HIBS  
FOIA Control Number: 2017-0172

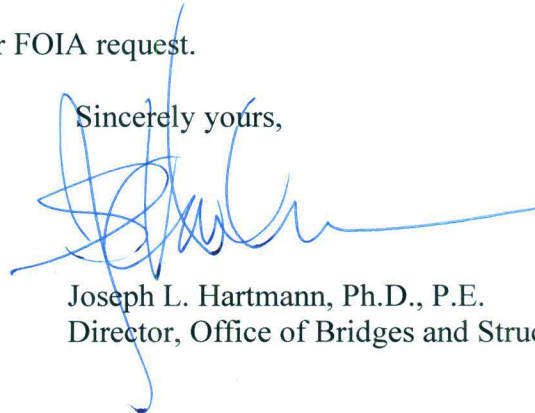

This letter is in reply to your February 19 Freedom of Information Act (FOIA) request to the Federal Highway Administration (FHWA). Under the FOIA, you requested a copy of the homepage for the FHWA Staffnet's National Bridge Inspection Program (NBIP) site. Our FOIA Team acknowledged receipt of your request on February 22 and asked us to reply.

As you requested, we photocopied the homepage of the NBIP, as well as each page connected to the site by one click. We are releasing these documents without redaction. Our FOIA contact, Mr. Richard F. Weingroff, will e-mail them to you.

The cost of search and review in replying to your FOIA request was below our minimum charge. Because there is no charge, we have not had to make a decision on your request for a fee waiver.

This letter completes our response to your FOIA request.

Sincerely yours,

Joseph L. Hartmann, Ph.D., P.E.  
Director, Office of Bridges and Structures

The following list is a compilation of supplemental guidance and decisions which were discussed in April Kick-off meetings, quarterly Division calls, and/or by emails.

The PY15 Tips and Reminders are still applicable for PY16.

Note that this guidance supplements (does not replace) previous guidance provided.

| <input type="checkbox"/> | PY | Metric                     | Category          | Title                                                | Decision/Guidance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Hyperlink                                                                        | Date       |

| 13 | 15  | General  | Channel X-sections                                            | Channel cross-sections are a required component of a bridge file per section 4.8.7 of the AASHTO Manual for Bridge Evaluation (MBE). The FHWA interprets the MBE provision to apply to all bridges, including floorless culverts, spanning a waterway. Cross sections include vertical measurements from identified points on the upstream and downstream face(s) of the structure to the stream bottom or embankment at each abutment and at other substructure walls or piers at a minimum. A single cross section at one face may be appropriate for historically stable channels and embankments. Cross sections need to be updated periodically so that a historical comparison is available in the file to help determine the extent of any scour, channel shifting, degradation, or aggradation of the stream. A frequency for obtaining and updating these measurements should be determined, depending on an assessment of the bridge and stream characteristics, and documented in the bridge file. The need for obtaining cross sections for pipes and box culverts that meet the definition of a bridge under the NBIS, should be evaluated on a case-by-case basis. This guidance, which is still relevant, was provided in the now rescinded NBIP Q and A. |                    | 5/26/2016  |
| 14 | 3   | Sampling | Metric 3 Sampling Clarification                               | Clarification on sampling of Team Leaders for Metric 3. For procedure #1 in the Commentary under Assessment levels (page 10 of 80) should read: <i>If a list of all TLs can be provided, randomly sample the list to review TL qualifications.</i> For additional guidance see the May 20, 2013 email.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | May 20, 2013 email | 5/25/2016  |
| 16 | 13  | General  | "Assigned Load Ratings" for Allowable Stress Designed Bridges | For PY 2016 it has been clarified that "assigned load ratings" are not acceptable for bridges designed by the <b>Working</b> or <b>Allowable Stress Design</b> method. These bridges will be identified on MAR13 as compliance deficiencies under M13-3b. <i>Discussed in the November NBIP call.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Teleconferences    | 11/23/2015 |
| 13 | All | General  | Inspection Date Compliance MM/DD/YY versus MM/YY              | We want to insure that all Divisions are uniformly and consistently assessing the frequency metrics. The NBIS requires regular inspection intervals which is assessed in Metrics 6-11. The inspection date recorded in the National Bridge Inventory is in the MM/YY format. Accordingly, compliance should be assessed based on a month/year calculation. If an inspection is performed within a calendar month, it should be inspected within or before that calendar month 24 months later. For the example, if a bridge inspected on June 2, 2009 inspection, followed by the June 29, 2011 inspection would be considered compliant as it was performed within 24 months. This guidance, which is still relevant, was provided in the now rescinded NBIP Q and A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                    | 5/26/2016  |

#### Records Management Notice

## Geotechnical

[Welcome](#) [Announcements](#) [GRS-IBS Video](#) [||](#)

Welcome to the Federal Highway Administration (FHWA) Geotechnical Discipline Sharepoint website. On this site, you will find a wide range of information pertaining to the geotechnical discipline within the FHWA including: a discipline inventory, competencies requirements by grade, learning and development resources needed to build expertise and strengthen the geotechnical discipline, and conference and webinar schedules. FHWA understands that a key to ensure safety to surface transportation public users of our Nation's highways is FHWA's ability to sustain a committed team of geotechnical specialists. Your commitment to FHWA's mission and goals is essential to our success.

**Welcome** **Announcements** ||**Welcome to the Hydraulics Discipline Sharepoint Website.**

Hydraulics is a key design area in engineering transportation facilities. Our discipline is responsible for scour technology, bridge and culvert hydraulics, highway drainage, hydrology, environmental hydraulics, and unknown foundations. On this site, you will find information pertaining to the hydraulics discipline including: technical guidance and documents, training and development resources, and conference and webinar opportunities. Also on the site is contact information of the Hydraulic Discipline Team, who will be able to provide additional assistance and training.

 Disciplines Centralized Register and Organization Profile System (CROPS)

Welcome to the Discipline Support System's Landing page and the home of the discipline Centralized Register and Organization Profile System (CROPS). The site will be your one stop shop to everything Discipline. From this page you have access to all discipline SharePoint sites. You can also review the current announcement from all disciplines in one place and choose to navigate to the discipline site directly to gather more information. CROPS provides the most current information on discipline membership at your fingertips. As CROPS matures, a Frequently Asked Questions List will be developed along with more information regarding specific features, functions and important updates. We hope you find this site useful.

## Disciplines
