State of Cambodia

The new regime in Cambodia was dubbed the People's Republic of Kampuchea, and it consisted primarily of Cambodian communists who had fled the terrible purges of the Khmer Rouge regime. Though many among the newly appointed leadership had intensely nationalistic feelings, they labored under the reality of a Vietnamese military occupation of the country. Considering the level of destruction left in the wake of the Khmer Rouge regime, including the annihilation of the intelligentsia, the new regime had little choice but to rely on Vietnam for material support, technical advice and most of all, protection from the defeated but still dangerous forces of Pol Pot.

The Vietnamese invasion also stoked nationalist feelings in other segments of the Cambodian Diaspora. Soon the Khmer Rouge had rivals for the honor of expelling the Vietnamese from Cambodian soil. Remnants of Lon Nol's Khmer Republic regime, who for years had lived in exile along the Thai border, in France, the US and elsewhere, organized the Khmer People's National Liberation Front to contest the new Cambodian regime. Prince Sihanouk, now freed from the house arrest he had endured under Pol Pot, also organized a royalist revolutionary force, and began to build military camps along the Thai border.

Thailand, suddenly finding its historic regional Vietnamese rival bumping up against its border, actively encouraged and supported all three resistance forces. Within a couple of years, international pressure led to the founding of the so-called Coalition Government of Democratic Kampuchea, dominated by the Khmer Rouge, but including the republican and royalist resistance forces. That provided the political cover under which China, the US, the Association of Southeast Asian nations and many European countries would provide assistance to the combined resistance. Geopolitical calculations thus dictated a moral choice which haunts the US to this day: a great deal of US assistance made its way to the Khmer Rouge, who by now were widely suspected of having committed genocide.

In the event, however, neither the new Cambodian government nor the resistance was strong enough to prevail in battle, and so Cambodia sunk into what would become a twenty year long war of attrition. It was brutal, grinding, and bloody. Vietnamese forces, in particular, took an enormous number of casualties, and some came to call the war, "Vietnam's Vietnam." Vietnam still had plenty of its own domestic problems to deal with flowing from their revolutionary victory in 1975, and thus they put in place a program to achieve self-sufficiency on the part of their client regime in Cambodia so that they could eventually withdraw and focus on their own development.

But that program required years of effort, and enormous cost. A great deal of this cost was borne by Vietnam's Soviet ally. Thus when the Soviet Union lurched towards collapse in 1989 and began to reduce support for its own Third World clients, it was fortunate for Vietnam that its program to stabilize the People's Republic of Kampuchea had progressed far enough to allow the withdrawal of Vietnamese combat units from Cambodia.

The collapse of the Soviet Union also transformed the international geopolitical environment in such a way that the principal supporters of the war in Cambodia – the Russians, the Chinese and the Americans – began to seek a way to end the conflict. The resulting negotiations culminated in a framework document in 1990, and the Paris Peace Conference in 1991. The settlement called for a quadripartite solution, with the Phnom Penh regime, the Khmer Rouge, the royalists and the republicans all agreeing to cease hostilities and commit to elections under the guidance of a United Nations peacekeeping operation. The UN force would be known as:

#### UNTAC: The United Nations Transitional Authority in Cambodia

The Paris treaty on Cambodia in October 1991 committed the United Nations to the largest, most expensive and most interventionist peacekeeping operation in history, with the possible exception of the Congo. Idealists argued that the goal of the accords was to bring peace to a land that had known a quarter century of war and genocide. Realists argue the purpose was merely to remove the "Cambodian Problem" from the international agenda. In either case, the "Agreements on a Comprehensive Political Settlement of the Cambodian Conflict" were touted as a model for collective security in the post-Cold War world order. Consequently, it is important to have a clear understanding of exactly what these agreements did – and did not – accomplish.

The Comprehensive Settlement achieved numerous significant objectives. The Cambodian conflict was decoupled from Great Power geopolitical conflict. Chinese military aid to the Khmer Rouge was terminated. Cambodia's two decades of international isolation was ended. About 362,000 refugees left the camps in Thailand and returned to Cambodia. The three-faction, rebel coalition challenging the Cambodian government was reduced to a single recalcitrant faction. The fragile beginnings of political pluralism were put in place. A free press began flowering in Cambodia as never before. Indigenous human rights groups and other civil society organizations were founded and began rapid growth. Approximately 90% of eligible Cambodians registered to vote, and 89% of those voted in 1993's free and fair elections, despite Khmer Rouge threats to kill anyone who participated. A liberal constitutional monarchy was promulgated, and a coalition government began functioning, more or less. These were huge accomplishments, a tribute to the skill and dedication of the international civil servants who risked (and in some cases sacrificed) their lives in Cambodia. It was \$3 billion well spent.

At the same time, one must be clear-headed in assessing the impact of the UN in Cambodia. The Comprehensive Settlement had laid out numerous central objectives

above and beyond the elections, all of which considered to be essential preconditions for a successful mission. First, the ceasefire was to be implemented and maintained. Second, all outside assistance to the warring factions was to be terminated. Third, the warring armies were to be cantoned, disarmed and demobilized. Fourth, the utterly destroyed Cambodian economy was to be rehabilitated. Fifth, the demobilized soldiers, internally displaced persons, and repatriated refugees were to be reintegrated into civil society. And sixth, a neutral political environment was to be established; which is to say, state institutions had to be decoupled from party organs. Not a single one of these central objectives of the UN peace plan in Cambodia was achieved.

US Secretary of State Warren Christopher called the Cambodia's UN-administered elections "the triumph of democracy." Rhetorical flourishes aside, he probably realized that one UN-administered election does not make a democracy. In fact, if one examines the transition to stable, liberal democratic systems in western, northern and southern Europe, in central and southern Latin America, and in the emerging democracies of East Asia, it is clear that this process has depended in part on the existence of strong labor movements and a powerful middle class, capable of bargaining with military, landed and financial elites. These conditions did not remotely exist in Cambodia at the time of the UN withdrawal, and they still do not. Thus one can confidently conclude that it is premature to predict the consolidation of democratic rule in Cambodia. To be completely fair, critics of the UN operation in Cambodia should not ascribe such a goal to the operation. Partisans of the UN operation should avoid dreaming that the mission could have achieved that goal in just eighteen months.

The Khmer Rouge reneged on the peace agreements, and their defiance of the UN forces in Cambodia quickly showed the Phnom Penh regime that there was no penalty for refusing to play by the rules of the peace treaty – not that they ever intended to do so. Combat continued, and the UN's peacekeeping mission was by turns transmuted into an election-holding mission. Even so, the UN carried out this rump goal very effectively. The May 1993 election produced a constituent assembly, which wrote a new constitution for the country, and in September, a new government was promulgated.

#### The "Royal" Government: Second Kingdom of Cambodia

Thus, one goal that the UN intervention in Cambodia indisputably did achieve was to leave in place a new, legitimate government. Events would soon prove, however, that this government was far from a marvel of efficiency or stability. The new Royal Government of Cambodia was menaced from birth by a continuing Khmer Rouge insurgency, and by an unwieldy political arrangement.

Though the royalist political party had won the election, it faced an unenviable challenge in attempting to govern. For one thing, the second-place Cambodian People's Party controlled the entire administrative apparatus of the state, including the police, the secret police, and the military. For another thing, as is the nature of one-party states, the People's Party and the administrative organs of the state were totally intertwined, two sides of the same coin. Wresting control of such an apparatus is virtually impossible.

Moreover, active cadres of the People's Party numbered in the tens of thousands, and those cadres were spread across every village in the country, where they had been close to the people for the previous fifteen years.

In contrast, the royalist party was very much an elite organization, with little more than a hundred or so experienced political operatives. Moreover, virtually all of their senior operatives had spent the previous quarter century in exile abroad, and thus had little sense of what was really happening on the streets of Phnom Penh, much less in the villages of the countryside. Even after they returned with the UN intervention, royalist officials had little contact with ordinary Cambodians. This was particularly true in the case of their top political officers, many of whom were members of the royal family, and had no desire to mingle with mere commoners.

All of this was a recipe for disaster. The People's Party had refused to accept the election outcome, alleging a variety of irregularities in the UN's conduct of the polling. One faction of the People's Party went so far as to threaten armed succession, terrorizing royalist operatives in several eastern provinces. Realizing their weak position, the royalists agreed to form a coalition government with the People's Party, with power theoretically shared on the basis of co-ministers from each party at the top levels in the organizational hierarchy of the government.

The system of co-ministers was bound to yield nothing but frustration for the royalists. It was clear to all that real power continued to lay in the hands of the People's Party, despite the title of "First Prime Minister" bestowed upon the royalist leader, Prince Norodom Ranariddh. Still, at first, the arrangement appeared to many to be a miracle of national reconciliation, and the country set about rebuilding following many years of war. As tensions between the main coalition partners in the government grew over the first years of the new Royal Government, however, the business of governing gradually ground to a halt, and bickering set in. Many royalists grew increasingly bitter over their lack of access to the levers of power, and the continuing dominance of the People's Party.

In late 1996, royalist military and intelligence officials conceived a plan they hoped would reverse their fortunes. They began to negotiate with the Khmer Rouge, aiming to recreate the alliance of the 1980s and alter the internal balance of power in the government. Intelligence services controlled by the People's Party quickly detected these maneuverings, and Second Prime Minister Hun Sen bitterly denounced the moves, threatening that it would mean war. The international diplomatic community in Phnom Penh urgently called on the royalists to cease and desist from this provocative plan, but hubris carried the day. On July 4, 1997, as the royalists moved to formalize their alliance with the Khmer Rouge, the coalition government exploded into combat on the streets of Phnom Penh. The royalist military was quickly routed, and a number of their key senior intelligence officials were rounded up by People's Party loyalists and summarily executed. First Prime Minister Prince Norodom Ranariddh fled the country just ahead of the fighting.

Though it was quite brutal, one significant result of the coup d'état was that the three competing military factions within the Cambodian government – those loyal to the People's Party, the republicans and the royalists – were reduced to one. After much posturing and international pressure, the People's Party agreed to new elections and the royalists returned from exile. In 1998, the elections were held, eventually yielding a new government dominated by the People's Party. Norodom Ranariddh, Sihanouk's son and the former First Prime Minister, settled for a largely ceremonial role as President of the National Assembly.

At the same time, using a combination of military pressure and negotiations offering various forms of amnesty, the Khmer Rouge military and political organizations were gradually divided and conquered by the People's Party's Hun Sen. At the end of 1998, the last remaining Khmer Rouge political leaders surrendered to the government, and early in 1999, the last remaining Khmer Rouge military chieftain was captured. The Khmer Rouge had finally been defeated.

Since then, Cambodia has struggled to adjust to an unaccustomed life as a peaceful society, to rebuild an economy shattered by decades of war, and to find some way to achieve national reconciliation in a nation where the majority of the population alive today has known nothing but conflict for their entire lives. It will take generations to achieve these goals.

### **Issues and Questions**

1. For the last six hundred years, Thailand and Vietnam have fought each other in repeated wars on Cambodian territory. Cambodia can thus be seen as a buffer zone between two rival regional powers. But in the course of these wars, Thailand and Vietnam have annexed much of what was the Angkor Empire. The most recent of these wars ended in 1991 with the Paris Peace Accords. Many Cambodian intellectuals say they fear that the Mekong River one day soon will become the border between Thailand and Vietnam. Does Vietnam's admission to the Association of Southeast Asian Nations mark a breakpoint in this long history of rivalry between the two nations, or is it more likely a strategic pause before the next round of conflict?

2. Many a Cambodian ruler has seen power slip from his grasp under the pressure of peasant rebellions. The Khmer Rouge attempted to exploit the power of the peasantry by ruling in the name of the peasants, but their oppression was so extreme that the people welcomed the overthrow of the Pol Pot regime by foreign forces. We can conclude from this that Cambodia cannot be ruled without at least the acquiescence, if not the active support, of Cambodia's peasantry. Given that many observers say the conditions of life for rural Cambodians have been growing steadily worse over the last fifteen years, what are the prospects for internal stability in Cambodia should this trend continue?

## CULTURE AND SOCIETY

This section of the study guide provides the sparsest of introductions to Cambodian culture and society. In particular, we will examine the growing divergence between urban and rural lifestyles, social structure, religion, and national holidays. Each of these topics reveals some important things about what it means to be a Cambodian.

It is sometimes said that Cambodia is not one, but rather two countries – Phnom Penh and “not-Phnom Penh.” Remarkable progress has been made over the last decade in restoring the charm and luster that Phnom Penh lost during the war years. In the capital today, one finds five-star hotels, pizza parlors, fine French restaurants, Internet cafes, satellite dishes, and many other appurtenances of contemporary cosmopolitan life. Streets, sidewalks, storm sewers, parks and other public amenities are being gradually rehabilitated throughout the city. These factors make Phnom Penh a comfortable posting for expatriates, diplomats and other foreigners – notwithstanding the occasional outbreaks of armed violence. A surprising proportion of Cambodians in Phnom Penh speak at least some English, ranging from civil servants to service sector employees to taxi drivers. But for foreigners who never venture outside of Phnom Penh, the glitz of the capital masks what many consider to be the “real Cambodia.”

Outside this urban center, the 80% of the Cambodian people who live in the countryside still exist in a largely traditional peasant environment, with few modern conveniences. In some remote rural villages, it appears as if life has changed very little over the centuries. The vast majority of Cambodians continue to eke out a meager existence through subsistence agriculture, never more than one crop failure away from catastrophe. Their social lives revolve around extended family ties, the village, and Buddhism. Many of them have never traveled more than a few miles beyond their home village. At the same time, and in contrast to some of their city cousins, Cambodia’s rural population hews to a set of core values that are in some ways strikingly similar to those of farmers in the US heartland: they tend to be honest, hard-working, conservative, and generously hospitable. These values are anchored by a traditional social structure in which every person knows his or her place in the scheme of things.

### Social Structure

The Cambodian language contains an intricate vocabulary that is designed to indicate differences in the status of individuals, and this reflects the country’s highly hierarchical social structure. Beginning with the King, there is a complex set of linguistic constructs (“the royal language”) that is used at court when addressing the sovereign, depending upon whom is speaking to whom (the King, the Queen, consorts, concubines, siblings and children of the King and the Queen, court officials, younger and older princes of another royal line, younger and older princesses, religious officials, secular officials, commoners, and so on). Though somewhat less elaborate, there are similar forms of speech that are used in everyday verbal intercourse to indicate relative social status, encompassing senior government officials, individuals of royal title, rankings by age, wealth, military office, and other indicators of social standing. Within a family, for

example, different forms of speech are used to address older and younger siblings of each gender, parents, grandparents, children, grandchildren, in-laws, cousins and other relations. The Khmer Rouge attempted, but failed, to eradicate these linguistic signs of social status, although their assault on these traditional forms of speech does appear to have slightly attenuated the historically sacrosanct nature of this practice.

Casual observation of these forms of speech in everyday life can lead one to conclude that women are valued less than men in Cambodian society. While this is true in some respects, anthropologists have concluded that traditions of gender relations in Cambodia are rather more complex than that. For example, women are expected to be virtuous, particularly with respect to sexual matters, while men are not. It is common for young males to be initiated into sexual activity by prostitutes, but females are expected to remain chaste until marriage, and to remain faithful thereafter. Men, on the other hand, commonly employ the services of prostitutes. This duality is reflected in the fact that many Cambodian men insist on the truth of the myth that there is no such thing as a Khmer prostitute, only Vietnamese prostitutes. Nonetheless, the role of women in family life is in many ways dominant. The wife traditionally manages the household finances, and often assists her husband in functioning effectively as the family breadwinner.

The ambiguous duality of gender roles in Cambodia becomes slightly clearer when we observe educational attainment. As of 2000, for example, 80% of adult males were literate, but only 57% of adult females were literate. While 66% and 65% of males and females respectively were enrolled in primary school, by secondary school those figures fall to 24% and 14% respectively. A large part of the reason for the dramatic decline in secondary attendance is economic, insofar as many families are unable to afford the costs of education. But if a family must choose, often they choose to educate their male children, while the females stay home to help with chores and farming.

## Religion

The dominant religion in Cambodia is Buddhism, and there is a minority but still substantial following of Islam. Despite the years of communist control, religion remains a crucial influence in the lives of most Cambodians. When asked what it means to be a "Cambodian," many people will answer, 'a Cambodian is a Buddhist.' Cambodia's version of Buddhism is syncretic, which is to say, it combines mainstream Buddhist doctrine with elements of Hinduism, animism, and other indigenous traditional spiritual beliefs. As a result, the spirit world suffuses Cambodian Buddhism. Ancestor spirits are held to be particularly potent, and spirits are also associated with many other aspects of the world, such as particular places and things. For example, there are "spirit forests" in many places in Cambodia, where large, old trees, are believed to be inhabited by guardian spirits; this has led to serious conflict with loggers in some cases. Mainline Buddhist practice has been slow to regenerate after the religious devastation of the Khmer Rouge period, when the Sangha was utterly annihilated. During the People's Republic of Kampuchea period in the 1980s, the government permitted a limited practice of Buddhism, but did not actively encourage it, preferring that it be restricted primarily to the few surviving monks and the elderly. But after the withdrawal of Vietnamese troops in 1989, Buddhism was again declared the state religion. The once-respected Buddhist Institute in Phnom Penh began to be regenerated only during the period of UN intervention, and has grown, albeit slowly, since then. Well-trained monks are still few and far between today, and this has resulted in many scandalous incidents of devotees who fail to uphold the precepts of the religion by drinking alcohol, consorting with women, and engaging in other prohibited activities.

The form of Islam practiced by Cambodia's Cham population is, like Cambodian Buddhism, also syncretic. Many Cambodian Muslims profess to believe not only in the teachings of the Prophet Mohammed, but also in the teachings of the Buddha. Like Buddhism, Islam in Cambodia was nearly destroyed under the Khmer Rouge, with virtually all of the religious leaders exterminated, and much of the physical apparatus of the religion laid waste. In the years since, Islam has been revived in the Cham community in large part thanks to the efforts of foreign missionaries, at first primarily from Malaysia, but in recent years increasingly from Saudi Arabia, Kuwait and other Gulf States. Some of these missionaries have attempted to introduce fundamentalist forms of Islam into the Cham community, particularly from the Sufi, Wahhabi and Salafist sects. These proselytizers have not, however, found particularly fertile ground among the Cham, who regard these more austere and militant versions of Islam as inimical to their traditional beliefs and lifestyles. Even so, these forms have had some influence; for example, it is now more common than it has been to see Cham veiled from head to toe, with only their faces visible.

## Holidays

Cambodia is notable for its many national holidays. The Cambodian people love a good party, and this shows in the profusion of events that are officially celebrated. Perhaps nothing exemplifies this more clearly than the fact that Cambodia celebrates not

one, but three different New Year holidays, including the international new year, Chinese New Year (late January/early February, varying according to the lunar calendar), and the Cambodian New Year (March 17). Another key national holiday is Pchum Ben, or Ancestor Day (September), which is actually observed for nearly a week, a time when many people travel to their ancestral villages to honor the spirits of their ancestors. Vesak Buchea Day (late May) marks the birth, enlightenment and death of the Buddha.

There are also several important royal holidays. One of the most notable of these is the "Plowing of the Furrow" ceremony (late May), during which oxen are brought to the Royal Palace and presented with several different bowls containing grains, water, legumes, and other items; by observing which items are of most interest to the oxen, astrologers are believed to be able to predict the course of the coming agricultural season. The Water Festival (usually early November, but set by the royal astrologer) is another important national holiday, nominally marking the victory of Jayavarman VII in an epic naval battle against the Kingdom of Champa in 1178; the parades, floats, boat races, and other amusements of the Water Festival today bring millions of people from the provinces to Phnom Penh for several days of celebrations. The King's Birthday (October 31) has been observed solemnly each year since the restoration of the monarchy in 1993, with the exception of 1997, when all concerned were distracted by combat between the royalist party and the ruling party. Finally, Independence Day (November 9) marks the end of French colonialism, and is celebrated with a ceremony at Independence Monument which is located, not coincidentally, at the intersection of Norodom Boulevard and Sihanouk Boulevard.

Since the fall of the Khmer Rouge regime, multiple international holidays have been observed, and these seem to have proliferated over the years. They include International Women's Day (March 8), International Labor Day (May 1), International Human Rights Day (December 10), and Paris Peace Accords Day (October 23). There are also several controversial holidays that are freighted with political baggage, including "Liberation Day" (January 7), and the "Day of Hate" (May 20). "Liberation Day" nominally marks the day that the Khmer Rouge were expelled from Phnom Penh in 1979; however, for many who are not partisans of the ruling party, this observance is acidly referred to as "Vietnamese Invasion Day." Similarly, the "Day of Hate" was instituted in 1983 as a means of promoting solidarity in the struggle against Pol Pot's Khmer Rouge; this particular holiday has been in the process of transition in recent years. It was suppressed at the demand of the royalists in the early years of the first post-UNTAC government, then revived after 1997 by the ruling party, and in the last few years has begun to be referred to as a "Day of Commemoration" or a "Day of Remembrance," out of consideration for national reconciliation.

## Art

Those who are unfamiliar with Cambodia might be forgiven for thinking that the Cambodian arts consist primarily of the multitude of ancient Hindu and Buddhist carvings that decorate the monuments at Angkor. But in fact, Cambodia boasts a wide variety of artistic forms, traversing the performing arts, plastic and design arts, literature,

and architecture. Within each of these categories, there is a rich diversity of styles ranging from the traditional to the modern. Contemporary artistic forms in Cambodia include classical dance by the royal ballet, folk dances from the provinces, shadow puppet theater, modern theater, story-telling, music such as pinpeat orchestra, rock and roll, rap, design arts like weaving and jewelry design, a profusion of painting styles in watercolor, oil and other media drawing on traditional and modern influences, with a vibrant school of impressionism, sculpture, and a wide range of literature styles in poetry and prose – all of these artistic endeavor and more are flowering in Cambodia.

In a very real sense, this flowering of artistic creativity also amounts to a resurrection, both in the traditional and modern arts, because virtually all art forms were driven to the edge of extinction by the Khmer Rouge drive to eliminate perceived foreign, bourgeois and monarchical influences from Cambodia. By some estimates, nine out of ten of Cambodia's artists perished under the Khmer Rouge. But perhaps no art form more uniquely identifies Cambodia than the royal ballet. The restoration of classical dance has helped to restore a sense of national unity and pride, distancing the Cambodian people from their recent years of turmoil, appealing to enduring values embedded in Cambodian culture. As Julie Mehta has written, "Cambodian classical dance is the single most lively connection the modern Khmer have with their glorious ancestors." [Mehta 2001]

Cambodian classical dance was once the exclusive preserve of the Cambodian king, an entertainment of the court which served to symbolize the mystical connection between the king and the divinities. During the colonial period, the French were taken with the royal dance company and made it available to French and colonial audiences. At independence, King Sihanouk took measures to re-appropriate the court dance troupe and eliminate what he regarded as foreign influences that had seeped in during the years of French dominance. With these changes and the climate of nationalistic ferment in the 1950s, Cambodia's classical dance evolved into a popular medium. As a symbol of the monarchy, however, it was virtually destroyed during the Khmer Rouge era, when nearly all of Cambodia's classical dancers were killed. In recent years, this art form has been undergoing a revival, and has now been harnessed as a means to bind the nation together again. With its spare style and elegant forms, classical dance transports the audience to another time and space, far from the turmoil of recent years.

The evocation of the glory of the Angkor Empire present in every performance of the royal ballet is the key to the way Cambodian classical dance contributes to regenerating a sense of cultural unity and nationhood. A standard in the classical dance repertoire is the *Reamker*, Cambodia's adaptation of the Indian classic, *Ramayana*. This tale is the story of Ream (named "Rama" in the Indian version), an incarnation of the Hindu god Vishnu, tracing his exploits and woe across his lifetime. At the center of the story is an epic battle involving legions of monkey-warriors and demons in a struggle to rescue Ream's kidnapped wife, Seda (or "Sita" in the Indian version). An indication of how intimately this legend is tied to Cambodia's identity as a nation can be found in the fact that many of the bas reliefs in Angkor Wat and other Angkor Empire-era temples depict scenes based on the *Ramayana*. In this respect, this story and its enactment in

classical dance provides a potentially potent symbolic rallying point for the shattered nation.

### **Issues and Questions**

1. A prime tenet of Buddhism is compassion, which promotes the corollary value of tolerance. Consequently, Cambodians tend to be remarkably tolerant of other religions, including not only Islam, but also Christianity, Hinduism, and many other faith traditions. In Cambodia one therefore finds a vast range of missionaries attempting to convert Buddhists – who seen by some as adherents to a “godless” religion – to another faith, including Mormons, Catholics, various Protestant sects, various Muslim sects, and many others. Interestingly, the growth of Christian churches in former Khmer Rouge zones has been particularly strong in recent years. What impact might the progressive proliferation

Association of Cambodia, only 16 are entirely Cambodian-owned; the majority of the textile factories that produce products for export are Chinese-owned, with the remainder owned by Korea, Malaysia, Singapore, Europe and US. The largest market for Cambodian textile exports is the US, which buys approximately two-thirds of Cambodia's exports. Europe accounts for most of the other third. However, Cambodian textile the exports to the US have been made possible by virtue of the Multi-Fiber Agreement quota system, and under World Trade Organization rules, that quota system is scheduled to end on December 31, 2004. (Cambodia was admitted to the WTO in September 2003, along with Nepal becoming the first 'least developed countries' to join the organization.) There is a widespread expectation that with the elimination of the advantages conferred by the quota system, foreign factory owners are likely to move these textile and garment enterprises to other countries that offer comparable labor costs, and stronger infrastructures and legal regimes. Should this occur to any great extent, it will have a dramatic impact on Cambodia's economic performance.

In contrast to the modern factories that serve the export market, many textiles produced for Cambodia's domestic market are still made the old fashioned way.  
(Photo by Craig Etcheson)

This would be an unfortunate development, indeed, because at present Cambodia is already the poorest country in Southeast Asia. As of 2003, 78% of its population lived on less than \$2 per day, and 45% were below the poverty line at less than \$1 per day. The bulk of these impoverished people are rural agricultural small-holders. Moreover, recent studies have shown that the practice of "land-grabbing" by rapacious units of the Royal Cambodian Armed Forces is increasing in many provinces, and as a result, more and more displaced rural residents are becoming landless and utterly destitute. This is a significant part of the reason why poverty rates in Cambodia continue to rise, despite the steady growth of GDP. In addition, the fact that some 60% of Cambodia's population is

under twenty years of age means that a huge demographic bulge is preparing to enter the workforce, and at present it is difficult to foresee how the economy can possibly create enough jobs to absorb this supply of labor. That is a formula for serious social unrest, and it looms in the immediate future.

The government's budget for 2003 was projected at slightly more than \$700 million. Approximately half of Cambodia's national budget is financed by foreign aid, with much of that aid focused on capital investment. Over the last decade, the international community has pumped billions of dollars into Cambodia's economy, fulfilling a commitment made in the Paris Peace Accords of 1991. How long this level of donor generosity can be sustained is a critical question for Cambodia's leaders. Given the limited appeal of the Cambodian economy to foreign direct investors, without this high level of charity, that economy would face dramatic problems. It is for these reasons that King Sihanouk has frequently lamented that his country has become a "beggar nation."

In standard analyses of Cambodia's national accounts, and in the data produced by international financial institutions on the performance of Cambodia's economy, a central aspect of the economic realities of Cambodia is typically neglected: there is reason to believe that a very significant proportion – perhaps a majority – of economic activity in Cambodia occurs "off the books." For example, most of Cambodia's civil servants earn a salary averaging \$20 per month, which is only a fraction of the amount required for a single person to survive in urban Cambodia. And yet, most of these civil servants own a home, an automobile or motorcycle, a cell phone and so on. How is this possible? The answer is that additional resources flow to each employee through a system of clan support. It works like this: even though primary and secondary education is nominally free, each teacher demands a small payment of 100-200 Riel (2.5-5 cents) from each student, each day. The teacher retains a small amount of this income, but most of it is handed over to the principal, who in turn retains a small amount and gives the balance to the superintendent, and so on, as the cash flows up the clan hierarchy to the top, ending up in the hands of, say, Hun Sun. This process occurs in each and every aspect of life in Cambodia, and the result is a very large cash flow. The substantial resources thus garnered are allocated by the clan leader to support his "extended family," thereby earning and retaining their loyalty.

The cash flow that is generated through this hierarchical system of payments is significantly augmented through the black market economy. Gambling, drug-smuggling, money laundering, human trafficking, illegal logging, the gem trade and other illicit activities produce huge revenue streams that are similarly allocated through the clan system. For example, one recent analysis of the human trafficking industry in Cambodia calculated that the cash flow from the sale of human beings and the associated prostitution industry generates upwards of \$250 million dollars annually. That revenue alone would amount to one-sixteenth of the nominal GDP, and none of it appears on national accounts. If we extrapolate the revenue streams from this single area of the black economy across the entire range of illicit economic activities in the country, the

conclusion is inescapable that standard economic analyses of the country do not describe totally the true nature of Cambodia's economy.

### **Issues and Questions**

1. Demographers project that given current trends in fertility and mortality, Cambodia's population will nearly double in size by 2025, to some 22 million. Taking into account the declining availability of arable land in Cambodia, as well as the limited growth prospects for Cambodian industry, what impact is this development likely to have on the overall standard of living in the country in coming years?

2. Off-shore exploration of potential hydrocarbon deposits in the Gulf of Thailand by international oil companies has indicated that there may be very large, albeit as-yet unproven, deposits of natural gas and petroleum within the exclusive economic zone claimed by Cambodia. However, the most promising areas for hydrocarbon exploitation are the subject of territorial disputes with Thailand. Explore the implications of this situation for a) the development of Cambodia's domestic economy; b) Cambodia's relations with Thailand; and c) Cambodia's integration into the international economic system.

## GOVERNMENT AND POLITICS

This section of the study guide provides an overview of Cambodia's system of government and politics. It will review the branches of the government – the executive, legislative and judiciary – and provide snapshots of the major political parties, as well as a brief insight into the functioning of the country's political processes.

Cambodia's government, as defined by the Constitution of 1993, is a multi-party liberal constitutional monarchy, with a monarch who "reigns but does not rule." The three branches of government – the executive, legislative and judicial – are co-equal and independent only in theory, as practice has not yet come fully into conformity with the constitutional design. The reality in Cambodia today is that the executive drives the process of governance, with the other two branches playing subsidiary roles.

### Hun Sen and the Cambodian People's Party

For all intents and purposes, Cambodia's Executive branch is now, and for twenty years has been, a man named Hun Sen. Prime Minister Hun Sen has displayed a remarkable ability to out-manuever his opponents for more than two decades. Born in 1952, he has achieved extraordinary accomplishments for a peasant boy with a limited formal education. But he did attend a Phnom Penh high school, and learned to read and write. These skills served him well when he joined the Khmer Rouge guerillas in 1970. Respected by his largely illiterate peers as a relatively intellectual figure, he quickly assumed leadership positions. Hun Sen was soon selected by the Khmer Rouge for advanced leadership training. His bravery in combat further impressed his communist superiors. He was one to be watched, and groomed.

Over the course of the 1970-75 civil war, however, Hun Sen came to see the wanton brutality of the organization he had joined. As the Khmer Rouge regime took shape after 1975, he was ordered to lead his troops against domestic "enemies" of the regime. Hun Sen says that he evaded a command to attack an ethnic Cham village in Kroch Chhmar District of Kampong Cham Province around the end of September 1975 by claiming that he and 70% of his men were sick with malaria. He also began to see increasing numbers of his revolutionary comrades being called away by the Khmer Rouge for "meetings," never to be seen again. Before long it was his turn to be called away for a meeting, and it was then, in June 1977, that he made the fateful decision to flee the Khmer Rouge purges for Vietnam. Like the Khmer Rouge before, the Vietnamese also soon recognized his leadership potential, and began grooming him to lead forces back into Cambodia to fight and topple the Khmer Rouge regime.

After the Khmer Rouge regime was overthrown, the Vietnamese selected Hun Sen as Foreign Minister of the new regime. He performed well in that role, gaining stature among his colleagues, trust from the Vietnamese whose troops occupied the country, and experience with the international community, in general, and the United Nations, in particular. Within a few years he was appointed as Prime Minister, a post to which he has clung through the following tumultuous two decades. His survival in such a

lethal environment demonstrated Hun Sen's ferocious competitive drive. He is a natural, an instinctive political animal.

Despite his self-declared image as "Strongman," and the perception many of his opponents have of him as a dictatorial tyrant, Hun Sen does not rule entirely at his own whim. Most important policy decisions are first hashed out in the Standing Committee of the Cambodian People's Party, and then submitted to the Council of Ministers for consideration. In the ruling party's politburo, Hun Sen is not even first among equals, ranking second after Chairman Chea Sim. Reflecting its roots as a communist organization, the ruling party still operates according to a slightly fractured version of democratic centralism. Policy issues are debated, and a consensus is forged among the representatives of the various clans that carry weight in the upper reaches of the party. Hun Sen's occasional tendency to present his colleagues with *faites accompli* has given rise to many tensions over the years, and has earned him a significant degree of enmity among his rivals within the party. Thus it is not for nothing that he maintains a large, private security contingent.

Hun Sen with US Ambassador Charles Twining, May 1994  
(Photo by Craig Etcheson)

And indeed, Hun Sen does have rivals within the Cambodian People's Party (CPP), despite the fact that the CPP endeavors to project an image of unity and solidarity. Analysts have long identified People's Party Chairman Chea Sim as the head of a clan that is considered a rival center of power to Hun Sen. Chea Sim has a long background in senior leadership positions, first as a Khmer Rouge district chief in Kampong Cham during the Democratic Kampuchea regime, then as Interior Minister and a key member of the Council of State during the crucial formative phases of the People's Republic of

Kampuchea, longtime President of the National Assembly, and more recently, President of the Senate during the Second Kingdom of Cambodia, and Chairman of the ruling party since 1991. Over the course of these thirty years in leadership posts, he has assembled a large following in the party and government who owe their positions to his patronage. In the last few years, one of Sim's protégées, Deputy Prime Minister and Interior Minister Sar Kheng, has himself developed a clan structure that appears to be breaking off from Chea Sim's and forming a center of power in his own right.

### Norodom Ranariddh and FUNCINPEC

Prince Norodom Ranariddh leads the "National United Front for an Independent, Neutral, Peaceful and Cooperative Cambodia," more commonly known as FUNCINPEC (for the French acronym of the official name), or simply the "royalist" party. The first mandate of the then-new Royal Government was given in the UN-sponsored election in 1993, and the royalist party took the largest number of seats in parliament in that election. The second mandate came out of the 1998 election, when the Cambodian People's Party claimed the largest block of seats in parliament, and joined in a coalition with the second-place royalists to form a governing majority. A minority of seats in 1998 went to the third-place opposition group, the Sam Rainsy Party.

In the July 2003 national election, the royalist party took a big hit. The CPP increased its seats in the Assembly from 64 in the outgoing parliament to 73 in the third mandate. The opposition party made strong gains, increasing its seat holdings by 60%, from 15 in the outgoing Assembly to 24 in the coming Assembly. All these gains were at the expense of the royalists, whose share of seats in the Assembly will decline from 43 to 26, a loss of nearly half their Members of Parliament. Moreover, in terms of the popular vote, the opposition party edged out the royalists with 22% of the votes compared to 21% for the royalists.

Why are the royalists losing seats? They have seen a steady decline in their popularity, from 58 seats in 1993's election, to 43 in the 1998, to 26 in the 2003. Part of the reason for this slide in public support is due to perceptions of corruption on the part of some senior royalist leaders. Partly it is due to perceptions that the royalist party is poorly led, and politically inept. And without question, partly it is due to the perception among some of their erstwhile supporters that the royalists sold out to the ruling People's Party during the 1998 mandate, functioning as a weak junior coalition partner in government, unable to articulate significant policy differences between itself and the ruling party. Another significant element may be regular statements from King Norodom Sihanouk, expressing contempt for his son, Norodom Ranariddh.

As has usually been the case over the centuries, Cambodia's royal families today engage in internecine competition for power, patronage, influence and money. Though Ranariddh has been the undisputed leader of the royalist organization since his father turned the reins over to him in the early 1980s, he is not without rivals. Chief among these are his uncle, Prince Norodom Sirivuth, whose intelligence and political acumen are widely regarded to be far superior to Ranariddh. Since the turn of the century, Sirivuth

has served as the Secretary-General of the royalist party. Members of the other principal royal family, the Sisowath royal line, also compete for position.

### The Sam Rainsy Party

Sam Rainsy was born in 1949 to an old Cambodian political family; his father, Sam Sary, was a Deputy Prime Minister in the 1950s. There has long been speculation that Sihanouk's secret police did in Sary. Rainsy was raised and trained in France, and waited out much of the war years working as a financier in Paris, but maintained close connections with the royalist party. He returned to Cambodia to stand for a seat in the National Assembly during the 1993 election, and was subsequently appointed as Minister of Finance in the first coalition government. Rainsy received high marks from his international interlocutors for his honesty, integrity and effectiveness in that position. But his vocal denunciations of government corruption soon bought him trouble with his colleagues in the royalist party and the government at large. After publicly criticizing Ranariddh for corruption, Rainsy was expelled from the party, dismissed as Finance Minister and stripped of his seat in the National Assembly.

Rainsy promptly formed a new political vehicle, the Khmer Nation Party, and began to attract a following that responded to his appeals for good government, his bitter criticism of the People's Party, and his very harsh rhetorical line against Vietnam and Vietnamese. The CPP soon engineered the emergence of a rival political party that took the same name – the Khmer Nation Party – and in the subsequent lawsuit, Rainsy lost the right to use that name. At that point, he renamed his party after himself, as the Sam Rainsy Party, or SRP. Sharing leadership in the SRP is Rainsy's wife, Tioulong Samura, who, like Rainsy, also comes from an old Cambodian political family. It is often speculated that Samura is the real brains behind the SRP operation, and no one doubts her abilities. As a team, they transformed the face of Cambodian politics in a very brief period of time. The SRP appears to be on the verge of eclipsing the royalists as the second largest political party in Cambodia, but then, that assessment depends in part on what one thinks of Cambodian elections as a barometer of public opinion.

### Elections in Cambodia since 1993

The idea of genuinely representative elections in Cambodia is a very new thing – so new, in fact, it may not have happened yet. The election staged by the United Nations in 1993 was widely regarded as having been free and fair, by everyone except the incumbent Cambodian People's Party, which denounced its loss to the royalists as fraudulent, and mounted a short-lived succession threat in eastern Cambodia. The pressure of CPP opposition to the vote led to a power-sharing arrangement with the royalists, an arrangement that contained the seeds of its own destruction. That coalition government eventually erupted into factional fighting in 1997.

The 1998 election took place amidst an environment of serious political turmoil, and as the first election to be managed by the Cambodians themselves, it exhibited more than a few flaws, and left many questions in its wake. Both the royalists and the

opposition party rejected the results of that election, taking to the streets in protests that eventually turned violent, provoking an even more violent government response. But the losers may have had a point about the fairness of that election. For example, a random survey of 100 likely voters was taken just days prior to the election among recently-defected former Khmer Rouge rebels in the foothills of Kampong Speu Province's Kamchay Mountains. Of the 100 persons questioned, not a single individual voiced any support for the CPP; most bitterly denounced the ruling party. And yet, when the votes were tallied, this particular constituency – Taing Syar Commune in Phnom Srouch District – came in with 55% of the vote for the CPP. Was it a silent majority speaking? Or was it manipulation of the vote? Perhaps we will never know, but that result was far from the only suspicion raised in the 1998 election.

Were the July 2003 elections “free and fair”? Most international and domestic observers have declared that July's election may have been the cleanest in the history of Cambodia, but others – such as the International Republican Institute – note that this still left room for a lot of shenanigans. One of the most significant manipulations of the process occurred prior to the actual vote, during voter registration, when there were repeated difficulties of various kinds in certain constituencies that are strongholds of the opposition and royalist parties. According to one estimate, up to half a million voters were unable to register in those constituencies. Even so, election day itself played out fairly cleanly. Moreover, the year-long political stand-off in the wake of the election proceeded without any outbreaks of mass violence. Although the absurdly long negotiation to form the Third Mandate of the Royal Government caused untold damage to the public interest, at the same time, it marks a new level of maturity in Cambodia's political dialogue. In that sense, the 2003 elections turned out to be a victory for the Cambodian people.

### The Legislative Branch

Cambodia has a 122-member National Assembly that functions as little more than a rubber stamp for legislation that is introduced by the executive. As part of the political deal to resolve the political stand-off after the 1998 election, Cambodia also created a 61-member “upper chamber” called the Senate. The function of the Senate appears to be largely to give incomes and official titles to senior political functionaries who could not be accommodated within the confines of the National Assembly or Royal Government. Legislation must be approved by both houses of parliament, and it almost invariably is, typically with no amendments – although there is often sharp debate.

A great deal of time, manpower and money has been injected into the National Assembly by the international donor community over the last decade in an effort to increase the capacity and professionalism of that legislative body. Among other things, a large new National Assembly building is being constructed adjacent to the Buddhist Institute. But the fact that the contract for building this new palace of law went to a close relative of the chairman of the Assembly's construction committee says a lot about how things continue to be done at the Assembly.

## The Judiciary

Like so much of the country, the Cambodian judiciary was annihilated during the Khmer Rouge regime. In the decade following the Khmer Rouge, little was done to rehabilitate a professional judiciary, with only a handful of lawyers having been trained at Kiev and in other Soviet law schools. Most judicial posts were staffed by political hacks who in many cases had not even graduated from high school, much less law school. The criminal code adopted by the People's Republic of Kampuchea was called "Decree Law Number 2," and was drafted by Sin Song, a communist functionary with no legal training. As Evan Gottesman has observed, Decree Law Number 2 "served to reveal the fundamental tautology that underlay the PRK's criminal justice system: anyone guilty of 'betraying the revolution' was 'Pol Pot,' and 'Pol Pot' was anyone 'betraying the revolution.'" [Gottesman 2003: 241]

The situation today is only marginally better, despite a decade of efforts to reform the judiciary. Cambodian jurists now draw randomly on multiple contradictory legal codes, including the 1956 French-derived penal code, People's Republic of Kampuchea-era decree law, hastily drafted State of Cambodia legal codes enacted in 1992, legal codes that were promulgated under the authority of UNTAC, and fragmentary legal instruments that have been promulgated since 1993. The result is legal anarchy. For example, in 1994, a newspaper published a headline that read, "Ranariddh is More Stupid than Hun Sen Three Times a Day." Second Prime Minister Hun Sen took offense, and filed a civil suit against the publisher for monetary damages under the State of Cambodia-era defamation law. When the case came to court, the judge promptly threw out Hun Sen's civil suit, and slapped the publisher with criminal charges using UNTAC's criminal defamation statute. The publisher was convicted, and sentenced to a hefty fine and a lengthy prison term, whereupon King Sihanouk exercised His royal prerogative to pardon the convict, a power granted to His Majesty under the 1993 Constitution. So here we had one case, using three separate legal codes.

The professionalism of the judiciary has been gradually improving, but has a long way to go. The ruling party has been reluctant to promote to the bench the several hundred young lawyers who have been graduated since 1993, but has been active in encouraging sitting judges to undertake remedial professional training. According to sources at the Council of Ministers, Cambodia currently has approximately 200 practicing judges. However, according to Ministry of Justice records, there are only 120 sitting judges in Cambodia. In addition, the country has about 55 prosecutors, of whom fewer than ten have attended law school; more than half of the prosecutors did not graduate from high school. Of the judges, the Council of Ministers asserts that approximately forty have either bachelors or masters degrees at law; Ministry of Justice records suggest that only fifteen Cambodian judges have law degrees. Whether the real number is closer to 15 or to 40, most of these law degrees are of Soviet vintage. Of the remaining roster of sitting judges, the overwhelming majority have no formal legal training whatsoever, beyond perhaps a few seminars and workshops over the last decade or so. More than half of Cambodia's judges did not even graduate from high school.

## His Majesty the King

As noted earlier, King Norodom Sihanouk was restored to the throne of Cambodia in 1993. Under the constitution, Sihanouk is Head of State, but is a monarch who “reigns but does not rule.” Having survived six tumultuous decades at the center of Southeast Asian politics, Sihanouk is one the most senior and experienced statesmen in the world today. It is worth recalling that when He came to power, the world’s dominant political leaders included Franklin Roosevelt, Joseph Stalin, Winston Churchill, Charles de Gaulle, and Mao Tse-tung. Those men are all long dead, and Sihanouk is Head of State. But the incredible trauma that Cambodia and her people have suffered during His years on the political scene will certainly color the epitaph that marks His grave. And in fact, that grave has already been dug, as it were. At the ancient imperial capital of Oudong, the construction of Sihanouk’s burial stupa was completed in 2002, along with a royal crematorium at the base of the Phnom from which the stupa rises. It is a magnificent monument – derided by wags as costing one billion bowls of rice – but it is a resting place befitting a God-King who stood astride Cambodia as no other has since the glory days of the Angkor Empire. The King’s wife, Queen Monique – who has a mixture of Khmer, Vietnamese, French, and Italian blood – is said to favor her only son, Prince Sihamoni, to succeed her husband on the throne. There has also been speculation that the Throne Council could select her either as Queen or as Regent to reign following King Sihanouk’s demise.

## **Issues and Questions**

1. October 2004 marks the 82<sup>nd</sup> birthday of King Norodom Sihanouk. As His health has deteriorated in recent years, the King has expressed increasing worries about the future of Cambodia's monarchy. Royal succession is controlled by the Throne Council, and that body is dominated by the ruling Cambodian People's Party. Some in the ruling party believe that the death of Sihanouk would provide a golden opportunity to destroy the troublesome royalist party, by abolishing the monarchy and declaring a republic. Others in the ruling party believe that it would be wise to maintain the monarchy, in order to split the votes of those who oppose continued ruling party control between the royalists and the Sam Rainsy Party. Which course would you choose upon Sihanouk's death?

2. The Cambodian People's Party has dominated Cambodia's political scene since 1979. This extended tenure has the advantages of providing stability and cadre with long experience, but also has all the disadvantages that flow from Lord Acton's dictum. CPP power is deeply entrenched. After all, despite 20,000 peacekeeping troops and an international mandate for a UN-controlled poll, the CPP lost the 1993 election but still managed to retain power. Given the CPP's pervasive political control, even if it were possible for the royalists or the opposition to seize the organs of the state, would it be desirable? Could either of these parties – or perhaps more to the point – would either of these parties be willing and able to rule without having to resort to extreme repression in order to overcome the ubiquitous tendrils of the CPP's political control?

## FOREIGN POLICY AND DEFENSE

This section of the study guide will highlight some issues of concern to Cambodia's foreign affairs and defense. Most of Cambodia's principal foreign affairs issues were touched upon under the heading of History, but here we will consider some of those matters in a bit more depth, and introduce a few additional current foreign affairs issues. This final narrative section of the study guide also provides a brief overview of Cambodia's military posture and defense situation.

### Foreign Policy Issues

There are several foreign policy issues that warrant additional attention in this study guide, including terrorism, the Khmer Rouge Tribunal, and Cambodia's role in the regional balance of power. There is also one issue in US-Cambodia bilateral relations that warrants a brief discussion – the deportation of alien residents from the United States to Cambodia – because it is likely to be a source of mutual grief for years to come.

#### Terrorism

Within days after the September 11 attack on the World Trade Center, Prime Minister Hun Sen wrote to President Bush offering his unqualified assistance in the fight against terrorism. He has followed up on that commitment in several concrete ways, including using his tenure as chair of ASEAN in 2003 to urge his fellow Southeast Asian leaders to cooperate with the US in the war on terrorism. At home, Hun Sen initiated an intense investigation of Cambodia's Islamic religious schools, resulting in the arrest of three alleged operatives of the al-Qaeda affiliated organization Jemaah Islamiya, two Thai nationals and an Egyptian, at two Cham schools. During the same crackdown, fifty other Islamic teachers from Sudan, Yemen, Nigeria, Egypt, Pakistan and Saudi Arabia were expelled from Cambodia, and the schools where they had been teaching were shuttered. More recently, after reports that shoulder-fired anti-aircraft weapons had been smuggled from Cambodia to Thailand by militants, the government agreed to cooperate with the United States in destroying Cambodia's entire stock of anti-aircraft missiles. Additional cooperative activities such as intelligence sharing are also taking place. The close cooperation with Cambodia in the war on terrorism has irked some in the US Congress such as Senator Mitch McConnell, who has been known to suggest that Prime Minister Hun Sen is himself a terrorist.

#### The Khmer Rouge Tribunal

No single Cambodian issue has engaged more sustained and intense attention from the international community since 1997 than question of a Khmer Rouge Tribunal. At the opening session of the Paris Peace talks in 1989, Prime Minister Hun Sen called on the international community to prosecute the leadership of the Khmer Rouge for genocide and other crimes against humanity, and he regularly repeated this rhetoric in subsequent years. In June 1997, the UN Special Representative of the Secretary-General for Human Rights in Cambodia, Ambassador Thomas Hammarberg, persuaded Hun Sen

and his Co-Prime Minister Norodom Ranariddh to write to Secretary-General Kofi Annan, formally requesting UN assistance to establish such a tribunal. Annan responded by appointing a three-member Group of Experts to study the issue, and in January 1999, they produced a report recommending that the UN clone the International Criminal Tribunals for Yugoslavia and Rwanda, adding a new chamber for Cambodia. However, by this time, Khmer Rouge supreme leader Pol Pot had died, and the remaining senior Khmer Rouge political leadership had surrendered to the Cambodian government. Consequently, Hun Sen rejected the recommendations of the UN Group of Experts.

Former Khmer Rouge officials study a plan for development of an eco-tourism nature preserve in a remote region of Banteay Meanchey Province during December 1999.

(Photo by Craig Etcheson)

But the momentum of the tribunal idea inside the UN bureaucracy had gained a head of steam, and the Secretariat was not prepared to take no for an answer. Moreover, spurred by the 1994 Cambodian Genocide Justice Act, US Ambassador at Large for War Crimes David Scheffer explored numerous potential avenues for bringing the surviving Khmer Rouge leadership to justice. With these elements as the principal motive force, there ensued a torturous and twisting five year long process of negotiations which ultimately yielded two key documents, Cambodia's 2001 "Law on the Establishment of Extraordinary Chambers in the Courts of Cambodia for the Prosecution of Crimes Committed During the Period of Democratic Kampuchea," and the 2003 "Agreement

Between the United Nations and the Royal Government of Cambodia Concerning the Prosecution under Cambodian Law of Crimes Committed During the Period of Democratic Kampuchea.” These documents specify the modalities for international cooperation with Cambodia in a mixed national-international criminal tribunal that will judge a handful of Khmer Rouge leaders on charges of war crimes, genocide, other crimes against humanity, and violations of other Cambodian and international laws.

The UN-Cambodia agreement was adopted by the UN General Assembly in May 2003. However, the prolonged political stalemate following the July 2003 Cambodian elections prevented consideration of the agreement by Cambodia’s National Assembly, at least through mid-July 2004. The political stalemate did not, however, prevent the UN and the Cambodian government from proceeding with technical preparations, and the UN projects that the Khmer Rouge Tribunal could be established within six months of parliamentary ratification by the National Assembly.

If and when it is established, the tribunal will be composed of two chambers, a trial chamber with three Cambodian judges and two international judges, and an appeals chamber with four Cambodian judges and three international judges. Decisions will be taken by a “supermajority” principle, in which a majority plus at least one international judge will be required to agree in order for the court to hand down a judgment. Cambodian and international co-investigating magistrates and co-prosecutors are to work together to prepare indictments and prosecute those “senior leaders of Democratic Kampuchea and those who were most responsible” for the crimes of the Khmer Rouge regime. The court will be seated in Phnom Penh, and is to be financed primarily by voluntary contributions to a UN Trust Fund.

**Polling Data on Cambodian Public Attitudes toward Khmer Rouge Tribunal (KRT)**

Source	Date	N	Sample	Question	Yes
KJA	Feb 95	794	5 provinces	Pol Pot trial?	79%
DC-Cam	May 97	22	political elite	KRT?	85%
IFFASSORC	Jan 99	1503	Urban/rural	KRT/leaders?	81%
McGrew	Dec 99	48	urban elite	KRT?	87%
Cam Daily	Jan 00	24	rural	KRT/leaders?	100%
CSD	Jan 00	632	urban	KRT good?	82%
DC-Cam	Jun 02	873	Urban/rural	KRT?	78%
IRI	Feb 04	1200	Urban/rural	KRT good?	84%

Public opinion data indicates that the Cambodian people are strongly in favor of a Khmer Rouge Tribunal, with more than four-fifths of respondents showing support for

the convening of a tribunal. The data suggest that this support has been consistent over time for the last decade, and consistent across varying cohorts of the population. Urban, rural, elite, and mass respondents in all sections of the country, all appear to want a Khmer Rouge trial to be established, and they have wanted it for quite some time. This is the case despite the fact that the Cambodian public is all too familiar with the shortcomings of the Cambodian justice system. Cambodian politicians seem to be keenly aware of this sentiment, because they regularly and loudly insist that this must be done, and will be done soon. Yet, a variety of factors have thus far prevented the establishment of the tribunal.

The plan for the Khmer Rouge tribunal has been highly controversial both among the Cambodian intelligentsia and internationally because, as noted in the section on Government and Politics, the Cambodian judiciary has a reputation for corruption, weak technical capacity, and a habit of answering to the executive, particularly in sensitive cases with political implications. Critics thus argue that the plan for the tribunal gives too much control to the Cambodian government, and that the deliberations of the court are liable to lack an adequate degree of judicial independence and be contaminated by political interference from Cambodia's executive. Human rights groups such as Amnesty International and Human Rights Watch have been harshly critical of the plan, but a 27-member "Group of Interested States" has continued to promote the process and assist the UN and the Cambodian government in coming to terms on the issue. During the Clinton Administration, the United States was the primary driving force behind the Khmer Rouge Tribunal, while since the advent of the Bush Administration, the process has been driven primarily by France and Japan, with the US playing a subsidiary role.

The proposed Khmer Rouge Tribunal would constitute a significant precedent in international jurisprudence. Unlike any internationalized criminal tribunal devised to date, the Khmer Rouge Tribunal will give an unprecedented degree of influence to nationals of the country where the violations were committed. Some justice advocates worry that this precedent will create future opportunities for countries who might otherwise be subject to the jurisdiction of the International Criminal Court (ICC) – which is a purely international body, and presumably less vulnerable to the intense political pressures that are always involved with war crimes prosecutions – to reject the jurisdiction of the ICC and demand the "Cambodia model," thus retaining significant domestic control over any judicial proceedings.

Proponents of the Khmer Rouge Tribunal argue that this precedent might not be such a bad thing. The Bush Administration's Ambassador for War Crimes, Pierre Prosper, has stated that it is US policy to seek the prosecution of war criminals in a domestic, national context whenever that appears to be feasible. For victims of war crimes, genocide, and other crimes against humanity, it is likely to be much more satisfying to see those who persecuted them being prosecuted locally, rather than in far away places like The Hague, where judicial proceedings are conducted in unfamiliar foreign languages, and where – not incidentally from the perspective of the donor community – the cost of justice is exceptionally high.

This practice conforms to the principle of "complementarity," which is embodied in Article 17 of the Rome Statute of the ICC. This principle holds that war crimes prosecutions should in the first instance be undertaken in the country where the violations occurred, unless the government in question is either unable or unwilling to do so. It remains to be seen if the Cambodian government is in fact willing and able to hold these trials. But should the Khmer Rouge Tribunal eventually be convened as it has been envisioned, this new precedent will become firmly established in international jurisprudence. More importantly, perhaps, twenty-five years after they were subjected to crimes against humanity on an unimaginable scale, the people of Cambodia may finally see a measure of justice meted out against the architects of the Cambodian genocide.

### The Regional Balance of Power

As a tiny country with a pitifully weak state apparatus, Cambodia faces enormous challenges in its foreign relations with its two much stronger neighbors, Vietnam and Thailand, as well as with the two global powers that have the most abiding interest in the region, China and the United States. All four of these countries share long and complicated histories with Cambodia, including having been directly involved in armed conflict in Cambodia as recently as the early 1990s. Moreover, all four were guarantors of the Paris Accords of 1991, and thus have a shared and continuing responsibility to ensure the peace in Cambodia.

It was noted at some length in previous sections of the study guide that Cambodia has been whip-sawed between Thailand and Vietnam for centuries. Vietnam essentially created the current ruling dynasty in Cambodia, and that ruling party continues to nurture close relations with the Vietnamese. Thus there are many channels, both formal and informal, through which the Cambodian and Vietnamese governments can discuss issues of mutual concern. Vietnam's interests in Cambodia today are far more complex than the primarily security-related concerns that predominated two decades ago. Vietnam is the second largest investor in Cambodia's economy, and cross-border trade is substantial, including a great deal of exchange that takes place beyond regular trade channels. It can thus be said that the complex web of ties with Vietnam probably constitute Cambodia's single most important bilateral relationship. But it could not be Cambodia's only important regional relationship.

Historically, it has been unhealthy for Cambodian rulers to hew too closely to one or the other side of the Thai-Vietnam rivalry. The Cambodian government has been responding to this historical imperative for more than a decade, a transition in many ways made easier by the integration of first the royalist and republican factions into the national community, and more recently the Khmer Rouge. All three of those former adversaries with the central government had close relations with Thailand, and those connections are now being exploited to the benefit of the country as a whole. For its part, too, Thailand has dramatically accelerated its courting of the Cambodian government in the years since the final collapse of the Khmer Rouge, particularly under the leadership of Prime Minister Thaksin Shinawatra. This has yielded new cooperation across a broad

spectrum of issues, including trade, border crossings, security and terrorism, cultural exchange and other areas.

Yet, the process of balancing a stronger neighbor sometimes requires that clear signals be sent. Since 1993, Thailand had come to dominate several key sectors of the Cambodian economy, including pharmaceuticals, tourism, hotels, construction materials, telecommunications, and airlines. Cambodia's ruling party evidently decided by late 2002 that the imperatives of economic sovereignty dictated that this imbalance must be redressed. On January 29, 2003, the government orchestrated an anti-Thai riot in Phnom Penh, striking a decisive blow against precisely these Thai economic interests. Since then, negotiations have been in train that will eventuate in new business arrangements. Henceforth, most Thai investments in Cambodia will include partnerships with key members of the Cambodia's ruling party.

As the principal patron of the Khmer Rouge, the People's Republic of China (PRC) was an avowed enemy of the People's Republic of Kampuchea (PRK), and was bitterly denounced by PRK state propaganda organs. In the years immediately following the overthrow of the Khmer Rouge regime, the PRK engaged in periodic bouts of repression against Cambodia's Sino-Khmer community, spurred by fears of a fifth column controlled from Beijing. But the ruling party soon realized that it was not capable of suppressing the energy and discipline of the Cambodia's Chinese business community, and moreover, that it was unwise to do so, in view of the extent to which that community was driving the economic recovery. So, beginning in the mid-to-late 1980's, the CPP instead sought to harness Sino-Khmer entrepreneurial instincts, a policy that has matured in subsequent years. Along with that change of domestic policy, Cambodia also began to court the PRC, a policy initiative that has been vigorously reciprocated. This policy has advanced rapidly since the UN peace process.

The growth of Chinese influence in Cambodia has been substantial at the cultural, political and economic levels. The development of party-to-party and state-to-state relations between Cambodia and the PRC since the early 1990's has dovetailed with the growing influence of the "overseas Chinese" in Cambodia to create a new dynamic. According to figures from the Cambodian Development Council, in 2002 China became Cambodia's third largest investor (\$23 million), trailing South Korea (\$72.6 million) and Vietnam (\$24.2 million) out total FY02 foreign direct investment of \$139 million. The attention lavished on Cambodia by Chinese leaders has been extraordinary, with repeated visits in recent years by the PRC President, Prime Minister, and a seemingly endless parade of senior ministers bearing gifts. A particularly notable recent high-level expression of this interest came in November 2002, when Premier Zhu Rongji visited Phnom Penh and forgave the state debts accrued by the Khmer Rouge, reportedly amounting to as much as \$2 billion.

The reasons for China's intense interest in Cambodia span the spectrum of economic, political and security interests. Particularly important motivations for Chinese foreign policy behavior in Cambodia include driving a strategic wedge into ASEAN, and challenging US, Indian, Japanese and other great power influence in the region at large.

Establishing beachheads from which to exploit the region's natural resources and enhance trade and investment opportunities is another factor. And another consideration is to ensure that any Khmer Rouge Tribunal inflicts minimum damage on the PRC's interests.

In contrast, US attention to Cambodia has been relatively muted. US foreign assistance to Cambodia is been limited by Congressional restrictions, and has been hovering around \$30-40 million annually for the last decade or so. Most of this assistance is distributed to non-governmental organizations in Cambodia, with direct assistance to the government restricted to a few humanitarian areas such as mine clearance, AIDS, and maternal health care. The sole high-profile visit by a senior US official in many years was the brief appearance of Secretary of State Colin Powell in Phnom Penh during the June 2003 ASEAN Regional Forum. Nonetheless, the Cambodian government has assiduously courted the attentions of the US government, mindful of the potency of the "sole superpower" in regional and global affairs. Rather than allow China's influence to become too dominant, Hun Sen has worked hard to maintain and improve his relations with the US as well.

Hun Sen's management of both his regional and global foreign policy challenges illustrates an important technique of weak power diplomacy. Hun Sen has a tendency to tell everyone what they want to hear, and then he wobbles a bit to keep everyone off-balance and continuing to beat a path to his door with additional inducements. It is a technique he learned from his greatest teacher, Norodom Sihanouk. To Chinese audiences, Hun Sen repeats the same mantra: Cambodia is following the "Two Victories" policy, which is to forget the past and concentrate only on the future – forgetting the past being the key phrase the Chinese want to hear, and that Cambodia adheres resolutely to the "One China Policy." To American audiences, Hun Sen demands that a Khmer Rouge tribunal be convened before the end of this year – no matter what year one might be talking about – arguing that the Cambodian people deserve justice for the crimes of the Khmer Rouge regime, and that regional leaders should cooperate with the US in the war on terrorism, just as Cambodia has. Hun Sen is a superb tactician, and is reputed to be a master-level chess player. It shows in the way he manages his foreign policy challenges.

#### Deportation of Alien Residents

In March 2002 under the authority of the 1996 Illegal Immigration Reform and Immigrant Responsibility Act, the US concluded a Memorandum of Understanding with the Cambodian government for the deportation of US alien residents of Cambodian extraction who have been convicted of an "aggravated felony." As of June 2004, 67 such individuals had been deported to Cambodia in nine transfers (one of whom subsequently died of natural causes). The pool of alien residents who have been deemed eligible for deportation to Cambodia is slightly more than 1,400. Virtually all of the affected individuals came to the US as legal refugees, and most of them arrived in the US as very young children. However, they subsequently failed to obtain US citizenship, rendering them eligible for deportation. Hence, most of these individuals have been raised as Americans. Many of them have no memories of Cambodia, and do not speak or write the

Khmer language. Some of them, born in Thai refugee camps during the 1970s and 1980s, have never set foot on Cambodian soil.

In practice, an "aggravated felony" can include such offenses as shoplifting, driving while intoxicated, and possession of personal-use quantities of marijuana. One deportee became an aggravated felon when, after having been convicted of relieving himself against a wall in public, that offense was subsequently reclassified as a "sex crime." He had been gainfully employed in a steady job for nearly a decade, owned a home, and was married with four children. Perhaps understandably, his wife refused to relocate to Cambodia with the children, and sued for divorce. Thus it is the case that some of the deportees do not conform to one's typical image of "hardened criminals."

Nonetheless, a significant proportion of those scheduled for deportation, and some of those already deported, have been convicted of serious crimes such as multiple homicide, many of which were committed in connection with membership in violent Southern California street gangs. In a similar situation under the 1996 legislation, hundreds of members of Los Angeles' "El Mara" street gang have been deported to Central America, where the deportees have reconstituted the gang as a transnational criminal enterprise. In Honduras, authorities have reacted harshly to criminal activity by El Mara members; nearly two hundred of them have been killed in various prison incidents. There are concerns that a similar dynamic might develop in Cambodia, and there are signs that this could occur. While some of the deportees have adapted well and are integrating themselves into Cambodian society as productive citizens, others have already had multiple encounters with Cambodian law enforcement authorities, and may eventually be tempted to band together for self-protection against existing Cambodian street gangs, or simply because that is all they know how to do.

In an attempt to ease the entry of the deportees into Cambodian society, an NGO called the Returnee Assistance Project ("RAP") was founded in 2002 by an American minister, Bill Herod. RAP provides orientation, language literacy classes, employment counseling, housing assistance, substance abuse treatment and other services to the deportees. As of June 2004, RAP was operating two half-way houses for the deportees, and was preparing to open a third in anticipation of an increase in the rate of deportations. A few of the returnees require full-time care due to physical or mental health problems, or advanced age. Since mid-2003, the US Department of State has been the largest single source of funding for RAP. US Foreign Service Officers who are posted to Phnom Penh are likely to encounter various aspects of the deportee situation for years to come.

### Defense

The Royal Cambodian Armed Forces (RCAF) is organized into the Army, Navy, and Air Force. Annual budgeted military expenditures are currently running slightly below US\$100 million, which is about 3% of gross domestic product. Beyond that, it is difficult to be very precise about Cambodia's military posture and order of battle.

Estimates of the size of Cambodia's Army, for example, range from 20,000 to 140,000. It is likely that total military manpower is much closer to the lower end of this range, but it is difficult to know. We do know, however, that more than 400 officers hold the rank of general. The reason for the wide variance in manpower estimates is corruption; "ghost soldiers" permit commanders to pocket pay, and to sign up non-existent conscripts for the World Bank's well-intended but chronically troubled demobilization program. Human rights campaigner Brad Adams has argued,

Collecting the salaries of ghosts is only part of the incentive for inflating the numbers. Soldiers are issued with a wide variety of supplies each year, from rice and shoes to shirts and underwear - and guns. But ghost soldiers don't eat and don't wear clothes. Senior military and government officials profit gloriously from this con. Companies close to senior military and political figures sell these goods to the army at inflated prices. As one of Cambodia's most powerful businessmen says, "For instance, a shirt costs \$8 but the army pays \$21. Shoes cost \$2-\$3 but they pay \$8-\$10. By law they are supposed to bid but they rarely do it." [*Phnom Penh Post*, November 23, 2001]

The level of readiness of the army, whatever size it may actually be, is generally abysmal. Training resources are highly limited. As a result, many officers employ those under their command in private extracurricular revenue-generating activities, such as illegal logging and other aspects of the illicit economy. These income-generating activities are in fact necessary for the military, as the average pay for those soldiers who do actually exist is \$20 per month plus an allowance of 20 kilograms (44 pounds) of rice, which is not nearly enough to support the soldier alone, much less his family.

Consulting standard open-source military references such as SIPRI, IISS, and CSIS will indicate that the RCAF has a modest stock of hardware. One source suggests that Cambodia has 24 combat aircraft, but it is best to take such numbers with a grain of salt. For example, twenty of these erstwhile combat aircraft are MIG-21 fighter-bombers, none of which have been airworthy during the last decade. Four of the MIGs were sent to Israel some years ago for retrofitting, but the Royal Government has not been able to pay the bill, and so the aircraft remain in Israel. Even if one of the MIGs were to suddenly become airworthy, there would be no pilot to fly it, as the Russian- and Vietnamese-trained pilots have long since abandoned the military for more lucrative commercial work. As for the Army's heavy weaponry, a similar discounting should be made. The RCAF claims a force of 150 main battle tanks and 400 pieces of towed artillery, but that is most likely a gross exaggeration. However, it is true that a higher proportion of the Army's assets are likely to be functional at any given time than is the case with the Air Force.

An anecdote regarding Cambodia's Air Force will serve to illuminate RCAF air doctrine, and provides an indication of the overall capability of the RCAF. In April 1994, RCAF Air Force Chief of Staff Lt. Gen. Norodom Vatvani was ordered to launch air attacks against civilian gem miners in the Khmer Rouge zone near Pailin. At that time, his entire functional fixed-wing fleet consisted of two old AN-24 cargo aircraft, and so he

pressed these platforms into service for the combat mission. Fearful of flying low enough to come under anti-aircraft fire in the Khmer Rouge zone, the pilots first attempted the attack by hurling satchel charges out of the aircraft from altitude, but this proved ineffective. Finally, they resorted to dropping mortar bombs from the rear of the aircraft, though it is not clear if they were able to actually inflict any casualties on the hapless gem miners laboring in pits far below.

The RCAF Navy does not fare much better than the Army and the Air Force. Cambodia has no major surface combatants, no submarines, and no naval aircraft. They have fewer than half-a-dozen coastal and river patrol craft, and some 1,500 marines. The Navy recently acquired a pair of twin Evinrude outboard-powered launches, which are proudly deployed each year at Phnom Penh's Water Festival. Along banks of the Tonle Sap and Mekong Rivers near Phnom Penh, one can observe several derelict US vessels rotting at anchor, and these serve to house much of Cambodia's marine force.

In view of the general lack of capability of the RCAF, Cambodia is fortunate in that at present it faces no strategic threats. It used to be said of Thailand that 'the business of the Thai military is business.' The Cambodian military seems to be copying that page from the Thai playbook. But Cambodia's military also seems to follow the ancient Hindu warrant for provincial political potentates, which is to "consume" the land and the people under their control. In view of the military's alleged involvement in such activities as human trafficking, illegal logging, and "land-grabbing," they evidently take that injunction quite literally. In this respect, the Cambodian military does not so much defend the Cambodian people from threats, but rather the corrupt, bloated, top-heavy and ineffective Cambodian military is in fact itself one of the principal threats facing the Cambodian people today.

### **Issues and Questions**

1. The proposed Khmer Rouge Tribunal is structured in such a way as to ensure that the Cambodian government can exercise effective control over the proceedings, despite the participation of international jurists in the court. For example, Dith Munty, who is a member of the CPP Politburo, is slated to preside over the tribunal's appeals chamber. Judicial independence is the *sine qua non* of "international standards of justice," but who is to say what constitutes "independence" in the context of a given country's judicial system? The UN General Assembly, for one, overwhelmingly affirmed its confidence in Cambodia's ability to conduct this legal procedure. In this light, evaluate the consequences of the principle of "complementarity" for the future of international justice in the wake of a Khmer Rouge Tribunal.

2. The People's Republic of China has provided generous levels of aid to the Royal Government of Cambodia over the last decade. Much of this aid has been in the form of security assistance, including such things as land mine removal, military procurement, military training, military re-organization, and so on. In contrast, the US security-related presence in Cambodia has been largely limited to a military attaché at the embassy, and

periodic missions by the Joint Task Force/Full Accounting, working on the repatriation of the remains of US service members lost during the war. Is it wise for the United States to take such a casual approach toward Chinese cultivation of favor among Cambodia's armed forces, or is it irrelevant due to Cambodia's debatable strategic significance?

## CHRONOLOGICAL TIMELINE

700-800 AD	Java dominates the region.
806 AD	Jayavarman II casts off Javanese domination and founds Angkor Empire
895	Yasovarman I founds the new capital at Angkor.
10 <sup>th</sup> c.	Buddhism is introduced; Angkor Thom is built.
11 <sup>th</sup> c.	Angkor Thom ("Great City") is embellished.
12th c.	Angkor Wat ("Temple City") is built by Suryavarman II; Kingdom of Champa (present day Cochinchina or Central Highlands of former South Vietnam) taken by Angkor in series of wars.
1178 AD	Vengeful Chams sack Angkor.
1181	Jayavarman VII expells Chams; embellishes Angkor Thom.
1220	Khmers evacuate Champa on death of Jayavarman VII.
1282	Jayavarman VIII defeats Mongol invasion.
1394	Siamese capture Angkor; 100-year war follows.
1431	Capital is moved to Longvek, then to Oudong; Thai annex northern regions.
1626	Vietnamese annex Cochinchina.
1834	On death of Ang Chan, Vietnamese seize control of Kingdom of Angkor.
1840-1846	Territory of Angkor Empire is battlefield for Vietnamese-Thai war.
1848	Ang Duong crowned King of Angkor by joint Vietnamese-Siamese agreement; he agrees to pay tribute to both.
1863	New monarch, King Norodom, accepts a French protectorate; "Cambodge" (Cambodia) emerges.
1884-1886	French governor provokes peasant uprisings.
1907	King Sisowath of Cambodia recovers with French help the provinces of Battambang, Siem Riep, and Sisophon, previously annexed by Thai.
3 Feb 1930	In Hong Kong, Ho Chi Minh founds the Indochinese Communist Party (ICP).
27 July 1931	Khieu Samphan is born in Cambodia.
25 Apr 1941	Norodom Sihanouk, age eighteen, crowned king by French.
12 Mar 1945	Under Japanese occupation, Sihanouk proclaims independence from France.
May 1945	Son Ngoc Thanh returns from refuge in Japan.
Aug 1945	Son Ngoc Thanh becomes prime minister.
Oct 1945	British, Indian, and Free French forces occupy Cambodia; Son Ngoc Thanh arrested, later deported; "Cambodian Liberation Front" formed.
11 Nov 1945	ICP dissolves itself.
8 Nov 1949	French grant limited independence to Cambodia with Franco-Cambodian Treaty; Cambodia becomes an Associate State in the French Union.
Feb 1951	Vietnamese communists reorganize into Lao Dong or Worker's Party.
3 Mar 1951	Lao Dong and CLF ally against French colonialism.
30 Sep 1951	Vietnamese reorganize remnants of ICP into three national parties, forming and dominating the Khmer People's Revolutionary Party (KPRP).
Mid-1953	King Norodom Sihanouk launches "royal crusade for independence" from France.

- 9 Nov 1953 French grant complete independence to Cambodia.
- 7 May 1954 French garrison at Dien Bien Phu, Vietnam, falls to Viet Minh; next day Geneva Conference convenes.
- 21 Jul 1954 Geneva ends, orders free elections for Cambodia and Vietnam, plus a pullout of Viet Minh forces in Cambodia; much KPRP retreats to Hanoi; a few KPRP cadres stay to fight, some to form Pracheachon or "People's Party" to contest elections.
- 8 Sept 1954 SEATO Treaty promulgated in Manila, Philippines.
- Dec 1954 Sihanouk declares neutralism after meeting India's Nehru.
- 31 Dec 1954 United States announces aid to Cambodia, South Vietnam, and Laos, effective January 1, 1955, to combat communism.
- 2 Mar 1955 Sihanouk abdicates to father (Norodom Suramarit) and forms Sangkum Reastr Niyum; he will control this central political institution until 1970.
- Apr 1955 Sihanouk meets with Vietnamese, Laotian, and Chinese communists at Bandung Conference of Nonaligned Nations.
- May 1955 Sihanouk signs agreement to admit US Military Assistance Advisory Group to assess Cambodian military hardware needs.
- 11 Sep 1955 National election returns 83% for Sihanouk's Sangkum, 13% for Democratic Party, and 3% for Pracheachon Party.
- 13 Feb 1956 Sihanouk to Peking, signs Sino-Cambodian Friendship Treaty.
- Feb 1956 Sihanouk refuses over-flight privileges to SEATO for joint military exercises.
- 22 June 1956 People's Republic of China (PRC) gives \$22.3 million to Cambodia, first PRC aid ever to a noncommunist state.
- Spring 1956 Sihanouk rejects SEATO membership, Thailand and South Vietnam impose economic blockade; CIA begins funding anti-Sihanouk rightist group, Khmer Serei, led by Son Ngoc Thanh; Thailand occupies northern frontier of Cambodia.
- June 1958 South Vietnamese army occupies parts of Stung Treng province.
- 13 July 1958 Sihanouk extends diplomatic recognition to PRC.
- Jan 1959 Sihanouk alleges "Bangkok Plot" against him.
- 21 Feb 1959 Cambodian General Dap Chhuon secessionist attempt with Thai, South Vietnamese, Laotian, and U.S. involvement is discovered and crushed by Sihanouk.
- 31 Aug 1959 Assassination attempt on King, Queen, and Prince.
- 3 Apr 1960 King Suramarit dies, succession crisis follows.
- 14 June 1960 National Assembly revises Constitution, elects Norodom Sihanouk head of state.
- 20 June 1960 Prince Norodom Sihanouk becomes head of state.
- 30 Sep 1960 Second KPRP National Congress convenes, later to be referred to as First Congress of the Communist Party of Kampuchea; twenty-one delegates opt for continued political struggle, "preparation" for armed struggle; Touch Samouth elected chairman, Nuon Chea is number two, and Saloth Sar is number three in party organization; KPRP changes party name to Khmer Worker's Party (KWP).

- Jan 1962 Pracheachon General Secretary Non Suon plus thirteen associates arrested, imprisoned for life.
- 20 Jul 1962 KWP Party Secretary Touch Samouth disappears, presumed victim of Sihanouk, opening way for rise of Saloth Sar to party leadership.
- Jan 1963 Sihanouk nationalizes banking and foreign trade.
- 1 May 1963 Liu-Chi state visit to Cambodia; Sihanouk alleges CIA-Kuomintang attempt on Liu's life and his own.
- May 1963 KWP sends 90 percent of leadership personnel underground; Saloth Sar confirmed as general secretary; he and Ieng Sary go to northeast, and later visit China.
- Aug 1963 Sihanouk severs relations with South Vietnam, renounces U.S. military assistance.
- Dec 1963 PRC begins delivery of military aid to Sihanouk's government.
- Sep 1964 Sihanouk meets with representatives of South Vietnamese National Liberation Front (NLF) and North Vietnamese Premier Pham Van Dong in Peking.
- 27 Oct 1964 Cambodian National Assembly threatens to break relations with United States if there are any further U.S. violations of Cambodia by U.S. Air Force.
- Nov. 1964 Sihanouk appeals to Vietnamese and Laotians for anti-U.S. summit conference.
- 7 Feb 1965 With Operation ROLLING THUNDER, United States begins bombing North Vietnam.
- 28 Feb 1965 U.S. announces "continuous limited air strikes" on North Vietnam.
- 1 Mar 1965 Sihanouk sponsors Indochinese People's Conference in Phnom Penh; Pathet Lao and NLF attend.
- 8 Mar 1965 U.S. Marines land at Da Nang, Vietnam.
- 1 May 1965 U.S. air strikes in Cambodia's Parrot's Beak.
- 3 May 1965 Sihanouk breaks diplomatic relations with United States.
- June 1965 PRC agrees in principle to provide technicians and more arms to Cambodia.
- Sep 1965 Khieu Thirith and Khieu Ponnary (sisters who are wives of Ieng Sary and Saloth Sar) go underground.
- Nov 1965 Sihanouk sends General Lon Nol on aid-seeking mission to Peking; he returns with arms for 20,000.
- Mid-1965 North Vietnamese begin using port of Sihanoukville as a supply route to South Vietnam.
- 11 Sept 1966 First election is held in Cambodia without pre-selection of candidates by Sihanouk.
- 22 Oct 1966 Rightist-dominated government emerges; Lon Nol is elected premier.
- Mar 1967 CPK cadres organize student demonstrations.
- Apr 1967 Massive peasant revolt in Samlaut district of Battambang Province over land expropriation and forced rice collection policy; Lon Nol sends in paratroopers, cracks down on dissent in capital.
- 22 Apr 1967 Sihanouk charges Khieu Samphan, Hou Yuon, and Hu Nim with responsibility for Samlaut rebellion.

- 24 Apr 1967 Samphan and Yuon go underground; Hu Nim stays in Phnom Penh.
- 30 Apr 1967 Sihanouk removes Lon Nol for failure of Samlaut pacification; Son Sann appointed as new prime minister.
- 2 May 1967 15,000 students demonstrate in Phnom Penh over assumed liquidation of Khieu Samphan and Hou Yuon by Sihanouk security forces.
- 9 May 1967 Sihanouk demands international recognition for the borders of Cambodia.
- 13 May 1967 NLF and Democratic Republic of Vietnam issue statement recognizing Cambodian border claims.
- May 1967 United States begins Operation SALEM HOUSE, cross-border armed reconnaissance inside Cambodia.
- 6 June 1967 Sihanouk extends de jure diplomatic recognition to NLF and Democratic Republic of Vietnam (DRV).
- Aug 1967 Samlaut rebellion stamped out by mass executions.
- 4 Sep 1967 Lon Nol accuses leftist Sihanouk aide, Chau Seng, of coup d'etat plan, latter is exiled; Hu Nim goes underground.
- 4 Jan 1968 PRC sends new military equipment to Lon Nol, including MIG jets and artillery.
- 12 Jan 1968 U.S. Ambassador to India Chester Bowles visits Cambodia to explore resumption of relations with United States and limitation of Vietnamese border use.
- 17 Jan 1968 CPK's newly founded Revolutionary Army of Kampuchea (RAK) begins guerrilla operations in seventeen of nineteen provinces.
- 27 Jan 1968 Sihanouk declares "war" on Khmer Rouge (KCP); United States announces policy of "hot pursuit" into Cambodia.
- 30 Jan 1968 Sihanouk names "Government of the Last Chance"; Penn Nouth is prime minister, Son Sann his deputy; Tet Offensive begins in Vietnam.
- 20 Jan 1969 Richard Nixon is sworn in as thirty-seventh U.S. President.
- 9 Feb 1969 General Abrams, commander of U.S. forces in Vietnam, requests air strikes against Vietnamese bases in Cambodia.
- 17 Mar 1969 Nixon approves request for air strikes in Cambodia.
- 18 Mar 1969 "Breakfast" air strike in Fishhook area of Cambodia, commencing U.S. bomb attacks designated "MENU" series.
- Apr 1969 United States agrees to respect Cambodian "sovereignty and neutrality."
- 21 Apr 1969 The CPK claims to have captured three provinces and partly captured three more.
- 24 Apr 1969 Summit Conference in Peking; DRV, newly founded Provisional Revolutionary Government of South Vietnam (PRG), CLF, and Laotian Front explore possibilities for unity against United States.
- 26 Apr 1969 Sihanouk announces "offensive" against Vietnamese Army in Ratanakiri Province, but his army actually attacks CPK positions.
- 2 May 1969 South Vietnamese communists open embassy in Phnom Penh.
- 9 May 1969 New York Times reporter William Beecher writes story on U.S. air strikes in Cambodia; nobody notices but Nixon.
- 10 May 1969 Al Haig transmits Nixon orders for wiretaps to find who leaked bombing story to Beecher.

- 25 May 1969 Royal Cambodian Air Force uses MIG fighters for first time against Communist positions.
- 11 Jun 1969 U.S.-Cambodian relations reestablished with exchange of embassies.
- 25 Jun 1969 Nixon proclaims "Nixon Doctrine."
- 1 Aug 1969 Penn Nouth resigns as prime minister.
- 12 Aug 1969 Lon Nol regains post as prime minister.
- 1 Sep 1969 Ho Chi Minh dies, Sihanouk attends funeral.
- Sep 1969 Lon Nol returns banking and foreign trade to private sector, then goes to Paris for "medical treatments"; Sirik Matak becomes acting prime minister.
- 29 Dec 1969 National Assembly sustains Sihanouk's rejection of banking and foreign trade denationalization.
- 27 Feb 1970 Sihanouk in Paris announces intent to travel to "great and friendly nations" of PRC and USSR to complain of Vietnamese occupation.
- 8 Mar 1970 Villagers in Svay Rieng Province demonstrate against Vietnamese occupation under direction of Lon Nol at order of Sihanouk in France.
- 11 Mar 1970 20,000, led by government-orchestrated troops, sack the NLF and DRV embassies in Phnom Penh.
- 12 Mar 1970 Sihanouk, in eyes-only cable, threatens heads will roll for overreaction to his anti-Vietnamese demonstration orders.
- 13 Mar 1970 Sihanouk leaves Paris for Moscow; more anti-Vietnamese riots in Cambodia; Acting Prime Minister Sirik Matak suspends government trade with PRG, announces army increase of 10,000 men; Cambodian Foreign Ministry notifies the PRG and DRV that all Vietnamese military forces must be withdrawn from Cambodian territory by March 15.
- 15 Mar 1970 Deadline for NVA pullout passes; Cambodia requests emergency meeting with DRV and PRG.
- 16 Mar 1970 At last official meeting between Cambodia and DRV / PRG, communists refuse to accede to troop removal; Chief of National Police Dum Manorine (Sihanouk's brother-in-law) attempts to arrest Lon Nol, but is blocked by troops loyal to Lon Nol.
- 17 Mar 1970 Dum's resignation is forced in the National Assembly.
- 18 Mar 1970 Cambodian National Assembly, voting with color-coded ballots under the watchful eye of General In Tam, deposes Sihanouk; Sihanouk leaves Moscow for Peking, informed of deposition at airport by USSR Prime Minister Kosygin.
- 19 Mar 1970 U.S. government states that Sihanouk was legally deposed, no need for new recognition of regime.
- 20 Mar 1970 Sihanouk in Peking announces intent to resist his deposition; Army of the Republic of Vietnam (ARVN) troops cross into Cambodia to harass NVA and PRG.
- 22 Mar 1970 Hanoi Party newspaper Nhan Dan supports Sihanouk.
- 23 Mar 1970 Sihanouk announces formation of Khmer National United Front (FUNK); Khmer People's National Liberation Armed Forces (PFLANK) formed; Sihanouk also announces intent to form united front with Laos and

- Vietnam; Kratie FANK (newly renamed Force Armee Nationale Khmer) garrison dissolves along with numerous others.
- 25 Mar 1970 PRC's Chou En-lai endorses the "United Front of Three Indochinese Peoples"; Polish embassy in Phnom Penh offers to evacuate DRV and PRG embassy staffs.
- 26 Mar 1970 Khieu Samphan, Hu Nim, and Hou Yuon join FUNK, Khieu as vice-chairman; nonviolent pro-Sihanouk demonstrations break out in Kampong Cham.
- 27 Mar 1970 DRV and PRG evacuate embassies, break relations; FANK fires on peasant demonstrators in Kampong Cham and Takeo.
- 28 Mar 1970 Mass insurrection: 40,000 pro-Sihanouk peasants march on Phnom Penh.
- 29 Mar 1970 North Vietnamese Army (NVA) initiates attacks on FANK in four of six military regions; FANK falls on column of peasants approaching Phnom Penh.
- 2 Apr 1970 In Peking, Sihanouk denounces United States as "sole culprit" in Indochina.
- 3 Apr 1970 North Vietnamese forces overrun Cambodian positions in Svay Rieng.
- 4 Apr 1970 PRC's Chou En-lai endorses Sihanouk's new front organization.
- 13 Apr 1970 Lon Nol troops launch widespread pogrom against ethnic Vietnamese Cambodians.
- 14 Apr 1970 Lon Nol appeals for international aid, US decides to send 3,000 weapons.
- 15 Apr 1970 US adds \$5 million in cash to Cambodia aid package.
- 19 Apr 1970 Nixon ups aid to \$10 million, and adds a CIA weapons cache to the mix
- 24 Apr 1970 Summit Conference of the Three Indochinese People's convenes in Peking, with Sihanouk and Chou En-lai presiding, DRV Premier Pham Van Dong attends.
- 26 Apr 1970 Nixon says he "reached my decision ... to go for broke" in Cambodia.
- 28 Apr 1970 US-South Vietnamese invasion of Cambodia begins, over objectives of the US Secretaries of State and Defense.
- 1 May 1970 Mao Tse-tung personally endorses Sihanouk's front organization.
- 4 May 1970 Sihanouk forms the exile Royal Government of National Unification of Kampuchea; the PRC breaks diplomatic relations with the Lon Nol regime.
- 11 May 1970 Cooper-Church Amendment, prohibiting US military action in Cambodia, is introduced in the Senate.
- 13 May 1970 Lon Nol re-establishes relations with Thailand, broken since 1961.
- 19 May 1970 Cambodia restores relations with South Vietnam, broken since 1963.
- 29 Jun 1970. US withdraws from Cambodia incursion, but South Vietnamese troops stay.
- 5 Jul 1970 Cambodia military tribunal sentences Sihanouk to death, in absentia.
- 10 Aug 1970 Rebels claim that half of Cambodia has been "liberated."
- 12 Sep 1970 Emory Swank arrives in Phnom Penh, first US Ambassador since 1965.
- 9 Oct 1970 Lon Nol proclaims a republic, and the Khmer Republic is born.
- 22 Dec 1970 Cooper-Church Amendment becomes law, prohibiting US funds for military use in Cambodia.

- 31 Dec 1970 Rebels claim 70% of Cambodia has been "liberated."
- 10 Jan 1971 US Military Equipment Delivery Team is formed for Cambodia.
- Mar 1971 Rebels claim 80% of Cambodia has been "liberated."
- 20 Aug 1971 Lon Nol troops launch Chenla-II offensive to open road to Battambang province.
- 18 Oct 1971 Lon Nol dissolves National Assembly.
- 20 Oct 1971 Lon Nol declares state of emergency, says he will no longer "play the game of democracy and freedom."
- 26 Oct 1971 Vietnamese launch counter-attack on Chenla-II offensive.
- 1 Dec 1971 Majority of Lon Nol army destroyed in Chenla-II counter-attack.
- 17 Dec 1971 Lon Nol revokes civil liberties and political rights in Khmer Republic.
- 11 Mar 1972 Lon Nol declares himself president and commander-in-chief.
- 4 June 1972 Lon Nol elected President of the Republic in questionable balloting.
- 11 Nov 1972 Sihanouk rejects Lon Nol cease fire offer.
- 27 Jan 1973 Paris Peace Accords signed; Article 20 states that all foreign troops will withdraw from Cambodia, but none do so; temporary US bombing halt in Cambodia.
- 6 Feb 1973 North Vietnam demands US end interference in Cambodia.
- 8 Feb 1973 US resumes bombing of Cambodia.
- 31 Mar 1973 Cambodian communist forces deploy armored units for the first time.
- Apr 1973 Cambodian communists begin a systematic program of "de-Sihanoukization."
- 22 Apr 1973 Communist forces advance on Phnom Penh.
- 27 Apr 1973 Communists penetrate to within 3 km of Phnom Penh, amid intense US air strikes.
- 10 May 1973 US House attempts to block funds for US air strikes in Cambodia.
- 21 May 1973 Intense US tactical air strikes begin to blunt communist offensive on Phnom Penh.
- 31 May 1973 US Senate votes 63-17 for an end to air strikes in Cambodia.
- 18 Jun 1973 Communists cut all six major roads linking Phnom Penh with provinces.
- 30 Jun 1973 Congress compromises with Nixon, allows bombing to continue until August 15.
- 9 Aug 1973 Communist forces overrun Phnom Penh international airport, cut communications links with outside world.
- 15 Aug 1973 US air strikes on Cambodia are ended.
- 29 Aug 1973 Lon Nol declares that negotiations are impossible, and that the war will be decided by arms.
- 
- 13 Nov 1973 US grants Lon Nol \$700 million in aid.
- 21 Nov 1973 Nixon pledges "all-out support" for Lon Nol.
- 5 Dec 1973 By a 2-vote margin, UN upholds Khmer Republic credentials in challenge by Sihanouk's government-in-exile.
- 2 Apr 1974 Mao Tse-tung is photographed with Khieu Samphan at his right hand, and Sihanouk at his left.
- 3 Apr 1974 John Gunther Dean arrives in Phnom Penh as first US Ambassador since Emory Swank departed seven months ago.

- 30 Jul 1974 Senate Judiciary Committee rejects Article IV (illegal war in Cambodia) of Articles of Impeachment against Nixon.
- 9 Aug 1974 Nixon resigns presidency in face of certain conviction by Senate.
- 16 Dec 1974 President Ford, with French president, issue communique expressing hope for peaceful negotiations among parties to Cambodia conflict.
- 1 Jan 1975 Communists launch final offensive against Phnom Penh.
- 5 Feb 1975 Communists cut Mekong River traffic, Phnom Penh is isolated except by air.
- 27 Mar 1975 USSR breaks diplomatic relations with Lon Nol regime.
- 1 Apr 1975 Lon Nol flees Cambodia for Hawaii.
- 12 Apr 1975 US Embassy in Phnom Penh is evacuated by air.
- 13 Apr 1975 Khmer New Year, ends Year of the Tiger, begins Year of the Hare.
- 14 Apr 1975 Khmer Republic military HQ bombed by air; 24-hour curfew in Phnom Penh.
- 15 Apr 1975 Khmer Republic main air base falls, Phnom Penh's defense perimeter collapses.
- 16 Apr 1975 Government imposes 48 hour curfew, Khmer Republic troops abandon outer defense line around capital.
- 17 Apr 1975 Phnom Penh falls with only sporadic resistance; evacuation of civilian population begins.
- 19 Apr 1975 Systematic murder of Khmer Republic military and civilian personnel begins.
- 20 Apr 1975 All Khmer nationals, including Vietnamese and Chinese, are forced out of French Embassy.
- 24 Apr 1975 Evacuation of Battambang, Poipet, and other cities begins.
- 30 Apr 1975 All foreigners deported from Cambodia; Saigon falls, "Vietnam War" ends.
- 3 May 1975 Cambodian-Vietnamese fighting begins on contested coastal islands.
- 12 May 1975 U.S. container ship Mayaguez seized in Cambodian territorial waters; Ford orders air strikes on Cambodia's only oil refinery, sends Marines to rescue crew.
- 21 June 1975 Le Monde reports fighting over Poulo Wai islands and in Ratanakiri mountains between Vietnamese and Cambodian communists.
- June 1975 Saloth Sar to Hanoi for border talks; border liaison group established.
- 18 July 1975 Khmer Rouge envoys ask Sihanouk to return to Cambodia, he refuses.
- Aug 1975 Khmer Rouge incursions into Vietnam increase; Vietnam's Le Duan to Phnom Penh for talks; Hou Yuon resigns in protest and then disappears.
- 19 Aug 1975 Penn Nouth and Khieu Samphan go to North Korea, offer Sihanouk position as head of state for life, he agrees.
- 9 Sep 1975 Sihanouk returns to Phnom Penh.
- Sep 1975 Second round of population relocation begins.
- 5 Jan 1976 Constitution of Democratic Kampuchea is promulgated.
- 20 Mar 1976 People's Representative Assembly chooses 250 delegates, including a previously unknown "rubber plantation worker" named Pol Pot.
- 4 Apr 1976 Sihanouk resigns as Head of State, replaced by Khieu Samphan.
- 14 Apr 1976 Pol Pot becomes Prime Minister.

- 10 Apr 1977 Hu Nim is arrested.
- 30 Apr 1977 Vietnam says division-sized Cambodian force attacks Ha Tien and Chau Doc.
- May 1977 Fierce Vietnam-Cambodia border battles.
- Sep 1977 Vietnam launches a major incursion into Cambodia, penetrating up to 10 miles.
- 28 Sep 1977 Pol Pot, Ieng Sary, Son Sen and Vorn Veth visit PRC.
- 25 Dec 1977 Cambodia decides that it is "all-out war" with Vietnam.
- 6 Jan 1978 Vietnam begins withdrawal from Cambodia.
- 5 Feb 1978 Vietnam offer cease fire, Cambodia rejects the offer.
- 15 May 1978 Cambodian Foreign Minister Ieng Sary proposes 7 month "cooling-off" period before begin border talks with Vietnam.
- 4 Jun 1978 In Tokyo, Ieng Sary alleges Vietnam-CIA plot to destroy Democratic Kampuchea.
- 27 Jun 1978 Radio Hanoi responds to Ieng Sary charge of CIA plot: "Have the Kampuchea authorities gone crazy?"
- 21 Aug 1978 Before the US Senate Foreign Relations Committee, George McGovern calls for an international peacekeeping force to destroy the Khmer Rouge regime.
- 3 Nov 1978 Vietnam and the USSR sign a 25-year friendship treaty.
- 2 Dec 1978 Khmer Rouge defectors in Vietnam declare the "Khmer National United Front for National Salvation" to overthrow the Khmer Rouge regime.
- 28 Dec 1978 Vietnam launches a large-scale invasion of Cambodia.
- 5 Jan 1979 Pol Pot predicts "certain victory" over the Vietnamese invaders.
- 7 Jan 1979 Phnom Penh falls to the Vietnamese, Pol Pot retreats to the Thai border.
- Feb 1979 PRC launches an incursion in northern Vietnam to "teach a lesson."
- 19 Aug 1979 The "People's Revolutionary Tribunal" in Phnom Penh finds Pol Pot and Ieng Sary guilty of genocide, sentences them to death in absentia.
- 9 Oct 1979 Son Sann founds the "Khmer People's National Liberation Front."
- 7 Mar 1980 PRC withdraws from northern Vietnam after sustaining at least 20,000 casualties.
- 11 Mar 1980 Khieu Samphan calls on "all peace-loving, justice-loving countries" to oppose Soviet and Vietnamese "expansionism."
- 19 May 1980 Vietnam tells Thailand that the situation in Cambodia is "irreversible."
- 9 Feb 1981 Sihanouk rebuffs Khieu Samphan offer to form a united front.
- 23 Apr 1981 PRC openly gives weapons to non-communist resistance in Thailand.
- 8 Jul 1981 At UN in New York, Ieng Sary denies that the Khmer Rouge are communists.
- 18 Sep 1981 US representative votes for Khmer Rouge to retain Cambodia's seat at UN.
- 7 Dec 1981 Communist Party of Kampuchea asserts that it has dissolved itself, but that the same individuals will continue to constitute the Government of Democratic Kampuchea.
- 22 Jun 1982 Sihanouk, Khieu Samphan and Son Sann sign an agreement to form the exile "Coalition Government of Democratic Kampuchea."

- 4 Feb 1983 US Secretary of State George Shultz meets Sihanouk in Beijing.
- 24 Apr 1983 Sihanouk meets with French President Mitterrand.
- 25 Jul 1983 The Phnom Penh government's "Research Committee on Pol Pot's Genocidal Regime" publishes the results of a multi-year study concluding that 3,314,768 persons died during the Khmer Rouge regime.
- 2 Jul 1985 UN Special Rapporteur on Genocide declares that the Khmer Rouge government of Democratic Kampuchea was guilty of genocide "even under the most restricted definition."
- 28 Jun 1988 US Congressional Joint Resolution 602 calls for the "non-return to power by genocidal Khmer Rouge."
- 18 Oct 1988 President Reagan signs Joint Resolution 602 into law.
- 24 Jul 1989 Cambodian Prime Minister Hun Sen dines with Sihanouk in Paris on the eve of an international peace conference.
- 30 Jul 1989 A month-long international peace conference on Cambodia convenes in Paris.
- 17 Nov 1989 Representative Steven Solarz asks the Department of State what the US is doing to "bring Pol Pot to trial." The State Department submits a document to the House Foreign Affairs Committee, stating that the department believes "evidence exists that the Khmer Rouge committed genocide..."
- 28 Aug 1990 In New York, the Perm 5 on the UN Security Council forge a framework document for a "comprehensive political settlement of the Cambodia conflict" that outlines a quadripartite solution, in which the four principal factions will disarm under UN auspices and peacefully compete for power in a UN-organized election.
- 23 Oct 1991 The Paris Conference on Cambodia adopts the "Agreements on a Comprehensive Political Settlement of the Cambodian Conflict," giving the Khmer Rouge equal legitimacy alongside the Phnom Penh government, and the royalist and republican factions, to compete in UN-sponsored elections. US Secretary of State James Baker tells the conference that the US "will support efforts to bring to justice those responsible for the mass murders of the 1970s if the new Cambodian Government chooses this path."
- 15 Mar 1992 Japanese diplomat Yasushi Akashi, head of the UN Transitional Authority for Cambodia, establishes himself in Phnom Penh.
- 10 Apr 1992 US Senator Charles Robb introduces S.2622, the "Khmer Rouge Prosecution and Exclusion Act." It dies in committee, opposed by the Bush Administration.
- 22 Jun 1992 Thirty-three nations meeting in Tokyo pledge \$880 million to the reconstruction and rehabilitation of Cambodia.
- 5 Apr 1993 Khmer Rouge radio denounces the UN elections as "a theatrical farce to hand over Cambodia to Vietnam." They have not cooperated with the UN mission.
- 28 May 1993 UN-organized elections result in victory for Prince Norodom Ranariddh's royalist party, which takes 58 of 120 seats in the National Assembly. The incumbent Cambodian People's Party challenges the results, and a crisis

- ensues, which is eventually resolved by an agreement to form a coalition government.
- 24 Sep 1993 Constituent Assembly declares a constitutional monarchy, and restores Norodom Sihanouk to the throne; the Second Kingdom of Cambodia is born.
- 30 Jun 1993 Senator Robb reintroduces the "Khmer Rouge Prosecution and Exclusion Act" as Title VI of S.1281, and the bill becomes subject of an extended struggle, with fierce opposition from the Clinton Administration.
- 13 Apr 1994 At his Senate confirmation hearing, Charles Twining, US Ambassador-designate to Cambodia, proposes a compromise on the Khmer Rouge Prosecution and Exclusion Act whereby the investigations would be carried out by a private organization rather than by the US government.
- 29 Apr 1994 US Congress adopts the Cambodian Genocide Justice Act.
- 30 Apr 1994 President Clinton signs the Cambodian Genocide Justice Act, and it comes into force as part of Public Law 103-236.
- July 1994 The Office of Cambodian Genocide Investigations is established in the Bureau of East Asian and Pacific Affairs, US Department of State.
- 17 Jan 1995 State Department announces a cooperative agreement between Office of Cambodian Genocide Investigations and Yale University's Cambodian Genocide Program.
- Aug 1996 Ieng Sary defects to government with a large proportion of Khmer Rouge forces.
- 15 Sep 1996 King Sihanouk grants a royal amnesty to Ieng Sary, overturning his 1979 conviction on charges of genocide by the People's Revolutionary Tribunal.
- 4 Jun 1997 General Nhiek Bun Chhay, an aide to First Prime Minister Norodom Ranariddh, tells reporters that negotiators are near to sealing a deal for Pol Pot, Ta Mok and Son Sen to go into exile, while Khieu Samphan would be permitted to take up a political role in Cambodia.
- 9 Jun 1997 Khmer Rouge leaders Son Sen and Yun Yat are assassinated on orders from Pol Pot, and the remaining Khmer Rouge leadership falls into armed turmoil.
- 19 Jun 1997 Pol Pot surrenders to Khmer Rouge forces loyal to General Ta Mok.
- 4 Jul 1997 Fighting erupts in Phnom Penh between military forces loyal to the CPP and the royalists, and the coalition government collapses into civil war; Second Prime Minister Hun Sen ousts First Prime Minister Ranariddh.
- 25 Jul 1997 Pol Pot is judged by a summary Khmer Rouge court and sentenced to house arrest for the murders of Khmer Rouge leaders Son Sen and Yun Yat.
- 18 Mar 1998 A Phnom Penh military court tries deposed First Prime Minister Ranariddh in absentia, finds him guilty of collusion with the Khmer Rouge and other offenses, sentences him to 30 years imprisonment.
- 30 Mar 1998 Ranariddh returns to Phnom Penh after being pardoned by his father, King Sihanouk; US Ambassador Kenneth Quinn comments, "Cambodia is a better country today than it was yesterday because it has taken one step in the direction of reconciliation."

- 6 Apr 1998 US President Clinton reportedly issues an order for Pol Pot to be taken into custody by US officials in Thailand.
- 15 Apr 1998 Pol Pot learns through a Voice of America broadcast that the Khmer Rouge are considering surrendering him to the US; he dies later that night in Anlong Veng.
- 30 Apr 1998 US tables draft statute at the UN Security Council for an ad hoc international Khmer Rouge tribunal, but the other four members of the P5 are not enthusiastic.
- 26 Jul 1998 Cambodian elections yield 64 National Assembly seats for the People's Party, 43 for the royalist party, and 15 for the opposition Sam Rainsy Party. The royalists and the opposition contest the result and take to the streets in violent protests.
- 11 Sep 1998 Congressman Dana Rohrabacher introduces HR533 in the US House of Representatives, calling for Prime Minister Hun Sen to be prosecuted for genocide.
- 10 Oct 1998 HR533 is adopted, expressing the sense of the US House of Representatives that the United States should work to bring about the indictment of Hun Sen for violations of international humanitarian law after 1978.
- 30 Nov 1998 After months of violent street protests over the election results, the People's Party and the royalist party form a coalition government, with Hun Sen as Prime Minister and Norodom Ranariddh as President of the National Assembly.
- 25 Dec 1998 The last Khmer Rouge political leaders in active resistance, Nuon Chea and Khieu Samphan, surrender to the Cambodian Government.
- 22 Feb 1999 A UN Group of Experts recommends the establishment of an international tribunal to prosecute the Khmer Rouge for genocide and other serious crimes.
- 12 Mar 1999 The Cambodian government delivers an aide-memoire to the UN Secretary-General, formally rejecting the proposal for an international tribunal.
- 30 Apr 1999 Cambodia becomes a member of the Association of Southeast Asian Nations.
- 17 Jun 1999 Cambodia requests UN assistance in drafting legislation to allow foreign judges and prosecutors to participate in a domestic Khmer Rouge tribunal.
- 30 Jun 1999 Russia and China tell the US that they formally reject the concept of a Chapter VII Security Council mandate for a Khmer Rouge tribunal, and the US then turns its attention to other potential approaches.
- 4 Aug 1999 With HR 2606, the US Congress conditions foreign assistance to Cambodia on a formal finding that "the Government of Cambodia has established a tribunal consistent with the requirements of international law and justice and including the participation of international jurists and prosecutors for the trial of those who committed genocide or crimes against humanity."

- 23 Oct 1999 US Ambassador at Large for War Crimes David Scheffer meets with Cambodian officials in Phnom Penh, seeks agreement on a compromise for the tribunal.
- 6 Jan 2000 Cambodia's Council of Ministers approves the draft Khmer Rouge tribunal law.
- 29 Dec 2000 The Khmer Rouge tribunal law goes before the National Assembly for debate.
- 2 Jan 2001 The National Assembly adopts the tribunal law.
- 30 May 2001 US Senate Foreign Relations Committee Chairman Jesse Helms and Senate Appropriations Committee Foreign Operations Subcommittee Chairman Mitch McConnell write to Secretary of State Colin Powell, saying they have "little faith" in the proposed Khmer Rouge genocide tribunal.
- 7 Aug 2001 Cambodia's Constitutional Council approves the tribunal law.
- 10 Aug 2001 King Sihanouk promulgates the tribunal law.
- 3 Feb 2002 Cambodia holds commune council elections, and the ruling party sweeps the vote, with the CPP dominating in 1,597 communes, compared to 13 for the opposition Sam Rainsy Party, and 10 for the royalist FUNCINPEC party.
- 8 Feb 2002 The UN rejects Cambodia's tribunal law, and withdraws from negotiations.
- 9 Feb 2002 US Ambassador to Cambodia, Kent Wiedemann, urges Cambodian government to remain open to negotiations with UN on the tribunal.
- 26 Mar 2002 US offers asylum to 1,000 Montagnard refugees who had fled Vietnam into Cambodian territory.
- 11 Apr 2002 Cambodia is one of ten countries depositing notice of ratification of the Treaty on the International Criminal Court (ICC) at the United Nations, bringing the total number of ratifications of the ICC to more than sixty and thus triggering the formal establishment of the court.
- 1 Oct 2002 Senate confirmation hearing is held for Charles A. Ray, US Ambassador-Designate to Cambodia.
- 18 Dec 2002 The UN General Assembly adopts a resolution instructing the Secretary-General to resume tribunal negotiations with the Cambodian government.
- 18 Mar 2003 Secretary-General Annan reports to the General Assembly that his team has reached agreement with the Cambodian government on a Khmer Rouge tribunal.
- 6 Jun 2003 Cambodia and the UN sign the Khmer Rouge tribunal agreement.
- 27 Jul 2003 National election returns a majority of 73 National Assembly seats for the ruling party, with 26 seats for the royalists and 24 for the opposition, but the CPP falls short of the two-thirds majority required to form a government. The resulting political stand-off delays formation of the next government for nearly a year, but unlike 1998, the minority parties do not call their partisans into the streets.
- 12 Sep 2003 The World Trade Organization agrees to admit Cambodia as a member.
- 30 Jun 2004 Leaders of the ruling party and royalist party sign an agreement on power sharing, clearing the way for the formation of a new government.

**CAUCASUS  
SELF-STUDY GUIDE**

## CAUCASUS SELF-STUDY GUIDE

Map published by N. Sanson, 1795, Amsterdam

## **SELF-STUDY GUIDE TO THE CAUCASUS**

The Self-Study Guide to the Caucasus (Armenia, Azerbaijan, Georgia and certain aspects of the North Caucasus, Russia) is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to Caucasus history, geography, politics, economics, culture, religion, media, and international relations.

The Caucasus is far too complex to be covered in depth using only the text in this Guide. The reader is encouraged to explore the questions and issues introduced, using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service Institute, Main State, or District of Columbia public libraries.

The first edition of the Guide was prepared and illustrated by Alex van Oss, Chair, Caucasus Studies, Area Studies Division, Foreign Service Institute. The views expressed in this Guide are those of the author and attributable sources and do not necessarily reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by the author. All sources used for graphics and extended quotes are from the public domain, from sites that explicitly say “can be used for non-profit or educational use,” or are from the author’s own materials. This publication is for official educational and non-profit use only.

## **ACKNOWLEDGEMENTS**

The purpose of this Guide is not merely to inform, but to stimulate the reader’s interest in the Caucasus, which is one of the most fascinating places in the world. To that end, I have taken the liberty of occasionally using my own illustrations and personal anecdotes.

Caucasus history is intricate, deeply felt, and open to many interpretations. It cannot easily be squeezed into a few dozen pages. This humble guide offers certain “glimpses” of the region, focusing especially on history and culture--or rather, histories and cultures. Parts of the North Caucasus, in Russia, have been included because events there affect the South Caucasus directly and in major ways.

My heartfelt thanks go to Carl Lankowski and Ambassador Harry Gilmore for their encouragement in this project; to Marie Gardner and Dara Hourdajian for copy-editing assistance; and to Melody Crallie for graphics design. My father, Hendrik van Oss, a Foreign Service Officer, and my brother, Hendrik G. van Oss, a geologist with the U.S. Geological Survey, also made many useful comments pertaining to history, geography, petroleum, grammar

and nuance. The cover illustration, kindly provided by Charles Maynes, is taken from Sergei Anisimov's Caucasus Region Travel Guide (Government Press, Moscow/Leningrad, 1927).

Alex van Oss  
July 6, 2004

Five years have sped by since this *Self-Study Guide* first appeared, during which time three events have rocked the Caucasus: Georgia's "Rose Revolution" (2003), the Russian-Georgian conflict (2008), and the worldwide economic crisis. A fourth and more positive surprise--the warming in relations between Armenia and Turkey--could potentially augur, if not an untying, at least a loosening of several of the Caucasus's intractable geopolitical knots. All this serves to remind us that events in the Caucasus do not remain local, but ripple throughout Europe, Central Asia, and further, within hours. [AvO April 2009]

## THE CAUCASUS

### INTRODUCTION

*“The Caucasus was always a powder keg—and now it is a nuclear powder keg!”*

Murat Yagan, Abkhazian elder,  
interview with the author, 2002

*“All Caucasians are great liars.”*  
(quoted in Griffin, Nicholas. p.3.  
Caucasus: Mountain Men and Holy Wars.  
St. Martin’s Press. 2001.)

The word Caucasus derives from *Kaf*, a legendary mountain. The conventional, and quaint, connotation of the word Caucasian as meaning “white” may be traced to the theories of German anthropologist Johann Friedrich Blumenbach who, in his treatise *On the Natural Variety of Mankind* (1775) used skull measurements, lightness of skin color, and beauty of features to define Caucasians as the world’s most ancient peoples, and the Caucasus as humanity’s cradle.

The Caucasus figures in Greek mythology as the lofty prison of Prometheus, chained to a rock (located, depending on the myth, on Mount Elbruz or Mount Kazbek). In addition, Jason and the Argonauts sailed to the valley of the Rioni Rivier, Imeretia, south of the Greater Caucasus Mountains, and there found the Golden Fleece--and later the sorceress Medea, who seduced Jason with an herbal potion. This legendary rendezvous reputedly occurred in the fields at Ushgul, possibly the highest site inhabited all year round in the Caucasus, near the castle of the renowned Queen Tamara, under whom the country prospered in the 12<sup>th</sup> century. Apparently, Tamara’s great beauty attracted lover upon lover; each stayed for one night in the castle and was hurled from the battlements the next morning. (In another version of the story, there was only one suitor, who tricked his way into the virtuous royal bedchamber—and became impotent.).

Setting legends aside, there is one rock-solid fact about the Caucasus: its strategic nature. Empires, nations, and hordes have long sought to control the Caucasus, generally for access to other regions. Narrow passes through the mountain gorges, or along coastal zones at either end of the peaks, allowed armies, pilgrims, and nomads to move from Asia into the Middle East and Southern Europe, and from Persia north into Russia. Throughout history the Caucasus afforded access to the Black Sea and the Silk Road in Central Asia, to Arabia and Mecca, and to India. Today the Caucasus beckons not so much as a passage, but as a conduit of Caspian oil and gas.

Caucasus politics are as unpredictable and potentially turbulent as the region’s seismic terrain. Unlike earthquakes, which tend to be local in focus, human upheavals in the Caucasus—pitting old regimes against new, democracy against autocracy, and all too often Christians against Muslims—threaten potentially to spread to the Middle East or otherwise entangle major powers. The Caucasus is a demographer’s delight (and nightmare) in that it presents a crazy-quilt of interspersed peoples and nationalities. Georgia and Azerbaijan historically have been home to sizeable and influential Armenian populations. Yerevan (Armenia), from the mid-18<sup>th</sup> century until 1834, belonged first to an Azerbaijani khanate and then to Persia--which in turn, as Iran, has a large Azeri population. For centuries, Caucasus peoples have shared history and, at times, rulers. These sundry ethnic groups—Abkhazians, Georgians, Armenians, Azeris, and dozens of others—have mingled in the street, conducted business, and intermarried, making the recent slew of civil wars, ethnic cleansings, and secessions all the more bitter. Turmoil in the Caucasus can be blamed on one or more of the following factors: outside interventions (by Tamerlane, for example, or the Ottomans, or the Tsar), Caucasus obduracy, Caucasus tempers, Caucasian traditions of vendetta, and the machinations of Stalin.

Stalin's dark Georgian genius forged the Soviet Union, but it also scorched and branded its peoples. While Stalin criticized nationalism as a threat to the Communist state, he also used it, when convenient, as a tool and devised borders in the Caucasus of exquisite complexity that served to isolate (at least on a map, if not in day to day intercourse) ethnic minorities within majorities, or cut across ethnic divides. With such boundaries, and with mass deportations of entire peoples, Stalin divided and conquered the lands and peoples of the USSR. The result—a jiggled, displaced, cultural hodge-podge—almost guarantees periodic instability throughout the Caucasus.

These tragic events, sometimes covered in the press, but more often hidden from the world, have occurred against a background of national wars and imperial expansions, not to mention today's energy resource exploration and development, regime changes, economic embargoes, arms, narcotics, and human trafficking, and anti-terrorist campaigns. And all in an area the size of North Dakota.

The Caucasus is a land consisting of "knots and 'nots'" that are at once geopolitical and conceptual, as follows:

- The Caucasus is not Russia.
- Russia is not the Caucasus.
- Even the Caucasus is not the Caucasus!

In essence what this means is that foreigners throughout the ages have been seduced into projecting their own fantasies (religious, Romantic, Imperialistic, post-Cold War, Eurasianist, Turanist, Democratic, and so forth) upon this ancient, variegated, and elusive region. During the 19th and 20th centuries, British and Russian diplomats, along with secret agents and adventurers, devoted a good deal of their lives to studying the Caucasus, learning its languages and customs, and even sometimes "going native." This is obviously not an option for the average United States diplomat. However, the Caucasus does offer a fascinating and potentially rewarding career path to anyone attracted by its cultural richness, and who understands the importance of its pivotal location and resources. Today a student of the Caucasus can refer to the work of many fine analysts, anthropologists, political scientists, journalists, and NGOs. Nevertheless, it remains the case that, while artists and poets turn to the Caucasus for inspiration, and tourists for rest and recreation, soldiers and diplomats will always find in this locale—the home of Narts and the proverbial Kaf Mountains—that their work is cut out for them...

## **GEOGRAPHY: A Land of Contrasts**

*In Tbilisi, situated in the Kura River valley, tourists may visit a synagogue, an Armenian Gregorian church, and a Georgian Orthodox church all on the same street— an indication of religious tolerance and the close mixing of peoples in Georgia. A Circassian elder, unimpressed by this story, scoffed and said: “Close? That’s nothing! Where I come from, high up in the mountains, the next village may be so close you can call out: ‘Hello...good morning!’ and they will hear you. But to get to that village on horseback takes a whole week.” (As recounted to the author.)*

Maps tell fascinating stories: ancient and medieval cartographers, referring to the Bible, often drew the Caucasus Mountains (labeled as 'Armenia,' 'Abkhazia,' or 'Circassia') in a central location--next to Jerusalem--and marked it with a helpful diagram of Noah's Ark on top of Mount Ararat. In these old curiosities, much of today's European Union ('Europa') would be squeezed towards the top of the map, towards the frozen northern periphery ('Ultima Thule'). Centuries later, newer atlases left out Noah and drew attention to Byzantium, Russia, and Persia--but, alas, these maps tended to shove the mighty Caucasus off to the left or right margin, or stuff it out of sight entirely, down into the central binding where the atlas pages join together. Fortunately for all, by the 19th century the Caucasus bobbed to the surface once again as the industrial world developed a thirst for oil, and British and German mapmakers traced out, in obsessive detail, every peak and valley between the Black Sea and the Caspian. Maps are indeed marvelous, but of course "maps are not the terrain"...

The terrain of the Caucasus happens to be extraordinarily varied, with numerous microclimate zones; its weather can be mild in one place and severe a short distance away. In some Black Sea

regions the mountains plunge directly to the shore and travelers may descend from alpine regions to lush sub-tropical strands in an hour. Ancient and dense forests in certain areas have been depleted and replaced by scrubland. In the Greater Caucasus mountain range, Elbruz (elev. 18,480 feet) is the highest peak in Europe, whereas parts of Azerbaijan, along the Caspian, are below sea level. Azerbaijan's natural gas vents, eternally burning, have been known and even worshiped since antiquity, along with oil deposits oozing from the earth. The Tabriz region, formerly Azeri, now in Iran, has been called the original Garden of Eden (an honor claimed by sundry other Caucasus nations as well), whereas Armenia is largely arid plateaus and plains, hot or snowbound, according to season, and with stark mountains. A short bird-flight away, Georgia's climate ranges from alpine and temperate to hot and humid—perfect for viniculture, which Georgians say began in their homeland.

With mountains to their back, South Caucasus peoples throughout history focused their attention more towards the south and west—Persia and Anatolia—and less to the north or east, whence the occasional “uninvited guest” would swoop in from the steppes or the deserts of Central Asia. By contrast, the North Caucasus peoples, backed by those same mountains, have had to contend with a series of eastern raiders—Huns, Mongols, Tatars—and northern foes ranging from Varegs (Varyagi, Vikings) and Khazars, to Russians, Cossacks, and Germans. In a sense, the Caucasus Mountains provide a false sense of security because, though rugged and steep, they are not impassable. As a result, powerful and often violent currents and influences find refuge within those vastnesses and periodically cross back and forth between north and south. Today the North Caucasus (and parts of the South) remains under the sway of Russia, whereas Georgia, Armenia and Azerbaijan, eternally wary of their large neighbor over the peaks, once again look to Iran and to the west—to Turkey, the European Union, and the United States—for their future. They look east as well: to China, for the Caucasus produces oil and gas, the life-blood of Western life and the western lifestyle worldwide. In all these matters, terrain, geography, and good maps, remain of paramount importance.

## **Armenia**

As the Finns say, “You just can't get around geography.” Terrain often determines destiny and certainly does so in Armenia. “Historical Armenia” occupied considerable portions of the Anatolian Plateau in today's Turkey. This is the highest landlocked plateau in the Middle East, with an average elevation of 3000 feet (and up to 7000 feet). The volcanic Mount Ararat (also situated in Turkey) is a nostalgic symbol for Armenians and rises to 17,000 feet. This plateau, with limited points of entry, enabled occupants of historical Armenia to dominate surrounding areas of the Middle East.

Viewed more closely, historical Armenia consisted of a series of small plateaus, valleys, and gorges crossed by some 34 greater and lesser mountain ranges of complex geology, dominated by limestone and igneous rock, and with little rainfall or forests. Today's Armenia, much reduced in territory, is landlocked, with mountain steppes and meadows, and patches of forests. The

Republic (29,793 square kilometers) is about the size of Maryland—less than a tenth of the territory of historical Armenia (which was comparable in area to Great Britain).

The Araks River ('Mother Araxes'), though un-navigable, is another Armenian national symbol. It flows by many of her ancient cities, descending from the plateau in cascades and gorges 5,000 feet to the fertile plain of Ararat, where it becomes the border with Turkey and Iran before emptying into the Caspian. Prominent lakes in historical Armenia include Van and Sevan. The latter is modern Armenia's largest body of water, at an altitude of 6,279 feet. Sevan originally covered 550 square miles, but Soviet hydroelectric projects reduced its level by 50 feet, and diversions of streams to replenish the lake have instead brought pollution and destroyed much of Sevan's marine life.

Armenia's climate is continental, dry, and often harsh, with summer temperatures of up to 110° F and winters sometimes colder than Moscow's. Armenia is essentially an extension of the Central Asian deserts, with rich volcanic soil that is largely un-tillable unless irrigated. Though little rain falls, abundant water flows from the mountains and mineral springs and is harnessed for hydroelectric power. The land is highly seismic, and earthquakes have swallowed up churches and destroyed cities time and again. For example, in 1988, a devastating earthquake at Gumri killed 25,000-50,000 people and left 200,000 homeless. As a result, Armenia is a land of picturesque and plentiful ruins.

## **Azerbaijan**

Some areas of Azerbaijan are steppe, whereas the "separate bit" of Azerbaijan, Nakhichevan, consists of arid plains and dramatic mountains. Azerbaijan's terrain varies from semi-desert regions below sea level, to the wet, muggy, forested mountains with tea plantations in the Talysh region. The capital, Baku, sits on the Absheron Peninsula, which juts into the Caspian Sea. In ancient times, the prophet Zarathustra resided in Apsheron. Today Apsheron offers a virtual cornucopia of crude oil and petroleum products--and also enjoys the distinction of being one of the most polluted regions on the globe thanks to oil spills, toxic defoliants and DDT used in the cotton industry.

## **Georgia**

Slightly bigger than South Carolina, Georgia is largely mountainous and rugged with a mild climate on the Black Sea coast and cold winters in the highlands. Its scenery can change quickly from forest to scrub to semi-desert to alpine meadow. Rivers course through dramatic and often romantically gloomy mountain gorges. The Kura (Mtkvari) River originates in Turkey and flows through the ancient capital, Mtskheta, and then Tbilisi, before continuing through Azerbaijan to the Caspian Sea.

## **Issues and questions for further exploration**

- 1 How many trade and travel routes exist across the Caucasus Mountains?
- 2 Where are the region's highest and lowest points?
- 3 Read the first chapter of Lermontov's A Hero of Our Time. Where was the narrator going and what mountains did he see en route?
- 4 Whence do the major Caucasus rivers originate, and where do they flow?

### CHRONOLOGY

100 BC

### ARMENIA

**TIGRAN THE GREAT**, expanded the Armenian

Empire to its greatest size (95-55 BC)

**ROMANS** conquer the Caucasus and Kartli-Iberia (66)

Then they conquer Armenian Empire (30 BC)

100 AD	And then they annex Azerbaijan ('Albania') 100-300AD
300	<b>CHRISTIANITY</b> accepted by Tiridates III (301 AD? 314 AD? debated)
400-600	<b>FIRST GOLDEN AGE OF ARMENIAN CULTURE</b> <b>Byzantine Empire</b> cedes Armenia to <b>Arabs</b> (653)
800	<b>BAGRATID</b> family (installed by Arabs, 806) governs Armenia. Armenian prince Ashot I (813) begins <b>1,000 years of Bagratid rule</b> in Georgia.
900	<b>SECOND GOLDEN AGE OF ARMENIAN CULTURE</b> (862-977) ( Ashot III)
1000 centuries)	<b>BYZANTINE GREEK</b> invasions of Armenia (continue into the 11th-14th centuries)
1000s-1300s	<b>SELJUK TURK</b> invasions of Armenia <b>CRUSADES.</b> Cilician Armenian and Georgian armies help European armies to control Holy Land. <b>MAMELUKE TURKS</b> conquer Cilician Armenia (1375)
1400s	<b>OTTOMAN Empire</b> absorbs most of modern Armenia, Azerbaijan, and Georgia.
1800	Treaty of Turkmanchay (1828) awards Nakhichevan and Erevan area to Russia "Armenian question" arises at Congress of Berlin (1878) and becomes an ongoing European issue. First Armenian revolutionary party formed (1881) <b>Massacre of 200,000-300,000(?) Armenian subjects by Ottoman Turks</b> (1894-
96)	
1900	Young Turks take over Ottoman government (1908). Reform agenda supported by Armenian population. <b>Young Turks order massacres of 600,000-- 2 million(?) Armenians, driving others from eastern Anatolia.</b> (1915-22) Armenia, Azerbaijan, and Georgia form independent <b>TRANSCAUCASIAN FEDERATION</b> (1917). Tsar Nicholas II abdicates Russian throne; Bolsheviks take power in Russia. (1918) <b>Independent Armenian, Azerbaijani, and Georgian states</b> emerge from defeat of Ottoman Empire in World War, become republics in the <b>USSR</b> for seven decades.
1920-30s	Industrialization, collectivization, purges, Russification.
1991	<b>Independence</b> from the Soviet Union. Ongoing Nagorno-Karabagh dispute.
<b>CHRONOLOGY                      AZERBAIJAN</b> <b>Persian fire worship</b>	

300 BC	GREEK influence
200	Parthian Empire
100	
	<b>ROMAN</b> influences in Caucasian “Albania”
100 AD	
200	<b>CHRISTIANITY</b> advances
300	
500	Attack by <b>Turkic</b> “Sabirs”
600	<b>Christian Albania</b> (Mikhranides) First big <b>Arab</b> attack (664)
700	
	<b>ARAB CONTROL</b>
800	
	Babek's Rebellion (816-837)
900	More autonomy in "Aran" and "Shirvan"
1000	
	<b>OGUZ/SELJUK TURKS</b>
1100	
	<b>GEORGIAN</b> suzerainty
	<b>GOLDEN AGE</b> ATABEKS (Attabeys) in Ganja/ <b>Nakhchivan</b>
1200	
	<b>MONGOL RAIDS</b> (1221,1235)
1300	
	<b>MONGOL EMPIRES</b>
	<b>TIMUR's RAMPAGES</b> (1380)
1400	<b>Turkic</b> Overlords (Gara-Goyonlu, Aq-Goyonlu)
1500	<b>SHI'ITE ISLAM</b> adopted (1501) "GREAT AZERI EMPIRE" (Persian Safayid Dynasty)
1600	<b>Ottoman</b> Turks, then <b>PERSIAN CONTROL</b>
1700	Nadir Shah Attacks 1735-47 <b>Small Khanates</b>
1800	<b>RUSSIAN COLONY</b>
	<b>OIL BOOM</b> 1860s-1915
1900	<b>Independence</b> 1918-20 Democratic Republic <b>USSR period</b>
1991	<b>Independence</b> again <b>Nagorno-Karabagh</b> dispute 1988-present
2003/2005	<b>Baku-Tbilisi-Ceyhan</b> oil pipeline

## CHRONOLOGY

5000 BC

## GEORGIA

**Neolithic** Culture, dwelling & burial sites in Tbilisi

2000

**INDO-EUROPEANS** enter Georgia

1000

Late Georgia Bronze Age

900

Capture of King Asia of the Daiaeni (845)

800

Sarduri II of **Urartu** invades Colchis (750)

**SCYTHIANS & CIMMERIANS** invade Georgia (730)

600

**GREEK** colonies

500

Xenophon and his Ten Thousand cross Southwest Georgia

400

**IBERIAN KINGDOM**, Tbilisi founded (458)

200

Mithridates Empator of Pontus (163-120)

100

**ROMANS**: Pompey's Caucasian Campaign (66-55)

0

Vespasian fortifies Mtskheta Castle (75 AD)

100 AD

Georgian ambassadors go to Hadrian

300

St. Nino "brings" **CHRISTIANITY** (330)

400

Peter the Iberian (409-88)

King **Vakhtan Gorgaslan** (446-510)

500

Armeno-Georgian monophysite synod of Dvin (506)

**JVARI CHURCH, Mtskheta** (590-607)

600

**GREEKS & KHAZARS** capture Tbilisi (627)

**ARABS** occupy east Georgia (655)

700

**CALIPH**'s forces ravage Georgia (636-38)

Prince Ashot the Great (from Armenia)

800

Adarnasse IV, King of the Georgians

900

**BAGRATID DYNASTY (lasts approx. 1000 years)**

Bagrat III, King of Kartli (975)

1000

**TVETISKHOVELI CATHEDRAL, Mtskheta** (1029)

**SELJUK TURKS** invade (1065)

**KING DAVID THE BUILDER** (1089-1125)

Georgia occupies part of Armenia (1123)

Georgia captures Tbilisi from Muslim emirs (1121)

Georgia occupies Derbent (1167)

The Bard **SHOTA RUSTAVELI** (1188)

**QUEEN TAMAR** (1184-1212)

1200

**GEORGIAN/GREEK Empire of Trebizond**

Georgia captures Kars (1206)

Georgia invades Iran (1208-1210)

**MONGOLS** invade (1236)

Georgia becomes principalities with nobles and kings, and is often vassal to the Mongol khan.

1300

**THE BLACK DEATH**

**TAMERLANE** invades (1386-88), sacks Tbilisi

Georgian **CLANS** evolve, country splits into three kingdoms + principalities (for 400 years)

**JEWISH, ARMENIAN, PERSIAN** merchants, Silk Road

access

1500 **TURKS** "invade" West Georgia (for 400 years)  
**SAFAVIDS** "invade" (1549)  
 FEUDAL lords and princes, Georgia divided into  
 Ottoman and Safavid spheres of interest (for 200 years)

1700 **RUSSIAN** contact begins (1554)  
 Herekle II (1744-98) unites Kartli and Kakheti  
**Georgia allies with CATHERINE THE GREAT (1783)**  
**SHAH AGHA MOHAMMAD KHAN** burns Tbilisi (1798)

1800 **Georgia annexed by RUSSIA (1801)**  
 Kingdom of Kartli-Kakheti abolished (1801)  
 Russia consolidates rule over Georgia (for 117 years)  
 RUSSIFICATION of feudal system  
 Military governors, Conspiracy of 1832  
**RUSSIA fights SHAMYL**  
 Georgian Socialist Democrats  
 Stalin born (1878)

1900 **RUSSIAN REVOLUTION (1917)**  
 Mensheviks seize control in Georgia

1918-20 **GEORGIAN INDEPENDENT STATE**  
 Land reforms  
 Red Army invades Georgia (1920)  
 Georgia becomes a Soviet Socialist Republic

1922-26 Georgia joins the **TRANSCAUCASIAN SOVIET  
 FEDERATIVE REPUBLIC**  
 Farm collectivization (1930s)

1936 Georgia becomes a **REPUBLIC of the USSR**  
 Purges (1936-37)

1989 Georgia/South Ossetia clashes

1990 Elections

1991 **GEORGIAN INDEPENDENCE** declared  
 Zviad GAMSAKHURDIA elected president

1991-2 **WAR WITH ABKHAZIA**  
 Gamsakhurdia deposed, Eduard SHEVARDNADZE returns  
 from Russia (1992)  
 Georgians repelled from Abkhazia  
 Abkhaz ceasefire (1994)

1995 SHEVARDNADZE becomes president.

2002 **UNITED STATES** forces enter Georgia to "train-and-equip"  
 Georgians for anti-terrorist operations

2003-5(?) **BAKU-TBILISI-CEYHAN OIL PIPELINE**  
 "ROSE REVOLUTION" (2003) Shevardnadze resigns

2004 Mikheil SAAKASHVILI inaugurated  
 Ajarian separatist leader Alan Abashidze toppled

2008

Clashes with S. Ossetia  
Abkhazian elections  
Russian-Georgian-S. Ossetian Conflict

## Ethnolinguistic Groups in the Caucasus Region

## PEOPLES

The Caucasus has been called the “museum of mankind” due to its varied and ancient cultures, as well as the “mountain of languages” (at least 40 being spoken, some by only a few thousand people, with more than two dozen languages in Daghestan alone). The Caucasus, like its neighbors, Turkey and Iran, is a cultural crossroads that has always boasted a mix of autochthonous “host” peoples (e.g. Georgians, Circassians) and various “guests”: Greeks, Mongols, Byzantines, Romans, Persians, Turks, Slavs, and many others. Few areas of the Caucasus can claim ethnic purity; indeed, the region resembles a crazy-quilt of interspersed peoples: there are Georgian Armenians, Turkish Georgians, Georgian Azeris, and every other

combination. For generations, even centuries, groups have lived in close proximity (such as the Armenians and Azeris in Nagorno-Karabagh, at least until recently), or mingled and intermarried (e.g. Abkhaz and Circassians with Georgians and Mingrelians), making current civil wars and the creation of breakaway regions all the more bitter.

Caucasus demography changes over time. Indeed, only its mountains endure, and the paths across them, while maps and political borders mean little to itinerant merchants or to displaced persons caught in a blizzard (or to fighters on sortie). In the Caucasus, anthropology and ethnography can prove to be poor guides and false friends, and books often give legitimacy to facts based on legend and hearsay. Such terms such as Caucasian, Circassian, Adyghe, and so forth, while convenient ethnographic designations, sometimes are inevitably colored by imperialistic or nationalist policies (or may even be tainted by dubious 'Aryan' race theory). Let the labeler beware! The distinctions implied by names in the Caucasus sometimes turn out to be chimera, divisive elements which distract from important commonalities.

# HISTORIES:

# ARMENIA

The first major state on the Anatolian plateau was Urartia, and Armenia's capital, Yerevan, stands near the Urartian citadel of Erebuni (782 BC). According to one theory, in ancient times, "Armens" arrived from the west (possibly Thrace), and slowly joined with the Urartians to form the Armenians. Other classical plateau dwellers included Kurds, Persians, Turkmens, and Turks.

Under Tigran II (the Great, 95-55 BC), Armenia stretched from the Mediterranean to the Caspian Sea, but its borders shrank dramatically in the 4th century AD. Though Armenia is the world's first Christian nation (314 AD), many Armenians over the centuries by necessity converted to Islam. In addition, for over a millennium Armenians have left their homeland to pursue commerce, or have been driven away by Byzantine transfers of populations and most recently by the massive uprooting and Ottoman massacres of 1915-22.

Geghard Monastery-13<sup>th</sup> Century

Armenia, though resilient, fell to the Romans, Byzantines, Arabs, Sassanid Persians, Mongols, the Seljuk Turks, Ottomans, and Russians. It re-emerged, briefly, as an independent country in 1918—before being forced into Soviet Russia in 1920.

During the 15<sup>th</sup>-17<sup>th</sup> centuries, Armenia was partitioned into halves controlled by Turkey and Persia. Of the western half of Armenia, Russia took control of its eastern portions during the 1800s: a prelude to the turbulent 20<sup>th</sup> century in which the great Ottoman and Russian empires gave way to Turkish and Soviet nation states—with Armenians caught in the middle.

Armenians traditionally comprised two groups: the educated urban Armenian populations in the great Ottoman cities, as well as in Baku and Tbilisi, and, secondly, rural Armenian peasants. There were also diaspora communities. In 1894-96, rising and even revolutionary feelings of Armenian individuality and nationalism provoked harsh repressions and massacres by the Ottoman sultan. The promise of a progressive “Young Turk” regime, which toppled the sultanate, turned sour during the First World War as the authorities turned on its Armenian citizenry and scourged them out of Anatolia (1915-23). Armenians fled to Russian controlled regions and formed an impoverished, fragile nation in the area surrounding Erevan.

It is difficult to imagine the chaos in the Caucasus after the Bolshevik Revolution. While Georgia and Azerbaijan for a time had “protector” states (Germany and Britain, respectively), Armenia was on its own. Threatened by Turkish expansionist forces, Armenia cast its lot with the Bolsheviks, becoming first an Independent Socialist Republic, then joining Georgia and Azerbaijan to make up a weak Transcaucasus Socialist Federative Soviet Republic, and finally perforce entering Soviet Russia. Until this time, Erevan had been but a tsarist backwater, a provincial center with insufficient resources or expertise to administer a country.

Even into the early 20<sup>th</sup> century, the majority of Erevan’s population (30,000) were Azeris, not Armenians. By contrast, Armenians at this time formed an influential majority in Tbilisi and a large component of the populace of Baku, two cities with ten times the population and wealth of Erevan. However, Erevan’s population increased rapidly, in late tsarist, early Bolshevik years, due mainly to the influx of 300,000 indigent refugees from Turkey. The fledgling nation was in dire condition and an estimated 20% of its population died of privations in the first year and a half of Armenia’s existence.

The 1920s introduced an era of intense land cultivation and industrial development in

Armenia, as Yerevan expanded, and planners built hydroelectric plants, canals, and irrigation projects. Then came “Stalin’s Revolution” which brought waves of purges and forced farm collectivization. This was firmly resisted by peasants who slaughtered 300,000 head of cattle (1928-33). For a short period Stalin backpedaled, declaring the USSR to be “dizzy with success” from Moscow’s disastrous economic edicts—but collectivization began anew in 1930. This was a major assault on Armenian (and Georgian) society, the peasantry, and Armenian’s traditional merchant and commercial classes.

At great human cost, forced industrialization virtually eradicated Armenia’s unemployment by 1931. However, the abundance of jobs was due substantially to a labor shortage, low pay, poor working conditions, and absenteeism. On the positive side, industrialization also brought with it increased literacy, social mobilization, and independence of women. For a time, Soviet authorities encouraged the use of local languages—e.g. Armenian—but imposed Russian as a Soviet *lingua franca* after 1934. Nationalism was discouraged in favor of Soviet patriotism, followed shortly by harsh suppression of artists and writers. The Great Purges of 1936-38 culled the ranks of the Armenian Communist Party, replacing old elites with more compliant new members. Agnasi Khanjian, Armenia’s leader, an ardent Marxist, died during a visit to Lavrenti Beria, Stalin’s ruthless henchman, in Tbilisi in July 1936. (Officially Khanjian ‘committed suicide.’ Curiously, in December of the same year, Nestor Lakhoba, the Abkhazian leader who had resisted Stalin’s mandate that Abkhazia be collectivized and enter Georgia as an ‘autonomous republic’ --also expired after meeting with Beria. Lakhoba’s death was ruled a ‘heart attack,’ but many people suspected poisoning.)

With the fall of the Soviet Union, Armenia declared its (second) independence in 1991. The country is small (29,800 sq km), about the size of Maryland. The major international issue facing Armenia today is the “frozen conflict” (dating from 1988, with a ceasefire declared in 1994) with Azerbaijan over Nagorno-Karabakh. Called “Artsakh” by Armenians, Karabagh is a primarily an Armenian-populated region assigned to Soviet Azerbaijan in the 1920s by Moscow. Armenians presently hold not only Nagorno-Karabakh but a sizeable portion of Azerbaijan proper. The stalemate hampers the economies of both Armenia and Azerbaijan.

After independence, Armenians faced dire hardships (50% of Armenians live below the poverty line), including a major earthquake and turbulent politics. In 1999, Armenian Prime Minister Sarkisian was assassinated in Parliament. President, Robert Kocharian (elected 1998) cracked down on opposition groups, and the 2008 election of his successor, former defense minister Serzh Sargsyan, was marred by violent protests, fatalities, and opposition purges. Sargsyan has yet to consolidate legitimacy--as opposed to power; indeed, some critics suggest that Armenia's cautious overtures to Turkey in recent months, with an eye to opening Armenia's borders, is intended to distract from Sargsian's considerable domestic problems. His opponent during the elections, Levon Ter-Petrossian (Armenia's first president, 1991-1998, after independence from the Soviet Union) remains a significant adversary. In part Armenia's political drama reflects tensions between Armenians from within the country itself, and those from Nagorno-Karabagh (who include Robert Kocharian, Armenia's president from 1998 to 2008 and a former leader in the Karabagh movement, and Serzh Sargsyan, former chairman of the NK Republic Self-Defense Forces Committee).

Armenia's population (8.6 million worldwide) has declined from 3.3 million (1989) to 2.6 million today, due to emigration. Long an ethnic minority even in historical Armenia, today's Armenians make up 96% of the nation's population. By the end of 1993, virtually all Azeris--i.e. Muslims--had emigrated from Armenia. Armenia's natural resources include deposits of copper, gold, molybdenum, zinc, and alumina. During Soviet times--the era of central planning--Armenia operated large agro-industrial complexes and its industrial sector supplied machine tools, textiles, and many other manufactured goods to other republics in the USSR, receiving raw materials and energy in exchange. In those days Armenia produced top physicists and astronomers, chemicals, machine tools and textiles, and was considered the USSR's "Silicon Valley" because of its industrial and computer capability. Now all that is gone and educated Armenians have difficulty finding jobs to match their skills (which anecdotally are considerable

in trade, science and the arts, but less stellar in management and public administration). In Soviet times, agriculture accounted for only 20% of Armenia's total employment; today, however, agriculture (much of it subsistence farming, occupying approximately half the labor force) and construction form the most significant basis of its economy. Endemic corruption in customs and tax collection reflects more a systemic, rather than a personal or moral problem.

IMF-sponsored programs have resulted in positive economic growth rates; and--until the worldwide economic crisis in 2008--Armenia cut inflation, stabilized its currency, and privatized many small- and medium-sized enterprises. Chronic energy shortages of the 1990s have been mitigated by energy from the Metsamor nuclear power plant (situated, unfortunately, in a seismically active zone). Armenia maintains close economic ties with Russia; Armenia's **electricity sector, privatized in 2002, is now owned by Russia's RAO-UES**. Armenia's industries included metal-cutting machine tools, forging-pressing machines, electric motors, tires, knitted wear, hosiery, shoes, silk fabric, chemicals, trucks, instruments, microelectronics, gem cutting, jewelry manufacturing, software development, food processing, and brandy. With the unique exception of northern Armenia and Karabagh, much of the region appears barren, especially since the years of energy privation in the early 1990s when forests were cut for fuel. Nevertheless, Armenia has fruit trees and vineyards, flowers and melons aplenty. Birds abound, including the eponymous crane called the *grunk*, or *groong* (see Websites section below). Armenia's fauna include boars and bears, leopard, ibex, wolf and mouflon (a wild sheep)—as well as such insects as the tarantula, mosquito, three species of scorpion, and the fly.

### A Turkish/Armenian "Thaw"?

Important to note is that, despite the massacres and expulsions of Armenians from Anatolia nearly a century ago, today some 50,000 Turkish Armenians live in Istanbul and an estimated one million in eastern Turkey. Though the borders remain closed, Armenians and Turks work in each others countries without incident. Armenians can be found vacationing in the seaside Turkish resort of Antalya, and Turkish goods are widespread in Armenia, though imported through a third country, Georgia. This shows subtle conditions can be "on the ground," as opposed to analyses published in foreign affairs journals--and just how intertwined the fortunes are of the three South Caucasus nations. If, for example, Georgia experiences Russian border closures or fuel interruptions, Armenia immediately feels the pinch. And any threat or interruption in flow through the Baku-Tbilisi-Cheyhan and Baku-Tbilisi-Erzurum pipelines causes instant concern in Azerbaijan.

It has become fashionable in some academic circles to argue that Armenia's closed borders render it irrelevant to a Caucasus that envisions itself a crucial link between north and south, and east and west. Others maintain that, *au contraire*, Armenia is not isolated, that it has valuable mineral resources (e.g. copper, molybdenum, iron) and it trades extensively with Germany, the Netherlands, France, Belgium and Israel (diamonds); and it maintains close ties with Russia (indeed, Russian troops can be observed patrolling Yerevan airport and at the Turkish borde). Another argument maintains that between Yerevan and Baku, two major population centers, there is "nothing"--an economic vacuum--hence< Armenia's future lies in the west, with Europe and Turkey, not in the east.

Of Armenia's budget, almost 25% goes to defense, public order and security. By contrast, Azerbaijan spends more than \$2 billion on defense--equivalent to Armenia's *entire annual budget*. Obviously, even partial resolution of the Nagorno-Karabagh conflict would improve the situation considerably, and opening the border between Armenia and Turkey would result in decreased military spending on both sides and increased trade and transportation to Anatolia and the Middle East. For more on the "thaw," see below in the following section.

### Issues and questions for further exploration

- 1 Why is Armenia considered at once outside, alongside, and “inside” Azerbaijan?
- 2 What is Armenia’s most prevalent and ancient building material?
- 3 What makes the *grunk*, or *groong*, an eponymous Armenian crane?
- 4 Where is “Noah’s Ark” and why is the question of current interest?
- 5 Which nation has the largest diaspora community: Armenia or Azerbaijan—and why?
- 6 Where and what is Cilicia?
- 7 For what were Armenians renowned in Byzantine and Ottoman times?
- 8 Which Armenian family ruled as Georgia’s longest dynasty?
- 9 How are Armenian and Georgian churches similar, and how do they differ?
- 10 Which nation accepted Christianity first, and by how many years?
- 11 Who created the Armenian alphabet?
- 12 By what strategies did the Armenian SSR survive and prosper in the Soviet Union?
- 13 What are Armenia’s strengths and weaknesses today?

## Deportations, Massacres, and the Question of Genocide

A large portion of the Armenian diaspora stems from Ottoman oppressions, massacres, and

deportations in the period 1915-23. Until then, Armenian citizens of the Empire formed two general groups: educated urban residents, and peasants or villagers in Eastern Anatolia, all organized into a *millet* community under the leadership of the Armenian Patriarch of Constantinople. (The millet served both a religious and secular, or administrative function, it being the means by which the Sultan collected Poll Taxes from Armenians. Additional millets formed later for Armenian Catholics and Evangelicals/Protestants.)

During the 19th century, nationalistic political aspirations spread among Armenians, especially those studying abroad or in contact with Christian missionaries. After long suffering from Ottoman and Kurdish raids, double taxation, expropriations and brutality, Armenians in Anatolia and Russia, as well as the Czar's representatives in Constantinople, pressured the Sultan's government for reforms. Other nationalistic groups called for a free "Turkish Armenia."

In the 1890s, Ottoman authorities cracked down on revolutionary nationalists, killing 100,000-300,000 Armenians. The reformist Young Turk movement overthrew the Sultan in 1909, but later turned against Armenian citizens as well. When Turkey and Russia became opponents in the First World War, Anatolian and Russian Armenian communities found themselves caught in between. Some joined the Ottoman forces, others the Czar's.

In 1915, Ottoman officials seized hundreds of Armenian leaders in the capital--politicians, priests, scholars, and professionals--and deported them to the interior, along with virtually the entire East Anatolian Armenian population. (This region, 'historical Armenia,' also contained ancient populations of Kurds and Turkic groups). Eyewitness and official accounts of the highest caliber--from American and British diplomats, missionaries, and from German military and railroad personnel in Turkey--attest to the scope and brutality of the Ottomans' actions. Armenian males were either killed immediately or, if in the military, disarmed and worked to death as slave laborers, or executed. The remaining Armenians, mostly women and children, trekked hundreds of miles into the desert. Many died of hardships or were killed by hired Kurds and other irregulars. Few arrived at their destination, near Aleppo; some survived by converting to Islam and finding shelter with Turkish families.

Thousands of Armenian civilians perished during Ottoman incursions into the Russian South Caucasus and during the Turkish national revolution (1919-23). Casualty estimates range from hundreds of thousands to over a million and a half Armenians dead.

The Armenian government today supports lobbying efforts by Caucasus Diaspora communities in Russia, Europe, the United States and the Middle East to have the above doleful events recognized as genocide--a claim rejected categorically by the Turkish government. Turkey's official position is that the desperate Ottoman government sought to isolate, neutralize, and remove during World War One what it perceived to be a dangerous element posed by its own Armenian citizens. The action they chose was to force-march entire Armenian communities away from the eastern war front with Russia. Turkish authorities and most Turkish scholars maintain that the context of these, admittedly harsh, deportations was a deplorable civil war in which both Armenians and Muslim Turks lost many lives.

Governments of several countries (but not all, and not the United States), along with many

scholars, consider the Armenian deportations and killings to be genocide--a term coined in 1944 by a Polish lawyer, Raphael Lemkin, which means, essentially, the *intentional* harm or destruction of a national, ethnic, religious, or racial group.

The controversy continues. In 2001, Turks and Armenians (albeit none in government positions) formed a Reconciliation Commission--reaction to which has been mixed. In 2004, *Ararat*, an award-winning film by Canadian director Atom Egoyan about the Armenian massacres, received permission to be shown in Turkey. The Cultural Ministry later rescinded its permit after nationalist Turkish political parties strongly objected to the film's release, *but Ararat has since been shown*. Following statements by writer Orhan Pamuk and the assassination of Turkish-Armenian editor Hrant Dink, in 2007, there are signs of a rethinking about Turkey's history and a desire to explore chapters inaccessible to Turkish citizens, either because these topics are not covered in their education, or because of the difficulty--indeed, impossibility--of non-specialists today reading Ottoman Turkish, which was written in Arabic. In Turkey today there is both intense nationalism, as well as more thoughtful responses to the "Armenian question," such as a recent on-line campaign to inquire into the subject of the Armenian massacres, and even to apologize for them.

Few words are as charged as "genocide," created by Lemkin and ratified by the United Nations in 1948. Over the more than six decades of its existence, "genocide" has entered common parlance and possesses now not only its original, legal meaning, but an emotionally charged conversational sense as well. To be sure, Lemkin wanted the emotional element: he wanted his new word to conjure up the odious nature and the enormity of a "crime against humanity." But he also wanted clarity about the matter and realized the need for a new legal concept that would deprive genocide perpetrators of the shield of national sovereignty. Preoccupied by the atrocities and exterminations visited upon Armenians and Jews, but he was also aware of the sufferings of many other groups as well. Today, occasionally, the charge of genocide can bring a guilty party to justice, as Lemkin hoped, but there is no guarantee. Furthermore, the legal definition of genocide can be interpreted in many ways, and this inherent ambiguity has had a major unintended consequence: it can sometimes impede dialogue between nations and communities. (See THE OTHER DIPLOMACY section, p. )

### **Issues and questions for further exploration**

- 1 How did Armenian nationalism arise?
- 2 How is genocide defined by the 1948 Convention on the Prevention and Punishment of the Crime of Genocide?
- 3 During the late 19<sup>th</sup>-early 20<sup>th</sup> centuries, what position did the United States take

officially, and Americans popularly, with regard to Armenians and the Ottoman government?

- 4 What must an American diplomat today say (or not say) when confronted with the “Armenian question”?

## **AZERBAIJAN**

The word “Azerbaijan” derives from the Greek “Atropatena” and Persian “Aturpatan”: meaning, protected by fire. Today’s Azerbaijan (86,600 sq km, slightly smaller than Maine) has long been a desired corner of the world, both as a low-lying, north-south route, and as a source of wonder due to the eternal flames and oozes emanating from the region’s oil and natural gas vents. Though often home to large Armenian communities (as Armenia has been to Azeris), more than a decade and a half of strife over the Nagorno-Karabagh enclave leaves Azerbaijan with a majority Turkic and Muslim population—the reverse situation pertaining in Nagorno-Karabagh and Armenia, which is now totally Armenian and Christian.

Bordering the Caspian Sea and pierced by the Great Caucasus mountain range, Azerbaijan (86,600 sq km), about the size of Maine, exists in three portions: the Caspian part; Nagorno-Karabagh; and a crucial “extra” bit, or enclave, the Nakhichevan Autonomous Republic wedged

between Armenia, Iran, and Turkey. Owing to these geopolitical complexities, Azerbaijan shares boundaries with Armenia, Georgia, Iran, Russia, and also Turkey.

Greater Azerbaijan comprised a northern region—today’s Azerbaijan—and a southern half, now in Iran, whose capital is Tabriz. In South Azerbaijan, Medians were followed by an Aechemenid state. In the north, by the 2<sup>nd</sup> century AD, a Caucasian “Albanian” kingdom appeared which became Christian. At the same time, Turkic-language groups settled in the area, leaving a linguistic imprint. By the end of the 7<sup>th</sup> century, the Arab caliphates ruled and Islam predominated, though Christianity remained in some areas. Islamic cultural centers flourished as did literature and music. Various independent Shirvan states resisted Seljuk Turk and Mongol invasions. Later Safavids united Azerbaijan, which however again split into numerous feudal states under the aegis of Persia. Thus, the Azerbaijan region, Christianized early and exposed to centuries of Islamic influence, had seen by the mid-19<sup>th</sup> century a round-robin of power struggles between Persia, the Ottomans, and local khanates.

Now came the Great Game. Russia’s conquest of the Caucasus turned Azerbaijan into an arena of diplomacy, espionage, and military adventures between Russia, Britain, and other nations over control of Central Asia and access to India. After the Treaty of Gulistan (1813) and the Treaty of Turkmanchay (1828), North Azerbaijan became a part of the Russian Empire and began rapidly to Europeanize and industrialize as it exported oil to Europe. Azerbaijan also became a thriving center of modern Muslim culture, boasting an opera house, a grammar school for Azeri girls, numerous newspapers, and a growing literary scene. The oil boom enriched Russians, Armenians, Europeans—and some Azerbaijani Turks. With increased education and contact with intellectual circles in Kazan, Istanbul, Tabriz, Moscow, St. Petersburg, Berlin, and Paris, feelings of Azerbaijani nationalism grew, hand in hand with pan-Turkic and pan-Islamic sentiments. During this period, Azerbaijan became increasingly ethnically mixed—and divided into sectarian factions of Armenians and other groups who had entered the region as part of Russian colonization.

At the time of the Russian Revolution, Czarist forces, Bolsheviks, Turkey, England, Germany, and Persia all jostled for influence and access to Azeri oil fields which produced half of the world's oil. With the collapse of the tsarist government in 1917, Bolshevik recruiters and Turkic activists maneuvered for control of Baku. Two massacres occurred in 1918, the first inflicted by Armenians upon Azeris, and the second by Azeris on Armenians. A Bolshevik "Baku Commune," made up mainly of Armenians, was put to flight and later executed. A benevolent, politically diverse, and all too brief period of independence ensued (1918-19), which was cut short by the entry into Baku of the Soviet army in 1920. All this resulted in huge loss of life in conflicts often instigated by such revolutionary agent provocateurs as 'Gayoz Nisharadze'—later to be known by another pseudonym, Stalin.

During the Soviet era, Lenin and Stalin (as Commissar of Nationalities and later as the state leader), purged Azerbaijan's elite, cracked down on religion, and jiggered the country's borders, rendering it into two regions separated by Armenia, and leaving Azerbaijan an amalgam of Azeri and Armenian populated enclaves and exclaves. Under Soviet rule the Azerbaijani alphabet changed from Arabic, to Latin, to Cyrillic (it is now back to a Latin alphabet). More than the other two South Caucasus republics, the Azerbaijan SSR adopted Russian as a language of intellectual discourse. A kind of inter-ethnic *pax sovieticus* prevailed, laced with corruption and privileges for the elite, which suppressed dissident nationalism and fostered a relatively peaceful status quo. At the same time, as part of the Soviet Union, Azerbaijan became more isolated as the republic's borders with Iran were closed and Azerbaijanis with Iranian passports were forced to leave. Whereas before the Russian Revolution, Azeris made up 43% of the population of Erevan, in 1948, Soviet authorities separated the peoples and deported some 100,000 Azeris out of Armenia.

The Baku oil boom, which had begun in the 19<sup>th</sup> century, declined after World War Two as Soviet planners decided to develop oil resources at more politically secure locations, in Siberia. After independence (1991), Azerbaijan's economy suffered anew due to the Nagorno-Karabagh conflict.

Azerbaijan today is ethnically Azeri 90%, Dagestani 3.2%, Russian 2.5%, Armenian 2% (almost all in Nagorno-Karabagh), and other 2.3% (1998 est.). Language and religious affiliation follow the same percentage profile, though in fact most Azerbaijanis are nominal rather than actual practicing adherents of any religion. Independent since 1991, Azerbaijan is slowly engaging in economic reforms and turning from a command to a market economy.

Azerbaijan's economy collapsed nearly 60% in 1990-95 after the country's independence from the Soviet Union. Estimates vary of Azerbaijan's oil and gas reserves, but they are large and almost certainly guarantee a measure of future economic growth. Azerbaijan has one of the world's largest natural gas fields discovered in the past two decades. Nevertheless, its oil and gas reserves are most emphatically not infinite, and its economic well-being depends upon world oil prices, the security of new pipelines in the region, careful management of resources, and control of incipient "Dutch Disease" (i.e. distortions to the economy and currency due to over-reliance upon a single export, such as oil and gas). Meanwhile, Azerbaijan remains locked in a "frozen" dispute with Armenia over Nagorno-Karabagh, which severely limits its present economic development. As with Armenians in Armenia, close to 50% of Azerbaijanis live in poverty.

Azerbaijan trades less with Russia and other former Soviet republics these days, and more with Turkey and Europe. Its industries include petroleum and natural gas, petroleum products, oilfield equipment; steel, iron ore, cement, chemicals and petrochemicals, and textiles. Its agriculture produces cotton, grain, rice, grapes, fruit, vegetables, tea, tobacco; cattle, pigs, sheep, and goats. Azerbaijan exports mostly oil and gas (90% of Azerbaijan's total exports value), as well as machinery, cotton, and foodstuffs (e.g. pomegranate juice and in the future, hopefully, water buffalo mozzarella cheese).

Azerbaijan is strategically important for its oil and gas reserves, and also for its ability to provide air access to Central Asia and Afghanistan. Aspects of its government and business community are notoriously corrupt and unhesitant about silencing dissent. Journalists, upon occasion meet a sorry fate, while others report freely; in 2009 Azerbaijan curtailed foreign news broadcasting. Its current, Ilham Aliyev (the son of Azerbaijan's late president, KGB-trained Geydar Aliyev), may be in power for a long time, as, according the wishes of a "majority" of Azerbaijani voters in 2009, presidential term limits have been removed. That said, Aliyev has shown himself to be a capable leader, able to maneuver between competing clans and "strong" families, while at the same time consolidating power and, in effect, "branding" the Aliyev family name through a wide range of philanthropic ventures funded by the Heydar Aliyev Foundation (headed by the president's wife, Mehriban Aliyev, who was elected to the Azerbaijan National Assembly in 2005). Azerbaijan has enthusiastically sponsored a new academy of diplomacy in order to train a new generation of government professionals; and Azerbaijani journalists participate in international training programs (some hosted in Baku). In a new program, qualified young students who gain admissions into top international educational institutions receive bursaries from the government, in exchange for a promise to devote five years afterwards to working in Azerbaijan before, if they so choose, seeking their fortunes abroad. Internationally, Ilham Aliyev has successfully handled competing demands by Russia, Turkey, Iran, and the United States, keeping his Azerbaijan's and his own options open.

Anti-Armenian rhetoric waxes and wanes in Azerbaijan, and particularly worrisome is the growth of Azerbaijan's military budget (\$2.46 billion in 2009). While Azerbaijani may believe that time is on their side and that Nagorno-Karabagh can be retaken militarily, outside analysts consider Armenian-supported troops to be in an advantageous position due to superior fighting capability and their occupation of the high ground in Nagorno-Karabagh.

### Issues and questions for further exploration

- 1 Who were/are Azeris, versus Azerbaijanis, versus Azerbaijanians, versus Azerbaijani Turks, etc.?
- 2 Why is a Selucid not a Seljuk or a Safavid?
- 3 Why is Azerbaijan in two pieces?
- 4 Where, for the most part, is the Azeri diaspora?
- 5 Where is Tabriz, and what was it, historically?

- 6 Why has Azerbaijan, though Muslim, been called the most “European” of Caucasus nations?

## Nagorno-Karabagh

The 'autonomous region' of Nagorno-Karabagh ('Mountainous Black Garden') has harbored Azeri as well as Armenian communities. Conflict, ethnic cleansing, and atrocities committed by both groups over the last 20 years (and counting) leave the region currently with an Armenian majority and under Karabagh-Armenian control--and with annual sniper fatalities.

While sharing many customs, Azerbaijanis and Armenians differ in their racial, religious, and socio-cultural backgrounds—and also in their historical memory. The 20<sup>th</sup> century rise in

Azerbaijan's national consciousness (and Armenia's somewhat earlier) played a part in these divisions, as did economics and class: many Armenians came to Baku in the 19<sup>th</sup> and early 20<sup>th</sup> centuries to work in the oil industry and, as an "exploited proletariat" class, served as prime fuel for revolution makers. The "Armeno-Tatar War" of 1905-07 resulted in regional Turkish populations relying less on Christian and Jewish inhabitants for goods and services, and it boosted Armenian political aspirations. **The Turkic Azeris regarded Ottomans as kin and allies, and they supported Turkey when it invaded the Caucasus in 1918, desiring to expand and unite Anatolia with the Turks 'ancestral' regions in Central Asia. During this military thrust, Turks victimized "Russian," or "Eastern" Armenians and helped establish the Republic of Azerbaijan. In 1920, clashes occurred in Azerbaijan between pro-Turkish, pro-Soviet, and multinational factions--hostilities which later, during the Soviet era, led to much historical revision: Azerbaijanis were forced to paint their fellow-Turks as villains and reactionaries, while glorifying an Armenian and Bolshevik martyr, Stepan Shaumian. After the USSR fell, Azerbaijan revised its history once again and rapidly 'anti-Shaumianized' and 'de-Armenianized' itself in the process.** Nagorno-Karabagh became an autonomous region in Soviet times, and over a span of 65 years Azerbaijan authorities cut Karabagh Armenians' ties to Armenia and downplayed Armenian culture. They encouraged Azeri settlement into the region, and bolstered Turkic census populations by listing Kurds and Talysh (who are of Iranian stock) as ethnic Azeris.

In 1988, after Nagorno-Karabagh voted to secede from Azerbaijan, thousands of Azerbaijanis fled from southern Armenia to Baku. Meanwhile, in an effort to prevent Azeri-Armenian hostilities, Communist Party officials closed Baku to thousands of Karabagh-Armenian workers and commuters from the nearby city of Sumgait, on the Caspian. They also settled Azeri refugees from Armenia into two villages near Sumgait. In February, Azerbaijani gangs rioted against Armenians in Sumgait, killing dozens and wounding hundreds. Some 14,500 Armenians fled the city; many went to Nagorno-Karabagh. In September 1988 all Armenians in Susha, Nagorno-Karabagh, had been driven from the city; and, correspondingly, all Azerbaijanis were forced to flee from Stepanakert, five miles north of Susha. Later, Armenian forces would burn Susha to the ground. In 1989 Azerbaijan imposed a rail blockade of Armenia and Nagorno-Karabagh. By January 1990, there were anti-Armenian pogroms in Baku and subsequent killings of Azeri protestors by Soviet troops.

The late 1980s saw mass exoduses and "sorting out" of populations: some 200,000 Armenians left Azerbaijan in two weeks, and Azeris claim that the Armenians expelled 165,000 Azeris from Armenia (the Armenians dispute these figures). It has been argued that the resurgence of violence in and concerning Nagorno-Karabagh precipitated the collapse of the Soviet Union. Certainly the Kremlin could not contain the problem or the disruptions caused by the movements of peoples, and it is sobering to think how much misery has been generated by Nagorno-Karabagh (whose area is only 1,700 square miles, approximately the size of Rhode Island and Martha's Vineyard combined).

In the Karabagh dispute, it is not just two ethnic groups but two entire concepts of international law that collide: one principle affirms the territorial integrity of internationally recognized states, while the other insists upon the self-determination of peoples. Both Armenians and Azerbaijanis accuse the other party of aggression, and uphold distinct and divergent

demographic, historical, cultural, and economic arguments. For example:

Armenians point out the lack of ancient Azeri artifacts in a land abounding with *khachkars* (Armenian cross-stones) and churches. Azeris, who are Muslim, say: no matter, many famous Azeri poets and composers came from the region. Azeris stress their Turkic past and kinship with ancient “Caucasian Albanians,” (see map, circa 1540, below) who they claim were victimized by Armenian imperialism. Some Azeris claim that the native Karabagh population, even if self-identified as Armenian, are the progeny of these same Caucasus Albanians—and therefore they cannot be *genuine* Armenians. As for the ancient *khachkars*, they are not Armenian “cross-stones,” but are actually Turko-Azerbaijani, for the Caucasus Albanians adapted Christianity before the Armenians did...and so forth and so on.

Meanwhile, Armenia argues that Azerbaijan has no right to Nagorno-Karabagh because the region was assigned to Soviet Azerbaijan by the Russian Communist Party at a time when that body lacked juridical standing under international law. During the 1920s (as well as seven decades later), Azerbaijan officials responded to Karabagh Armenian resistance with threats, forced disarmament, economic blockade, and even military action. In 1991, the “Republic of Mountainous Karabagh” (Armenian *Artsakh*) unilaterally seceded, whereupon the Azerbaijani Supreme Soviet, in a tit for tat, dissolved Karabagh’s autonomous status—and the region declared independence (as yet unrecognized) in 1992. In that year the United States imposed aid restrictions on Azerbaijan as punishment for its blockade and use of force against Armenia and Nagorno-Karabagh. In addition, as a matter of policy—though not law—the United States refrained from providing military aid to either Azerbaijan or Armenia so long as the Nagorno-Karabagh conflict was underway. These restrictions were suspended post-9/11, 2001, as America made new, anti-terrorist, alliances.

Woodcut map of the Caucasus and Historical Armenia published about 1540 by Sebastian Munster in his edition of Ptolemy's *Geographica*.

Azeri militia began continuous bombardment of Karabagh's capital, Stepanakert, from surrounding heights (much as Serbs bombed helpless Sarajevo in that same decade). Armenian forces prevailed; Azerbaijan's Communist government fell; the conflict proceeded, and once again Armenians seized additional Azerbaijani territory. Until 1993, Armenia denied its active engagement in the war and for a period even refused to recognize the Karabagh Republic, fearing "complications." This posture shifted as Armenia grew increasingly assertive about the right of Karabagh Armenians to self-defense. Armenia's president (until 2008), Robert Kocharian, formerly served as Karabagh's president and prime minister.

The two sides reached a cease-fire in 1994. Azerbaijan lost considerable territory in the war (estimates range from 13-20% of its area) and must care for some 800,000 refugees and internally displaced persons. Potential resolutions of the crisis include land-swaps (however the 1992 'Goble Plan,' which proposed connecting Armenia and Nagorno-Karabagh, and Azerbaijan and Nakhichevan, was quickly dropped as a concept) and economic inducements, including oil pipeline proposals (Armenia does not benefit from any Caspian-to-Turkey oil routing plans). Unfortunately, both Armenia and Azerbaijan appear to favor a resolution of the Nagorno-Karabagh conflict later rather than sooner.

The following Nagorno-Karabagh chart may be of help:

### **NABORNO-KARABAGH: Differing points of view**

AZERBAIJANI vs KARABAGH-ARMENIAN and ARMENIAN

Azerbaijan is the aggrieved party-- its territorial integrity violated and its land occupied by Armenia.

Armenia is not a party to the conflict and will not accept Turkish peace-keepers in the region.

Karabagh is historically Azeri. Armenians came into the region in large numbers *after* the Russian conquest (in 1813 and 1828) of the area of present-day Armenia and Azerbaijan.

"Artsakh" is the ancient cultural and religious center of Armenians. "Nagorno-Karabagh" is a mongrel Russian-Turkic imposed name. The "Bagh" were actually Balayi, an ancient tribe of *Armenians*.

Armenians in Karabagh during USSR times did *not* suffer discrimination. Indeed,

The 60 years in the Azerbaijan Soviet Socialist Republic was, for Karabagh-Armenians, a period of cultural *repression* and economic *underdevelopment*.

most economic indicators in Nagorno-Karabagh were *higher* than in the rest of Azerbaijan

The USSR government was pro-Armenian (Gorbachev had Armenian advisors). World opinion favors Armenians & Armenia as 'eternal victims' though 20% of Azerbaijan is occupied by Armenian forces and approximately 1 million Azeris have been displaced.

Azerbaijan is trying to restore its *sovereignty*.

*Armenia* is Azerbaijan's main negotiating partner, not representatives of the so-called "Republic of Nagorno-Karabagh"

Demands withdrawal of Armenian troops from occupied Azerbaijan., as a precondition for negotiations.

Approx. 13 % of Azerbaijan is under Armenian control.

Nagorno-Karabagh declared independence in 1992 (though this status remains unrecognized). It seeks *self-determination* against outside repressive powers.

As an "independent" country, Azerbaijan should negotiate directly with *Karabagh-Armenians* (i.e. not with Armenia).

Insists on self-determination for Nagorno-Karabagh; Demands security and "special status" for Azerbaijan territories neighboring Nagorno-Karabagh; and guaranteed access to Armenia.

### **Issues and questions for further exploration**

- 1 Play the "Game of Hats": How would an Armenian explain events in Nagorno-Karabagh?
- 2 How would an Azerbaijani?
- 3 How would a Russian, or a Turk?

## GEORGIA

Georgia's recorded history extends back more than 2500 years; it has prehistoric dolmens (stone monuments), the earliest known remains of humans who walked upright, and the most ancient evidence of winemaking. The Georgian language is one of the world's distinct and oldest; and it is said that songs sung in the polyphonic style of the sixth century BC can still be heard at many a Georgian feast table today! Many Georgian church frescos predate the ecclesiastical glories of Byzantium and Rome.

Tbilisi (founded in 458 AD, pop. 1,066,000<sup>4</sup>--2004 figures) stands on sites of dwellings and burial grounds dating to 5000 BC and has been destroyed and rebuilt many times over the

centuries. Georgians officially adopted Christianity in the early 4th century (though almost certainly Christianity existed in Georgia earlier), and the Georgian Orthodox Church, along with the unique Georgian alphabet and language, helped preserve the country's sense of identity through the ages. Sometimes unified, at other times broken into principalities, Georgia suffered incursions from Persian, Roman, Byzantine, Arab, Mongol, and Turkish armies from at least the First century B.C. through the 18th century—and from Russians, British, and German forces in more recent times.

The most celebrated rulers of Georgia as an independent kingdom were King David the Builder in the 11<sup>th</sup> and Queen Tamara in the 12<sup>th</sup> century. In the late 18<sup>th</sup> century, Georgia appealed to the Russia's Catherine the Great for protection from the Persians, and signed a treaty by which Russia agreed to make Kartli, the kingdom of eastern Georgia, a protectorate. This turned out to be the first squeeze by which the Russian empire began, in 1801, to disenfranchise Georgia's aristocracy and ancient Bagrationi dynasty and to absorb, annex, unify, and rule the entire region. This relationship prevailed in one form or another until 1991 and the fall of the Soviet Union.

Despite a major Georgian uprising attempt (1832) and 25 years of war against various tribes in Daghestan and Chechnya, Russia's domination of the Caucasus caused one of the world's largest diasporas when hundreds of thousands of Abkhaz, Chechens and other Circassians moved

to the Balkans, Anatolia, the Middle East, Europe, and the United States. Under Russia, Georgians absorbed modern European ideas of nationalism and self-determination. During the chaos of the Russian Revolution, Georgia declared independence under a Menshevik government in 1918, prompting the Red Army to invade in 1921. From 1922-36, Georgia belonged to the Transcaucasian Socialist Federative Soviet Republic. After the federation dissolved, Georgia became a full republic of the Soviet Union.

Georgia's most famous son, Joseph Stalin, imposed forced land reforms, collectivization and Russification campaigns on the Caucasus, along with political repressions and purges. Nevertheless, for Soviets in general, especially artists and writers, Georgia remained a verdant "Riviera"—a place for rest, recuperation, and inspiration—and after World War Two Georgia became known as the wealthiest of the Soviet republics, with flourishing industry (manganese, coal), agriculture (tea, citrus fruit, wine, and tobacco), and high education standards.

In the waning years of the Soviet Union, ethnic tensions resurfaced in the Georgian autonomous regions of Abkhazia and South Ossetia, which led to clashes. During anti-Abkhazian protests in Tbilisi, Soviet forces killed 19 demonstrators, mostly women. Georgia held elections in 1990 and seceded from the Soviet Union in 1991, installing ultra-nationalist writer and former dissident Zviad Gamsakhurdia as president, who was deposed in January of the following year. Eduard Shevardnadze, former head of the Georgian Communist Party and USSR Politburo member, returned from Moscow to assume leadership.

Georgia signed a cease-fire with Ossetian separatists in 1992, but that same year, during a period of ongoing confrontation between the government and opposition militias, Georgia also battled Abkhazian forces and invaded Sukhumi. Russia, ever keen to keep the Caucasus off-kilter, helped Georgia put down an insurrection by Gamsakhurdia supporters in western Georgia—while it also extended military aid to Abkhazian separatists, who drove Georgians out of the region in September, 1993. Georgia then signed a ceasefire with Abkhazia in 1994. This ongoing "frozen conflict," costing some 10,000 lives and resulting in almost 200,000 internally displaced persons (mostly ethnic Georgians and Mingrelians), was monitored by Russian "peacekeepers", the United Nations Observer Mission in Georgia (UNOMIG) and the Organization for Security and Cooperation in Europe (OSCE).

Shevardnadze was re-elected in 1995 and 2000. Russian troops departed from the Vaziani military base in Georgia, but remained at bases in Batumi and Akhalkalaki, which celebrated the 175 years of Russian presence. (Russia subsequently withdrew even from these positions and moved its troops to Armenia; however, after the Russian-Georgian conflict of 2008, Russia again enlarged its military footprint Georgia by establishing new bases in Abkhazia and South Ossetia.)

Strife with Abkhazia resumed in 2001. Fighters from the North Caucasus joined the Abkhazian cause and also entered Georgia's Pankisi Gorge, sparking Russian accusations that Georgia was intentionally harboring Chechen rebels (which, true or false, Georgia denied). Plagued by severe infrastructure breakdown and rampant government corruption, the Georgian populace demonstrated against Shevardnadze. In the wake of 9/11, 2001, United States Special Forces arrived to "train-and-equip" Georgian military to oppose terrorist groups (2002), and Moscow

continued its threat of taking military action if Chechen fighters remained in the Pankisi region. Georgian forces killed or captured dozens of Chechens and guerillas in the Pankisi Gorge and extradited a few to Russia. (See *Kisti*, in the North Caucasus: Panoply of Peoples section below.)

It is difficult for the outsider to "read" Georgia's boisterous political scene, due to its heightened rhetoric and the paucity of objective local media. Georgian politics reached an almost operatic climax in 2003 when President Shevardnadze, after highly irregular parliamentary elections, was ousted in a "Rose Revolution" and replaced by a 36-year old American-educated lawyer and Georgian parliamentarian, Mikheil Saakashvili, who vowed to crack down on corruption and to restore Georgia's territorial integrity. After this peaceful, though illegal, "regime change," Saakashvili was duly elected without opposition and with an overwhelming 96% mandate. In May, 2004, he confronted the rebellious leader of the autonomous region of Adjara, Aslan Abashidze, who fled to Moscow. Over the years, Saakashvili instituted many reforms, but his popularity has waned due to high inflation and the lack of "trickle down" economic benefits to many sectors of Georgian society. While enjoying the strong financial and moral support of the United States (and the personal enthusiasm of the the Bush administration), Saakashvili has faced growing disaffection within Georgia, manifested by frequent street demonstrations--which the Georgian government has at times put down by force--and calls for resignation and new elections. Even former allies from the Rose Revolution now criticize Saakashvili, who in the meantime has continually replaced and reshuffled top government and military figures in recent years. It must be said, however, that President Saakashvili--a dynamic and extroverted personality, and a cunning politician--remains popular in many parts of Georgia. Many of his political troubles stem largely from Georgia's failure to improve relations with Russia, which imposed boycotts of Georgian wine and bottled water, cut off transportation links, and expelled Georgian workers (resulting in severe declines in remittance payments to Georgia). This sorry situation culminated in out-and-out military conflict between Georgia and Russia in August 2008 (see below).

**Georgia's People and Economy:** Georgia's population (4.4 million by the 2002 census, excluding Abkhazia or South Ossetia) comprises ethnic Georgians 70.1%, Armenians 8.1%, Russians 6.3%, Azeris 5.7%, Ossetians 3%, Abkhazians 1.8%, other 5%. (1989 figures). The official languages are Georgian and Abkhazian (in Abkhazia); and major religions include Georgian Orthodox 65%, Muslim 11%, Russian Orthodox 10%, Armenian Apostolic 8%, other 6%.

Georgia's natural resources include forests, hydropower, nonferrous metals, manganese, iron ore, copper, citrus fruits, tea, and wine. While much of its industry remains stagnant, Georgia in the past produced steel, aircraft, machine tools, foundry equipment (automobiles, trucks, and tractors), tower cranes, electric welding equipment, fuel re-exports, machinery for food packing, electric motors, textiles, shoes, chemicals, wood products, bottled water, legendary semi-sweet and dry wines, and excellent brandy.

Georgia's modest increases in GDP growth and foreign investment during the mid-1990s slowed dramatically with the Russian financial crisis of 1998, its woes compounded by drought

and tax collection failures. Georgia completed during this period the Baku-Supsa “early oil” pipeline, and, and in 2003, work began on Georgia’s section of the new Baku-Tbilisi-Ceyhan (Turkey) oil pipeline (scheduled to open in 2005). Georgia is a member of the World Trade Organization, though its progress is hindered by corruption—a state of affairs that Georgian President Saakashvili has vowed to change.

Georgians have suffered recurring electricity shortages. In 1998, Georgia began, unsuccessfully, to privatize its energy distribution system in order to generate income. The 2004 award-winning documentary, *Power Trip*, directed by Robert Devlin, vividly portrays the attempt of an American firm, AES, to rebuild Georgia’s electricity distribution sector. After AES’s departure from Georgia—a major economic setback—electricity distribution fell under Russian control.

Georgia’s transportation and communications infrastructure remains in poor condition. Up until the 2004 elections, rampant government corruption hampered domestic and foreign investment, economic development and growth, and undermined the government’s credibility.

The United States is Georgia’s largest foreign investor. Major investor projects include the construction of the Baku-Tbilisi-Ceyhan and the Shah Deniz gas pipeline. Georgia markets its natural spring water, of which one source is in the Borzhomi national parkland region—directly in the path of the BTC pipeline—prompting environmental concerns.

The United States, Canada, China, Britain, and Switzerland have each explored for oil and natural gas in Georgia. New “lateral” drilling techniques indicate potentially promising oil deposits, as does the discovery by oil companies of Georgia’s remarkable “burning water” springs, bubbling with methane. Locals light these with a match and use them for cooking as a natural “stove.”

Though small in size, Georgia’s strategic location between the Black Sea, Russia, Armenia, Azerbaijan, and Turkey, gives it hope of becoming a “gateway” to the Caucasus and Caspian. Georgia, since the dramatic political changes of 2003-4, encourages the world to view it as part of “wider Europe.” Georgia signed a partnership and cooperation agreement with the European Union and participates in NATO's Partnership for Peace program. United States humanitarian and military assistance has helped Georgia to recover from civil war and post-independence hard times and to better patrol its borders. In addition, the United States provides assistance to humanitarian, technical, and institution-building programs, such as training opportunities for government and law enforcement officials and economic advisers—in addition to educational exchange programs. **United States spending-per-capita in Georgia is high, and \$1billion has been pledged to help pay for damage during the 2008 Georgian-Russian conflict.**

### **Issues and questions for further exploration**

- 1 Who was Shota Rustaveli?
- 2 When was Gori founded, and who is memorialized there?

- 3 What is the *Dede Ena* and why is it an important Georgian book?
- 4 To whom do the Georgian and Armenian churches owe allegiance?
- 5 When was Stalin born, who was his father, and how did he die? (Attempt to confirm your answers.)
- 6 Did Georgia suffer during Stalin's time? How so (or how not)?
- 7 Georgia's first flag after independence had three colors: what were they and what did they symbolize? Its current flag (actually, a 14<sup>th</sup> century one) has five crosses—what do they symbolize?
- 8 What positions did Eduard Shevardnadze hold during long his political career?
- 9 Where are the “breakaway” regions and other potential hot-spots of Georgia?
- 10 Where, precisely, is the infamous Pankisi Gorge? **And the Khodori Pass? (Find them on a map.)**

## STALIN

Recent biographies of Stalin, based on archival research until now impossible, shed new light on his early life. These views of the young "Soso" Djugashvili, later known as Koba, offer clues to Stalin's character and actions. Even as an adolescent this "Georgian" Stalin was ruthless, complex, and never to be underestimated. A prolific reader and "culture vulture," Stalin was a poet with a fine singing voice who, throughout his life, made perceptive editorial comments about the press, theater, music, and public relations. (He was, if you will, a kind of dedicated 'editor' of Soviet society who would defend his views and editorial choices to the death--yours!)

The question often arises as to whether Stalin favored his native Georgia after becoming USSR dictator. The answer is complex: basically, Stalin promoted the concept of the Soviet Man (and Soviet Mother) over ethnicity, and in fact came into conflict with Lenin, who warned against antagonizing Georgians unnecessarily by promoting "Great Russian Chauvinism." But Stalin played a cunning and ruthless game and dealt the ethnic cards as he as he saw fit--so long as his face was each and every one. Stalin knew all about the ethnic intricacies of the Russian empire; for a time he served as Commissar of Nationalities, negotiating and delineating the borders of the new union republics and autonomous entities of the Soviet Union. He promoted Georgian emigration into other parts of the Caucasus and also enjoyed drinking Georgian Khvanchkara red wine and singing Georgian songs. Many of his close associates and drinking companions were Georgian family members or comrades from early revolutionary days. However, close relationship or Georgian origin was no guarantee of security, and Stalin had many of these nearest and dearest imprisoned or executed. Thus, Stalin favored Georgia when it suited his purposes; otherwise, Georgians suffered along with the rest of the Soviet Union during periods of collectivization and ideological purging. Ironically, Stalin's ruthless henchman in these matters, Lavrenty Beria, was also a Georgian (actually a Mingrelian, born in Abkhazia).

Much remains enigmatic, however, including the exact nature of Stalin's relations with the Tsarist secret police. Was he a double agent? More cautious historians point to the lack of hard evidence; however, there are considerable circumstantial indications of this possibility. For example, after expulsion from the seminary where he trained for the priesthood, Stalin held but one steady job: with the Tiflis Meteorological Observatory where, for a few hours, three times a week, he read thermometers and barometers. This was Stalin's *only* salaried job until he joined

the revolutionary government in 1918, and he held this position for only two years (1899-1901). Furthermore, a timeline of Stalin's life reveals a startling phenomenon: for his first two decades years Stalin remains, essentially, a local Georgian lad. Then, for a decade and a half (again, with no apparent source of income), Stalin suddenly starts to travel abroad to Scandinavia, England, and Western Europe (attending Bolshevik gatherings and meeting Lenin); and domestically, throughout the Caucasus (doing agitation work from Baku to Batumi); to St. Petersburg and Moscow, and to sundry far northern and eastern Siberian villages as an exile (venues from most of which he soon 'escapes'). It is a most curious pattern, indeed. How did Stalin manage to do it? Who helped him? Who paid?

## **ABKHAZIANS, SOUTH OSSETIANS, AND OTHER GROUPS IN GEORGIA**

Just as one may learn much about a book from its footnotes and marginalia, so too with history: time and again seemingly marginal regions of the world turn out to have a major effect upon nations. The Caucasus is a prime example and, for this reason, its various autonomous regions and ethnic groups bear close scrutiny. Abkhazia and South Ossetia are diminutive territories, in a small nation, in a compact part of the world, but should not therefore be underestimated. Though seemingly peripheral to world events, the frequently intractable interactions of these and other Caucasus peoples repeatedly have wide ripple effects.

**Abkhazians and Ossetians:** As the Soviet Union crumbled and disintegrated (1991), Abkhazians and South Ossetians formed their own parties and the Kremlin, seeking to constrain Georgia's independence, supported both. Georgia declared independence in April 1991 and elected a strongly nationalistic president, Zviad Gamsakhurdia, who, along with the Georgian Parliament, abolished South Ossetia's autonomy and renamed the territory as the "District of

Samachablo" (the *Georgian* word for the land). This set off a devastating war of several months duration.

At the same time, tensions arose in Adjara—another autonomous region of Georgia—and in Abkhazia. Abkhazia and Georgia had a long history of ill-will. Abkhazians, at only 17% of the population (1989 census) were a minority in their own homeland and bitterly resented periodic colonization efforts by Georgians (45% of the population). On the other hand, Georgians protested the disproportionate allotment of political and administrative positions 67% of which went to the Abkhazian minority.

The Abkhazian parliament, with its slim majority of Abkhazians over Georgians, debated whether to secede from Georgia. Gamsakhurdia, ousted in a "democratic coup" in Tbilisi, was replaced by Eduard Shevardnadze, who had returned from Moscow. In August, 1992, Georgian forces entered Abkhazian territory—ostensibly to protect Georgia's rail and road supply lines—and, without notifying Shevardnadze, occupied the Abkhazian Parliament.

The ensuing war continued until October, 1993. Abkhazians, aided by North Caucasian militaries (primarily Chechens) and also by Russians, proved victorious. Some 250,000 Georgian residents of Abkhazia (Georgians, at 45% of the population, made up the Republic's majority, compared to Abkhazians, who were only 17%) fled east across the mountains to Georgia. Abkhazians declared independence in 1992, but to this day it remains unrecognized as a nation.

During the conflict, Georgian forces burned the Abkhazian State Archives and the Institute of History, Language and Literature, destroying irreplaceable documents and manuscripts—an attack, say Abkhazians, on their very identity and historic memory. (These archives are presently being replenished, slowly and in increments, from outside sources, in the 'Idica' project.)

Kept apart by Russian "peace-keepers," a tense status quo prevails between the two sides. Georgia demands the return of refugees to their homes and restoration of Abkhazia to its former status with "the highest level of autonomy." Abkhazians, however, refuse the return of refugees, for fear of becoming once again a minority in the Republic with subsequent ethnic cleansing by Georgians or forced emigration.

Abkhazia, caught in an ongoing economic blockade enforced by Georgia and Russia, exports hydroelectricity and fruit to Russia, along with illicit goods (e.g. timber) to Turkey and Europe. The blockade also interrupts an important railroad link between Russia and Armenia. In the last couple of years, Abkhazia has begun to attract several hundred thousand Russian tourists, lured by cheap hotel rates, no visa restrictions, and beautiful beaches. Still, Russia withholds full endorsement of Abkhazia's secession so as not to set a precedent for giving up Chechnya. Russian (and American) official policy is to support Georgia's territorial integrity.

Tensions remain high between Georgia and Abkhazia to this day as both sides consider Abkhazia to be homeland. The current ceasefire and "frozen conflict" threatens at any time to thaw and re-ignite. Meanwhile, politicians and historians debate the various and complex Georgian and Abkhazian claims of being autochthonous. Others argue for an overall "objective" view of history—a difficult task at best. **After the 2008 Georgia-Russia conflict, Abkhazia**

declared “independence,” but this status is recognized by only a handful of nations.

**Adjarians:** Ethnically Georgian, but nominally Muslim—the result of Turkish domination of this region on the Ottoman border. Until 2004, Adjaria was the “fiefdom” of Aslan Abashidze and palpably more affluent than the rest of Georgia.

**Kisti:** These ethnic Chechens settled in Georgia’s Pankisi Valley during the 19<sup>th</sup> century. They speak and write in Georgian, have Georgianized names, but retain Chechen customs.

**Meskhetian Turks:** Also known as Ahiska Turks, these are either Turkified Georgians, or related to Turks or Azeris. They lived next to Javakheti, a western region of Georgia with a large Armenian population, and were deported en masse in 1943-44 to Krygyzstan, Kazakhstan, and Uzbekistan. (Stalin deported Chechans, Ingush, Karachais, Balkars and Volga Germans as well, ostensibly fearing their support of the German military during the war; but the Ahiska/Meskhetians were never so charged). Unlike Chechens, Crimean Tatars, or other deported populations, the Meskhetian Turks have never been “rehabilitated” or repatriated. Some moved to Nagorno-Karabagh, but, as Muslims, were forced out during the Armenian-Azerbaijan conflict. Others live in Russia and a very few have returned to Georgia. Their plight remains unresolved.

**Mingrelians:** Ethnically related to Georgians and speaking a distinct, but Georgian-type language, the Mingrelians live in the western, sub-tropical region which is near the Black Sea, next to Abkhazia in the northwest and Adjaria to the south. Many prominent Georgians were Mingrelian, and there has been much intermarriage. The shift of Mingrelian populations into Abkhazia during the 1930s-40s helped spark ethnic conflict and violence half a century later during Georgia’s early independence.

**Khevsur:** Ethnic highland Georgians, the Khevsur, or Khevsuretians, live in near isolation. They are neither Muslim nor manifestly Christian. Traditionally chosen as elite guards of the kings of old Kartli, the Khevsur were known to wear chain mail armor, leading to speculation that their ancestors included lost Crusaders (!).

**Svans:** Traditionally “wild” in character (and reputedly most like the original Georgians), the Svans live in the western Caucasus highlands near Mount Ushba and Shkhara. Villages have ancient stone towers, used for protection against raids and avalanches. The Svans have no churches, but harbor precious and old crucifixes and icons. Their region has never been invaded.

## **Georgians and Abkhazians: Some more history**

The Georgian/Abkhazian conflict arises, paradoxically, out of both something and nothing: that is to say, out of actual historical events and also out of ideas or interpretations of those events dating back two hundred years--or two thousand! It's a question of focus: Abkhazians tend to concentrate on the Middle Ages and on brief periods of the Soviet era as times when they enjoyed a measure of autonomy. Georgians, however, point to other decades in the Middle Ages and to periods in antiquity when the two regions were one.

In ancient days the territory of modern Abkhazia belonged to the Kingdom of Colchis (6<sup>th</sup> to the 1st centuries BC). Later it adjoined and eventually became an integral part of the Western Georgian kingdom of Lazika (Egrisi). In the 8th century, with the weakening of the Byzantine Empire, the Abkhazian Kingdom arose and absorbed the whole territory of today's Western Georgia.

With the death of the last Abkhazian king, power shifted to the Georgian Bagrationi (Bagratid) dynasty, originally from Armenia, who ruled as "Kings of Abkhazians and Georgians." This arrangement lasted from the 12th to the early 14th century, until the Mongol invasion, whereupon the kingdom, including Abkhazia, broke up into principalities. Abkhazia became a rival of the neighboring Georgian principality of Megrelia (Mingrelia). North Caucasus tribes related to Abkhazians took part in these conflicts and settled in Abkhazia. Christianity declined in Abkhazia with the spread of Islam under the influence of the Ottoman Empire.

Russia began its conquest of the Caucasus region in the early 1800s and the Abkhazian principality joined the Russian Empire in 1810. As the Tsar came to dominate the eastern Georgian kingdoms of Kakheti and Imereti, along with Megrelia in the west, Abkhazians rebelled continually but fruitlessly. After the Russian-Turkish war (1878-79), Russia encouraged the massive emigration of some 30,000 Abkhazians to Turkey, of whom hundreds perished during the voyage over the Black Sea. The Georgian national movement strongly criticized this Tsarist policy, as well as the conscious resettling of Russians and other nationalities into the Caucasus. Georgian writers and pedagogues, educated in Russia, returned to encourage Georgians to use their own language and resist attempts at Russification. At this time, and later when the Caucasus was under Soviet control, many Georgians moved to Abkhazia, shifting the region's ethnic balance and leaving Abkhazians a minority in their own homeland.

During the Russian Revolution and Civil war period, Georgia proclaimed independence and its army entered Abkhazia to oppose the Bolshevik rulers there. Abkhazians today view this as an invasion. Although Abkhazians comprised only a minority of the population (and Georgians the majority), Georgia affirmed, in theory if not totally in practice, Abkhazia's full autonomy—but only if it remained within the borders of Georgia.

Members of the Abkhazian National Council conspired with the Russian Menshevik Army to oust Georgian forces from the region; but the Georgian government dissolved the ANC, called for new elections, and in March, 1919, decreed that Abkhazia was part of the Georgian Democratic Republic, with autonomous rights.

The Bolshevik occupation of Georgia in 1921 brought the region into the USSR as the Soviet Republic of Abkhazia united with the Soviet Republic of Georgia. Stalin reconfigured this ambiguous relationship a decade later, making Abkhazia an autonomous republic within, and essentially subservient to, the Soviet Republic of Georgia. Abkhazians claim that Stalin, who was of Georgian birth, favored the national interests of Georgia by this maneuver. Furthermore, they accuse Stalin's henchman, KGB head Lavrenty Beria (a Mingrelian born in Abkhazia) of purging nearly all the Abkhazian intelligentsia, suppressing the Abkhazian language, and further changing Abkhazia's demographic balance by encouraging Georgians to work in the region's new factories.

After Stalin and Beria's death in the 1950s, Abkhazians negotiated with the Kremlin over the possibility of separating from Georgia. They won the right to establish a national university in 1978 and set up daily television broadcasts in the Abkhazian language. Meanwhile, as always, Abkhazians and Georgians continued to live and work together, and even marry.

To this day Abkhazian and Georgian historians and linguists debate whether Abkhazians are in fact the territory's original people, and the Georgians late intruders. Georgia's first president, the ultra-nationalistic Zviad Gamsakhurdia, called Abkhazians latecomers from the North (that is, essentially, 'Chechens'). The question remains: Did an ethnically distinct people found the Kingdom of Abkhazia (8<sup>th</sup>-9<sup>th</sup> centuries)? If so, then Abkhazian statehood extends back 1200 years and secession from Georgia would have an "objective" justification. On the other hand, if the Georgian "radical" view is correct, that Abkhazians arrived only in the 17<sup>th</sup> century then Georgia's argument for territorial integrity gains legal merit.

Even language enters the debate. Radical Georgians point out that the Abkhazian words for "sea" and "boat" come from other languages, and that this "proves" that, instead of being autochthonous to the land, Abkhazians descended from the Caucasus Mountains to the shore as latecomers. Opposing historians, however, cite ancient Greek references to Abkhazians in the region and point to other linguistic traces supporting their claim.

Meanwhile, "arbitrator" scholars say that Abkhazians never occupied the territory exclusively. In ancient times it was part of the kingdom of Lazika (the Laz/Mingrelians being of Georgian ethnicity and still very much extant in Georgia and northeast Turkey), and even before the common era Lazika submitted to the kingdom of eastern Georgia to make a stronger political union so that they could face common enemies together.

Arbitrators argue that the 8<sup>th</sup> century Abkhazian kingdom was not founded on a purely ethnic basis, nor were there signs of Georgian/Abkhazian hostility as Abkhazia expanded to absorb the whole of Western Georgia (incidentally, at a time when the majority of Abkhazia's inhabitants were Georgians). Other evidence of harmony lies in the fact that, in the 9<sup>th</sup> century, the Abkhazian church, formed on the Byzantine model and using Greek texts and liturgy, voluntarily moved under the authority of the Bishop of Mtskheta, in Eastern Georgia, and adopted the Georgian language. This is proved by ancient inscriptions to be found in Abkhazian churches. Georgian was also the language of state administration, as no Abkhazian alphabet existed until the end of the 19<sup>th</sup> century. When the Abkhazian Kingdom shifted to the aegis of the great Georgian Bagrationi royal dynasty (10<sup>th</sup>-19<sup>th</sup> century), "Abkhazia" had come to mean Western

Georgia. In short, Georgians and Abkhazians appear to have formed a single political unit, and the common language used during the height of the Bagrationi state administration and cultural flowering was Georgian.

To add to the puzzle, Georgian historical figures at this time were sometimes called “Abkhazian,” not because they were Abkhazian, but because the term referred to the western portion of Georgia, and indeed, sometimes to the whole of the Georgian-Abkhazian kingdom. Some modern Abkhazian historiographers deny the existence of a united medieval kingdom without ethnic autonomies or with a common culture. After the Mongol invasion, the region broke into feuding principalities; Georgian, however, remained the language of the church and administration.

Abkhazians claim that ethnically related mountain people from the North Caucasus aided them in opposing Megrelian (Georgian) intruders. This is countered by assertions that these highlanders, though noted good fighters, were actually mercenaries hired by both sides. Both interpretations have their modern counterparts. During the 1992 war between Georgia and Abkhazia, Chechen fighters did indeed cross the mountains to assist their Abkhazian “brothers” against Georgian forces. And throughout the late 19<sup>th</sup> and early 20<sup>th</sup> century (indeed, to this day) Circassian and Chechen descendents of the original diaspora from the Caucasus joined the military throughout Anatolia and the Middle East. There they served honorably, valiantly, and effectively—and not infrequently on both sides of those regions’ many conflicts.

The breakup of the kingdoms into principalities, along with the spread of Islam and the settlement of northern peoples into the region during the 16<sup>th</sup>-17<sup>th</sup> centuries, caused “alienation” from Georgia. These mountain tribes, though related to Abkhazians, felt little sense of being part of a larger Georgian-Abkhazian cultural whole. It is also claimed that many Georgians in Abkhazia “saved” themselves from the newcomers by adopting their customs and religious practices (and thus many modern Abkhazians are descendents of Georgians and bear Georgian names). Language divisions emerged, with the Abkhazian nobility retaining Georgian, while lower social classes spoke other languages. Some historians charge that Russian rulers in the 19<sup>th</sup> century, and later the Soviets, used ethnography and philology as tools of conquest to pit groups against one another and to widen or create divisions where none in fact existed.

Contemporary critics say that Georgia’s educational system has attributed the glories of Medieval Georgian culture only to ethnic Georgians, while at the same time marginalizing other groups—for example, Armenians, Jews, Ossetians, Persians, Kurds, Syrians, and others. They assert that this is a mistaken interpretation and an outgrowth of 19<sup>th</sup> century ethnocentric Russian historiography. Today’s call is for an objective yet inclusive reconsideration of past events so as to restore the universal sense of dignity and full citizenship guaranteed by the Georgian constitution.

## COLOR REVOLUTIONS

Serbia, Georgia and Ukraine, for all their differences, shared several characteristics in the years 199\_ to 200\_. Each underwent political and social turmoil and a change of government driven largely by peaceful, technically savvy youth movements bearing names like Otpor, Kmara, and Pora, meaning, basically, "Enough!" Conversant in English, often educated abroad, or at least exposed to contemporary American and European culture, these NGO-trained groups knew how to use computers and mobile phones, how to monitor elections and conduct exit polls among voters, and how to propagandize effectively, for example, by literally painting the town with the abovementioned slogans. The results were dramatic: three corrupt governments folded, quickly; three new governments arose with substantial, even overwhelming popular support, and all three immediately began to undergo the briefest of honeymoon periods. The aftermath of Serbia's elections, and Georgia and Ukraine's Rose and Orange Revolutions (later reinforced by election results), have had positive outcomes, including a boisterous, sometimes even chaotic political debate. There have also been neutral and negative consequences: exacerbated opposition rhetoric, lack of governmental transparency, confrontations in the international sphere, and even suspicious deaths.

All three countries have had to contend with Russia, which has viewed "color revolutions" on her border or among Slav brethren nations with horror and disdain. In official and media assessments, Russia calls these tidal shifts occasions of sinister influence and espionage, and has stringently curtailed NGO activity on home soil of such groups as the Open Society Institute and the British Council. Another influence on the Color Revolutionaries was the Albert Einstein Institution, in Boston, which has widely disseminated writings by American activist Gene Sharp (b.1928), such as *The Politics of Nonviolent Action* (1973) and *From Dictatorship to Democracy* (1982??). These works discuss nearly 200 methods of nonviolent means; many of them, such as street campaigning, peaceful resistance, raising awareness (consciousness-building), agitation, network building, political marketing, debating skills, media relations, mobilization and recruiting--characterized efforts to effect change not only in the three countries above, but also in Byelarus, Albania, Russia, Kyrgyzstan, Uzbekistan, Lebanon, and Venezuela.

Since 2004, the Saakashvili government has experienced notable successes and failures. Among the successes are:

- professionalization of the police force and a reduction in its corruption
- reduced corruption in education and electoral procedures
- attraction of foreign investment (e.g. from Kazakhstan and Israel)
- overall westernization, establishment of jury courts (partial)
- infrastructure improvement
- "placement" of Georgia on the world map

- increased "confidence-building" measures between Georgia and its break-away regions (see below)
- re-establishment of control over break-away Adjara and the Kodori region in Abkhazia
- solidification of relations with Europe and the United States

Negative outcomes include:

- cronyism (especially in the judiciary and television media, but not necessarily in print media)
- dramatic deterioration in relations with Russia (largely due to Putin's and Saakashvili's clashing personalities): boycott of Georgian bottled water, wine, produce; cutting of transportation links; expulsion of Georgian workers; decline of remittances; 2008 invasion by Russia, with bombings and seizure of Georgian territories.
- increased presidential control over the Georgian parliament
- little trickle-down benefit to ordinary citizens from foreign investment
- increased inflation
- poor relations with political opposition, heightened rhetoric, resulting in demonstrations and strong-arm government reactions
- strong-arm movements against S. Ossetia and Abkhazia resulting in probably long-term loss of these regions

## **August 8, 2008**

Matters have only deteriorated after Russia's invasion on this date. Several murky and conflicting chronologies exist concerning Georgian bombardment of Tskhinvali, the capital of South Ossetia, and Russia's occupation of the area and its subsequent bombings and seizure of areas beyond South Ossetia and Abkhazia. Generally speaking, Saakashvili gave orders to Georgian military to respond to Russian and S. Ossetian provocations in S. Ossetia. This set off disproportionate actions from a motley combination of Russian, North and South Ossetian, Abkhaz, and Chechen military units who seized roads and cities, bombed civilian areas, airports and military targets, killed indiscriminately among villages, and advanced to within 20 miles of Tbilisi. Russia claims to have saved S. Ossetians from "genocide." The United States's close ties with Georgia threatened to turn events into a test of will between major powers. Despite a withdrawal agreement brokered by the French president and international support for Georgia, whose army was routed, Russia remains in control of Abkhazia and South Ossetia. The latter have declared "independence," recognized so far only by Russia, Nicaragua, Venezuela, Belarus, Transnistria and Hamas. The aftermath:

- Fatalities and thousands of displaced Georgians from S. Ossetia (joining the multiple thousands of earlier IDP's from S. Ossetia and Abkhazia conflicts dating back to 1992).
- immediate plunge of foreign investment in Georgia
- immediate diminution of gas and oil flows through the BTC and Baku-Erzurum pipelines
- \$4-5 billion dollars in aid promised by the United States and Europe
- Georgian political destabilization with increased calls for Saakashvili's resignation and new

elections. Distancing from him by former Rose Revolution allies, who have joined the opposition.

Journalist Thomas Goltz, who was in Tbilisi at the time, facetiously refers to the whole affair as the "Russian-Georgian Sochi 2014 War," referring to Russia's desire to stage the Winter Olympics in Sochi, a few miles away from Abkhazia. Russia maintains that "regime change" in Georgia is needed before peace can prevail. Georgia fears renewal of hostilities during warmer weather as snow melts and movement becomes easier. United Nations peacekeepers and OSCE monitors are inadequate or hold no mandate to police border regions with Abkhazia and South Ossetia. The United States continues to support Georgia's territorial integrity.

## GENERATIONS

In Georgia, a new generation rules. Its "Rose Revolution" president and his partners have barely entered their 40s, and most government officials are still in their 30s and even 20s. Georgia's small political arena lacks *eminences grises*, or low-profile functionaries, with experience and administrative skills. Meanwhile, citizens over 50 tend to be sidelined in the workforce, either because they have fewer computer and English-language skills, or because they seem tainted by their Soviet-era upbringing and outlook. In a country that traditionally reveres elders, this is an unnatural and unbalanced situation. In the rest of the Caucasus, governments may retain old "survivors" from previous eras; nevertheless, general change is still important. It may, for example, affect the rhetoric over "frozen" or "legacy" conflicts in Abkhazia and Nagorno-Karabagh. On the one hand, young people born during or after the expulsions and ethnic killings of the early 1990s do not have the same memories of these events as do their parents--but nor do they have personal acquaintances on the other side. Whereas in the past Armenians and Azerbaijanis may have attended the same school, or served together during military conscription, now the populations have separated. Similarly, young people in Abkhazia have no chance to get to know their counterparts in the rest of Georgia, or vice versa, should they even care to. The result is: heightened antagonism and receptive audiences for nationalistic rhetoric.

## QUESTIONS:

- Aside from headline news, what are relations between Georgians, Abkhaz, and South Ossetians actually like?
- When Caucasus hostilities flare, what weight should be given to "back-channel" diplomacy and efforts at conflict resolution? Are they moot or as important as before?

## THE NORTH CAUCASUS: Panoply of Peoples

While U.S. diplomats serve only in the three nations of the South Caucasus, the north part-- Dagestan, Chechnya, Ingushetia, North Ossetia, Kabardino-Balkaria, Karachai-Cherkessia, and Adyghea--in southern Russia, must also be factored into the overall "Caucasian equation." However one views the map, it is a fact that the North and South Caucasus are intertwined culturally, politically, and to a degree, economically (e.g. through smuggling). On the Black Sea coast, Sochi, too, was part of the Caucasus: it was the port from which much of the Caucasus Diaspora departed their homeland in 1964-1867. (Their descendants in Caucasus communities in Anatolia, Jordan, Syria, and Israel maintain ties with kin in Abkhazia and other regions.) Today Sochi is in the news primarily as the venue for the 2014 Winter Olympics.

The more than 40 North Caucasus peoples can be divided linguistically as follows:

- 1 **Northwest Caucasians:** the Circassians  
**Western or 'Adyghe':** Shapsughes, Bzhedugs, Temirgoys, Abzakhs, Ubykhs, Abkhaz-Abazinians;  
**Eastern:** Besleneys and Kabardians
- 2 **North Central Caucasians:** the Karachai and Balkars, who speak Tur and, though present since ancient times, are ethnically unrelated to other North Caucasus peoples.
- 3 **Northeast Caucasians/Daghestanians:** Ingush, Chechens, and the Dagestani (of which the Avars, Dargins, and Lezgins are the most important).
- 4 **Other** North Caucasus groups and subgroups, such as the Kumyks.

The Andi, Botlikh, Godoberi, Akhvakh, Bagulaal, Khvarsh, Kryz, Tskahur, and many others, can only be mentioned, for the sum of the Caucasus' ethnic parts can easily overwhelm the whole—and the reader. It is important to note that many of today's conflicts in the Caucasus can be traced back, not to ethnic differences or the tenets of religion, but to the impositions of foreign governments—that is, the movements of populations and the brutal deportations of some South and virtually all North Caucasus peoples by Stalin during the 1940s.

### **Some North Caucasus Peoples:**

**Balkars:** (see **Karachais**)

**Chechens:** Chechens fought the Russians for three decades in Daghestan and other regions during the Murid Wars of the 19<sup>th</sup> century under the leadership of Imam Shamil (see Islam section, below). Deported by Stalin to Kazakhstan in 1944, thousands of Chechens died in exodus and exile, and returned to a russified Chechnya in the 1950s. (There is evidence that some of those too old or feeble to be deported were burned to death by the Soviets.) A former Soviet air force general, Jokhar Dudayev, declared Chechnya's independence in the early 1990s, whereupon Soviet leader Boris Yeltsin attempted to regain control of the region. The "First Chechen War" raged from 1994-96, during which time Russian forces first regained, then lost control of Grozny (an old Russian fort named 'awesome,' or 'dreaded'), which became the capital of Chechnya. Dudayev was killed in 1996; a short peace prevailed until 1999, when the new Russian president, Vladimir Putin, ordered a new assault on Grozny. During the resulting devastation, many inhabitants fled to neighboring Ingushetia, North Ossetia, and to Georgia. The war continued as a relentless series of ambushes, sabotages, assassinations, and exterminations little documented or noted by the world. **Today, Chechnya is ruled by Ramzan Kadyrov, who has been brutally effective at rebuilding Grozny and eliminating opposition (in recent years those falling out of favor with him have been assassinated, even abroad).**

**Circassians:** The Circassians comprise indigenous Adyghe, Kabardians, and Cherkess groups with distinct, but mutually intelligible, languages or dialects. Their numbers are considerably reduced after an extensive (estimates range from 600,000-2 million people) migration to Turkey, the Middle East, Europe, and the United States. Thousands died from hunger and shipwreck during the voyage over the Black Sea. Today, some groups (Ubykh) are extinct or nearly so. Circassians, loyal army fighters, served in the Balkans and the Middle East; the Ottomans settled them in the most unstable areas of the Empire—for example, in Syria, where local Beduin did not obey the central government. Circassians brought stability and founded a town on the relics of ancient Philadelphia—today's Amman.

**Dagestan peoples:** Comprising Avars, Dargins, Lezgins, Kumyks, Nogais, Laks, Tabasarans, Rutuls, Aguls, Tsakhurs, and many others.

**Kabardians:** Also called Kabardins, these people have always been considered the most pro-Russian of all the Muslim peoples of the Caucasus and actively assisted the Russian Czarist army.

In general, Islam is not as strong among Circassians as among Karachais or Balkars. Nevertheless—and because of Soviet policy to divide Moslem groups—Kabardians were

deported in large numbers in December, 1943, to Central Asia and Siberia. Diaspora Circassians today live mainly in Turkey, Syria, Jordan, Germany, and the United States. During the 1990s, a Circassian national movement arose in diaspora communities and a few thousand Circassians re-emigrated to the Caucasus.

**Ingushetians:** Traditionally an indigenous mountain people, the Ingush resettled more recently in valleys and towns as part of Russia's policy to "civilize" the Caucasus. Their language is akin to Chechen and they are largely Sunni Moslems. Ingush—along with Chechens—were deported in February, 1944, to Kazakhstan, Kyrgyzstan, Uzbekistan, and Siberia in 190 trains and some 12,000 train carriages. They returned to the Caucasus in large numbers, starting in 1954.

**Karachai:** Of Turkic origin, moved in the 13<sup>th</sup> century to the high valleys in the Central North Caucasus and were deported along with their cohabitants, the **Balkarians**, in 1944. The Karachai, Balkarians, Circassians, and the Kabardins inhabit roughly the same areas.

A geopolitical note: some argue that it would have made sense in the 1920s, to create a Karachai-Balkarian (i.e. a southern, Turkic, Moslem, mountainous) republic and a Kabardino-Cherkess (i.e. northern, pagan, indigenous, Christian) republic. But Soviet authorities, true to form, sought to divide and conquer: instead of drawing the boundary from east to west, they traced it north to south, thus cutting *across* ethnic divisions. As a result, instead of a theoretically sensible "Karachai-Balkaria" republic and a "Kabardino-Cherkessia" republic, we have today's heterogeneous and ethnically contentious Karachai-Cherkess and Kabardino-Balkar republics.)

**Ossetians:** The Ossetians Early 6<sup>th</sup> century AD "immigrants" to the Caucasus. Their communities straddled the mountains just west of the important Georgian Military Road and were divided between Georgia and Russia. Ossetians speak a distinct Indo-European language of the Persian group and call themselves Ir, Iron, or Os. The ancestors of the Ossetians are reputed to be the Alans, a nomadic people from the steppe northeast of the Black Sea whose specialty was warfare and horse breeding. Many fled the Huns in 370 AD and crossed into Gaul and Africa. **Research suggests that the Alans, wearing armor and bearing lances, were the origin of western knights, and that the Arthurian legends have both Celtic and Alanic roots, particularly when compared with the Caucasus Nart sagas. The Alans intermarried throughout Western Europe and left archaeological traces in Italy, France, Britain, Spain, and North Africa. It is tantalizing to think, as some scholars do, that Sir Lancelot might have been originally "Alanus [Latin for 'Alan'] à Lot [a river in western France]. Certain Alan, or Os, groups settled in the Caucasus. Largely Orthodox Christian, a northern Ossetian minority accepted Islam, and pagan traditions remain alive today in Ossetia (as they do in Abkhazia). Ossetians traditionally held the high passes of the Caucasus. South Ossetia has tried several times to merge with North Ossetia (in Russia). As an autonomous region of Georgia, they opposed Georgian nationalism during the 1990s and sealed themselves off and declared "independence" after the Russian-Georgian conflict in August 2008.**

**Issues and questions for further exploration**

- 1 Why are there Karchai/Balkar and Kabardin/Cherkess tensions—but no Kabardin/Karchai or Cherkess/Balkar tensions? (Or are there?)
- 2 Why and how did Stalin deport Caucasus peoples?
- 3 How do North Caucasus politics impinge upon the South Caucasus?
- 4 How can a region of the Caucasus be at once Christian, Muslim, and pagan?

## Why study the North Caucasus, or “little peoples”?

The regions of North Ossetia, Ingushetia, Chechnya, Dagestan, Adygheya, Karachai-Circassia, Kabardino-Balkaria, and Krasnodar Krai lie north of the Greater Caucasus mountain range, in Russia, and hence beyond the scope of this (South) Caucasus self-study guide. Nevertheless, events in the north shape what happens afar and hence bear close monitoring.

For two centuries, the Caucasus served Russia much as India served Britain (and during the same period): as a testing ground and cultural “mirror.” Just as the Raj, the United Kingdom’s “Jewel in the Crown,” gave luster and meaning to the idea of empire and British-ness, so too the Caucasus enabled Imperial Russia, and later the Soviet Union, to conceive of itself as an empire and superpower.

But the Russians weren’t the only ones to dream powerful Caucasus dreams: in 19<sup>th</sup> century Daghestan and Chechnya, militant Sufi and Islamist movements proclaimed *jihad* and kept the Czar’s armies at bay for decades. During the height of the Caucasus wars of the 19<sup>th</sup> century, Imam Shamyl (1797-1870) and his fighters raided fearlessly, even into the heart of Georgia, capturing hostages and scooping them back up into the mountains. For decades no army could defeat him, for the mountain passes were too narrow and precipitous to admit any but a single stream of soldiers on foot or horseback: easy prey for mountain warriors. Eventually, by cutting down acres of forest cover, by building bridges in impossible places, and through bribes, Russia managed to put down the mountain people—at least for a time.

These conflicts now rage anew in Putin’s Russia. Even today, among diaspora Caucasus groups in the Middle East and Anatolia, Caucasus culture clubs, with libraries of books in exotic and sometimes extinct languages, with dance classes and feasting halls, often prominently display on their walls the stern portrait of Shamyl. Brandishing a saber he rides his horse into battle, or sits tamely in a photograph taken in St. Petersburg, his curly red beard balanced by a tall sheepskin hat, his chest covered with bullet belts and sundry swords and daggers tucked into his belt. Shamyl’s two grown sons stand by his side, similarly garbed.

Imam Shamyl is worth careful study. He commanded (and among many people still commands) respect for his valor and ruthlessness, his toughness, shrewdness, and ultimately his pragmatism, for Shamyl surrendered and ended his days as an honored “guest” of the Czar.

Judging from events and history, the Czars are gone—while Shamyl endures.

## **CHRISTIANITY**

It is a challenging to try to define the architectural differences between Georgian and Armenian churches yet they are distinct. Sometimes Armenian churches seem more faceted and angular, and Georgian more rounded (though not always). Some Armenian basilicas have separate chapels built in each direction off the nave; Georgian ones often have three parallel naves put together. Perhaps the main difference lies in their construction material: Georgian stone churches seem lighter, whiter, whereas Armenian churches, built from the local tuff, a porous volcanic rock, take on pink, ochre, or reddish hues.

Of extreme interest are the cave monasteries built at David-Garedzha (in Kakheti, eastern Georgia) and Vardzia (near Turkey and Armenia). David-Garedzha lies in a silent and rather inaccessible region which, ironically, could turn out to be a promising oil field. Vardzia is a vast complex of originally 3,000 man-made caves carved out of the tuff cliffs above the Kura (Mtkvari) River.

Armenia proudly claims to be the world's first Christian state (debated dates range from 301 to 314 AD), with Georgia coming in a close second (330 AD). However, Christians lived among Greek colonies along the Black Sea coast in the first and second centuries, and Armenian church history attests to conversions in Armenia by the Apostles Thaddeus and Bartholomew (hence the Armenian 'Apostolic' Church). Certainly Christians lived in both Armenia and Georgia from the earliest times--and Jews long before.

Georgia's conversion to Christianity resulted in the suppression of the wealthy and powerful class of pagan priests and a cultural reorientation towards Rome, Byzantium and the west. A

church schism developed over the nature of Christ ('human and divine' vs. 'beyond human understanding'), resulting in the creation of the Monophysitic ('beyond human understanding') churches: most importantly the Armenian, as well as the Syrians, the Egyptian and Ethiopian Copts, the Indian church, and the Nestorians in Persia. The Armenian Apostolic Church belongs to the family of Oriental Orthodox Churches. During the 19<sup>th</sup> and 20<sup>th</sup> centuries, missionaries in Anatolia ('Historical Armenia') established Protestant and Catholic Armenian churches.

With Constantinople's permission, in Georgia the Iberian Church established a bishop at Mtskheta and became autocephalous, which the Orthodox Church of Georgia remains to this day despite long periods of Persian and Arab domination.

Writing came to both Armenia through Biblical texts. In the 5<sup>th</sup> century, St. Mesrop (Mashtots) invented an Armenian alphabet based possibly on Greek and Persian scripts. Some sources say St. Mesrop also devised the Georgian alphabet, while others maintain it appeared earlier, invented by King Parnavas in the third century, or else that it arose in the 5<sup>th</sup> century BC from Aramaic with later Greek influences. The earliest known Georgian inscription is in the Judean desert, 433 AD. Georgia's ecclesiastical alphabet, Khutsuri, gave way in the 11 century to the secular Mkhedruli alphabet. Azerbaijani, a Turkish/Altaic language, first used Arabic, then the Latin alphabet (1928-38), then Cyrillic letters (1939-91), and after independence reverted to a Turkic Latin script.

Armenian and Georgian religious painting possesses its own inimitable style and predates much European church art. The homophonic Armenian and polyphonic Georgian liturgies are unforgettable and utterly different from Gregorian chant, or the Slavonic or Catholic service.

Often entwined with politics, the Church has played a significant role throughout Armenian and Georgian history. Two examples: During the 19<sup>th</sup> century, missionaries in Anatolia from England and the United States, hoping to win converts to Protestantism, offered Armenians travel and education opportunities. This catalyzed the idea of independence and nationalism among Armenian Ottomans receiving a western education. And more recently: in 1999, the Shevardnadze government arranged to send priceless ancient Georgian artifacts to the United States on a tour. When the Georgian Patriarch forbade the inclusion of icons or ecclesiastical chalices, the project turned into a virulent parliamentary election issue and the art tour foundered.

## **ISLAM**

Along with pagan traditions, Judaism, and Christianity, Islam has a long history in the

Caucasus. Islam came to the Caucasus in waves from the Ottoman Empire, and from Persia and the Arabs. Islamic culture is particularly old in Dagestan, where an Arab army occupied Derbent in 643 AD, just eleven years after the death of Mohammed. As the numbers of faithful grew, Moslem *murids* of Daghestan from 1830-59 obstructed Russian expansion into the Middle East and did so largely unaided by outside forces. Daghestan at the turn of the 20<sup>th</sup> century had hundreds of Moslem religious schools and thousands of mosques, and Dagestanis reputedly spoke the most beautiful Arabic in the entire Islamic world.

An interesting episode in Soviet cultural history occurred, in the 1920s, over the question of Dagestan's official language—aside from Russian. The choice was either Arabic or a Turkic dialect. However, the Soviet authorities dropped this simple option in favor of making *each* of Dagestan's 11 main indigenous languages official (out of 33 spoken in the region). This guaranteed the predominance of Russian, for the sake of convenience, as a “language of inter-ethnic communication.”

In “Caucasian Albania” (roughly, Azerbaijan), Arabs set up a satrapy in 705 AD. The aggressive anti-Christian Abbashid dynasty (750) provoked a series of rebellions through most of the 9<sup>th</sup> century. Arab power waned and Azerbaijan divided into fiefdoms in the 10<sup>th</sup> century, until the arrival of Muslim Oguz and Slejuk Turks who established a decentralized rule with regional principalities. Conversions to Islam occurred more through the immigration of Turkic peoples than by force. Islam flourished even under periods of Georgian control. Mongol raids (1225-1386) pushed Turkic and Turkmen nomads into Anatolia and east, from Nakhichevan, into Azerbaijan. Sub-khanates fought the Ottomans, and among themselves, until the defeat of the Ardebil Khanate ushered in the Saffavid dynasty (which was Shi’ite Moslem).

Until the mid-16<sup>th</sup> century, the North Caucasus was divided into a Christian west (Adyghe, plus some Kabardians and Ossetians); a Muslim east (Daghestan); and a pagan center (Chechens and Ingus). There were no serious conflicts. Relative calm prevailed from 1604-1783 as Cossacks moved into the East Caucasus and Islam pushed into the west. During this time, the Ottoman Sultan Ahmad III and the Crimean Khan campaigned against the Kabardians and defeated them. The Moslem conquerors appointed an imam for each highland *aoul* (village), killed all priests and monks, and took the princes’ and nobles’ sons to Crimea as hostages for conversion. These assaults ended in 1729 with the expulsion of the Khans, but some Kabardians remained Sunni Moslems thereafter. The defeat of the Crimean khans brought Russians ever closer to the North Caucasus peoples.

In 1783, terrified by the prospect of imminent Persian invasion, Georgia signed a treaty with Russia. In reaction, seeking to undermine the Czar’s growing influence in the Caucasus, the Ottoman Sultan sent a “caliph” to the Caucasus—a Chechen Naghshbandi (Sufi) mystic named Mansur who was known for his piety and hatred of non-Moslems. As Arabic language and culture spread west from Daghestan to Adyghe (Circassian) regions; many pagan *aouls* converted to Islam in the 1860s, and Sheikh Mansur galvanized Caucasus Moslems and briefly united them against the Russians. He became known as the “Mahdi,” the awaited leader of the Moslem jihad. Eventually Sheikh Mansur was captured and his movement (or mystical *tariqat*) vanished, but only for three decades: the *jihad*, or struggle unified around Islam, remained hidden and it evolved into the *murid* movement led by Shamyl.

Shamyl’s imamate (1824-59) was a Sufi-inspired military jihad mixed with a clannish mountain “democracy.” Though it ended in Shamyl’s defeat, his influence endured and stimulated recurrences of anti-Russian unrest in 1877 and 1920. Over the decades, Islamic law (*shariat*) quietly took its place alongside traditional mountain law (*adat*).

One tends to think of the Russians, and later the Soviets, as being in total control of the Caucasus. In actuality smaller or larger revolts and Holy Wars dragged off and on from 1824 to as late as 1922. During this period, North Caucasus feudalism gave way to clans and peasant societies, but even with an overlay of Soviet culture, the old Sufi order spread.

From 1922-92, sporadic rebellions occurred, which have been little documented, and Soviet authorities deported entire North Caucasus nations. Even in exile, the Chechens maintained their integrity, to a great extent through adherence to their Sufi orders (*tariqa*). Meanwhile, Russians and Cossacks resettled the Chechen homelands. (It is argued that one reason why deportations

from Chechnya would not work today is that the Russian birthrate is in severe decline, whereas Moslem populations throughout Russia are increasing dramatically, and hence Russians could not easily repopulate the deracinated areas).

Today most North Caucasus indigenous populations are Moslem. But such simplifications soon give way to fractal complexities. While it is true that Islam defines social life and ethnic identity in the *Northeast* Caucasus, it can only be considered a minor social factor in Northeast Ossetia and in the *Northwest* Caucasus, i.e. Abkhazia. However, one cannot stereotype the Abkhaz, for while those indigenous Abkhazians living in the Caucasus are predominantly Christian, *Diaspora* Abkhazians, in Turkey, are, with few exceptions, Moslem. This can be explained in at least two ways: either most Abkhazians converted to Islam prior to moving to Turkey in the 19<sup>th</sup> century, perhaps as a precaution. Or, Islamic Abkhaz joined the Diaspora precisely *because* they were devout Moslems in the first place.

Several thousand diaspora (i.e. Moslem) Abkhazians returned to their homeland in the 1980s and discovered to their shock that their Caucasus relatives were, if religious at all, Orthodox Christians; and that—even more horrifying—other Caucasian peoples of the Northwest, though officially Moslem, were not interested in religious teaching. To its credit, the Abkhaz government constructed a mosque in order to satisfy the needs of the returning devout.

### Issues and questions for further exploration

- 1 How did Islam come to the Caucasus?
- 2 Is Caucasus Islam “pure” or mixed with other traditions?
- 3 How do the Georgian Orthodox and Armenian Apostolic churches differ, and in what regards are they related?
- 4 Describe, in detail, a Georgian and an Armenian church?
- 5 What is an Armenian *khachkar*?
- 6 How did the church and the Soviet state interact in Georgia and Armenia?

## SECURITY ISSUES AND MILITARY ASSISTANCE

Under-funding and conflict continue to plague the military forces of all three South Caucasus nations. During the 1990s, Armenia and Azerbaijan established control over paramilitary groups; indeed, the war in Nagorno-Karabagh galvanized their respective armies. By contrast, Georgia until recently has suffered continual infighting between clan ('mafia') groups, gangs, and government forces.

Russia still maintains 8,000 troops in Georgia (Batumi and Akhalkalaki bases), and peacekeepers in Abkhazia (approx. 1,600) and South Ossetia (600). Separatist groups also maintain armed forces: in Abkhazia (300-5,000, with 45,000 on mobilization call); South Ossetia (2,000-6,000?); and Nagorno-Karabagh (20,000, with 40,000 on mobilization call). During the Soviet era, approximately 40,000 Armenians (including Karabagh-Armenians) served as officers in the Soviet forces. This in part explains why Armenia retains close military ties and alliances with Russia, while Georgia and Azerbaijan seek military and security assistance from the West.

In 1997, Moscow and Yerevan signed a "Friendship Treaty" which includes a mutual military assistance provision. Armenia receives from Russia military equipment and training, parts and supplies. By treaty, Russian troops may remain in Armenia until 2005, and the two nations have agreed to form a jointly run "counter-terrorism" brigade. Post 9/11 military assistance also comes from the United States. Armenian troops maintain economic and logistical ties with Karabagh forces, and Armenian personnel appear regularly in Nagorno-Karabagh.

Georgia receives material and advisory support from numerous international groups whose goal is to reform and restructure Georgia's security force. Assistance comes in the form of military education and training; instruction in resource management, peacekeeping activities, budgeting and planning; language training (English, French, German, Greek, Italian, and

Turkish)—all of which will facilitate communications with NATO, PSO and other programs; and other areas. Participating groups include the International Security Advisors Board (ISAB) and Americans in the US European Command (EUCOM) Joint Contract Team.

The 1994 Partnership for Peace Program (PFP) aims to foster trust and reduce the risk of conflict among its 30 members by establishing a working relationship between them and NATO. Georgia, Azerbaijan, and Armenia joined the PFP in 1994.

Turkey provides funds, training, as well as instructors for the Georgian Commando Battalion and at Marneuli Air Base. Turkey also advises in the reform of the Georgian Military Academy and provides support for the Georgian platoon in Kosovo. Greece assigns an advisor to the Georgian Navy and will supply a missile cruiser and train its crew. Germany offers logistics and NGO training; and an advisor from the UK assists the Georgian Procurement Policy Board. Georgia sends cadets, officers, and staff for training to Estonia, France, Italy, Germany, Greece, US, USA, and to Turkey.

The United States' \$64 million Train-and-Equip Program (2002-2004, May) boosted the Georgian army's counter-terrorist capabilities by providing special operations and tactical training, combat skills, land navigation, and human rights education. Additional US security assistance funding to Georgia increased from \$39.6 million (2001) to \$41.4 million (2003)—approximately double of what is given to Azerbaijan. These funds have helped Georgia monitor and patrol its borders after Russian guards departed in 1998. Supplies from the US range from uniforms, vehicles, communications and surveillance equipment, to computers. Georgia hopes one day to join NATO and is shifting from Soviet to Alliance military standards. However, Georgia's military faces ongoing problems: desertion, low morale, lack of planning, and ineptitude.

Unlike Armenians, few Azerbaijanis served as Soviet officers (the result of anti-Muslim discrimination in the Soviet military). Immediately after independence, Azerbaijan, with few trained personnel and little equipment, had to create a military to contend with Armenian separatists in Nagorno-Karabagh. Army morale and the chain of command collapsed in 1992 when a regional commander, Surat Husseinov, defected from the front line in a bid for power through an attempted coup.

From 1991, Azerbaijan's military could be described as Soviet in style, being still essentially a branch of the Soviet military rather than an effective national defense force. Azerbaijan's military still uses ageing Soviet equipment and faces manpower shortages, low morale, poor living conditions and training, and other problems. After the Husseinov episode, the government is reluctant to trust the military, which is prone to internal political feuding, lack of professionalism, and corruption. (Azerbaijan is not alone in this regard.) With increased revenues coming to Azerbaijan from foreign investment and oil sales, funding for the armed forces has increased since 2000. Azerbaijan has superior air power to Armenia, but spare parts and adequately trained pilots have come into short supply. Moreover, Armenia may actually have what has been described as a surrogate air force in the form of MiG aircraft transferred between Russian bases in Georgia to Armenia. Azerbaijan shows signs of improvement in performance of their armed forces and in peacekeeping troops in the Balkans, Afghanistan, and

Iraq. Training teams from Turkey are working to help Azerbaijan bring its techniques and procedures up to NATO standards.

In 1991, Azerbaijan cut off Armenia's supply of natural gas from Russia and continued a sporadic rail blockade. Transportation and communications links to Stepanakert were cut as well. Open warfare began in December. Responding to Armenian lobbying efforts, the United States restricted its military assistance to Azerbaijan (and to Erevan, according to some sources). This scenario changed radically after 9/11: to reward Azerbaijan for supporting the "US campaign against international terrorism," American military assistance has increased from \$2.3 million (2001) to more than \$20 million (2003). Assistance includes upgrading air-space control and air-traffic safety; training officers in the United States; training Azerbaijani peacekeeping units and border patrols; improving Azerbaijan's navy; as well as English language training. However, Azerbaijan, with its ageing Soviet equipment, still relies on Russia for replacement parts and assistance.

### **Issues and questions for further exploration**

- 1 Why does the United States have a military assistance program with Georgia and other South Caucasus nations?
- 2 What is the Russian military presence in the Caucasus and what is its history?
- 3 Why does Armenia maintain closer military ties with Russia than do the other South Caucasus nations?

## PETROLEUM

*"Oil was first found in the Caucasus thousands of years ago. Then it trickled down to Arabia-- and there has been trouble ever since!" (Abkhazian elder, in conversation with the author, 2002)*

The Caucasus Mountains arose as the result of a cataclysmic "train wreck" millions of years ago when continental plates collided, closing up the ancient east-west "Tethys Sea" and crumpling the landscape into huge ranges extending from the Alps to the Himalayas. Thus, proto-"Georgia," which once was coastal region before the African and South American tectonic plates crashed into Europe and Asia, now lay in the midst of mountains. This suturing of continents, which occurred ages before the appearance of humans, gave rise to the Caucasus region's earthquakes, scenery, volcanoes and hot springs—and to its petroleum geology.

Despite initial enthusiastic media claims about the Caspian Sea's oil capacity making it a "second Persian Gulf," in terms of crude petroleum or hydrocarbon reserves--it is not. Indeed, some analysts point out that the three major Caspian oil fields (Azeri-Chirag-Guneshli: ACG) combined produce five times *less* than Qatar, the smallest OPEC producer. However, for the next decade the Caspian may indeed be the world's largest growth area for non-OPEC oil. This makes oil a vital resource for the Caucasus, whether in the capacity of oil provider or as a conveyor and

terminus. The United States and other western nations, anxious to disengage themselves from dependence on Middle East oil, take keen interest in Caspian oil and natural gas reserves. (Less optimistic analysts maintain that the ACG fields will satisfy only a little over the 1% of the world's global oil demands in 2008. Still, the profits seem to be there.)

Azerbaijan, Kazakhstan, and Russia ratified treaties dividing up the Caspian Sea bed for oil exploration based on equidistance. By contrast, Iran (whose nearby Caspian seafloor is relatively oil poor) pushed for an even division of the Caspian, which would give it more sea-bed territory to explore. The dispute continues. In fact, Iran on July 2001 sent a jet plane and gun boat to chase off an Azerbaijani vessel operated by British Petroleum that had entered contested waters to test drill for oil. Meanwhile, Turkmenistan desires to move its sea border further west, closer to Baku, and hence improve its oil exploration opportunities.

The Caspian is not uniformly rich in oil treasures. Kashagan, in the north, is the fifth largest oil field ever discovered. But in Azerbaijan, whose primary export is petroleum and where commercial oil production began as early as the 1870s (adding considerably to the wealth of the Rothschild and Nobel families, and many others), no new oil field discoveries have been made since 1994. Such shifting tides in the affairs of oil result in intricate diplomacy and business negotiations over oil pipeline routes, oil "quality banks," shipping rates, access to current and projected markets, and environmental and human rights trade-offs.

Today's Caspian and Caucasus energy map is festooned with a network of current and proposed pipelines designed to move oil from on- or off-shore deposits to tankers plying the Black Sea; to Turkey; or to the Russian "Transneft" system to Europe; or through Iran, Afghanistan, and Pakistan to India. There is even an as-yet unrealized vast pipeline destined to cross the Asian continent to China. Europe's need for oil will grow an estimated 20% by the year 2020 and China's by even more. China, hungry for petroleum to support its huge and growing economy, is an active player in the oil fields of Central Asia.

The new Baku-Tbilisi-Ceyhan pipeline eases certain "choke-points" or transportation bottlenecks that result from having to use Russia's existing Transneft and Gazprom system overland through the former USSR, or from shipping through the hazardous Bosphorus Straits. The BTC pipeline runs almost 1100 miles from Baku, on the Caspian, through Tbilisi to the Mediterranean; oilflow began in May, 2005 and took nearly a year to reach its destination at Ceyhan, Turkey. Partially following the BTC route, but only to Erzurum, Turkey, is the BTC natural gas pipeline (also called the Shah-Deniz or South Caucasus Pipeline). With an expected lifetime of 40 years, the BTC pipeline skirts Nagorno-Karabagh in Azerbaijan and Kurdish regions in Turkey, passing through Georgia rather than Armenia. On August 6, 2008, an explosion in eastern Turkey closed the pipeline temporarily; a few days later, Russian bombs in Georgia exploded pointedly close to the BTC pipeline. Both events forced delays and re-routing of Caspian oil, partially through Russian pipelines. BTC shipments restarted on August 25th. The BTE gas pipeline also closed temporarily due to security concerns during the South Ossetia conflict.

Development of onshore oil fields in Georgia, employing new "horizontal" drilling methods may, in time, give that country an extra economic boost, but so far, these are high-risk projects.

The most significant hurdle to oil transport and development is getting supplies safely and consistently to their export terminus.

For a long time, Armenia did not stand to gain from any current oil or gas negotiations--an isolation that threatened to continue so long as its borders with Azerbaijan and Turkey remained closed. However, an Iran-Armenia Gas Pipeline has existed since 2006 (extending from Tabriz to Meghri, Armenia, but no further inland), and in March, 2009, construction on an Iran-Armenia oil pipeline began, intended to transfer diesel from Tabriz refineries to Eraskh, in Armenia.

The future, like fuel itself, is in flux: will older pipelines (e.g. the Baku-Supsa line): be mothballed or perhaps maintained at lower outputs? Where will new oil and gas markets emerge and for how long? Projections and risk assessments add to the giant puzzle of oil and gas projections. One plan is to connect the BTE gas pipeline with Nabucco, an as-yet unbuilt gas conduit through Eastern Europe to a distribution hub in Austria. The Caucasus's and Central Asia's central locus as energy provider means that Azerbaijan and its neighbors are in constant negotiations with the West, and with Russia, Iran, and China. Russia strongly desires to retain decisive control over natural gas shipments to Europe. Turkey, in the meantime, uses its status as a transit nation and way-station for the planned Nabucco gas pipeline project (from the Caspian to Austria) as leverage in its efforts to enter the European Union. The world economic crisis makes the Caucasus energy scenario all the more kinetic and fraught with surprise.

Any given energy deal can be viewed as sinister or advantageous, and presented in stark terms of ensuring or betraying Europe's and the Caspian's "independence" from Russian energy dominance. But there are subtleties: e.g. in the case of Russian control over Georgia's electricity grid: is this necessarily bad for Georgia's independence? Can it be viewed as a pragmatic arrangement? Does it leave Georgia with certain advantages, given that it is an electricity intermediate, or transit nation, between Russia and another highly desirable energy market (Turkey)?

Maneuvering over oil and gas transport makes for the creation of a new "Great Game": one affecting economies throughout Europe, the Middle East, and Asia. At any given moment there seem to be winners and losers in this game, yet they can change places in a matter of weeks and months as oil prices rise and fall, and market demand shifts. Other variables include the appearance of new transport choke-points, or instances of sabotage, conflict, or accident that close off one or another pipeline. Another complicating factor (and not a new one) is the lack of transparency in much energy wheeling and dealing: how is a reputable energy company, even if it wanted to, supposed to "partner" with a foreign corporate entity that has an obviously false address, fake staff, and murky accounting practices?

Crucial to US policy about Caspian oil and gas will be its evolving relations with Iran, which currently has energy ties with Georgia, Armenia, and Azerbaijan.

## ISLAM

Along with pagan traditions, Judaism, and Christianity, Islam has a long history in the Caucasus. Islam came to the Caucasus in waves from the Ottoman Empire, and from Persia and the Arabs. Islamic culture is particularly old in Dagestan, where an Arab army occupied Derbent in 643 AD, just eleven years after the death of Mohammed. As the numbers of faithful grew, Moslem *murids* of Dagestan from 1830-59 obstructed Russian expansion into the Middle East and did so largely unaided by outside forces. Dagestan at the turn of the 20<sup>th</sup> century had hundreds of Moslem religious schools and thousands of mosques, and Dagestanis reputedly spoke the most beautiful Arabic in the entire Islamic world.

An interesting episode in Soviet cultural history occurred, in the 1920s, over the question of Dagestan's official language—aside from Russian. The choice was either Arabic or a Turkic dialect. However, the Soviet authorities dropped this simple option in favor of making *each* of Dagestan's 11 main indigenous languages official (out of 33 spoken in the region). This guaranteed the predominance of Russian, for the sake of convenience, as a “language of inter-ethnic communication.”

## Oil and Water:

These elements ordinarily do not mix--but in theory they should, at least in discussions about the Caucasus's resources and economic prosperity. Unfortunately, all too often water remains a "sleeper" issue, though the need for access to water has sparked conflicts often attributed to

other, more overtly political, motivations. What is more, maneuvering for oil and gas also, directly or indirectly, touches upon water concerns. For example, the planning for new pipeline projects is driven not merely by the desire to get fuel to market, but by the urgent necessity of protecting the Black Sea, and particularly its narrow outlet to the Mediterranean through the Bosphorous, from oil spills, explosions and fire. While water is less "sexy" and receives less attention in the press, it is in fact more vital than fuel. The imminent drying up and disappearance of the Aral Sea will cause huge health problems and demographic shifts in Central Asia and Russia; and these in turn will affect the economies of entire regions, including the Caucasus. Joint water (and forestry) conservation and monitoring projects offer important opportunities for cooperation between former adversaries in the Caucasus.

### **Environmental Concerns:**

Most existing or projected Caucasus pipelines run through regions that are seismically active, politically unstable, or environmentally fragile. Oil companies have therefore been forced to take extra precautions to ensure pipeline durability, resistance to attack and vandalism, and ease of maintenance. To encourage local cooperation, companies were advised set up training programs to give local governments and communities some stake in the oil venture: that is to say, a sense of responsibility (or, indeed, actual responsibility) for, say, an exploratory oil-rig or a pipeline running through a particular region. To this end, BP and consortium members paid some \$60 million to support community projects and village programs along the BTC route through Azerbaijan, Georgia, and Turkey—money considered well spent. The ideal was to prepare a safe social "bed" for the pipelines. This meant increasing the overall lawfulness of the countries involved by boosting the transparency and dependability of its businesses. However, oil resources per se do not guarantee continuing wealth, or economic growth and stability. For example, comparing the GDP of Norway with that of Middle Eastern nations over the past decades: Norway's GDP has climbed steadily, whereas Middle East economies peaked from oil, and then tended to fall and bump along. In theory, oil funds can help spread oil wealth throughout an entire society; but to do this such revenues must be harbored and protected from institutional and private corruption.

Environmental concerns include:

- 1 The BTC pipeline and oil development's impact on the already polluted Caspian Sea and its endangered sturgeon.
- 2 Its impact on two dense primary forests in Georgia, as well as the buffer zone of a protected natural park with several rare and endangered species. (The BTC pipeline requires a 500-meter wide clear-cut corridor crossing.)
- 3 In Turkey, the pipeline corridor contains more than 500 endemic plant species, and a third of the country's threatened vertebrates are found within 250 meters of it.
- 4 The route crosses two sites protected under national legislation, including habitats for the threatened Caucasian grouse, as well as two critically endangered plant species and 15

bird species with fewer than 500 numbered nesting pairs.

Other concerns focus on the potential vulnerability of the pipeline to vandalism and earthquakes. The pipeline passes close to the Borzhomi mineral water springs and to landslide zones in Georgia. Meanwhile, Turkey has experienced 17 major seismic shocks in the past 80 years; thus there is a high chance of a major earthquake occurring during the 40-year projected span of operation for the BTC line.

Pro-environment and human rights groups criticize British Petroleum's control over the BTC project, claiming that, through legal agreements, BP virtually governs the BTC corridor, stripping local people and workers of their civil rights. Recently, whistleblower critics of the project complained of incorrect materials being supplied, of BTC pipeline crews being forced to begin work before land surveys could be completed, and of pipeline installed before mandatory inspections could take place. In August 2004, Georgia called a temporary halt to construction to its portion of the BTC pipeline, ostensibly over environmental concerns. Additional concerns have been raised about Turkey and its ability to meet social, environmental, health, and safety commitments while maintaining construction on schedule.

### Issues and questions for further exploration

- 1 Look at a map of the Caucasus and Caspian region. With an eye to physical geography and political boundaries, where would *you* put a new pipeline?
- 2 On a map showing pipelines, choose one and trace it with your finger. Why does it follow the course shown? Over what terrain does it pass?
- 3 Which countries invest most in Caspian/Caucasus oil and gas exploration?

## **DRUGS, TRAFFICKING, CONTRABAND:**

Major drug routes from Iran lead through the Caucasus to Europe and Turkey. In many regions corruption, instability, and separatist conflicts lead to an "ecology," or cycle, of dependency wherein contraband- and drug-running supports state agents (for example, in the 'break-away' regions of Abkhazia, South Ossetia, and Nagorno-Karabagh). Two (possibly cynical) points can be made: none of this is new, in the sense that the Caucasus has for centuries been a source of slaves, and opium and other drugs have deep cultural roots. Secondly, all this is but one piece of a much larger, international picture in which illegal gains from trafficking, narcotics, and contraband (even of the mundane, such as cigarettes) are soon to exceed even the astronomic income from arms sales worldwide. So far, however, these matters remain a "soft," though serious, security concern in the South Caucasus.

## **THE "OTHER" DIPLOMACY**

New methods exist to augment diplomacy in the Caucasus, especially in sensitive matters, such as planned ethnic killing. These include the establishment of "truth commissions" (where immunity is extended in exchange for truthful testimony), "confidence-building" measures and "conflict resolution" workshops. Other terms for these approaches include "second tier diplomacy," "people-to-people," "outreach," and "peace-building" ventures) play a modest but promising role in international affairs. Unfortunately, they tend to be underused and under-reported in the media, and all but ignored by think-tanks and foreign policy journals (which focus on more traditional considerations, such as national interests, 'carrots and sticks,' and 'signal sending').

Nevertheless, educational exchange programs, joint cultural projects, and "trust enhancing" gatherings can have a considerable effect, dollar for dollar, over the long term. Incrementally, such "other" diplomacy works to strengthen civic society and develop ties between younger people in governments and NGOs who otherwise would not meet. Protocols for the Other Diplomacy (and its conceptual partner, the Other Journalism--for reporters and editors, too, can play a key role in these endeavors) are evolving in numerous university departments and through USAID-sponsored programs.

In popular literature, too, much valuable information can be gleaned about negotiation and reconciliation from individuals of recognized moral stature, such as the Dalai Lama and South Africa's Bishop Mandela. Particularly intriguing—and useful for diplomats-- is Ekhard Tolle's

concept of something he calls the "Pain Body," which refers to any memory, individual or collective, of past trauma. To a person (or a nation), the Pain Body, writes Tolle, no matter how excruciating, may also sometimes seem beneficial, like a protective shield or something integral to one's individual, group, or national identity. This is an illusion, for in reality the Pain Body is a "parasite" nurtured by negative headlines, nationalistic rhetoric, remembrance of ancient atrocities and vendettas-- and thus is concerned only with *its own* survival. Tolle suggests that humble recognition of the other party's experience of pain, as well as one's own, is a vital step to reconciliation.

#### **CAUCASUS CULTURES AND TRADITIONS: Some personal glimpses**

*"You are interested in Kebeh because you are an American. But I am not 'interested' in Kebzeh—because I am Abkhazian!"* (author interview with Turkish Abkhazian, Istanbul, 2002)

Pirosmanashvili was a self-taught, wandering artist who painted on tin, black oil-cloth, inn walls. This picture is in the Georgian Art Museum, which was a seminary when Stalin studied there (1894-1898).

In the long run, everything in the Caucasus—everything except the mountains themselves—arises out of its cultures. It is easy to romanticize the Caucasus. Indeed, it is irresistible, and most foreigners first encounter the region through the classics of Russian 19th century literature, particularly the verses and stories by Tolstoy, Lermontov, and Pushkin, who depict the interaction of Russians and mountain peoples. Lermontov, in particular, vividly conveys his Caucasus obsession in *The Hero of Our Times*, and also, as a painter, in his marvelously atmospheric landscape sketches, oils, and watercolors.

Lermontov: Mount Kazbek

Lermontov: The Maidan in Tbilisi

**Tradition:** For centuries, visitors have noticed something "different" about highland dwellers, especially those far removed from trade and invasion routes in the valleys and lowlands. Perhaps it was their physical beauty or nobleness of bearing; or an inexplicable tenaciousness, even ferocity; or, throughout the mountains and valleys, various permutations of generosity and obduracy.

This Caucasus "something" has been called a code of honor or courtesy system, typified by lavish hospitality shown to guests, in the veneration of elders, and in the intricacies of vendetta, war and peacemaking. Somehow this special quality of character—this ethical "backbone"—was

linked to *adat* (strict mountain law), or to something called “Kabsa,” “Khabsa,” “Kebzeh,” “Adyge habza,” the “Circassian code of law” or even “Caucasian yoga.” It was, in short, a system of education and edification, “laws, rules, etiquettes, and ethos” little known outside the region: the rules of behaviors and morals that in other parts of the world are handed down through religion. To an American it may seem akin to Southern Honor or to military honor; it is the fruit of inheritance, upbringing, discipline, and training. Its focus is to bind together the community by building up the character of each individual, instilling such virtues as forbearance, honesty, dignity, sensitivity, and guts.

Scholars have tried to pigeonhole the phenomenon: it is simply mysticism, they say, or paganism or Zoroastrianism—or else it is animism, Sufism, Islamic fundamentalism, fanaticism, asceticism, esotericism—or merely “good Middle Eastern manners.” Confusion occurs because it, whatever “it” may be, is more easily experienced than studied. Much of this cultural tradition vanished under the Soviet regime, though elements endure—again, more easily sensed than documented.

**Groups:** Traditional Caucasus societies are traditional and focused on family; that is, upon village, clan, and community allegiance rather than individual attainment or competition. Caucasus nations are small: in effect, big “villages” where gifts go a long way and personal contacts are important. The flip side of such hospitable, family-oriented, sensual cultures is that they also have traditions of violence and vendetta. Today’s “mafias” are often clan-based.

**Myths:** Circassians lived primarily in the highlands and North Caucasus, but also on the Black Sea. Ancient history books describe such groups as the Achins (Abzech), Zych (Kemirgey), Hemochs (Nat-Khuaj), Anychs (Bzedough, or Shapsug), and many others. The historical name of the Circassians is Nat, or And (Ant); the Nats became known as the Narts, who are also legendary gods and giants that gave rise to the fabulous Nart Epics of the Caucasus.

**Customs:** In Georgia, both the tourist and the diplomat soon encounter Caucasus feasting customs, especially the toasting rituals led by the appointed *tamada*, or master of ceremonies. Toasts are made to peace, to Georgia, to guests, to ancestors, to parents, to brothers and sisters, to the deceased, to the children, to friendship, and to the “feet”—i.e. to the workers who have crushed the grapes to make wine. (A personal anecdote: The author, as part of a delegation of American journalists, once witnessed a candle-lit feast, high in the Georgian mountains, during which the *tamada* exuberantly proposed a toast to ‘the eyes of the most beautiful women in the world—*who happen to be in this room!*’ This caused considerable alarm among some of the foreign guests, unaccustomed to having their eyes toasted, but they smiled and raised their glasses anyway. What else could be done?)

Circassian, or Cherkess, may be a corruption of *Kerket*, a Greek word. Circassians call themselves *Adighe*. The character of the ancient Adighes included chivalry, dignity, sagacity, bravery, and horsemanship. They lived an austere life and grew hardy and acetic as a result. They chose their war leaders from within the ranks, and developed the skill of fighting on great heights and on narrow necks of land. To the Circassians, guests came from God, and thus were to

be considered as honored members of the family and given the best food and drink, and, upon departure, escorted and protected from harm. Cooperation was common among neighbors, be it in raising a house or in agriculture; and it was no shame to ask for help from others. Brigandage and horse rustling, in moderation, was considered more of a virtue than a crime--as was the kidnapping of brides.

Modesty was admired, and husbands did not accompany brides directly home. Dancing, at times decorous, at others extraordinarily acrobatic (putting *Riverdance* to shame) was communal, reflecting the stages of life and involving all present, in turn. Though complicated and often sensual ('*Caucasus dancing is simple,*' said one Abkhazian elder, Murat Yagan, to the author: '*The man is the peacock, and the woman is the peahen!*'), dance serves as a discipline, a "harnessing of sexual energy," in which the partners never touch, merely gaze into each other's eyes.

In traditional Caucasus society, parents not infrequently "loaned" their children to other families from infancy to adolescence. This was a sign of respect and it created ties of kinship. Two unrelated children thus reared as "milk" brothers or sisters remained close throughout their lives and were forbidden to marry one another.

Other examples of "Tradition": Younger persons stood up when parents or elders entered the room, and refrained from smoking or drinking in their presence. This occurs today even in Circassian diaspora communities in Turkey that have been assimilated and absent from their homeland for nearly one and a half centuries. (It should be noted that such courtesies are performed naturally and gracefully. Spending several days in such a household, the author never failed to be astonished, and embarrassed, when his hosts, decades older, stood up whenever he came into the room—for he was the guest.)

In the past, Caucasus society had classes: princes, nobles, and commoners. (As one old joke puts it, '*He who is not a prince in Georgia—is a sheep!*') But princes, while owning land and exercising executive powers, were, in theory, humble and egalitarian. They took seriously their responsibilities of selfless public service. In legislative matters the leaders worked through consensus and submitted draft laws to a "Council of Elders," which passed on its approved proposals to a "Council of the Nobility"—and so the discussion passed back and forth. (This is similar to the working procedure of the centuries-old traditional Six-Nations, or Iroquois Confederacy in the United States.)

Other aspects of Tradition involved martial arts training, horse and swordsmanship, and certain physical and mental exercises. At its most refined level, the Tradition concerned itself with spiritual matters, with the order of the natural world and other realms. Unlike other religions, the Tradition had no texts or scriptures—for indeed it was not a religion: it was a way of life, akin to Japanese Bushido, or perhaps to the Native American "Good Red Road."

**Animism:** In ancient times, Caucasus peoples worshipped natural powers, the sun, and certain holy trees, gardens, and mountains, which were to be approached only with the greatest respect. Some climbed high trees in order to pray. Many gods and legends originating in the Caucasus are known today in their more familiar Greek mythology guise. Holy places—glades,

groves, rocks, trees, mountains—remain and are respected as such to this day.

**Carpets:** Carpets have been called the world’s oldest “furniture.” Certainly carpets—especially Caucasian carpets—are beautiful and addicting, and visitors would do well to refrain from buying too many (at least at one time). Carpets are, of course, far more than just carpets: they are cultural maps, works of art, and, as such, may be endowed with spiritual as well as aesthetic attributes.

**Painting:** Niko Pirosmani (Georgian) and Hakob Hakobian (Armenian) are but two painters who deserve to be better known in Europe and America. The main art museum in Yerevan houses a surprise for Americans: dozens of paintings by Rockwell Kent. The artist donated many works to Armenia. Partly this stemmed from Kent’s Marxist and Socialist sympathies, and also, almost certainly, it had something to do with his affinity for Armenia’s stark landscape: Kent, who was also a farmer, adventurer, and romantic, loved remote regions: Maine, Nova Scotia, Greenland—and Armenia.

**Film and Dance:** Suffice it to say the George Balanchine, one of the 20<sup>th</sup> century’s greatest choreographers, was born Balanchivadze in Georgia. Another Georgian, Paata Tsikurishvili, a world famous mime, currently resides in Washington, D.C. Dance plays a special role in the Caucasus: it bound the community together, with all generations dancing together; certain aspects of traditional dance refer to astronomical events. Partners do not touch, though there is strong eye contact. Typically the hands move, but the upper body is motionless; the feet perform intricate and rapid steps, difficult to learn. Each nation has its own spectacular traditions of drama, children’s theater, and puppetry. Filmmaking in Georgia and Azerbaijan dates back a century, and all three South Caucasus countries at one time had thriving studios. Now many of the great directors have died and younger counterparts work abroad. **During the Soviet period Georgians made more than 700 works (including, in 1957, Mikheil Kalatozov's *The Cranes are Flying*). Today the Georgian film industry is dormant and many of its best directors live abroad. Tengiz Abuladze's classic *Repentance* (1987)—a composite portrait of Stalin, Beria, Hitler, and Mussolini) signaled the beginning of Glasnost in Georgia; it could never have been made without the help of Eduard Shevardnadze. The living master of Georgian (and French) film, and one of the great directors of our time, is Otar Ioseliani, whose works (e.g. *Falling Leaves*, *There was a Singing Blackbird*, *Brigands-Chapter VII*, *Adieu, plancher les vaches!*) are lyrical and nostalgic, filled with whimsy and gentle humor—with surprising moments of violence—somewhat in the spirit of Jean Renoir. Ioseliani loves to use music, song, silence, and surrealistic juxtapositions in time and place. Recent feature films about Georgia and its culture include *Son of Gascogne* (1995, dir. Pascal Aubier), about the misadventures of a Georgian song troupe in France, and *After Otar Left* (2003, dir. Julie Bertucelli). the story of a family in Tbilisi whose son works abroad, and dies. Concerning Armenia, beautiful depictions of the land and its history come from Canadian director Atom Egoyan, and in particular his films *Ararat* (2003) and *Calendar*. Egoyan's work is about people in crisis; they explore a range of themes: acceptance, genocide, tradition and modernity; the meaning of home and connection; and particularly the importance of stories, and the question: Whose stories does one believe—and why? An evocative recent film about Armenia, with beautiful scenes of the land in winter, is *Vodka Lemon*. The late, great Sergei Parajhanov (painter, puppeteer, director of, among other films, *Sayat Nova*, *The Color of Pomegranates* (1969), *The Legend of Suram Fortress* (1984), and *Ashik Kerib*) has been**

compared to Fellini for the range and vividness of his artistic creations, which weave together legends, artifacts, architecture, and traditions from throughout the Caucasus. Azerbaijan film--which dates back to 1898--has yet to be promoted in this country; prominent scenarist Rustam Ibragimbekov wrote the screenplay for the award-winning Russian film *Burnt by the Sun* (1994, dir. Nikita Mikhalkov). From Russia, *Prisoner of the Mountains* (1997, dir. Sergei Bodrov) is a powerful contemporary rendering of Pushkin's poem and Tolstoy's story: the classic trope about the clash between Russian and Caucasus cultures. *Time of the Dancer* (1998 dir. Vadim Abdrashatov), is about a group Soviet veterans who try to establish a normal life for themselves in an unidentified Caucasus country (Chechnya?). *House of Fools*, (2002, dir. Andrei Kochalovsky) is about patients in a mental home in Chechnya and how they cope with the war at their doorstep. Alexei Balabanov's film *War (Voina)*, (2002), filmed in Dagestan and Chechnya, contains beautiful scenery, but is otherwise in all ways dreadful: the Chechens are uniformly barbaric, their English hostages foolish and effete, and the Russian soldiers valiant. In 2005, fire in the Georgian film archives in Tbilisi destroyed many reels and soundtracks; surviving copies in Moscow remain under the control of the Russian government. In some cases, Moscow has negotiated with Western promoters the rights to Soviet/Georgian films, with no proceeds going to Georgia. The Caucasus is waiting to be rediscovered as a venue for filmmaking.

**Music:** Hohvahness and Katchachurian are two of Armenia's greatest composers. Both Azerbaijan and Georgia have a long opera tradition, and there are many masters of folk instrument and bardic traditions throughout the South Caucasus.

**Georgian choirs:** Polyphonic singing in Georgian folk music and church chants, documented as far back as the 10th century AD, and is undoubtedly far more ancient, has many styles, ranging from one or two solo voices above a droning choir to homophonic singing with tempo increases. In a style called "Krimanchuli," a male voice yodels in high register. Singers tend to focus more upon the smooth blending of voices rather than on the lyrics. Church singing is more subdued, western regions being harsher and more dissonant than the chants of Eastern Georgia.

**Jazz in Baku:** Special mention should be made of contemporary "classical" art forms, such as the jazz. Baku supported a large European community during the 19th century when it produced more than 51 percent of the world's supply of oil. Jazz hit the scene early on, and despite Soviet prohibitions and subjugation of the arts to Communist ideology--so that even the saxophone solo in Ravel's "Bolero" had to be played on the bassoon--a new movement began in the 1950s that combined jazz with a traditional Azeri music form, the *mugam*. Its greatest proponent was jazzman, pianist, and composer, Vagif Mustafazade (1940-79), who secretly listened to jazz on the BBC and VOA. Mustafazade excelled at playing by ear improvisation of classical jazz, dance music, B-Bop, and *mugam*-fusion, with improvised rhythm and scales. Mustafazade gained worldwide recognition and organized music groups in Georgia. His daughters also became talented classical and jazz musicians. When American jazz pianist B.B. King heard Vagif Mustafazade perform at the famous Iveria Hotel in Tbilisi, he remarked, "Mr. Mustafazade, they call me the 'King of the Blues,' but I sure wish I could play the blues as well as you do."

**Old Things:** The Caucasus is full of archeological mysteries and treasures. No one really knows who erected the dolmens found in Georgia and Abkhazia, the prehistoric arrays of standing stones in Armenia, or the grooved stone “roads” on the Apsheron peninsula. Especially intriguing are the 6,000 petroglyphs discovered under boulders and in possibly manmade caves at Gobustan, on the Caspian Sea, 30 miles south of Baku. They date from the 12<sup>th</sup>-8<sup>th</sup> century BC and portray bulls, deer, predators, reptiles, insects—and curious engraved images of long (reed?) boats with many passengers and oars. The latter are virtually identical to boat engravings found in northernmost Norway. The late adventurer and history theorist Thor Heyerdahl expressed a “growing suspicion” that the ancestral Scandinavians came from the Caspian, which was once connected to the Black Sea in warmer climactic times (8,000-10,000 years ago). The region had many reed-filled waterways, and Heyerdahl speculated that Aser-Odin (a figure in old Norse sagas and legends) may have traveled up the Volga to the source of the Dvina River, and from there sailed to the Baltic and Nordic realms. Aser, said Heyerdahl, might have been related to the word Asov (Ashov), on the Black Sea—or to Azer.

### Issues and questions for further exploration

- 1 What is the community benefit of the “veneration of elders”?
- 2 What is the disadvantage of the above?
- 3 When is the proper time to toast during a Georgian feast?
- 4 What is the correct technique of slicing a suspended apple in half using a Circassian sword while riding a horse at a gallop?
- 5 Is horse theft ever commendable? How about bride-kidnapping? (Argue it both ways, as if you lived in an isolated mountain community.)
- 6 What is the role of women in traditional Caucasus societies?
- 7 Is the reputation of Caucasus peoples for living long lives true or a myth?
- 8 Does yogurt prolong life?
- 9 What is *purpulgica* and how is it prepared?

### Bibliography

- 1 Bitov, Andrei. *A Captive of the Caucasus*. Farrar, Strauss, and Giroux, 1992.
- 2 Natirbov, Malia Giurey (1910-2002). *A Circassian’s Saga: Reminiscences*. Remarkable memoirs: Natirbov was born in Chita, Siberia, into a Circassian family; his father was a government official of Czar Nicholas II. During the Russian Revolution, the family fled to Odessa and Constantinople and immigrated to the United States in 1923. During World War Two, Natirbov served as Russian liaison and translator to Major Mark Clark, and later joined the CIA.
- 1 Svanidze, Batu. *My Uncle, Joseph Stalin*. Curious accounts of Stalin’s personal life and “Georgian” character. 1953.
- 2 Yagan, Murat. *I Come From Behind Kaf Mountain*. Threshold Books. 1984. Yagan, now a Canadian citizen, was born in Abkhazia and raised in Turkey. This spiritual memoir acquaints readers with Islam, mystical Christianity, Sufi practice, and the ancient Caucasus “Kebzeh” tradition—part animism, part martial art, as well as character and leadership training.

## Fiction

- 1 Iskander, Fazil. Sandro of Chegem. Vintage Books, 1983; The Gospel According to Chegem. Vintage Books, 1984. Iskander (b. 1929) has been likened to Sholom Aleichem, Mark Twain, and Gabriel García Márquez. He writes delightful yarns about villagers, wily brigands, Soviet bureaucrats--and Sandro, the inimitable 80-year old Abkhazian elder.
- 2 Lermontov, Mikhail. A Hero of Our Times. 1840..
- 3 Said, Kurban. Jenia Graman (Translator) Ali and Nino. Overlook Press.1999. One of the few Azerbaijani novels in English. The author is a mysterious figure, or possibly two, who assumed a double pen-name. "Said" (1905-42) many believe to be "Essad Bey," who in turn may have been Lev Nussimbaum, a Jewish convert to Islam born in Azerbaijan. His writing partner may have been the Austrian baroness, Elfriede Ehrenfels (ostensible author of The Girl from the Golden Horn). Essad/ "asad" (Arabic), and Lev all mean "lion." Others believe the author to be Yusif Vazir Chamanzaminli (1887-1943), an Azeri writer and statesman. Ali and Nino has become the "Romeo and Juliet" of Azerbaijan and the action-packed plot takes the reader from Baku, Tbilisi, Nagorno-Karabagh, Tehran, to Daghestan.
- 4 Tolstoy, Lev. "The Raid." 1853; "The Wood-felling." 1855; The Cossacks. 1863 Hadji Murat.1904.
- 5 Werfel, Franz. The Forty Days of Musa Dagh. Germany. 1932.

## Cuisine

## A Final Word About Borders and Nationalities

T. H. White, in *The Once and Future King*, wrote about how inconsequential borders are to birds (who consequently ignore them). Humans, however, must contend with the boundaries they create, and in the Caucasus borders aggravate as many problems as they resolve. Armenia is landlocked; its closed border with Azerbaijan splits the latter in two. Contested borders drawn on water divide the Caspian and its petroleum treasures, while pipelines attempt to circumvent other borders by snaking over mountains and under seas. Georgia's internal borders create tensions in the face of government bankruptcy and corruption. Borders in the North Caucasus add to no one's security while the Chechen war rages on.

Yet despite borders, the news (or more often the distressing lack of news) about the region, and despite the Caucasus' complexities, certain patterns endure. People there are resilient and the landscapes remain as awesome as ever. Life goes on, nature prevails over human affairs, and, as always, the events of today in the Caucasus offer tantalizing glimpses of—its past.

# CENTRAL ASIA SELF-STUDY GUIDE

GEORGE P. SHULTZ NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

## SELF-STUDY GUIDE TO CENTRAL ASIA

**The Self-Study Guide:** Central Asia is intended to provide U.S. Government personnel in the foreign affairs community with an overview of important issues related to Central Asia's history, geography, politics, economics, culture, religion, media, and international relations. The Guide should serve an introductory self-study resource.

The topic is far too complex to be covered in depth using only the text in this Guide. The reader is encouraged to explore the questions and issues introduced, using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in the Foreign Service

## Institute or Main State Libraries.

The first edition of this Guide was prepared by. Dr. Sergei Gretskey, Chair, Central Asian Studies, Area Studies Division, Foreign Service Institute.

The views expressed in this Guide are those of the author and attributable sources and do not necessary reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by Dr.Gretskey.

All sources used for graphics and extended quotes are from the public domain, from sites that explicitly say “can be used for non-profit or educational use,” or are from the author’s own materials.

This publication is for official educational and nonprofit use only.

## CHRONOLOGY

5 <sup>th</sup> century B.C.	Bactria and Sogd are major states in Central Asia. Bukhara and Maraqanda (Samarqand) emerge as important centers of trade on the Silk Road.
329 B.C.	Alexander the Great captures Maraqanda (Samarqand)
750 A.D.	Arabs complete conquest of Central Asia.
8 <sup>th</sup> -9 <sup>th</sup> centuries	Golden age of Central Asia. Bukhara becomes a cultural center of Muslim world.
1219-1225	Mongols conquer Central Asia, intensifying its Turkification and reducing Iranian influence.
1380-1405	Timur unifies Mongol holdings in Central Asia. Flowering of arts and sciences under the Timurids.
1501-1510	Uzbek nomadic tribes conquer Central Asia and establish Khanate (later Emirate) of Bukhara.
1511	Khan Qasym unites Kazakh tribes.
1700	Khanate of Quqon is established in the Ferghana Valley.
1726	Kazakh Khan Abul Khair seeks Russian protection from the Kalmyks, beginning Russian permanent presence in Central Asia.
1865-1868	Russian conquest of Central Asia and the establishment of the Turkestan Governorship-General with the capital in Tashkent. Emirate of Bukhara and Khannate of Khiva become Russian protectorates.
1917	Bolshevik revolution
1918-1920	Bolsheviks establish Turkestan Autonomous Soviet Socialist Republic within Soviet Russia. They capture Bukhara and Khiva and proclaim them People's Republics. Kyrgyz Autonomous Soviet Socialist Republic is established (included modern Kazakhstan and Kyrgyzstan).
1920s-1930s	Basmachi opposition movement.
1924-1925	National and territorial delimitation of Central Asia: Soviet Socialist Republics of Turkmenistan and Uzbekistan are established. Tajikistan becomes an autonomous republic within Uzbekistan.
1929	Tajikistan becomes a Soviet Socialist Republic.
1936	Kazakhstan and Kyrgyzstan become Soviet Socialist Republics.
1985-1991	Policy of perestroika under Soviet leader Gorbachev brings out national and Islamic revival in Central Asia.
1991	The breakup of the Soviet Union. Central Asian republics become independent states.
1992-1997	Civil war in Tajikistan.
Late 1990s-present	Rise of authoritarian regimes and Islamic extremism in Central Asia.

## GEOGRAPHY

Central Asia is a relatively recent geographical and political term. Historically, the region was known to the world as Russian (Western) Turkestan, Inner Asia, Mowarranahr, and Transoxania (Transoxus). After the national and territorial delimitation of 1924-25 it became known as Central Asia and Kazakhstan. Only since their independence in 1991 the five states of Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan became collectively known as Central Asia though a number of scholars argue that the geographical term should also include Afghanistan and Xinjiang province of the People's Republic of China (also known as Eastern Turkestan).

Central Asia borders on Russia, China, Afghanistan, Iran, and Azerbaijan (across the Caspian Sea). Its total area is 1,542,240 square miles, which is a little less than half of the area of the contiguous United States. Kazakhstan is by far the largest country in the region, its total area being 1,049,151 square miles (2,717,300 square kilometers). Next comes Turkmenistan (188,456 sq. mi. or 488,100 sq km), followed by Uzbekistan (172,741 sq. mi. or 447,400 sq km), Kyrgyzstan (76,641 sq. mi. or 198,500 sq km), and Tajikistan (55,251 sq. mi. or 143,100 sq km). All the five states are landlocked with Uzbekistan being a double-landlocked country.

The climate can be broadly described as continental with cold winters (temperatures range from - 42°F to -49° F) and hot summers (temperatures reach up to 104° F in the shade in the southernmost parts of the region). In the Ferghana Valley, shared by Kyrgyzstan, Tajikistan, and Uzbekistan, the climate is subtropical and in the Qaraqum desert it is subtropical desert. In the high Tien Shan Mountains of Kyrgyzstan and Pamir Mountains of Tajikistan it is polar.

The region is divided into four topographic zones – steppe, i.e., prairie, (northern Kazakhstan), semi-desert (roughly, the rest of Kazakhstan), desert (Turkmenistan, parts of Kyrgyzstan and Uzbekistan) and mountain (there are mountains in all the states, ranging from low in Turkmenistan to high in Kyrgyzstan and Tajikistan). The vast majority of the surface area is desert lowland. The two great sand deserts are the *Qaraqum* (black sand) desert, south of the Aral Sea between the Caspian and the Amu Darya, and the *Qyzylqum* (red sand) desert, stretching from the Aral Sea to the Tian Shan mountains in Kyrgyzstan. Deserts make 80 percent of Turkmenistan's and Uzbekistan's territory while 93 percent of Tajikistan's territory is mountaneous where the Pamir-Alay mountain system dominates the landscape. The highest point of the system is *Mount Ismail Somoni* (formerly Communism Peak) which at 7, 496 meters is the highest elevation in the former Soviet Union. The mountain ranges are nearly barren, but contain significant enormous and accessible water reserves. In certain areas it is possible to grow cereal grains on the lower slopes of the mountains without irrigation though fruit and vegetables and commodity crops like cotton require it.

### Mountain ranges of Central Asia

The two most important rivers of Central Asia are *Amu Darya* and *Syr Darya*. The name of the region in ancient (Transoxania or Transoxus) and medieval (Mowarranahr), which both mean “the other side of the river” in Latin and Arabic correspondingly, derives from Amu Darya which in antiquity was called *Oxus*. The total length of Amu Darya, which rises in the Pamir Mountains in Tajikistan and flows along the Tajik-Afghan border into Turkmenistan and Uzbekistan, is 2,540 kilometers (1,580 miles). The total length of Syr Darya (ancient *Jaxartes*), which rises in Kyrgyzstan and flows into Uzbekistan and Kyrgyzstan, is 2,200 kilometers (1,370 miles). The three largest bodies of water in the region are the Aral Sea, the Caspian Sea, and Lake Ysyk Köl. Aral and Caspian are saltwater lakes, or inland seas. The Caspian Sea is the world’s largest inland body of water with the territory of 371,000 square kilometers (143,000 square miles). The Aral Sea used to be the fourth largest but by 1993 had lost 60 percent of its 66,458 sq km (25,660 sq mi) territory in 1960 as the inflow from its two tributaries, Amu Darya and Syr Darya, stopped due to the increased irrigation and other reasons. It has subsequently broken into 3 unconnected segments and created huge environmental and health problems for the entire region. The water level in the Caspian Sea has been rising since the late 1970s, flooding lands in Kazakhstan and Turkmenistan. Major oil and gas fields are located off its shores in the Kazakh and Turkmen sectors.

Lake Ysyk Köl is one of the world’s largest mountain lakes located at altitude of 1,607

meters (5,273 ft) in the Tian Shan Mountains in northeastern Kyrgyzstan. It has an area of about 6,100 sq km (2,360 sq mi). Increased irrigation and other factors have caused a decline in the lake's level which has dropped about 10 meters (27 feet) since 1850. It is famous as a resort and a torpedo testing site in the Soviet era.

### **Issues and questions for further exploration**

- What are the political and economic implications of the landlocked position of Central Asian states?
- In what extent has the desiccation of the Aral Sea affected lives of Central Asians?
- What are the prospects for further agricultural development in the region in light of the Aral Sea problem?

## **POPULATION**

Ethnic composition of Central Asia reflects its rich history of lying at the crossroads of various conquerors who passed through the region from all directions, starting with Alexander the Great and ending with the Russians. The original population of ancient Central Asia belonged to the East Iranian tribes. During the sixth century A.D. they were largely dislodged by the nomadic Turks who came from the northwest. Small numbers of Arabs and Persians date back to the eighth century when they brought Islam into the region. Yet Turkic expansion into Central Asia continued in a number of waves resulting, by the eleventh century, in their domination of the region. Sedentary Central Asian Iranians remained, primarily in the cities, including the most important such as Bukhara and Samarqand. In the eighth century, they coalesced into a

single group known as the Tajiks which makes them the longest established ethnicity in the region.

The conquest of the region by Genghiz Khan in the thirteenth century added the Mongolian element to the ethnogenesis of modern Central Asians. In the fifteenth century, a split in the confederation of Uzbek tribes led to the emergence of two distinct ethnic groups – the Kazakhs and the Uzbeks. Around the same time the Turkmen appear as a separate entity. The Kyrgyz are the oldest Turkic ethnic group in the region, dating its origin back to the twelfth century.

Though the number of tribes, making each of the Turkic nations, varied reaching ninety-two with the Uzbeks, some of them were shared by at least two ethnicities. This applied primarily to the Kazakhs, the Kyrgyz, and the Uzbeks which illustrates their common origins. Among the most important common tribes were *Barlas, Karluk, Kipchak, Kungrat, Mangyt, Naiman*, etc. The division of Central Asians into the current five major nationalities – Kazakhs, Kyrgyz, Tajiks, Turkmen, and Uzbeks – is a relatively recent and arbitrary. It was a result of the Bolshevik nationalities policy and dates back to the national and territorial delimitation of the region in 1924-25. Prior to that self-identification was mostly related to tribal or regional affiliation as well as based on nomad versus sedentary status.

The influx of the Russians into the region began in the nineteenth century, though the first settlements of the Russian Cossaks in what is now Kazakhstan appeared in the eighteenth century. The Russian population increased during economic reforms of the beginning of the twentieth century with Russians settling mostly in the Kazakh and Kyrgyz lands. Mass immigration of Russians and other European nationalities began after the 1917 Bolshevik revolution and continued through the Soviet period. It peaked during the 1950s-1960s *Virgin Lands* campaign of agricultural development in Kazakhstan and industrial development of the region in the 1960s and 1970s associated with importation of the needed labor from outside region. In late perestroika and first years of independence, there was a large outflow of Russians and other Europeans from the region, especially in the wake of the Tajik civil war.

The current ethnic composition and other vital population statistics are as follows for each country individually (as of July 2001 unless indicated otherwise):

**Kazakhstan.** *Population:* 16,731,303. *Ethnic groups:* Kazakh 53.4 percent, Russian 30

percent, Ukrainian 3.7 percent, Uzbek 2.5 percent, German 2.4 percent, Uighur percent, other 6.6 percent (1999 census). *Age structure: 0-14 years: 26.73 percent (male 2,271,866; female 2,200,078); 15-64 years: 66.03 percent (male 5,358,535; female 5,688,550); 65 years and over: 7.24 percent (male 412,761; female 799,513).* *Population growth rate: 0.03 percent. Net migration rate: -6.43 migrant(s)/1,000 population. Life expectancy: 63.29 years.*

**Kyrgyzstan.** *Population: 4,753,003. Ethnic groups: Kyrgyz 52.4 percent, Russian 18 percent, Uzbek 12.9 percent, Ukrainian 2.5 percent, German 2.4 percent, other 11.8 percent. Age structure: 0-14 years: 35.03 percent (male 841,029; female 823,723); 15-64 years: 58.83 percent (male 1,369,842; female 1,426,522); 65 years and over: 6.14 percent (male 110,340; female 181,547). Population growth rate: 1.44 percent. Net migration rate: -2.66 migrant(s)/1,000 population. Life expectancy: 63.46 years.*

**Tajikistan.** *Population: 6,578,681. Ethnic groups: Tajik 64.9 percent, Uzbek 25 percent, Russian 3.5 percent, other 6.6 percent. Age structure: 0-14 years: 41.18 percent (male 1,367,194; female 1,341,967); 15-64 years: 54.22 percent (male 1,773,605; female 1,793,345); 65 years and over: 4.6 percent (male 131,009; female 171,561). Population growth rate: 2.12 percent. Net migration rate: -3.49 migrant(s)/1,000 population. Life expectancy: 64.18 years.*

**Turkmenistan.** *Population: 4,603,244. Ethnic groups: Turkmen 77 percent, Uzbek 9.2 percent, Russian 6.7 percent, Kazakh 2 percent, other 5.1 percent (1995). Age structure: 0-14 years: 37.88 percent (male 891,758; female 852,104); 15-64 years: 58.09 percent (male 1,313,303; female 1,360,690); 65 years and over: 4.03 percent (male 70,800; female 114,589). Population growth rate: 1.85 percent. Net migration rate: -1.04 migrant(s)/1,000 population. Life expectancy: 61 years.*

**Uzbekistan.** *Population: 25,155,064. Ethnic groups: Uzbek 80 percent, Russian 5.5 percent, Tajik 5 percent, Kazakh 3 percent, Karakalpak 2.5 percent, Tatar 1.5 percent, other 2.5 percent (1996). Age structure: 0-14 years: 36.32 percent (male 4,646,341; female 4,489,265); 15-64 years: 59.06 percent (male 7,351,908; female 7,504,626); 65 years and over: 4.62 percent (male 466,029; female 696,895). Population growth rate: 1.6 percent. Net migration rate: -2.06 migrant(s)/1,000 population. Life expectancy: 63.81 years.*

### Issues and questions for further exploration

- What are the major ethnic elements that provided the foundation for modern Central Asian ethnic groups?
- How did Russian colonization and Soviet economic policy influence the ethnic composition of Central Asian states?

## **HISTORY**

History of the region can be divided into five periods: ancient (ending in 8<sup>th</sup> century AD), medieval and early modern (8<sup>th</sup>-18<sup>th</sup> centuries), Russian colonization (18<sup>th</sup>- early 20<sup>th</sup> centuries), Soviet rule (1921-1991), independent (1991 – to present).

### **Ancient period**

Ancient history of the region was based on Iranian civilization and lasted from the rise of the first known oases to the Arab conquest in the 8<sup>th</sup> century AD. In this period, the fabled “Silk Road,” linking China to the Mediterranean cultures, began to prosper. The most civilized part was centered in Sogd or Sogdiana, corresponding roughly to the area between the two most important rivers of the region – Amu Darya and Syr Darya. Later, the Arabs called this area Mawarranahr (the land beyond the river) which became the name for the entire region. Transoxania is Latin translation of the name. The people of Sogd belonged to Eastern Iranian ethnicity and their capital of Sogdiana was the city of Maraqanda which stood in the place where modern Samarqand does.

One of the highlights of the early Central Asian history was the arrival of Alexander the Great in 330-327 B.C. It generated a fierce resistance on the part of the Sogdians who nonetheless named a lake after the conqueror: Lake Iskanderkul is located in modern Tajikistan. Alexander, who tried to fuse Greek and Asian cultures in part by marrying his officers to Asian wives, himself married Roxana, a daughter of a local nobleman. Later, in 1<sup>st</sup> century AD, southern Central Asia became part of the Kushan Empire with the center in modern Peshawar (Pakistan). The borders of the Kushan Empire stretched from Amu Darya to Ganges. By the time of the invasion of Turkic tribes in 6<sup>th</sup> century, ancient civilizations fall into decay.

The Turkic empire was divided into two parts – eastern and western. Central Asia was part of the western Turkic empire centered in Semirechye (territory between Chu and Talas rivers). The only exception was the territory of modern Turkmenistan which was part of the Sassanian Empire. The region was organized into a number of small states, the most powerful with the capital in Samarqand. The dominant religions of ancient Central Asia were Buddhism, Manichaeism, and Zoroastrianism.

The head of Alexander the Great. 3<sup>rd</sup> century B.C.

One of the most important developments that happened at the time of the Kushan Empire was the emergence of the Silk Road. Through the centuries economies of Central Asia became closely connected with the ancient Greece and Rome as well as with China, India, and other parts of Asia. So, it was only natural that Central Asia became the crossroads of transcontinental caravan routes connecting China with the ports of the eastern Mediterranean, and, by way of branch roads, with India in the south and the Urals and the Black Sea ports in the north. Central Asians became the principal agents in this commercial exchange which gave a distinctive mercantile character to their civilization. The goods that were traded included silk, gold and silver coins, glass, carved gems, iron, fabrics, etc.

### **Medieval and early modern period**

It is believed that the Arab conquest stopped the region from being colonized by the Chinese. The Arabs themselves looked on Central Asia as a province rested from the Chinese whose defeat in the battle at the Talas River in 751 put an effective end to their encroachments into the region.

The Arabs arrived in Central Asia in 704 and by 715 the region came under their rule. Despite the preservation of the existing dynasties as the vehicle of local administration the actual authority belonged to the *wali*, an official appointed by the Arabs. Resistance to the Arab conquest was fierce and ended only with the rise of the Abbasid Caliphate in 750. The Abbasids espoused the policy of racial equality of Muslims unlike their predecessors, the Umayyads, who treated non-Arabs as second-class Muslims despite the Quranic injunction of equality of all believers before God. It may be due to such perception of non-Arabs that Islam was not spread by the sword. Conversion proceeded peacefully and mainly through Muslim traders who propagated Islam primarily as a way of life, not as a dogmatic faith.

The nobles. Mural in a Afrasiyab (Samarqand) palace. 7<sup>th</sup>-8<sup>th</sup> centuries.

The rise of the Abbasids led to the creation of the Samanid state with the capital in Bukhara. It was the last state headed by Central Asians of Iranian stock. In 999, the Samanid dynasty was overthrown by the Karakhanids, who were the first in a long line of various Turkic dynasties that with brief intervals ruled the region until the arrival of the Russians in the 18<sup>th</sup> century. One such interval was the Mongol conquest. Genghiz Khan's troops reached Central Asia in 1219 through the cleft between the Pamir proper and the Tian-Shan mountains at a height of over 13,000 feet.

Mausoleum of the Samanids. Bukhara. 9<sup>th</sup>-10<sup>th</sup> centuries.

Contrary to popular perceptions, the Mongols did not destroy everything on their way though they usually slaughtered four-fifth of the population, leaving a civilian, usually a Persian or an Uighur, to administer the remainder. Yet their conquest changed the balance of power between the nomad and settled regions in favor of the former. Genghiz Khan introduced Yasa, a codified law based on the combination of Mongol tribal customary practice and Muslim precepts, which is lost to history. The Turkicization of the Mongols began long before they adopted Islam. In an interesting twist of history the literary Turkic language that developed at the time in the region was named after Genghiz's second son, Chagatai, who inherited part of Central Asia at his father's death, despite his hostility toward Islam and its culture.

In 1395, Amir Timur (Timurlane, 1336-1405) defeats Toktamys, khan of the Golden Horde, which marks the end of Mongol rule in Central Asia. Timur sought to combine the elements of the Turko-Mongol political and military system with the elements of Muslim, mainly Persian, culture. His son's rule is considered to be the golden age of Persian literature and art. Under his grandson, Ulugh Beg, who himself was a famous

astronomer, there was a genuine flourishing of the arts and sciences in Samarqand and Bukhara.

In the first two decades of the 15<sup>th</sup> century, two new confederations of nomadic Turkic tribes are formed in Central Asia: the Nogai Horde (a union of Kipchak tribes between the Ural and Volga rivers) and the Uzbek Khanate, also known as Dashti-Qipchaq, which controlled the steppe from the headwaters of the Syr Darya river basin to the Aral Sea and north to the Irtysh river. At the beginning of the 16<sup>th</sup> century, the Uzbeks, led by Shaibani Khan (1451- 1510), conquered the Timurid possessions and established the Uzbek Khannate (later Emirate) of Bukhara. Babur, the last Timurid ruler, was forced to flee to India where he founded the Mogul Empire in 1526. Shaibani Khan clashed with and ultimately was killed by Ismail Safavid, who changed Iranian denomination from Sunnism to Shiism. As a result, Central Asia became separated and effectively secluded from the Middle Eastern Muslim world until its independence in 1991. Another important reason was the decline of the Silk Road in wake of the development of maritime routes between the Far East and Europe.

Shaibani invasion and rivalry over succession within the Uzbek Khanate itself led to its disintegration into three groups – Siberian Uzbek, Uzbek -Shaibanid, Uzbek – Kazakh. Kazakhs went on to form their own state, Kazakh confederation under Khan Khaqq Nazar in the second half of the 16<sup>th</sup> century. The confederation proved to be short-lived and soon split into three hordes or *zhuz* (hundred) which were more temporary military alliances than based on the principle of consanguinity. The Great zhuz controlled the territory of Semirechye, the Middle was based in what today is central Kazakhstan, and the Lesser zhuz in western Kazakhstan. Khan Teuke is said to have reunited the zhuzes under his control in 1680-1718. The union lasted until the submission of the Lesser zhuz to Russian rule in 1731 when Khan Abul Khair, unable to stop the Kalmyk invasion, swore allegiance to the Russian crown to escape defeat.

### **Russian colonization**

Modern history of Central Asia coincides by and large with the Russian conquest. Though the first encroachments into the Kazakh steppes began in the 16<sup>th</sup> century, the Russians did not develop plans of colonizing the region until the beginning of the 19<sup>th</sup> century. Peter the Great, who died in 1725, planned for having a defended line of communications rather than conquer the entire region.

Inclusion of the Lesser zhuz into the Empire did not stop the Russian Cossaks from advancing further into the Steppe which led to the Kazakhs' frequent raiding of Russian settlements. As a result, in the reign of Nicholas I (1825-55), the Kazakhs gradually found themselves enveloped in lines of Russian fortifications. Its advance across the Kazakh steppe brought Russia into direct contact with the Khannates of Khiva (established in the 16<sup>th</sup> century) and Qoqand (established in 1700 in the Ferghana valley). The two khanates as well as the Emirate of Bukhara by then were weak states with ill-defined borders until the rise of the three tribes turned dynasties at the end of the 18<sup>th</sup> century – Mangyt in Bukhara, Ming in Khiva, and Qungrad in Quqand – who revived and centralized them. The absence of recognized borders, which put the three states into constant conflicts with each other and their neighbors Afghanistan, China, and Persia, now became a problem Russia had to deal with as well.

Russian response – territorial conquest – was more a product of decision-making by the local military commanders and civilian officials than a policy formulated in St. Petersburg. In 1817 and 1839-40, the Russians attempted to conquer Khiva but were defeated. Another twenty-five years would pass before the Russian troops would capture Tashkent, an important commercial center and a convenient geographic location to launch further attacks deeper into the region. Armed resistance was negligible as local armies lacked experience and weaponry of modern warfare and unity to jointly fight the common enemy. The only significant battle the Russians fought in Central Asia was the battle of Geok Tepe in 1881 against the Tekke Turkmen who demonstrated fierce resistance.

In 1867, the Turkestani Governorship-General was established with the capital in Tashkent followed by the establishment of the Steppe Governorship-General with jurisdiction over the Kazakh territories. The distinct feature of the Turkestani Governoship-General was that unlike any other administrative unit of the Russian Empire it was administered by the Ministry of War, not Internal Affairs, which meant that administrators at all levels were the military. The Russians conquered Khannate of Qoqand by 1876 but stopped short of capturing Bukhara and Khiva, instead reducing them to protectorates.

St. Petersburg, lacking both personnel and the funds to governing its new possessions, largely delegated responsibility for local matters, such as, e.g., justice, taxation, irrigation, to native self-government. Central Asians were legally classified as *inorodtsi*

(aborigines) and had neither the full rights nor the same obligations as the tsar's other subjects. They were exempt from conscription and there were no native auxiliary units, though a small number of the elites received Russian titles and military ranks.

At the same time, Russian rule brought a number of important social changes. In sedentary areas, the warrior elites disappeared which led to the growing importance of the *ulama*, Muslim clergy and scholars, the formation of a new class of wealthy merchants, and monetized economy. The introduction of elections for administrative positions undermined traditional elites. In addition, the Statute of 1886 granted property rights in land to those who cultivated it which was a blow to the economic power of the tribal chiefs, though *waqf* (endowed) lands belonging to mosques were not touched. The Russians abolished slavery, the slave trade, torture, corporal and capital punishment.

Reception of Russian officers at the Bukhara Court. Late 19<sup>th</sup> century.

Migration of the Russian population into Central Asia began with the adoption of Resettlement act of 1889 which offered land allotments, tax exemptions, and interest-

free loans to peasant colonists though it still required a permission to migrate. Colonists settled mostly in the Steppe Governorship-General which led to the reduction of acreage reserved for the use of Kazakhs. The construction of the Transcaspian railroad (1880-1), extended in 1885 to Bukhara and Samarqand, and of the Orenburg-Tashkent railroad in 1906 led to the growth in cotton production for the Russian market. St. Petersburg stimulated that development, which would give Central Asian agriculture a distinctively monoculture character later in the twentieth century, by imposing in 1887 a protective tariff on foreign cotton. By 1911, Central Asian cotton was supplying half the total needs of Russia's textile industry. The growth of local industry was limited: The ginning and spinning of cotton fiber and extraction of oil from cotton seed accounted for 85% of Turkestan's total industrial production in 1914. Native population was employed primarily as un- or semi-skilled workers.

Russification of Central Asians was limited as Russian officials believed that superiority of the Russian culture will naturally lead Central Asians to abandon their beliefs and traditions. Earlier on St. Petersburg made a distinction between the nomad and sedentary population, favoring the former as less "fanatic" due to their superficial adherence to Islam and hence more prone to Russian influence. In line with this policy, Russian schools were the only supported by the state, a very limited number of these schools was opened, and in the Steppe Governorship-General they outnumbered the ones in Turkestan: By 1913, there were 157 Russian schools in the Steppe Governorship-General with the native population of 3.3 mln and 89 schools in Turkistan with the native population of 5.1 mln. *Jadids*, Central Asian enlighteners cum modernizers of the end of the 19<sup>th</sup>-beginning of the 20<sup>th</sup> centuries, who sought to open modern secular schools and institute political and social reforms in the region, were equally persecuted and feared by the local elites and clergy and the Russians.

The end of the Russian colonial rule in Central Asia was marked by a chain of rebellions caused by the June 25, 1916 decree which ordered the mobilization of a half a million Central Asians for military service on the front lines of WWI. Tsarist authorities failed to explain the change in the draft policy. As a result of the unrest, many Russian civilians were killed and about 9,000 farmsteads were destroyed. Native losses far exceeded those of the Russians and large numbers of Central Asians were forced to flee Xinjiang, Persia, and Afghanistan. The new Governor-General of Turkestan proposed a host of measures: More administrators, greater responsibility for the welfare of the natives, greater protection for the land rights of nomads and peasants

who fell deeply into debt; subsidized grain imports but they were not implemented because of the Bolshevik revolution of 1917.

### Soviet period

The Bolshevik revolution did not bring independence to Central Asia, partly because there were no organized groups or movements which demanded it. A few that existed, e.g., Kazakh *Alash Orda*, demanded – and sometimes proclaimed (Alash Orda, May 1917; Qoqand, December 1917) – autonomy within the Russian Federation. Other demands included the end to planting cotton, which was viewed as a colonial crop, redistribution of the confiscated lands, etc. Soviet power was proclaimed in Tashkent a week before the Bolshevik revolution. The government which was formed after the revolution, Turkestani Council of People's Commissars, practically excluded Central Asians and ignored their demands. It moved to suppress any display of independence by the locals, including the sacking of Qoqand in February 1918. In 1920, the Bolsheviks moved even further: In their quest for the world revolution, they sent the Red Army to abolish the Emirate of Bukhara and Khannate of Khiva, proclaiming both People's republics. The same year, Kyrgyz (Kazakh) autonomous Soviet Socialist Republic within the Russian Federation was established. On April 11, 1921, Soviet Turkestan, by the decree of the All-Russian Central Executive Committee, entered the RSFSR.

Excesses of Bolshevik rule and the “Red terror” tactics used to implement their policies led to the rise of an organized opposition known as the *Basmachi* movement. The movement was not coherent ideologically nor was it unified except for a brief period in 1921-1922 when Enver Pasha, son-in-law of the last Ottoman sultan, became its supreme commander. Yet it enjoyed popular support, especially among the peasantry who wanted a return to the old ways and thus were susceptible to the Islamist propaganda, eventually making dominant the conservative faction. Punitive raids against the Basmachis were not successful and only intensified the hostility toward the Bolsheviks. Only when Moscow changed its tactics and adopted conciliatory policies, which included restoration of Sharia courts, waqf property, inclusion of the natives in the government and the Red Army corps, etc., were the Bolsheviks able to achieve a turn around which was also helped by internal bickering within the Basmachi movement itself. Yet pockets of Basmachi resistance continued to exist into the 1930s.

After consolidating their power the Bolsheviks launched a campaign of modernization

and sweeping transformation known as industrialization, collectivization of agriculture, and cultural revolution. It began with the administrative reconfiguration of the region following the creation of the Soviet Union in 1922 and known as national and territorial delimitation of 1924-1925. As a result of delimitation, Turkestan Autonomous Republic and nominally independent republics of Bukhara and Khwarezm (Khiva) were abolished. Instead, Uzbekistan and Turkmenistan Soviet Socialist Republics (SSR) and Tajik Autonomous Republic within Uzbekistan were created. Kyrgyzstan became an autonomous republic within the Russian Federation. The status of Kazakhstan did not change. Tajikistan became a full SSR in 1929, followed by Kazakhstan and Kyrgyzstan in 1936. Delimitation and creation of new nations was done without too much regard for self-identification of the population, leaving substantial numbers of ethnic groups outside the borders of the newly created republics bearing their names.

Learning to read. 1920s.

Soviet policy toward Central Asia can best be described by Martin Spechler's term "welfare colonialism." In economic and social spheres, the aim was to achieve

equalization with the more developed European parts of the Soviet Union. This was achieved through capital transfers, return of the entire proceeds from the republics' turnover tax instead of the standard one-fourth, allowing more private initiative, especially in agriculture and housing), personnel appointments, affirmative action-style education policy when Central Asians had quotas in the best universities of the Soviet Union, etc. At the same time, economic development of the region remained skewed. Central Asian economy largely remained agricultural as well as a source of raw material for the Soviet economy. Cotton production was given even greater importance at the expense of grain and fruit, resulting in severe environmental (desiccation of the Aral Sea) and health problems. Before the Bolshevik revolution two-thirds of the sown irrigated area was given up to grain, the Soviets reduced it to about 10 %. About 90% of cotton was exported as raw fiber to the European part of the Soviet Union. The 1950s Virgin lands campaign in Kazakhstan to increase locally grown wheat through the increase of sown area was only partially successful as the yields were less than expected. Agricultural reforms of the 1920s-1930s, which abolished private property on land, had a dramatic effect on Central Asian nomads, primarily Kazakhs and Kyrgyz, who were forced to settle. As a result, a million of Kazakhs perished and thousands fled to Xinjiang. This was accompanied by a significant reduction of herds.

For a long time industrial development centered around cotton production and the main industries were cotton ginning, the production of cotton-picking machines, fertilizers, cottonseed oil, and textiles for local markets. Only when during WWII a large number of industrial enterprises were evacuated, primarily to Kazakhstan and Uzbekistan, did industrialization and urbanization of Central Asia began. Yet the evacuated enterprises came with the refugee manpower which had a number of important consequences: Central Asian cities became heavily Russified; skilled labor remained primarily European and the need for skilled labor was satisfied mainly through importation from outside the region; enterprises belonged to the Soviet military-industrial complex and fell into the "All-Union subordination" category which put them under Moscow's direct jurisdiction. Post-WWII industrial development also focused on natural resource extraction and their partial local processing, including oil, coal, gas, ores and others minerals (uranium for the first Soviet A-bomb came from Tajikistan), etc. Hydro-electric power production also became important.

Political structure of Soviet Central Asia reflected the structure of the communist party-state. Each of the republics had its own communist party, which was a branch of the

Communist Party of the Soviet Union (CPSU), its own parliament called the Supreme Soviet, and its government called the Council of Ministers. Despite nominal sovereignty of the constituent republics and the federal character of the Soviet state, all power belonged to Moscow and was concentrated in the hands of the Politburo of the CPSU. Yet Moscow always appointed natives into key local positions to give semblance of native rule. Before WWII, given the lack of educated native cadres the Bolsheviks had to rely on the Jadids and the members of Alash Orda, Young Bukharans and other pre-revolutionary political parties and groups. They were all purged by Joseph Stalin in the 1930s and replaced by the new elites who were the products of the Soviet system and CPSU training schools. That has not changed the level of trust in Moscow as it introduced the position of a second secretary of the local communist party, usually filled by a Russian or a fellow Slav, to watch over local leaders and the implementation of Moscow's policies. Heads of most important departments of central committees of local communist parties, legislatures, and governments were also usually non-local cadres. Throughout the Soviet period only two Central Asians were members of the Politburo. On their part, Central Asians viewed membership in the CPSU instrumentally, as an opportunity for social advancement.

Perestroika, reforms introduced by Mikhail Gorbachev in 1985-1991, affected Central Asia in a number of ways. Republics were encouraged to take more initiative in matters of economic development as capital transfers from Moscow decreased. Political reforms led to the emergence of alternative political parties and groups against the backdrop of national and religious revival. These changes coupled with the diminishing central control over local politics allowed Central Asian elites to pursue politics that reflected traditional character of Central Asian politics beneath the veneer of Soviet-era institutions.

It became apparent that despite official policies aimed at egalitarianism hierarchical character of the social structure of Central Asian societies has persevered. As in other traditional societies, it was sustained by the system of patron-client relationships which had entrapped the majority of the population into submission and dependence on a patron in resolving all sorts of issues faced through the course of a lifetime. It perpetuated the kin/local/regional segmentation of a society and prevented the emergence of clearly delineated criteria of citizenship. Russian and Soviet attempts to change traditional patterns of social organization of Central Asian societies and with it

to uproot traditional loyalties and patron-client relationships not only failed but exacerbated regional and tribal rivalries, laying the foundation for politics based on regional affiliations rather than ideological, interest, or any other divisions.

Independence was not sought by Central Asian elites and caught them by surprise. They were generally in favor of the August 1991 anti-Gorbachev coup as they saw in his reforms, especially political, a threat to their power. Though in the aftermath of the coup Central Asian republics proclaimed their independence (Kazakhstan – December 16; Kyrgyzstan – August 30; Tajikistan – September 9; Turkmenistan – October 27; Uzbekistan – August 31), decades of disenfranchisement and dependence on Moscow explained why they lobbied for the creation of the Commonwealth of Independent States (CIS) after Presidents Boris Yeltsin of Russia, Leonid Kravchuk of Ukraine, and Stanislav Shushkevich of Belarus dissolved the Soviet Union in December 1991.

The breakup of the Soviet Union in 1991 accelerated the process of retraditionalization of Central Asian societies which started in perestroika. The process has been characterized by the partial replacement of Soviet-era institutions and mores with those Central Asians had prior to Sovietization and which they continued to practice despite official proscription. It was the process spawned from the top as much as from the bottom and was marked, in part, by validation of the primacy of kin-based relationships, legitimization of the patronage system, Islamic revival, and abandonment of affirmative action policy toward women as they were pressured to assume more traditional roles. Despite regularly held presidential and parliamentary elections there has been no turnover of political elites: The leaders that ruled the countries at independence are still in power. Only in Tajikistan there has been a limited change in 1992 when Imomali Rahmonov became president. Yet he has stayed in power since then. Faced with daunting tasks of state- and nation-building, Central Asian leaders opted for building authoritarian regimes and privatizing the gains of economic reforms into the hands of their families and close associates. Social dislocation and lack of prospects for a better future have resulted in the growth of political and religious extremism throughout the region.

### **Issues and questions for further exploration**

- How does Central Asian history influence Central Asian political culture today?
- What are the major historic differences among Central Asians that affect their choice of developmental paths today?

- Can we speak about a history of statehood of the five eponymous Central Asian nations?
- In what ways have the Russian conquest and then the Communist regime transform Central Asia and its people?
- How did Central Asian republics and their elites respond to the breakup of the Soviet Union?

## **ISLAM**

Islam is the predominant religion among Central Asians and has become an integral part of the Central Asian way of life and culture. Yet it is not observed equally dutifully by all Central Asians with the Tajiks and Uzbeks being the most devout.

Islam was brought to Central Asia by the Arabs in the seventh century. Its religious doctrine, Sharia (canon law), adat (customary law), and Islamic culture were spread by merchants, who penetrated Central Asia after the conquest. The Tajiks and Uzbeks were the first to convert, followed by the Turkmen (12<sup>th</sup>-14<sup>th</sup> centuries), Kyrgyz (16<sup>th</sup>-17<sup>th</sup> centuries), and Kazakhs (18<sup>th</sup>-19<sup>th</sup> centuries, though southern Kazakhs became

Muslims in the 9<sup>th</sup> century). The Kazakh case is the most interesting since they were Islamized by the decision of Catherine II. The majority of Central Asians are Sunni Muslims of the Hanafi school. There is also a number of Sufi (Muslim mysticism) orders and a few Shi'a groups, of whom the most notable are the Ismailis of Tajikistan.

One of the original copies of the Quran compiled under Caliph Uthman (644-656), now in Tashkent

The Hanafi school became dominant in Central Asia primarily for two reasons. First, its founder, Abu Hanifa (d.767), was a non-Arab of the Iranian origin which at the time was psychologically important for Central Asians who like other non-Arab Muslims fought for equal treatment. Second, unlike three other the Hanafi school was less literal in its doctrinal interpretation of the Quran and allowed for the incorporation of the pre-Islamic traditions. It has given Central Asian Islam a fairly tolerant and liberal character that excluded radicalism. Bukhara and Samarqand were traditional centers of Islamic learning. The former was the birthplace of a renowned Muslim scholar Ismail al-Bukhari (810-70) who compiled one of the two most authentic collections of the *hadith* (Prophet Muhammad's sayings).

Sufism in the region, which has similarly been liberal, is represented by the following orders: Naqshbandiya (Bukhara), Qadiriya (Ferghana), Yasawiya (southern Kazakhstan), and Qubraviya (Khorezm/Khiva). Naqshbandiya, the dominant order, was founded in Bukhara by Bahauddin Naqshband (1317-1389). Membership in the Sufi orders has been exclusive and secretive and the leadership has usually been maintained within one family. The Ismaili Shi'a in the GornoBadakhshan Autonomous Province of Tajikistan trace their origins to the 11<sup>th</sup> century. Their spiritual leader is Prince Agha Khan who has been actively providing humanitarian aid to his followers during the Tajik civil war of 1992-1997.

Before the 1917 Bolshevik revolution there were around 26,300 mosques, 6,000 *maktabs* (primary Islamic schools), and 300 *madrassas* (Islamic schools) in Central Asia. Soviet policy toward Islam as to any other religion was its suppression as inimical to Marxist ideology. There were periods of respite in militant atheism in the 1920s, when the Soviets needed to win over Central Asians and consolidate their power, and during WWII, when in 1943 Joseph Stalin allowed the establishment of the Muslim Spiritual Board of Central Asia and Kazakhstan and reopening of some mosques to ensure Muslims' loyalty to the state amidst the uncertainty on the frontlines. Yet, by the time perestroika began in 1985, there were less than a hundred mosques in the entire region, one Islamic institute in Tashkent, and one madrassa in Bukhara.

Perestroika brought Islamic revival in Central Asia further backed by a liberal law on freedom of conscience passed on 1 October 1990. The most visible sign of the revival was the booming mosque construction: At independence, there were around 7,500 mosques in the region and 380 madrassas in Uzbekistan alone. Perestroika also allowed "parallel Islam," which existed alongside with the officially sanctioned Islamic institutions, to come into the open. It was a network of separate groups of young Central Asians influenced by the Islamic revolution in Iran and the Afghan *mujaheddin* (combatants against Soviet occupation) propaganda to work toward spiritual renewal and eventual establishment of an Islamic state in the region. In 1989, these young men came together to establish an All-Union Party of Islamic Renaissance whose Tajik and Uzbek branches were the most numerous and influential. In 1991, these branches became independent. Other Islamic groups included Islam Lashkari (Warriors of Islam) and Adalat (Justice). Islamists demanded greater role for Islam in political and social life of Central Asians, adoption of some aspects of Sharia

(especially those concerning family) into law, proclamation religious holidays official, making Friday a day-off, etc. Their eventual goal was the creation of an Islamic state in their respective republics.

There are communities of the followers of other religions, including Christianity, mostly Russian Orthodox Church, Judaism, Buddhism, etc.

### **Issues and questions for further exploration**

- How has the Hanafi school of Sunni Islam shape the character of Central Asian Islam and Islamic practices?
- What role has Sufism play in the evolution of Central Asian Islam?
- What the causes of the growth of Islamic extremism in the region?

## **CULTURE AND EDUCATION**

Being at the crossroads of various civilizations since the early stages of their history, Central Asians have a very rich culture in part influenced by the way of life. Though all the five nations are Muslim and have predominantly rural population, there is a divide between the Kazakhs, Kyrgyz, and Turkmen whose nomadic way of life continued until the late 1920s and the Tajiks and Uzbeks who became sedentary much earlier. At the same time all Central Asians who reside in cities, especially capitals, have closely interacted with large Russian populations and thus are likely to demonstrate a mix of

native and Russian cultural influences. Central Asians take great pride in providing hospitality for guests. In accordance with tradition guests are offered the best of everything irrespective of the economic situation of the host. Central Asians maintain close family ties. In countryside members of an extended family often live in one household.

The former group continues to identify themselves with their nomadic ancestry who, while herding their livestock, used to live in *yurts*, portable felt-covered dwellings. This tradition continues among the shepherds of today. Also their traditional diet is distinctive from the Tajik and Uzbek as it includes *qazy* (horse meat), *qumyz* (fermented mare's milk), and *shabat* (fermented camel's milk). At the same time, all Central Asians share such dish as *osh-palou*, pilaf of rice, meat, vegetables, and sometimes spices and (dried) fruit, which originated among Tajiks and Uzbeks. Among other cultural characteristics shared by all Central Asians are a spring festival, *Nowruz* (ancient Iranian New Year celebrated on the day of spring Equinox) and a game, *buzkashi* (also known as *baiga*, *qoqpar*, and *ulaq*), in which players compete to drag a goat carcass into a goal and which dates back to the Genghis Khan period. In addition to *osh-palou*, other traditional Tajik and Uzbek dishes include *laghmon* (soup with long, thick noodles), *kabob* (barbecued kebabs), *non* (bread) of many varieties for different occasions, etc.

Nomadic way of life is associated primarily with folk arts, oral literary tradition, and vocal music. In Central Asia, all three are common throughout the region. Traditional folk arts include handmade textiles, silver jewelry, ceramics, wool and silk carpets, wood carving, wall painting, etc. The carpets were traditionally used to decorate the floors and walls of palaces, houses of nobility as well as *yurts* and were considered to be a sign of wealth.

Another ancient tradition is the performance of the epos (a partly historical and partly legendary series of poems) in the form of a song by an *aqyn* or *hafiz*, Central Asian minstrel, on a variety of string instruments. Though common to all Central Asians, it is mostly associated with the formerly nomadic nations who acquired written languages much later than Tajiks and Uzbeks: Turkmen in the 18<sup>th</sup> century (associated with poet *Magtumguli*), Kazakhs in the 1860s (associated with the name of poet *Abay Ibrahim Kunanbayev*), and Kyrgyz in 1923. One of the most well-known is the Kyrgyz epos called *Manas* about a legendary hero who battle foreign invaders to create a homeland

for his people. All but disappeared during the Soviet period, interest in both epos and aqyn tradition was revived as Central Asians sought to restore their national heritage.

As for Tajiks and Uzbeks, their oral traditions were largely displaced with the spread of Islam which brought the art of writing and education as well as influenced the development of architectural and musical styles and genres. Traditional Tajik and Uzbek music is similar to that of the Middle East and is characterized by complicated rhythms and meters that evoke a richly melodic sound. One of the famous music genres is *shashmaqom* which is infused with Sufi themes.

Architectural designs, which reflect common Islamic tradition, are distinguished by turquoise-colored mosque domes and the glazed tilework, usually forming abstract geometrical patterns, also found on many religious buildings.

Guri Amir Mausoleum. Samarqand. 14<sup>th</sup>-15<sup>th</sup> centuries.

Tajiks share literary heritage with two other Persian-speaking nations of Iran and Afghanistan. Persian literature emerged from Bukhara under the Samanids during the

9<sup>th</sup> and 10<sup>th</sup> centuries. It is associated with the name of *Abu Abdullohi Rudaki* who is considered to be the father of Persian poetry. Another important Bukharan name for Persian-speaking literature as well as Muslim and world philosophy and science is *Abu Ali ibn Sino* (980-1037) better known in the west as Avicenna, the author of the “*Canon of Medicine*.” In the late 19<sup>th</sup>-early 20<sup>th</sup> centuries, Bukhara was the center of Central Asian Jadidism whose leader, *Abdurrauf Fitrat*, wrote poems and scholarly books on Islam and social and political reforms in both the Tajik and Uzbek languages. He and hundreds of other Central Asian intellectuals perished during Stalin’s purges of the 1930s.

During the Soviet period new, European cultural forms and genres were introduced to the region, including novel, opera, ballet, symphony, etc. Their introduction and evolution were accompanied by the Communist party drive to create a new, proletarian culture which would have little connection to traditional culture deemed to be too Islamic for an atheistic society the communists aspired to create. Thus, the Arabic-based alphabets of Central Asian languages were first changed into Latin at the end of the 1920s and then, in the late 1930s, into Cyrillic. Possession of books with Arabic script became a criminal offense. Intellectually and linguistically Central Asians were subjected to Russification, albeit unofficial.

The contents of arts, literature, and music had to conform to the genre called *socialist realism*, which was a form of communist propaganda, though Central Asians were allowed to express it in the officially approved traditional forms. Such arrangement for national cultures of different Soviet ethnic groups was known as “*national in form, socialist in content*.” The Soviets were unable to completely eliminate traditional cultures and replace them with a new one. Late 1970s-early 1980s brought revival primarily associated with the name of Kyrgyz writer *Chingiz Aitmatov* who gained international renown for his novels such as *The Day Lasts More Than A Century* (English translation 1982) and collections of short stories such as *Tales of Mountains and Steppes* (English translation 1969).

One undisputed achievement of the Soviet period is the introduction of the modern education system which produced nearly 100 percent rate of literacy where it was virtually absent before. Free primary and secondary education became compulsory and largely remains the case in all five Central Asian states. At the same time the governments have been unable to maintain the Soviet-era levels of funding. There is

shortage of new textbooks and teachers who are poorly paid. The same problems face university-level education though a number of new private universities have been opened, including a number of joint Central Asian-American universities.

### **Issues and questions for further exploration**

- In what ways have different lifestyles influence the development of different cultural forms among Central Asians?
- Can we talk about some common elements in the culture of Central Asians?
- How much has the Russian influence westernization of Central Asian cultures?

## **KAZAKHSTAN**

**Government and politics.** The Republic of Kazakhstan, a country slightly less than four times the size of Texas, proclaimed its independence on 16 December 1991. It is a presidential republic with separation of powers between three branches. Since independence two constitutions were adopted. The 1993 constitution proclaimed the country a unitary state and introduced strong, French-style presidency. The 1995 constitution increased presidential power and instituted bicameral parliament while substantially limiting its authority. President is elected for seven years and has unlimited powers: He appoints the Prime Minister and the entire Council of Ministers, governors of the fourteen provinces and the cities of Astana and Almaty as well as executives of all lower level administrative units, and all judges. He can initiate constitutional amendments, dissolve parliament, call referenda at his discretion, override the decisions of the executive branch officials, etc.

Legislative branch is represented by a bicameral parliament consists of the Senate (upper house) and the *Mazhlis* (lower house). The Senate has 39 members, 32 of whom are elected by indirect vote at a joint session of the deputies of *maslihats* (local assemblies) and 7 are appointed by the president. Senators serve six-year terms. The Mazhlis consists of 77 deputies, 67 of whom are elected in single-mandate districts and 10 are appointed from a party list based on proportional representation with a 7% threshold. Under the 1995 constitution, it does not have much power as the legislative initiative is primarily president's prerogative as is the appointment of and or control

over the executive branch.

Judicial branch of the government is represented by the Supreme Court (44 members) and the Constitutional Council (7 members). Judges of all levels are appointed by the president and serve for an unspecified term. Despite steps taken to increase professionalism and independence of the judiciary, including substantial raise in judge's salaries, the system continues to be heavily politicized.

Since independence Nursultan Nazarbayev has been the president of Kazakhstan. He was first elected on 1 December 1991, then had his term extended by a 1995 referendum, and reelected on 10 January 1999. In 2000, the parliament passed a law "On the first president of the Republic of Kazakhstan" which guarantees his lifelong powers and privileges as well as immunity. Nazarbayev's rule has been characterized by concentration of political and economic power in the hands of the president himself, his family, and trusted kin in a clear manifestation of zhuz-based patronage politics despite a semblance of balance in key appointments. Notwithstanding his earlier commitment to democratic reform, Nazarbayev has progressively moved toward a regime of personalistic dictatorship by manipulating electoral process, intimidating opposition, and limiting political liberties of citizens. Twice, in 1993 and 1995, he dissolved parliament and ruled by presidential decree. Liberal laws adopted in early independence have been revised to institute tougher control on political and civil society activity in the country. In July 2002, the new law on political parties was passed requiring a party to have 50,000 registered members up from the previously required 3,000. The new law will mostly likely make it impossible for Nazarbayev's opponents to register political parties.

At present, major political parties represented in Mazhilis include Otan with 24 seats, Civic Party with 11 seats, Communist Party with 3 seats, Agrarian Party with 3 seats, People's Cooperative Party with 1 seat. With the exception of the Communists all other parties are pro-government, Otan is formally headed by the president himself. Major opposition parties are represented by the RNPK (Republican People's Party of Kazakhstan), headed by Akezhan Kazhegeldin, exiled former prime minister and Nazarbayev's chief opponent, Azamat, DVK (Democratic Choice of Kazakhstan), and Ak Zhol. Members of the opposition represent mostly former government officials, businessmen, and intellectuals dissatisfied with nepotism, growing authoritarianism, and slow pace of economic reforms.

**Civil society.** In addition to political parties, there are above 3,050 NGOs registered with the Ministry of Justice as it is required by the Law on Public Associations passed in 1998. Participation in unregistered NGOs is illegal and subject to criminal prosecution. Creation of government-sponsored NGOs is widely practiced. Only a fraction of the registered NGOs is estimated to be fully functioning. The main obstacles to civil society development in Kazakhstan, as elsewhere in Central Asia, are patronage character of its institutions and lack of domestic financial support. Creation of government-sponsored NGOs is widely practiced.

In the early 1990s, Kazakhstan enjoyed a vibrant and relatively free media. Its independence was severely restricted as a result of the adoption of two laws: The 1998 Media Law and the 1999 Law on Confidential State Affairs which made information about Nazarbayev and his family and their economic interests a state secret and its disclosure a criminal offense. Electronic and print media are dominated by the *Khabar* group, owned by Nazarbayev's eldest daughter.

**Economy.** Despite the initial drop in GDP to about half it was before independence, since 1995 Kazakhstan has been successfully restructuring its economy and introducing market institutions, maintaining macroeconomic stability over the last years. By 1998, Kazakhstan has completed privatization of small enterprises. In 1999, private sector share in GDP was 60 percent. The 1999 GDP structure of the economy is as follows: 30 percent industry, 10 percent agriculture, and 60 percent services. The country is rich with mineral resources such as oil, natural gas, coal, iron ore, manganese, chrome ore, nickel, cobalt, copper, molybdenum, lead, zinc, bauxite, gold, uranium. This makes their extraction and processing most important industrial sectors with oil and metallurgy accounting for over two-thirds of the country's exports. Another important industrial sector is machine-building sector specializing in agricultural and construction equipment as well as some defense items. The government is now working to implement industrial policy to diversify the economy and reduce its dependence on oil.

Kazakhstan's oil reserves are estimated to be 16.4 billion barrels, not including the recently discovered offshore deposits in the Caspian Sea (Kashagan field) which may, if proven, add another 40 billion barrels. The oils sector draws 84 percent of FDI (over \$9 billion in 1993-1999). Lack of an agreement on the delimitation of the Caspian Sea has not halted Kazakhstan's offshore oil exploration projects or foreign investment. One of the major problems is transportation of oil out of the landlocked country. At present, there are only two pipelines, both going through Russia. Kazakhstan has been

tentative about participation in the Baku-Ceyhan pipeline project which is designed to provide Caspian states with an alternative route.

Oil field

Kazakhstan has been successful in implementing reforms in the financial sector. Though the size of the banking sector is still relatively small, it has been moving toward operating in full compliance with the Basel principles. Kazakhstan was the first Asian country to introduced privatized pension system in 1997. Yet, the development of the stock market is being held due to the opposition of major business interests managing national “blue-chip” state enterprises. Decision to float *tenge*, national currency, in 1999 was encouraging to the growth of domestic production in such sectors as agriculture, food processing, etc.

Kazakhstan continues to be a large agricultural producer, specializing in livestock and grain. Over 90 percent of agricultural enterprises have been privatized. 75 percent of agricultural land has been leased to private farms or individual farmers. The amended land law (2000) allows for privatization of the land adjacent to rural dwellings which is

expected to give additional boost to the development of the sector.

***Social issues.*** Social problems arise for a number of reasons. Economic transition and rampant corruption (Transparency International ranks the country 86<sup>th</sup> of the 99 listed) have resulted in the growing social differentiation. Intra-ethnic tensions are rife: Kazakhstani Russians, especially Cossaks, who dominate northern and eastern regions and protest what they see as discrimination are silenced by charges of separatism, organizing “armed insurrection,” or treason, resulting in long prison sentences. Living standards are declining: UNDP estimated that in 2000, 65 percent of the population lives beyond the poverty line. The quality and availability of health care and other social services have deteriorated since independence. A number of social problems are caused by environmental degradation as a result of the Aral Sea desiccation (water pollution, high rates of cancer and congenital deformations, etc.), the legacy of the Soviet nuclear test site at Semipalatinsk (now Semei), and soil pollution from overuse of agricultural chemicals.

***Foreign policy.*** At independence, Kazakhstan unexpectedly became a nuclear power as it was a site of the Soviet ICBMs deployment. It immediately brought the country into the international spotlight: It became a signatory to the START (Strategic Arms Reduction Treaty) and the Lisbon Protocol which obligated Kazakhstan to denuclearize (completed by May 1995). Kazakhstan became a member of the UN, OSCE, IMF, World Bank, and other international organizations. President Nazarbayev, promoting the country as a bridge between Asia and Europe, has pursued the policy of “multi-vector diplomacy,” trying to develop close relations with countries beyond Kazakhstan’s immediate neighborhood which includes Russia and China whose dominance he has been seeking to escape.

Relations with Russia though continue to be important for a number of reasons: a large Russian population in Kazakhstan; 6,846 km border the countries share; trade (Russia continues, despite continuing decline, to be the most important partner with 20 percent of Kazakhstani exports going to Russia and 37 percent imports coming from it); security. Russia continues to lease a number of military installations, including the Baikonur space center. Kazakhstan is a member of the 1992 CIS Collective Security Treaty; Customs Union with Russia which also includes Belarus and Kyrgyzstan. Dissatisfaction with the CIS made President Nazarbayev advance unsuccessfully an idea of a Eurasian Union (1994) and Eurasian Economic Community (1999) which

would have meant closer integration of Kazakhstan and other former Soviet republics with Russia. Nazarbayev continues to reiterate that Russia is Kazakhstan's closest ally by virtue of history and geography.

While trade with China, barter in particular, is booming, relations between the two states are complicated due to historic fears of Chinese domination; presence of Uighur diaspora in Kazakhstan who advocates Xinjiang's independence; continued Chinese nuclear tests at Lob Nor test site, located close to the border with Kazakhstan. Yet the two countries moved closer together with the creation of the Shanghai Cooperation Organization in 1996 whose goal is to foster political, security, economic and other forms of cooperation between China and Russia, Kazakhstan, Kyrgyzstan, Tajikistan, and Uzbekistan.

Kazakhstan has attempted to build its relations with other Central Asian states within the framework of the Central Asian Economic Community established in 1994 together with Kyrgyzstan and Uzbekistan and joined by Tajikistan in 1998. The attempt failed due to difference in economic policies pursued by the member-states and personal rivalries between Central Asian presidents. As a result, an attempt to create a regional peace-keeping battalion, *Centrazbat*, which was trained by the NATO through the Partnership for Peace program, has also failed.

Prior to independence, Kazakhstan, as other Central Asian states, did not have independent armed forces. It began to build its military in 1992 and currently has an army of 45,000 personnel, an air force of 19,000, and a navy of 100 (the Caspian Flotilla, based in Astrakhan (Russia), is under the joint command of Russia, Kazakhstan, and Turkmenistan). Additionally, there are three paramilitary units which include the Republican Guard, security troops of the Ministry of Interior, and border guards, whose total strength is 34,500 personnel.

From the beginning Kazakhstan has sought to develop close relations with the West, especially the United States, as a balance to its relations with Russia and China. Kazakhstan also needs western FDI and expertise to develop its oil industry and transform the economy. Tengiz Chevron Oil project is the single most important US-Kazakh joint venture which has attracted almost half of \$1.5 billion American companies invested in Kazakhstan in 1993-1998. In the wake of 9/11, Kazakhstan has supported US campaign against international terrorism and granted emergency landing rights to US military aircraft engaged in the military campaign in Afghanistan. Yet the

crackdown on opposition and political repression which have intensified in 2001-2002 raise concern in Washington about the chances for a successful democratic transition in Kazakhstan. Also the Department of Justice is conducting investigation into whether signing bonuses American oil companies paid the Kazakh government were in fact kickbacks to Nazarbayev and his entourage.

### **Issues and questions for further exploration**

- The importance of the energy sector for economic development of Kazakhstan.
- Economic reforms and corruption.
- Causes for reverse of political democratization in Kazakhstan.
- The significance of the Russian factor in Kazakhstan's domestic and foreign policy.

## **KYRGYZSTAN**

**Government and politics.** The Republic of Kyrgyzstan, a country slightly smaller in size than South Dakota, proclaimed its independence on 31 August 1991. It is a presidential republic with separation of powers between three branches. Constitution adopted on 5 May 1993 provided for a strong presidential power further enhanced by constitutional amendments passed in 1996 at the expense of the legislature. The president has the power to appoint the prime minister, the cabinet (on the recommendation of the prime minister), the chairmen of the Central Bank and the Central Election Committee. He can dissolve the legislature if it rejects his nominee for the prime minister three times. He can also bypass the legislature and rule by edict. The president appoints governors of the seven provinces and forty-three districts the country is administratively divided into.

Legislative branch is represented by a bicameral parliament, *Jogorku Kenesh* (Supreme Council), which is elected by popular vote to serve five-year terms. It consists of the *Myizam Chygaruu Jyiyny* (Legislative Assembly), the upper chamber, and the *El Okulder Jyiyny* (People's Representative Assembly), the lower chamber. The upper chamber has 35 members who sit in permanent session. They adopt and interpret laws and ratify international treaties, and can also impeach the president. The lower chamber has 70 members who meet several times a year to approve presidential appointees and deal with budget and tax issues. Despite strengthening of the presidential powers the parliament has displayed greater independence in its actions than in any other Central Asian state, dismissing presidential appointees, overturning presidential vetoes, and initiating legislation.

Judicial branch is represented by the Supreme Court, the Constitutional Court, and the Higher Court of Arbitration. Supreme Court judges are appointed for 10-year terms by the Supreme Council on the recommendation of the president. Despite measures taken to increase professionalism through the qualification exams and raising salaries, judicial system continues to be politicized.

Since independence the country has been run by President *Askar Akayev* who has been president since October 1990. He was last re-elected on 29 October 2000 in elections which the OSCE described as failed to comply with commitments for democratic elections. It was a departure from the early post-independence period when Akayev, a physicist, was considered the most reform-minded and democratically-oriented of the Central Asian leaders. Despite initial steps taken toward political and economic liberalization in the early 1990s, Akayev began to demonstrate authoritarian tendencies in 1994 when he dissolved the first post-independence parliament when it moved to limit Akayev's powers. With years he came to rely increasingly on the members of his and his wife's clansmen from northern Kyrgyzstan appointed to the highest positions in the government and less tolerant of any opposition. Prior to the 2000 parliamentary elections three leading opposition parties (*Ar Namys* (Honor), *El Bei Bechara* (Party of Poor People), and the *Democratic Movement of Kyrgyzstan*) were barred from participation in the elections under various pretexts. As the 2000 presidential elections approached Feliks Kulov, *Ar Namys* leader and one-time ally of Akayev and his vice-president,

was arrested and later convicted of a number of abuse-of-powers charges as he was about to enter the presidential race.

Despite these negative developments Kyrgyzstan remains the most liberal country in Central Asia which has a vibrant civil society, an independent media, and a fairly independent legislature with the largest number of independent deputies, 73 out of 105. The parties represented in the Supreme Council include pro-government the Union of Democratic Forces with 12 seats, My Country with 4, Democratic Party of Women with 2, Party of Afghan War Veterans with 2, Agrarian Labor Party with 1; and opposition the Communists with 6, People's Party with 2, Ata Meken (Fatherland) with 2, and the Erkin (Free) Kyrgyzstan with 1.

**Civil society.** Kyrgyzstan has a vibrant civil society. Yet it is plagued by the same problems as in Kazakhstan and out of thousands registered NGOs only about 500 are functioning. There are few legal restrictions on the NGO activity as the country still maintains the liberal 1991 Law on Public Organizations. In 1999, a new Law on Noncommercial Organizations was passed which allows the government to restrict the activities of an NGO should it be deemed undermining the public order or promote racial intolerance. In fact, in July 2000, one of the leading human rights groups, the Kyrgyz Committee on Human Rights, was deregistered and its leaders charged with "destabilizing the social order," which is a criminal offense. The 170-member NGO Coalition for Democracy and Civil Society was prevented by the Central Election Committee from monitoring the 2000 presidential election. At the same time, NGOs which deal with less sensitive issues, such as women's rights, environment, etc., generally have access to the government officials and have some influence on policy-making. Presidential Coordinating Council on Sustainable Development includes several NGO leaders.

Media in Kyrgyzstan is still to a significant degree state-owned. There are about 50 private newspapers and magazines, 14 TV and 11 radio stations. Independent media experiences not only government pressure but is constricted by insufficiency of financial and technological resources. As elsewhere in the region, criticism of the president and his family is a criminal offense. In the most celebrated case, Zamira Sadykova, a journalist of Res Publika newspaper, was imprisoned for a year and a half after publishing an article in 1995 alleging that President Akayev owned property abroad. Usually the government launches tax audits and criminal investigations to harass the most independent media outlets. In 1998, Akayev established an extra-constitutional Morals Commission authorized to evaluate the contents of the media publications and take action against the media when needed. In a clear violation of the constitutionally guaranteed freedom of press it, e.g., suspended three publications the same year which were allowed to reopen after they revised their line.

**Economy.** At independence Kyrgyzstan was one of the poorest republics of the former Soviet Union with an economy dominated by the agricultural sector. Its industrial development was limited to a number of enterprises which were part of the Soviet defense industry and which were closed down after 1991. Kyrgyzstan possesses a few mineral resources such as gold (one of the largest proven reserves in the world), mercury, lead, zinc, coal, etc. Its major energy resource is water.

Kyrgyzstan has been the leading former Soviet republic in restructuring its economy along the market principles. It was the first to introduce its national currency, *som* (May 1993) and to become a member of the WTO (November 1998). With the help of the IMF and the World Bank Kyrgyzstan has introduced a comprehensive package of macroeconomic and structural adjustment programs, which allowed to achieve production recovery and an increase in exports by 1996. Yet Kyrgyzstan has borrowed heavily from the IFIs and private lenders in the process of market transformations and despite all the success huge structural problems remain which makes the repayment of the debt virtually impossible and thus threaten turning the country into a permanent international client state. Agricultural sector continues to dominate the economy making 39 percent of the GDP with industry 22 and services 39 percent. Major industries include small machinery, textiles, food processing, cement, shoes, sawn logs, refrigerators, furniture, electric motors, gold, rare earth metals. As in Kazakhstan privatization has been successful in small and medium-sized businesses but stop short of privatizing large-scale, export-oriented enterprises. Private sector accounts for about 65 percent of GDP.

Private property on land in Kyrgyzstan was introduced by the 1998 referendum which approved corresponding constitutional amendments. Only 10 percent of the country's territory is considered fully arable. Yet in 2000 the parliament announced a five-year moratorium on the purchase and sale of land. Main agricultural products are tobacco, cotton, potatoes, vegetables, grapes, fruits and berries, sheep, goats, cattle, wool.

Kyrgyzstan's primary export commodities include cotton, wool, meat, tobacco, gold, mercury, uranium, hydropower, machinery, and shoes. It is still recovering from the 1998 Russia financial crisis which in has demonstrated country's dependence on foreign trade and energy imports and vulnerability to external shocks. The major persistent problems facing the government are excessive

external debt, double-digit inflation, inadequate revenue collection, and deteriorating infrastructure.

**Social issues.** Kyrgyzstan remains one of the poorest states of the former Soviet Union: Its per capita income is \$300 and 63 percent of the population lives below the poverty line. Life expectancy declined from 68.8 years in 1991 to 66.9 years in 1997. By 2000, enrollment for secondary schooling dropped to 33 percent from 37 percent in 1990. Corruption remains pervasive. Inter-ethnic relations, especially with the local Uzbeks, which had led to the killing of 320 Kyrgyz and Uzbeks in 1990, remain to be a source of tension. The other source of tension is clan rivalries among Kyrgyz themselves. It is especially true in the case of the northern Sarybagysh, which has provided most of the Kyrgyz leaders, President Akayev included, and southern clans as the former has monopolized political and economic power.

Drug trafficking through Kyrgyzstan has created enormous social problems and criminalized the economy. Until 1974, Kyrgyzstan continued to legally grow opium poppy and produced about 16 percent of the world's supply. Opium production has never been eradicated but is surpassed by cannabis. Drug use is on the rise and now Kyrgyzstan has a higher ratio of drug users (11 per 1,000) than the US (10.5 per 1,000). These problems have been aggravated since independence and the civil war in Tajikistan which opened a major drug trafficking route from Afghanistan via Tajikistan and the Osh province of Kyrgyzstan, and then via Kazakhstan and Uzbekistan into Russia and the rest of Europe. The city of Osh became the drug trafficking of Central Asia. It is estimated that about 64 drug-trafficking groups operate in the country. Kyrgyzstan has been actively engaged in regional and international efforts to fight drug-trafficking and production. UN Drug Control Program (UNDCP) ran the "Osh Knot" which had several aims, including fostering regional cooperation and training 60 officials. It was terminated in 1999 due to disagreements with the Kyrgyz and corruption.

Environmental issues add to the many problems Kyrgyz society has to address. As a result of faulty irrigation practices water pollution is a major health problem since many people get their water directly from contaminated streams and wells. This leads to increased soil salinity and water-borne diseases against the backdrop of the general deterioration of the quality and availability of public health services.

**Foreign policy.** After independence Kyrgyzstan has aggressively pursued relations with the outside world to seek both international recognition and outside assistance in instituting economic reforms. It got both and due to its pronounced commitment to building democracy and a market economy, Kyrgyzstan became known in Washington and the West as "an island of democracy" and President Askar Akayev as "Askar Jefferson." Kyrgyzstan quickly became a member of the UN, OSCE, IMF, World Bank, other international organizations and the largest per capita recipient of foreign aid among the newly independent states.

However relations with the United States have cooled as Akayev backtracked on democratic reforms and displayed more authoritarian tendencies. During her visit to Kyrgyzstan in April 2000, then-Secretary of State Madeleine Albright pressured Akayev to honor his country's commitments to the OSCE. After 9/11, Kyrgyzstan has joined US-led anti-terrorist campaign and leased its Manas airport to the US and NATO troops who conduct operations in Afghanistan. Germany is Kyrgyzstan's largest exports partner, accounting for about 33 percent of the country's exports in 1999.

Relations with Russia continue to be important. Russians make about 15 percent of the Kyrgyzstan's population and Russia continues to be the main imports partner, accounting for about 18 percent in 1999. Kyrgyzstan is a member of the CIS, Customs Union with Russia, Kazakhstan, and Belarus, and the Collective Security Treaty. In May 2000, Kyrgyzstan became the only CIS state to pass a law, making Russian the second official state language. Kyrgyzstan has the second smallest armed forces in the region – 9,000 troops – as it relies on Russia in addressing its national security concerns.

Relations with China are characterized by historic memories of Chinese domination and apprehension about its intentions today. To placate the Chinese, the government has refused to register resident Uighur organizations that advocate independence of Xinjiang. Kyrgyzstan is a member of the Shanghai Cooperation Organization.

Maintaining good relations with its Central Asian neighbors is essential for Kyrgyzstan's survival. Relations with Kazakhstan are very close sustained in part by the marriage of President Akayev's only son to President Nazarbayev's youngest daughter. Relations with Uzbekistan are more problematic as President Islam Karimov of Uzbekistan has been critical of Akayev's policies, e.g., the introduction of the national currency, WTO membership, etc. To show his displeasure, Karimov has repeatedly cut off gas

and electricity to Kyrgyzstan. On its part, Kyrgyzstan, an upstream state, has threatened to cut water supply to Uzbekistan as well as Kazakhstan in an attempt to collect payment ostensibly for maintenance of the water supply infrastructure.

Yet the most immediate problem and national security threat to the country comes from Tajikistan. Relations between the two countries have been strained since 1989 when a border conflict over water and arable land erupted. It was settled in 1993 and Kyrgyzstan played an active role in UN-mediated Tajik peace talks. Recent problems have been caused by the armed groups of the Afghanistan-based Islamic Movement of Uzbekistan (IMU) who repeatedly penetrated Kyrgyzstan from the Tajik territory in 1999 and 2000 en route to Uzbekistan. They have captured several villages, took hostages, including American tourists and Japanese geologists, causing major embarrassment for Akayev and further straining of Kyrgyz-Uzbek relations. IMU incursions stopped with the start of anti-terrorist operation in Afghanistan in October 2001.

### **Issues and questions for further exploration**

- What factors explain that Kyrgyzstan has gone the farthest in economic liberalization in Central Asia?
- How have the country's strategic weaknesses influence its domestic policy?

## **TAJIKISTAN**

**Government and politics.** The Republic of Tajikistan, a country slightly smaller in size than Wisconsin, proclaimed its independence on 9 September 1991. It is a presidential republic with separation of powers between three branches. The 1994 constitution established Tajikistan as a parliamentary democracy. Yet the power is concentrated in the hands of the president, especially after constitutional amendments in 1999 which introduced a single seven-year term for the president. The president appoints the prime minister and members of the Council of Ministers, subject to the approval by the parliament. He also appoints heads of provincial, district, and city governments who are simultaneously heads of local legislatures, subject to the approval by local legislatures, and has the right to dismiss local officials. Tajikistan is divided into 2 provinces, 1 autonomous province of Gorno-Badakhshan, and a number of districts in central part of the republic under direct central administration.

The unicameral parliament, *Majlisi Oli*, was introduced by the 1994 constitution. The 1999 constitutional amendments provided for a bicameral *Majlisi Oli*, consisting of the *Majlisi Namoyandegon*, Assembly of Representatives (lower chamber), and the *Majlisi Milli*, National Assembly (upper chamber). Members of the 63-seat lower chamber are popularly elected for the term of 5 years while 33 members of the upper chamber are indirectly elected, 25 selected by provincial deputies and 8 appointed by the president also for the five-year term. As a result of the 2000 parliamentary elections, President Rahmonov's People's Democratic Party of Tajikistan received 65 percent of votes, followed by the Communist Party with 20 percent, and Islamic Rebirth Party with 7.5 percent.

Judicial branch is represented by the Supreme Court, the Constitutional Court, the Supreme Economic Court, and the Military Court. Judges are appointed by the president to five-year terms by the president who also has the power to dismiss them. As elsewhere in the region, the judiciary remains nominally independent.

The first six years of its independence were the most traumatic in Tajikistan's recent history. The civil war, which lasted from 1992 through 1997, resulted in about 100,000 dead and a deeply fragmented country. In its early stages, the war was waged between the Rahmonov government, a coalition of the Soviet-era elites from the two provinces of Kulob and Leninobod, and the United Tajik Opposition (UTO), a coalition of secular and Islamist groups and parties. The Rahmonov government, supported by the Russians and initially by President Karimov, wanted to preserve the status quo and prevent the opposition, especially the Islamic Rebirth Party (IRP), from influencing country's post-independent development. The UTO was united around the idea of a fair redistribution of political and economic resources which were concentrated in the hands of the Khujandi elite (Khujand is the capital of and a district in the Leninobod province), who dominated the post-WWII Tajikistan. After a split between the Kulobis and the Khujandis over power the civil war acquired a more regional character. In 1994, the UN-mediated peace talks on Tajikistan began and the UNMOT, UN observer mission to Tajikistan, was dispatched to monitor the implementation of the agreements reached between the government and the opposition. The war ended in 1997 and in accordance with the peace agreement the UTO was to receive 30 percent of jobs in the central, provincial, and local government; its military groups were to be integrated with the regular military and law enforcement units. Also, a Government of National Reconciliation and a National Reconciliation Commission

(NRC) to oversee the implementation of the peace agreement were to be established for the transitional period until the new parliamentary and presidential elections. Provisions of the peace agreement were only partially fulfilled, as, e.g., the UTO never received the stipulated percentage of government positions.

The 1999 presidential and 2000 parliamentary elections were won by Rahmonov and his People's Democratic Party of Tajikistan. Despite widespread voter irregularities, the UTO won seven percent of the seats in the new parliament and did not challenge the results of both elections. On his part, President Rahmonov included a number of opposition figures in his new government such as Akbar Turajonzoda, one of the prominent Muslim and UTO leaders, who was appointed first deputy prime minister. Following the elections the NRC was abolished and the UTO split up into its constituent groups and parties: the IRP, Rastokhez Popular Movement, Democratic Party, and La'li Badakhshon Society.

Rahmonov and his Kulobi faction continue to dominate Tajik politics, to a large extent due to the support of Moscow and the Russia military stationed in Tajikistan which he has relied upon since coming to power in November 1992. Yet the country remains fragmented and the central government does not exercise control over the entire territory: The once opposition's strongholds of central Tajikistan and Gorno-Badakhshan province as well as the Sogd (former Leninobod) province, which considers itself sidelined, maintain a significant degree of autonomy, exacerbated by the fact that a small number of opposition armed groups turned rogue, refusing to recognize the peace accord. Also, there is an apparent split within the Kulobi faction itself between President Rahmonov and Ubaidullo Khuvaidulloev, mayor of Dushanbe and a one-time Rahmonov's eminence grise. Political assassinations have been a part of Tajik politics even after the end of the civil war. Prominent figures of the former UTO and other independent politicians are usually the targets.

At the same time, Tajikistan has demonstrated a possibility of the inclusion of Islamists and secular opposition groups into politics without them undermining stability and behaving destructively despite discontent with the Kulobi dominance. In this sense, should the current multi-party politics continue, the country may serve as an example for the rest of the region.

**Civil society.** The civil war, fragmentation of the country, and lack of central control have contributed to the growth of NGOs and their fairly free functioning. Liberal attitude toward the NGOs in Tajikistan can also be explained that it is the only Central Asian country which, after the ban that existed during the civil war, allows the existence of religious political parties. There are about 300 registered NGOs in the country though it is estimated that the real number is about 1,000. Many NGOs, especially those funded from abroad, do not register to avoid taxation as the government increasingly sees them as a source of revenue. Half of the NGOs focus on environmental issues.

Improved relations with the government allowed NGOs to successfully lobby for the adoption of the new Law on Nongovernmental Organizations in 1999 which simplifies registration process, allows them to engage in commercial activity, etc. In 2000, President Rahmonov and the NGO community signed the Agreement of Social Harmony.

Media in Tajikistan has not enjoyed the same freedom as the NGO community, proving the point that Central Asian governments seek to maintain strict control over any activity connected with politics or sensitive subjects such as government officials involvement in drug trafficking. There are 14 broadcast and about 245 print media outlets in the country. The majority of newspapers are published weekly due to financial constraints. Opposition parties publish about 20 newspapers, the government owns 4.

**Economy.** Throughout the Soviet period Tajikistan had one of the poorest, agrarian-based economies. The economy was further weakened by five years of the civil war. Cotton has been the most important crop. Tajikistan possesses mineral resources which include silver, gold, uranium, and tungsten. Its major energy resource is water.

The structure of the Tajik economy is as follows: 19.8 percent of GDP falls on agriculture, 18.1 percent on industry, and 62.1 percent on services. In terms of labor force employment, 50 percent work in agriculture, 20 in industry, and 30 in services.

Economic transformations in Tajikistan have lagged behind, which can only partially be explained by the civil war, and now the country faces the need of both acceleration of market-oriented and post-war reconstruction. Though about 83 percent of small state-owned businesses were privatized only a small number of medium- and large-scale enterprises was. In 2000, inflation was 33 percent. Tajikistan was the last Central Asian state to introduce its own national currency, *somoni*, in April 2001.

Agriculture continues to be the dominant sector. Its products include cotton, grain, fruits, grapes, vegetables, cattle, sheep, goats, etc. Despite measures at privatization, agricultural sector is still dominated by state-owned farms. Those that are privatized usually end up in the hands of government and local officials as well as leaders of armed groups. Cotton, fruits, and vegetable oil constitute major export items. Cotton prices are effectively set by the government.

Cotton field

Industrial production consists mainly of aluminum, zinc, lead, chemicals and fertilizers, cement, metal-cutting machine tools, refrigerators and freezers. Tajikistan is a major world producer of hydroelectric power, being the third after the United States and Russia. The Nurek hydropower station produces over 11 billion kilowatt hours (KWH). The Rogun station, which is under construction, will have the capacity to produce 13 billion KWH. Despite few restrictions to foreign investment, only \$126 million of FDI were invested in Tajikistan primarily because of concerns over stability. FDI has been largely invested in gold and soft drinks production as well as textile industry. The country remains dependent on foreign aid and trade relations with the CIS countries, especially Russia and Uzbekistan: 62 percent of Tajik exports and 78 percent of its imports fall on the CIS. Export commodities include aluminum, electricity, textiles. Import commodities include electricity, petroleum products, aluminum oxide, machinery and equipment, and foodstuffs.

**Social issues.** Social problems in the country, which resemble the situation in other Central Asian states, have been exacerbated by the devastation and dislocation caused by the civil war. Most of the population lives in abject poverty: Population below poverty line is 80percent. Pervasive corruption and drug trafficking are widespread: A number of high-ranking Tajik officials have been arrested in Russia, Kazakhstan, and other countries for their involvement in drug trafficking. The country simultaneously suffers from the shortage of skilled manpower (many fled during the war), and mass unemployment which is about 51 percent of the population. Only about 62 percent of the relevant age group children are enrolled in primary and secondary school: Parents often cannot afford clothing or are afraid for children's security. Infant mortality is on the rise as is maternal mortality rate (130 per 100,000 live births) which is the highest in the CIS.

**Foreign policy.** Since independence Tajikistan has oriented its foreign policy toward maintaining close relations with Moscow. The Russians have supported the Rahmonov government through the civil war period and continue to favor him and the Kulobis over other regional elites. Tajikistan is the only Central Asian country which has the Russian military stationed on its territory which includes the 201<sup>st</sup> motorized rifle division and about 15,000 border guards, the majority of whom are local recruits. In 1999, Moscow and Dushanbe signed a ten-year agreement which established a Russian military base. Reliance on Russia in matters of national security explains the fact that the country has the smallest armed forces in the region – 6,000 active and 1,200 paramilitary personnel – and was the last to join Partnership for Peace Program (2002). Dushanbe is a member of the Moscow-led CIS, 1992 Collective Security Treaty, and Customs Union. Despite close security relations with Russia, trade relations are on the decline: only 8percent of Tajikistani exports go to and 13.6percent of its imports come from Russia.

The civil war and pro-Moscow orientation have led to Tajikistan's relative external isolation. Relations with neighboring countries remain strain. Portions of Tajikistan's northern and western border with Uzbekistan and its eastern border with China have not been officially demarcated. Relations with Uzbekistan go through cycles of deterioration: Tashkent is weary of Rahmonov's Moscow-centric foreign and security; is unhappy with the exclusion of the Khujandis from power; accuses Dushanbe with giving safe haven to the fighters of the Islamic Movement of Uzbekistan (IMU). To make its point known, Tashkent has frequently cut gas supplies to Tajikistan, closed down the only rail link Tajikistan has with the outside world, and gave refuge to the renegade Colonel Mahmud Khudoiberdyev, who twice raided northern Tajikistan and in 1997 and 1998 and retreated back to Uzbekistan. After the civil war ended Uzbeks who fought within the UTO armed units stayed in Afghanistan and formed the IMU. Tashkent has repeatedly accused the Rahmonov government and former UTO commanders that they do not do enough to stop IMU incursions into Uzbekistan or directly aid IMU fighters.

Tajikistan has become closely entangled in the Afghan politics. First, as a result of the civil war tens of thousands of Tajik refugees were stranded in northern Afghanistan. The UTO headquarters was located in the town of Taloqan (Tahor province) where President Barhanuddin Rabbani of Afghanistan and Ahmad Shah Massoud, his field commander, both ethnic Tajiks, relocated after the fall of Kabul to the Taliban in 1996. Second, in the late 1990s, Tajikistan became an entrepot of Russian and Iranian military assistance to the Northern alliance. Rabbani and Massoud used a military base in southern Tajikistan.

Iran was one of the first countries to establish diplomatic relations with Tajikistan. Despite common cultural heritage relations remain complicated. It was especially the case through the civil war period when Iran was suspected in supporting the UTO whose leaders lived in Tehran. As an official observer at the UN-mediated intra-Tajik peace talks Iran generally played a positive role partly explained by its desire to maintain good relations with Russia, Iran's major arms trade partner. Iran's economic ties with Tajikistan remain negligible.

Tajikistan's relations with the west remain limited. The only period of active international involvement in the country was during the UN-mediated peace talks in Tajikistan (1994-1997) and the UNMOT presence (December 1994 – May 2000) in the country. The United States was an unofficial observer at the talks. Due to security concerns, US embassy has been relocated to Almaty, Kazakhstan. Tajikistan is the only CIS country which does not have its embassy in Washington. In the wake of 9/11, Tajikistan's international exposure has increased. Secretary of Defense Donald Rumsfeld was the first high-ranking US official to visit Tajikistan since Secretary of State James Baker's visit in 1992.

### **Issues and questions for further exploration**

- How has the civil war changed regional politics and the role of Russia in Central Asia?
- The impact of the civil war on the rise of extremism Islam in Central Asia.
- What does the political return of the IRP mean for the future of political Islam in the region?

## TURKMENISTAN

**Government and politics.** Turkmenistan, a country slightly larger than California in size, became independent on 27 October 1991. Administratively, it is divided into five provinces, *welayatlar*, and the capital city of Ashgabat which is a separate administrative unit. In accordance with the 1992 constitution, it is a presidential republic with a separation of power between three branches. The constitution stipulated the president to be called *Turkmenbashi*, i.e., the Leader of all the Turkmen. The president is elected for five year terms. He functions both as a head of state and Chairman of the Cabinet of Ministers, whom he appoints with the parliament's approval. The president also appoints and dismisses state prosecutors and judges, has the right to issue edicts having the force of law and to dissolve the parliament if it twice passes a no-confidence vote in the government.

Legislative branch consists of a unicameral *Majlis*, National Assembly. The Assembly has 50 members who are popularly elected

to serve five-year terms but have to be pre-approved by the president.

The constitution also established two other representative bodies which are absent in other Central Asian states: *Halq Maslahaty*, People's Council, and *Jashulilar Maslakhati*, the Council of Elders. People's Council serves as the highest representative body of "popular power." It unites the three branches of power, the president, cabinet, Majlis deputies, supreme court and supreme economic court judges, 60 directly elected representatives from the regions, and representatives of scholarly and cultural organizations. The Council members serve for five years without compensation, meeting once a year to advise the president, establish broad domestic and foreign policy guidelines, consider constitutional amendments, ratify treaties, etc. It is considered to be the highest body in the country. The Council of Elders was introduced to reflect the tradition of reliance of the advice of the elders in matters of importance. In accordance with the constitution the president has to consult with the council before making domestic and foreign policy decisions. The council is also charged with the task of selecting presidential candidates. Both councils are chaired by the president.

Judicial branch is represented by the Supreme Court. Its 22 judges are appointed by the president. Their function is limited to issues related to the judicial codex, Supreme Law, and to review constitutionality of laws.

Turkmenistan's politics has been dominated by Saparmurat Niyazov, former first secretary of the Communist Party of Turkmenistan, who was first elected to the office of the president in 1990. His term in office was extended by the 1994 referendum. In 1999, the People's Council proclaimed him president for life. Niyazov's official name (title) is "President Saparmurat Turkmenbashi Niyazov the Great." The title reflects the cult of personality of Niyazov which not only resembles, but exceeds that of Joseph Stalin. In the early post-independence period, the official rationale for Niyazov's cult of personality was the need to prevent the disintegration of the country by uniting the Turkmen tribes around a single leader. Niyazov's book, "Ruhnama," published in 2000, is presented by the official propaganda as an equivalent, if not a substitute for, the Quran.

Despite constitutional provisions allowing formation of political parties and NGOs, Turkmenistan remains the only CIS country with one-party system. Only the former communist party, which changed its name to Democratic Party of Turkmenistan, is allowed to exist. All opposition activity is banned. The ease with which Niyazov installed an authoritarian regime can be explained by the fact that during perestroika no significant opposition parties or groups emerged in Turkmenistan. All decision-making is concentrated in the hands of Niyazov. At the same time, Turkmenbashi has approved his Ten Year Democratization Plan in accordance with which the country would gradually move toward a multiparty system by 2008 and 2009 at which point the Majlis would be given greater powers.

Until recently Niyazov has also been successful in preventing the rise of opposition in the ranks of the government elites whom he reshuffles and imprisons regularly. A string of defections in the late 2001-early 2002 of a number of prominent politicians, most notably Boris Shikhmuradov, a former deputy prime minister and foreign minister, may signal that Niyazov's inner circle is getting increasingly weary of the autocrat's erratic rule.

**Civil society.** There is practically no civil society in Turkmenistan. The population is completely disenfranchised. Despite constitutional guarantees and legal framework, authorities discourage the formation of NGOs. Only a handful of NGOs which deal with environmental and women's issues are allowed to function, albeit without official registration. Niyazov abolished even the Soviet-era civil society organizations such as unions of journalists, film-makers, etc. He closed down the Academy of Sciences of Turkmenistan with its branch of research institutes as well as ballet, opera, theater, circus, and philharmonic as unnecessary and incompatible with the Turkmen traditions.

There is no freedom of press and no independent media in Turkmenistan. President Niyazov is listed as the founder of all newspapers published in the country. All media outlets promote Niyazov's cult of personality and refrain from reporting any social or political problems with the exception of Niyazov's criticism and dressing down the officials.

**Economy.** Turkmenistan is largely a desert country with intensive agriculture in irrigated oases and huge gas and oil resources estimated to be between 2.86 and 7 trillion cubic meters for gas and 6 billion barrels for oil. It has the fifth largest gas reserves in the world and is the world's tenth largest producer of cotton. Other natural resources include coal, sulfur, and salt. Because of the hydrocarbons the industrial sector is the leading in GDP composition with 43 percent, agriculture accounts for 25 percent, and services 32 percent although only 19 percent of the labor force is employed in industry, while 44 percent work in the agricultural

and 37 percent in the service sectors.

Turkmenistan introduced its national currency, *manat*, in November 1993. Market economic reforms were to start in January 1994 after the adoption of the “Ten Years of Prosperity” program which in part envisaged the privatization of state owned enterprises as well as collective and state farms. In practice, little has been accomplished and the size of the private sector in Turkmenistan is only 25 percent. Evaluation of economic performance is further complicated by lack of reliable data: Even the state budget is not published. Whatever economic data is published gives a positive spin on the performance of the national economy.

There has been no privatization of land. Only 3 hectares can be leased to farmers subject to promises of good behavior. One-half of Turkmenistan’s irrigated land is planted in cotton. Other agricultural products include grain and livestock.

Oil and gas industry also remain under state control. Contracts in those industries are awarded arbitrarily by Niyazov and the revenues go to the Presidential Fund, which for all practical purposes have replaced the country’s treasury. Development of the energy sector is also hampered by the lack of export pipelines and an agreement on the Caspian Sea delimitation. The former has resulted in Turkmenistan’s dependence on exporting its gas through Russia, which has restricted the market to Ukraine and South Caucasus states, often resulting in prolonged episodes of payment arrears. The latter led to disputes with Azerbaijan over a number of offshore oil fields and, as a consequence, lack of commitment to the Baku-Ceyhan pipeline project. Both sectors remain in need restructuring and need FDI to do that. So far, Turkmenistan has attracted about \$782 million in FDI. Despite legislative measures taken to encourage foreign investment, Turkmenistan is considered to have unfavorable investment climate.

Turkmenistan’s economy is heavily dependent on the energy sector as about two-thirds of its GDP and its budget come from the gas industry and gas exports. Gas makes 33 percent of the country’s export commodities, followed by oil (30 percent), cotton fiber (18 percent), and textiles (8 percent). Foreign trade partners include Ukraine, Iran, Turkey, Russia, Kazakhstan, Tajikistan, and Azerbaijan.

**Social problems.** The country is plagued by the same set of social problems as the rest of the region. Tribal rivalries continue to be a factor despite Niyazov’s attempts at nation-building. Corruption is widespread, but lack of any data has prevented Transparency International from ranking Turkmenistan. The country has the lowest life expectancy in the CIS which is 61 years. 58 percent of the population lives below the poverty line. The country faces severe environmental problems related to desertification, Caspian Sea pollution, salination, and the contamination of soil and groundwater with agricultural chemicals and pesticides. Turkmenistan is used as a transshipment point for illicit drugs from Southwest Asia to Russia and Western Europe. In general, Turkmenistan remains the most closed country in Central Asia which obscures the true picture of the problems the population may face.

**Foreign policy.** After independence Turkmenistan became a member of international organizations, including the UN, CIS, OSCE, IMF, World Bank, etc. In December 1995, the UN recognized Turkmenistan as a country with the status of positive neutrality. This reflected President Niyazov’s preference for the development of bilateral relations with all countries, above all former Soviet republics, and non-interference in external conflicts. Thus from the start of the civil war in Tajikistan, Ashgabat refused to join Russia and other Central Asian states in their peace-keeping operation in Tajikistan, though it hosted 3 rounds of UN-mediated intra-Tajik peace talks. In keeping with its neutrality status, it refused to join the CIS Collective Security Treaty, the Central Asian Economic Community, or any other multilateral regional organizations, including efforts to deal with the Aral Sea problem, which has often caused frustration on the part of Turkmenistan’s neighbors.

Nonetheless, Ashgabat has sought to maintain friendly relations with all of its neighbors, including Iran and the Taliban regime in Afghanistan. It tried, but failed, to mediate between various Afghan factions. Turkmenistan continued with its policy of neutrality after the start of the US-led anti-terrorist campaign in Afghanistan in October 2001. In general, Niyazov’s authoritarian policies and his growing cult of personality have led to the isolation of the country. Turkmenistani citizens are discouraged from traveling abroad as are foreigners from coming to Turkmenistan. In June 2000, Niyazov prohibited citizens from holding foreign accounts and established the Council for the Supervision of Foreigners.

Turkmenistan’s armed forces consist of an army (14,500 troops) and an air force (3,000). Presently, its navy is part of the Caspian Sea Flotilla, which is based in Astrakhan (Russia) and is under the joint command of Russia, Kazakhstan, and Turkmenistan. In accordance with the Turkmen-Russian-Turkish agreement, Turkmenistan’s armed forces operate under joint Turkmen-Russian command with the participation of Turkish military advisors until they are developed.

### Issues and questions for further exploration

- Why Turkmenistan is the only Central Asian state where political opposition is virtually nonexistent?
- What can explain the rise of President Niyazov's cult of personality?
- Has the policy of "positive neutrality" contributed to Turkmenistan's isolation?

## UZBEKISTAN

**Government and politics.** The Republic of Uzbekistan, a country slightly larger than California, proclaimed independence of 1 September 1991. In accordance with the constitution adopted in December 1992, it is a presidential republic with separation of powers. Administratively it is divided into 12 provinces, *wiloyatlar*, 1 autonomous republic of Qaraqalpaqstón, and capital city of Tashkent.

The president is elected to a five-year term and can serve two consecutive terms. He is given extensive powers, including the right to appoint and dismiss the prime minister and members of the cabinet (with the parliamentary approval), establish and dissolve ministries, appoint and dismiss judges of all levels, provincial governors and local administrators, initiate legislation and return laws passed by parliament for reconsideration, etc. The president enjoys personal immunity and at the end of his term he becomes a lifetime member of the Constitutional Court.

Legislative branch is represented by the unicameral *Oliy Majlis*, Supreme Assembly. It has 250 members who are elected by popular vote to serve five-year terms and meet two times a year unless there is a need for a special session. The assembly has the right to initiate and pass legislation as well as execute policies through committee work.

Though nominally separate, judicial branch is subordinate to the Ministry of Justice, i.e., to the executive branch. It consists of the Supreme Court, Constitutional Court, and High Economic Court. Judges and procurators of all levels are appointed and dismissed by the president. To observe impartiality they are prohibited from being members of a political party.

Since independence Uzbekistan has had only one president – Islam Karimov who was first elected in March 1990, reelected in 1992, had his power extended by a referendum in 1995, and reelected again in January 2000. In the early 1990s, the country briefly enjoyed a period of political liberalization and pluralism. Opposition political parties such as Birlik, Erk, and Islamic Rebirth Party were allowed to exist even though unregistered officially. In 1992, Muhammad Solykh, opposition’s candidate, ran in presidential elections against Karimov and got about 14 percent of the votes amidst allegations that the elections were rigged.

Developments in neighboring Tajikistan, where the Tajik opposition, a coalition of secular and Islamist groups and parties, became a formidable force, and where the civil war broke out at the end of 1992, led Karimov to crack down on both secular and religious opposition in Uzbekistan. The president of Uzbekistan was afraid that the success of the UTO would serve as a stimulus for the Uzbek opposition and further embolden it in its actions. Also he was concerned about the possibility of irredentism on the part of the Tajik minority against the backdrop of the calls in Tajikistan to “return” Tajik-populated cities of Bukhara and Samarqand to

Tajikistan. All opposition activity and that of ethnic minorities was banned and only loyal political parties are allowed to exist. Currently, there are five registered political parties all of which have representation in the National Assembly elected in December 1999: People's Democratic Party (NDP, 48 seats), Fidokorlar (Self-Sacrificers) National Democratic Party (34 seats), Fatherland Progress Party (20 seats), Adolat (Justice) Social Democratic Party (11 seats), National Rebirth Party (MTP, 10 seats). Until 1996, Islam Karimov was a member of the NDP, former communists, when he withdrew claiming that the president represents the entire population of the country. Presidential and parliamentary elections in Uzbekistan are largely ceremonial rather than genuinely competitive. During the 2000 presidential elections even Karimov's "opponent," Abdulhafiz Jalolov of the NDP, publicly stated that he would vote the incumbent.

Karimov's strong-arm tactics have backfired as the opposition, especially Islamic, became more radical. In February 1999, bombs went off in different parts of Tashkent which the government variably attributed to the Islamists and secular opposition groups. The bombings which killed 16 and injured more than 100 people led to a further crackdown on the opposition and a number of death sentences and long prison sentences in absentia to prominent opposition. International human rights and lawyers groups estimate that there are at least 7,000 political prisoners in Uzbekistan.

In 1999, to tighten control over the polity, Islam Karimov initiated the institutionalization of the *mahalla* (neighborhood) committees as a part of his administrative structure. Mahallas, which historically formed around a mosque and provided social services to its members, were given the powers of self-government yet as part of the central government structure. Mahalla committee members receive state salaries.

Bombings in Tashkent coincided with the emergence, if were not were the first act, of the *Islamic Movement of Uzbekistan (IMU)*. It was first formed in 1995 under the name of the Islamic Revival Movement of Uzbekistan which apparently reflected the fact that many of its leaders and members were fighting within the ranks of the Islamic Revival Movement of Tajikistan. With the end of the Tajik civil war, they branched off into a separate group based in Afghanistan which advocated the overthrow of the existing regime in Tashkent by declaring jihad against it and establishing an Islamic state in Uzbekistan. In 1999 and 2000, it attempted and partially succeeded in penetrating Uzbekistan through Kyrgyzstan and Tajikistan, taking hostages, including foreigners, and engaging in skirmishes with the Kyrgyz and Uzbek army. In 2000, the State Department declared it a terrorist organization. The IMU was reported to have established ties with and enjoy support of Osama bin Laden. After the launch of the anti-terrorist campaign in Afghanistan in October 2001, the IMU was reported to have been dealt a severe blow and its leader, Juma Namangani, killed.

Another important Islamist group active in Uzbekistan is *Hizbi Tahrir* (HT, Party of Liberation) which is a branch of the party established in the Middle East in 1950s. Its goal is wider than that of the IMU: HT wants to establish the restoration of an Islamic Caliphate in Central Asia and beyond. The other difference is that HT hopes to achieve its goal through nonviolent means.

This may be increasingly impossible and unappealing to HT and other opposition groups as the Karimov government shows no signs of opening up political space in the country. Continued emphasis on repression and domination of politics by one man coupled with deteriorating living standards make political future of Uzbekistan -- as well as of Kazakhstan and Turkmenistan where the situation is similar -- inherently unstable.

**Civil society.** According to the Ministry of Justice of Uzbekistan, there are more than 2,300 registered NGOs in the country. There is practically no distinction between government-approved and government-organized NGOs. Only those public organizations that are deemed to have no political agenda are allowed to function. Those primarily include women's and environmental groups, WWII veterans, etc.

According to the Ministry of Justice, there are about 25 TV and 2 radio stations, 480 newspapers, and 140 journals Uzbekistan. All broadcast media are subject to annual re-registration. Though there is a number of independent electronic and print media outlets, in general media is under direct government control. Despite the exercise of self-censorship independent media outlets are often closed. In accordance with government regulations all TV and radio programming is taped. Criticism of President Islam Karimov is a criminal offense as is the distribution of newspapers published by opposition parties in exile.

**Economy.** At independence, Uzbekistan had a more diversified economy than other Central Asian states with the exception of Kazakhstan yet still predominantly agricultural. Today, agricultural sector accounts for 28 percent of GDP and 44 percent of the

labor force, industry 21 and 20 percent, and services 51 and 36 percent correspondingly. Uzbekistan is rich in natural resources which include natural gas, petroleum, coal, gold, uranium, silver, copper, lead and zinc, tungsten, molybdenum, etc. Uzbekistan is the third largest producer of cotton.

After independence, Uzbekistan continues to pursue statist economic policy, advocating a measured transition to market economy ostensibly to preserve social stability which, the government argues, will be upset by mass privatization and price deregulation. It thus maintains tight controls on production and prices and government subsidies on many items, including municipal utilities, and generally upholds Soviet-era welfare system. It refuses to introduce full convertibility of its national currency, *sum* (launched in June 1994), despite a number of agreements reached with the IMF which made the latter to withdraw from the country. Only in July 2002, the government took what is expected to be the first step toward full convertibility when it abolished multiple exchange rates. According to official statistics, the size of the private sector is 45 percent of GDP. Yet this and other economic figures are viewed by international financial institutions as unreliable. Besides, government regulations define as privatized even those enterprises and businesses which have been transformed into joint stock companies where the government is the only shareholder.

Tashkent Production Association named after V. Chkalov

Major industries include textiles, food processing, machine building, metallurgy, natural gas, and chemicals. Only 10 percent of its territory is suitable for cultivation. Agricultural sector is focused on producing cotton, vegetables, fruits, grain, and livestock breeding. Export commodities include cotton, gold, natural gas, mineral fertilizers, ferrous metals, textiles, food products, and automobiles. Uzbekistan's major export partners are Russia (13 percent), Switzerland, and UK (10 percent each). The country imports machinery and equipment, chemicals, metals, and foodstuffs. Major imports partners are Russia (14 percent), South Korea (14 percent), Germany (11 percent), and US (8 percent). A growing debt burden, persistent inflation, and a poor business climate led to stagnant growth in 2000, with little improvement predicted for 2001.

The official economic policy also stresses self-sufficiency which has limited country's integration into the world economy. In this sense, its response to the negative external conditions generated by the Asian and Russian financial crises was typical: Export and currency controls were further tightened. Steps taken toward introducing some elements and institutions of market economy have not prevented the country from running high inflation (50 percent in 2000). Despite the adoption of legislation favorable to foreign investment, the country failed to attract any significant FDI which in 2000 stood at \$73 million and reflected a steady decline since 1997 when it peaked at \$167 million. A growing debt burden, persistent inflation, ageing infrastructure, and a poor business

climate have led to stagnant growth in the recent years.

**Social problems.** Uzbekistan faces the same social problems as other countries of the region: Increase in drug trafficking, corruption (the country ranks 79 out of 90 states), crime, poverty (the government does not publish data on the percentage of the population below poverty line); declining life expectancy, quality of social and health services.

It also experiences severe environmental problems caused by the desiccation of the Aral Sea which has resulted in growing concentrations of chemical pesticides and natural salts which are blown from the increasingly exposed lake bed and contribute to desertification. Water pollution from industrial wastes and the heavy use of fertilizers and pesticides have caused severe health problems and a sharp drop in life expectancy, especially in the Aral Sea region.

**Foreign policy.** Since independence Uzbekistan has pursued a foreign policy aimed at protecting and strengthening its independence predicated in part on the perceived threat of the resurgent Russian neo-imperialism of the early 1990s. It sought to establish close relations with the west yet those relations have been strained due to Islam Karimov's authoritarian policies and human rights abuses except when the Uzbek president showed signs of change. Economic relations with the west have also not lived up to earlier expectations as the preservation of the essentially command economic system failed to attract FDI. Many of foreign entrepreneurs and businesses who came to Uzbekistan after 1991 subsequently left the country.

At the same time, Karimov succeeded in developing strong military relations with the United States following then-Secretary of Defense William Perry's visit in 1995 preceded by Uzbekistan's joining PfP in 1994. Uzbekistan has arguably the most capable armed forces in the region. At independence, Tashkent was the headquarters of the Soviet Turkestan Military District and hosted 3 Soviet army military schools. That plus the military infrastructure provided a good foundation for the building of the armed forces of independent Uzbekistan. At present, they consist of a 44,000-strong army and an air force of 15,000. In addition, there are paramilitary units of 18,000-20,000 personnel, including a 700-strong National Guard which protects the president.

US-Uzbek military relations proved very important in 2001 when Uzbekistan promptly made available its Khanabad base on the Uzbek-Afghan border for the US military engaged in anti-terrorist operation in Afghanistan.

Uzbekistan's relations with Russia have not been steady though Moscow continues to be the country's major trade partner. Concerns about neo-imperialist rhetoric on the part of Russian elites have encouraged Tashkent to pursue a more independent foreign policy and avoid any multilateral arrangements of political or security nature within the CIS. In 1995, Tashkent dramatically changed its policy toward Tajikistan, where it initially supported President Rahmonov government against the UTO, to favor, to the displeasure of Moscow, the return of the opposition and its inclusion in the Tajik government. For this reason Uzbekistan also withdrew from the CIS Collective Security Treaty in 1999. At the same time, Karimov signed a 2002 left the GUUAM (acronym for Georgia, Ukraine, Uzbekistan, Azerbaijan, and Moldova), which has been considered by many in the west as a counterbalance to the Russia-dominated CIS. He has also joined the Russia- and China-led Shanghai Cooperation Organization in 2001 (check), which is acquiring a more pronounced political and security character.

Uzbekistan's relations with its Central Asian neighbors have been strained due to the perceived strife for regional domination shared by other Central Asians vis-a-vis the Uzbeks. As mentioned earlier, attempts at regional economic integration and security cooperation within the framework of Central Asian Economic Community failed. Relations with the neighbors further deteriorated after Uzbekistan mined its borders, following the IMU raids, which resulted in a number of civil casualties.

Relations with Turkey have been marred since the late 1990s when Tashkent accused Ankara that it harbors Uzbek opposition leaders, resulting in closure of Turkish colleges and the withdrawal of Uzbek students enrolled in Turkish universities. Relations with Iran have remained cool because of the suspicions that Teheran's agenda includes support for Uzbek Islamists. Instead, Tashkent opted for close relations with Israel seeing them as another element in developing close relations with the United States and the west.

### **Issues and questions for further exploration**

- How does the government of Uzbekistan explain slow pace of economic and political reforms in the country?

- The impact of the Afghan and Tajik politics on Uzbekistan's policy toward Uzbek Islamists and the country's foreign policy.
- In what ways do history, geography, and demographic influence Uzbekistan's regional policy ?

# COTE D'IVOIRE SELF STUDY GUIDE

GEORGE P. SHULTZ  
NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The **Self-Study Guide: Cote d'Ivoire** is intended to provide U.S. government personnel in the foreign affairs community with an overview of important Cote d'Ivoire issues related to history, geography, politics, religion, culture, economics, and international relations. The guide merely serves as an introduction and should be used as a self-study resource. Cote d'Ivoire is far too complex and diverse a society to be covered in any depth using only the text in this guide. Therefore, the reader is encouraged to explore the questions and issues introduced using the Internet site guide and articles and books listed in the bibliography. Most of the bibliographic material can be found either on the Internet or in Foreign Service Institute or Main State Libraries.

Gilbert J. Donahue (Foreign Service Officer Retired; U.S. Embassy Abidjan 1974-76) prepared this Guide. The views expressed in this guide are those of the author and attributable sources and do not

necessarily reflect official policy or position of the Department of State or the National Foreign Affairs Training Center

This publication is for official educational and nonprofit use only.

First Edition  
July 2002

## COTE D'IVOIRE TIMELINE

11 <sup>th</sup> to 14 <sup>th</sup> c.	Early Islamic empires in northern part of present-day Cote d'Ivoire
15 <sup>th</sup> c.	Coastal exploration by Europeans led by Portuguese Trade in gold, ivory, pepper and slaves
17 <sup>th</sup> to 18 <sup>th</sup> c.	Europeans conducted considerable trade in ivory
1637	French missionaries landed in Cote d'Ivoire
1842	First permanent French settlements in Cote d'Ivoire in Assinie and Grand Bassam
1889	French Protectorate of Cote d'Ivoire established
1893	France made Cote d'Ivoire a colony
1895	Cote d'Ivoire became part of French West Africa Colonial leaders put down many revolts by indigenous people and established French rule throughout country's interior
1896 to 1916	French recruited Ivoirians for World War I service France established <i>Indigenat</i> legal system and imposed requirement for <i>corvee</i> labor
1940 to 1945	Administration loyal to Free French under General de Gaulle
1944	Felix Houphouet-Boigny founded <i>Syndicat Agricole Africain</i> (African Agricultural Union - SAA)

1945	Houphouet-Boigny founded the Ivorian Democratic Party ( <i>Parti Democratique de la Cote d'Ivoire</i> - PDCI)
October 1945	First countrywide elections held in Cote d'Ivoire for delegates for French Constituent Assembly; Felix Houphouet-Boigny chosen as Ivorian African delegate; he successfully sponsored bill to end <i>corvee</i> labor and thereby became a hero throughout French West Africa
1946	France formed French Union, granted African members free speech, free association, and free assembly, and eliminated separate legal codes and forced labor requirement; Cote d'Ivoire became an Overseas Territory of France
1947	Houphouet-Boigny and other African leaders founded African Democratic Rally ( <i>Rassemblement Democratique Africain</i> - RDA)
1958	Cote d'Ivoire became a self-governing republic in the French Community
April 1959	Cote d'Ivoire adopted its first constitution; PDCI won all seats in National Assembly; Houphouet-Boigny became prime minister
1959	Houphouet-Boigny and counterparts in other French West African countries formed the Council of the Entente, aimed at spurring region's economic development
August 1960	Cote d'Ivoire proclaimed independence from France
October 1960	Houphouet-Boigny was elected country's first president
October 1990	Houphouet-Boigny legalized other political parties and permitted first multiparty elections for president and national assembly; first opposition newspaper permitted; Houphouet-Boigny elected to seventh and last term as president; a constitutional amendment provided that the leader of the National Assembly would become president on the death or resignation of the sitting president
December 1993	Houphouet-Boigny died; Henri Konan Bedie succeeded him as president
October 1995	Opposition parties boycotted the presidential election; Henri Konan Bedie won re-election with 96% of the vote; opposition claimed sham
October 1999	Opposition candidate Alassane Ouattara was legally barred from running for president
December 1999	President Bedie was overthrown by a coup headed by General Robert Guei; Bedie fled to Togo, then France
January 2000	General Guei suspended the country's foreign debt payments
July 2000	New constitution was approved for the Second Republic
October 2000	Alassane Ouattara was barred from running for president; the race was between General Guei and Laurent Gbagbo
November 2000	General Guei claimed election win, then fled the country following massive demonstrations; contender Gbagbo declared himself winner by default

December 2000

Alassane Ouattara was excluded from running for the National Assembly; his party members then boycotted the election

March 2001

Municipal elections were dominated by Ouattara's RDR party and PDCI; Gbagbo's FPI party did not campaign heavily in those elections

# INTRODUCTION

Those who have followed African developments closely have witnessed over the past twenty years the steady decline of Cote d'Ivoire, once a shining light of political stability and the pinnacle of economic development in West Africa. As this study attempts to demonstrate, factors that underlay the country's success were also instrumental in its downfall. The experience of Cote d'Ivoire provides lessons for both political and economic management in the process of African development. However, foreign policy and the international markets – especially those for commodities and finance – have also played important roles in bringing Cote d'Ivoire's economic plight.

Cote d'Ivoire is a country of many contradictions. It has been described as “the Jewel of West Africa.” Although its people provided some of the most sustained resistance to French colonialism, it became one of France's most loyal clients. Considered by many as a model of democracy and political stability, in reality, Cote d'Ivoire's autocratic government failed to develop democratic institutions and harshly dealt with its opposition. While projecting the image of a modern market economy, the country actually followed a dirigist, plutocratic “state capitalism” economic model. Although Africans were nominally in charge, they operated at the behest of their European (mostly French) backers. Thus, Cote d'Ivoire became a prime example of neo-colonialism.

A treacherous coast and difficult terrain so greatly impeded the country's exploration by Europeans that its inhabitants remained fairly isolated and autonomous until about one hundred years ago. As the French colonizers pushed inland from the coast they increasingly imposed the hard hand of autocratic rule on the people, forcing them to provide free labor for public works as well as private plantations, and subjecting the indigenous people to a separate legal and penal system. Post-World War II France under President de Gaulle provided social, political and economic improvements, greater autonomy, and eventually, independence.

Truly the father of his country and a rare French-African cultural hybrid, Felix Houphouet-Boigny founded the country's first political party in the 1940s and became its most prominent politician. His opposition to French discriminatory policies made him a champion for the colonized throughout French

West Africa. His subsequent willingness to cooperate with the French gave him the opportunity to represent Africa in France itself. In 1960, Houphouet-Boigny led his country into a relatively prosperous independence that was the envy of its neighbors. During its first twenty years of independence, Cote d'Ivoire remained an island of stability in a region rife with military coups, civil war and economic distress. The country's economic prosperity and growth were the necessary underpinnings of its stability. Another factor, however, was the iron hand of President Houphouet-Boigny, who permitted only one political party and increasingly denied civil rights and liberties lest a rival to his power emerge. He also sowed the seeds of the present anti-foreign bias by encouraging the immigration of farm workers from neighboring countries.

The system began to crack in the late 1970s, as official corruption became more noticeable and was less well tolerated, and economic growth and prosperity were affected by a downturn in the international markets for the commodities on which the economy depends. By the late 1980s, Cote d'Ivoire was suffering balance of payments difficulties as well as mounting interest payments for its foreign debt. The international financial institutions called for political liberalization. President Houphouet-Boigny, unwilling to yield power to a successor, and determined to run for a seventh term in 1990, nevertheless did finally allow other political parties to form. When he died in office in 1993, his successor, Henri Konan Bedie, was untested politically. Although popularly elected as president in 1995, Bedie's overt favoritism toward his Baoule ethnic group caused resentment among other groups. His anti-foreign *Ivoirite* policies alienated the economically important one-third of the population with a "foreign" background. Moreover, the Bedie government badly managed the economy and brought the country close to bankruptcy in 1999. His fatal mistake was to delay paying salaries to the military, thereby giving the military a pretext to take political action against him.

In an unprecedented development for Cote d'Ivoire, the old government was swept away by a nearly bloodless coup on Christmas Eve 1999. Retired Chief of the Army General Robert Guei was asked to head a government of national salvation. After assuring the international community he would return the country to democracy, Guei presided over a national convention to draft a new constitution and called for new elections, in which he announced himself a candidate. Although Guei claimed victory in a rigged election that was boycotted by several political parties, he was forced by popular sentiment to flee the country. As a result, Laurent Gbagbo, head of the Ivorian Popular Front and a longtime opponent of President Houphouet-Boigny and his Democratic Party of Cote d'Ivoire, claimed victory and became president, despite calls for a rerun. Gbagbo quickly joined ranks with other "nationalist" parties to embrace President Bedie's *Ivoirite* policies and freeze out of the political process opponents from the Muslim north who had a "foreign" background. Chief among these is former prime minister and opposition leader Alassane Ouattara. The challenges President Gbagbo faces include stabilizing the political situation, restoring economic growth, managing international political and economic affairs, and, if possible, introducing real democracy, while at the same time keeping a watchful eye on the Ivorian military. This is a tall order.

Thus far, Cote d'Ivoire's leaders have maintained a neocolonial dependence on France and blocked effective reforms. It remains to be seen whether the country has now embarked on a new era of its independence in which it is better placed to become self-sustaining as well as politically inclusive.

# GEOGRAPHY AND CLIMATE

## General Setting and Climate

The Republique de Cote d'Ivoire, or Ivory Coast, has the largest population and strongest economy of the West African Monetary Union (all of which are francophone countries). The head of state is Laurent Gbagbo, and the head of government (prime minister) is Affi N'Guessan. The government is a constitutional democracy. The official language is French, and Dioula is widely spoken.

With a land area of 124,503 sq. mi., Cote d'Ivoire is a bit larger than and roughly the same square shape as New Mexico. Cote d'Ivoire is bordered by Liberia and Guinea on the west, Mali and Burkina Faso on the north, Ghana on the east, and the Atlantic Ocean, Gulf of Guinea to the south. The country has a tropical hot and humid climate in the south, and is warm and somewhat less humid in the north. The southern region has two wet seasons (March-July and October-November). Cote d'Ivoire is divided into three broad belts running east to west, beginning in the south with coastal lagoons, then rainforest and savannah, and finally highlands in the west and northwest. Mt. Nimba, located near Man and the highest point in the country, rises to 5,750 ft.

The country's political and administrative capital is Yamoussoukro (pop. 120,000), located in the center of the country. The city was the birthplace of the country's first president, Felix Houphouet-Boigny, who designated it as the national capital in March 1983. The largest city and major commercial port is Abidjan, the former capital and chief economic center (pop. 3.5 million). About 25 percent of the country's population lives in or near Abidjan. Abidjan was established as the French administrative center in the 1930s. Composed of four peninsulas converging at a key intersection of lagoons, Abidjan was ideally suited as a trading and transportation center. The French-built Vridi Canal in 1951 made Abidjan the country's premier port and center of industry as well as administration. The U.S. Embassy remains in Abidjan. Other important cities are Bouake (396,000) and Daloa (138,000).

## Physical Geography

The Lagoon region in the south is protected by a strip of sandbars separating the brackish lagoon water from the ocean. The sandbars, as well as treacherous ocean currents, made it difficult for European ships to anchor and thus delayed European settlement of the region until the mid-1800s. During the early 20<sup>th</sup> century, the Tadio, Ebrie and Aby lagoons were connected by canals to further economic development. The flat land to the north of the lagoons is extensively cultivated in tropical plantation crops for export, mostly to Europe, including pineapples and ornamental flowers. There are also large plantations of oil palms and rubber trees.

The rainforest region originally covered one-third of the country. Since the 1970s, however, it has shrunk considerably due to overexploitation of tropical timber resources. The forest cover of 12.5 million

hectares in the 1960s has dwindled to only 3 million ha. now, plus 1.6 million ha. in the national reserves. The only primary forest left is in the Tai reserve in southwestern Cote d'Ivoire and in the Banco protected area near Abidjan. The forest region reaches down to the coast in the country's rocky western region near the port of San Pedro. The new capital Yamoussoukro, located northwest of Abidjan and just southeast of Lake Koussou, is on the northern edge of the forest zone.

The northern two-thirds of the country is a vast and mostly treeless savanna grassland. Since a series of droughts beginning in the 1970s, there has been increasing desertification in this region. The key industries are cattle raising and cotton production. The western area rises toward the Guinea highlands and the eastern area near Ghana has many small hills. The main city of the region is Bouake, the country's second largest, located north of Yamoussoukro. The Komoe National Park is located in the northeastern quadrant of the Savanna.

The country's four major rivers are, from west to east, Cavally, Sassandra, Bandama, and Komoe. All of them run from north to south and only their lower reaches near the coast are navigable. The Bandama was dammed in 1972 creating Lake Kossou, northwest of Yamoussoukro. The dam produces a considerable amount of the country's electricity.

## Economic Geography

Cote d'Ivoire had a gross domestic product (GDP) of \$22 billion in the early 1990s. The GDP per capita was \$588 in 2000. That year, the country had real growth of -2.3%, a balance of trade of \$676 million, foreign debt of \$14.02 billion, and foreign direct investment of \$134 million.

The country's chief exports are cocoa (36% of the total in value terms), coffee, tropical woods, petroleum, cotton, bananas, pineapples, palm oil, and fish. Cote d'Ivoire's natural resources include crude oil, diamonds, manganese, iron ore, cobalt, bauxite, and copper. Land use is as follows: 9% arable land; 4% permanent crops; 9% meadows and pastures; 26% forest and woodland; 52% other. The country has eight national parks.

In addition to the main port of Abidjan-Port Bouet, the other principal seaports are San Pedro (for export of coffee and cocoa), Sassandra (export of tropical timber), and Grand Bassam (for export of plantation production).

Cote d'Ivoire has 46,600 km of highways and a 410-mile-long railroad from Abidjan to the border of Burkina Faso (the rail line continues on to Ouagadougou). The country's extensive inland waterways are economically important, including 980 km of navigable rivers, canals, and coastal lagoons. The country has one of the densest and best-maintained highway systems in West Africa, including 43,000 miles, 8% of which are paved.

Cote d'Ivoire's merchant marine has seven ships totaling 71,945 GRT/90,648 DWT: 5 cargo, 1 petroleum, oils, and lubricants (POL) tanker, and one chemical tanker. There are 42 airports in service

and the country's civil aviation fleet has 12 transport aircraft.

## Self-Study Questions for Further Exploration

- How did Cote d'Ivoire's relative isolation from the rest of the continent, as well as its geographic protection from European exploration, affect its culture and history?
- How have the different geographic and climatic zones affected economic development in those areas?
- What are some of Cote d'Ivoire's advantages vis-à-vis its neighbors?
- How has Cote d'Ivoire been able to make use of its inland waterways for regional and national development?
- To what extent does the country's terrain still impede Cote d'Ivoire's development?
- How has Cote d'Ivoire been affected by the exploitation of its forest resources and the southward growth of the Sahara desert?

# HISTORY

## Early History

Although little is known of Cote d'Ivoire's history prior to the 14<sup>th</sup> century, recently discovered Neolithic

artifacts indicate evidence of prehistoric civilization. For most of the country's history, its southern forests provided an effective barrier to large-scale development. As a result, Ivorian ethnic groups were isolated and maintained little contact with nearby peoples. In Roman times, Cote d'Ivoire was on the southern extremity of a caravan route going south from the Mediterranean Sea across the Sahara to the northern edge of the rainforest. Trade was conducted in salt, slaves, gold and other items.

After the collapse of the Roman Empire, the country found itself on the fringes of several Islamic kingdoms that flourished south of the Sahara, just touching Cote d'Ivoire's savannah area north of the dense forest near the coast. Under the 11<sup>th</sup> century Sudanic empires, which developed several well-known centers of Islamic learning, Arab traders from North Africa visited Cote d'Ivoire to spread Islam. The northwest corner of Cote d'Ivoire near the city of Odienne was part of the Islamic Empire of Mali during the 11<sup>th</sup> to 14<sup>th</sup> centuries. There was little penetration of Islam in the forest areas, however. Subsistence agriculture developed in clearings in the forest belt and in the savannah grasslands. Ivorian peoples also hunted and grazed livestock.

Extensive European involvement in Cote d'Ivoire was delayed until the modern era due to the country's rugged, harborless coastline. Immediately prior to the period of European exploration, there were five indigenous states in Cote d'Ivoire. The Muslim Empire of Kong (Juula-Senoufo peoples) was founded in the 18<sup>th</sup> century in the north-central region. Settlers fleeing the Asante confederation in present-day Ghana founded the Abron kingdom of Jaman in the 17<sup>th</sup> century. That kingdom was located south of Bondoukou, became a major center of commerce and Islam, and produced widely regarded Quranic scholars. The Baoule kingdom was established in the mid-18<sup>th</sup> century in the central part of the country near Sakasso. Members of this kingdom strongly resisted French domination in the early 20<sup>th</sup> century. The Agni kingdoms located in eastern Cote d'Ivoire still resist the imposition of outside authority. The kingdoms of Indenie and Sanwi attempted to secede from independent Cote d'Ivoire as recently as 1969.

## European Exploration

European coastal exploration began in the 15<sup>th</sup> century under the Portuguese. They and other Europeans initially traded for gold, ivory, and pepper, and beginning in the 16<sup>th</sup> century, slaves. Cote d'Ivoire's lack of good harbors caused European traders mostly to bypass it. From the 17<sup>th</sup> century until the beginning of the 18<sup>th</sup> century, Europeans maintained profitable trade in ivory, for which the region was named. The first French missionaries landed in the country in 1637 at Assinie on the southeastern coast. Although they established a mission there, they did not remain permanently. French ships continued to visit Cote d'Ivoire and they returned to Assinie in 1701 with Prince Aniaba, an Ivorian who had been taken to France for education by the French navy. At that time, French missionaries and soldiers established a settlement, but it also failed to last, due to climate and disease. In fact, during the 1700s, the Europeans referred to this area of Africa as the "bad man's coast." The difficulty that Europeans had in surviving the climatic conditions delayed further settlement by one hundred years.

French Admiral Bouet met with African leaders in the area during the 1830s to conclude trading treaties to ensure supplies of gold, ivory, rubber and palm oil. In the 1840s, French soldiers negotiated treaties

with the indigenous peoples to establish fortified trading posts on the coast. Thus, the first permanent French settlements in Cote d'Ivoire were military forts. They were eventually replaced by trading posts at Assinie in 1842 and Grand Bassam in 1843. Grand Bassam subsequently became the colony's first capital. The French gradually pushed inland from the coast. During the 1840s-1860s, a welter of treaties provided for French sovereignty within the military posts, as well as trading privileges, in exchange for fees, or *coutumes*, paid yearly to local rulers. During this period, palm oil became an important export.

## French Settlement

The French presence in the region was partly geostrategic, i.e., to counter the influence of Britain. After the French defeat in the Franco-Prussian War (1871), France withdrew its military garrisons from its West African settlements and turned the posts over to resident merchants. In 1878, Grand Bassam was turned over to Arthur Verdier, a Marseille shipper. Verdier cleared forested areas and established cocoa and coffee plantations, acquiring the plants from Ghana. During that period, the first mahogany logs were exported from Cote d'Ivoire. Lieutenant Louis-Gustave Binger was appointed French Resident in Cote d'Ivoire and in 1882 he founded the Kong Company to manage a coffee plantation.

At the 1885 Berlin Conference, European countries agreed to recognize each other's colonies in the rest of the world. On the coastline of Africa, only permanent European settlements would be recognized. In 1890, this rule was extended to the interior, as well. To ensure the validity of its claims, in 1886 France reassumed direct control of its West African trading posts and pushed into interior regions. The consequent search for gold and other trade goods caused French opportunists to penetrate as far as the northern area of Cote d'Ivoire. In 1887, Binger conducted a two-year exploration of the interior, the first to link Senegal with Cote d'Ivoire. During that same period, Marcel Treich-Laplène negotiated agreements with local rulers to extend French influence beyond the coast. French troops also built forts and posts throughout the territory. In 1889, Britain recognized French sovereignty over the territory. France and Liberia established a border agreement in 1892, and in 1893 France and Britain agreed on the border with Ghana. The country's northern border was not set until 1947.

In 1893, Cote d'Ivoire formally became a French colony, Binger became the first governor, and the capital was located at Grand-Bassam. In 1895, Cote d'Ivoire became part of French West Africa under the overall supervision of the French Governor General in Senegal. At that time French West Africa was comprised of Cote d'Ivoire, Dahomey (Benin), Guinea, Niger, French Sudan (Mali), Upper Volta (Burkina Faso), and Mauritania. The individual colonies were divided into districts called circles, each of which was headed by a commandant who governed with relative autonomy. As advisors, the commandant chose a council of notables, including local rulers with his own appointees. During this period, the French imposed the *Indigenat*, a separate system of law, providing for summary judgments, and applying only to the indigenous peoples, not the French. This system, widely hated throughout the French colonial domain, was finally abolished in 1946.

Before 1900, Samory Toure, a Malinke leader from Guinea, led resistance to French dominion. During 1879-98, he ruled a Muslim empire including much of West Africa. In northern Cote d'Ivoire, Samory

ruled the area between Odienne and Bouna, and had his capital at Dabakala, where he kept a well-trained army. The Senoufo and Baoule people supported him against the French. In 1898, the French captured Samory and exiled him to Gabon. Thereafter, the French rapidly consolidated their position in Cote d'Ivoire.

## French Rule

Due to a yellow fever epidemic in Grand-Bassam, the French moved the capital to Bingerville in 1900. Since Paris required colonies to be self-supporting in administration and defense, the French imposed a head tax to fund public works. The indigenous people resisted the tax, viewing it as a humiliating reversal of the previous French agreement to pay a *coutume* to local rulers.

During 1902-1916, there were many revolts against French rule by the forest peoples. In 1906, Governor Louis-Gabriel Angoulvant began the forceful conquest of the entire territory, which included harsh campaigns against the Baoule, Dan and Dida peoples. On January 8, 1910, the Abe Revolt took place in the region near Agboville, to the northwest of Abidjan and near the new rail line to Upper Volta (Burkina Faso). The people tore up the rails and killed everyone who was not an Abe. Governor Angoulvant carried out brutal manhunts throughout the forest in search of the perpetrators. The Abe people conducted guerrilla war for several years before they were subdued. By 1916, Cote d'Ivoire was firmly under French control. France compelled many Africans to fight by its side in various campaigns during World War I.

To improve the colony's economic base, the French government sold land concessions to planters for private plantations. While the concessions were conceived primarily to lure white settlers to the colony, some Africans, mainly colonial administrators, also purchased land. During this period, the French government established state mines, opened lumber operations, and built transportation and other infrastructure. The French also introduced cash crops for export, including cocoa, coffee and millet. The opportunities for Africans to participate in these enterprises gave rise to a wealthy planter class. The rich, better-educated Ivorians adopted French culture and became the vanguard of a new African elite. They were exempt from military and labor service and became accepted as cultural and social equals by the French. Thus, the elites recognized the economic advantages of submission to French rule.

French rule was direct, systematic and authoritarian. Colonial administrators engaged in divide and rule policies, choosing local leaders and even regrouping villages. The French systematically destroyed traditional power relationships among ethnic groups. The colony's inhabitants were considered French subjects with no political rights and a separate system of law applied to them. All adult males had to perform *corvee* labor. That is, they were forced to work ten days for no pay each year, either on French-owned plantations or public works projects. Forced labor was the most hated aspect of French rule. After 1930, a small group of westernized Ivorians was allowed to apply for French citizenship; however, French colonial policies continued to favor the Europeans with higher prices for their produce, access to protected markets, and the provision of free labor under the forced labor system. These differences fueled African resentment. In fact, it has been said that Cote d'Ivoire had the bloodiest, most turbulent colonial

history of any country in West Africa.

Because Cote d'Ivoire's indigenous population was not numerous enough to provide labor for the rapidly growing French-owned plantations, the colonial administrators recruited farm workers from Upper Volta, and they annexed part of that territory in 1932 to ensure the steady supply of laborers. Meanwhile, social changes also resulted from the influx of Catholic missionaries, who established churches and primary schools.

## World War II - Promises of Autonomy

In 1934, the French moved the capital to Abidjan near the central coast, a location that was more accessible to interior towns and which offered greater potential for industrial development. In 1936, the new socialist government in France positively addressed many Ivorian concerns, including the desire to raise the minimum wage, and reduce the *corvee* labor time commitment. The Socialist Party of Cote d'Ivoire was founded at that time. The Vichy Government forced the colonies to proclaim loyalty either to Vichy or the Free French. Since most Ivorians favored the Free French after General Charles de Gaulle took control, the Vichy Government punished the colony by extending the *corvee*, conscripting laborers for the military, and forcing farmers to donate food to the military. This was a period of economic exploitation, overt racism, and hardship for Africans.

France's precipitous fall to Germany early in the war gave rise to the Ivorian nationalist movement, and many intellectuals were attracted to Marxist ideas. In 1943, Communist Study Groups organized branches in West Africa, including Abidjan. In response to African planters' complaints about French discrimination, Felix Houphouet-Boigny founded the African Agricultural Union (*Syndicat Agricole Africain* – SAA) in 1944 to seek an end of the *corvee* and improve the situation for African planters and farmers. By 1945, the SAA had 20,000 members from all ethnic groups and areas of Cote d'Ivoire. The SAA provided the core for the Democratic Party of Cote d'Ivoire (*Parti Democratique de Cote d'Ivoire*-PDCI), which was founded after the war by Felix Houphouet-Boigny.

The 1944 Brazzaville Conference, General de Gaulle's meeting with high-ranking colonial officials, recommended significant political, economic and social reforms in an effort to appease the educated African elite. De Gaulle promised that after the war, the colonies would be represented in the French Constituent Assembly. He agreed to draw up a new constitution that would provide the colonies greater autonomy as well as their own elected legislative assemblies. The conference decided that France would respect local customs, abolish the *Indigenat* (1945), adopt a new penal code, end *corvee* labor conscription (1946), improve health and education, and employ more Africans in colonial administration. After the war, the French government fulfilled few of these promises.

## Houphouet-Boigny and Limited Self-Government

In October 1945, the first countrywide elections were held in Cote d'Ivoire to choose two delegates for the French Constituent Assembly. Felix Houphouet-Boigny was chosen as the Ivorian African delegate.

By successfully sponsoring a bill to end *corvee*, he became famous throughout French West Africa. France also granted citizenship to all people in its colonies. However, citizenship rights were not defined to enable most of the indigenous population to exercise the full civil rights of French people. In 1946, Houphouet-Boigny supported local self-government and the political equality of the French and Africans in the French Constituent Assembly. Later that year, he founded the *Parti Democratique de la Cote d'Ivoire* (PDCI), and then was reelected as a delegate to the Second Constituent Assembly, which established the French Union. France thereby granted African members free speech, free association, and free assembly, and eliminated the separate legal codes and the forced labor requirement. French African colonies were designated overseas territories. However, the French Government retained all legislative and executive powers. Cote d'Ivoire remained under the administration of the French Ministry of Overseas Departments and Territories.

In 1947, Houphouet-Boigny and other African leaders founded the African Democratic Rally (*Rassemblement Democratique Africain* - RDA), which called for full equality with the French and was therefore viewed as a threat by the colonial administration. Cote d'Ivoire became a center of recruitment for the militant African party. The French also saw the PDCI as a threat, since it opposed the conservative and discriminatory colonial government installed in 1947. Houphouet-Boigny escaped imprisonment only due to his parliamentary immunity. The PDCI organized strikes, and boycotts of French goods and violence erupted in 1949. Because the French Government considered the PDCI a threat to its rule, colonial administrators arrested many leaders and circumscribed the party's activities. Therefore, by 1951, the PDCI was near collapse. Houphouet-Boigny decided to sever relations with the Communist Party, which resulted in a new phase of French political concessions and economic cooperation.

In 1956, under the Fourth Republic, France backed away from the concept of integrating its overseas territories with continental France. Instead, Paris sought to provide autonomy for domestic policy, with France solely responsible for foreign affairs, defense, higher education, and economic assistance. The French Assembly passed an amendment to the constitution called the *loi-cadre*, largely as a result of Houphouet-Boigny's careful maneuvering, to provide all adults the right to vote for representatives to local and district councils and to empower each territorial assembly to make laws. One of President de Gaulle's first acts was to offer the African colonies a choice to become independent or continue as part of Overseas France under the *loi-cadre*.

## Process of Independence

The 1958 Fifth Republic Constitution provided for free association of autonomous republics within the French Community. Designed to facilitate the evolution of internal self-government, community status would keep the African states firmly French. Nonetheless, Cote d'Ivoire supported the Community, arguing this was a pragmatic course in view of the lack of trained personnel to run an independent government. In that year, President Charles de Gaulle visited Abidjan and welcomed the Ivorian decision. In September 1958, Cote d'Ivoire voted to become a self-governing republic within the French Community. In April 1959, Cote d'Ivoire adopted its first constitution and the PDCI won all the seats in the National Assembly. Houphouet-Boigny also became prime minister. In 1959, Houphouet-Boigny

and his counterparts in other French West African countries formed the Council of the Entente, in opposition to the pro-independence Mali Federation of Guinea and Mali. After the independence of Guinea, however, the French Community was considered “dead” and there was nothing to keep its remaining members from declaring independence on their own.

Therefore, on August 7, 1960, with Paris’ blessing, Cote d’Ivoire followed Senegal and Mali in declaring independence. Cote d’Ivoire enacted its first constitution as an independent country on October 31, 1960, and elected Houphouet-Boigny as president. The country maintained its traditionally close relations with France and kept many French advisors in government positions. The French helped build the Ivorian defense force, based on the French colonial marine infantry. The Ivorian constitution established a democratic government with a presidential system, separation of powers and independent judiciary. The PDCI won all National Assembly seats in the first election and, within a short period, the government became authoritarian under the single party rule of the PDCI. No other political parties were allowed. Houphouet-Boigny limited the powers of the National Assembly and tailored election laws in the PDCI’s favor. He established a highly personalized regime, controlling government through the use of patronage and effectively co-opting his political enemies. At the time, Philippe Yace, Secretary General of PDCI and president of the National Assembly, was the second most powerful leader in the country.

## **Independence – The First Twenty Years**

During the first twenty years of independence, Houphouet-Boigny consolidated party and government power. He ensured strict loyalty by party members and military officers. To his credit, he sought to balance the composition in government of ethnic groups, regional affinities, political leanings, and economic power bases, and the president made effective use of state and party patronage. Representatives of each important ethnic group held cabinet posts, but the president himself directly controlled the police and military.

During the 1960s, dissenters against government policy were routinely rounded up and arrested. Houphouet-Boigny pardoned them if they admitted guilt; others were forced into military service. That way, Cote d’Ivoire could claim it had no political prisoners. Some of those arrested chose exile, either to neighboring countries or to France. Houphouet-Boigny justified this policy by arguing that political stability was a requirement for economic prosperity. In 1962, radical PDCI members sought to kidnap the president in order to press for political concessions. This attempt failed, however, and the radicals were arrested and secretly tried. There was another plot by leftists, politicians and northerners in 1963. Also in the 1960s, Kragbe Gnagbe, a Bete, organized an alternative political party based near Gagnoa. The government responded by arresting many organizers. As a reaction, the Bete people carried out a bloody revolt against the government in 1970 and Gnagbe was banished to his village. This did not squash the tradition of Bete criticism inside the government, as well as vocal opposition to Houphouet-Boigny’s rule. By 1971, most government opponents were released from prison.

The 1960s and 1970s witnessed the large-scale migration of Africans from nearby countries seeking economic opportunity. Many of these economic migrants were Mossi people from Burkina Faso. They

provided cheap labor for Cote d'Ivoire's coffee and cocoa plantations. However, they also sparked resentment on the part of Ivorian ethnic groups. There were demonstrations in 1969 in Abidjan by unsuccessful job seekers from the countryside. In addition, Ivorian intellectuals and elites chafed at the continued employment of French officials in ministries and industries. Many Ivorians saw the president as favoring Europeans and resisting Ivorianization of the economy. University students demonstrated against the PDCI. Foreign-trained students sought a more socialist approach toward economic development and opposed the government's "neo-colonial" policies. That year, there was a student-government confrontation at Abidjan University organized by the Movement of Ivorian Primary and Secondary School Students (*Mouvement des Etudiants et Eleves de Cote d'Ivoire* – MEECI). The government cracked down hard.

During the 1970s, Houphouet-Boigny refined his style and sought out younger intellectuals and trained technocrats for high level posts. He also campaigned for political support from the middle and lower classes. He conducted a series of public dialogues in the mid-1970s to discuss current issues, including government reforms and business concerns about corruption. However, the dialogues did not result in substantial reform. The president also maintained useful contacts with traditional tribal leaders, after putting down nascent rebellions by ethnic groups in 1969 and 1970. Houphouet-Boigny relied on strong management, pragmatic organization, French political and economic backing, and foreign investment and technology. His style worked. This was a period of economic growth and optimism.

However, the 1970s were a period of political instability in neighboring West African countries, where military forces routinely toppled leaders. There was even an alleged military coup attempt in Cote d'Ivoire in 1973. The president harshly dealt with the military instigators, but recognizing their grievances, subsequently gave the military greater scope in national affairs and Ivorianized its leadership. Following his fourth election in 1975 with 100% of the votes, Houphouet-Boigny reshuffled the cabinet in an effort to root out members fingered for corruption or disloyalty, and he appointed military officers to civil positions in the capital and prefectures.

Nevertheless, just as Houphouet-Boigny attracted more highly skilled people to the government, he provided PDCI sinecure positions to his old guard of loyalists. The PDCI did not embrace democratic procedures, but instead sought to sustain the economically privileged political class. Both party members and government officials engaged in nepotism and corruption, and there were poorly defined and overlapping responsibilities amongst them. Houphouet-Boigny finally allowed the open election of party officials in the late 1970s.

## Houphouet-Boigny's Last Twenty Years

By 1980, Cote d'Ivoire had enjoyed twenty years of solid economic growth and political stability. In every way, it was a standout in the region. However, corruption by the wealthy and politically powerful was very apparent. The officials' penchant for lining their own pockets rapidly became a political liability. An economic downturn in the early 1980s caused by the fall of international commodity prices led to economic hardship for most people, caused a rise in urban drug abuse and crime, and served as a

rallying cry for political agitation.

In 1980, Houphouet-Boigny ran unopposed for president and was elected to a fifth term. In addition to corruption, presidential succession became an issue. At the seventh party congress of the PDCI, he abolished the post of secretary general and Houphouet-Boigny himself was installed as the party's executive chairman. Philippe Yace lost favor with the president and was booted out. A constitutional amendment established the post of vice president to succeed the president in event of a mid-term vacancy. However, the office of vice president was not filled until after the 1985 election. Following election to his sixth term that year, Houphouet-Boigny again amended the constitution and eliminated the office of vice president. Houphouet-Boigny's advanced age, coupled with public concern about succession, remained political issues to the end of his life. He was seen as irreplaceable – he had made himself so. But he was not infallible and there were cracks in the country's economic miracle.

Although Houphouet-Boigny's personal position was unassailable, the decade of the 1980s saw rising social discontent that was increasingly manifest in demonstrations against the government. In 1983, 4,000 teachers organized by the National Union of Secondary School Teachers of Cote d'Ivoire (*Syndicat National des Enseignants du Secondaire de Cote d'Ivoire* – SYNESCI), the only union independent of the PDCI, stuck to voice basic opposition to both presidential and cabinet mismanagement of the economy. The president dissolved the union, closed all secondary schools, and sent home 200,000 students.

Anti-government and anti-PDCI political tracts circulated in Abidjan. In an effort to head off further embarrassing disclosures, PDCI leaders made excursions to the countryside to conduct public dialogues and discredit their detractors. By the time of the PDCI's 1985 eighth party congress, a full-blown crime wave affected Abidjan and other cities, a large influx of immigrants from Burkina Faso and Ghana swamped the country and, growing in notoriety, the Ivorian criminal underworld conducted ever more brazen attacks against French and Lebanese business interests. Thus, the 1980s were a period of uncertainty and instability which reflected an increasingly authoritarian government out of touch with the electorate.

Economic mismanagement, and volatile world markets for the country's commodity exports, eventually led to severe balance of payments problems and the decision to default on foreign debt in 1987. That year, Houphouet-Boigny stopped coffee and cocoa exports in order to stabilize the market. Because the policy was poorly implemented and enforced, however, it had no impact on the market but it did cause the government to lose much prestige and support from agricultural interests.

In 1987, Robert Gbai Tagro established the *Parti Republicain de la Cote d'Ivoire*. This was neither recognized nor banned, but its congress was crushed and the leaders were detained. In 1988, there was a plot against Houphouet-Boigny within the PDCI by Dioula businessmen from Touba. The government dealt swiftly with the plotters.

As the 1990s began, many groups demonstrated against government policies and in favor of greater democracy, especially legalization of other political parties besides the PDCI. Prior to the 1990 elections, the World Bank pressed for the free formation of political parties. In response, Houphouet-Boigny

legalized nine political parties and permitted the publication of one opposition newspaper. He also appointed Alassane Ouattara, a Muslim from northern Cote d'Ivoire and an economist with experience in international banking, to work with the IMF on a plan for economic reform. Late 1990 saw the country's first multiparty elections, in which candidates from 26 political parties. Houphouet-Boigny received 85% of the vote for a seventh term. Laurent Gbagbo, leader of the Ivorian Popular Front Party (PFI), was the chief opposition candidate. The PFI won one seat in the National Assembly, which for the first time included twelve opposition members to the PDCI's 163-seat majority. The opposition claimed the presidential election had been rigged.

In November 1990, the National Assembly enacted a new constitutional amendment to clarify presidential succession: the leader of the National Assembly would become president on the death or resignation of the sitting president. At the time, Henri Konan Bedie, a technocrat and fellow Baoule, was National Assembly leader and therefore widely regarded as Houphouet-Boigny's likely successor. Another constitutional amendment provided for the appointment of a prime minister. That position went to Alassane Ouattara.

In May 1991, Ivorian troops violently disrupted a student meeting at Abidjan University, reportedly killing several students, but the government denied there had been any deaths. In 1992, the investigating committee implicated high ranking military officers in the abuses, but President Houphouet-Boigny refused to take disciplinary action against them. A march by 20,000 people demanded that the government step down. During the entire five-month period Houphouet-Boigny remained in Europe.

## **The post-Houphouet-Boigny Era**

The Houphouet-Boigny era ended with his death in December 1993. Following a short power struggle for succession between Bedie and Ouattara, France, the United States, and most other countries backed Bedie's claim of ascendancy. Bedie did not have his predecessor's charisma or political skills. Continued economic hardship during the 1990s and pressure for a greater voice in political issues continued to erode his popular support. Before 1995, the PDCI maintained power despite the multiparty presidential and legislative elections of 1990. The government routinely denied opposition parties the right to meet in public places, citing possible violence if demonstrations got out of hand. The 1992 Anti-vandalism Law held organizers of demonstrations and marches liable for any property damage resulting from those activities. Abandoning Houphouet-Boigny's policy of ethnic balance, Bedie increasingly favored fellow Baoules for government and party positions, thereby sowing the seeds for inter-ethnic rivalry.

In October 1995, many opposition parties boycotted the presidential election, claiming the government had improperly amended the electoral code in 1994 to bar potential rivals from running. The opposition objected to the denial of the candidacy of Alassane Ouattara, head of the Democratic Rally of Republicans (RDR), on the grounds that Ouattara's parents were not Ivorian born. Ouattara was considered Bedie's greatest potential rival, and political enemy. The RDR also levied complaints about the composition of voters' lists and restrictions on demonstrations. The government banned marches and

sit-ins prior to the election, and opposition party members blocked access to polling stations and impeded delivery of election materials. The opposition's boycott was finally lifted after a government agreement with the opposition to revise the voting lists. The opposition parties grouped together under the Republican Front (FR) banner, but did not field coalition candidates for the election. In addition, there was ethnic violence between the Bete (ethnic group of Laurent Gbagbo) and the Baoule (Bedie's group) peoples. Foreign observers considered the voting a relatively smooth process, but Amnesty International complained about violations of right of assembly and free expression during the campaign, as well as arrests and convictions of some students – the Federation of Students and School Pupils (FESCI, which was banned in 1991) – as well as journalists.

Favorable economic conditions in the mid-1990s helped Bedie win the 1995 presidential election, and enabled his party, the PDCI, to win 80% of the seats in the National Assembly. Several Bedie-proposed constitutional amendments adopted by the National Assembly in 1998 were criticized by the opposition parties: an extension of the presidential mandate from five to seven years, authorization for the president to withhold election results during periods of unrest, and the establishment of a senate one-third of whose members would be named by the president. Meanwhile, economic conditions worsened and opposition voices became more strident. Some opposition leaders were imprisoned, and Bedie's campaign against Ouattara became more personal. A combination of political maneuvering and judicial decisions depicted Ouattara as a foreigner since his parents were not born in Cote d'Ivoire and thus again prohibited him from seeking the presidency.

Popular discontent with the government came to a head on Christmas Eve 1999, when General Robert Guei conducted a successful and relatively bloodless coup against President Bedie. However, the coup did not put an end to political uncertainty. Two military mutinies and attempted assassinations followed the coup. General Guei spent his first six months consolidating political power, assuring the international community of his support for a return to democratic government, and dealing with the country's dire financial straits, which included defaulting on its foreign debt. In July 2000, voters approved a new constitution for the Second Republic, which institutionalized nationality requirements for presidential candidates. The new constitution effectively ended Ouattara's presidential ambitions.

In the October 2000 presidential election, Ouattara was constitutionally barred from running and the PDCI candidate lost in the first round. The electoral battle was between General Guei, who had hoped for PDCI support, and Laurent Gbagbo, the "historic opponent" of the PDCI. Both Ouattara's RDR and the PDCI, which accounted for two-thirds of the electorate, boycotted the elections. There were many incidents of military and police action against demonstrators, including major human rights abuses. For example, fifty-seven bodies were found dumped in a mass grave in Yopougon, a suburb of Abidjan. Although the electoral commission gave Guei the victory, he fled the country after massive demonstrations. Laurent Gbagbo proclaimed himself president by default, and refused to rerun the election, despite questions about its legitimacy. Since Ouattara was excluded from running, the RDR party boycotted the election. Although only 33% of registered voters turned out, Gbagbo's FPI won 96 seats in the 225-seat Assembly, and was able to co-opt 22 independents; the PDCI won only 94 seats and became the opposition. Ouattara's RDR, however, continues to challenge the other parties. It dominated the March 2001 municipal elections, together with the PDCI. This was the RDR's first effort to campaign

nationwide. Gbagbo's FPI did not campaign heavily in those elections.

Since the election of 2000, President Gbagbo has attempted to consolidate his government and rebuild relations with the international community as well as with ethnic and regional groups. Although following the election he stressed national reconciliation, he has since taken a highly partisan approach. Gbagbo is dependent on a restive military and is preoccupied with remaining in power. Much of Gbagbo's future success will depend on strong economic growth and his ability to resolve political issues in a country increasingly divided along ethnic, regional and religious lines.

## Self-Study Questions for Further Exploration

- What factors in Cote d'Ivoire's early history continue to affect the country's current events?
- How did Cote d'Ivoire's social makeup – i.e., the proliferation and complexity of its ethnic groups – affect its response to European colonialism?
- How did the early history of international trade and the establishment of agriculture-based plantations affect the country's economic and political development?
- To what extent did the French approach to administering its colony influence the governing methods of independent Cote d'Ivoire?
- What is the relationship between the French creation of an indigenous moneyed elite and the current social and economic cleavage in Ivorian society?
- How did the importation of farm labor from Burkina Faso sow the seeds for the xenophobia of the 1980s and 1990s?
- Do Ivorians now have more or fewer civil rights than they enjoyed on the eve of independence from France?

# MAP OF COTE D'VOIRE'S ETHNIC GROUPS

## POPULATION AND CULTURE

### Population

Cote d'Ivoire's total population is 15,980,950 (2000). This is a considerable increase from the 5.4 million in 1970 and represents a 3.8% annual growth rate. Ivorian life expectancy is 55 years, relatively high for Africa. Infant mortality has been declining.

## Ethnic Makeup

Unlike many African countries with a small number of contending ethnic groups, Cote d'Ivoire has more than sixty. They include the following: Baoule (15%), Senoufo (10%), Bete (6%), Lagoon peoples (5%), Agni/Anyi (3%), and a Mande cluster including Juula, Bambara and Malinke (17%). The single largest ethnic group is the Baoule, which produced both President Felix Houphouet-Boigny and his successor, President Henri Konan Bedie. Current President Laurent Gbagbo is a Bete.

With many small ethnic groups, the country has been less prone to domination by a single group. President Houphouet-Boigny was careful to avoid favoring any one group and he ensured that positions of power were shared among all groups. His successors, especially President Bedie, were less scrupulous in avoiding ethnic favoritism, and indeed, ethnic background is increasingly important in politics.

In addition, about 30% of the country's inhabitants are non-Ivorian Africans or non-Africans, including Lebanese, Europeans, and Asians, as well as refugees and immigrants from neighboring African countries, especially Burkina Faso. Although non-Ivorians are economically critical to the country, since the early 1990s, they have faced social, political and economic discrimination.

## Religion

Islam, the second most widespread religion in Africa, has the most adherents in Cote d'Ivoire, claiming 60% of the inhabitants. Mosques predominate in towns and villages in the northern half of the country, and several traditional centers of Islamic learning and culture exist in the north.

About 20% of the inhabitants practice Christianity, including both Catholic and Protestant churches. The Catholic faith predominates among the middle class and urban southerners. The first permanent Roman Catholic mission was established in 1895, and the first African priest was ordained in 1934. In the 1890s, the church started seminaries and schools, and St. Paul's Cathedral was built in Abidjan. President Houphouet-Boigny personally funded the construction of the Our Lady of Peace basilica in Yamoussoukro, the second largest church in the world, which can fit 200,000 people within its confines. After its consecration by the Pope in 1990, the church became a pilgrimage destination for Catholics in Africa.

Harrism is the largest and oldest protestant denomination in the country. Founded in 1914 by Liberian William Harris, the church is an Africanized form of Protestantism that won a large following in part because there was no discrimination against women. This was important in Cote d'Ivoire due to the traditional role of matrilineal descent in Ivorian culture. Since the 1920s, Harrism has been recognized as a branch of Methodism. It is a syncretic faith that includes the protestant Bible, Catholic holidays, the Christian cross, the African chief's cane, long white robes, traditional dances, storytelling sermons, group prayer, and emphasis on miracle cures.

About 18% of the population adheres to indigenous religions, which include ancestral worship and

animism, the belief that everything in nature has a soul. Some ethnic groups believe in reincarnation. In addition to a supreme being, some groups worship lesser gods seeking their intervention for good health, harvests, or children. Ancestral spirits are understood to be members of the family or line who were transformed into spirits. They remain in contact with the living and help them in their present lives. Magic is common to many rituals and many Ivorians wear *grisgris*, or charms, to ward off evil spirits or to deter the action of evil spells cast by their enemies. In some parts of the country there are blends of Muslim, Christian and traditional forms of religion.

## Historical Migrations and Settlement

Cote d'Ivoire was already inhabited during the Late Stone Age (8000 to 4000 B.C.). Archeological evidence includes ax heads and pottery. There were many settlements along the Bandama River and near Abengourou, as well as Touba, Diva, Fedessedougou and Korhogo in the north. Based on the discovery of shells and pottery from burial mounds, the area near the lagoons was inhabited by 1500 B.C. About 2000 years ago, Cote d'Ivoire had already become a meeting point for many peoples of western Africa. By that time, there were settlements of the Mande, Voltaic, Kru and Akan-speaking peoples. Although the great West African kingdoms of Ghana, Mali and Songhai (A.D. 400-1600) were to the north, trade routes connected them with settlements on the edge of the rainforest in present-day Cote d'Ivoire.

Between 1300-1700, many of the country's current ethnic groups settled there, occupying Odienne, Katiola and Kong. In the 1500s, the Mande or Dioula people migrated from Mali into the northwest region inhabited by the Senoufo. Under them, Kong and Bondoukou became centers of Islam. Bondoukou eventually became the center of the Abron Kingdom, founded by settlers from Ghana. The Baoule and Agni people migrated from the Asante region of Ghana west into central Cote d'Ivoire in the 1700s. The Baoule founded Sakasso as their capital and the Agni established the kingdoms of Indenie and Sanwi, with Abengourou as the capital of Indiene. By 1600, about one million people lived in the present territory of Cote d'Ivoire.

## Description of Ethnic Groups

Here follow descriptions of the best-known Ivorian ethnic groups:

### Agni/Anyi

The Agni and Abron peoples are related to the Baoule. They still pay allegiance to their kings, have an elite status and have historically wielded considerable political power in Cote d'Ivoire. They are well known for their artwork in metal, wood and clay.

### Baoule

These people live in the central part of the country and their economy is based on plantation agriculture, producing coffee and cocoa. The group has a matrilineal social structure and includes many wealthy

planters and politicians.

## **Bete**

This group is the Baoule's chief rival. Primarily Christian, they raise cash crops, believe in the superiority of their culture, and have long supported anti-government movements.

## **Dan or Yacouba**

These people are known for their dances and masks, cloth, baskets and wooden sculptures. They worship a single god, Zran, who is the creator of the universe. Their traditional education consists of an initiation rite to induct its members into secret societies. The people believe that the *gor*, who is responsible for dispensing justice, can turn into animals to survey the forces of good and evil. The Dan masks are important symbols with smooth, delicate lines and sensual features. One famous dance is the stilt dance, in which the dancer stands 20 feet high. Another is the acrobatic and dangerous juggling dance, where the female dancer is tossed into the air and must avoid sharp knives when falling back to earth.

## **Dioula**

These people, who originated in Guinea, live in the far northwest. Their religion is a blend of Islam and traditional beliefs. The Dioula are subsistence farmers, growing rice, millet and peanuts, and raising goats, sheep, poultry, and some cattle. They have a patrilineal society and their villages are grouped around men with the same clan name. Their headmen are also imams or religious leaders.

## **Kru**

These people, located on the southwestern coast, were traditionally fishermen, but they are rapidly becoming assimilated into the mainstream of Ivorian urban society. Like the Bete and Guere, the Kru, all inhabitants of the west central rainforest, originally migrated from present-day Liberia.

## **Koulango**

These people in northeastern Cote d'Ivoire are related to the Lobi and farm and raise cattle. Their main crops are yams, corn, peanuts, cotton and watermelons. They also raise goats, sheep and cattle.

## **Lagoon Peoples**

Prominent among the various groups that inhabit the lagoon area are the Ebrie and the Abidji.

## **Lobi**

These people live east of the Senoufo. They are a proud people known as excellent archers. The Lobi

women have ornamental plates that pierce their lips.

## Senoufo

Living in the northern savanna, these are among the oldest ethnic groups in Cote d'Ivoire. They are known for their woodcarving, masks, and hand-painted Korhogo fabrics. Their crops include yams, rice, peanuts, and millet. Culturally, the village is an extended family. The Senoufo's cultural capital is Korhogo, a city that dates from the 13<sup>th</sup> century. They have secret associations to prepare boys for adulthood. The training takes place in a sacred forest and can last the entire lifetime. The dance of the leopard men is performed when the boys return from the initiation.

## Non-Ivorians

For much of the 20<sup>th</sup> century, French and Ivorian government policies encouraged economic migration from nearby areas, especially Upper Volta, now known as Burkina Faso, northeast of Cote d'Ivoire. Most of those who took advantage of this opportunity were members of the Mossi people. Originally, they were destined to work as farm laborers in Cote d'Ivoire's important and growing agricultural plantations. While most of the economic immigrants still live in rural areas, they form significant communities in Abidjan and other cities and towns.

A large group of Lebanese immigrants, numbering 60,000 – 180,000, are engaged in the country's wholesale and retail trade. Many of the Lebanese arrived in Cote d'Ivoire during the 1960s and 1970s to escape the Lebanon civil war.

A community of French expatriates, numbering 25,000- 30,000, has remained in Cote d'Ivoire since independence. This number includes French and Ivorian government officials and technicians, as well as business administrators and technical experts. Although many French left the country following the death of Houphouet-Boigny in 1993 and also after the 1999 coup, this remains an important group.

## Traditional Culture

Cote d'Ivoire's traditional culture includes much unique art – especially masks and textiles – which are among the best in West Africa. Baoule vessels and masks are realistic. The Dan people carve wooden spoons with two legs for serving rice. Their striking masks show a human face with a calm expression and eyehole slits reminiscent of Asian Buddhism. The Senoufo produce ornately carved wooden doors and highly stylized statues of hornbill figures. In many ethnic groups, the masks represent ancestor worship or man-animal connections. Some groups believe that masks and statues collect energy from the dead and serve as “spirit traps” to control spirits for the good of the living. Griots, or oral historians and traditional advisors, are important to the cultural traditions of many groups.

## Popular Culture

The Ivorian government owns two daily newspapers, two major radio stations, and the country's two broadcast television channels. Four of the country's radio stations are not under government control and Canal Horizon is a private television subscription service. The main print media are *Fraternite Matin*, the PDCI party newspaper, *Le Jour*, *La Nouvelle Republique*, and *La Voie*.

Cote d'Ivoire has produced several writers of note, including Bernard Dadie, whose novels in English translation include *Climbie* (1971), relating a childhood journey to France, *The Black Cloth*, and *The City Where No One Dies*.

Writer Ake Loba's novel *Kocoumbo* describes his suffering from being uprooted and a time spent in poverty in Paris. Amhadou Kourouma wrote *The Suns of Independence* about a village chief deposed after independence.

Music is an important medium of social expression. It became politicized during Bedie's presidency. Prominent during the 1999 Christmas Eve coup was a reggae beat song by Alpha Blondy entitled, "French Army, get out of here." Many Ivorian popular songs carry an anti-corruption, anti-authoritarian message. An example is a 1999 song called "Dictature," which accused President Bedie of "ruling by dividing, dividing by trickery."

## Holidays

Although Cote d'Ivoire obtained its independence on August 7, 1960, the country celebrates its national day on December 7. In addition, all major Christian holidays are official (Christmas, Easter, Ascension Day, Assumption Day, and All Saints Day), as well as New Year's Day. Muslim holidays are also observed in some regions.

## Self-Study Questions for Further Exploration

- What are some of the advantages and disadvantages for Cote d'Ivoire as a result of having a large number of diverse ethnic groups?
- In the years since independence, has Cote d'Ivoire developed a national culture?
- What is the role of the French language in the Ivorian culture?
- Has this been a help or a handicap?
- How have Cote d'Ivoire's various ethnic groups and traditional cultures contributed to the national culture?

## SOCIAL ISSUES

### Class Structure

Since early in the French colonial period, there has been a marked distinction in Ivorian society between the literate, French-speaking elite, and all other Ivorians. These differences – especially the mastery of the French language – have been a mark of, and prerequisite for, privilege. In traditional times, ethnic groups were ruled by customary heads who followed the matrilineal or patrilineal custom of the particular group. In many ethnic groups, land and other resources were held in common. While some traditional groups maintained formal kingdoms with hierarchical administration, many indigenous groups were governed solely at the village level and maintained only cultural, not political, links with neighboring groups. The advent of a more hierarchical social structure, therefore, parallels the imposition of colonial rule and the establishment of a market economy.

The post-independence period of rapid urbanization in the 1960s-1970s brought about considerable economic and social cleavage. This was apparent especially in cities and towns, and the capital Abidjan. The privileged, urban-dwelling, government officials and heads of private companies received a larger share of national wealth, and the gap widened between them and their compatriots. There was a strong desire to live in cities and towns since their inhabitants enjoyed better government services. There were fewer secondary schools or health clinics in the more distant parts of the country. Since the 1990s, the government has taken steps to improve the provision of government services beyond the main urban centers, and the middle class has been growing.

“Foreigners,” which includes both those people born outside Cote d’Ivoire, as well as those whose parents were not born in the country, fall outside Cote d’Ivoire’s traditional social structure. This group represents 30% of the country’s population, most of whom remain in rural areas performing agricultural work (usually on Ivorian plantations) or inhabit cities and towns where they perform less skilled jobs when employed. There are 3 million “residents of foreign nationality” and 2 million residents of foreign

origin, including migrant workers. Most non-Ivorian Africans face at least some form of social and legal discrimination. There have been attacks on foreigners in the south, something akin to ethnic pogroms, as well as anti-ethnic riots and political demonstrations.

Non-African foreigners, including French and Lebanese, are for the most part temporarily residing in Cote d'Ivoire, do not seek citizenship, and do not encounter active discrimination in Ivorian society. There have, however, been crimes against foreigners and their property, often politically motivated by those calling for Ivorianization of enterprises. Many Ivorians tend to see European residents as economic exploiters.

## Family Life

A widely shared characteristic among Cote d'Ivoire's many ethnic groups is respect for family, elderly people in general, and women. The Ivorians are hospitable people, polite, gentle and laid-back. Trust is very important in a relationship. Ivorians feel duty-bound to care for the extended family. This characteristic has seriously strained urban dwellers faced with an influx of relatives from the countryside. In social relations, men shake hands and women kiss each other three times on the cheek, starting with the left cheek. Ivorians consider it impolite to stare at people. While traditional clothing for women includes a head wrap, wearing one is a matter of individual choice in urban areas.

## Health and Welfare

Cote d'Ivoire has long had one of the most extensive public health programs in West Africa. In 1960, the average longevity was 39 years. By 1992, it had risen to 53 years for men and 57 years for women. Although there has been a drop in longevity during the past decade as government health budgets suffered, Ivorian longevity is still much higher than the norm for West Africa. Cote d'Ivoire's cities and towns have experienced overcrowding, income disparity has caused a stark contrast between the rich and the poor, and the government has been unable to provide sufficient clean water and sewage services to maintain a healthy environment. There is often malnutrition in rural areas, which also lack sealed water sources, a necessity to prevent parasitic disease. Malnutrition in northern Cote d'Ivoire is among the worst in all of Africa.

Health services, particularly in rural areas, remain inadequate. Common diseases afflicting Ivorians are malaria, hookworm, yaws, and onchocerciasis (river blindness). During the 1990s, AIDS became the leading cause of death. The country's economic difficulties have reduced health budgets, thereby limiting the government's efforts to control these diseases. River blindness, which is particular to West Africa, is caused by a parasite and spread by the black fly. Most of those affected are under 35 years old. Only 40% of households have access to water from a closed pipe which inhibits the spread of the disease. Access to clean water is as important as medicine.

## Education

The Ivorian educational system is based on the French model dating from the colonial era. Although public education is free through the university level, the government does not ensure that all children receive education, and it is common for families in rural areas to favor boys over girls. French is the language of instruction throughout the system at all levels and most textbooks are still published in France. There are also Catholic and Muslim schools.

Cote d'Ivoire had an enviable education system during the 1970s. However, due to the country's economic hardships since then, students are required to pay for their educational materials, teachers' salaries have been reduced, and new construction and expansion of schools have halted. Between 1980 and 1992, the percentage of school age children enrolled shrank from 79% to 69%. While 75% boys attend primary school, only 50% of girls do.

Children usually start primary school at age 7 or 8. The schools are often crowded and poorly staffed. Only 20% of primary school graduates continue to secondary schools in towns or cities. Families of students from rural areas must provide housing or pay for boarding at secondary schools. The graduates of secondary schools can become primary school teachers, attend vocational school, or go on to university. The National University of Cote d'Ivoire in Abidjan has 20,000 students, one-half of whom are from other African countries. Some Ivorians attend universities in France, Belgium, Canada and the United States. In the late 1990s, adult education programs emphasized basic literacy and gave priority to women. The goal was to increase the overall literacy rate to 85% by 2010, including 70% of Ivorian women. Currently, the literacy rate is 40%: 50% for males and 30% for females.

## Labor Force

Cote d'Ivoire has one of the highest birthrates in the world, 3.8%, and half of the population is under 16 years of age. More than half of the country's population lives in cities and towns. Cote d'Ivoire's labor force is estimated at 5,718,000, with over 85% engaged in agriculture and 11% wage earners. Organized labor accounts for about 20% the wage labor force. Unemployment is high in cities – as much as 25% -- and crime is high. About 15% of Abidjan's residents live in slums. The agricultural sector continues to employ much "foreign" labor. As a group, the 30% of the workforce that is foreign contributes more than half of the country's income.

## Self-Study Questions for Further Exploration

- Are social class, ethnic and gender differences becoming more or less important in Ivorian society?
- Are the differences between the village, on the one hand, and the city and town, on the other, growing or diminishing?
- What factors contribute to the high Ivorian birthrate?

- How do government efforts to improve provision of health services and education affect the country's ability to build a modern economy?
- How might the traditional social class structure have affected efforts to build a modern nation and alleviate poverty?
- How do Ivorians square their dislike for "foreigners" with their continuing economic reliance on this labor pool?

# ECONOMY

## Economic Policy

French colonial policy, which required economic self-sufficiency, helped make Cote d'Ivoire France's most prosperous territory in West Africa by the mid-1950s. The country's economic success was based on agriculture. Underlying the economy and making its performance possible was the French support for the country's currency, the C.F.A. (*Communauté Financière Africaine*) franc, which was convertible to the French franc (and now the Euro). The French government guaranteed the stability of the franc and established the Central Bank of the West African States to issue currency and control credit for the participating governments. The C.F.A. franc greatly facilitated commercial and financial activities among the countries of the region as well as their international trading partners. At the time of writing, the CFA franc traded at the rate of 791.87=\$1.00.

During the first twenty years of independence, Cote d'Ivoire was extolled as a shining economic success story based on its reliance on the "free market" system. At the time, Cote d'Ivoire was one of the few sub-Saharan countries not promoting socialism. And, its success was notable. In fact, Cote d'Ivoire's economy followed a dirigist, state-planned and invested economic model heavily reliant on French direction and assistance. There was considerable government control over the economy, via investment and tax policies. Cote d'Ivoire can be compared to Brazil, not only as an important producer of agricultural commodities, but also as an emergent industrial nation undergoing rapid social as well as economic transformation.

Cote d'Ivoire's agricultural sector provides 80-95% of the country's total exports and is the most important contributor to the Gross Domestic Product (GDP). However, the importance of this sector makes the economy heavily dependent on volatile international commodity markets. Since the 1980s, the country's large foreign debt has been hard to manage and led the government to privatize many state enterprises. Nevertheless, Cote d'Ivoire lacked sufficient investment to maintain its high economic growth rate. The economic downturn of the late 1990s demonstrated that the country's widespread prosperity lacked deep roots. Continued availability of foreign investment – especially from the private

sector – and adequate energy sources at stable prices are critical to the country's economic growth in the long-term.

## Economic Performance

Ivorian President Houphouet-Boigny's greatest achievement was to make Cote d'Ivoire the wealthiest country in West Africa (per capita). He believed that increasing the agricultural output would make up for the lack of other commercializable resources. Following independence in 1960, the country also spurred development of non-agricultural economic growth in the coastal area near Abidjan. This occurred largely through French private investment and by French technical experts. The government itself was also deeply involved in the economy, not only building infrastructure, but also setting up and managing para-statal enterprises. During the 1960s and 1970s, Ivorians flocked to Abidjan for jobs, thereby increasing the differences between the city and the village.

By end of the 1960s, Cote d'Ivoire had achieved a 50% increase in the production of coffee, cocoa and bananas, and a 200% increase in pineapple production. During the 1960s, the country had an average annual growth rate of 10-12 percent. The Ivorian Caisse de Stabilisation was established to regulate prices for agricultural commodities, to buffer Ivorian producers from the price volatility of the international market, and to make a profit for the government during the good times. The Ivorian government encouraged production of agricultural commodities for export, allowed prices to rise with inflation, welcomed the influx of cheap agricultural labor from neighboring countries, and coddled Ivorian farmers in what would eventually become a heavily debt-laden sector.

However, due to the country's overall high growth rate, agriculture accounted for only one-quarter of the economy by the early 1970s. The discovery of oil in the late 1970s helped diversify and stimulate the economy further. By 1980, per capita income had increased 61% and the country enjoyed a more even distribution of wealth than other African countries. Immigrants from various African countries continued to arrive in Cote d'Ivoire to work in agriculture. Even during this period of strong economic growth, urban populations experienced both unemployment and under-employment, and Europeans continued to dominate the top executive jobs. In addition, there were growing regional disparities.

In the mid-1970s, the government made a major effort to diversify the economy by expanding the production of palm oil, natural rubber, coconut oil, cotton, sugar, and tropical fruits. The Ivorian economic success sustained itself reasonably well through the 1970s, but the overall growth rate dropped precipitously in the following decade.

During the worldwide recession in the late 1970s and early 1980s, the country's economic growth slowed considerably, commodity prices fell internationally, and severe droughts continued to affect Ivorian farmers' yields. The 1973 Sahelian drought especially plagued northern farmers. Desertification resulting from the southward growth of the Sahara, which many believe was hastened by the over-exploitation of forest resources in the country's southern band, continues to worsen economic conditions in the north. The economic slowdown also resulted in rampant unemployment in cities where workers

had previously been lured by economic opportunities. In addition, the country suffered from hyperinflation between 1973 and 1985.

Although Cote d'Ivoire had a 7.2 percent annual growth rate during 1960-81, better than almost any other country during the same period, this was not the result of "economic liberalism." The government was involved in the economy as an owner and manager of agriculture and industry, and as a close regulator of the private sector as well. Since the 1980s, many of the government-invested industries were privatized. During this period, there were calls for the government to Ivorianize the public sector, as well, since many expatriates still held responsible positions in the government and the para-statal. At that time, international coffee and cocoa prices dropped and there were tensions between Ivorian and migrant farmers.

By the late 1980s, even more significant than the fall in international commodity prices was the drying up of foreign and domestic investment needed to sustain economic growth. Offshore petroleum production failed to meet expectations. Meanwhile, the government diverted scarce export income into non-productive investments, such as the immense Catholic basilica in Yamoussoukro. Substantial foreign borrowing increased the country's foreign debt burden and mortgaged its economic future.

In the 1980s, the Ivorian government undertook efforts to stockpile coffee and cocoa in hopes of firming the world market price. This plan failed and caught the government in a position of not being able to repay its foreign loans. The high level of foreign borrowing during the mid-1970s led to debt payment problems. In May 1987, Cote d'Ivoire suspended payments on its foreign debt and held re-scheduling negotiations with the Paris Club, the IMF and the London Club. In the late 1980s, the government undertook a structural adjustment program, putting in place austerity measures, as a result of IMF requirements, but a corruption scandal caused the cutoff of funds from the IMF and other lenders. Furthermore, a decision by the European Union to allow chocolate makers to use less cocoa butter resulted in the potential loss of \$1.5 billion in export revenue which caused a reduction in cocoa prices for producers by as much as 20%.

In the run-up to the 1990 election, Laurent Gbagbo's Ivorian Popular Front party called for ivorianizing the public sector and decentralizing municipal governments. President Houphouet-Boigny, however, took a hard line, dissolving unions, closing universities, and arresting the protesters. By the 1990s, there were resentments and frustrations among farmers in northern Cote d'Ivoire, who simultaneously faced the collapse of the world commodity markets, the worsening of their fields due to desertification, apparent corruption, and favoritism to the country's south. Frequent failures of electric power in Abidjan made it impossible for residents to ignore the serious problems in the economy, as well as the implications for continued government rule. The pro-democracy movements in neighboring West African countries, especially Mali and Ghana, also influenced Ivorians in considering changes to their system.

The International Monetary Fund (IMF) and World Bank forced Cote d'Ivoire to agree to a structural adjustment plan as a condition for assistance. The government had to reduce civil service salaries and grants to students. Many Ivorians targeted government officials' corruption as an issue and began to call for an end to one-party rule. Following the 1993 death of President Houphouet-Boigny and during the

first term of his successor, President Henri Konan Bedie, Cote d'Ivoire reached an agreement with the IMF/World Bank to forego 50% of its foreign debt and reschedule the rest as part of a new structural adjustment package, valued \$800 million. However, the Fund/Bank also required specific reforms: the end of state-mandated cocoa prices to farmers and the abolition of the state marketing board, the Caisse de Stabilisation.

The Ivorian economy experienced steady growth after 1995 due to French devaluation of the CFA franc, improved cocoa and coffee prices, growth in non-traditional primary exports, limited trade and banking liberalization, offshore oil and gas discoveries as well as external financing and debt rescheduling by multilateral lenders and France. In 1998, the government concluded an enhanced structural adjustment facility (ESAF) with the IMF that resulted in rescheduling a portion of the accumulated debt. The country's \$16 billion debt was thereby reduced to \$12 billion. Nonetheless, during 1999, approximately 38% of the budget was committed to debt servicing.

When the Ivorian military took over power in January 2000, it canceled Cote d'Ivoire's international debt payments. In March 2001, the World Bank declared Cote d'Ivoire to be in a non-payment status, making it ineligible for new loans and fresh disbursements from the already approved assistance programs. Although the country had achieved a 6% growth rate during 1995-98, by 1999 growth had dropped to 1.6%. In 2000, the country experienced negative growth for the first time, -2.4%.

Following the fall 2000 presidential elections and the establishment of President Laurent Gbagbo's new government in 2001, the World Bank/IMF determined the country had made satisfactory progress towards its economic goals. In March 2002, the Bank/Fund approved a new adjustment program. The Ivorian government recently completed a new Poverty Reduction Strategy Framework in preparation for further donor assistance. Foreign donors have generally agreed to provide broad-based assistance for the environment, especially forestry and national parks, as well as rural development, infrastructure and education. Sustainable growth over the long-term will require the development of a modern labor force, for which universal education is the key, as well as the upgrading of the organizational capabilities of institutions, and dealing conclusively with poverty. Government's ability meet these challenges is a key test of its effectiveness. Economic decisions made in the 1980s and 1990s, which very much limit the options of the current government leaders, continue to dog Cote d'Ivoire.

## Agriculture

Cote d'Ivoire's principal resource is its rich, well-watered soil. During the colonial period, especially between 1900-1930, the French established the country's plantation economy, based on coffee and cocoa, bananas and pineapples, which became the chief exports. Pre-independence, most large, commercial plantations were owned by French settlers and farmed by Ivorian *corvee* labor. Generally, Ivorian farmers found difficulty competing with French plantation owners, who received better prices and favorable trade treatment. During World War I, the French relied on Ivorians to produce more cocoa, cotton, rice and rubber destined for the war effort in Europe.

Since independence, Cote d'Ivoire has become the world's largest cocoa producer – one million tons a year, or 40% share of world market. The country is also the leading African producer of coffee -- 175,000 tons annually. The agricultural sector employs more than one-quarter of the population and there are 620,000 cocoa and coffee farmers. At least 20% of coffee, cocoa, rubber and palm oil products are processed in Cote d'Ivoire prior to export. Additional agricultural products are cotton, bananas, rubber, rice, sugar, pineapple, coconut, yams, cassava (which produces tapioca), okra, sweet potatoes, peppers, and plantain bananas. Livestock is restricted to goats and sheep as the incidence of the tsetse fly greatly restricts cattle raising. Despite the country's success in agriculture, Cote d'Ivoire remains one of top 10 food importers in Africa because cultivated land emphasizes commercial cash crops.

## Industry

Cote d'Ivoire's main manufacturing industries involve the processing of food and other agricultural materials processing, lumber production, textiles, chemicals, auto assembly, oil refining, and the production of steel containers and aluminum sheets.

Cote d'Ivoire's forest resources, especially the niagou, samba and mahogany trees, were sought after by European cabinetmakers and importers of hardwood plywood. Unfortunately, over-exploitation of the country's forest reserves led to the collapse of the timber industry. What is worse, the excess logging of timber resources also resulted in rapid, unremediated and unremediable deforestation. Although the country's forest resources have been seriously depleted, it still produces the following wood products: plywood, crates, boxes, veneer, cabinets, and furniture.

The country's few extractive industries include the mining of copper, nickel, uranium, and manganese, as well as some diamond production on the Bou tributary of the Bandama River. Oil was discovered in commercializable quantities in 1977. Production began in 1980 and the country currently has an annual output of 2.5 million barrels. In 1990, gold was discovered.

Tourism, which was the most developed in West Africa, fell as a result of political instability in the late 1990s. Since the tourism industry drew on the country's rich cultural heritage as well as its relatively developed infrastructure to facilitate trips to the outlying regions, it is hoped this sector will revive.

## Power, Transportation and Communications

Cote d'Ivoire is self-sufficient in electric power and exports power to Ghana, as well. There are two hydroelectric plants, on the Bia and Bandama rivers. There are plans to include Cote d'Ivoire in a five-country regional West African natural gas link up with Nigeria.

During the period of European exploration, Cote d'Ivoire's section of the Gulf of Guinea did not lend itself to trade due to the lack of natural harbors. During 1901-1934, the French constructed wharves at Grand-Bassam to facilitate the export of cash crops. They built the Asagny Canal to connect Grand-Bassam with Abidjan and Grand-Lahou, other key commercial cities. In 1950, the French built the Vridi

canal, which opened up Abidjan to ocean-going ships.

Cote d'Ivoire has a good telecommunications system. There are also two modern ports: Abidjan, one of the busiest in Africa, and San Pedro, in the southwest. The country has excellent national and international air links centered on the Abidjan International Airport at Port-Bouet. Air Afrique was headquartered in Abidjan until its demise in 2002.

## Foreign Investment and Trade

Cote d'Ivoire has been a member of the IFC since 1963, and its IFC portfolio totals \$115 million, the fourth largest in Africa. Since the mid-1990s, foreign investment has dropped 40%. Cote d'Ivoire's main exports are agricultural commodities, especially coffee and cocoa. In 1995, the country's exports were \$3.7 billion, and imports were \$2.4 billion. Cote d'Ivoire's main trading partners for exports are the Netherlands, France, Germany, and the United States; for imports, the main trading partners are France, Nigeria, Germany, Italy, and the United States. Imports from the United States include paper products, computer hardware and software, cosmetics, and toiletries.

Because the bulk of Cote d'Ivoire's exports are agricultural commodities, the international terms of trade often go against the country. Doubtless, this fact helped contribute to the balance of payments difficulties the country experienced in the 1980s and 1990s. The devaluation of the CFA franc helped spur exports, which had been held back due to the country's high cost structure. Continued challenges for the government are to lure new foreign direct investment as well as foster the indigenous capital market.

## Self-Study Questions for Further Exploration

- What were the most successful economic policies made during the 1960s-1980s?
- Which economic policies during that period were less successful?
- Which sectors are most likely to attract private sector investment?
- Which sectors would benefit the economy the most if public sector spending were increased?
- What is Cote d'Ivoire's current economic policy and what are its prospects for success?
- How can Cote d'Ivoire continue to build a modern economy and society on the basis of the export of agricultural commodities?
- How can Cote d'Ivoire's agricultural plantations continue to depend on "foreign" labor to harvest commodities if that labor force is discriminated against politically and socially?

- What are the prospects for the development of Ivorian industry?
- Will Cote d'Ivoire continue to rely on IMF/World Bank loans or will it be able to attract foreign direct investment and mobilize its internal capital?

# POLITICS AND GOVERNMENT

## Government Structure

The government of Cote d'Ivoire is closely modeled on that of the French Fifth Republic. The 1960 constitution was based on the French constitution of 1958, which provided for a democratic republic with three branches of government. It also bears the strong stamp of first president Houphouet-Boigny's influence. As in the United States, for most of the country's history, the president has simultaneously been head of state, head of government, and commander in chief of the armed forces. Houphouet-Boigny also headed the PDCI, which was the country's only legal political party for most of his rule. Houphouet-Boigny's successor Bedie also headed the PDCI. The current president, Laurent Gbagbo heads his own political party, the PFI.

The constitution called for the president to be elected directly every 5 years. The president was to be assisted by the Council of Ministers and the Economic and Social Council. The councils' purpose was to suggest and vet ideas and laws or programs for the president's consideration.

The 1960 constitution guaranteed freedom, granted equal treatment before the law and permitted no discrimination based on religion, race, gender, or place of birth. People charged with crimes were presumed innocent until proved guilty and had the right to representation by counsel. The right to post bail, however, was not guaranteed, nor were the freedoms of press or assembly.

The legislative branch, the National Assembly, has had 175 deputies since 1985. The deputies are elected for five-year terms at the same time as the president, and they elect their own leader. The function of the deputies is to pass or reject laws proposed by president or other deputies.

The judicial branch comprises the following superior courts: the Supreme Court, which reviews National Assembly laws before they are implemented; the High Court of Justice, which has right to impeach the president and try government officers for crimes in office; and the State Security Court. The judicial branch also oversees various lower courts that try criminal and civil cases. The president appoints all judges.

The constitution of 1960 provided for several layers of local government. The country was divided into 49 prefectures, which were in turn divided into sub prefectures. The prefects and sub prefects were appointed by the national government and normally were not natives of areas they governed. Their purpose was to ensure the proper implementation of laws and provision of government services, such as health care, education, and agricultural assistance to farmers.

The lowest level of local government was villages and cities. The villages could select a leader or chief,

who must then be approved by the prefect and work under the supervision of the sub prefect. Larger cities and towns were permitted municipal councils and mayors. The municipal council was elected by the citizens. The mayors were selected by the council. The Ministry of Interior set guidelines for the selection process as well as the responsibilities of the office holders.

Cote d'Ivoire's legal system was based on French civil law and African customary law. Judicial review was performed in the Constitutional Chamber of the Supreme Court. Cote d'Ivoire has not accepted compulsory jurisdiction by the International Court of Justice.

## Houphouet-Boigny's Model

President Houphouet-Boigny was comfortable with the French dirigist model in economics, which requires a strong, centrally driven unitary government with most decision making taking place in the capital by bureaucrats. For the most part, during the period of 1960-90, only PDCI members could be elected to political office, only PDCI publications and media were permitted, and Ivorians did not enjoy freedom of speech or press. The government routinely relied on the army to back up the police in controlling and quashing demonstrations and other forms of public dissent.

The president and the PDCI controlled election to the National Assembly, which became a rubber stamp for the president's preferred policies. The PDCI is organized along the lines of the French Communist Party, which provided technical assistance during the 1940s. However, the PDCI is a mass organization, without restrictions on membership. Prior to the country's independence, the PDCI sought continued association with France in the French Community. The PDCI has been an effective mouthpiece for the elite, and has not been comfortable with democracy or with democratic methods. In its heyday, Houphouet-Boigny maintained autocratic control and enabled the PDCI to remain the country's sole political party for 30 years.

Houphouet-Boigny made effective use of the Ivorian custom of *palaver* (a public discussion of issues involving the leader) to govern. Controversial issues were publicly aired in this environment, which gave all sides a chance to make their positions known. After listening to the debate, the chief executive then made his decision. In most cases, the entire group accepted his decision. Continued public dissent was rare, and usually not permitted by the government. Houphouet-Boigny encouraged farmers and businesspeople to seek positions in local government as well as the national legislature. The president governed through an alliance of Akan-speaking southerners and Muslim northerners.

## Fractures in the System

Since the early 1980s, students have protested against the continued role of foreigners in the economy and government, as well as corruption. They also agitated for an end to one party rule. Prior to the election of 1990, other parties were allowed to form and the current president, Laurent Gbagbo, headed a major opposition efforts.

## The Post-Houphouet Era

As economic conditions during the 1980s worsened, the perceived slow pace of Ivorization became a political issue among some groups, especially students and urban dwellers. There was a popular call for political choice, but the government was not willing to permit other parties. Economic conditions forced the government to reduce services and freeze wages. Unemployment rose, as did inflation. Attacks against expatriates led to a dropoff of tourism and foreign investment.

Both Ivorians and Cote d'Ivoire's foreign partners, especially France, were concerned about the lack of a clear succession policy and an anointed successor to the president. They also pressed Houphouet-Boigny to legalize other political parties besides the PDCI. In September 1989, Houphouet-Boigny undertook "five days of dialogue" permitting criticism of party and government that called for a multi-party system. Prior to the election in 1990, the president permitted the formation and legalization of other political parties and allowed their candidates to run for office.

After Houphouet-Boigny's seventh election victory in 1990, which followed the government's brutal quelling of frequent demonstrations, he designated fellow Baoule Henri Konan Bedie as the vice president and Muslim northerner Philippe Yace as National Assembly speaker. Under various previous constitutional amendments, the incumbents of one of those positions had been designated as the successor to the president in the event of his inability to govern. In 1990, Houphouet-Boigny had enacted a new constitutional amendment that clearly designated the vice president as his successor.

## Politics Under Bedie

President Bedie stressed a policy of Ivorian nationalism known as *Ivoirite*, the overt favoring of citizens whose parents were born in Cote d'Ivoire. Because Bedie gave precedence to members of his Baoule group, politics became defined by ethnicity more than any single other factor. A combination of government corruption, inefficient enterprise management and poor government direction characterized Bedie's term in office.

## How the 1999 Coup Changed Politics

Cote d'Ivoire has been changed in many ways since the 1999 Christmas Eve coup. First and foremost is the precedent of a change of government brought about by the military, a first-time occurrence in Ivorian history. Now that the military has demonstrated success in taking over the country, their power can never be discounted by the elected president. This military has, therefore, become a force in politics. This is new for Cote d'Ivoire. Secondly, the country enacted a Second Constitution that enshrines many of the anti-foreign policies that became popular during the 1990s. That is, a significant portion of the inhabitants of the country have been denied the basic political rights of citizens. It remains to be seen whether this can be sustained, especially since these "foreigners" are so important economically. Finally, the coup did bring into the presidency the first "opposition" candidate. However, President Gbagbo governs without the benefit of a clear-cut electoral victory. If he runs in a future presidential election and

wins outright, that would legitimize his administration. However, the nature of future elections is by no means certain, and President Gbagbo's ability to retain sufficient popularity to win one is even more difficult to foresee.

## Self-Study Questions for Further Exploration

- How did France's colonial policies affect post-independence governmental organization and functioning?
- How did Houphouet-Boigny's personal background shape him as a political leader?
- Why did Houphouet-Boigny distrust democracy?
- What have been the most important factors affecting the Ivorian political system during the past ten years?
- Has the establishment of a multi-party system spurred the development of democratic institutions?

## POLITICAL LEADER PROFILES

### FELIX HOUPHOUET-BOIGNY

The future first leader of his country was born on October 18, 1905 in Yamoussoukro, central Cote d'Ivoire. A member of the country's largest ethnic group, the Baoule, Felix Houphouet-Boigny was descended from a line of chiefs. A blend of French and traditional cultures, Houphouet-Boigny became a catholic at age 11 and attended the Ecole William Ponty and the Ecole de Medicine et de Pharmacie in Dakar, Senegal, where he was trained as a *medecin africain*, an African doctor. While in Dakar, Houphouet-Boigny became acquainted with the future political elite of West Africa.

Houphouet-Boigny's early career, during 1925-40, involved serving as a rural doctor and running a coffee plantation in Cote d'Ivoire. He married a woman related to the Agni kings and in 1940 he inherited extensive coffee plantations near Yamoussoukro, whose output he expanded with modern techniques to include cocoa production. After being appointed Baoule chief for that area, he formed the Association of Customary Chiefs, and he eventually became associated with international Marxist organizations. In 1944, Houphouet-Boigny helped found the African Agricultural Union, representing 20,000 African planters, laborers, civil servants, and traders, to counter existing colonial policy favoring French plantation owners. Since that year, Houphouet-Boigny was his country's most prominent politician.

His list of accomplishments is vast:

In 1945 he got the French to abolish *corvee* forced labor on plantations;

He formed the *Parti Democratique de la Cote d'Ivoire* (PDCI), which was to remain the country's sole or main political party until 1999;

In 1945 and 1946 he was elected to the French National Assembly, where he affiliated with the Communist Party;

In 1950 he broke with the Communists and began cooperation with the French;

He made the PDCI part of the *Rassemblement Democratique Africain* (African Democratic Rally), in the pre-independence period a political force throughout French West Africa;

In 1956 he was appointed as a minister of state in the French government and became mayor of Abidjan;

In 1957 he was elected president of the Grand Council of French West Africa in Senegal and speaker of the Territorial Assembly of Cote d'Ivoire;

In 1958 he served as Minister of Health in Paris and he campaigned for self-government within the French Community;

In 1959 he became prime minister of Cote d'Ivoire; and

In 1960 he was elected the first president of Cote d'Ivoire.

To his credit, during his years in office, Houphouet-Boigny maintained Cote d'Ivoire on a western-oriented course. His charismatic personality enabled him to do much, and kept the taint of scandal and corruption from sticking to him. He governed by hard charm and effectively managed a personality cult. He assiduously co-opted political rivals and periodically granted amnesty to political prisoners as well as those in prison for less violent crimes.

After only a few years in office, he was already respectfully known as *Le Vieux*, the "old man." From start to finish, his main political base was his fellow African planters. Houphouet-Boigny encouraged the commercial production and export of coffee and cocoa. He made many trips to the United States, which he admired, and met with eight U.S. presidents.

In the 1960s, Houphouet-Boigny introduced the policy of Ivorization, i.e., replacement by educated Ivorians of French or other expatriate government officials and professionals, teachers, technicians, and managers. Widely hailed during the 1960s and 1970s for managing the "Ivorian miracle," towards the end of his career, Houphouet-Boigny became increasingly unresponsive to the call for political reform, refusing to give up power or to facilitate the succession. During his seventh term as president, he died in

office on December 7, 1993, after a six-month struggle with prostate cancer. His ultimate legacy was to leave his country in the hands of status quo cronies tarnished by corruption and uninterested in democracy.

## HENRI KONAN BEDIE

A Baoule and a Christian like Houphouet-Boigny, Bedie is a second-generation politician and a technocrat. He was born in Dadiékro in Central Cote d'Ivoire in 1934, and was educated both in Cote d'Ivoire and France, where he received a doctorate in economics at the University of Poitiers. In 1960 he entered the French colonial service and served as diplomatic counselor at the French Embassy in Washington. Subsequently, he was the first Ivorian Ambassador to the United States for six years. In 1966 he was named Minister Delegate for Financial Affairs, and thereafter was promoted to Minister of Economy and Finance, serving concurrently as governor of the IMF and administrator for the World Bank.

In 1977 Bedie was dismissed from the ministry after the bankruptcy of some state-owned sugar factories. He then became special advisor on African affairs to the president of the International Finance Corporation of the World Bank in Washington. In 1980 he returned to Cote d'Ivoire and was elected president of the National Assembly. During the 1980s, he received support from the younger generation of politicians, except those who favored closer ties with the United States and Germany. As the leader of the National Assembly at the time of Houphouet-Boigny's death, Bedie constitutionally succeeded him as president.

Less self-confident and politically skilled than Houphouet-Boigny, Bedie overtly favored members of the Baoule ethnic group and pushed an exclusionist policy, especially against those born outside Cote d'Ivoire, and aimed primarily at keeping potential rival Alassane Ouattara from holding elected office. Despite successively draconian measures that significantly curtailed civil rights and led to human rights abuses, Bedie was unable to contain the resentments of northerners and others, especially as the economy tanked in the late 1990s. In 1996 he devised a new interpretation of *Ivoirite*, Ivorian identity, separating the population into "pure Ivorians" and "circumstantial Ivorians," i.e., immigrants and their descendants. These policies, which some Ivorian intellectuals labeled "neo-fascist," restricted the civil rights of people whose forebears were not born in Cote d'Ivoire, and resulted in the social as well as political stigmatization of "foreigners." Bedie also ensured that strict nationality rules were enacted in the Ivorian Electoral Code. However popular such policies might have been with Ivorians, the public perception of government corruption and inept economic management resulted in the December 1999 military coup and government takeover by General Robert Guei, and Bedie's subsequent flight to Togo and then France. Bedie's legacy was ethnic polarization, xenophobia, and economic bankruptcy.

## ALASSANE DRAMANE OUATTARA

Ouattara, a Muslim, was born in 1942 in Dimbokro in northern Cote d'Ivoire to parents who had immigrated from modern-day Burkina Faso. He studied at the Drexel Institute of Technology in

Philadelphia, and received a M.A. and a Ph.D. in economics from the University of Pennsylvania. A technocrat, Ouattara served his country in many capacities, both inside and outside government. President Houphouet-Boigny, who recognized his capability, named him prime minister. He thus became Henri Konan Bedie's chief political rival.

Ironically, Ouattara laid the foundations for the country's ethnic polarization while prime minister by introducing national Identity cards. The emphasis on the birthplace of Ivorian residents and their parents became his political undoing. In 1994, he founded the Democratic Rally of Republicans (RDR) and remains its leader. In that year, he accepted the appointment of IMF deputy director. In 1995, new electoral rules prevented him from running for president. He also served in several positions at the Central Bank of West African States (BCEAO), including as governor. In April 1998, Ouattara announced he would again seek election in Cote d'Ivoire, even if it required a court case to test his eligibility. However, President Bedie successfully manipulated anti-northerner sentiments among southerners and thereby mobilized public opinion against Ouattara. Changes in the 2000 Second Republic constitution, and supreme court decisions, effectively bar Ouattara from elective office in Cote d'Ivoire.

Despite what appears to be an end to his political aspirations, Ouattara remains the single credible opposition leader in Cote d'Ivoire. Although Ouattara can count on a substantial following among Muslims in general and fellow northerners in particular, he is shunned by the nationalists, including traditional PDCI supporters and members of other parties prominent in the south and west.

## **GENERAL ROBERT GUEI**

General Guei, born in 1941, is a member of the Yakouba (Guere) ethnic group in western Cote d'Ivoire, which is related to the Gio group of Liberian President Charles Taylor. There may have been a political relationship between General Guei and President Taylor. He was a French-trained career officer. Under President Houphouet-Boigny, he served as army chief of staff and led Ivorian troops against students at the University of Abidjan to quell demonstrations in 1991. He refused a similar order in 1995 from President Bedie and retired to his plantation leading to rumors he was planning a coup. Although he criticized Bedie for playing ethnic politics, Guei nevertheless supported Bedie's nationalist and anti-foreign policy of *Ivoirite*. Bedie demoted Guei, and then kicked him out of government in 1997, because of the coup rumors. Nicknamed "Le Boss" by his military colleagues, he was long considered a political enemy of Bedie.

When disgruntled soldiers demanding back pay successfully engineered the 1999 Christmas Eve coup, General Guei accepted their appeal to serve as interim leader. He headed the National Committee of Public Salvation comprised of nine senior military officers. During his ten months in power, he stopped Cote d'Ivoire's international debt payments, reassured the international community he would support a return to democracy, held a convention to draft a decidedly anti-foreign Ivorian constitution, and then decided to run for president, despite earlier assurances he had no such ambitions. The latter decision resulted in prolonged student riots.

Although Guei personally welcomed Ouattara on his return to Cote d'Ivoire following the coup, Guei nevertheless backed constitutional changes that barred Ouattara from seeking elective office. Guei himself was denied support by his own party, the PDCI, which boycotted the elections along with Ouattara's RDR. Although Gbagbo won the November 2000 vote, Guei claimed victory, and then fled to Liberia in the wake of widespread opposition-led demonstrations and lack of army support. Although there is little popular support for the military, it continues to be feared, and has become a necessary linchpin of the current president's rule. There continue to be popular concerns voiced about General Guei's relationship with Liberian President Taylor.

## LAURENT GBAGBO

Cote d'Ivoire's current president, and the first president of the Second Republic, Laurent Gbagbo is a member of the Bete community, a rival group to Houphouet-Boigny's Baoule. Born in 1945 in the central-western city of Gagnoa, he was a political activist during his student days and spent 1971-73 in prison. He met his wife Simone Ehivet in the mid-1970s. They are both committed socialist activists. Gbagbo was a young history professor during the 1982 anti-government protest by students at the National University of Cote d'Ivoire. Following the demonstration, Gbagbo sought voluntary exile in France.

At the time, Gbagbo signified a paradigm shift in Ivorian politics. Labeled a "youthful firebrand," he was the only politician of note to publicly challenge President Houphouet-Boigny and he refused to be co-opted. Gbagbo spoke out in favor of a multiparty political system and real democracy and he sought to fight against the "dictatorship of the PDCI." He returned to Cote d'Ivoire in 1988 to help found the Ivorian Popular Front (*Front Populaire Ivoirien* – FPI). As the FPI candidate for president, Gbagbo was beaten by Houphouet-Boigny in 1990, although he received a respectable 18% of the votes. Following student demonstrations in the early 1990s, Gbagbo was jailed again in 1992. As a member of the National Assembly in the mid-1990s, Gbagbo allied with the PDCI in support of a revision of the electoral code to prohibit "foreigners" from seeking office. The alliance was short-lived and both the FPI and Ouattara's RDR boycotted the polls, thereby throwing the presidency to Bedie in 1995.

Although Gbagbo made a favorable showing in the November 2000 presidential election, General Guei claimed victory. However, when the army refused to support him against popular opposition, General Guei fled the country and Gbagbo became president by default. Since Gbagbo refused to hold new elections, his succession to the presidency was won at the cost of legitimacy. Gbagbo's challenge is to govern a country badly riven by ethnic and anti-foreign tensions, and with severe economic strains as well. Time will tell whether he will be true to the democratic ideals he once espoused.

## NATIONAL SECURITY AND FOREIGN POLICY

### Overview

Since independence in 1960, France continued to maintain close relations with Cote d'Ivoire. Indeed, for the first decade, many French administrators remained in place, both in government and business. Cote d'Ivoire drafted a rational and achievable economic development plan that it proceeded to implement. Ever since then, France has maintained considerable economic and political influence. At the time of independence, Cote d'Ivoire faced enmity or strained relations with neighbors Guinea, Mali and Ghana. Therefore, Houphouet-Boigny insisted that France maintain a battalion of marines near Abidjan to buttress his own military.

Under Houphouet-Boigny, Cote d'Ivoire established a tradition of freethinking in foreign policy. It was not afraid to go against the trend of other African countries. Cote d'Ivoire was one of the few African countries with a significant Muslim population to establish relations with Israel. It was one of the last countries in Africa to shift recognition from Taiwan to the People's Republic of China, and Cote d'Ivoire established a dialogue with apartheid South Africa in the 1970s, an almost unprecedented policy move.

Prior to 1989, Cote d'Ivoire was extremely careful in its dealings with communist countries. Since that year, it has unhesitatingly fostered relations with Russia and Eastern European countries.

Although Cote d'Ivoire has generally been responsive to western countries' interests and concerns, and has played a role in support of West African peacekeeping operations, it has nevertheless maintained a complex relationship with Liberia.

## **Relations with African Countries**

Prior to independence in 1960, Houphouet-Boigny and other Ivorian leaders were actively involved in various political movements affecting all of West Africa. In 1959, Houphouet-Boigny founded the Council of the Entente, a grouping of Cote d'Ivoire, Burkina Faso, Benin and Niger (and which now includes Togo), to foster continued ties to France and French economic aid. Cote d'Ivoire was a founding member of the Organization of African Unity (OAU), and in the 1970s, it joined ECOWAS, the Economic Community of West African States, which has the dual roles of ensuring peace and stability and encouraging trade among member states. Cote d'Ivoire has supported ECOWAS's efforts to maintain a regional military force for peacekeeping.

Cote d'Ivoire's independent line on foreign policy sometimes created problems with neighbors. During the 1966-71 Nigerian civil war, Cote d'Ivoire backed Biafran independence, one of only four African countries to do so. During the 1970s, Cote d'Ivoire maintained a dialogue with the white South African government and opened trade ties during the period of apartheid. Cote d'Ivoire was one of very few African countries, and only one outside of southern Africa, to do so.

Cote d'Ivoire's relations with Liberia, Ghana, Burkina Faso, Mali, and Guinea have worsened or improved, depending on the policies those governments were implementing at the time. Since the 1970s, Cote d'Ivoire sought to improve its relations with West African countries. Nevertheless, Cote d'Ivoire is considered to have been involved in the internal politics of Burkina Faso and to have helped overthrow President Thomas Sankara. In 1985, Houphouet-Boigny negotiated peace between Mali and Burkina Faso over a boundary dispute. In 1989, Cote d'Ivoire became involved in the Liberian civil war. Charles Taylor, the Liberian rebel leader at the time and currently Liberia's president, amassed his forces and entered Liberia from Ivorian territory. There were allegations at the time that Cote d'Ivoire helped him obtain weapons. In 1991, Houphouet-Boigny hosted a peace conference in Yamoussoukro between Taylor and the then Liberian government.

Cote d'Ivoire has a history of maintaining a dialogue between francophone and anglophone countries of West Africa and attempting to mediate conflicts in other parts of Africa. Following the death of President Houphouet-Boigny, President Bedie continued this tradition. In 1997, Bedie met with Angolan opposition leader Jonas Savimbi to further the peace process. In 1998, Bedie visited South Africa at the invitation of Nelson Mandela to consolidate trade and economic relations.

## **Relations with France**

Cote d'Ivoire's closest and most consistent foreign ties have been maintained with France, especially in the area of security. France is the country's most important trading partner, and has continued to favor Cote d'Ivoire with technical and financial assistance. France also sought to support its significant private sector investment in the country. France trained Ivorian troops and in 1970, French troops helped put down an uprising in the Bete region near Gagnoa. Houphouet-Boigny was able to co-opt the rebels by paying them high salaries in government and PDCI positions, as well as by securing advanced equipment provided by France. Despite the overwhelming importance of the country's relations with France, Cote d'Ivoire sought to diversify its dependence on France by welcoming cooperative relations with other European countries as well as the United States.

Since Houphouet-Boigny's death, and especially since the mid-1990s, the French have changed their approach to the former colonies. There has been a tendency to be much less directly involved in the countries' politics or economy. The French devalued the CFA franc, decreased their financial support and foreign assistance to governments, and encouraged multilateral assistance from the IMF and World Bank, rather than continued bilateral support. Cote d'Ivoire was one of the few countries to have benefited from the devaluation of the CFA franc. The fact that France did not act to quell the 1999 coup demonstrates the extent of the change in its policy toward its client, despite the 20,000 French citizens residing in Cote d'Ivoire at the time and the continued military presence of 550 soldiers.

## **Relations with Communist Countries**

Cote d'Ivoire sought to maintain friendly, but standoffish, relations with the major communist states. This policy resulted from President Houphouet-Boigny's personal experience with the French Communist Party in the 1940s, with the various communist study groups formed in West Africa in the 1950s, and with his concern about socialist influence from his left-leaning neighbors, Guinea and Mali, in the 1960s. Cote d'Ivoire was one of the few West African countries to develop a market-based economy. Therefore, ideologically, it was at odds with communism. The country's officials were also concerned about pressure that the Soviet Union and its satellites might seek to exert on the country's foreign policy, including its votes in the United Nations. Thus, in the early 1960s, Cote d'Ivoire refused development assistance from any communist country.

In the 1980s, Cote d'Ivoire was one of the last African countries to switch diplomatic recognition from Taiwan to the People's Republic of China. And after the collapse of the Soviet Union and the end of communism in Eastern Europe, Cote d'Ivoire established friendly relations with their successor states.

## **Relations with Other Countries and the United Nations**

In the 1960s, Cote d'Ivoire established diplomatic relations with Israel, but under pressure from other African governments, broke relations in 1973. Israel provided much useful development assistance at the level of the village. Cote d'Ivoire resumed diplomatic relations in 1986 and has maintained them ever since. Cote d'Ivoire has close diplomatic ties with other major commodity producers, especially Brazil

and Malaysia. As has been true for all African countries, the United Nations has played an important role in Cote d'Ivoire, especially as an advisor on economic development.

## Relations with the United States

Since independence, Cote d'Ivoire has maintained a close relationship with the United States. Several Ivorian leaders and government officials have lived or studied in the United States and there has been an active cultural exchange program between the two countries. The United States has provided development assistance for energy, health care and micro-credit programs. There have been very few periods of strain, with the December 1999 coup and its aftermath under General Robert Guei being the most recent.

## Foreign Relations of the Gbagbo Government

As a result of the post-coup reconciliation forum and the conclusion of the Yamoussoukro Communiqué, Cote d'Ivoire has improved relations with the European Union, France, the United States and other African countries, and foreign donors have resumed their assistance to Cote d'Ivoire.

## Self-Study Questions for Further Exploration

- Why have France and Cote d'Ivoire desired to maintain close relations?
- How is their relationship changing?
- To what extent has the common French language facilitated, and the different English language made more difficult, establishment of good working relationships with Cote d'Ivoire's neighbors?
- What are Cote d'Ivoire's assets in the conduct of foreign policy? What factors work against Cote d'Ivoire?
- Can Cote d'Ivoire continue to play a useful diplomatic and security role in its region?

# East Africa Study Guide: Kenya, Uganda, Tanzania

## Introduction

This self-study guide is intended to provide users with a working knowledge of the nations and peoples of East Africa - Kenya, Tanzania and Uganda. Separate chapters address topics of historical to contemporary interest. Each chapter of the study guide begins with a general overview followed by issues to ponder. Thereafter the user is directed to a series of readings that elaborate on the theme presented. A listing of web sites is also provided. Obviously, the user who follows through on the readings or who even expands his study beyond the specific recommendations will benefit most from the exercise. Self-study involves a bit of legwork. Readings have been chosen from books and articles that are available in the NFATC and Main State libraries, but books may also be obtained from good university or even public libraries. Finally, on-line bookstores carry the essential texts.

Although this East African guide covers all three countries, there is an obvious breakout of topics that pertain more specifically to each nation. These will be identified as one progresses. However, given the commonality of history and of current problems – AIDS for example - one of the fascinations of East Africa is the comparison that one may make between the varying pathways chosen by the three nations. Thus, readers are encouraged to sample readings pertaining to countries outside their immediate focus so as to reinforce comparative judgments and to understand the wider regional context.

Ambassador Robert E. Gribbin prepared this study guide. He lived and worked in all three East African nations from the 1960s onward. He professes to all the opinions expressed herein and accepts responsibility for the errors and omissions.

## Chapter 1: Pre-History

### Geography

East Africa is one of the most spectacularly scenic parts of the planet because of its geography. Generally, eastern Africa is high and dry. The land rises from the coast to inland plateaus of two to five thousand feet. Statistically most of the land including Kenya's northeast and northwest, Uganda's north and Tanzania's center are very dry. Some places are deserts and others can only sustain the hardest vegetation. Fertile land abounds, however, in all three countries with Kenya having proportionately the least amount relative to its overall area. Nonetheless, East Africa's 100 million people are predominately farmers and they strive to produce crops under conditions, which range from marvelous to terrifying.

The Great Rift Valley is the region's most notable feature. It is the only place on land where the earth's tectonic plates are still moving. Beginning in Jordan, this rift holds the Red Sea, blasts through Ethiopia and manifests itself in two divisions in East Africa, the eastern and the western rifts. The eastern rift valley carves an impressive trough across Kenya and into Tanzania beginning with Lake Turkana and subsequently holding a series of lakes such as Baringo, Bogoria, Nakuru, Elementita, Navashia, Magadi, Natron and Manyara in its basin. The eastern rift valley is characterized by steep walls which provide spectacular views. The valley floor is littered with volcanoes some of which were recently active and countless hot springs. In fact, geothermal production of electricity is growing in Kenya. The eastern rift is Kenya's most dramatic geographical feature, but it does peter out south of Lake Manyara in northern Tanzania.

If anything, the western rift valley is more impressive. It holds Lakes Albert and Edward and the Semliki Nile on Uganda's western border with Congo, then Lake Kivu between Rwanda and Congo, then Lake Tanyanika, the world's second deepest fresh water lake with depths over 5,000 feet, which constitutes the border between Tanzania and Congo. These rift winds further south to cradle Lake Malawi on Tanzania's southern border. This valley also contains much volcanic activity as evidenced by hot springs and fumeroles. Mount Nyiragongo, a volcano near Goma, Congo remains quite active. Eventually, this rift will separate East Africa from the rest of the continent and let the sea flood in. However, that eventuality lies many millions of years in the future.

East Africa's largest lake, Lake Victoria Nyanza (the name itself is a marvelous redundancy - translated from Swahili it means Lake Victoria Lake) lies in a shallow basin between the two rift valleys. This vast body of fresh water provides the livelihood directly and indirectly for millions of people. Because of its size, Victoria creates its own micro-climate of regular rainfall for surrounding areas. Lake Victoria is also the source of the Nile River, which begins its northward flow at Rippon Falls, Uganda.

The highest points on the geographical tapestry of East Africa are mountains. Mount Kilimanjaro, of clear volcanic origin and certainly the most photographic peak in the world, is Africa's highest topping out at 19,340 feet. In probably what was one of the blatant gestures of colonial arrogance, Queen Victoria gave the Mountain to her cousin Willy (Kaiser Whilem of Germany) in 1901 as a birthday present. (Check the map and see how the boundary diverts to allow for this "gift.") Kilmanjaro and neighboring Mt. Meru tower over Tanzania's northern border. Further west other large volcanoes, including Ngorongoro, whose collapsed crater is the world's most unique game park, dot the landscape.

In addition to Kilmanjaro, whose northern slopes remain in Kenya, Kenya's main mountains are Mt. Kenya (17,058 ft.), whose snow covered crag dominates the sky of northern Kenya and Mount Elgon (14,178 ft.) which sits astride the western border with Uganda. In terms of surface area, Elgon wins the prize as the largest volcano in the region. Uganda's southern border with Rwanda/Congo is defined by the Virunga Volcanoes, home to the rare mountain gorillas.

Elsewhere Uganda's most prominent mountains, the mystical Mountains of the Moon, known today as the Ruwenzoris constitute part of the western frontier with the Congo. Mt. Stanley's glacier covered peak

Margarita (16,763 ft.) lies mostly hidden from outside view by ever-present clouds. Truly, the remote reaches of the Ruwenzoris resemble land that time forgot with huge ferns, verdant grasses and giant succulent plants dominating a landscape of rare plants and birds. In Kenya other ranges such as the Abedares on the eastern rift wall and the Matthews range in the semi-desert north, pushed upwards by crustal movements, indicate the range of geological forces at work in the region.

Kenya has only two major rivers that reach the Indian Ocean, the Tsavo/Galana and the Tana. A third the Uaso Nyiro evaporates in the northern desert. Tanzania too has only two major rivers, the Rufiji and the Rovuma, that reach the sea. None of these rivers is easily navigable. Historically they have not provided a means of access to the interior or vice versa. Other watercourses in Kenya and Tanzania empty into the lakes of the rift valleys or into Lake Victoria. All of Uganda's streams drain into the Nile watershed and eventually into the great river itself. The Nile begins its 3,000-mile course to the Mediterranean Sea from the northern bank of Lake Victoria (elevation 3710 feet) near present day Jinja. After the dam at Owens Falls, which produces electricity for Uganda and parts of Kenya, the Nile (in this section known as the Victoria Nile) tumbles down through white water rapids to Lake Kyoga. It turns westward and speeds up until it crashes through the nineteen-foot wide portal at Murchinson Falls and drops 150 feet in a cataclysm of spray and thunder. Then it meanders slowly to Lake Albert amidst thousands of hippos and huge crocodiles. Exiting as the Albert Nile from the northern end of the lake, the river contains some fast sections as it passes out of Uganda into Sudan. The cataracts end in southern Sudan from whence the Nile is navigable to Khartoum and beyond.

## Early Man

Anthropologists, evolutionists and paleontologists agree that human kind got its start in East Africa some several million years ago. While they agree on the basic assumption to the effect that man evolved from ape like ancestors, they disagree on when this might have happened and as to what the direct lineage was. The ape/man branch apparently had several dead ends including the much later but better known Neanderthal man. In East Africa, however, the dead ends came earlier in the paleontological record and each skeleton or fragment thereof, especially skulls, opens new areas of discussion and debate. The effort is to fully document the evolution of Homo Sapiens (i.e. us) through discovery of missing links. Also, scientists wish to understand the dead ends - why and when. This may seem like arcane science to the uninvolved, but it is very topical in East Africa. National museums in Nairobi and Dar Es Salaam feature relics of early man found at Olduvai Gorge, Tanzania (near the Serengeti) or Koobi Fora, Kenya (on Lake Turkana). The distinguished Leakey family (father Louis, mother Mary, sons Richard and Philip) blazed the way but they have been subsequently joined by numerous scientists from all around the world in trying first to find and then to interpret the fossil record. Museum societies in the three capitals often sponsor talks on current excavations.

## Modern Man

Leaping forward over the eons of time during which the region apparently sustained almost no people to the modern era, East Africa's population grew and changed over the past several thousand years due to

successive waves of gradual migrations. The oldest peoples currently in the region are remnants of hunter-gatherer clans, related to the bushmen of southern Africa or the pygmies of the Congo basin. Other Africans are usually identified at the broadest level by language group. In this regard Africa's three-principle language groups all meet and overlap in East Africa, especially in Kenya. Most East Africans speak Bantu languages, they trace their distant ancestry to people who pushed out of the Niger River delta region of current day Nigeria/Cameroon to populate most of the continent. The Bantu expansion in Africa took thousands of years and obviously involved lots of assimilation along the way. Tanzania today counts some 120 groups or tribes of people who speak Bantu tongues. Some Bantu tribes, for example the Embu, Meru and Kikuyu people of Kenya are closely related. However, they have major differences with other nearby Bantu tribes such as the Luhya and little in common with more distant groups, such as the Baganda in Uganda.

The second language group present in East Africa is the Nilotic group. As the name indicates people speaking these languages trace their roots to the upper Nile region. The Luo people around Lake Victoria and the Acholi of northern Uganda are classified as western Nilotic, the Masai of the Kenyan and Tanzanian plains are eastern Nilotic and the Kalenjin (President Moi's group) are southern Nilotic. Perhaps because they are more closely related in time, Nilotics tend to have more cultural practices in common than do Bantus.

The third language group is the Cushitic or Hamitic group represented in Kenya by Somali speakers and other emigrants from the Horn of Africa.

Finally, today there are other groups present in all three nations. Most numerous are "Asians," the term used to describe all people from the sub-continent of India. Many of their ancestors came to build the railroads around the turn of the 20<sup>th</sup> century. Arabs as well have lived for generations in the towns of the Swahili coast. Finally, Europeans - mostly British but including others - collectively called "wazungu" in Swahili compose a small minority of settlers and businessmen.

Even though the people of the region form a complicated mosaic of interacting languages and traditions, individual identity is often defined by Africans themselves in terms of tribe or ethnicity. Increasingly in the melting pots of cities and in the modern sector, tribal identity is breaking down somewhat as class, education, religious or other affiliations become important. That being said, and despite efforts to broaden cross-tribal appeal to deal with issues as they affect all citizens, politics in the region, especially Kenya and Uganda, continue to be defined in many instances by tribe.

One of the unifying aspects of life in East Africa is the growth of Swahili and English as common languages. Swahili is a Bantu language that has incorporated many words from Arabic, English and other languages. Spoken as an original language by the people of the coast, the Zanzibari dialect of Swahili was adopted by the East African Swahili Board in 1943 to be the basis of a standardized language. This version of Swahili became the national language of Tanzania. Under the tutelage of first President Julius Nyerere it spread widely throughout the country. Swahili is also an "official" language of Kenya and can be used in Parliament and in government, even though all documents are still mostly in English. Swahili is less common in Uganda where Luganda (the language spoken by the Baganda people) serves also as a

lingua franca, but Swahili is spoken by many people and is the language most used by the army.

English is the language of the modern sector - business, education, science, government and diplomacy – in all three nations.

## **Items to Ponder**

Why was East Africa the garden of Eden? What characteristics made it conducive to the evolution of early man? Are those elements still present today?

How has the geography of the region influenced national boundaries? One often speaks of illogical boundaries in Africa, is that true for East Africa?

Tribalism will be a theme throughout this study guide. Begin to think about personal and group identity. Who are you? How do you introduce yourself to others? By family, region of origin, profession? What do you associate with that gives you a group identity?

Hujambo! Sijambo! Habari yako? Mzuri (How are you? I am fine! What is new? Fine). As evidenced by this little greeting dialogue, Swahili is a wonderful language and most spoken forms are fairly simple. Swahili words infiltrate English throughout East Africa, for example, "wanainchi," i.e. person of the country, is almost always used in Kenya to the exclusion of citizen. Learn some Swahili (there are many phrase books and the old FSI course is excellent) and you will enjoy your tour.

The Tribes of East Africa.

## Chapter 2: Early Civilizations

Even as population movements changed the complexity of the hinterlands, a recognizable, distinct and very sophisticated culture grew up along the coast. By about 800 AD small trading towns dotted the coast

line from Sofala in the south (in present day Mozambique) to the Benadir coast of present day Somalia in the north. Trade between these enclaves and the greater world of the Indian Ocean littoral – Arabia to India - flourished for centuries.

The people of these enclaves were the ancestors of the present day Swahili people; African with a good mixture of Persian and Arab included. Their towns were built of coral, which can be easily quarried and carved when wet, but which hardens to stone as it dries. The workability of this material permitted elaborate designs to be carved as ornate decorations to prominent buildings and homes. Settlements from this era evolved into present day Mombasa, Malindi, Kilwa, Zanzibar and Lamu. Other early towns were abandoned when wells dried up, disease struck or war ravaged them. It is from ruins, Geti near Malindi in Kenya is probably the best preserved, that scholars today learn something about the vanished civilization. Collectively this civilization was known as the Zenji Empire, named from a Persian word for black. Zanzibar for example is derived from the same source and means "black coast." Although the word Zenji was appropriate, these towns constituted no empire but rather a collection of independent city-states. While there were often links between ruling and prominent families, the towns usually owed no allegiance to any single sovereign.

Like Venice and Genoa in Europe, the coastal towns existed on trade. They were not centers of production, but merely collectors and forwarders of goods. They took a percentage and lived well. Gold, ivory and slaves constituted their offerings to the east. In turn the Zenji towns imported consumer goods such as porcelain, cloth, brass and other metals. They are known to have had contact with China, India and, of course, Arabia. Even though slaves were undoubtedly part of their commerce, slaving as it was to become in the 18<sup>th</sup> and 19<sup>th</sup> centuries was not a mainstay of the Zenji economies.

The geography of the coast was conducive to an independent seaward oriented culture. The coast is protected from greater reaches of the mainland by swamps, escarpments and near deserts. The coastal strip receives adequate rainfall. The climate is conducive to tropical agricultural. The sea provides bountiful food. And the monsoon winds blow consistently from northeast to southwest during half the year then change 180 degrees to blow in the opposite direction for six months. This means that lanteen rigged dhows can ride the winds to the east and back. Although interactions with people of the hinterlands were regular, the towns do not appear to have exercised political or military power beyond their immediate shore side spheres. To the contrary, the towns were apparently attacked and sacked from time to time by raiders from the interior.

## **Arrival of the Portuguese**

This golden, but fragile civilization endured for hundreds of years. Little is known of it, because the people had no written language, or, in any case left no records. The towns were independent but interrelated. Islam was adopted at some point along the way. It probably arrived with Omani Arabs in the seventh century. Real change, however, came in 1498 with the arrival of Portuguese sea captain Vasco da Gama. Da Gama is the best known of a series of Portuguese explorers who, under the initial impetus of Prince Henry the Navigator beginning in 1415, pushed doggedly along Africa's western coast finally to

round the Cape of Good Hope in 1488 (named by its Portuguese discoverer Bartolomeu Dias). The Portuguese quest was for adventure, wealth, power, and new lands. Prince Henry enlisted the support of the Pope who blessed the explorations and fired Portuguese religious zeal to find and aid the mythical Christian king "Prester John" who was reportedly besieged by Moslem infidels.

In the spring of 1498 having rounded the Cape of Good Hope, Da Gama entered unknown territory as he turned northward along the eastern coast. Da Gama missed the first of the Swahili towns, Sofala, at the outlet of the Zambezi River, but he subsequently landed in Mozambique town. There he found a flourishing civilization that was more advanced in many respects than was Portugal's. However, the inhabitants were infidels. That fact, coupled with the reality of superior Portuguese firepower, justified looting the town. Subsequently Da Gama looted other towns as he moved up the coast toward Mombasa, which he found hostile and prepared to resist. He by-passed Mombasa, but word of his inimical intent spread ahead of him so that the rulers of Malindi upon learning of Da Gama's coming struck a bargain with him. In exchange for peace, they would show him the way to India. Da Gama agreed, but before leaving Malindi erected a large stone cross, which he brought from Portugal, called a "padrado" that still stands today upon Malindi's headland.

Although abandoned by his Malindi-provided Arab navigator in India, Da Gama found his way back to East Africa, looted the few towns he missed on the way out and returned to Lisbon. He came back to the Indian Ocean two years later and blazed the way for other Portuguese vessels captained by even more rapacious individuals. Because black infidels peopled the towns, the Portuguese displayed no qualms about reducing them to vassalage. They enforced their will and established military bastions from which to rule. Admiral D'Almedia's conquest of the region was sealed with the subjugation of Kilwa and Mombasa in 1507. The most enduring relic of this era is the massive stone edifice of Fort Jesus which dominates the old harbor entrance at Mombasa. However, rather than military might, it was Portuguese insistence on monopolizing trade that rang the death knell for the Swahili coast. Because the Portuguese did not have the number of ships necessary to takeover or maintain the trade, it declined precipitously. Additionally, the Portuguese wanted more gold than was available and they used force to take what they wanted. Obviously, there was resistance to Portuguese rule plus much clandestine trade. Even though the Swahili coast survived this first brush with European imperialism, it was never to be the same.

Portuguese dominance of the seas and consequently of the East African coast endured 200 years, but left few marks. Only administrators and military men lived in the region. Virtually no settlers came and the staunchly Islamic communities proved immune to feeble missionary efforts. Over time the Portuguese presence weakened. Intrigue and revolts became more frequent. Mombasa was a particularly troublesome place. Fort Jesus fell to local Sultan Yusuf in 1631. It was recaptured by Portugal, but fell definitively in 1698, following a five year siege during which most of the defenders died. Saif ben Sultan who conquered the fort also drove the Portuguese from Kilwa and Pemba in 1699. Having cleared the Swahili coast of the Portuguese, he then returned to Oman to straighten out dynastic issues

To complement weakening Portuguese power in its coastal enclaves, by the end of the seventeenth century the Dutch and the English displaced Portuguese control of the oceans. Since not much of value had been found along the East African coast, it slipped out of the glare of European attention. As noted

above, sovereignty was regained, in the first instance by Imams and Sheiks from Oman who in turn passed control to prominent Swahili family dynasties such as the Mazuris in Mombassa.

## Issues to Ponder

What of the Zenji Empire remains in the culture of the coast? Does the tolerance towards others reflect a centuries old contact with the wider world?

Prince Henry the Navigator died long before Da Gama's voyage; yet he caused the development of ships and navigational devices that permitted such voyages to occur. Portuguese discoveries led directly to the Atlantic slave trade and the subjugation of Africa to European powers. Has anyone else had such an impact on Africa? Should Henry be blamed or absolved?

Why were the Portuguese so inept and unable to leave a better legacy in East Africa?

The Indian Ocean.

## Chapter 3: The Omani Epoch

### Omani Sultans Rule the Coast

Omani rulers exercised indirect rule over the coast for the next hundred years, but the Sultan only formally re-claimed the coast as his dominion in 1777. His successor Seyyid Said sought to levy more direct rule in the early 1800s, but to do that had to re-take control from the Swahili families. Mombasa was the prize because of its harbor and fort. The Mazuris, however, wished to retain their independence and in 1823, just as the Sultan's forces closed in, the Mazuri sought British protection. Thinking that the establishment of a protectorate was an excellent way to abolish slavery and exceeding his orders (he had none) British naval Captain Owens who was then in Mombasa accepted the Mazuri offer and thus temporarily thwarted Sultan Seyyid Said's plans. The British government, however, reneged on the deal

in 1826 because it wanted no obligations or responsibilities in East Africa. Seyyid Said subsequently took control of Mombasa in 1837.

During the period of time when he consolidated his rule on the coast, Sultan Seyyid Said lived in Zanzibar. In fact, he formally shifted his capital from dry, sandy Muscat to green, fertile, Zanzibar in 1832. Beyond the obvious inducement of climate, Seyyid Said reckoned that commercial opportunities along the coast were superior to those of southern Arabia. He set out systematically to ensure success. He introduced cloves and found that the soils and climate of Zanzibar and neighboring Pemba Island were perfectly suited for the crop. Cloves then complimented long-standing trade in slaves and ivory from the mainland.

Sultan Seyyid Said was an astute diplomat. He recognized British power so did little to antagonize the British. Instead he always put forward enough real cooperation to compliment the façade of even greater gentility which he portrayed to the world. Other trading nations of the globe recognized the growing importance of Zanzibar and Seyyid Said's court. The United States opened a consulate in Zanzibar in 1837, which remained in operation (with a small hiatus during World War I when it moved temporarily to Mombasa) until 1979, long after Zanzibar's 1964 union with Tanyanika.

In short order, Seyyid Said built the slave trade from a trickle to a torrent. He was never interested in imperial domination of the mainland, but only in drawing out its wealth. As they had done for centuries past Arab slave caravans trudged regularly into the interior of Tanganyika where they acquired slaves either by barter or purchase from local chiefs or by direct capture. Slaves were bound together, collected at points such as Tabora and Ujiji, then marched to the coast. Newly acquired slaves often carried ivory as their first duty to their new masters. In the 1820s and 30s about fifteen thousand Africans were sold each year in the slave market in Zanzibar. For each person sold, three did not live long enough to reach market and another one or two died in transit to Arabia or India. Although these annualized numbers in no way approach the outflow of slaves from West Africa to the Americas, remember that the eastern slave trade had been ongoing for a thousand years. So the total of slaves exported from East Africa over the centuries may well equate to the fifteen to twenty million people who endured the Atlantic passage.

Whatever the numbers, the slave trade had a devastating effect on African society in the interior. Villagers were never safe from marauding slavers. Slave raids fostered acceptance of violence and periodic disruptions of everyday life forced a continued cycle of economic subsistence. There was neither the time nor the historical space for the people of East Africa to create the types of institutions and surplus wealth (which west Africans had experienced a thousand years earlier) that led to economic advancement.

## Combating Slavery

Following its 1815 victory in the Napoleonic wars (in which England gained the island of Mauritius from France), English ships ruled the Indian Ocean. Conforming to domestic pressure – much of which was generated by William Pitt and John Wilberforce - Britain gradually began to increase anti-slavery pressures in the region. Britain focused first on the sea-borne trade which could be interrupted, then more

determinedly on the land-based trade and the markets along the coast. By and large these anti-slavery activities coupled with the fact that Britain was the global superpower of the 19<sup>th</sup> century drew it inevitably further into East Africa. (This study guide does not go into the intellectual history of Britain in the 18<sup>th</sup> and 19<sup>th</sup> centuries which gave rise to new ideas regarding the equality of men - manifested in the American and French revolutions – which undermined the idea of slavery. Readers interested in pursuing this topic will find much material available.)

In 1807 Britain banned the slave trade and authorized the Royal Navy to interdict slavers. Even though traffic in English ships halted almost immediately, the ban had little impact in the Indian Ocean. Flush from victory over France, in 1822 the British forced the Moresby Treaty on Sultan Seyyid Said which required that he not sell slaves to Christians, nor transport slaves to the British colonies of India and Mauritius. The treaty did not interfere in the commerce within the Sultan's dominions nor with exports to the Muslim world. Although the loss of peripheral markets irritated the Sultan, pragmatist that he was, he accepted the British conditions. In 1833 the British Parliament voted to abolish slavery in its dominions. This, of course, had no impact on East Africa, but did set the stage for further British efforts to curtail the trade which came in 1845 via the Hamerton Treaty with Seyyid's successor Seyyid Majid. The treaty legally severed the slave trade between East Africa and Arabia. Enforcement of trading restrictions was very difficult due to the inadequate means available. Therefore much of the trade continued as before. During the era of explorations which ensued (discussed below) the evils of slavery were exposed by the mass media of the day – books, newspapers and journals – which generated great public clamor in Europe for outright abolition. Finally in 1873 under threat of a British blockade of Zanzibar, Sultan Bargharsh (Seyyid's third son) agreed to abolish the trade. Even so, it took another thirty or so years to stamp out vestiges of the trade and the institution itself. It was not, in fact, until 1897 that slavery was outlawed in Zanzibar.

### **Issues to Ponder**

Was East African slavery more humane than the slave trade to the plantations of the new world? Does the legacy of slavery still exist on the coast? If so, how might it be manifested?

What was the day of the American consul in Zanzibar like? What did he do? Whom did he report to?

What was Seyyid Said's longest lasting impact on the region?

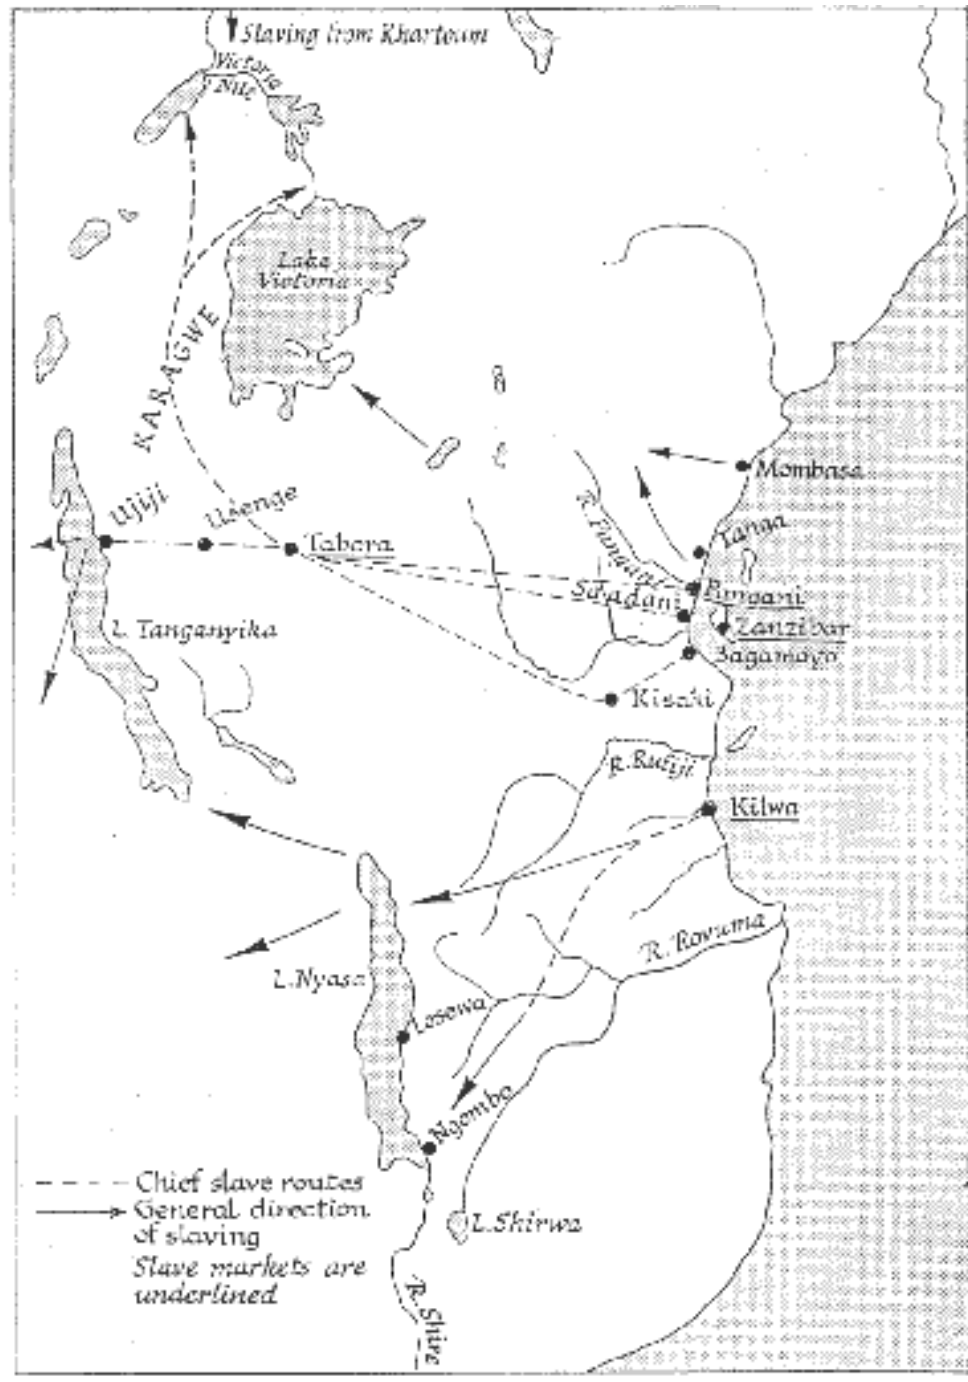

### **Readings:**

A true gem of a web site. This one contains a series of papers about Zanzibar. The items on slavery and the lineage of the Sultans are pertinent to this chapter.

Slave Routes.

## Chapter 4: Exploration

### Attention shifts to the mainland

By the middle of the nineteenth century, most of the world's map had been filled in to the satisfaction of Europe. Yet several great mysteries remained to be unraveled. Foremost among these was the source of the Nile River. From Ptolemy's time, the Mediterranean world heard rumors of snow and ice in the center of Africa. Ptolemy said that the Nile rose in the Mountains of the Moon. But where were those mountains? Also, what was the course of the mighty Congo River that disgorged itself into the Atlantic Ocean? Intrepid men (and women) set out to solve these mysteries mostly for the glory of it (riches and fame were showered on those who survived), but also for the sheer adventure of testing themselves against the unknown. One of the pathfinders, Dr. David Livingstone, was something of an anomaly because his motivation was also related to stamping out slavery. The mortality rate of European explorers in tropical Africa was appallingly high largely due to disease, but also as a result of conflict with indigenous people who, because of the slave trade, were deeply suspicious and hostile towards outsiders. Nonetheless, even against great odds, men stepped forward willingly to participate in these journeys of exploration.

Among the first bits of tantalizing news from Africa was the 1847 allegation by a German missionary J. Rebman resident at Rabai near Mombasa to the effect that a great snow covered mountain (Kilimanjaro) existed inland just south of the equator. His colleague Krapf confirmed the sighting in 1849 and also reported a second snow clad peak (Kenya) further to the north. Learned societies were skeptical and someone even wrote a book "proving" that snow could not exist on the equator, but the reports sparked the interest of the Royal Geographical Society and resulted in further efforts to unlock the mysteries of East Africa.

Most expeditions into East Africa were mounted from Zanzibar. They followed the slave caravan routes across central Tanganyika to the Lake. Livingstone went this way in 1853, again in 1856 and again in 1866. His reports of the evils of slavery plus the geographical marvels (he saw and named Victoria Falls on the Zambezi River in 1855, but the African name "smoke that thunders" is much more apt.) gave him cult like status with the reading public. However, little was heard of Livingstone after the beginning of his third journey. He seemed to have disappeared into the depths of the dark continent. Henry Morton Stanley, who was to become the 19<sup>th</sup> century's best known man of adventure, took a commission from the New York Herald newspaper and set off to search for him in 1871. Walking into the Tanganyikan lakeside village of Ujiji on November 10, 1871, Stanley spied an ill white man shuffling forward to greet him. He proffered his hand and uttered the immortal phrase of obvious logic, "Dr. Livingstone, I presume?"

Stanley's account of his expedition was front-page news around the world and re-kindled a public interest in African exploration, and in Stanley himself, that lasted the best part of the next thirty years.

Meanwhile Burton and Speke solved the Nile mystery in 1857 when they verified no northern outflow from Lake Tanganyika. Several weeks later, Speke alone saw the vast expanse of Lake Victoria (which he named for his queen). Although Speke speculated the lake was the source of the Nile, this was not confirmed and became a cause celebre in England pitting Burton and Speke, proponents of conflicting theories, against each other. The issue was resolved in 1860 when Speke returned with James Grant and saw the outlet at Rippon Falls. In the early twentieth century the British administration erected a statue of

Speke at this point with the inscription saying that John Hanning Speke was the "first man" to see the source of the Nile. Later a Ugandan government took down the plaque noting that while Speck may have been the first "European" to see the Nile, many African men before him had often seen it.

In 1860 Samuel Baker and his wife Isabelle filled in blanks on the map regarding the course of the Nile and in the process found Murchinson Falls. Henry Stanley made East and Central Africa his turf with voyages of discovery to the lakes of the western rift valley, the Mountains of the Moon (which Stanley passed by on one occasion, but did not see because of clouds) and finally the course of the Congo River. Stanley went on to greater glory in the expedition to rescue Emin Pasha and then, as an employee of King Leopold, in the establishment of the Congo Free State.

John Thompson explored Kenya in 1882. Previously, the country had been avoided by Europeans on account of fear of the Masai, but Thompson experienced few difficulties and traced a grand circuit from Mombasa to Lake Rudolph (which Hungarian Count Teleki coming from Ethiopia mapped earlier) on to Lake Victoria and back to the coast.

By 1880 the geographical mysteries of the continent were solved, but more importantly the lands and the people that inhabited them were revealed to the outside world. Whether they wanted to or not (and, of course, no one asked) East Africans were about to embark on a new era of encounters with that world.

### **Issues to Ponder**

What today would compare with the mid-19<sup>th</sup> century fascination with the exploration of Africa? Going to Antarctica, climbing Everest, travel to the Moon or Mars? Maybe just the Discovery Channel?

What does it take in a person's character to venture into the unknown, understanding a real possibility of death?

### **Readings:**

Explorers of East Africa.

## Chapter 5: The Partition of Africa

Initially European nations, Britain in particular, were not interested in colonies in Africa. Britain had been spurned by America, and saw that similar divisions were coming with Canada and Australia. If people of British origin declined links to the motherland, why then could one expect that black and brown people would want ties? The colonial experience in India too had been less than satisfactory and expensive besides. Instead Britain was more than content with military dominance of the seas, which enabled flourishing commerce. British prosperity was based on trade wherein raw materials and goods were bought and sold on open markets. As long as these markets functioned there was no need for

governmental control of raw materials. However, in order to assure profitable trade, the British government chartered companies and granted them exclusive rights to specific areas of British influence. To this end in the late 1880s the Imperial British East African Company headed by Sir William Mackinnon was granted trade rights in East Africa. The competing German company was the German East African Company directed by Karl Peters. Both entities actively established trading relationships and signed treaties with local chiefs along the Tanganyikan and Kenyan coasts. While both organizations made profits, neither was spectacularly profitable. Peters sought to expand German influence in Kenya and in Uganda, but both companies made the case in their respective capitals that greater administrative control and the development of infrastructure were essential to stopping slavery (still a good rallying cry) and to commercial success. Nonetheless, Prime Minister Gladstone, who served for much of the last half of the nineteenth century, held off Parliamentary proponents for African colonies.

Yet when the time came Britain was forced by European politics to acquire colonies. The impetus came from King Leopold of Belgium and German Chancellor Bismarck. Leopold was a schemer par excellence who sought to establish Belgium, and himself, as a greater power via the acquisition of colonies. After eyeing Asia and Latin America (already taken) he settled on Africa. He organized a "benevolent" society, employed Henry Stanley and began to establish trading stations along the Congo River. French explorer de Brazza took note and began a competing system of alliances with chiefs on the north bank of the river. As time progressed, Leopold's society metamorphosed into a private company (which he controlled) and finally into a Belgian government colony. But to back up, Leopold's acquisitiveness coupled with Portugal's long-standing territorial claims and complimented by Bismarck's intent to make Germany a real world power all coalesced into the Berlin conference of 1885. Diplomats in Berlin simply carved up Africa into spheres of influence. France and Britain got the lions' shares as they were granted rights to the hinterlands behind their coastal spheres of influence, but Leopold got his Congo, Portugal retained most of its claims and Germany was allocated territories in West Africa (Togo and Cameroon), Southwest Africa (Namibia) and East Africa (Tanganyika). The only conditions that the colonial powers imposed upon themselves at Berlin were the obligation to exercise "effective control" over and to develop their new possessions. This obligation became the driving force for greater metropole efforts in the newly delineated colonies.

The East African coast had been troublesome to carve up, complicated as it was by the recognized sovereignty of the Sultan of Zanzibar over the coastal zone and by his claims to the interior. Britain acquiesced to German control of the coastal strip of Tanganyika including its acquisition of the port of Dar es Salaam, but Britain defended the Sultan's rule over Zanzibar, Pemba and a ten-mile wide strip in Kenya, including Mombasa. Based on a treaty Peters signed with a local sheik Germany also laid claim to an area around Witu (between Malindi and Lamu in Kenya). Bismarck sent a flotilla of battleships to Zanzibar to ensure that the Sultan signed away his rights in accordance with decisions made in Berlin. Even though authorized by its peers at Berlin, Britain was reluctant to become more involved in East Africa, until it decided to strengthen its role in Egypt. In the late 1880s once Britain decided to stay in Egypt, it too became concerned with control of the Nile River, as had the rulers of Egypt for thousands of years.

In previous years explorers and missionaries found thriving kingdoms in Uganda where they planted

seeds of division: English vs. French, and Catholic vs. Protestant vs. Muslim. By the 1880s Leopold had pretensions to parts of the Nile watershed. France's claims to the area were not resolved until the Fashoda (Sudan) confrontation with Great Britain on the Nile in 1889. Germany too sought to exercise dominion in Uganda. Moreover, in 1885 an Anglo/Egyptian army under General Gordon had been soundly defeated at Ormdurman leaving the Sudan in the hands of the Mahdi, an Islamic fanatic. For all these reasons Britain felt compelled to obtain and exercise control of Uganda.

The initial responsibility for the establishment of an official British presence in Uganda was assigned to officials of the Imperial British East African Company. Lord Lugard set out to accomplish this task in 1890. After a series of wranglings with Kabaka Mwanga (king of Buganda), Lugard obtained a treaty which recognized the company's authority in Buganda, but anti-British intrigues continued in the court of the Kabaka and in rival kingdoms of Bunyoro, Toro and Ankole. However, Lugard was not diverted and proceeded to consolidate control of Uganda. In 1894 Sir Gerald Portal, the British consul from Zanzibar, arrived in Kampala and declared a British protectorate.

Meanwhile the provisions of the Anglo-German Agreement of 1890 cleared up conflicting claims on the coast. Germany agreed to stay out of Uganda, but could extend its claim in Tanganyika westward to the Congo. Germany also gave up its claim to Witu. In return, for the sum of 200,000 English pounds Germany bought outright the ten mile coastal strip of Tanganyika which earlier it only "leased" from the Sultan. Germany also recognized a British protectorate over Zanzibar, which included the island itself, Pemba Island and the ten-mile wide coastal strip in Kenya and part of Somalia. Establishment of this protectorate relieved the Sultan of the realistic fear that Germany would completely take over his dominions. Finally, as the dealmaker, Britain returned to Germany the island of Heligoland in the North Sea, which it had held since the Napoleonic era.

As agreements go, except for Sultan Barghash who lost territory and his independence, this was a fairly good treaty as it eliminated a dangerous British- German rivalry in the region.

### **Issues to Ponder**

Why did the European nations need colonies? What did Germany and Belgium realistically gain? Did Africa matter, or was it just a way to keep score? Could you have drawn the borders of East Africa in a better fashion?

Did the Sultan of Zanzibar deserve to lose his lands or was he a victim of racism?

### **Readings:**

Ward and White. *East Africa ; A Century of Change 1870-1970*  
Pages 12-44, "The Partition of East Africa."

Pakenham, Thomas. *The Scramble for Africa: the White Man's Conquest of the Dark Continent from*

***1876 to 1912***. Random House, New York, 1991.

Chapter 16, "The Sultan's Flag"

Chapter 17, "Cries from the Heart"

Chapter 18, "Dr. Emin, I presume"

Chapter 19, "Salisbury's Bargain"

Pakenham's opus is a detailed study of the acquisition of spheres of influence, power and colonies throughout the continent. He focuses much attention on politics and pressures on European governments and leaders in their home arenas. An excellent table of contents lets the discerning reader choose chapters of most immediate interest.

[www.Zanzibar.archivies.com](http://www.Zanzibar.archivies.com)

Both these sites, which we have visited before, contain items relevant to the age of exploration and the partition of Africa.

Anglo-German Agreements of 1886 and 1890.

## Chapter 6: Conquest and Consolidation

Exercising control of the people of East Africa took some doing. Outsiders were not especially welcome; particularly when they dismantled traditional political structures, disrupted social customs and introduced alien philosophies and religions. As was true elsewhere on the continent Africans found Europeans to be a different type of opponent. Rather than raid, win and leave, taking livestock and maybe women, the Europeans stayed and sought to rule. Ultimately throughout all of East Africa the establishment of colonial rule was aided by the spread of disease such as sleeping sickness and measles which decimated populations and weakened their social fabric. Rinderpest too, chiefly the epidemic around 1900, wiped out cattle herds and concomitant economic prosperity. Conquest and consolidation, however, took different forms in each of the three territories.

### British Uganda

Ugandan kingdoms of Buganda, Bunyoro, Toro, Ankole and Busoga were well-established functional

societies. Other groups in the territory such as the Teso, Acholi, Langi, Bugisu and Bukedi were not organized centrally. Luggard established a policy of indirect rule, which meant that he used the existing tribal structures to establish and enforce British rule. Essentially this meant that aside from some basic law-and-order and economic issues, i.e. tax collection, life for most went on pretty much as before. Even so, British officials were instructed to get out, meet the people and learn the districts. Even though the District Officer held some ultimate power of coercion, which always provided him with a strong hand to play, imperial policy favored persuasion over coercion.

As noted earlier, Luggard signed a company treaty with the Kabaka of Buganda in 1890 which was followed by the declaration of a protectorate in 1894. During those intervening years and afterwards, some military effort and a good bit of politics were required to bring other kingdoms, especially Bunyoro, into the British fold. In fact, as an aftermath to the conquest of Bunyoro, accomplished with Bugandan military help, several Bunyoro regions – now called the lost counties – were transferred to Buganda's control.

By 1902 when the British demarcated border for eastern Uganda was shifted from the rift valley (of Kenya) to its present location bisecting Mt. Elgon, most of Uganda was pacified under British authority. However, the political issues that plagued Uganda later in the 20<sup>th</sup> century were well established. Those issues included: the prominence of the kingdom of Buganda in the Ugandan protectorate, divisions within the Baganda people according to religion – Catholic, Protestant (Anglican) or Muslim. These divisions often had dynastic implications for the ruling family. Beyond Buganda, traditional rivalries amongst the other kingdoms and tribal groups – the Bunyoro, for example, continued to complain about the lost counties - were compounded by their separate adherence along tribal or regional lines to either Catholicism or Anglicanism. Political parties would later build on these cleavages. Another issue was that of land ownership, particularly the Mailo lands of Buganda. (Mailo is a word derived from "mile" that was applied to land that, for the first time, could be sold or leased.)

A key tenant of British indirect colonial administration was that a protectorate or colony should be self-supporting. It should generate the funds necessary to support its operations and development. Obviously, this philosophy meant that taxes had to be paid, but to do that money needed to be earned. Consequently cash crops of cotton, coffee and tea were introduced. Since the indigenous sector was not able to pay lots of taxes, revenue needs justified the imposition of high import and export taxes – a structural economic problem that still plagues the three states today.

## German Tanganyika

In contrast to the British, the Germans insisted on Germanizing their colony. First, however, they had to conquer it. In the 1890s Germany separately fought the Hehe, the Nyamwezi and the Chagga in order to establish control. Subsequently, Germany introduced the "akida" system of appointed local officials who reported in turn to German commissioners. The men chosen to be akida agents had little loyalty to the existing tribal governing system, and usually were not from the area where they were posted, so were responsive to their German masters. This system was fairly repressive; coercion was used to obtain labor,

payment of taxes, etc. However, one positive aspect of German colonial administration, seen in retrospect, was the use of Swahili throughout the territory.

Also in contrast to the British, the German government took a more active interest in promoting economic development. It was willing to spend money from Berlin on agriculture, infrastructure and other projects. The German administration introduced cotton and sisal and helped establish them as crops. It also began a government backed education system. The crowning opus was construction of the Tanga to Moshi rail line in 1893 and construction of the central line from Dar es Salaam to Tanga and Lake Tanganyika in 1905 – 1914 (the British added the extension to Mwanza in the 1920s).

Governor Count von Glotzen who served in the first years of the 20<sup>th</sup> century introduced some reforms to reduce abusive coercive practices, but simmering resentment burst forth in 1905 in the Maji Maji rebellion. Maji Maji was a carefully planned full-scale revolt by the Ngoni and related people in the southern part of the territory. Designed to oust the Germans completely, the plan was to kill officials, traders and missionaries; to force the Germans back to the coast and even to capture Dar es Salaam. Fortunately for the Germans, the Ngoni fought alone, apparently they never sought support from the larger better-organized Nymawezi or Hehe tribes. Maji maji means water water in Swahili. Warriors were anointed with magic charms that were supposed to turn German bullets to water. (This same idea of magic and faith turning bullets aside surfaced in the Simba Rebellion in the Congo in the sixties and again with Alice Lakwana's Holy Spirit Movement in Uganda in 1986.) The southern revolt caught the administration totally by surprise. Maji Maji warriors enjoyed initial success in killing and running off Germans. However, once contained, it was simply a matter of time before German colonial troops with modern arms reversed the tide of battle. The German response was heinous; its scorched earth policy brought an end to the rebellion but at the cost of reducing the south to ruin and alienating the people of the region for generations. At about this same time German suppression of a revolt in South West Africa (Namibia) took on the dimensions of genocide when the Herero people were almost annihilated as distinct ethnic group following General von Trothu's "Extermination Order."

Although unsuccessful in ousting the Germans, the Maji Maji rebellion did generate a more careful look at colonial policies by the administration and did result in some easing of strictness.

## British East Africa

Kenya was different from both of its neighbors. It was lightly populated, had no centralized kingdoms or large tribal societies. While the coastal strip under the suzerainty of the Sultan of Zanzibar produced food and copra, the end of slavery in the Sultan's dominions in 1897 with no other source of labor in sight brought an end to large scale plantation agriculture. The region immediately behind the coast was barren bush for hundreds of miles. Because the combination of geography and the fearsome Masai kept intruders away, Kenya's interior was spared the ravages of slavery.

On Thompson's and other explorers' treks to the interior, groups of agriculturists such as the Kikuyu and nomadic herdsmen like the Masai were encountered as well as Luhya and Luo farmers and fishermen

around Lake Victoria. Of these Chief Mumia, a Luhya, who lived just north of the lake had been hospitable and helpful to Luggard in his efforts to reach Uganda.

Once the Ugandan protectorate was declared in 1894, Britain was faced with the problem of how to get to and from that landlocked territory. The solution was to build a railroad from Mombasa to the lake. This vast construction project began in 1897 and terminated at Kisumu on Lake Victoria in 1901. Along the way it generated the towns of present day Kenya. Nairobi started as the storehouse and construction site at the end of the plains and before the climb to the rift valley escarpment. Nakuru was an entrepot in the center of the rift valley and Kisumu grew up around the terminus of the line at Lake Victoria. Indian coolies were brought in to build the rail line. Many stayed. Joined by families, they grew into the community collectively called Asians that one finds in East Africa today. The rail line was also the cause of the Ugandan border being shifted westward in 1902 when the powers-that-be decided it would be better administratively to have all the line in one territory.

British authorities fought to establish imperial rule in Kenya. A series of separate skirmishes with the Kikuyu, Meru, Kisii and Luo brought peace to their respective regions. The Nandi were the most troublesome especially when they saw the railroad dividing their land, but they too were subdued. The British generally avoided confrontation with the Masai who were reputed to be the most warlike of Kenya's people.

The railroad changed Kenya. Justification for opening Uganda was not enough; backers of the rail scheme needed more. Although the idea of white settlement in the cool, fertile and non-tropical highlands had been advanced earlier by Johnston, Luggard and Mackinnon, it was not until a railroad through nowhere was being built that further justification for the venture was required. European settlement was the answer.

In order to attract settlers, a crown lands ordinance was passed in 1901, which rendered the conveyance of title possible. Settlers were then sought from Britain and South Africa. In the pre-World War years they trickled in slowly and like pioneers everywhere found it a demanding task to bend the new land to their way of life and ideas about agriculture. Though perseverance and individual effort they succeeded and effectively transformed the Kenyan highlands into "white man's country." Settling along the railway, they turned it into a profitable operation within a dozen years.

Although the British administration used mechanisms of indirect rule in Kenya, labor and land issues, especially the alienation of tribal land for European settlement were continually troublesome and were the seed that flowered later as Kikuyu nationalism. Even after independence land questions would remain central features of political argumentation in the quest for tribal and individual economic prominence.

## Issues to Ponder

What enabled Britain and Germany to establish their respective rule in East Africa? Moral superiority, political advancement, military might, divine providence? What did the Germans and the British, at the time, think authorized them to take over?

Was African resistance more or less active than you had thought? What mobilizing factors were involved?

What were the differences between "direct" and "indirect" colonial rule. Which was more effective? Which was better?

Ward & White, *East Africa: A Century of Change, 1870-1970*  
Pages 45-78, "The beginnings of colonial rule"

Pakenham, *The Scramble for Africa*  
Chapter 23 "The Flag Follows the Cross"  
Chapter 34, "Maji Maji"

### **Additional Readings:**

Miller, Charles. *The Lunatic Express*, Random House, New York, 1971

This book recounts the trials and tribulations of building the Kenyan railroad. It is a superb history of the time and the region covering Zanzibar, Uganda and, of course, Kenya.

Huxley, Elspeth, *White Man's Country (Volume One: 1870-1914); Lord Delemare and the Making of Kenya*, Chatto and Windus, London, 1935.

DT434.K4H78

Huxley wrote the definitive biography of Lord Delemare, a truly unique individual whose enthusiasms, exuberance and money made him larger than life as an individual, as well as someone fanatically committed to Kenya; to its economic and political success. He was the unchallenged leader of the settlers for nearly a half century.

Meinertzhagen, Richard, *Kenya Diary (1902-1906)*, Eland Books, London, 1957.

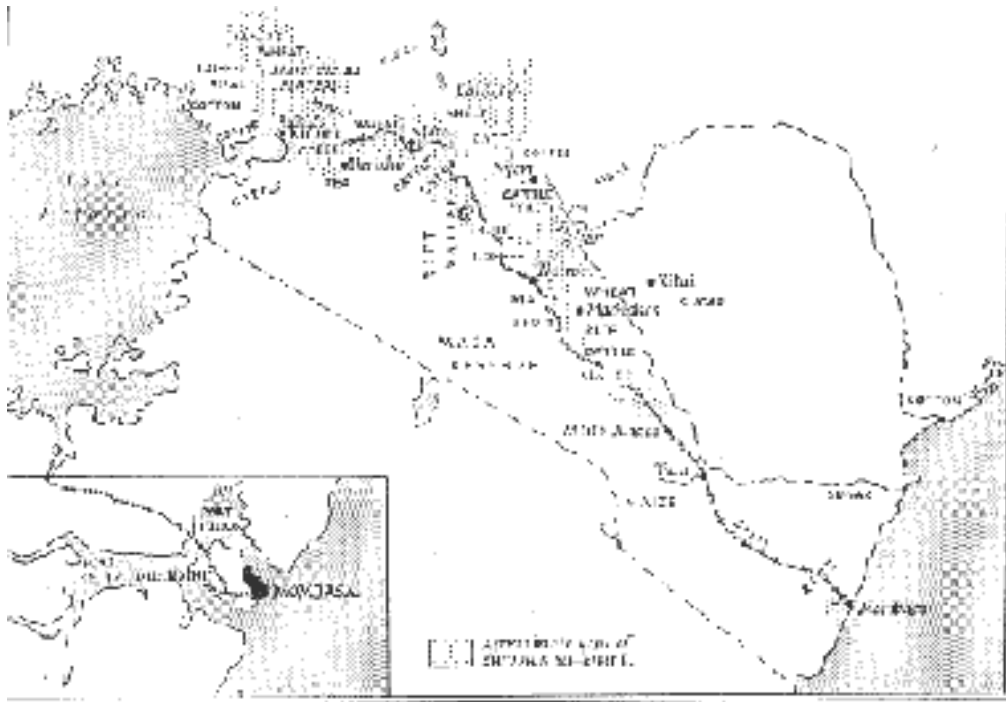

DT434.K4M4

Meinertzhagen was a district officer in Kenya at the turn of the century. His very readable reminisces give an accurate flavor of indirect administration and of the efforts necessary to pacify the Kikuyu and the Nandi. Also, he happily killed an astonishing number of rhino. Although handicapped by his surname, Meinertzhagen went on to become the chief of British intelligence in East Africa during World War I where he pitted wits with General von Lettow-Vorbeck, but that's the next chapter.

Churchill, Winston S. *My African Journey*. London: Hodder and Stoughton, 1908.

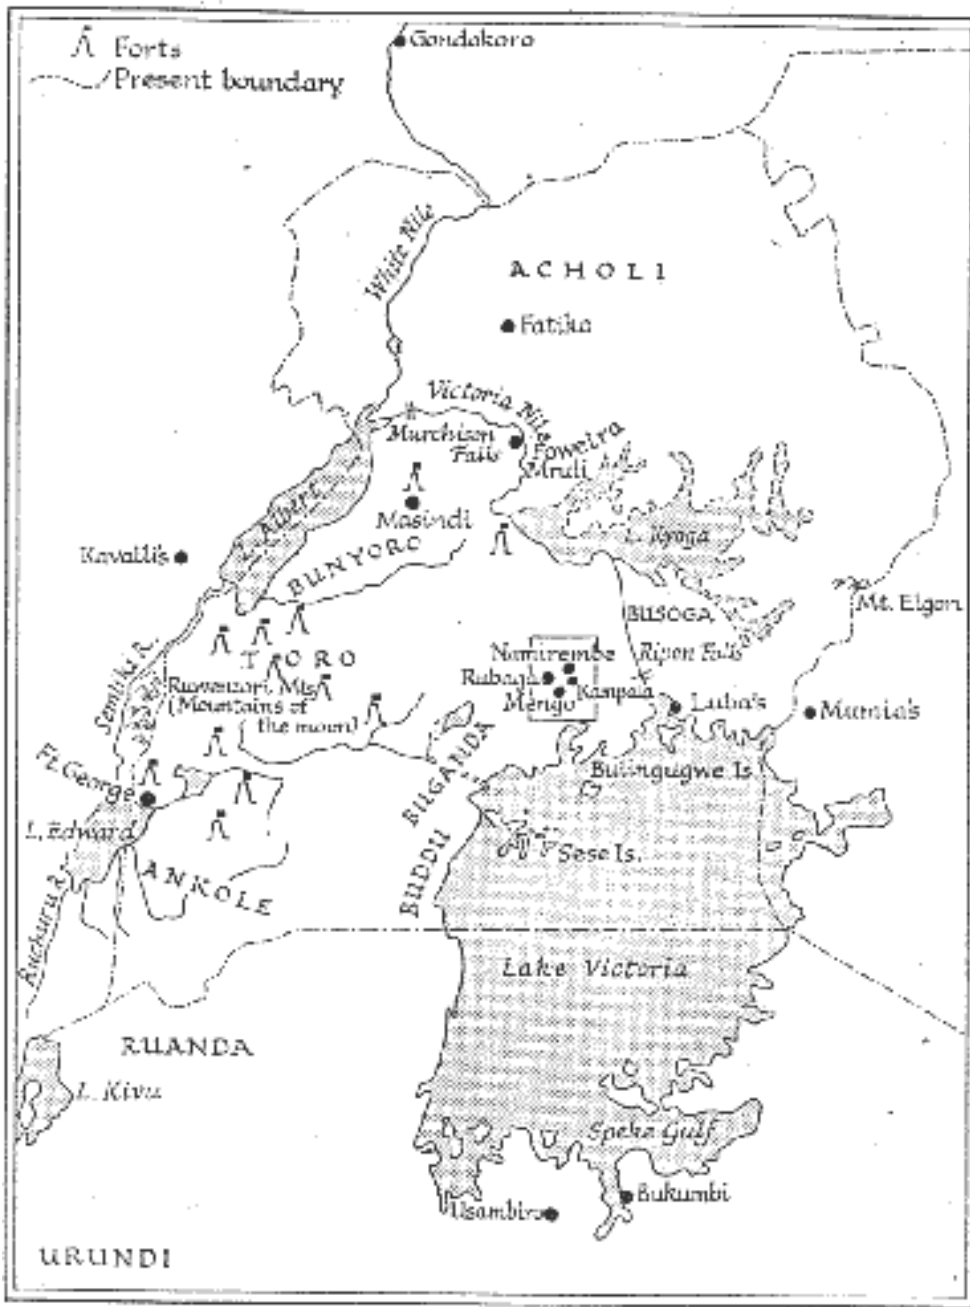

As a young assistant cabinet minister for the colonies, Churchill took the railroad from Mombasa to Lake Victoria, sailed to Entebbe, biked, walked and boated down the Nile to the Mediterranean. An excellent writer, his descriptions of Uganda are especially interesting.

The Railway, European Settlement, and Agricultural Products of Kenya.

## PEOPLES AND KINGDOMS OF UGANDA

## Chapter 7: World War I

As if the changes of the previous twenty years weren't enough, World War I arrived. The war generated long range consequences for Tanganyika and Kenya, but it had an immediate impact as well.

When war loomed, the military commander in German East Africa General P.E. von Lettow-Vorbeck, was astute enough to recognize that European powers would try to keep the war away from the colonies. He knew from the outset that Germany would probably lose the war, but felt rather than keep war from Africa, he should do as much as he could to tie up British assets in Africa. This would consequently provide more breathing space for German forces in Europe. He judged that he probably could not win in

East Africa either because he would be unable to get munitions and supplies. Nonetheless, with those caveats in mind, Lettow-Vorbeck convinced his reluctant governor of his position and began his campaign.

In 1914 Lettow-Vorbeck's army consisted of several hundred German regulars, several hundred Tanganyikan troops and hundreds up to thousands of porters, called carriers. Dar es Salaam's central market is known as Karikor (carrier corps) as it was first an assembly ground for the carriers. General von Lettow-Vorbeck's motley army seized the initiative, attacked and took Taveta on the Kenyan border from whence it raided and cut the Mombasa/Nairobi rail line at Tsavo. This got British attention. British forces, mostly Kenyan irregulars, counterattacked at Taveta, got a fight but then found the Germans gone. In 1915 an expeditionary force of Indian troops landed at Tanga on the Tanganyikan coast and were routed by the German defenders. In 1916 when General Smuts of South Africa took command of the British effort and began pressing German positions, Lettow-Vorbeck marched south. Along the way men and guns from the German cruiser *Konigsberg* which had been blockaded in the Rufiji delta by British warships joined him. The heavy naval guns were strapped onto carts and towed along. (Today, one is in Entebbe, Uganda as a war memorial). The German commander began a long game of cat-and-mouse skirmishing as his forces moved along. He led his enemies south into Mozambique, back again into western Tanganyika and then into Northern Rhodesia. It was there, after the Armistice, on British territory, with his tattered flags flying and drums beating, that he surrendered. In sum, Lettow-Vorbeck achieved his goal. He was never defeated. He tied up tens of thousands of British men and millions of pounds of resources. Although, the East Africa campaign had no impact on the outcome of the war, General von Lettow-Vorbeck became a legend.

Legendhood notwithstanding, the consequences for Tanganyika were devastating. First, there had been no administration for years so what had been established, particularly in the economic arena was lost. War and troop movements from both sides had taken a toll on the rural areas. The modern economy had stopped. The country was wrecked. Recovering from this devastation was not easy. Germany was shorn of its colonies by the victors. In its place Britain accepted (the U.S. refused) to govern under a mandate from the League of Nations. Although in retrospect this probably provided a climate more conducive to future political freedoms, in the short term, Tanganyika became an obligation and a responsibility rather than a possession where the metropole was willing to invest. Deprived of resources, the economy limped along and never registered a respectable rate of growth.

In the aftermath of the war, Britain began a program of granting land to British officer war veterans in Kenya's white highlands. This led to an influx of settlers that raised overall numbers of whites to a critical enough level so that they had to be taken into account by the administration. Soon settler interests and British administrative interests began to diverge with regard to the role and future of Africans in the colony. The settlers wanted land and cheap African labor to farm it, whereas the administration sought to protect and advance the interests of the indigenous Kenyans. This is not to say that the administration became pro-African; it very much saw Kenya's future as an imperial multi-racial dependency, but it did begin to constrain settler aspirations.

Another consequence of the war was the collapse of the world financial system. Kenya's currency was the

Indian rupee, which fell like a rock making settler financial obligations, which were enumerated in pounds sterling, shoot up. While there was a quick rebound in prices just after the war for primary products, by the early twenties the boom was over as the devastated European economies had much reduced spending power. Inflation was rampant in Kenya and farm laborers naturally sought higher wages to pay for more expensive imports. Thus white settlers, who constituted the modern sector of the economy, were squeezed by creditors and laborers alike. The resulting economic stall precipitated further confrontation between settlers and Africans and between settlers and the administration.

A final consequence of WWI was expanding political awareness of the African populations of all the territories. Africans had fought and carried. They had journeyed far, seen other lands, met other people, seen whites fighting whites for no understandable reason. They shared all these views with families and neighbors upon returning home. This greater opening to the wider world, as accelerated by the war, was a factor in newly created African organizations and societies that were the precursors of the coming political movements.

### **Issues to Ponder**

Was von Lettow-Vorbeck a genius or just an egomaniac who personally drove East Africa into a decades long morass? If he had not fought, would Germany have retained Tanganyika?

Of the consequences of the war, which do you think was the most influential in changing the course of history in the region?

### **Readings:**

Ward & White. *East Africa, A Century of Change, 1870-1979*  
Pages 78-96, "The First World War"

### **Additional Readings**

Miller, Charles, *The Battle for the Bundu: The First World War in East Africa*

This is the same Miller who wrote The Lunatic Express. Like the other book, this is a detailed chronicle – literally almost step by step – of the war in East Africa. Military history buffs will find it compelling.

Boyd, William, *An Ice Cream War*

This is a novel, but it is set squarely in the context of the war. Boyd respects all the historical facts. Although he focuses exclusively on the European characters – Africans are mostly background - the story is entertaining and provides a realistic feeling for the situation.

## **Chapter 8: Between the Wars**

# Kenya

Land, labor and the Legislative Council were the issues between the wars. Since Kenya was still lightly settled by Europeans, an effort was made to entice ex-servicemen to come and farm. Several thousand ultimately came and many stayed, but only several hundred succeeded as farmers. At the same time settlers were determined to preserve the highlands for whites only. Efforts by Asians and appeals for them by a sympathetic colonial government in India came to naught. Policy remained firm. Asians were not to farm in the highlands. (They were permitted to occupy marginal lands near Kisumu where they started a sugar industry.) Segregated residential areas in the towns and cities also became the norm. As an interesting aside, the British government offered the Zionist Movement the opportunity to make the Trans-Nzoia region (between Eldoret and Kitale) a new Jewish homeland in exchange for relinquishing claims to Palestine, but Zionist leaders refused.

Africans were confined to "native reserves" and thus effectively excluded from land that they or their ancestors had used intermittently for years. Africans, especially Kikuyus whose traditional territory bore the brunt of seizure for English farms, chafed at exclusions from unused farmland. Their animosity grew as their numbers and "land hunger" increased. The largest scale dispossession operation, however, was the removal of the northern Masai from the Laikipia plateau, which opened this vast ranch land to European settlers. (Since much of this region was not suited to crops, it was not coveted in the same way as cropland by Kikuyu farmers.) Currently, Kenya's great ranches of hundreds of thousands of acres each, many of which inadvertently act as game reserves, are in the Laikipia region northwest of Mt. Kenya.

The establishment of viable cash crops, coffee for example, was the objective of European farmers, but cash crops - coffee in particular - were denied to African farmers. Reasoning for this was several fold; first Europeans believed that Africans could not properly care for coffee; thus their plots would harbor disease and risk infecting larger European plantations. Secondly, and more to the point, was labor. To farm effectively Europeans needed African labor, which they wanted on their own terms. Africans, however, were content to engage in subsistence farming that met their daily needs. They had no desire to leave families to work away from home. Therefore, settlers additionally feared that if Africans could produce cash crops they would have even fewer incentives to seek work on European farms in order to have money for taxes or purchases. Much argument, legislation and coercion were employed over the decades as practices gradually evolved in the highlands away from migrant labor to a system of residential labor wherein men and their families lived on white-owned farms.

Paralleling racial land policies were racial political policies. Although Britain envisaged a multi-racial colony where, in time, even Africans would come into their own, it was confounded by strident settler aspirations for self-preservation through strict racial separation. Nonetheless, Britain made its intent clear in the 1923 Devonshire White Paper.

"Kenya is an African territory, and His Majesty's Government think it necessary definitely to record their considered opinion that the interests of the African natives must be paramount, and that if, and when, those interests and the interests of the immigrant races

should conflict, the former should prevail."

Throughout the troublesome years to come, Britain half-heartedly stuck to that principle. As part of its colonial policy Britain gradually increased the powers of the Kenyan Legislative Council and began to shift from appointed to elected members. Finally, the Council came to include elected members from the European, Asian, Arab and ultimately African communities (for decades Africans were represented by Europeans appointed for that purpose). The political history of this era is largely given over to the posturing and political battles over representation on the Legislative Council, not only the numbers of seats per community, but also whether election would be on communal or common roles.

In retrospect the superciliousness of colonial attitudes of moral superiority and paternalism seem unfathomable today, but they were very real and very operative at the time. British society was based on class where everyone had a position in society. In the colonies the British saw themselves as the ruling, wealthy, upper class. The Asians were shopkeepers and traders and the Africans were the laborers and servants. Missionaries viewed Africans as essentially people without culture, blank pages upon which to write Christianity. Administrators saw them as peoples without valid traditions or political institutions who were to be protected and tutored. Additionally administrative jobs and careers were tied to success within the system. Settlers, of course, saw Africans as labor to be exploited. Combined the three European groups – colonial officers, missionaries, and settlers – all had a stake in the perpetuation of the colonial system. Thus, any effort to challenge that system on the basis of land or labor rights or God forbid, indigenous political aspirations, was perceived as dangerous and seditious.

## African Political Awakenings

Modern African politics began in the twenties. Harry Thuku was a young government clerk who protested work conditions and land policies. Jailed, he became a lightning rod for African grievances. He formed an organization that became the Kikuyu Central Association in 1921. Other tribal associations such as the Kavirondo Association (Luos and Luhyas) and the Ukambani Association also emerged. Britain had envisaged African political leadership growing from its system of indirect rule, that is, Britain hoped the traditional chiefs and others who had become part of the colonial apparatus would gradually take on political responsibilities. This was not to be, but it took some time throughout all of East Africa before colonial authorities accepted that the new breed of African political leaders would arise among the young educated men in the towns.

The tribal associations made no immediate claims to Legislative Council representation; rather they took up cudgels on issues directly related to their peoples. The Kikuyu Central Association (KCA) agitated for access to unoccupied land in the highlands. A young firebrand, Jomo Kenyatta was sent to London in 1929 and again in 1931 to lobby Kikuyu land concerns with Parliament. (The second time he stayed until 1946.) KCA seized on the issue of female circumcision to take on the Anglican and Catholic churches and as a way to instill Kikuyu nationalism. Fallout from this struggle led to the creation of hundreds of independent Kikuyu schools. Kenyatta's account of these issues and his constant challenges to colonial attitudes are found in his book on the Kikuyu people, Facing Mount Kenya. Meanwhile, the Kavirondo Association objected to land alienation around Kakamega for gold mining while the Ukambani

Association fought against government mandated herd thinning during years of drought.

## Uganda

Although the idea of European settlement was briefly considered for Uganda, it became clear that the situation there was not conducive to such an undertaking. Asians, however, were permitted to settle. They soon organized vast sugar and tea estates. Without the motor of European agricultural production that Kenya possessed, colonial authorities searched to find suitable cash crops for Uganda to replace the once prolific but now dwindling ivory exports. Cotton was the answer. Soon Ugandan farmers were producing commercial quantities of cotton. Coffee too became a staple crop - the robusta variety throughout most of the land, but high quality arabica on Mt. Elgon and in the western highlands. East African authorities extended the "Ugandan" railroad to Uganda in 1924 by finishing the line from Nakuru to Kampala.

Constitutionally, Britain established a multi-racial Legislative Council in Uganda. While Europeans served on the Council, they represented no special constituency, but the people of the protectorate as a whole. Asians and Africans were appointed to the Council early on. The key issue during these years was the role of the kingdom of Buganda in relation to the rest of the country and especially in relation to the Legislative Council. Britain tried to rule equitably, but Buganda – recalling the Protectorate Treaty of 1898 - insisted on special status as an independent entity within the territory. Consequently, the Bugandan Parliament, the Lukiko, refused to participate in the Council. Colonial governor Sir Philip Mitchell got so frustrated with the Lukiko's obstinacy that he withdrew colonial officials from Buganda for a period of years during the 1930s.

## Tanganyika

The years between the two world wars were a slow time for Tanganyika. Britain, the new colonial authority, took time to re-establish government functions. In a notable reversal of German direct rule, Governor Byatt introduced indirect colonial administration in the 1920s. Indirect rule, however, was not as successful as hoped because many traditional authorities had disappeared or been devalued during the German epoch. One far-reaching decision by the new authorities was the policy of non-encouragement of European settlement. Some German settlers did return and some other Europeans also came, but they received no special inducements or status and the African character of the territory was retained.

Tanganyika's important cash crop was sisal. Additionally, to the dismay of Kenyan settlers, Governor Byatt encouraged Chagga farmers on Mt. Kilimanjaro and in the Para Mountains to grow arabica coffee. In contrast to efforts elsewhere in East Africa to implement policies conducive to the flow of cheap labor to white owned farms, the Tanganyikan authorities sought to protect African workers from abuses. To this end they set forth requirements for improved working conditions and even set up camps to house and feed men journeying to and from seasonal work.

Constitutionally, Britain set up a Legislative Council similar to those of Uganda and Kenya. Only Europeans and Asians sat on it initially; some members were designated to represent Africans. The

colonial government also began to establish local government councils but, as noted above, found few tribes – only the Chagga – organized enough to be able to participate. Nyamwezi and Sukuma leadership had been destroyed and the GoGo, Masai and Ngoni never had centralized structures in the first place.

The worldwide economic depression hit all of East Africa hard. Tanganyika's economy stalled. Commercial despair coupled with British reluctance to rule led for a time to thoughts of returning the territory to Germany. However, the idea was not too serious and Europe tumbled into war before any thing occurred.

### **Issues to Ponder**

Some say colonialism was a product of its era, i.e. Victorian and Edwardian times, and once exported to Africa the values of those times – paternalism, racism, moral superiority - became set in stone and seemingly impervious to changes occurring at home. Others say colonialism was more about realistic economic exploitation than attitudes. Finally a third point of view is that colonialism was an inevitable outgrowth of European competition in the nineteenth and early twentieth centuries. What do you think? Was colonialism justified?

Disputes over access to land have been part of human history since time immemorial, but in Kenya - perhaps as nowhere else on the planet – such issues have driven the formation of the modern state. Keep tracking this problem.

## Chapter 9: Paths to Independence

### Effects of World War II

No battles were fought in East Africa, but the territories provided troops and essential supplies for the allied effort. The U.S. opened a Consulate in Mombasa in 1942 for the express purpose of buying hides and skins for boots, pyrethrum (a natural insecticide), tantalite (used in bomb scopes) and other items for the war effort. Italian POWs captured in Ethiopia and Somalia were incarcerated in Kenya and put to work building roads. Those who stayed on after the war formed the core of Kenya's small Italian community.

Africans who went to war went far. The King's African Rifles fought not only in Ethiopia, but also in North Africa and in Burma. Men who returned home truly came back with a different view of the world. They became part of a modern politically aware group, which felt entitled to a greater political role.

Unlike the post-WWI era, the economic boom that followed WWII did not collapse, but rather carried East Africa to greater prosperity.

Another consequence of the war was changed attitudes in Britain about colonies. The war could not have been won without colonies and popular sentiment was shifting in favor of economic support leading to eventual political autonomy. This was evident in the passage of the Colonial Welfare and Development Act of 1945, which provided funds for infrastructure, schools and health clinics. Additionally to Tanganyika's benefit, the United Nations Trusteeship system replaced the League of Nations mandate. Under new rules the trustee was required to prepare its territory for independence and, to ensure progress, its activities were subject to scrutiny by UN members.

In all four territories constitutional progress was marked by an increase in African representation on respective Legislative Councils, a widening of the franchise, and a shift of governing responsibility from the colonial authorities to the Legislative Council. Even so, particularly in Kenya, Britain remained determined to structure a multi-racial constitutional governing system that enshrined firm protections for minority rights.

## Kenya

In the forties education zoomed to the forefront of African concerns and in the process established a social priority which remains valid today. In 1945 the Beecher Commission recommended that four years of primary school be immediately instituted country-wide, to be followed by another four years as soon as possible. It also recommended the creation of government secondary schools as well as vocational, agricultural and technical schools and a teacher training institute. Implementation of these recommendations, while not replacing church and independent Kikuyu schools, put the government fully into the educational business for the first time.

## Mau Mau

In 1944 Mr. E.W. Mathu became the first African appointed to Kenya's Legislative Council. He founded a new political party named the Kenyan African National Union (KANU). By 1948 there were four African members of the Council and by 1951 there were six. Despite this marginal but real progress on the constitutional front, Kikuyu grievances, especially over land, erupted into violence. The Kikuyu had long complained over being excluded from the white highlands, especially as their number increased and land became scarce in the reserves. Mathu was joined by recently returned budding politician Jomo Kenyatta in arguing the Kikuyu point of view, but to no avail. Popular Kikuyu resentment manifested itself in traditional oath taking which led to intra Kikuyu violence in the late forties aimed at real and perceived supporters of the authorities. Violence became more common and extended to whites in the early fifties. Violence took the form of intimidation, maiming of cattle, hut burning, forced oathing and killing. The rebels took to the bush on the high slopes of Mt. Kenya and in the dense forests of the Aberdare Mountains from whence they raided surrounding areas.

In response to the violence the colonial government declared a "state of emergency" in 1952. As almost the first act, the governor arrested Jomo Kenyatta, accused him of leading the rebellion and banished him to the barren northwest to await trial. KANU was banned and its other leaders also arrested. The government recruited "home guards" of loyal Kikuyus, brought in police and military forces composed of Kenyans from other tribes, enlisted settlers as special anti-guerrilla forces and assigned regular British army units to combat the irregulars. Mau Mau was very disruptive. Not only did it usher in a reign of terror in the central highlands and the Kikuyu reserves, but it led to massive dislocations, forced resettlement into protected villages and squalid detention camps. However, all told only 58 whites and Asians and about 2,000 African civilians were killed. Military casualties on the government side were about a thousand and much higher, perhaps 10,000, among the Mau Mau forces. Most of the fighting concluded by 1956, but the state of emergency remained in effect until the eve of independence in 1962.

Mau Mau had several near term consequences of which the most important was to elevate Kenyatta to mythical status as a martyr and leader. Secondly, Mau Mau was perceived in England very much as the logical consequence of racist settlers seeking to dominate Africans. This resulted in sympathy for the beleaguered Africans and rising approval of African political aspirations. Also, the assignment of regular British forces ensured that decisions about Kenya's future would be made in London and not by settlers in Nairobi. In longer-term perspective and with an obvious element of historical revisionism, Mau Mau – which was purely a Kikuyu phenomenon - became mythologized as a "Kenyan" nationalist struggle, which embodied the independence hopes of all the people of the territory.

## **Constitutional Progress**

Despite Mau Mau – or even because of it – Britain continued to push ahead with Legislative Council revisions. In 1957 Tom Mboya, Oginga Odinga (both Luos) and Daniel arap Moi (a Kalenjin) were elected to the Council. In that year 29 of the 59 members were elected on communal rolls so that Europeans, Arabs, Africans, and Asians, further sub-divided into Hindus and Moslems, all had seats. (On a communal voting roll members of each racial community elect members to specific seats reserved for that community. On a common roll, all voters vote together for all seats. Obviously, the purpose of a communal roll is to assure minority representation in elected bodies.) By the mid-fifties it was clear that Kenya would at some point become independent, as Ghana did in 1958. Although there was a small hard core of opposition, Europeans on the Legislative Council began to accept this eventuality and several parties; the United Party of Kenya and the New Kenya Group began to look for ways to cooperate with their African colleagues. Mboya lead the African block. Following the 1957 elections his vision for Kenya included: no franchise requirements, no racial/communal voting rolls, no restrictions on land ownership but a maximum size of land holdings, eight years of primary school, African involvement in local government and an end to the Mau Mau emergency.

In 1960 constitutional negotiations at Lancaster House in the UK led to agreement for a greater number of elected seats to be chosen from a common roll. Those elected would form a responsible autonomous government. In subsequent elections two African political parties contested for power. The Kenyan African National Union (KANU) - largely a coalition of the two largest tribes, the Kikuyu and the Luo - led by James Gichuru, Oginga Odinga and Tom Mboya took the majority of seats while the Kenyan

African Democratic Union (KADU) - led by Ronald Ngala (from the coast), Masinde Muliro (a Kamba) and Daniel arap Moi - established a strong minority. Since KANU refused to form a government in the absence of Kenyatta, Ngala formed Kenya's first internal African government. By 1962, however, in time for the second round of Lancaster House constitutional talks, the emergency was over and Kenyatta assumed a leadership role. In the second round of talks, KADU achieved protections from domination by the majority tribes through the creation of regional assemblies with considerable powers over agriculture, education, health and local government. With this constitution in hand, Kenyatta assumed the position of Prime Minister and independence was set for December 12, 1963.

## Uganda

Uganda's political history in the post war era was largely that of maneuvering between Buganda, the colonial authorities and other political elements for control of the Legislative Council and ultimately the independent government. In 1945 the Governor appointed African representatives from Bunyoro and Busoga along with the Katikiro (Prime Minister of Buganda) to the Legislative Council. Immediately the Lukiko objected and ordered the Katikiro not to participate on the grounds that Buganda must remain aloof from wider territorial government. In fact, the Kabaka, Sir Edward Mutesa II, insisted that Buganda become fully independent. As evidence of British acceptance of his position, the Kabaka wanted the responsibility for Buganda to be shifted from the Colonial Office to the Foreign Office. Machinations of the early fifties that culminated in this proposal were too much for Governor Andrew Cohen who summarily deported the Kabaka trusting that his successor would be more pliant. Cohen's hopes were realized in some respects in 1954 when changes to the Bugandan government enhanced the Lukiko's power and transformed the Kabaka into a constitutional monarch.

The Protectorate Constitution of 1958 provided for direct election of representatives to the Legislative Council from all parts of the territory. However, still insisting on its special prerogatives, the Bugandan government boycotted the elections thus denying itself representation on the new Council. Meanwhile, other political forces and parties were making their case. Dr. Milton Obote created the Ugandan National Congress (subsequently the Ugandan Peoples' Congress – UPC), which drew its strength from the north. Benedicto Kiwanuka, a Catholic Mugandan, started the Democratic Party (DP), which catered to those opposed to the Bugandan Protestant establishment. Apolo Kironde created the United National Party designed to support the Kabaka and the Lukiko. These parties contested for power under new rules laid out by the Wild Commission in 1959. The Commission eliminated minority safeguards inherent in communal rolls, it provided for a Council of Ministers to be drawn from the Legislative Council to run government affairs under the supervision of the governor. Finally, it permitted the continued existence of traditional rulers, i.e. the five kingdoms, but gave them no political role in the territorial government.

In the elections of 1961, Obote's UPC won the popular vote throughout the country, but captured only 35 seats. The Democratic Party ran second and took 43 seats including all seats in Buganda. Sticking to its special status argument, the Lukiko boycotted the election thus forfeiting Baganda representation on the Council to its opponents in the Democratic Party. On March 1, 1962 Kiwanuka became Prime Minister of an internal self-government. Because of Lukiko's non-participation, the new government was inherently unstable. Consequently as part of ensuing independence negotiations federalism was re-proposed and this

time accepted. The new National Assembly would be directly elected by most citizens, but 21 Bugandan MPs would be chosen by the Lukiko, a majority of whose members by this time were themselves elected rather than appointed. Elections under this formula were held in April 1962. The UPC again won the most seats but did not obtain a simple majority. Kironde's party evolved into the Kabaka Yekka Party (the Kabaka "alone") and under this banner, as named by the Lukiko, its members took seats in the Assembly. Exploiting Baganda differences, Obote convinced the Kabaka Yekka members to join the UPC in a coalition to outvote the Democratic Party and dismiss Prime Minister Kiwanuka. Obote took over,

Uganda became independent on October 9, 1962 with Obote as Prime Minister.

## **Tanganyika.**

Tanganyika's path to independence was less troublesome than its neighbors. However, because of its poverty, its prospects as a viable nation were more modest as well. Africans were named to the Legislative Council in 1945 and by 1951 their number had expanded to four (of fourteen). On the recommendation of his Council, innovative governor Sir Edward Twining appointed an African, Chief Kidaha Makwaia, to his executive team. Finally, by the mid-fifties, Britain abandoned the remnants of indirect rule and established a system of elected local governments. Also the Legislative Council continued to evolve in numbers and responsibilities. As was true elsewhere in East Africa, Tanganyika moved steadily away from the idea of communal voting rolls and protected constituencies towards universal representation.

Dr. Julius Nyerere emerged on the political scene in 1953 when he transformed a moribund association into the Tanganyikan African National Union (TANU). A pragmatist, Nyerere counseled moderation in terms of working within the system, but was adamant that Tanganyika should move quickly forward to independence. In particular, Nyerere found allies among the members of the UN Trusteeship Council who held oversight responsibility for Tanganyika. In 1958 TANU won a majority in the Legislative Council. In 1960 TANU won all but one seat. Subsequently, Nyerere formed a government and worked closely with Governor Sir Richard Turnbull, who was sympathetic to nationalist aspirations. With some constitutional modifications in 1961 to reflect the reality of the political system already in place and functioning well, Tanganyika achieved self-government. It became fully independent on December 8, 1961 with Nyerere as Prime Minister.

As noted earlier, Tanganyika was poor. Cash crops consisted of coffee, sisal and a smattering of other products. Most of the people were subsistence farmers. Tanganyika had produced small quantities of gold for some time and a wandering prospector found diamonds in Geita in 1946. Dr. J.T. Williamson, a Canadian geologist later gave a magnificent stone, "the Star of Africa" to Queen Elizabeth upon the occasion of her coronation. In an effort to find a viable crop, Britain spent millions on a vast groundnut production scheme in the late forties designed to produce vegetable oil for the world market. After several years of effort, the poorly planned, poorly implemented project collapsed completely. Mention of the Tanganyikan groundnut scheme fiasco today still brings grimaces to the faces of development experts around the world.

## Issues to Ponder

As many books have been written about Mau Mau as on any other topic pertaining to Kenya. They include novels, memoirs from each side of the conflict, efforts to chronicle it impartially and lots of political revisionism replete with historical "spin." Sample some. Meanwhile, assess Mau Mau in the context of its times. It changed the course of history in Kenya, led to the emergence of real national consciousness and the leadership of Jomo Kenyatta. Yet within months of independence virtually, all acknowledged Mau Mau leaders themselves disappeared from the political scene.

Although its people were relatively well educated and its economy strong (in comparison to other African states at this time) the seeds for Uganda's future troubles were clearly visible in the weak political institutions it inherited at independence. Whose fault was this? What could have been done differently? Why was Uganda not a viable country-to-be?

Julius Nyerere made his political appearance in this chapter. We will look more at him later, but how much of Tanganyika's peaceful accession to independence was due to him personally or how much credit should be given to the colonial/trustee authority? Why was Tanganyika different?

## Chapter 10: Zanzibar

Zanzibar dropped from our scope during the recitation of East Africa's history during the Twentieth century. Indeed Zanzibar did recede into the shadows as the focus of politics and development concentrated on the mainland. Following implementation of the anti-slavery ordinances at the turn of the century, Britain became the complete master of Zanzibar. The British representative known progressively as the Regent, the Consul General and the Resident ruled. The Sultan remained only as a figurehead. However, long reigning Sultan Seyyid Khalifa who served from 1911 to 1963 did effectively embody the virtues of a benign constitutional monarch and came to symbolize continuity and stability to his people. Over time Britain introduced its colonial practices to replace the Sultan's inept judicial and police systems, but generally Britain grafted its indirect system of administration onto the Sultan's antiquated administration. Although they solved the slavery problem, British administrators did little to resolve the intense racial antagonisms that grew up in its aftermath. The British record for spending on infrastructure or economic development was poor. Although ostensibly the Sultan's dominions extended to the ten-mile

wide coastal strip of Kenya, in reality the British administered that part of the protectorate from Mombasa with little reference to Zanzibar.

Zanzibar's population was a polyglot composition of Arabs, Africans, Europeans and Asians. Arabs were mostly of Omani descent; many families first came with the early Sultans in the 18<sup>th</sup> and 19<sup>th</sup> centuries. Other Arabs were of more recent vintage and some only rode the dhows, stayed for a season and departed. Arabs composed the traditional ruling class associated with the Sultanate. They owned the mid-size to large clove and copra plantations which had been economically devastated by the termination of slavery. The small European community comprised the handful of consuls, representatives of global trading companies or shipping lines and colonial officials. Asians were influential merchants, moneylenders and shopkeepers. In addition to those who had been there for generations, more Indians settled in Zanzibar in the early part of the 20<sup>th</sup> century as an alternative to the mainland. Africans composed the majority of the population and occupied the bottom rungs of society and the economy. They too were divided into two or even three distinct groups. First, were the indigenous people of the islands whose culture and background were that of the Swahili coast. A second group were those who had been slaves or were the descendants of slaves. Some of the indigenous people could be characterized as belonging to this group as well. Third, were those, even second-generation ex-slaves, who were identified as mainlanders. This group also included a steadily growing number of true mainlanders who, following the abolition of slavery, were recruited to work the plantations.

Land and education became issues between the wars. With slave labor gone, the clove plantations produced less and less. Many reached a state of collapse and were acquired by default by the Asian moneylenders. Worried over Asian acquisition of coconut and clove land at the expense of the islanders (and feeling a bit guilty about removing the Arabs' economic prop of slavery), in 1934 the government formally restricted sale of land outside the African/Arab community. It also developed a program to transfer ownership of some plantation land to African smallholders. Educational efforts were not as successful. In fact, it was not until after WWII that substantial numbers of Zanzibari children had the opportunity to go to school.

While the crux of economic life was manifested in the increasing Asian takeover of the economy, issues in politics pitted all three races against each other. Arabs were the traditional elite and maintained their dominance. The British saw them as the planters and the clerks for the administration. During the fifties, however, this dominance, theretofore assured by reserved seats on the Legislative Council as well as the Sultan's nominal role as chief of state, began to slip away. The British followed their East African process of gradual constitutional development by slowly allowing more elected seats and a progressive widening of the franchise. In 1960 Zanzibar adopted constitutional changes that would have a majority of members elected from a common role. This new Council would become the basis for true self-government.

Political parties organized to compete for power in January 1961. The Afro-Shirazi Party (ASP) led by Abied Karume reflected the aspirations of ex-slaves and mainlanders. A breakaway faction, the Zanzibar and Pemba's Peoples' Party (ZPPP) led by Abdul Rahman Babu appealed to Pembans and represented African interests against the Arabs. The Zanzibar Nationalist Party (ZNP) led by Shiek Ali Muhsin was deemed to be the Arab party, but garnered substantial support from indigenous islanders. Election results

were split. Although the Afro-Shirazi Party received a clear majority of the overall vote, it deadlocked with the ZNP at 11 seats each in Council after dividing the ZPPP's three seats. Since government was impossible new elections were called. This time campaigning turned violent, racial harangue and intimidation were rampant, shops were looted and people killed in riots, but nearly 95 percent of the voters cast ballots. Again the Afro-Shirazi Party won a majority of the popular vote, but only ten seats. The ZNP also got ten seats with 3 falling to the ZPPP.

The ZNP and the ZPPP joined forces in a coalition. Afro-Shirazi partisans objected to this outcome and its members boycotted the Council. Nonetheless internal self-government went forward on the basis of these election results which were repeated in pre-independence voting of July 1963. Zanzibar thus became independent on December 9, 1963 as a constitutional monarchy with newly enthroned Sultan Seyyid Jamshid bin Abdullah as monarch and a ZNP Prime Minister in charge of government. However, a large African faction headed by the Afro-Shirazi Party felt cheated and remained discontent.

## Revolution

Zanzibar's revolution produced a violent change in the social, economic and political order of the islands. Although there was discontent within the Afro-Shirazi Party led by Abied Karume, the ASP leadership was apparently not thinking in terms of a coup, but others were. Only a month after independence an enigmatic Ugandan immigrant named John Okello led an uprising. Okello had a history of working class jobs in Uganda, Kenya and on Pemba Island. He believed he had a mission from God to purify society. He held an abiding hatred of foreigners which he defined as Asians and Arabs. The ultimate irony is, of course, that he himself was also a foreigner in Zanzibar. In any case, Okello's dreams were put into action during the closing months of 1963. He carefully selected, trained and organized a group of several hundred men for revolution. Most of the leaders were, like Okello, recent arrivals from the mainland, especially from Kenya.

Okello's war was made easier by the arrogance of the new government which lightly dismissed rumors that something was afoot, had no army, made a stupid decision to centralize all armaments in two police stations of Zanzibar town which sat smack in the middle of African neighborhoods. Finally, the new government fired about forty policemen, Africans from the mainland, but did not repatriate them. These policemen subsequently lent their expertise and knowledge to the revolution.

Okello's ragtag army struck on the night of January 10. In fighting that lasted several hours, they captured the two police station armories and the radio station thus seizing control of Zanzibar. The Sultan, his family and some ministers fled before dawn. In the ensuing days and weeks self-proclaimed Field Marshall Okello unleashed a terror aimed at Arabs. Lists were used to identify those to attack. Perhaps as many as ten thousand persons were tortured and killed, women and girls raped, shops, homes and plantations burned. Arab and Asian civil servants were dismissed and imprisoned. While visiting this chaos and settling ancient grievances on the islands, Okello was careful to exclude the British from his ire. Thus, there was no intervention by British troops on stand-by in Nairobi or from British warships that soon arrived in Zanzibar's harbor.

Okello stated early on that he was not interested in government. In fact, he named Karume president during one of his early radio broadcasts. Karume, however, was not part of the plot nor were Abdulrahman Babu, leader of Umma, a communist oriented splinter party, and Kassim Hanga. The two latter men had been separately plotting their own violence. However, all three opposition leaders had been caught unaware by Okello's move. In fact, all three were in Dar es Salaam when it happened. They quickly returned to Zanzibar and even as Okello directed the terror, they began organizing the Zanzibar Revolutionary Council (ZRC). Over the course of several weeks in late January and February these leaders of the indigenous people and established mainlanders eased Okello progressively to the margins. When Okello left Zanzibar in late February for a victory tour of neighboring capitals, Karume consolidated power and then refused permission for Okello to return. (Okello bounced around East Africa for a few years. He did some time in a Kenyan jail at some point where he wrote his memoirs. He was last seen shaking hands with Idi Amin in 1971.)

Meanwhile on Zanzibar the new order was being put into place. Land and businesses were nationalized. Rule by decree established. Asians by the thousands and Arabs from the detention camps were dispossessed and sent packing. The ZRC was much influenced by the communist leanings of Babu and Kassim and found ready openings to the east – East Germany, the Soviet Union and China. Arms shipments and experts swiftly solidified these new bonds. The cold war arrived in Zanzibar almost overnight. Originally pro-British, Karume became disenchanted with the slow pace of British recognition of his regime and with other signs which he interpreted as counter-plotting. He also adopted a distaste for the United States. Chargé d'affaires Picard was expelled in January for passing lurid rumors to the press. In April, in a bluster of communist inspired rhetoric, Karume ordered the American satellite tracking station closed and expelled acting U.S. Chargé Petterson along with all American and all British citizens.

## Tanzania

As all this was going on, Karume felt buffeted by his colleagues and compelled to adopt their socialist/communist views. While he apparently liked the policies, he sensed strong personal rivalries from his peers and feared cold war machinations. His solution to these rising challenges was unity with Tanganyika. Unity was secretly planned and hastily accomplished in April 1964. Karume got what he wanted which was autonomy for Zanzibar under the broader umbrella held by Julius Nyerere. Karume's rivals were trucked off to be ministers in the new union government in Dar es Salaam. Since Zanzibar was no longer a sovereign entity as such, it became less of a cold war prize. For Nyerere union represented the logical extension of national territory. Furthermore, union reduced the risk of surprises from a volatile neighbor and set some controls on the nearby communist presence.

The Act of Union was passed on April 26, 1964. Even while retaining his Zanzibari presidency, Karume also took title to the newly created position of First Vice President of Tanzania.

## Karume in Power

Uneducated but shrewd, Karume consolidated his rule. He rarely left the islands. He became despotic,

arbitrary and capricious. He recruited a small army and established a fairly competent East German trained secret police. Karume brooked no rivals. He maneuvered them out of the way, sent them to the mainland, imprisoned and executed them. Essentially Okello's revolution succeeded in destroying the old order, but Karume's new order was arbitrary and chaotic. Suspicion and fear were the hallmark of the day. Social services decayed and bureaucratic inefficiency prevailed. All land was nationalized, but three-acre parcels were then allocated to individual families. This saved the economy because when clove prices rebounded in the late 1960s Zanzibari clove growers earned hard currency for the islands. All businesses were nationalized in the sixties and private commerce formally outlawed in 1970. Karume's outrages against sensibilities were many. One well-reported transgression was the forced marriage of young Arab and Asian girls to himself and his political cronies.

Zanzibar was a parasite in the union. It contributed little to the arrangement and took much from it. Karume largely ignored Nyerere. Zanzibar maintained relations with eastern bloc nations and came to depend strongly on East Germany and China. Karume was assassinated in 1972 by the son of a man he probably killed in 1964. Aboud Jumbe replaced him as Chairman of the Revolutionary Council and began a slow process of re-establishing political norms and reasonable economic and social order.

### **Issues to Ponder**

Zanzibar's revolution was begun by a megalomaniac who put another warped individual into power. Does the quest for power automatically corrupt? Or does the sort of ruthlessness inherent in each man's character simply make him the only type of individual capable of managing such a situation?

Were there any positive outcomes to the Zanzibar revolution? Who were the winners over the long run? Have they yet really won? Did Britain acquit itself well?

Although we will look more at Nyerere later, what compelled this ostensibly honorable man and his mainland government to accept Karume's and Zanzibar's outrageous actions and behavior?

## Chapter 11: Leaders

With the exception of Karume, several unusual men came forward to lead their nations through the last throes of colonialism into independence. Specifically, Kenyatta, Nyerere and Obote quickly became larger-than-life figures who cast varied shadows over their respective political landscapes. Indeed the history of the three nations would have been much different had they not played key roles. Kenyatta was the supreme pragmatist, Nyerere an unabashed ideologue, and Obote a first rate opportunist.

### Kenyatta

Born in the 1890s, about the time Europeans first arrived in Kikuyuland, Jomo Kenyatta got a smattering of mission primary education before moving to Nairobi. He emerged as a Kikuyu nationalist, took on the reins of the Kikuyu Central Association in the twenties and was sent by that organization to London in the thirties to lobby Parliament for land rights. He circulated in leftist circles, visited the Soviet Union, preached Kikuyu causes including female circumcision, studied anthropology, wrote an anti-colonial treatise in the form of an explanation of Kikuyu culture, married an English woman, and took refuge on a Sussex farm during WWII. He imbibed British culture and learned the British way of thinking. Throughout he stayed in contact with Kenyans, but on account of the distance, remained aloof from Nairobi political squabbles. He returned to Kenya in 1946 and quickly became immersed in agitations for land. His nationalism was deemed seditious by the authorities and the settlers and, although no conclusive proof was ever offered, he was tagged with being an instigator of Mau Mau. Kenyatta was arrested in 1952, convicted and imprisoned. His political reputation grew even as he spent ten years in jail. He was released just in time to become Kenya's first Prime Minister.

Without a doubt an agitator and nationalist, Kenyatta was also a moderate who – had he been given the chance – would probably have worked within the system. History did not happen that way, however, and because of what people thought of him - settlers and the authorities considered him the devil incarnate while Africans believed him to be the savior of the nation – he achieved powerful stature. As president he coupled this stature with the aura of age and the reality of wisdom. He was fondly and respectfully known as "Mzee," a Swahili term for elder. Kenyatta implemented pragmatic and conciliatory policies. He urged the settlers to stay and make Kenya prosperous. Yet he acted quickly to assuage "land hunger." He instituted land reform and opened the highlands to all. He opted to continue a free market economy. He pursued pro-western foreign policies, but rarely ventured into the international arena. Internally, he groomed, trained and balanced both his own generation of political colleagues as well as the coming generation of leaders.

Kenyatta was not perfect. His judgment was not always sound. He could be autocratic. As a politician he played hard and sometimes dirty. As he aged and withdrew from the day-to-day management of government, he relied on persons who often pursued their own agendas - either personal political aggrandizement or private wealth. He allowed too much political and economic power to accrue to his family and to the Kikuyu elite. Yet on balance, the verdict is extremely positive. Kenyatta led Kenya to independence without rancor. Given the emotions of that time, that was a singularly astonishing achievement. He later established the moderate and pragmatic parameters that characterize Kenya today as a quasi-democratic, free-market oriented, largely peaceful society. On the negative side, the roots of Kenya's current problems, i.e. less than full democracy, abuse of human rights and corruption, also lie in the Kenyatta era.

Over eighty years old, Kenyatta died in office in 1978.

## Nyerere

Julius Nyerere was born in 1922 at Butiama, near Musoma on Lake Victoria in western Tanganyika. He was educated in mission schools and as clear evidence of his extraordinary intellect was among the first Tanganyikans to earn university degrees. Nyerere taught school prior to becoming a full time politician in the 1950s. He never lost the demeanor and aura of a teacher. Indeed "Mwalimu" (teacher in Swahili) was the most appropriate title ever assigned to this humble and decent man whose ideas and philosophy dramatically changed not just Tanzania, but also the whole way the world looked at third world nations and their problems.

Nyerere entered the political arena in the fifties and shortly became the founder of the Tanganyikan African National Union (TANU). He became a member of the Legislative Council and as independence drew near collaborated with Governor Turnbull to assure the smooth transfer of power. Nyerere became Tanganyika's first Prime Minister and its first President. Nyerere's agenda was to combat disease, poverty and ignorance. To do that he sought to mobilize the nation, to assemble and devote its meager resources for the betterment of all. The tranquillity he had hoped to engender as part of this quest was rattled by the violence of the Zanzibar revolution in January 1964. That revolt was mirrored shortly thereafter by a mutiny in the newly minted Tanganyikan army. Although army grievances had more to do with pay and conditions of service than they did with political aspirations, Nyerere was shaken by the event, but in accordance with his personal style – and in contrast with Kenyatta who called in British troops to quell a similar outburst – Nyerere negotiated his mutiny away.

As noted in Chapter 10, Tanganyika and Zanzibar joined in 1964 to form Tanzania (the name is usually accented, as are most Swahili words, on the penultimate syllable - TanzaNia). Although, as also noted, Zanzibar retained autonomy in most spheres, nonetheless, the act of union alone gave further credence to Nyerere as an architect of a new Africa.

## Ujamaa

Nyerere's vision for the nation was to shape new approaches to problems. He constructed a whole ideology of how a poverty stricken nation like his could through self-reliance throw off the confines of colonialism and imperialism and take control of its own destiny via a distinctly African brand of socialism. Nyerere began by mobilizing rural people to better use resources for development. He noted that Tanzania lagged behind the rest of the world in economic progress. To catch up, he said, "We must run, while they walk." In accordance with his ideas Tanzania created a system of ujamaa villages which grouped traditionally scattered homesteads of rural residents onto a single site for several purposes. First, to facilitate the flow of government services of education, adult literacy, health services, agricultural extension efforts and the like. Secondly, by pooling efforts via cooperative production and larger-scale marketing, villagers should make greater strides than via traditional inefficient methods. Villagers would stress their self-reliance via such a system. Supporting these ideas was the conviction that collectivism was traditionally African. The word "ujamaa" itself means family.

Another step on the economic front was the belief that the state, as opposed to the private sector, should control the means of production. Consequently, the government nationalized most of Tanzania's industry. Historically, this proved to be an error in terms of maintenance or expansion of output, but part of the initial purpose behind nationalization was to enforce the fact that Africans, not outsiders, were masters in their own house.

Concomitantly, Nyerere believed that political competition wasted human resources. He felt it important that all Tanzanians accept one vision of society and of the future. He believed that common vision could best be expressed via a single political party. He accepted that choice should be part of self-reliance in the political sphere, but was convinced that democracy could be accommodated within the sole party. Furthermore, unlike almost every other leader on the continent, Nyerere put into practice the idea that the one party must be a real channel of communication from the leadership to the people and vice versa. Consequently, a TANU party structure grew up nationwide that paralleled or excised governmental functions. While this doubled the bureaucracy that citizens had to deal with, party officials were less bound by regulations and enjoyed greater flexibility in managing local issues.

Nyerere was aware that in much of Africa the heady promise of independence was being destroyed by the canker of corruption. He was determined to spare Tanzania that fate. In 1967 he enunciated the Arusha Declaration which put forward a leadership code that reflected Nyerere's personal asceticism. Under the code leaders were to eschew personal investments and acquisition of property. They were to subsist solely on their government or party salaries and not use their positions for unethical purposes. This Puritanism and the vigor with which the people enforced it did in fact have the desired result, which was to combat corruption.

Finally, Nyerere made a bold mark in international affairs. An ardent believer in African independence, he was a staunch supporter of southern African freedom movements. Groups opposing white rule in the south found ready support and succor in Dar es Salaam. British policy of acceptance of white Rhodesia's Unilateral Declaration of Independence in 1965 cast a pall over Tanzania's ties to the U.K. Additionally, Tanzania's socialist proclivities complicated relations with other western nations including the U.S. However, Scandinavian states rallied to a socialist brother and the Communist bloc did as well, especially

China. In accordance with its philosophy of self-reliance, Tanzania accepted support from any professed friend. Nyerere sought to bind third world nations together so as to increase their bargaining power vis-à-vis the cold war contestants. He joined the Non-Aligned Movement and was an ardent supporter of the Organization for African Unity.

In what was almost another African first, Julius Nyerere voluntarily retired from Tanzania's presidency in 1985. By that time the world he knew in the 1960s was no more. The cold war was about to wind down and Southern Africa was free from colonial domination. The World Bank and the International Monetary Fund and their economic philosophies dominated third world development issues. Nyerere's bold experiments in ujamaa, a nationalized economy, a single party state and self-reliance had not borne the fruit he envisaged (under subsequent leadership many economic directions were reversed.) Yet Nyerere's legacy is compelling. Tanzania today exudes a great sense of nationhood and a powerful ethic of self-reliance and self-confidence. The nation that Nyerere created from the disparate tribes of Tanganyika and Zanzibar remains vibrant.

Nyerere died in 1999.

## Obote

The least charismatic of the three fathers of their countries, Milton Obote had the most difficult assignment in forging unity and a sense of direction out of the complexities of Ugandan politics. He gave it a try during his first years in office, but ultimately retreated - particularly during his second incarnation as president - to tribal parochialism, which was his downfall.

Obote was born in 1924 in Lira. A Langi tribesman by birth, like all northerners, Obote was viewed as a lesser breed by the haughty rulers of Buganda. The Langi, the Teso and the Acholi people of the north and east had not been historical players in Uganda where attention had focused on Buganda in the first instance and the other kingdoms in the second. Nonetheless, as northerners became educated, they too clamored for political rights. Obote spent several years at Makerere College, but left without obtaining a degree. He worked for a while in Kenya in the 1940s then returned home and found his metier in politics. A mesmerizing orator, he proved to be a ruthless infighter and ambitious schemer. Obote was among the first to seize upon new political opportunities. Initially he formed a Langi based group called the Ugandan Nationalist Movement, which successively joined other groups before finally coalescing into the Ugandan Peoples' Congress in 1960. Although the UPC was the first political party with some elements of broad national appeal, the fundamentals of Ugandan politics remained firmly based on tribe and/or religion. The Baganda themselves were split by religion and most everyone else was anti-Baganda.

Obote convinced the Kabaka Yekka Party to join the UPC in a coalition and under those terms he became Uganda's first Prime Minister in 1962. This doomed coalition was a marriage of convenience. Obote wanted national power and the Kabaka wanted to ensure that his Bagandan rivals in the Democratic Party were denied power. As a condition of the coalition, the Kabaka had demanded a federal system. However, the new federal state, which allowed latitude for the five kingdoms, was not successful. Following much

political maneuvering and infighting, including a debacle over the still contentious lost counties plus an effort to oust Obote from the UPC (thwarted in part on account of support for Obote from General Idi Amin, Deputy Army Commander), confrontation with the Kabaka came to a head. Obote won. In what was to be dubbed "the battle of Mengo," thousands of Baganda died and the Kabaka fled to London. Obote suspended the constitution in 1966, removed the Kabaka from the presidency and ordained a centralized republic with himself as president. Obote took steps to eliminate Buganda as a political entity. The centralization of power permitted the development and increasing use of detention and violence to cow or eliminate rivals.

Recognizing the need to build a popular power base, Obote sought to expand his government's appeal by transforming the nation into a socialist state. (Theories of "African" socialism abounded during the sixties and were quite popular – and equally devastating – across the continent.) During the next few years Obote's "The Common Man's Charter" steered Uganda leftward through a series of nationalizations, extension of government regulation into the economy and use of cooperatives for many rural endeavors. The economic program was popular in some quarters and despised in others. In short, it fostered even more acrimony in an already divided nation. However, it was neither bitter politics vis a vis Buganda, nor disagreement over policy that cost Obote his position, but rather his failure to control General Amin. Although promoted to Army Commander by Obote, Amin correctly felt Obote's moves to increase the number of senior Langi officers as well as to investigate Amin for killing a military rival, threatened his tenure as army chief. Consequently, in January 1971 when Obote was in Singapore for a Commonwealth summit, Amin launched a coup d'état.

Obote went into exile in Tanzania where he plotted his return. To jump ahead a half dozen years, Obote supported Nyerere's military response to Amin's seizure of Tanzanian territory in 1979. Amin was ousted in 1979 and following short-lived governments of Yusuf Lule and Godfrey Binaisa (currently a public defender in New Jersey), Obote returned to the presidency. This time he made little pretense of trying to forge a national consensus, instead he relied on his northern brethren to combat insurgent armies at every turn. He faced Amin loyalists in the far northwest, disgruntled Bagandan irregulars in the center and a well organized guerrilla campaign of Yoweri Museveni in the southwest and in the Luwero triangle outside Kampala. Obote relied on his army, traditionally staffed by northern Acholi and Langi tribesmen, to fight these foes. They did a very poor job and as the house was crumbling about them, Obote turned more exclusively to his Langi tribesmen. The Acholi counter-reaction was to oust Obote, which they did in July 1985.

Obote went into exile again (rumor has it that he looted the national bank on his way out of town). He currently resides in Zambia.

## Issues to Ponder

If you haven't soured on British colonialism yet, carefully study the kangaroo trial accorded to Jomo Kenyatta. Keep in mind, however, that this judicial proceeding and others like it were where the Kenyans learned how to handle political dissent. Kenyatta and especially Moi learned the lesson well.

What is the impact of a single person in a nation's destiny? How much different would Kenya have been without Kenyatta? While that might be imaginable, it is inconceivable that Tanzania as it evolved could have done so without the influence of Mwalimu. Lacking him, Tanzania would probably have remained an unremarkable third world basket case. With him, however, it was a very remarkable third world basket case.

When making your assessments of Nyerere's programs, avoid simple characterizations of what worked or didn't work. Instead, try to get inside his head, try to understand his dreams, his vision and his ideas. Obviously, many of Nyerere's programs did not work, but is that because his philosophy was fatally flawed, or was it because the Tanzanian people (or humankind in general) weren't up to the task?

Obote falls short on our list of heroes, yet Uganda had the most numerous, best educated people in all of East Africa. Where were its leaders? How badly flawed was the system at independence? Whose fault was that? Obote did not have the strength of character or political skills to lead Uganda out of morass. Could anyone have saved Uganda from tribal and sectarian violence?

### **Readings:**

There are many readings pertinent to this chapter. Indulge yourselves. Nyerere-phobes will want to look hard at Mwalimu's ideas.

Arnold, Guy, *Kenyatta and the Politics of Kenya*, London, J.M. Dent & Sons, 1974.

DT434.K4A7

Pages 98-110, 167-180, and 192-210 provide the basic information. Those who want more would enjoy the chapters on Facing Mount Kenya, Mau Mau and the Kapenguria trial.

Legum, Colin and Mnari, Geoffrey, editors, *Mwalimu: The Influence of Nyerere*, Trenton, Africa World Press, 1995

DT448.2.M89

This is a fascinating collection of essays by scholars extremely knowledgeable about Tanzania who assess the various elements of Nyerere's contributions to political and economic thought and practice. Skim through it all, but read Chapter 4, Ujamaa; Chapter 6, One-Party Democracy; Chapter 7, Human-Centered Development and the closing short chapters assessing his impact.

Ofcansky, Thomas P. *Uganda: Tarnished Pearl of Africa*. Boulder, Westview Press, 1996.

DT433.222.O35

Pages 39-68 cover politics and government from Obote 1 to Museveni.

Mutibwa, Phares. *Uganda Since Independence, a Story of Unfilled Hopes*. Trenton, Africa World

Press, 1992

DT433.26.M88

Pages 22-71 provide a more detailed look at the Obote era.

### **Additional Reading:**

Murray-Brown, Jeremy, *Kenyatta*, New York, E.P. Dutton and Company, 1973

DT433.576.K46M8

Milton and Ingrham. *Obote: a Political Biography*. London, Routledge, 1994

(Not in Department of State Libraries)

[www.nationaudio.com/News/DailyNation/171099/Comment/News\\_Analysis9.html](http://www.nationaudio.com/News/DailyNation/171099/Comment/News_Analysis9.html)

Published shortly after his death, these two commentaries on Julius Nyerere by prominent scholars Ali Mazuri and James Nyong'o recount Mwalimu's contributions.

[www.uganda.co.ug/millium/obote.html](http://www.uganda.co.ug/millium/obote.html)

This is a decent encyclopedia entry on Obote with links to other figures of his era.

## **Chapter 12: Conqueror of the British Empire**

Idi Amin came from obscurity to leave a mark of terror and buffoonery on Uganda. In the process he traumatized the people, destroyed the economy and wrecked the political system. Although Amin was certainly possible in the first instance because of the tribalism, which permeated politics, his legacy was to further tribalize society to the extent that the dysfunctionality he engendered still plagues Uganda today.

A Kakwa tribesman from the West Nile District, Amin received only a smattering of primary schooling. A northern warrior, he joined the King's African Rifles in 1946. An amiable giant of a man, British officers thought Amin to be an ideal soldier – simple, enthusiastic, strong and of regal bearing, i.e. he looked good in a parade. He fought Mau Mau insurgents in Kenya and rose steadily in the ranks. As independence loomed, Amin was one of two senior sergeants to be commissioned as officers. He received training in Britain and Israel, but was not literate enough to successfully complete the courses. Nonetheless, because of seniority he became one of the top men in the independent Ugandan Army. He rose quickly from lieutenant to general. When Deputy Army Commander in 1966, Amin sustained Obote against a poorly plotted takeover. Afterwards Obote promoted him to Army Commander. Although his personal quirks, aberrations and predilection for violence were evident, Amin did command the loyalty of some troops, particularly Kakwa brethren whom he brought into the army. Although Amin had helped Obote out of several jams, the Army Commander was a liability, an embarrassment, but above all an

unpredictable unknown, for the president.

Amin correctly interpreted Obote's attempts to move him aside in late 1970, and so he struck back. When Obote was attending a Commonwealth meeting in Singapore in January 1971, Amin took over. Amin's coup d'état did not enjoy the total support of the army, which was dominated by Acholi and Langi northerners, but it was embraced by the people of Buganda who were delirious with joy at the ouster of their nemesis Milton Obote. Always cunning and with a solid sense of theater, Amin consolidated Bagandan support by authorizing the re-burial in Buganda (at Kasubi) of recently deceased Kabaka Mutesa II who died in exile in London.

Even in the euphoria of takeover, Amin began to purge the army of his real and perceived enemies. This was the beginning of the years of slaughter that cost several hundred thousand Ugandans their lives. The rationale behind most of the killings was "enemy of the state," but decisions were arbitrary and capricious. Many prominent Ugandans including first Prime Minister Kiwanuka and Anglican Archbishop Lwum were murdered. The State Research Bureau staffed by Amin's thugs who flaunted fancy clothes and dark glasses, systematized torture and death.

With the expulsion of the Asians, citizen and non-citizen alike, in 1972 Amin dealt a crippling blow to the economy. Shopkeepers and proprietors of small businesses for the most part, Asians also served as doctors and lawyers and owned factories, sugar and tea plantations. Despite a storm of protest from abroad, Amin was adamant; all 50,000 Asian would leave...and so they did – humiliated, stripped of their wealth and possessions. Many Africans who long envied the perceived prosperity of the Asians and resented their business practices applauded this action. The "economic war" as the expulsion and the subsequent acquisition of property came to be known was a resounding defeat for the economy. New owners sold off stocks and had no way to re-supply. Credit systems evaporated. Because a large part of the moneyed sector disappeared, the economy spiraled downward.

Amin also reversed Uganda's foreign policies and threw his lot in with the Muslim world. The leftward jaunt under Obote already raised qualms in Britain and the west about Uganda's orientation. Amin multiplied these fears as he appeared unreliable and increasingly incompetent. The expulsion of the Asians, mostly to Britain, confirmed the judgment that Uganda was not a worthy partner. A whole series of other incidents involving detained Peace Corps Volunteers, the murder of Edward Stroh, the hijacking of Air France (and the subsequent Israeli raid on Entebbe), the murder of Dora Bloch, the arrest of Cecil Hills, not to mention growing knowledge of the grisly murder machine of the State Research Bureau all combined to sour and interrupt ties with western nations. In their stead, playing on his Islamic faith, Amin turned to the Muslim world, to Egypt, to Saudi Arabia and especially to Libya. Less critical, but also with fewer resources to share, these nations rallied around Uganda. To the dismay of critics both inside and outside of Africa, Amin ascended to the presidency of the OAU in 1975, further tarnishing the reputation of that body.

In his final act of arrogance, Amin decided to reclaim the Kagera salient, the small bit of Tanzanian territory just south of the Ugandan border. Amin claimed that the Akagera River was the natural boundary, so he was just rectifying a colonial border mistake. Ugandan occupation of region in 1979

brought an immediate military response from Tanzania. Nyerere mustered his army, which counter-attacked. Accompanied by a motley grouping of Ugandan dissidents including pro-Obote forces, Bagandan dissidents, and newly minted rebel leader Yoweri Museveni, the Tanzanian army recaptured the salient and slowly moved toward Kampala. Amin's army put up feeble resistance. Ultimately their chief fled, first to Jinja, then home to Aura and finally into exile in Libya.

Today Amin lives in exile in Saudi Arabia, under conditions resembling house arrest.

### **Issues to Ponder**

1. Was Idi Amin an anomaly or merely the most egregious example of colonial authorities' failure to select and train suitable men for military positions?
2. How do you account for Amin's appeal to the Ugandan public? Was he a legitimate hero or was he just good theater?

### **Readings:**

Mutibwa, Phares. *Uganda Since Independence, A Story of Unfulfilled Hopes* Trenton, Africa World Press, 1992

DT433.26.M88

Pages 78-122

### **Additional Readings:**

Decalo, Samuel. *Psychoses of Power, African Personal Dictatorships*. Boulder, Westview Press, 1989

DT352.8.D44

Pages 79-119

Decalo writes an excellent description of Amin's personality – what drove him and how he drove others.

Grahame, Iain. *Amin and Uganda, A Personal Memoir*. London, Granada, 1980

DT433.282.A55G7

Grahame remembers the soldier Amin he commanded. He also recounts the several occasions when he was sent by the British government to intervene and plead with his former subordinate.

Martin, David. *General Amin*. London, Faber and Faber, 1974

DT433.282.A5M3

Written just as he attained the presidency, this book recounts Amin's military service more than his political career.

A serviceable biography of the man.

## Chapter 13: Uganda: Liberators and Revolution

Uganda's agony did not end with Amin's departure. In the chaotic period that followed two short-lived governments, both propped up by Tanzanian occupiers, attempted to rule. First was Yusuf Lule, a Mugandan who was not part of the Baganda hierarchy. He proved unable and was quickly replaced by Godfrey Binaisa. Binaisa too was weak and proved unable to contain corruption in the army. Many officers leftover from the pre-Amin era were actively working for Obote's return. Binaisa was also sandbagged by fellow Baganda from the Democratic Party who refused to work with him. Finally, Binaisa's ouster was accepted by Museveni, the Minister of Defense at the time, who represented a growing third force not aligned with any of the older parties. With Binaisa's departure, the pro-Obote Military Commission stepped in and organized elections in 1980. Museveni formed a new party, the Ugandan Patriotic Movement, to contest the elections against Obote's UPC and Ssemogerere's DP. The elections were flawed, essentially rigged by Paulo Muwanga, Vice Chairman of the Military Commission. The UPC won a commanding majority and Obote took office in December.

The 1980 elections had major consequences. First, Uganda missed an opportunity to redress matters in the wake of Amin's departure and to establish a viable political system. Secondly, the debacle provided the rationale for Museveni to opt out of working within the system and to begin efforts to overthrow it. Thirdly, Obote realized that many Ugandans hated him and his new government. Rather than try to mend fences, Obote retreated into staunch tribalism. Finally and most tragically, the situation overall was conducive to the continuation of criminal and state-orchestrated violence that had become part of every day life.

In the wake of the stolen election of 1980, Obote made no reconciliatory moves. The DP, however, pursuing misguided hopes that it could reform the system from within took up its 51 seats in Parliament. On the other hand, Museveni concluded that the system – a too powerful presidency dominated by a vile, corrupt northern army – had to be changed, if Uganda's cycle of violence were to cease. He and his followers formed the National Resistance Army (NRA) and took to the bush.

Obote unleashed his loosely reined army against the belligerents. The army committed many atrocities against civilians – predominately Bagandan farmers - in the Luwero Triangle region just northwest of Kampala. The struggle quickly took on dimensions of a tribal war: southern Bantus versus northern Nilotics. The fighting Nilotics increasingly came from the Acholi half of the army. Acholi military leaders saw that Obote sent their tribesmen to war while keeping the Langi half (Obote's tribesmen) in garrisons elsewhere. This division inside the army, reinforced by the Acholi view that the war was lost in the field and could only be resolved by negotiations, led to Brigadier Basilio Okello's coup d'etat of July 1985. The coup makers installed their senior man, General Tito Okello, as president. Obote fled to Zambia.

Despite overtures to the Baganda, the Acholi regime quickly showed it merely changed the guard. Troops

ran amuck in Kampala and an alliance was forged with the remnants of Amin's army from the West Nile. The NRA initially did not respond to Okello's peace overtures, but finally under enormous pressure from outside, its political wing, the National Resistance Movement (NRM), did join peace talks organized in Nairobi in November under the aegis of President Moi. By December those talks hammered out a power sharing agreement which was signed by both sides.

Museveni apparently recognized that the Okellos could never honor their obligations under the agreement. Therefore, he concluded that the NRA too, which already controlled about half of Uganda, would not be held to the provisions of the agreement. Consequently, in January 1986 the NRA finally moved on and took Kampala. Museveni was sworn in as president.

The significance of the NRA takeover was several fold. First, for Uganda it represented revolutionary change – the old colonial based political system that exploited tribal differences was thrown out and the predatory northern army was dissolved. Secondly, Museveni's continuation of the struggle after signing the Nairobi agreement was taken as a personal affront by President Moi. This translated into strained relations between the two men and their nations for the next decade. Thirdly, the NRA takeover was a home grown revolution (with minimal outside support) that successfully replaced a recognized sitting government. This sent shudders through neighboring autocrats like Moi and Mobutu.

## **Yoweri Kaguta Museveni**

Born into a Bahima family in southern Ankole (near the Rwandan border), Museveni was named by his father in honor of the seventh battalion of the King's African Rifles. He attended university in Dar es Salaam where he threw his considerable energy into student politics and where he also imbibed nationalist revolutionary vibes of Tanzania and of FRELIMO. Museveni did not burst unknown upon the political scene with the NRA, but was already an acknowledged leader. He held the post of Minister of Defense during the Lule and Bianisa regimes when he was deemed to be the second most dangerous challenger (DP chief Ssemogerere being the lead) to Obote's return. Museveni was defeated (by a DP candidate) in the stolen election of 1980.

In the bush Museveni's leadership and revolutionary vision flourished. He was of a new generation of pragmatic leaders who owed nothing to the system. A man of far reaching vision, Museveni held determined convictions of the rightness, and righteousness, of his point of view. Nonetheless, although not easily swayed, he was astute enough to listen to contrary opinions and to weigh them on their merits. In office as president, he has mastered the practice of co-opting opponents to accept his point of view or ridiculing and cowering them into silence. President Museveni has an appealing public persona. He uses humor and homespun wisdom in public pronouncements. He rejects labels of "politician" or "general," instead he describes himself as a "revolutionary." Under his direction Uganda's economy strengthened. Also, President Museveni himself emerged onto a wider regional and global stage as a leader whose influence and opinions count.

## **The National Resistance Movement**

The NRM took power in 1986 with a self-imposed mandate to rebuild Uganda. Its ten-point program included restoration of democracy, the establishment of security and re-launching the economy.

Decrying Uganda's "backwardness," the NRM completely rejected party politics. Instead it opted for a pyramid of elected bodies called Resistance Councils (RCs). Citizens directly elect village level RCs. RC members, in turn, choose the next level and so forth up to the national level, which is Parliament. Persons stand for election on their own merits rather than under a party banner (everyone generally knows, however, which party a candidate would support were parties permitted.) Nonetheless, the exclusion of party affiliations reduced the vicious tribalism that characterized previous politics. Secondly, the RC system reserved seats in Parliament for special constituencies, i.e. women, youth, labor and the army. Laudably, this insured that women were well represented. Uganda's commendable constitutional consultations (1989-92) found widespread support for the new representational system.

Despite support for the RC system, the continued ban on political party activities remains contentious in Uganda. Parties are permitted to exist, but may not contest elections, hold rallies or otherwise "politic." Furthermore the ban became a point of dissension between the U.S. (and to a lesser extent other donors) in the late 1990s. Debate on the timing to resume full political freedoms remains topical at the turn of the century. Meanwhile, a relatively unfettered press emerged and, except in conflict zones, human rights were respected.

The Museveni government confronted security problems at every turn. First, in 1986, it had to chase down the retreating Acholi and West Nile forces. Some of the Acholi troops joined civilians and metamorphosed into priestess Alice Lakwena's Holy Spirit Movement, which upon her departure, was further transformed into the Lord's Resistance Army led by Joseph Kony. These atavistic Acholi movements initially appealed to an anti-Bantu sentiment, accentuated by the NRA's abuses directed at non-combatants in the north,. In the years since the late 1980s, when the NRA imposed better internal discipline, the victims of the LRA have been overwhelmingly their fellow Acholis. Despite vast military superiority and intense political efforts, the NRA has not brought the LRA to heel. Today the LRA enjoys very little support in Acholiland, but has been sustained by a hard core of believers operating from bases in southern Sudan with support from Khartoum.

Uganda was plagued with other insurgents as well. Ex-Amin forces were largely neutralized in 1989 when Brigadier Ali joined the government, but a small secessionist movement of the Bakonjo people has operated in the Ruwenzori Mountains for decades. More recently, in the late ninties and into 2000, the African Democratic Party, a loose coalition of dissidents including some Islamic fundamentalists, operating out of the Congo sowed havoc with raids along the eastern border and even into Kassese and Kibale towns.

In 1990 about 4,000 NRA troops of Rwandan refugee origin, led by General Fred Rwigema, one of Museveni's original NRA bush compatriots, deserted and invaded Rwanda under the banner of the Rwandan Patriotic Army. Although he denied prior knowledge and provided minimal active support for the deserters, Museveni certainly acquiesced to their leaving and did little to thwart their invasion of

Rwanda. In fact, the Rwandan departure ended the political liability of having so many foreigners in the NRA.

On the economic front, the NRM government has dramatically changed the landscape. We will look at that in the next chapter.

### **Issues to Ponder**

1. No-party politics characterize present day Uganda. What arguments justify banning political parties? What are the arguments for lifting the ban? Would you join the cynics who say the ban is only in place until Museveni and the NRM can build themselves up enough so that they would not lose a fair election?
2. Internal violence remains a factor in Uganda's political life. Can this apparently ingrained practice be halted? or will it remain a problem for years to come?
3. President Museveni often chastises his countrymen for blaming troubles of backwardness, under-development, political violence, etc. on outsiders instead of accepting responsibility for their own predicament. Is he correct?

## Chapter 14: Uganda's Economy

One of the remarkable success stories of Africa in the last 15 years is the rehabilitation of Uganda's economy. The base for success was always there. At independence in 1962 Uganda's per capita income was among the highest in Africa and its income distribution was the best. But nationalizations during Obote's first presidency skewed efficient resource allocation. Amin's plundering of the government and expulsion of Asians ruined daily commerce and destroyed the tax base. Continued violence and instability under Obote the second time around kept donors and investors at bay. During the twenty or so years from the mid-1960s, Uganda's GDP dropped precipitously.

The NRM, however, was committed to the restoration of economic growth through the building of a mixed economy. Although Museveni was initially suspect on account of his University of Dar es Salaam "socialist" education (plus some of his early statements), he proved to be an apt pupil of economic reality and a pragmatic executor of tough policies. President Museveni and his team instituted sweeping economic reforms. They freed the exchange rate, disposed of state owned enterprises, permitted Asians to regain property, eliminated marketing boards, sliced away petty regulations and reformed taxation. Above all they encouraged diversification in the agricultural sector and insisted on more transformation of primary products into finished goods. These measures paid off, not only on their own merits, but also because their implementation opened veritable flood gates of foreign aid from the World Bank, the IMF, USAID, Britain and others.

Lest we sound too laudatory, we flag that free market economics bring problems of unequal income distribution. This is compounded in Uganda (as in Kenya) by the elite having priority access to opportunities and by corruption. Although steps have been taken to curb "eating" as it is locally known, punishments have not yet been harsh enough to seriously inhibit corrupt practices. Additionally, Uganda has not delivered up to the expectations of rural residents in terms of modernization particularly the improvement of roads, schools and health clinics. It is precisely these sorts of issues – hopes for improvements in their own lives and disgust with those perceived to be perverting the delivery of improvements – that are fodder for political dissent.

### **Issues to Ponder**

1. Uganda offers the perfect case study of how macro-economic discipline adversely affects social spending. In other words, adherence to IMF/IBRD economic reform targets usually translates into less money available for government spending. Cuts or reduced increases are usually taken in education and health sectors. Is that fair? See the readings for several perspectives.
2. Persons excluded from the modern sector must make ends meet. Their economic activities are often referred to as the informal economy. In all of East Africa informal economies claim a large portion of the population. A priority for nations is to discover ways to integrate the formal and informal sectors.

## Chapter 15: From Kenyatta to Moi

The Kenyatta era tapered off. Problems of ossification of government mirrored the aging leader. Since his family and the Kiambu Kikuyu coterie around him were desperate to hang on to power, and Kenyatta himself was unwilling to name an heir, his entourage concocted a plan to keep an unwanted successor from arising. They made it illegal to speculate on the death of the president and on a possible successor. This did indeed contain the overt positioning, but only heightened the internal maneuvering. Ultimately the idea was to permit self-effacing Vice President Daniel arap Moi, who served Kenyatta loyally, to become president in accordance with the Constitution. According to the Kiambu plan, he then would be replaced by some carefully chosen Kikuyu. When Kenyatta did die in 1978, Moi inherited the presidency as foreseen. The plan then went awry as the Kikuyu inner circle could not agree on a candidate. Charles Njonjo (a Kikuyu), Kenyatta's Attorney General, stood by Moi and helped battle back aspirants. Njonjo's savvy coupled with Moi's theretofore hidden cunning as exemplified in the appointment of Mwai Kibaki (also Kikuyu) as Vice President and the rather considerable powers of the office combined to solidify his hold on the presidency.

Moi inherited a nation marked with the indelible stamp of Mzee. Kenya was characterized by Kenyatta's system of patronage and the concentration of power in the administrative authorities (just like the British). Yet, despite its faults, Kenya was a fairly prosperous place. Its private sector-oriented economy flourished. Coffee prices were good in the late seventies. In the growing economy there was a place for everyone to pursue his ambitions. Additionally, Kenya had taken none of the ideological bents of its neighbors. It continued with a British style Parliamentary system and maintained pro-western foreign

policies. The military stayed in the barracks. Most human rights were decently respected and national issues were debated in Parliament.

Daniel arap ("son of") Moi was born in 1924 near Karbarnet in Baringo District. He is Tugen, a subset of the Kalenjin tribe. Educated in American mission schools, Moi remains a churchgoer and is prone to use Biblical quotations in speeches. Initially a teacher, he turned to politics in the nineteen fifties and was one of the first Africans elected to the Legislative Council in 1957. As independence approached Moi joined Ngala and others to form the Kenyan African Democratic Union (KADU) which was a coalition of the smaller tribes designed to offset KANU, the coalition of Kikuyus and Luos. KADU was absorbed into KANU in 1964 and Moi shifted his allegiance to Kenyatta. Moi was selected to be Kenya's third vice president in 1967. As vice president he stayed in the background, but obviously learned many lessons of political control from the master manipulator Kenyatta himself.

Tall, gravelly-voiced, stern-faced, Moi cuts an avuncular figure. Kenyatta's trademark was a flywhisk and Moi's is a baton. As president, over the years, Moi has become more autocratic and more out of touch with the people. His challenge has been to preside over a nation acutely divided by tribal animosities (particularly in the political arena), an elite, which considers continued wealth and power its birthright and an economy, which has been up and down. All of this plays out against the backdrop of a burgeoning population, especially of urban poor, and growing demands led by the educated portion of the population for greater political freedoms.

The coalition led by Njonjo, which helped consolidate Moi's early presidency, began to unravel in 1980. In a carefully orchestrated campaign, word went out from the presidency of a "traitor." This assertion got lots of press play and it soon became evident that Njonjo was the target. Although no compelling evidence of real treason was ever produced, Njonjo was hounded out of public life. The message was clear. Loyalty and subservience to Moi were essential for a political career. Soon after the Njonjo episode, another conspiracy named "Mwakenya" was alleged. The final outrage was an attempted coup d'état mounted by men from Kenya's Air Force. Although the Air Force was composed largely of Kikuyus, Luo non-commissioned officers instigated the uprising. On a Sunday in August 1982 coup makers took Nairobi's radio station and set up roadblocks in town. Army Commander Mohamed, a Somali, immediately rallied his forces and occupied Nairobi with little opposition from the rebels. In the interim, however, lawlessness in Nairobi set off a spate of looting which proved difficult to contain. Indeed, the combined events of a coup attempt and unfettered looting showed how fragile the veneer of public order really was.

The result of these challenges was to confirm in the Moi camp the idea that it was under siege from the larger tribes – the Kikuyu and the Luo. This mind set then engendered a siege mentality during which all challenges to the regime were met with harshness. The government harassed, intimidated, arrested, imprisoned and mistreated its critics. Such actions raised public consciousness about the regime and, in turn, rebounded in greater alienation. Western countries were outraged. The U.S. in particular called for a halt to human rights abuses. Subsequently, human rights concerns coupled with unresolved issues regarding tolerance of corruption led donors, including the World Bank, to cut back assistance programs in Kenya.

The 1988 election was a low point in Kenya's democratic history. KANU used all the power available to it to ensure victory in what observers' said was not a free and fair election. The next low point was the political murder of Foreign Minister Robert Ouko. The minister was taken from his farm in Koru in the middle of the night. His mutilated body was found partially burned nearby the next day. The circumstances of the crime itself were sensational enough, but the government's clumsy attempts to cover-up fueled convictions that the presidency was involved. A yearlong inquiry led by a Scotland Yard detective came to the same conclusion. Moi cronies and confidants Nicholas Biwott and Hezekiah Oyugi lost their jobs.

As Kenya moved into the nineties, it was clear that economic and political changes were vital. Reforms in one arena complimented reforms in the other. Economic regulations were eased. Monopolies – cereal boards, milk and meat commissions, etc. were abolished. Parastatals like Kenya Airways were privatized. The doors to competition were opened internally and to a lesser extent externally. Implementation of these set of reforms led to resumption of World Bank and some other donor assistance.

In the political sphere, multiple parties were permitted. Although a number were created, the Forum for the Restoration of Democracy (FORD) led by old warhorse Oginga Odinga, a Luo, and Kikuyu lawyers Paul Muite and Gideon Imanyora, younger activists, led the challengers. Soon they were joined by Kenneth Matiba, a Kenyatta kinsman, and Martin Shikuku, a maverick Luhya MP. Former Vice President Mwai Kibaki formed the Democratic Party. FORD was soon rent asunder by internal differences and essentially broke into two factions Odinga/Muite vs Matiba/Shikuku.

Even though the Moi coterie continued to sow division wherever it could and used the still considerable powers of the presidency to intimidate and harass opponents, the elections of 1993 confirmed that power was shifting away from the president. He gained only 36 percent of the vote, but led the presidential voting so was returned for another eight year term. Due to gerrymandering KANU retained a majority in Parliament. More importantly, Moi's support came from the relatively poorer sections of Kenya - Rift Valley, Coast and Northeastern Provinces. The larger tribes voted along tribal lines for their brethren.

In the later nineties, Moi continued to institute reforms only under dire pressure. He demonstrated a knack to do just the bare minimum at the last minute. But reforms of the civil service, anti-corruption measures, greater independence for the judiciary and more economic measures have just barely kept the lid on. Students, the Law Society of Kenya, professional associations, non-governmental organizations, the media and even the churches clamor for more liberalization and greater freedoms.

The boost to the economy that reform measures engendered have helped buy time, but the structural problem of badly skewed distribution of wealth remains troublesome. Kenya's fast growing population means that land hunger can never be satiated. At the same time, it also means that quantities of poor youths crowd both the urban and rural areas. There is no relief in sight for them.

President Moi says that he will step down when his current term ends in 2002. Kenya then will be a much different place and the new leadership will have to create new, probably more pluralistic mechanisms,

through which to govern.

## Issues to Ponder

1. Certainly the concept of loyalty in Kenya, to tribe and to leaders, takes on a dimension unknown and perhaps even unfathomable to Americans, but the idea of responsible dissent has still to find root in Africa. One is either a supporter or an enemy. There is little ground in between for constructive criticism...and politicians do take things personally.

2. Like the United States, Kenya has an unfortunate history of political assassinations. Mboya, Pinto, Kariuki and Ouku all died because of their politics. What are the similarities and the differences between events here and there?

This is an excellent article by Bill Berkeley that gives a good account of the frustrations and challenges faced by Kenyans under Moi in the 1990s.

# Chapter 16: Kenya's Economy

Kenya's economy is a continuation of its colonial economy which was based on agricultural exports complimented by a protected manufacturing sector producing import substitutes. This economy grew up behind a rather stiff set of government imposed controls that only began to be loosened in the 1980s.

Coffee, tea and pyrethrum were the colonial era exports, which were grown mostly on white owned farms. The export base expanded when post-independence land reforms placed an African yeomanry on mid-size farms on millions of acres formally held by Europeans. Extension services encouraged African production of cash crops and augmented the quantity of agricultural exports. In the years since independence there was great diversification into other cash crops such as fresh vegetables, houseplants and even cut flowers for airfreight to Europe.

Behind Kenya's barriers which protected local enterprises from global competition, a manufacturing sector grew up making items like batteries, soap, beer, cement, textiles, vehicle assembly, agricultural chemicals, tires and the like. These concerns provided employment and were the basis for the formal economy, i.e. the portion of the economy that is measured, regulated and taxed. Meanwhile, because most Kenyans were excluded from the formal sector, they continued to work and produce in the "informal" sector comprised of subsistence farmers, pastoralists, many thousands of street traders and "jua kali" (hot sun) workshops.

Although ostensibly a capitalist economy during the colonial, Kenyatta and early Moi eras, the government became increasingly involved in managing the economy through marketing boards, regulations and government owned corporations. Parastatal companies offered myriad opportunities for patronage, nepotism, cronyism and corruption. Kenyan managers who often sported big bellies would slap them satisfactorily and note, "participation in democracy." Even though few efforts were made to fix the system that was rotting at the top, the government responded readily to everyday concerns of the Wanainchi by imposing price controls on key commodities such as sugar, tea, matches, vegetable oil, maize meal and beer. To satisfy anti-Asian sentiment, the government also reserved trading in essential commodities to African merchants.

Kenya has no major mineral deposits and much of its land surface is arid with little agricultural value. Great tracks of this marginal land, however, are home to one of the greatest profusions of wildlife in Africa. Tourists have come for a hundred years to hunt (former President Roosevelt killed thousands of animals during his 1904 safari) and to view. The game parks are a major attraction, as are Kenya's sparkling beaches. By the 1980s despite ups and downs with poachers and devastating drought, over 350,000 visitors a year made tourism Kenya's second largest foreign exchange earner, a position which it retains today. The sector generates tens of thousands of jobs as well, many of which are held by persons from marginal land game areas.

Kenya experienced a solid economic growth rate in the sixties and seventies, the latter largely due to the coffee boom (frosts in Brazil dramatically reduced the world supply). But by the eighties, the growth rate had dropped to about 4% per year, which equaled Kenya's population growth rate. It was clear that major structural reforms and cleansing of corruption were necessary if momentum was to be regained. Progress was slow, hampered in part, by a devastating drought in the early eighties, imported inflation due to the

global energy crisis, and investor loss of confidence attributed to the 1982 coup attempt. The increase in authoritarian rule that followed also led to disengagement by the donor community.

In 1983 President Moi commissioned Central Bank Governor Philip Ndegwa to produce reform recommendations. Ndegwa recommended that government budgetary and fiscal policies be changed. An IMF structural adjustment program was also begun. Over time reforms have included freeing the currency, elimination of import barriers, modification of the tax system, reduction of internal regulation, elimination of price controls, opening monopolies to competition and privatization of parastatals. The deeply imbedded corruption issue has proven more difficult to contend with, but privatization reduced opportunities for corruption and progress has been registered. Public airings of a sugar import scandal and a banking swindle coupled with punishment of the perpetrators helped drive home the message that such activity was no longer permissible.

At the turn of the 21st century, Kenya's economy looks better than it has in years from a structural point of view, but severe problems remain. National infrastructures, especially roads, are in a woeful state. Energy supplies are insufficient. Environmental controls are practically non-existent. Arable land is over subscribed. Historically self-sufficient in food, Kenya is now hard pressed to maintain that sufficiency. When drought hits as it did in 1999 and 2000, Kenya must import food. The economy cannot create jobs – either urban or rural - fast enough to absorb new workers. There is a vast gap between the wealthy ruling class and the poor. In sum, the rapidly expanding population quickly negates almost any progress that is achieved.

## Issues to Ponder

1. A Kenyan economist argues that Kenya's prosperity relative to other African states occurred because it spent less on social welfare. Like the United States and Britain in the 19<sup>th</sup> century resources were concentrated in the wealthier class who invested. The diversified and growing economy that resulted benefits all. While this theory justifies Kenya's economic history, it also has a ring of truth to it. Time will tell whether the price is worth it. What do you see as the trade-offs?
2. Globalization, defined as the growing linkage between national economies via information age technologies, is seen as blight and a benefit for the third world. A blight because it will further widen the gap between rich and poor, i.e. computer users vs non-users. Globalization is deemed a benefit because the second and third generation of Kenya's elite will be the innovators and entrepreneurs who can use information technology to Kenya's advantage. Only time will tell which trend predominates.
3. Globalization also renders national economic controls and policies less powerful. For example, multinational banks make lending decisions irrespective of monetary policy. Prices are set in the world market place and barriers to trade are abolished. Economic information is completely uncontrollable. Loss of government levers means that governments become less able to control their national destinies and to provide for the

common welfare. How is this going to impact on East Africa?

## **Chapter 17: Tanzania: Post Nyerere Politics and Economy**

Nyerere's multi-pronged experiment included: nationalizations (ultimately there were over 400 parastatals – everything from banks to diamond mines to meerschaum pipe companies), ujamaa (socialism at the village level), and the Arusha code of conduct (which kept government and party elite out of business). Combined with ineffective management and misallocation of resources, these factors provoked a backward slide of the economy into the doldrums. Additionally, Tanzania's socialist orientation did not generate external resource flows. The communists, except for China's major one-time shot of the TAZARA railroad to Zambia's copper belt, did not have much to give. Although European socialist governments, i.e. the Scandinavians, made Tanzania a priority, major western donors and the Bretton Woods institutions backed away.

Internally, the TANU political machine made itself predominate. Party faithful ran bureaucracies across the country. Even though his public persona was magnanimous, Nyerere tolerated little internal dissent. Tanzanian jails overflowed with political prisoners. Also, despite the fact that the 1967 Arusha set of principles was designed specifically to limit corruption and to eliminate conflict of interest, in effect, it drove such activities underground and made them more difficult to root out. In short, by the mid-seventies, the verdict was becoming clear; Tanzania's noble economic experiment was failing.

To his credit, Mwalimu recognized the problems and accepted partial responsibility for them. He apparently also saw that he could not preside over any real reversal of direction, so decided not to stand for the presidency in 1985. However, he retained the chairmanship of Chama Cha Mapinduzi (CCM); the political party successor to TANU formed when it merged with Zanzibar's sole political party ASP in 1977. As chairman Nyerere continued to exert influence on Tanzania's political course.

In 1986 Nyerere's vice president, Ali Hassan Mwinyi, was chosen to represent CCM. As the candidate of the sole political party in the one-party state, he was elected president. Mwinyi's first order of business was to begin economic reforms. He established an Economic Recovery Program and entered into talks

with the IMF and World Bank. Reforms included dismantling government controls, liberalization of regulation, and floating of the currency. Although some initial progress was achieved, the system proved entrenched. Reforms also ran into popular discontent generated by sharp increases in prices of imported goods as the Tanzanian shilling found international equilibrium. During Mwinyi's second term reform zeal waned and economic malaise re-asserted itself. On the political front, however, the winds of change were blowing. Tanzania permitted the establishment of multiple political parties in 1992. Parties organized as expected along tribal and personality lines, but were unable to displace the monolith of CCM, which was truly a national machine.

In free and fair elections in 1995, CCM candidate Benjamin Mkapa won over sixty percent of the vote and was sworn in as president. Omar Ali Juma from Zanzibar was elected Vice President. Tanzanian Labor Party candidate Mrema polled twenty-six percent of the popular vote. The TLP and four other parties won seats in a CCM controlled Parliament.

Born in 1938, Mkapa's initial political training was as Nyerere's press spokesman. Very much a Nyerere and TANU/CCM insider, Mkapa was fully aware of the issues at stake. As president, he renewed economic reforms, insisted on more rapid privatization, and tackled reduction of the civil service. Promising a more effective fight against corruption, in 1993 he entered into a structural adjustment program with the IMF/IBRD. Under Mkapa's leadership Tanzania swallowed some tough medicine as it realigned its economy. But by and large, the remedy, although damaging to the patient, took hold. By 2000 Tanzania turned a corner and was achieving real progress and steady growth.

## **The economy itself**

Tanzania's economy remains primarily agricultural. Agricultural exports of coffee, sisal, cotton, cashews, cloves (from Zanzibar), tea and wheat make up 85% of total exports. Considering that only five percent of Tanzania's total area is catalogued as "arable," it is easy to understand that Tanzania is one of the poorest countries on the planet. Per capita income is only about \$150 per year. Obviously most Tanzanians make their livelihood via subsistence agriculture.

Unlike its East African neighbors, Tanzania does have exploitable minerals. The famous Wilkinson Diamond Mines have been re-privatized and gold is beginning to be mined on an industrial basis. Natural gas deposits at Songo Songo in the Rufiji delta have been under development for years. When on line, the gas should alleviate Tanzania's severe energy crunch.

Via privatization Tanzania's meager industrial sector has been dramatically re-structured, although not without controversy. Controversy because of complaints that assets were incorrectly priced and sold off either via old boy networks to the political class or sold at bargain rates to external investors – bogeyman multinationals – who will only exploit the nation. Of course, there is some truth in both perspectives, but overall the transformation is beginning to prove positive. Locally produced commodities like beer, soap, batteries, plastics, etc., are of good quality. Credit is becoming available as private banks expand and agricultural export performance has improved due to more efficient marketing mechanisms.

Problems abound. Internal economic infrastructure remains woeful. Road and rail systems are inadequate and in a poor state of repair. Hydraulic power production fails to meet demand. Most tellingly, the delivery of social services to rural citizens lags far behind expectations.

Like Kenya and Uganda, Tanzania hosts spectacular areas brimming with wildlife. Yet unlike its neighbors development of this resource has been slow. Part of the issue has to do with a longstanding dispute with Kenya over who should benefit from the tourist dollar (for example, northern border crossings to Kenya from the Serengeti have been closed for decades so as to keep Nairobi based operators at bay), but the issue is also philosophical. Tanzania did not want the demonstration effect of opulent decadent westerners polluting its simple pastoral people or the conservative Muslim communities of the coast. More recently, Tanzania slowly opened the door to greater tourism albeit charging top dollar for park fees in an effort to capture the top end of the tourist spectrum. This change is already producing greater revenues from the parks and beaches. Growth should continue.

In summary, at the turn of the century, Tanzania is getting most of its macro-economic policies in alignment with global requirements. Despite perturbations, the economy is re-shaping to free market dimensions. This should ensure the continuation of assistance flows from donor nations as well as new investment, which will compliment internally mobilized resources and thus enable the modest growth so far obtained to expand further.

### **Issues to Ponder**

1. Where might Tanzania have been if it had not taken a thirty-year economic detour?

## **Chapter 18: International Relations**

# Kenya

All three of the East African states came out of the British colonial tradition and inherited a natural affinity and orientation towards the west. Kenya has never deviated much from this orientation. Britain remains its major partner politically as well as economically. Additionally, Kenya established solid links to other developed Commonwealth nations such as Canada and Australia. And even though there were some ups and downs, the United States too maintained solid relations with Kenya over the years. On the other side of the ledger Kenya eschewed close ties with the eastern bloc and with Libya. Instead, Kenya maintained ties to nations on the western side of the cold war, i.e. Israel, Taiwan, South Korea, and South Vietnam. Even though it paid lip service to the Non-Aligned Movement and the Group of 77, in reality, Kenya stood aloof from the more contentious subjects on the radical agenda. Rather, its foreign policy was shaped by Kenya's own needs, especially in the economic development sphere, and its reluctance to play a larger role, even on the African stage.

Kenya's reluctance to engage internationally emerged early as decided by President Kenyatta. In the first instance he was already old when he came to power and did not like to travel. He especially disliked flying. Secondly, when Kenyatta did attempt to exert influence, partially at the behest of the United States, during the Stanleyville crisis of 1964, he was badly bruised diplomatically and felt betrayed by the U.S./Belgian military intervention just when he was pressing a negotiated solution. Kenyatta concluded that such activity would not rebound to his credit so thereafter kept away. This policy of separateness remains largely in effect today.

Kenya did, however, have troubles of its own. First, it faced an irredentist Somali movement in the vast northeast just after independence and had to expend considerable effort in dealing with the "shifta" bandits. Secondly, Nyerere led Tanzania onto a socialist path, as did Obote in Uganda shortly thereafter. Kenyatta believed his colleagues were wrong. He also thought they mounted a challenge to Kenya, which maintained a capitalist path. Economic, political and philosophical differences with his neighbors led to closed borders, the collapse of East African Common Services and un-neighborly accusations. Matters, of course, intensified when Amin took power in Uganda. In 1973 Kenya readily lent its airspace and landing fields for the Israeli raid on Entebbe. Already cool, Kenyan relations with Uganda took another nosedive following Museveni's take-over in 1986. President Moi who was trying to facilitate a negotiated outcome felt betrayed by upstart Museveni. Museveni, in turn, saw Moi as a relic of an older time.

Kenya's relations with Ethiopia and Sudan were more correct, essentially on account of distance. An ally of the Emperor, Kenya steered clear of Mengistu and has kept its distance from Meles as well. Sudan posed more of a problem because Sudanese People liberation Army (SPLA) leader John Garang makes Nairobi his home, as do hundreds of politically aware southerners. Thousands of Sudanese refugees live in Kenya's far northwest from whence humanitarian operations are conducted into southern Sudan. Through the mechanism of IGAD (the Inter-Governmental Authority on Development), Kenya has been active with its Horn of Africa neighbors in seeking a solution to the Sudanese conflict. Elsewhere Kenya is a reluctant host to tens of thousands of Somali refugees and leaders, but has largely refrained from mixing in any of the volatile politics of that trouble spot.

As noted above Kenya's relations with the United States have been generally good. The U.S. approves of Kenya's moderate pro-west orientation, of its competition-oriented economy and of its democratic institutions. The two nations share the same perspective on many global issues. Kenya readily agreed to sign a military access agreement in 1980 when the U.S. felt threatened by events in Iran and the Persian Gulf. (The U.S. opened a consulate in Mombasa in 1981 (closed in 1991) to oversee political relations with the Islamic coast and to supervise dozens of U.S. Navy ship visits.) Over the years the United States provided over a billion dollars in development aid to Kenya. Many American companies are headquartered in Nairobi, tens of thousands of Americans take safaris in beautiful game parks, a large American missionary community works in rural areas and the Peace Corps thrives.

The terrorist bombing of the U.S. embassy in August 1998 traumatized both the United States and Kenya. The people of Nairobi rallied actively to rescue victims, to remove the dead and to care for the injured. In the aftermath of the event Kenyan citizens were horrified to learn that hatred could take such a toll of their fellow citizens. The sense of shared victimization reinforced positive sentiments towards Americans. The Kenyan and American governments subsequently coordinated very closely in seeking out perpetrators of the crime.

The positive side of the relationship notwithstanding, the U.S. criticizes Kenya's human rights shortcomings, its entrenched corruption and the leadership's reluctance to open more fully to democratic norms. Kenya, in turn, complains that it is being held to a standard higher than that applied to other African states. The U.S. agrees that is the case, because more is expected of Kenya. The dialogue continues.

## Uganda

Uganda too came to independence with a strong British orientation. Although he still maintained ties to Israel, Obote's move to the left and third world activism put him squarely in the Non-Aligned camp and strained relations with the United Kingdom. Obote was critical of Britain's obstinacy regarding apartheid in South Africa and the U.K.'s acquiescence of settler unilateral independence in Rhodesia. Obote thought these issues to be so important that he went to the Commonwealth Conference in Singapore in 1972 to pursue them knowing full well that Idi Amin was discontent at home.

As noted in an earlier chapter, Amin let ties with the west fall aside to be replaced by links with the Muslim world – Egypt, Libya, Saudi Arabia and Sudan. The U.S. closed its embassy in 1973. Amin's bizarre behavior, however, sooner or later alienated most everyone but Qadhaffi. Amin was elected chairman of the OAU in 1975 in accordance with standing practice of selecting the chairman from the host country (the Kampala venue for the OAU was chosen long in advance).

Kenyatta carefully regulated contact with Amin and Kenya kept guard on the common border. However, malefactors profited. Much Ugandan coffee was smuggled out and many ostensibly Ugandan-bound goods – upon which no Kenya duties were collected – never reached Uganda. Fleeing Amin, Obote found refuge in Tanzania from whence with Nyerere's full support he sought to regain power. The 1979 war

epitomized Nyerere's hatred and disgust with Amin and cast some aspersions on Nyerere's otherwise progressive image.

The United States re-opened its embassy in Kampala in 1979, but it was not until after Obote left the scene for the second time (in 1986) that western nations began to re-engage in Uganda in a substantive fashion. Re-engagement took the form of complete dialogue on political, human rights and economic issues. Although as with Kenya there have been differences in degrees of compliance, with western benchmarks, overall the donor community led by the United States, the U.K. and the World Bank have been quite satisfied with results in Uganda. One internal sticking point with the U.S. revolves around Uganda's time frame for the return to normal party politics.

President Museveni is often dubbed a model of a new breed of African leaders who owe nothing to the former political order. Whatever the designation, Museveni plunged Uganda into a complicated set of problems within the region. The issues with Kenya were noted previously and while relations improved by the year 2000, hiccups still occur. Sudan is a grievous problem where the juxtaposition of Ugandan support for SPLA rebels is offset by Sudanese support for the Lord's Resistance Army as well as its support for African Democratic Party rebels operating out of Congo.

Partially because of anti-Ugandan rebels in Zaire/Congo, in 1996 Uganda threw its weight behind the rebel alliance that ousted Mobutu. Subsequently, when the Kabila alliance collapsed, Uganda and Rwanda joined forces with new bands of rebels to oppose Kabila in the war that subsequently tore Congo apart. Uganda is a party to the 1999 Lusaka Accords, which put forward a framework for peace in Congo, including the withdrawal of foreign troops, but so far (in September 2000) progress towards peace is stymied.

As noted previously, President Museveni accepted the RPA mutiny and invasion of Rwanda in 1990. The post-genocide alliance between Kampala and Kigali that began in 1994 was strong as evidenced by joint involvement in protection of their eastern borders, operations against perpetrators of genocide who took refuge in Zaire and the ouster of Mobutu. This same alliance is instrumental in the ongoing war in Congo aimed at replacing Kabila. However, the alliance frayed a bit in the summer of 2000 when fighting erupted between Ugandan and Rwandan troops in Kisangani over the spoils of war. Leaders subsequently mended relations and by September 2000 the anti-Kabila alliance again presented a united front.

## Tanzania

Less British in orientation than its neighbors, Tanzania was also less beholden to the "motherland" at independence. Nyerere's vision was to be self-reliant. To this end he sought to balance Tanzania's external orientation between the West and the East as well as internally within the South. However, his "socialist" rhetoric alienated western powers that were chary to deal with such radicalism and who had the conviction that Nyerere's state controlled economy was doomed to fail. Estrangement from Great Britain was compounded over disagreements regarding British acceptance of the apartheid state of South Africa and its failure to prohibit Rhodesian unilateral independence. The United States shared British unease

with Nyerere's radicalism, which, for the U.S., was compounded by Tanzania's support of Mozambique (anti-Portuguese) freedom movements. As if that weren't enough, Tanzania accepted China's offer to build a railroad from Dar es Salaam to Zambia's copper belt (a project that western experts said was not profitable). This turn to the communist world, even though Nyerere never had much use for the Soviets, confirmed negative judgments about Tanzania.

Nyerere joined the Non-Aligned Movement, a grouping of third world states determined to forge their own destiny outside the confines of the cold war. However, led by nations like Cuba, Yugoslavia and India, the NAM was little more than a vociferous anti-west grouping. Nyerere was also instrumental in creating a South/South dialogue designed, partially because of the failure of the NAM, to generate and share third world expertise and resources among nations of the third world.

The passage of time eased Tanzania's strained relations with the west. The cold war ended. Mozambique became independent. The Chinese did not prove to be much of a threat to western economic prowess in Africa. From the western perspective, the NAM remains a thorn in the smoother functioning of the world, but beyond rhetoric it poses no real threat. Internally, when Tanzania's bold economic experiments failed to bear fruit, the west was prepared to re-engage and to work with the Tanzanian government for economic development.

Regionally, just before and at independence Tanzania rejected closer ties with Kenya within the context of East African unity. In pre-independence days Tanzania was leery that Kenya's white settler community might exert too much influence in any union arrangements. In the post-independence era it feared Kenya's relatively stronger, capitalistic economy. Tanzania's weak manufacturing sector just could not compete. Initial common market arrangements collapsed precisely because of this concern. Additionally, as leaders with diametrically opposed political philosophies, Kenyatta and Nyerere kept their distance from each other. Nyerere was much more compatible with Obote whom he saw as a fellow traveler in the quest for social justice and African independence. As noted above, Nyerere's support for Obote extended to invading Uganda and helping put Obote back in power.

Support for Obote aside, Tanzanian leaders also enjoyed good relations with Museveni. When he took power in 1986 (after Nyerere's departure from the presidency), Tanzanian and Ugandan relations continued at even keel. Tanzania has productive peaceful ties with its other neighbors – Mozambique, Malawi and Zambia and to a lesser extent with Congo. Ties with Rwanda and Burundi, however, have been troubled periodically by refugees and insurgents from those nations seeking refuge in Tanzania. Yet in both the cases of Rwanda and Burundi, power-sharing talks designed to sort out internal conflict have been held in Arusha, touted recently by President Clinton as the "Geneva of Africa."

As was the case with Kenya, the bombing of the U.S. Embassy in Dar es Salaam in August 1998, in which only Tanzanians died, generated a shared sense of vulnerability between Tanzanians and Americans. Tanzania has a resident community of American missionaries scattered widely around the country, a small Peace Corps program, but only a few businessmen. Tanzania has, however, over the years attracted dedicated American academics who studied, wrote about and supported Nyerere's various programs.

## Issues to Ponder

1. Constant themes in American policy in Africa for the last forty years have included: the cold war face-off, shared international and regional objectives, establishment of a stable system based on the rule of law which promotes democracy and human rights, and the achievement of a free market economy. When countries did well in reflecting American values and priorities, U.S. relations prospered, when countries came up short, relations turned sour. U.S. ties with all three East African nations have reflected the ups and downs of assessments of where they stood on the scale at any given time. In the last few years there seems to be a convergence of opinion on what is desirable, so current relations are often based on how effective a nation is in achieving goals.

# Chapter 19: Society, Population and AIDS

Africans still value family and tribe above national identity. Within the tribe one has shared language, common culture, myths, values, and most importantly a built in support group vis a vis outsiders. Historically tribes were complete societies unto themselves. They occupied specific territories, which they defended against interlopers. Land use was central to both agrarian and pastoral peoples. Tribal law and practice governed access and use. Along with domestic disputes, land issues were much litigated in whatever judicial forum the group employed. Tribes developed governing institutions ranging from a council of elders (the norm in most of Kenya and northern Uganda) to elected or hereditary chiefs (in much of Tanzania) to elaborate kingdoms (central and western Uganda). Persons had specific

responsibilities within the society. Most tribal societies had some sort of adulthood ceremony or rite of passage for boys and girls. Although historically tribes interacted with one another it was often via the market place, political alliance or warfare.

Given that the social fabric of Africa was tribal, it is little wonder that tribal affiliation became a building block of modern politics where tribal identity and personal allegiance outweigh other concerns. This sort of tribalism (the word itself has taken on slightly negative connotations of backwardness) has been particularly vicious in Kenya and Uganda where tribal groups constitute fairly sizable blocks – up to 25 percent – of the population. The fear is that one group will seize control at the expense of others. In Tanzania, in contrast, no group dominates to that extent so government must be by coalition. Plus, Nyerere did a commendable job of building a national consciousness. These factors render tribalism a less explosive political force in Tanzania.

Whatever their tribe East Africans are now caught in a period of transition from traditional ways of life to the modern world. Groups as a whole and individuals within groups are in various stages of this transition. The least modern peoples, pastoralists such as the Masai, Turkana, Samburu, and Karamojong, El Molo fishermen on Lake Turkana or the pygmy bands of the Semliki forest live very much as they have for thousands of years. They wear colorful dress, carry spears, herd animals, fish or hunt and gather. Even so tribal elders may have a son or nephew who works as a security guard in Nairobi or as a game scout in a nearby park. They are likely to have a transistor radio in their hut, a plastic jerry can for water and other vestiges of the modern world. Increasingly, some children of these nomadic groups go to school. Even though young men from the pastoral tribes try to maintain warrior traditions, the kind of raiding practiced in years past is no longer tolerated.

The greatest number of East Africans are subsistence farmers. They eat what they grow, barter or sell surpluses in local markets and buy what necessities they can afford. As was true with their ancestors, access to land is the key determinate of economic success. Evolving concepts of land use ranging from ujamaa villages to outright ownership complicate relations in rural Africa. Nonetheless, farm families scrape up school fees to send their children to school. They attend church, belong to cooperatives, participate in community development activities, exercise their right to vote, and have relatives in town. Despite their difficult circumstances rural Africans face their lives with an admirable sense of determination and optimism.

A growing number of East Africans are urbanized. They come to the towns and cities in search of jobs which most don't find. Better educated persons, including young women, scramble for clerical, shop keeping, government or other positions. Those who don't find work in the modern sector often resort to informal sector activity – shining shoes, selling papers, running kiosks, or day labor. Others resort to crime. Africa's cities are indeed dangerous places. New arrivals rely on the social net of extended family and tribal brethren as they strive to find a place in the urban pot. One fully employed person often supports a household of over a dozen relations. A new phenomenon that bears watching is that bonds of poverty are creating a class-consciousness that overrides tribal affinities in urban areas.

Sitting on top of the economic pyramid are the elite, usually self-made men and women who by virtue of

acumen, education and ambition arrived at the top. These people too accept extended family obligations to house, feed and educate relatives. They also send money home to parents. (The ultimate ambition of every Nairobi elite is to buy a big farm and retire to the country.) In short, current African society is a very dense network of relationships that start with the family and extend outward along tribal lines. Increasingly modern sector Africans are also connected via school ties, political party alliances, sports or business interests. Inter-tribal marriage, although still far from common, also occurs.

## Population Growth

The single most powerful negative factor impeding economic growth is rapid population growth. Kenya, with one of the highest population growth rates in the world, has gone from 12 million people at independence to 27 million today. Uganda and Tanzania are also similarly impacted. Dar es Salaam, for example, a town of just over one hundred thousand in 1960, sports almost three million inhabitants today. Population growth nefariously saps economic growth. East African nations battle hard just to stay even. Populations mushroomed in the latter half of the 20<sup>th</sup> century because modern medicine, especially childhood immunizations, meant more children lived into adulthood. Economic planners quickly saw the problem looming, but families who prized children did not heed exhortations to reduce births. Additionally, limited availability of birth control devices and flat out opposition to birth control by pro-natal governments and the Catholic Church hampered early programs. It was only after the reality of the economic cost of large families sunk in, as exemplified by more school fees, clothes, etc., that East Africans began to space births. When birth control devices became more available and governments changed their stance, birth rates began to decline, but the problem remains acute. Meanwhile, the sheer numbers of people overwhelm social and economic infrastructure. Suitable agricultural land is not available so marginal land is utilized and even that is not enough. A new underclass of rural landless poor has been created.

## AIDS

The newest scourge visited on the people of East Africa is HIV/AIDS. Deemed by researchers to have attained epidemic proportions first in Raikai District of Uganda, AIDS subsequently spread throughout the region. Transmitted heterosexually initially by truck drivers, soldiers, prostitutes and others who engaged in sex with multiple partners, HIV infections multiplied easily among urban populations.

In the year 2000 the rate of HIV infection among sexually active people in Kampala, Nairobi and Dar es Salaam hovers around 30%. AIDS devastates a nation's human resources as it strikes people in peak earning years. The loss of their human potential is compounded when deaths tear families asunder and condemn tens of thousands of orphans and other survivors to lives of poverty.

Can the tide be stemmed? Probably not, but it can and is being slowed, especially in Uganda via an intense education program aimed at changing peoples' sexual practices. "Zero grazing," i.e. faithfulness to one partner, is a common slogan. Condom use is taught and encouraged. Counseling support systems are available to infected persons and their families. Neither the governments of Kenya or Tanzania have been

as pro-active as Uganda in facing the crisis. Unfortunately, without great activism, the prospects for reversing the infection rate are not good.

Cures? Even though Africans are fatalistic about "slim" disease, they have flocked to spurious miracle cures. A woman near Masaka, Uganda, for example, sold clay out of her backyard as fast as she could dig it as a natural cure. A medical researcher in Kenya claimed to have discovered a cure, which he named Kenron, and raked in thousands before his pseudo-scientific product was shown to have only marginal impact. However sad these instances are, they indicate growing knowledge about AIDS and its invariably fatal consequences. Equally sadly, even the most favorable projections indicate that millions of people will die. The pandemic may be contained over time, but no cure is in sight.

### Issues to Ponder

1. Tribalism is a minefield – past, present and future – for the peoples of East Africa. Rapidly increasing populations result in inherently greater competition for the more slowly expanding economic pie. This translates into stiffened tribal solidarity with regard to land, education, job opportunities, governmental largess, military promotions and political power. How nations manage this competition and the caldron of emotions it generates will largely determine how harmonious their futures will be.
2. The population and AIDS data comprise a terrifying Malthusian double whammy. East Africa is being swamped by a rising tide of children and youth at the same time it grapples with succor for the large number of HIV/AIDS victims. These parallel calamities will test the resiliency and social cohesiveness of East African societies. Facing these problems forthrightly is a real exercise of leadership for national authorities. Are they up to the challenge?

This site leads to the latest statistics and summaries of the AIDS epidemic in Kenya and Tanzania.

[www.usaid.gov](http://www.usaid.gov)

On this site chose "health and population" which leads to AIDS data and information about programs in East Africa.

### **Congratulations!**

You have finished the study guide. We hoped you achieved your goals. You should now know something about East Africa, but there will not be a test. Remember there are dozens of books, hundreds of articles and a growing number of informative web sites out there waiting for you to continue your study.

# ETHIOPIA SELF STUDY GUIDE

NATIONAL FOREIGN AFFAIRS TRAINING CENTER  
School of Professional and Area Studies  
Foreign Service Institute  
U.S. Department of State

The **Self-Study Guide: Ethiopia** is intended to provide U.S. government personnel in the foreign affairs community with an overview of important issues related to Ethiopian history, geography, politics, economics, culture, religion, media, and international relations. The guide should serve an introductory self-study resource. The topic is far too complex to be covered in depth using only the text in this guide. The reader is encouraged to explore the questions and issues introduced using the Internet and bibliographic sources provided in the text and in the resource sections. Most of the referenced material can be found on the Internet or in Foreign Service Institute or Main State Libraries.

The first edition of this guide was prepared by Dr. David H. Shinn, US Ambassador to Ethiopia from 1996 – 1999. The views expressed in this guide are those of the author and attributable sources and do not necessarily reflect official policy or positions of the Department of State or the National Foreign Affairs Training Center (NFATC). Staff members of the NFATC made final but minor edits to the draft study submitted by Dr. Shinn. All sources used for graphics and extended quotes are public domain, from sites that explicitly say "can be used for non-profit or educational use," or are from the author's own materials.

This publication is for official educational and nonprofit use only.

## INTRODUCTION

The purpose of this self-study guide is to provide basic background information on Ethiopia for persons being assigned there. The guide tries to present the information in a way that individuals can obtain a better understanding of the country and, as a result, have a more productive and pleasant tour of duty. You are encouraged to think about the questions raised at the end of each section and pursue those that interest you, drawing on resource materials cited in the paper. Various websites that contain current information relevant to many of the questions raised below follow at the end of the paper.

## GEOGRAPHY AND CLIMATE

### MEANING OF NAME

Ethiopia takes its name from the Greek meaning “the land of burnt faces.” The name was in use by the Greeks as early as the 3<sup>rd</sup> century BC when Ptolemy II made hunting expeditions to Ethiopia. Inscriptions on monuments in northern Ethiopia suggest that the Ethiopic syllabic writing system is at least 3,000 years old. There are numerous references to Ethiopia in the Bible, but it is not always clear that they refer to what is present day Ethiopia. In the eyes of early foreign writers, Ethiopia sometimes served as a reference point for people who lived in many parts of Africa far from Ethiopia’s current borders.

Common use in earlier times of the term Abyssinia for Ethiopia also tends to confuse the issue. Abyssinia comes from a corruption of the Arabic word *habesh*, which means “mixed breed.” The Habeshat people from the southwest coast of Arabia and Yemen colonized the west coast of the Red Sea, now Eritrea and northern Ethiopia. Abyssinia makes its first appearance in a European work in the 13<sup>th</sup> century, a book by an English writer. Strictly speaking, Abyssinia applies only to the ethnic population roughly coincident with the former Aksumite State discussed under the history section. Ethiopia is a more suitable term for all of the language groups living within the present borders of the country.

## LOCATION AND SIZE

At the center of the Horn of Africa, Ethiopia shares a boundary with five countries—Djibouti, Eritrea, Kenya, Somalia and Sudan. The borders with Somalia and Sudan are about 1,000 miles long while those with Eritrea (567 miles), Kenya (512 miles) and Djibouti (209 miles) are considerably shorter. The back door to the Persian Gulf and an area of frequent conflict, the Horn of Africa is of more than passing strategic interest to the United States.

At 435,000 square miles, Ethiopia is larger than California and Texas combined. It also has a diversity of topography that rivals these two states. California and Texas have, however, one extremely important feature missing in Ethiopia—a coastline and access to the sea. Ethiopia lost its Red Sea coastline in 1993 when Eritrea became de jure independent. Until the outbreak of war with Eritrea in 1998, Ethiopia was largely dependent on the Eritrean port of Assab and the port of Djibouti for the movement of its imports and exports. Since 1998 and the closure of the border with Eritrea, Ethiopia has relied on Djibouti and looked into the possibility of increasing trade through ports in Somaliland and Sudan.

## IMPORTANT PHYSICAL FEATURES

Ethiopia’s bedrock constitutes part of the earth’s first continent of Gondwanaland, of which Africa is the largest intact remnant. There are several distinctive features about Ethiopia’s topography. Starting at Lake Stephanie, now a dry lakebed on Ethiopia’s southern border with Kenya, and continuing northward to the Danakil Depression bordering Djibouti and Eritrea, the Great Rift Valley dissects the country. A massive highland plateau covers most of Ethiopia to the north and west of the Rift. A smaller highland plateau extends into a significant part of Ethiopia south and east of the Rift. Lakes punctuate the Rift Valley in the south and center while the Awash River and Danakil Depression are the main features in the north. Most of Ethiopia’s periphery to the west, south and east is an area of low altitude, hot temperatures, minimal rainfall and sparse population. As a result of this situation, it is common to refer in a very general way to two Ethiopian cultures constituting a variety of ethnic groups—one living in the highlands and the other in the bottom of the Rift and the lowlands on the periphery of the country. The northernmost part of the highland plateau is Ethiopia’s historical core.

Ethiopia’s geographical diversity manifests itself in many ways. Returning to the comparison with California and Texas, Mt. Dashen, located in the Simien mountains northeast of the zonal capital of Gonder, rises to 15,158 feet and is the fourth highest mountain in Africa. Mt. Whitney, the highest

mountain in the lower 48 states, has an altitude of 14,494 feet. Ethiopia has more than 20 mountains with an altitude of at least 13,000 feet. The Danakil Depression, one of the hottest places on earth, is also the lowest point in Ethiopia at a minus 410 feet. The lowest place in Death Valley, California, is minus 282 feet. The Danakil is a large triangle-shaped basin with numerous volcanoes and well known for its lack of water and inhospitable climate. Ethiopia has more spectacular escarpments than those found in Texas or perhaps anywhere else in the United States other than the Grand Canyon. At the end of the long rains, they are verdant and give rise to thousands of beautiful waterfalls. Ethiopia hosts one of the world's larger lakes, Tana, and a small part of another, Rudolph also known as Turkana, most of which is in neighboring Kenya.

Ethiopia is blessed with rivers, not surprising in view of its high escarpments and mountains that capture the moist air coming from the Atlantic and equatorial Africa to the west and especially evaporation from the huge swamp in Southern Sudan known as the Sudd. The most important of these rivers is the Blue Nile, locally called the Abay, which flows for 1,000 miles through Ethiopia and Sudan before joining the White Nile at Khartoum, capital of Sudan. By comparison, the Rio Grande, which originates in Colorado and forms the border between Texas and Mexico, is almost 1,900 miles long. From its source at Lake Tana until it joins with the waters of the White Nile and reaches the Mediterranean, the Blue Nile flows for 2,750 miles. The Blue Nile and several other tributaries originating in Ethiopia contribute 86 percent of the water that ultimately reaches the Aswan Dam in Egypt. The importance of this fact will be noted later. This powerful river also contributes one of Ethiopia's most important tourist attractions, the Blue Nile Falls where water from Lake Tana drops over the edge of a lava flow, creating a spectacular sight at the end of the rainy season. Ethiopia's other major rivers are the Awash, Omo and Wabe Shebele. The Awash flows east and literally disappears in the saline lakes near the border with Djibouti. The Omo feeds into Lake Rudolf and the Wabe Shebele flows into Somalia, where it dissipates in the hot sand before reaching the Indian Ocean.

## **NATURAL RESOURCES AND LAND**

Not particularly blessed with natural resources, Ethiopia does produce modest quantities of gold and has small reserves of platinum, copper and potash. There are large reserves of unexploited natural gas located in the politically unstable and isolated Ogaden Region, inhabited by Somalis. Some of the rich oil fields now being exploited in neighboring Sudan may extend across the border into Ethiopia. Ethiopia does have significant hydropower potential. As a result of many years of poor agricultural techniques, deforestation and over-grazing, heavy rain in the highlands has severely eroded much of Ethiopia's soil. Only an estimated 12 percent of the land is arable. Some 40 percent are permanent pasturage of varying quality and 25 percent consists of generally sparse forests and woodland. The remainder has minimal productive value.

## **CLIMATE**

Befitting its large size and varied topography, Ethiopia has many different climates. As Ethiopia lies just north of the equator, the longest days are in June and July when there are about 45 minutes more daylight

than in December and January. The capital of Addis Ababa, which is about 8,000 feet above sea level, has a temperate climate throughout the year. The annual low temperature is about 40 degrees and the annual high is about 75 degrees. There is usually very little rain in the capital from October through May. The rain is normally heavy and occasionally continuous for several days at a time from June through September. But even during the rainy season, there are sunny and clear days.

Temperatures are icy cold in the high Simien and Bale mountain ranges where there are occasional frosts and even snow. Much of the highlands experience a temperate climate like that found in Addis Ababa while some of the lowlands have torrid temperatures. Differences in rainfall are equally dramatic. During the primary rainy season there can be torrential downpours in the highlands while the lowlands usually experience minimal precipitation and sometimes go an entire year with virtually no rain. As one climbs from the lowlands to the highlands, of course, the temperature and rainfall change accordingly. The difference between a good crop year and a bad one often depends as much on the timing of the rain and its location as it does on the annual amount. In fact, some of the crop growing areas located at the highest altitudes of the country occasionally have a bad year because there is too much rather than too little rain.

## **VEGETATION, NATIONAL PARKS AND TRAVEL**

Ethiopia's vegetation is as varied as its topography and climate. The southern and western highlands still have some impressive indigenous forests. Towards the end of the heavy rains, wild flowers blanket parts of the central highlands. The northeastern highlands of Tigray are drier and thinly vegetated. The Rift Valley south of Addis Ababa is dominated by grasses and acacia trees. The western lowlands have lush vegetation after the rains. The vast eastern and southern lowlands inhabited by the Somali, Afar and Boran constitute a brown, thinly vegetated desert during most of the year.

Although there are ten national parks in Ethiopia, most of them are poorly administered and disappointing as compared to parks in East Africa. Simien and Bale National Parks are the most interesting. The rare Simien fox and mountain nyala can be seen in both and Simien National Park is the home of Ethiopia's rarest endemic herbivore, the Walia ibex. The bird life is spectacular in many parts of Ethiopia. Although a variety of other animals can be seen, their numbers are generally small. There has been too much human encroachment, civil war and lack of funding for park maintenance.

The bottom line is that Ethiopia's geography is among the most diverse, interesting and beautiful on the African continent. It changes dramatically from the dry season to the rainy season and from the lowlands to the highlands. Anyone who is assigned to Addis Ababa for more than a few months and does not see some of the rest of Ethiopia misses a unique opportunity. In order to fully appreciate the diversity of the topography, flora and fauna, trips by road are recommended over those by air whenever possible.

### **Self-Study Questions for Further Exploration**

- What are the political and economic implications for Ethiopia now that it is landlocked and no longer controls access to the sea?

- What problems do Ethiopia's Rift Valley and high escarpments pose for economic development of the country?
- Looking back historically, were the Ethiopian highlands a plus or minus in ensuring independence of the country?
- To what extent has Ethiopia's climate been the cause of its periodic famines?

## HISTORY

Ethiopia may be the origin of humankind. The earliest hominid teeth and bones found to date come from the Afar-inhabited section of the northern Rift Valley.

Ethiopia has the longest history as an independent country of any in Sub-Saharan Africa and one of the longest in the world. Unlike the rest of Sub-Saharan Africa, Ethiopia also has a rich written history as a result of early church records and accounts from numerous travelers and explorers who passed through the country. Together with Liberia, it is the only country in Sub-Saharan Africa never to be colonized; Italian military occupation from 1936-41 hardly qualifies as colonization.

## CRADLE OF HUMANKIND

Recent discoveries in the Rift Valley's Central Awash region of hominid, i.e. erect-walking human ancestors, teeth and bone fragments date back about 4.5 million years. This takes the human chain further back than any other discoveries to date and suggests, until contrary evidence is found, that Ethiopia leads the search for the origins of humankind. These discoveries during the 1990s are known as *Australopithecus ramidus*. The partial skeleton of the more famous "Lucy," whose name comes from a Beatles' song popular at the time of her discovery in 1974, is known scientifically as *Australopithecus afarensis* and dates back 2.9 to 3.4 million years. Lucy's diminutive skeleton resides in a safe in Addis Ababa; interested persons can view a replica plaster cast at the National Museum. Paleoanthropologists found Lucy in the Rift Valley just north of the more recent discovery of *ramidus* material. This search area has become the most exciting in the world for paleoanthropologists seeking the earliest hominid evidence. Once a lush, tropical valley, there are layers of hominid teeth, bones and tools in the Awash dating from at least 4.5 million years until several thousand years ago.

## PRE-AKSUMITE CIVILIZATION

Linguistic evidence suggests that both Cushitic and Omotic speakers were living in Ethiopia by about 7,000 BC. These two linguistic families spawned a number of languages still spoken in Ethiopia today. Cushitic gave rise to Agew in the central and northern highlands and, to the east and southeast, Saho, Afar, Somali, Sidamo and Oromo. Omotic led to Wolaita and Gemu-Gofa. The Cushitic and Omotic-speaking peoples collected wild grasses and other plants for thousands of years before cultivating those they liked best. The descendants of these peoples came into contact with migrants from Arabia. Northern Ethiopia probably established contact with southwestern Arabia across the Red Sea by 2000 BC. Persons from Arabia began to arrive in Ethiopia by the first millennium BC, bringing with them Semitic speech, writing and a stone building tradition. From these contacts the Ge'ez language, a forerunner of Amharic and spoken to this day by Ethiopian Orthodox priests, developed. The newcomers joined with indigenous inhabitants, producing a pre-Aksumite culture. The most significant structure remaining from this period is the stone temple of Yeha located just north of Aksum. Believed to date from between 800 to 500 BC, it may have been Ethiopia's first capital. The exterior shell can be visited today; the interior walls, floors and roof have disappeared.

## THE AKSUMITE STATE

A unique African civilization emerged at the beginning of the first millennium AD in the northern highlands of Ethiopia and Eritrea. Aksum, located in present day Tigray Region, flourished for almost seven centuries and became one of the most powerful kingdoms of the ancient world. The port of Adulis in Eritrea was also an important Aksumite trading center with the Mediterranean and India. Even pre-Aksumite Yeha continued to be influential. Aksum thrived on trade. It exported frankincense, grain, animal skins, rhino horn and ivory. It imported from Egypt, Arabia and India cloth, glassware and iron and wine and olive oil from Syria and Italy.

The Aksumite State was strongest between the 3<sup>rd</sup> and 6<sup>th</sup> centuries; the kingdom extended across the Red Sea into southern Arabia and west into the Nile Valley of Sudan. Aksum was rich, well organized and technically and artistically advanced. It produced coinage in bronze, silver and gold and erected extraordinary monuments, some of which stand today. Christianity came to Ethiopia during Aksumite rule and helped to transform society. It not only shaped spiritual and intellectual life, but also influenced its culture, social life, art and literature.

Islam from the Arabian Peninsula had a significant impact on Aksum during the 7<sup>th</sup> and 8<sup>th</sup> centuries. Members of the Prophet's family are believed to have taken refuge in Aksum in the 7<sup>th</sup> century, leading to cordial relations between Aksum and Islam. The Arabs considered the Aksumite state as an equal with the Islamic state, Byzantine Empire and China. But the expansion of Islam in Egypt and the Levant reduced the influence of Aksum and hastened the isolation of its church. Trade and the economy declined and hard times set in. After the mid-seventh century, Aksumite and Muslim fleets skirmished in the Red Sea; Islam gained the upper hand. To the present day, however, Aksum remains a religious and spiritual capital for many of Ethiopia's Orthodox population.

## THE ZAGWE DYNASTY

Following the decline of Aksum in about the mid-7<sup>th</sup> century, power in the region shifted southward. Military colonies drawing on Aksumite culture, the Semitic language and Christianity began to develop around the Agew population. By the 10<sup>th</sup> century, a post-Aksumite Christian kingdom emerged in the central northern highlands and extended to the Red Sea ports of Adulis and even Zeila in present day Somalia. During the 11<sup>th</sup> and 12<sup>th</sup> centuries, this culture expanded throughout that part of Ethiopia inhabited by the Amhara people. A new dynasty known as the Zagwe and based in the Agew district of Lasta came to power in about 1137. Strong Christians, the Zagwe focused on the construction of new churches and monasteries. The Zagwe kings built the amazing rock-hewn churches of Lalibela, a must stop for anyone assigned to Ethiopia. Perhaps because the center of power was farther from the coast, less is known about Zagwe than Aksum. From the 7<sup>th</sup> to the 12<sup>th</sup> centuries, the Ethiopian Orthodox Church emphasized the Old Testament and the Judaic roots of the church. This differentiated it from European Christianity and even from the faith of other Monophysites such as the Copts. Unhappiness with rule from Lasta developed in Eritrea, Tigray and among the Amhara. An Amhara noble, Yekuno Amlak, overthrew the last Zagwe leader about 1270 and proclaimed himself as king. More than 130 years of Zagwe rule came to an end.

## THE “SOLOMONIC LINE” AND RISE OF THE AMHARA

Yekuno Amlak “restored” the “Solomonic” dynasty because it claimed descent from both Aksum and King Solomon in ancient Israel. According to Ethiopian tradition, the lineage of Aksumite kings originated with the offspring of an alleged union between Solomon and the Queen of Sheba. The belief developed that royal legitimacy derived from descent in a line of Solomonic kings. All subsequent Ethiopian kings traced their ancestry to Yekuno Amlak and, consequently, to Solomon and Sheba. Shoa province became the geographical and political center of the Christian kingdom. Internecine family conflict during Yekuno Amlak’s reign and immediately after was resolved about 1300. In order to avoid these difficult succession problems, future monarchs had all of their sons imprisoned except for the designated heir.

A succession of Amhara leaders expanded the territory under their control. One of the most important was Zara Yakob, who reigned from 1434 to 1468. He conquered several neighboring Islamic territories, strengthened central control over what was previously a highly decentralized administrative system, sponsored a reorganization of the church and encouraged the flowering of Ge’ez literature. The unity of the state depended on an emperor’s ability to control the governors of individual kingdoms. Zara Yacob moved this process forward. The early 15<sup>th</sup> century also witnessed the arrival of the first official European delegation and Ethiopian visits to Europe.

## THE ISLAMIC AND OROMO CHALLENGES

Islamic raids on Christian Ethiopia from the Somali port of Zeila plagued the country during the

1490s. The Ethiopians put them down, but early in the 16<sup>th</sup> century Ahmad ibn Ibrahim al Ghazi, known as “Gran the Lefthanded” by his Christian enemies, rallied a diverse group of Muslims in a jihad designed to end Christian power in the Ethiopian highlands. Gran defeated the Ethiopian emperor and by 1532 had overrun most of eastern and southern Ethiopia. At the request of the emperor, Portugal sent a force of 400 well armed soldiers to deal with Gran. The Portuguese army and the Ethiopians experienced defeat near Lake Tana. A new emperor, aided by the remnant of the Portuguese force, raised a large army, defeated the Muslim army and, in the process, killed Gran in 1543. Thousands of people lost their lives in the Christian-Muslim wars, which were also a setback to earlier cordial relations between Christians and Muslims in Ethiopia. Already weakened by the Muslim attacks, the Christian kingdom became pressured to the south and southeast by migrations of the pastoral Oromo people. In a series of massive population movements during the second half of the 16<sup>th</sup> century, the Oromo penetrated much of the southern and northern highlands as well as the lowlands to the east seeking new land and pastures. Many Oromo mixed with the Amhara, became Christians and developed a stake in the system. The Oromos generally retained, however, their language and sense of identity. The Oromo migrations weakened both Christian and Muslim power. The effect was to leave the Ethiopian state fragmented and much reduced in size, with an alien population in its midst. The Oromo are the largest ethnic group in Ethiopia today; the Amhara and other ethnic groups are still coming to terms with the political implications of this situation.

## **THE GONDER STATE**

Portuguese Roman Catholic missionaries arrived in Ethiopia in the mid-1550s. Following their failed efforts to convert the Ethiopians from their Monophysite beliefs, Emperor Fasiladas, who reigned from 1632 to 1667, expelled all the Roman Catholic missionaries. The problems caused by the missionaries, especially the Jesuits, left a deep hostility toward foreign Christians that continued into the 20<sup>th</sup> century. Fasiladas sought to reassert central authority and to reinvigorate the Solomonic monarchy and the Orthodox Church. Ruling from Gonder, the state experienced a flowering of architecture and art that is still visible today. Successive Gonder kings relied upon Oromo military units to counter challenges to their rule. At one point, Oromo became the primary language at the court and Oromo leaders reached the highest positions in the nobility.

Gonder became consumed with court intrigue and faced a serious challenge from Tigray. The central government self-destructed and emperors became little more than puppets in the hands of rival feudal lords and their armies. From 1769 until 1855, the central kingdom ceased to exist as a coherent entity. Autonomous nobles engaged in constant warfare.

## **EMPEROR TEWODROS II**

Crowned emperor in 1855, Tewodros II is the first leader of what is generally known as modern Ethiopia. Ruling from the natural fortress of Maqdala, Tewodros established a national army, arms factory and road network. He worked to reform the land system, abolish slavery and promote Amharic as the national language in place of Ge’ez. His reforms met strong opposition from the clergy and rival lords. Fanatical in his response, Tewodros solicited British support for his modernization programs.

When this failed, he imprisoned some British functionaries in his court at Maqdala. In 1868 Sir Robert Napier led a British military force of 32,000 men to confront Tewodros. An American journalist, Henry Stanley, accompanied Napier to Maqdala. Having superior numbers and far better equipped, Napier freed the hostages at Maqdala, looted its royal treasure and torched the stronghold. Tewodros committed suicide; he left a disorganized kingdom. His defeat weakened Ethiopia, giving other potential European colonizers ideas.

## **EMPEROR YOHANNES IV**

A battle for succession followed the death of Tewodros. A Tigrayan prevailed and was crowned Emperor Yohannes IV in 1872. He supported the church and encouraged a form of federalism. He required local lords to recognize his power and pay taxes to the state. After obtaining the support of his subjects, Yohannes proved that he was also a good soldier. Egyptian forces advanced into Ethiopia from Eritrea. Yohannes drew them into battle and defeated them convincingly in 1875 and 1876. Several retired American officers from both sides of the American Civil War served as advisers to the Egyptian troops in Ethiopia.

The opening of the Suez Canal in 1869 increased the strategic value of the Red Sea and European interest in Ethiopia. Italy took control in 1885 of the port of Massawa in Eritrea and stopped all arms destined for Ethiopia. On the west side of Ethiopia, the forces of the Mahdi filled the void left by Egypt and overran Sudan. A large Islamic army of Mahdists arrived in Ethiopia in 1888, sacked Gonder and burned many of its churches. The following year Yohannes met and defeated the Mahdist forces at the Battle of Metema on the Sudanese border. Yohannes died in the battle.

## **EMPEROR MENELIK II**

Menelik II claimed the throne in 1889. Some ten years later he established control over much of present-day Ethiopia and gained recognition from most of the European colonial powers of the empire's boundaries. Menelik established his royal encampment at Addis Ababa, which means "new flower" and became the country's capital. A forward-looking leader, Menelik authorized a French company to build a railroad from the port of Djibouti to Addis Ababa. He embarked on military conquests to the south that more than doubled the size of the empire. He consolidated his power by awarding newly conquered land to his soldiers and those he appointed to office.

The European powers, however, were casting an increasingly covetous eye on Ethiopia. Menelik considered Italy the greatest threat and in order to forestall imperial designs on Ethiopia signed the Treaty of Wuchale with the Italians in 1889. Disagreement over the meaning of the treaty, of which there were versions in Amharic and Italian, caused Menelik to renounce it later. Relations became further strained after Italy established a colony in neighboring Eritrea and penetrated Somali territory. Great Britain agreed that Ethiopia should fall within the Italian sphere of influence while France encouraged Menelik to oppose the Italian threat. Italian forces invaded Tigray from Eritrea late in 1885. During a pitched battle the following year near the Tigrayan capital of Adwa, Menelik humiliated the Italian forces, inflicting the

first defeat on a European power by an African army. Italy then recognized Ethiopian independence and Ethiopia accepted the Italian colony in Eritrea. By 1908 the European powers had accepted Ethiopia's borders except for those with Italian Somalia. Menelik had a debilitating stroke in 1906. A Council of Ministers assisted in the management of state affairs.

## **EMPEROR HAILE SELASSIE I**

Following Menelik's death in 1913, his grandson briefly held power, to be replaced soon after by Menelik's daughter. Ras Tafari, later to become emperor, served during this period as the prince regent. He achieved a major diplomatic success in 1923 when Ethiopia gained entry to the League of Nations. Ras Tafari took effective control of the government in 1926. He signed a twenty-year treaty of friendship with Italy two years later. He established the Bank of Ethiopia in 1930 and signed the same year an agreement with Britain, France and Italy that gave Ethiopia the right to procure arms for use against external aggression. Crowned emperor in 1930, Ras Tafari took the name Haile Selassie I. The following year he introduced Ethiopia's first written constitution. He encouraged reforms aimed at modernizing the country and decreasing the authority of the nobility. He established reliable provincial rulers throughout the territory inhabited by the Amhara as well as most of the rest of the country. The only traditional leader capable of challenging his authority was the leader in Tigray.

## **MUSSOLINI'S INVASION AND ITALIAN OCCUPATION**

Italy reaffirmed its 1928 treaty of friendship with Ethiopia as late as 1934. But Italy wanted to colonize Ethiopia and the international climate of the mid-1930s suggested that Italy could get away with aggression. Italy provoked an incident in 1934 at Walwal in Ethiopia's Somali-inhabited Ogaden region bordering Italian Somalia. A relatively minor fight ensued between Ethiopian and Italian military units. The following year, the League of Nations exonerated both parties in the Walwal incident. Mussolini decided, however, that he had enough of an excuse to attack Ethiopia and did so without a declaration of war in 1935, from both Eritrea and Italian Somalia. The League of Nations declared Italy an aggressor but took no effective action. Superior Italian armaments and chemical weapons overwhelmed the Ethiopians, who had difficulty obtaining adequate weapons. Some Tigrayan and Oromo units defected to the Italians. In spite of significant disadvantages, Ethiopian forces fought on for seven months. Haile Selassie went into exile in early May 1936 and Italian forces entered Addis Ababa. The Emperor made a powerful speech before the League of Nations the following month where he declared two choices before the world: support for collective security or international lawlessness. Following occupation, Italy merged Ethiopia with Eritrea and Somalia to create the new colonial territory of Italian East Africa. It quickly removed and transported to Rome the Aksum stele, which Italy recently agreed to return to Aksum. About 60,000 Italian workers entered Ethiopia to improve the country's infrastructure. One of the legacies was a much improved road system. Ethiopians strongly resisted Italian rule; Mussolini's response was brutal. After an attempt on the life of the Italian viceroy in Addis Ababa in 1937, the Fascists conducted a three-day massacre in the city that killed several thousand Ethiopians. The Ethiopian patriotic movement drew support from all parts of the country while Haile Selassie remained in exile. Although Italy controlled all of the major towns, it never conquered the entire country. The outbreak of World War II in 1939 changed

the course of events in Ethiopia. Italy's declaration of war against Britain led the latter to offer assistance to Ethiopian patriots operating on the Sudan-Ethiopia border. By the beginning of 1941 Britain launched three major attacks on Italian East Africa, including one led by Haile Selassie. The emperor and his forces entered Addis Ababa victorious on May 5, 1941. The Italian occupation was over although the Italians were not entirely pushed out of Ethiopia until early the next year. There was a British military administration in Ethiopia for the remainder of the war, but it left responsibility for internal affairs with the emperor. An Anglo-Ethiopian agreement in 1942 confirmed Ethiopia's status as a sovereign state.

## **POST-WAR ETHIOPIA**

There was considerable post-war reconstruction and reform in the 1940s and 1950s. American assistance grew rapidly. Ethiopia established a new government bank, a national currency and the first national airline, Ethiopian, which became one of the most successful in Africa. Ethiopia built new schools and opened its first institution of higher education, Haile Selassie I University now known as Addis Ababa University.

Efforts at reform met with mixed success. The emperor was not able to implement significant land reform, much of which remained in the hands of the nobility and the church. The emperor put in place a revised constitution in 1955. It made provision for an elected Chamber of Deputies while the emperor continued to appoint the members of the Senate. The government remained autocratic and real power remained with the emperor. The patriarch in Alexandria, Egypt, had traditionally named the patriarch of the Ethiopian Orthodox Church. Haile Selassie changed the system in 1956, naming the patriarch himself.

Serious efforts at modernization did not stem dissatisfaction in some quarters over the slow pace of reform and the autocratic rule of the emperor. Taking advantage of a state visit to Brazil in 1960, the emperor's Imperial Bodyguard staged a coup d'etat. Initially successful in Addis Ababa, the rebels seized the crown prince and more than twenty cabinet ministers and other government leaders. The stated intent of the coup makers was the establishment of a government that would improve the economic, social, and political position of the general population. They failed, however, to gain widespread popular support; army and air force units remained loyal to the emperor, who quickly returned to Ethiopia. But the unsuccessful coup did put into question the ability of the imperial system to withstand the political changes sweeping through Africa.

## **COPING WITH CHANGE**

The two regions posing the greatest challenge to the empire were Eritrea, which after the defeat of the Italians was under British military administration until 1952, and the Somali-inhabited Ogaden. The United Nations installed in 1952 an autonomous Eritrean government linked to Ethiopia through a loose federal structure under the emperor's sovereignty. From the beginning, Ethiopia took steps to incorporate Eritrea more fully into the empire. The Eritrean Assembly, many of whose members had been accused of taking bribes, voted unanimously in 1962 to change Eritrea's status to a province of Ethiopia. This decision energized Eritrean groups that already opposed incorporation into Ethiopia. An armed conflict

between these groups and Ethiopian forces plagued Haile Selassie and his successor until the Eritreans achieved military victory almost 30 years later.

After the British left the Ogaden in 1948, Ethiopia moved back with its administrators. Inhabited by nomadic Somalis in a region where borders are not clear, the new Republic of Somalia, which became independent in 1960, immediately claimed the Ogaden and Haud areas of Ethiopia. This Somali policy, supported by some Somalis living inside Ethiopia, led to periodic conflict between Ethiopia and Somalia that continues up to the present.

In addition to confronting problems in Eritrea and the Ogaden, Haile Selassie experienced growing opposition in the fourteen years of his rule after the failed 1960 coup. His efforts at major tax reform ended largely in defeat. Some parts of society wanted more rapid reform while others strongly resisted any change. Student demonstrations became more common. Inflation and corruption persisted at a time when Haile Selassie was growing old and was less in control of the situation. The final straw was a famine in 1972-74 causing the death of as many as 200,000 peasants. The government botched its handling of the famine and even tried to hide it from the outside world. The pieces were in place for dramatic change.

## **THE 1974 REVOLUTION AND THE DERG**

Taking advantage of a deteriorating situation in the country, a group of left-wing military officers known as the Derg or Committee seized power in 1974. They held the emperor under house arrest for about a year before murdering him. An internal power struggle and clashes over ideology haunted the revolution initially. Before the end of its first year, one faction killed the first leader of the Derg and more than fifty other prominent individuals. Major Mengistu Haile Mariam emerged as the leader of the Derg. He embarked on a socialist path and made preparations to launch a new offensive against the growing threat of Eritrean secession. The Derg also deposed the patriarch of the Ethiopian Orthodox Church.

The Derg's ultimate goal was the creation of a one party system. It nationalized all land, abolished tenancy and put peasants in charge of enforcement. The Derg laid little groundwork for this radical change and strong opposition developed in some areas. Internal political groups began to challenge Mengistu for control of the revolution. He dealt severely with his opposition. The most infamous campaign, known as the "Red Terror," occurred in 1977-78 and resulted in the death of perhaps 100,000 political opponents.

The radicalization of the regime coincided with a growing threat from an indigenous Somali liberation group supported by neighboring Somalia. Mengistu turned in desperation to the Soviet Union for support having given up on the United States, which had had close ties to the emperor. Soviet military assistance and advisers together with Cuban troops poured into Ethiopia and stopped the Somali threat. In the process, however, Mengistu became a hostage to the Soviet Union. In the meantime, Eritrean groups stepped up their opposition to the regime and a serious, new threat developed in Tigray—the Tigray People's Liberation Front (TPLF). Other dissident groups among the Somali and Oromo also put increasing pressure on the Derg.

As Ethiopia became more closely tied to the Soviet Union, it announced that its single political party was a genuine communist party and the government took on the trappings of a Marxist-Leninist state. A horrific famine followed the drought of 1984-85 in which hundreds of thousands of Ethiopians died. Failed government resettlement campaigns, communal farms, “villageisation” programs and war with the Eritreans and TPLF aggravated the disaster. Locust and grasshopper plagues followed the drought. Food production continued to decline. The economy was in a free fall by the late 1980s. The Eritreans and TPLF steadily gained territory in the north. By 1988 Ethiopia had lost most of Eritrea and the TPLF controlled most of Tigray.

The various opposition groups in Ethiopia united to form the Ethiopian People’s Revolutionary Democratic Front (EPRDF) in 1989. Pressure by the EPRDF throughout much of the country, including the vicinity of Addis Ababa, and the Eritrean People’s Liberation Front left Mengistu in a precarious military position. The disintegration of the Soviet Union and changes in Eastern Europe left him without allies. With the economy in shambles, Mengistu fled in 1991 to Zimbabwe where he remains to the present day. The EPRDF entered Addis Ababa days later and took control of the government.

## **THE EPRDF GOVERNMENT**

Meles Zenawi emerged as the leader of a transitional government in Ethiopia while Isaias Afwerki assumed control of Eritrea and established a provisional government. The provisional government administered Eritrea until 1993 when Eritreans voted overwhelmingly for independence. Ethiopia accepted the new government in Eritrea. Meles pledged to oversee the formation of a multi-party democracy in Ethiopia, which had again become a land-locked country with the loss of Eritrea. Ethiopians elected a constituent assembly in 1994; the same year it adopted a constitution for the Federal Democratic Republic of Ethiopia. Elections for Ethiopia’s first popularly chosen national parliament and regional legislatures took place in 1995. Most opposition parties chose to boycott them, ensuring a landslide victory for the EPRDF.

The EPRDF government of Prime Minister Meles has promoted a policy of ethnic federalism, devolving significant powers to regional, ethnically based authorities. Ethiopia has nine semi-autonomous administrative regions that have the power to raise and spend their own revenues. The economy has performed reasonably well under the EPRDF in spite of periodic drought conditions. It restored cordial relations with the West and its neighbors. Opposition to its rule continues, however, from political parties such as the Oromo Liberation Front and the All Amhara People’s Organization. Human rights organizations continue to criticize the EPRDF’s record. Ethiopia faced a major challenge following the outbreak of conflict along the border with Eritrea in 1998. After much loss of life and financial expense, it only came to an end following an Ethiopian military victory in 2000. The United Nations has a monitoring force in place in the area of conflict, preparatory to delimiting and demarcating the border.

### **Self-Study Questions for Further Exploration**

- Do Ethiopians today give much thought to the fact that Ethiopia may be the origin of humankind?

- How does Ethiopia's long and proud history affect domestic politics today?
- How constant have Ethiopia's borders been over the millennia?
- What has been the impact of Ethiopia's early contacts with Islam on its current relations with the Islamic world?
- What is the impact of the 16<sup>th</sup> century Oromo migrations on Ethiopian politics today?
- In view of Italy's checkered historical relationship with Ethiopia, what do you think is the nature of relations between the two countries now?
- Did the close American relationship with Emperor Haile Selassie complicate its links with successor governments?
- Disagreement over ownership of land has been a theme in Ethiopian history. Where does it stand today?
- Ethiopia has never completely pacified Somali inhabited areas and irredentism remains a potential threat from Somalia. What are the prospects for bringing real peace to Somali Region of Ethiopia?

## POPULATION AND CULTURE

### POPULATION

Ethiopia had an estimated population in 2001 of more than 64 million people, making it the third most populous country on the continent after Nigeria and Egypt. There is some disagreement over the current population growth rate, due in no small part to the imprecise impact of the growing number of HIV/AIDS cases on the death rate. The World Bank put the growth rate at 2.4 percent in 1999, down from 2.9 percent in 1995. On the other hand, the CIA World Factbook suggests the growth rate for 2000 was 2.76 percent. Whatever the actual percentage today, it is probably safe to assume that it is declining. The World Bank believes life expectancy at birth dropped from 44.1 years in 1995 to 42.4 years in 1999. Again the CIA World Factbook uses a higher figure of just over 45 years for 2000. About 17 percent of

Ethiopia's population now lives in an urban setting, still a relatively low figure even for a developing country.

## LANGUAGE GROUPS

Ethiopia has a more complicated language and ethnic composition than most countries in Africa. This is perhaps not surprising in view of the fact that it is the third most populous country. It has been further complicated by a considerable amount of intermarriage in certain areas. There are at least 70 languages spoken as mother tongues, a few by many millions and some by only a few thousand persons. The number of distinct social units exceeds the number of languages because some separate communities speak the same language. More than 50 of the languages spoken in Ethiopia fall within three families--Semitic, Cushitic and Omotic--of the Afro-Asiatic super language family. The remainder speaks languages found in the Nilo-Saharan super language family.

Most speakers of Ethio-Semitic languages live in the highlands at the center and north of the country. Persons who speak East Cushitic languages tend to be located in the highlands and the lowlands of the center and south while other Cushitic speakers live in the center and north. Omotic speakers are concentrated in the southern part of Ethiopia, especially in the area north of the western part of Kenya. The Nilo-Saharan speakers live in the southwest and west along the border with Sudan.

Amharic is the most important of the Ethio-Semitic languages. The official language of the empire, it continues to be used widely in government and business and serves as the lingua franca of the country. There are, however, parts of Ethiopia where the indigenous people speak little if any Amharic, especially in Somali and Afar regions and other peripheral areas. Tigrinya, spoken by the Tigray people, is the second most important Ethio-Semitic language. There are seven Ethio-Semitic languages spoken by the Gurage people. Relatively small numbers of Ethiopians speak Tigre, which is related to Tigrinya. The most numerous are the Beni Amir, who live in the north and west near the Sudan border. Two other groups that speak Ethio-Semitic languages are the Harari, concentrated in the town of Harar, and the Argobba, who live on the slopes of the Rift Valley and southwest of Harar.

Oromiffa, also known as Afan Oromo, is the most important Cushitic language in Ethiopia. The Oromo live in a large crescent shaped area stretching from the Kenya border through Harar and Addis Ababa and continuing to the Sudan border. Many Oromo also speak Amharic. The Oromo live in both the highland and lowland sections of Ethiopia. Several Cushitic-speaking groups live in the far south, the most numerous being the Konso. The Somali, Afar and Saho, all Cushitic-speaking peoples, share a pastoral tradition. The Somali predominate in the southeast while the Afar live along the Djibouti and lower part of the Eritrean border. The Saho are found along the central part of the border with Eritrea. Saho is a linguistic rather than an ethnic category. Sidama is often used to describe a group of languages, the most important of which are Sidama and Hadya-Libido. There are six groups of Central Cushitic (Agew) speakers. Relatively small numbers of persons speak these languages. One of the groups, the Beta Israel or Falasha Jews, has received a huge amount of publicity. Virtually all of them have immigrated to Israel. The only Cushitic-speaking group in the far north is the Beja.

Many small groups that speak languages of the Omotic family live between the lakes of southern Ethiopia's Rift Valley and the Omo River. There are as many as 80 different groups, although some of them speak dialects of the same language. The Wolayta-speakers are the most numerous followed by those who speak Gemu-Gofa. Some 40 individual groups speak a variant of Gemu-Gofa. Two separate groups speak Kefa-Mocha. Nilo-Saharan speakers to the west and Cushitic speakers to the east have influenced the Omotic languages.

Of the four language groups represented in Ethiopia, the smallest number of people speaks a Nilo-Saharan language. The most important of these languages are Nuer and Anuak, spoken by people who live along the border with Sudan in the southwest. The Kunema and Nara speakers are located in western Tigray. The Berta and the Gumuz, who together are called the Benishangal, live along the central part of the border with Sudan. Several groups of Koman speakers live in the same general area near the border with Sudan.

## **ETHNIC GROUPS**

Ethiopia's ethnic groups correspond roughly to the language groups reviewed above. Many of the ethnic groups are small and wield minimal political power. As a result of intermarriage and questionable statistics, information on population totals and percentages for the various ethnic groups are only educated guesses. The most numerous are the Oromo at about 40 percent of the population. Amhara account for perhaps 25 percent, Tigrayans about 8 percent, Somali 6 percent and Afar 4 percent. The various Sidamo peoples probably constitute about 9 percent and the Gurage about 2 percent. Many small groups make up the remainder. Historically, the Amhara have held a disproportionate amount of political power while the Oromo have been under represented. Today, however, Tigrayans are in a particularly strong position in the central government. Opposition political parties in Ethiopia tend to draw their support from a particular ethnic group or coalition of closely related groups.

## **RELIGION**

Throughout most of Ethiopian history, there has been a close link between the Ethiopian Orthodox Church and the state. The 1955 constitution made clear that it was the established church of the empire. The church was a central part of the power structure during Amhara and Tigrayan rule. The Oromo are divided among Ethiopian Orthodox, Islam and Protestantism. Islam tended to spread among ethnically diverse and geographically dispersed groups at different times. It failed to provide the same degree of political unity as the Orthodox religion. Traditional belief systems were strongest in the lowland regions, but they developed elements of both Islam and orthodoxy. The arrival of protestant missionaries in the 20<sup>th</sup> century from Europe and North America gave rise to a significant number of followers, particularly in the western and southern parts of Ethiopia. The largest Protestant churches are Kale Hiwot and Mekane Yesus.

The long history in Ethiopia of relations between Muslims and Christians has left a mixed legacy. Islam

still remembers that Ethiopia gave refuge to members of the Prophet's family in the 7<sup>th</sup> century. At the same time, Ethiopians have not forgotten the Muslim-Christian wars, especially the 16<sup>th</sup> century attacks by "Gran the Lefthanded" and the 19<sup>th</sup> century invasion by the forces of the Mahdi. The imperial regime officially tolerated Muslims. It permitted Muslim courts to deal with family and personal issues according to Islamic law. But the imperial authorities gradually took over Muslim schools and discouraged the teaching of Arabic. The close association between the Ethiopian Orthodox Church and the state tended to alienate Muslims.

The left-wing revolution in 1974 resulted in a major change in the official status of the Ethiopian Orthodox Church and other religions. The Mengistu regime disestablished the Orthodox Church and removed the patriarch. It declared all religions equal and a number of Muslim holy days became official holidays in addition to the Christian holidays. Divisions persisted, nevertheless, between Muslims and Christians. Following defeat of the Derg in 1991, the Meles government repaired relations with the Ethiopian Orthodox Church but went to considerable lengths to maintain harmonious relations with both Muslims and Protestants. Key members of the EPRDF are not thought to be particularly religious, but they seem to be tolerant of all religions.

Ascertaining the percentage of Ethiopians who subscribe to a particular religion is about as difficult as ascribing percentages to ethnic and language groups. The Amhara and Tigrayans are almost entirely Ethiopian Orthodox. The Oromo are mainly Muslim, but have significant numbers of Orthodox and Protestant followers. The Somali and Afar and smaller related groups are almost entirely Muslim. Many of the Omotic-speaking peoples in the south are followers of indigenous practices, but Protestant missionaries have made significant inroads. The small ethnic groups along the Sudan border tend to be Muslim. There are also a few pockets scattered around Ethiopia where Roman Catholicism has taken hold. Ethiopian Orthodox and Muslims probably account for slightly less than 45 percent each of the population. Protestantism may have reached almost 5 percent of the population while animists account for the remainder.

## **ART, MUSIC, LITERATURE AND FOOD**

Ethiopia has a wonderful tradition in art, which until the 20<sup>th</sup> century, drew primarily on religious and historical motifs. Only in recent years has Ethiopian art begun to attract the attention that it deserves. Modern Ethiopian artists are also making their mark in the world of art. Afewerk Tekle, known for his Meskel Flower painting and stained glass in the headquarters of the Organization of African Unity, is the most famous, but some younger artists are following close behind. Zerihun Yetmgeta is another of the older artists who has left a significant legacy.

Because Ethiopia is so large and diverse, there are many forms of music and dance. Most are confined to particular ethnic areas. The variety of music and dance common to the Ethiopian highlands is the best known and can be heard and observed regularly in Ethiopian nightclubs and bars. Now that there are so many Ethiopians living in the diaspora, the music has also developed a following outside the country. Aster Aweke, for example, is well known in Ethiopia and in the diaspora.

Ethiopian literature has a long and proud history. Until recently it was rarely written in any language other than Amharic or one of the indigenous languages and seldom translated. This is particularly true in the case of poetry. As a result, Ethiopian authors are generally not well known outside the country. This is beginning to change as more literature is being written in English and other world languages. Sahle Sellassie and Daniachew Worku are examples of modern Ethiopian novelists.

The traditional food from the Ethiopian highlands deserves a special note. Again, the ethnic diversity of the country has resulted in a variety of diets. But “Ethiopian food” is traditionally associated with that common for centuries in the highlands. It consists of the national bread, *injera*, which resembles a huge, spongy pancake with a slightly sour taste. Made from a local grain known as teff, it is traditionally served on a communal mushroom shaped basket known as a *mesob*. It is accompanied by *wat*, a variety of stew like condiments made of both meat and vegetables. You tear off small pieces of *injera*, combine them with the *wat*, and eat the delicious combination without utensils. The rise of the Ethiopian diaspora has resulted in the establishment of many Ethiopian restaurants throughout Europe and North America. In the Washington area they are concentrated in Adams Morgan.

## NATIONAL HOLIDAYS

Ethiopia has many national holidays, most of them related to major Ethiopian Orthodox festivals although key Islamic holidays have been added. The dates of some of the holidays, especially the Islamic ones, vary slightly from year to year, depending on the sighting of the moon. The most colorful Orthodox holiday is *Timkat* or the celebration of Christ’s baptism. It is a three-day event in January. Another popular Orthodox ceremony is *Meskel* or the finding of the true cross, a two-day holiday in September. Holidays celebrating political events include the victory over the Italians at Adwa (March 2), liberation of Ethiopia from Italian fascist rule (April 6), international labor day (May 1) and the overthrow of the Derg (May 28). Regular business is conducted in Ethiopia Monday through Friday.

### Self-Study Questions for Further Exploration

- Even if one accepts an annual population growth rate as low as 2.4 percent, can Ethiopia cope with the growing population in the coming decades?
- Has Amharic been a unifying language in Ethiopia?
- What will the official policy of ethnic federalism do to the development of languages in the country?
- What is the effect of ethnicity on Ethiopian politics?
- What are the prospects for religious harmony in Ethiopia?
- Are Ethiopian art, music and literature, much of which is of a very high quality, likely to receive

greater recognition outside the country?

## **SOCIAL ISSUES**

### **CLASS STRUCTURE**

Class structure in Ethiopia throughout its imperial history resembled a feudal regime. Nobles and the Ethiopian Orthodox Church controlled much of the land; the peasants worked the land for the nobility. Social status during imperial rule depended on one's landholdings, which provided the basis for class formation and social stratification. The 1955 constitution, which was approved during the reign of Haile Selassie, had as an underlying theme the power of the monarchy. The first chapter dealt with the pomp and glory of the imperial institution and the rules of "Solomonic" succession to the throne.

This system came to an end with the overthrow of the imperial regime by the Derg in 1974. The Mengistu government instituted a constitution in 1987 based on the principles of scientific socialism. According to the constitution, Ethiopia was "a state of working peasants in which the intelligentsia, the revolutionary army, artisans, and other democratic sections of society participate." It committed the state to central planning and the owner of the means of production. It described the family as the basis of society. Social stratification based on landholding largely disappeared. But as the Derg sought to build a classless society it, in fact, created one based on pure political power and influence.

The EPRDF approved a new constitution in 1994. An egalitarian document with numerous provisions concerning human and individual rights, it is based on the principle that all citizens have equal access to publicly funded social services, including education. It also asserts that all people are equal before the law. The preamble to the constitution calls for "full respect of individual and people's fundamental freedoms and rights to live together on the basis of gender equality and without any religious or cultural

discrimination.” The constitution covers so many rights and freedoms that it is not surprising some are honored in the breach. In practice, there is a very small wealthy class and relations are generally cordial among individuals from the various economic strata. Considerable controversy surrounds, however, the EPRDF’s policy of ethnic federalism.

## **FAMILY LIFE**

Daily activity in Ethiopia revolves around the extended family as is true for most African societies. To some extent individual ethnic group characteristics determine the way in which families function internally and interact with other families and society at large. Because Ethiopia is comprised of so many different ethnic groups, it is difficult to generalize about the nature of family life. There are significant differences, for example, in the way families function in a rural setting as compared to an urban one. Likewise, families living a pastoral existence will have different patterns than those who are settled agriculturists.

Generally speaking there is a much greater willingness to assist and care for members of the extended family than is the case in the West. Consequently, a family member will usually care for the sick and the elderly rather than expect a governmental institution to accept this responsibility. Family members with a steady income or greater degree of wealth normally assist those, including cousins, in-laws, etc., who are in financial need. Children whose parents can not afford to pay for school fees will routinely request help from a member of the extended family who is perceived to be in a better financial position. This can become a tremendous burden for salaried employees, even relatively low paid ones, who are seen by family members as an unending source of assistance. Family bonds tend to be stronger than is the case in the industrialized world. This is starting to break down, however, in urban settings.

Although there are growing urban-rural differences, most Ethiopians live with their families until marriage. In rural areas, the parents of the couple usually arrange the marriage and a long engagement often follows. Several days of feasting cap the ceremony. The financial burden of weddings has become huge, especially in the cities, and some Ethiopians are beginning to question whether these enormous expenses are a good way to launch a life together. After marriage in rural areas, the couple usually joins the household of the husband’s parents. The couple eventually requests a plot of land from the village in order to build a house. Increasingly in urban areas, marriage resembles the Western model where an individual seeks a partner of his/her choice.

Divorce is a relatively easy process in Ethiopia and marriages can be dissolved at the request of either party, depending on religious affiliation. Adultery is the most common reason given. Each partner theoretically retains the property he or she brought to the marriage. Allowances may be made in favor of the “wronged” partner.

## **GENDER**

Although the 1994 constitution calls for gender equality, it will take many years to change millennia of

tradition. The fact is that Ethiopian women, as is the case in so many traditional societies, have unequal status to men. The overwhelming majority of women live in rural conditions where they experience daily physical hardships throughout their lives. This involves carrying heavy loads such as water over long distances, manually grinding grain, collecting firewood, raising large families and even helping the men in the fields. Ethiopian women have traditionally suffered various kinds of discrimination and have had fewer opportunities for personal growth, education and employment. The custom of many Ethiopian societies is to require female circumcision in spite of the fact that the government and some NGOs are trying to stop the practice.

Ethiopians measure a woman's worth in terms of her role as a mother and wife. Rural women are an integral part of the agricultural economy, most of which is at the subsistence level and highly labor intensive. Combined with giving birth to large numbers of children, such an existence takes a high physical toll. Rural Ethiopian women tend to look older than their actual age. Ethiopian women employed in urban areas are concentrated in the service sector. Women factory workers generally earn a lower wage than their male counterparts. At the same time, there are signs of progress for women living in towns and cities. Education, health care and employment outside the home have become more available. Although nationwide illiteracy remains high, it is not significantly higher for women (about 68 percent) than for men (about 57 percent) and it is declining at a faster rate for women.

## **HEALTH AND WELFARE**

Missionary doctors, nurses and midwives brought modern medicine to Ethiopia during the last quarter of the 19<sup>th</sup> century. They had little success, however, in decreasing the effects of acute and endemic diseases that debilitated large segments of the population. The creation of the Ministry of Public Health in 1948 began the process of confronting national health problems.

A number of factors contribute to the continuing poor state of health in Ethiopia. Rivers and lakes are the sources of water for most Ethiopians. This water is often unsafe; it is estimated that only 25 percent of the rural population and 75 percent of the urban population have access to safe water. Malnutrition is widespread in much of Ethiopia even during a good crop year. Periods of drought and famine magnify the problem. Health services are concentrated in the urban areas. Only about 60 percent of the population have access to any kind of health service and it is often of low quality. There is one doctor for every 40,000 Ethiopians and 87 hospitals with only 12,000 beds for more than 64 million people. The health care infrastructure has been crippled by more than three decades of conflict, underfunding and neglect. Efforts to improve the situation are underway, but it will take decades to overcome the challenge. Government expenditures on health care as a percentage of total expenditure, for example, increased from 3.5 percent in 1986/87 to 4.9 percent in 1995/96.

The major killing diseases in Ethiopia are perinatal-maternal conditions, acute respiratory infection, malaria, nutritional deficiency for children, diarrhea, AIDS and tuberculosis. There is wide regional variation in the pattern of diseases. Malaria, for example, is endemic in at least 70 percent of Ethiopia but does not generally occur in the higher altitudes. Schistosomiasis and yellow fever also tend to be

concentrated at lower altitudes. Venereal disease is more common in urban areas where prostitution contributes to the problem. HIV/AIDS is increasing at a rapid rate; as many as 4 million people may be infected. Because of its large population, Ethiopia now has the third highest number of HIV positive persons in the world. Between seven and ten percent of the sexually active population is HIV positive. Infection rates are considerably higher in urban areas and along major transportation routes than in the rural parts of the country. Although the basic cause of AIDS is now understood by nearly all Ethiopians, there is still a huge stigma attached to the disease and a reluctance to discuss it at the personal level. The government, assisted by churches, partner countries and numerous NGOs, has belatedly undertaken a major effort to deal with the pandemic.

It is very difficult to define poverty in a country as poor as Ethiopia. One government study done in the early 1990s suggested that more than 50 percent of the population suffered from chronic poverty. Welfare programs are largely non-existent in Ethiopia. The extended family is expected to provide for those in need. Churches, mosques and NGOs contribute, however, to the well being of many Ethiopians. The government focuses primarily on health care and education.

## EDUCATION

Religious instruction organized by the Ethiopian Orthodox Church was the only formal education in Ethiopia until the early 1900s. The first public school opened in Addis Ababa in 1907; by the mid-1930s there were still only about 8,000 students in 20 public schools. The number grew to 60,000 students in 400 primary schools by 1952, supplemented in the 1960s by 310 mission and privately owned schools with an enrollment of 52,000. The Derg regime expanded significantly primary school enrollment, which grew to 2.5 million in the mid-1980s. It crept up to 2.7 million by the mid-1990s. This constituted about 28 percent of the total primary school population; the percentage for girls was about 21 percent. Junior secondary schools increased from 1000 in the mid-1980s to over 1200 in the mid-1990s while senior secondary schools grew from 260 to 330 in the same period.

There has been less success in improving the quality of primary and secondary education. Schools are generally understaffed and poorly equipped. Laboratories are virtually non-existent in some secondary schools. The physical infrastructure of many schools, especially in rural areas, is well below standard. Perhaps most important, many educators believe the quality of teachers has deteriorated in recent decades. The policy of ethnic federalism permits the regions to determine the principal language of instruction in primary school. Oromia, Afar, Somali and Tigray regions have selected the predominant local language. The others continue to rely on Amharic. All schools teach English at a certain point, but the quality of instruction has declined due to the significant increase in the number of students in school and the decrease in organizations like the Peace Corps that made a major contribution to the teaching of English.

The educational system has long been a manufacturer of an unemployable cadre of students rather than provider of skilled manpower. It tends to be theory focused and is not designed to link theoretical knowledge to practical problems. Civic education has not traditionally been an important part of the

curriculum, although this is changing. Nor is the system designed to develop openness, assertiveness and creativeness among students. The number of vocational and technical schools in Ethiopia remains low but is finally beginning to show signs of growth. The government is also devoting a greater share of its budget to education. It increased from about 10 percent in the mid-1980s to 15 percent in the mid-1990s.

Although some question the quality of higher education today, the government has devoted significant resources in recent years to expanding it. The government reorganized the system, creating several regional centers for higher education that are autonomous from Addis Ababa University, the largest campus. All universities are under the authority of the Ministry of Education. Relative lack of autonomy from the Ministry has led to occasional problems such as the nationwide boycott of classes by students in 2001 following disagreements over policy issues. Each university campus draws students from throughout the country; this policy allows them to mix with other ethnic groups, thus offsetting the more parochial implications of ethnic federalism at the primary and secondary school level. Higher education enrollment grew from about 4,500 in 1970 to more than 18,000 in the mid-1980s. The number has increased well above that today.

## **LABOR FORCE**

The overwhelming majority of the labor force is engaged in agriculture, usually at the subsistence level, although the percentage has declined from about 88 percent in the mid-1980s to 70 percent in the mid-1990s. In the urban labor market, a higher proportion of females engages in sales and service related activities while men dominate the craft related occupations. Women are much more likely to be self-employed and men are found in far greater numbers in the government. Unemployment is high in urban areas. The Confederation of Ethiopian Trade Unions (CETU) represents the different guilds at the national level. Compared to the American labor system, CETU is an obliging organization in its relationship with the government. Peasant associations and cooperatives are important institutions in the agricultural sector. They focus primarily on improving the well being of the farmer through collective purchases of agricultural inputs and collective sale of farm products. They have minimal impact on agricultural policy.

### **Self-Study Questions for Further Exploration**

- Are class differences still an important issue in Ethiopia?
- Is the growth in the percentage of Ethiopians living in urban areas generally a healthy development for society?
- What measures can be taken to improve gender equality?
- What realistic steps can Ethiopia take to improve the health care system and expand it to areas where there now is no care?
- To what extent will the HIV/AIDS pandemic threaten Ethiopia's economic development?

- Is the answer to Ethiopia's future development to put more students through school, improve the quality of the existing curriculum or thoroughly revise the current educational system?
- Why does the union movement play such a modest role in social change?

## ECONOMY

### EPRDF ECONOMIC POLICY

When the EPRDF came to power in 1991, it brought with it some Marxist-Leninist economic baggage. This socialist ideology combined with a more recent willingness to implement market reforms makes it difficult to categorize EPRDF policy. It seems to have grudgingly accepted market economics as the only option for Ethiopia but still has a tendency towards government intervention and control. Some of the EPRDF economic theorists are probably not convinced that capitalism will provide the rapid and sustainable economic development that Ethiopia desperately needs. The EPRDF seems committed, however, to taking those steps that it believes will most effectively energize the population to contribute to the economy in a way that will benefit all regions of the country.

The EPRDF believes that the agricultural sector should be the driving force for the rest of the economy. Both land and labor productivity in this sector is exceedingly low. The goal is to improve productivity by introducing new technology, fertilizer, improved seed and extension services. To achieve this goal, however, the EPRDF believes the government must intervene on a massive scale by orchestrating the distribution of fertilizer and improved seed and overseeing the extension system. In urban areas the EPRDF sees itself as the provider of social and physical infrastructure, including housing. This, in turn, will in its view stimulate the private sector to invest in productive enterprises leading to more employment. The EPRDF is also committed to some regional balance in its economic development program. Although government budget allocations are designed to encourage this process, it has been difficult to achieve development in areas where the infrastructure is poor and the number of educated and skilled people are few.

Other basic EPRDF economic policies include improved tax administration, especially broadening the base on the revenue side and reducing expenditures to less than that of nominal GDP. It intends to minimize the tendency of government to crowd out the private sector by reducing government borrowing

from domestic sources. It plans to create an environment that will permit the establishment of a competitive financial system. It is trying to increase private investment by speeding up privatization, improving the investment code, increasing dialogue with the private sector and ensuring an adequate supply of urban land for investment purposes.

Ethiopia, in on-going discussions with the IMF, has made clear that its mid-term economic strategy includes a focus on poverty reduction by fostering rural development, expanding and improving a comprehensive food security program and building conditions for high and sustainable growth. The goal over the short term is real annual GDP growth of seven to eight percent and consumer price inflation at no more than five percent. The primary fiscal policy objectives over the short term are to redirect resources from defense-related expenditures toward poverty-reducing outlays and to lay the foundation for better tax revenue mobilization. Monetary policy is also aimed at keeping inflation in the low single digits. Structural reforms include modernizing monetary management, improving interbank operations, strengthening the soundness of smaller banks and upgrading the management of the state-owned Commercial Bank of Ethiopia. It also intends to further liberalize the foreign trade and exchange regimes, allow market determination of the exchange rate and promote export development.

## **EPRDF ECONOMIC PERFORMANCE**

The structure of Ethiopia's economy has changed little since the EPRDF came to power. Agriculture continues to contribute more than 50 percent of GDP. The average share for agriculture over the last 20 years has been about 55 percent. Industry's contribution to GDP has remained relatively static at about 10 percent. The service sector, on the other hand, has increased to about 25 percent of GDP from 20 percent during the Derg. The contribution of the distributive sector has remained static at just over 10 percent.

Ethiopia's real GDP under the EPRDF has grown on the average at a rate of about 4.5 percent annually. The per capita GDP growth rate has been about 2.6 percent, which compares favorably with a 1.9 percent rate during the last ten years of the Derg. Ethiopia's economic situation deteriorated sharply in 1999/2000 as a result of a severe drought, the 1998-2000 border war with Eritrea, a major worsening of its terms of trade associated with lower coffee export prices and the steep rise in petroleum import prices. In spite of this situation, the IMF reported that real GDP growth reached 7.5 percent in 2000/01 while inflation turned negative, reflecting a bumper cereal crop and large inflows of food aid. This strong showing occurred in spite of an expenditure of \$3 billion by Ethiopia to finance the conflict with Eritrea. The Ethiopian Economic Policy Research Institute offers a more dismal picture of the economy, citing a sharp drop in foreign investment, a reduction in tourism, the high cost of the war, costs associated with rerouting imports and exports and higher debt. Ethiopian reserves dropped from about a half billion dollars in 1997 to well under \$400 million in 2000. The Institute concludes, however, that Ethiopia continues to have a reasonable GDP growth rate. The IMF believes the debt-service ratio will fall from 19 percent in 1999/2000 to 15 percent in 2002/2003 and 9 percent by 2009/10. It further expects the ratio to drop to an average of 7.5 percent beyond that. Gross domestic savings averaged 7.2 percent during the Derg and 6.9 percent during the EPRDF. There is a steady trend, however, suggesting that some of the measures taken by the EPRDF to encourage savings are beginning to work. While gross fixed capital

formation as a percent of GDP declined sharply during the last 11 years of the Derg, it has made a healthy recovery under the EPRDF, averaging over 15 percent and doing best in recent years. Because the low savings ratio could not finance this increase in investment, the resource gap widened from an average of 7.1 percent of GDP during the Derg to about 8.7 percent under the EPRDF. This resulted in an increase of debt burden during EPRDF stewardship. The Ethiopian economy has performed modestly under the EPRDF. Its successes stem from the positive effect of the dismantling of the most suffocating anti-private sector policies of the Derg regime and generous support from the donor community. High growth rates in industry and services are largely due to the recovery made from the unusually low level during the last years of the Derg. The agricultural sector did not perform as well as expected. This is not surprising in view of several bad harvests due to drought and, in some high altitude locations, an excess of rain. Perhaps the biggest surprise, however, is the fact that the economy has done as well as it did in spite of a \$3 billion expenditure on a war with Eritrea.

## AGRICULTURE

Ethiopia is divided into two major agricultural zones—the highlands and the lowlands. The highlands constitute about 40 percent of the land area and the lowlands 60 percent. About 25 percent of the land area are intensively or moderately cultivated. Animals graze on most of the remainder, although some areas are so steep, eroded and/or lacking in water that they serve virtually no agricultural purpose. Ethiopia may have the largest livestock population in Africa. Farming practices vary somewhat according to vegetation zones and the tradition of different ethnic groups. The most common way of tilling the field is by oxen or cattle. Mechanized plowing is rare. It is not uncommon to see farmers working small plots using hoes or even sharpened sticks to break up the soil. Oxen and cattle pull a crude wooden plow fitted with iron tips. The farmers then spread seeds and plow them under in the same manner. Increasingly, farmers are using fertilizer. In the final analysis, the rains or lack thereof determine the size and quality of the crop. There is very little irrigated agriculture in Ethiopia. When the crops fail, farmers kill off their livestock to survive. When the livestock are gone, they are dependent on foreign assistance and vegetation such as wild plants and roots. Commercial farming began in the 1960s. Following a brief period of modest growth, the Derg nationalized the commercial operations and converted them to state farms. Most of these efforts performed poorly and the EPRDF handed some of them over to local farmers and privatized others. Of the original 26 state farms, there are now only 13 remaining. They raise wheat, corn, cotton, coffee and tea. The EPRDF is encouraging large-scale commercial farming, but the results have been modest. Access to good land is the main obstacle. Investors must identify land that is not already being used by others. This forces them to the low, hot, disease-ridden parts of Ethiopia where there is still unoccupied land. The major cereal crops are teff (used in the national bread *injera*), wheat, barley, corn, millet and sorghum. Pulses are the second most important element in the national diet and a principal source of protein. Niger seed, flaxseed and sesame are widely cultivated. Castor beans, rapeseed, peanuts, safflower and sunflower seeds are a less significant part of the diet. Ensete, also known as the false banana, is an important food source in the southern and southwestern highlands. Fruits and vegetables grow well in parts of Ethiopia but consumption tends to be low because of their high cost. Common vegetables include onions, green beans, peppers, squash and cabbage. Ethiopia produces a variety of citrus, bananas, mangoes and papaya. The most important cash crop is coffee. In fact, arabica coffee may have originated in Ethiopia. As many as 15 million Ethiopians depend on the production,

processing, trade and transport of coffee for their livelihood. More than 90 percent of the country's coffee production comes from smallholder farmers. A significant amount grows wild. The major foreign exchange earner, some varieties of Ethiopian washed coffee earn a premium in the world market. Starbucks usually carries at least one variety of Ethiopian coffee. Coffee prices rise and fall quickly, making it difficult to estimate the impact of the crop in any given year on Ethiopia's foreign exchange income. Other cash crops include cotton, sugar, tea and tobacco, most of which are consumed domestically. Ethiopia grows chat, fruit and vegetables for export. Chat, a mild stimulant that is illegal in the U.S., is becoming increasingly popular in Ethiopia. Livestock contribute an estimated 30-35 percent of agricultural GDP and about 15 percent of overall GDP. Cattle account for 70 percent of this value, sheep and goats 14 percent and poultry 13 percent. Camels, mules and horses constitute the balance. Their value includes the provision of draft power, meat and milk. In addition, they have a high export value for hides and skins. Ethiopia may have as many as 80 million head of livestock and 60 million poultry.

## INDUSTRY

Prior to the 1974 revolution, foreigners established and/or owned most of the 273 manufacturing enterprises in Ethiopia. The Derg nationalized virtually all of these companies. The EPRDF is slowly returning them to private hands. The three-percent contribution of Ethiopia's manufacturing sector to GDP is among the lowest in the world. In fact, the contribution of all industry to GDP slipped from 12 percent in 1980 to 10 percent in 1995. The total number of "manufacturing" establishments in the mid-1990s was well over a million but only 642 of this number employed 10 or more persons and used power machines. The remainder constituted cottage, informal, small-scale and handicraft industries.

About 40 percent of all small-scale, cottage and handicraft enterprises are in the food and beverage sector. One-third of the cottage and handicraft industries involve textiles while about one-third of the small-scale activities are in metal working and weaving. Enterprises that employ 10 or more persons focus primarily on food and beverages, furniture and fixtures, non-metallic mineral products and leather goods. All of the small-scale, cottage, handicraft and informal industries are privately owned. About one-third of the large-scale industries are owned by the government. Approximately 45 percent of all the value added originates from manufacturing in Addis Ababa. Oromia Region accounts for another 37 percent.

## TRANSPORTATION AND TELECOMMUNICATIONS

Ethiopia has a relatively underdeveloped road system although there have been significant improvements in recent years thanks to the European Union and World Bank. It is expensive and difficult to build and maintain roads in much of the country because of the mountainous topography and heavy seasonal rains. Nevertheless, most cargo and passengers travel by road. Ethiopia has about 18,000 miles of roads. Since the closure of the Ethiopia/Eritrea border in 1998 and the loss of the port of Assab, the most important route for commerce is the one between Addis Ababa and the Gulf of Aden port of Djibouti. Most of the roads are not paved, but virtually all of them are passable year round except in unusually heavy rain. There are many more miles of tracks that are only passable in dry weather. Some of the roads

built during the Italian military occupation are still in use today.
