Re: Freedom of Information Reference No. 12523

This is a response to your August 8, 2011 request, which has been processed under the Port Authority's Freedom of Information Code (the "Code", copy enclosed), for copies of documents that discuss or identify the extent of records losses by the Port Authority on September 11, 2001.

Material responsive to your request and available under the Code can be found on the Port Authority's website at <http://www.panynj.gov/corporate-information/foi/12523-O.pdf>.

Please refer to the above FOI reference number in any future correspondence relating to your request.

Very truly yours,

Ann L. Qureshi
FOI Administrator

Ms. Carrol Bennett
The Port Authority of New York and New Jersey
Suite 35 West
One World Trade Center
New York, New York
10048

Dear Ms. Bennett:

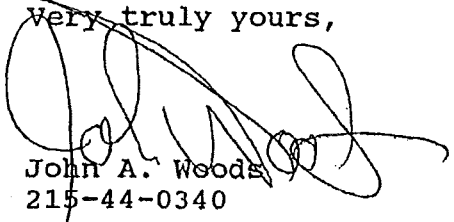

As per your request, specified personal property, at
Library, The Port Authority of New York and New Jersey
One World Trade Center, New York, New York 10048,
has been inspected and appraised by me.

It is my opinion the estimated fair market value
of the property is as follows:

\$ 212,356.38

Interpretation of value with data and property inventory are
enclosed.

Very truly yours,

John A. Woods

NARRATIVE

In June, 1996, this appraiser was contacted to make an appraisal of specified personal property at the Port Authority of New York and New Jersey. Visits were made and interviews and inspection performed in September, 1996. Library property is in World Trade Center Building #1 on the 54th and 55th floors.

The Port Authority of New York and New Jersey was established in 1922 to provide for the creation and comprehensive development of the Port of New York. To support the compact, a central library was created for employees of the Port Authority offices to better coordinate the terminal, transportation and other facilities. More recently, the tenants of the World Trade Center used the library as well.

The collection served this purpose. Library and Information Services in the library were kept up to date and the Chief Librarian cooperated with management in maintaining a collection to support the Authority in journal, microform, and monograph.

Specific items of interest within the collection include the corrected manuscript of Port of New York as well as the 1989 Edition of the Oxford English Dictionary <O.E.D>, the Bible of the English Language. In the documents section we found reference to Safety Products and Stress Testing. The Port Authority evaluated very carefully equipment before placing it in operation.

Methodology

In appraising library collections for sale, it is common to use the Comparable Sales approach. The appraiser reviews catalogues and price lists of used and out of print books and periodicals as well as reports of library collection sales. In this case, recent sales do not reflect the value of this library. These catalogues provide a basis for determining values. Books with library markings bring less than unmarked books.

Value Over Time

This particular library has a large number of Indexes and Directories. This group drops in value greatly over time. Such that the 1995 and 1994 Directories would lose all value in the next few years as they are replaced by current ones.

Narrative (Continued)

Items Not Appraised

99 boxes of library property were isolated and placed on top of library shelves. These items were neither inspected nor appraised.

Form 8283

When donations are made to non profit organizations, Internal Revenue Form 8283 is required. Appraisals for donations need to be performed not earlier than 60 days before the date of donation.

This appraiser found the staff helpful, informative and knowledgeable about the library's resources. Special thanks to Carrol Bennett, Patricia Cose, and Henry Barnard.

CERTIFICATION

CERTIFICATE OF APPRAISER

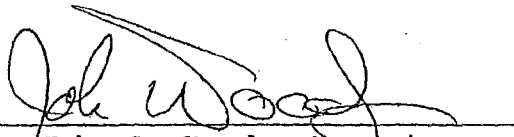

This is to certify, to the best of my knowledge and belief, that all facts and figures contained in this appraisal are true and correct;

That the appraiser has personally inspected the property;

That I have no interest, present or contemplated, in the property herein appraised;

That my fee for the appraisal and computation of this report is in no sense contingent upon the valuation set forth in this report.

Date November 19, 1996

Port Authority of New York and New Jersey
PANYNJ Valuable Paper Loss due to 9/11/01
As of July, 2007

\$ 131,109.00	Achieved Drawing Images
\$ 199,288,136.00	Drawing of Record (DOR / "As-Built")
\$ 340,498.00	Active Construction (Stage IV) Drawing as of 9/11/01
\$ 6,251,690.00	Active Design (Stage III) Drawings as of 9/11/01
\$ 3,740,621.00	Active Preliminary Design (Stage I & II) Drawings
\$ 63,849.00	Geotechnical Subsurface logs and details as of 9/11/01
<u>\$ 209,815,903.00</u>	Total Cost to replace Engineering Valuable Paper

PANYNJ
VALUABLE PAPER DUE TO LOSS ON 9/11

ARCHIVED DRAWING IMAGES - \$131,109

The Port Authority of New York and New Jersey (the "PA") lost 347,560 archived engineering drawings and images, a total of 5,790 different contracts. According to Christi Clark, these drawing images were stored on the PA server (CD Jukebox) located in One WTC, 72nd floor. The physical engineering drawings were stored at One WTC, 46th floor. Ms. Clark was able to obtain the listing of contracts/drawings lost from in the WTC and contacted consultants who agreed to provide copies of any work saved from their files. Additionally, Ms. Clark was able to recover some of the lost drawing images from aperture cards stored offsite. The drawing images were then reproduced and archived by the PA. A complete listing of all the drawings is exhibited in the work papers at Work Paper 1.C - Archived Drawing Images - ARCHIVED DRAWING IMAGES schedule ("W/P 1.C"). Total cost to reproduce was \$131,109

DRAWINGS OF RECORD (DOR / "AS-BUILT") - \$199,288,136

In March 1999, the PA began an "As-built Initiative" utilizing consultant and PA staff. The initiative focused on processing the backlog of Drawings of Record (DOR) and created a centralized filing system for all in-house engineering drawings by utilizing scanning services to create electronic images for long term storage. Completed project drawings were gathered from individual cubical locations, at all PA Locations, counted, inventoried into a database, scanned to the server and then centralized within a flat file system. The initiative utilized several outside drafting consultants to update drawings for archiving. The initiative was complete on 9/10/01 and scheduled to be processed to offsite storage when 9/11 occurred and all files, supporting files and updated Mylar drawings were destroyed.

The centralized process for the PA was as follows:

- Enter the following information into the database, creating a master record, from the title block as such,
 - Name
 - Contract Number
 - Contract Description

The above database was backed up to August 31, 2001.

- Scan the drawing to create an image and obtain a system generated "image number". The images were stored on CD's located on the 72nd Flr.
- Enter the image number into the database and appropriate master record.
- Store the Drawing Mylars in the flat files

If there had been improvements/repairs to any aforementioned facility, the following occurred or was to occur:

- Check out the Mylar
- Update the Mylar in CAD or have a Drafting Consultant manually update Mylar
- Consolidate original Mylar plus any engineering work performed to consolidate changes and draft an updated master Mylar known as a Drawing of Record ("As-Built").
- Scan the DOR Mylar to create an electronic record of the latest drawing.
- Send the DOR Mylar to Engineering Files to create Aperture Cards (2 sets) and archive the Mylar's at an offsite storage facility.
- Keep one set of Aperture Cards with Engineering and send one set to an offsite storage facility.

In addition to the DOR's processed by the CPD Engineering Files there also was a backlog of DOR's from completed projects that had not been processed to off-site storage. This back-log accounted for 337 contracts/ 33,670 drawings. The DOR's processed by Drafting Consultants managed by the CPD, under the "As-Built Initiative", were also physically located with engineering files on the 46th floor and accounted for 170 contracts / 17,846 drawings of which, 69 contracts / 885 drawings were recovered. The back-log of DOR's that the CPD was processing accounted for 1084 contracts / 48,585 drawings. All of these drawings were physically located in the building between the 46th and 72nd floor and were lost on 9/11.

Since the PA has a retention policy that states all drawings are to be kept in archive permanently and since a DOR cannot be "re-created" due to the loss of critical work performed (shop drawings), in 2002 the PA began re-surveying facilities to re-coup the critical underground utility and mapping information lost from the DOR's, which will be a replacement of all DOR's and satisfy the retention policy.

The total cost to re-survey and replace Drawing of Record information is: \$199,288,136

ACTIVE CONSTRUCTION (Stage IV) DRAWINGS - \$340,498

The PA lost 7,657 active Stage IV Construction Drawings under 827 different contracts/work orders that resided on the 46th Floor in the WTC, which were being processed for offsite storage. According to Christi Clark, a complete listing of these drawings was recovered from the Server Backups. Ms. Clark was able to obtain a list of all active construction Stage IV projects and located 120 contracts on Aperture Cards stored offsite. Additionally, Ms. Clark recovered 11 contracts from the field staff. The recovered drawing sets were then reproduced, rescanned into an electronic image, and redistributed to staff.

The total cost to Recover and Reproduce was \$340,498

ACTIVE DESIGN (Stage III) Drawings - \$6,251,690

The PA had 161 contracts currently in design on 9/11/01. According to Christi Clark, a complete listing of these contracts was recovered from the Server Backups. The PA was able to restore 116 AutoCAD files/contracts from the server, which were then reproduced for design review. The PA was unable to restore 25 AutoCAD files/contracts from the server. PA and supplemental design staff recreated these 25 contracts. The PA Design Division was able to recover 20 print sets from staff and convert these sets to electronic images and then AutoCAD files.

The total cost to Recreate, Convert and Reproduce Design Drawings was \$6,251,690

ACTIVE PRELIMINARY DESIGN (Stage I & II) Drawings - \$3,740,621

The PA had 121 contracts currently in the preliminary design phase on 9/11/01. According to Christi Clark, a complete listing of these contracts was recovered from the Server Backups. The PA was able to restore 77 AutoCAD files/contracts from the server, which were then reproduced for preliminary design review. The PA was unable to restore 44 AutoCAD files/contracts from the server. PA and supplemental design staff recreated these 44 contracts.

The total cost to Reproduce and Recreate Preliminary Design Drawings was \$3,740,621

GEOTECHNICAL SUBSURFACE - \$63,849

The PA was able to restore the Soil Logs and Standard Details for Geotechnical Subsurface work from the Server Backups. The cost to restore and recover these logs and details was \$63,849.
