BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM
WASHINGTON, D. C. 20551

ADDRESS OFFICIAL CORRESPONDENCE
TO THE BOARD

July 10, 2020

Re: Freedom of Information Act Request No. F-2017-00188

This is in response to your email message dated and received by the Board's Information Disclosure Section on May 31, 2017. Pursuant to the Freedom of Information Act ("FOIA"), 5 U.S.C. § 552, you seek:

> [a] copy of all notes, memos, correspondence, and other materials concerning the Federal Reserve OIG audit report: 2015-MO-B-006 March 31, 2015, entitled: The Board Can Enhance Its Diversity and Inclusion Efforts. [You are] not requesting a copy of the audit report itself, since that document is posted online.

Staff searched Board records and located information responsive to your request. I have determined, however, that certain portions of the responsive information consists of non-public proprietary materials of a consultant (e.g., vendor reports and presentation materials for Board diversity efforts); internal pre-decisional deliberations and recommendations (e.g., memoranda, presentations, and the deliberative portions of staff emails); and personally identifiable information (e.g., staff performance reviews, promotions records, and compensation information). This information is subject to withholding and will be withheld pursuant to exemptions 4, 5, and 6 of the FOIA, 5 U.S.C. §§ 552(b)(4), (b)(5), and (b)(6), respectively. I have also determined that the information should be withheld because it is reasonably foreseeable that disclosure would harm an interest protected by an exemption described in subsection (b) of the FOIA, 5 U.S.C. § 552(b). The responsive documents have been reviewed under the requirements of subsection (b) and all reasonably segregable nonexempt information will be provided to you. The documents being provided to you will indicate the amount of information that has been withheld and the applicable exemptions. Approximately 4,306 pages will be released to you in full or in part, and approximately 4,106 pages are being withheld in full.

Accordingly, your request is granted in part and denied in part for the reasons cited above. The Board's Information Disclosure Section will provide you with copies of the documents being made available to you under separate cover. If you believe you have a legal right to any of the information that is being withheld, you may appeal this determination by writing to Board of Governors of the Federal Reserve System, Attn: FOIA Appeals, 20th Street & Constitution Avenue NW, Washington, DC 20551; by facsimile to 202-872-7565; or electronically to FOIA-Appeals@frb.gov. Your appeal must be postmarked or electronically transmitted within 90 days of the date of the response to your request.[1]

Very truly yours,

Margaret McCloskey Shanks
Deputy Secretary of the Board

[1]As an alternative to an administrative appeal, you may contact the Board's FOIA Public Liaison, Ms. Candace Ambrose, at 202-452-3684 for further assistance. Additionally, you may contact the Office of Government Information Services ("OGIS") at the National Archives and Records Administration to inquire about the FOIA mediation services they offer. The contact information for OGIS is as follows: Office of Government Information Services, National Archives and Records Administration, 8601 Adelphi Road-OGIS, College Park, MD 20740-6001; email at ogis@nara.gov; telephone at 202-741-5770 or toll free at 1-877-684-6448; or facsimile at 202-741-5769.

Preface

In anticipation of the expiration of its 2008–12 Strategic Plan, the Federal Reserve Board launched an enhanced strategic review process that involved the leadership and senior staff in the Board's divisions and offices.

More than 40 directed meetings were conducted at multiple levels of the organization, and the Executive Committee of the Board (ECB)—a body that includes all division and office directors, the chief operating officer, and the administrative governor—held working sessions over the course of several months. These sessions focused on what it would take to meet the mandates of the Wall Street Reform and Consumer Protection Act of 2010 (the Dodd-Frank Act), address the challenge of financial stability more generally, attempt to close cross-disciplinary knowledge gaps, develop appropriate policy, and continue effectively addressing the recovery of a fragile global economy.

The ECB identified and framed the most critical organizational challenges, developed potential options for addressing them, and clarified the tradeoffs. This strategic framework is the result.

The Board releases this strategic framework—which was approved on June 26, 2012—in the spirit of the Government Performance and Results Act (GPRA) of 1993, which requires that federal agencies, in consultation with Congress and outside stakeholders, prepare a strategic plan covering a multiyear period and submit an annual performance plan and performance report. The GPRA Modernization Act of 2010 refines those requirements to include quarterly performance reporting. Although the Board is not covered by GPRA, the Board follows the spirit of the act and prepares and publicizes these regular plans and performance reports.

This strategic framework is one of the reports published by the Board in the spirit of GPRA. Others include the

- *Annual Performance Plan.* This document includes specific targets for some of the Board's performance measures identified in the strategic plan and describes the operational processes and resources needed to meet those targets. It also discusses validation of data and verification of results.
- *Annual Performance Report.* This document discusses the Board's performance in relation to strategic themes and objectives.

Several other documents provide further information about the planning, budgeting, operations, and performance of the Federal Reserve System. As required by the Federal Reserve Act, the Board annually submits to the Congress a report describing in detail the operations of the System for the previous year. Since 1985, the System has also provided the Congress with a supplement, the *Annual Report: Budget Review*, which provides a detailed explanation of the plans and resources discussed in the approved budgets of the Board and Reserve Banks.

All these reports are available on the Board's website, at www.federalreserve.gov/publications.

Executive Summary

The 2007–09 financial crisis and the resulting statutory changes called for fundamental changes in the way the Board conducts its operations.

To meet its responsibilities, the Board must make strategic investments in its people, data, and facilities, and enhance its management processes to boost productivity and make coordination more effective across the organization. At the same time, the Board must also continue to manage its resources effectively by capturing cost savings and operational efficiencies.

The Board has defined its priorities for the next four years within the scope of its strategic plan:

- continue building a robust interdisciplinary infrastructure for regulation, supervision, and financial stability
- redesign data governance and management processes to enhance the Board's data environment
- establish a modern, safe work environment that emphasizes the need to maintain data quality and integrity and the importance of enhanced collaboration within the organization and with the public
- create a work environment built on market-oriented compensation and support for academic and personal achievement that attracts and retains top talent, while maintaining a highly collegial atmosphere
- strengthen management processes to enable effective implementation of strategic themes, increase operating efficiencies, and reduce administrative burden
- establish a cost-reduction approach and a budgetary growth target that maintains an effective and efficient use of financial resources

Achieving these strategic goals will improve the way the Board functions and will require more active collaboration across the divisions at the Board and the System. Such an effort will, furthermore, serve to ensure employees are able to focus on the policy work and research required to anticipate and address emerging risks to U.S. financial stability; it will also support the Federal Reserve's congressionally mandated goals of achieving price stability and maximum sustainable employment in the U.S. economy.

The Board will use this framework to align resources and to implement changes through 2015. Throughout the implementation, priorities will be reassessed to take into account changing circumstances, environmental factors, and trends. Likewise, funding for these initiatives will be reviewed and offset, to the extent possible, by savings initiatives and efficiency gains.

As the Board implements this framework and makes the necessary investments in people, data, and facilities, the Board recognizes the importance of its longstanding efforts to promote equal employment opportunity and diversity and to foster diversity in procurement.

Introduction

Overview of the Federal Reserve System

The Federal Reserve System is the central bank of the United States, established by the Congress to provide the nation with a safer, more flexible, and more stable monetary and financial system. Over the years, Congress has expanded the System's role in banking and the economy, and today the Federal Reserve System has numerous, varied responsibilities, including

- conducting the nation's monetary policy by influencing the money and credit conditions in the economy in pursuit of maximum employment, stable prices, and moderate long-term interest rates;
- helping maintain the stability of the financial system and containing systemic risks that may arise in financial institutions and markets;
- supervising and regulating a variety of financial institutions and activities to ensure the safety and soundness of the nation's banking and financial systems and to protect certain rights of consumers;
- providing certain financial services to depository institutions, the U.S. government, and foreign official institutions; and
- promoting consumer protection, fair lending, and community development.

The System was created on December 23, 1913, when the Federal Reserve Act was signed into law by President Woodrow Wilson "to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes."

In a 1977 amendment to the Federal Reserve Act, the Congress defined the primary objectives of national economic policy by directing the Board and the Federal Open Market Committee to "maintain long run growth of the monetary and credit aggregates commensurate with the economy's long run potential to increase production, so as to promote effectively the goals of maximum employment, stable prices, and moderate long-term interest rates."

As time has passed, further legislation has clarified and supplemented the System's original purposes. Key laws affecting the Federal Reserve include the Bank Holding Company Act of 1956 and its amendments; the Financial Institutions Reform, Recovery, and Enforcement Act of 1989; the Federal Deposit Insurance Corporation Improvement Act of 1991; the Gramm-Leach-Bliley Act of 1999; the Check Clearing for the 21st Century Act of 2004; and the Dodd-Frank Act.

Background: The Dodd-Frank Act and Its Impact on the U.S. Regulatory Framework

The passage of the Dodd-Frank Act was a significant event for the Federal Reserve and other U.S. regulators of financial institutions and entities.

The act was designed to address critical gaps and weaknesses in the U.S. regulatory framework that were revealed during the course of the financial crisis. For example, the act created an interagency council to monitor and coordinate responses to emerging threats to the financial system, required that large bank holding companies and systemically important financial firms be subject to enhanced prudential standards to reduce the risks they may present to the financial system, and provided for the consolidated supervision of all systemically important financial institutions.

It also provided a mechanism for resolving financial firms whose failure could pose a threat to U.S. financial stability, and provided for the strengthened

supervision of systemically important financial market utilities that provide payment, settlement, and clearing services. Moreover, the act enhanced the transparency of the Federal Reserve while preserving its independence, a feature crucial to its ability to implement monetary policy effectively.

In January 2011, pursuant to section 342 of the Dodd-Frank Act, the Board established an Office of Diversity and Inclusion (ODI). The Board has welcomed the new requirements under section 342 of Dodd-Frank as a complement to, and strengthening of, its existing efforts. ODI is working with Human Resources and Procurement staff at the Board to (1) ensure a commitment to recruit and retain a staff that is diverse and inclusive and (2) develop standards and procedures to ensure, to the extent possible, the fair inclusion and utilization of minority- and women-owned businesses in the Board's procurements.

Structure of the System

The Federal Reserve System is considered to be an independent central bank because its decisions are not ratified by other branches of government. The System is, however, subject to oversight by the Congress, and must work within the framework of the overall objectives of economic and financial policy established by its enabling statutes.

Congress designed the structure of the Federal Reserve System to ensure it maintained a broad perspective on the economy and on economic activity in all parts of the nation. It is a federated system, composed of a central, governmental agency—the Board of Governors—in Washington, D.C., and 12 regional Federal Reserve Banks.

A major component of the System is the Federal Open Market Committee (FOMC), a deliberative body consisting of the members of the Board of Governors, the president of the Federal Reserve Bank of New York, and presidents of four other Federal Reserve Banks (who serve on a rotating basis). The FOMC oversees open market operations, the main tool used by the Federal Reserve to influence overall monetary and credit conditions in the United States.

Board of Governors

The Board of Governors of the Federal Reserve System (the Board) is a federal government agency. The Board is composed of seven members, each of whom is appointed by the President and confirmed by the Senate. The full term of a Board member is 14 years, and the appointments are staggered so that one term expires on January 31 of each even-numbered year.

The Chairman, Vice Chairman, and the Vice Chairman for Supervision of the Board are also appointed by the President and confirmed by the Senate. The nominees to these posts must already be members of the Board or must be simultaneously appointed to the Board. The terms for these positions are four years.

Mission and Values of the Board of Governors

The Board's longstanding mission is to foster the stability, integrity, and efficiency of the nation's monetary, financial, and payment systems in pursuit of optimal macroeconomic performance. This mission is rooted in the Federal Reserve System's statutory mandates, and on a set of core institutional values.

- **Public interest.** In its actions and policies, the Board seeks to promote the public interest; it is accountable and responsive to the general public, the U.S. government, and the financial community.
- **Integrity.** The Board adheres to the highest standards of integrity in its dealings with the public, the financial community, and its employees.
- **Excellence.** The conduct of monetary policy, responsibility for bank supervision, and maintenance of the payment system demand high-quality analysis, high performance standards, and a secure, robust infrastructure. The pursuit of excellence drives the Board's policies concerning recruitment, selection, and retention of Board employees.
- **Efficiency and effectiveness.** In carrying out its functions, the Board is continually aware that its operations are supported primarily by public funds, and it recognizes its obligation to manage resources efficiently and effectively.

- **Independence of views.** The Board values the diversity of its employees, input from a variety of sources, and the independent professional judgment that is fostered by the System's regional structure. It relies on strong teamwork and consensus-building to mold independent viewpoints into coherent, effective policies.

Board Division Responsibilities

The Board is organized along divisional lines, with each division having specific functions.

Office of Board Members

The Office of Board Members—including the seven Governors—provides overview, direction, and supervision for System goals, objectives, and projects involving monetary policy, supervision and regulation policy, and managerial policy.

Within the office, the public affairs unit provides the public with information concerning Federal Reserve actions and works to increase the public's understanding of the System's functions, responsibilities, and policy goals. The congressional liaison program facilitates effective communication between the Board and the Congress and other government agencies.

Office of the Secretary

The Office of the Secretary provides corporate secretary and governmental services to Board members, Board staff, and the public.

The division maintains electronic information systems (Board records management and distribution/voting applications), oversees Board meetings and agendas, prepares minutes of Board meetings and notation voting summaries, and administers the Freedom of Information Act program. Specialty services include managing the Reserve Bank directors program (providing guidance on selection of directors and applicable regulations and conducting orientation programs and conferences for Reserve Bank directors and chairs), securing official passports for Board and System staff, planning official conferences and events, and providing temporary executive assistants for Board members.

The division also serves as liaison to the Federal Advisory Council and the Community Depository Institutions Advisory Council and acts as the Board's Ombudsman.

Research and Statistics

The Division of Research and Statistics (R&S) focuses on the domestic economy, and provides the Board, FOMC, and other System officials with analysis and research pertaining to current and prospective economic conditions, and supplies data and analyses for public use. The division also provides analysis and research pertaining to supervision and regulation, payment system policy and oversight, and consumer affairs.

International Finance

The Division of International Finance (IF) focuses on the global economy and provides the Board, the FOMC, and other System officials with assessments of current and prospective international, economic, and financial developments. The division evaluates and forecasts major economic and financial developments abroad, developments in foreign exchange and other international asset markets, and U.S. international transactions.

The division maintains close contacts with international organizations and foreign official institutions and supports the Board's participation in international meetings. The division also provides support for the Board's financial supervision and regulation activities and supplies data on international financial positions for public use.

Monetary Affairs

The Division of Monetary Affairs (MA) supports the Board and the FOMC in the formulation of U.S. monetary policy and on matters pertaining to financial stability.

The division serves as secretariat of the FOMC and contributes to the communication of policy through vehicles such as the FOMC statement and the minutes of FOMC meetings. The division also oversees the implementation of monetary policy through open market operations, discount rates and the operations and administration of the discount window, and reserve requirements.

It coordinates with the Open Market Desk at the Federal Reserve Bank of New York in the conduct of open market operations. The division produces data

series on related financial elements of the economy and analyses developments in money, reserves, bank credit and profits, and interest rates, and forecasts movements in money, reserves, and bank credit. Staff in the division, working with colleagues in other divisions, conducts analysis of topics related to financial stability, assists in the implementation of the Dodd-Frank Act, and provides support for the Board's financial supervision and regulation activities (including "stress-testing" of financial institutions and helping in the development of regulations related to liquidity issues). The division also oversees the Term Deposit Facility and the Statistics and Reserves business function for the System.

Office of Financial Stability Policy and Research

The Office of Financial Stability Policy and Research (OFS) coordinates staff support to the Board and FOMC on financial stability policy. Together with staff in other divisions and the Reserve Banks, it analyzes risks to the financial system by monitoring key financial institutions, markets, and infrastructures, and conducts research on the causes and consequences of financial disruptions.

The office also develops and evaluates alternative macroprudential supervisory and regulatory policy responses, and presents them for consideration to policymakers in order to mitigate emerging and structural vulnerabilities. In addition, the office coordinates the Federal Reserve's involvement in interagency and international financial stability policymaking groups, including the Financial Stability Oversight Council (FSOC) and the Financial Stability Board (FSB).

Banking Supervision and Regulation

The Division of Banking Supervision and Regulation (BS&R) is responsible for informing the Board on current and anticipated developments in bank supervision and banking structure. The division also coordinates and directs the System's bank supervision and examination activities; in this role, the division develops and ensures implementation of policy for these activities, and it develops requirements for data collection, supervisory automated systems and related technology, and training. The division has a leading role in the implementation of the Dodd-Frank Act provisions across the Federal Reserve System. In addition to these responsibilities, the division also processes applications for prior consent to form or expand bank holding companies or make other changes in banking structure.

Consumer and Community Affairs

The Division of Consumer and Community Affairs (C&CA) informs the Board on the concerns of consumers and communities and coordinates the System's consumer compliance supervision and examination activities, including policy development and examiner training. The division also conducts consumer focused research and policy analysis, implements requirements for consumer protection statutes, and promotes community development in traditionally underserved neighborhoods.

Legal Division

The Legal Division provides legal advice and services to the Board to meet its responsibilities in all aspects of its duties, including the Board's bank supervisory and regulatory responsibilities. The division also provides legal support for the Board's role in developing and implementing monetary policy, employing its financial stability tools, and all aspects of the Board's operations, including the Board's procurement and personnel functions, ethics, and information disclosure.

The Legal Division represents the Board in litigation in federal and state court, and pursues enforcement actions against individuals and companies over which the Board has supervisory authority. The Legal Division also drafts regulations and proposes statutory changes to advance the Board's mission.

Reserve Bank Operations and Payment Systems

The Division of Reserve Bank Operations and Payment Systems (RBOPS) oversees the Federal Reserve Banks' provision of financial services to depository institutions, fiscal agency services to the Treasury and other entities, and emergency liquidity facilities.

The division also has oversight responsibility for Reserve Bank support functions, such as information technology, human resources, financial and cost accounting, operating and capital budgets, facilities management, and internal audit. In addition, it develops and recommends to the Board policies and regulations governing payment, clearing, and settlement systems; works collaboratively with other central banks and market regulators to set standards to

promote the safety and efficiency of payment, clearing, and settlement systems globally; and conducts research regarding payment and settlement matters.

Office of the Chief Operating Officer

The Office of the Chief Operating Officer works with all division directors to establish, implement, and measure performance against the Board's strategic direction, and provides analysis and counsel to the administrative governor regarding the overall operation of the Board's administrative functions, technology services, and short- and long-term strategic planning goals.

The chief operating officer provides oversight to the Division of Information Technology, the Management Division, the Division of Financial Management, the Office of Diversity and Inclusion, and the chief data officer function.

Division of Financial Management

The Division of Financial Management (DFM) is responsible for providing effective financial and risk management activities across the organization, including (1) overseeing implementation of the recommendations resulting from the ongoing strategic planning effort and (2) ensuring that the investment requirements outlined in the strategic plan are aligned with the Board's budget process.

Information Technology

The Division of Information Technology (IT) provides infrastructure support to all Board divisions, including mainframe operations and distributed processing, applications development, central automation and telecommunication support, data and communications security, local area network administration, and technology reviews of all Board functions.

Management Division

The Management Division (MGT) provides the full spectrum of personnel management, facility, and logistical support for the Board's day-to-day operations, including managing office space and property and providing food services and physical security. The division also provides continuity-of-operations services and business-resumption services.

Office of the Inspector General

The Office of the Inspector General (OIG) conducts independent and objective audits, inspections, evaluations, investigations, and other reviews related to the program and operations of the Board and the Consumer Financial Protection Bureau. Through this work, OIG promotes integrity, economy, efficiency, and effectiveness; helps prevent and detect fraud, waste, and abuse; and strengthens the agencies' accountability to Congress and the public.

The Impact of the 2007–09 Financial Crisis and the Dodd-Frank Act on the Board

While the Federal Reserve's broad mission and functions remain essentially unchanged, the 2007–09 financial crisis fundamentally changed how the Board operates within its functional disciplines.

Changes in the Board's approach to monetary policy, supervision, and financial stability are expected to prove particularly critical, and will drive an evolution in Board capabilities begun after the crisis and in response to the provisions of the Dodd-Frank Act. This operational evolution will prove central to the Board's effort to continue to build its capabilities in key areas over the next four years covered under this strategic plan:

- **Elevating financial stability.** First and foremost, the review of the financial crisis of 2007–09 elevated the importance of designing the operational capabilities in the Federal Reserve System to help identify threats to the stability of the U.S. financial system. Today, financial stability issues are prominent in discussions of monetary policy, and the Board is providing a robust policy infrastructure to support financial stability. When completed, this new infrastructure will include new capital and liquidity requirements to strengthen the financial sector, a more robust monitoring system for markets and institutions, an ambitious research agenda to establish context for policymakers, and more effective tools for addressing future financial crises.
- **Enhancing supervision.** The crisis highlighted gaps in the regulatory structure imposed by statute to supervise financial institutions. In particular, it

became clear that various entities exerting potential impact on the nation's monetary, financial, and payment systems were inadequately supervised at the federal level. In addition, the crisis revealed that existing supervisory policies did not fully address issues raised by complex and interrelated financial structure.

While broader government-wide improvements and changes are needed to address these issues, the Board, for its part, has adopted an enhanced supervisory approach that takes a more systemic approach to understanding the risks posed by the combined actions of institutions rather than focusing on the health of individual firms; this includes business drivers, new industry practices, new products, and the potential risk implications of such developments in financial markets and the economy. The more proactive approach to supervision reflected in the Dodd-Frank Act has meant re-thinking the type of skills required at the Board, and improving coordination of new and existing skill sets across the System.

- **Developing and refining new tools for monetary policy.** The financial crisis tested the limits of traditional monetary policy tools, and triggered a re-examination of standard monetary policy assumptions.

Looking ahead, the Board will focus significant efforts on research regarding the evaluation of tools introduced during the crisis, such as large-scale asset purchases and emergency liquidity provision. The organizational challenge will include ensuring the right balance between, on one hand, resources devoted to designing monetary policy and, on the other hand, resources needed to support crisis prevention or containment.

- **Integrating the way monetary policy and financial stability decisions are made.** The Dodd-Frank Act gives the Federal Reserve an important role in areas of financial stability policy (such as macroprudential supervisory oversight), defining the conditions that can result in financial instability, identifying policy strategies that can prevent such outcomes, and providing oversight of systemically important financial institutions and financial market infrastructures. The Federal Reserve's role in financial stability also recognizes that the analysis and data required for supervision is useful in conducting monetary policy and vice versa. It will take time and effort to establish the processes and procedures that best exploit these synergies.

Meeting the Strategic Challenges

Meeting the challenges in the four areas described in the previous section requires appropriate levels of Board resources and investments in people, data, and facilities. Meeting these challenges also requires management processes for hiring, developing, and re-allocating expertise and coordination across the organization.

The following six themes will guide investment and action over the 2012–15 planning period:

- continuing to build a robust infrastructure for regulation, supervision, and monitoring risks to financial stability
- redesigning data governance and management processes to enhance the Board's data environment
- ensuring a modern, safe work environment that emphasizes the need to maintain data quality and integrity and the importance of enhanced collaboration within the organization and with the public
- creating a work environment built on market-oriented compensation and support for academic and personal achievement that allows the Board to attract and retain top talent while reinforcing collegiality
- strengthening management processes to enable effective implementation of strategic themes, increasing operating efficiencies, and reducing administrative burden
- establishing a cost-reduction approach and a budgetary growth target that maintains an effective and efficient use of financial resources

Strategic investments in these areas above those required for day-to-day operations are necessary for the Board to meet the supervisory expectations of it under the Dodd-Frank Act while continuing to enhance its ability to promote stable prices, full employment, and financial stability. The strategic investments are also accompanied by an agenda of management process changes that will keep major investments on track, identify additional opportunities for cost savings, and improve overall operations.

Strategic Themes

Strategic Theme 1

Continue Building a Robust Infrastructure for Regulation, Supervision, and Monitoring Risks to Financial Stability

The financial crisis of 2007–2009 has resulted in an enhanced approach to supervision and regulation, which places a heightened emphasis on the health of both individual institutions and the financial system as a whole. As a result, the Board has emphasized its interdisciplinary approach to regulation and supervision, regularly involving economists, legal experts, and regulatory experts in supervisory exercises and in rulewriting.

In addition, the Board has increased its base of knowledge and experience concerning fundamental business drivers, related risks, the interconnectedness of the modern financial landscape, and potential outcomes in a complex and dynamic market environment.

Finally, the Board's role in the supervisory oversight of systemically important firms has expanded. The Dodd-Frank Act gives the Federal Reserve responsibilities and powers to oversee additional financial institutions that the interagency council (FSOC) designates as systemically important. The act also formalized several of the macroprudential tools that supervisors and regulators use, including stress tests, resolution and recovery planning, source-of-strength guarantees, and early remediation requirements.

With the new legal authority in place, the Board has begun to design and build a new policy infrastructure to support its financial stability and prudential supervisory strategies. The Board is coordinating supervision across systemically important firms and leading the development and execution of supervisory efforts. As a coordinator directly participating in supervisory exercises, the Board is uniquely positioned to bring a horizontal perspective concerning systemically important institutions—particularly how changing market conditions are affecting individual firms and financial stability as a whole.

Strategic Objectives

Strategic objective 1: Strengthen the stability of the financial sector through the development of policies, tools, and standards.

Strategic objective 2: Monitor financial markets and industry practices and structures.

Strategic objective 3: Monitor and supervise individual financial institutions and infrastructures.

Strategic objective 4: Ensure that sufficient crisis management tools are in place.

Strategic objective 5: Analyze for the Board and FOMC the role that financial stability concerns should play in setting monetary policy.

Strategic objective 6: Pursue research on stress tests, macroprudential regulation and tools, and other financial stability topics.

Roles and Responsibilities

The policy infrastructure for financial stability will bring resources and expertise together from multiple Board divisions. Three economics divisions (IF, MA, and R&S) and the OFS will continue to drive the Board's research agenda, participate in market monitoring, and collaborate with BS&R and the Federal Reserve Banks on stress tests and cross-institutional reviews focused on particular practices in the financial industry as a whole (horizontal reviews).

These functional areas will also participate and support the Large Institution Supervision Coordinating Committee (LISCC) activities, as required, and develop crisis management tools. OFS will coordinate much of the Federal Reserve's involvement in

interagency and international financial stability policymaking groups, including FSOC and the FSB. The Legal Division will lead some Dodd-Frank Act implementation initiatives and review all new rules. Legal will also continue to provide advice to the banking supervision function.

Potential Risks and Challenges

The success of the Board's financial stability and supervisory strategy depends on retaining the right mix of skills and expertise, developing sufficient Federal Reserve System capacity, and ensuring high levels of coordination across divisions and across the System.

Without these additional resources, the Board risks delaying its expanded mandate for institutional regulation and financial stability. Failure to fully implement new supervisory rules, activities, and processes could jeopardize the soundness of individual institutions and the financial system at large.

The Board also faces risks to its operational capabilities through staff turnover, as some staff continue to labor under crisis-levels demands on their time and functional capacity. They may leave the Board due to the demanding pace of work, and the Board would have difficulty replacing their specialized skills.

Strategic Theme 2

Redesign Data Governance and Management Processes to Enhance the Board's Data Environment

Data and data management play a critical role in fulfilling the Board's mission. As the Board's mandate has expanded in the wake of the financial crisis and the passage of the Dodd-Frank Act, so has the need for data to meet the breadth and depth of analytical issues that staff are now addressing.

The Board's current process for managing data served the organization well when the Board managed relatively small and predictable data sets that required limited sharing across divisions and within the System. However, the Board and the System now require a data governance and management structure that supports a growing quantity of data and an increased need to share data more broadly while ensuring the operational flexibility required by the Board's data users.

The success of the Board's strategy concerning financial system stability and supervisory strategy depends on proper data management. Implementing a data governance framework will be an important complement to the Board's investment in enhanced research capability. Effective and efficient data management will enhance staff's ability to obtain, interpret, and analyze the large volume of data that new supervisory responsibilities will require. As supervision is a delegated function that is coordinated by the Board, data management for the supervision function will require a System perspective.

Strategic Objectives

Strategic objective 1: Improve data governance by establishing a new Office of the Chief Data Officer and ensuring that there are clear roles and responsibilities among the chief data officer, the Board Data Council, and data users.

Strategic objective 2: Ensure that all enterprise data are handled, processed, stored, and disseminated by professional data management groups.

Strategic objective 3: Strengthen the Board's data environment by establishing an infrastructure to share data and improve opportunities for data integration that supports the Board's research and analytical capabilities.

Roles and Responsibilities

Economists and analysts across the Board's economics divisions, OFS, BS&R, RBOPS, and C&CA will provide input on the development of data policies, including the types of data needed, consistency of policies, and the degree of coordination across the System.

The Board's IT division will play a critical role in designing the overall data environment, including providing the supporting IT infrastructure in coordination with System and Reserve Bank IT partners (as required to support the data needs of Board functions delegated to Reserve Banks). The Board's Legal Division will work closely with the Board's Research Library to develop standards for license-usage agreements with vendors to ensure appropriate use.

Potential Risks and Challenges

The financial crisis and the Board's mandate under the Dodd-Frank Act have created five specific chal-

lenges related to data: quantity, sharing, awareness, access and controls, and quality.

Quantity. Since the financial crisis, the quantity of data required for economic research, policy analysis, and supervisory purposes—both its variety and volume—has increased dramatically, straining current arrangements.

Sharing. The need to share data among Board divisions, the System, and other federal agencies has also increased. There are many more instances where data are already shared, either in an organized manner or informally. However, data sharing has been difficult due to large file sizes and constraints in the existing data environment. The increased need to share data places a burden on the owners of the data since they must serve not only as data managers but also as service providers.

Awareness. Board staff members are not aware either of what data are available or of the full characteristics of such data due to the limitations of available catalogs. In addition, it is important to know the full range of data that the Board collects from the public and regulated parties in order to ensure the Board's continued compliance with the requirements of the Paperwork Reduction Act of 1980.

Controls and access. The Board does not have a uniform set of policies for data security and controls beyond the Federal Information Security Management Act of 2002. This constrains the process of both granting and gaining access to data.

For acquired data, users need to be aware that the data may be subject to a unique set of licensing restrictions. The Board has developed a set of standards for license and usage agreements with vendors to ensure appropriate use; as new license agreements are negotiated, these standards will be implemented for additional data sets.

Quality. Since the onset of the financial crisis, ad hoc data collections have increased; thus, uniformity and guidance are necessary to ensure appropriate data quality.

Strategic Theme 3

Ensure a Modern, Safe Work Environment that Emphasizes the Need to Maintain Data Quality and Integrity and the Importance of Enhanced Collaboration within the Organization and with the Public

Data Center Relocation

The Board's Data Center provides the infrastructure that makes data and servers available to the Board and System for monetary policy, financial supervision, consumer protection, and economic research. Data Center and operational staff are critical in maintaining the Board's computer systems and associated components. Board staff, primarily from its IT and economics divisions, are responsible for determining the infrastructure needs and maintenance requirements of the Data Center.

To be able to meet the increased quantity of data demanded by the economic and supervision function after the financial crisis, the Data Center has had to increase its capacity significantly. In the past two years alone, the Data Center's storage capacity has nearly quadrupled as the number of physical and virtual servers has increased and has also driven the growth of supporting infrastructure. The resulting increased density of storage and computer systems has exceeded the cooling and power capacity of the Data Center.

Strategic Objectives

Strategic Objective 1: Create the capacity for increased data demand.

Strategic Objective 2: Address critical Data Center subsystem requirements.

Roles and Responsibilities

IT, R&S, and MGT will be the primary divisions involved in the Data Center relocation. These divisions will work together to coordinate an agreement,

plan the Data Center relocation, and ensure the continuity of operations during the transition.

Potential Risks and Challenges

The Data Center relocation includes a significant initial investment because of the requirement to build out the associated space. Unintended issues or challenges could result in cost overruns or late delivery, which would impact accomplishment of the Board's mission.

Martin Building Renovation

Ensuring a safe and adequate work environment for individuals and groups to work and meet is a key component of the Board's overall strategy. There have been no significant renovations completed on the Martin Building facility since its construction in 1974.

Short-term upgrades have been made as issues have arisen, but the drive to reduce upfront capital costs has made it more difficult to reduce long-term operating costs. This trade-off has led to an outdated, inefficient building that does not meet the current needs of the Board in fulfilling its missions. Efforts associated with the renovation will focus on security, energy efficiency, meeting and conference space, and physical plant capacity.

Strategic objective 3: Create a safe and secure work environment.

Strategic objective 4: Upgrade physical infrastructure.

Strategic objective 5: Reduce utility consumption and expenses.

Roles and Responsibilities

MGT is responsible for securing sufficient leasing space to accommodate staff during the construction period, overseeing the renovation, and ensuring that the project is completed according to plan while meeting the Board's needs.

Potential Risks and Challenges

A renovation of this scope is a complex undertaking and there are significant implementation risks and transition-oriented challenges that must be managed, particularly as it relates to costs. Risks include disruption to staff during the renovation and ensuring that planning efforts address future space requirements.

Strategic Theme 4

Create a Work Environment Built on Market-oriented Compensation and Support for Academic and Personal Achievement that Attracts and Retains Top Talent While Reinforcing Collegiality

The Board has added almost 400 positions in response to the financial crisis, the implementation of the Dodd-Frank Act, and the general functional support necessary to manage an organization of the Board's complexity and importance to the U.S. financial system and economy.

Over the next four years, the Board will add more full-time employees consistent with the themes described in this strategic framework. Maximizing the value of the Board's human capital will depend on enhancing processes for effective recruitment, development, and retention of qualified staff.

Strategic Objectives

Strategic objective 1: Increase efficiency and effectiveness of the existing performance management process.

Strategic objective 2: Reduce administrative burden associated with the adverse-action process while respecting employees' due-process rights.

Strategic objective 3: Enhance the talent management process (succession planning, development programs, training, etc.).

Strategic objective 4: Increase equitability in compensation and benefits, in closer alignment with the Federal Reserve System and market.

Roles and Responsibilities

MGT, working closely with all Board divisions and offices, will develop and implement the strategic objectives.

Potential Risks and Challenges

Performance Management

The Board will need to ensure that any change it makes to its performance management process does not prevent meaningful distinctions between high and low performers. The Board must also ensure that changes do not make the process more complicated.

Adverse Action

Changes that affect the rights of Board employees must be carefully considered and implemented to ensure compliance with law and to minimize negative effects on morale.

Succession Planning

Lack of a systematic approach to succession planning may lead to concerns that qualified staff are being lost. Moving toward a Board-wide succession-planning process will require significant staff support for governors and division directors as they prepare for talent-assessment sessions. Legal concerns must also be addressed in any succession-planning approach.

Compensation

There are three primary challenges that the Board needs to address in order to increase the effectiveness of its compensation administration system:

- The Board has a fragmented system for administering compensation. Divisions have different standards for writing job descriptions, and because the salary of a position is linked to the job description, the variance in job descriptions allows different salaries for comparable work.
- The current system does not link market rates to Board salaries and benefits for comparable positions. Failing to link market rates to salaries and benefits will limit the Board's ability to attract and retain top talent.
- Variable pay (e.g., cash awards, targeted awards) for staff is limited and too fragmented, making it difficult to adequately distinguish and reward high performers with additional compensation.

Strategic Theme 5

Strengthen Management Processes to Enable Effective Implementation of Strategic Themes, Increase Operating Efficiencies, and Reduce Administrative Burden

The Board defines "management processes" to mean the internal support processes necessary for long-term planning and short-term execution of the Board's priorities. Management processes can include strategic planning, budgeting, identification of cost savings, performance management, risk management, talent management, and knowledge sharing.

Enhancements to the Board's management processes will allow for increased ownership and accountability of leadership decisions, an enhanced ability to prioritize strategic needs, and a potentially reduced administrative burden.

Strategic Objectives

Strategic objective 1: Focus on enterprise issues.

Strategic objective 2: Strengthen financial planning accountability.

Strategic objective 3: Reduce financial management administrative burden.

Roles and Responsibilities

DFM will have primary responsibility for developing the framework to implement the strategic objectives.

Potential Risks and Challenges

Well-designed management processes are essential to driving enterprise-wide decisions, ensuring better coordination, and reducing administrative burden. However, organizational structure and role changes may be equally important, and these changes are difficult to raise and resolve. It is essential to have a single point of accountability for executing and ensuring compliance with these processes.

Another challenge with implementation is the difficulty with defining performance metrics and markers of progress related to strategic outcomes. For example, it is difficult to measure the delivery of high-quality policy insight. As such, it will be important to identify indirect indicators that will show that the Board is on the right track toward achieving desired outcomes.

Finally, the planned changes will require broad commitment from the workforce. To earn that commitment, leaders will need to invest sufficient time to explaining the need for change and what will be different. Appropriate communication of the Board's strategy to both internal and external audiences will be particularly important.

Strategic Theme 6

Establish a Cost-reduction Approach and a Budgetary Growth Target that Maintains an Effective and Efficient Use of Financial Resources

The Board recognizes the importance of continuing to identify opportunities to enhance its operational efficiency and control growth in its operational costs. Implementing these changes will help ensure that the strategic investments remain within a sustainable budgetary range and provide the appropriate level of support so that the Board continues to meet its mandates and builds the capabilities to improve the way it fulfills its mission.

Strategic Objectives

Strategic objective 1: Use financial resources efficiently and effectively.

Strategic objective 2: Achieve budgetary savings and expense growth in line with Board-approved targets.

Roles and Responsibilities

The chief operating officer and the chief financial officer, working with the ECB and other senior staff across the organization, will have primary responsibility for developing the approach, quantifying expected savings, and overseeing implementation.

Potential Risks and Challenges

As part of this strategy, the Board expects to capture sufficient savings in its operating budget to offset some of the costs of the strategic priorities. There is inherent risk in trying to establish the proper balance between implementing cost-reduction initiatives and ensuring the appropriate level of resource investment to achieve the goals and objectives outlined in the strategic framework. The Board must ensure that reductions in its administrative and overhead functions do not impede day-to-day operations.

PRACTICAL Manager
Fall 1990

The Budget Process at the Board

By Kip Livingston

One of the more important tasks facing any manager is the preparation of the budget. At first glance, this strikes some managers as a time-consuming, administrative task rather than a significant managerial function. Most Board managers understand that careful preparation of the program budget is a significant part of their responsibilities and is particularly essential in the Board's budget environment. While preparation of the budget will probably never be fun, it need not be difficult. The purpose of this article is to provide a better understanding of the Board's budget process.

The Board's budget process incorporates the classic budget phases: planning, formulation, implementation, and evaluation. The full process spans two and one half years. Since we begin a new budget each year, there are always two or three budgets in process at any given time.

Formulation

The budget process is the principal element of the planning and management process at the Board. This process begins in the Spring of the year prior to the budget year. Individual divisions conduct strategic planning sessions. During these sessions, divisions develop ideas and plans that will guide them for the years ahead. The division directors present these plans to their respective Board Oversight Committees in May. These meetings provide an opportunity for dialogue between the division directors and Board Members about the general direction the division will follow. The Controller is responsible for scheduling and moderating these meetings.

When the meetings are completed, the Controller's staff prepares an analysis of the potential costs of ideas that were presented, together with a current analysis of likely economic assumptions for the period. Based on these analyses, the Controller presents a recommended budget guideline to the Board in early June.

Upon Board approval of a budget guideline, the Controller sends out a budget call memorandum to all divisions advising them of their individual guidelines and budget submission schedules. The divisions submit their proposed budgets to the Controller during September and October. These proposals are reviewed by the Controller, the Staff Director for Management and the appropriate oversight committees. When these reviews are completed, the Controller summarizes the results and prepares a recommended budget for Board approval in the first week in December.

Implementation

Board approval marks the end of the budget formulation stage. Based on the approved budget, the Controller prepares a cash budget and semi-annual assessment of the Federal Reserve Banks for funds. The Banks then transmit these funds quarterly to our account at the FR Bank of Richmond. Implementation of the Board's budget starts on January 1, with the divisions preparing operating plans that project expenses by month. These plans are entered into computerized systems so that actual

Salary Increase Recommendations

By Barbara Brodell

Promotions and Career Ladder Progressions serve as a means of recognizing and rewarding employees who assume greater responsibility, within their current job (career ladder progression) or in a new job for which they qualify (promotion).

A **promotion** is a grade increase that an employee receives when he or she is selected to fill a vacant position in a new career ladder with a new set of duties and a higher grade. Employees are selected from a competitive pool of qualified employees through the Board's job posting process. Selection is based on past performance, experience, and qualifications.

A **career ladder progression** is a grade increase that recognizes an employee's proven ability to perform satisfactorily at the next higher grade level, up to the **full performance level. The full performance level is the highest grade level of work that is attainable within a career ladder without using competitive methods.**

A career ladder progression to a grade level above the full performance level is permitted when an employee performs duties and responsibilities that exceed those at the full performance level. Opportunities to progress above the full performance level are limited based on the availability of senior level work in the unit. Selection is made by either interviewing all eligible employees or by reviewing their performance appraisal documents.

When an employee receives a grade increase either through a promotion or career ladder progression, it is accompanied by an increase in salary to recognize the greater level of responsibility. Managers recommending an employee for a career ladder progression or a promotion should submit a recommendation to HRM that considers the following guidelines:

- increases the employee's salary at least to the new range minimum (but generally not above the range midpoint);
- emphasizes the level of increased responsibility assumed by the employee;
- recognizes the employee's education and experience relative to the minimum qualifications for the job level; and
- places the employee's salary relative to other employees with similar jobs at that level, both within the section and the division.

The Compensation staff in HRM approves the division's recommended salary increase taking into consideration the following:

- the employee's education and experience relative to the job requirements;
- the division's recommendation; and
- the salaries of employees with comparable experience and qualifications within the section, division, and other divisions throughout the Board.

HRM strives to ensure that salary decisions are consistent with the Division's recommendation and are internally equitable. When differences of opinion occur, the Compensation Specialist will work with the division manager to reach a mutually agreeable solution. These actions are detailed in the Compensation Program Administrative Manual.

For more information on determining increases for career ladder progressions and promotions, the Compensation Specialists are available to discuss the process in more detail. Lisa Hickman, ext. 3748; Barbara Brodell, ext. 3843 and Ali Emran, ext. 3747.

For practice applying the guidelines discussed above, try the case study on page 5.

Case Study

Assume you are the Manager of the Data Analysis Section. You are recommending that one of the section's employees, Sarah Smith, be given a career ladder progression to grade 24.

What is your recommendation for Sarah's salary increase?

Section: Data Analysis

Job Family: Data Analyst

Current Section Staff:

	Salary	Grade	Experience/Education	Performance History
Christine	$39,000	24	Bachelors + 7 yrs. exp.	CMS
Michael	$42,400	24	Associates + 10 yrs. exp.	CFS
Beth	$36,000	24	Bachelors + 5 yrs. exp.	CES
George	$33,500	23	Bachelors + 7 yrs. exp.	CMS
Sarah	**$33,500**	**23**	**MBA + 4 yrs. experience**	**CES**

Career Ladder:

	Minimum Qualifications	Grade	Salary Range
	Bachelors or equivalent	21	$21,090 - $26,360 - $31,630
	Bachelors + 2 yrs.	23	$29,320 - $36,650 - $43,980
(full performance)	Bachelors + 4 yrs.	24	$34,610 - $43,260 - $51,910
(above full performance)	Bachelors + 6 yrs.	25	$40,820 - $51,030 - $61,240

See page 12 for Compensation staff recommendation.

report to request a hearing and a decision from an Equal Employment Opportunity Commission (EEOC) administrative judge or to request a final Board decision without a hearing.

- You may request a hearing before an EEOC administrative judge any time after 180 days have elapsed since the filing of your formal complaint.
- All requests for a hearing before an EEOC administrative judge must be made by submitting a written request to:

EEOC
131 M Street, NE – Fourth Floor, Suite 4NW02F
Washington, DC 20507

- You are required to send a copy of your request for a hearing to:

Sheila Clark, Program Director
Office of Diversity and Inclusion
Stop 156, Room M-3408
20th Street & Constitution Avenue, NW
Washington, DC 20551

- If you request a final Board decision without a hearing, the Board will have 60 calendar days to render its final decision.
- If you request a hearing before an EEOC administrative judge, the EEOC will appoint an EEOC administrative judge to hold the hearing. The administrative judge will make findings of fact and conclusions of law and will issue a decision. The Board will have 40 calendar days from the date of its receipt of the administrative judge's decision to issue a final order informing you whether it will implement the decision. If the Board does not implement the administrative judge's decision, the Board can file an appeal with the EEOC simultaneously with the issuance of the Board's final order.
- As a complainant, you may appeal the Board's dismissal, or its final decision on your formal complaint, to the EEOC within 30 calendar days of your receipt of the Board's dismissal or final decision.
- As a complainant, you may file a civil action in U.S. district court within 90 calendar days of the Board's final decision or the EEOC's decision on appeal. In addition, you may file a civil action in U.S. district court after 180 calendar days have passed since the filing of your formal complaint or since the filing of your appeal with the EEOC.

Important Points to Remember

- **You have the right to be represented at any stage in the presentation of your complaint by a person of your own choosing. This representative may be a Board employee and need not be an attorney. The Board does not, however, provide attorneys. The Board may determine to award attorney fees to a complainant—but only for the services of an attorney—when a finding of discrimination has been entered or when such an award is deemed appropriate under the applicable regulations. Attorney fees are not available for services performed at the administrative level for Age Discrimination in Employment Act (ADEA) or Equal Pay Act (EPA) complaints.**
- **Any person considering filing an EEO complaint must first meet with an EEO counselor within 45 days of the alleged discriminatory act.**
- **Copies of the Board's EEO rules and the Board's internal policy statements on EEO as well as further details on the EEO complaint process, including the Mediation Program for EEO Complaints, are available from the Office of Diversity and Inclusion.**
- **For a work-related problem in which you do not believe discrimination is a factor, you should first seek a resolution through your supervisor and other division management. If that effort fails, you may wish to contact an employee relations specialist in Human Resources.**
- **If a complaint is determined to be appropriate for mediation, mediation can be offered (prior to the hearing) at both the informal and formal complaint processing stages.**

Office of Diversity and Inclusion

You may contact any representative of the Office of Diversity and Inclusion in person, in writing, by e-mail, or by phone for advice or information on all aspects of equal employment opportunity.

The EEO Complaint System and How It Works

An Equal Opportunity Employer

The Board's policy is to provide equal opportunity in employment for all persons. Thus, consistent with applicable law, the Board prohibits discrimination in employment on the basis of race, color, religion, sex, national origin, age, disability, or genetic information and promotes the full realization of equal employment opportunity (EEO) through a continuing affirmative program. In addition, as a matter of policy and although it is not required by law, the Board prohibits discrimination in employment on the basis of sexual orientation.

The Board is committed to complying with the following statutes and any amendments thereof: Civil Rights Act of 1964 (Title VII), section 501 of the Rehabilitation Act of 1973, the Age Discrimination in Employment Act of 1967, the Equal Pay Act of 1963, the Genetic Information Nondiscrimination Act of 2008, and the Uniformed Services Employment and Reemployment Rights Act of 1994. The Board's plan, program objectives, and goals dealing with equal employment opportunity are set forth in the Board's Rules Regarding Equal Opportunity, 12 CFR 268, and in the Annual EEO Program Status Report adopted by the Board. Both of these documents are available from the Board's Office of Diversity and Inclusion.

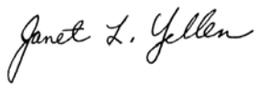
As an essential part of the Board's policy, no one will be subject to retaliation or reprisal for participating in any stage of the administrative or judicial proceedings provided for in the Board's Rules Regarding Equal Opportunity.

The Board has a zero-tolerance policy for discriminatory harassment, which includes sexual harassment. The Board is committed to preventing any discriminatory harassment.

The Board calls on senior management to comply fully with its policy of a work environment that is free from discrimination, hostility, intimidation, reprisal, and harassment. Each manager, at every level, must ensure that the Board's commitment to equality of opportunity is honored.

The following is an overview of the Board's EEO complaint process. For a comprehensive review of the Board's EEO program, employees and applicants for employment are encouraged to review the Board's Rules Regarding Equal Opportunity.

Sincerely,



Janet L. Yellen, Chair

Equal Employment Opportunity (EEO) Designations

The Board designates members of its staff to help carry out the functions described in the Board's Rules Regarding Equal Opportunity.

EEO Counselors		
Johanna C. Bruce	M-3304	ext. 2787
Penny Thompson	M-3310	ext. 2077
Daniel Aranda	M-3303	ext. 3367

EEO counselors are available to counsel any Board employee or applicant who feels that he or she has been discriminated against because of race, religion, color, national origin, sex, age, disability, genetic information, or sexual orientation, or has been subjected to retaliation for engaging in protected activity.

Receipt of Complaints

The following individual is designated to receive formal complaints of discrimination:

Sheila Clark, Program Director
Office of Diversity and Inclusion
Board of Governors of the Federal Reserve System
Stop 156, Room M-3408
20th Street & Constitution Avenue, NW
Washington, DC 20551
Voice: (202) 452-2883

Approaches to Address Complaints

If you believe that you have been discriminated against because of your race, religion, color, national origin, sex, age, disability, genetic information, or sexual orientation, or have been subjected to retaliation for engaging in protected activity, you should contact an EEO counselor.

If you believe that you are a victim of discriminatory harassment, which includes sexual harassment, you may contact an EEO counselor. You may also seek relief by reporting such conduct through the established channels designated in the Board's Discriminatory Workplace Harassment Policy. In this regard, an employee may report discriminatory harassment to (1) the offending individual's supervisor or the harassed employee's supervisor; (2) the offending individual's division director or the harassed employee's division director; (3) the Office of Diversity and Inclusion program director, (4) an employee relations specialist in the Human Resources Function of the Management Division; (5) the officer responsible for Employee Relations, or his or her designee; (6) for employees in Human Resources, the assistant general for Human Resources in the Legal Division.

The EEO Complaint System

The following steps summarize the Board's EEO complaint process for employees and applicants who feel they have been discriminated against because of their race, religion, color, national origin, sex, age, disability, genetic information, or sexual orientation, or have been subjected to retaliation for engaging in protected activity. There are time limits for the filing and resolution of an EEO complaint. Failure of the employee or applicant to meet the time requirements stated for any stage of the complaint process may result in the dismissal of the complaint or the loss of administrative and judicial rights. These steps also apply to complaints of retaliation and equal pay (sex-based wage discrimination).

- You must contact an EEO counselor within 45 calendar days of the date of the matter alleged to be discriminatory or, in the case of a personnel action, within 45 calendar days of the effective date of the action.
- Unless you agree to an extension of time, the EEO counselor has 30 calendar days to inquire into your informal complaint, to attempt a resolution of the matter, and to advise you how to file a formal complaint if the matter is not resolved.
- In the event the Board's alternative dispute resolution process is offered to you and you agree to participate in mediation, the informal complaint processing period will be 90 days. Mediation will be offered on a case-by-case basis, when the program director deems a complaint appropriate for mediation.
- If the EEO counselor cannot resolve your complaint or if your complaint is in mediation and it is not resolved by the 90th day, the EEO counselor will issue you in writing a notice of your right to file a formal complaint with the Board. Should you choose to file a formal complaint, you must do so within 15 calendar days after your receipt of this notice.
- If you file a formal complaint, the Office of Diversity and Inclusion will review that complaint and determine the issues accepted for investigation. The Office of Diversity and Inclusion will then assign an EEO investigator to investigate the issues accepted in your complaint.
- At the conclusion of the investigation, the program director will provide you with the investigative report.
- You will have 30 calendar days from receipt of the investigative

Executive Recruiter

Job ID #: 10306
Functional Area: Human Resources
Employment Status: Temporary
Position Type: Full-Time
Education Required: Bachelor's or Equivalent Exp.
Salary Grade Low: 27
Salary Grade High: 28
Career Ladder High: 28
Closing Date: FEB 17, 2015

Location: Washington, DC
Facility: Not Indicated
Division: Management Division
Relocation Provided: Yes
Experience Required: 7 years

Apply Now | Add to Job Cart

Position Description

The Executive Recruiter will be a critical member of the Human Resources (HR) team and will have a direct impact on the future success of HR in addressing the leadership and workforce succession planning needs of clients. The Executive Recruiter serves as a strategic internal consultant to clients and manages the full cycle recruitment process for a broad array of official and senior management positions. The Executive Recruiter will provide an impactful combination of business acumen, strategic functional recruitment and HR experience to support clients with the objective of developing and implementing high quality sourcing and screening strategies for senior level and Officer level positions. This person will create applicant flows and a strong pipeline connection of potential candidates. The incumbent will also: act as a strategic partner and talent acquisition advisor influencing senior leadership teams, pro-actively identify the needs and risks of clients and the Board as they relate to the executive recruitment process, ensure programs continuously meet Board and client business objectives and recommend changes for improvement. The Executive Recruiter maintains a high level of discretion and trust and embodies a strong customer service philosophy.

Position Requirements

Incumbent must demonstrate an established network of executive level job candidates and sourcing network. Incumbent must demonstrate complete mastery and successful track record of the executive level sourcing and placement process and will be expected to act as the resident expert on this topic at the Board. At the FR-27, 7 years of experience required; at the FR-28, 8+ years of experience required leading progressively complex senior executive search and recruitment responsibilities in financial services and regulatory organizations. A mastery level knowledge of all Human Resources Management practices and especially Succession Planning and Organizational Design and a mastery level of understanding of Executive Compensation principles as well as current market pricing for Executive level talent. Proficient in working with applicant tracking technology and PeopleSoft. Quickly learns and assimilates complex technical and business requirement information at the Board and has such knowledge from previous work experience. The ability to handle conflicting information and

requirements effectively is important. Demonstrated ability to handle multiple tasks, competing priorities, and challenging situations professionally. Ability to elicit cooperation from a wide variety of sources, including upper management, clients, and other departments. Excellent oral and written communication/presentation skills. Demonstrated commitment to a strong customer service philosophy required. Requires strong human relations and analytical skills typically acquired through completion of a bachelor's degree in management, business administration or related discipline or equivalent experience.

The Federal Reserve Board of Governors is seeking to hire an Executive Recruiter at the Washington DC office. This is a temporary, full-time position for two years with the possibility of an extension.

The Executive Recruiter serves as a strategic internal consultant to clients and manages the full cycle recruitment process for a broad array of official and senior management positions. The Executive Recruiter will provide an impactful combination of business acumen, strategic functional recruitment and HR experience to support clients with the objective of developing and implementing high quality sourcing and screening strategies for senior level and Officer level positions. This person will create applicant flows and a strong pipeline connection of potential candidates. The incumbent will also: act as a strategic partner and talent acquisition advisor influencing senior leadership teams, pro-actively identify the needs and risks of clients and the Board as they relate to the executive recruitment process, ensure programs continuously meet Board and client business objectives and recommend changes for improvement.

The Executive Recruiter will work alongside of the Board recruitment team but with report directly to the Assistant Director for Human Resources.

It is strongly preferred that applicants have at least 5 years tenure as an Executive Recruiter and provide specific examples of successful executive placements, demonstrated success in defining executive level job descriptions, experience requirements and success factors, demonstrated success at driving diverse candidate slates and successful feedback mechanism for the executive level search process.

*****Internal Posting Policy***If an internal Board employee meets the minimum qualifications for this position and applies during the internal job posting preference dates 02/10/2015 to 02/17/2015, then the employee will receive an interview with the hiring manager. Internal Board employees who apply after the internal posting preference period are not guaranteed an interview with the hiring manager.**

We are an Equal Opportunity Employer and do not discriminate against applicants due to race, ethnicity, gender, veteran status, or on the basis of disability or any other federal, state or local protected class.

Financial Literacy Activities

During 2013, the Board continued to participate in community and Federal Reserve System outreach events and programs, examples of which are listed below.

- *Congressional Black Caucus Annual Legislative Conference*: In September 2013, the Board, in conjunction with the Federal Reserve System, sponsored a booth at the 43rd Annual Legislative Conference. Financial education materials and information were distributed to conference attendees. The Board also provided support for the Financial Educa ion Youth Summit convened by he Congressional Black Caucus held at the U.S. Capitol Visitor Center and Trinity Washington University.
- *FedEd Program*: During 2013, research assistants from divisions within the Board continued to implement a program developed to work with local high school students to improve their understanding of personal finances and the role of the Federal Reserve System in the economy. Subjects covered include the importance of saving, budgeting, using credit, establishing financial goals, and the impact of Federal Reserve policy on those subjects. More than 40 presentations were made to middle and high school students in the Washington metropolitan area. Presentations were made at ten schools in the District of Columbia: Roosevelt High School; Wilson High School; Coolidge High School; Dunbar High School; Anacos ia High School; Ballou High School; Washington La in Public Charter School; Edmund Burke School; KIPP DC Charter School; and St. Albans School. Presentations were made at two schools in Virginia--Annandale High School and Marshall High School--and one school in Maryland--Stone Ridge School of the Sacred Heart. Presentations were also made at the District of Columbia Public Schools Central Office to preview the FedEd Program for the New Heights Providers Meeting, the Sumner School for the DC Future Business Leaders of America, and the Heights School.
- *Federal Reserve Financial Literacy Day*: On October 23, 2013, the Board and the Federal Reserve System held training programs and seminars around the country on such topics as saving, budge ing, credit use, and the establishment of financial goals. Board research assistants presented the program to classes at two schools in the District of Columbia: Cardozo High School and the Columbia Heights Education Campus.
- *Math x Economics*: On May 23, 2013, the Board hosted the Math x Economics program for a second year in a row. The goal of the program was to introduce students to economics as a potential course of study in college and as a future career option. The Board's recruitment efforts targeted groups who are underrepresented in the field of economics, including minorities and females, especially from underserved schools. A total of 29 students from Washington metropolitan area schools attended. The students completed a survey at the end of the program; all 29 participants said they would recommend the program to other students. The descriptive statistics of the respondents are listed below.

Distribution of participants	Percent
Female	56
Male	44
Juniors	78
Seniors	22
African American	25.9
Hispanic	18.5
Asian	18.5
White	18.5
More than one ethnicity	14.8
Did not specify ethnicity	3.7

- *Education and Training Materials Distribution*: During 2013, the Board continued to provide financial literacy materials to consumer education and financial literacy groups, including the University of Maryland Extension Family and Consumer Sciences Center, the YMCA of Metropolitan Washington, Operation HOPE, and It Takes a Community to Raise a Child (located in New York City).

- *Professional Outreach*: On April 3, 2013, Chairman Bernanke delivered remarks to the 13 h Annual Redefining Investment Strategy Education (RISE) Forum. His remarks highlighted he importance of promoting economic and financial knowledge among people of all ages and walks of life. He stated that the Board and the 12 Federal Reserve Banks are all deeply involved in economic education and in supporting the work of teachers, schools, and national organizations.

  On November 13, 2013, Chairman Bernanke hosted the annual Teacher Town Hall Meeting at the Federal Reserve Board. Federal Reserve Banks also held gatherings around the country to provide educators the opportunity to listen to the Chairman and ask questions. His remarks covered the origins, history, and role of the Federal Reserve, and how it has helped shape the nation's economy and financial system.

National Summit on Diversity in the Economics Profession

Print

About | Conference Program

About

The National Summit on Diversity in the Economics Profession, hosted by the Board of Governors of the Federal Reserve System in partnership wi h the American Economic Association, will be held at the Federal Reserve Board on October 30, 2014 in Washington, D.C. This conference brings together presidents and research directors of he Federal Reserve Banks and chairs of economics departments from around the country to open a profession-wide dialogue about diversity. Speakers and panelists will discuss he state of diversity in the economics profession and examples of successful diversity initiatives in academia. A hallmark of the conference will be the opportunity for collegial learning, discussion, and sharing among faculty peers to develop practical ideas about what can be accomplished in our profession.

Please note that attendance at the conference is by invitation only. Conference attendees and media representatives must register in advance.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
Eighth Annual No FEAR Act Report
Fiscal Year 2011

The Board of Governors of the Federal Reserve System (Board) hereby submits this Eighth Annual Report pursuant to the requirements of Section 203 of the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act), Public Law 107-174. In accordance with Section 203(a) of the No FEAR Act and its regulations there-under (5 C.F.R. § 724.302), this Eighth Annual Report is being forwarded to the Speaker of the House of Representatives, the President pro tempore of the Senate, the Committee on Governmental Affairs of the Senate, the Committee on Government Reform of the House of Representatives, each committee of Congress with jurisdiction relating to the Board, the Equal Employment Opportunity Commission, and the Attorney General of the United States, and the Director of the Office of Personnel Management.

The Board responds to the items listed in Section 203(a) (1) through (8) of the No FEAR Act and 5 C.F.R. § 724.302 as follows:

(1) The number of cases in Federal court pending or resolved in each fiscal year and arising under each of the respective provisions of the Federal Antidiscrimination Laws and Whistleblower Protection Laws applicable to the agency as defined in 5 C.F.R. § 724.102 in which an employee, former Federal employee, or applicant alleged a violation(s) of these laws, separating data by the provision(s) of law involved;

Fiscal Year 2011	
Basis of Actions	***Total Cases Pending or Resolved***
29 U.S.C.§ 633a (Age)	1
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	2

(2) In the aggregate, for the cases identified in paragraph (1), above, and separated by provision(s) of law involved:

(i) The status or disposition (including resolved);

Fiscal Year 2011	
Status or Disposition:	***Pending***
Basis of Actions	
29 U.S.C.§ 633a (Age)	1
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	2
	Resolved
Basis of Actions	
29 U.S.C.§ 633a (Age)	0
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	0

(ii) The amount of money required to be reimbursed to the Judgment Fund by the agency for payments as defined in 5 C.F.R. § 724.102;

None

(iii) The amount of reimbursement to the Fund for attorney's fees where such fees have been separately designated;

None

(3) In connection with cases identified in paragraph (1), above, the total number of employees in each fiscal year disciplined as defined in 5 C.F.R. § 724.102 and the specific nature, e.g., reprimand, etc., of the disciplinary actions taken, separated by the provision(s) of law involved;

None

(4) The final year-end data about discrimination complaints for each fiscal year that was posted in accordance with Equal Employment Opportunity Regulations at subpart G of title 29 of the Code of Federal Regulations (implementing section 301(c)(1)(b) of the No FEAR Act);

Attached is a copy of the No FEAR fiscal year-end data posted as of September 30, 2011, for fiscal year 2011.

(5) Whether or not in connection with cases in Federal court, the number of employees in each fiscal year disciplined as defined in 5 C.F.R. § 724.102 in accordance with any agency policy described in paragraph (6), below. The specific nature, e.g., reprimand, etc., of the disciplinary actions taken must be identified.

None

(6) A detailed description of the agency's policy for taking disciplinary action against Federal employees for conduct that is inconsistent with Federal Antidiscrimination Laws and Whistleblower Protection Laws or for conduct that constitutes another prohibited personnel practice revealed in connection with agency investigations of alleged violations of these laws;

The Board does not have a separate policy for disciplining Board employees found to have committed practices referenced above. However, the Board's disciplinary policies, the Disciplinary Actions Policy and the Adverse Action Policy, will be used to discipline such employees.

Under the Disciplinary Actions policy, the Board may take progressive discipline to correct unsatisfactory conduct or other work-related problems. Progressive discipline is the application of graduated actions in disciplinary cases. It can include, where appropriate, oral counseling, written warnings, and suspensions of 14 calendar days or less. Under the Adverse Action Policy, adverse action against an employee may be in the form of discharge, removal, or suspension without pay for a period of more than 14 calendar days, or a reduction in grade or pay.

(7) An analysis of the information provided in paragraphs (1) through (6), above, in conjunction with data provided to the Equal Employment Opportunity Commission in compliance with 29 C.F.R. § 1614. Such analysis must include: (i) An examination of trends; (ii) Causal analysis; (iii) Practical knowledge gained through experience; and (iv) Any actions planned or taken to improve complaint or civil rights programs of the agency with the goal of eliminating discrimination and retaliation in the workplace;

During the reporting period, the EEO staff collaborated and partnered with the Human Resources Employee Relations staff to identify issues, trends and workplace challenges relating to workplace harassment. Meetings were held with senior management to address harassment resolution. Customized managerial workplace harassment training was conducted for departments with related issues.

Although the Board has provided workplace harassment training, harassment complaints continue to enter the EEO complaint process. Behavioral transition from

receiving training to changing workplace behavior has been a challenge for the Board. Currently the Board is developing a Workplace Harassment Policy which will establish fundamental processes and procedures in an effort to address occurrences. A workplace harassment module for managerial and non-managerial employees has been included in the No FEAR required training. Training completion will be tracked in a Learning Management System. Customized workplace harassment classroom training was conducted in FY 2011 and will also be conducted in FY 2012 along with web-based training.

During FY 2011 the Board's EEO staff counseled 58 pre-complaints, of which 10 entered the formal complaint process. In FY 2010, 86 pre-complaint counseling sessions were held and 7 entered the formal complaint process. The increase in the number of formal complaints filed is attributable to an increase of alleged work place harassment issues. The EEO staff continues to focus on effective counseling in the informal stage in the attempt to reach resolutions through mediation and facilitated discussions between parties involved.

(8) For each fiscal year, any adjustment needed or made to the budget of the agency to comply with its Judgment Fund reimbursement obligation(s) incurred under 5 C.F.R. § 724.103.

None

(9) The agency's written plan developed under 5 C.F.R. § 724.203(a) to train its employees.

See attached agency No FEAR Act Training Plan.

No FEAR Act

No FEAR Act Notice

The Notification and Federal Employee Anti-discrimination and Retaliation Act (No FEAR Act) of 2002 increases federal agency accountability for acts of discrimination or reprisal against employees.

The No FEAR Act requires agencies to post on their public web sites statistical data relating to equal employment opportunity complaints filed against the respective agencies.

The Federal Reserve Board's public web site contains statistical data in accordance with the No FEAR Act.

ADDRESS OFFICIAL CORRESPONDENCE
TO THE BOARD

No FEAR Act Written Training Plan

Submitted by
Board of Governors of the Federal Reserve System

On July 20, 2006, the Office of Personnel Management (OPM) published its final rule implementing the training requirements of the Notification and Federal Employee Antidiscrimination and Retaliation Act (No FEAR Act).

The final rule required each agency to develop a written plan for training all of its employees, including supervisors and managers. The plan must describe:

- The instructional materials and method of the training
- The training schedule, and
- The means of documenting completion of training

On December 28, 2006, the Office of Personnel Management issued the final rule regarding "Implementations of Title II of the No FEAR Act of 2002 – Reporting and Best Practices." Among other things, this final rule requires each agency to provide annual reports on the number of items relating to the agency's implementation of the No FEAR Act, including the agency's written plan.

This document constitutes the Board of Governors of the Federal Reserve System's (Board) No FEAR Act written training Plan.

I. The instructional materials and method of the training

The final rules require federal agencies to train all employees on their rights and remedies under the federal antidiscrimination and whistleblower protection laws. Agencies must have trained all current employees by December 17, 2006, and all new employees within 90 days of hire. Agencies also must provide training to all employees every two years.

With these requirements in mind, the Board contracted with Global Compliance to provide instruction to employees through Global Compliance's interactive online No FEAR Act training course.

As required by the No FEAR Act and the OPM final rule, the Board's online course teaches our employees about their rights and remedies available under the antidiscrimination, retaliation, and whistleblower protection laws. With regard to rights under whistleblowing statutes, the No FEAR Act provides for notification and training only with regard to a federal statute that is inapplicable to employees of the Board. The Federal Deposit Insurance Act and the Inspector

General Act, however prohibit retaliation against Board employees if they make a protected disclosure of any possible violation of any law or regulation, gross mismanagement, a gross waste of funds, and abuse of authority, or a substantial and specific danger to public health or safety. Employees who believe they have experienced retaliation for such whistleblowing activities have been informed via the required Employee Notification of Rights No FEAR Act provision whom to contact.

The No FEAR Act course:

- Provides instruction on all topics required by the No FEAR Act and the OPM final rule
- Provides supervisors and managers additional instruction on their responsibilities
- Allows users to interact with a series of audio-visual scenarios so that they are continually engaged in the learning process

II. The training schedule

The Board has conducted mandatory EEO Training since 1979. We have maintained completion records through our training course data base. The Board has provided two days of EEO training for supervisory and non-supervisor employees. The training consisted of anti-discrimination laws, legal compliance topics, EEO complaint process and retaliation.

Beginning April 2007, access to the online course was provided. Employees completed their initial No FEAR Act training by April 30, 2007. The Board ensures that subsequently hired employees complete training within 90 days from their starting dates.

As required under the No FEAR Act, employees will be provided a refresher courses via blended training, i.e.: Web, classroom, and seminars focusing on the major principles of the previous training and addressing new and developing areas related to No FEAR compliance.

III. The means of documenting completion of training

The Board tracks employees' completion of the online training courses through Global Compliance's learning management system. Global Compliance automatically creates a record of each employee's course completion and enables training coordinator to monitor training activities such as start and incomplete.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
Ninth Annual No FEAR Act Report
Fiscal Year 2012

The Board of Governors of the Federal Reserve System (Board) hereby submits this Ninth Annual Report pursuant to the requirements of Section 203 of the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act), Public Law 107-174. In accordance with Section 203(a) of the No FEAR Act and its regulations there-under (5 C.F.R. § 724.302), this Ninth Annual Report is being forwarded to the Speaker of the House of Representatives, the President pro tempore of the Senate, the Committee on Governmental Affairs of the Senate, the Committee on Government Reform of the House of Representatives, each committee of Congress with jurisdiction relating to the Board, the Equal Employment Opportunity Commission, and the Attorney General of the United States, and the Director of the Office of Personnel Management.

The Board responds to the items listed in Section 203(a) (1) through (8) of the No FEAR Act and 5 C.F.R. § 724.302 as follows:

(1) The number of cases in Federal court pending or resolved in each fiscal year and arising under each of the respective provisions of the Federal Antidiscrimination Laws and Whistleblower Protection Laws applicable to the agency as defined in 5 C.F.R. § 724.102 in which an employee, former Federal employee, or applicant alleged a violation(s) of these laws, separating data by the provision(s) of law involved;

Fiscal Year 2012	
Basis of Actions	***Total Cases Pending or Resolved***
29 U.S.C. § 633a (Age)	1
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	2
29 U.S.C. § 206 (Equal Pay Act)	1
29 U.S.C . § 791 (Disability)	1

(2) In the aggregate, for the cases identified in paragraph (1), above, and separated by provision(s) of law involved:

(i) The status or disposition (including resolved);

Fiscal Year 2012	
Status or Disposition:	***Pending***
Basis of Actions	
29 U.S.C. § 633a (Age)	0
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	1
29 U.S.C. § 206 (Equal Pay)	1
29 U.S.C. § 791 (Disabiltiy)	0
	Resolved
Basis of Actions	
29 U.S.C. § 633a (Age)	1
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	1
29 U.S.C. § 791 (Disabiltiy)	1

(ii) The amount of money required to be reimbursed to the Judgment Fund by the agency for payments as defined in 5 C.F.R. § 724.102;

None

(iii) The amount of reimbursement to the Fund for attorney's fees where such fees have been separately designated;

None

(3) In connection with cases identified in paragraph (1), above, the total number of employees in each fiscal year disciplined as defined in 5 C.F.R. § 724.102 and the specific nature, e.g., reprimand, etc., of the disciplinary actions taken, separated by the provision(s) of law involved;

None

(4) The final year-end data about discrimination complaints for each fiscal year that was posted in accordance with Equal Employment Opportunity Regulations at subpart G of title 29 of the Code of Federal Regulations (implementing section 301(c)(1)(b) of the No FEAR Act);

Attached is a copy of the No FEAR Act FY 2012 data posted on the Board's public website.

(5) Whether or not in connection with cases in Federal court, the number of employees in each fiscal year disciplined as defined in 5 C.F.R. § 724.102 in accordance with any agency policy described in paragraph (6), below. The specific nature, e.g., reprimand, etc., of the disciplinary actions taken must be identified.

None

(6) A detailed description of the agency's policy for taking disciplinary action against Federal employees for conduct that is inconsistent with Federal Antidiscrimination Laws and Whistleblower Protection Laws or for conduct that constitutes another prohibited personnel practice revealed in connection with agency investigations of alleged violations of these laws;

The Board does not have a separate policy for disciplining Board employees found to have committed practices referenced above. However, the Board's disciplinary policies, the Disciplinary Actions Policy and the Adverse Action Policy, will be used to discipline such employees.

Under the Disciplinary Actions policy, the Board may take progressive discipline to correct unsatisfactory conduct or other work-related problems. Progressive discipline is the application of graduated actions in disciplinary cases. It can include, where appropriate, oral counseling, written warnings, and suspensions of 14 calendar days or less. Under the Adverse Action Policy, adverse action against an employee may be in the form of discharge, removal, or suspension without pay for a period of more than 14 calendar days, or a reduction in grade or pay.

(7) An analysis of the information provided in paragraphs (1) through (6), above, in conjunction with data provided to the Equal Employment Opportunity Commission in compliance with 29 C.F.R. § 1614. Such analysis must include: (i) An examination of trends; (ii) Causal analysis; (iii) Practical knowledge gained through experience; and (iv) Any actions planned or taken to improve complaint or civil rights programs of the agency with the goal of eliminating discrimination and retaliation in the workplace;

During FY 2012 the Board's EEO staff counseled 54 pre-complaints, of which 12 entered the formal complaint process compared to 58 pre-complaint counseling sessions in FY 2011 with 10 formal complaints filed.

An analysis of complaints filed identified an increase in the following bases: age, race, reprisal and non-sexual harassment. The EEO staff and the Employee Relations staff continue to focus on effective counseling in an attempt to reach resolutions through mediation and facilitated discussions between parties involved.

Also the counselors worked with management and employees to address effective ways to address complaints that did not enter the formal process.

In FY 2012, the Board conducted management training which focused on building respect in a diverse workplace, harassment awareness and prevention, and strategic diversity management competencies. Additional training was also provided on workplace related policies, effective coaching for development and effective communications with a focus on feedback techniques, team building and conflict resolution.

In accordance with the No FEAR Act training requirements, the Board will continue to provide training via web-base and classroom instruction. The Board issued a request for proposal (RFP) for web-based training which will continue the initial training modules and add additional EEO subjects, such as disability accommodations, GINA, and any updates to Federal employment regulations. The responses to the RFP are under review and an award is expected in May 2013.

In accordance with Board procedures, the Board is reviewing and revising employment policies where applicable. Among the policies being updated are Adverse Action, Leave, Reasonable Accommodation, EEO, and Sexual Harassment (to be renamed) Discriminatory Workplace Harassment. The updated policies are scheduled to be released in FY 2013. Updated and revised policies will strengthen the processes and procedures in addressing issues pertaining to EEO and other related workplace disputes, with the objective of decreasing and/or resolving complaints.

Also, included in the Board's on-boarding process, employees will continue to certify receipt and review of the Discriminatory Workplace Harassment which includes sexual harassment. The certifications are maintained by the Diversity and Inclusion office.

(8) For each fiscal year, any adjustment needed or made to the budget of the agency to comply with its Judgment Fund reimbursement obligation(s) incurred under 5 C.F.R. § 724.103.

None

(9) The agency's written plan developed under 5 C.F.R. § 724.203(a) to train its employees.

See attached agency No FEAR Act Training Plan.

No FEAR Act Notice

The Notification and Federal Employee Anti-discrimination and Retaliation Act (No FEAR Act) of 2002 increases federal agency accountability for acts of discrimination or reprisal against employees.

The No FEAR Act requires agencies to post on their public web sites statistical data relating to equal employment opportunity complaints filed against the respective agencies.

The Federal Reserve Board's public web site contains statistical data in accordance with the No FEAR Act.

OF THE
FEDERAL RESERVE SYSTEM
WASHINGTON, D. C. 20551

ADDRESS OFFICIAL CORRESPONDENCE
TO THE BOARD

No FEAR Act Written Training Plan

Submitted by
Board of Governors of the Federal Reserve System

On July 20, 2006, the Office of Personnel Management (OPM) published its final rule implementing the training requirements of the Notification and Federal Employee Antidiscrimination and Retaliation Act (No FEAR Act).

The final rule required each agency to develop a written plan for training all of its employees, including supervisors and managers. The plan must describe:

- The instructional materials and method of the training
- The training schedule, and
- The means of documenting completion of training

On December 28, 2006, the Office of Personnel Management issued the final rule regarding "Implementations of Title II of the No FEAR Act of 2002 – Reporting and Best Practices." Among other things, this final rule requires each agency to provide annual reports on the number of items relating to the agency's implementation of the No FEAR Act, including the agency's written plan.

This document constitutes the Board of Governors of the Federal Reserve System's (Board) No FEAR Act written training Plan.

I. The instructional materials and method of the training

The final rules require federal agencies to train all employees on their rights and remedies under the federal antidiscrimination and whistleblower protection laws. Agencies must have trained all current employees by December 17, 2006, and all new employees within 90 days of hire. Agencies also must provide training to all employees every two years. With these requirements in mind, the Board will provide instruction to employees through interactive online No FEAR Act training courses.

As required by the No FEAR Act and the OPM final rule, the Board's online course teaches our employees about their rights and remedies available under the antidiscrimination, retaliation, and whistleblower protection laws. With regard to rights under whistleblowing statutes, the No FEAR Act provides for notification and training only with regard to a federal statute that is inapplicable to employees of the Board. The Federal Deposit Insurance Act and the Inspector

General Act, however, prohibit retaliation against Board employees if they make a protected disclosure of any possible violation of any law or regulation, gross mismanagement, a gross waste of funds, and abuse of authority, or a substantial and specific danger to public health or safety. Employees who believe they have experienced retaliation for such whistleblowing activities have been informed via the required Employee Notification of Rights No FEAR Act provision whom to contact.

The No FEAR Act course:

- Provides instruction on all topics required by the No FEAR Act and the OPM final rule
- Provides supervisors and managers additional instruction on their responsibilities
- Allows users to interact with a series of audio-visual scenarios so that they are continually engaged in the learning process
- Provides a quiz based on training content
- Portal for employees to submit questions to the EEO office based on training content

II. The training schedule

The Board has conducted required EEO Training for all employees since 1979. We have maintained completion records through our training course data base. The Board also provides specific EEO training for supervisory employees. The training modules cover anti-discrimination laws, legal compliance, workplace harassment (including sexual harassment), the EEO complaint process and retaliation.

Beginning April 2007, access to the online course was provided. Employees completed their initial No FEAR Act training by April 30, 2007 and subsequent training thereafter. The Board ensures that employees complete training within 90 days from their starting dates.

As required under the No FEAR Act, employees will be provided refresher courses via blended training, i.e.: Web, classroom, and seminars focusing on the major principles of the previous training and addressing new and developing areas related to No FEAR Act compliance.

III. The means of documenting completion of training

The Board tracks employees' completion of the online training courses through a learning management system which automatically creates a record of each employee's course completion and enables the training coordinator to monitor training scheduling and completion.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
Tenth Annual No FEAR Act Report
Fiscal Year 2013

The Board of Governors of the Federal Reserve System (Board) hereby submits this Tenth Annual Report pursuant to the requirements of Section 203 of the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act), Public Law 107-174. In accordance with Section 203(a) of the No FEAR Act and its regulations there-under (5 C.F.R. § 724.302), this Tenth Annual Report is being forwarded to the Speaker of the House of Representatives, the President pro tempore of the Senate, the Committee on Governmental Affairs of the Senate, the Committee on Government Reform of the House of Representatives, each committee of Congress with jurisdiction relating to the Board, the Equal Employment Opportunity Commission, and the Attorney General of the United States, and the Director of the Office of Personnel Management.

The Board responds to the items listed in Section 203(a) (1) through (8) of the No FEAR Act and 5 C.F.R. § 724.302 as follows:

(1) The number of cases in Federal court pending or resolved in each fiscal year and arising under each of the respective provisions of the Federal Antidiscrimination Laws and Whistleblower Protection Laws applicable to the agency as defined in 5 C.F.R. § 724.102 in which an employee, former Federal employee, or applicant alleged a violation(s) of these laws, separating data by the provision(s) of law involved;

Fiscal Year 2013	
Basis of Actions	***Total Cases Pending or Resolved***
29 U.S.C. § 633a (Age)	0
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	1
29 U.S.C. § 206 (Equal Pay Act)	1
29 U.S.C . § 791 (Disability)	0

(2) In the aggregate, for the cases identified in paragraph (1), above, and separated by provision(s) of law involved:

(i) The status or disposition (including resolved);

Basis of Actions	
29 U.S.C. § 633a (Age)	0
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	1
29 U.S.C. § 206 (Equal Pay)	1
29 U.S.C. § 791 (Disabiltiy)	0
	Resolved
Basis of Actions	
29 U.S.C. § 633a (Age)	0
42 U.S.C. § 2000e-16 (Race, Color, Religion, Sex, or National Origin)	0
29 U.S.C. § 791 (Disability)	0

(ii) The amount of money required to be reimbursed to the Judgment Fund by the agency for payments as defined in 5 C.F.R. § 724.102;

None

(iii) The amount of reimbursement to the Fund for attorney's fees where such fees have been separately designated;

None

(3) In connection with cases identified in paragraph (1), above, the total number of employees in each fiscal year disciplined as defined in 5 C.F.R. § 724.102 and the specific nature, e.g., reprimand, etc., of the disciplinary actions taken, separated by the provision(s) of law involved;

None

(4) The final year-end data about discrimination complaints for each fiscal year that was posted in accordance with Equal Employment Opportunity Regulations at subpart G of title 29 of the Code of Federal Regulations (implementing section 301(c)(1)(b) of the No FEAR Act);

Attached is a copy of the No FEAR Act FY 2013 data posted on the Board's public website.

(5) Whether or not in connection with cases in Federal court, the number of employees in each fiscal year disciplined as defined in 5 C.F.R. § 724.102 in accordance with any agency policy described in paragraph (6), below. The

specific nature, e.g., reprimand, etc., of the disciplinary actions taken must be identified.

None

(6) A detailed description of the agency's policy for taking disciplinary action against Federal employees for conduct that is inconsistent with Federal Antidiscrimination Laws and Whistleblower Protection Laws or for conduct that constitutes another prohibited personnel practice revealed in connection with agency investigations of alleged violations of these laws;

The Board does not have a separate policy for disciplining Board employees found to have committed practices referenced above. However, the Board's disciplinary policies; the Disciplinary Actions Policy and the Adverse Action Policy are used to discipline such employees.

Under the Disciplinary Actions policy, the Board may take progressive discipline to correct unsatisfactory conduct or other work-related matters. Progressive discipline is a process for dealing with job-related behavior that does not meet the Board's expected and communicated performance standards. The primary purpose for progressive discipline is to provide the employee aware of an opportunity to improve conduct or performance issues. It involves increasingly formal efforts to provide feedback to the employee so he or she can correct the problem. It can include, where appropriate, oral counseling, written warnings, and suspensions of 14 calendar days or less. Under the Adverse Action Policy, adverse action against an employee may be in the form of discharge, removal, or suspension without pay for a period of more than 14 calendar days or a reduction in grade or pay.

In accordance with Board procedures, the Board reviews and revises employment policies where applicable. The Equal Employment Opportunity, Discriminatory Workplace Harassment and Reasonable Accommodation policies are among the policies implemented or updated in fiscal year 2013. The updated policies strengthen and clarify the processes and procedures in addressing matters that pertain to EEO and other related workplace issues in order to avoid, decrease and/or resolve complaints. The Board informed employees of policy updates through the internal website and new employees certify receipt of the Workplace Harassment policy during the on-boarding process. Certifications are maintained by the Diversity and Inclusion office.

(7) An analysis of the information provided in paragraphs (1) through (6), above, in conjunction with data provided to the Equal Employment Opportunity Commission in compliance with 29 C.F.R. § 1614. Such analysis must include: (i) An examination of trends; (ii) Causal analysis; (iii) Practical knowledge gained through experience; and (iv) Any actions planned or taken to improve

complaint or civil rights programs of the agency with the goal of eliminating discrimination and retaliation in the workplace;

EEO Complaint Activity

In accordance with 29 C.F.R § 1614.105(d), pre-complaint counseling cases were completed timely within 30 calendar days, unless an extension was granted. During FY 2013, the Board's EEO counselors counseled 146 pre-complaints, of which 6 entered the formal complaint process. In FY 2012, 54 pre-complaint counseling sessions were held and 12 formal complaints were filed. Thus, while the number of pre-complaint counseling sessions increased, the number of formal EEO complaints filed in fiscal year 2013 decreased by 50 percent compared to fiscal year 2012.

The EEO and Employee Relations staff continue to collaborate to reach resolutions through mediation and facilitated discussions between parties involved. Also, counselors closely interacted with employees and management to effectively promote resolutions for complaints that did not enter the formal process.

EEO Investigations

In fiscal year 2013, the average number of days EEO formal complaints were in the investigative stage increased to 228 days, compared to 133 in FY 2012. Much of the increase in processing time was due to amendments of pending complaints, which required additional investigation. To address this issue, the Board has established the following procedure to improve the investigation processing time:

- Investigators are required to submit a status report of investigation within 45 days of the assignment.

- When a complaint is amended, the Office of Diversity and Inclusion will adjust the timeframe for completing the investigation based on the number of amended claims accepted by the Board for investigation.

Training

In fiscal year 2013, the Board continued to provide Workplace Harassment Prevention training and counseling services to divisions addressing EEO and/or diversity issues and trends. Other diversity-related training included Conflict Resolution, Management Awareness, Fierce Conversations, and Micro Inequities Workshop.

In compliance with the training requirements of the No FEAR Act, the Board has contracted with Navex Global to provide No FEAR web-based training in 2014. This training is required for all employees. The segments will cover EEO compliance, disability and accommodations and discriminatory workplace harassment.

(8) For each fiscal year, any adjustment needed or made to the budget of the agency to comply with its Judgment Fund reimbursement obligation(s) incurred under 5 C.F.R. § 724.103.

None

(9) The agency's written plan developed under 5 C.F.R. § 724.203(a) to train its employees.

See attached agency No FEAR Act Training Plan.

No FEAR Act

No FEAR Act Notice

The Notification and Federal Employee Anti-discrimination and Retaliation Act (No FEAR Act) of 2002 increases federal agency accountability for acts of discrimination or reprisal against employees.

The No FEAR Act requires agencies to post on their public web sites statistical data relating to equal employment opportunity complaints filed against the respective agencies.

The Federal Reserve Board's public web site contains statistical data in accordance with the No FEAR Act.

FEDERAL RESERVE SYSTEM
WASHINGTON, D. C. 20551

ADDRESS OFFICIAL CORRESPONDENCE
TO THE BOARD

No FEAR Act Written Training Plan

Submitted by
Board of Governors of the Federal Reserve System

On July 20, 2006, the Office of Personnel Management (OPM) published its final rule implementing the training requirements of the Notification and Federal Employee Antidiscrimination and Retaliation Act ("No FEAR Act").

The final rule required each agency to develop a written plan for training all of its employees, including supervisors and managers. The plan must describe:

- The instructional materials and method of the training
- The training schedule, and
- The means of documenting completion of training

On December 28, 2006, the Office of Personnel Management issued the final rule regarding "Implementations of Title II of the No FEAR Act of 2002 – Reporting and Best Practices." Among other things, this final rule requires each agency to provide annual reports on the number of items relating to the agency's implementation of the No FEAR Act, including the agency's written plan.

This document constitutes the Board of Governors of the Federal Reserve System's (Board) No FEAR Act written training Plan.

I. The instructional materials and method of the training

The final rules require federal agencies to train all employees on their rights and remedies under the federal antidiscrimination and whistleblower protection laws. Agencies must have trained all current employees by December 17, 2006, and all new employees within 90 days of hire. Agencies also must provide training to all employees every two years.

With these requirements in mind, the Board contracted with Brightline Compliance, LLC to provide instruction to employees through Brightline's interactive online No FEAR Act training course.

As required by the No FEAR Act and the OPM final rule, the Board's online course teaches our employees about their rights and remedies available under the antidiscrimination, retaliation, and whistleblower protection laws. With regard to rights under whistleblowing statutes, the No FEAR Act provides for notification and training only with regard to a federal statute that is inapplicable to employees of the Board. The Federal Deposit Insurance Act and the Inspector

General Act, however prohibit retaliation against Board employees if they make a protected disclosure of any possible violation of any law or regulation, gross mismanagement, a gross waste of funds, and abuse of authority, or a substantial and specific danger to public health or safety. Employees who believe they have experienced retaliation for such whistleblowing activities have been informed via the required "Employee Notification of Rights" No FEAR Act provision whom to contact.

The No FEAR Act course:

- Provides instruction on all topics required by the No FEAR Act and the OPM final rule
- Provides supervisors and managers additional instruction on their responsibilities
- Allows users to interact with a series of audio-visual scenarios so that they are continually engaged in the learning process

II. The training schedule

The Board has conducted mandatory EEO Training since 1979. We have maintained completion records through our training course data base. The Board has provided two days of EEO training for supervisory and non-supervisor employees. The training consisted of anti-discrimination laws, legal compliance topics, EEO complaint process and retaliation.

Beginning April 2007, access to the online course was provided. Employees completed their initial No FEAR Act training by April 30, 2007. The Board ensures that subsequently hired employees complete training within 90 days from their starting dates.

As required under the No FEAR Act, employees will be provided a refresher courses via blended training, i.e.: Web, classroom, and seminars focusing on the major principles of the previous training and addressing new and developing areas related to No FEAR compliance.

III. The means of documenting completion of training

The Board tracks employees' completion of the online training courses through a learning management system which automatically creates a record of each employee's course completion and enables training coordinator to monitor training activities such as start and incomplete.

GLOSSARY

1. *Adverse Actions* – a discharge, removal, suspension without pay for a period of more than 14 calendar days, or a reduction in grade or base pay against an employee. All other actions do not constitute adverse actions. In addition, adverse actions do not include:

    - actions the employee voluntarily agrees to or takes on his or her own behalf;
    - actions that reduce an employee's variable pay, bonuses, cash awards, or any other type of pay that does not constitute base pay;
    - any action taken under the Board's Workforce Reduction policy (including separation or reduction in grade or pay); or
    - actions taken to carry out a transfer of function(s) required by law or other actions required by applicable law

2. *AWA* – an alternative work arrangement (AWA) is a work arrangement that varies from the traditional five-day workweek schedule. Options include, but are not limited to, compressed work schedules, flextime, job sharing, voluntary part-time employment, and telecommuting.

3. *Benefits* – Any ER issue involving equity or fairness in administration of benefits. Benefits include both financial and convenience benefits:

    - **Financial Benefits**: The Board provides its employees with subsidized health (i.e., medical, dental, vision) benefits, a savings plan (Thrift Plan) with matching contributions, a defined benefit retirement plan, paid leave, tuition assistance, a transportation subsidy, and other benefits as appropriate to the market.
    - **Convenience Benefits:** The Board also provides its employees non-financial benefits that contribute to employee health, well-being, and efficiency. They include medical services, a subsidized cafeteria, a fitness center, a credit union with an automated teller machine, and a convenience store.

4. *BOA (ER)* – A Basic Ordering Agreement for ER is a contract with an external vendor for Job Coaching or Mediation services that sets forth the price schedule for specified services:

    - **Job Coaching:** Management may hire a job coach to help an employee (supervisory or non-supervisory) develop and improve skills. Job coaches may be requested when management notes performance deficiencies or when an employee simply wants to improve his/her own skills with assistance from an external source.
    - **Mediation:** Staff or management may request a neutral, third party mediator to assist in resolving workplace concerns and issues. The mediator's role is to promote an open dialogue between participants, assist them in defining the problem, and help them find a mutually beneficial solution.

5. *Compensation* - Any ER issue involving pay equity or pay fairness arising out of the Board's cash compensation programs (including (1) base salaries and the guidelines used to set and adjust salaries, and (2) additional pay programs, such as cash awards, variable pay plans, sign-on and retention bonuses, project incentives or pay as described in the Overtime and Other Forms of Premium Pay Policy.)

6. *Disability* –Any ER matter or complaint initiated because of an employee's stated medical disability and that is not primarily involved with the processing of an informal accommodation or formal reasonable accommodation under the Board's Reasonable Accommodation Policy. With respect to an individual, a disability is a physical or mental impairment that substantially limits one or more of such individual's "major life activities," such as walking, seeing, hearing, speaking, performing manual tasks, eating, sleeping, working, operating major bodily functions, etc. An impairment that is episodic or in remission may constitute a disability if it would substantially limit a major life activity when active.

7. *Disciplinary Actions* – a documented oral counseling, a written warning or suspension of 14 calendar days or less. Disciplinary Actions only address conduct-related problems and provide for less-severe disciplinary measures than the Adverse Action Policy and Procedures.

8. *EAP* – The Employee Assistance Program (EAP) is a voluntary, confidential resource for support when you are experiencing any personal difficulty. Objective advice, practical problem-solving, and information are offered to help you resolve problems. Serious problems may consume an employee's attention, causing job efficiency to suffer. The EAP can help employees resolve such problems early, before they affect job performance. ER may collaborate with an employee and the EAP to assist in the resolution of personal difficulties.

9. *EEO* – The Board's policy is to provide *Equal Employment Opportunity* in employment for all persons, including discrimination involving race, color, religion, sex, national origin, age, disability, genetic information, employment applications, memberships, service in the uniformed services, and sexual orientation. ER may receive initial complaints of prohibited discrimination under the EEO policy. ER may assist the Office of Diversity & Inclusion to investigate claims of discrimination or harassment.

10. *Fit for Duty* – The Board's Mandatory Fitness Program is applicable to employees in positions that affect the public safety and to applicants seeking such positions. The Mandatory Fitness Program is designed to ensure that employees and applicants subject to this policy meet the physical, physiological, and mental fitness standards applicable to their jobs. The following employees are subject to periodic medical examinations:

    - an employee who is authorized under the Board's law enforcement authority to carry a firearm; or
    - an employee in any other position that affects the public safety

11. *FMLA* – The Family and Medical Leave Act of 1993 (FMLA) is a United States federal law requiring covered employers to provide employees job-protected and unpaid leave for qualified medical and family reasons. Qualified medical and family reasons include: personal or family illness, family military leave, pregnancy, adoption, or the foster care placement of a child.

12. *Harassment* – Discriminatory harassment is verbal or physical conduct that demeans or shows hostility or aversion toward an individual because of his or her race, color, religion, sex, gender, national origin, age (40 or older), disability, genetic information, or because of retaliation for engaging in protected activity. Discriminatory harassment is against the law when it has the purpose or effect of unreasonably interfering with an individual's work performance or of creating an intimidating, hostile, or offensive working environment. ER may assist the Office of Diversity & Inclusion to investigate claims of discrimination or harassment.

13. *Leave (Violations)* – All employees must ensure that they work a full work day or receive approval to be absent and accurately report and account for leave taken to cover such absences. Common Leave Violations include an employee's failure to follow procedures for requesting leave and for getting leave approved, like tardiness and call-offs, that may result in a period of unauthorized leave without pay, as well as making false statements in connection with a leave request.

14. *Leave (Processing)* – All leave matters not involving violations of the Leave Policy, including leave administration matters like FMLA requests (now administered by the Employee Life function of HR), that involve the granting of leave under the Board's Leave Policy.

15. *PEP* – The Board's provisional employment period for newly hired employees is two years, except as noted below. This time period permits supervisors and the division to determine the employee's overall suitability for continued employment. A provisional employee may be separated from employment at the will of the Board for any reason that is not unlawful. A provisional employee has no right to continued employment.

16. *Performance/PMP* – Includes ER matters related to an employee's performance problems under the Board's 3Cs Program and the Board's PMP Policy.

17. *Rehab Act* – Any matter involving an informal accommodation or a Reasonable Accommodation under the Rehabilitation Act of 1973. A reasonable accommodation includes any change in the work environment or in the way things are customarily done that would not create an undue hardship for the Board and would enable (1) a qualified individual with a disability to perform the essential functions of his or her job, (2) an employee with a disability to enjoy the equal benefits and privileges of employment, and/or (3) an individual with a disability to apply for a job at the Board.

    - an **informal accommodation** is an accommodation the Board may make in the ordinary course of its business, such as an ergonomic equipment adjustment, whether or not the employee is disabled under the Rehabilitation Act.
    - a **formal reasonable accommodation** is an accommodation the Board would make as a result of its legal obligation to provide reasonable accommodations to qualified individuals with disabilities under the Rehabilitation Act.

18. *Selection* – Any employee complaint involving the Board's internal hiring practices as governed by the Board's Vacant-Position Posting Policy.

19. *Suitability* – Generally, suitability means fitness or eligibility to perform services for the Board, as evidenced by an individual's past and present conduct. An individual is not suitable to perform services for the Board if the Board has reason to believe that he or she will not protect and promote the integrity, efficiency, and security of its operations. Suitability determinations often occur at the beginning of an individual's employment, when the Board receives the results of its initial background investigation. However, they may also occur at any time, including well after completion of an initial background investigation, if the Board becomes aware of information that presents a concern about an individual's suitability to perform Board work. Employees who fail to meet the Board's suitability requirements may be disciplined, transferred, suspended, terminated, limited in their ability to access sensitive or classified information, or subject to other actions that the Board deems appropriate to remedy its suitability concern.

20. *Work Related* – The Work Related case type includes work related problems like employee complaints or questions regarding unfair treatment on the basis of conduct or reasons that do not adversely affect the employee's performance and that are not covered under existing laws regarding discrimination. The Board's Adjusting Work Related Problems Policy covers these work related problems. In addition, the Work Related case type may include workplace conflict involving two or more staff persons, as well as conflict between staff and management. ER incorporates dispute resolution strategies to address workplace conflicts. Unlike the ER BOA case type, which is used whenever an external consultant is used to perform job coaching or mediation services, the Work Related case type may not involve the use of an external consultant.

21. *Worker Compensation* – Any matter involving an employee who suffers from a work-related illness or injury and is therefore unable to perform the full range of duties of his or her position and who is receiving workers' compensation. The Board's Return-to-Work Policy covers the administration of worker's compensation cases.

December 27, 2010

Establishment of the Office of Diversity and Inclusion and appointment of the program director

From Governor Kevin M. Warsh and Stephen R. Malphrus, Staff Director

Section 342 of the Dodd-Frank Act requires the Board and each Reserve Bank, as well as other financial regulatory agencies, to establish a diversity and inclusion office by January 21, 2011.

To comply with this provision, the Board approved, effective January 2, 2011, the establishment of a new Office of Diversity and Inclusion that will incorporate the EEO Programs Office as well as other areas of focus under section 342, including fostering diversity in the Board's procurements and assisting in developing standards to assess the diversity practices of the entities the Board regulates. The Office will work with other areas of the Board, including Procurement, Staffing, Bank Supervision and Regulation, and Consumer and Community Affairs to carry out its statutory responsibilities.

Sheila Clark has been appointed program director for the office. Sheila joined the Board in February 1995 as the EEO programs director and has administered the Board's equal employment opportunity and affirmative action programs over the last 15 years. She works with business units and divisions to promote equal opportunity and diversity in their employment practices. She has been responsible for providing training to Board employees regarding their rights and responsibilities under the federal EEO laws and providing an effective counseling program to address complaints of discrimination.

In addition, Sheila works with and evaluates the Reserve Bank EEO programs. Prior to joining the Board, Sheila was manager of Workplace Diversity Programs at Dow Jones Company, where she gained extensive experience in equal employment opportunity and affirmative action in the private sector. During her employment with Dow Jones, she was responsible for the company's EEO/affirmative action initiatives, work-family initiatives, college recruitment, and diversity training. Sheila has a BA in management.

BOARD OF GOVERNORS
OF THE
FEDERAL RESERVE SYSTEM
WASHINGTON, D. C. 20551

ADDRESS OFFICIAL CORRESPONDENCE
TO THE BOARD

No FEAR Act Written Training Plan

Submitted by
Board of Governors of the Federal Reserve System

On July 20, 2006, the Office of Personnel Management (OPM) published its final rule implementing the training requirements of the Notification and Federal Employee Antidiscrimination and Retaliation Act ("No FEAR Act").

The final rule required each agency to develop a written plan for training all of its employees, including supervisors and managers. The plan must describe:

- The instructional materials and method of the training
- The training schedule, and
- The means of documenting completion of training

On December 28, 2006, the Office of Personnel Management issued the final rule regarding "Implementations of Title II of the No FEAR Act of 2002 – Reporting and Best Practices." Among other things, this final rule requires each agency to provide annual reports on the number of items relating to the agency's implementation of the No FEAR Act, including the agency's written plan.

This document constitutes the Board of Governors of the Federal Reserve System's (Board) No FEAR Act written training Plan.

I. The instructional materials and method of the training

The final rules require federal agencies to train all employees on their rights and remedies under the federal antidiscrimination and whistleblower protection laws. Agencies must have trained all current employees by December 17, 2007, and all new employees within 90 days of hire. Agencies also must provide training to all employees every two years.

With these requirements in mind, the Board contracted with Brightline Compliance, LLC to provide instruction to employees through Brightline's interactive online No FEAR Act training course.

As required by the No FEAR Act and the OPM final rule, the Board's online course teaches our employees about their rights and remedies available under the antidiscrimination, retaliation, and whistleblower protection laws. With regard to rights under whistleblowing statutes, the No FEAR Act provides for notification and training only with regard to a federal statute that is inapplicable to employees of the Board. The Federal Deposit Insurance Act and the Inspector

General Act, however prohibit retaliation against Board employees if they make a protected disclosure of any possible violation of any law or regulation, gross mismanagement, a gross waste of funds, and abuse of authority, or a substantial and specific danger to public health or safety. Employees who believe they have experienced retaliation for such whistleblowing activities have been informed via the required "Employee Notification of Rights" No FEAR Act provision whom to contact.

The No FEAR Act course:

- Provides instruction on all topics required by the No FEAR Act and the OPM final rule
- Provides supervisors and managers additional instruction on their responsibilities
- Allows users to interact with a series of audio-visual scenarios so that they are continually engaged in the learning process

II. The training schedule

The Board has conducted mandatory EEO Training since 1979. We have maintained completion records through our training course data base. The Board has provided two days of EEO training for supervisory and non-supervisor employees. The training consisted of anti-discrimination laws, legal compliance topics, EEO complaint process and retaliation.

Beginning April 2007, access to the online course was provided. Employees completed their initial No FEAR Act training by April 30, 2007. The Board ensures that subsequently hired employees complete training within 90 days from their starting dates.

As required under the No FEAR Act, employees will be provided a refresher courses via blended training, i.e.: Web, classroom, and seminars focusing on the major principles of the previous training and addressing new and developing areas related to No FEAR compliance.

III. The means of documenting completion of training

The Board tracks employees' completion of the online training courses through Brightline's learning management system, BrightlineLMS. BrightlineLMS automatically creates a record of each employee's course completion and enables training coordinator to monitor training activities such as start and incomplete.

April 22, 2011

The Honorable Daniel Inouye
President Pro Tempore of the Senate
S-128 Capitol Bldg.
Washington, DC 20510

Dear Senator:

On behalf of the Board of Governors of the Federal Reserve System, I am submitting the seventh annual report pursuant to the requirements of Section 203(a) of the Notification and Federal Employee Anti-discrimination and Retaliation Act of 2002 (No FEAR Act), Public Law 107-174. In accordance with Section 203(b) of the No FEAR Act, this report includes data for fiscal year 2010.

Sincerely,

Sheila Clark
Diversity and Inclusion Programs Director

WRP
Workforce Recruitment Program

About Us | Employers | Schools | Students | Resources

Welcome to the 2015 Workforce Recruitment Program (WRP)

If you are an Employer in the federal government and wish to take advantage of WRP,

Register Now!

If you are a private sector employer and wish to take advantage of WRP, go to www.askEARN.org.

If you're a school or student interested in WRP and wish to learn more, read our About Us section for more details.

Do you need highly qualified candidates for jobs at your office? The Workforce Recruitment Program can help! The WRP is a recruitment and referral program that connects federal and private sector employers nationwide with highly motivated college students and recent graduates with disabilities who are eager to prove their abilities in the workplace through summer or permanent jobs.

The U.S. Department of Labor's Office of Disability Employment Policy (ODEP) and the U.S. Department of Defense's Office of Diversity Management & Equal Opportunity (ODMEO) manage the program, which continues to be successful with the participation of many other federal agencies and sub-agencies. Since the program's expansion in 1995, over 6,000 students and recent graduates have received temporary and permanent employment opportunities through the WRP.

In 2011, the Office of Personnel Management (OPM) highlighted the WRP as a model strategy in its guidance to federal agencies regarding the recruitment and hiring of people with disabilities in response to Executive Order 13548, Increasing Federal Employment of Individuals with Disabilities.

Annually, trained WRP recruiters from federal agencies conduct personal interviews with interested candidates on college and university campuses across the country. Candidates represent all majors, and range from college freshmen to graduate students and law students. Information from these candidate interviews is compiled in a searchable database that is available through this website to federal Human Resources Specialists, Equal Employment Opportunity Specialists, and other hiring officials in federal agencies. You can request a password here. If you are an employer in the private sector, or a student interested in private sector employment, you can take advantage of the WRP through the National Employer Technical Assistance Center at www.askEARN.org.

Office of Inspector General Statement of Independence for Individual Projects

Employees of the Office of Inspector General (OIG) or its contractors who are engaged in audit, attestation, inspection, evaluation, or investigative work are to conduct themselves in a manner consistent with the Federal Reserve Board's and OIG's core values, the "Ethics Handbook for Board Employees," the *Government Auditing Standards*, the *Quality Standards for Inspection and Evaluation*, and the standards applicable to their project. Employees of the OIG and its contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in conflict-of-interest situations or situations that give the appearance that a conflict exists.

The OIG and its staff and contractors must be free from personal, external, and organizational impairments to independence and must avoid appearance of such impairments of independence, so their work will be viewed as impartial by objective third parties. Employees of the OI and its contractors should refer to the Quality Standards for Inspection and Evaluation and chapter 3 of the *Government Auditing Standards* a comprehensive discussion of personal, external, and organizational impairments to independence. Impairments to independence include, are not limited to:

--financial interest that is direct, or is significant/material though indirect, in the audited entity or program.
--seeking employment with the entity to be reviewed or under review.
--preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project.
--official, professional, personal, or financial relationships that might cause an employee of the OIG or its contractors to limit the extent of his/her inquiry, to limit disclosure, or to weaken or slant findings in any way.
--external interference or influence that improperly or imprudently limits or modifies the scope of project work.

Employees of the OIG and its contractors should be aware that independence impairments can occur because of the potential to develop close personal relationships with Board staff who work in program areas being audited or otherwise reviewed. Also, employees of the OIG and its contractors may wish to apply for job postings in other Board divisions at a time when they are assigned to or about to be assigned to review a program in that division. When these or other apparent or potential conflicts of interest occur, the individual should fully disclose the situation to the cognizant OIG manager. In consultation with the Inspector General, appropriate action by management might include reassigning the individual, limiting the individual's role, or providing additional reviews of the individual's work. Failure to comply with the OIG's policies and procedures regarding personal impairments may result in disciplinary action against the individual, consistent with the Board's Disciplinary Actions policy.

Instructions:

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members. The completed and signed form should be scanned into the project database. Individuals who are either not able to sign this statement or experience a situation in the future where they believe their independence and/or objectivity is or may be impaired should notify the cognizant OIG manager to discuss their situation. The Assistant Inspector General for Legal Services and the Board's Ethics Officer are also available for consultation.

I have read the above and attest that I have neither personal nor external impairments to my independence that will keep me from objectively planning and conducting my work on this project and reaching independent conclusions based on the evidence. I will reevaluate my independence whenever my assignment is changed and whenever my circumstances change. If changes affecting either my independence or my objectivity occur subsequent to the completion of this form, I will promptly notify the cognizant OIG manager.

Office of Inspector General
Officer Statement of Independence for Individual Projects

Office of Inspector General (OIG) officers engaged in audit, attestation, inspection, evaluation, or investigative work are to conduct themselves in a manner consistent with the Federal Reserve Board's and OIG's core values, the "Ethics Handbook for Board Employees," the *Government Auditing Standards*, the *Quality Standards for Inspection and Evaluation*, and any other standards applicable to the specific project.

OIG staff must be free from personal, external, and organizational impairments to independence and must avoid the appearance of such impairments of independence, so their work will be viewed as impartial by objective third parties. Officers should refer to the *Quality Standards for Inspection and Evaluation* and chapter 3 of the *Government Auditing Standards* for a comprehensive discussion of personal, external, and organizational impairments to independence. Impairments to independence include, but are not limited to:

--financial interest that is direct, or is significant/material though indirect, in the audited entity or program;
--preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project;
--official, professional, personal, or financial relationships that might cause one to limit the extent of his/her inquiry, to limit disclosure, or to weaken or slant findings in any way;
--seeking employment with the entity to be reviewed or under review; or
--external interference or influence that improperly or imprudently limits or modifies the scope of project work.

When an actual, potential, or perceived conflict of interest occurs, the individual should fully disclose the situation to the Inspector General or, in the case of the Inspector General, the OIG's Assistant Inspector General for Legal Services. The Board's Ethics Officer also is available for consultation. Appropriate action to address the matter might include recusal from a specific project, reassigning the individual, limiting the individual's role, or providing additional reviews of the individual's work.

This form, which documents compliance with applicable independence standards, is to be completed by an officer when he/she becomes involved in a project. The signed form should be scanned into the project database or provided to the project manager for inclusion. An officer who subsequently experiences a situation where his/her independence and/or objectivity is or may be impaired should fully disclose the situation as provided in the previous paragraph. Failure to comply with the OIG's policies and procedures regarding personal impairments may result in disciplinary action against the employee, consistent with the Board's Disciplinary Actions policy.

I have read the above and attest that I do not have any personal, external, or organizational impairment to my independence with respect to this project. I am able to objectively oversee this project and reach independent conclusions or decisions based on the evidence. I will reevaluate my independence whenever my circumstances change and will notify the appropriate official as necessary.

Subject: OIG Audit of the Board's Diversity and Inclusion Processes -ZFRSSE-
Attachments: Board Announcement CR Diversity April 2014.pdf

Good afternoon,

The Office of Inspector General received a letter from the House Committee on Financial Services requesting that our office review activities related to workplace diversity and inclusion at the Board. As described in the attached memorandum, we are initiating an audit of the Board's personnel operations and other efforts to provide equal employment opportunities, and will be contacting your offices shortly to arrange an entrance conference. If you have any questions concerning this audit, please contact me at (202) 973-5042 or Anna Saez, OIG Manager at (202) 973-5027.

Regards,
Tim Rogers

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

April 25, 2014

MEMORANDUM

TO: Donald Hammond
Chief Operating Officer

FROM: Timothy Rogers
Senior OIG Manager for Management and Operations
Office of Audits and Evaluations

SUBJECT: Congressional Request Regarding the Board's Diversity and Inclusion Processes

In response to a recent letter from the House Committee on Financial Services (attachment A), the Office of Inspector General is initiating an audit of the Board of Governors of the Federal Reserve System's (Board) activities related to diversity and inclusion processes. The objective of this audit is to assess the Board's personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce.

To answer our objective, we plan to

- analyze information related to trend statistics, such as performance management results and promotions for minority and women employees, informal and formal equal employment opportunity complaint statistics, and employee satisfaction survey results

- review relevant Board personnel operations, policies, and procedures, such as those related to performance management, to determine whether adequate controls are established to prevent and detect bias or discrimination

- assess the Board's efforts to respond to complaints, employee satisfaction survey results, or other potential indications of bias and to increase diversity in management

- evaluate the Office of Minority and Women Inclusion's role and involvement in monitoring the impact of the Board's personnel policies on minorities and women, as well as monitoring the agency's efforts to increase diversity in senior management positions

- identify any factors that may impact the Board's ability to increase diversity in senior management positions

Our scope will include personnel activities that took place from January 2011 through December 2013, as well as changes to policies and procedures since December 2013.

We will contact your office shortly to schedule an entrance conference to further discuss our planned work in more detail. Attachment B contains our initial list of documents that we are requesting to assist us in addressing our objective. Please provide the documents at your earliest convenience. If you have any questions concerning this audit, please contact Anna Saez, OIG Manager, at 202-973-5027 or me at 202-973-5042.

United States House of Representatives
Committee on Financial Services
Washington, D.C. 20515

March 24, 2014

Inspector General Mark Bialek
Board of Governors of the Federal Reserve System
Office of Inspector General
20th and C Streets N.W.
Mail Stop 300
Washington, DC 20551

Dear Inspector General Bialek:

We write to request that the Office of the Inspector General (OIG) for the Board of Governors of the Federal Reserve System (FRS) review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Federal Reserve System's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Federal Reserve System or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Sincerely,

Attachment B

Office of Inspector General Statement of Independence for Individual Projects

Employees of the Office of Inspector General (OIG) or its contractors who are engaged in audit, attestation, inspection, evaluation, or investigative work are to conduct themselves in a manner consistent with the Federal Reserve Board's and OIG's core values, the "Ethics Handbook for Board Employees," the *Government Auditing Standards*, the *Quality Standards for Inspection and Evaluation*, and the standards applicable to their project. Employees of the OIG and its contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in conflict-of-interest situations or situations that give the appearance that a conflict exists.

The OIG and its staff and contractors must be free from personal, external, and organizational impairments to independence and must avoid the appearance of such impairments of independence, so their work will be viewed as impartial by objective third parties. Employees of the OIG and its contractors should refer to the Quality Standards for Inspection and Evaluation and chapter 3 of the *Government Auditing Standards* for a comprehensive discussion of personal, external, and organizational impairments to independence. Impairments to independence include, but are not limited to:

- financial interest that is direct, or is significant/material though indirect, in the audited entity or program.
- seeking employment with the entity to be reviewed or under review.
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project.
- official, professional, personal, or financial relationships that might cause an employee of the OIG or its contractors to limit the extent of his/her inquiry, to limit disclosure, or to weaken or slant findings in any way.
- external interference or influence that improperly or imprudently limits or modifies the scope of project work.

Employees of the OIG and its contractors should be aware that independence impairments can occur because of the potential to develop close personal relationships with Board staff who work in program areas being audited or otherwise reviewed. Also, employees of the OIG and its contractors may wish to apply for job postings in other Board divisions at a time when they are assigned to or about to be assigned to review a program in that division. When these or other apparent or potential conflicts of interest occur, the individual should fully disclose the situation to the cognizant OIG manager. In consultation with the Inspector General, appropriate action by management might include reassigning the individual, limiting the individual's role, or providing additional reviews of the individual's work. Failure to comply with the OIG's policies and procedures regarding personal impairments may result in disciplinary action against the individual, consistent with the Board's Disciplinary Actions policy.

Instructions:

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members. The completed and signed form should be scanned into the project database. Individuals who are either not able to sign this statement or experience a situation in the future where they believe their independence and/or objectivity is or may be impaired should notify the cognizant OIG manager to discuss their situation. The Assistant Inspector General for Legal Services and the Board's Ethics Officer are also available for consultation.

- - - - - - - - - -

I have read the above and attest that I have neither personal nor external impairments to my independence that will keep me from objectively planning and conducting my work on this project and reaching independent conclusions based on the evidence. I will reevaluate my independence whenever my assignment is changed and whenever my circumstances change. If changes affecting either my independence or my objectivity occur subsequent to the completion of this form, I will promptly notify the cognizant OIG manager.

Signature:  **Date:** 5-22-2014

Entrance Conference for the Audit of the Board's Diversity and Inclusion Processes

Date: 5/12/2014

Participants:

- Donald Hammond, Chief Operating Officer, COO
- Michell Clark, Director, Management Division
- David Harmon, Deputy Director, Human Capital
- Shelia Clark, Program Director, Diversity and Inclusion
- Melissa Heist, Associate Inspector General, OIG
- Timothy Rogers, Senior Manager, OIG
- Kimberly Perteet, Senior Auditor, OIG
- Jina Hwang, Counsel, OIG
- Brian Murphy, Auditor, OIG
- Brandon Lee, Auditor, OIG

Meeting objective/Purpose:

The purpose of this meeting was to provide senior Management Division staff of objective, scope, methodology, and key dates related to the audit.

Minutes:

- The audit team presented an agenda and audit process documents.
- The team informed the auditees of the objective, scope and methodology.
    - The audit team mentioned policies, procedures, and internal controls will be examined during this audit.
    - Also, the audit team will analyze statistical trends related to EEO complaints, the PMP, and promotions

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

May 12, 2014

SUBJECT: Entrance Conference for the Audit of the Board's Diversity and Inclusion Processes

Objective

Assess the Board's personnel operations and other efforts to provide equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce.

Scope

- Personnel activities from January 2011 through December 2013
- Changes to policies and procedures since December 2013

Methodology

- Interview various agency personnel
- Review personnel operations, policies and procedures, reports, existing statistics, and other relevant documentation
- Analyze data to identify statistical trends
- Conduct internal control testing to assess the adequacy of established controls

Key Dates

(b) (5)

OIG Contacts

- Primary contact:
  - Kimberly Perteet, Project Leader, (202) 973-7318, kimberly.l.perteet@frb.gov
  - Anna Saez, Project Manager, (202) 973-5027, annabelle.saez@frb.gov

- Additional contacts:
  - Brandon Lee, Auditor, (202) 973-7322, brandon.m.lee@frb.gov
  - Brian Murphy, Auditor, (202) 973-6179, brian.p.murphy@frb.gov
  - Tim Rogers, Senior OIG Manager for Management and Operations, (202) 973-5042, timothy.p.rogers@frb.gov
  - Melissa Heist, Associate Inspector General for Audits and Evaluations, (202) 973-5024, melissa.m.heist@frb.gov

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch,* issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☑ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch,* issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☑ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

Good afternoon,

We are providing the attached discussion draft report on our audit related to the Board's diversity and inclusion efforts, *The Board Can Enhance its Diversity and Inclusion Efforts,* for your review. Our report is in response to the congressional letter that we received in March 2014 requesting our review of areas within the Board related to diversity and inclusion, including performance management, employee complaint handling, and recruiting and hiring, among others. The report includes recommendations designed to enhance and promote diversity and inclusion, as well as to strengthen related controls. The discussion draft will be used to facilitate our exit conference, to be scheduled for next week. Should you have any questions, please contact Anna Saez, OIG Manager, at 202-973-5027, or me at 202-973-5042.

Because the draft report is still subject to revision, please appropriately safeguard the report to prevent premature disclosure. We appreciate the cooperation we have received from many staff throughout the Board, and look forward to meeting with you to discuss the diversity and inclusion draft report.

Regards,

Tim Rogers

INTERNAL FR

Good Afternoon,

We are providing for your comment the attached draft report on our audit of the Board's diversity and inclusion efforts. We greatly appreciate the cooperation and support provided by you and your staff during this audit. The Congressional requestor for this audit has asked that we issue this report by March 31, so we are requesting you provide your written comments by Thursday, March 26, 2015. If you or your staff have any questions, please feel free to contact me or Tim Rogers, Senior OIG Manager, at 202-973-5042.

Thank you,
Melissa

To assess the Board's personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and increase racial, ethnic, and gender diversity in the workforce.

To answer our objective, we will:

- analyze information related to trend statistics for minority and women employees (e.g., performance management and recognition results, promotions, and representation at all levels of the agency); informal and formal EEO complaint statistics; and employee satisfaction survey results to determine whether this information suggests disparities in race/ethnicity, gender or age.
- review relevant agency personnel operations, policies, and procedures (e.g., performance management, recruitment and hiring practices, and promotion) to determine whether adequate controls are established to prevent and detect bias or discrimination
- assess the agency's efforts to respond to complaints, employee satisfaction survey results, or other potential indications of bias or discrimination and to increase diversity throughout the agency
- evaluate the Office of Minority and Women Inclusion's (OMWI) role and involvement in monitoring the impact of the Board's personnel policies on minorities and women, as well as monitoring the Board's efforts to increase diversity in senior management positions
- identify factors that may impact the Board's ability to increase diversity in senior management positions

Subject: Board-CFPB OIG Report on Board Diversity and Inclusion

Hi Jennifer:

Please find attached our final report, "The Board Can Enhance Its Diversity and Inclusion Efforts," dated March 31, 2015. A hard copy will follow. This report responds to a March 24, 2014, letter requesting that we evaluate whether the Board's personnel practices and policies have created an unfair or discriminatory workplace for minorities and women at the Board and to assess the roles and operations of the Board's Office of Minority and Women Inclusion in dealing with personnel matters. This report will be posted on our website on Friday, April 3. We ask that you not release the report outside your office until it is available on our website.

Let me know if you have any questions.

Thanks,

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☑ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

Project name: 2014 Congressional Request on the Board's Personnel Practices

Individual's name: (b) (6)

OFFICE OF INSPECTOR GENERAL
BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM
CONSUMER FINANCIAL PROTECTION BUREAU
WASHINGTON, DC 20551

NON-DISCLOSURE AGREEMENT

I, (b) (6) understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence*, and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☒ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

NON-DISCLOSURE AGREEMENT

I, (b) (6) , understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☑ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

I have not identified any threats to my independence.

I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☑ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

NON-DISCLOSURE AGREEMENT

I, (b) (6) , understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch,* issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation,* issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☒ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

NON-DISCLOSURE AGREEMENT

I, (b) (6) _____, understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☒ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☑ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

NON-DISCLOSURE AGREEMENT

I, (b) (6) , understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☒ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

NON-DISCLOSURE AGREEMENT

I, (b) (6) _____, understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☑ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

NON-DISCLOSURE AGREEMENT

I, (b) (6) _____, understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration (b) (6) this NDA is terminated in writing by the OIG.

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence,* and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☒ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

CONSUMER FINANCIAL PROTECTION BUREAU
WASHINGTON, DC 20551

NON-DISCLOSURE AGREEMENT

I, (b) (6) _____, understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

Statement of Independence on Individual Projects

The Office of Inspector General (OIG) and its staff and contractors must be independent in all matters relating to audit, inspection, and evaluation work. OIG employees and contractors who are engaged in audits, inspections, or evaluations are to comply with the OIG policy AE-001, *Independence*, and conduct themselves in a manner consistent with the Board of Governors of the Federal Reserve System's (Board) and the OIG's core values; the Board's *Principles of Ethical Conduct*; the *Standards of Ethical Conduct for Employees of the Executive Branch*, issued by the U.S. Office of Government Ethics; the generally accepted government auditing standards (GAGAS), issued by the Comptroller General of the United States; *Quality Standards for Inspection and Evaluation*, issued by the Council of the Inspectors General on Integrity and Efficiency; and any other standards applicable to their project. OIG employees and contractors must take precautions to ensure that their conduct is perceived as being independent, professional, and appropriate and are not to become involved in situations that impair independence or give the appearance that impairment to independence exists.

Independence comprises independence of mind and independence in appearance. Independence of mind is the state of mind that permits the performance of an audit without being affected by influences that compromise professional judgment, thereby allowing an individual to act with integrity and exercise objectivity and professional skepticism. Independence in appearance is the absence of circumstances that would cause a reasonable and informed third party, having knowledge of the relevant information, to reasonably conclude that the integrity, objectivity, or professional skepticism of an audit organization or member of the audit team had been compromised (GAGAS 3.03).

GAGAS establishes the conceptual framework (see GAGAS 3.07–3.26 and appendix II) that OIG employees and contractors must use to identify and evaluate threats to independence given the circumstances of their work. Whether independence is impaired depends on the nature of the threat, whether the threat is of such significance that it would compromise an auditor's professional judgment or create the appearance that the auditor's professional judgment may be compromised, and the specific safeguards applied to eliminate the threat or reduce it to an acceptable level. GAGAS provides broad categories of threats (GAGAS 3.14) and examples of circumstances that create threats to independence (GAGAS A3.02–A3.09) and it describes safeguards that may be effective in certain circumstances (GAGAS 3.16–3.19).

Consistent with GAGAS 3.21, 3.64, and 3.65, auditors use professional judgment in applying the conceptual framework to determine independence in a given situation. When identifying and evaluating threats to independence, OIG employees and contractors must consider the broad

categories of threats to independence and the example safeguards provided in GAGAS, as well as the unique circumstances of the project. In addition to the GAGAS examples, specific situations that threaten independence and must be reported to the project manager or an appropriate official if the project manager is not available include the following:

- financial interest that is direct, or is significant or material though indirect, in the audited entity or program
- seeking employment with the division or program area to be reviewed or under review (including the time period leading up to the submission of a job application)
- preconceived ideas toward individuals, groups, organizations, or objectives of a particular program that could bias the project
- official, professional, personal, financial, or any kind of relationship that might cause an OIG employee or contractor to limit the extent of his or her inquiry, to limit disclosure, or to weaken or slant findings in any way
- external interference or influence that improperly or imprudently limits or modifies the scope of project work

When these or any other apparent or potential threats to independence are identified, the individual must immediately and fully disclose the situation to the project manager. The project manager, in consultation with the applicable Senior OIG Manager and Associate Inspector General, must determine whether identified threats to independence are significant and whether they can be reduced to an acceptable level with the imposition of safeguards. Any disclosed threats to independence and applied safeguards must be documented on this form (GAGAS 3.24). If the disclosed threats to independence are deemed insignificant, the basis for that determination must be documented on this form.

Failure to comply with the OIG's policies and procedures regarding independence may result in adverse or disciplinary action against the individual, up to and including termination, consistent with applicable Board policy.

Instructions

This form, which documents compliance with applicable independence standards, is to be completed at the start of each project by OIG or contractor project team members, as well as any OIG staff members who substantially contribute to the project in accordance with the OIG's *Independence* policy. Generally, the project's start date refers to the date the project is initiated in the audit system. A new form must be completed when circumstances change or when threats to independence arise that impact the individual's independence. In addition, this form must be completed by OIG referencers prior to their involvement in the project. The completed forms are maintained as electronic workpapers in the audit systems.

Certification

I certify that I have read and understand the above, as well as the OIG's *Independence* policy and GAGAS independence standards. With regard to the assigned project, I have evaluated threats to my independence, both independence of mind and in appearance, and attest that (select one):

☑ I have not identified any threats to my independence.

☐ I have identified threats to independence and applied safeguards, as described below.

Describe any threats to independence identified and safeguards applied (attach additional page if necessary).

☐ As a **referencer** for this project, I certify that I have not identified any threats to my independence that would prevent me from objectively performing the independent reference review.

I also agree to reevaluate my independence whenever my assignment is changed or whenever my circumstances change while working on this project. If changes affecting either my independence or my objectivity regarding this project occur subsequent to the completion of this form, I will immediately notify the project manager or an appropriate official if the project manager is not available.

I, (b) (6) _____, understand that, in the course of performing work for the Office of Inspector General (OIG) of the Board of Governors of the Federal Reserve System (Board) and the Consumer Financial Protection Bureau (CFPB), I may come into possession of or obtain knowledge of information of the OIG, the Board, the Federal Open Market Committee (FOMC), the Federal Reserve Banks, or the CFPB that is not public or that has not and is not required by law to be made public, including, for example, information that is designated as restricted, controlled, proprietary, confidential, confidential supervisory, or personnel (collectively, "*Confidential Information*"). Confidential Information shall include, but is not limited to (1) information pertaining to the security arrangements and strategies of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB (including information describing security controls related to information technology infrastructure such as network architecture and specific systems, applications, and databases); (2) economic data; (3) financial, statistical, and personnel data pertaining to the OIG, Board, FOMC, Federal Reserve Banks, CFPB, or other financial institutions; (4) financial, statistical, personnel planning and similar information relating to past, present, or future activities of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB; (5) pre-decisional deliberative information and data; (6) law enforcement privileged information; (7) attorney-client privileged information; (8) personally identifiable information; (9) trade-secret information; and (10) non-public information included in the files of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB.

Confidential Information does not include information that (1) is public; (2) is or becomes publicly available without breach by me of this Non-Disclosure Agreement ("*NDA*"); (3) was rightfully received by me without obligation of confidentiality; or (4) was developed by me independently of any disclosures to me made by the OIG, Board, FOMC, Federal Reserve Banks, or CFPB. Except for information I receive that is not Confidential Information, I will treat all information I receive from the OIG, Board, FOMC, Federal Reserve Banks, or CFPB as Confidential Information, regardless of the manner or form in which the information is transmitted or accessible. In addition, I will also treat the advice, deliverables, products, outputs, or similar items I provide or produce while working with the OIG ("*Product Information*") as Confidential Information until such time as the OIG informs me in writing that such Product Information is public.

Thus, I agree to the following terms:

1. I will keep in confidence all Confidential Information that may be acquired in connection with or as a result of my responsibilities. I will not, at any time, either during or after my work with the OIG, make public or otherwise communicate or disclose Confidential Information to anyone other than authorized personnel of the OIG, Board, FOMC, Federal Reserve Banks, or CFPB, without the OIG's prior written consent. (The OIG will coordinate and obtain the necessary approval(s) from the Board, the FOMC, the Federal Reserve Banks, or the CFPB, as applicable.)

2. I will use Confidential Information solely in connection with my responsibilities in working for the OIG. I will not directly or indirectly use Confidential Information for my private gain or for the private gain of another person or entity at any time, either during or after termination of my work with the OIG.

3. I will inform the OIG of any external requests or demands for disclosure of Confidential Information, and I will refer all such demands and requests for disclosures, including but not limited to subpoenas, to the OIG.

4. Should a question arise as to whether particular information is Confidential Information, I will immediately contact the OIG and seek a determination as to the information's status. Until a determination has been made by the OIG (after coordination with the Board, FOMC, Federal Reserve Banks, or CFPB, as applicable), I shall treat it as Confidential Information in accordance with this NDA.

5. At all times, including during and after my work with the OIG, I will take all necessary steps to protect Confidential Information subject to this NDA.

6. Upon completion, expiration, or termination of my services, unless I am instructed otherwise by the OIG, I will promptly dispose of all Confidential Information in my possession in whatever manner is approved by the OIG for the disposal of such information, which may include the return of Confidential Information to the OIG.

7. I understand that I am prohibited from releasing any publicity or advertising regarding the work I perform for the OIG and from using the name or insignia of the OIG, Board, FOMC, CFPB, Federal Reserve Banks, or the Federal Reserve System, or any variation or adaptation thereof, for any commercial, advertisement, promotional, or endorsement purposes, unless the OIG and the Board's Chief Operating Officer (or his/her designee) has given prior written consent for such release or use.

8. I agree and acknowledge that the disclosure or use of any Confidential Information in breach of this NDA would cause irreparable harm to the OIG, Board, FOMC, CFPB, or Federal Reserve Banks. Accordingly, in the event of such use or disclosure, I understand that I may be subject to legal or other action, which may include termination of my work with the OIG and referral for criminal prosecution, if appropriate.

9. If I suspect that any Confidential Information to which I am given access is or may have been lost or disclosed without authorization, I will immediately notify the OIG.

I understanding that this NDA, all of its terms and conditions, shall remain in effect following the expiration or termination of my work with the OIG until this NDA is terminated in writing by the OIG.

Good afternoon,

Attached is our final report titled *The Board Can Enhance Its Diversity and Inclusion Efforts*, OIG Report No. 2015-MO-B-006. It includes recommendations designed to improve the monitoring and promotion of diversity and inclusion at the Board, as well as strengthen related controls.

We will be providing the report to the requesters and the Chairman of the House Financial Services Committee later today and plan to post the report on our public website on April 3, 2015.

We appreciate the cooperation that we received during the audit. If you have any questions or wish to discuss this report further, please contact me at 202-973-5024, or Timothy Rogers, Senior OIG Manager for Management and Operations at 202-973-5042.

RESTRICTED FR

Restricted-FR

Good afternoon,

We are providing the attached discussion draft report on our audit related to the Board's diversity and inclusion efforts, *The Board Can Enhance its Diversity and Inclusion Efforts,* for your review. Our report is in response to the congressional letter that we received in March 2014 requesting our review of areas within the Board related to diversity and inclusion, including performance management, employee complaint handling, and recruiting and hiring, among others. The report includes recommendations designed to enhance and promote diversity and inclusion, as well as to strengthen related controls. The discussion draft will be used to facilitate our exit conference, to be scheduled for next week. Should you have any questions, please contact Anna Saez, OIG Manager, at 202-973-5027, or me at 202-973-5042.

Because the draft report is still subject to revision, please appropriately safeguard the report to prevent premature disclosure. We appreciate the cooperation we have received from many staff throughout the Board, and look forward to meeting with you to discuss the diversity and inclusion draft report.

Regards,

Tim Rogers

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

September 2, 2014

MEMORANDUM

TO: Distribution List

FROM: Timothy Rogers
Senior OIG Manager for Management and Operations
Office of Audits and Evaluations

SUBJECT: The OIG's Audit of Workplace Diversity at the Board: Request for Input on Factors Related to Ensuring Diversity

The Office of Inspector General is conducting an audit in response to a letter from the House Committee on Financial Services. The letter requests that our office review activities related to workplace diversity and inclusion at the Board. Our audit objective is to assess the Board's personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce. Our announcement memorandum, with the committee's request letter attached, is provided as an attachment to this memorandum.

As part of our review, we are identifying factors that may affect the Board's ability to increase diversity in senior management, as well as understanding the role and involvement of the Office of Minority and Women Inclusion (OMWI) in monitoring the effect of the Board's personnel policies on minorities and women. We have been working with OMWI, the Equal Employment Opportunity (EEO) office, and human resources directly, but we also believe that our audit would be enhanced if we obtained the views of the agency's senior management on the following questions:

(b) (5)

(b) (5)

[redacted]

Because of the limited time we have to respond to the House Committee on Financial Services, our team would like to schedule a meeting in early September to discuss these questions with you or your designee. Should a meeting not be feasible, a conference call or an e-mail with responses to our questions is also suitable. Ideally, we would like your input on the questions above by September 9, 2014. Anna Saez, OIG Manager, is overseeing the project. Should you have any questions, feel free to contact Anna at 202-973-5027 or me at 202-973-5042.

Thank you for your assistance with this effort.

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

April 25, 2014

MEMORANDUM

TO: Donald Hammond
Chief Operating Officer

FROM: Timothy Rogers
Senior OIG Manager for Management and Operations
Office of Audits and Evaluations

SUBJECT: Congressional Request Regarding the Board's Diversity and Inclusion Processes

In response to a recent letter from the House Committee on Financial Services (attachment A), the Office of Inspector General is initiating an audit of the Board of Governors of the Federal Reserve System's (Board) activities related to diversity and inclusion processes. The objective of this audit is to assess the Board's personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce.

To answer our objective, we plan to

- analyze information related to trend statistics, such as performance management results and promotions for minority and women employees, informal and formal equal employment opportunity complaint statistics, and employee satisfaction survey results

- review relevant Board personnel operations, policies, and procedures, such as those related to performance management, to determine whether adequate controls are established to prevent and detect bias or discrimination

- assess the Board's efforts to respond to complaints, employee satisfaction survey results, or other potential indications of bias and to increase diversity in management

- evaluate the Office of Minority and Women Inclusion's role and involvement in monitoring the impact of the Board's personnel policies on minorities and women, as well as monitoring the agency's efforts to increase diversity in senior management positions

- identify any factors that may impact the Board's ability to increase diversity in senior management positions

Our scope will include personnel activities that took place from January 2011 through December 2013, as well as changes to policies and procedures since December 2013.

We will contact your office shortly to schedule an entrance conference to further discuss our planned work in more detail. Attachment B contains our initial list of documents that we are requesting to assist us in addressing our objective. Please provide the documents at your earliest convenience. If you have any questions concerning this audit, please contact Anna Saez, OIG Manager, at 202-973-5027 or me at 202-973-5042.

Committee on Financial Services
Washington, D.C. 20515

March 24, 2014

Inspector General Mark Bialek
Board of Governors of the Federal Reserve System
Office of Inspector General
20th and C Streets N.W.
Mail Stop 300
Washington, DC 20551

Dear Inspector General Bialek:

We write to request that the Office of the Inspector General (OIG) for the Board of Governors of the Federal Reserve System (FRS) review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Federal Reserve System's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Federal Reserve System or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Sincerely,

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

September 2, 2014

MEMORANDUM

TO: Scott Alvarez
General Counsel, Legal Division
Board of Governors of the Federal Reserve System

FROM: Timothy Rogers
Senior OIG Manager for Management and Operations
Office of Audits and Evaluations

SUBJECT: The OIG's Audit of Workplace Diversity at the Board: Request for Input on Factors Related to Ensuring Diversity

The Office of Inspector General is conducting an audit in response to a letter from the House Committee on Financial Services. The letter requests that our office review activities related to workplace diversity and inclusion at the Board. Our audit objective is to assess the Board's personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce. Our announcement memorandum, with the committee's request letter attached, is provided as an attachment to this memorandum.

As part of our review, we are identifying factors that may affect the Board's ability to increase diversity in senior management, as well as understanding the role and involvement of the Office of Minority and Women Inclusion (OMWI) in monitoring the effect of the Board's personnel policies on minorities and women. We have been working with OMWI, the Equal Employment Opportunity (EEO) office, and human resources directly, but we also believe that our audit would be enhanced if we obtained the views of the agency's senior management on the following questions:

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

CONSUMER FINANCIAL PROTECTION BUREAU

April 25, 2014

MEMORANDUM

TO: Donald Hammond
Chief Operating Officer

FROM: Timothy Rogers
Senior OIG Manager for Management and Operations
Office of Audits and Evaluations

SUBJECT: Congressional Request Regarding the Board's Diversity and Inclusion Processes

In response to a recent letter from the House Committee on Financial Services (attachment A), the Office of Inspector General is initiating an audit of the Board of Governors of the Federal Reserve System's (Board) activities related to diversity and inclusion processes. The objective of this audit is to assess the Board's personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce.

To answer our objective, we plan to

- analyze information related to trend statistics, such as performance management results and promotions for minority and women employees, informal and formal equal employment opportunity complaint statistics, and employee satisfaction survey results

- review relevant Board personnel operations, policies, and procedures, such as those related to performance management, to determine whether adequate controls are established to prevent and detect bias or discrimination

- assess the Board's efforts to respond to complaints, employee satisfaction survey results, or other potential indications of bias and to increase diversity in management

- evaluate the Office of Minority and Women Inclusion's role and involvement in monitoring the impact of the Board's personnel policies on minorities and women, as well as monitoring the agency's efforts to increase diversity in senior management positions

- identify any factors that may impact the Board's ability to increase diversity in senior management positions

Our scope will include personnel activities that took place from January 2011 through December 2013, as well as changes to policies and procedures since December 2013.

We will contact your office shortly to schedule an entrance conference to further discuss our planned work in more detail. Attachment B contains our initial list of documents that we are requesting to assist us in addressing our objective. Please provide the documents at your earliest convenience. If you have any questions concerning this audit, please contact Anna Saez, OIG Manager, at 202-973-5027 or me at 202-973-5042.

Inspector General Mark Bialek
Board of Governors of the Federal Reserve System
Office of Inspector General
20th and C Streets N.W.
Mail Stop 300
Washington, DC 20551

Dear Inspector General Bialek:

We write to request that the Office of the Inspector General (OIG) for the Board of Governors of the Federal Reserve System (FRS) review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Federal Reserve System's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Federal Reserve System or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Sincerely,

OFFICE OF INSPECTOR GENERAL

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

Office of Audits and Evaluations

SUBJECT: Congressional Request Regarding the Board's Diversity and Inclusion Processes

In response to a recent letter from the House Committee on Financial Services (attachment A), the Office of Inspector General is initiating an audit of the Board of Governors of the Federal Reserve System's (Board) activities related to diversity and inclusion processes. The objective of this audit is to assess the Board's personnel operations and other efforts to provide for equal employment opportunities, including equal opportunity for minorities and women to obtain senior management positions, and for racial, ethnic, and gender diversity in the workforce.

To answer our objective, we plan to

- analyze information related to trend statistics, such as performance management results and promotions for minority and women employees, informal and formal equal employment opportunity complaint statistics, and employee satisfaction survey results

- review relevant Board personnel operations, policies, and procedures, such as those related to performance management, to determine whether adequate controls are established to prevent and detect bias or discrimination

- assess the Board's efforts to respond to complaints, employee satisfaction survey results, or other potential indications of bias and to increase diversity in management

- evaluate the Office of Minority and Women Inclusion's role and involvement in monitoring the impact of the Board's personnel policies on minorities and women, as well as monitoring the agency's efforts to increase diversity in senior management positions

- identify any factors that may impact the Board's ability to increase diversity in senior management positions

Our scope will include personnel activities that took place from January 2011 through December 2013, as well as changes to policies and procedures since December 2013.

We will contact your office shortly to schedule an entrance conference to further discuss our planned work in more detail. Attachment B contains our initial list of documents that we are requesting to assist us in addressing our objective. Please provide the documents at your earliest convenience. If you have any questions concerning this audit, please contact Anna Saez, OIG Manager, at 202-973-5027 or me at 202-973-5042.

March 24, 2014

Inspector General Mark Bialek
Board of Governors of the Federal Reserve System
Office of Inspector General
20th and C Streets N.W.
Mail Stop 300
Washington, DC 20551

Dear Inspector General Bialek:

We write to request that the Office of the Inspector General (OIG) for the Board of Governors of the Federal Reserve System (FRS) review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Federal Reserve System's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Federal Reserve System or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Sincerely,

PSSC:D.1 PRG

Good Afternoon,

We are providing for your comment the attached draft report on our audit of the Board's diversity and inclusion efforts. We greatly appreciate the cooperation and support provided by you and your staff during this audit. The Congressional requestor for this audit has asked that we issue this report by March 31, so we are requesting you provide your written comments by Thursday, March 26, 2015. If you or your staff have any questions, please feel free to contact me or Tim Rogers, Senior OIG Manager, at 202-973-5042.

Thank you,
Melissa

MEMORANDUM

TO: Audit of the Board's Diversity and Inclusion Processes Audit File

FROM: Kimberly Perteet

CC: Anna Saez

SUBJECT: OIG's Analysis of the Board's MD 715 Requirements for Barrier Analysis

The MD-715 states that agencies must regularly evaluate their employment practices to identify barriers to equality of opportunity for all individuals. Where such barriers are identified, agencies must take measures to eliminate them. With these steps, agencies will ensure that all persons are provided opportunities to participate in the full range of employment opportunities and achieve to their fullest potential.

We identified in the Board's annual MD-715 reports for 2011-2013, the Board reports its identification of barriers to equal employment opportunity and its plans to eliminate such barriers. See pages 5- 48 ,2011 E.3.58 2012 E.3.59 2013 E.3.60 .

Good afternoon,

The Office of Inspector General is conducting an audit in response to a letter from the House Committee on Financial Services. The letter requests that our office review activities related to workplace diversity and inclusion at the Board. As described in the attached memorandum, we are seeking input from the Board's division directors on factors that may affect the Board's ability to increase diversity in senior management, to include the role of the Office of Minority and Women Inclusion. Included in the attached is a copy of our original announcement letter, as well the congressional request. Should you have any questions you may contact Anna Saez, OIG Manager, at 202-973-5027, or me at 202-973-5042. We appreciate your assistance in this effort.

Regards,

Tim Rogers

Summary		Detail
Assigned To:	SMN	*Criteria:*
Prepared By:	SMN, 3/10/2015	GAGAS Appendix A, Section 6.04 - Types of Evidence
Reviewed By:	KLP, 3/10/2015	A6.04 In terms of its form and how it is collected, evidence may be categorized as physical, documentary, or testimonial. Physical evidence is obtained by auditors' direct inspection or observation of people, property, or events. Such evidence may be documented in summary memos, photographs, videos, drawings, charts, maps, or physical samples. Documentary evidence is obtained in the form of already existing information such as letters, contracts, accounting records, invoices, spreadsheets, database extracts, electronically stored information, and management information on performance. Testimonial evidence is obtained through inquiries, interviews, focus groups, public forums, or questionnaires. Auditors frequently use analytical processes including computations, comparisons, separation of information into components, and rational arguments to analyze any evidence gathered to determine whether it is sufficient and appropriate. The strength and weakness of each form of evidence depends on the facts and circumstances associated with the evidence and professional judgment in the context of the audit objectives.

Summary		Detail
Procedure Step:	(b) (5)	(b) (5)
Type:		*Criteria:*
Assigned To:	BPM	GAGAS Standards 6.56 Auditors must obtain sufficient, appropriate evidence to provide a reasonable basis for their findings and conclusions. 6.57 The concept of sufficient, appropriate evidence is integral to an audit. Appropriateness is the measure of the quality of evidence that encompasses its relevance, validity, and reliability in providing support for findings and conclusions related to the audit objectives. In assessing the overall appropriateness of evidence, auditors should assess whether the evidence is relevant, valid, and reliable. Sufficiency is a measure of the quantity of evidence used to support the findings and conclusions related to the audit objectives. In assessing the sufficiency of evidence, auditors should determine whether enough evidence has been obtained to persuade a knowledgeable person that the findings are reasonable.

D.1.PRG - Reporting *Procedure Step:* Prepare Draft Reports *Type:* Reporting *Assigned To:* SMN *Prepared By:* SMN, 4/1/2015 *Reviewed By:* KLP, 4/1/2015 PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	*Purpose:* (b) (5) *Criteria:* GAGAS 7.03, 7.08-7.31 7.03 Auditors must issue audit reports communicating the results of each completed performance audit. 7.08 Auditors should prepare audit reports that contain (1) the objectives, scope, and methodology of the audit; (2) the audit results, including findings, conclusions, and recommendations, as appropriate; (3) a statement about the auditors' compliance with GAGAS; (4) a summary of the views of responsible officials; and (5) if applicable, the nature of any confidential or sensitive information omitted. 7.09 Auditors should include in the report a description of the audit objectives and the scope and methodology used for addressing the audit objectives. Report users need this information to understand the purpose of the audit, the nature and extent of the audit work performed, the context and perspective regarding what is reported, and any significant limitations in audit objectives, scope, or methodology. 7.10 Audit objectives for performance audits may vary widely. Auditors should communicate audit objectives in the audit report in a clear, specific, neutral, and unbiased manner that includes relevant assumptions. When audit objectives are limited but broader objectives could be inferred by users, auditors should state in the audit report that certain issues were outside the scope of the audit in order to avoid potential misunderstanding.

Summary	Detail
	7.11 Auditors should describe the scope of the work performed and any limitations, including issues that would be relevant to likely users, so that they could reasonably interpret the findings, conclusions, and recommendations in the report without being misled. Auditors should also report any significant constraints imposed on the audit approach by information limitations or scope impairments, including denials or excessive delays of access to certain records or individuals. 7.12 In describing the work conducted to address the audit objectives and support the reported findings and conclusions, auditors should, as applicable, explain the relationship between the population and the items tested; identify organizations, geographic locations, and the period covered; report the kinds and sources of evidence; and explain any significant limitations or uncertainties based on the auditors' overall assessment of the sufficiency and appropriateness of the evidence in the aggregate. 7.13 In reporting audit methodology, auditors should explain how the completed audit work supports the audit objectives, including the evidence gathering and analysis techniques, in sufficient detail to allow knowledgeable users of their reports to understand how the auditors addressed the audit objectives. Auditors may include a description of the procedures performed as part of their assessment of the sufficiency and appropriateness of information used as audit evidence. Auditors should identify significant assumptions made in conducting the audit; describe comparative techniques applied; describe the criteria used; and, when sampling significantly supports the auditors' findings, conclusions, or recommendations, describe the sample design and state why the design was chosen, including whether the results can be projected to the intended population. 7.14 In the audit report, auditors should present sufficient, appropriate evidence to support the findings and conclusions in relation to the audit objectives. Clearly developed findings[164] assist management and oversight officials of the audited entity in understanding the need for taking corrective action. If auditors are able to sufficiently develop the elements of a finding, they should provide recommendations for corrective action if they are significant within the context of the audit objectives. However, the extent to which the elements for a finding are developed depends on the audit

Summary	Detail
	objectives. Thus, a finding or set of findings is complete to the extent that the auditors address the audit objectives. 7.15 Auditors should describe in their report limitations or uncertainties with the reliability or validity of evidence if (1) the evidence is significant to the findings and conclusions within the context of the audit objectives and (2) such disclosure is necessary to avoid misleading the report users about the findings and conclusions. As discussed in paragraphs 6.69 through 6.72, even though the auditors may have some uncertainty about the sufficiency or appropriateness of some of the evidence, they may nonetheless determine that in total there is sufficient, appropriate evidence given the findings and conclusions. Auditors should describe the limitations or uncertainties regarding evidence in conjunction with the findings and conclusions, in addition to describing those limitations or uncertainties as part of the objectives, scope, and methodology. Additionally, this description provides report users with a clear understanding regarding how much responsibility the auditors are taking for the information. 7.16 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value, or other measures. If the results cannot be projected, auditors should limit their conclusions appropriately. 7.17 Auditors may provide background information to establish the context for the overall message and to help the reader understand the findings and significance of the issues discussed. Appropriate background information may include information on how programs and operations work; the significance of programs and operations (e.g., dollars, impact, purposes, and past audit work, if relevant); a description of the audited entity's responsibilities; and explanation of terms, organizational structure, and the statutory basis for the program and operations. When reporting on the results of their work, auditors should disclose significant facts relevant to the objectives of their work and known to them which, if not disclosed, could mislead knowledgeable users, misrepresent the results, or conceal significant improper or illegal practices.

Summary	Detail
	7.18 Auditors should also report deficiencies in internal control, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that have occurred or are likely to have occurred and are significant within the context of the audit objectives. 7.19 Auditors should include in the audit report (1) the scope of their work on internal control and (2) any deficiencies in internal control that are significant within the context of the audit objectives and based upon the audit work performed.165 When auditors detect deficiencies in internal control that are not significant to the objectives of the audit but warrant the attention of those charged with governance, they should include those deficiencies either in the report or communicate those deficiencies in writing to audited entity officials. Auditors should refer to that written communication in the audit report if the written communication is separate from the audit report. When auditors detect deficiencies that do warrant the attention of those charged with governance, the determination of whether and how to communicate such deficiencies to audited entity officials is a matter of professional judgment. 7.20 In a performance audit, auditors may conclude that identified deficiencies in internal control that are significant within the context of the audit objectives are the cause of deficient performance of the program or operations being audited. In reporting this type of finding, the internal control deficiency would be described as the cause. **7.21 When auditors conclude, based on sufficient, appropriate evidence, that fraud,166 noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse167 either has occurred or is likely to have occurred which is significant within the context of the audit objectives, they should report the matter as a finding. Whether a particular act is, in fact, fraud or noncompliance with provisions of laws, regulations, contracts or grant agreements may have to await final determination by a court of law or other adjudicative body.** 7.22 When auditors detect instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that are not significant within the context of the audit objectives but warrant

Summary	Detail
	the attention of those charged with governance, they should communicate those findings in writing to audited entity officials. When auditors detect any instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment. 7.23 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings and, for example, report only on information that is already a part of the public record. 7.24 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances. a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties. b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is significant to the findings and conclusions and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and appropriate steps as soon as practicable after the auditors' communication

Summary	Detail
	with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency. 7.25 The reporting in paragraph 7.24 is in addition to any legal requirements for the auditor to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the audit prior to its completion. Internal audit organizations do not have a duty to report outside the audited entity unless required by law, rule, regulation, or policy.168 7.26 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraphs 7.24 and 7.25. 7.27 Auditors should report conclusions based on the audit objectives and the audit findings. Report conclusions are logical inferences about the program based on the auditors' findings, not merely a summary of the findings. The strength of the auditors' conclusions depends on the sufficiency and appropriateness of the evidence supporting the findings and the soundness of the logic used to formulate the conclusions. Conclusions are more compelling if they lead to the auditors' recommendations and convince the knowledgeable user of the report that action is necessary. 7.28 Auditors should recommend actions to correct deficiencies and other findings identified during the audit and to improve programs and operations when the potential for improvement in programs, operations, and performance is substantiated by the reported findings and conclusions. Auditors should make recommendations that flow logically from the findings and conclusions, are directed at resolving the cause of identified deficiencies and findings, and clearly state the actions recommended. 7.29 Effective recommendations encourage improvements in the conduct of government programs and operations. Recommendations are effective when they are addressed to parties that have the authority to act and when the recommended actions are specific, practical, cost effective, and

Summary	Detail
	measurable. 7.30 When auditors comply with all applicable GAGAS requirements, they should use the following language, which represents an unmodified GAGAS compliance statement, in the audit report to indicate that they performed the audit in accordance with GAGAS. We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. 7.31 When auditors do not comply with all applicable GAGAS requirements, they should include a modified GAGAS compliance statement in the audit report. For performance audits, auditors should use a statement that includes either (1) the language in 7.30, modified to indicate the requirements that were not followed or (2) language that the auditor did not follow GAGAS.170 *Source:* See record of work done. *Scope:* Audit of the Board's diversity and inclusion processes. *Details:* (b) (5)

	reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings and, for example, report only on information that is already a part of the public record. 7.24 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances. a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties. b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is significant to the findings and conclusions and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding agency. 7.25 The reporting in paragraph 7.24 is in addition to any legal requirements for the auditor to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the audit prior to its completion. Internal audit organizations do not have a duty to report outside the audited entity unless required by law, rule, regulation, or policy.168 7.26 Auditors should obtain sufficient, appropriate evidence, such as confirmation

Summary	Detail
	from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraphs 7.24 and 7.25. 7.27 Auditors should report conclusions based on the audit objectives and the audit findings. Report conclusions are logical inferences about the program based on the auditors' findings, not merely a summary of the findings. The strength of the auditors' conclusions depends on the sufficiency and appropriateness of the evidence supporting the findings and the soundness of the logic used to formulate the conclusions. Conclusions are more compelling if they lead to the auditors' recommendations and convince the knowledgeable user of the report that action is necessary. 7.28 Auditors should recommend actions to correct deficiencies and other findings identified during the audit and to improve programs and operations when the potential for improvement in programs, operations, and performance is substantiated by the reported findings and conclusions. Auditors should make recommendations that flow logically from the findings and conclusions, are directed at resolving the cause of identified deficiencies and findings, and clearly state the actions recommended. 7.29 Effective recommendations encourage improvements in the conduct of government programs and operations. Recommendations are effective when they are addressed to parties that have the authority to act and when the recommended actions are specific, practical, cost effective, and measurable. 7.30 When auditors comply with all applicable GAGAS requirements, they should use the following language, which represents an unmodified GAGAS compliance statement, in the audit report to indicate that they performed the audit in accordance with GAGAS. We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our

Summary	Detail
	audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. 7.31 When auditors do not comply with all applicable GAGAS requirements, they should include a modified GAGAS compliance statement in the audit report. For performance audits, auditors should use a statement that includes either (1) the language in 7.30, modified to indicate the requirements that were not followed or (2) language that the auditor did not follow GAGAS.170 *Source:* Melissa Heist, Associate Inspector General for Audits and Evaluations *Scope:* Audit of the Board's diversity and inclusion processes. *Details:* *Record of Work Done:* Melissa Heist, Associate Inspector General for Audits and Evaluations issued the final report on 03/31/15. D.1.PRG - Reporting *Procedure Step:* Hard Copy Working Papers *Type:* Reporting *Assigned To:* *Prepared By:* SMN, 3/23/2015 *Reviewed By:* (None) PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	*Purpose:* Collect and provide all hardcopy workpapers to the OIG administrative assistant for filing. *Criteria:* GAGAS 6.79-6.85 6.79 Auditors must prepare audit documentation related to planning, conducting, and reporting for each audit. Auditors should prepare audit documentation in sufficient detail to enable an experienced auditor, having no previous connection to the audit, to understand from the audit documentation the nature, timing, extent, and results of audit procedures performed, the audit evidence obtained and its source and the conclusions reached, including evidence that supports the auditors' significant judgments and conclusions. An experienced auditor means an individual (whether internal or external to the audit organization) who possesses the competencies and skills that would have enabled him or her to conduct the performance audit. These competencies and skills include an understanding of (1) the performance audit processes, (2) GAGAS and applicable legal and regulatory requirements, (3) the subject matter associated with achieving the audit objectives, and (4) issues related to the audited entity's environment. 6.80 Auditors should prepare audit documentation that contains evidence that supports the findings, conclusions, and recommendations before they issue their report. 6.81 Auditors should design the form and content of audit documentation to meet the circumstances of the particular audit. The audit documentation constitutes the principal record of the work that the auditors have performed in accordance with

Summary	Detail
	standards and the conclusions that the auditors have reached. The quantity, type, and content of audit documentation are a matter of the auditors' professional judgment. 6.82 Audit documentation is an essential element of audit quality. The process of preparing and reviewing audit documentation contributes to the quality of an audit. Audit documentation serves to (1) provide the principal support for the auditors' report, (2) aid auditors in conducting and supervising the audit, and (3) allow for the review of audit quality. 6.83 Auditors should document159 the following: a. the objectives, scope, and methodology of the audit; b. the work performed and evidence obtained to support significant judgments and conclusions, including descriptions of transactions and records examined (for example, by listing file numbers, case numbers, or other means of identifying specific documents examined, but copies of documents examined or detailed listings of information from those documents are not required); and c. supervisory review, before the audit report is issued, of the evidence that supports the findings, conclusions, and recommendations contained in the audit report. 6.84 When auditors do not comply with applicable GAGAS requirements due to law, regulation, scope limitations, restrictions on access to records, or other issues impacting the audit, the auditors should document the departure from the GAGAS requirements and the impact on the audit and on the auditors' conclusions. This applies to departures from unconditional requirements and from presumptively mandatory requirements when alternative procedures performed in the circumstances were not sufficient to achieve the objectives of the standard.160 6.85 Underlying GAGAS audits is the premise that audit organizations in federal, state, and local governments and public accounting firms engaged to perform audits in accordance with GAGAS cooperate in auditing programs of common interest so that auditors may use others' work and avoid duplication of efforts. Subject to applicable laws and regulations, auditors should make appropriate individuals, as well as audit documentation, available upon request and in a timely manner to other

Summary	Detail
	auditors or reviewers to satisfy these objectives. The use of auditors' work by other auditors may be facilitated by contractual arrangements for GAGAS audits that provide for full and timely access to appropriate individuals, as well as audit documentation. *Source:* Hardcopy workpapers related to the audit. *Scope:* Audit of the Board's diversity and inclusion processes. *Details:* *Record of Work Done:* No hardcopy workpapers were retained for this audit. *Conclusion:* See record of work done. No exceptions noted. *Notes:* *Results 4:*

A.2.PRG - Admin Steps *Procedure Step:* Professional Competence *Type:* Preliminary *Assigned To:* SMN *Prepared By:* SMN, 3/27/2015 *Reviewed By:* KLP, 4/1/2015 PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	*Purpose:* Ensure staff assigned to the audit collectively possess adequate professional competence for the tasks required. *Criteria:* GAGAS 3.69-3.81, 6.12d, 6.45, and 6.51 **Competence** 3.69 The staff assigned to perform the audit must collectively possess adequate professional competence needed to address the audit objectives and perform the work in accordance with GAGAS. 3.70 The audit organization's management should assess skill needs to consider whether its workforce has the essential skills that match those necessary to perform the particular audit. Accordingly, audit organizations should have a process for recruitment, hiring, continuous development, assignment, and evaluation of staff to maintain a competent workforce. The nature, extent, and formality of the process will depend on various factors such as the size of the audit organization, its structure, and its work. 3.71 Competence is derived from a blending of education and experience. Competencies are not necessarily measured by years of auditing experience because such a quantitative measurement may not accurately reflect the kinds of experiences gained by an auditor in any given time period. Maintaining competence through a commitment to learning and development throughout an auditor's professional life is an important element for auditors. Competence enables an auditor to make sound professional judgments. **Technical Knowledge** 3.72 The staff assigned to conduct an audit in accordance with GAGAS should collectively possess the technical knowledge, skills, and experience necessary to be competent for the type of work being performed before

Summary	Detail
	beginning work on that audit. The staff assigned to a GAGAS audit should collectively possess a. knowledge of GAGAS applicable to the type of work they are assigned and the education, skills, and experience to apply this knowledge to the work being performed; b. general knowledge of the environment in which the audited entity operates and the subject matter; c. skills to communicate clearly and effectively, both orally and in writing; and d. skills appropriate for the work being performed; for example, skills in (1) statistical or nonstatistical sampling if the work involves use of sampling; (2) information technology if the work involves review of information systems; (3) engineering if the work involves review of complex engineering data; (4) specialized audit methodologies or analytical techniques, such as the use of complex survey instruments, actuarial-based estimates, or statistical analysis tests, as applicable; or (5) specialized knowledge in subject matters, such as scientific, medical, environmental, educational, or any other specialized subject matter, if the work calls for such expertise. **Additional Qualifications** 3.73 Auditors performing financial audits should be knowledgeable in U.S. generally accepted accounting principles (GAAP), or with the applicable financial reporting framework being used, and the American Institute of Certified Public Accountants' (AICPA) Statements on Auditing Standards (SAS)37and they should be competent in applying these SASs to the audit work. 3.74 Similarly, auditors performing attestation engagements should be knowledgeable in the AICPA general attestation standard related to criteria, the AICPA attestation standards for field work and reporting, and the related Statements on Standards for Attestation Engagements (SSAE),38 and they should be competent in applying these standards and SSAE to the

Summary	Detail
	attestation work.39 3.75 Auditors engaged to perform financial audits or attestation engagements should be licensed certified public accountants, persons working for a licensed certified public accounting firm or for a government auditing organization, or licensed accountants in states that have multi-class licensing systems that recognize licensed accountants other than certified public accountants. **Continuing Professional Education** 3.76 Auditors performing work in accordance with GAGAS, including planning, directing, performing audit procedures, or reporting on an audit conducted in accordance with GAGAS, should maintain their professional competence through continuing professional education (CPE). Therefore, each auditor performing work in accordance with GAGAS should complete, every 2 years, at least 24 hours of CPE that directly relates to government auditing, the government environment, or the specific or unique environment in which the audited entity operates. Auditors who are involved in any amount of planning, directing, or reporting on GAGAS audits and auditors who are not involved in those activities but charge 20 percent or more of their time annually to GAGAS audits should also obtain at least an additional 56 hours of CPE (for a total of 80 hours of CPE in every 2-year period) that enhances the auditor's professional proficiency to perform audits. Auditors required to take the total 80 hours of CPE should complete at least 20 hours of CPE in each year of the 2-year periods. Auditors hired or initially assigned to GAGAS audits after the beginning of an audit organization's 2-year CPE period should complete a prorated number of CPE hours. 3.77 CPE programs are structured educational activities with learning objectives designed to maintain or enhance participants' knowledge, skills, and abilities in areas applicable to performing audits. Determining what subjects are appropriate for individual auditors to satisfy both the 80-hour and the 24-hour requirements is a matter of professional judgment to be exercised by auditors in consultation with appropriate officials in their audit

Summary	Detail
	organizations. Among the considerations in exercising that judgment are the auditors' experience, the responsibilities they assume in performing GAGAS audits, and the operating environment of the audited entity. 3.78 Meeting CPE requirements is primarily the responsibility of individual auditors. The audit organization should have quality control procedures to help ensure that auditors meet the continuing education requirements, including documentation of the CPE completed. The Government Accountability Office (GAO) has developed guidance pertaining to CPE requirements to assist auditors and audit organizations in exercising professional judgment in complying with the CPE requirements. **CPE For Specialists** 3.79 The audit team should determine that external specialists assisting in performing a GAGAS audit are qualified and competent in their areas of specialization; however, external specialists are not required to meet the GAGAS CPE requirements. 3.80 The audit team should determine that internal specialists consulting on a GAGAS audit who are not involved in directing, performing audit procedures, or reporting on a GAGAS audit, are qualified and competent in their areas of specialization; however, these internal specialists are not required to meet the GAGAS CPE requirements. 3.81 The audit team should determine that internal specialists, who are performing work in accordance with GAGAS as part of the audit team, including directing, performing audit procedures, or reporting on a GAGAS audit, comply with GAGAS, including the CPE requirements.41 The GAGAS CPE requirements become effective for internal specialists when an audit organization first assigns an internal specialist to an audit. Because internal specialists apply specialized knowledge in government audits, training in their areas of specialization qualify under the requirement for 24 hours of CPE that directly relates to government auditing, the government environment, or the specific or unique environment in which the audited entity operates. **Planning** 6.12 During planning, auditors should also **(d)** assign sufficient staff and

Summary	Detail
	specialists with adequate collective professional competence and identify other resources needed to perform the audit; **Assigning Staff & Other Resources** 6.45 Audit management should assign sufficient staff and specialists with adequate collective professional competence to perform the audit. Staffing an audit includes, among other things: a. assigning staff and specialists with the collective knowledge, skills, and experience appropriate for the job, b. assigning a sufficient number of staff and supervisors to the audit, c. providing for on-the-job training of staff, and d. engaging specialists when necessary. **Written Audit Plan** 6.51 Auditors must prepare a written audit plan for each audit. The form and content of the written audit plan may vary among audits and may include an audit strategy, audit program, project plan, audit planning paper, or other appropriate documentation of key decisions about the audit objectives, scope, and methodology and the auditors' basis for those decisions. Auditors should update the plan, as necessary, to reflect any significant changes to the plan made during the audit. *Source:* (b) (5)

Entrance Conference for the Audit of the Board's Diversity and Inclusion Processes

Date: 5/12/2014

Participants:

- Donald Hammond, Chief Operating Officer, COO
- Michell Clark, Director, Management Division
- David Harmon, Deputy Director, Human Capital
- Shelia Clark, Program Director, Diversity and Inclusion
- Melissa Heist, Associate Inspector General, OIG
- Timothy Rogers, Senior Manager, OIG
- Kimberly Perteet, Senior Auditor, OIG
- Jina Hwang, Counsel, OIG
- Brian Murphy, Auditor, OIG
- Brandon Lee, Auditor, OIG

Meeting objective/Purpose:

The purpose of this meeting was to provide senior Management Division staff of objective, scope, methodology, and key dates related to the audit.

Minutes:

- The audit team presented an agenda and audit process documents.
- The team informed the auditees of the objective, scope and methodology.

B.1.PRG - Background\Planning *Procedure Step:* 1. (b) (5) *Type:* Planning *Assigned To:* KLP *Prepared By:* SPK, 3/26/2015 *Reviewed By:* KLP, 3/26/2015 PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	*Purpose:* (b) (5) *Criteria:* GAGAS 3.40 - 3.49, 7.04, 7.13 - 7.14 3.40 Routine activities performed by auditors that relate directly to the performance of an audit, such as providing advice and responding to questions as part of an audit, are not considered nonaudit services under GAGAS. Such routine activities generally involve providing advice or assistance to the entity on an informal basis as part of an audit. Routine activities typically are insignificant in terms of time incurred or resources expended and generally do not result in a specific project or engagement or in the auditors producing a formal report or other formal work product. However, activities such as financial statement preparation, cash to accrual conversions, and reconciliations are considered nonaudit services under GAGAS, not routine activities related to the performance of an audit, and are evaluated using the conceptual framework as discussed in paragraph 3.46. 3.41 Routine activities directly related to an audit include the following: a. providing advice to the audited entity on an accounting matter as an ancillary part of the overall financial audit; b. researching and responding to the audited entity's technical questions on relevant tax laws as an ancillary part of providing tax services; c. providing advice to the audited entity on routine business matters; d. educating the audited entity on matters within the technical expertise of the auditors; and readily available to the auditors, such as best practices and

Summary	Detail
	benchmarking studies. 3.42 An auditor who previously performed nonaudit services for an entity that is a prospective subject of an audit should evaluate the impact of those nonaudit services on independence before accepting an audit. If the nonaudit services were performed in the period to be covered by the audit, the auditor should (1) determine if the nonaudit service is expressly prohibited by GAGAS and, if not, (2) determine whether a threat to independence exists and address any threats noted in accordance with the conceptual framework. 3.43 Nonaudit services provided by auditors can impact independence of mind and in appearance in periods subsequent to the period in which the nonaudit service was provided. For example, if auditors have designed and implemented an accounting and financial reporting system that is expected to be in place for many years, a threat to independence in appearance for future financial audits or attestation engagements performed by those auditors may exist in subsequent periods. For recurring audits, having another independent audit organization perform an audit of the areas affected by the nonaudit service may provide a safeguard that allows the audit organization that provided the nonaudit service to mitigate the threat to its independence. Auditors use professional judgment to determine whether the safeguards adequately mitigate the threats. 3.44 An auditor in a government entity may be required to perform a nonaudit service that could impair the auditor's independence with respect to a required audit. If the auditor cannot, as a consequence of constitutional or statutory requirements over which the auditor has no control, implement safeguards to reduce the resulting threat to an acceptable level, or decline to perform or terminate a nonaudit service that is incompatible with audit responsibilities, the auditor should disclose the nature of the threat that could not be eliminated or reduced to an acceptable level and modify the GAGAS compliance statement accordingly. 3.45 By their nature, certain nonaudit services directly support the entity's operations and impair auditors' ability to maintain independence in mind and appearance. The nonaudit services discussed below are among those

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
	frequently requested of auditors working in a government environment. Some aspects of these services will impair an auditor's ability to perform audits for the entities for which the services are provided. The specific services indicated are not the only nonaudit services that would impair an auditor's independence. 3.46 Auditors may be able to provide nonaudit services in the broad areas indicated in paragraphs 3.49 through 3.58 without impairing independence if (1) the nonaudit services are not expressly prohibited, (2) the auditor has determined that the requirements for performing nonaudit services in paragraphs 3.34 through 3.44 have been met, and (3) any significant threats to independence have been eliminated or reduced to an acceptable level through the application of safeguards. Auditors should use the conceptual framework to evaluate independence given the facts and circumstances of individual services not specifically prohibited in this section. 3.47 For performance audits and agreed-upon procedures engagements, nonaudit services that are otherwise prohibited by GAGAS may be provided when such services do not relate to the specific subject matter of the engagement. 3.48 For financial statement audits and examination or review engagements, a nonaudit service performed during the period covered by the financial statements may not impair an auditor's independence with respect to those financial statements provided that the following conditions exist: a. the nonaudit service was provided prior to the period of professional engagement; b. the nonaudit service related only to periods prior to the period covered by the financial statements; and c. the financial statements for the period to which the nonaudit service did relate were audited by another auditor (or in the case of an examination or review engagement, examined, reviewed, or audited by another auditor as appropriate). **Management Responsibilities** **3.49** If performed on behalf of an audited entity by the entity's auditor, management responsibilities such as those listed in paragraph 3.36 would

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
	create management participation threats so significant that no safeguards could reduce them to an acceptable level. Consequently the auditor's independence would be impaired with respect to that entity. *Source:* FRB OIG House of Representatives Committee on Financial Services *Scope:* (b) (5) 2014 Board's Congressional Request -- Personnel activities from January 2011 to December 2013, and Changes to policies and procedures since December 2013. B.1.PRG - Background\Planning *Procedure Step:* 2. Understand the Program to be Audited *Type:* Planning *Assigned To:* BML *Prepared By:* BML, 5/20/2014 *Reviewed By:* KLP, 3/11/2015	*Purpose:* Review, as applicable, information explaining the program's applicable laws and regulations, goals and objectives, size (resource efforts), operations, outputs, and outcomes. *Criteria:* GAGAS 6.15 6.15 Obtaining an understanding of the program under audit helps auditors to assess the relevant risks associated with the program and the impact of the risks on the audit objectives, scope, and methodology. The auditors'

Summary	Detail
PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	understanding may come from knowledge they already have about the program or knowledge they gain from inquiries, observations, and reviewing documents while planning the audit. The extent and breadth of those inquiries and observations will vary among audits based on the audit objectives, as will the need to understand individual aspects of the program, such as the following: a. Provisions of laws, regulations, contracts and grant agreements: Government programs are usually created by law and are subject to specific laws and regulations. Laws and regulations usually set forth what is to be done, who is to do it, the purpose to be achieved, the population to be served, and related funding guidelines or restrictions. Government programs may also be subject to contracts or grant agreements. Thus, understanding the laws and legislative history establishing a program and the provisions of any contracts or grant agreements is essential to understanding the program itself. Obtaining that understanding is also a necessary step in identifying the provisions of laws, regulations, contracts, or grant agreements that are significant within the context of the audit objectives. b. Purpose and goals: Purpose is the result or effect that is intended or desired from a program's operation. Legislatures usually establish the program's purpose when they provide authority for the program. Entity officials may provide more detailed information on the program's purpose to supplement the authorizing legislation. Entity officials are sometimes asked to set goals for program performance and operations, including both output and outcome goals. Auditors may use the stated program purpose and goals as criteria for assessing program performance or may develop additional criteria to use when assessing performance. c. Internal control: Internal control, sometimes referred to as management control, in the broadest sense includes the plan, policies, methods, and procedures adopted by management to meet its missions, goals, and objectives. Internal control includes the processes for planning, organizing, directing, and controlling program operations. It includes the systems for measuring, reporting, and monitoring program performance. Internal

Summary	Detail
	control serves as a defense in safeguarding assets and in preventing and detecting errors; fraud; noncompliance with provisions of laws, regulations, contracts or grant agreements; or abuse. d. Inputs: Inputs are the amount of resources (in terms of money, material, personnel, etc.) that are put into a program. These resources may come from within or outside the entity operating the program. Measures of inputs can have a number of dimensions, such as cost, timing, and quality. Examples of measures of inputs are dollars spent, employee-hours expended, and square feet of building space. e. Program operations: Program operations are the strategies, processes, and activities management uses to convert inputs into outputs. Program operations may be subject to internal control. f. Outputs: Outputs represent the quantity of goods or services produced by a program. For example, an output measure for a job training program could be the number of persons completing training, and an output measure for an aviation safety inspection program could be the number of safety inspections completed. g. Outcomes: Outcomes are accomplishments or results of a program. For example, an outcome measure for a job training program could be the percentage of trained persons obtaining a job and still in the work place after a specified period of time. An example of an outcome measure for an aviation safety inspection program could be the percentage reduction in safety problems found in subsequent inspections or the percentage of problems deemed corrected in follow-up inspections. Such outcome measures show the progress made in achieving the stated program purpose of helping unemployable citizens obtain and retain jobs, and improving the safety of aviation operations. Outcomes may be influenced by cultural, economic, physical, or technological factors outside the program. Auditors may use approaches drawn from other disciplines, such as program evaluation, to isolate the effects of the program from these other influences. Outcomes also include unexpected and/or unintentional effects of a program, both positive and negative.

Summary	Detail
	Source: • Board internal website • FRB OIG *Scope:* (b) (5) *Details:* *Record of Work Done:* Background *Organization* **The Board of Governors of the Federal Reserve System (Board)** is a federal government agency. The Board is composed of seven members, who are appointed by the President of the United States and confirmed by the U.S. Senate. *Mission & Objectives* The Federal Reserve System is the central bank of the United States. It was founded by Congress in 1913 to provide the nation with a safer, more flexible, and more stable monetary and financial system. Over the years, its role in banking and the economy has expanded. FRB Mission ; B.1.86 *Organization*

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
	The Office of Diversity and Inclusion (OD&I) is comprised of the Equal Employment Opportunity office, Diversity and Inclusion, and The Office of Minority, Women, and Inclusion. Shelia Clark is the program Director and has 9 employees. Office of Diversity and Inclusion - Organizational ChartOffice of Diversity and Inclusion staff *Mission & Objectives* The mission of OD&I to provide equal opportunity for all qualified persons; to prohibit discrimination in employment and because of race, color, notational origin, disability, age, or sex; and to promote the full realization of equal employment opportunity. Additionally, the office provides oversight to the reserve banks. Some of the objectives of OD&I are (1) meet the spirit and intent of relevant laws and regulations, (2) develop standards for EEO and diversity in the workforce, (3) Monitor the Reserve Banks progress related to EEO and diversity, (4) advise the Board about the impact of policies related to minority and women businesses, (5) provide guidance to help resolve EEO matters, (6) assist procurement in developing standards for good-faith estimates related to minorities and women, (7) work with staff from BSR, Legal, and Consumer Affairs to assess diversity policies and practices, (8) provide oversight related to training on EEO and diversity, (9) support HR and procurement related to diversity and EEO objectives, (10) review legal precedents that could affect EEO and diversity, (11) provide leadership to employee advisory committees, (12) sponsor programs/awareness about inter-group relations, (13) evaluate the EEO information system, (14) implement outreach programs to high schools and colleges, (15) maintain relationships with organizations who are responsible for EEO, (16) establish a board evaluation process that will withstand external review, (17) work with reserve banks, and various entities to balance the autonomy of the reserve banks with the Board's oversight role. OD&I Mission and Objectives Laws, Regulations, and Policies *PMP*

Summary	Detail
	The purpose of the PMP process is to (1) continuously improve individual and organizational performance, (2) develop and motivate employees to become top performers and help the Board achieve its mission and purpose, and (3) inform various employment decisions. The performance ratings are extraordinary, outstanding, commendable, marginal, and unsatisfactory. To meet the goals of the PMP process, supervisors are responsible for creating performance standards, monitoring performance, and providing an employee with feedback on his or her performance. Board PMP Policy (Including Appeals Process) *EEO* The EEO policy is to provide equal opportunity in employment for all persons. The policy prohibits discrimination in employment on the basis of race, color, religion, sex, national origin, age, disability, or genetic information, and promotes the full realization of equal employment opportunity. Additionally, the Board complies with the following statues and any amendments: • Civil Rights Act of 1964 (title VII), • section 501 of the Rehabilitation Act of 1973, • the Age Discrimination in Employment Act of 1967 (ADEA), • the Equal Pay Act of 1963, the Genetic Information Nondiscrimination Act of 2008, and • the Uniformed Services Employment and Reemployment Rights Act of 1994 (USERRA) If an employee feels they have been discriminated against on the basis of race, color, religion, sex, national origin, disability, age, or genetic information, or subject to retaliation the employee may raise a complaint with the ODI office. The aggrieved person must contact an EEO counselor

Summary	Detail
	within 45 days of the date of the action. An employee or applicant for employment, who believes that he or she has been discriminated against on the basis of any application, membership, or service in the uniformed services, or subject to retaliation for engaging in protected activity, may raise any such complaint with the Department of Labor. Because the process for USERRA-related complaints differs from the process for complaints of other forms of discrimination, ODI does not counsel or provide any complaint processing for USERRA-related complaints. The Board has assigned managers and supervisors direct reasonability for implementation of EEO policies. The ODI director coordinates agency wide EEO procedures, advise the Board related to EEO laws, implementing other related Board policies, coordinating EEO complaint resolutions, and recommending corrective actions. Board EEO Policy *Dodd Frank Wall Street Reform* Section 342 of Dodd Frank established the Office of Minority and Women Inclusion (OMWI). Each agency was required to establish an OMWI, within 6 months of the Act date, related to matters of diversity in management, employment, and business activities. The Act outlines duties of the director to coordinate with the agency to design and implement related policies (such as increased minority owned and women owned business participation, EEO, and assessing diversity polices). The agencies are required to submit an annual report to congress related to amounts paid by contractors, percentage totals of those amounts, challenges faced, and any findings/recommendations. Lastly, the agency will is required to take affirmative action steps to promote diversity. Dodd_Frank_Act_Section_342 *OMWI Reprot April 2014* The Board's ODI office regularly releases a report to Congress related about the activities of the Office of Diversity and Inclusion. ODI strives to meet the "Essential Elements of a Model EEO Program" found in the Equal Employment Opportunity Commission's (EEOC) Management Directive 715. The Board reviews quarterly employment data to determine any adverse impact based on race or gender as well as complaint trends. The

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
	Board annually submits the EEOC, EEO-1 Report, and EEO status report. The Board's total workforce is 44 percent female and 44 percent minority. The Board reported an increase of 69 (3 percent) employees in the total workforce for 2013, of which 32 were minorities and 20 were women. The percentage of minorities in the Executive Senior Level category increased from 21 percent in 2012 to 23 percent in 2013. In the 1st/Mid. Level Manager category, the percentage of minorities increased from 42 percent in 2012 to 53 percent in 2013. Representation of women decreased from 65% in 2012 to 55% in 2013. The representation of women remained at 40 percent in the Executive Senior Level category. In 2013, the Board filled 409 positions, of which 113 were summer interns. Board utilized a variety of sources to fill the positions. Thirty-nine percent of the positions were filled internally. In filling the remaining 61 percent of positions, the Board used a variety of methods. The Board still struggles to hire Hispanics in the overall workforce and in the hiring of minorities in economic and regulatory roles. A comprehensive program strategy was implemented by setting forth specific actions to assist the Board in fostering relationships with minority-owned and women-owned businesses. omwi-report-20140401 omwi-report-20120402omwi-report-20130329 *Conclusion:* The OIG has identified relevant information and data to gain an understanding of the entities to be audited. The information sources were policies/procedures, laws, and organizational charts. *Notes:* *Results 4:*

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
B.1.PRG - Background\Planning *Procedure Step:* 3. (b) (5) *Type:* Planning *Assigned To:* *Prepared By:* KLP, 5/18/2014 *Reviewed By:* (None) PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	*Purpose:* (b) (5) *Criteria:* GAGAS 7.04, 7.08-7.43 7.04 Auditors should use a form of the audit report that is appropriate for its intended use and is in writing or in some other retrievable form.162 For example, auditors may present audit reports using electronic media that are retrievable by report users and the audit organization. The users' needs will influence the form of the audit report. Different forms of audit reports include written reports, letters, briefing slides, or other presentation materials. **REPORT CONTENTS** 7.08 Auditors should prepare audit reports that contain (1) the objectives, scope, and methodology of the audit; (2) the audit results, including findings, conclusions, and recommendations, as appropriate; (3) a statement about the auditors' compliance with GAGAS; (4) a summary of the views of responsible officials; and (5) if applicable, the nature of any confidential or sensitive information omitted. **Objective, Scope, Methodology** 7.09 Auditors should include in the report a description of the audit objectives and the scope and methodology used for addressing the audit objectives. Report users need this information to understand the purpose of the audit, the nature and extent of the audit work performed, the context and perspective regarding what is reported, and any significant limitations in audit objectives, scope, or methodology. 7.10 Audit objectives for performance audits may vary widely. Auditors should communicate audit objectives in the audit report in a clear, specific, neutral, and unbiased manner that includes relevant assumptions. When audit objectives are limited but broader objectives could be inferred by users, auditors should state in the audit report that certain issues were outside the scope of the audit in order to avoid potential misunderstanding. 7.11 Auditors should describe the scope of the work performed and any

Summary	Detail
	limitations, including issues that would be relevant to likely users, so that they could reasonably interpret the findings, conclusions, and recommendations in the report without being misled. Auditors should also report any significant constraints imposed on the audit approach by information limitations or scope impairments, including denials or excessive delays of access to certain records or individuals. 7.12 In describing the work conducted to address the audit objectives and support the reported findings and conclusions, auditors should, as applicable, explain the relationship between the population and the items tested; identify organizations, geographic locations, and the period covered; report the kinds and sources of evidence; and explain any significant limitations or uncertainties based on the auditors' overall assessment of the sufficiency and appropriateness of the evidence in the aggregate. 7.13 In reporting audit methodology, auditors should explain how the completed audit work supports the audit objectives, including the evidence gathering and analysis techniques, in sufficient detail to allow knowledgeable users of their reports to understand how the auditors addressed the audit objectives. Auditors may include a description of the procedures performed as part of their assessment of the sufficiency and appropriateness of information used as audit evidence. Auditors should identify significant assumptions made in conducting the audit; describe comparative techniques applied; describe the criteria used; and, when sampling significantly supports the auditors' findings, conclusions, or recommendations, describe the sample design and state why the design was chosen, including whether the results can be projected to the intended population. **Report Findings** 7.14 In the audit report, auditors should present sufficient, appropriate evidence to support the findings and conclusions in relation to the audit objectives. Clearly developed findings[164] assist management and oversight officials of the audited entity in understanding the need for taking corrective action. If auditors are able to sufficiently develop the elements of a finding, they should provide recommendations for corrective action if they are significant within the context of the audit objectives. However, the extent to which the elements for a finding are developed depends on the audit

Summary	Detail
	objectives. Thus, a finding or set of findings is complete to the extent that the auditors address the audit objectives. 7.15 Auditors should describe in their report limitations or uncertainties with the reliability or validity of evidence if (1) the evidence is significant to the findings and conclusions within the context of the audit objectives and (2) such disclosure is necessary to avoid misleading the report users about the findings and conclusions. As discussed in paragraphs 6.69 through 6.72, even though the auditors may have some uncertainty about the sufficiency or appropriateness of some of the evidence, they may nonetheless determine that in total there is sufficient, appropriate evidence given the findings and conclusions. Auditors should describe the limitations or uncertainties regarding evidence in conjunction with the findings and conclusions, in addition to describing those limitations or uncertainties as part of the objectives, scope, and methodology. Additionally, this description provides report users with a clear understanding regarding how much responsibility the auditors are taking for the information. 7.16 Auditors should place their findings in perspective by describing the nature and extent of the issues being reported and the extent of the work performed that resulted in the finding. To give the reader a basis for judging the prevalence and consequences of these findings, auditors should, as appropriate, relate the instances identified to the population or the number of cases examined and quantify the results in terms of dollar value, or other measures. If the results cannot be projected, auditors should limit their conclusions appropriately. 7.17 Auditors may provide background information to establish the context for the overall message and to help the reader understand the findings and significance of the issues discussed. Appropriate background information may include information on how programs and operations work; the significance of programs and operations (e.g., dollars, impact, purposes, and past audit work, if relevant); a description of the audited entity's responsibilities; and explanation of terms, organizational structure, and the statutory basis for the program and operations. When reporting on the results of their work, auditors should disclose significant facts relevant to the objectives of their work and known to them which, if not disclosed, could mislead knowledgeable users, misrepresent the results, or conceal significant improper or illegal practices. 7.18 Auditors should also report deficiencies in internal control, instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements,

Summary	Detail
	or abuse that have occurred or are likely to have occurred and are significant within the context of the audit objectives. **Deficiencies in Internal Control** 7.19 Auditors should include in the audit report (1) the scope of their work on internal control and (2) any deficiencies in internal control that are significant within the context of the audit objectives and based upon the audit work performed.165 When auditors detect deficiencies in internal control that are not significant to the objectives of the audit but warrant the attention of those charged with governance, they should include those deficiencies in writing to audited entity officials. Auditors should refer to that written communication in the audit report if the written communication is separate from the audit report. When auditors detect deficiencies that do warrant the attention of those charged with governance, the determination of whether and how to communicate such deficiencies to audited entity officials is a matter of professional judgment. 7.20 In a performance audit, auditors may conclude that identified deficiencies in internal control that are significant within the context of the audit objectives are the cause of deficient performance of the program or operations being audited. In reporting this type of finding, the internal control deficiency would be described as the cause. **Fraud, Noncompliance with Provisions of Laws, Regulations, Contracts, and Grant Agreements, and Abuse** 7.21 When auditors conclude, based on sufficient, appropriate evidence, that fraud,166 noncompliance with provisions of laws, regulations, contracts or grant agreements, or abuse167 either has occurred or is likely to have occurred which is significant within the context of the audit objectives, they should report the matter as a finding. Whether a particular act is, in fact, fraud or noncompliance with provisions of laws, regulations, contracts or grant agreements may have to await final determination by a court of law or other adjudicative body. 7.22 When auditors detect instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that are not significant within the context of the audit objectives but warrant the attention of those charged with governance, they should communicate those findings in writing to audited entity officials. When auditors detect any

Summary	Detail
	instances of fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that do not warrant the attention of those charged with governance, the auditors' determination of whether and how to communicate such instances to audited entity officials is a matter of professional judgment. 7.23 When fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse either have occurred or are likely to have occurred, auditors may consult with authorities or legal counsel about whether publicly reporting such information would compromise investigative or legal proceedings. Auditors may limit their public reporting to matters that would not compromise those proceedings and, for example, report only on information that is already a part of the public record. **Reporting Findings Directly to Parties Outside the Audited Entity** 7.24 Auditors should report known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse directly to parties outside the audited entity in the following two circumstances. a. When entity management fails to satisfy legal or regulatory requirements to report such information to external parties specified in law or regulation, auditors should first communicate the failure to report such information to those charged with governance. If the audited entity still does not report this information to the specified external parties as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the information directly to the specified external parties. b. When entity management fails to take timely and appropriate steps to respond to known or likely fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse that (1) is significant to the findings and conclusions and (2) involves funding received directly or indirectly from a government agency, auditors should first report management's failure to take timely and appropriate steps to those charged with governance. If the audited entity still does not take timely and appropriate steps as soon as practicable after the auditors' communication with those charged with governance, then the auditors should report the entity's failure to take timely and appropriate steps directly to the funding

Summary	Detail
	agency. 7.25 The reporting in paragraph 7.24 is in addition to any legal requirements for the auditor to report such information directly to parties outside the audited entity. Auditors should comply with these requirements even if they have resigned or been dismissed from the audit prior to its completion. Internal audit organizations do not have a duty to report outside the audited entity unless required by law, rule, regulation, or policy. 7.26 Auditors should obtain sufficient, appropriate evidence, such as confirmation from outside parties, to corroborate assertions by management of the audited entity that it has reported such findings in accordance with laws, regulations, or funding agreements. When auditors are unable to do so, they should report such information directly as discussed in paragraphs 7.24 and 7.25. **Conclusions** 7.27 Auditors should report conclusions based on the audit objectives and the audit findings. Report conclusions are logical inferences about the program based on the auditors' findings, not merely a summary of the findings. The strength of the auditors' conclusions depends on the sufficiency and appropriateness of the evidence supporting the findings and the soundness of the logic used to formulate the conclusions. Conclusions are more compelling if they lead to the auditors' recommendations and convince the knowledgeable user of the report that action is necessary. **Recommendations** 7.28 Auditors should recommend actions to correct deficiencies and other findings identified during the audit and to improve programs and operations when the potential for improvement in programs, operations, and performance is substantiated by the reported findings and conclusions. Auditors should make recommendations that flow logically from the findings and conclusions, are directed at resolving the cause of identified deficiencies and findings, and clearly state the actions recommended. 7.29 Effective recommendations encourage improvements in the conduct of government programs and operations. Recommendations are effective when they are addressed to parties that have the authority to act and when the recommended actions are specific, practical, cost effective, and measurable. **Reporting Auditors' Compliance with GAGAS**

Summary	Detail
	7.30 When auditors comply with all applicable GAGAS requirements, they should use the following language, which represents an unmodified GAGAS compliance statement, in the audit report to indicate that they performed the audit in accordance with GAGAS. We conducted this performance audit in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. 7.31 When auditors do not comply with all applicable GAGAS requirements, they should include a modified GAGAS compliance statement in the audit report. For performance audits, auditors should use a statement that includes either (1) the language in 7.30, modified to indicate the requirements that were not followed or (2) language that the auditor did not follow GAGAS **Reporting Views of Responsible Officials** 7.32 Auditors should obtain and report the views of responsible officials of the audited entity concerning the findings, conclusions, and recommendations included in the audit report, as well as any planned corrective actions. 7.33 Providing a draft report with findings for review and comment by responsible officials of the audited entity and others helps the auditors develop a report that is fair, complete, and objective. Including the views of responsible officials results in a report that presents not only the auditors' findings, conclusions, and recommendations, but also the perspectives of the responsible officials of the audited entity and the corrective actions they plan to take. Obtaining the comments in writing is preferred, but oral comments are acceptable. 7.34 When auditors receive written comments from the responsible officials, they should include in their report a copy of the officials' written comments, or a summary of the comments received. When the responsible officials provide oral comments only, auditors should prepare a summary of the oral comments and provide a copy of the summary to the responsible officials to verify that the comments are accurately stated. 7.35 Auditors should also include in the report an evaluation of the

Summary	Detail
	comments, as appropriate. In cases in which the audited entity provides technical comments in addition to its written or oral comments on the report, auditors may disclose in the report that such comments were received. 7.36 Obtaining oral comments may be appropriate when, for example, there is a reporting date critical to meeting a user's needs; auditors have worked closely with the responsible officials throughout the work and the parties are familiar with the findings and issues addressed in the draft report; or the auditors do not expect major disagreements with the findings, conclusions, and recommendations in the draft, or major controversies with regard to the issues discussed in the draft report. 7.37 When the audited entity's comments are inconsistent or in conflict with the findings, conclusions, or recommendations in the draft report, or when planned corrective actions do not adequately address the auditors' recommendations, the auditors should evaluate the validity of the audited entity's comments. If the auditors disagree with the comments, they should explain in the report their reasons for disagreement. Conversely, the auditors should modify their report as necessary if they find the comments valid and supported with sufficient, appropriate evidence. 7.38 If the audited entity refuses to provide comments or is unable to provide comments within a reasonable period of time, the auditors may issue the report without receiving comments from the audited entity. In such cases, the auditors should indicate in the report that the audited entity did not provide comments. **Reporting Confidential and Sensitive Information** 7.39 If certain pertinent information is prohibited from public disclosure or is excluded from a report due to the confidential or sensitive nature of the information, auditors should disclose in the report that certain information has been omitted and the reason or other circumstances that make the omission necessary. 7.40 Certain information may be classified or may be otherwise prohibited from general disclosure by federal, state, or local laws or regulations. In such circumstances, auditors may issue a separate, classified or limited use report containing such information and distribute the report only to persons authorized by law or regulation to receive it. 7.41 Additional circumstances associated with public safety, privacy, or

Summary	Detail
	security concerns could also justify the exclusion of certain information from a publicly available or widely distributed report. For example, detailed information related to computer security for a particular program may be excluded from publicly available reports because of the potential damage that could be caused by the misuse of this information. In such circumstances, auditors may issue a limited use report containing such information and distribute the report only to those parties responsible for acting on the auditors' recommendations. In some instances, it may be appropriate to issue both a publicly available report with the sensitive information excluded and a limited use report. The auditors may consult with legal counsel regarding any requirements or other circumstances that may necessitate the omission of certain information. 7.42 Considering the broad public interest in the program or activity under audit assists auditors when deciding whether to exclude certain information from publicly available reports. When circumstances call for omission of certain information, auditors should evaluate whether this omission could distort the audit results or conceal improper or illegal practices. 7.43 When audit organizations are subject to public records laws, auditors should determine whether public records laws could impact the availability of classified or limited use reports and determine whether other means of communicating with management and those charged with governance would be more appropriate. For example, the auditors may communicate general information in a written report and communicate detailed information orally. The auditor may consult with legal counsel regarding applicable public records laws. *Source:* FRB OIG *Scope:* (b) (5)

B.1.PRG - Background\Planning *Procedure Step:* 4. Define Objectives, Scope, and Methodology *Type:* Planning *Assigned To:* BPM *Prepared By:* SMN, 3/23/2015 *Reviewed By:* (None) PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6*	*Purpose:* Define the objectives, scope, and methodology of the audit. *Criteria:* GAGAS 6.07 - 6.10, 6.39 - 6.40, 6.83a 6.07 Auditors must plan the audit to reduce audit risk to an appropriate level for the auditors to obtain reasonable assurance that the evidence is sufficient and appropriate128 to support the auditors' findings and conclusions. This determination is a matter of professional judgment. In planning the audit, auditors should assess significance and audit risk and apply these assessments in defining the audit objectives and the scope and methodology to address those objectives. Planning is a continuous process throughout the audit. Therefore, auditors may need to adjust the audit objectives, scope, and methodology as work is being completed. In situations where the audit objectives are established by statute or legislative oversight, auditors may not have latitude to define or adjust the audit objectives or scope. 6.08 The objectives are what the audit is intended to accomplish. They identify the audit subject matter and performance aspects to be included, and may also include the potential findings and reporting elements that the auditors expect to develop. Audit objectives can be thought of as questions about the program that the auditors seek to answer based on evidence obtained and assessed against criteria. The term "program" is used in GAGAS to include government entities, organizations, programs, activities, and functions.

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
SCORECARD: *Rating:* *Sample Size:*	6.09 Scope is the boundary of the audit and is directly tied to the audit objectives. The scope defines the subject matter that the auditors will assess and report on, such as a particular program or aspect of a program, the necessary documents or records, the period of time reviewed, and the locations that will be included. 6.10 The methodology describes the nature and extent of audit procedures for gathering and analyzing evidence to address the audit objectives. Audit procedures are the specific steps and tests auditors perform to address the audit objectives. Auditors should design the methodology to obtain reasonable assurance that the evidence is sufficient and appropriate to support the auditors' findings and conclusions in relation to the audit objectives and to reduce audit risk to an acceptable level. 6.39 If auditors believe that it is likely that sufficient, appropriate evidence will not be available, they may revise the audit objectives or modify the scope and methodology and determine alternative procedures to obtain additional evidence or other forms of evidence to address the current audit objectives. Auditors should also evaluate whether the lack of sufficient, appropriate evidence is due to internal control deficiencies or other program weaknesses, and whether the lack of sufficient, appropriate evidence could be the basis for audit findings. 6.40 Auditors should determine whether other auditors have conducted, or are conducting, audits of the program that could be relevant to the current audit objectives. The results of other auditors' work may be useful sources of information for planning and performing the audit. If other auditors have identified areas that warrant further audit work or follow-up, their work may influence the auditors' selection of objectives, scope, and methodology. 6.83 Auditors should document159 the following: **a.** the objectives, scope, and methodology of the audit; *Source:* FRB OIG

Physical evidence is obtained by auditors' direct inspection or observation of people, property, or events. Such evidence may be documented in summary memos, photographs, videos, drawings, charts, maps, or physical samples. Documentary evidence is obtained in the form of already existing information such as letters, contracts, accounting records, invoices, spreadsheets, database extracts, electronically stored information, and management information on performance. Testimonial evidence is obtained through inquiries, interviews, focus groups, public forums, or questionnaires. Auditors frequently use analytical processes including computations, comparisons, separation of information into components, and rational arguments to analyze any evidence gathered to determine whether it is sufficient and appropriate. The strength and weakness of each form of evidence depends on the facts and circumstances associated with the evidence and professional judgment in the context of the audit objectives.

B.1.PRG - Background\Planning *Procedure Step:* 6. Understand Internal Controls Relevant to Project *Type:* Planning *Assigned To:* SPK *Prepared By:* SPK, 3/10/2015 *Reviewed By:* (None) **PROPERTIES:** *Location:* *Frequency:* *Category 4:*	*Purpose:* Describe the internal controls process for the program and the rationale for the extent that such controls will be evaluated and tested in the audit. *Criteria:* Board Policies Reviewed: - Equal Employment Opportunity - EEO Complaint Process and How It Works - Performance Management Program - Adverse Action - Vacant Position Posting - Discriminatory Workplace Harassment GAGAS 6.16 - 6.22 6.16 Auditors should obtain an understanding of internal control132 that is significant within the context of the audit objectives. For internal control that is significant within the context of the audit objectives, auditors should

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
User Category: *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	assess whether internal control has been properly designed and implemented and should perform procedures designed to obtain sufficient, appropriate evidence to support their assessment about the effectiveness of those controls. Information systems controls are often an integral part of an entity's internal control. The effectiveness of significant internal controls is frequently dependent on the effectiveness of information systems controls. Thus, when obtaining an understanding of internal control significant to the audit objectives, auditors should also determine whether it is necessary to evaluate information systems controls.133 6.17 The effectiveness of internal control that is significant within the context of the audit objectives can affect audit risk. Consequently, auditors may determine that it is necessary to modify the nature, timing, or extent of the audit procedures based on the auditors' assessment of internal control and the results of internal control testing. For example, poorly controlled aspects of a program have a higher risk of failure, so auditors may choose to focus more efforts in these areas. Conversely, effective controls at the audited entity may enable the auditors to limit the extent and type of audit testing needed. 6.18 Auditors may obtain an understanding of internal control through inquiries, observations, inspection of documents and records, review of other auditors' reports, or direct tests. The nature and extent of procedures auditors perform to obtain an understanding of internal control may vary among audits based on audit objectives, audit risk, known or potential internal control deficiencies, and the auditors' knowledge about internal control gained in prior audits. 6.19 The following discussion of the principal types of internal control objectives is intended to help auditors better understand internal controls and determine whether or to what extent they are significant to the audit objectives. a. Effectiveness and efficiency of program operations: Controls over program operations include policies and procedures that the audited entity has implemented to provide reasonable assurance that a program meets its objectives, while considering cost-effectiveness and efficiency. Understanding these controls can help auditors understand the program operations that convert inputs to outputs and outcomes. b. Relevance and reliability of information: Controls over the relevance and

Summary	Detail
	reliability of information include policies and procedures that officials of the audited entity have implemented to provide themselves reasonable assurance that operational and financial information they use for decision making and reporting externally is relevant and reliable and fairly disclosed in reports. Understanding these controls can help auditors (1) assess the risk that the information gathered by the entity may not be relevant or reliable and (2) design appropriate tests of the information considering the audit objectives. c. Compliance with applicable laws, regulations, contracts, and grant agreements: Controls over compliance include policies and procedures that the audited entity has implemented to provide reasonable assurance that program implementation is in accordance with provisions of laws, regulations, contracts, and grant agreements. Understanding the relevant controls concerning compliance with those laws, regulations, contracts or grant agreements that the auditors have determined are significant within the context of the audit objectives can help them assess the risk of noncompliance with provisions of laws, regulations, contracts, or grant agreements, or abuse. 6.20 A subset of these categories of internal control objectives is the safeguarding of assets and resources. Controls over the safeguarding of assets and resources include policies and procedures that the audited entity has implemented to reasonably prevent or promptly detect unauthorized acquisition, use, or disposition of assets and resources. 6.21 In performance audits, a deficiency in internal control[134] exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct (1) impairments of effectiveness or efficiency of operations, (2) misstatements in financial or performance information, or (3) noncompliance with provisions of laws, regulations, contracts, or grant agreements on a timely basis. A deficiency in design exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that, even if the control operates as designed, the control objective is not met. A deficiency in operation exists when a properly designed control does not operate as designed, or when the necessary authority or qualifications to perform the control effectively. 6.22 Internal auditing is an important part of overall governance, accountability, and internal control. A key role of many internal audit organizations is to provide assurance that internal controls are in place to adequately mitigate risks and achieve

Summary	Detail
	program goals and objectives. The auditor may determine that it is appropriate to use the work of the internal auditors in the auditor's assessment of the effectiveness of design or operation of internal controls that are significant within the context of the audit objectives. *Source:* FRB OIG GAO Government Auditing Standards Board policies *Scope:* (b) (5) *Details:* *Record of Work Done:* (b) (5)

B.1.PRG - Background\Planning *Procedure Step:* 8. Identify Relevant Criteria *Type:* Planning *Assigned To:* *Prepared By:* SMN, 3/26/2015 *Reviewed By:* KLP, 3/26/2015 PROPERTIES: *Location:* *Frequency:* *Category 4:*	*Purpose:* Describe the laws, regulations, policies, standards, measures, expectations, best practices, and/or benchmarks against which performance is to be compared and evaluated. *Criteria:* GAGAS 6.12a, 6.15b, 6.37 6.12 During planning, auditors should also **(a)** identify the potential criteria needed to evaluate matters subject to audit; 6.15 Obtaining an understanding of the program under audit helps auditors to assess the relevant risks associated with the program and the impact of the risks on the audit objectives, scope, and methodology. The auditors' understanding may come from knowledge they already have about the program or knowledge they gain from inquiries, observations, and

Summary	Detail
User Category: *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	reviewing documents while planning the audit. The extent and breadth of those inquiries and observations will vary among audits based on the audit objectives, as will the need to understand individual aspects of the program, such as the following: (**b)** Purpose and goals: Purpose is the result or effect that is intended or desired from a program's operation. Legislatures usually establish the program's purpose when they provide authority for the program. Entity officials may provide more detailed information on the program's purpose to supplement the authorizing legislation. Entity officials are sometimes asked to set goals for program performance and operations, including both output and outcome goals. Auditors may use the stated program purpose and goals as criteria for assessing program performance or may develop additional criteria to use when assessing performance. 6.37 Auditors should identify criteria. Criteria represent the laws, regulations, contracts, grant agreements, standards, specific requirements, measures, expected performance, defined business practices, and benchmarks against which performance is compared or evaluated. Criteria identify the required or desired state or expectation with respect to the program or operation. Criteria provide a context for evaluating evidence and understanding the findings, conclusions, and recommendations included in the report. Auditors should use criteria that are relevant to the audit objectives and permit consistent assessment of the subject matter *Source:* Dodd_Frank_Act_Section_342 EEO MD 715 Guidance on establishingAffirmative programs of EEO Executive Order 13583 On Diversity 5 USC 43 Performance Appraisal Board EEO Policy

B.1.PRG - Background\Planning *Procedure Step:* 11. Consider Information System Controls *Type:* Planning *Assigned To:* BPM *Prepared By:* BPM, 7/31/2014 *Reviewed By:* KLP, 8/1/2014 PROPERTIES: *Location:* *Frequency:*	*Purpose:* (b) (5) *Criteria:* GAGAS 6.23 - 6.27 6.23 Understanding information systems controls is important when information systems are used extensively throughout the program under audit and the fundamental business processes related to the audit objectives rely on information systems. Information systems controls consist of those internal controls that are dependent on information systems processing and include general controls, application controls, and user controls. a. Information systems general controls (entitywide, system, and application

Summary	Detail
Category 4: *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	levels) are the policies and procedures that apply to all or a large segment of an entity's information systems. General controls help ensure the proper operation of information systems by creating the environment for proper operation of application controls. General controls include security management, logical and physical access, configuration management, segregation of duties, and contingency planning. b. Application controls, sometimes referred to as business process controls, are those controls that are incorporated directly into computer applications to help ensure the validity, completeness, accuracy, and confidentiality of transactions and data during application processing. Application controls include controls over input, processing, output, master file, interface, and data management system controls. c. User controls are portions of controls that are performed by people interacting with information system controls. A user control is an information system control if its effectiveness depends on information systems processing or the reliability (accuracy, completeness, and validity) of information processed by information systems. 6.24 An organization's use of information systems controls may be extensive; however, auditors are primarily interested in those information systems controls that are significant to the audit objectives. Information systems controls are significant to the audit objectives if auditors determine that it is necessary to evaluate the effectiveness of information systems controls in order to obtain sufficient, appropriate evidence. When information systems controls are determined to be significant to the audit objectives or when the effectiveness of significant controls is dependent on the effectiveness of information systems controls, auditors should then evaluate the design and operating effectiveness of such controls. This evaluation would include other information systems controls that impact the effectiveness of the significant controls or the reliability of information used in performing the significant controls. Auditors should obtain a sufficient understanding of information systems controls necessary to assess audit risk and plan the audit within the context of the audit objectives. 6.25 Audit procedures to evaluate the effectiveness of significant information systems controls include (1) gaining an understanding of the system as it relates to the information and (2) identifying and evaluating the general, application, and user

Summary	Detail
	controls that are critical to providing assurance over the reliability of the information required for the audit. 6.26 The evaluation of information systems controls may be done in conjunction with the auditors' consideration of internal control within the context of the audit objectives[137] or as a separate audit objective or audit procedure, depending on the objectives of the audit. Depending on the significance of information systems controls to the audit objectives, the extent of audit procedures to obtain such an understanding may be limited or extensive. In addition, the nature and extent of audit risk related to information systems controls are affected by the nature of the hardware and software used, the configuration of the entity's systems and networks, and the entity's information systems strategy. 6.27 Auditors should determine which audit procedures related to information systems controls are needed to obtain sufficient, appropriate evidence to support the audit findings and conclusions. The following factors may assist auditors in making this determination: a. The extent to which internal controls that are significant to the audit depend on the reliability of information processed or generated by information systems. b. The availability of evidence outside the information system to support the findings and conclusions: It may not be possible for auditors to obtain sufficient, appropriate evidence without evaluating the effectiveness of relevant information systems controls. For example, if information supporting the findings and conclusions is generated by information systems or its reliability is dependent on information systems controls, there may not be sufficient supporting or corroborating information or documentary evidence that is available other than that produced by the information systems. c. The relationship of information systems controls to data reliability: To obtain evidence about the reliability of computer-generated information, auditors may decide to evaluate the effectiveness of information systems controls as part of obtaining evidence about the reliability of the data. If the auditor concludes that information systems controls are effective, the auditor may reduce the extent of direct testing of data. d. Evaluating the effectiveness of information systems controls as an audit objective: When evaluating the effectiveness of information systems

Summary	Detail
	controls is directly a part of an audit objective, auditors should test information systems controls necessary to address the audit objectives. For example, the audit may involve the effectiveness of information systems controls related to certain systems, facilities, or organizations. *Source:* Conversation with Board HR Analytics Manager Lewis Andrews, see RE Follow-up Question -FRSONLY- PeopleFluent Flyer Brochure, see wp peoplefluent_brochure E-mails with OIG Office of Audits Manager Khalid Hasan, see wp IT Data Reliability_PeopleSoft OIG's own internal data assessment form, see wp Data Reliability Assessment form Final - Jun 13, 2014 *Scope:* Evaluate methods that could be used to ensure data reliability assessments are completed for each source the OIG may use for the Board's Congressional Request of Personnel Practices. *Details:* (b) (5)

B.1.PRG - Background\Planning *Procedure Step:* 14. Use of External Auditors/Consultants *Type:* Planning *Assigned To:* BPM *Prepared By:* KLP, 4/10/2015 *Reviewed By:* (None) PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	*Purpose:* (b) (5) [redacted] *Criteria:* GAGAS 3.28 - 3.30, 6.42 - 6.46 3.28 Audit organizations that are structurally located within government entities are often subject to constitutional or statutory safeguards that mitigate the effects of structural threats to independence. For external audit organizations, such safeguards may include governmental structures under which a government audit organization is: a. at a level of government other than the one of which the audited entity is part (federal, state, or local); for example, federal auditors auditing a state government program; or b. placed within a different branch of government from that of the audited entity; for example, legislative auditors auditing an executive branch program. **3.29 Safeguards other than those described above may mitigate threats resulting from governmental structures. For external auditors or auditors who report both externally and internally, structural threats may be mitigated if the head of an audit organization meets any of the following criteria in accordance with constitutional or statutory requirements:** a. directly elected by voters of the jurisdiction being audited; b. elected or appointed by a legislative body, subject to removal by a legislative body, and reports the results of audits to and is accountable to a legislative body; c. appointed by someone other than a legislative body, so long as the appointment is confirmed by a legislative body and removal from the position is subject to

Summary	Detail
	oversight or approval by a legislative body, and reports the results of audits to and is accountable to a legislative body; or d. appointed by, accountable to, reports to, and can only be removed by a statutorily created governing body, the majority of whose members are independently elected or appointed and are outside the organization being audited. 3.30 In addition to the criteria in paragraphs 3.28 and 3.29, GAGAS recognizes that there may be other organizational structures under which external audit organizations in government entities could be considered to be independent. If appropriately designed and implemented, these structures provide safeguards that prevent the audited entity from interfering with the audit organization's ability to perform the work and report the results impartially. For an external audit organization or one that reports both externally and internally to be considered independent under a structure different from the ones listed in paragraphs 3.28 and 3.29, the audit organization should have all of the following safeguards. In such situations, the audit organization should document how each of the following safeguards was satisfied and provide the documentation to those performing quality control monitoring and to the external peer reviewers to determine whether all the necessary safeguards are in place. The following safeguards may also be used to augment those listed in paragraphs 3.28 and 3.29: a. statutory protections that prevent the audited entity from abolishing the audit organization; b. statutory protections that require that if the head of the audit organization is removed from office, the head of the agency reports this fact and the reasons for the removal to the legislative body; c. statutory protections that prevent the audited entity from interfering with the initiation, scope, timing, and completion of any audit; d. statutory protections that prevent the audited entity from interfering with audit reporting, including the findings and conclusions or the manner, means, or timing of the audit organization's reports; e. statutory protections that require the audit organization to report to a legislative body or other independent governing body on a recurring basis; f. statutory protections that give the audit organization sole authority over the selection, retention, advancement, and dismissal of its staff; and g. statutory access to records and documents related to the agency, program, or function being audited and access to government officials or

Summary	Detail
	other individuals as needed to conduct the audit. 6.42 Some audits may necessitate the use of specialized techniques or methods that require the skills of a specialist. Specialists to whom this section applies include, but are not limited to, actuaries, appraisers, attorneys, engineers, environmental consultants, medical professionals, statisticians, geologists, and information technology experts. If auditors intend to use the work of specialists, they should assess the professional qualifications and independence of the specialists. 6.43 Auditors' assessment of professional qualifications of the specialist involves the following: a. the professional certification, license, or other recognition of the competence of the specialist in his or her field, as appropriate; b. the reputation and standing of the specialist in the views of peers and others familiar with the specialist's capability or performance; c. the specialist's experience and previous work in the subject matter; and d. the auditors' prior experience in using the specialist's work. 6.44 Auditors' assessment of the independence of specialists who perform audit work includes identifying threats and applying any necessary safeguards in the same manner as they would for auditors performing work on those audits. 6.45 Audit management should assign sufficient staff and specialists with adequate collective professional competence to perform the audit.145 Staffing an audit includes, among other things: a. assigning staff and specialists with the collective knowledge, skills, and experience appropriate for the job, b. assigning a sufficient number of staff and supervisors to the audit, c. providing for on-the-job training of staff, and d. engaging specialists when necessary. 6.46 If planning to use the work of a specialist, auditors should document the nature and scope of the work to be performed by the specialist, including a. the objectives and scope of the specialist's work, b. the intended use of the specialist's work to support the audit objectives, c. the specialist's procedures and findings so they can be evaluated and related to other planned audit procedures, and

B.1.PRG - Background\Planning *Procedure Step:* 15. Assess Risk *Type:* Planning *Assigned To:* BPM *Prepared By:* BPM, 8/1/2014 *Reviewed By:* (None) PROPERTIES: *Location:* *Frequency:* *Category 4:* *User Category:* *Category 5* *Category 6* SCORECARD: *Rating:* *Sample Size:*	*Purpose:* Describe how audit risk will be reduced to an appropriate level to provide reasonable assurance that the evidence is sufficient and appropriate to support the findings and conclusions. Consider the potential for: (a) violations of law or regulatory requirements, contract provisions, grant agreements and the rationale for how such areas will be addressed in work steps. (b) fraud, waste and abuse and the rationale for how such areas will be addressed in work steps. (b) (5) *Criteria:* GAGAS 6.05, 6.07, 6.10-6.11, 6.28-6.34 6.05 Audit risk is the possibility that the auditors' findings, conclusions, recommendations, or assurance may be improper or incomplete, as a result of factors such as evidence that is not sufficient and/or appropriate, an inadequate audit process, or intentional omissions or misleading information due to misrepresentation or fraud. The assessment of audit risk involves both qualitative and quantitative considerations. Factors impacting audit risk include the time frames, complexity, or sensitivity of the work; size of the program in terms of dollar amounts and number of citizens served; adequacy of the audited entity's systems and processes to detect inconsistencies, significant errors, or fraud; and auditors' access to records. Audit risk includes the risk that auditors will not detect a mistake, inconsistency, significant error, or fraud in the evidence supporting the audit. Audit risk can be reduced by taking actions such as increasing the scope of work; adding specialists, additional reviewers, and other resources to perform the audit; changing the methodology to obtain additional evidence, higher quality evidence, or alternative forms of corroborating evidence; or aligning the findings and conclusions to reflect the evidence obtained.

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
	6.07 Auditors must plan the audit to reduce audit risk to an appropriate level for the auditors to obtain reasonable assurance that the evidence is sufficient and appropriate[128] to support the auditors' findings and conclusions. This determination is a matter of professional judgment. In planning the audit, auditors should assess significance and audit risk and apply these assessments in defining the audit objectives and the scope and methodology to address those objectives. Planning is a continuous process throughout the audit. Therefore, auditors may need to adjust the audit objectives, scope, and methodology as work is being completed. In situations where the audit objectives are established by statute or legislative oversight, auditors may not have latitude to define or adjust the audit objectives or scope. 6.10 The methodology describes the nature and extent of audit procedures for gathering and analyzing evidence to address the audit objectives. Audit procedures are the specific steps and tests auditors perform to address the audit objectives. Auditors should design the methodology to obtain reasonable assurance that the evidence is sufficient and appropriate to support the auditors' findings and conclusions in relation to the audit objectives and to reduce audit risk to an acceptable level. 6.11 Auditors should assess audit risk and significance within the context of the audit objectives by gaining an understanding of the following: a. the nature and profile of the programs and the needs of potential users of the audit report; b. internal control as it relates to the specific objectives and scope of the audit; c. information systems controls for purposes of assessing audit risk and planning the audit within the context of the audit objectives; d. provisions of laws, regulations, contracts, and grant agreements, and potential fraud, and abuse that are significant within the context of the audit objectives; e. ongoing investigations or legal proceedings within the context of the audit objectives; and f. the results of previous audits and attestation engagements that directly relate to the current audit objectives

The Board Can Enhance Its Diversity and Inclusion Efforts

Summary	Detail
	6.28 Auditors should identify any provisions of laws, regulations, contracts or grant agreements that are significant within the context of the audit objectives and assess the risk that noncompliance with provisions of laws, regulations, contracts or grant agreements could occur.138 Based on that risk assessment, the auditors should design and perform procedures to obtain reasonable assurance of detecting instances of noncompliance with provisions of laws, regulations, contracts, or grant agreements that are significant within the context of the audit objectives. 6.29 The auditors' assessment of audit risk may be affected by such factors as the complexity or newness of the laws, regulations, contracts or grant agreements. The auditors' assessment of audit risk also may be affected by whether the entity has controls that are effective in preventing or detecting noncompliance with provisions of laws, regulations, contracts, or grant agreements. If auditors obtain sufficient, appropriate evidence of the effectiveness of these controls, they can reduce the extent of their tests of compliance. 6.31 When auditors identify factors or risks related to fraud that has occurred or is likely to have occurred that they believe are significant within the context of the audit objectives, they should design procedures to obtain reasonable assurance of detecting any such fraud. Assessing the risk of fraud is an ongoing process throughout the audit and relates not only to planning the audit but also to evaluating evidence obtained during the audit. 6.32 When information comes to the auditors' attention indicating that fraud, significant within the context of the audit objectives, may have occurred, auditors should extend the audit steps and procedures, as necessary, to (1) determine whether fraud has likely occurred and (2) if so, determine its effect on the audit findings. If the fraud that may have occurred is not significant within the context of the audit objectives, the auditors may conduct additional audit work as a separate engagement, or refer the matter to other parties with oversight responsibility or jurisdiction 6.33 Abuse involves behavior that is deficient or improper when compared with behavior that a prudent person would consider reasonable and necessary business practice given the facts and circumstances. Abuse also includes misuse of authority or position for personal financial interests or those of an immediate or close family member or business associate.140 Abuse does not necessarily involve fraud, noncompliance with provisions of laws, regulations, contracts, or grant agreements.

Summary	Detail
	6.34 Because the determination of abuse is subjective, auditors are not required to detect abuse in performance audits. However, as part of a GAGAS audit, if auditors become aware of abuse that could be quantitatively or qualitatively significant to the program under audit, auditors should apply audit procedures specifically directed to ascertain the potential effect on the program under audit within the context of the audit objectives. After performing additional work, auditors may discover that the abuse represents potential fraud or noncompliance with provisions of laws, regulations, contracts, or grant agreements. *Source:* Auditor Developed Matrix *Scope:* Any risk factors likely to be encountered during the course of the OIG's Audit of Board Personnel Practices including (data reliability, lack of sufficient evidence, complexity of the subject matter, potential for fraud, waste, and abuse). *Details:* *Record of Work Done:* GAGAS defines audit risk as "the possibility that the auditors' findings, conclusions, recommendations, or assurance may be improper or incomplete, as a result of factors such as evidence that is not sufficient and/or appropriate, an inadequate audit process, or intentional omissions or misleading information due to misrepresentation or fraud." The OIG will assess audit risk using the below risk model. The risk model states: Audit Risk = Inherent Risk x Control Risk x Detection Risk. a) Inherent Risk: The probability that an error (whether intentional or

Summary	Detail
	unintentional) exists assuming that there are no related controls. b) Control Risk: The probability that an error (whether intentional or unintentional) will not be prevented or detected on a timely basis by the entity's internal control. c) Detection Risk: The probability that an error (whether intentional or unintentional) will not be detected by the auditor. Procedure Step:	16. Fraud Discussion	(b) (5)
Type:	Planning	
Assigned To:	BPM	*Criteria:*
Prepared By:	BPM, 7/28/2014	GAGAS 6.30
Reviewed By:	KLP, 8/1/2014	In planning the audit, auditors should assess risks of fraud occurring that is significant within the context of the audit objectives. Fraud involves obtaining something of value through willful misrepresentation.
PROPERTIES:		Whether an act is, in fact, fraud is a determination to be made through the judicial or other adjudicative system and is beyond auditors' professional responsibility. Audit team members should discuss among the team fraud risks, including factors such as individuals' incentives or pressures to commit fraud, the opportunity for fraud to occur, and rationalizations or attitudes that could allow individuals to commit fraud. Auditors should gather and assess information to identify risks of fraud that are significant within the scope of the audit objectives or that could affect the findings and conclusions. For example, auditors may obtain information through discussion with officials of the audited entity or through other means to determine the susceptibility of the program to fraud, the status of internal controls the audited entity has established to prevent and detect fraud, or the risk that officials of the audited entity could override internal control. An attitude of professional skepticism in assessing these risks assists auditors in assessing which factors or risks could significantly affect the audit objectives.

The EEO Tabulation 2006-2010 (5-year ACS data)

FTP Site Technical Documentation

EEOC
U. S. Equal Employment Opportunity Commission

Social, Economic, and Housing Statistics Division
American Community Survey Office
Version 1 January 8, 2013

Table of Contents

Chapter 1 Introduction

Introduction

The Census Bureau entered into a reimbursable agreement with a consortium of four Federal agencies, consisting of the Equal Employment Opportunity Commission (EEOC), the Department of Justice (DOJ), the Office of Federal Contract Compliance Programs (OFCCP) at the Department of Labor (DOL), and the Office of Personnel Management (OPM), to create a custom tabulation identified as the EEO Tabulation 2006-2010 (5-year ACS data). This tabulation was created according to the specifications of the agencies in the consortium based on the American Community Survey (ACS) 2006-2010 5-year data. The EEO Tabulation 2006-2010 (5-year ACS data) serves as the primary external benchmark for comparing the race, ethnicity, and sex composition of an organization's internal workforce, and the analogous external labor market, within a specified geography and job category. More detailed information on this tabulation can be found here: http://www.census.gov/people/eeotabulation/.

The American Community Survey

The American Community Survey (ACS) is a part of the U.S. Census Bureau's Decennial Census Program and is designed to provide more current demographic, social, economic, and housing estimates throughout the decade. The ACS provides information on more than 40 topics, including education, language ability, the foreign-born, marital status, migration and many more subjects. Each year, the survey randomly samples around 3.5 million addresses and produces statistics that cover 1-year, 3-year, and 5-year periods for geographic areas in the United States and Puerto Rico. The 5-year estimates are available for many distinct geographies, including the nation, all 50 states, DC, Puerto Rico, counties, places, census tracts, and block groups. For more information about the ACS, please visit our home page at: www.census.gov/acs.

The 107 tables on the EEO Tabulation 2006-2010 (5-year ACS data) are available through American FactFinder (AFF) (factfinder2.census.gov). On AFF, these are available for download in several forms, including .csv files. This document will brief data users on the contents of the EEO tables located on the Census FTP site and explain how they can use it to obtain these tables.

Chapter 2 How to Use the EEO Tabulation 2006-2010 (5-year ACS data) Files

2.1 Location of the EEO Tabulation (2006-2010) on the FTP site

The EEO Tabulation is located on the Census FTP site at
http://www2.census.gov/EEO_2006_2010/.

2.2 EEO Tabulation File Organization

The EEO Tabulation 2006-2010 (5-year ACS data) on the FTP site consists of a number of zipped files. Each file set consists of one version of each table that covers all areas. The contents of these files, how to use the datasets, and a description of the variables and geographies contained in the datasets are included in this documentation.

The EEO Tabulation (2006-2010) on the FTP site is organized in two folders as shown in the above screenshot. There are two directories that contain the same combination of files. These are simply arranged differently to accommodate various user needs.

EEO_2006_2010_Tables_All_In_2_Giant_Files

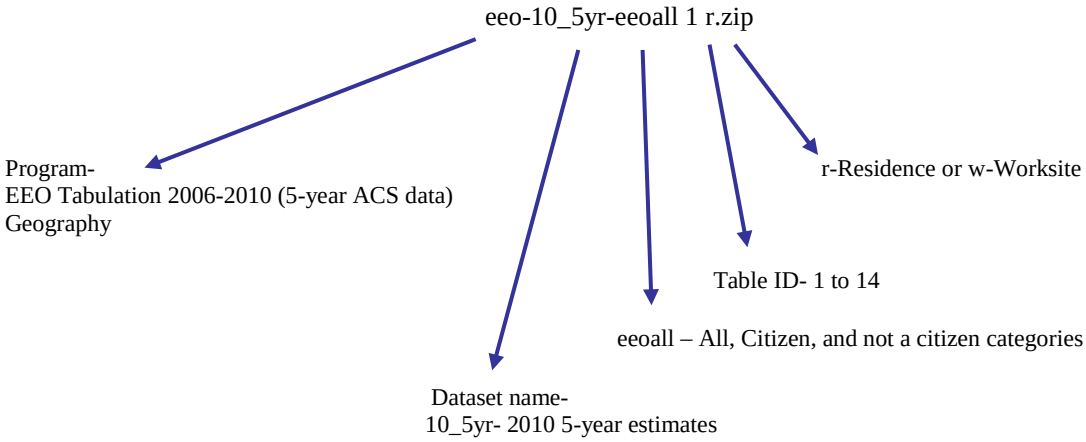
The "Tables All in 2 Giant Files" directory contains two zipped files, which includes one multiple data and annotation files divided by EEO Table sets 1 thru 7 and Table sets 8 thru 14. These zipped files are ideal for users who want estimates and margins of error for all EEO geographies throughout the nation at once. These files are very large and should only be used by those that can easily process very large files.

EEO_2006_2010_Tables_By_Table _Set

The "Tables By Table Set" directory contains files for each table set for all EEO geographic areas. Within those folders are geography files and files containing the data and annotation files, one per table set (table sets are explained in Section 2.3). Downloading from these folders is

ideal for users who only want an entire table set for EEO geographies. These tables will be divided up by residence and workplace geographies.

The naming convention used for the zipped files in this directory is the following:



File Name: eeo-10_5yr-eeoall1r.zip		
Example	**Name**	**Range or Type**
eeo	Program	EEO Tabulation 2006-2010 (5-year ACS data)
10	Reference Year	ACS data year 2006-2010
5yr	Period Covered	5yr- 5-year data
eeoall	Categories Covered	Contains tables for categories of All (citizen and not a citizen combined), Citizen, and Not a citizen
1	Table ID	1 to 14
r/w	Geography Type	r-Residence or w-Worksite

2.3 Data Format and Access

ACSII text versions of the EEO Tabulation 2006-2010 (5-year ACS data) tables that are disseminated through AFF are available for downloading via FTP site. These files include the (1) geographic header record file, (2) data files and (3) annotation files in pipe-delimited ("|") ASCII format. These three types of files contain shared identifiers so these can be joined together. Metadata and EEO table shells are contained in a Microsoft Excel spreadsheet. More information about the files and metadata is described in detail in the sections below.

2.4 Data and Annotation Files

The data and annotation files are named <program>-< dataset>-<custom tab abbreviation>< table id><r-residence,w-worksite>.dat (or .ann). The program for this EEO Tabulation (2006-2010) is "eeo," the dataset will be the 2010 5-year data set (e.g.10_5yr), the tabulation abbreviation "eeo," the tableid is the EEO Table id (e.g.1 thru 14), followed by an "r" or "w"

denoting that the table set consists of residence or worksite geography. The file extension is .dat for the data files and .ann for the annotation files.

For example, .dat table and .ann table for EEO Table Set 1 for the EEO Tabulation 2006-2010 (5-year ACS data) for the total population in residence geographies are named as follows:

eeo-10_5yr-eeoall1r.dat
eeo-10_5yr-eeoall1r.ann

For the worksite geographies, these are named as follows:

eeo-10_5yr-eeoall1w.dat
eeo-10_5yr-eeoall1w.ann

2.5 Geographic Header File

Two geographic header files are provided which contain information about all geographic entities for the EEO Tabulation (2006-2010), one for the residence geographies and one for worksite/flow geographies. The geographic header file is named with the structure <program>-< dataset>-"-geographic-header_file-"-r/w.xls. The program for this tabulation is "eeo." The dataset will be the current 5-year data set (e.g. 10_5yr). The file extension is .xls. For example, the geographic header files for the EEO Tabulation 2006-2010 data are named as follows:

eeo-10-5yr-geographic-header-file-r.xlsx
eeo-10-5yr-geographic-header-file-w.xlsx

The header row in these files contains a record layout and each following row contains a single geographic area with a unique geographic identifier (GEOID). All geographic codes for a geographic area are embedded within the GEOID. The GEOID is made up of a three-digit summary level, a two-digit component (always "00" for EEO), a constant "US," and the unique geographic area code within the summary level. The summary level field (SUMLEV) is the critical element in identifying the geographic area type for each record. The worksite file contains a FLOWID and its associated GEOID. Both of these geographic header files are located in the zipped file eeo-10-5yr-geographic-header-file.zip on the EEO FTP site at http://www.census.gov/EEO_2006_2010/.

The SUMLEV field represents a three-digit code, which represent the following geographic areas:

- Nation (010)
- State (040)
- CBSA (310)
- State-County (050)
- State-Place (160)
- County Set (902)

2.6 Metadata File

The spreadsheet called "The EEO Tabulation 2006-2010-5-Year-Table-shells.xls" contains all of the table shells in a single location. See Table 2-1 below for an example of a table shell applied to the .dat structure and the section under File Structure called "Table Shell Metadata" for details about the metadata file.

Table 2-1. Example of an EEO table shell

AFF Display ID	Table ID	Indent	Line Num	Stub	Estimate_1	MOE_1
EEO-ALL01R	EEOALL1R	0	0	EEO 1r. Detailed Census Occupation by Sex and Race/Ethnicity for Residence Geography		
EEO-ALL01R	EEOALL1R	0	0.3			
EEO-ALL01R	EEOALL1R	0	0.4		Total, race and ethnicity	Total, race and ethnicity
EEO-ALL01R	EEOALL1R	1	0.9	Total, both sexes		
EEO-ALL01R	EEOALL1R	2	1	Number	#	#
EEO-ALL01R	EEOALL1R	2	2	Percent	%	%
EEO-ALL01R	EEOALL1R	1	2.9	Male		
EEO-ALL01R	EEOALL1R	2	3	Number	#	#
EEO-ALL01R	EEOALL1R	2	4	Percent	%	%
EEO-ALL01R	EEOALL1R	1	4.9	Female		
EEO-ALL01R	EEOALL1R	2	5	Number	#	#
EEO-ALL01R	EEOALL1R	2	6	Percent	%	%

2.7 Data File Contents

There are two types of tables that contain EEO Tabulation data. The data files (file extension - .dat) contain estimates and margins of error, but include numeric values for jam values (see Chapter 3 for more information on jam values). The annotation files (file extension - .ann) complement the .dat files by containing clearer character values for jam values.

NOTE: All of the following structural references to the data files also apply to the annotation files. In order to simplify documentation in this chapter, descriptions about the structure of the annotation files are omitted because they are redundant with the descriptions of the data files.

Each data file is a single EEO table in a pipe-delimited (|) ASCII file format. Each row contains the estimates and margins of error for a single geographic area for a particular iteration. The geographic area is identified with the first column, GEOID. Flow geographies contain a GEOID followed by a FLOW ID (i.e. 0500000US01001| 0100100000|) in the second field of the data file shown as GEOID|FLOWID|. The iteration number is the second field in the data file for non-flow data and indicates the EEO occupation iterations that are tabulated, and is in the third field for flow data. The iterations are identified by their four-digit iteration number (EEO OCC). See the example file layout for eeo-10_5yr-eeoall1w.dat in table 2-2 below for more details concerning the structure the data files.

Table 2-2. Example File Layout for eeo-10_5yr-eeoall1w.dat

GEOID |FLOWID OCC|EST1|MOE1|EST2|MOE2|……..
1600000US5613900|56139000000000|9750|21|32|0|119|0|119|35|42|0|222|0|222|0|222|9
1600000US7206593|72065937206593|9750|22|23|20|23|0|222|0|222|0|222|0|222|0|222|9
1600000US7214290|721429072119B0|9750|23|34|20|34|0|222|0|222|0|222|0|222|0|222|9
1600000US7232522|72325227276770|9750|9|24|4|24|0|222|0|123|0|222|0|222|0|222|0|0
1600000US7263820|72638207263820|9750|29|39|25|29|0|222|0|222|0|222|0|222|0|222|9
1600000US7276770|72767700000000|9750|210|202|210|202|0|219|0|219|0|219|0|219|0|9
1600000US7276770|72767707206593|9750|35|40|0|222|35|40|0|222|0|222|0|222|0|222|9
1600000US7276770|727677072137B0|9750|20|26|0|222|20|26|0|222|0|222|0|222|0|222|9
1600000US7276770|72767707276770|9750|70|53|45|46|20|23|0|222|15|25|0|222|0|222|9

The remaining fields in the data files alternate estimates and margins of error in numerical order of the table cells. The recommended naming for the estimates is tblid_tblcell_EST and for margins of error is tblid_ tblcell _ME. In most tables, field 3 contains the estimate for table cell 1 (i.e. eeoall1_1_EST, eeoall1_2_EST, etc.) and field 4 contains the margin of error for table cell 1 (i.e. eeoall1_1_ME, eeoall1_2_ME, etc.). If there is more than one cell in the table, then field 5 contains the estimate for table cell 2 and field 6 contains the margin of error for table cell 2, and so on for all table cells.

Chapter 3 User Notes

Supplemental Documentation

Supplemental documentation concerning the American Community Survey, to assist users using this technical document, is located on the ACS Website at: www.census.gov/acs/www/data_documentation/documentation_main/.

Documents such as the Subject Definitions, Accuracy of the Data, and Code Lists are available on the URL listed above.

Geographic Terms and Concepts

The most updated geographic terms and concepts can be found at: http://www.census.gov/geo/www/reference.html.

The EEO Tabulation 2006-2010 (5-year ACS data) uses the December 2009 vintage for metropolitan and micropolitan statistical areas and components which can be found at: http://www.census.gov/population/metro/files/lists/2009/List1.txt.

Data Collection and Processing Procedures

The American Community Survey operations involve a complex set of data collection and processing procedures that are too extensive to discuss as a chapter in the EEO Tabulation (2006-2010) documentation. EEO data users interested in a technical discussion of ACS operational processes and survey design should review the ACS Design and Methodology Report located at: http://www.census.gov/acs/www/methodology/methodology_main/.

Questionnaire

Examples of the questionnaires that were sent to sample addresses can be found in the questionnaires section of the ACS website located at: http://www.census.gov/acs/www/SBasics/SQuest/SQuest1.htm.

ACS Standard Data Products in New AFF and User Handbook

The U.S. Census Bureau produces a variety of products that allow data users to access and research ACS data. These products are available in American FactFinder (AFF). Information about how to use AFF is located at: http://factfinder2.census.gov/faces/nav/jsf/pages/index.xhtml.
Data users looking for a summary overview of the ACS program or for discussion of annual changes in ACS data collection or product availability should refer to the Data and Documentation section on the ACS website at: http://www.census.gov/acs/www/data_documentation/data_main/.

Maps and Geographic Reference Materials

Detailed information about the ACS maps can be found in the reference maps section of the ACS website located at: http://www.census.gov/acs/www/data_documentation/reference_maps/.

Code Lists

The ACS provides code lists to identify all potential response categories for the variables included in the EEO Tabulation 2006-2010 (5-year ACS data). These variables are occupation, Hispanic origin, race, and industry. The code lists are available at: http://www.census.gov/acs/www/Downloads/data_documentation/pums/CodeLists/ACSPUMS2006_2010CodeLists.pdf.

Jam Values

Some data values represent unique situations where either the information to be conveyed is an explanation for the absence of data represented by a symbol in the data display, such as "(X). The data files (.dat) contain numeric values for jam values, while the annotation files (.ann) contain character values that are more descriptive.

The following list shows the special data values which can appear in any EEO Table on the FTP Site and on the American FactFinder website (AFF):

Special Data Values (Used in .dat files)	**Display Value (Used in .ann files.)**	**Description**
-999999999	N	Indicates that an estimate or its margin of error cannot be provided because the number of sample cases is too small for the given geographic area.
-888888888	(X)	Indicates that the estimate is not applicable or not available.
-666666666	-	Indicates that no sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
-222222222	**	An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

A missing string indicates that the estimate is unavailable. This appears in the data files as two pipe-delimiters adjacent to each other without anything between them, or if the last cell in a data file is filtered then you get a pipe-delimiter followed immediately by a carriage return or EOF. A missing value indicates when an estimate is missing because of filtering for geographic restrictions or was removed due to the Disclosure Review Board's (DRB) Requirements.

Jam values are also used for the margins of error of controlled estimates. A statistical test for sampling variability is not appropriate. This is similar to the "*****" symbol used in American FactFinder.

Resources for using the FTP Site Files

The zipped file EEOTabulation2006-2010FTPSiteTableReferences.zip located on http://www2.census.gov/EEO_2006_2010/ contains the EEO-Tabulation-2006-2010-FTP-Site-Table-References.xlsx document, which consists of the following supplemental information for the EEO Tabulation 2006-2010 (5-year ACS data) disseminated via FTP.

- "**TableID-List**" defines the tables for EEO Tabulation (for FTP site).
- "**SummaryLevels-Table-Set**" defines the summary levels for EEO Special Tabulation.
- "**Tables-By-Geography**" defines all geographies used with which tables.
- "**Tables-By-Variables**" defines all variables used with which tables.
- "**Variables**" defines all variables that are referenced in the tables' lists, except for industry and for occupation.
- **"Industry"** defines the EEO 10W TableID suffix groupings, 2007 Census industry codes, corresponding 2007 NAICS industry codes, and EEO industry title.
- "**OccReCodesAggregatedOccs**" defines the EEO Tabulation 2006-2010 (5-year ACS) and 2008-2010 (3-year ACS) Occupation Code Crosswalk to Aggregated Occupations
- "**Guide-AggregatedOccups**" defines aggregated occupation group definitions.
- "**PUMSOCClist**" contains a crosswalk of full list of 2010 Census Detailed Occupation Codes to EEO Tabulation/PUMS Detailed Occupation Code List.
- "**EEOcrosswalk2000to0610**" contains an EEO Tabulation Crosswalk for the 2000 versus the 2006-2010 occupation codes.

User Notes

Other ACS user notes can be found on:
http://www.census.gov/acs/www/UseData/usernotes.html

PRELIMINARY PROGRAM OF THE ALLIED SOCIAL SCIENCE ASSOCIATIONS JANUARY 3-5, 2014, PHILADELPHIA, PA

NOTE: Everyone must register for the meeting, including speakers.

Please review your session(s) and let us know if you see anything that is amiss. Before making additions, please do a search to make sure you are not adding someone who is already scheduled at the same time.

We realize that there are some conflicts with participants. This was unavoidable, and in such cases a co-author will have to present the paper. Changes and corrections should be sent to gwyn.p.loftis@vanderbilt.edu.

All sessions will be equipped with a projector and screen for your presentation. ASSA will not provide computers.

Special Events listings are available here.

Location of Sessions for 2014 in Philadelphia, Pennsylvania

The beginning and ending times of sessions is shown below, with the exception being on the last day of the meeting when the last time slot will run from 1:00 pm to 3:00 pm.

8:00 am - 10:00 am
10:15 am - 12:15 pm
12:30 pm - 2:15 pm
2:30 pm - 4:30 pm

2015 Annual Meeting

Registration for the ASSA and AEA Continuing Education Meetings is NOW OPEN.

The 2015 Annual Meeting will take place in Boston, MA on January 3-5, 2015. *Please note this is a Saturday/Sunday/Monday meeting this year*. The headquarters hotel will be the Sheraton Boston.

2015 Preliminary Program
2015 Daily Program of Events

Deadlines

Registration: Deadline to cancel on conference registration is December 3, 2014.
Housing: Deadline to guarantee convention hotel rate is December 3, 2014. You may continue to make and modify reservations until December 15 at 3:00 pm. *No refunds if registering after December 3 or on-site.*

Registration Fee	Received by Dec. 3	After Dec. 3 on-line only
Regular Attendee	$55.00	$115.00
Full-time Student (Student ID required to pickup badge)	$25.00	$45.00
Spouse, Guest or Administrators (If affiliation is needed you must register separately and pay the full fee.)	$25.00	$45.00

RE: Final Report on the Evaluation of the EPA Office of Civil Rights

Dear Ms. Carrillo:

This document serves as the final deliverable for the Office of Civil Rights (OCR) project. This deliverable presents our findings and recommendations to improve the overall efficiency and effectiveness of the Office of Civil Rights and its three program offices:

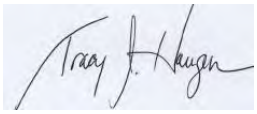
- External Complaints and Compliance (Title VI);
- Employment Complaints Resolution (Title VII); and,
- Affirmative Employment and Diversity (AED).

Given the urgency within the Agency to rapidly transform the OCR function, Deloitte developed a plan that highlights the priority and sequencing for implementing each recommendation.

We have very much enjoyed working with the Agency on this engagement. Civil Rights and Diversity and Inclusion are core tenets that are promoted within Deloitte's culture. We hope you find our firm's passion for this subject matter is reflected in the depth of the analysis and quality of the recommendations within this report. Moreover, we are looking forward to continued discussions with the Agency regarding our findings and recommendations.

Please do not hesitate to contact me at 202-758-1750, or by e-mail at thaugen@deloitte.com.

Sincerely,



Tracy Haugen, Director
Deloitte Consulting LLP

1. Executive Summary

The Environmental Protection Agency (EPA) contracted with Deloitte Consulting (Deloitte) to conduct an assessment of the Office of Civil Rights (OCR). The contract objectives were to:

- Conduct a comprehensive review and program evaluation to determine how effectively OCR is meeting its mission and regulatory mandates.
- Complete a comprehensive review of the OCR structure, staff and functions to pinpoint strengths and weaknesses.
- Assess Headquarters, field office, and laboratory interactions, present findings and deliver high-level recommendations.
- Deliver an objective evaluation which EPA officers can use to guide improvements for OCR functions and day-to-day operations.

Findings and Conclusions

EPA's senior leadership has increased the Agency's emphasis on resolving civil rights issues that are critical to fulfilling its mission. Recently, EPA leaders have been providing significant support to OCR, investing both time and resources needed to address significant performance challenges, including the following:

- The Office has not adequately adjudicated Title VI complaints – those addressing allegations of discrimination against communities of citizens affected to environmental rules promulgated by the EPA.
- OCR has struggled to track, investigate, and resolve Title VII cases – those addressing Equal Employment Opportunity (EEO) violations inside the Agency – in a timely or effective manner.
- OCR has not completed compliance checks of EPA grantees, in a timely or effective manner, to ensure that grantees are not engaging in discrimination in their work.
- OCR has not consistently filed its statutory affirmative employment reports over the past five years, although the 2010 MD-715 was submitted on time.

These challenges emerged over the past decade and have continued to erode OCR's performance. To a significant extent, they are attributable to OCR's difficulty in building a staff with the qualifications, knowledge and training to effectively complete its mission-related work, much of which is highly technical and complex. Over a period of several years, required competencies have not been well-defined, nor has there been any attempt to determine the extent to which staff possess the necessary competencies to perform successfully. There are limited formal training or career development programs to provide training in the work they have been assigned to perform, despite the challenging, sensitive, and often complex nature of the work.

OCR staff members also suffer from the absence of the rudiments of organizational infrastructure – well-documented policies and procedures, standardized processes, and effective systems. Staff members are often confused about their job duties. Managers lack the performance tracking and management systems and processes needed to manage the office's business and hold staff members accountable for effectively executing their jobs. OCR has not implemented the processes needed to collect and maintain information needed to fulfill statutory recordkeeping requirements.

Finally, OCR has operated in an insular fashion that has limited its effectiveness. It has not taken full advantage of the extensive technical expertise available in the program areas of EPA that would enable it to conduct better investigations and achieve more expeditious resolutions. OCR has not provided sufficient clarity to the program management, human resources and EEO offices to secure the data it needs to complete its submissions in a timely fashion. Nor has it effectively leveraged other EPA and state government officials whose relationships, contacts and local knowledge would enhance its field investigations. Additionally, OCR has not conducted much outreach to state government departments of environmental quality to build awareness of circumstances that can give rise to allegations of discrimination from communities with environmental concerns.

This set of circumstances has resulted in a record of poor performance:

- Only 6% of the 247 Title VI complaints have been accepted or dismissed within the Agency 20-day time limit.[1] [2]
- OCR's backlog of Title VI cases stretches back to 2001. At the time of this report's publication, there were numerous cases that have been awaiting action for up to four years. Two cases have been in the queue for more than eight years.
- In the area of Affirmative Employment and Diversity, OCR did not even complete its annual Management Directive 715 (MD-715) EEO report (a basic administrative task required of all Federal agencies) for 2006, 2007, and 2008.[3] [4] It is our understanding that 2010 MD-715 was filed on time.
- OCR's Title VII function is known for poor investigative quality and a lack of responsiveness. It has not been able to perform its most fundamental Title VII administrative tasks related to filing mandatory reports and processing complaints and writing final agency decisions.

This situation has exposed EPA's Civil Rights programs to significant consequences which have damaged its reputation internally and externally. In the Rosemere Neighborhood Association case regarding the timeliness of a Title VI complaint response, it was found that "OCR's failure to process the Retaliation Complaint in accordance with the timeline set forth in 40 C.F.R. S7.115(c)(1) constitutes agency action unlawfully withheld pursuant to the Administrative Procedures Act, 5 U.S.C. S706(1)." [5] OCR's performance has also damaged its reputation within EPA. It was noted repeatedly in interviews with EPA staff and management that OCR has been viewed as an organization that performs poorly and does not offer specialized expertise.

Much of this owes to OCR's challenges at the leadership levels over a period of years, [redacted] As leaders and staff struggled within this turbulent environment, OCR seemed to lose sight of its mission and priorities. It appeared to place too much emphasis on minor responsibilities, like executing heritage events, and not enough on the critical discrimination cases affecting employees and disadvantaged communities. In addition to not setting the right tone, past OCR leaders seemingly abdicated responsibility for crafting a vision, developing strategies, setting objectives, tracking performance and

[4] Confirmed during AED staff interviews.
[5] "Settlement Agreement" between Rosemere Neighborhood Association (RNA) and EPA. March, 17, 2010. p3, paragraph 1.

making critical decisions that would have improved OCR's effectiveness. While a new Director was recently appointed, other key leadership positions remain unfilled.

Recommendations

EPA has taken the initial steps to address OCR's current challenges. First, the Agency commissioned this study as a vehicle to engage OCR and its stakeholders in the process of evaluating organizational performance improvement opportunities. Second, it has appointed an experienced Director with a strong understanding of OCR priorities. Third, and most importantly, it has made improving the OCR function a top priority, recognizing its importance to achieving the overall objectives of the EPA.

Yet, much work remains. The recommendations in this report are intended to address the near term need to effectively perform fundamental processes such as complaint resolution, while establishing the organizational and operational infrastructure needed to transform OCR into a model Civil Rights organization for the longer term. Immediate steps should focus on making OCR more effective in its day-to-day operations and expanding responsibilities for civil rights across EPA. In the long run, EPA should develop a strategy anchored in complaint prevention in order to effectively address both Title VI and Title VII issues.

EPA's first improvement actions must address current deficiencies in OCR's leadership and workforce competencies:

- Complete efforts to fill OCR's leadership positions expeditiously with qualified, experienced, and motivated civil rights professionals. A competent leadership team will enable OCR to implement all of the other needed changes, while building its credibility.
- Reevaluate all staff job roles and formally document required skills, competencies and experiences for each role. With well-defined job roles, OCR can evaluate its current workforce against the requirements and identify gaps.
- Develop and execute a workforce plan that includes creation of well-defined career paths, employee performance management processes, new training programs and employee recruiting and selection processes.

Building a more capable workforce from top to bottom will enable EPA and OCR to address its significant day-to-day operating issues and implement the other more strategic changes that are required.

To expand responsibility for achieving the Agency's civil rights objectives and to bring needed Agency support to OCR, the Administrator should establish two cross-functional or "networked" teams. A networked team brings together people from different areas within EPA to work as a project team in accomplishing a set of specific goals but does not alter formal reporting relationships,

These "networked" teams should help OCR set priorities, marshal resources and remove obstacles that challenge timely and effective completion of important tasks. These teams should be accountable and report to the Administrator for driving achievement of the EPA's civil rights objectives through broad involvement of program offices, field offices, and the other Headquarters human capital and legal functions.

The External Civil Rights Networked Team (External Team) should be established to address the pressing need to expedite effective resolution of complex Title VI cases. It should adopt a standard process to charter cross-functional investigative teams that bring together the right expertise to address each complaint. Specifically, the External Team should:

- Assist the OCR to prioritize complaints, ensuring their alignment with overall EPA and Administration objectives.
- Bring the right program and field leaders together to assess the investigative requirements of each complaint.
- Work with program and field leaders to identify and commit the right experts to each cross-functional investigative team.
- Hold those outside of OCR accountable for fulfilling their commitments to investigative analysis on behalf of the Administrator.

The External Team should be chaired by the Environmental Justice Lead. It should be composed of leaders from Office of Enforcement and Compliance Assurance (OECA), the Civil Rights and Finance Law Office (CRFLO), ORD, the Office of Grants and Debarment (OGD), and the Title VI program office.

The Internal Diversity and Inclusion Networked Team (Internal Team) should be established to address OCR's deficiency in gathering, analyzing and reporting important EEO data for reporting and remedial actions. It should help Affirmative Employment and Diversity (AED) facilitate the participation of other EPA departments in the timely collection of accurate data. Additionally, AED should:

- Clarify and reinforce to staff that its primary role is to identify barriers and implement remediation strategies.
- Use the MD-715 submission as the focal point to guide all communications with stakeholders across the Agency.
- Hire, train, or realign staff members who possess a balance of barrier analysis expertise and passion for civil rights and diversity.
- Coordinate programming, guidance and direction through its network of EEO Officers.
- Develop awareness and training programs that will help managers across EPA preclude complaints and promote the agency's civil rights objectives.

The Internal Team should be chaired by the AA for the Office of Diversity, Outreach and Collaboration (ODOC). It should be composed of leaders from Associate Regional Administrator (ARA) EEO, the Office of Human Resources (OHR), CRFLO, Title VII and AED.

Two other organizational changes should be adopted. EPA should re-establish the dotted line relationship between ARA EEO Officers and the Director of OCR for tighter integration and collaboration with the field. In addition, OCR should establish a Headquarters EEO Officer position to develop and manage EEO and AED programs for the staff at headquarters, which currently represents a significant percentage of overall EEO complaints. (For additional background information and alternatives, see Section 4.1). [6] Executing these initiatives should greatly enhance EPA's ability to achieve and maintain compliance with Equal Employment Opportunity Commission (EEOC) reporting requirements, while providing a firmer foundation for AED to identify and address barriers.

To achieve its Title VII objectives, OCR must upgrade its workforce capabilities in the areas of analysis, legal research and communications. It should also develop standard quality assurance processes and use

[6] Recommendation based on analysis and interviews. Section 4.1 begins on page 20.

them to identify performance issues. A number of other operational improvements are required to reduce backlog and increase quality. OCR should:

- Implement a case management tool to enable case tracking, reporting, analysis, and performance measurement.
- Increase the use of the Alternative Dispute Resolution program at both the Headquarters and field offices, and institute conflict management training program targeted for staff and management.
- Assign high-performing field-level EEO Officers on a temporary basis.
- Prepare staff to manage investigations function performed by contractors.

Implementing these improvements should lead to significant reductions in the backlog while instituting higher standards for quality.

Implementation Considerations

The changes needed to address current organizational and operational issues will require a 12-24 month timeframe. Instituting changes that have the potential to make OCR a model civil rights organization is likely to take longer. While EPA should be thinking long term, it must focus implementation efforts initially to address specific performance gaps, such as the quality of work products and an ad hoc approach to coordination with key internal operating partners, i.e., Human Resources (HR), Office of General Counsel (OGC), and OGD. Implementation should proceed in phases to address both immediate operational needs and the agency's desire to fulfill a higher order of objectives for its civil rights function:

- **Stabilize** (March to October, 2011) – Address operational challenges to improve current effectiveness.
- **Reassess** (October, 2011) – Review progress of improvement efforts and develop strategies to institutionalize changes.
- **Institutionalize** (October, 2011 to March, 2013) – Drive institutional changes and make strategic investments.

In the Stabilize Phase, EPA should focus on implementing recommendations that address current deficiencies in leadership and workforce competencies, organizational changes, and basic process improvements. The Reassess Phase should be a time to assemble key leaders and stakeholders to take stock in progress to date, revisit civil rights objectives drawing on new insights, and develop plans for longer-term institutional changes and strategic investments. The Institutionalize Phase should focus on implementing strategic investments in training, awareness and prevention programs, and new information systems. Subject to constraints posed by conflicting priorities, new initiatives, and emerging directives from outside EPA, the Agency should set a goal to implement the recommendations within a 12-24-month period.

2. Introduction

2.1 Purpose and Scope

The Environmental Protection Agency (EPA) contracted with Deloitte Consulting (Deloitte) to conduct a comprehensive review and program evaluation of the Office of Civil Rights. The purpose of the assessment was to determine the extent to which the structure, policies, procedures, and resources of the Office of Civil Rights (OCR) facilitate accomplishment of EPA's equal employment opportunity and equal opportunity mission, and to assess whether OCR operates in accordance with applicable laws and regulations (e.g., Equal Employment Opportunity Commission (EEOC) regulations set forth at 29 C.F.R. Part 1614, 40 C.F.R. Part 5 & 7, EEOC's MD-110 and MD-715 and external statutes including Title VI).

This study evaluated the organizational structure, external civil rights programs, non-discrimination laws and statutes, internal operations, staff competencies, and resources of the Office of Civil Rights to determine its ability to meet its functional responsibilities and operations. In addition, the study conducted interviews with nine federal agencies and other external research to benchmark EPA's civil rights function. Below is the listing of agencies and interviewed personnel:

Figure 2-1. Agencies and Personnel Interviewed

Federal Agencies Interviewed	
Federal Highway Administration	**Office of Civil Rights** Brenda Armstead, Internal Programs and External Investigations and Adjudications Director Thalia Williams, EEO Specialist-Title VI
Department of the Interior	**Office of Civil Rights** Sharon D. Eller, Director Office of Civil Rights Lola Hatcher-Capers, Deputy Director, Office for Civil Rights Alvin Dillings, Senior EO Policy Advisor Jack Andre, Chief, Public Civil Rights Division Sylvia Jones, Special Emphasis Program Manager
Department of Energy	**Office of Civil Rights** Bill Valdez, Acting Director Sharon Wyatt, Attorney-Advisor Neil Schuldenfrei, Senior Attorney-Advisor C. Lloyd Buddoo, Senior Attorney-Advisor Bill Lewis, Deputy Director of Civil Rights
NASA	**Office of Equal Opportunity and Diversity** Brenda Manual, Associate Administrator Frederick Dalton, Conflict Management Program
Department of Housing and Urban Development (HUD)	**Fair Housing and Equal Opportunity** Sara Pratt, Deputy Assistant Secretary-Enforcement and Programs Lynn Grosso, Director-Office of Enforcement Will Brandt, Information Services and Communication Tracy Mullins, Acting Director-Compliance and Disability Rights
Department of State	**Office of Civil Rights** John M. Robinson, Director & Chief Diversity Officer Pamela Britton, Law Clerk
U.S. Forest Service	**Office of Civil Rights** Debra A. Muse, Director, Office of Civil Rights Deborah Lombardino, Branch Chief Eurial Turner, Assistant Director of Programs
Department of Labor	**Civil Rights Center** Julia Mankata-Tamakloe, Chief-Office of External Compliance Violet Parker, Chief- Diversity Management

	Naomi Barry-Perez, Chief- Office of Internal Enforcement
National Institute of Health	**Office of Equal Opportunity and Diversity Management** Lawrence N. Self, Director Sheila Stokes, Director-Complaints Management and Resolution Rose Pruitt, Manager

Lastly, the study looked for opportunities for OCR to become more effective and move towards its vision to become a "model Office of Civil Rights for the government."

During the project kickoff held on September 8, 2010, EPA and Deloitte project team leadership confirmed the list of deliverables for each task as follows:

- Tasks 1 and 2: Develop Interim Report and Deliver Preliminary Briefing
- Tasks 3 and 4: Develop Final Report and Deliver Final Briefing

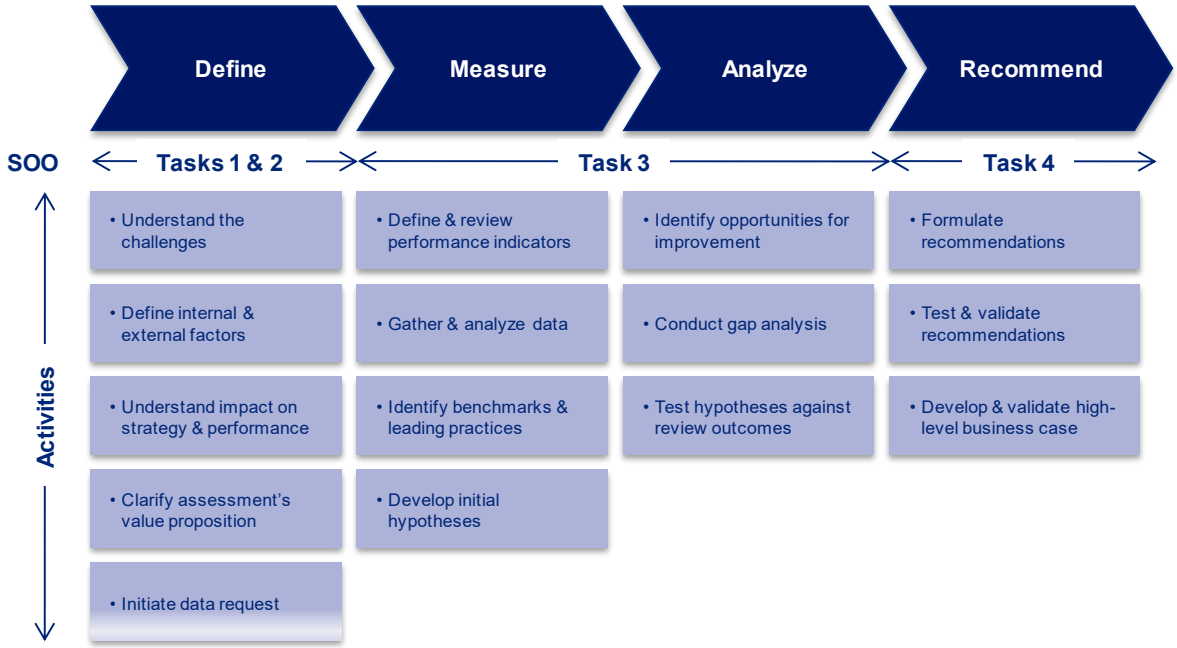
2.2 Approach

Deloitte's approach included a large number of internal and external interviews, a benchmark effort and a comprehensive desk study of leading practices. The Deloitte team conducted one-on-one interviews and focus group sessions with more than one hundred EPA employees to ensure broad inputs across organizational functions and hierarchies. The team conducted a benchmark study that included interviews at nine other federal agencies and with senior leadership at the Equal Employment Opportunity Commission (EEOC). In addition, Deloitte completed comprehensive desk study of leading practices in civil rights, and where relevant to the study, diversity and inclusion.

During the course of the project, Deloitte solicited continuous feedback during its status meetings to address any scheduling or other project issues, ensure findings and recommendations consistent with EPA's unique requirements, and to incorporate any missing data points that we may have overlooked. In addition, Deloitte conducted executive briefings to review preliminary findings and themes with EPA executives, including the Chief of Staff and Deputy Chiefs of Staff.

As depicted in Figure 2.2, the Statement of Objectives (SOO) for the evaluation divided the study into four sets of tasks that are aligned with Deloitte's Organizational Assessment Approach. This final report is the culmination of that work and offers EPA leadership recommendations to revitalize the EPA Office of Civil Rights (OCR) and position it to become a model civil rights organization.

Figure 2-2. Deloitte's Organizational Assessment Approach



2.3 Data Collection

Deloitte collected both qualitative and quantitative data to inform its research activities.

Interviews: Deloitte interviewed agency executives, key stakeholders, and OCR staff to gather current state information and seek validation that proposed recommendations align with EPA's unique culture and values, business strategies, politics and bureaucracy.

Job Analysis: Deloitte administered a web-based job analysis survey as a part of this assessment to 45 OCR and EEO Officer resources from the 10 regions, three laboratories, and Headquarters (HQ). The survey involved 22 questions across the following four categories: workload distribution; skill requirements; internal and external contacts; employee morale and workplace satisfaction; and an open forum to add additional comments.

OCR Document Review: Deloitte reviewed relevant EPA, OCR, and working group documents to better understand the processes, people, structure, and resources of OCR. Additionally, Deloitte sought copies of past "Diversity Action Plans" and any copies available of previously completed OCR Program Reviews though these were not provided.

Leading Practices Analysis: Deloitte interviewed executives and staff of nine other federal agencies' Civil Rights offices (or equivalent naming convention) to assess their approach to people, processes, structure, technology, and other relevant factors contributing to "model" design across Title VI, Title VII, AED, and Reasonable Accommodations functions. Deloitte also reviewed reference material from the Equal Employment Opportunity Commission and the Department of Justice's Federal Coordination and Compliance Section.

EPA Intranet: Deloitte sought access to the EPA Intranet to review stakeholder communications, consistency of mission statements and functional descriptions between HQ and field offices, and to

assess the breadth of recommendation options around web-based technologies.[7] (Note: EPA was not able to grant access until January 5, 2011, two days before the draft Final report was submitted. EPA did produce a thumb drive on January 5 as an alternative. However due to the timing, it was not considered for this report.)

2.4 Stakeholder Interviews

In an effort to obtain inputs from all parties involved with or affected by OCR's performance, Deloitte recommended representation from staff, oversight organizations, partners, and customers. The project team worked with EPA project leadership to finalize the interviewees, which included all the recommended groups and stakeholders from internal management groups, such as the EPA Human Resources Council. At a high level, the interviews represented the following key stakeholder groups:

- *Office of the Administrator* – Interviews with the top executive team including the EPA Administrator, Deputy Administrator, Chief of Staff;
- *Office of Civil Rights* – Interviews with more than 40 OCR managers and line employees;
- *Office of General Counsel and Office of Inspector General* – Interviews with 5 members, including the General Counsel;
- *EPA Program Offices* – Interviews with 7 senior and mid-level leadership staff from multiple program areas; and
- *Equal Employment Opportunity Commission* – Interview with the senior representative for Federal programs at the EEOC, the main oversight body for the Civil Rights Act.

Deloitte advised participants that interviews were confidential and non-attributable, and provided interviewees the opportunity to give additional input by contacting either the EPA Project Officer or through direct contact with the Deloitte interviewer via email or telephone. The project team aggregated the information collected in these discussions and considered it in conjunction with existing documentation so that no single source had more influence than another, regardless of role.

Two experienced interviewers facilitated each interview, using standardized interview guides focused on six primary questions that were provided to respondents prior to the interview session. The staff interview questions, which covered two areas – organization and job analysis – are listed below:

PART 1: ORGANIZATIONAL QUESTIONS

- What do you think the vision and mission of OCR should be?
- What are the top three priorities for your particular team?
- What would you consider positive and negative about the overall work environment within OCR?
- Does your immediate supervisor provide you with sufficient feedback and guidance?
- What are the resources that you need to do your job effectively and efficiently?
- What are you held accountable for with regards to your work performance? How and when are you evaluated?

[7] Deloitte was notified on January 05, 2011 at 1:42 PM that the tokens were available. This report was submitted two days later on January 07, 2011. As a result, Deloitte was unable to complete its review of the EPA intranet.

PART 2: JOB ANALYSIS QUESTIONS

- What is your role within the organization?
- What level of knowledge does your job need to have in order to be successful? Please refer to specific product/professional knowledge.
- What previous experience do you believe is needed to be successful?
- What qualifications/training does the job holder need to have to undertake this job successfully?
- What are the job holder's daily, weekly, monthly, and yearly deliverables?
- What processes are the deliverables of this position dependent on?
- What other comments would you like to make regarding your job role?

The EPA non-OCR interview questions are listed below:

NON-OCR INTERVIEW QUESIONS

- What are your expectations for OCR?
- What do you believe are strengths and successes of OCR?
- Where do you see shortcomings/deficiencies within OCR?
- From your perspective what are the priorities for OCR?
- What do you perceive are the major challenges for change?
- What other stakeholders should we make sure to meet with, such as informal influencers?

3 Overview of the Office of Civil Rights (OCR)

3.1 Background

Federal agencies implement The Civil Rights Act of 1964 (i.e., "the Act"), as amended, which prohibits discrimination on the basis of race, color, religion, national origin or sex[8]. Federal agencies commonly organize their civil rights functions into three distinct programs, including Equal Employment Opportunity (EEO), External Civil Rights, and Affirmative Employment.

3.2 OCR Overview

The Office of Civil Rights (OCR) similarly divides the Environmental Protection Agency's (EPA) civil rights responsibilities into three program offices[9]: External Complaints and Compliance (Title VI); Employment Complaints Resolution (Title VII); and Affirmative Employment and Diversity (AED). Each program office is headed by an Assistant Director who manages headquarters employees and provides leadership, direction, and guidance to carry out the Agency's equal employment and equal opportunity programs. These programs provide policy and technical assistance to EPA's Headquarters, regional offices, and laboratories located throughout the country. OCR's headquarters office also has a Reasonable Accommodations function that serves the needs of both headquarters and field staff.

The Director of OCR has a direct line reporting relationship to the EPA Administrator and takes administrative direction from the Chief of Staff or Deputy Chief of Staff on a day-to-day basis. The Director serves as the principal adviser on EPA's nationwide internal and external Civil Rights programs and policies. OCR's principal role is to uphold the Agency's commitment to EEO, equity, and diversity in the workplace and foster an environment that is free from discrimination, reprisal, and harassment.

Figure 3-1. OCR's Primary Responsibilities

OCR's Primary Responsibilities

- **External Complaints and Compliance (Title VI)** monitors compliance, processes complaints and conducts outreach and training related to Federal Title VI statutes and EPA's nondiscrimination regulations, 40 C.F.R. § 7.130(b).
- **Affirmative Employment and Diversity (AED)** analyzes barriers to employment and advancement opportunities for women, minorities, and persons with disabilities and implements and reports remediation measures.
- **Employment Complaints Resolution (Title VII)** processes discrimination complaints related to Federal Title VII statutes and provides guidance for applying the alternative dispute resolution mechanism.

[8] Source: http://www.eeoc.gov/laws/statutes/index.cfm
[9] Source: http://www.epa.gov/civilrights/aboutocr.htm

External Complaints and Compliance (Title VI) Program

The mission of EPA's External Compliance (Title VI) program is to ensure that recipients of EPA financial assistance comply with relevant non-discrimination requirements under Federal law.[10] The Title VI division is staffed by an Assistant Director, six case managers, and one senior case manager, reflecting the heavy emphasis on the complaints function.

The program has three primary functional responsibilities including outreach and training, compliance and enforcement, and complaints management. The outreach and training responsibility is administered primarily through OCR's web presence which includes a series of links to laws, regulations, and online training. Compliance and enforcement is administered through a pre-award form (form number 4700-4) that is attached to all grant applications and included in grant packages issued by the Office of Grants and Debarment (OGD) and implemented through OCR's network of field-based EEO Officers. The Title VI case management process is divided into three discreet stages: 1) Jurisdictional Review, 2) Investigation, and 3) Final Agency Decision. Each stage concludes in a quality checkpoint with the Assistant Director, the Civil Rights and Finance Law Office (CRFLO), or both and always returns to the Case Manager before moving to the next stage. Jurisdictional Review and Investigation stages have set targeted timeframes. In the Jurisdictional Review stage, Case Managers have twenty days to prepare and finalize an Acceptance Letter. The investigation stage must be completed within one hundred and eighty days unless requests for information from the complainant are not provided in a timely manner.

The Title VI division is staffed by an Assistant Director, six case managers, and one senior case manager, reflecting the heavy emphasis on the complaints function. Case managers are assigned approximately five cases, while senior case managers are assigned up to seven cases.

Affirmative Employment and Diversity (AED) Program

AED is responsible for providing the leadership, direction and advice to managers and supervisors in carrying out their equal opportunity and civil rights responsibilities[11]. AED staff manage and oversee the Agency's Affirmative Employment and Special Emphasis and Diversity Programs. The National Special Emphasis and Diversity Program Managers develop internal EEO policies and procedures, develop and implement training, and provide oversight and technical assistance to Headquarters program management offices, regional offices and laboratories.

EPA's Affirmative Employment and Diversity (AED) program implements the following seven National special emphasis programs:[12]

- Black Employment Program
- Federal Women's Program
- Hispanic Employment Program
- Asian American/Pacific Islander Employment Program
- American Indian/Alaska Native Employment Program
- Diversity Programs for Older Workers and Sexual Orientation
- Disability Employment Program

[10] Source: http://www.epa.gov/civilrights/extcom.htm
[11] Source: http://www.epa.gov/civilrights/summ.htm
[12] Source: http://www.epa.gov/civilrights/summ.htm

AED has a staff of nine full-time time employees including an Assistant Director (GS-15), an Affirmative Employment Program Manager (GS-14) who serves as the custodian of the workforce data, and six Equal Employment Managers (GS-14 and GS-13) who are the lead representatives for their respective employment programs which include targeted recruiting. The Assistant Director and Disabilities Equal Employment Manager positions were vacant at the time of this report. The majority of Equal Employment Managers (EEMs) have previous experience in employment complaints programs or counseling, though few have experience or education directly related to their affirmative employment program area to assist in developing remediation strategies to address the affirmative employment barriers.

Employment Complaints Resolution (Title VII) Program

The mission of EPA's Employment Complaints (Title VII) program is to provide equal employment opportunity; eliminate discrimination in employment; and maintain an environment that is free from any form of prohibited discrimination.[13] Employees can pursue their allegation through either the informal or Alternative Dispute Resolution (ADR) mechanism, or file a formal complaint with OCR or directly with the Equal Employment Opportunity Commission (EEOC).

When employees choose to file a formal complaint of discrimination with OCR, the case is processed at the Headquarters OCR office by Equal Employment Specialists (EES) directly aligned to the region or laboratory of the case's origination. The formal complaints process moves through three stages including: (1) Jurisdictional Review, (2) Investigation, and (3) Final Agency Decision (FAD).

OCR has a staff of eight EESs reporting to an Assistant Director who reviews outputs along each stage of the case management process and moves completed work products to CRFLO for legal sufficiency review and, finally, the Director of OCR for approval and signature. Six of the eight EES positions are responsible for completing the Jurisdictional Review and Investigation stages while the remaining two EES positions are dedicated FAD writers. Two of the EES positions also hold collateral duty for, respectively, managing intake of formal cases and coordinating the Alternative Dispute Resolution (ADR) mechanism.

3.3 Organizational Context

OCR operates in a highly complex organizational environment and must carefully manage its inter- and intra-agency relationships in order to successfully deliver its statutory and administrative responsibilities. These operating partnerships vary by frequency of interaction and level of authority. Effectively managing these relationships is integral to maintaining OCR's credibility and retaining the neutrality of EPA's civil rights programs.

By placing the OCR within the Office of the Administrator, EPA is well-positioned to achieve several efficiencies, including:

- **Executive Sponsorship** – the Administrator is eager to champion OCR's mission as she is directly held accountable for its success.
- **Organizational Alignment** – OCR can more easily coordinate EPA's Civil Rights programs and meet the Agency's changing priorities by ensuring its neutrality and reinforcing the importance of civil rights within the context of EPA's overall mission.

[13] Source: http://www.epa.gov/civilrights/crshome3.htm

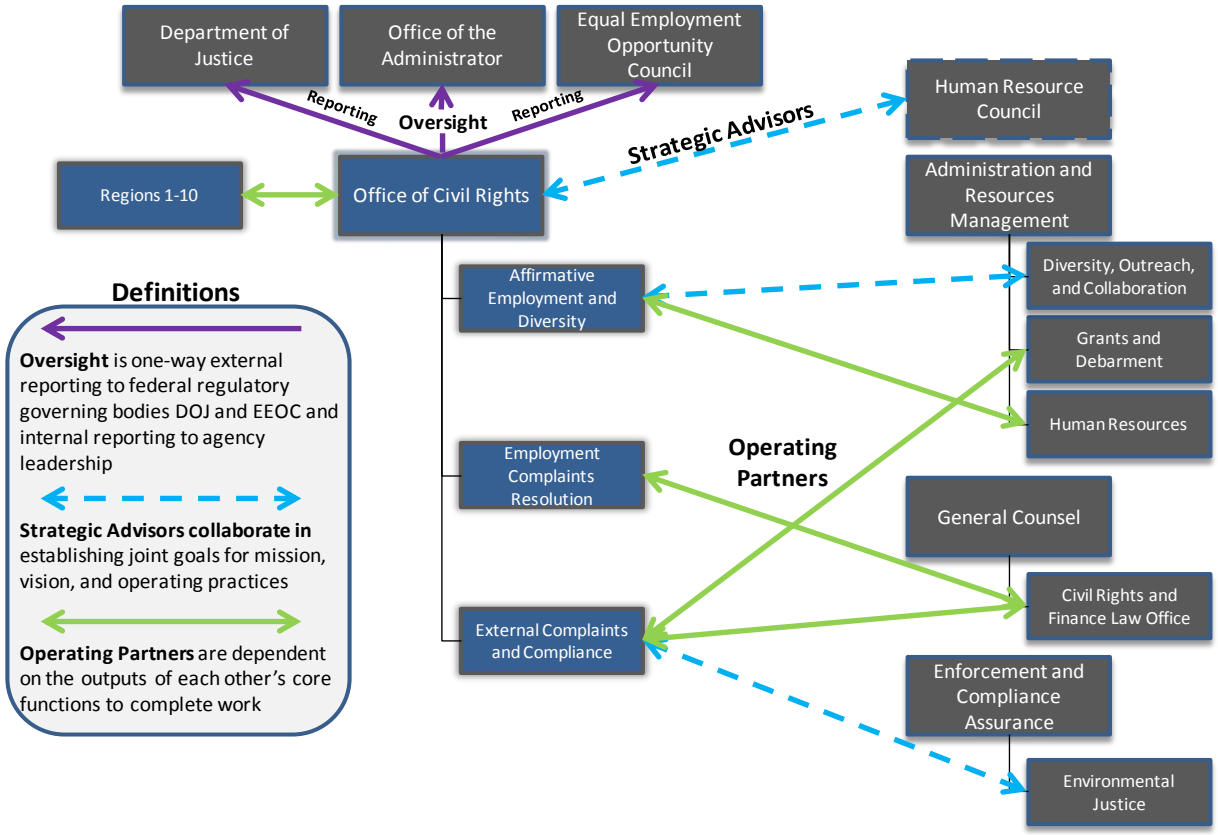
- **Oversight** – the Administrator's Chief of Staff and Deputy Chief of Staff regularly provide strategic direction to OCR and continuous feedback to the Administrator.
- **Visibility –** OCR's position in the Office of the Administrator enhances its visibility with program and regional leadership.

As illustrated in Figure 3-2, OCR must regularly interact with two outside oversight bodies, the EEOC and the U.S. Department of Justice (DOJ). EEOC and DOJ also provide training and procedural guidance to assist civil rights professionals to implement best practice programs and complete reporting requirements in a timely and accurate manner. EEOC and DOJ oversight is explained below:

Equal Employment Opportunity Commission (EEOC) – EEOC requires federal agencies to complete Management Directive 715 report (MD-715), which details the status of activities undertaken pursuant to its Affirmative Employment program under AED, and activities undertaken pursuant to its affirmative employment obligations under the Rehabilitation Act, Section 501. Additionally, agencies are required to complete the EEOC Form 462, which provides information on Federal equal employment opportunity complaints and ADR activities completed by the Title VII program.

Department of Justice (DOJ) – DOJ requests federal agencies to regularly report in regards to Executive Order 12250, which ensures the consistent and effective implementation of Title VI and other civil rights laws that prohibit discriminatory practices in Federal programs and programs receiving Federal financial assistance.

Figure 3-2. Internal and External EPA Civil Rights Reporting Relationships



Internally, OCR maintains operating partnerships with several EPA offices, including the Office of Human Resources (OHR), CRFLO (within the Office of General Counsel (OGC)), the Office of Grants and Debarment (OGD) and its network of field offices at the regions and laboratories; and OCR has an emerging relationship with the Office of Diversity, Outreach and Collaboration (ODOC) and strives to meet more regularly with Office of Environmental Justice (OEJ).

4 Current State Assessment

Deloitte Consulting (Deloitte) identified a reoccurring set of challenges that have impacted the ability of the Office of Civil Rights (OCR) to fulfill its mission:

- The OCR function has lacked stable leadership. While a new director has been appointed, [redacted] the organization's inability to fill subordinate leadership positions continues to be problematic.
- Management practices such as Standard Operating Procedures and operational goals are not well defined.
- OCR and the program offices have not established processes for collaborating to resolve civil rights and Equal Employment Opportunity Commission (EEOC) issues
- OCR staff lack the competencies and skills to get their job done effectively. Information systems support is also lacking.

The following sections discuss the challenges OCR faces. The first addresses organization- wide challenges. The other three address the OCR program offices (Title VI, Title VII and Affirmative Employment and Diversity (AED)). Within each section, we present our current state findings, benchmark practices from other federal agencies, and recommendations to implement corrective actions.

4.1 Organization-wide Challenges

Historically OCR's leadership had been relatively stable. However in a 16-month period, OCR lost four of its five top leaders [redacted]. Below is a summary of OCR Director, Deputy Director and Assistant Director tenure:

Name	Date Started	Date Left
Director		
[redacted]		
[redacted]		
[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]

Key Observations

- Focus has been on reactive, tactical complaint processing with limited effort to implement more proactive, preventative trend analysis and interventions
- 80% leadership attrition [redacted] in the last year
- Staff self report confusion on OCR mission
- Processes are non-standard and not repeatable
- Incomplete operating procedures and handbooks
- Lack of case management tracking system
- Internally supplied conflicting information on MD-715 and 462 report on Title VII FADs timeliness[14]
- Backlog in Title VI and VII cases
- Failure to meet MD-715 deadlines
- Lack of core competencies such as legal analysis

[14] "Summary of OCR Complaint Processing Issues 12-1-10to 1-3-11.doc)". 01/03/2011, 12:41 p.m. (Page 2-3)

[redacted]

Deputy Director

[redacted]

Assistant Directors

[redacted]

As a result of this leadership turnover, OCR has struggled to clarify its organizational vision and articulate its value and relevance to internal operating partners and employees, thereby compromising its credibility with external stakeholders. As such, the overall Agency has little confidence in OCR's programs ability to achieve its goals and objectives.

Without strong and consistent leadership and vision, OCR has drifted in focus and struggled to perform fundamental tasks. There has been a "seesaw" in emphasis between Title VI and VII programs, depending on which had the greatest backlog. Historically, this fire drill mentality has resulted in significant financial and reputational consequences for the Agency. For example, a Title VII case in 2000 led to a $600,000 settlement and resulted in the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR), drawing attention to EPA's employment discrimination challenges. More recently in 2010, a Title VI infraction led to a settlement and publicized criticism that EPA is ineffective in managing its External Civil Rights caseload. At the same time, OCR's AED program has continually failed to meet its MD-715 reporting deadline for several years. In the 2010 462 report, the Title VII program had to report that when the complainant requested an immediate FAD, EPA delivered "none on time", and seven were delivered after an average of 282.43 days had passed. Where the complainant did not elect a hearing or a Final Agency Decision (FAD), the Environmental Protection Agency (EPA) issued one on time, and the remaining 13 after an average of 332.38 days had passed.[15]

These challenges, coupled with dwindling credibility, have inhibited OCR's ability to champion a culture of inclusion, fairness, and respect, values that are fundamental to its mission. Furthermore, the current leadership environment has to address low employee morale, isolated program activities, and ineffective or unclear direction or guidance to the field. As a result, several duplicative civil rights

[15] MD-715 - Inside EPA, Feb 19, 2010, "Personnel Disputes Roil EPA's Rights Office, Undermining Equity Agenda", "Summary of OCR Complaint Processing Issues 12-1-10 to 1-3-11.doc)". 01/03/2011, 12:41 p.m. (Page 2-3).

functions have emerged throughout EPA, outside of OCR.[16] In this environment, OCR staff struggle to perform fundamental tasks and creativity and innovation is stymied.

Management and Infrastructure

OCR has not been well-managed. Lack of clear expectations, governance, and processes has created an environment where employees are not provided the structure and guidance required for their roles. Furthermore, inadequate oversight has led OCR to operate as a silo without influence on the greater EPA organization.

At the time of the study in Fall 2010, OCR lacked a clearly articulated strategy to achieve its organizational goals and objectives. Roles and responsibilities lack strategic focus and basic understanding of the core set of tasks and, as a result, staff operates without clear guidance and managerial direction. Meaningful job descriptions, annual work plans, standard and repeatable processes, and performance monitoring and management are limited or altogether absent. While there was evidence of individual ad hoc initiatives to develop manuals, job aids, or performance plans, few were completed and implemented to sustain consistent performance.

Moreover, some staff are not given proper guidance on desired competencies and skills development. For example, the web-based skills survey indicated that less than half of OCR staff felt that EPA programs knowledge was very important to do their job and only 55% of leadership rated legislative awareness as critical/very important. Other civil rights organizations have a required competency for knowledge of Equal Employment Opportunity (EEO) law, regulations and policies[17]. If this EEO and program knowledge is not seen as valued, OCR may struggle to connect to the EPA mission and stay current on civil rights legislative mandates.

[redacted]

Inadequate infrastructure is an additional concern. OCR lacks documented processes and standard operating procedures necessary to sustain performance. Additionally, performance management programs and career paths have not been consistently developed and applied resulting in unclear performance feedback and career progression.

Collaboration

Finally, OCR has a heavy reliance on Office of General Counsel (OGC), Office of Human Resources (OHR) and other internal collaboration partners to complete its core tasks yet lacks mechanisms to secure necessary resources and support. For OCR to be successful, it needs to be seen as relevant and part of the Administrator's agenda.

There is concern that OCR may not have the same clout as other management initiatives raised by Associate/ Assistant Administrators, particularly with the Director in a non-political position, and therefore seen as less of a priority. However, there was equal concern that OCR would be subject to the political whims of each administration if the Director became a political appointee.

When asked about the Director reporting relationship, the nine benchmarking agencies were consistent in their recommendation to leverage the mandated direct reporting line to the head of the Agency to be

[16] See Section 3.3, Figure 3-6, for additional background on "Redundant" civil rights functions outside of OCR.

[17] National Institutes of Health Competency Model, Equal Employment Opportunity Specialist GS-260, Occupation Competency Model

the advocate and voice of civil rights. Each Civil Rights Director indicated they would use the direct access to personally voice concern to the head of the Agency if they felt civil rights were not being upheld. Therefore, the sanctity of this reporting relationship was emphasized as the part of the OCR stewardship during our interviews.

From 1993 to October 2010, OCR has received 247 Title VI complaints, according to the complaint tracking log provided to Deloitte. The tracking file notes the month and year the complaint is received and the month and year the complaint is accepted or closed. Only 6%, or 15 out of 247, were moved to either accepted or rejected within 1-month period, in alignment to the EPA targeted 20 day timeframe for acknowledgement. In fact, half of the complaints have taken one year or more to move to accepted or dismissed status[18].

The staff and management interviews indicated a core challenge with Title VI is the complexity of each case with complicated investigation plans often requiring health impact modeling as reflected in the investigation plan examples provided to Deloitte. The Title VI complaint backlog was directly attributable to OCR's difficulty in securing the time of the resources in the program and regional offices that have the required technical and regulatory expertise to execute the highly analytical investigation plan.

As of November 19, 2010 when Deloitte received the complaint log, there was an open case submitted in November 1994 with a status of Partial Informally Resolved. [redacted] has assisted in locating the appropriate expertise and securing support within EPA, but it may be difficult to sustain commitment to the complaint resolution process due to competing priorities.

Similarly, AED and Title VII need to coordinate diversity efforts with OHR to embed into Human Resources (HR) programs such as recruiting and promotions. Additionally, the newly formed Office of Diversity, Outreach and Collaboration (ODOC) also plays a role in advocating diversity. OCR, OHR and ODOC are in the process of aligning missions and plans.

Benchmark Approaches

Figure 4-1 compares a summary of Deloitte's key findings to example benchmark approaches from civil rights functions outside of EPA. Model civil rights offices ensure the relevancy to their organizations by integrating civil rights into the larger Agency strategy and goals. The majority of civil rights offices interviewed during the benchmark study participated in regular meetings as part of the top Agency leadership team to discuss civil rights as a mission critical function. This encourages active executive participation in addressing barriers and implementing remediation plans as well as supporting complaint timely resolution.

Figure 4-1. Summary Findings and Example Benchmark Approaches

Summary Findings	Benchmark Approaches
• **OCR staff have varying interpretations of the mission and vision**	• **U.S. Department of State** OCR mission, vision, values, and goals were designed and ratified by all State Department civil rights employees[19]
• **MD-715 is seen as an administrative task with**	• **National Institutes of Health** MD-715 is produced quarterly at the Institute and Center level and actions and progress reported at the Executive level[20].

[18] "Final OCR T6 Complaint Listing (10.15.2010).xls" received from Helena Wooden-Aguilar, Friday 11/19/2010 at 3:10 p.m.

[19] Copy is provided in Appendix A

disjointed process of collecting each element	
• **OCR does not have a cohesive leadership team regularly sharing insights into program and regions**	• **U.S. Department of Labor Civil Rights Center (CRC)** Title VI, Title VII, and AED program leads are a cohesive team that is able to articulate innovations and tools in all program areas, and share staff
• **EPA leadership lacks confidence in OCR program offices**	• **National Aeronautics and Space Administration (NASA) Office of Diversity and Equal Opportunity (ODEO)** Administrator champions diversity and oversees a strategic diversity partnership within NASA that involves top leadership across the agency in influencing and addressing diversity and inclusion. As a result, the Office of Diversity and Equal Opportunity can harness agency wide leadership support for initiatives and programs
• **OCR does not have a strategic plan or consistent performance tracking**	• **NASA** ODEO established a policy to incorporate specific and measurable diversity and inclusion metrics into SES, Managers, and Supervisors performance ratings
• **OCR, OHR, and OGC have not engaged in consistent discussion of formalized roles, responsibilities, and data sharing requirements**	• **U.S. Forest Service** OCR, Solicitor's office, and Human Resources collaborated to map processes from informal to formal complaints and integrated mapping into action plans
• **Work product quality is inconsistent and often rejected by partnering offices (e.g. OGC).**	• **U.S. Commission on Civil Rights** suggests agency head offices develop guidelines for mandatory quality assurance review procedures that require review at various stages of development, and uniformly track witness contact to ensure accountability

Recommendations

The following recommendations are intended to help address these organization-wide challenges:

- Develop the model OCR vision and strategy to more proactive, prevention mindset for civil rights protection.
- Emphasize complaint trend analysis and predictive modeling to pinpoint potential problem areas for early interventions.
- Increase the effort and expertise to develop and implement remediation strategies to reduce barriers and prevent complaints.
- Develop External Networked Team to include Title VI, Office of Environmental Justice (EJ), Office of Enforcement and Compliance Assessment (OECA), and Office of Research and Development (ORD) resources chaired by overall champion to aggressively resolve Title VI backlog, enhance compliance reviews and develop proactive guidance for recipients to reduce potential for complaints.

Develop a strategic roadmap to direct a complete overhaul of every OCR program area to align with model OCR and institute improvement management system. The roadmap should be coordinated by a senior leader, such as the Chief of Staff or Deputy Chief of Staff. By positioning the effort above OCR, it can create greater confidence that OCR has the Administrator level access to receive all the necessary support and is not trying to make all the improvements by itself.

[20] Sample Quarterly NIH MD-715 was not provided to Deloitte. EPA may need to request directly.

The Chief of Staff or Deputy Chief of Staff should formally launch the initiative and serve as an informal ombudsman to both OCR employees and the broader community of EPA and external stakeholders. This concerted effort will restore the trust and confidence in the Office of Civil Rights as well as indicate the significant priority the Administrator has placed on developing a model OCR. The Chief of Staff or Deputy Chief of Staff governs the overall initiative – through regular status meetings – and facilitates access to Agency executives to build consensus among internal partners (e.g., OHR, OGC) and to ensure new OCR work plans are aligned with Agency goals and strategy. The roadmap should overhaul management systems, redefine job roles, and realign staff, as illustrated in Figure 4-2 below.

Figure 4-2. Recommended Management and Resource-Related Improvements

Improve Management Systems	Redefine Job Roles and Realign Staff
1. Update Responsibility Assignment Matrix, or RACI charts, and develop Operating Level Agreements with key process partners to clarify roles, responsibilities, and interdependencies 2. Conduct an end-to-end process improvement program to update processes, embed quality control measures, and define performance measures for all core OCR functions 3. Formulate templates, checklists, handbooks (for new and rotating employees), and other job aids which are critical to empowering employees and ensuring consistent, repeatable processes	1. Define the roles and responsibilities, competencies, and performance elements for each position 2. Map current staff to newly defined roles according to Knowledge, Skills and Abilities (KSA) and career fit 3. Conduct skills gap analysis and plans to develop the employees 4. Provide necessary training and development to close gaps 5. Formulate career paths and implement formal employee performance coaching

Monitor performance to track progress and course correct. OCR will restore its credibility by improving performance (e.g., reduce backlog) and articulating its value and relevancy to EPA's goals and strategy through communications which are targeted to specific audiences and make practical sense in the day-to-day lives of EPA employees and other relevant stakeholders.

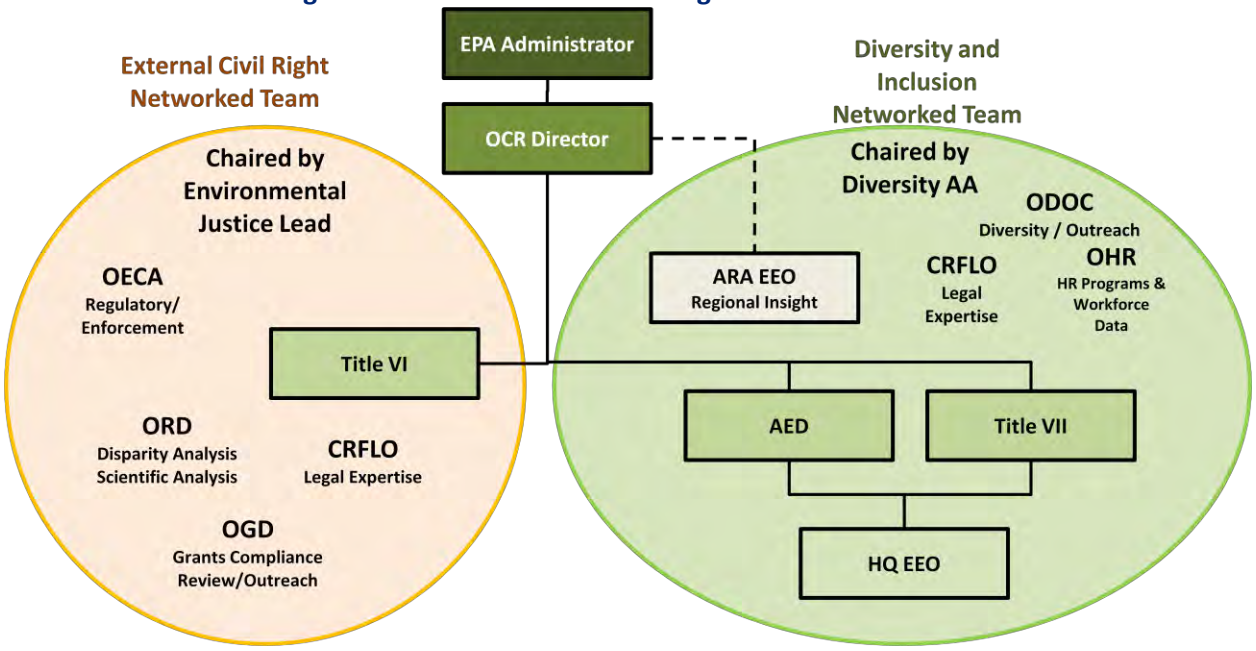
Make a few key changes to the organization of its civil rights functions

Like most federal agencies, EPA has multiple options for organizing the civil rights function and optimizing its ability to accomplish its mission. In order to determine the optimal organizational model for EPA, the Agency should consider the following organizational goals:

- Clarity on civil rights function;
- Dedicated focus on rebuilding and maintaining robust civil rights program;
- Greater influence on the programs and regions; and
- Agility to tap into ad hoc expertise to resolve complex Title VI complaints.

With these goals in mind, we recommend implementing a new OCR organizational structure as depicted in Figure 4-3.

Figure 4-3. Recommended OCR Organizational Structure



The diagram illustrates two "networked" teams. A networked team brings together people from different areas within EPA to work as a project team in accomplishing a set of specific goals but does not alter formal reporting relationships. The networked teams should have a Champion or Chair to lead and sponsor the effort. These teams should supplement, rather than supplant, the OCR organization. One focuses on internal diversity and inclusion and the other focuses on external community civil rights. Each network has a Champion to drive participation and address issues as they arise with his/her Associate/Assistant Administrator peer level.

In addition, Deloitte proposes a champion program to provide integration and coordination across collaboration partners for single point of accountability. The ODOC Associate Assistant Administrator can serve as the Diversity Champion. The Diversity Champion is goaled with action plans to address diversity barriers as identified in MD-715 and other internal EEO analyses. The Diversity Champion sponsors collaboration between OHR, ARA EEO, Affinity groups, Title VII and AED in developing remediation plans to address barriers. If team members are not fulfilling their role, the Diversity Champion can address with the respective Associate/Assistant Administrators for agreement on priority and time commitment. For example, MD-715 might indicate low advancement rates of Hispanic

engineers in region X. The Diversity Champion charters a diversity team of Region Lead, AED, Region X EEO, Region X SEPM, Hispanic Affinity group and OHR to identify underlying root cause and offer suggestions to address. The Diversity Champion holds Region X accountable for finalizing and executing the action plan, which gets monitored at senior management meetings. This championship model provides shared accountability for barrier analysis and remediation plans at the leadership level with an executive sponsor yet still provides the OCR Director with direct line escalation access to the Administrator if issues are too politically sensitive or not getting the adequate attention.

Similarly, Title VI would become part of External Civil Rights Networked Team under Environmental Justice (EJ) Champion linked with Office of Enforcement and Compliance Assurance (OECA), Office of Research and Development (ORD), Civil Rights and Finance Law Office (CRFLO), and Office of Grants and Debarment (OGD). By selecting the Champion from Office of Environmental Justice (OEJ), the External Team will align under the overall EJ mission of "fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations and policies."[21] The EJ Champion would review with the OCR Director the Title VI complaint backlog to proactively work with the programs to resolve the complaints as well as take preventative measures based on case trend analysis (i.e., 55 percent of complaints related to public participation). This External Civil Right Networked Team works with DOJ in defining the framework for complaint investigations and compliance guidance.

For example, ORD coordinates the development of scientific analyses and overall benchmarking data such as average number of superfund sites within different minority neighborhoods as part of the disparate impact analysis. When a complaint comes in, Title VI is able to leverage ORD's benchmark/control group analytics for its investigation plan. OECA supplies the environmental program requirements for public participation, enforcement and permitting which Title VI layers on the civil rights requirements. Title VI provides the civil rights criteria and threshold while OECA determines the regulatory requirements under each program (i.e. public participation steps for Clean Air) with DOJ validating the overall approach. These guidelines can then be integrated into the grants management process, bolstering the current 4700 self assessment during the application phase as well as program evaluation which also considers civil rights requirements.

By allocating the Title VI work elements to the appropriate EPA organizations, this mitigates the current challenge of Title VI having the full spectrum of possible skills required to process highly complex complaints. Title VI supplies the civil rights expertise working with OECA/EJ to supply the environmental regulatory and analysis expertise. With a single EJ Champion, the different parts of the organization receive regular monitoring to ensure the cases are prioritized appropriately.

The Champion program addresses the concern that the non-political OCR Director is not on equal ground with the Associate/Assistant Administrators. With two champions supporting the main mission of external and internal compliance, they are able to support the Director in peer executive meetings. However, the OCR Director's direct access to the Administrator is maintained since the formal reporting relationship is preserved and the benefit of confidential sensitive discussions can take place. It is highly recommended that supporting linked performance goals and Standard Operating Procedures (SOPs) are developed to reflect the specialized teams in order to institutionalize these informal structures and

[21] http://www.epa.gov/environmentaljustice/basics/index.html

provide sustainability into future administrations subject to shifts in political appointee focus and preferences.

In this concept, the current Office of Civil Rights structure of the three program areas remains intact for dedicated focus on civil rights. However Title VII adds Headquarter (HQ) focused EEO Officer to handle HQ intake and complaint resolution and administer EEO programs. Over 32% of overall Title VII complaints are from Headquarters, warranting dedicated resource to proactive address and monitor EEO issues.

Further, the proposed model facilitates better coordination with the field**.** ARA EEO Officers have a dotted line relationship with the OCR Director yet remain solid line to the region to maintain position on regional management team. However OCR Director should be involved in selection, certifying, input and feedback on performance goals, and promotion consideration for ARA EEOs. Similarly, EEOs should provide input for Special Emphasis Program Managers (SEPM) within their region, often 20% collateral duties assignment. This structural matrix addresses the need to be embedded in the mission but yet provides venue for escalation and objective oversight.

Alternative changes to organization of its civil rights functions

The OECA Assistant Administrator (AA) can also be considered for the External Team Chair. As OECA's mission to "aggressively goes after pollution problems that make a difference in communities through vigorous civil and criminal enforcement…advance environmental justice by protecting vulnerable communities [22]", it will bring the enforcement prowess and expertise to adjudicate Title VI cases. OECA, through its main website, has also stated it is "resetting our relationship with states" which is a practice Department of Labor, Fair Housing Equal Opportunity and Federal Highways Transit Authority emphasized in their benchmark interviews. The advantage Deloitte sees with the OEJ Champion is the momentum from the White House in naming EPA as overall EJ Lead. However, given that OEJ sits within OECA, either the EJ lead or OCEA AA will bring the enforcement and environmental justice perspective as chair.

EPA can also consider moving Title VI function to OECA as part of overall enforcement. The advantage is the organizational legal competence required to assess cases and the outreach to the states and EPA programs. The disadvantage is the core knowledge and singular focus of civil rights law and regulations resident in OCR. Civil rights offices in other agencies expressed concerns about diluted access to resources, leadership attention if they were integrated into larger offices. This would be of concern as EPA embarks on transforming OCR into a model civil rights office.

Another option for Title VI is to fold the function into OGD as part of grants management. U.S. Department of the Interior's (DOI) Fish and Wildlife Services (FWS) administers Title VI within its grants management. However, FWS Title VI complaints tend to be related mostly to reasonable accommodations, which is much less complex than EPA's Title VI complaint portfolio.

[22] http://www.epa.gov/about epa/oeca.html

4.2 Title VI Program Management

Current State Findings

Administering the Title VI program for environmental regulation is highly complex and may require conducting technical analyses such as causal connection between these facially neutral procedures or practices, if there a disproportionate impact on the protected group and modeling for adverse health claims. This often requires Title VI to request support across EPA's scientific program offices, and OECA.

Key Observations

- 50% of Title VI cases took over 1 year to be accepted, versus EPA target 20 day turnaround
- 55 percent of the Title VI cases coming in to EPA's OCR are related to permitting, enforcement and public participation/involvement
- No tracking system to monitor investigations and complaints and lengthy case management timelines.
- EPA does not provide Title VI compliance guidance to recipients.
- OCR only conducts outreach and training for Title VI through web-based programs.
- Much needed expertise in program and regional offices has no incentive for prioritizing Title VI work

Due to this complexity, the Title VI program has struggled to develop a consistent framework to analyze complaints, resulting in a lengthy and time-consuming effort to evaluate the complaints and once accepted, to adequately investigate the cases. Only 6%, or 15 out of 247, were compliant with EPA targeted 20-day timeframe for acknowledgement. In fact, half of the complaints have taken one year or more to move to accepted or dismissed status. One case was accepted after nine years and a second case was accepted only after ten years.

Feedback from Title VI employees indicated that major delays result primarily from the complexity of determining whether cases fall within jurisdiction because there is little or no legal precedence for comparison. Investigations are further challenged by a lack of scientific methods to conduct needed analyses. [redacted] has assisted in locating the appropriate expertise and securing support but the overall complaint process is too often subject to competing priorities; mission related staff are in high-demand for mission related tasks.

The Title VI program office has taken steps, however, to improve its programmatic success by:

- Relocating the Title VI team to the main OCR office to increase contact with Headquarters Civil Rights, program and Agency executive offices;
- Developing draft Standard Operating Procedures (SOPs) for the investigative process and the compliance process; and
- Supporting training for environmental law proficiency of staff in the Title VI function.

Repeatable Complaints Process

Because each Title VI complaint often must be analyzed with the environmental science in addition to the civil rights regulations, EPA has not been able to develop a repeatable complaint resolution process and framework. As a result, OCR lacks finalized operational documents to govern the program's internal functions, or to communicate meaningful guidance to external stakeholders. Existing standard operating procedures, templates, and job aids are in draft format. Title VI also lacks meaningful compliance guidance for grant applicants. Title VI office has developed draft investigative report templates and outlines, as well as draft investigative procedures. When Deloitte inquired in November 2010 if Title VI complaints portfolio analysis had ever been done, the response was Title VI has not tried to group the complaints. The grouping of potentially related complaints can help determine if the scientific analysis

could address a series of like complaints as well as trigger broader Environmental Justice inquiry due to the emerging patterns.

OCR Title VI is just beginning to develop a network of environmental analysis technical expertise to bring together the right skill sets to investigate complaints. However, these resources are often overloaded with their own workload and may not be able to prioritize the complaint resolution in the timely manner required by OCR. The prolonged history of backlog has reinforced a persistent internal perception that EPA intentionally avoids making decisions in its Title VI program amongst OCR staff that further confirms unawareness on overall priority and urgency in Title VI function.

Staff Skills and Competencies

As mentioned in the Approach section, Deloitte administered a web-based job analysis. Responses indicate Title VI employees lack clarity regarding the technical skillset they require for their role. A high variability of answers points to a significant lack of common job role understanding. Furthermore, program staff's competencies are inconsistent and/or misaligned with the highly technical nature of complex Title VI complaints investigations.

The staff competencies required for EPA's Title VI program are unique to EPA in comparison to other Title VI programs due to the highly technical environmental law and policy requirements which are layered on traditional civil rights case law skills. Currently, Title VI staff competencies are largely process-based and many staff do not have the expected environmental policy or law background expected of their role, particularly necessary in completing the investigation plan as indicated in the template provided. Only 42% of the overall staff indicated knowledge of EPA programs to be important (breakdown by program office not available). For Title VI, each complaint must adhere to both civil rights requirements as well as each regulatory act (e.g. Clean Air).

Process Impediments

The highly technical nature of Title VI complaints requires investigative support from subject matter experts in EPA's programs and regions. Although the Title VI Program has started to build a supportive network of technical expertise for environmental analysis, the program and regions have little incentive to prioritize OCR support above their increasing workload. Deloitte identified only one example of successful deployment of intra-agency expertise. This example occurred in 1998 during an investigation of a Title VI case against Select Steel. This investigation concluded in a 'no finding' decision.

Deloitte noted that Final Agency Decisions (FADs) for Title VI has required EPA executives, including Chief of Staff and General Counsel, to meet on a regular basis for review and approval. While a lack of management systems and required expertise are partially the cause for the program's backlog, the necessity to mobilize an executive decision making committee including membership from the General Counsel and Chief of Staff may become a standard process. [redacted] was successful in mobilizing this executive body for several months and concluded fifteen cases from the extensive backlog this year.

The higher caseload volume and equally poor work quality from the Title VII program draws resources and attention from Title VI needs, further challenging its opportunities to devise and implement strategies to improve operational performance. [redacted] The Title VI collaboration has been augmented by a Special Assistant for Title VI who reports directly to the Administrator; however, the role is a temporary detail leaving a void of mentorship, reputational credibility, and access to Agency leaders once the term expires.

Compliance Review and Recipient Guidance

The only compliance review identified during the study is by the field-based EEO Officers in collecting and signing EPA's 4700-4 mandatory external civil rights compliance form required of all grant recipients. The 4700-4 is a self-assessment web-based form the grant applicants complete. Title VI staff expressed concern in the current practice of requesting their signature on the form without any interaction with the recipient and opportunity to verify the data supplied in the 4700-4. Deloitte was not able to find a management control system that flagged current plaintiffs charged with a Title VI compliant violation if they were to apply for additional grants. Federal Highway Administration has a similarly complex Title VI program with economic, environmental impact and adverse impact assessments. They have been able to develop an extensive recipient handbook that identifies potential issues and recommends actionable and measurable mitigation strategies to prevent complaints. EPA is not currently in a position to develop and communicate similar guidance to applicants and recipients.

Benchmark Approaches

Figure 4-4 compares the Deloitte's summary findings for the Title VI program to example benchmarked approaches from other U.S. government organizations.

Figure 4-4. Summary Findings and Example Benchmark Approaches

Summary Findings	Benchmark Approaches
• **EPA does not drive recipients to be Title VI compliant** • **EPA underutilizes field staff for pre-award and post-award compliance and there is no indication that the Office of Grants and Debarment (OGD) is integrated into the compliance process**	• **Federal Highway Administration (FHWA)** Title VI program has placed responsibility on the State Transportation Authority to develop proactive Title VI programs, conduct annual reviews, develop procedures for collecting statistical data, and annual reviews of special emphasis programming. • **U.S. Department of Housing and Urban Development (HUD)** processes over 10,000 external civil rights complaint cases annually. The regions handle the majority of cases and there is heavy reliance on external partners.
• **EPA has not finalized its operating tools and templates**	• **US Commission on Civil Rights** suggests federal agencies should develop management plans that include clear procedures, and classification system regarding case priority.
• **EPA has not conducted statistical analysis of higher incidence cases, committed to developing investigative procedures, or implemented preventive measures**	• **HUD's** Fair Housing and Equal Opportunity (FHEO) conducts a risk analysis using random sampling based on factors considered high risk to select entities for compliance review.
• **EPA has difficulty meeting timelines for complex cases with little or no legal precedence**	• **U.S. Department of Labor** The majority of OCR senior leadership staff had extensive experience (10 years or more) in civil rights functions, human resources/personnel management, or in an agency's Solicitor's General office providing expertise and leadership needed for complex cases.
• **Leadership requires further training in project management and effective staff supervision**	• **National Institute of Health (NIH)** Office of Equal Opportunity and Diversity Management (OEODM) requires Title VII staff to be trained in legal writing and legal analysis. EPA Title VI leadership could have a similar requirement.

Summary Findings	Benchmark Approaches
• **Staff competencies are inconsistent and/or**	• **NIH** OEODM has a detailed competency model outlines

misaligned with the highly technical nature of complex Title VI complaints investigations	skills required for Title VII work, and provides customized training curriculum for each employee. The competency model also serves as a basis for conversations regarding performance.
• **There is a lack of focus on long-term strategic resources that integrate ADR and trend analysis to proactively work with repeat offenders**	• **HUD** FHEO is upgrading its IT system, TEAPOTs, to perform predictive modeling to identify potential non-compliance, based on extensive available case data. Currently, the system is a real time web-accessible automated system used in the investigation and tracking of complaints and compliance reviews.
• **OCR only conducts outreach and training for Title VI through web-based programs**	• **U.S. Department of Labor** Civil Rights Center (CRC) Annual National Equal Opportunity Training Symposium educates recipients of Federal financial assistance about their nondiscrimination and equal opportunity responsibilities. • **Federal Highway Administration (FHWA)** OCR program specialists, civil rights specialists, and contracted investigators are provided with a Title VI desk reference book. Title VI funding recipients receive a handbook to assess their implementation, compliance, and enforcement efforts.
• **Much needed expertise in program and regional offices has no incentive for prioritizing Title VI work**	• **HUD** FHEO regional offices handle the majority of cases, and there is heavy reliance on external partners. Title VI intake, jurisdictional review, investigations, and decisions are all done at regional level.
• **Concluding Final Agency Decision (FADs) requires General Counsel and Chief of Staff input**	• **Department of Energy** OCR, General Counsel, and Human Resources have joint monthly meetings. The Office of General Counsel gets involved with cases during very early stages, but is not involved in FAD or managerial processes.
• **Strain from Title VII and AED issues reduces resources and attention from addressing Title VI challenges**	• **HUD** FHEO separates its external civil rights function from its internal civil rights function because the functions do not interact with one another, and have uniquely different relationships internally and externally.

Recommendations

As discussed in Section 4.1, the development of an improvement roadmap will address defining Title VI core functions and related staff development plans and corresponding SOPs and tools. Below are additional Title VI recommendations, based on the findings.

Define a framework to delineate the cross functional teams needed to respond. Building on the recommendation stated in the "Management" section of the report, Title VI should prioritize its management documentation according to highest priority or highest volume cases. Specifically, approximately 55 percent of cases originate from permitting, enforcement, and public participation, therefore, Title VI should concentrate its resources on developing standard, repeatable processes to address these types of cases. Title VI should work closely with DOJ to finalize processes and procedures. Additional stakeholders who should be consulted in developing SOPs including Civil Rights and Finance Law Office (CRFLO), Headquarters (HQ) and field-level OGD staff, subject matter experts from program areas, and the regional employees who maintain relationships with grantees. Coordinating stakeholders is needed to ensure uniformity across regional enforcement offices, particularly for high incidence complaints such as permits, enforcement, and public participation.

Clearly define guidance documents for funding grant recipients and establish formal Title VI compliance processes and procedures. Model agencies can seamlessly integrate a compliance program to help support and hold recipients accountable while also strategically addressing the use of federal funds.

Implement a formal information management system to track, analyze, and forecast important Title VI data. The system should be capable of prioritizing compliance data and complaints cases, escalate high risk issues, and analyze data as required to prevent and proactively address unnecessary exposure.

4.3 Affirmative Employment and Diversity (AED)

Current State Findings

OCR's AED program does not perform to the expectations of its mandated role, including the annual submission of the MD-715. Annual work plans include sections for structure goals, activities and persons responsible, timelines aligned to quarters, goals for recruitment, career development, and advancement of the employee groups. The document review indicated that content varied in breadth and depth. Interviews with program staff, EPA employees, and work plans revealed that AED primarily hosts special observance events – one event for each program area (e.g. Black History Month, etc.) – and compiles data required for the annual MD-715 report.[23] However, AED staff rely on contractors for barrier and trend analysis of underrepresented workforce populations with untimely data. The MD-715 report was not completed between 2006 and 2008. It is our understanding the 2010 MD-715 was submitted on time January 31, 2011.

Key Observations

- AED has difficulty accessing data from multiple sources for the MD-715.
- Tendency to complete responsibilities (e.g., MD-715) as last minute exercises
- MD-715 contractor analysis capabilities are underutilized and serve as a redundant function to AED staff. Data accuracy is frequently questioned.
- Redundancy in guidance and inconsistent direction provided to SEPMs.Content and timing of guidance to SEPMs not coordinated with EEO offices
- AED staff tend to have higher grade levels without unique KSAs or competencies typically required to justify high non-supervisory grade level.
- EPA staff lacks focus on staff training and customer service.
- Minimal collaboration with the Title VII program and little engagement with other EPA functions.
- No formal meetings, reporting relationships or operational guidelines to ensure consistency, strategic messaging, and resource allocation.
- Redundant OCR functions have developed outside the purview of OCR.

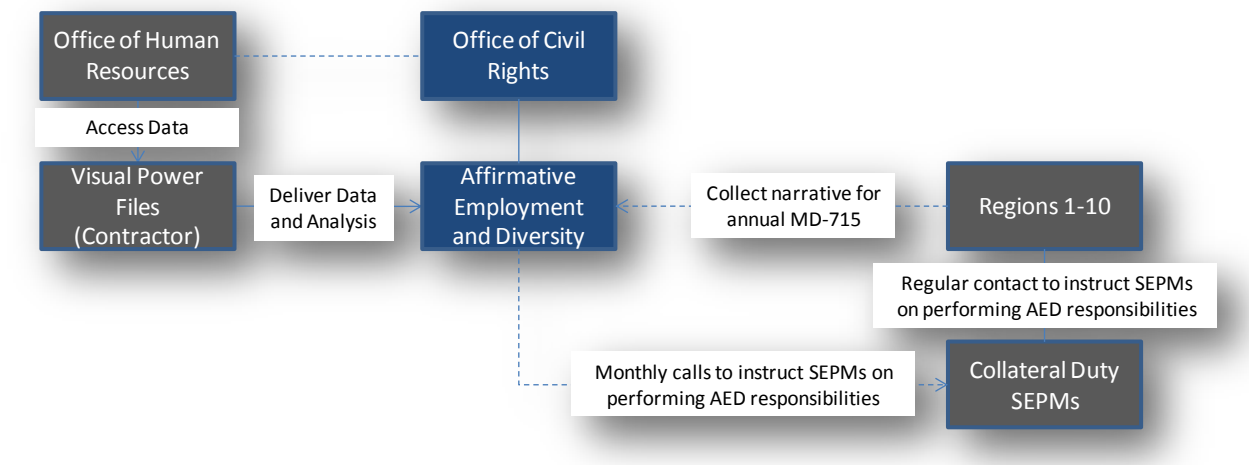
AED historically has requested narrative information for MD-715 from Program Management Officers (PMO), Human Resource Officers (HRO)s, and Equal Employment Opportunity (EEO) Officers with insufficient clarity (i.e., templates or examples of requested materials), resulting in incomplete and/or untimely submissions[24].

[23] Agencies are required to submit the MD-715 report annually by January 31.

[24] Based on interviews with PMOs and HROs requesting templates to ensure they are providing the correct type of narrative, ideally related to barriers identified.

Figure 4-5 depicts the workflow for compiling MD-715 data, including regional participation.

Figure 4-5. AED Interactions



Note the barrier analysis is not shared by AED with the regions yet they are asked to submit narrative for the annual report. [redacted]

Additionally, OHR and ODOC question the accuracy and validity of the numbers and analysis leading ODOC to begin developing its own dashboard tracking diversity workforce demographics based on the same HR database used by OCR for the MD-715 demographic analyses.

Alternatively, it appears the majority of AED's interactions involve coordinating national observance events (e.g. Women's History Month) with the Headquarters PMOs and the collateral duty Special Emphasis Program Managers (SEPM) located in the Headquarters, regions, and laboratories. The affirmative employment work plans vary in structure although generally include sections for goals, activities and persons responsible, and timelines aligned to quarters. The content also varied in breadth and depth, though generally included goals for recruitment, career development, and advancement of the employee groups to be conducted in concert with the SEPMs, EEO and OHR.

Collateral duty SEPMs located in the regions and EPA laboratories report to EEO Officers and receive direction from AED Headquarters. AED provides inconsistent centralized guidance and direction to EEO Officers as well as SEPMs. Furthermore, EEO Officers interviewed indicated that they are providing separate guidance and direction to SEPMs. SEPMs are tasked to spend 20 percent to AED functions; however, interviews indicated that SEPMs workload is disproportionate.

Staff Skills and Competencies

[redacted] AED has a staff of nine full-time time employees including a Director (GS-15), an Affirmative Employment Program Manager (GS-14) who serves as the custodian of the workforce data, and six Equal Employment Managers (GS-14 and GS-13) who are the lead representatives for their respective employment programs. AED has seven GS-14's and above, Title VI and Title VII each have only two GS-14's and above in their similarly sized offices. The Assistant Director and Disabilities Equal Employment Manager positions were vacant at the time of this report was completed.

[redacted] AED staff are not conducting analysis nor embedding results into on-going communications with program and regional managers and executives. Furthermore, there is no indication that barriers and trends or Equal Employment Opportunity Commission (EEOC) recommendations are proactively being identified and/or remedied.

As with other OCR program areas, there is a general lack of focus on defining a training curriculum and developing staff competencies. [redacted]

Collaboration Partners

Deloitte's assessment indicates that AED does not actively collaborate with other functions in OCR, and minimally partners with other EPA functions, including three program areas outside that support AED's mandate: Minority Academic Institutions (MAI) Program; White House Initiatives (WHI); and the Office of Diversity, Outreach, and Collaboration (ODOC). Several redundant functions now operate outside of OCR, as illustrated in Figure 4-6. Currently, no formal meetings, reporting relationships, and/or operational guidelines exist to ensure consistent and strategic messaging and resource allocation across these similar, yet separate functions.

Figure 4-6. Example Redundant OCR Functions Across EPA

Location	OCR Function	Finding	Redundancy
Office of Human Resources (OHR)	Targeted Recruitment	• AED is responsible for designing and coordinating targeted recruitment plans[25]. • Lack of coordination and outreach from AED has led to OHR designing and implementing their own targeted recruitment plans.	• OHR duplicates AED's responsibility for targeted recruitment
Office of Small Business Programs (OSBP)	Minority Academic Institutions	• AED is responsible for coordinating outreach and targeted recruitment, and cultivating mission-related relationships with Minority Academic Institution26 • [redacted]	• OSBP coordinates Minority Academic Institutions
Office of Diversity, Outreach and Collaboration (ODOC)	Diversity and Related Workforce Analysis	• AED is responsible for continually measuring and reporting disparities amongst protected classes of EPA's workforce • [redacted], ineffective use of contracting, and limited or no outreach to programs, regions, or EPA executives has left a void • ODOC conducts workforce analysis demographics (i.e., AED's barrier analysis) to be included in a executive dashboard for on-going diversity performance reporting	• ODOC duplicates AED's core responsibility for statistical analysis and reporting

Benchmark Approaches

Figure 4-7 compares the Deloitte's summary findings for the AED program to example benchmark approaches from other U.S. government organizations.

Figure 4-7. Summary Findings and Example Benchmark Approaches

Summary Findings	Benchmark Approaches
• **AED has outsourced its primary focus, MD-715, of which the data accuracy is frequently questioned** • **AED has difficulty accessing data from multiple sources for the MD-715** • **Tendency to complete responsibilities (e.g., MD-715) as last minute exercises**	• **NIH** OEODM uses quarterly briefings to Executive Offices, Institutes, and Centers to ensure accuracy of data and analysis needed for the MD-715 and staff accountability. • OEODM has direct access to HR databases for MD-715 that can drill down to 27 Institutes and Centers.
• **Redundancy in guidance and inconsistent direction provided to SEPMs** • **Content and timing of guidance to SEPMs not coordinated with EEO offices** • **AED uses a contractor to conduct periodic barrier analysis workshops for SEPMs** • **AED work plans varied in content and structure**	• **National Nuclear Security Administration** SEPMs are issued a comprehensive guide which includes the background and history of the federal program, SEPM roles and responsibilities, activity guidelines and detailed descriptions, guidance on purchasing requisitions, and an annual report of activities.

[25] Based on AED position description and sample workplans

Summary Findings	Benchmark Approaches
• **AED has a disproportionately higher grade levels yet does not require nor sponsor development plans for specialized knowledge, skills, abilities**	• **NIH** OEODM has a detailed competency model which they use to assess Title VII skills and provide customized training curriculum for each employee. The competency model also serves as a basis for conversations regarding performance
• [redacted]	• **NIH** OEODM staff training is available online. Staff can also request training outside of the agency if they can justify that it adds value to their core work and fits within the budget. Title VII staff is provided with online aids such as Cyberfeds, ELI training, and the EEOC Institute.
• **EPA OCR staff lacks focus on staff training and customer service**	• **U.S. Department of State** OCR FY11 Strategic Plan requests customer service training for staff in addition to a dedicated customer service staff role.
• **Minimal collaboration with the Title VII program and little engagement with other EPA functions**	• **U.S. Department of Labor** CRC Title VI, Title VII, and AED program leads are a cohesive team that is able to articulate innovations and tools in all program areas, and share staff.
• **No formal meetings, reporting relationships or operational guidelines to ensure consistency, strategic messaging, and resource allocation**	• **National Nuclear Security Administration's (NNSA)** EEO and Diversity Program Manager issued a comprehensive Special Emphasis Program Manager's guide. The guide includes background, roles and responsibilities of OCR and SEPMs, activity guidelines and descriptions, logistics guidance, sample materials, and annual report of activities.
• **Redundant functions exist outside the purview of OCR**	• **NIH** OEODM Director restructured the office to ensure that field officers report directly to the director, creating a centralized strategy and eliminating duplicate efforts.

Recommendations

As mentioned in Section 4.1, the improvement roadmap will address defining AED core functions and related staff development plans and corresponding SOPs and tools. Below are additional AED recommendations, based on the findings.

Emphasize AED's primary role in alleviating barriers and implementing remediation strategies and use the MD-715 as the focal point to guide all communications with stakeholders across the Agency, and with executives on a quarterly basis. AED is the public face of EPA's civil rights programs and should lead the development of outreach and training materials which further the cause of fairness, respect, and inclusion in the workplace.

Tactically, AED needs to develop a standard template for work plans which outlines its program of activities and links activities to their impact on identifying and reducing barriers. For example, AED should coordinate with EPA's various Affinity groups to understand their workplace challenges and research these challenges by reviewing data from Human Resource (HR) records (i.e., the number of employees promoted, trained, rewarded, etc.) from the Federal and EPA implemented Affirmative Employment programs.

AED should use this analysis as the basis for advising Affinity groups interested in hosting National Observance events to ensure the events focus on challenges for the employee population. National

Observance events should not be part of AED's program of activities; they should only communicate relevant barriers and recommend speakers, activities or other targeted measures to be included in events as a further means for addressing barriers.

AED should use SEPMs to implement barrier remediation strategies – such as training events, brownbag diversity discussion, town hall meetings, panels, workshops on barrier-related issues – and, as a means to collect additional qualitative data on workplace issues, validate the quantitative data AED uses in its annual MD-715 representation to EEOC. Additionally, Title VII complaints analysis should be included in the barrier analysis as well as assessing the preventative programs such as conflict management training and its subsequent impact on complaints for remediation consideration.

Hire, train, or realign staff that possesses a balance of barrier analysis expertise and experience with a strong passion for civil rights and diversity. Successful AED staff have a command of barrier analysis – both statistical analysis and remediation strategies – and have strong interpersonal skills capable of building persuasive arguments for fairness, respect, and inclusion with both the executive staff and line employees. AED should implement a formal curriculum to ensure all staff have a common understanding for key functions (i.e., barrier analysis, presentation skills, and executive communications) and phase out reliance on contractor support for core statistical analysis responsibilities.

Coordinate programming, guidance, and direction through its network of EEO Officers. AED should not circumvent field-based EEO Officers by providing input and direction to regional SEPMs, but rather leverage the existing network of EEO Officers as the focal point for all AED programming. EEO Officers translate the guidance and direction into specific measures unique to their local context and strengthen relationships with their network of SEPMs while reporting progress against barriers to AED for inclusion in the annual MD-715 report. Furthermore, a headquarters EEO Officer role should be established to coordinate AED functions across the employment programs. The Headquarters EEO Officer would act as the single point of contact for all AED programming, including the data collection and analysis for the annual MD-715 report, and eliminate the current tendency of AED staff to concentrate disproportionately on headquarters needs.

4.4 Title VII Program Management

Current State Findings

Analysis of interview records and Title VII program documentation pointed to a program lacking consistent, repeatable processes [redacted] and a resulting perception that the Title VII program's neutrality is at risk. CRFLO is involved in every stage of case processing which is the highest observed interaction between the CRFLO and OCR in comparison to benchmark agencies. EPA's law office currently provides a high level of editing, notations, and rejections of Title VII staff findings. While much of this is explained by a lack of competence and ineffective quality controls within the Title VII program itself, there remains a need to delineate roles and responsibilities between CRFLO and OCR to clarify who holds the ultimate decision making authority and avoid external scrutiny of the grey area between providing legal advice and performing responsibilities on behalf of OCR.

Key Observations

- Title VII guidelines do not include templates, supporting quick reference guides, or other job aids integral for implementing standard, repeatable processes.
- A formal performance measurement, reporting, and evaluation framework has not been institutionalized in the Title VII program.
- Performance monitoring systems for tracking settlement costs, types, and case durations are limited, inconsistent, and include errors and omissions.
- Staff have inconsistent skills and competencies, and lack formalized resources and managerial support.
- No established formal training curriculum and limited emphasis on performance coaching and staff development.
- [redacted]
- Title VII's heavy reliance on CRFLO threatens the program's neutrality and delays processing.
- Significant delays and quality control issues experienced in completion of several mandated reports.

The Title VII program focuses almost exclusively on meeting the one hundred and eighty day timeline for completing Final Agency Decisions (FADs). EEONet, the database used to track overdue cases, is being reviewed by OCR for the quality and accuracy of EEONet data and reports. Therefore the specific quantity and days past due of FADs are not reliable statistics. On January 3, 2011, Title VII management provided past due FADs data for this report, as a substitute for the EEONet figures.

Example: 462 Reports in 2010 Show Delays

- On December 13, 2010, when the 462 Report was submitted, 15 FADs were over 200 days overdue, 21 FADs were over 100 days overdue.
- As of the same date, one case was 630 days overdue and seven others with deadlines in December and January were not yet assigned.

Source: Title VII Special Assistant

One possible explanation for the delays is the minimal attention to quality when investigating cases, or more specifically, managing the work of contract EEO investigators.

The Investigative Reports (IRs) which conclude this stage of the process are routinely insufficient both in terms of legal research and analysis, questioning the complainant and other persons involved, and lack comprehensible, logical writing. The result is a heavier burden on FAD writers to address the routine shortcomings or rely on the Special Assistant and OCR leadership to provide support. Deloitte's assessment identified several shortcomings, including:

- IRs contain references to outdated anti-discrimination policies;

- Critical investigative records are absent, incomplete, or illegible;
- IRs lack reference to the Agency policy/guidelines involved in the complaint;
- Complete lack of comparative data, for example, by race, EEO activity, and disability; and
- Record of other instances where employees other than the complainant were denied/approved opportunities (e.g., training) and when such occurrences took place.

[redacted] has led to continuous intervention from OCR leadership and a process that embeds CRFLO into reviewing outputs at the conclusion of each stage of the investigative process. While CRFLO is independent from the Employment Law Division which represents EPA management, there are still perceptual risks when Office of General Counsel (OGC) is involved at such a granular level.

Performance Management and Guidance

EPA adheres to EEOC's "Management Directive 110: Federal Sector Complaint Processing Manual" and 29 C.F.R. Part 1614 as the standard operating procedures for implementing its formal complaints function and has adapted its own "EEO Investigator Guidelines". However, the guidelines do not include templates, supporting quick reference guides or other job aids integral for implementing standard, repeatable processes. As a remedial step, OCR appointed a Special Assistant for Title VII to implement quality controls – such as a "Quality Assurance Checklist for FADs" – and provide on-going subject matter expertise and performance coaching to assist the Assistant Director and Equal Employment Specialists (EES) staff in improving the quality and timeliness of outputs.

Performance monitoring systems for tracking settlement cost, type, case duration from open to close, and other aspects relevant to employment complaints, are limited and include errors and omissions. For instance, the settlement tracking workbook provided to the research team captured only the settlement fee and not associated attorney fees. Furthermore, the taxonomy of the classification system was non-standard and lacked unique identifiers between the descriptors of complaint sources. The tracking sheet provided to the team only listed cases settled and does not indicate what judgments were awarded by the courts. Available data suggests that only two million dollars in settlement costs were issued over the ten year tracking period, while the real cost to the Agency could be much greater when court ordered fees are accounted.

Management also does not track performance of EEO investigative contractors according to a performance checklist provided by the Title VII program. The program does not maintain records of supplemental investigations, nor attempt to determine whether these costs can be avoided in the future. Supplemental investigations are viewed as normal business practice and not associated with quality problems of contracted EEO investigators.[26] Furthermore, OCR management provided Deloitte

[26] Note: The number of supplemental investigations, while not known by program leadership specifically, was said to be two or similarly nominal.

with a summary of complaint processing issues that identified 18 quality issues spanning from one month's timeframe, requiring rework.[27]

Complaints Case Tracking System

Title VII lacks a formal complaints case tracking system. The study team learned that a system was purchased, but it was not evident at the time when or how the system would be implemented. The current approach to managing cases is largely paper-based and relies on the Assistant Director who reviews each new case and assigns to a case manager. During the three proceeding stages of case management: 1)Jurisdictional Review, 2) Investigation, and 3)Final Agency Decision – the document frequently changes hands between the case manager, CRFLO legal advisor, FAD writer, Special Assistant to Title VII, and the Assistant Director before proceeding to the Director of OCR for final signature. The handoffs are not recorded and there is no mechanism to capture comments for post mortem quality review; the current paper-based approach is inadequate for tracking and reporting case progress as it moves through the case management cycle and does not enable continuous process improvement.

Staff Skills and Competencies

Some staff members are consistently high performers, but others demonstrate a need for additional development. Staff roles have been compartmentalized into managing a stage of the complaints lifecycle such as Jurisdictional Review and Investigation, rather than owning a case from intake to close. This level of specialization should lead to standard, repeatable and quality controlled processes and yet work products lack attention to detail and exhibit the spectrum from easy to fix mistakes to incomplete IRs or acceptance of cases which do not meet legal sufficiency requirements for admittance into the formal complaints program. There is no evidence of a formalized learning and development curriculum. Furthermore, the majority of staff did not have routine performance coaching and career development discussions with supervisors. The results of Deloitte's web-based survey highlight that the lack of formal career development appears to be linked to low employee morale and workplace satisfaction.

Proactive and Preventative Program

As Title VII struggles in its basic complaint intake and processes, little emphasis has been given to greater use of Alternative Dispute Resolution (ADR) program or development of conflict management courses to facilitate difficult conversations between employee and management. Deloitte was not able to find evidence of complaint trend analysis to determine repeat offenders or incident anomalies to proactively conduct interventions. These types of programs focus on reducing the likelihood of complaints being generated rather than passively waiting for incidents to occur.

[27] Fentonmiller, Laura. "Summary of OCR Complaint Processing Issues 12-1-10 to 1-3-11.doc)". January 3, 2011. 12:41 PM. pp 2-3.

Benchmark Approaches

Figure 4-8 compares the Deloitte's summary findings for the Title VII program to example benchmark approaches from other U.S. government organizations.

Figure 4-8. Summary Findings and Example Benchmark Approaches

Summary Findings	Benchmark Approaches
• **Title VII guidelines do not include templates, supporting quick reference guides, or other job aids integral for implementing standard, repeatable processes**	• **Department of the Interior** OCR has a repository of past cases and templates for commonly occurring cases. Boiler plates have been developed for common processes and procedures.
• **A formal performance measurement, reporting, and evaluation framework has not been institutionalized in the Title VII program** • **Performance monitoring systems for tracking settlement costs, types, and case durations are limited, inconsistent, and include errors and omissions**[28]	• **The Department of the Interior and the National Institutes for Health** use iComplaints, a universal system for inputting and tracking complaints. The system also tracks staff pay and how long it takes staff to process the inputs of the system.
• **Staff have inconsistent skills and competencies, and lack formalized resources** [redacted]	• **NIH:** Title VII EEO specialists are all certified counselors and mediators, and are required to be trained in legal writing and legal analysis. • **NIH** staff training is available online. In addition, staff has access to training outside of the agency, and online aids such as Cyberfeds, ELI training, and the EEOC Institute.
• [redacted]	• The MOU between the United States Postal Service (**USPS)** and the **U.S. Department of Labor** allows the Department of Labor to use USPS investigations contractors to ease their procurement process, reduce costs, and share the burden for quality control.
• **Title VII's heavily reliance on CRFLO threatens the program's neutrality and delays processing**	• **Forest Service** OCR and General Counsel collaborated to design standard operating procedures for the EEO complaint process. The SOPs outline every step in the process, process owner, and process time breakdown. • **NASA** has an attorney assigned to the ODEO from the Solicitor General's office. The attorney is only asked to advise when there is an overload. The ODEO Associate Administrator has all final decision rights.
• **Significant delays and quality control issues experienced in completion of several mandated reports**	• **U.S. Commission on Civil Rights** suggests mandatory quality assurance review procedures. The guidelines should require review at various stages of development, and uniformly track witness contact so that investigators are held accountable for quality work.

Recommendations

As mentioned in Section 4.1, the improvement roadmap will address defining Title VII core functions and related staff development plans and corresponding SOPs and tools. Below are additional Title VII recommendations, based on the findings.

[28] Although OCR currently lacks a case management system, it has initiated the implementation of a system.

Enforce a performance management and quality assurance program. The Title VII program should institute a formal performance tracking program which defines specific targets for: timeliness; quality of writing; accuracy of legal research and analysis; and ability to effectively manage contract investigators, specifically to avoid unnecessary costs and rework. The performance tracking program should be preceded by an internal workshop on roles, responsibilities, and individual performance expectations which concludes with a commitment by staff to team and collaborate to take advantage of strengths where others have weaknesses and accept an 'as-one' approach to quality management.

Strengthen legal research and analysis skills. Title VII staff should have attorneys on staff to advise the Civil Rights Director on Title VII issues, and perform leadership roles for the office. The lawyers do not need litigation experience, but should be able to provide a deep understanding of Title VII and civil rights related laws, whether through experience, formal education, or a combination of both. Furthermore, this legal acumen will help Title VII program provide prompt, fair and impartial review, and adjudication of any allegation of discrimination.

Develop deep analytical and communication skills. OCR staff should have strong analytical, communication, and writing skills. The frequent interface with complainants and other parties necessitates competence in translating legal jargon into common language. Strong interpersonal skills should be emphasized. Additionally, Title VII staff should have the ability to or at least understand statistical analysis of case origin, issue, and other parameters to proactively identify hot spots of employment complaints and coordinate with the AED program to institute remedial actions, as feasible and appropriate.

Implement a case management tool to manage Title VII workload, track timeliness and results, and complete mandatory reporting. (Deloitte learned this is already underway.) The case management tool should incorporate access rights for each stakeholder involved in the process. Currently, field-based staff are left out of the case management process once they submit a case to Headquarters which turned from informal to formal status. It is important that EPA leverage technology as a vehicle to not only organize, streamline, and track operational performance, but also trigger alerts to inform stakeholders of outcomes which help civil rights colleagues and relevant parties learn from the decisions and outcomes resultant from case closure.

Strengthen the Alternative Dispute Resolution (ADR) mechanism and Conflict Management programs. Assess the statistical outcomes of discrimination complaint origins and issues and develop specific ADR and Conflict Management measures to proactively conduct outreach in high incidence regions and for high incidence issues. Coordinate implementation through EEO Officers in the field who participate in ADR and Conflict Management training and set specific goals for number of supervisors and line employees in high incidence areas trained. The program should be supplemented by specific Affirmative Employment programming from AED wherever the complaint trends indicate higher incidence within one employee thread (i.e. Hispanics, women, American Indians and Native Alaskans, etc.). The training and intervention program should be tracked to measure increased instances of informal complaints resolved through ADR instead of moving into the formal complaints process, as well as an overall reduction in total informal complaints lodged as a result of supervisors and line employees trained in Conflict Management skills and techniques. Executive sponsorship for the ADR and Conflict Management initiative should originate from the top of the Agency, for example, through messaging from the Administrator to relevant regional or program leaders acknowledging high incidences of discrimination complaints and championing the intervention program.

Assign high-performing field-level EEO Officers to part-time or full-time detail to provide a better source of skilled labor to reduce Title VII backlog. The OCR Director coordinates with regional administration to assign high performing EEO Officers to a part-time detail. The Title VII Assistant Director coordinates the assignment of workload according to greatest need, either at the Jurisdictional Review and Investigation stages, or the Final Agency Decision stage. EEO Officers avoid handling cases where there could be a conflict of interest, such as EEO cases originating from their regions. The addition of quality inputs contributes to reducing backlog and also reinforcing a sense of common purpose and shared responsibility between HQ and field-level EEO Officers. The EEO Officers also gain insight into the mechanics of the formal investigation process enhancing their ability to inform prospective complainants through real-life experience.

Document rules of engagement for collaborating with OGC staff to mitigate perceptions that neutrality is compromised by OGC involvement in the formal complaints management stages. Establish appropriate boundaries within OGC to protect OCR's neutrality and its use of firewalled CRFLO staff.

Restructure the Contract Investigations Function. Title VII should develop a more stringent standard for selecting and replacing contracted investigators, such as an approach for blocking underperforming contractors from reenlisting in EPA's investigative program. Title VII should also explore alternatives to its contract management program, by either in-sourcing or outsourcing the function. Given Title VII's inability to consistently meet their existing requirements, Deloitte recommends contracting with the USPS which has an established center of excellence for EEO contract investigators. The DOL uses the USPS contract investigative service and described as a benefit both cost reductions and ease of quality control.

5 Approach to Implementation

5.1 Implementation Plan

This Implementation Plan addresses the activities and milestones to put into operation the recommendations for each of the five areas discussed: 1) Leadership; 2) Management; 3) Title VI Program Management; 4) AED; and 5) Title VII Program Management. Given the urgency within the Agency to rapidly transform the Office of Civil Rights (OCR) function, Deloitte Consulting (Deloitte) developed an Implementation Plan assuming a start date of March 1, 2011 and end date of March, 2013. A Gantt chart illustrating tasks and timeline is on the following pages.

We realize that both the number of recommendations proposed, and subsequent effort, would require a tremendous amount of Agency resources and commitment to accomplish within a one year timeframe. Further constraining matters will be the likelihood of budget reductions that will make it more difficult for the Agency to implement all of our proposed recommendations within a short time. Given this likelihood, we have presented a sequence of activities that would have the most immediate impact. Therefore, the Environmental Protection Agency (EPA) can choose to stretch these recommendations over a two-year time table to better balance resources.

Our plan begins with recognizing that EPA must address its current deficiencies in leadership and workforce competencies. We propose a Stabilize Phase that will begin in March, 2011 and carry through to October, 2011. The intended purpose of this phase is to implement the recommendations that help fill OCR's leadership positions expeditiously with qualified, experienced and motivated senior civil rights professionals; develop and implement a plan that will fundamentally improve OCR's processes; and secure the right overall staff resources, including those who can carry out the fundamental pursuit of improving the specific Title VI program objectives.

We begin by addressing how OCR can overcome problems in the core process areas impeding its effectiveness. This includes determining how the OCR programs can better interact with other EPA offices. For example, OCR can establish a stronger relationship with ORD and OECA to better collect and analyze data that will proactively predict the likelihood of potential Title VI cases. These activities, which include a great deal of interaction and outreach with internal EPA stakeholders, will take approximately two months.

An equally important part of this Stabilize Phase is realignment and improvement of the core workforce to support OCR needs and Title VI extended network of resources. These activities will carry into late October 2011, including documenting all staff job roles and determining required skills, competencies and experiences for each role. With well-defined job roles, OCR can evaluate its current overall workforce against the requirements and identify gaps. Then, a comprehensive workforce plan will help OCR fill the gaps through a combination of new training programs and/or targeted staff hiring or alignment. It will also include the development of well-defined career paths and performance management processes.

The other critical aspect of this Stabilize Phase is addressing OCR's pressing need to expedite effective resolution of complex Title VI cases. This begins by helping OCR adopt a standard process to charter cross-functional investigative teams that bring together the right expertise to address each complaint. To catalyze these efforts, a senior leader in the Office of the Administrator should be identified as a "champion" to drive greater cooperation and collaboration between OCR, the program offices that possess unique technical expertise, and the field offices that understand the local context of individual complaints.

Upon the completion of the Stabilize Phase, it is recommended that OCR leadership set aside six weeks to conduct a long-term strategic planning session. This session will address a number of objectives, first and foremost being an assessment of its overall effectiveness. Also, it will give OCR leadership an opportunity to prioritize further improvements in the administering of the Title VI and Title VII programs and last, but not least, AED. Moreover, the group will review and refine the proposed organizational design recommendation. Once refined and approved, OCR will implement the new organizational structure.

Most importantly, the purpose of this session will be to determine how the OCR leadership, in concert with the EPA Administrator, will be able to institutionalize the current Title VI program objectives. This institutionalization will be designed to protect the Title VI program objectives from the shifting political priorities – especially those common as a result of changes in Administrations. The likely result of these planning sessions will be recommendations to draw upon existing environmental authorization legislation in order to fashion a legal basis for regulations that can further justify Title VI objectives.

Should EPA have the resources, our Implementation Plan assumes the next series of transformation objectives will focus on process improvements in AED and Title VII, as well as improving the underlying support systems. Focusing on AED first, the majority of recommendations will be conducted beginning in November, 2011 and carry through to March 2013. The initial focus will be on developing practical work plans to improve its ability to coordinate affirmative employment across the Agency. In particular, these plans will focus on activities and outreach initiatives to improve inclusion and diversity in the workplace. This will also include better alignment and leveraging EEO Officers in the field to both promote Affirmative Employment and Diversity (AED) sponsored initiatives as well as improve their ability to gather information about potential barriers. Like the Title VI program, however, one of the most critical and time consuming activities will be staff development and/or realignment for Title VII and AED.

Title VII has the most recommendations in the Institutionalize Phase, as reflected in the project plan. Beginning in September 2011, the majority of Title VII efforts will focus on improving several key processes, including: strengthening the Alternative Dispute Resolution mechanism and conflict resolution programs; determining opportunities to improve staff legal research and analysis skills; and restructuring the Contracts Investigations function. We also recommend bringing experienced Equal Employment Opportunity (EEO) officials into the Title VII program to improve overall program interaction with regional offices. Once these process improvements are complete, they will be documented into a new set of Standard Operation Procedures (SOPs).

Finally, our recommendations discuss implementation of three major systems improvements, including predictive analytics to support Title VI, improved case management support for Title VII (which is already underway), and a general overall of the AED system. We have scheduled these systems improvements for the latter half of the overall effort as business requirements become clear. As discussed above, OCR has to focus on a number of critical process and human capital improvements at the outset, so there is no way to address these systems improvements earlier in the implementation plan. The risk, however, is that the plan calls for the systems improvements in AED, Title VI, Title VII to occur simultaneously. One systems upgrade, no matter how small, is a time and resource consuming initiative. Three upgrades in a near simultaneous schedule would be difficult to manage.

As such, we would believe that OCR should consider spacing these upgrades out over the course of 18-24 months so they can occur sequentially. This sequential systems development approach will also allow OCR to further refine the business and technical systems requirements, as well as explore additional technology alternatives both within the Agency and outside in order to determine the most cost-effective and least risky solutions.

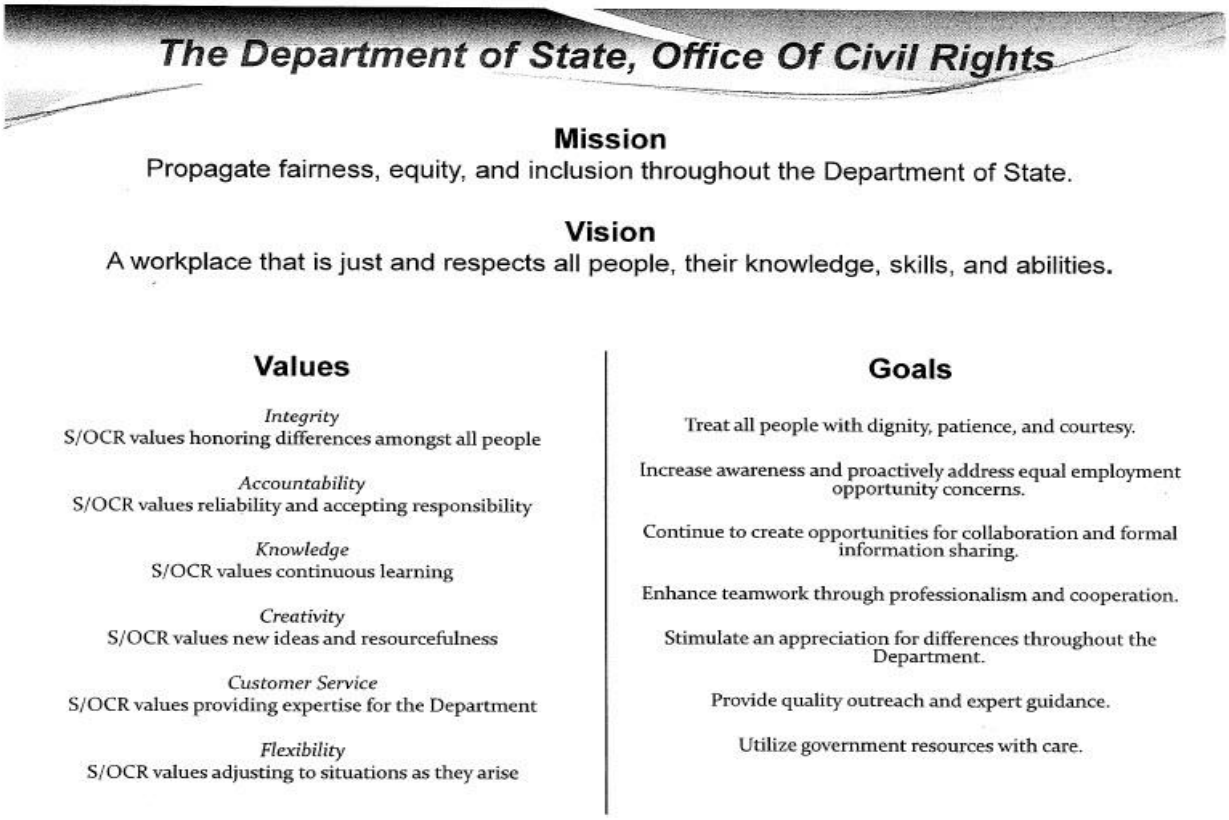
6.1 Appendix A: Leading Practices Analysis

See enclosed PowerPoint presentation

Requested Department of State, Office of Civil Rights mission, vision, values and goals



The Department of State, Office Of Civil Rights

Mission

Propagate fairness, equity, and inclusion throughout the Department of State.

Vision

A workplace that is just and respects all people, their knowledge, skills, and abilities.

Values

Integrity
S/OCR values honoring differences amongst all people

Accountability
S/OCR values reliability and accepting responsibility

Knowledge
S/OCR values continuous learning

Creativity
S/OCR values new ideas and resourcefulness

Customer Service
S/OCR values providing expertise for the Department

Flexibility
S/OCR values adjusting to situations as they arise

Goals

Treat all people with dignity, patience, and courtesy.

Increase awareness and proactively address equal employment opportunity concerns.

Continue to create opportunities for collaboration and formal information sharing.

Enhance teamwork through professionalism and cooperation.

Stimulate an appreciation for differences throughout the Department.

Provide quality outreach and expert guidance.

Utilize government resources with care.

6.6 Appendix F: Roles and Responsibilities

Strategic Advisors

The Human Resource Council (HRC) is a cadre of Senior Executive Service (SES) Environmental Protection Agency (EPA) employees who volunteer to provide strategic guidance and direction in setting future human resource goals and strategies. OCR provides periodic reports to the HRC regarding the Agency's demographic trends and high priority civil rights issues. The benefit of this relationship is access to SES staff overseeing both program and regional administration who can collaborate with the Office of Civil Rights (OCR) to link civil rights objectives to broader Agency goals. The HRC provides key operational insights to civil rights leadership and, vice versa, OCR receives important feedback regarding civil rights performance across EPA programs and regions.

The Office of Environmental Justice (OEJ) maintains an ad hoc reporting relationship with the External Complaints and Compliance (Title VI) program to provide an alternative venue for cases which do not fit within Title VI guidelines but could still be addressed by other EPA program offices. OEJ and the Title VI program also collaborate in developing briefing materials for the White House Initiative on Environmental Justice and to assess whether Title VI processes can be replicated for managing Environmental Justice cases.

The Office of Diversity, Outreach, and Collaboration (ODOC) is a newly established Associate Assistant Administrative level function whose role is to design a cross-cutting and strategic approach to diversity management. ODOC has developed a conceptual framework for an executive dashboard reporting workforce demographics which overlaps with the Affirmative Employment and Diversity's responsibilities. Cultivating this relationship could provide OCR with subject matter expertise and visibility into diversity management.

Operating Partners

The Civil Rights Law and Finance Office (CRFLO) provides legal expertise to assist both Title VI and employment complaints (predominantly Title VII) case managers with complex legal analysis. The relationship has expanded and contracted over the years and presently CRFLO provides quality assurance for documentation developed throughout the lifecycle of case management for both external (Title VI) and internal (Title VII) complaints. CRFLO is a dedicated resource for civil rights related cases and structurally separate from the Employment Law division which represents Agency management.

The Office of Human Resources (OHR) as well as its network of field staff, known as Human Resource Officers (HROs) is the primary partner for all EEO related civil rights programs – including those managed by the Affirmative Employment and Diversity (AED) and Employment Complaints Resolution programs. OHR and the HROs are stakeholders in capturing and reporting workforce data and ensuring affirmative employment and non-discrimination policies are integrated into EPA's talent management practices at Headquarters and with front-line managers at the field level.

The Office of Grants and Debarment (OGD) interfaces with the External Complaints and Compliance (Title VI) program to ensure all requests for federal funds include a pre-award declaration of compliance with federal non-discrimination requirements. OGD reports statistical data on grant applications which the Title VI program uses for ad hoc reporting to Agency leadership and biennial reporting to the Department of Justice. The Title VI program and OGD also coordinate changes to the database of organizations which have existing civil rights disputes or unresolved infractions and are barred from doing business with EPA.

Field offices at the regions and laboratories perform core civil rights responsibilities for AED, Title VI, and Title VII programs while also periodically interfacing with Headquarters OCR to communicate local civil rights challenges and accomplishments.

Foreword

In 1992 the Committee of Sponsoring Organizations of the Treadway Commission (COSO) released its *Internal Control—Integrated Framework* (the original framework). The original framework has gained broad acceptance and is widely used around the world. It is recognized as a leading framework for designing, implementing, and conducting internal control and assessing the effectiveness of internal control.

In the twenty years since the inception of the original framework, business and operating environments have changed dramatically, becoming increasingly complex, technologically driven, and global. At the same time, stakeholders are more engaged, seeking greater transparency and accountability for the integrity of systems of internal control that support business decisions and governance of the organization.

COSO is pleased to present the updated *Internal Control—Integrated Framework* (*Framework*). COSO believes the *Framework* will enable organizations to effectively and efficiently develop and maintain systems of internal control that can enhance the likelihood of achieving the entity's objectives and adapt to changes in the business and operating environments.

The experienced reader will find much that is familiar in the *Framework*, which builds on what has proven useful in the original version. It retains the core definition of internal control and the five components of internal control. The requirement to consider the five components to assess the effectiveness of a system of internal control remains unchanged fundamentally. Also, the *Framework* continues to emphasize the importance of management judgment in designing, implementing, and conducting internal control, and in assessing the effectiveness of a system of internal control.

At the same time, the *Framework* includes enhancements and clarifications that are intended to ease use and application. One of the more significant enhancements is the formalization of fundamental concepts that were introduced in the original framework. In the updated *Framework*, these concepts are now principles, which are associated with the five components, and which provide clarity for the user in designing and implementing systems of internal control and for understanding requirements for effective internal control.

The *Framework* has been enhanced by expanding the financial reporting category of objectives to include other important forms of reporting, such as non-financial and internal reporting. Also, the *Framework* reflects considerations of many changes in the business and operating environments over the past several decades, including:

- Expectations for governance oversight
- Globalization of markets and operations
- Changes and greater complexities of business
- Demands and complexities in laws, rules, regulations, and standards
- Expectations for competencies and accountabilities
- Use of, and reliance on, evolving technologies
- Expectations relating to preventing and detecting fraud

This *Executive Summary*, provides a high-level overview intended for the board of directors, chief executive officer, and other senior management. The *Framework and Appendices* publication sets out the *Framework*, defining internal control, describing requirements for effective internal control including components and relevant principles, and providing direction for all levels of management to use in designing, implementing, and conducting internal control and in assessing its effectiveness. Appendices within the *Framework and Appendices* provide additional reference, but are not considered a part of the *Framework*. The *Illustrative Tools for Assessing Effectiveness of a System of Internal Control*, provides templates and scenarios that may be useful in applying the *Framework*.

In addition to the *Framework*, *Internal Control over External Financial Reporting: A Compendium of Approaches and Examples* has been published concurrently to provide practical approaches and examples that illustrate how the components and principles set forth in the *Framework* can be applied in preparing external financial statements.

COSO previously issued *Guidance on Monitoring Internal Control Systems* to help organizations understand and apply monitoring activities within a system of internal control. While this guidance was prepared to assist in applying the original framework, COSO believes this guidance has similar applicability to the updated *Framework*.

COSO may, in the future, issue other documents to provide assistance in applying the *Framework*. However, neither the *Internal Control over External Financial Reporting: A Compendium of Approaches and Examples, Guidance on Monitoring Internal Control Systems*, nor any other past or future guidance takes precedence over the *Framework*.

Among other publications published by COSO is the *Enterprise Risk Management—Integrated Framework* (*ERM Framework*). The *ERM Framework* and the *Framework* are intended to be complementary, and neither supersedes the other. Yet, while these frameworks are distinct and provide a different focus, they do overlap. The *ERM Framework* encompasses internal control, with several portions of the text of the original *Internal Control–Integrated Framework* reproduced. Consequently, the *ERM Framework* remains viable and suitable for designing, implementing, conducting, and assessing enterprise risk management.

Finally, COSO would like to thank PwC and the Advisory Council for their contributions in developing the *Framework* and related documents. Their full consideration of input provided by many stakeholders and their insight were instrumental in ensuring that the core strengths of the original framework have been preserved, clarified, and strengthened.

David L. Landsittel
COSO Chair

Executive Summary

Internal control helps entities achieve important objectives and sustain and improve performance. COSO's *Internal Control—Integrated Framework (Framework)* enables organizations to effectively and efficiently develop systems of internal control that adapt to changing business and operating environments, mitigate risks to acceptable levels, and support sound decision making and governance of the organization.

Designing and implementing an effective system of internal control can be challenging; operating that system effectively and efficiently every day can be daunting. New and rapidly changing business models, greater use and dependence on technology, increasing regulatory requirements and scrutiny, globalization, and other challenges demand any system of internal control to be agile in adapting to changes in business, operating and regulatory environments.

An effective system of internal control demands more than rigorous adherence to policies and procedures: it requires the use of judgment. Management and boards of directors[1] use judgment to determine how much control is enough. Management and other personnel use judgment every day to select, develop, and deploy controls across the entity. Management and internal auditors, among other personnel, apply judgment as they monitor and assess the effectiveness of the system of internal control.

The *Framework* assists management, boards of directors, external stakeholders, and others interacting with the entity in their respective duties regarding internal control without being overly prescriptive. It does so by providing both understanding of what constitutes a system of internal control and insight into when internal control is being applied effectively.

For management and boards of directors, the *Framework* provides:

- A means to apply internal control to any type of entity, regardless of industry or legal structure, at the levels of entity, operating unit, or function
- A principles-based approach that provides flexibility and allows for judgment in designing, implementing, and conducting internal control—principles that can be applied at the entity, operating, and functional levels
- Requirements for an effective system of internal control by considering how components and principles are present and functioning and how components operate together
- A means to identify and analyze risks, and to develop and manage appropriate responses to risks within acceptable levels and with a greater focus on anti-fraud measures

1 The ***Framework*** uses the term "board of directors," which encompasses the governing body, including board, board of trustees, general partners, owner, or supervisory board.

- An opportunity to expand the application of internal control beyond financial reporting to other forms of reporting, operations, and compliance objectives
- An opportunity to eliminate ineffective, redundant, or inefficient controls that provide minimal value in reducing risks to the achievement of the entity's objectives

For external stakeholders of an entity and others that interact with the entity, application of this *Framework* provides:

- Greater confidence in the board of directors' oversight of internal control systems
- Greater confidence regarding the achievement of entity objectives
- Greater confidence in the organization's ability to identify, analyze, and respond to risk and changes in the business and operating environments
- Greater understanding of the requirement of an effective system of internal control
- Greater understanding that through the use of judgment, management may be able to eliminate ineffective, redundant, or inefficient controls

Internal control is not a serial process but a dynamic and integrated process. The *Framework* applies to all entities: large, mid-size, small, for-profit and not-for-profit, and government bodies. However, each organization may choose to implement internal control differently. For instance, a smaller entity's system of internal control may be less formal and less structured, yet still have effective internal control.

The remainder of this Executive Summary provides an overview of internal control, including a definition, categories of objective, description of the requisite components and associated principles, and requirement of an effective system of internal control. It also includes a discussion of limitations—the reasons why no system of internal control can be perfect. Finally, it offers considerations on how various parties may use the *Framework*.

Defining Internal Control

Internal control is defined as follows:

> *Internal control is a process, effected by an entity's board of directors, management, and other personnel, designed to provide reasonable assurance regarding the achievement of objectives relating to operations, reporting, and compliance.*

This definition reflects certain fundamental concepts. Internal control is:

- *Geared to the achievement of objectives* in one or more categories—operations, reporting, and compliance
- *A process* consisting of ongoing tasks and activities—a means to an end, not an end in itself
- *Effected by people*—not merely about policy and procedure manuals, systems, and forms, but about people and the actions they take at every level of an organization to affect internal control
- Able to *provide reasonable assurance*—but not absolute assurance, to an entity's senior management and board of directors
- *Adaptable to the entity structure*—flexible in application for the entire entity or for a particular subsidiary, division, operating unit, or business process

This definition is intentionally broad. It captures important concepts that are fundamental to how organizations design, implement, and conduct internal control, providing a basis for application across organizations that operate in different entity structures, industries, and geographic regions.

Objectives

The *Framework* provides for three categories of objectives, which allow organizations to focus on differing aspects of internal control:

- *Operations Objectives*—These pertain to effectiveness and efficiency of the entity's operations, including operational and financial performance goals, and safeguarding assets against loss.
- *Reporting Objectives*—These pertain to internal and external financial and non-financial reporting and may encompass reliability, timeliness, transparency, or other terms as set forth by regulators, recognized standard setters, or the entity's policies.
- *Compliance Objectives*—These pertain to adherence to laws and regulations to which the entity is subject.

Components of Internal Control

Internal control consists of five integrated components.

Control Environment

The control environment is the set of standards, processes, and structures that provide the basis for carrying out internal control across the organization. The board of directors and senior management establish the tone at the top regarding the importance of internal control including expected standards of conduct. Management reinforces expectations at the various levels of the organization. The control environment comprises the integrity and ethical values of the organization; the parameters enabling the board of directors to carry out its governance oversight responsibilities; the organizational structure and assignment of authority and responsibility; the process for attracting, developing, and retaining competent individuals; and the rigor around performance measures, incentives, and rewards to drive accountability for performance. The resulting control environment has a pervasive impact on the overall system of internal control.

Risk Assessment

Every entity faces a variety of risks from external and internal sources. Risk is defined as the possibility that an event will occur and adversely affect the achievement of objectives. Risk assessment involves a dynamic and iterative process for identifying and assessing risks to the achievement of objectives. Risks to the achievement of these objectives from across the entity are considered relative to established risk tolerances. Thus, risk assessment forms the basis for determining how risks will be managed.

A precondition to risk assessment is the establishment of objectives, linked at different levels of the entity. Management specifies objectives within categories relating to operations, reporting, and compliance with sufficient clarity to be able to identify and analyze risks to those objectives. Management also considers the suitability of the objectives for the entity. Risk assessment also requires management to consider the impact of possible changes in the external environment and within its own business model that may render internal control ineffective.

Control Activities

Control activities are the actions established through policies and procedures that help ensure that management's directives to mitigate risks to the achievement of objectives are carried out. Control activities are performed at all levels of the entity, at various stages within business processes, and over the technology environment. They may be preventive or detective in nature and may encompass a range of manual and automated activities such as authorizations and approvals, verifications, reconciliations, and business performance reviews. Segregation of duties is typically built into the selection and development of control activities. Where segregation of duties is not practical, management selects and develops alternative control activities.

Information and Communication

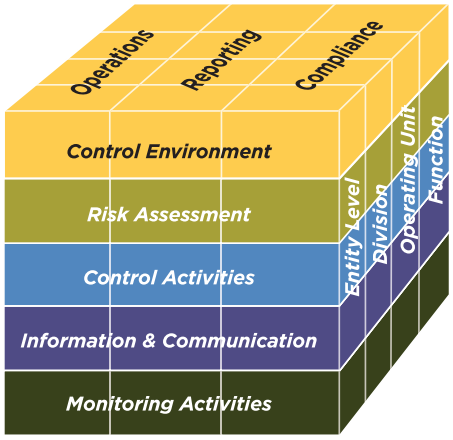
Information is necessary for the entity to carry out internal control responsibilities to support the achievement of its objectives. Management obtains or generates and uses relevant and quality information from both internal and external sources to support the functioning of other components of internal control. Communication is the continual, iterative process of providing, sharing, and obtaining necessary information. Internal communication is the means by which information is disseminated throughout the organization, flowing up, down, and across the entity. It enables personnel to receive a clear message from senior management that control responsibilities must be taken seriously. External communication is twofold: it enables inbound communication of relevant external information, and it provides information to external parties in response to requirements and expectations.

Monitoring Activities

Ongoing evaluations, separate evaluations, or some combination of the two are used to ascertain whether each of the five components of internal control, including controls to effect the principles within each component, is present and functioning. Ongoing evaluations, built into business processes at different levels of the entity, provide timely information. Separate evaluations, conducted periodically, will vary in scope and frequency depending on assessment of risks, effectiveness of ongoing evaluations, and other management considerations. Findings are evaluated against criteria established by regulators, recognized standard-setting bodies or management and the board of directors, and deficiencies are communicated to management and the board of directors as appropriate.

Relationship of Objectives and Components

A direct relationship exists between *objectives*, which are what an entity strives to achieve, *components*, which represent what is required to achieve the objectives, and the *organizational structure* of the entity (the operating units, legal entities, and other). The relationship can be depicted in the form of a cube.



- The three categories of objectives—operations, reporting, and compliance—are represented by the columns.
- The five components are represented by the rows.
- An entity's organizational structure is represented by the third dimension.

Components and Principles

The *Framework* sets out seventeen principles representing the fundamental concepts associated with each component. Because these principles are drawn directly from the components, an entity can achieve effective internal control by applying all principles. All principles apply to operations, reporting, and compliance objectives. The principles supporting the components of internal control are listed below.

Control Environment

1. The organization[2] demonstrates a commitment to integrity and ethical values.
2. The board of directors demonstrates independence from management and exercises oversight of the development and performance of internal control.
3. Management establishes, with board oversight, structures, reporting lines, and appropriate authorities and responsibilities in the pursuit of objectives.
4. The organization demonstrates a commitment to attract, develop, and retain competent individuals in alignment with objectives.
5. The organization holds individuals accountable for their internal control responsibilities in the pursuit of objectives.

2 For purposes of the *Framework*, the term "organization" is used to collectively capture the board, management, and other personnel, as reflected in the definition of internal control.

Risk Assessment

6. The organization specifies objectives with sufficient clarity to enable the identification and assessment of risks relating to objectives.

7. The organization identifies risks to the achievement of its objectives across the entity and analyzes risks as a basis for determining how the risks should be managed.

8. The organization considers the potential for fraud in assessing risks to the achievement of objectives.

9. The organization identifies and assesses changes that could significantly impact the system of internal control.

Control Activities

10. The organization selects and develops control activities that contribute to the mitigation of risks to the achievement of objectives to acceptable levels.

11. The organization selects and develops general control activities over technology to support the achievement of objectives.

12. The organization deploys control activities through policies that establish what is expected and procedures that put policies into action.

Information and Communication

13. The organization obtains or generates and uses relevant, quality information to support the functioning of internal control.

14. The organization internally communicates information, including objectives and responsibilities for internal control, necessary to support the functioning of internal control.

15. The organization communicates with external parties regarding matters affecting the functioning of internal control.

Monitoring Activities

16. The organization selects, develops, and performs ongoing and/or separate evaluations to ascertain whether the components of internal control are present and functioning.

17. The organization evaluates and communicates internal control deficiencies in a timely manner to those parties responsible for taking corrective action, including senior management and the board of directors, as appropriate.

Effective Internal Control

The *Framework* sets forth the requirements for an effective system of internal control. An effective system provides reasonable assurance regarding achievement of an entity's objectives. An effective system of internal control reduces, to an acceptable level, the risk of not achieving an entity objective and may relate to one, two, or all three categories of objectives. It requires that:

- Each of the five components and relevant principles is present and functioning. "Present" refers to the determination that the components and relevant principles exist in the design and implementation of the system of internal control to achieve specified objectives. "Functioning" refers to the determination that the components and relevant principles continue to exist in the operations and conduct of the system of internal control to achieve specified objectives.
- The five components operate together in an integrated manner. "Operating together" refers to the determination that all five components collectively reduce, to an acceptable level, the risk of not achieving an objective. Components should not be considered discretely; instead, they operate together as an integrated system. Components are interdependent with a multitude of interrelationships and linkages among them, particularly the manner in which principles interact within and across components.

When a major deficiency exists with respect to the presence and functioning of a component or relevant principle, or with respect to the components operating together in an integrated manner, the organization cannot conclude that it has met the requirements for an effective system of internal control.

When a system of internal control is determined to be effective, senior management and the board of directors have reasonable assurance, relative to the application within the entity structure, that the organization:

- Achieves effective and efficient operations when external events are considered unlikely to have a significant impact on the achievement of objectives or where the organization can reasonably predict the nature and timing of external events and mitigate the impact to an acceptable level
- Understands the extent to which operations are managed effectively and efficiently when external events may have a significant impact on the achievement of objectives or where the organization can reasonably predict the nature and timing of external events and mitigate the impact to an acceptable level
- Prepares reports in conformity with applicable rules, regulations, and standards or with the entity's specified reporting objectives
- Complies with applicable laws, rules, regulations, and external standards

The *Framework* requires judgment in designing, implementing, and conducting internal control and assessing its effectiveness. The use of judgment, within the boundaries established by laws, rules, regulations, and standards, enhances management's ability to make better decisions about internal control, but cannot guarantee perfect outcomes.

Limitations

The *Framework* recognizes that while internal control provides reasonable assurance of achieving the entity's objectives, limitations do exist. Internal control cannot prevent bad judgment or decisions, or external events that can cause an organization to fail to achieve its operational goals. In other words, even an effective system of internal control can experience a failure. Limitations may result from the:

- Suitability of objectives established as a precondition to internal control
- Reality that human judgment in decision making can be faulty and subject to bias
- Breakdowns that can occur because of human failures such as simple errors
- Ability of management to override internal control
- Ability of management, other personnel, and/or third parties to circumvent controls through collusion
- External events beyond the organization's control

These limitations preclude the board and management from having absolute assurance of the achievement of the entity's objectives—that is, internal control provides reasonable but not absolute assurance. Notwithstanding these inherent limitations, management should be aware of them when selecting, developing, and deploying controls that minimize, to the extent practical, these limitations.

Using the *Internal Control—Integrated Framework*

How this report can be used depends on the roles of the interested parties:

- *The Board of Directors*—The board should discuss with senior management the state of the entity's system of internal control and provide oversight as needed. Senior management is accountable for internal control and to the board of directors, and the board needs to establish its policies and expectations of how members should provide oversight of the entity's internal control. The board should be apprised of the risks to the achievement of the entity's objectives, the assessments of internal control deficiencies, the management actions deployed to mitigate such risks and deficiencies, and how management assesses the effectiveness of the entity's system of internal control. The board should challenge management and ask the tough questions, as necessary, and seek input and support from internal auditors, external auditors, and others. Sub-committees of the board often can assist the board by addressing some of these oversight activities.
- *Senior Management*—Senior management should assess the entity's system of internal control in relation to the *Framework*, focusing on how the organization applies the seventeen principles in support of the components of internal control. Where management has applied the 1992 edition of the framework, it should first review the updates made to this version (as noted in Appendix F of the *Framework*), and consider implications of those updates to the entity's

system of internal control. Management may consider using the *Illustrative Tools* as part of this initial comparison and as an ongoing evaluation of the overall effectiveness of the entity's system of internal control.

- *Other Management and Personnel*—Managers and other personnel should review the changes made to this version and assess implications of those changes on the entity's system of internal control. In addition, they should consider how they are conducting their responsibilities in light of the *Framework* and discuss with more senior personnel ideas for strengthening internal control. More specifically, they should consider how existing controls affect the relevant principles within the five components of internal control.
- *Internal Auditors*—Internal auditors should review their internal audit plans and how they applied the 1992 edition of the framework. Internal auditors also should review in detail the changes made to this version and consider possible implications of those changes on audit plans, evaluations, and any reporting on the entity's system of internal control.
- *Independent Auditors*—In some jurisdictions, an independant auditor is engaged to audit or examine the effectiveness of the client's internal control over financial reporting in addition to auditing the entity's financial statements. Auditors can assess the entity's system of internal control in relation to the *Framework*, focusing on how the organization has selected, developed, and deployed controls that affect the principles within the components of internal control. Auditors, similar to management, may use the *Illustrative Tools* as part of this evaluation of the overall effectiveness of the entity's system of internal control.
- *Other Professional Organizations*—Other professional organizations providing guidance on operations, reporting, and compliance may consider their standards and guidance in comparison to the *Framework*. To the extent diversity in concepts and terminology is eliminated, all parties benefit.
- *Educators*—With the presumption that the *Framework* attains broad acceptance, its concepts and terms should find their way into university curricula.

Black's Law Dictionary (9th ed. 2009), **disparate treatment**

DISPARATE TREATMENT

disparate treatment. The practice, esp. in employment, of intentionally dealing with persons differently because of their race, sex, national origin, age, or disability. • To succeed on a **disparate**-**treatment** claim, the plaintiff must prove that the defendant acted with discriminatory intent or motive. [Cases: Civil Rights 1033, 1138.]

"Claims brought on behalf of a group of employees come in two varieties: claims of intentional discrimination (or **disparate treatment**) and claims of discriminatory impact (or **disparate** impact). The difference between these types of claims is significant, so much so that constitutional law only recognizes claims of **disparate treatment**, not **disparate** impact. Yet these two kinds of claims resemble one another, especially in the statistical evidence that the plaintiff must present in order to establish liability.... [C]lass claims of **disparate treatment** emphasize the historical perspective and its negative conception of equality as colorblindness, while class claims of **disparate** impact emphasize the remedial perspective and its goal of eliminating the effects of past discrimination." George Rutherglen, *Employment Discrimination Law* 56 (2001).

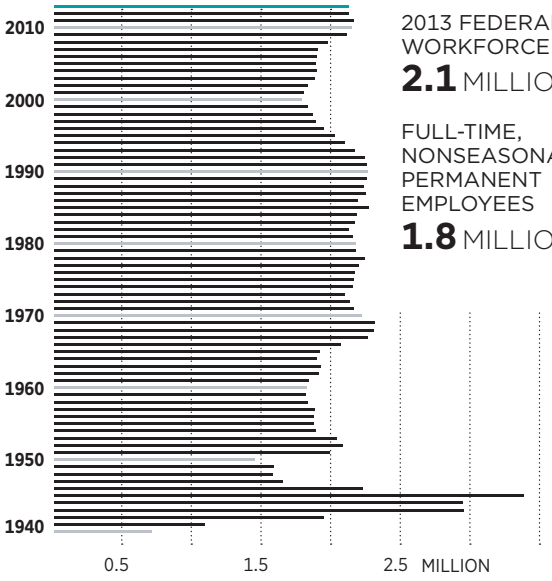
Bryan A. Garner, Editor in Chief

FED FIGURES 2014

Federal Departures

On the heels of budget cuts, pay freezes and hiring slow-downs, more than 114,000 people left the federal government in 2013, mostly through retirements. Additionally, the number of employees who voluntarily resigned from federal service increased every year since 2009. With the steady turnover, it is imperative for federal leaders to closely examine who they are losing and assess their short- and long-term needs. Who did government lose in 2013? Which agencies had the highest attrition rates and are people in specific occupations leaving at higher rates? To address these questions, the Partnership for Public Service analyzed recent separations data for full-time, nonseasonal, permanent civilian employees who left the federal government in fiscal 2013 in executive branch agencies, excluding the U.S. Postal Service.

SIZE OF THE FEDERAL WORKFORCE



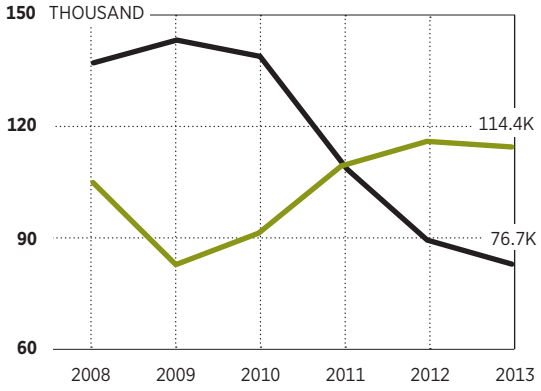
2013 FEDERAL WORKFORCE
2.1 MILLION

FULL-TIME, NONSEASONAL, PERMANENT EMPLOYEES
1.8 MILLION

RECENT HIRING AND DEPARTURES TRENDS

DEPARTURES
NEW HIRES

The number of employees annually leaving the federal government increased from a low of 83,317 in 2009 to 115,661 in 2012 and leveled off at 114,354 in 2013. At the same time, the number of new employees hired by the government declined every year since 2009.



TOTAL GOVERNMENT-WIDE DEPARTURES IN 2013
114,354

PERCENT OF THE TOTAL FEDERAL WORKFORCE
6.2%

PERCENT INCREASE IN DEPARTURES SINCE 2009
37.3%

RECENT DEPARTURE TRENDS BY FISCAL YEAR

RETIREMENT: Separation entitling employee to withdraw from retirement fund.

RESIGNATION: Voluntarily leaving one's position.

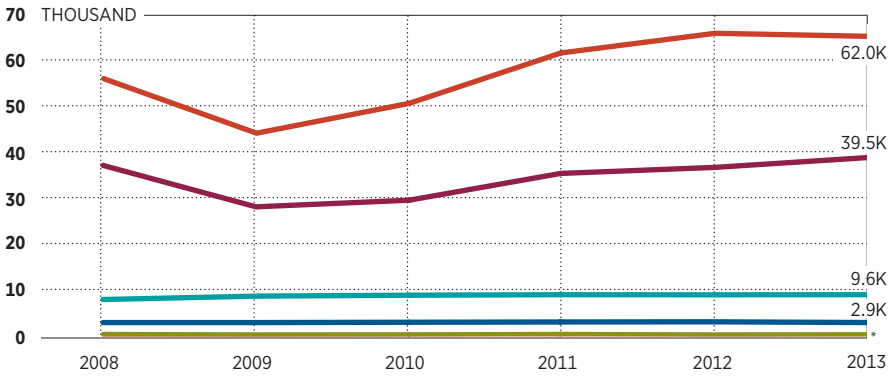
TERMINATION OR REMOVAL: Employee dismissal either based on misconduct, unsatisfactory performance or an expiration of appointment, work or funds.

REDUCTION IN FORCE (RIF): Separation resulting from lack of funds or elimination of position or agency.

OTHER SEPARATION: Departures that include resignations in lieu of termination and other agency-specific separations.

DEATH

Federal employees leave government service for a variety of reasons, including resignations, retirements, reductions in force, terminations or removal, and death. Retirements made up the largest classification of departures, accounting for 54.2 percent or 61,953 of all separations from federal service in 2013, while employees who resigned made up 34.5 percent of those who left.



*In 2013, there were 409 RIFs and 47 other separations.

TOP 10 OCCUPATIONAL GROUPS FOR FEDERAL DEPARTURES

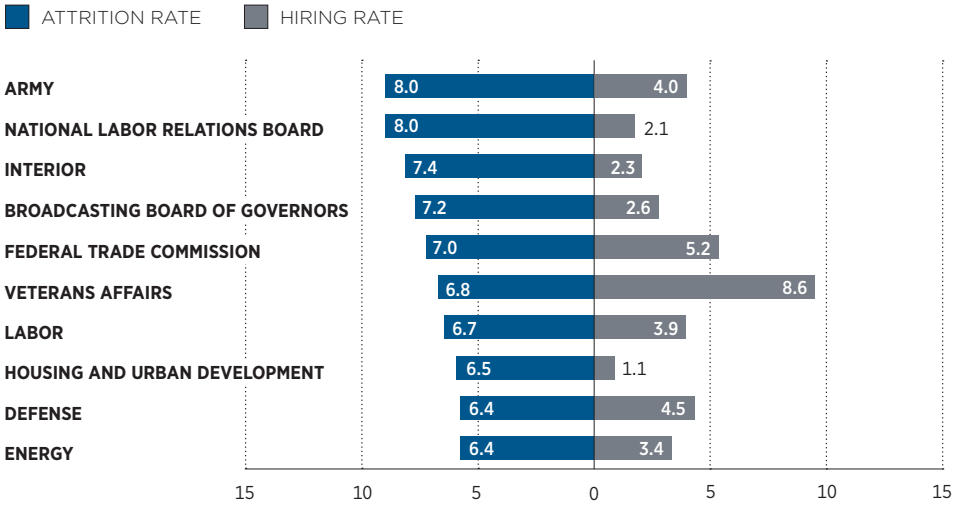
	ADMINISTRATION, OPERATIONS AND GENERAL MGMT.	MEDICAL, DENTAL AND PUBLIC HEALTH	INVESTIGATION AND INSPECTION	ACCOUNTING AND BUDGET
PERCENT OF DEPARTURES	**16.4**%	**15.2**%	**7.4**%	**5.7**%
EXITING EMPLOYEES IN **2013**	18,733	17,361	8,507	6,547
EXITING EMPLOYEES IN **2012**	20,429	15,923	7,993	7,207

A profile of recent federal departures

As government continues to lose more employees than it brings on board each year, who are we losing from federal service? The following pages offer a demographic profile of those employees who left in fiscal 2013 (October 1, 2012 through September 30, 2013). For years of service and veteran status, the most recent data available for departures was from fiscal 2012.

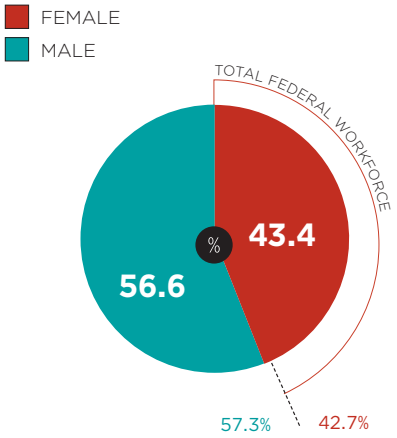
AGENCY ATTRITION RATES VERSUS AGENCY HIRING RATES

Attrition rates are calculated by dividing the number of departures throughout the fiscal year by the size of the workforce at the end of that fiscal year. Of all mid-size and large agencies—those with 1,000 or more employees—the Department of the Army and the National Labor Relations Board had the highest attrition rates during fiscal 2013. This is juxtaposed with agency hiring rates, which we calculated by dividing the number of hires throughout the fiscal year by the size of the workforce at the end of that fiscal year. The government-wide average attrition rate was 6.2 percent.



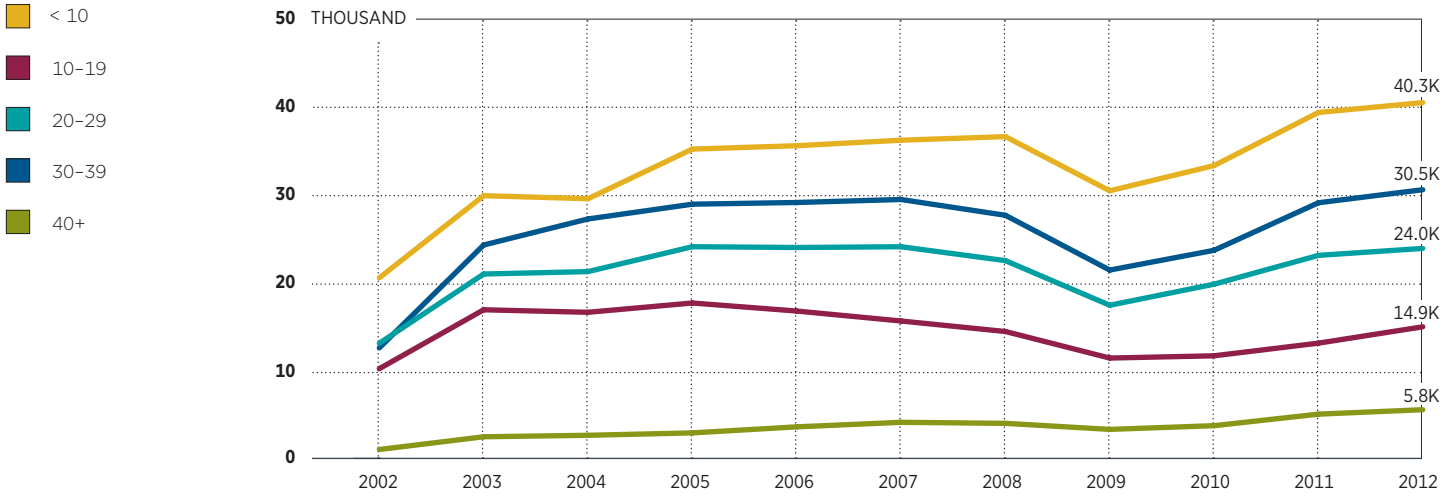
GENDER

Women accounted for 43.4 percent of all separations from federal service during fiscal 2013. This number closely mirrors the current makeup of the federal workforce, where 42.7 percent of federal employees in 2013 were women. This, along with recent hiring trends, continues to reinforce the gender gap between men and women in the federal workforce.



YEARS OF SERVICE

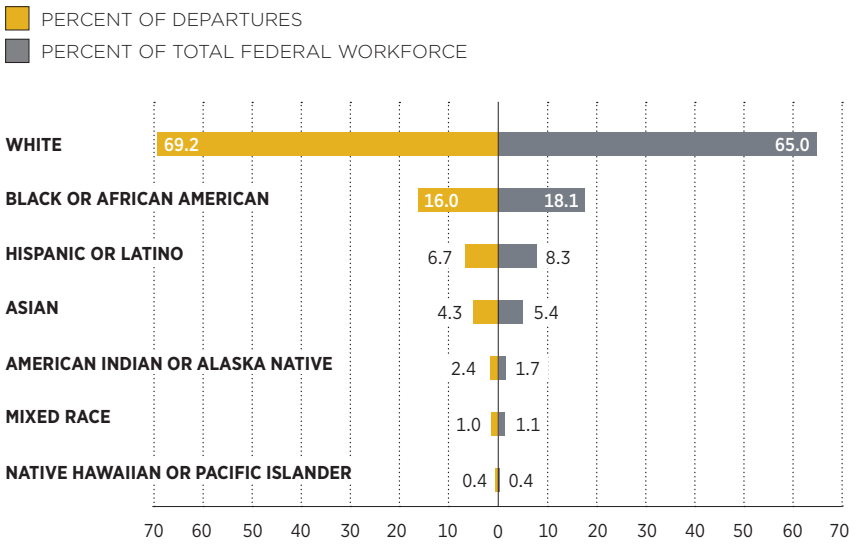
Those who served for fewer than 10 years made up the largest number of employees who left federal service every year from 2002 to 2012, accounting for approximately one-third of the departures during this time. Years of service refers to the number of years of federal civilian employment, including creditable military service. Complete departures data for years of service was not available for 2013.



ENGINEERING AND ARCHITECTURE	BUSINESS AND COMMERCE	OTHER OCCUPATIONS*	LEGAL AND CLAIMS SERVICES	SOCIAL SCIENCES AND PSYCHOLOGY	INFORMATION TECHNOLOGY
5.7%	**4.9%**	**4.7%**	**4.6%**	**4.1%**	**3.8%**
6,532	5,640	5,330	5,215	4,681	4,303
6,218	6,696	5,334	5,098	4,604	4,304

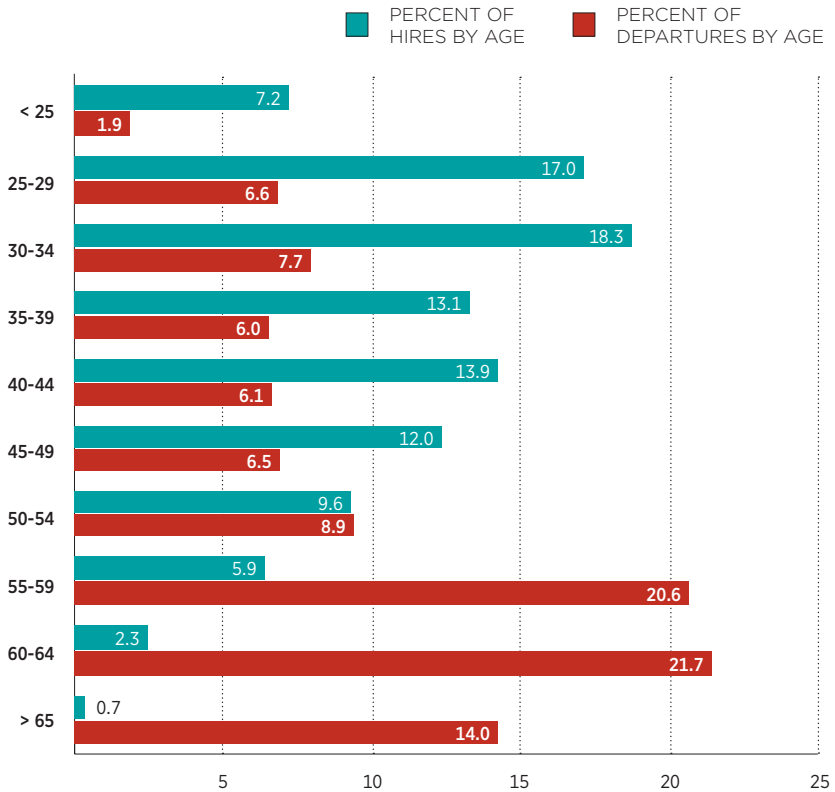
RACE AND ETHNICITY

In fiscal 2013, employees of a minority racial or ethnic group accounted for a smaller percentage of separations from federal service (30.8 percent) than they made up in the overall workforce (35.0 percent).



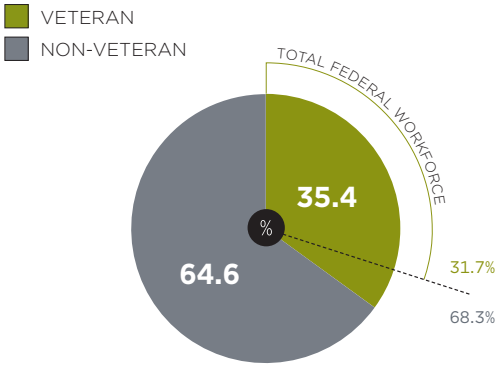
AGE

Employees under 30 accounted for 8.5 percent of departures, a sizable share since this group only represents 7.1 percent of the total federal workforce. Agencies will need to focus on retention strategies for this group of employees if they are to increase the representation of new, young talent in the federal workforce.

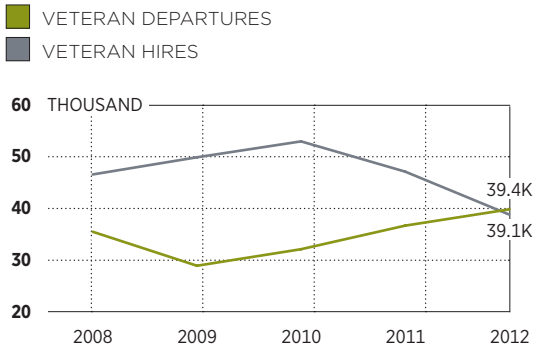


VETERAN STATUS

Veterans have accounted for slightly more than one-third of all federal employees who have left the government since 2008. Despite this turnover rate, the number of veterans in the federal workforce has increased from 446,826 veterans in 2008 to 572,239 veterans in 2012, the most recent year for which complete departures data for veterans is available. This coincided with a 2009 presidential executive order to increase veterans' employment.



VETERAN DEPARTURE TRENDS (2008–2012)



Data Sources: Unless otherwise noted below, all data are from FedScope (fedscope.opm.gov) for all full-time, nonseasonal, permanent employees who left federal service during fiscal 2013.

Race and Ethnicity: U.S. Office of Personnel Management analysis of full-time, nonseasonal, permanent employees who left federal service during fiscal 2013.

Veteran Status: U.S. Office of Personnel Management, *Employment of Veterans in the Federal Executive Branch: Fiscal Year 2012*, (Washington, D.C., 2012), 7, 17.

Veteran Departure Trends and Years of Service: Partnership for Public Service analysis of the Central Personnel Data File (now called the EHRI-SDM) for full-time, nonseasonal, permanent employees who left federal service during fiscal 2008-2012 and during 2002-2012, respectively.

Historical Federal Workforce Tables: "Executive Branch Civilian Employment Since 1940," U.S. Office of Personnel Management, http://1.usa.gov/1qUnFOQ (accessed Feb. 25, 2014).

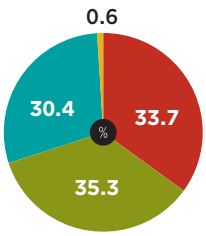
*Includes positions that are not included in other white-collar occupational groups either because the duties are unique or because they do not align with one particular group.

GS LEVEL

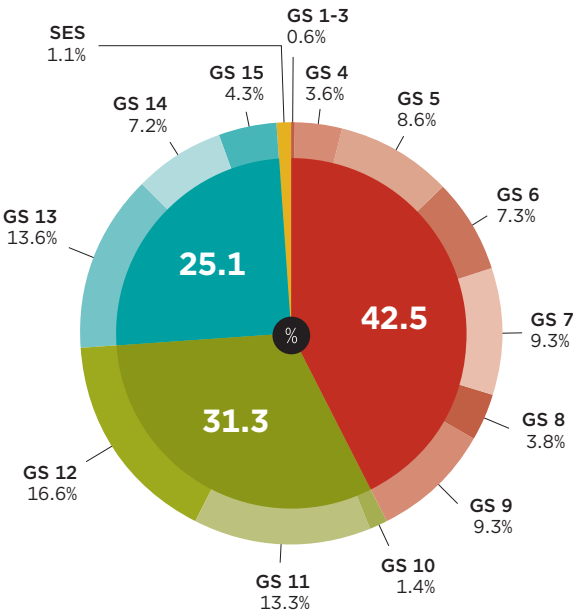
The General Schedule (GS) is a 15-level, government-wide pay and classification system used for the majority of the federal workforce. The largest number of employees who left federal service in 2013 were working at the GS-12 level, although entry-level employees made up a larger percentage of departures than they currently make up in the overall workforce—42.5 percent compared to 33.7 percent. Attrition rates were highest among the Senior Executive Service (SES) (11.3 percent) and among entry-level employees (7.6 percent).

ENTRY LEVEL
MID LEVEL
SENIOR LEVEL
SES

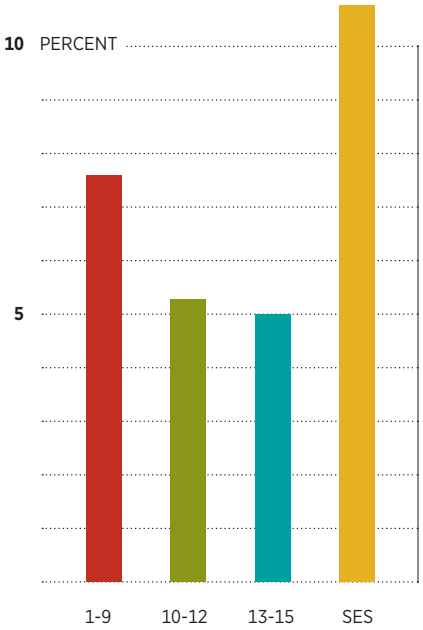
TOTAL FEDERAL WORKFORCE



PERCENT OF TOTAL WORKFORCE DEPARTURES BY GS LEVEL



ATTRITION RATE BY GS LEVEL (GROUPED)



In analyzing data for federal departures, the Partnership finds:

- The number of departing employees has increased for most years since fiscal 2009.
- Retirements accounted for more than half of all separations from federal service in 2013 (61,953), although the number of retirements decreased last year by 4,306.
- Resignations continued to increase in 2013, constituting 34.5 percent of all departures. The number of employees who resigned decreased in 2008 and 2009 during the worst years of the economic downturn, though more federal employees have quit each year since.
- Terminations or removals constituted only 8.4 percent of all departures in 2013. When placed in the context of government's 1.8 million employees, only 0.5 percent of the total workforce was terminated or removed in 2013.
- While entry-level employees only made up 33.7 percent of the federal workforce, they accounted for 42.5 percent of departures. In absolute numbers, the government hired roughly the same number of entry-level employees as it lost through departures in 2013, though the high turnover among entry-level talent poses challenges as agencies cultivate talent pipelines.

Predicting, preparing and managing these departures is critical to reshaping the federal workforce to meet evolving needs.

For more information and tips on how to examine turnover and retain employees, see "Beneath the Surface: Understanding Attrition at Your Agency and Why It Matters" and "Keeping Talent: Strategies for Retaining Valued Federal Employees."

For further information on the federal workforce or recent federal hiring trends, see the Partnership's "Federal Workforce" or "Federal Hiring" Fed Figures.

Frequently Asked Questions

GENERAL QUESTIONS ABOUT INROADS

See the menu at right for answers to questions related to the specific topics listed.

What is INROADS?

INROADS is the nation's largest non-profit source of paid internships for undergraduate, diverse youth. By providing the skills, support, and network students need to obtain an internship at a top company, INROADS prepares students to lead and contribute from Day 1. Learn more>>>

How does INROADS work?

INROADS knows talent. First, INROADS recruits the best and the brightest diverse college students. By understanding our corporate partners' needs and culture, while simultaneously coaching and training student applicants, we focus on getting the fit right, matching candidates who are ready to contribute on Day 1. Upon acceptance of an internship, INROADS Interns are provided on-going coaching with an advisor, a corporate mentor, access to our network and support such as free tutoring and scholarships, and most importantly, a unique skills development plan designed to increase the Intern's soft skills and overall understanding of how to become a high-performer. We save our clients time so they can focus on providing a supportive work environment with challenging work assignments. These successive year internships groom the Interns, not only for a full-time job with their corporate sponsor upon graduation, but also for fast advancement within that company. Learn more>>>

What is the INROADS goal?

The INROADS goal is achieved when a corporate sponsor hires its INROADS Intern immediately upon graduation. Over the past two years, 92% of INROADS Interns accepted offers for full time employment from their sponsoring companies. A large percentage of the remaining INROADS graduates accepted offers from other INROADS corporate sponsors.

Who is an INROADS Intern?

An INROADS Intern is an outstanding undergraduate college student pursuing a degree major in a field of study that will lead to a professional career in management. The student must maintain a B or better grade point average, and remain committed to the INROADS mission and goal. Learn more>>>

Who should apply for an INROADS Internship?

Talented undergraduate college students who have a 3.0 or higher GPA. Many INROADS Internships require a higher GPA. Interested students must pursue a college degree in business, accounting, actuarial science, engineering, computer and information sciences, sales, marketing

Acting Inspector General Fred Gibson
Federal Deposit Insurance Corporation
Office of Inspector General
3501 Fairfax Drive
Arlington, VA 22226

Dear Acting Inspector General Gibson:

We write to request that the Office of the Inspector General (OIG) for the Federal Deposit Insurance Corporation (FDIC) review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Federal Deposit Insurance Corporation's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Federal Deposit Insurance Corporation or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Sincerely,

JEB HENSARLING, TX, CHAIRMAN

Inspector General Eric M. Thorson
U.S. Department of the Treasury
Office of Inspector General
1500 Pennsylvania Avenue, N.W.
Room 4436,
Washington, DC 20220

Dear Inspector General Thorson:

We write to request that the Office of the Inspector General (OIG) for the U.S. Treasury Department review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Treasury's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Treasury or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Sincerely,

Acting Inspector General Michael P. Stephens
Federal Housing Finance Agency
Office of Inspector General
400 7th Street, S.W.
Washington, DC 20024

Dear Acting Inspector General Stephens:

We write to request that the Office of the Inspector General (OIG) for the Federal Housing Finance Agency (FHFA) review the agency's internal operations to determine whether any personnel practices have created a discriminatory workplace or otherwise systematically disadvantaged minorities from obtaining senior management positions.

Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act established an Office of Minority and Women Inclusion (OMWI) at most of the federal financial regulatory agencies, responsible for matters relating to diversity in management, employment, and business activities. Despite this statutory mandate, the Government Accountability Office (GAO) concluded in a report released last year that management-level representation of minorities and women among federal financial agencies and Federal Reserve Banks has not changed substantially from 2007 through 2011. In fact, across all federal financial regulators, agency representation of minorities was as low as 6 percent and dropped as low as zero percent at one of the Reserve Banks. In light of these findings and the concerns raised by employee performance evaluations at the Consumer Financial Protection Bureau (CFPB), we believe the OIG should work in cooperation with Federal Housing Finance Agency's OMWI Director to assess current personnel practices and make recommendations necessary to ensure full compliance with the law.

The 2013 GAO report, entitled "Trends and Practices in the Financial Industry and Agencies after the Recent Financial Crisis," documented the extremely poor representation of women and minorities in leadership positions within the financial services industry and among federal financial regulators. According to GAO, industry representation of minorities in 2011 was higher in lower-level management positions – approximately 20 percent – as compared to about 11 percent of senior-level manager positions.

While public attention is currently and justifiably focused on the CFPB, the most recent OMWI reports suggest the disparities impeding internal upward mobility for minorities may be endemic throughout all the agencies regulating the financial services industry. According to the Treasury Department's 2013 OMWI report, among its senior executive management, 86 percent are white men, compared to 7 percent Black men, 4 percent Hispanic men, and 3 percent Asian men. Among the agency's GS-15 employees, which serves as a pipeline to senior level management, white men are once again overrepresented at 86 percent, compared to 6 percent Black men, 2 percent Hispanic men, and 6 percent Asian men.

At the Federal Reserve, white men represent 50 percent of executive senior level managers, compared to just 28.7 percent represented by white women. Along ethnic categories, black and Hispanic men represent, respectively, roughly 5 percent and 1 percent of executive senior level managers. Black women represent roughly 6 percent and Hispanic women represent nearly 2 percent of senior managers.

According to the most recent information from the GAO, at the National Credit Union Administration (NCUA), whites represent 88 percent of senior level management positions, compared to 4 percent represented by blacks and 4 percent by Hispanics. At the Office of the Comptroller of the Currency (OCC), whites represent 82 percent of senior level managers, compared to 9 percent black and 5 percent Hispanic. Whites represent 89 percent of senior level management positions at the Securities and Exchange Commission, compared to 2 percent black and 5 percent Hispanic. Minorities appear to fair best at the Federal Housing Finance Agency, where whites represent 76 percent of senior level management positions, compared to 16 percent black and 8 percent Hispanic. However, more comprehensive analysis is still needed from the agency to fully assess the racial and gender employment of minorities in senior positions beyond the GAO's limited information.

Accordingly, we request that the OIG examine any employee complaints, formal or informal, related to personnel practices, workplace policies and the findings from any employee satisfaction surveys, whether conducted by the Federal Housing Finance Agency or an outside entity. If the OIG identifies any individuals or groups of individuals who have exhibited discriminatory behaviors or patterns of unfair or unequal treatment, we ask that the OIG provide recommendations about appropriate actions, including remedial training or removal from employment with the agency. Furthermore, we request that the OIG assess the agency's OMWI operations, and ensure corrective actions are taken within the agency with regard to employee compensation, rating systems, retention, and promotion of women and minorities.

Reports on Computer Systems Technology

The Information Technology Laboratory (ITL) at the National Institute of Standards and Technology (NIST) promotes the U.S. economy and public welfare by providing technical leadership for the Nation's measurement and standards infrastructure. ITL develops tests, test methods, reference data, proof of concept implementations, and technical analyses to advance the development and productive use of information technology. ITL's responsibilities include the development of management, administrative, technical, and physical standards and guidelines for the cost-effective security and privacy of other than national security-related information in federal information systems. The Special Publication 800-series reports on ITL's research, guidelines, and outreach efforts in information system security, and its collaborative activities with industry, government, and academic organizations.

Abstract

This publication provides a catalog of security and privacy controls for federal information systems and organizations and a process for selecting controls to protect organizational operations (including mission, functions, image, and reputation), organizational assets, individuals, other organizations, and the Nation from a diverse set of threats including hostile cyber attacks, natural disasters, structural failures, and human errors. The controls are customizable and implemented as part of an organization-wide process that manages information security and privacy risk. The controls address a diverse set of security and privacy requirements across the federal government and critical infrastructure, derived from legislation, Executive Orders, policies, directives, regulations, standards, and/or mission/business needs. The publication also describes how to develop specialized sets of controls, or overlays, tailored for specific types of missions/business functions, technologies, or environments of operation. Finally, the catalog of security controls addresses security from both a functionality perspective (the strength of security functions and mechanisms provided) and an assurance perspective (the measures of confidence in the implemented security capability). Addressing both security functionality and security assurance ensures that information technology products and the information systems built from those products using sound systems and security engineering principles are sufficiently trustworthy.

Lisa Kaiser *DHS*	Pam Miller *The MITRE Corporation*	Sandra Miravalle *The MITRE Corporation*	Victoria Pillitteri *NIST*

In addition to the above acknowledgments, a special note of thanks goes to Peggy Himes and Elizabeth Lennon of NIST for their superb technical editing and administrative support. The authors also wish to recognize Marshall Abrams, Nadya Bartol, Frank Belz, Deb Bodeau, Dawn Cappelli, Corinne Castanza, Matt Coose, George Dinolt, Kurt Eleam, Jennifer Guild, Cynthia Irvine, Cass Kelly, Steve LaFountain, Steve Lipner, Tom Macklin, Tim McChesney, Michael

McEvilley, John Mildner, Joji Montelibano, George Moore, LouAnna Notargiacomo, Dorian Pappas, Roger Schell, Carol Woody, and the research staff from the NIST Computer Security Division for their exceptional contributions in helping to improve the content of the publication. And finally, the authors also gratefully acknowledge and appreciate the significant contributions from individuals, working groups, and organizations in the public and private sectors, both nationally and internationally, whose thoughtful and constructive comments improved the overall quality, thoroughness, and usefulness of this publication.

FIPS 200 AND SP 800-53

IMPLEMENTING INFORMATION SECURITY STANDARDS AND GUIDELINES

FIPS Publication 200, *Minimum Security Requirements for Federal Information and Information Systems*, is a mandatory federal standard developed by NIST in response to FISMA. To comply with the federal standard, organizations first determine the security category of their information system in accordance with FIPS Publication 199, *Standards for Security Categorization of Federal Information and Information Systems*, derive the information system impact level from the security category in accordance with FIPS 200, and then apply the appropriately tailored set of baseline security controls in NIST Special Publication 800-53, *Security and Privacy Controls for Federal Information Systems and Organizations*. Organizations have flexibility in applying the baseline security controls in accordance with the guidance provided in Special Publication 800-53. This allows organizations to tailor the relevant security control baseline so that it more closely aligns with their mission and business requirements and environments of operation.

FIPS 200 and NIST Special Publication 800-53, in combination, ensure that appropriate security requirements and security controls are applied to all federal information and information systems. An organizational assessment of risk validates the initial security control selection and determines if additional controls are needed to protect organizational operations (including mission, functions, image, or reputation), organizational assets, individuals, other organizations, or the Nation. The resulting set of security controls establishes a level of security due diligence for the organization.

DEVELOPING COMMON INFORMATION SECURITY FOUNDATIONS

COLLABORATION AMONG PUBLIC AND PRIVATE SECTOR ENTITIES

In developing standards and guidelines required by FISMA, NIST consults with other federal agencies and the private sector to improve information security, avoid unnecessary and costly duplication of effort, and ensure that its publications are complementary with the standards and guidelines employed for the protection of national security systems. In addition to a comprehensive public review and vetting process, NIST is collaborating with the Office of the Director of National Intelligence (ODNI), the Department of Defense (DoD), and the Committee on National Security Systems (CNSS) to establish a unified information security framework for the federal government. A common foundation for information security will provide the Civil, Defense, and Intelligence sectors of the federal government and their contractors, more cost-effective and consistent ways to manage information security-related risk to organizational operations and assets, individuals, other organizations, and the Nation. The unified framework will also provide a strong basis for reciprocal acceptance of authorization decisions and facilitate information sharing. NIST is also working with many public and private sector entities to establish mappings and relationships between the security standards and guidelines developed by NIST and the International Organization for Standardization and International Electrotechnical Commission (ISO/IEC).

SECURITY REQUIREMENTS

FROM THE PERSPECTIVE OF DIFFERENT COMMUNITIES OF INTEREST

The term *security requirement* is used by different communities and groups in different ways and may require additional explanation to establish the particular context for the various use cases. Security requirements can be stated at a very high level of abstraction, for example, in legislation, Executive Orders, directives, policies, standards, and mission/business needs statements. FISMA and FIPS Publication 200 articulate security requirements at such a level.

Acquisition personnel develop security requirements for contracting purposes that address the protections necessary to achieve mission/business needs. Systems/security engineers, system developers, and systems integrators develop the security design requirements for the information system, develop the system security architecture and the architecture-specific derived security requirements, and subsequently implement specific security functions at the hardware, software, and firmware component level.

Security requirements are also reflected in various nontechnical security controls that address such matters as policy and procedures at the management and operational elements within organizations, again at differing levels of detail. It is important to define the context for each use of the term security requirement so the respective communities (including individuals responsible for policy, architecture, acquisition, engineering, and mission/business protection) can clearly communicate their intent.

Organizations may define certain *security capabilities* needed to satisfy security requirements and provide appropriate mission and business protection. Security capabilities are typically defined by bringing together a specific set of safeguards/countermeasures (i.e., security controls) derived from the appropriately tailored baselines that together produce the needed capability.

TECHNOLOGY AND POLICY NEUTRALITY

CHARACTERISTICS OF SECURITY CONTROLS

The security controls in the catalog with few exceptions, have been designed to be policy- and technology-neutral. This means that security controls and control enhancements focus on the fundamental safeguards and countermeasures necessary to protect information during processing, while in storage, and during transmission. Therefore, it is beyond the scope of this publication to provide guidance on the application of security controls to specific technologies, environments of operation, communities of interest, or missions/business functions. Application-specific areas are addressed by the use of the tailoring process described in Chapter Three and the use of overlays described in Appendix I. It should also be noted that while the security controls are largely policy- and technology-neutral, that does not imply that the controls are policy- and technology-unaware. Understanding policy and technology is necessary so that the controls are meaningful and relevant when implemented.

In the few cases where specific technologies are called out in security controls (e.g., mobile, PKI, wireless, VOIP), organizations are cautioned that the need to provide adequate security goes well beyond the requirements in a single control associated with a particular technology. Many of the needed safeguards and countermeasures are obtained from the other security controls in the catalog allocated to the initial control baselines as starting points for the development of security plans and overlays using the tailoring process. There may also be some overlap in the protections articulated by the security controls within the different control families.

In addition to the customer-driven development of specialized security plans and overlays, NIST Special Publications and Interagency Reports may provide guidance on recommended security controls for specific technologies and sector-specific applications (e.g., Smart Grid, healthcare, Industrial Control Systems, and mobile).

Employing a technology- and policy-neutral security control catalog has the following benefits:

- It encourages organizations to focus on the *security capabilities* required for mission/business success and the protection of information, irrespective of the information technologies that are employed in organizational information systems.
- It encourages organizations to analyze each security control for its applicability to specific technologies, environments of operation, missions/business functions, and communities of interest.
- It encourages organizations to specify security policies as part of the tailoring process for security controls that have variable parameters.

The specialization of security plans using the tailoring guidance and overlays, together with a robust set of technology- and policy-neutral security controls, promotes cost-effective, risk-based information security for organizations—in any sector, for any technology, and in any operating environment.

INFORMATION SECURITY DUE DILIGENCE

MANAGING THE RISK TO ORGANIZATIONAL MISSIONS/BUSINESS FUNCTIONS

The security controls in NIST Special Publication 800-53 are designed to facilitate compliance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance. Compliance is *not* about adhering to static checklists or generating unnecessary FISMA reporting paperwork. Rather, compliance necessitates organizations executing *due diligence* with regard to information security and risk management. Information security due diligence includes using all appropriate information as part of an organization-wide risk management program to effectively use the tailoring guidance and inherent flexibility in NIST publications so that the selected security controls documented in organizational security plans meet the mission and business requirements of organizations. Using the risk management tools and techniques that are available to organizations is essential in developing, implementing, and maintaining the safeguards and countermeasures with the necessary and sufficient strength of mechanism to address the current threats to organizational operations and assets, individuals, other organizations, and the Nation. Employing effective risk-based processes, procedures, and technologies will help ensure that all federal information systems and organizations have the necessary resilience to support ongoing federal responsibilities, critical infrastructure applications, and continuity of government.

PRIVACY CONTROLS

PROVIDING PRIVACY PROTECTION FOR FEDERAL INFORMATION

Appendix J, *Privacy Control Catalog*, is a new addition to NIST Special Publication 800-53. It is intended to address the privacy needs of federal agencies. The Privacy Appendix:

- Provides a structured set of privacy controls, based on best practices, that help organizations comply with applicable federal laws, Executive Orders, directives, instructions, regulations, policies, standards, guidance, and organization-specific issuances;
- Establishes a linkage and relationship between privacy and security controls for purposes of enforcing respective privacy and security requirements which may overlap in concept and in implementation within federal information systems, programs, and organizations;
- Demonstrates the applicability of the NIST Risk Management Framework in the selection, implementation, assessment, and ongoing monitoring of privacy controls deployed in federal information systems, programs, and organizations; and
- Promotes closer cooperation between privacy and security officials within the federal government to help achieve the objectives of senior leaders/executives in enforcing the requirements in federal privacy legislation, policies, regulations, directives, standards, and guidance.

There is a strong similarity in the structure of the privacy controls in Appendix J and the security controls in Appendices F and G. For example, the control AR-1 (Governance and Privacy Program) requires organizations to develop privacy plans that can be implemented at the organizational or program level. These plans can also be used in conjunction with security plans to provide an opportunity for organizations to select the appropriate set of security and privacy controls in accordance with organizational mission/business requirements and the environments in which the organizations operate. Incorporating the same concepts used in managing information security risk, helps organizations implement privacy controls in a more cost-effective, risked-based manner while simultaneously protecting individual privacy and meeting compliance requirements. Standardized privacy controls provide a more disciplined and structured approach for satisfying federal privacy requirements and demonstrating compliance to those requirements.

CAUTIONARY NOTE

IMPLEMENTING CHANGES BASED ON REVISIONS TO SPECIAL PUBLICATION 800-53

When NIST publishes revisions to Special Publication 800-53, there are four primary types of changes made to the document: (i) security controls or control enhancements are added to or withdrawn from Appendices F and G and/or to the low, moderate, and high baselines; (ii) supplemental guidance is modified; (iii) material in the main chapters or appendices is modified; and (iv) language is clarified and/or updated throughout the document.

When modifying existing tailored security control baselines at Tier 3 in the risk management hierarchy (as described in Special Publication 800-39) and updating security controls at any tier as a result of Special Publication 800-53 revisions, organizations should take a measured, risk-based approach in accordance with organizational risk tolerance and current risk assessments. Unless otherwise directed by OMB policy, the following activities are recommended to implement changes to Special Publication 800-53:

- First, organizations determine if any added security controls/control enhancements are applicable to organizational information systems or environments of operation following tailoring guidelines in this publication.
- Next, organizations review changes to the supplemental guidance, guidance in the main chapters and appendices, and updated/clarified language throughout the publication to determine if changes apply to any organizational information systems and if any immediate actions are required.
- Finally, once organizations have determined the entirety of changes necessitated by the revisions to the publication, the changes are integrated into the established continuous monitoring process to the greatest extent possible. The implementation of new or modified security controls to address specific, active threats is always the highest priority for sequencing and implementing changes. Modifications such as changes to templates or minor language changes in policy or procedures are generally the lowest priority and are made in conjunction with established review cycles.

Table of Contents

Prologue

"*…Through the process of risk management, leaders must consider risk to US interests from adversaries using cyberspace to their advantage and from our own efforts to employ the global nature of cyberspace to achieve objectives in military, intelligence, and business operations… "*

"…For operational plans development, the combination of threats, vulnerabilities, and impacts must be evaluated in order to identify important trends and decide where effort should be applied to eliminate or reduce threat capabilities; eliminate or reduce vulnerabilities; and assess, coordinate, and deconflict all cyberspace operations…"

"…Leaders at all levels are accountable for ensuring readiness and security to the same degree as in any other domain…"

-- THE NATIONAL STRATEGY FOR CYBERSPACE OPERATIONS
OFFICE OF THE CHAIRMAN, JOINT CHIEFS OF STAFF, U.S. DEPARTMENT OF DEFENSE

Foreword

NIST Special Publication 800-53, Revision 4, represents the most comprehensive update to the security controls catalog since its inception in 2005. The publication was developed by NIST, the Department of Defense, the Intelligence Community, and the Committee on National Security Systems as part of the Joint Task Force, an interagency partnership formed in 2009. This update was motivated principally by the expanding threat space—characterized by the increasing sophistication of cyber attacks and the operations tempo of adversaries (i.e., the frequency of such attacks, the professionalism of the attackers, and the persistence of targeting by attackers). State-of-the-practice security controls and control enhancements have been developed and integrated into the catalog addressing such areas as: mobile and cloud computing; applications security; trustworthiness, assurance, and resiliency of information systems; insider threat; supply chain security; and the advanced persistent threat. In addition, Special Publication 800-53 has been expanded to include eight new families of privacy controls based on the internationally accepted Fair Information Practice Principles.

Special Publication 800-53, Revision 4, provides a more *holistic* approach to information security and risk management by providing organizations with the breadth and depth of security controls necessary to fundamentally strengthen their information systems and the environments in which those systems operate—contributing to systems that are more resilient in the face of cyber attacks and other threats. This "Build It Right" strategy is coupled with a variety of security controls for "Continuous Monitoring" to give organizations near real-time information that is essential for senior leaders making ongoing *risk-based* decisions affecting their critical missions and business functions.

To take advantage of the expanded set of security and privacy controls, and to give organizations greater flexibility and agility in defending their information systems, the concept of *overlays* was introduced in this revision. Overlays provide a structured approach to help organizations tailor security control baselines and develop specialized security plans that can be applied to specific missions/business functions, environments of operation, and/or technologies. This specialization approach is important as the number of threat-driven controls and control enhancements in the catalog increases and organizations develop risk management strategies to address their specific protection needs within defined risk tolerances.

Finally, there have been several new features added to this revision to facilitate ease of use by organizations. These include:

- Assumptions relating to security control baseline development;
- Expanded, updated, and streamlined tailoring guidance;
- Additional assignment and selection statement options for security and privacy controls;
- Descriptive names for security and privacy control enhancements;
- Consolidated tables for security controls and control enhancements by family with baseline allocations;
- Tables for security controls that support development, evaluation, and operational assurance; and
- Mapping tables for international security standard ISO/IEC 15408 (Common Criteria).

The security and privacy controls in Special Publication 800-53, Revision 4, have been designed to be largely policy/technology-neutral to facilitate flexibility in implementation. The controls are well positioned to support the integration of information security and privacy into organizational processes including enterprise architecture, systems engineering, system development life cycle, and acquisition/procurement. Successful integration of security and privacy controls into ongoing organizational processes will demonstrate a greater maturity of security and privacy programs and provide a tighter coupling of security and privacy investments to core organizational missions and business functions.

The Joint Task Force

Errata

The following changes have been incorporated into Special Publication 800-53, Revision 4.

DATE	TYPE	CHANGE	PAGE
05-07-2013	Editorial	Changed CA-9 Priority Code from P1 to P2 in Table D-2.	D-3
05-07-2013	Editorial	Changed CM-10 Priority Code from P1 to P2 in Table D-2.	D-4
05-07-2013	Editorial	Changed MA-6 Priority Code from P1 to P2 in Table D-2.	D-5
05-07-2013	Editorial	Changed MP-3 Priority Code from P1 to P2 in Table D-2.	D-5
05-07-2013	Editorial	Changed PE-5 Priority Code from P1 to P2 in Table D-2.	D-5
05-07-2013	Editorial	Changed PE-16 Priority Code from P1 to P2 in Table D-2.	D-5
05-07-2013	Editorial	Changed PE-17 Priority Code from P1 to P2 in Table D-2.	D-5
05-07-2013	Editorial	Changed PE-18 Priority Code from P2 to P3 in Table D-2.	D-5
05-07-2013	Editorial	Changed PL-4 Priority Code from P1 to P2 in Table D-2.	D-6
05-07-2013	Editorial	Changed PS-4 Priority Code from P2 to P1 in Table D-2.	D-6
05-07-2013	Editorial	Changed SA-11 Priority Code from P2 to P1 in Table D-2.	D-6
05-07-2013	Editorial	Changed SC-18 Priority Code from P1 to P2 in Table D-2.	D-7
05-07-2013	Editorial	Changed SI-8 Priority Code from P1 to P2 in Table D-2.	D-8
05-07-2013	Editorial	Deleted reference to SA-5 (6) in Table D-17.	D-32
05-07-2013	Editorial	Deleted CM-4 (3) from Table E-2.	E-4
05-07-2013	Editorial	Deleted CM-4 (3) from Table E-3.	E-5
05-07-2013	Editorial	Deleted reference to SA-5 (6).	F-161
05-07-2013	Editorial	Changed SI-16 Priority Code from P0 to P1.	F-233
01-15-2014	Editorial	Deleted “(both intentional and unintentional)” in line 5 in Abstract.	iii
01-15-2014	Editorial	Deleted “security and privacy” in line 5 in Abstract.	iii
01-15-2014	Editorial	Changed “an initial set of baseline security controls” to “the applicable security control baseline” in Section 2.1, RMF Step 2.	9
01-15-2014	Editorial	Deleted the following paragraph: “The security control enhancements section provides…in Appendix F.”	11
01-15-2014	Editorial	Changed “baseline security controls” to “the security control baselines” in Section 2.3, 2nd paragraph, line 6.	13
01-15-2014	Editorial	Changed “an initial set of security controls” to “the applicable security control baseline” in Section 3.1, paragraph 2, line 4.	28
01-15-2014	Editorial	Changed “security control baselines” to “baselines identified in Appendix D” in Section 3.1, paragraph 2, line 5.	28
01-15-2014	Editorial	Changed “an appropriate set of baseline controls” to “the appropriate security control baseline” in Section 3.1, paragraph 3, line 3.	29
01-15-2014	Editorial	Deleted “initial” before “security control baseline” and added “FIPS 200” before “impact level” in Section 3.1, paragraph 3, line 4.	29
01-15-2014	Editorial	Changed “sets of baseline security controls” to “security control baselines” in Section 3.1, paragraph 3, line 6.	29
01-15-2014	Editorial	Changed “initial set of baseline security controls” to “applicable security control baseline” in Section 3.2, paragraph 1, line 1.	30
01-15-2014	Editorial	Changed “initial set of baseline security controls” to “applicable security control baseline” in Section 3.2, paragraph 3, line 5.	31
01-15-2014	Editorial	Deleted “set of” before “security controls” in Section 3.2, Applying Scoping Considerations, Mobility paragraph, line 1.	33

DATE	TYPE	CHANGE	PAGE
01-15-2014	Editorial	Deleted “initial” before “set of” in Section 3.2, Applying Scoping Considerations, Mobility paragraph, line 2.	33
01-15-2014	Editorial	Changed “the baselines” to “each baseline” in Section 3.2, Applying Scoping Considerations, Mobility paragraph, line 3.	33
01-15-2014	Editorial	Changed “initial set of security controls” to “security control baseline” in Section 3.2, Applying Scoping Considerations, Mobility paragraph, line 5.	33
01-15-2014	Editorial	Added “specific” before “locations” in Section 3.2, Applying Scoping Considerations, Mobility paragraph, line 6.	33
01-15-2014	Editorial	Changed “initial” to “three” in Section 3.2, Applying Scoping Considerations, Mobility paragraph, line 8.	33
01-15-2014	Editorial	Changed “initial set of baseline security controls” to “applicable security control baseline” in Section 3.2, Selecting Compensating Security Controls, line 10.	36
01-15-2014	Editorial	Changed “a set of initial baseline security controls” to “security control baselines” in Section 3.3, line 1.	40
01-15-2014	Editorial	Added “.” after “C.F.R” in #3, Policies, Directives, Instructions, Regulations, and Memoranda.	A-1
01-15-2014	Editorial	Added “Revision 1 (Draft)” to NIST Special Publication 800-52 in References.	A-7
01-15-2014	Editorial	Added “Configuration,” to title of NIST Special Publication 800-52, Revision 1.	A-7
01-15-2014	Editorial	Changed date for NIST Special Publication 800-52, Revision 1 to September 2013.	A-7
01-15-2014	Editorial	Moved definition for Information Security Risk after Information Security Program Plan in Glossary.	B-11
01-15-2014	Editorial	Added AC-2 (11) to high baseline in Table D-2.	D-2
01-15-2014	Editorial	Changed AC-10 Priority Code from P2 to P3 in Table D-2.	D-2
01-15-2014	Editorial	Changed AC-14 Priority Code from P1 to P3 in Table D-2.	D-2
01-15-2014	Editorial	Changed AC-22 Priority Code from P2 to P3 in Table D-2.	D-2
01-15-2014	Editorial	Changed AU-10 Priority Code from P1 to P2 in Table D-2.	D-3
01-15-2014	Editorial	Changed CA-6 Priority Code from P3 to P2 in Table D-2.	D-3
01-15-2014	Editorial	Changed CA-7 Priority Code from P3 to P2 in Table D-2.	D-3
01-15-2014	Editorial	Changed CA-8 Priority Code from P1 to P2 in Table D-2.	D-3
01-15-2014	Editorial	Changed IA-6 Priority Code from P1 to P2 in Table D-2.	D-4
01-15-2014	Editorial	Changed IR-7 Priority Code from P3 to P2 in Table D-2.	D-5
01-15-2014	Editorial	Changed MA-3 Priority Code from P2 to P3 in Table D-2.	D-5
01-15-2014	Editorial	Changed MA-4 Priority Code from P1 to P2 in Table D-2.	D-5
01-15-2014	Editorial	Changed MA-5 Priority Code from P1 to P2 in Table D-2.	D-5
01-15-2014	Editorial	Deleted Program Management Controls from Table D-2.	D-8/9
01-15-2014	Editorial	Deleted the following sentence at end of paragraph: “There is no summary table provided for the Program Management (PM) family since PM controls are not associated with any particular security control baseline.”	D-9
01-15-2014	Editorial	Added AC-2 (12) and AC-2 (13) to high baseline in Table D-3.	D-10
01-15-2014	Editorial	Changed AC-17 (5) incorporated into reference from AC-17 to SI-4 in Table D-3.	D-12
01-15-2014	Editorial	Changed AC-17 (7) incorporated into reference from AC-3 to AC-3 (10) in Table D-3.	D-12
01-15-2014	Editorial	Changed AC-6 to AC-6 (9) in AU-2 (4) withdrawal notice in Table D-5.	D-15
01-15-2014	Editorial	Changed “Training” to “Scanning” in SA-19 (4) title in Table D-17.	D-34
01-15-2014	Editorial	Deleted SC-9 (1), SC-9 (2), SC-9 (3), and SC-9 (4) from Table D-18.	D-37
01-15-2014	Editorial	Added AC-2 and AC-5 to SC-14 and deleted SI-9 from SC-14 in Table D-18.	D-37

DATE	TYPE	CHANGE	PAGE
01-15-2014	Editorial	Deleted CA-3 (5) from Table E-2.	E-4
01-15-2014	Editorial	Added CM-3 (2) to Table E-2.	E-4
01-15-2014	Editorial	Added RA-5 (2) and RA-5 (5) to Table E-2.	E-4
01-15-2014	Editorial	Deleted CA-3 (5) from Table E-3.	E-5
01-15-2014	Editorial	Added CM-3 (2) to Table E-3.	E-5
01-15-2014	Editorial	Deleted bold text from RA-5 (2) and RA-5 (5) in Table E-3.	E-5
01-15-2014	Editorial	Added CM-8 (9) to Table E-4.	E-7
01-15-2014	Editorial	Added CP-4 (4) to Table E-4.	E-7
01-15-2014	Editorial	Added IR-3 (1) to Table E-4.	E-7
01-15-2014	Editorial	Added RA-5 (3) to Table E-4.	E-7
01-15-2014	Editorial	Deleted SA-4 (4) from Table E-4.	E-7
01-15-2014	Editorial	Changed SA-21 (1) from “enhancements” to “enhancement” in Table E-4.	E-7
01-15-2014	Editorial	Deleted SI-4 (8) from Table E-4.	E-7
01-15-2014	Editorial	Changed “risk management process” to “RMF” in Using the Catalog, line 4.	F-6
01-15-2014	Editorial	Changed “an appropriate set of security controls” to “the appropriate security control baselines” in Using the Catalog, line 5.	F-6
01-15-2014	Editorial	Deleted extraneous “,” from AC-2 g.	F-7
01-15-2014	Editorial	Added AC-2 (11) to high baseline.	F-10
01-15-2014	Substantive	Added the following text to AC-3 (2) Supplemental Guidance: “Dual authorization may also be known as two-person control.”	F-11
01-15-2014	Editorial	Changed “ucdmo.gov” to “None” in AC-4 References.	F-18
01-15-2014	Editorial	Added “.” after “C.F.R” in AT-2 References.	F-38
01-15-2014	Editorial	Changed AC-6 to AC-6 (9) in AU-2 (4) withdrawal notice.	F-42
01-15-2014	Editorial	Deleted “csrc.nist.gov/pcig/cig.html” and added “http://” to URL in AU-2 References.	F-42
01-15-2014	Editorial	Changed “identify” to “identity” in AU-6 (6) Supplemental Guidance.	F-46
01-15-2014	Substantive	Added the following text to AU-9 (5) Supplemental Guidance: “Dual authorization may also be known as two-person control.”	F-49
01-15-2014	Editorial	Added “Control Enhancements: None.” to AU-15.	F-53
01-15-2014	Editorial	Deleted extraneous “.” from CM-2 (7) Supplemental Guidance.	F-66
01-15-2014	Editorial	Added “)” after “board” in CM-3 g.	F-66
01-15-2014	Substantive	Added CA-7 to related controls list in CM-3.	F-66
01-15-2014	Substantive	Added the following text to CM-5 (4) Supplemental Guidance: “Dual authorization may also be known as two-person control.”	F-69
01-15-2014	Editorial	Added “http://” to URLs in CM-6 References.	F-71
01-15-2014	Editorial	Added “component” before “inventories” in CM-8 (5).	F-74
01-15-2014	Editorial	Changed “tsp.ncs.gov” to “http://www.dhs.gov/telecommunications-service-priority-tsp” in CP-8 References.	F-86
01-15-2014	Substantive	Added the following text to CP-9 (7) Supplemental Guidance: “Dual authorization may also be known as two-person control.”	F-87
01-15-2014	Editorial	Changed “HSPD 12” to “HSPD-12” and added “http://” to URL in IA-2 References.	F-93
01-15-2014	Editorial	Changed “encrypted representations of” to “cryptographically-protected” in IA-5 (1) (c).	F-96
01-15-2014	Editorial	Changed “Encrypted representations of” to “Cryptographically-protected” in IA-5 (1) Supplemental Guidance.	F-97

DATE	TYPE	CHANGE	PAGE
01-15-2014	Substantive	Added the following text to IA-5 (1) Supplemental Guidance: "To mitigate certain brute force attacks against passwords, organizations may also consider salting passwords."	F-97

CHAPTER ONE

INTRODUCTION

THE NEED TO PROTECT INFORMATION AND INFORMATION SYSTEMS

The selection and implementation of *security controls* for information systems[1] and organizations are important tasks that can have major implications on the operations[2] and assets of organizations[3] as well as the welfare of individuals and the Nation. Security controls are the safeguards/countermeasures prescribed for information systems or organizations that are designed to: (i) protect the confidentiality, integrity, and availability of information that is processed, stored, and transmitted by those systems/organizations; and (ii) satisfy a set of defined security requirements.[4] There are several key questions that should be answered by organizations when addressing the information security considerations for information systems:

- What security controls are needed to satisfy the security requirements and to adequately mitigate risk incurred by using information and information systems in the execution of organizational missions and business functions?
- Have the security controls been implemented, or is there an implementation plan in place?
- What is the desired or required level of assurance that the selected security controls, as implemented, are effective in their application? [5]

The answers to these questions are not given in isolation but rather in the context of an effective *risk management process* for the organization that identifies, mitigates as deemed necessary, and monitors on an ongoing basis, risks[6] arising from its information and information systems. NIST Special Publication 800-39 provides guidance on managing information security risk at three distinct tiers—the organization level, mission/business process level, and information system level. The security controls defined in this publication and recommended for use by organizations to satisfy their information security requirements should be employed as part of a well-defined risk management process that supports organizational information security programs.[7]

[1] An information system is a discrete set of *information resources* organized expressly for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information. Information systems also include specialized systems such as industrial/process controls systems, telephone switching/private branch exchange (PBX) systems, and environmental control systems.

[2] Organizational operations include mission, functions, image, and reputation.

[3] The term *organization* describes an entity of any size, complexity, or positioning within an organizational structure (e.g., a federal agency or, as appropriate, any of its operational elements).

[4] Security requirements are derived from mission/business needs, laws, Executive Orders, directives, regulations, policies, instructions, standards, guidance, and/or procedures to ensure the confidentiality, integrity, and availability of the information being processed, stored, or transmitted by organizational information systems.

[5] Security control *effectiveness* addresses the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for the information system in its operational environment or enforcing/mediating established security policies.

[6] Information security-related risks are those risks that arise from the loss of confidentiality, integrity, or availability of information or information systems and consider the potential adverse impacts to organizational operations and assets, individuals, other organizations, and the Nation.

[7] The program management controls (Appendix G) complement the security controls for an information system (Appendix F) by focusing on the organization-wide information security requirements that are independent of any particular information system and are essential for managing information security programs.

It is of paramount importance that responsible officials understand the risks and other factors that could adversely affect organizational operations and assets, individuals, other organizations, and the Nation.[8] These officials must also understand the current status of their security programs and the security controls planned or in place to protect their information and information systems in order to make informed judgments and investments that mitigate risks to an acceptable level. The ultimate objective is to conduct the day-to-day operations of the organization and accomplish the organization's stated missions and business functions with what the OMB Circular A-130 defines as *adequate security*, or security commensurate with risk resulting from the unauthorized access, use, disclosure, disruption, modification, or destruction of information.

1.1 PURPOSE AND APPLICABILITY

The purpose of this publication is to provide guidelines for selecting and specifying security controls for organizations and information systems supporting the executive agencies of the federal government to meet the requirements of FIPS Publication 200, *Minimum Security Requirements for Federal Information and Information Systems*. The guidelines apply to all components[9] of an information system that process, store, or transmit federal information. The guidelines have been developed to achieve more secure information systems and effective risk management within the federal government by:

- Facilitating a more consistent, comparable, and repeatable approach for selecting and specifying security controls for information systems and organizations;
- Providing a stable, yet flexible catalog of security controls to meet current information protection needs and the demands of future protection needs based on changing threats, requirements, and technologies;
- Providing a recommendation for security controls for information systems categorized in accordance with FIPS Publication 199, *Standards for Security Categorization of Federal Information and Information Systems*;
- Creating a foundation for the development of assessment methods and procedures for determining security control effectiveness; and
- Improving communication among organizations by providing a common lexicon that supports discussion of risk management concepts.

In addition to the security controls described above, this publication: (i) provides a set of information security program management (PM) controls that are typically implemented at the organization level and not directed at individual organizational information systems; (ii) provides a set of privacy controls based on international standards and best practices that help organizations enforce privacy requirements derived from federal legislation, directives, policies, regulations, and standards; and (iii) establishes a linkage and relationship between privacy and security controls for purposes of enforcing respective privacy and security requirements which may overlap in concept and in implementation within federal information systems, programs, and organizations. Standardized privacy controls provide a more disciplined and structured approach for satisfying federal privacy requirements and demonstrating compliance to those

[8] This includes risk to critical infrastructure/key resources described in Homeland Security Presidential Directive 7.

[9] Information system components include, for example, mainframes, workstations, servers (e.g., database, electronic mail, authentication, web, proxy, file, domain name), input/output devices (e.g., scanners, copiers, printers), network components (e.g., firewalls, routers, gateways, voice and data switches, process controllers, wireless access points, network appliances, sensors), operating systems, virtual machines, middleware, and applications.

requirements. Incorporating the same concepts used in managing information security risk, helps organizations implement privacy controls in a more cost-effective, risked-based manner.

The guidelines in this special publication are applicable to all federal information systems[10] other than those systems designated as national security systems as defined in 44 U.S.C., Section 3542.[11] The guidelines have been broadly developed from a technical perspective to complement similar guidelines for national security systems and may be used for such systems with the approval of appropriate federal officials exercising policy authority over such systems.[12] State, local, and tribal governments, as well as private sector organizations are encouraged to consider using these guidelines, as appropriate.

1.2 TARGET AUDIENCE

This publication is intended to serve a diverse audience of information system and information security professionals including:

- Individuals with information system, security, and/or risk management and oversight responsibilities (e.g., authorizing officials, chief information officers, senior information security officers,[13] information system managers, information security managers);
- Individuals with information system development responsibilities (e.g., program managers, system designers and developers, information security engineers, systems integrators);
- Individuals with information security implementation and operational responsibilities (e.g., mission/business owners, information system owners, common control providers, information owners/stewards, system administrators, information system security officers);
- Individuals with information security assessment and monitoring responsibilities (e.g., auditors, Inspectors General, system evaluators, assessors, independent verifiers/validators, analysts, information system owners); and
- Commercial companies producing information technology products and systems, creating information security-related technologies, or providing information security services.

1.3 RELATIONSHIP TO OTHER SECURITY CONTROL PUBLICATIONS

To create a technically sound and broadly applicable set of security controls for information systems and organizations, a variety of sources were considered during the development of this special publication. The sources included security controls from the defense, audit, financial, healthcare, industrial/process control, and intelligence communities as well as controls defined by

[10] A *federal information system* is an information system used or operated by an executive agency, by a contractor of an executive agency, or by another organization on behalf of an executive agency.

[11] A *national security system* is any information system (including any telecommunications system) used or operated by an agency or by a contractor of an agency, or other organization on behalf of an agency: (i) the function, operation, or use of which involves intelligence activities; involves cryptologic activities related to national security; involves command and control of military forces; involves equipment that is an integral part of a weapon or weapons system; or is critical to the direct fulfillment of military or intelligence missions (excluding a system that is to be used for routine administrative and business applications, e.g., payroll, finance, logistics, and personnel management applications); or (ii) is protected at all times by procedures established for information that have been specifically authorized under criteria established by an Executive Order or an Act of Congress to be kept classified in the interest of national defense or foreign policy.

[12] CNSS Instruction 1253 provides implementing guidance for *national security systems*.

[13] At the *agency* level, this position is known as the Senior Agency Information Security Officer. Organizations may also refer to this position as the *Senior Information Security Officer* or the *Chief Information Security Officer*.

national and international standards organizations. The objective of NIST Special Publication 800-53 is to provide a set of security controls that can satisfy the breadth and depth of security requirements[14] levied on organizations, mission/business processes, and information systems and that is consistent with and complementary to other established information security standards.

The catalog of security controls in Special Publication 800-53 can be effectively used to protect information and information systems from traditional and advanced persistent threats in varied operational, environmental, and technical scenarios. The controls can also be used to demonstrate compliance with a variety of governmental, organizational, or institutional security requirements. Organizations have the responsibility to select the appropriate security controls, to implement the controls correctly, and to demonstrate the effectiveness of the controls in satisfying established security requirements.[15] The security controls facilitate the development of assessment methods and procedures that can be used to demonstrate control effectiveness in a consistent/repeatable manner—thus contributing to the organization's confidence that security requirements continue to be satisfied on an ongoing basis. In addition, security controls can be used in developing *overlays* for specialized information systems, information technologies, environments of operation, or communities of interest (see Appendix I).

1.4 ORGANIZATIONAL RESPONSIBILITIES

Organizations use FIPS Publication 199 to categorize their information and information systems. Security categorization is accomplished as an organization-wide activity[16] with the involvement of senior-level organizational personnel including, for example, authorizing officials, chief information officers, senior information security officers, information owners and/or stewards, information system owners, and risk executive (function).[17] Information is categorized at Tier 1 (organization level) and at Tier 2 (mission/business process level). In accordance with FIPS Publication 200, organizations use the security categorization results from Tiers 1 and 2 to designate organizational information systems at Tier 3 (information system level) as low-impact, moderate-impact, or high-impact systems. For each organizational information system at Tier 3, the recommendation for security controls from the *baseline* controls defined in Appendix D is the starting point for the security control *tailoring* process. While the security control selection process is generally focused on information systems at Tier 3, the process is generally applicable across all three tiers of risk management.

FIPS Publication 199 security categorization associates information and the operation and use of information systems with the potential worst-case adverse impact on organizational operations and assets, individuals, other organizations, and the Nation.[18] Organizational assessments of risk, including the use of specific and credible threat information, vulnerability information, and the likelihood of such threats exploiting vulnerabilities to cause adverse impacts, guide and inform

[14] Security requirements are those requirements levied on an information system that are derived from laws, Executive Orders, directives, policies, instructions, regulations, standards, guidelines, or organizational (mission) needs to ensure the confidentiality, integrity, and availability of the information being processed, stored, or transmitted.

[15] NIST Special Publication 800-53A provides guidance on assessing the effectiveness of security controls.

[16] See FIPS Publication 200, Footnote 7.

[17] Organizations typically exercise managerial, operational, and financial control over their information systems and the security provided to those systems, including the authority and capability to implement or require the security controls deemed necessary to protect organizational operations and assets, individuals, other organizations, and the Nation.

[18] Considerations for potential national-level impacts and impacts to other organizations in categorizing organizational information systems derive from the USA PATRIOT Act and Homeland Security Presidential Directives (HSPDs).

the tailoring process and the final selection of security controls.[19] The final, agreed-upon set of security controls addressing specific organizational mission/business needs and tolerance for risk is documented with appropriate rationale in the security plan for the information system.[20] The use of security controls from Special Publication 800-53 (including the baseline controls as a starting point in the control selection process), facilitates a more consistent level of security for federal information systems and organizations, while simultaneously preserving the flexibility and agility organizations need to address an increasingly sophisticated and hostile threat space, specific organizational missions/business functions, rapidly changing technologies, and in some cases, unique environments of operation.

Achieving adequate information security for organizations, mission/business processes, and information systems is a multifaceted undertaking that requires:

- Clearly articulated security requirements and security specifications;
- Well-designed and well-built information technology products based on state-of-the-practice hardware, firmware, and software development processes;
- Sound systems/security engineering principles and practices to effectively integrate information technology products into organizational information systems;
- Sound security practices that are well documented and seamlessly integrated into the training requirements and daily routines of organizational personnel with security responsibilities;
- Continuous monitoring of organizations and information systems to determine the ongoing effectiveness of deployed security controls, changes in information systems and environments of operation, and compliance with legislation, directives, policies, and standards;[21] and
- Information security planning and system development life cycle management.[22]

From an engineering viewpoint, information security is just one of many required operational capabilities for information systems that support organizational mission/business processes—capabilities that must be funded by organizations throughout the system development life cycle in order to achieve mission/business success. It is important that organizations *realistically* assess the risk to organizational operations and assets, individuals, other organizations, and the Nation arising from mission/business processes and by placing information systems into operation or continuing operations. Realistic assessment of risk requires an understanding of threats to and vulnerabilities within organizations and the likelihood and potential adverse impacts of successful exploitations of such vulnerabilities by those threats.[23] Finally, information security requirements must be satisfied with the full knowledge and consideration of the risk management strategy of

[19] Risk assessments can be accomplished in a variety of ways depending on the specific needs of organizations. NIST Special Publication 800-30 provides guidance on the assessment of risk as part of an overall risk management process.

[20] Authorizing officials or designated representatives, by accepting the completed security plans, agree to the set of security controls proposed to meet the security requirements for organizations (including mission/business processes) and/or designated information systems.

[21] NIST Special Publication 800-137 provides guidance on continuous monitoring of organizational information systems and environments of operation.

[22] NIST Special Publication 800-64 provides guidance on the information security considerations in the system development life cycle.

[23] NIST Special Publication 800-30 provides guidance on the risk assessment process.

the organization, in light of the potential cost, schedule, and performance issues associated with the acquisition, deployment, and operation of organizational information systems.[24]

1.5 ORGANIZATION OF THIS SPECIAL PUBLICATION

The remainder of this special publication is organized as follows:

- **Chapter Two** describes the fundamental concepts associated with security control selection and specification including: (i) multitiered risk management; (ii) the structure of security controls and how the controls are organized into families; (iii) security control baselines as starting points for the tailoring process; (iv) the use of common controls and inheritance of security capabilities; (v) external environments and service providers; (vi) assurance and trustworthiness; and (vii) revisions and extensions to security controls and control baselines.
- **Chapter Three** describes the process of selecting and specifying security controls for organizational information systems including: (i) selecting appropriate security control baselines; (ii) tailoring the baseline controls including developing specialized overlays; (iii) documenting the security control selection process; and (iv) applying the selection process to new and legacy systems.
- **Supporting appendices** provide essential security control selection and specification-related information including: (i) general references; [25] (ii) definitions and terms; (iii) acronyms; (iv) baseline security controls for low-impact, moderate-impact, and high-impact information systems; (v) guidance on assurance and trustworthiness in information systems; (vi) a catalog of security controls;[26] (vii) a catalog of information security program management controls; (viii) mappings to international information security standards; (ix) guidance for developing overlays by organizations or communities of interest; and (x) a catalog of privacy controls.

[24] In addition to information security requirements, organizations must also address privacy requirements that derive from federal legislation and policies. Organizations can employ the privacy controls in Appendix J in conjunction with the security controls in Appendix F to achieve comprehensive security and privacy protection.

[25] Unless otherwise stated, all references to NIST publications in this document (i.e., Federal Information Processing Standards and Special Publications) are to the most recent version of the publication.

[26] The security controls in Special Publication 800-53 are available online and can be downloaded in various formats from the NIST web site at: http://web.nvd.nist.gov/view/800-53/home.

CHAPTER TWO

THE FUNDAMENTALS

SECURITY CONTROL STRUCTURE, ORGANIZATION, BASELINES, AND ASSURANCE

This chapter presents the fundamental concepts associated with security control selection and specification including: (i) three-tiered risk management; (ii) the structure of security controls and the organization of the controls in the control catalog; (iii) security control baselines; (iv) the identification and use of common security controls; (v) security controls in external environments; (vi) security control assurance; and (vii) future revisions to the security controls, the control catalog, and baseline controls.

2.1 MULTITIERED RISK MANAGEMENT

The selection and specification of security controls for an information system is accomplished as part of an organization-wide information security program for the management of risk—that is, the risk to organizational operations and assets, individuals, other organizations, and the Nation associated with the operation of information systems. Risk-based approaches to security control selection and specification consider effectiveness, efficiency, and constraints due to applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidelines. To integrate the risk management process throughout the organization and more effectively address mission/business concerns, a three-tiered approach is employed that addresses risk at the: (i) *organization* level; (ii) *mission/business process* level; and (iii) *information system* level. The risk management process is carried out across the three tiers with the overall objective of continuous improvement in the organization's risk-related activities and effective inter-tier and intra-tier communication among all stakeholders having a shared interest in the mission/business success of the organization. Figure 1 illustrates the three-tiered approach to risk management.

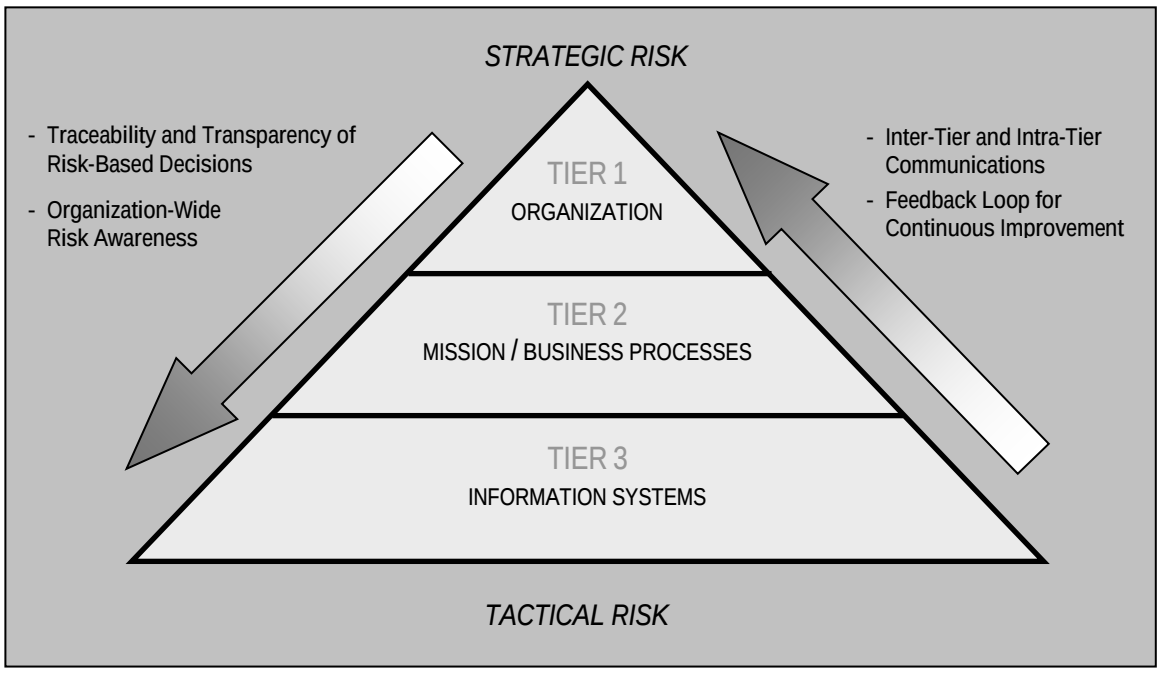

FIGURE 1: THREE-TIERED RISK MANAGEMENT APPROACH

Tier 1 provides a prioritization of organizational missions/business functions which in turn drives investment strategies and funding decisions—promoting cost-effective, efficient information technology solutions consistent with the strategic goals and objectives of the organization and measures of performance. Tier 2 includes: (i) defining the mission/business processes needed to support the organizational missions/business functions; (ii) determining the security categories of the information systems needed to execute the mission/business processes; (iii) incorporating information security requirements into the mission/business processes; and (iv) establishing an enterprise architecture (including an embedded information security architecture) to facilitate the allocation of security controls to organizational information systems and the environments in which those systems operate. The Risk Management Framework (RMF), depicted in Figure 2, is the primary means for addressing risk at Tier 3.[27] This publication focuses on Step 2 of the RMF, the security control selection process, in the context of the three tiers in the organizational risk management hierarchy.

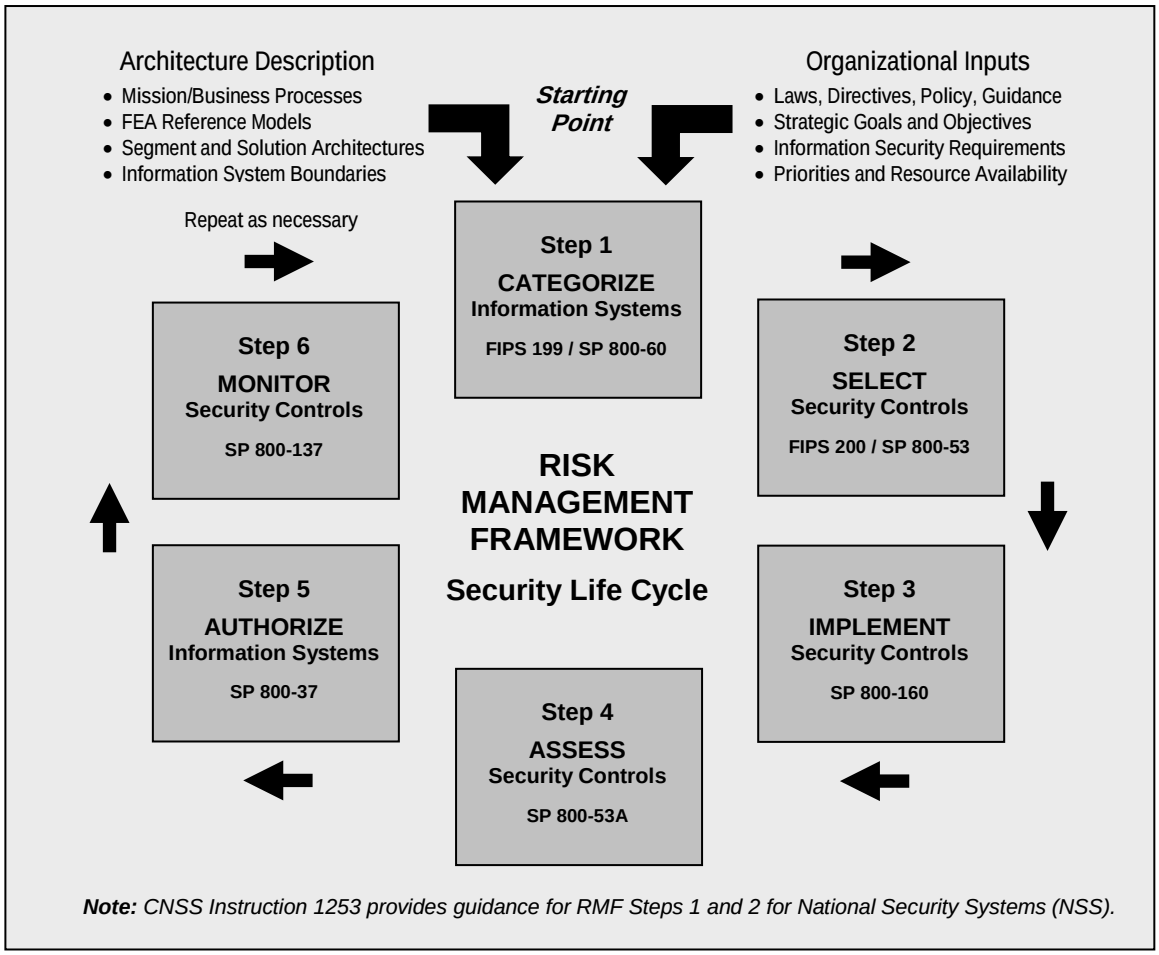

FIGURE 2: RISK MANAGEMENT FRAMEWORK

The RMF addresses the security concerns of organizations related to the design, development, implementation, operation, and disposal of information systems and the environments in which those systems operate. The RMF consists of the following six steps:

[27] NIST Special Publication 800-37 provides guidance on the implementation of the Risk Management Framework. A complete listing of all publications supporting the RMF and referenced in Figure 2 is provided in Appendix A.

Step 1: *Categorize* the information system based on a FIPS Publication 199 impact assessment;[28]

Step 2: *Select* the applicable security control baseline based on the results of the security categorization and apply tailoring guidance (including the potential use of overlays);

Step 3: *Implement* the security controls and document the design, development, and implementation details for the controls;

Step 4: *Assess* the security controls to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for the system;[29]

Step 5: *Authorize* information system operation based on a determination of risk to organizational operations and assets, individuals, other organizations, and the Nation resulting from the operation and use of the information system and the decision that this risk is acceptable; and

Step 6: *Monitor* the security controls in the information system and environment of operation on an ongoing basis to determine control effectiveness, changes to the system/environment, and compliance to legislation, Executive Orders, directives, policies, regulations, and standards.

2.2 SECURITY CONTROL STRUCTURE

Security controls described in this publication have a well-defined organization and structure. For ease of use in the security control selection and specification process, controls are organized into eighteen *families*.[30] Each family contains security controls related to the general security topic of the family. A two-character identifier uniquely identifies security control families, for example, PS (Personnel Security). Security controls may involve aspects of policy, oversight, supervision, manual processes, actions by individuals, or automated mechanisms implemented by information systems/devices. Table 1 lists the security control families and the associated family identifiers in the security control catalog.[31]

TABLE 1: SECURITY CONTROL IDENTIFIERS AND FAMILY NAMES

ID	FAMILY	ID	FAMILY
AC	Access Control	MP	Media Protection
AT	Awareness and Training	PE	Physical and Environmental Protection
AU	Audit and Accountability	PL	Planning
CA	Security Assessment and Authorization	PS	Personnel Security
CM	Configuration Management	RA	Risk Assessment
CP	Contingency Planning	SA	System and Services Acquisition
IA	Identification and Authentication	SC	System and Communications Protection
IR	Incident Response	SI	System and Information Integrity
MA	Maintenance	PM	Program Management

[28] CNSS Instruction 1253 provides security categorization guidance for national security systems.

[29] NIST Special Publication 800-53A provides guidance on assessing the effectiveness of security controls.

[30] Of the eighteen security control families in NIST Special Publication 800-53, seventeen families are described in the security control catalog in Appendix F, and are closely aligned with the seventeen minimum security requirements for federal information and information systems in FIPS Publication 200. One additional family (Program Management [PM] family) provides controls for information security programs required by FISMA. This family, while not specifically referenced in FIPS Publication 200, provides security controls at the organization level rather than the information system level. See Appendix G for a description of and implementation guidance for the PM controls.

[31] *Privacy controls* listed in Appendix J, have an organization and structure similar to security controls, including the use of two-character identifiers for the eight privacy families.

The security control structure consists of the following components: (i) a *control* section; (ii) a *supplemental guidance* section; (iii) a *control enhancements* section; (iv) a *references* section; and (v) a *priority* and *baseline allocation* section. The following example from the Auditing and Accountability family illustrates the structure of a typical security control.

AU-3 CONTENT OF AUDIT RECORDS

Control: The information system generates audit records containing information that establishes what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, and the identity of any individuals or subjects associated with the event.

Supplemental Guidance: Audit record content that may be necessary to satisfy the requirement of this control includes, for example, time stamps, source and destination addresses, user/process identifiers, event descriptions, success/fail indications, filenames involved, and access control or flow control rules invoked. Event outcomes can include indicators of event success or failure and event-specific results (e.g., the security state of the information system after the event occurred). Related controls: AU-2, AU-8, AU-12, SI-11.

Control Enhancements:

(1) *CONTENT OF AUDIT RECORDS | ADDITIONAL AUDIT INFORMATION*

The information system generates audit records containing the following additional information: [*Assignment: organization-defined additional, more detailed information*].

Supplemental Guidance: Detailed information that organizations may consider in audit records includes, for example, full-text recording of privileged commands or the individual identities of group account users. Organizations consider limiting the additional audit information to only that information explicitly needed for specific audit requirements. This facilitates the use of audit trails and audit logs by not including information that could potentially be misleading or could make it more difficult to locate information of interest.

(2) *CONTENT OF AUDIT RECORDS | CENTRALIZED MANAGEMENT OF PLANNED AUDIT RECORD CONTENT*

The information system provides centralized management and configuration of the content to be captured in audit records generated by [*Assignment: organization-defined information system components*].

Supplemental Guidance: This control enhancement requires that the content to be captured in audit records be configured from a central location (necessitating automation). Organizations coordinate the selection of required audit content to support the centralized management and configuration capability provided by the information system. Related controls: AU-6, AU-7.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-3	**MOD** AU-3 (1)	**HIGH** AU-3 (1) (2)

The control section prescribes specific security-related activities or actions to be carried out by organizations or by information systems. The term *information system* refers to those functions that generally involve the implementation of information technology (e.g., hardware, software, and firmware). Conversely, the term *organization* refers to activities that are generally process-driven or entity-driven—that is, the security control is generally implemented through human or procedural-based actions. Security controls that use the term organization may still require some degree of automation to be fulfilled. Similarly, security controls that use the term information system may have some elements that are process-driven or entity-driven. Using the terms organization and/or information system does not preclude the application of security controls at any of the tiers in the risk management hierarchy (i.e., organization level, mission/business process level, information system level), as appropriate.

For some security controls in the control catalog, a degree of flexibility is provided by allowing organizations to define values for certain parameters associated with the controls. This flexibility is achieved through the use of *assignment* and *selection* statements embedded within the security controls and control enhancements. Assignment and selection statements provide organizations with the capability to tailor security controls and control enhancements based on: (i) security requirements to support organizational missions/business functions and operational needs; (ii) risk assessments and organizational risk tolerance; and (iii) security requirements originating in federal laws, Executive Orders, directives, policies, regulations, standards, or guidelines.[32]

For example, organizations can specify additional information needed for audit records to support audit event processing. See the AU-3 (1) example above (i.e., [*Assignment: organization-defined additional, more detailed information*]). These assignments may include particular actions to be taken by information systems in the event of audit failures, the frequency of conducting system backups, restrictions on password use, or the distribution list for organizational policies and procedures.[33] Once specified,[34] the organization-defined values for assignment and selection statements become part of the security control, and the control implementation is assessed against the completed control statement. Assignment statements offer a high degree of flexibility by allowing organizations to specify parameter values, without requiring those values to be one of two or more specific predefined choices. In contrast, selection statements narrow the potential input values by providing a specific list of items from which organizations must choose.[35]

The supplemental guidance section provides non-prescriptive, additional information for a specific security control. Organizations can apply the supplemental guidance as appropriate, when defining, developing, and/or implementing security controls. The supplemental guidance can provide important considerations for implementing security controls in the context of operational environments, mission/business requirements, or assessments of risk and can also explain the purpose or meaning of particular controls. Security control enhancements may also contain supplemental guidance when the guidance is not applicable to the entire control but instead focused on a particular control enhancement. The supplemental guidance sections for security controls and control enhancements may contain a list of *related controls*. Related controls: (i) directly impact or support the implementation of a particular security control or control enhancement; (ii) address a closely related *security capability*; or (iii) are referenced in the supplemental guidance. Security control enhancements are by definition related to the base control. Related controls that are listed in the supplemental guidance for the base controls are not repeated in the supplemental guidance for the control enhancements. However, there may be related controls identified for control enhancements that are not listed in the base control.

The security control enhancements section provides statements of security capability to: (i) add functionality/specificity to a control; and/or (ii) increase the strength of a control. In both cases, control enhancements are used in information systems and environments of operation requiring

[32] In general, organization-defined *parameters* used in assignment and selection statements in the basic security controls apply also to all control enhancements associated with those controls.

[33] Organizations determine whether specific assignment or selection statements are completed at Tier 1 (organization level), Tier 2 (mission/business process level), Tier 3 (information system level), or a combination thereof.

[34] Organizations may choose to define specific values for security control parameters in policies, procedures, or guidance (which may be applicable to more than one information system) referencing the source documents in the security plan in lieu of explicitly completing the assignment/selection statements within the control as part of the plan.

[35] Security controls are generally designed to be *technology*- and *implementation*-independent, and therefore do not contain specific requirements in these areas. Organizations provide such requirements as deemed necessary in the security plan for the information system.

greater protection than provided by the base control due to the potential adverse organizational impacts or when organizations seek additions to the base control functionality/specificity based on organizational assessments of risk. Security control enhancements are numbered sequentially within each control so that the enhancements can be easily identified when selected to supplement the base control. Each security control enhancement has a short subtitle to indicate the intended security capability provided by the control enhancement. In the AU-3 example, if the first control enhancement is selected, the control designation becomes AU-3 (1). The numerical designation of a control enhancement is used only to identify the particular enhancement within the control. The designation is not indicative of either the strength of the control enhancement or any hierarchical relationship among the enhancements. Control enhancements are not intended to be selected independently (i.e., if a control enhancement is selected, then the corresponding base security control must also be selected). This intent is reflected in the baseline specifications in Appendix D and in the baseline allocation section under each control in Appendix F.

The references section includes a list of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidelines (e.g., OMB Circulars/Memoranda, Homeland Security Presidential Directives, FIPS Publications, and NIST Special Publications) that are relevant to a particular security control.[36] The references provide federal legislative and policy mandates as well as supporting information for the implementation of security controls and control enhancements. The references section also contains pertinent websites for organizations to use in obtaining additional information for security control implementation and assessment.

The priority and security control baseline allocation section provides: (i) the recommended priority codes used for sequencing decisions during security control implementation; and (ii) the initial allocation of security controls and control enhancements to the baselines. Organizations can use the *priority code* designation associated with each security control to assist in making sequencing decisions for control implementation (i.e., a Priority Code 1 [P1] control has a higher priority for implementation than a Priority Code 2 [P2] control, a Priority Code 2 [P2] control has a higher priority for implementation than a Priority Code 3 [P3] control, and a Priority Code 0 [P0] indicates the security control is not selected in any baseline). This recommended sequencing prioritization helps to ensure that the foundational security controls upon which other controls depend are implemented first, thus enabling organizations to deploy controls in a more structured and timely manner in accordance with available resources. The implementation of security controls by sequence priority code does not imply the achievement of any defined level of risk mitigation until *all* of the security controls in the security plan have been implemented. The priority codes are intended only for implementation sequencing, not for making security control selection decisions.

2.3 SECURITY CONTROL BASELINES

Organizations are required to adequately mitigate the risk arising from use of information and information systems in the execution of missions and business functions. A significant challenge for organizations is to determine the most cost-effective, appropriate set of security controls, which if implemented and determined to be effective, would mitigate risk while complying with security requirements defined by applicable federal laws, Executive Orders, regulations, policies, directives, or standards (e.g., FISMA, OMB Circular A-130, HSPD-12, FIPS Publication 200). There is no one correct set of security controls that addresses all organizational security concerns in all situations. Selecting the most appropriate set of security controls for a specific situation or

[36] Publications listed in the *references section* refer to the most recent versions of the publications. References are provided to assist organizations in applying the security controls and are not intended to be inclusive or complete.

information system to adequately mitigate risk is an important task that requires a fundamental understanding of organizational mission/business priorities, the mission and business functions the information systems will support, and the environments of operation where the systems will reside. With that understanding, organizations can demonstrate how to most effectively assure the confidentiality, integrity, and availability of organizational information and information systems in a manner that supports mission/business needs while demonstrating due diligence. Selecting, implementing, and maintaining an appropriate set of security controls to adequately protect the information systems employed by organizations requires strong collaboration with system owners to understand ongoing changes to missions/business functions, environments of operation, and how the systems are used.

To assist organizations in making the appropriate selection of security controls for information systems, the concept of *baseline* controls is introduced. Baseline controls are the starting point for the security control selection process described in this document and are chosen based on the security category and associated impact level of information systems determined in accordance with FIPS Publication 199 and FIPS Publication 200, respectively.[37] Appendix D provides a listing of the security control baselines. Three security control baselines have been identified corresponding to the low-impact, moderate-impact, and high-impact information systems using the high water mark defined in FIPS Publication 200 and used in Section 3.1 of this document to provide an initial set of security controls for each impact level.[38]

Appendix F provides a comprehensive catalog of security controls for information systems and organizations, arranged by control families. Chapter Three provides additional information on how to use FIPS Publication 199 security categories and FIPS Publication 200 system impact levels in applying the tailoring guidance to the baseline security controls to achieve adequate risk mitigation. Tailoring guidance, described in Section 3.2, helps organizations to customize the security control baselines selected using the results from organizational assessments of risk. Baseline tailoring actions include: (i) identifying and designating common controls; (ii) applying scoping considerations; (iii) selecting compensating controls; (iv) assigning specific values to security control parameters; (v) supplementing initial baselines with additional security controls or control enhancements; and (vi) providing additional information for control implementation.

Implementation Tip

There are security controls and control enhancements that appear in the security control catalog (Appendix F) that are found in only higher-impact baselines or are not used in any of the baselines. These additional security controls and control enhancements for information systems are available to organizations and can be used in tailoring security control baselines to achieve the needed level of protection in accordance with organizational assessments of risk. The set of security controls in the security plan must be sufficient to adequately mitigate risks to organizational operations and assets, individuals, other organizations, and the Nation based on the organizational risk tolerance.

[37] CNSS Instruction 1253 provides guidance on security control baselines for national security systems.

[38] The baseline security controls contained in Appendix D are not necessarily absolutes in that the guidance described in Section 3.2 provides organizations with the ability to tailor controls in accordance with the terms and conditions established by their authorizing officials and documented in their respective security plans.

2.4 SECURITY CONTROL DESIGNATIONS

There are three distinct types of designations related to the security controls in Appendix F that define: (i) the scope of applicability for the control; (ii) the shared nature of the control; and (iii) the responsibility for control development, implementation, assessment, and authorization. These designations include *common* controls, *system-specific* controls, and *hybrid* controls.

Common controls are security controls whose implementation results in a security capability that is *inheritable* by one or more organizational information systems. Security controls are deemed inheritable by information systems or information system components when the systems or components receive protection from the implemented controls but the controls are developed, implemented, assessed, authorized, and monitored by entities other than those responsible for the systems or components—entities internal or external to the organizations where the systems or components reside. Security capabilities provided by common controls can be inherited from many sources including, for example, organizations, organizational mission/business lines, sites, enclaves, environments of operation, or other information systems. Many of the controls needed to protect organizational information systems (e.g., security awareness training, incident response plans, physical access to facilities, rules of behavior) are excellent candidates for common control status. In addition, there can also be a variety of technology-based common controls (e.g., Public Key Infrastructure [PKI], authorized secure standard configurations for clients/servers, access control systems, boundary protection, cross-domain solutions). By centrally managing and documenting the development, implementation, assessment, authorization, and monitoring of common controls, security costs can be amortized across multiple information systems.

The organization assigns responsibility for common controls to appropriate organizational officials (i.e., common control providers) and coordinates the development, implementation, assessment, authorization, and monitoring of the controls.[39] The identification of common controls is most effectively accomplished as an organization-wide exercise with the active involvement of chief information officers, senior information security officers, the risk executive (function), authorizing officials, information owners/stewards, information system owners, and information system security officers. The organization-wide exercise considers the security categories of the information systems within the organization and the security controls necessary to adequately mitigate the risks arising from the use of those systems (see *baseline* security controls in Section 2.3).[40] Common control identification for the controls that impact multiple information systems, but not all systems across the organization could benefit from taking a similar approach. Key stakeholders collaborate to identify opportunities to effectively employ common controls at the mission/business line, site, or enclave level.

When common controls protect multiple organizational information systems of differing impact levels, the controls are implemented with regard to the highest impact level among the systems. If the common controls are not implemented at the highest impact level of the information systems, system owners will need to factor this situation into their assessments of risk and take appropriate risk mitigation actions (e.g., adding security controls or control enhancements, changing assigned values of security control parameters, implementing compensating controls, or changing certain aspects of mission/business processes). Implementing common controls that are less than

[39] The Chief Information Officer, Senior Information Security Officer, or other designated organizational officials at the senior leadership level assign responsibility for the development, implementation, assessment, authorization, and monitoring of common controls to appropriate entities (either internal or external to the organization).

[40] Each common control identified by the organization is reviewed for applicability to each specific organizational information system, typically by information system owners and authorizing officials.

effective or that provide insufficient security capability for higher-impact information systems can have a significant adverse impact on organizational missions or business functions.

Common controls are generally documented in the organization-wide *information security program plan* unless implemented as part of a specific information system, in which case the controls are documented in the security plan for that system.[41] Organizations have the flexibility to describe common controls in a single document or in multiple documents with references or pointers, as appropriate. In the case of multiple documents, the documents describing common controls are included as attachments to the information security program plan. If the information security program plan contains multiple documents, organizations specify in each document the organizational officials responsible for development, implementation, assessment, authorization, and monitoring of the respective common controls. For example, the organization may require that the Facilities Management Office develop, implement, assess, authorize, and continuously monitor physical and environmental protection controls from the PE family when such controls are not associated with a particular information system but instead, support multiple systems. When common controls are included in a separate security plan for an information system (e.g., security controls employed as part of an intrusion detection system providing boundary protection inherited by one or more organizational information systems), the information security program plan indicates which separate security plan contains a description of the common controls.

Implementation Tip

The selection of common controls is most effectively accomplished on an organization-wide basis with the involvement of senior leadership (i.e., mission/business owners, authorizing officials, chief information officers, senior information security officers, information system owners, information owners/stewards, risk executives). These individuals have the collective knowledge to understand organizational priorities, the importance of organizational operations and assets, and the importance of the information systems that support those operations/assets. The senior leaders are also in the best position to select the common controls for each security control baseline and assign specific responsibilities for developing, implementing, assessing, authorizing, and monitoring those controls.

Common controls, whether employed in organizational information systems or environments of operation, are authorized by senior officials with at least the same level of authority/responsibility for managing risk as the authorization officials for information systems inheriting the controls. Authorization results for common controls are shared with the appropriate information system owners and authorizing officials. A plan of action and milestones is developed and maintained for common controls that have been determined through independent assessments, to be less than effective. Information system owners dependent on common controls that are less than effective consider whether they are willing to accept the associated risk or if additional tailoring is required to address the weaknesses or deficiencies in the controls. Such risk-based decisions are influenced by available resources, the trust models employed by the organization, and the risk tolerance of authorizing officials and the organization.[42]

[41] Information security program plans are described in Appendix G. Organizations ensure that any security capabilities provided by common controls (i.e., security capabilities inheritable by other organizational entities) are described in sufficient detail to facilitate adequate understanding of the control implementation by inheriting entities.

[42] NIST Special Publication 800-39 provides guidance on trust models, including validated, direct historical, mediated, and mandated trust models.

Common controls are subject to the same assessment and monitoring requirements as system-specific controls employed in individual organizational information systems. Because common controls impact more than one system, a higher degree of confidence regarding the effectiveness of those controls may be required.

Security controls not designated as common controls are considered *system-specific* or *hybrid* controls. System-specific controls are the primary responsibility of information system owners and their respective authorizing officials. Organizations assign a *hybrid* status to security controls when one part of the control is common and another part of the control is system-specific. For example, an organization may choose to implement the Incident Response Policy and Procedures security control (IR-1) as a hybrid control with the policy portion of the control designated as common and the procedures portion of the control designated as system-specific. Hybrid controls may also serve as predefined templates for further control refinement. Organizations may choose, for example, to implement the Contingency Planning security control (CP-2) as a predefined template for a generalized contingency plan for all organizational information systems with information system owners tailoring the plan, where appropriate, for system-specific uses.

Partitioning security controls into common, hybrid, and system-specific controls can result in significant savings to organizations in implementation and assessment costs as well as a more consistent application of security controls organization-wide. While security control partitioning into common, hybrid, and system-specific controls is straightforward and intuitive conceptually, the actual application takes a significant amount of planning and coordination. At the information system level, determination of common, hybrid, or system-specific security controls follows the development of a tailored baseline. It is necessary to first determine what security capability is needed before organizations assign responsibility for how security controls are implemented, operated, and maintained.

Security plans for individual information systems identify which security controls required for those systems have been designated by organizations as common controls and which controls have been designated as system-specific or hybrid controls. Information system owners are responsible for any system-specific implementation details associated with common controls. These implementation details are identified and described in the security plans for the individual information systems. Senior information security officers for organizations coordinate with *common control providers* (e.g., facility/site managers, human resources managers, intrusion detection system owners) to ensure that the required controls are developed, implemented, and assessed for effectiveness. Collectively, the security plans for individual information systems and the organization-wide information security program plans provide complete coverage for all security controls employed within organizations.

The determination as to whether a security control is a common, hybrid, or system-specific is context-based. Security controls cannot be determined to be common, hybrid, or system-specific simply based on reviewing the language of the control. For example, a control may be system-specific for a particular information system, but at the same time that control could be a common control for another system, which would inherit the control from the first system. One indicator of whether a system-specific control may also be a common control for other information systems is to consider who or what depends on the functionality of that particular control. If a certain part of an information system or solution external to the system boundary depends on the control, then that control may be a candidate for common control identification.

Implementation Tip

- Organizations consider the *inherited risk* from the use of common controls. Security plans, security assessment reports, and plans of action and milestones for common controls (or a summary of such information) are made available to information system owners (for systems *inheriting* the controls) after the information is reviewed and approved by the senior official or executive responsible and accountable for the controls.
- Organizations ensure that common control providers keep control status information current since the controls typically support multiple organizational information systems. Security plans, security assessment reports, and plans of action and milestones for common controls are used by authorizing officials to make risk-based decisions in the security authorization process for their information systems and therefore, inherited risk from common controls is a significant factor in such risk-based decisions.
- Organizations ensure that common control providers have the capability to rapidly broadcast changes in the status of common controls that adversely affect the protections being provided by and expected of the common controls. Common control providers inform system owners when problems arise in the inherited common controls (e.g., when an assessment or reassessment of a common control indicates the control is flawed or deficient in some manner, or when a new threat or attack method arises that renders the common control less than effective in protecting against the new threat or attack method).
- Organizations are encouraged to employ automated management systems to maintain records of the specific common controls employed in each organizational information system to enhance the ability of common control providers to rapidly communicate with system owners.
- If common controls are provided to organizations by entities *external* to the organization (e.g., shared and/or external service providers), arrangements are made with the external/shared service providers by the organization to obtain information on the effectiveness of the deployed controls. Information obtained from external organizations regarding effectiveness of common controls is factored into authorization decisions.

2.5 EXTERNAL SERVICE PROVIDERS

Organizations are becoming increasingly reliant on information system services provided by external providers to conduct important missions and business functions. External information system services are computing and information technology services implemented outside of the traditional security authorization boundaries established by organizations for their information systems. Those traditional authorization boundaries linked to physical space and control of assets, are being extended (both physically and logically) with the growing use of external services. In this context, external services can be provided by: (i) entities within the organization but outside of the security authorization boundaries established for organizational information systems; (ii) entities outside of the organization either in the public sector (e.g., federal agencies) or private sector (e.g., commercial service providers); or (iii) some combination of the public and private sector options. External information system services include, for example, the use of service-oriented architectures (SOAs), cloud-based services (infrastructure, platform, software), or data center operations. External information system services may be used by, but are typically not part of, organizational information systems. In some situations, external information system services may completely replace or heavily augment the routine functionality of internal organizational information systems.

FISMA and OMB policies require that federal agencies using external service providers to process, store, or transmit federal information or operate information systems on behalf of the

federal government, assure that such use meets the same security requirements that federal agencies are required to meet. Security requirements for external service providers including the security controls for external information systems are expressed in contracts or other formal agreements.[43] Organizations are responsible and accountable for the information security risk incurred by the use of information system services provided by external providers. Such risk is addressed by incorporating the Risk Management Framework (RMF) as part of the terms and conditions of the contracts with external providers. Organizations can require external providers to implement all steps in the RMF except the security authorization step, which remains an inherent federal responsibility directly linked to managing the information security risk related to the use of external information system services.[44] Organizations can also require external providers to provide appropriate evidence to demonstrate that they have complied with the RMF in protecting federal information. However, federal agencies take direct responsibility for the overall security of such services by authorizing the information systems providing the services.

Relationships with external service providers are established in a variety of ways, for example, through joint ventures, business partnerships, outsourcing arrangements (i.e., through contracts, interagency agreements, lines of business arrangements, service-level agreements), licensing agreements, and/or supply chain exchanges. The growing use of external service providers and new relationships being forged with those providers present new and difficult challenges for organizations, especially in the area of information system security. These challenges include:

- Defining the types of external information system services provided to organizations;
- Describing how those external services are protected in accordance with the information security requirements of organizations; and
- Obtaining the necessary assurances that the risk to organizational operations and assets, individuals, other organizations, and the Nation arising from the use of the external services is acceptable.

The degree of confidence that the risk from using external services is at an acceptable level depends on the trust that organizations place in external service providers. In some cases, the level of trust is based on the amount of direct control organizations are able to exert on external service providers with regard to employment of security controls necessary for the protection of the service/information and the evidence brought forth as to the effectiveness of those controls.[45] The level of control is usually established by the terms and conditions of the contracts or service-level agreements with the external service providers and can range from extensive control (e.g., negotiating contracts or agreements that specify detailed security requirements for the providers) to very limited control (e.g., using contracts or service-level agreements to obtain commodity

[43] Organizations consult the Federal Risk and Authorization Management Program (FedRAMP) when acquiring cloud services from external providers. FedRAMP addresses required security controls and independent assessments for a variety of cloud services. Additional information is available at http://www.fedramp.gov.

[44] To effectively manage information security risk, organizations *authorize* information systems of external providers that are part of the information technologies or services (e.g., infrastructure, platform, or software) provided to the federal government. Security authorization requirements are expressed in the terms and conditions of contracts with external providers of those information technologies and services.

[45] The level of trust that organizations place in external service providers can vary widely, ranging from those who are highly trusted (e.g., business partners in a joint venture that share a common business model and common goals) to those who are less trusted and represent greater sources of risk (e.g., business partners in one endeavor who are also competitors in another market sector). NIST Special Publication 800-39 describes different trust models that can be employed by organizations when establishing relationships with external service providers.

services such as commercial telecommunications services).[46] In other cases, levels of trust are based on factors that convince organizations that required security controls have been employed and that determinations of control effectiveness exist. For example, separately authorized external information system services provided to organizations through well-established lines of business relationships may provide degrees of trust in such services within the tolerable risk range of the authorizing officials and organizations using the services.

The provision of services by external providers may result in certain services without explicit agreements between organizations and the providers. Whenever explicit agreements are feasible and practical (e.g., through contracts, service-level agreements), organizations develop such agreements and require the use of the security controls in Appendix F of this publication. When organizations are not in a position to require explicit agreements with external service providers (e.g., services are imposed on organizations, services are commodity services), organizations establish and document explicit assumptions about service capabilities with regard to security. In situations where organizations are procuring information system services through centralized acquisition vehicles (e.g., governmentwide contracts by the General Services Administration or other preferred and/or mandatory acquisition organizations), it may be more efficient and cost-effective for contract originators to establish and maintain stated levels of trust with external service providers (including the definition of required security controls and level of assurance with regard to the provision of such controls). Organizations subsequently acquiring information system services from centralized contracts can take advantage of the negotiated levels of trust established by the procurement originators and thus avoid costly repetition of activities necessary to establish such trust.[47] Centralized acquisition vehicles (e.g., contracts) may also require the active participation of organizations. For example, organizations may be required by provisions in contracts or agreements to install public key encryption-enabled client software recommended by external service providers.

Ultimately, the responsibility for adequately mitigating unacceptable risks arising from the use of external information system services remains with authorizing officials. Organizations require that appropriate *chains of trust* be established with external service providers when dealing with the many issues associated with information system security. Organizations establish and retain a level of trust that participating service providers in the potentially complex consumer-provider relationship provide adequate protection for the services rendered to organizations. The chain of trust can be complicated due to the number of entities participating in the consumer-provider relationship and the types of relationships between the parties. External service providers may also outsource selected services to other external entities, making the chain of trust more difficult and complicated to manage. Depending on the nature of the services, organizations may find it impossible to place significant trust in external providers. This situation is due not to any inherent untrustworthiness on the part of providers, but to the intrinsic level of risk in the services.[48]

[46] Commercial providers of commodity-type services typically organize their business models and services around the concept of shared resources and devices for a broad and diverse customer base. Therefore, unless organizations obtain fully dedicated services from commercial service providers, there may be a need for greater reliance on compensating security controls to provide the necessary protections for the information system that relies on those external services. Organizational assessments of risk and risk mitigation activities reflect this situation.

[47] For example, procurement originators could authorize information systems providing external services to the federal government under the specific terms and conditions of the contracts. Federal agencies requesting such services under the terms of the contracts would not be required to reauthorize the information systems when acquiring such services (unless the request included services outside the scope of the original contracts).

[48] There may also be risk in disallowing certain functionality because of security concerns. Security is merely one of multiple considerations in an overall risk determination.

Where a sufficient level of trust cannot be established in the external services and/or providers, organizations can: (i) mitigate the risk by employing compensating controls; (ii) accept the risk within the level of organizational risk tolerance; (iii) transfer risk by obtaining insurance to cover potential losses; or (iv) avoid risk by choosing not to obtain the services from certain providers (resulting in performance of missions/business operations with reduced levels of functionality or possibly no functionality at all).[49] For example, in the case of cloud-based information systems and/or services, organizations might require as a compensating control, that all information stored in the cloud be encrypted for added security of the information. Alternatively, organizations may require encrypting some of the information stored in the cloud (depending on the criticality or sensitivity of such information)—accepting additional risk but limiting the risk of not storing all information in an unencrypted form.

2.6 ASSURANCE AND TRUSTWORTHINESS

Assurance and trustworthiness of information systems, system components, and information system services are becoming an increasingly important part of the risk management strategies developed by organizations. Whether information systems are deployed to support, for example, the operations of the national air traffic control system, a major financial institution, a nuclear power plant providing electricity for a large city, or the military services and warfighters, the systems must be reliable, trustworthy, and resilient in the face of increasingly sophisticated and pervasive threats. To understand how organizations achieve trustworthy systems and the role assurance plays in the trustworthiness factor, it is important to first define the term *trust*. Trust, in general, is the *belief* that an entity will behave in a predictable manner while performing specific functions, in specific environments, and under specified conditions or circumstances. The entity may be a person, process, information system, system component, system-of-systems, or any combination thereof.

From an information security perspective, trust is the belief that a security-relevant entity will behave in a predictable manner when satisfying a defined set of security requirements under specified conditions/circumstances and while subjected to disruptions, human errors, component faults and failures, and purposeful attacks that may occur in the environment of operation. Trust is usually determined relative to a specific *security capability*[50] and can be decided relative to an individual system component or the entire information system. However, trust at the information system level is not achieved as a result of composing a security capability from a set of trusted system components—rather, trust at the system level is an inherently subjective determination that is derived from the complex interactions among entities (i.e., technical components, physical components, and individuals), taking into account the life cycle activities that govern, develop, operate, and sustain the system. In essence, to have trust in a security capability requires that there is a sufficient basis for trust, or *trustworthiness,* in the set of security-relevant entities that are to be composed to provide such capability.

Trustworthiness with respect to information systems, expresses the degree to which the systems can be expected to preserve with some degree of confidence, the confidentiality, integrity, and availability of the information that is being processed, stored, or transmitted by the systems across a range of threats. Trustworthy information systems are systems that are believed to be capable of operating within a defined risk tolerance despite the environmental disruptions, human errors,

[49] Alternative providers offering a higher basis for trust, usually at a higher cost, may be available.

[50] A *security capability* is a combination of mutually reinforcing security controls (i.e., safeguards/countermeasures) implemented by technical means (i.e., functionality in hardware, software, and firmware), physical means (i.e., physical devices and protective measures), and/or procedural means (i.e., procedures performed by individuals).

structural failures, and purposeful attacks that are expected to occur in the environments in which the systems operate—systems that have the trustworthiness to successfully carry out assigned missions/business functions under conditions of stress and uncertainty.[51]

Security Capability

Organizations can consider defining a set of security capabilities as a precursor to the security control selection process. The concept of *security capability* is a construct that recognizes that the protection of information being processed, stored, or transmitted by information systems, seldom derives from a single safeguard or countermeasure (i.e., security control). In most cases, such protection results from the selection and implementation of a set of mutually reinforcing security controls. For example, organizations may wish to define a security capability for secure remote authentication. This capability can be achieved by the selection and implementation of a set of security controls from Appendix F (e.g., IA-2 [1], IA-2 [2], IA-2 [8], IA-2 [9], and SC-8 [1]). Moreover, security capabilities can address a variety of areas that can include, for example, technical means, physical means, procedural means, or any combination thereof. Thus, in addition to the above functional capability for secure remote access, organizations may also need security capabilities that address physical means such as tamper detection on a cryptographic module or anomaly detection/analysis on an orbiting spacecraft.

As the number of security controls in Appendix F grows over time in response to an increasingly sophisticated threat space, it is important for organizations to have the ability to describe key security capabilities needed to protect core organizational missions/business functions, and to subsequently define a set of security controls that if properly designed, developed, and implemented, produce such capabilities. This simplifies how the protection problem is viewed conceptually. In essence, using the construct of security capability provides a shorthand method of grouping security controls that are employed for a common purpose or to achieve a common objective. This becomes an important consideration, for example, when assessing security controls for effectiveness.

Traditionally, assessments have been conducted on a control-by-control basis producing results that are characterized as pass (i.e., control satisfied) or fail (i.e., control not satisfied). However, the failure of a single control or in some cases, the failure of multiple controls, may not affect the overall security capability needed by an organization. Moreover, employing the broader construct of security capability allows an organization to assess the severity of vulnerabilities discovered in its information systems and determine if the failure of a particular security control (associated with a vulnerability) or the decision not to deploy a certain control, affects the overall capability needed for mission/business protection. It also facilitates conducting *root cause* analyses to determine if the failure of one security control can be traced to the failure of other controls based on the established relationships among controls. Ultimately, authorization decisions (i.e., risk acceptance decisions) are made based on the degree to which the desired security capabilities have been effectively achieved and are meeting the security requirements defined by an organization. These risk-based decisions are directly related to organizational risk tolerance that is defined as part of an organization's risk management strategy.

Two fundamental components affecting the trustworthiness of information systems are *security functionality* and *security assurance*. Security functionality is typically defined in terms of the security features, functions, mechanisms, services, procedures, and architectures implemented within organizational information systems or the environments in which those systems operate. Security assurance is the measure of confidence that the security functionality is implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for the system—thus possessing the capability to accurately mediate and enforce established security policies. Security controls address both security functionality and

[51] While information is the primary area of concern, trustworthiness applies to the protections for all *assets* deemed critical by organizations. Furthermore, protections are provided by technology (i.e., hardware, software, firmware), physical elements (i.e., doors, locks, surveillance), and human elements (i.e., people, processes, procedures).

security assurance. Some controls focus primarily on security functionality (e.g., PE-3, Physical Access Control; IA-2, Identification and Authentication; SC-13, Cryptographic Protection; AC-2, Account Management). Other controls focus primarily on security assurance (e.g., CA-2, Security Assessment; SA-17, Developer Security Architecture and Design; CM-3, Configuration Change Control). Finally, certain security controls can support security functionality and assurance (e.g., RA-5, Vulnerability Scanning; SC-3, Security Function Isolation; AC-25, Reference Monitor). Security controls related to functionality are combined to develop a security capability with the assurance-related controls implemented to provide a degree of confidence in the capability within the organizational risk tolerance.

Assurance Evidence—From Developmental and Operational Activities

Organizations obtain security assurance by the *actions* taken by information system developers, implementers, operators, maintainers, and assessors. Actions by individuals and/or groups during the development/operation of information systems produce *security evidence* that contributes to the assurance, or measures of confidence, in the security functionality needed to deliver the security capability. The depth and coverage of these actions (as described in Appendix E) also contribute to the efficacy of the evidence and measures of confidence. The evidence produced by developers, implementers, operators, assessors, and maintainers during the system development life cycle (e.g., design/development artifacts, assessment results, warranties, and certificates of evaluation/validation) contributes to the understanding of the security controls implemented by organizations.

The *strength* of security functionality[52] plays an important part in being able to achieve the needed security capability and subsequently satisfying the security requirements of organizations. Information system developers can increase the strength of security functionality by employing as part of the hardware/software/firmware development process: (i) well-defined security policies and policy models; (ii) structured/rigorous design and development techniques; and (iii) sound system/security engineering principles. The artifacts generated by these development activities (e.g., functional specifications, high-level/low-level designs, implementation representations [source code and hardware schematics], the results from static/dynamic testing and code analysis) can provide important evidence that the information systems (including the components that compose those systems) will be more reliable and trustworthy. Security evidence can also be generated from security testing conducted by independent, accredited, third-party assessment organizations (e.g., Common Criteria Testing Laboratories, Cryptographic/Security Testing Laboratories, and other assessment activities by government and private sector organizations).[53]

In addition to the evidence produced in the development environment, organizations can produce evidence from the operational environment that contributes to the assurance of functionality and ultimately, security capability. Operational evidence includes, for example, flaw reports, records of remediation actions, the results of security incident reporting, and the results of organizational continuous monitoring activities. Such evidence helps to determine the effectiveness of deployed security controls, changes to information systems and environments of operation, and compliance with federal legislation, policies, directives, regulations, and standards. Security evidence,

[52] The *security strength* of an information system component (i.e., hardware, software, or firmware) is determined by the degree to which the security functionality implemented within that component is correct, complete, resistant to direct attacks (strength of mechanism), and resistant to bypass or tampering.

[53] For example, third-party assessment organizations assess cloud services and service providers in support of the Federal Risk and Authorization Management Program (FedRAMP). Common Criteria Testing Laboratories test and evaluate information technology products using ISO/IEC standard 15408. Cryptographic/Security Testing Laboratories test cryptographic modules using the FIPS 140-2 standard.

whether obtained from development or operational activities, provides a better understanding of security controls implemented and used by organizations. Together, the actions taken during the system development life cycle by developers, implementers, operators, maintainers, and assessors and the evidence produced as part of those actions, help organizations to determine the extent to which the security functionality within their information systems is implemented correctly, operating as intended, and producing the desired outcome with respect to meeting stated security requirements and enforcing or mediating established security policies—thus providing greater confidence in the security capability.

The Compelling Argument for Assurance

Organizations specify assurance-related controls to define activities performed to generate relevant and credible evidence about the functionality and behavior of organizational information systems and to trace the evidence to the elements that provide such functionality/behavior. This evidence is used to obtain a degree of confidence that the systems satisfy stated security requirements—and do so while effectively supporting the organizational missions/business functions while being subjected to threats in the intended environments of operation.

With regard to the security evidence produced, the *depth* and *coverage* of such evidence can affect the level of assurance in the functionality implemented. Depth and coverage are attributes associated with assessment methods and the generation of security evidence. Assessment methods can be applied to developmental and operational assurance. For developmental assurance, depth is associated with the rigor, level of detail, and formality of the artifacts produced during the design and development of the hardware, software, and firmware components of information systems (e.g., functional specifications, high-level design, low-level design, source code). The level of detail available in development artifacts can affect the type of testing, evaluation, and analysis conducted during the system development life cycle (e.g., black-box testing, gray-box testing, white-box testing, static/dynamic analysis). For operational assurance, the depth attribute addresses the number and types of assurance-related security controls selected and implemented. In contrast, the coverage attribute is associated with the assessment methods employed during development and operations, addressing the scope and breadth of assessment objects included in the assessments (e.g., number/types of tests conducted on source code, number of software modules reviewed, number of network nodes/mobile devices scanned for vulnerabilities, number of individuals interviewed to check basic understanding of contingency responsibilities).[54]

Addressing assurance-related controls during acquisition and system development can help organizations to obtain sufficiently trustworthy information systems and components that are more reliable and less likely to fail. These controls include ensuring that developers employ sound systems security engineering principles and processes including, for example, providing a comprehensive security architecture, and enforcing strict configuration management and control of information system and software changes. Once information systems are deployed, assurance-related controls can help organizations to continue to have confidence in the trustworthiness of the systems. These controls include, for example, conducting integrity checks on software and firmware components, conducting penetration testing to find vulnerabilities in organizational

[54] NIST Special Publication 800-53A provides guidance on the generation of security evidence related to security assessments conducted during the system development life cycle.

information systems, monitoring established secure configuration settings, and developing policies/procedures that support the operation and use of the systems.

The concepts described above, including security requirements, security capability, security controls, security functionality, and security assurance, are brought together in a model for trustworthiness for information systems and system components. Figure 3 illustrates the key components in the model and the relationship among the components.

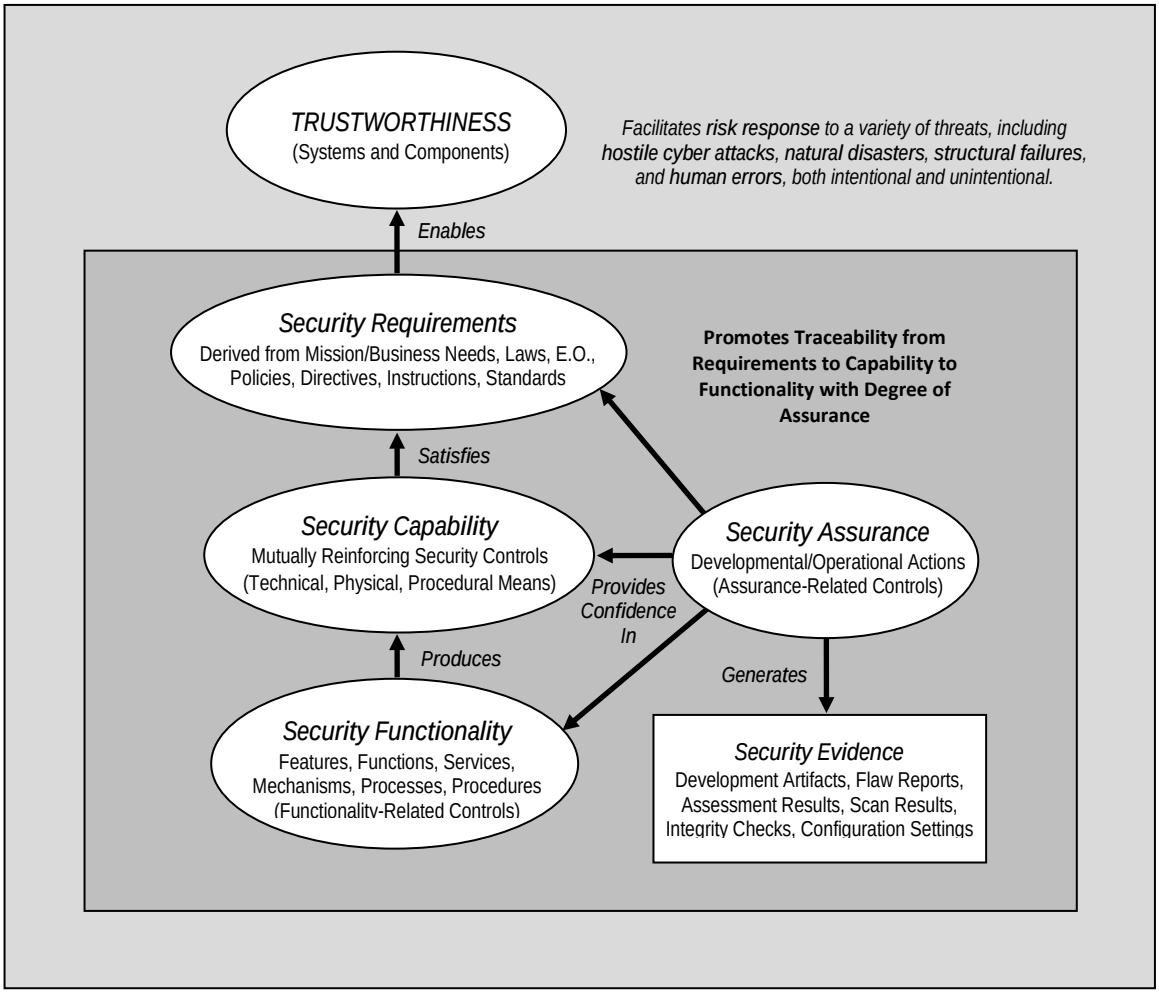

FIGURE 3: TRUSTWORTHINESS MODEL

Developmental and Operational Activities to Achieve High Assurance

Raising the bar on assurance can be difficult and costly for organizations—but sometimes essential for critical applications, missions, or business functions. Determining what parts of the organization's information technology infrastructure demand higher assurance of implemented security functionality is a Tier 1/Tier 2 risk management activity (see Figure 1 in Chapter Two). This type of activity occurs when organizations determine the *security requirements* necessary to protect organizational operations (i.e., mission, functions, image, and reputation), organizational assets, individuals, other organizations, and the Nation. Determining security requirements and the associated *security capabilities* needed to generate the appropriate protection is an integral part of the organizational risk management process described in NIST Special Publication 800-39—specifically, in the development of the *risk response strategy* following the risk framing and risk assessment steps (where organizations establish priorities, assumptions, constraints, risk tolerance and assess threats, vulnerabilities, mission/business impacts, and likelihood of threat occurrence). After the security requirements and security capabilities are determined at Tiers 1 and 2 (including the necessary assurance requirements to provide measures of confidence in the desired capabilities), those requirements/capabilities are reflected in the design of the enterprise architecture, the associated mission/business processes, and the organizational information systems that are needed to support those processes. Organizations can use the Risk Management Framework (RMF), described in NIST Special Publication 800-37, to ensure that the appropriate assurance levels are achieved for the information systems and system components deployed to carry out core missions and business functions. This is primarily a Tier 3 activity but can have some overlap with Tiers 1 and 2, for example, in the area of common control selection.

Trustworthy information systems are difficult to build from a software and systems development perspective. However, there are a number of design, architectural, and implementation principles that, if used, can result in more trustworthy systems. These core *security principles* include, for example, simplicity, modularity, layering, domain isolation, least privilege, least functionality, and resource isolation/encapsulation. Information technology products and systems exhibiting a higher degree of trustworthiness (i.e., products/systems having the requisite security functionality and security assurance) are expected to exhibit a lower rate of latent design/implementation flaws and a higher degree of penetration resistance against a range of threats including, for example, sophisticated cyber attacks, natural disasters, accidents, and intentional/unintentional errors.[55] The vulnerability and susceptibility of organizational missions/business functions and supporting information systems to known threats, the environments of operation where those systems are deployed, and the maximum acceptable level of information security risk, guide the degree of trustworthiness needed.

Appendix E describes the minimum assurance requirements for federal information systems and organizations and highlights the assurance-related controls in the security control baselines in Appendix D needed to ensure that the requirements are satisfied.[56]

[55] Organizations also rely to a great extent on security assurance from an operational perspective as illustrated by the assurance-related controls in Tables E-1 through E-3. Operational assurance is obtained by other than developmental actions including for example, defining and applying security configuration settings on information technology products, establishing policies and procedures, assessing security controls, and conducting a rigorous continuous monitoring program. In some situations, to achieve the necessary security capability with weak or deficient information technology, organizations compensate by increasing their operational assurance.

[56] CNSS Instruction 1253 designates security control baselines for national security systems. Therefore, the assurance-related controls in the baselines established for the national security community, if so designated, may differ from those controls designated for non-national security systems.

Why Assurance Matters

The importance of security assurance can be described by using the example of a light switch on a wall in the living room of your house. Individuals can observe that by simply turning the switch on and off, the switch appears to be performing according to its functional specification. This is analogous to conducting black-box testing of security functionality in an information system or system component. However, the more important questions might be—

- Does the light switch do anything else besides what it is supposed to do?
- What does the light switch look like from behind the wall?
- What types of components were used to construct the light switch and how was the switch assembled?
- Did the switch manufacturer follow industry best practices in the development process?

This example is analogous to the many developmental activities that address the quality of the security functionality in an information system or system component including, for example, design principles, coding techniques, code analysis, testing, and evaluation.

The security assurance requirements and associated assurance-related controls in Appendix E address the light switch problem from the *front of the wall perspective*, and potentially from the *behind the wall perspective*, depending on the measure of confidence needed about the component in question. For organizational missions/business functions that are less critical (i.e., low impact), lower levels of assurance might be appropriate. However, as missions/business functions become more important (i.e., moderate or high impact) and information systems and organizations become susceptible to advanced persistent threats by high-end adversaries, increased levels of assurance may be required. In addition, as organizations become more dependent on external information system services and providers, assurance becomes more important—providing greater insight and measures of confidence to organizations in understanding and verifying the security capability of external providers and the services provided to the federal government. Thus, when the potential impact to organizational operations and assets, individuals, other organizations, or the Nation is great, an increasing level of effort must be directed at what is happening behind the wall.

2.7 REVISIONS AND EXTENSIONS

The security controls listed in this publication represent the state-of-the-practice safeguards and countermeasures for federal information systems and organizations. The security controls[57] will be carefully reviewed and revised periodically to reflect:

- Experience gained from using the controls;
- New federal legislation, Executive Orders, directives, regulations, or policies;
- Changing security requirements;
- Emerging threats, vulnerabilities, and attack methods; and
- Availability of new technologies.

The security controls in the security control catalog are expected to change over time, as controls are withdrawn, revised, and added. The security controls defined in the low, moderate, and high baselines are also expected to change over time as the level of security and due diligence for mitigating risks within organizations changes. In addition to the need for change, the need for stability is addressed by requiring that proposed modifications to security controls go through a

[57] The privacy controls listed in Appendix J will also be updated on a regular basis using similar criteria.

rigorous public review process to obtain both public and private sector feedback and to build consensus for such change. This provides over time, a stable, flexible, and technically sound set of security controls for the federal government, contractors, and any other organizations using the security control catalog.

CHAPTER THREE

THE PROCESS

SELECTION AND SPECIFICATION OF SECURITY CONTROLS

This chapter describes the process of selecting and specifying security controls and control enhancements for organizational information systems to include: (i) selecting appropriate security control baselines; (ii) tailoring the baselines; (iii) documenting the security control selection process; and (iv) applying the control selection process to new development and legacy systems.

3.1 SELECTING SECURITY CONTROL BASELINES

In preparation for selecting and specifying the appropriate security controls for organizational information systems and their respective environments of operation, organizations first determine the criticality and sensitivity of the information to be processed, stored, or transmitted by those systems. This process, known as security categorization, is described in FIPS Publication 199.[58] The security categorization standard is based on a simple and well-established concept—that is, determining the potential adverse impact for organizational information systems. The results of security categorization help guide and inform the selection of appropriate security controls (i.e., safeguards and countermeasures) to adequately protect those information systems. The security controls selected for information systems are commensurate with the potential adverse impact on organizational operations and assets, individuals, other organizations, or the Nation if there is a loss of confidentiality, integrity, or availability. FIPS Publication 199 requires organizations to categorize information systems as low-impact, moderate-impact, or high-impact for the stated security objectives of confidentiality, integrity, and availability (**RMF Step 1**). The potential impact values assigned to the security objectives are the highest values (i.e., high water mark) from the security categories that have been determined for each type of information processed, stored, or transmitted by those information systems.[59] The generalized format for expressing the security category (SC) of an information system is:

$$\mathbf{SC}_{\text{information system}} = \{(\textbf{confidentiality}, \textit{impact}), (\textbf{integrity}, \textit{impact}), (\textbf{availability}, \textit{impact})\},$$

where the acceptable values for potential impact are low, moderate, or high.

Since the potential impact values for confidentiality, integrity, and availability may not always be the same for a particular information system, the high water mark concept (introduced in FIPS Publication 199) is used in FIPS Publication 200 to determine the impact level of the information system for the express purpose of selecting the applicable security control baseline from one of the three baselines identified in Appendix D.[60] Thus, a *low-impact* system is defined as an information system in which all three of the security objectives are low. A *moderate-impact* system is an information system in which at least one of the security objectives is moderate and

[58] CNSS Instruction 1253 provides security categorization guidance for national security systems.

[59] NIST Special Publication 800-60, *Guide for Mapping Types of Information and Information Systems to Security Categories*, provides guidance on the assignment of security categories to information systems.

[60] The high water mark concept is employed because there are significant dependencies among the security objectives of confidentiality, integrity, and availability. In most cases, a compromise in one security objective ultimately affects the other security objectives as well. Accordingly, security controls are not categorized by security objective. Rather, the security controls are grouped into baselines to provide a general protection capability for classes of information systems based on impact level.

no security objective is greater than moderate. Finally, a *high-impact* system is an information system in which at least one security objective is high.

Implementation Tip

To determine the impact level of an information system:

- First, determine the different types of information that are processed, stored, or transmitted by the information system. NIST Special Publication 800-60 provides common information types.
- Second, using the impact values in FIPS Publication 199 and the recommendations of NIST Special Publication 800-60, categorize the confidentiality, integrity, and availability of each information type.
- Third, determine the information system security categorization, that is, the highest impact value for each security objective (confidentiality, integrity, availability) from among the categorizations for the information types associated with the information system.
- Fourth, determine the overall impact level of the information system from the highest impact value among the three security objectives in the system security categorization.

Note: *For national security systems, organizations use CNSSI 1253 for security categorization*.

Once the impact level of the information system is determined, organizations begin the security control selection process (**RMF Step 2**). The first step in selecting and specifying security controls for the information system is to choose the appropriate security control baseline.[61] The selection of the security control baseline is based on the FIPS 200 impact level of the information system as determined by the security categorization process described above. The organization selects one of three security control baselines from Appendix D corresponding to the low-impact, moderate-impact, or high-impact rating of the information system.[62] Note that not all security controls are assigned to baselines, as indicated in Table D-2 by the phrase *not selected*. Similarly, as illustrated in Tables D-3 through D-19, not all control enhancements are assigned to baselines. Those control enhancements that are assigned to baselines are so indicated by an "**X"** in the low, moderate, or high columns. The use of the term *baseline* is intentional. The security controls and control enhancements in the baselines are a starting point from which controls/enhancements may be removed, added, or specialized based on the tailoring guidance in Section 3.2.

The security control baselines in Appendix D address the security needs of a broad and diverse set of constituencies (including individual users and organizations). Some *assumptions* that generally underlie the baselines in Appendix D include, for example: (i) the environments in which organizational information systems operate; (ii) the nature of operations conducted by organizations; (iii) the functionality employed within information systems; (iv) the types of threats facing organizations, missions/business processes, and information systems; and (v) the type of information processed, stored, or transmitted by information systems. Articulating the underlying assumptions is a key element in the initial *risk framing* step of the risk management process described in NIST Special Publication 800-39. Some of the assumptions that underlie the baselines in Appendix D include:

[61] The general security control selection process may be augmented or further detailed by additional sector-specific guidance as described in Section 3.3, *Creating Overlays*, and Appendix I, *template* for developing overlays.

[62] CNSS Instruction 1253 provides security control baselines for national security systems.

- Information systems are located in physical facilities;
- User data/information in organizational information systems is relatively persistent;[63]
- Information systems are multi-user (either serially or concurrently) in operation;
- Some user data/information in organizational information systems is not shareable with other users who have authorized access to the same systems;
- Information systems exist in networked environments;
- Information systems are general purpose in nature; and
- Organizations have the necessary structure, resources, and infrastructure to implement the controls.[64]

If one or more of these assumptions is not valid, then some of the security controls assigned to the initial baselines in Appendix D may not be applicable—a situation that can be readily addressed by applying the tailoring guidance in Section 3.2 and the results of organizational assessments of risk. Conversely, there are also some possible situations that are specifically not addressed in the baselines. These include:

- Insider threats exist within organizations;
- Classified data/information is processed, stored, or transmitted by information systems;
- Advanced persistent threats (APTs) exist within organizations;
- Selected data/information requires specialized protection based on federal legislation, directives, regulations, or policies; and
- Information systems need to communicate with other systems across different security domains.

If any of the above assumptions apply, then additional security controls from Appendix F would likely be needed to ensure adequate protection—a situation that can also be effectively addressed by applying the tailoring guidance in Section 3.2 (specifically, security control supplementation) and the results of organizational assessments of risk.

3.2 TAILORING BASELINE SECURITY CONTROLS

After selecting the applicable security control baseline from Appendix D, organizations initiate the tailoring process to modify appropriately and align the controls more closely with the specific conditions within the organization (i.e., conditions related to organizational missions/business functions, information systems, or environments of operation). The tailoring process includes:

- Identifying and designating common controls in initial security control baselines;
- Applying scoping considerations to the remaining baseline security controls;
- Selecting compensating security controls, if needed;

[63] Persistent data/information refers to data/information with utility for a relatively long duration (e.g., days, weeks).

[64] In general, federal departments and agencies will satisfy this assumption. The assumption becomes more of an issue for nonfederal entities such as municipalities, first responders, and small (business) contractors. Such entities may not be large enough or sufficiently resourced to have elements dedicated to providing the range of security capabilities that are assumed by the baselines. Organizations consider such factors in their risk-based decisions.

- Assigning specific values to organization-defined security control parameters via explicit assignment and selection statements;
- Supplementing baselines with additional security controls and control enhancements, if needed; and
- Providing additional specification information for control implementation, if needed.

The tailoring process, as an integral part of security control selection and specification, is part of a comprehensive organizational risk management process—framing, assessing, responding to, and monitoring information security risk. Organizations use risk management guidance to facilitate risk-based decision making regarding the applicability of security controls in the security control baselines. Ultimately, organizations use the tailoring process to achieve cost-effective, risk-based security that supports organizational mission/business needs. Tailoring activities are approved by authorizing officials in coordination with selected organizational officials (e.g., risk executive [function], chief information officers, senior information security officers, information system owners, common control providers) prior to implementing the security controls. Organizations have the flexibility to perform the tailoring process at the organization level for all information systems (either as a required tailored baseline or as the starting point for system-specific tailoring activities), in support of a particular line of business or mission/business process, at the individual information system level, or by using a combination of the above.[65]

Conversely, organizations do not remove security controls for operational convenience. Tailoring decisions regarding security controls should be defensible based on mission/business needs and accompanied by explicit risk-based determinations.[66] Tailoring decisions, including the specific rationale for those decisions, are documented in the security plans for organizational information systems. Every security control from the applicable security control baseline is accounted for either by the organization (e.g., common control provider) or by the information system owner. If certain security controls are tailored out, then the associated rationale is recorded in security plans (or references/pointers to other relevant documentation are provided) for the information systems and approved by the responsible organizational officials as part of the security plan approval process.[67]

Documenting significant risk management decisions in the security control selection process is imperative in order for authorizing officials to have the necessary information to make credible, risk-based decisions with regard to the authorization of information systems. Since information systems, environments of operation, and personnel associated with the system development life cycle are subject to change, providing the assumptions, constraints, and rationale supporting those important risk decisions allows for a better understanding in the future of the security state of the information systems or environments of operation at the time the original risk decisions were made and facilitates identifying changes, when previous risk decisions are revisited.

[65] See also Section 3.3, *Creating Overlays*, and Appendix I, *template* for developing overlays.

[66] Tailoring decisions can also be based on timing and applicability of selected security controls under certain defined conditions. That is, security controls may not apply in every situation or the parameter values for assignment statements may change under certain circumstances. Overlays can define these special situations, conditions, or timing-related considerations.

[67] The level of detail required in documenting tailoring decisions in the security control selection process is at the discretion of organizations and reflects the impact levels of the respective information systems implementing or inheriting the controls.

Identifying and Designating Common Controls

Common controls are controls that may be inherited by one or more organizational information systems. If an information system inherits a common control, then that system does not need to explicitly implement that control—that is, the security capability is being provided by another entity. Therefore, when the security controls in Appendix F call for an information system to implement or perform a particular security function, it should not be interpreted to mean that all systems that are part of larger, more complex systems or all components of a particular system need to implement the control or function. Organizational decisions on which security controls are designated as common controls may greatly affect the responsibilities of individual system owners with regard to the implementation of controls in a particular baseline. Common control selection can also affect the overall resource expenditures by organizations (i.e., the greater the number of common controls implemented, the greater potential cost savings).

Applying Scoping Considerations

Scoping considerations, when applied in conjunction with risk management guidance, provide organizations with a more granular foundation with which to make risk-based decisions.[68] The application of scoping considerations can eliminate unnecessary security controls from the initial security control baselines and help to ensure that organizations select *only* those controls that are needed to provide the appropriate level of protection for organizational information systems—protection based on the missions and business functions being supported by those systems and the environments in which the systems operate. Organizations may apply the scoping considerations described below to assist with making risk-based decisions regarding security control selection and specification—decisions that can potentially affect how the baseline security controls are applied and implemented by organizations:

- CONTROL ALLOCATION AND PLACEMENT CONSIDERATIONS—

  The term *information system* can refer to systems at multiple levels of abstraction ranging from system-of-systems to individual single-user systems. The growing complexity of many information systems requires careful analysis in the allocation/placement of security controls within the three tiers in the risk management hierarchy (organization level, mission/business process level, and information system level) without imposing any specific architectural views or solutions.[69] Security controls in the initial baselines represent an information system-wide set of controls that may not be applicable to every component in the system. Security controls are applicable only to information system components that provide or support the information security capability addressed by the controls.[70] Organizations make explicit risk-based decisions about where to apply or allocate specific security controls in organizational information systems in order to achieve the needed security capability and to satisfy security requirements.[71] An example of this type of allocation is applying the

[68] The scoping considerations listed in this section are exemplary and *not* intended to limit organizations in rendering risk-based decisions based on other organization-defined considerations with appropriate rationale.

[69] This is especially true with the advent of service-oriented architectures where specific services are provided to implement a single function.

[70] For example, auditing controls are typically applied to components of an information system that provide auditing capability (e.g., servers, etc.) and are not necessarily applied to every user-level workstation within the organization. Organizations should carefully assess the inventory of components that compose their information systems to determine which security controls are applicable to the various components.

[71] As information technology advances, more powerful and diverse functionality can be found in smart phones, tablets, and other types of mobile devices. While tailor guidance may support not allocating a particular security control to a specific technology or device, any residual risk associated with the absence of that control must be addressed in risk assessments to adequately protect organizational operations and assets, individuals, other organizations, and the Nation.

requirement from AC-18 (1) (i.e., protecting wireless access to information systems using authentication/encryption) to all wireless access except for wireless access to visitor subnetworks which are not connected to other system components.

- OPERATIONAL/ENVIRONMENTAL-RELATED CONSIDERATIONS—

  Several of the security controls in the baselines are based on the assumption of the existence of certain operational/environmental factors. Where these factors are absent or significantly diverge from the baseline assumptions, it is justifiable to tailor the baseline. Some of the more common operational/environmental factors include:

  - *Mobility*

    The mobility of physical hosting environments can impact the security controls selected for organizational information systems. As noted above, the set of security controls assigned to each baseline in Appendix D assumes the operation of information systems in fixed facilities and nonmobile locations. If those information systems operate primarily in mobile environments, the security control baseline should be tailored appropriately to account for the differences in mobility and accessibility of the specific locations where the systems reside. For example, many of the security controls in the Physical and Environmental Protection (PE) family that are selected in all three baselines reflect the assumption that the information systems reside in physical facilities/complexes that require appropriate physical protections. Such controls would likely not provide added value for mobile environments such as ships, aircraft, automobiles, vans, or space-based systems.[72]

  - *Single-User Systems and Operations*

    For information systems that are designed to operate as single-user systems (e.g., smart phones), several of the security controls that address sharing among users may not be needed. A single-user system or device refers to a system/device that is only intended to be used by a single individual over time (i.e., exclusive use). Systems or devices that are shared by multiple users over time are not considered single-user. Security controls such as AC-10, Concurrent Session Control, SC-4, Information in Shared Resources, and AC-3, Access Enforcement[73] may not be required in single-user systems/operations and could reasonably be tailored out of the baseline at the discretion of organizations.

  - *Data Connectivity and Bandwidth*

    While many information systems are interconnected, there are some systems which for security or operational reasons, lack networking capabilities—that is, the systems are *air gapped* from the network. For nonnetworked systems, security controls such as AC-17, Remote Access, SC-8, Transmission Confidentiality and Integrity, and SC-7, Boundary Protection, are not applicable and may be tailored out of the security control baselines at the discretion of organizations. In addition to nonnetworked information systems, there are systems that have very limited or sporadic bandwidth (e.g., tactical systems that support warfighter or law enforcement missions). For such systems, the application of security controls would need to be examined carefully as the limited and/or sporadic bandwidth could impact the practicality of implementing those controls and the viability of adversaries staging cyber attacks over the limited bandwidth.

[72] The mobile nature of devices means that it is possible that, for some period of time, the devices may reside in fixed facilities or complexes in fixed locations. During that time, the PE controls would likely apply.

[73] Organizations consider whether individual users have administrator privileges before removing AC-3 from security control baselines.

- *Limited Functionality Systems or System Components*

  What constitutes an information system under the E-Government Act of 2002 is quite broad. Fax machines, printers, scanners, pagers, smart phones, tablets, E-readers, and digital cameras can all be categorized as information systems (or system components). These types of systems and components may lack the general processing capabilities assumed in the security control baselines. The nature of these constraints may limit the types of threats that these systems face, and hence the appropriateness of some of the security controls. Thus, a control such as SI-3, Malicious Code Protection (required in all control baselines) may not be practical for information systems or components that are not capable of executing code (e.g., text-only pagers). However, because there is often no clear delineation between these types of information systems or components (e.g., smart phones combine the digital capabilities of telephones, cameras, and computers), it is important that the application of security controls to limited functionality systems or components be done judiciously and always take into account the intended use of the systems, system capabilities, and the risk of compromise.

- *Information and System Non-Persistence*

  There is often an assumption that user information within organizational information systems is persistent for a considerable period of time. However, for some applications and environments of operation (e.g., tactical systems, industrial control systems), the persistence of user information is often very limited in duration. For information systems processing, storing, or transmitting such non-persistent information, several security controls in the Contingency Planning (CP) family such as CP-6, Alternate Storage Site, CP-7, Alternate Processing Site, and CP-9, Information System Backup, may not be practical and can be tailored out at the discretion of organizations. For similar reasons, controls such as MP-6, Media Sanitization, and SC-28, Protection of Information at Rest, are good candidates for removal through tailoring.[74] In addition to the non-persistence of information, the information systems/services may be non-persistent as well. This can be achieved by the use of virtualization techniques to establish non-persistent instantiations of operating systems and applications. Depending on the duration of the instantiations, some baseline controls might not be applicable.

- *Public Access*

  When public access to organizational information systems is allowed, security controls should be applied with discretion since some security controls from the specified control baselines (e.g., identification and authentication, personnel security controls) may not be applicable for public access. Thus, in the case of the general public accessing federal government websites (e.g., to download publically accessible information such as forms, emergency preparedness information), security controls such as AC-7, Unsuccessful Logon Attempts, AC-17, Remote Access, IA-2, Identification and Authentication, IA-4, Identifier Management, and IA-5, Authenticator Management, typically would not be relevant for validating access authorizations or privileges. However, many of these controls would still be needed for identifying and authenticating organizational personnel that maintain and support information systems providing such public access websites and services. Similarly, many of the security controls may still be required for users accessing nonpublic information systems through such public interfaces, for example, to access or change personal information.

[74] Organizations balance information persistence with the sensitivity of the information. Non-persistent information may still require sanitization after deletion. In addition, organizations consider the duration of information sensitivity—some information may be persistent, but only be sensitive for a limited time.

- SECURITY OBJECTIVE-RELATED CONSIDERATIONS—

  Security controls that support only one or two of the confidentiality, integrity, or availability security objectives may be downgraded to the corresponding control in a lower baseline (or modified or eliminated if not defined in a lower baseline) only if the downgrading action: (i) reflects the FIPS Publication 199 security category for the supported security objective(s) before moving to the FIPS Publication 200 impact level (i.e., high water mark);[75] (ii) is supported by an organizational assessment of risk; and (iii) does not adversely affect the level of protection for the security-relevant information within the information system.[76] For example, if an information system is categorized as moderate impact using the high water mark concept because confidentiality and/or integrity are moderate but availability is low, there are several controls that only support the availability security objective and that potentially could be downgraded to low baseline requirements—that is, it may be appropriate *not* to implement CP-2 (1) because the control enhancement supports only availability and is selected in the moderate baseline but not in the low baseline. The following security controls and control enhancements are potential candidates for downgrading:[77]

  - *Confidentiality:* AC-21, MA-3 (3), MP-3, MP-4, MP-5, MP-5 (4), MP-6 (1), MP-6 (2), PE-4, PE-5, SC-4, SC-8, SC-8 (1);
  - *Integrity:* CM-5, CM-5 (1), CM-5 (3), SC-8, SC-8 (1), SI-7, SI-7 (1), SI-7 (5), SI-10; and
  - *Availability:* CP-2 (1), CP-2 (2), CP-2 (3), CP-2 (4), CP-2 (5), CP-2 (8), CP-3 (1), CP-4 (1), CP-4 (2), CP-6, CP-6 (1), CP-6 (2), CP-6 (3), CP-7, CP-7 (1), CP-7 (2), CP-7 (3), CP-7 (4), CP-8, CP-8 (1), CP-8 (2), CP-8 (3), CP-8 (4), CP-9 (1), CP-9 (2), CP-9 (3), CP-9 (5), CP-10 (2), CP-10 (4), MA-6, PE-9, PE-10, PE-11, PE-11 (1), PE-13 (1), PE-13 (2), PE-13 (3), PE-15 (1).

- TECHNOLOGY-RELATED CONSIDERATIONS—

  Security controls that refer to specific technologies (e.g., wireless, cryptography, public key infrastructure) are applicable only if those technologies are employed or are required to be employed within organizational information systems. Security controls that can be explicitly or implicitly supported by automated mechanisms do not require the development of such mechanisms if the mechanisms do not already exist or are not readily available in commercial or government off-the-shelf products. If automated mechanisms are not readily available,

[75] When applying the high water mark in Section 3.1, some of the original FIPS Publication 199 confidentiality, integrity, or availability security objectives may have been upgraded to a higher security control baseline. As part of this process, security controls that uniquely support the confidentiality, integrity, or availability security objectives may have been upgraded unnecessarily. Consequently, it is recommended that organizations consider appropriate and allowable downgrading actions to ensure cost-effective, risk-based application of security controls.

[76] Information that is security-relevant at the information system level (e.g., password files, network routing tables, cryptographic key management information) is distinguished from user-level information within the same system. Certain security controls are used to support the security objectives of confidentiality and integrity for both user-level and system-level information. Caution should be exercised in downgrading confidentiality or integrity-related security controls to ensure that downgrading actions do not result in insufficient protection for the security-relevant information within the information system. Security-relevant information must be protected at the high water mark in order to achieve a similar level of protection for any of the security objectives related to user-level information.

[77] Downgrading actions apply only to the moderate and high baselines. Security controls that are uniquely attributable to confidentiality, integrity, or availability that would ordinarily be considered as potential candidates for downgrading (e.g., AC-16, AU-10, IA-7, PE-12, PE-14, SC-5, SC-13, SC-16) are eliminated from consideration because the controls are either selected for use in all baselines and have no enhancements that could be downgraded, or the controls are optional and not selected for use in any baseline. Organizations should exercise caution when downgrading security controls that do not appear in the list in Section 3.2 to ensure that downgrading actions do not affect security objectives other than the objectives targeted for downgrading.

cost-effective, or technically feasible, compensating security controls, implemented through nonautomated mechanisms or procedures, are used to satisfy specified security controls or control enhancements (see terms and conditions for applying compensating controls below).

- MISSION REQUIREMENTS-RELATED CONSIDERATIONS—

  Some security controls may not be applicable (or appropriate) if implementing those controls has the potential to degrade, debilitate, or otherwise hamper critical organizational missions and/or business functions. For example, if the mission requires that an uninterrupted display of mission-critical information be available at an operator console (e.g., air traffic controller console), the implementation of AC-11, Session Lock, or SC-10, Network Disconnect, may not be appropriate.

Selecting Compensating Security Controls

Organizations may find it necessary on occasion to employ compensating security controls. Compensating controls are alternative security controls employed by organizations in lieu of specific controls in the low, moderate, or high baselines described in Appendix D—controls that provide equivalent or comparable protection for organizational information systems and the information processed, stored, or transmitted by those systems.[78] This may occur, for example, when organizations are unable to effectively implement specific security controls in the baselines or when, due to the specific nature of the information systems or environments of operation, the controls in the baselines are not a cost-effective means of obtaining the needed risk mitigation. Compensating controls are typically selected after applying the scoping considerations in the tailoring guidance to the applicable security control baseline. Compensating controls may be employed by organizations under the following conditions:

- Organizations select compensating controls from Appendix F; if appropriate compensating controls are not available, organizations adopt suitable compensating controls from other sources;[79]
- Organizations provide supporting rationale for how compensating controls provide equivalent security capabilities for organizational information systems and why the baseline security controls could not be employed; and
- Organizations assess and accept the risk associated with implementing compensating controls in organizational information systems.

Assigning Security Control Parameter Values

Security controls and control enhancements containing embedded parameters (i.e., assignment and selection statements) give organizations the flexibility to define certain portions of controls and enhancements to support specific organizational requirements. After the initial application of scoping considerations and the selection of compensating controls, organizations review the security controls and control enhancements for assignment/selection statements and determine appropriate organization-defined values for the identified parameters. Parameter values may be prescribed by applicable federal laws, Executive Orders, directives, regulations, policies, or standards. Once organizations define the parameter values for security controls and control

[78] More than one compensating control may be required to provide the equivalent protection for a particular security control in Appendix F. For example, organizations with significant staff limitations may compensate for the separation of duty security control by strengthening the audit, accountability, and personnel security controls.

[79] Organizations should make every attempt to select compensating controls from the security control catalog in Appendix F. Organization-defined compensating controls are employed *only* when organizations determine that the security control catalog does not contain suitable compensating controls.

enhancements, the assignments and selections become a part of the control and enhancement.[80] Organizations may choose to specify the values for security control parameters before selecting compensating controls since the specification of the parameters completes the control definitions and may affect compensating control requirements. There can also be significant benefits in collaborating on the development of parameter values. For organizations that work together on a frequent basis, it may be useful for those organizations to develop a mutually agreeable set of uniform values for security control parameters. Doing so may assist organizations in achieving a greater degree of reciprocity when depending upon the information systems and/or services offered by other organizations.

Supplementing Security Control Baselines

The final determination of the appropriate set of security controls necessary to provide adequate security for organizational information systems and the environments in which those systems operate is a function of the assessment of risk and what is required to sufficiently mitigate the risks to organizational operations and assets, individuals, other organizations, and the Nation.[81] In many cases, additional security controls or control enhancements (beyond those controls and enhancements contained in the baselines in Appendix D) will be required to address specific threats to and vulnerabilities in organizations, mission/business processes, and/or information systems and to satisfy the requirements of applicable federal laws, Executive Orders, directives, policies, standards, or regulations.[82] The risk assessment in the security control selection process provides essential information in determining the necessity and sufficiency of the security controls and control enhancements in the initial baselines. Organizations are encouraged to make maximum use of Appendix F to facilitate the process of supplementing the initial baselines with additional security controls and/or control enhancements.[83]

Situations Requiring Potential Baseline Supplementation

Organizations may be subject to conditions that, from an operational, environmental, or threat perspective, warrant the selection and implementation of additional (supplemental) controls to achieve adequate protection of organizational missions/business functions and the information systems supporting those missions/functions. Examples of conditions and additional controls that might be required are provided below.

- ADVANCED PERSISTENT THREAT

  Security control baselines do not assume that the current threat environment is one where adversaries have achieved a significant foothold and presence within organizations and organizational information systems—that is, organizations are dealing with an advanced persistent threat (APT). Adversaries continue to attack organizational information systems and the information technology infrastructure and are successful in some aspects of such attacks. To more fully address the advanced persistent threat, concepts such as insider threat

[80] CNSS Instruction 1253 provides assignment of minimum values for organization-defined variables applicable to national security systems. Parameter values can also be defined as part of overlays described in Section 3.4.

[81] Considerations for potential national-level impacts and impacts to other organizations in categorizing organizational information systems derive from the USA PATRIOT Act and Homeland Security Presidential Directives.

[82] In previous versions of Special Publication 800-53, tailoring referred only to the removal of security controls from baselines and supplementation referred only to the addition of controls to baselines. In this document, the term tailoring has been redefined to include both the addition of security controls to baselines (i.e., tailoring up) and the removal of controls from baselines (i.e., tailoring down).

[83] Security controls and control enhancements selected to supplement baselines are allocated to appropriate information system components in the same manner as the control allocations carried out by organizations in the initial baselines.

protection (CM-5 (4)), heterogeneity (SC-29), deception (SC-26 and SC-30), non-persistence (SC-25 and SC-34), and segmentation (SC-7 (13)) can be considered.

- CROSS-DOMAIN SERVICES

  Security control baselines do not assume that information systems have to operate across multiple security domains. The baselines assume a flat view of information flows (i.e., the same security policies in different domains when information moves across authorization boundaries). To address cross-domain services and transactions, some subset of the AC-4 security control enhancements can be considered to ensure adequate protection of information when transferred between information systems with different security policies.

- MOBILITY

  The use of mobile devices might result in the need for additional security controls and control enhancements not selected in the initial baselines. For example, AC-7 (2), which requires the purging/wiping of information after an organization-defined number of unsuccessful logon attempts, or MP-6 (8), which requires the capability for remote purging/wiping, could be selected in order to address the threat of theft or loss of mobile devices.

- CLASSIFIED INFORMATION

  In some environments, classified and sensitive information[84] may be resident on national security systems without all users having the necessary authorizations to access all of the information. In those situations, additional security controls are required to ensure that information requiring strict separation is not accessed by unauthorized users. More stringent access controls include, for example, AC-3 (3) and AC-16. When classified information is being processed, stored, or transmitted on information systems that are jointly owned by multiple entities (e.g., coalition partners in military alliances), more restrictive controls for maintenance personnel may be required including, for example, MA-5 (4).

Processes for Identifying Additional Needed Security Controls

Organizations can employ a *requirements definition* approach or a *gap analysis* approach in selecting security controls and control enhancements to supplement initial baselines. In the requirements definition approach, organizations obtain specific and credible threat[85] information (or make reasonable assumptions) about the activities of adversaries with certain capabilities or attack potential (e.g., skill levels, expertise, available resources). To effectively withstand cyber attacks from adversaries with the stated capabilities or attack potential, organizations strive to achieve a certain level of defensive capability or cyber preparedness. Organizations can select additional security controls and control enhancements from Appendix F to obtain such defensive capability or level of preparedness. In contrast to the requirements definition approach, the gap analysis approach begins with an organizational assessment of its current defensive capability or level of cyber preparedness. From that initial capability assessment, organizations determine the types of threats they can reasonably expect to counter. If the current organizational defensive capabilities or levels of cyber preparedness are insufficient, the gap analysis determines the required capabilities and levels of preparedness. Organizations subsequently define the security controls and control enhancements from Appendix F needed to achieve the desired capabilities or cyber-preparedness levels. Both of the approaches described above require timely and accurate

[84] The example is illustrative only. CNSS Instruction 1253 provides specific guidance regarding security controls required for national security systems.

[85] While this example focuses on threats to information systems from purposeful attacks, the threat space of concern to organizations also includes environmental disruptions and human errors.

threat information. It is essential that organizations work with the appropriate threat identification component to obtain such information.

During the tailoring process, organizations consider reevaluating the priority codes from the security control baselines to determine if any changes to those priorities are appropriate. This is especially important when adding security controls that are not included in any of the baselines, because those controls have priority codes of P0. The reevaluation of priority codes can be based on organizational assessments of risk or design/developmental decisions related to the security architecture or the systems and security engineering process that may require certain sequencing in security control implementation.

Enhancing Information Security without Changing Control Selection

There may be situations in which organizations cannot apply sufficient security controls within their information systems to adequately reduce or mitigate risk (e.g., when using certain types of information technologies or employing certain computing paradigms). Therefore, alternative strategies are needed to prevent organizational missions/business functions from being adversely affected— strategies that consider the mission and business risks resulting from an aggressive use of information technology. Restrictions on the types of technologies used and how organizational information systems are employed provide an alternative method to reduce or mitigate risk that may be used in conjunction with, or instead of, supplemental security controls. Restrictions on the use of information systems and specific information technologies may be, in some situations, the only practical or reasonable actions organizations can take in order to have the capability to carry out assigned missions/business functions in the face of determined adversaries. Examples of use restrictions include:

- Limiting the information that information systems can process, store, or transmit or the manner in which organizational missions/business functions are automated;
- Prohibiting external access to organizational information by removing selected information system components from networks (i.e., air gapping); and
- Prohibiting moderate- or high-impact information on organizational information system components to which the public has access, unless an explicit risk determination is made authorizing such access.

Providing Additional Specification Information for Control Implementation

Since security controls are statements of security capability at higher levels of abstraction, the controls may lack sufficient information for successful implementation. Therefore, additional detail may be necessary to fully define the intent of a given security control for implementation purposes and to ensure that the security requirements related to that control are satisfied. For example, additional information may be provided as part of the process of moving from control to specification requirement, and may involve *refinement* of implementation details, *refinement* of scope, or *iteration* to apply the same control differently to different scopes. Organizations ensure that if existing security control information (e.g., selection and assignment statements) is not sufficient to fully define the intended application of the control, such information is provided. Organizations have the flexibility to determine whether additional detail is included as a part of the control statement, in supplemental guidance, or in a separate control addendum section. When providing additional detail, organizations are cautioned not to change the intent of the security control or modify the original language in the control. The additional implementation information can be documented either in security plans or systems and security engineering plans. The type of

additional detail that might be necessary to fully specify a security control for implementation purposes is provided in the SI-7 (6) example below:

SI-7 SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY

(6) *SOFTWARE, FIRMWARE, AND INFORMATION INTEGRITY | CRYPTOGRAPHIC PROTECTION*

The information system implements cryptographic mechanisms to detect unauthorized changes to software, firmware, and information.

Supplemental Guidance: Cryptographic mechanisms used for the protection of integrity include, for example, digital signatures and the computation and application of signed hashes using asymmetric cryptography, protecting the confidentiality of the key used to generate the hash, and using the public key to verify the hash information. Related control: SC-13.

Additional implementation detail for SI-7 (6):

Digital signatures are applied to all traffic for which non-repudiation is required employing SHA-256 or another approved NIST algorithm demonstrably of at least the same strength of mechanism.

3.3 CREATING OVERLAYS

The previous sections described the process of tailoring security control baselines to achieve a more focused and relevant security capability for organizations. In certain situations, it may be beneficial for organizations to apply tailoring guidance to the baselines to develop a set of security controls for community-wide use or to address specialized requirements, technologies, or unique missions/environments of operation.[86] For example, the federal government may decide to establish a governmentwide set of security controls and implementation guidance for: (i) public key infrastructure (PKI) systems that could be uniformly applied to all PKI systems implemented within federal agencies; (ii) cloud-based information systems that are uniformly applied to all federal agencies procuring or implementing cloud services; or (iii) industrial control systems (ICSs) at federal facilities producing electric power or controlling environmental systems in federal facilities. Alternatively, to address particular communities of interest with specialized requirements, the Department of Defense, for example, may decide to establish a set of security controls and implementation guidance for its tactical operations and environments by applying the tailoring guidance to the standard security control baselines for national security systems to achieve more specialized solutions. In each of the above examples, tailored baselines can be developed for each information technology area or for the unique circumstances/environments and promulgated to large communities of interest—thus achieving standardized security capabilities, consistency of implementation, and cost-effective security solutions.

To address the need for developing community-wide and specialized sets of security controls for information systems and organizations, the concept of *overlay* is introduced. An overlay is a fully specified set of security controls, control enhancements, and supplemental guidance derived from the application of tailoring guidance in Section 3.2 to security control baselines in Appendix D.[87] Overlays complement the initial security control baselines by: (i) providing the opportunity to add or eliminate controls; (ii) providing security control applicability and interpretations for specific information technologies, computing paradigms, environments of operation, types of information systems, types of missions/operations, operating modes, industry sectors, and statutory/regulatory requirements; (iii) establishing community-wide parameter values for assignment and/or selection statements in security controls and control enhancements; and (iv) extending the supplemental guidance for security controls, where necessary. Organizations typically use the overlay concept

[86] This type of tailoring can be conducted at the federal level or by individual organizations.

[87] CNSS Instruction 1253 provides tailoring guidance and security control baselines for national security systems.

when there is divergence from the basic assumptions used to create the initial security control baselines (see Section 3.1). If organizations are not divergent from the basic assumptions for the initial baselines, there is likely no need to create an overlay. Alternatively, the baselines may be missing key assumptions which would justify creating an overlay with additional assumptions.

The full range of tailoring activities can be employed by organizations to provide a disciplined and structured approach for developing tailored baselines supporting the areas described above. Overlays provide an opportunity to build consensus across communities of interest and develop security plans for organizational information systems that have broad-based support for very specific circumstances, situations, and/or conditions. Categories of overlays that may be useful include, for example:

- Communities of interest, industry sectors, or coalitions/partnerships (e.g., healthcare, law enforcement, intelligence, financial, transportation, energy, allied collaboration/sharing);
- Information technologies/computing paradigms (e.g., cloud/mobile, PKI, Smart Grid, cross-domain solutions);
- Environments of operation (e.g., space, tactical);
- Types of information systems and operating modes (e.g., industrial/process control systems, weapons systems, single-user systems, standalone systems);
- Types of missions/operations (e.g., counterterrorism, first responders, research, development, test, and evaluation); and
- Statutory/regulatory requirements (e.g., Foreign Intelligence Surveillance Act, Health Insurance Portability and Accountability Act, Privacy Act).

Organizations can effectively use the risk management concepts defined in NIST Special Publication 800-39 when developing overlays. The successful development of overlays requires the involvement of: (i) information security professionals who understand the specific subject area that is the focus of the overlay development effort; and (ii) subject matter experts in the overlay area who understand the security controls in Appendix F and the initial baselines in Appendix D. The format and structure for developing overlays is provided in Appendix I.

Multiple overlays can be applied to a single security control baseline. The tailored baselines that result from the overlay development process may be more or less stringent than the original security control baselines. Risk assessments provide information necessary to determine if the risk from implementing the tailored baselines falls within the risk tolerance of the organizations or communities of interest developing the overlays. If multiple overlays are employed, it is possible that there could be a conflict between the overlays. If the use of multiple overlays results in conflicts between the application or removal of security controls, the authorizing official (or designee), in coordination with the mission/business owner and/or information owner/steward, can resolve the conflict. In general, overlays are intended to reduce the need for ad hoc tailoring of baselines by organizations through the selection of a set of controls and control enhancements that more closely correspond to common circumstances, situations, and/or conditions. However, the use of overlays does not preclude organizations from performing further tailoring to reflect organization-specific needs, assumptions, or constraints. Tailoring of overlays is accomplished within the constraints defined within the overlay and may require the concurrence/approval of the authorizing official or other organization-designated individuals. For example, an overlay created for an industrial control system (ICS) may require tailoring for applicability to a specific type of ICS and its environment of operation. But it is anticipated that the use of overlays would greatly reduce the number and extent of organization-specific ad hoc tailoring.

3.4 DOCUMENTING THE CONTROL SELECTION PROCESS

Organizations document the relevant decisions taken during the security control selection process, providing a sound rationale for those decisions. This documentation is essential when examining the security considerations for organizational information systems with respect to the potential mission/business impact. The resulting set of security controls and the supporting rationale for the selection decisions (including any information system use restrictions required by organizations) are documented in the security plans. Documenting significant risk management decisions in the security control selection process is imperative so that authorizing officials can have access to the necessary information to make informed authorization decisions for organizational information systems.[88] Without such information, the understanding, assumptions, constraints, and rationale supporting those risk management decisions will, in all likelihood, not be available when the state of the information systems or environments of operation change, and the original risk decisions are revisited. Figure 4 summarizes the security control selection process, including the selection of initial baselines and the tailoring of the baselines by applying the guidance in Section 3.2.

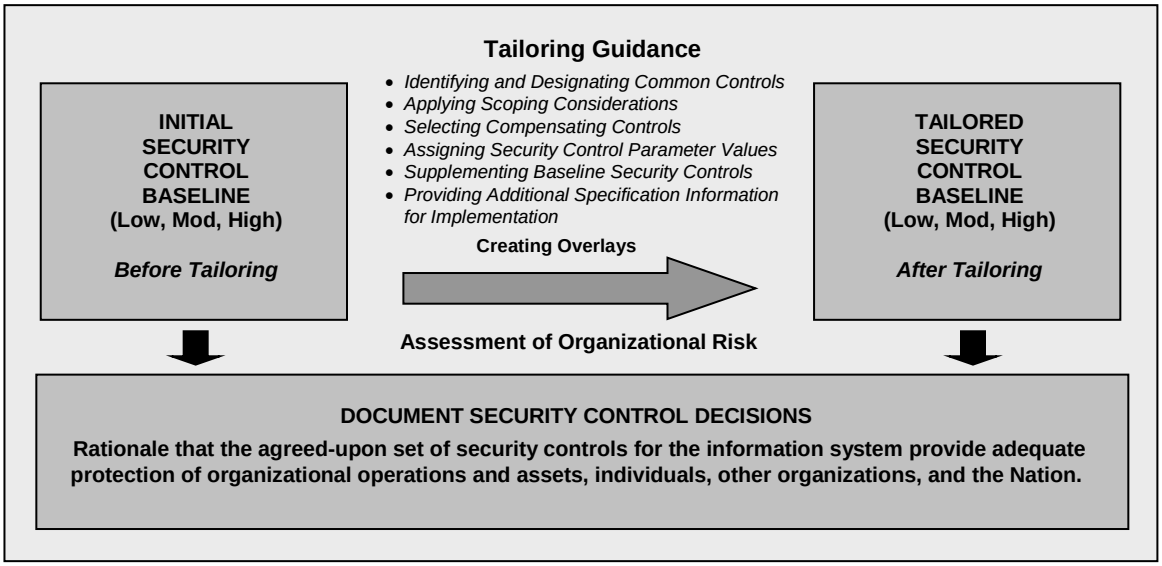

FIGURE 4: SECURITY CONTROL SELECTION PROCESS

Iterative and Dynamic Nature of Security Control Tailoring

The security control tailoring process described above, while appearing to be sequential in nature, can also have an iterative aspect. Organizations may choose to execute the tailoring steps in any order based on organizational needs and the information generated from risk assessments. For example, some organizations may establish the parameter values for security controls in the initial baselines prior to selecting compensating controls. Other organizations may delay completing assignment and selection statements in the controls until after the supplementation activities have been completed. Organizations may also discover that when fully specifying security controls for the intended environments of operation, there may be difficulties that arise which may trigger the need for additional (supplemental) controls. Finally, the security control tailoring process is not static—that is, organizations revisit the tailoring step as often as needed based on ongoing organizational assessments of risk.

[88] The security control selection process also applies to common control providers and the authorizing officials rendering authorization decisions for common controls deployed within organizations.

In addition to the iterative and dynamic nature of the security control tailoring process, there may also be side effects as controls are added and removed from the baselines. Security controls in Appendix F can have some degree of dependency and functional overlap with other controls. In many cases, security controls work together to achieve a security capability. Thus, removing a particular security control from a baseline during the tailoring process may have unintended side effects (and potentially adverse impacts) on the remaining controls. Alternatively, adding a new security control to a baseline during the tailoring process may eliminate or reduce the need for certain specific controls because the new control provides a better security capability than the capability provided by other controls. For example, if organizations implement SC-30 (2) using virtualization techniques to randomly/frequently deploy diverse and changing operating systems and applications, this approach could potentially limit the requirement to update the security configurations in CM-2 (2). Therefore, the addition or removal of security controls is viewed with regard to the totality of the information security needs of the organization and its information systems, and not simply with regard to the controls being added or removed.

Implementation Tip

In diverging from the security control baselines during the tailoring process, organizations consider some very important linkages between various controls and control enhancements. These linkages are captured in the selection of controls and enhancements in the baselines and are especially significant when developing overlays (described in Section 3.3 and Appendix I). In some instances, the linkages are such that it is not meaningful to include a security control or control enhancement without some other control or enhancement. The totality of the controls and enhancements provide a required *security capability*. Some linkages are obvious such as the linkage between Mandatory Access Control enhancement (AC-3 (3)) and Security Attributes (AC-16). But other linkages may be more subtle. This is especially true in the case where the linkage is between security functionality-related controls and security assurance-related controls as described in Appendix E. For example, it is not particularly meaningful to implement AC-3 (3) without also implementing a Reference Monitor (AC-25). Organizations are encouraged to pay careful attention to the *related controls* section of the *Supplemental Guidance* for the security controls to help in identifying such linkages.

Other Considerations

Organizational tailoring decisions are not carried out in a vacuum. While such decisions are rightly focused on information security considerations, it is important that the decisions be aligned with other risk factors that organizations address routinely. Risk factors such as cost, schedule, and performance are considered in the overall determination of which security controls to employ in organizational information systems and environments of operation. For example, in military command and control systems in which lives may be at stake, the adoption of security controls is balanced with operational necessity. With respect to the air traffic control system and consoles used by air traffic controllers, the need to access the consoles in real time to control the air space outweighs the security need for an AC-11, Session Lock. In short, the security control selection process (to include tailoring activities described in Section 3.2) should be integrated into the overall risk management process as described in NIST Special Publication 800-39.

Finally, organizations factor scalability into the security control selection process—that is, controls are scalable with regard to the extent/rigor of the implementation. Scalability is guided by the FIPS Publication 199 security categorizations and the associated FIPS Publication 200 impact levels of the information systems where the controls are to be applied. For example, contingency plans for high-impact information systems may contain significant amounts of

implementation detail and be quite lengthy. In contrast, contingency plans for low-impact systems may contain considerably less detail and be quite succinct. Organizations use discretion in applying the security controls to organizational information systems, giving consideration to the scalability factors in particular operational environments. Scaling controls to the appropriate system impact level facilitates a more cost-effective, risk-based approach to security control implementation—expending only the level of resources necessary to achieve sufficient risk mitigation and adequate security.

Implementation Tip

Maintaining a record of security control selection and control status can be addressed in one or multiple documents or security plans. If using multiple documents, consider providing references to the necessary information in the relevant documents rather than requiring duplication of information. Using references to relevant documentation reduces the amount of time and resources needed by organizations to generate such information. Other benefits include greater security awareness and understanding of the information system capabilities. Increased security awareness/understanding supports more effective integration of information security into organizational information systems.

3.5 NEW DEVELOPMENT AND LEGACY SYSTEMS

The security control selection process described in this section can be applied to organizational information systems from two different perspectives: (i) new development; and (ii) legacy. For new development systems, the security control selection process is applied from a *requirements definition* perspective since the systems do not yet exist and organizations are conducting initial security categorizations. The security controls included in the security plans for the information systems serve as a security specification and are expected to be incorporated into the systems during the development and implementation phases of the system development life cycle. In contrast, for legacy information systems, the security control selection process is applied from a *gap analysis* perspective when organizations are anticipating significant changes to the systems (e.g., during major upgrades, modifications, or outsourcing). Since the information systems already exist, organizations in all likelihood have completed the security categorization and security control selection processes resulting in the establishment of previously agreed-upon security controls in the respective security plans and the implementation of those controls within the information systems. Therefore, the gap analysis can be applied in the following manner:

- First, *reconfirm* or *update* as necessary, the security category and impact level for the information system based on the types of information that are *currently* being processed, stored, or transmitted by the system.
- Second, *review* the existing security plan that describes the security controls that are currently employed considering any updates to the security category and information system impact level as well as any changes to the organization, mission/business processes, the system, or the operational environment. Reassess the risk and revise the security plan as necessary, including documenting any additional security controls that *would* be needed by the system to ensure that the risk to organizational operations, organizational assets, individuals, other organizations, and the Nation, remains at an acceptable level.
- Third, *implement* the security controls described in the updated security plan, document in the plan of action and milestones any controls not implemented, and continue with the remaining steps in the Risk Management Framework in the same manner as a new development system.

Applying Gap Analyses to External Service Providers

The gap analysis perspective is also applied when interacting with external service providers. As described in Section 2.5, organizations are becoming increasingly reliant on external providers for information system services. Using the steps in the gap analysis described above, organizations can effectively use the acquisition process and appropriate contractual vehicles to require external providers to carry out the security categorization and security control selection steps in the RMF. The resulting information can help determine what security controls the external provider either has in place or intends to implement for the information system services that are to be provided. If a security control deficit exists, the responsibility for adequately mitigating unacceptable risks arising from the use of external information system services remains with authorizing officials. In such situations, organizations can reduce the organizational risk to an acceptable level by:

- Using the existing contractual vehicle to require the external provider to meet the additional security control requirements established by the organization;
- Negotiating with the provider for additional security controls if the existing contractual vehicle does not provide for such added requirements;
- Approving the use of compensating controls by the provider; or
- Employing alternative risk mitigation actions[89] within the organizational information system when a contract either does not exist or the contract does not provide the necessary leverage for organizations to obtain the needed security controls.

Implementation Tip

Many organizations operate and maintain complex information systems, often referred to as a system-of-systems. Enterprise architecture plays a key part in the security control selection process for these types of information systems. Organizations can address the complex system problem by dividing the system into two or more subsystems and applying the FIPS 199 security categorization and FIPS 200 impact level determination to each subsystem. Applying separate impact levels to each subsystem does not change the overall impact level of the information system; rather, it allows constituent subsystems to receive a separate allocation of security controls instead of deploying higher-impact controls across every subsystem. It is not valid to treat the subsystems as entirely independent entities, however, since the subsystems are interdependent and interconnected.

Organizations develop security architectures to allocate security controls among subsystems including monitoring and controlling communications at key internal boundaries within the system and provide system-wide controls that meet or exceed the highest information system impact level of the constituent subsystems inheriting security capabilities from those controls. Organizations also consider that replicated subsystems within complex systems may exhibit common vulnerabilities that can be exploited by common threat sources—thereby negating the redundancy that might be relied upon as a risk mitigation measure. The impact due to a security incident against one constituent subsystem might cascade and impact many subsystems at the same time.

[89] For example, local policies, procedures, and/or compensating controls could be established by organizations to serve as alternative mitigation actions for risks identified in a gap analysis.

POLICIES, DIRECTIVES, INSTRUCTIONS, REGULATIONS, AND MEMORANDA

1. Presidential Memorandum, National Insider Threat Policy and Minimum Standards for Executive Branch Insider Threat Programs, November 2012.
2. Code of Federal Regulations, Title 5, *Administrative Personnel*, Section 731.106, *Designation of Public Trust Positions and Investigative Requirements* (5 C.F.R. 731.106).
3. Code of Federal Regulations, Part 5 Administrative Personnel, Subpart C—Employees Responsible for the Management or Use of Federal Computer Systems, Section 930.301 through 930.305 (5 C.F.R. 930.301-305).
4. Committee on National Security Systems Policy (CNSSP) No. 11, *National Policy Governing the Acquisition of Information Assurance (IA) and IA-Enabled Information Technology (IT) Products*, July 2003.
5. Committee on National Security Systems Policy (CNSSP) No. 12, *National Information Assurance Policy for Space Systems Used to Support National Security Missions*, March 2007.
6. Committee on National Security Systems (CNSS) Instruction 4009, *National Information Assurance Glossary*, April 2010.
7. Committee on National Security Systems (CNSS) Instruction 1253, Version 2, *Security Categorization and Control Selection for National Security Systems*, March 2012.
8. Committee on National Security Systems Directive (CNSSD) No. 504, *Directive on Protecting National Security Systems from Insider Threat*, January 2012.
9. Department of Homeland Security, *National Infrastructure Protection Plan (NIPP)*, 2009.

10. Intelligence Community Directive (ICD) 705, *Sensitive Compartmented Information Facilities*, May 2010.

11. Federal Continuity Directive 1 (FCD 1), *Federal Executive Branch National Continuity Program and Requirements*, February 2008.

12. Executive Office of the President of the United States and Federal CIO Council, *Federal Identity, Credential, and Access Management (FICAM) Roadmap and Implementation Guidance*, December 2011.

13. Homeland Security Presidential Directive 7, *Critical Infrastructure Identification, Prioritization, and Protection*, December 2003.

14. Homeland Security Presidential Directive 12, *Policy for a Common Identification Standard for Federal Employees and Contractors*, August 2004.

15. Homeland Security Presidential Directive 20 (National Security Presidential Directive 51), *National Continuity Policy*, May 2007.

16. Intelligence Community Directive Number 704, *Personnel Security Standards and Procedures Governing Eligibility For Access To Sensitive Compartmented Information And Other Controlled Access Program Information*, October 2008.

17. National Communications System (NCS) Directive 3-10, *Minimum Requirements for Continuity Communications Capabilities*, July 2007.

18. National Security Telecommunications and Information Systems Security Instruction (NSTISSI) 7003, *Protective Distribution Systems (PDS)*, December 1996.

19. Office of Management and Budget Circular A-130, Appendix III, Transmittal Memorandum #4, *Management of Federal Information Resources*, November 2000.

20. Office of Management and Budget, Federal Enterprise Architecture Program Management Office, *FEA Consolidated Reference Model Document*, Version 2.3, October 2007.

21. Office of Management and Budget, *Federal Segment Architecture Methodology (FSAM)*, January 2009.

22. Office of Management and Budget Memorandum 01-05, *Guidance on Inter-Agency Sharing of Personal Data - Protecting Personal Privacy*, December 2000.

23. Office of Management and Budget Memorandum 02-01, *Guidance for Preparing and Submitting Security Plans of Action and Milestones*, October 2001.

24. Office of Management and Budget Memorandum 03-19, *Reporting Instructions for the Federal Information Security Management Act and Updated Guidance on Quarterly IT Security Reporting*, August 2003.

25. Office of Management and Budget Memorandum 03-22, *OMB Guidance for Implementing the Privacy Provisions of the E-Government Act of 2002*, September 2003.

26. Office of Management and Budget Memorandum 04-04, *E-Authentication Guidance for Federal Agencies*, December 2003.

27. Office of Management and Budget Memorandum 04-26, *Personal Use Policies and File Sharing Technology*, September 2004.

28. Office of Management and Budget Memorandum 05-08, *Designation of Senior Agency Officials for Privacy*, February 2005.

29. Office of Management and Budget Memorandum 05-24, *Implementation of Homeland Security Presidential Directive (HSPD) 12—Policy for a Common Identification Standard for Federal Employees and Contractors*, August 2005.

30. Office of Management and Budget Memorandum 06-15, *Safeguarding Personally Identifiable Information*, May 2006.

31. Office of Management and Budget Memorandum 06-16, *Protection of Sensitive Information*, June 2006.

32. Office of Management and Budget Memorandum 06-19, *Reporting Incidents Involving Personally Identifiable Information and Incorporating the Cost for Security in Agency Information Technology Investments*, July 2006.

33. Office of Management and Budget Memorandum, *Recommendations for Identity Theft Related Data Breach Notification Guidance*, September 2006.

34. Office of Management and Budget Memorandum 07-11, *Implementation of Commonly Accepted Security Configurations for Windows Operating Systems*, March 2007.

35. Office of Management and Budget Memorandum 07-16, *Safeguarding Against and Responding to the Breach of Personally Identifiable Information*, May 2007.

36. Office of Management and Budget Memorandum 07-18, *Ensuring New Acquisitions Include Common Security Configurations*, June 2007.

37. Office of Management and Budget Memorandum 08-22, *Guidance on the Federal Desktop Core Configuration (FDCC),* August 2008.

38. Office of Management and Budget Memorandum 08-23, *Securing the Federal Government's Domain Name System Infrastructure*, August 2008.

39. The White House, Office of the Press Secretary, *Designation and Sharing of Controlled Unclassified Information (CUI)*, May 2008.

40. The White House, Office of the Press Secretary, *Classified Information and Controlled Unclassified Information*, May 2009.

41. Office of Management and Budget Memorandum 11-11, *Continued Implementation of Homeland Security Presidential Directive (HSPD) 12– Policy for a Common Identification Standard for Federal Employees and Contractors*, February 2011.

42. Office of Management and Budget Memorandum, *Requirements for Accepting Externally-Issued Identity Credentials*, October 2011.

43. Office of Management and Budget Memorandum 11-33, *FY 2011 Reporting Instructions for the Federal Information Security Management Act and Agency Privacy Management*, September 2011.

APPENDIX B

GLOSSARY

COMMON TERMS AND DEFINITIONS

Appendix B provides definitions for security terminology used within Special Publication 800-53. Unless specifically defined in this glossary, all terms used in this publication are consistent with the definitions contained in CNSS Instruction 4009, *National Information Assurance Glossary*.

Adequate Security [OMB Circular A-130, Appendix III, Adapted]	Security commensurate with the risk resulting from the loss, misuse, or unauthorized access to or modification of information.
Advanced Persistent Threat	An adversary that possesses sophisticated levels of expertise and significant resources which allow it to create opportunities to achieve its objectives by using multiple attack vectors (e.g., cyber, physical, and deception). These objectives typically include establishing and extending footholds within the information technology infrastructure of the targeted organizations for purposes of exfiltrating information, undermining or impeding critical aspects of a mission, program, or organization; or positioning itself to carry out these objectives in the future. The advanced persistent threat: (i) pursues its objectives repeatedly over an extended period of time; (ii) adapts to defenders' efforts to resist it; and (iii) is determined to maintain the level of interaction needed to execute its objectives.
Agency	See *Executive Agency*.
All Source Intelligence [Department of Defense, Joint Publication 1-02]	Intelligence products and/or organizations and activities that incorporate all sources of information, most frequently including human resources intelligence, imagery intelligence, measurement and signature intelligence, signals intelligence, and open source data in the production of finished intelligence.
Assessment	See *Security Control Assessment*.
Assessor	See *Security Control Assessor*.
Assurance [CNSSI 4009]	Measure of confidence that the security features, practices, procedures, and architecture of an information system accurately mediates and enforces the security policy.
Assurance Case [Software Engineering Institute, Carnegie Mellon University]	A structured set of arguments and a body of evidence showing that an information system satisfies specific claims with respect to a given quality attribute.
Audit Log [CNSSI 4009]	A chronological record of information system activities, including records of system accesses and operations performed in a given period.
Audit Record	An individual entry in an audit log related to an audited event.

Audit Reduction Tools [CNSSI 4009]	Preprocessors designed to reduce the volume of audit records to facilitate manual review. Before a security review, these tools can remove many audit records known to have little security significance. These tools generally remove records generated by specified classes of events, such as records generated by nightly backups.
Audit Trail [CNSSI 4009]	A chronological record that reconstructs and examines the sequence of activities surrounding or leading to a specific operation, procedure, or event in a security-relevant transaction from inception to final result.
Authentication [FIPS 200]	Verifying the identity of a user, process, or device, often as a prerequisite to allowing access to resources in an information system.
Authenticator	The means used to confirm the identity of a user, processor, or device (e.g., user password or token).
Authenticity	The property of being genuine and being able to be verified and trusted; confidence in the validity of a transmission, a message, or message originator. See *Authentication*.
Authorization (to operate)	The official management decision given by a senior organizational official to authorize operation of an information system and to explicitly accept the risk to organizational operations (including mission, functions, image, or reputation), organizational assets, individuals, other organizations, and the Nation based on the implementation of an agreed-upon set of security controls.
Authorization Boundary	All components of an information system to be authorized for operation by an authorizing official and excludes separately authorized systems, to which the information system is connected.
Authorize Processing	See *Authorization*.
Authorizing Official	A senior (federal) official or executive with the authority to formally assume responsibility for operating an information system at an acceptable level of risk to organizational operations (including mission, functions, image, or reputation), organizational assets, individuals, other organizations, and the Nation.
Availability [44 U.S.C., Sec. 3542]	Ensuring timely and reliable access to and use of information.
Baseline Configuration	A documented set of specifications for an information system, or a configuration item within a system, that has been formally reviewed and agreed on at a given point in time, and which can be changed only through change control procedures.

Blacklisting	The process used to identify: (i) software programs that are not authorized to execute on an information system; or (ii) prohibited Universal Resource Locators (URL)/websites.
Boundary Protection	Monitoring and control of communications at the external boundary of an information system to prevent and detect malicious and other unauthorized communications, through the use of boundary protection devices (e.g., gateways, routers, firewalls, guards, encrypted tunnels).
Boundary Protection Device	A device with appropriate mechanisms that: (i) facilitates the adjudication of different interconnected system security policies (e.g., controlling the flow of information into or out of an interconnected system); and/or (ii) provides information system boundary protection.
Central Management	The organization-wide management and implementation of selected security controls and related processes. Central management includes planning, implementing, assessing, authorizing, and monitoring the organization-defined, centrally managed security controls and processes.
Chief Information Officer [PL 104-106, Sec. 5125(b)]	Agency official responsible for: (i) Providing advice and other assistance to the head of the executive agency and other senior management personnel of the agency to ensure that information technology is acquired and information resources are managed in a manner that is consistent with laws, Executive Orders, directives, policies, regulations, and priorities established by the head of the agency; (ii) Developing, maintaining, and facilitating the implementation of a sound and integrated information technology architecture for the agency; and (iii) Promoting the effective and efficient design and operation of all major information resources management processes for the agency, including improvements to work processes of the agency. Note: Organizations subordinate to federal agencies may use the term *Chief Information Officer* to denote individuals filling positions with similar security responsibilities to agency-level Chief Information Officers.
Chief Information Security Officer	See *Senior Agency Information Security Officer*.
Chief Privacy Officer	See *Senior Agency Official for Privacy*.
Classified Information	Information that has been determined: (i) pursuant to Executive Order 12958 as amended by Executive Order 13526, or any predecessor Order, to be classified national security information; or (ii) pursuant to the Atomic Energy Act of 1954, as amended, to be Restricted Data (RD).

Commodity Service	An information system service (e.g., telecommunications service) provided by a commercial service provider typically to a large and diverse set of consumers. The organization acquiring and/or receiving the commodity service possesses limited visibility into the management structure and operations of the provider, and while the organization may be able to negotiate service-level agreements, the organization is typically not in a position to require that the provider implement specific security controls.
Common Carrier	In a telecommunications context, a telecommunications company that holds itself out to the public for hire to provide communications transmission services. Note: In the United States, such companies are usually subject to regulation by federal and state regulatory commissions.
Common Control [NIST SP 800-37; CNSSI 4009]	A security control that is inheritable by one or more organizational information systems. See *Security Control Inheritance*.
Common Control Provider [NIST SP 800-37]	An organizational official responsible for the development, implementation, assessment, and monitoring of common controls (i.e., security controls inheritable by information systems).
Common Criteria [CNSSI 4009]	Governing document that provides a comprehensive, rigorous method for specifying security function and assurance requirements for products and systems.
Common Secure Configuration	A recognized standardized and established benchmark that stipulates specific secure configuration settings for a given information technology platform.
Compensating Security Controls [CNSSI 4009, Adapted]	The security controls employed in lieu of the recommended controls in the security control baselines described in NIST Special Publication 800-53 and CNSS Instruction 1253 that provide equivalent or comparable protection for an information system or organization.
Computer Matching Agreement	An agreement entered into by an organization in connection with a computer matching program to which the organization is a party, as required by the Computer Matching and Privacy Protection Act of 1988. With certain exceptions, a computer matching program is any computerized comparison of two or more automated systems of records or a system of records with nonfederal records for the purpose of establishing or verifying the eligibility of, or continuing compliance with, statutory and regulatory requirements by, applicants for, recipients or beneficiaries of, participants in, or providers of services with respect to cash or in-kind assistance or payments under federal benefit programs or computerized comparisons of two or more automated federal personnel or payroll systems of records or a system of federal personnel or payroll records with non-federal records.

Confidentiality [44 U.S.C., Sec. 3542]	Preserving authorized restrictions on information access and disclosure, including means for protecting personal privacy and proprietary information.
Configuration Control [CNSSI 4009]	Process for controlling modifications to hardware, firmware, software, and documentation to protect the information system against improper modifications before, during, and after system implementation.
Configuration Item	An aggregation of information system components that is designated for configuration management and treated as a single entity in the configuration management process.
Configuration Management	A collection of activities focused on establishing and maintaining the integrity of information technology products and information systems, through control of processes for initializing, changing, and monitoring the configurations of those products and systems throughout the system development life cycle.
Configuration Settings	The set of parameters that can be changed in hardware, software, or firmware that affect the security posture and/or functionality of the information system.
Controlled Area	Any area or space for which an organization has confidence that the physical and procedural protections provided are sufficient to meet the requirements established for protecting the information and/or information system.
Controlled Interface [CNSSI 4009]	A boundary with a set of mechanisms that enforces the security policies and controls the flow of information between interconnected information systems.
Controlled Unclassified Information [E.O. 13556]	A categorical designation that refers to unclassified information that does not meet the standards for National Security Classification under Executive Order 12958, as amended, but is (i) pertinent to the national interests of the United States or to the important interests of entities outside the federal government, and (ii) under law or policy requires protection from unauthorized disclosure, special handling safeguards, or prescribed limits on exchange or dissemination.
Countermeasures [CNSSI 4009]	Actions, devices, procedures, techniques, or other measures that reduce the vulnerability of an information system. Synonymous with security controls and safeguards.
Covert Channel Analysis [CNSSI 4009]	Determination of the extent to which the security policy model and subsequent lower-level program descriptions may allow unauthorized access to information.
Covert Storage Channel [CNSSI 4009]	Covert channel involving the direct or indirect writing to a storage location by one process and the direct or indirect reading of the storage location by another process. Covert storage channels typically involve a finite resource (e.g., sectors on a disk) that is shared by two subjects at different security levels.

Covert Timing Channel [CNSSI 4009]	Covert channel in which one process signals information to another process by modulating its own use of system resources (e.g., central processing unit time) in such a way that this manipulation affects the real response time observed by the second process.
Cross Domain Solution [CNSSI 4009]	A form of controlled interface that provides the ability to manually and/or automatically access and/or transfer information between different security domains.
Cyber Attack [CNSSI 4009]	An attack, via cyberspace, targeting an enterprise's use of cyberspace for the purpose of disrupting, disabling, destroying, or maliciously controlling a computing environment/infrastructure; or destroying the integrity of the data or stealing controlled information.
Cyber Security [CNSSI 4009]	The ability to protect or defend the use of cyberspace from cyber attacks.
Cyberspace [CNSSI 4009]	A global domain within the information environment consisting of the interdependent network of information systems infrastructures including the Internet, telecommunications networks, computer systems, and embedded processors and controllers.
Data Mining/Harvesting	An analytical process that attempts to find correlations or patterns in large data sets for the purpose of data or knowledge discovery.
Defense-in-Breadth [CNSSI 4009]	A planned, systematic set of multidisciplinary activities that seek to identify, manage, and reduce risk of exploitable vulnerabilities at every stage of the system, network, or subcomponent life cycle (system, network, or product design and development; manufacturing; packaging; assembly; system integration; distribution; operations; maintenance; and retirement).
Defense-in-Depth	Information security strategy integrating people, technology, and operations capabilities to establish variable barriers across multiple layers and missions of the organization.
Developer	A general term that includes: (i) developers or manufacturers of information systems, system components, or information system services; (ii) systems integrators; (iii) vendors; (iv) and product resellers. Development of systems, components, or services can occur internally within organizations (i.e., in-house development) or through external entities.
Digital Media	A form of electronic media where data are stored in digital (as opposed to analog) form.

Discretionary Access Control	An access control policy that is enforced over all subjects and objects in an information system where the policy specifies that a subject that has been granted access to information can do one or more of the following: (i) pass the information to other subjects or objects; (ii) grant its privileges to other subjects; (iii) change security attributes on subjects, objects, information systems, or system components; (iv) choose the security attributes to be associated with newly-created or revised objects; or (v) change the rules governing access control. Mandatory access controls restrict this capability.
[CNSSI 4009]	A means of restricting access to objects (e.g., files, data entities) based on the identity and need-to-know of subjects (e.g., users, processes) and/or groups to which the object belongs. The controls are discretionary in the sense that a subject with a certain access permission is capable of passing that permission (perhaps indirectly) on to any other subject (unless restrained by mandatory access control).
Domain [CNSSI 4009]	An environment or context that includes a set of system resources and a set of system entities that have the right to access the resources as defined by a common security policy, security model, or security architecture. See *Security Domain*.
Enterprise [CNSSI 4009]	An organization with a defined mission/goal and a defined boundary, using information systems to execute that mission, and with responsibility for managing its own risks and performance. An enterprise may consist of all or some of the following business aspects: acquisition, program management, financial management (e.g., budgets), human resources, security, and information systems, information and mission management. See *Organization*.
Enterprise Architecture [44 U.S.C. Sec. 3601]	A strategic information asset base, which defines the mission; the information necessary to perform the mission; the technologies necessary to perform the mission; and the transitional processes for implementing new technologies in response to changing mission needs; and includes a baseline architecture; a target architecture; and a sequencing plan.
Environment of Operation [NIST SP 800-37]	The physical surroundings in which an information system processes, stores, and transmits information.
Event [CNSSI 4009, Adapted]	Any observable occurrence in an information system.
Executive Agency [41 U.S.C., Sec. 403]	An executive department specified in 5 U.S.C., Sec. 101; a military department specified in 5 U.S.C., Sec. 102; an independent establishment as defined in 5 U.S.C., Sec. 104(1); and a wholly owned Government corporation fully subject to the provisions of 31 U.S.C., Chapter 91.
Exfiltration	The unauthorized transfer of information from an information system.

External Information System (or Component)	An information system or component of an information system that is outside of the authorization boundary established by the organization and for which the organization typically has no direct control over the application of required security controls or the assessment of security control effectiveness.
External Information System Service	An information system service that is implemented outside of the authorization boundary of the organizational information system (i.e., a service that is used by, but not a part of, the organizational information system) and for which the organization typically has no direct control over the application of required security controls or the assessment of security control effectiveness.
External Information System Service Provider	A provider of external information system services to an organization through a variety of consumer-producer relationships including but not limited to: joint ventures; business partnerships; outsourcing arrangements (i.e., through contracts, interagency agreements, lines of business arrangements); licensing agreements; and/or supply chain exchanges.
External Network	A network not controlled by the organization.
Failover	The capability to switch over automatically (typically without human intervention or warning) to a redundant or standby information system upon the failure or abnormal termination of the previously active system.
Fair Information Practice Principles	Principles that are widely accepted in the United States and internationally as a general framework for privacy and that are reflected in various federal and international laws and policies. In a number of organizations, the principles serve as the basis for analyzing privacy risks and determining appropriate mitigation strategies.
Federal Agency	See *Executive Agency*.
Federal Enterprise Architecture [FEA Program Management Office]	A business-based framework for governmentwide improvement developed by the Office of Management and Budget that is intended to facilitate efforts to transform the federal government to one that is citizen-centered, results-oriented, and market-based.
Federal Information System [40 U.S.C., Sec. 11331]	An information system used or operated by an executive agency, by a contractor of an executive agency, or by another organization on behalf of an executive agency.
FIPS-Validated Cryptography	A cryptographic module validated by the Cryptographic Module Validation Program (CMVP) to meet requirements specified in FIPS Publication 140-2 (as amended). As a prerequisite to CMVP validation, the cryptographic module is required to employ a cryptographic algorithm implementation that has successfully passed validation testing by the Cryptographic Algorithm Validation Program (CAVP). See *NSA-Approved Cryptography*.

Firmware [CNSSI 4009]	Computer programs and data stored in hardware - typically in read-only memory (ROM) or programmable read-only memory (PROM) - such that the programs and data cannot be dynamically written or modified during execution of the programs.
Guard (System) [CNSSI 4009, Adapted]	A mechanism limiting the exchange of information between information systems or subsystems.
Hardware [CNSSI 4009]	The physical components of an information system. See *Software* and *Firmware*.
High-Impact System [FIPS 200]	An information system in which at least one security objective (i.e., confidentiality, integrity, or availability) is assigned a FIPS Publication 199 potential impact value of high.
Hybrid Security Control [CNSSI 4009]	A security control that is implemented in an information system in part as a common control and in part as a system-specific control. See *Common Control* and *System-Specific Security Control*.
Impact	The effect on organizational operations, organizational assets, individuals, other organizations, or the Nation (including the national security interests of the United States) of a loss of confidentiality, integrity, or availability of information or an information system.
Impact Value	The assessed potential impact resulting from a compromise of the confidentiality, integrity, or availability of information expressed as a value of low, moderate or high.
Incident [FIPS 200]	An occurrence that actually or potentially jeopardizes the confidentiality, integrity, or availability of an information system or the information the system processes, stores, or transmits or that constitutes a violation or imminent threat of violation of security policies, security procedures, or acceptable use policies.
Industrial Control System	An information system used to control industrial processes such as manufacturing, product handling, production, and distribution. Industrial control systems include supervisory control and data acquisition (SCADA) systems used to control geographically dispersed assets, as well as distributed control systems (DCSs) and smaller control systems using programmable logic controllers to control localized processes.
Information [CNSSI 4009]	Any communication or representation of knowledge such as facts, data, or opinions in any medium or form, including textual, numerical, graphic, cartographic, narrative, or audiovisual.
[FIPS 199]	An instance of an information type.
Information Leakage	The intentional or unintentional release of information to an untrusted environment.
Information Owner [CNSSI 4009]	Official with statutory or operational authority for specified information and responsibility for establishing the controls for its generation, collection, processing, dissemination, and disposal.

Information Resources [44 U.S.C., Sec. 3502]	Information and related resources, such as personnel, equipment, funds, and information technology.
Information Security [44 U.S.C., Sec. 3542]	The protection of information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction in order to provide confidentiality, integrity, and availability.
Information Security Architecture	An embedded, integral part of the enterprise architecture that describes the structure and behavior for an enterprise's security processes, information security systems, personnel and organizational subunits, showing their alignment with the enterprise's mission and strategic plans.
Information Security Policy [CNSSI 4009]	Aggregate of directives, regulations, rules, and practices that prescribes how an organization manages, protects, and distributes information.
Information Security Program Plan	Formal document that provides an overview of the security requirements for an organization-wide information security program and describes the program management controls and common controls in place or planned for meeting those requirements.
Information Security Risk	The risk to organizational operations (including mission, functions, image, reputation), organizational assets, individuals, other organizations, and the Nation due to the potential for unauthorized access, use, disclosure, disruption, modification, or destruction of information and/or information systems.
Information Steward [CNSSI 4009]	An agency official with statutory or operational authority for specified information and responsibility for establishing the controls for its generation, collection, processing, dissemination, and disposal.
Information System [44 U.S.C., Sec. 3502]	A discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information. Note: Information systems also include specialized systems such as industrial/process controls systems, telephone switching and private branch exchange (PBX) systems, and environmental control systems.
Information System Boundary	See *Authorization Boundary*.
Information System Component [NIST SP 800-128, Adapted]	A discrete, identifiable information technology asset (e.g., hardware, software, firmware) that represents a building block of an information system. Information system components include commercial information technology products.
Information System Owner (or Program Manager)	Official responsible for the overall procurement, development, integration, modification, or operation and maintenance of an information system.

Information System Resilience	The ability of an information system to continue to: (i) operate under adverse conditions or stress, even if in a degraded or debilitated state, while maintaining essential operational capabilities; and (ii) recover to an effective operational posture in a time frame consistent with mission needs.
Information System Security Officer [CNSSI 4009]	Individual with assigned responsibility for maintaining the appropriate operational security posture for an information system or program.
Information System Service	A capability provided by an information system that facilitates information processing, storage, or transmission.
Information System-Related Security Risks	Risks that arise through the loss of confidentiality, integrity, or availability of information or information systems and that considers impacts to the organization (including assets, mission, functions, image, or reputation), individuals, other organizations, and the Nation. See *Risk*.
Information Technology [40 U.S.C., Sec. 1401]	Any equipment or interconnected system or subsystem of equipment that is used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information by the executive agency. For purposes of the preceding sentence, equipment is used by an executive agency if the equipment is used by the executive agency directly or is used by a contractor under a contract with the executive agency which: (i) requires the use of such equipment; or (ii) requires the use, to a significant extent, of such equipment in the performance of a service or the furnishing of a product. The term *information technology* includes computers, ancillary equipment, software, firmware, and similar procedures, services (including support services), and related resources.
Information Technology Product	See *Information System Component*.
Information Type [FIPS 199]	A specific category of information (e.g., privacy, medical, proprietary, financial, investigative, contractor-sensitive, security management) defined by an organization or in some instances, by a specific law, Executive Order, directive, policy, or regulation.
Insider [Presidential Memorandum, National Insider Threat Policy and Minimum Standards for Executive Branch Insider Threat Programs]	Any person with authorized access to any U.S. Government resource, to include personnel, facilities, information, equipment, networks, or systems.

Insider Threat [Presidential Memorandum, National Insider Threat Policy and Minimum Standards for Executive Branch Insider Threat Programs]	The threat that an insider will use her/his authorized access, wittingly or unwittingly, to do harm to the security of United States. This threat can include damage to the United States through espionage, terrorism, unauthorized disclosure of national security information, or through the loss or degradation of departmental resources or capabilities.
[CNSSI 4009]	An entity with authorized access (i.e., within the security domain) that has the potential to harm an information system or enterprise through destruction, disclosure, modification of data, and/or denial of service.
Insider Threat Program [Presidential Memorandum, National Insider Threat Policy and Minimum Standards for Executive Branch Insider Threat Programs]	A coordinated group of capabilities under centralized management that is organized to detect and prevent the unauthorized disclosure of sensitive information. At a minimum, for departments and agencies that handle classified information, an insider threat program shall consist of capabilities that provide access to information; centralized information integration, analysis, and response; employee insider threat awareness training; and the monitoring of user activity on government computers. For department and agencies that do not handle classified information, these can be employed effectively for safeguarding information that is unclassified but sensitive.
Integrity [44 U.S.C., Sec. 3542]	Guarding against improper information modification or destruction, and includes ensuring information non-repudiation and authenticity.
Internal Network	A network where: (i) the establishment, maintenance, and provisioning of security controls are under the direct control of organizational employees or contractors; or (ii) cryptographic encapsulation or similar security technology implemented between organization-controlled endpoints, provides the same effect (at least with regard to confidentiality and integrity). An internal network is typically organization-owned, yet may be organization-controlled while not being organization-owned.
Label	See *Security Label*.
Line of Business	The following OMB-defined process areas common to virtually all federal agencies: Case Management, Financial Management, Grants Management, Human Resources Management, Federal Health Architecture, Information Systems Security, Budget Formulation and Execution, Geospatial, and IT Infrastructure.
Local Access	Access to an organizational information system by a user (or process acting on behalf of a user) communicating through a direct connection without the use of a network.

Logical Access Control System [FICAM Roadmap and Implementation Guidance]	An automated system that controls an individual's ability to access one or more computer system resources such as a workstation, network, application, or database. A logical access control system requires validation of an individual's identity through some mechanism such as a PIN, card, biometric, or other token. It has the capability to assign different access privileges to different persons depending on their roles and responsibilities in an organization.
Low-Impact System [FIPS 200]	An information system in which all three security objectives (i.e., confidentiality, integrity, and availability) are assigned a FIPS Publication 199 potential impact value of low.
Malicious Code	Software or firmware intended to perform an unauthorized process that will have adverse impact on the confidentiality, integrity, or availability of an information system. A virus, worm, Trojan horse, or other code-based entity that infects a host. Spyware and some forms of adware are also examples of malicious code.
Malware	See *Malicious Code*.
Managed Interface	An interface within an information system that provides boundary protection capability using automated mechanisms or devices.
Mandatory Access Control	An access control policy that is uniformly enforced across all subjects and objects within the boundary of an information system. A subject that has been granted access to information is constrained from doing any of the following: (i) passing the information to unauthorized subjects or objects; (ii) granting its privileges to other subjects; (iii) changing one or more security attributes on subjects, objects, the information system, or system components; (iv) choosing the security attributes to be associated with newly-created or modified objects; or (v) changing the rules governing access control. Organization-defined subjects may explicitly be granted organization-defined privileges (i.e., they are trusted subjects) such that they are not limited by some or all of the above constraints.
[CNSSI 4009]	A means of restricting access to objects based on the sensitivity (as represented by a security label) of the information contained in the objects and the formal authorization (i.e., clearance, formal access approvals, and need-to-know) of subjects to access information of such sensitivity. Mandatory Access Control is a type of nondiscretionary access control.
Marking	See *Security Marking*.
Media [FIPS 200]	Physical devices or writing surfaces including, but not limited to, magnetic tapes, optical disks, magnetic disks, Large-Scale Integration (LSI) memory chips, and printouts (but not including display media) onto which information is recorded, stored, or printed within an information system.

Metadata	Information describing the characteristics of data including, for example, structural metadata describing data structures (e.g., data format, syntax, and semantics) and descriptive metadata describing data contents (e.g., information security labels).
Mobile Code	Software programs or parts of programs obtained from remote information systems, transmitted across a network, and executed on a local information system without explicit installation or execution by the recipient.
Mobile Code Technologies	Software technologies that provide the mechanisms for the production and use of mobile code (e.g., Java, JavaScript, ActiveX, VBScript).
Mobile Device	A portable computing device that: (i) has a small form factor such that it can easily be carried by a single individual; (ii) is designed to operate without a physical connection (e.g., wirelessly transmit or receive information); (iii) possesses local, non-removable or removable data storage; and (iv) includes a self-contained power source. Mobile devices may also include voice communication capabilities, on-board sensors that allow the devices to capture information, and/or built-in features for synchronizing local data with remote locations. Examples include smart phones, tablets, and E-readers.
Moderate-Impact System [FIPS 200]	An information system in which at least one security objective (i.e., confidentiality, integrity, or availability) is assigned a FIPS Publication 199 potential impact value of moderate and no security objective is assigned a FIPS Publication 199 potential impact value of high.
Multifactor Authentication	Authentication using two or more different factors to achieve authentication. Factors include: (i) something you know (e.g., password/PIN); (ii) something you have (e.g., cryptographic identification device, token); or (iii) something you are (e.g., biometric). See *Authenticator*.
Multilevel Security [CNSSI 4009]	Concept of processing information with different classifications and categories that simultaneously permits access by users with different security clearances and denies access to users who lack authorization.
Multiple Security Levels [CNSSI 4009]	Capability of an information system that is trusted to contain, and maintain separation between, resources (particularly stored data) of different security domains.
National Security Emergency Preparedness Telecommunications Services [47 C.F.R., Part 64, App A]	Telecommunications services that are used to maintain a state of readiness or to respond to and manage any event or crisis (local, national, or international) that causes or could cause injury or harm to the population, damage to or loss of property, or degrade or threaten the national security or emergency preparedness posture of the United States.

National Security System [44 U.S.C., Sec. 3542]	Any information system (including any telecommunications system) used or operated by an agency or by a contractor of an agency, or other organization on behalf of an agency—(i) the function, operation, or use of which involves intelligence activities; involves cryptologic activities related to national security; involves command and control of military forces; involves equipment that is an integral part of a weapon or weapons system; or is critical to the direct fulfillment of military or intelligence missions (excluding a system that is to be used for routine administrative and business applications, for example, payroll, finance, logistics, and personnel management applications); or (ii) is protected at all times by procedures established for information that have been specifically authorized under criteria established by an Executive Order or an Act of Congress to be kept classified in the interest of national defense or foreign policy.
Network [CNSSI 4009]	Information system(s) implemented with a collection of interconnected components. Such components may include routers, hubs, cabling, telecommunications controllers, key distribution centers, and technical control devices.
Network Access	Access to an information system by a user (or a process acting on behalf of a user) communicating through a network (e.g., local area network, wide area network, Internet).
Nondiscretionary Access Control	See *Mandatory Access Control*.
Nonlocal Maintenance	Maintenance activities conducted by individuals communicating through a network, either an external network (e.g., the Internet) or an internal network.
Non-Organizational User	A user who is not an organizational user (including public users).
Non-repudiation	Protection against an individual falsely denying having performed a particular action. Provides the capability to determine whether a given individual took a particular action such as creating information, sending a message, approving information, and receiving a message.
NSA-Approved Cryptography	Cryptography that consists of: (i) an approved algorithm; (ii) an implementation that has been approved for the protection of classified information and/or controlled unclassified information in a particular environment; and (iii) a supporting key management infrastructure.
Object	Passive information system-related entity (e.g., devices, files, records, tables, processes, programs, domains) containing or receiving information. Access to an object (by a subject) implies access to the information it contains. See *Subject*.

Operations Security [CNSSI 4009]	Systematic and proven process by which potential adversaries can be denied information about capabilities and intentions by identifying, controlling, and protecting generally unclassified evidence of the planning and execution of sensitive activities. The process involves five steps: identification of critical information, analysis of threats, analysis of vulnerabilities, assessment of risks, and application of appropriate countermeasures.
Organization [FIPS 200, Adapted]	An entity of any size, complexity, or positioning within an organizational structure (e.g., a federal agency or, as appropriate, any of its operational elements).
Organizational User	An organizational employee or an individual the organization deems to have equivalent status of an employee including, for example, contractor, guest researcher, individual detailed from another organization. Policy and procedures for granting equivalent status of employees to individuals may include need-to-know, relationship to the organization, and citizenship.
Overlay	A specification of security controls, control enhancements, supplemental guidance, and other supporting information employed during the tailoring process, that is intended to complement (and further refine) security control baselines. The overlay specification may be more stringent or less stringent than the original security control baseline specification and can be applied to multiple information systems.
Penetration Testing	A test methodology in which assessors, typically working under specific constraints, attempt to circumvent or defeat the security features of an information system.
Personally Identifiable Information [OMB Memorandum 07-16]	Information which can be used to distinguish or trace the identity of an individual (e.g., name, social security number, biometric records, etc.) alone, or when combined with other personal or identifying information which is linked or linkable to a specific individual (e.g., date and place of birth, mother's maiden name, etc.).
Physical Access Control System [FICAM Roadmap and Implementation Guidance]	An automated system that manages the passage of people or assets through an opening(s) in a secure perimeter(s) based on a set of authorization rules.
Plan of Action and Milestones [OMB Memorandum 02-01]	A document that identifies tasks needing to be accomplished. It details resources required to accomplish the elements of the plan, any milestones in meeting the tasks, and scheduled completion dates for the milestones.
Portable Storage Device	An information system component that can be inserted into and removed from an information system, and that is used to store data or information (e.g., text, video, audio, and/or image data). Such components are typically implemented on magnetic, optical, or solid state devices (e.g., floppy disks, compact/digital video disks, flash/thumb drives, external hard disk drives, and flash memory cards/drives that contain non-volatile memory).

Potential Impact [FIPS 199]	The loss of confidentiality, integrity, or availability could be expected to have: (i) a *limited* adverse effect (FIPS Publication 199 low); (ii) a *serious* adverse effect (FIPS Publication 199 moderate); or (iii) a *severe* or *catastrophic* adverse effect (FIPS Publication 199 high) on organizational operations, organizational assets, or individuals.
Privacy Act Statement	A disclosure statement required by Section (e)(3) of the Privacy Act of 1974, as amended, to appear on documents used by organizations to collect personally identifiable information from individuals to be maintained in a Privacy Act System of Records (SORN).
Privacy Impact Assessment [OMB Memorandum 03-22]	An analysis of how information is handled: (i) to ensure handling conforms to applicable legal, regulatory, and policy requirements regarding privacy; (ii) to determine the risks and effects of collecting, maintaining, and disseminating information in identifiable form in an electronic information system; and (iii) to examine and evaluate protections and alternative processes for handling information to mitigate potential privacy risks.
Privileged Account	An information system account with authorizations of a privileged user.
Privileged Command	A human-initiated command executed on an information system involving the control, monitoring, or administration of the system including security functions and associated security-relevant information.
Privileged User [CNSSI 4009]	A user that is authorized (and therefore, trusted) to perform security-relevant functions that ordinary users are not authorized to perform.
Protective Distribution System	Wire line or fiber optic system that includes adequate safeguards and/or countermeasures (e.g., acoustic, electric, electromagnetic, and physical) to permit its use for the transmission of unencrypted information.
Provenance	The records describing the possession of, and changes to, components, component processes, information, systems, organization, and organizational processes. Provenance enables all changes to the baselines of components, component processes, information, systems, organizations, and organizational processes, to be reported to specific actors, functions, locales, or activities.
Public Key Infrastructure [CNSSI 4009]	The framework and services that provide for the generation, production, distribution, control, accounting, and destruction of public key certificates. Components include the personnel, policies, processes, server platforms, software, and workstations used for the purpose of administering certificates and public-private key pairs, including the ability to issue, maintain, recover, and revoke public key certificates.

Purge	Rendering sanitized data unrecoverable by laboratory attack methods.
Reciprocity [CNSSI 4009]	Mutual agreement among participating organizations to accept each other's security assessments in order to reuse information system resources and/or to accept each other's assessed security posture in order to share information.
Records	The recordings (automated and/or manual) of evidence of activities performed or results achieved (e.g., forms, reports, test results), which serve as a basis for verifying that the organization and the information system are performing as intended. Also used to refer to units of related data fields (i.e., groups of data fields that can be accessed by a program and that contain the complete set of information on particular items).
Red Team Exercise	An exercise, reflecting real-world conditions, that is conducted as a simulated adversarial attempt to compromise organizational missions and/or business processes to provide a comprehensive assessment of the security capability of the information system and organization.
Reference Monitor	A set of design requirements on a reference validation mechanism which as key component of an operating system, enforces an access control policy over all subjects and objects. A reference validation mechanism must be: (i) always invoked (i.e., complete mediation); (ii) tamperproof; and (iii) small enough to be subject to analysis and tests, the completeness of which can be assured (i.e., verifiable).
Remote Access	Access to an organizational information system by a user (or a process acting on behalf of a user) communicating through an external network (e.g., the Internet).
Remote Maintenance	Maintenance activities conducted by individuals communicating through an external network (e.g., the Internet).
Resilience	See *Information System Resilience*.
Restricted Data [Atomic Energy Act of 1954]	All data concerning (i) design, manufacture, or utilization of atomic weapons; (ii) the production of special nuclear material; or (iii) the use of special nuclear material in the production of energy, but shall not include data declassified or removed from the Restricted Data category pursuant to Section 142 [of the Atomic Energy Act of 1954].

Risk [FIPS 200, Adapted]	A measure of the extent to which an entity is threatened by a potential circumstance or event, and typically a function of: (i) the adverse impacts that would arise if the circumstance or event occurs; and (ii) the likelihood of occurrence. Information system-related security risks are those risks that arise from the loss of confidentiality, integrity, or availability of information or information systems and reflect the potential adverse impacts to organizational operations (including mission, functions, image, or reputation), organizational assets, individuals, other organizations, and the Nation.
Risk Assessment	The process of identifying risks to organizational operations (including mission, functions, image, reputation), organizational assets, individuals, other organizations, and the Nation, resulting from the operation of an information system. Part of risk management, incorporates threat and vulnerability analyses, and considers mitigations provided by security controls planned or in place. Synonymous with risk analysis.
Risk Executive (Function) [CNSSI 4009]	An individual or group within an organization that helps to ensure that: (i) security risk-related considerations for individual information systems, to include the authorization decisions for those systems, are viewed from an organization-wide perspective with regard to the overall strategic goals and objectives of the organization in carrying out its missions and business functions; and (ii) managing risk from individual information systems is consistent across the organization, reflects organizational risk tolerance, and is considered along with other organizational risks affecting mission/business success.
Risk Management [CNSSI 4009, adapted]	The program and supporting processes to manage information security risk to organizational operations (including mission, functions, image, reputation), organizational assets, individuals, other organizations, and the Nation, and includes: (i) establishing the context for risk-related activities; (ii) assessing risk; (iii) responding to risk once determined; and (iv) monitoring risk over time.
Risk Mitigation [CNSSI 4009]	Prioritizing, evaluating, and implementing the appropriate risk-reducing controls/countermeasures recommended from the risk management process.
Risk Monitoring	Maintaining ongoing awareness of an organization's risk environment, risk management program, and associated activities to support risk decisions.
Risk Response	Accepting, avoiding, mitigating, sharing, or transferring risk to organizational operations (i.e., mission, functions, image, or reputation), organizational assets, individuals, other organizations, or the Nation.

Role-Based Access Control	Access control based on user roles (i.e., a collection of access authorizations a user receives based on an explicit or implicit assumption of a given role). Role permissions may be inherited through a role hierarchy and typically reflect the permissions needed to perform defined functions within an organization. A given role may apply to a single individual or to several individuals.
Safeguards [CNSSI 4009]	Protective measures prescribed to meet the security requirements (i.e., confidentiality, integrity, and availability) specified for an information system. Safeguards may include security features, management constraints, personnel security, and security of physical structures, areas, and devices. Synonymous with security controls and countermeasures.
Sanitization	Actions taken to render data written on media unrecoverable by both ordinary and, for some forms of sanitization, extraordinary means. Process to remove information from media such that data recovery is not possible. It includes removing all classified labels, markings, and activity logs.
Scoping Considerations	A part of tailoring guidance providing organizations with specific considerations on the applicability and implementation of security controls in the security control baseline. Areas of consideration include policy/regulatory, technology, physical infrastructure, system component allocation, operational/environmental, public access, scalability, common control, and security objective.
Security [CNSSI 4009]	A condition that results from the establishment and maintenance of protective measures that enable an enterprise to perform its mission or critical functions despite risks posed by threats to its use of information systems. Protective measures may involve a combination of deterrence, avoidance, prevention, detection, recovery, and correction that should form part of the enterprise's risk management approach.
Security Assessment	See *Security Control Assessment*.
Security Assessment Plan	The objectives for the security control assessment and a detailed roadmap of how to conduct such an assessment.
Security Assurance	See *Assurance*.
Security Attribute	An abstraction representing the basic properties or characteristics of an entity with respect to safeguarding information; typically associated with internal data structures (e.g., records, buffers, files) within the information system and used to enable the implementation of access control and flow control policies, reflect special dissemination, handling or distribution instructions, or support other aspects of the information security policy.

Security Authorization	See *Authorization.*
Security Authorization Boundary	See *Authorization Boundary*.
Security Capability	A combination of mutually-reinforcing security controls (i.e., safeguards and countermeasures) implemented by technical means (i.e., functionality in hardware, software, and firmware), physical means (i.e., physical devices and protective measures), and procedural means (i.e., procedures performed by individuals).
Security Categorization	The process of determining the security category for information or an information system. Security categorization methodologies are described in CNSS Instruction 1253 for national security systems and in FIPS Publication 199 for other than national security systems. See *Security Category*.
Security Category [FIPS 199, Adapted; CNSSI 4009]	The characterization of information or an information system based on an assessment of the potential impact that a loss of confidentiality, integrity, or availability of such information or information system would have on organizational operations, organizational assets, individuals, other organizations, and the Nation.
Security Control [FIPS 199, Adapted]	A safeguard or countermeasure prescribed for an information system or an organization designed to protect the confidentiality, integrity, and availability of its information and to meet a set of defined security requirements.
Security Control Assessment [CNSSI 4009, Adapted]	The testing or evaluation of security controls to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for an information system or organization.
Security Control Assessor	The individual, group, or organization responsible for conducting a security control assessment.
Security Control Baseline [FIPS 200, Adapted]	The set of minimum security controls defined for a low-impact, moderate-impact, or high-impact information system that provides a starting point for the tailoring process.
Security Control Enhancement	Augmentation of a security control to: (i) build in additional, but related, functionality to the control; (ii) increase the strength of the control; or (iii) add assurance to the control.
Security Control Inheritance [CNSSI 4009]	A situation in which an information system or application receives protection from security controls (or portions of security controls) that are developed, implemented, assessed, authorized, and monitored by entities other than those responsible for the system or application; entities either internal or external to the organization where the system or application resides. See *Common Control*.
Security Control Overlay	See *Overlay.*

Security Domain [CNSSI 4009]	A domain that implements a security policy and is administered by a single authority.
Security Functionality	The security-related features, functions, mechanisms, services, procedures, and architectures implemented within organizational information systems or the environments in which those systems operate.
Security Functions	The hardware, software, and/or firmware of the information system responsible for enforcing the system security policy and supporting the isolation of code and data on which the protection is based.
Security Impact Analysis [CNSSI 4009]	The analysis conducted by an organizational official to determine the extent to which changes to the information system have affected the security state of the system.
Security Incident	See *Incident*.
Security Kernel [CNSSI 4009]	Hardware, firmware, and software elements of a trusted computing base implementing the reference monitor concept. Security kernel must mediate all accesses, be protected from modification, and be verifiable as correct.
Security Label	The means used to associate a set of security attributes with a specific information object as part of the data structure for that object.
Security Marking	The means used to associate a set of security attributes with objects in a human-readable form, to enable organizational process-based enforcement of information security policies.
Security Objective [FIPS 199]	Confidentiality, integrity, or availability.
Security Plan	Formal document that provides an overview of the security requirements for an information system or an information security program and describes the security controls in place or planned for meeting those requirements. See *System Security Plan* or *Information Security Program Plan*.
Security Policy [CNSSI 4009]	A set of criteria for the provision of security services.
Security Policy Filter	A hardware and/or software component that performs one or more of the following functions: (i) content verification to ensure the data type of the submitted content; (ii) content inspection, analyzing the submitted content to verify it complies with a defined policy (e.g., allowed vs. disallowed file constructs and content portions); (iii) malicious content checker that evaluates the content for malicious code; (iv) suspicious activity checker that evaluates or executes the content in a safe manner, such as in a sandbox/detonation chamber and monitors for suspicious activity; or (v) content sanitization, cleansing, and transformation, which modifies the submitted content to comply with a defined policy.

Security Requirement [FIPS 200, Adapted]	A requirement levied on an information system or an organization that is derived from applicable laws, Executive Orders, directives, policies, standards, instructions, regulations, procedures, and/or mission/business needs to ensure the confidentiality, integrity, and availability of information that is being processed, stored, or transmitted. Note: Security requirements can be used in a variety of contexts from high-level policy-related activities to low-level implementation-related activities in system development and engineering disciplines.
Security Service [CNSSI 4009]	A capability that supports one, or more, of the security requirements (Confidentiality, Integrity, Availability). Examples of security services are key management, access control, and authentication.
Security-Relevant Information	Any information within the information system that can potentially impact the operation of security functions or the provision of security services in a manner that could result in failure to enforce the system security policy or maintain isolation of code and data.
Senior Agency Information Security Officer [44 U.S.C., Sec. 3544]	Official responsible for carrying out the Chief Information Officer responsibilities under FISMA and serving as the Chief Information Officer's primary liaison to the agency's authorizing officials, information system owners, and information system security officers. Note: Organizations subordinate to federal agencies may use the term *Senior Information Security Officer* or *Chief Information Security Officer* to denote individuals filling positions with similar responsibilities to Senior Agency Information Security Officers.
Senior Agency Official for Privacy	The senior organizational official with overall organization-wide responsibility for information privacy issues.
Senior Information Security Officer	See *Senior Agency Information Security Officer*.
Sensitive Information [CNSSI 4009, Adapted]	Information where the loss, misuse, or unauthorized access or modification could adversely affect the national interest or the conduct of federal programs, or the privacy to which individuals are entitled under 5 U.S.C. Section 552a (the Privacy Act); that has not been specifically authorized under criteria established by an Executive Order or an Act of Congress to be kept classified in the interest of national defense or foreign policy.
Sensitive Compartmented Information [CNSSI 4009]	Classified information concerning or derived from intelligence sources, methods, or analytical processes, which is required to be handled within formal access control systems established by the Director of National Intelligence.
Service-Oriented Architecture	A set of principles and methodologies for designing and developing software in the form of interoperable services. These services are well-defined business functions that are built as software components (i.e., discrete pieces of code and/or data structures) that can be reused for different purposes.

Software [CNSSI 4009]	Computer programs and associated data that may be dynamically written or modified during execution.
Spam	The abuse of electronic messaging systems to indiscriminately send unsolicited bulk messages.
Special Access Program [CNSSI 4009]	A program established for a specific class of classified information that imposes safeguarding and access requirements that exceed those normally required for information at the same classification level.
Spyware	Software that is secretly or surreptitiously installed into an information system to gather information on individuals or organizations without their knowledge; a type of malicious code.
Subject	Generally an individual, process, or device causing information to flow among objects or change to the system state. See *Object*.
Subsystem	A major subdivision or component of an information system consisting of information, information technology, and personnel that performs one or more specific functions.
Supplemental Guidance	Statements used to provide additional explanatory information for security controls or security control enhancements.
Supplementation	The process of adding security controls or control enhancements to a security control baseline as part of the tailoring process (during security control selection) in order to adequately meet the organization's risk management needs.
Supply Chain [ISO 28001, Adapted]	Linked set of resources and processes between multiple tiers of developers that begins with the sourcing of products and services and extends through the design, development, manufacturing, processing, handling, and delivery of products and services to the acquirer.
Supply Chain Element	An information technology product or product component that contains programmable logic and that is critically important to the functioning of an information system.
System	See *Information System*.
System of Records Notice	An official public notice of an organization's system(s) of records, as required by the Privacy Act of 1974, that identifies: (i) the purpose for the system of records; (ii) the individuals covered by information in the system of records; (iii) the categories of records maintained about individuals; and (iv) the ways in which the information is shared.
System Security Plan [NIST SP 800-18]	Formal document that provides an overview of the security requirements for an information system and describes the security controls in place or planned for meeting those requirements.

System-Specific Security Control	A security control for an information system that has not been designated as a common security control or the portion of a hybrid control that is to be implemented within an information system.
Tailored Security Control Baseline	A set of security controls resulting from the application of tailoring guidance to a security control baseline. See *Tailoring*.
Tailoring	The process by which security control baselines are modified by: (i) identifying and designating common controls; (ii) applying scoping considerations on the applicability and implementation of baseline controls; (iii) selecting compensating security controls; (iv) assigning specific values to organization-defined security control parameters; (v) supplementing baselines with additional security controls or control enhancements; and (vi) providing additional specification information for control implementation.
Threat [CNSSI 4009, Adapted]	Any circumstance or event with the potential to adversely impact organizational operations (including mission, functions, image, or reputation), organizational assets, individuals, other organizations, or the Nation through an information system via unauthorized access, destruction, disclosure, modification of information, and/or denial of service.
Threat Assessment [CNSSI 4009]	Formal description and evaluation of threat to an information system.
Threat Source [FIPS 200]	The intent and method targeted at the intentional exploitation of a vulnerability or a situation and method that may accidentally trigger a vulnerability. Synonymous with threat agent.
Trusted Path	A mechanism by which a user (through an input device) can communicate directly with the security functions of the information system with the necessary confidence to support the system security policy. This mechanism can only be activated by the user or the security functions of the information system and cannot be imitated by untrusted software.
Trustworthiness [CNSSI 4009]	The attribute of a person or enterprise that provides confidence to others of the qualifications, capabilities, and reliability of that entity to perform specific tasks and fulfill assigned responsibilities.
Trustworthiness (Information System)	The degree to which an information system (including the information technology components that are used to build the system) can be expected to preserve the confidentiality, integrity, and availability of the information being processed, stored, or transmitted by the system across the full range of threats. A trustworthy information system is a system that is believed to be capable of operating within defined levels of risk despite the environmental disruptions, human errors, structural failures, and purposeful attacks that are expected to occur in its environment of operation.

User [CNSSI 4009, adapted]	Individual, or (system) process acting on behalf of an individual, authorized to access an information system. See *Organizational User* and *Non-Organizational User*.
Virtual Private Network [CNSSI 4009]	Protected information system link utilizing tunneling, security controls, and endpoint address translation giving the impression of a dedicated line.
Vulnerability [CNSSI 4009]	Weakness in an information system, system security procedures, internal controls, or implementation that could be exploited or triggered by a threat source.
Vulnerability Analysis	See *Vulnerability Assessment*.
Vulnerability Assessment [CNSSI 4009]	Systematic examination of an information system or product to determine the adequacy of security measures, identify security deficiencies, provide data from which to predict the effectiveness of proposed security measures, and confirm the adequacy of such measures after implementation.
Whitelisting	The process used to identify: (i) software programs that are authorized to execute on an information system; or (ii) authorized Universal Resource Locators (URL)/websites.

APPENDIX D

SECURITY CONTROL BASELINES – SUMMARY

LOW-IMPACT, MODERATE-IMPACT, AND HIGH-IMPACT INFORMATION SYSTEMS

This appendix contains the security control baselines that represent the *starting point* in determining the security controls for low-impact, moderate-impact, and high-impact information systems.[90] The three security control baselines are hierarchical in nature with regard to the security controls employed in those baselines.[91] If a security control is selected for one of the baselines, the family identifier and control number are listed in the appropriate column. If a security control is not used in a particular baseline, the entry is marked *not selected*. Security control enhancements, when used to supplement security controls, are indicated by the number of the enhancement. For example, an IR-2 (1) in the high baseline entry for the IR-2 security control indicates that the second control from the Incident Response family has been selected along with control enhancement (1). Some security controls and enhancements in the security control catalog are not used in any of the baselines in this appendix but are available for use by organizations if needed. This situation occurs, for example, when the results of a risk assessment indicate the need for additional security controls or control enhancements in order to adequately mitigate risk to organizational operations and assets, individuals, other organizations, and the Nation.

Organizations can use the recommended *priority code* designation associated with each security control in the baselines to assist in making sequencing decisions for control implementation (i.e., a Priority Code 1 [P1] control has a higher priority for implementation than a Priority Code 2 [P2] control; a Priority Code 2 [P2] control has a higher priority for implementation than a Priority Code 3 [P3] control, and a Priority Code 0 [P0] indicates the security control is not selected in any baseline). This recommended sequencing prioritization helps ensure that security controls upon which other controls depend are implemented first, thus enabling organizations to deploy controls in a more structured and timely manner in accordance with available resources. The implementation of security controls by sequence priority code does not imply any defined level of risk mitigation until *all* controls in the security plan have been implemented. The priority codes are used only for implementation sequencing, not for making security control selection decisions. Table D-1 summarizes sequence priority codes for the baseline security controls in Table D-2.

TABLE D-1: SECURITY CONTROL PRIORITIZATION CODES

Priority Code	Sequencing	Action
Priority Code 1 (P1)	FIRST	Implement P1 security controls first.
Priority Code 2 (P2)	NEXT	Implement P2 security controls after implementation of P1 controls.
Priority Code 3 (P3)	LAST	Implement P3 security controls after implementation of P1 and P2 controls.
Unspecified Priority Code (P0)	NONE	Security control not selected in any baseline.

[90] A complete description of all security controls is provided in Appendices F and G. In addition, separate documents for individual security control baselines (listed as Annexes 1, 2, and 3) are available at http://csrc.nist.gov/publications. An online version of the catalog of security controls is also available at http://web.nvd.nist.gov/view/800-53/home.

[91] The hierarchical nature applies to the security requirements of each control (i.e., the base control plus all of its enhancements) at the low-impact, moderate-impact, and high-impact level in that the control requirements at a particular impact level (e.g., CP-4 *Contingency Plan Testing*—Moderate: CP-4 (1)) meets a stronger set of security requirements for that control than the next lower impact level of the same control (e.g., CP-4 *Contingency Plan Testing*—Low: CP-4).

Table D-2 provides a summary of the security controls and control enhancements from Appendix F that have been allocated to the initial security control baselines (i.e., low, moderate, and high). The sequence priority codes for security control implementation and those security controls that have been withdrawn from Appendix F are also indicated in Table D-2. In addition to Table D-2, the sequence priority codes and security control baselines are annotated in a priority and baseline allocation summary section below each security control in Appendix F.

AC-25	Reference Monitor	P0	Not Selected	Not Selected	Not Selected

[92] The security control baselines in Table D-2 are the initial baselines selected by organizations prior to conducting the tailoring activities described in Section 3.2. The control baselines and priority codes are only applicable to non-national security systems. Security control baselines for national security systems are included in CNSS Instruction 1253.

Tables D-3 through D-19 provide a more detailed summary of the security controls and control enhancements in Appendix F. Each table focuses on a different security control family. Whereas Table D-2 includes only those security controls and control enhancements allocated to the three security control baselines, Tables D-3 through D-19 include all controls and enhancements for the respective security control families. The tables include the following information: (i) the security controls and control enhancements that have been selected for the security control baselines as indicated by an "x" in the column for the selected baseline;[93] (ii) the security controls and control enhancements that have not been selected for any security control baseline (i.e., the controls and control enhancements available for selection to achieve greater protection) as indicated by blank cells in the baseline columns; (iii) the security controls and control enhancements that have been withdrawn from Appendix F as indicated by an "x" in the respective withdrawn column; and (iv) the security controls and control enhancements that have assurance-related characteristics or properties (i.e., assurance-related controls) as indicated by an "x" in the respective assurance column. Assurance-related controls are discussed in greater detail in Appendix E to include the allocation of such controls to security control baselines (see Tables E-1 through E-3).

[93] The security control baselines in Tables D-3 through D-19 are only applicable to non-national security systems. Security control baselines for national security systems are included in CNSS Instruction 1253.

TABLE D-3: SUMMARY — ACCESS CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
AC-1	**Access Control Policy and Procedures**		x	x	x	x
AC-2	**Account Management**			x	x	x
AC-2 (1)	*ACCOUNT MANAGEMENT | AUTOMATED SYSTEM ACCOUNT MANAGEMENT*				x	x
AC-2 (2)	*ACCOUNT MANAGEMENT | REMOVAL OF TEMPORARY / EMERGENCY ACCOUNTS*				x	x
AC-2 (3)	*ACCOUNT MANAGEMENT | DISABLE INACTIVE ACCOUNTS*				x	x
AC-2 (4)	*ACCOUNT MANAGEMENT | AUTOMATED AUDIT ACTIONS*				x	x
AC-2 (5)	*ACCOUNT MANAGEMENT | INACTIVITY LOGOUT*					x
AC-2 (6)	*ACCOUNT MANAGEMENT | DYNAMIC PRIVILEGE MANAGEMENT*					
AC-2 (7)	*ACCOUNT MANAGEMENT | ROLE-BASED SCHEMES*					
AC-2 (8)	*ACCOUNT MANAGEMENT | DYNAMIC ACCOUNT CREATION*					
AC-2 (9)	*ACCOUNT MANAGEMENT | RESTRICTIONS ON USE OF SHARED GROUPS / ACCOUNTS*					
AC-2 (10)	*ACCOUNT MANAGEMENT | SHARED / GROUP ACCOUNT CREDENTIAL TERMINATION*					
AC-2 (11)	*ACCOUNT MANAGEMENT | USAGE CONDITIONS*					x
AC-2 (12)	*ACCOUNT MANAGEMENT | ACCOUNT MONITORING / ATYPICAL USAGE*					x
AC-2 (13)	*ACCOUNT MANAGEMENT | DISABLE ACCOUNTS FOR HIGH-RISK INDIVIDUALS*					x
AC-3	**Access Enforcement**			x	x	x
AC-3 (1)	*ACCESS ENFORCEMENT | RESTRICTED ACCESS TO PRIVILEGED FUNCTIONS*	x	Incorporated into AC-6.			
AC-3 (2)	*ACCESS ENFORCEMENT | DUAL AUTHORIZATION*					
AC-3 (3)	*ACCESS ENFORCEMENT | MANDATORY ACCESS CONTROL*					
AC-3 (4)	*ACCESS ENFORCEMENT | DISCRETIONARY ACCESS CONTROL*					
AC-3 (5)	*ACCESS ENFORCEMENT | SECURITY-RELEVANT INFORMATION*					
AC-3 (6)	*ACCESS ENFORCEMENT | PROTECTION OF USER AND SYSTEM INFORMATION*	x	Incorporated into MP-4 and SC-28.			
AC-3 (7)	*ACCESS ENFORCEMENT | ROLE-BASED ACCESS CONTROL*					
AC-3 (8)	*ACCESS ENFORCEMENT | REVOCATION OF ACCESS AUTHORIZATIONS*					
AC-3 (9)	*ACCESS ENFORCEMENT | CONTROLLED RELEASE*					
AC-3 (10)	*ACCESS ENFORCEMENT | AUDITED OVERRIDE OF ACCESS CONTROL MECHANISMS*					
AC-4	**Information Flow Enforcement**				x	x
AC-4 (1)	*INFORMATION FLOW ENFORCEMENT | OBJECT SECURITY ATTRIBUTES*					
AC-4 (2)	*INFORMATION FLOW ENFORCEMENT | PROCESSING DOMAINS*					
AC-4 (3)	*INFORMATION FLOW ENFORCEMENT | DYNAMIC INFORMATION FLOW CONTROL*					
AC-4 (4)	*INFORMATION FLOW ENFORCEMENT | CONTENT CHECK ENCRYPTED INFORMATION*					
AC-4 (5)	*INFORMATION FLOW ENFORCEMENT | EMBEDDED DATA TYPES*					
AC-4 (6)	*INFORMATION FLOW ENFORCEMENT | METADATA*					
AC-4 (7)	*INFORMATION FLOW ENFORCEMENT | ONE-WAY FLOW MECHANISMS*					
AC-4 (8)	*INFORMATION FLOW ENFORCEMENT | SECURITY POLICY FILTERS*					
AC-4 (9)	*INFORMATION FLOW ENFORCEMENT | HUMAN REVIEWS*					
AC-4 (10)	*INFORMATION FLOW ENFORCEMENT | ENABLE / DISABLE SECURITY POLICY FILTERS*					

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
AC-4 (11)	*INFORMATION FLOW ENFORCEMENT | CONFIGURATION OF SECURITY POLICY FILTERS*					
AC-4 (12)	*INFORMATION FLOW ENFORCEMENT | DATA TYPE IDENTIFIERS*					
AC-4 (13)	*INFORMATION FLOW ENFORCEMENT | DECOMPOSITION INTO POLICY-RELEVANT SUBCOMPONENTS*					
AC-4 (14)	*INFORMATION FLOW ENFORCEMENT | SECURITY POLICY FILTER CONSTRAINTS*					
AC-4 (15)	*INFORMATION FLOW ENFORCEMENT | DETECTION OF UNSANCTIONED INFORMATION*					
AC-4 (16)	*INFORMATION FLOW ENFORCEMENT | INFORMATION TRANSFERS ON INTERCONNECTED SYSTEMS*	x	Incorporated into AC-4.			
AC-4 (17)	*INFORMATION FLOW ENFORCEMENT | DOMAIN AUTHENTICATION*					
AC-4 (18)	*INFORMATION FLOW ENFORCEMENT | SECURITY ATTRIBUTE BINDING*					
AC-4 (19)	*INFORMATION FLOW ENFORCEMENT | VALIDATION OF METADATA*					
AC-4 (20)	*INFORMATION FLOW ENFORCEMENT | APPROVED SOLUTIONS*					
AC-4 (21)	*INFORMATION FLOW ENFORCEMENT | PHYSICAL / LOGICAL SEPARATION OF INFORMATION FLOWS*					
AC-4 (22)	*INFORMATION FLOW ENFORCEMENT | ACCESS ONLY*					
AC-5	**Separation of Duties**				x	x
AC-6	**Least Privilege**				x	x
AC-6 (1)	*LEAST PRIVILEGE | AUTHORIZE ACCESS TO SECURITY FUNCTIONS*				x	x
AC-6 (2)	*LEAST PRIVILEGE | NON-PRIVILEGED ACCESS FOR NONSECURITY FUNCTIONS*				x	x
AC-6 (3)	*LEAST PRIVILEGE | NETWORK ACCESS TO PRIVILEGED COMMANDS*					x
AC-6 (4)	*LEAST PRIVILEGE | SEPARATE PROCESSING DOMAINS*					
AC-6 (5)	*LEAST PRIVILEGE | PRIVILEGED ACCOUNTS*				x	x
AC-6 (6)	*LEAST PRIVILEGE | PRIVILEGED ACCESS BY NON-ORGANIZATIONAL USERS*					
AC-6 (7)	*LEAST PRIVILEGE | REVIEW OF USER PRIVILEGES*					
AC-6 (8)	*LEAST PRIVILEGE | PRIVILEGE LEVELS FOR CODE EXECUTION*					
AC-6 (9)	*LEAST PRIVILEGE | AUDITING USE OF PRIVILEGED FUNCTIONS*				x	x
AC-6 (10)	*LEAST PRIVILEGE | PROHIBIT NON-PRIVILEGED USERS FROM EXECUTING PRIVILEGED FUNCTIONS*				x	x
AC-7	**Unsuccessful Logon Attempts**			x	x	x
AC-7 (1)	*UNSUCCESSFUL LOGON ATTEMPTS | AUTOMATIC ACCOUNT LOCK*	x	Incorporated into AC-7.			
AC-7 (2)	*UNSUCCESSFUL LOGON ATTEMPTS | PURGE / WIPE MOBILE DEVICE*					
AC-8	**System Use Notification**			x	x	x
AC-9	**Previous Logon (Access) Notification**					
AC-9 (1)	*PREVIOUS LOGON NOTIFICATION | UNSUCCESSFUL LOGONS*					
AC-9 (2)	*PREVIOUS LOGON NOTIFICATION | SUCCESSFUL / UNSUCCESSFUL LOGONS*					
AC-9 (3)	*PREVIOUS LOGON NOTIFICATION | NOTIFICATION OF ACCOUNT CHANGES*					
AC-9 (4)	*PREVIOUS LOGON NOTIFICATION | ADDITIONAL LOGON INFORMATION*					
AC-10	**Concurrent Session Control**					x
AC-11	**Session Lock**				x	x
AC-11 (1)	*SESSION LOCK | PATTERN-HIDING DISPLAYS*				x	x
AC-12	**Session Termination**				x	x

TABLE D-4: SUMMARY — AWARENESS AND TRAINING CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
AT-1	**Security Awareness and Training Policy and Procedures**		x	x	x	x
AT-2	**Security Awareness Training**		x	x	x	x
AT-2 (1)	*SECURITY AWARENESS | PRACTICAL EXERCISES*		x			
AT-2 (2)	*SECURITY AWARENESS | INSIDER THREAT*		x		x	x
AT-3	**Role-Based Security Training**		x	x	x	x
AT-3 (1)	*SECURITY TRAINING | ENVIRONMENTAL CONTROLS*		x			
AT-3 (2)	*SECURITY TRAINING | PHYSICAL SECURITY CONTROLS*		x			
AT-3 (3)	*SECURITY TRAINING | PRACTICAL EXERCISES*		x			
AT-3 (4)	*SECURITY TRAINING | SUSPICIOUS COMMUNICATIONS AND ANOMALOUS SYSTEM BEHAVIOR*		x			
AT-4	**Security Training Records**		x	x	x	x
AT-5	**Contacts with Security Groups and Associations**	x	Incorporated into PM-15.			

TABLE D-5: SUMMARY — AUDIT AND ACCOUNTABILITY CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
AU-1	**Audit and Accountability Policy and Procedures**		x	x	x	x
AU-2	**Audit Events**			x	x	x
AU-2 (1)	*AUDIT EVENTS | COMPILATION OF AUDIT RECORDS FROM MULTIPLE SOURCES*	x	Incorporated into AU-12.			
AU-2 (2)	*AUDIT EVENTS | SELECTION OF AUDIT EVENTS BY COMPONENT*	x	Incorporated into AU-12.			
AU-2 (3)	*AUDIT EVENTS | REVIEWS AND UPDATES*				x	x
AU-2 (4)	*AUDIT EVENTS | PRIVILEGED FUNCTIONS*	x	Incorporated into AC-6 (9).			
AU-3	**Content of Audit Records**			x	x	x
AU-3 (1)	*CONTENT OF AUDIT RECORDS | ADDITIONAL AUDIT INFORMATION*				x	x
AU-3 (2)	*CONTENT OF AUDIT RECORDS | CENTRALIZED MANAGEMENT OF PLANNED AUDIT RECORD CONTENT*					x
AU-4	**Audit Storage Capacity**			x	x	x
AU-4 (1)	*AUDIT STORAGE CAPACITY | TRANSFER TO ALTERNATE STORAGE*					
AU-5	**Response to Audit Processing Failures**			x	x	x
AU-5 (1)	*RESPONSE TO AUDIT PROCESSING FAILURES | AUDIT STORAGE CAPACITY*					x
AU-5 (2)	*RESPONSE TO AUDIT PROCESSING FAILURES | REAL-TIME ALERTS*					x
AU-5 (3)	*RESPONSE TO AUDIT PROCESSING FAILURES | CONFIGURABLE TRAFFIC VOLUME THRESHOLDS*					
AU-5 (4)	*RESPONSE TO AUDIT PROCESSING FAILURES | SHUTDOWN ON FAILURE*					
AU-6	**Audit Review, Analysis, and Reporting**		x	x	x	x
AU-6 (1)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | PROCESS INTEGRATION*		x		x	x
AU-6 (2)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | AUTOMATED SECURITY ALERTS*	x	Incorporated into SI-4.			
AU-6 (3)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | CORRELATE AUDIT REPOSITORIES*		x		x	x
AU-6 (4)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | CENTRAL REVIEW AND ANALYSIS*		x			
AU-6 (5)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | INTEGRATION / SCANNING AND MONITORING CAPABILITIES*		x			x
AU-6 (6)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | CORRELATION WITH PHYSICAL MONITORING*		x			x
AU-6 (7)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | PERMITTED ACTIONS*		x			
AU-6 (8)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | FULL TEXT ANALYSIS OF PRIVILEGED COMMANDS*		x			
AU-6 (9)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | CORRELATION WITH INFORMATION FROM NONTECHNICAL SOURCES*		x			
AU-6 (10)	*AUDIT REVIEW, ANALYSIS, AND REPORTING | AUDIT LEVEL ADJUSTMENT*		x			
AU-7	**Audit Reduction and Report Generation**		x		x	x
AU-7 (1)	*AUDIT REDUCTION AND REPORT GENERATION | AUTOMATIC PROCESSING*		x		x	x
AU-7 (2)	*AUDIT REDUCTION AND REPORT GENERATION | AUTOMATIC SORT AND SEARCH*					
AU-8	**Time Stamps**			x	x	x
AU-8 (1)	*TIME STAMPS | SYNCHRONIZATION WITH AUTHORITATIVE TIME SOURCE*				x	x
AU-8 (2)	*TIME STAMPS | SECONDARY AUTHORITATIVE TIME SOURCE*					

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
AU-9	**Protection of Audit Information**			x	x	x
AU-9 (1)	*PROTECTION OF AUDIT INFORMATION | HARDWARE WRITE-ONCE* MEDIA					
AU-9 (2)	*PROTECTION OF AUDIT INFORMATION | AUDIT BACKUP ON SEPARATE PHYSICAL SYSTEMS / COMPONENTS*					x
AU-9 (3)	*PROTECTION OF AUDIT INFORMATION | CRYPTOGRAPHIC PROTECTION*					x
AU-9 (4)	*PROTECTION OF AUDIT INFORMATION | ACCESS BY SUBSET OF PRIVILEGED USERS*				x	x
AU-9 (5)	*PROTECTION OF AUDIT INFORMATION | DUAL AUTHORIZATION*					
AU-9 (6)	*PROTECTION OF AUDIT INFORMATION | READ-ONLY ACCESS*					
AU-10	**Non-repudiation**		x			x
AU-10 (1)	*NON-REPUDIATION | ASSOCIATION OF IDENTITIES*		x			
AU-10 (2)	*NON-REPUDIATION | VALIDATE BINDING OF INFORMATION PRODUCER IDENTITY*		x			
AU-10 (3)	*NON-REPUDIATION | CHAIN OF CUSTODY*		x			
AU-10 (4)	*NON-REPUDIATION | VALIDATE BINDING OF INFORMATION REVIEWER IDENTITY*		x			
AU-10 (5)	*NON-REPUDIATION | DIGITAL SIGNATURES*	x	Incorporated into SI-7.			
AU-11	**Audit Record Retention**			x	x	x
AU-11 (1)	*AUDIT RECORD RETENTION | LONG-TERM RETRIEVAL CAPABILITY*		x			
AU-12	**Audit Generation**			x	x	x
AU-12 (1)	*AUDIT GENERATION | SYSTEM-WIDE / TIME-CORRELATED AUDIT TRAIL*					x
AU-12 (2)	*AUDIT GENERATION | STANDARDIZED FORMATS*					
AU-12 (3)	*AUDIT GENERATION | CHANGES BY AUTHORIZED INDIVIDUALS*					x
AU-13	**Monitoring for Information Disclosure**		x			
AU-13 (1)	*MONITORING FOR INFORMATION DISCLOSURE | USE OF AUTOMATED TOOLS*		x			
AU-13 (2)	*MONITORING FOR INFORMATION DISCLOSURE | REVIEW OF MONITORED SITES*		x			
AU-14	**Session Audit**		x			
AU-14 (1)	*SESSION AUDIT | SYSTEM START-UP*		x			
AU-14 (2)	*SESSION AUDIT | CAPTURE/RECORD AND LOG CONTENT*		x			
AU-14 (3)	*SESSION AUDIT | REMOTE VIEWING / LISTENING*		x			
AU-15	**Alternate Audit Capability**					
AU-16	**Cross-Organizational Auditing**					
AU-16 (1)	*CROSS-ORGANIZATIONAL AUDITING | IDENTITY PRESERVATION*					
AU-16 (2)	*CROSS-ORGANIZATIONAL AUDITING | SHARING OF AUDIT INFORMATION*					

TABLE D-6: SUMMARY — SECURITY ASSESSMENT AND AUTHORIZATION CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
CA-1	**Security Assessment and Authorization Policies and Procedures**		x	x	x	x
CA-2	**Security Assessments**		x	x	x	x
CA-2 (1)	*SECURITY ASSESSMENTS | INDEPENDENT ASSESSORS*		x		x	x
CA-2 (2)	*SECURITY ASSESSMENTS | SPECIALIZED ASSESSMENTS*		x			x
CA-2 (3)	*SECURITY ASSESSMENTS | EXTERNAL ORGANIZATIONS*		x			
CA-3	**System Interconnections**		x	x	x	x
CA-3 (1)	*SYSTEM INTERCONNECTIONS | UNCLASSIFIED NATIONAL SECURITY SYSTEM CONNECTIONS*					
CA-3 (2)	*SYSTEM INTERCONNECTIONS | CLASSIFIED NATIONAL SECURITY SYSTEM CONNECTIONS*					
CA-3 (3)	*SYSTEM INTERCONNECTIONS | UNCLASSIFIED NON-NATIONAL SECURITY SYSTEM CONNECTIONS*					
CA-3 (4)	*SYSTEM INTERCONNECTIONS | CONNECTIONS TO PUBLIC NETWORKS*					
CA-3 (5)	*SYSTEM INTERCONNECTIONS | RESTRICTIONS ON EXTERNAL SYSTEM CONNECTIONS*				x	x
CA-4	**Security Certification**	x	Incorporated into CA-2.			
CA-5	**Plan of Action and Milestones**		x	x	x	x
CA-5 (1)	*PLAN OF ACTION AND MILESTONES | AUTOMATION SUPPORT FOR ACCURACY / CURRENCY*		x			
CA-6	**Security Authorization**		x	x	x	x
CA-7	**Continuous Monitoring**		x	x	x	x
CA-7 (1)	*CONTINUOUS MONITORING | INDEPENDENT ASSESSMENT*		x		x	x
CA-7 (2)	*CONTINUOUS MONITORING | TYPES OF ASSESSMENTS*	x	Incorporated into CA-2.			
CA-7 (3)	*CONTINUOUS MONITORING | TREND ANALYSES*		x			
CA-8	**Penetration Testing**		x			x
CA-8 (1)	*PENETRATION TESTING | INDEPENDENT PENETRATION AGENT OR TEAM*		x			
CA-8 (2)	*PENETRATION TESTING | RED TEAM EXERCISES*		x			
CA-9	**Internal System Connections**		x	x	x	x
CA-9 (1)	*INTERNAL SYSTEM CONNECTIONS | SECURITY COMPLIANCE CHECKS*		x			

TABLE D-7: SUMMARY — CONFIGURATION MANAGEMENT CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
CM-1	**Configuration Management Policy and Procedures**		x	x	x	x
CM-2	**Baseline Configuration**		x	x	x	x

CM-2 (2)	*BASELINE CONFIGURATION | AUTOMATION SUPPORT FOR ACCURACY / CURRENCY*		x			x
CM-2 (3)	*BASELINE CONFIGURATION | RETENTION OF PREVIOUS CONFIGURATIONS*		x		x	x
CM-2 (4)	*BASELINE CONFIGURATION | UNAUTHORIZED SOFTWARE*	x	Incorporated into CM-7.			
CM-2 (5)	*BASELINE CONFIGURATION | AUTHORIZED SOFTWARE*	x	Incorporated into CM-7.			
CM-2 (6)	*BASELINE CONFIGURATION | DEVELOPMENT AND TEST ENVIRONMENTS*		x			
CM-2 (7)	*BASELINE CONFIGURATION | CONFIGURE SYSTEMS, COMPONENTS, OR DEVICES FOR HIGH-RISK AREAS*		x		x	x
CM-3	**Configuration Change Control**		x		x	x
CM-3 (1)	*CONFIGURATION CHANGE CONTROL | AUTOMATED DOCUMENT / NOTIFICATION / PROHIBITION OF CHANGES*		x			x
CM-3 (2)	*CONFIGURATION CHANGE CONTROL | TEST / VALIDATE / DOCUMENT CHANGES*		x		x	x
CM-3 (3)	*CONFIGURATION CHANGE CONTROL | AUTOMATED CHANGE IMPLEMENTATION*					
CM-3 (4)	*CONFIGURATION CHANGE CONTROL | SECURITY REPRESENTATIVE*					
CM-3 (5)	*CONFIGURATION CHANGE CONTROL | AUTOMATED SECURITY RESPONSE*					
CM-3 (6)	*CONFIGURATION CHANGE CONTROL | CRYPTOGRAPHY MANAGEMENT*					
CM-4	**Security Impact Analysis**		x	x	x	x
CM-4 (1)	*SECURITY IMPACT ANALYSIS | SEPARATE TEST ENVIRONMENTS*		x			x
CM-4 (2)	*SECURITY IMPACT ANALYSIS | VERIFICATION OF SECURITY FUNCTIONS*		x			
CM-5	**Access Restrictions for Change**				x	x
CM-5 (1)	*ACCESS RESTRICTIONS FOR CHANGE | AUTOMATED ACCESS ENFORCEMENT / AUDITING*					x
CM-5 (2)	*ACCESS RESTRICTIONS FOR CHANGE | REVIEW SYSTEM CHANGES*					x
CM-5 (3)	*ACCESS RESTRICTIONS FOR CHANGE | SIGNED COMPONENTS*					x
CM-5 (4)	*ACCESS RESTRICTIONS FOR CHANGE | DUAL AUTHORIZATION*					
CM-5 (5)	*ACCESS RESTRICTIONS FOR CHANGE | LIMIT PRODUCTION / OPERATIONAL PRIVILEGES*					
CM-5 (6)	*ACCESS RESTRICTIONS FOR CHANGE | LIMIT LIBRARY PRIVILEGES*					
CM-5 (7)	*ACCESS RESTRICTIONS FOR CHANGE | AUTOMATIC IMPLEMENTATION OF SECURITY SAFEGUARDS*	x	Incorporated into SI-7.			
CM-6	**Configuration Settings**			x	x	x
CM-6 (1)	*CONFIGURATION SETTINGS | AUTOMATED CENTRAL MANAGEMENT / APPLICATION / VERIFICATION*					x
CM-6 (2)	*CONFIGURATION SETTINGS | RESPOND TO UNAUTHORIZED CHANGES*					x
CM-6 (3)	*CONFIGURATION SETTINGS | UNAUTHORIZED CHANGE DETECTION*	x	Incorporated into SI-7.			
CM-6 (4)	*CONFIGURATION SETTINGS | CONFORMANCE DEMONSTRATION*	x	Incorporated into CM-4.			
CM-7	**Least Functionality**			x	x	x
CM-7 (1)	*LEAST FUNCTIONALITY | PERIODIC REVIEW*				x	x
CM-7 (2)	*LEAST FUNCTIONALITY | PREVENT PROGRAM EXECUTION*				x	x

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
CM-7 (3)	*LEAST FUNCTIONALITY | REGISTRATION COMPLIANCE*					
CM-7 (4)	*LEAST FUNCTIONALITY | UNAUTHORIZED SOFTWARE / BLACKLISTING*				X	
CM-7 (5)	*LEAST FUNCTIONALITY | AUTHORIZED SOFTWARE / WHITELISTING*					X
CM-8	**Information System Component Inventory**		X	X	X	X
CM-8 (1)	*INFORMATION SYSTEM COMPONENT INVENTORY | UPDATES DURING INSTALLATIONS / REMOVALS*		X		X	X
CM-8 (2)	*INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED MAINTENANCE*		X			X
CM-8 (3)	*INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED UNAUTHORIZED COMPONENT DETECTION*		X		X	X
CM-8 (4)	*INFORMATION SYSTEM COMPONENT INVENTORY | ACCOUNTABILITY INFORMATION*		X			X
CM-8 (5)	*INFORMATION SYSTEM COMPONENT INVENTORY | NO DUPLICATE ACCOUNTING OF COMPONENTS*		X		X	X
CM-8 (6)	*INFORMATION SYSTEM COMPONENT INVENTORY | ASSESSED CONFIGURATIONS / APPROVED DEVIATIONS*		X			
CM-8 (7)	*INFORMATION SYSTEM COMPONENT INVENTORY | CENTRALIZED REPOSITORY*		X			
CM-8 (8)	*INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED LOCATION TRACKING*		X			
CM-8 (9)	*INFORMATION SYSTEM COMPONENT INVENTORY | ASSIGNMENT OF COMPONENTS TO SYSTEMS*		X			
CM-9	**Configuration Management Plan**				X	X
CM-9 (1)	*CONFIGURATION MANAGEMENT PLAN | ASSIGNMENT OF RESPONSIBILITY*					
CM-10	**Software Usage Restrictions**			X	X	X
CM-10 (1)	*SOFTWARE USAGE RESTRICTIONS | OPEN SOURCE SOFTWARE*					
CM-11	**User-Installed Software**			X	X	X
CM-11 (1)	*USER-INSTALLED SOFTWARE | ALERTS FOR UNAUTHORIZED INSTALLATIONS*					
CM-11 (2)	*USER-INSTALLED SOFTWARE | PROHIBIT INSTALLATION WITHOUT PRIVILEGED STATUS*					

TABLE D-8: SUMMARY — CONTINGENCY PLANNING CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
CP-1	**Contingency Planning Policy and Procedures**		x	x	x	x
CP-2	**Contingency Plan**			x	x	x
CP-2 (1)	*CONTINGENCY PLAN | COORDINATE WITH RELATED PLANS*				x	x
CP-2 (2)	*CONTINGENCY PLAN | CAPACITY PLANNING*					x
CP-2 (3)	*CONTINGENCY PLAN | RESUME ESSENTIAL MISSIONS / BUSINESS FUNCTIONS*				x	x
CP-2 (4)	*CONTINGENCY PLAN | RESUME ALL MISSIONS / BUSINESS FUNCTIONS*					x
CP-2 (5)	*CONTINGENCY PLAN | CONTINUE ESSENTIAL MISSIONS / BUSINESS FUNCTIONS*					x
CP-2 (6)	*CONTINGENCY PLAN | ALTERNATE PROCESSING / STORAGE SITE*					
CP-2 (7)	*CONTINGENCY PLAN | COORDINATE WITH EXTERNAL SERVICE PROVIDERS*					
CP-2 (8)	*CONTINGENCY PLAN | IDENTIFY CRITICAL ASSETS*				x	x
CP-3	**Contingency Training**		x	x	x	x
CP-3 (1)	*CONTINGENCY TRAINING | SIMULATED EVENTS*		x			x
CP-3 (2)	*CONTINGENCY TRAINING | AUTOMATED TRAINING ENVIRONMENTS*		x			
CP-4	**Contingency Plan Testing**		x	x	x	x
CP-4 (1)	*CONTINGENCY PLAN TESTING | COORDINATE WITH RELATED PLANS*		x		x	x
CP-4 (2)	*CONTINGENCY PLAN TESTING | ALTERNATE PROCESSING SITE*		x			x
CP-4 (3)	*CONTINGENCY PLAN TESTING | AUTOMATED TESTING*		x			
CP-4 (4)	*CONTINGENCY PLAN TESTING | FULL RECOVERY / RECONSTITUTION*		x			
CP-5	**Contingency Plan Update**	x	Incorporated into CP-2.			
CP-6	**Alternate Storage Site**				x	x
CP-6 (1)	*ALTERNATE STORAGE SITE | SEPARATION FROM PRIMARY SITE*				x	x
CP-6 (2)	*ALTERNATE STORAGE SITE | RECOVERY TIME / POINT OBJECTIVES*					x
CP-6 (3)	*ALTERNATE STORAGE SITE | ACCESSIBILITY*				x	x
CP-7	**Alternate Processing Site**				x	x
CP-7 (1)	*ALTERNATE PROCESSING SITE | SEPARATION FROM PRIMARY SITE*				x	x
CP-7 (2)	*ALTERNATE PROCESSING SITE | ACCESSIBILITY*				x	x
CP-7 (3)	*ALTERNATE PROCESSING SITE | PRIORITY OF SERVICE*				x	x
CP-7 (4)	*ALTERNATE PROCESSING SITE | PREPARATION FOR USE*					x
CP-7 (5)	*ALTERNATE PROCESSING SITE | EQUIVALENT INFORMATION SECURITY SAFEGUARDS*	x	Incorporated into CP-7.			
CP-7 (6)	*ALTERNATE PROCESSING SITE | INABILITY TO RETURN TO PRIMARY SITE*					
CP-8	**Telecommunications Services**				x	x
CP-8 (1)	*TELECOMMUNICATIONS SERVICES | PRIORITY OF SERVICE PROVISIONS*				x	x
CP-8 (2)	*TELECOMMUNICATIONS SERVICES | SINGLE POINTS OF FAILURE*				x	x
CP-8 (3)	*TELECOMMUNICATIONS SERVICES | SEPARATION OF PRIMARY / ALTERNATE PROVIDERS*					x
CP-8 (4)	*TELECOMMUNICATIONS SERVICES | PROVIDER CONTINGENCY PLAN*					x
CP-8 (5)	*TELECOMMUNICATIONS SERVICES | ALTERNATE TELECOMMUNICATION SERVICE TESTING*					
CP-9	**Information System Backup**			x	x	x
CP-9 (1)	*INFORMATION SYSTEM BACKUP | TESTING FOR RELIABILITY / INTEGRITY*				x	x

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
CP-9 (2)	*INFORMATION SYSTEM BACKUP | TEST RESTORATION USING SAMPLING*					x
CP-9 (3)	*INFORMATION SYSTEM BACKUP | SEPARATE STORAGE FOR CRITICAL INFORMATION*					x
CP-9 (4)	*INFORMATION SYSTEM BACKUP | PROTECTION FROM UNAUTHORIZED MODIFICATION*	x	Incorporated into CP-9.			
CP-9 (5)	*INFORMATION SYSTEM BACKUP | TRANSFER TO ALTERNATE STORAGE SITE*					x
CP-9 (6)	*INFORMATION SYSTEM BACKUP | REDUNDANT SECONDARY SYSTEM*					
CP-9 (7)	*INFORMATION SYSTEM BACKUP | DUAL AUTHORIZATION*					
CP-10	**Information System Recovery and Reconstitution**			x	x	x
CP-10 (1)	*INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | CONTINGENCY PLAN TESTING*	x	Incorporated into CP-4.			
CP-10 (2)	*INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | TRANSACTION RECOVERY*				x	x
CP-10 (3)	*INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | COMPENSATING SECURITY CONTROLS*	x	Addressed by tailoring procedures.			
CP-10 (4)	*INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | RESTORE WITHIN TIME PERIOD*					x
CP-10 (5)	*INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | FAILOVER CAPABILITY*	x	Incorporated into SI-13.			
CP-10 (6)	*INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | COMPONENT PROTECTION*					
CP-11	**Alternate Communications Protocols**					
CP-12	**Safe Mode**		x			
CP-13	**Alternative Security Mechanisms**					

TABLE D-9: SUMMARY — IDENTIFICATION AND AUTHENTICATION CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
IA-1	**Identification and Authentication Policy and Procedures**		x	x	x	x
IA-2	**Identification and Authentication (Organizational Users)**			x	x	x
IA-2 (1)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | NETWORK ACCESS TO PRIVILEGED ACCOUNTS*			x	x	x
IA-2 (2)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS*				x	x
IA-2 (3)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | LOCAL ACCESS TO PRIVILEGED ACCOUNTS*				x	x
IA-2 (4)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | LOCAL ACCESS TO NON-PRIVILEGED ACCOUNTS*					x
IA-2 (5)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | GROUP AUTHENTICATION*					
IA-2 (6)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | NETWORK ACCESS TO PRIVILEGED ACCOUNTS - SEPARATE DEVICE*					
IA-2 (7)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS - SEPARATE DEVICE*					
IA-2 (8)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | NETWORK ACCESS TO PRIVILEGED ACCOUNTS - REPLAY RESISTANT*				x	x
IA-2 (9)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS - REPLAY RESISTANT*					x
IA-2 (10)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | SINGLE SIGN-ON*					
IA-2 (11)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | REMOTE ACCESS - SEPARATE DEVICE*				x	x
IA-2 (12)	*IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS) | ACCEPTANCE OF PIV CREDENTIALS*			x	x	x
IA-2 (13)	*IDENTIFICATION AND AUTHENTICATION | OUT-OF-BAND AUTHENTICATION*					
IA-3	**Device Identification and Authentication**				x	x
IA-3 (1)	*DEVICE IDENTIFICATION AND AUTHENTICATION | CRYPTOGRAPHIC BIDIRECTIONAL AUTHENTICATION*					
IA-3 (2)	*DEVICE IDENTIFICATION AND AUTHENTICATION | CRYPTOGRAPHIC BIDIRECTIONAL NETWORK AUTHENTICATION*	x	Incorporated into IA-3 (1).			
IA-3 (3)	*DEVICE IDENTIFICATION AND AUTHENTICATION | DYNAMIC ADDRESS ALLOCATION*					
IA-3 (4)	*DEVICE IDENTIFICATION AND AUTHENTICATION | DEVICE ATTESTATION*					
IA-4	**Identifier Management**			x	x	x
IA-4 (1)	*IDENTIFIER MANAGEMENT | PROHIBIT ACCOUNT IDENTIFIERS AS PUBLIC IDENTIFIERS*					
IA-4 (2)	*IDENTIFIER MANAGEMENT | SUPERVISOR AUTHORIZATION*					
IA-4 (3)	*IDENTIFIER MANAGEMENT | MULTIPLE FORMS OF CERTIFICATION*					
IA-4 (4)	*IDENTIFIER MANAGEMENT | IDENTIFY USER STATUS*					
IA-4 (5)	*IDENTIFIER MANAGEMENT | DYNAMIC MANAGEMENT*					
IA-4 (6)	*IDENTIFIER MANAGEMENT | CROSS-ORGANIZATION MANAGEMENT*					
IA-4 (7)	*IDENTIFIER MANAGEMENT | IN-PERSON REGISTRATION*					
IA-5	**Authenticator Management**			x	x	x

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
IA-5 (1)	*AUTHENTICATOR MANAGEMENT | PASSWORD-BASED AUTHENTICATION*			X	X	X
IA-5 (2)	*AUTHENTICATOR MANAGEMENT | PKI-BASED AUTHENTICATION*				X	X
IA-5 (3)	*AUTHENTICATOR MANAGEMENT | IN-PERSON OR TRUSTED THIRD-PARTY REGISTRATION*				X	X
IA-5 (4)	*AUTHENTICATOR MANAGEMENT | AUTOMATED SUPPORT FOR PASSWORD STRENGTH DETERMINATION*					
IA-5 (5)	*AUTHENTICATOR MANAGEMENT | CHANGE AUTHENTICATORS PRIOR TO DELIVERY*					
IA-5 (6)	*AUTHENTICATOR MANAGEMENT | PROTECTION OF AUTHENTICATORS*					
IA-5 (7)	*AUTHENTICATOR MANAGEMENT | NO EMBEDDED UNENCRYPTED STATIC AUTHENTICATORS*					
IA-5 (8)	*AUTHENTICATOR MANAGEMENT | MULTIPLE INFORMATION SYSTEM ACCOUNTS*					
IA-5 (9)	*AUTHENTICATOR MANAGEMENT | CROSS-ORGANIZATION CREDENTIAL MANAGEMENT*					
IA-5 (10)	*AUTHENTICATOR MANAGEMENT | DYNAMIC CREDENTIAL ASSOCIATION*					
IA-5 (11)	*AUTHENTICATOR MANAGEMENT | HARDWARE TOKEN-BASED AUTHENTICATION*			X	X	X
IA-5 (12)	*AUTHENTICATOR MANAGEMENT | BIOMETRIC AUTHENTICATION*					
IA-5 (13)	*AUTHENTICATOR MANAGEMENT | EXPIRATION OF CACHED AUTHENTICATORS*					
IA-5 (14)	*AUTHENTICATOR MANAGEMENT | MANAGING CONTENT OF PKI TRUST STORES*					
IA-5 (15)	*AUTHENTICATOR MANAGEMENT | FICAM-APPROVED PRODUCTS AND SERVICES*					
IA-6	**Authenticator Feedback**			X	X	X
IA-7	**Cryptographic Module Authentication**			X	X	X
IA-8	**Identification and Authentication (Non-Organizational Users)**			X	X	X
IA-8 (1)	*IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS) | ACCEPTANCE OF PIV CREDENTIALS FROM OTHER AGENCIES*			X	X	X
IA-8 (2)	*IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS) | ACCEPTANCE OF THIRD-PARTY CREDENTIALS*			X	X	X
IA-8 (3)	*IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS) | USE OF FICAM-APPROVED PRODUCTS*			X	X	X
IA-8 (4)	*IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS) | USE OF FICAM-ISSUED PROFILES*			X	X	X
IA-8 (5)	*IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS) | ACCEPTANCE OF PIV-I CREDENTIALS*					
IA-9	**Service Identification and Authentication**					
IA-9 (1)	*SERVICE IDENTIFICATION AND AUTHENTICATION | INFORMATION EXCHANGE*					
IA-9 (2)	*SERVICE IDENTIFICATION AND AUTHENTICATION | TRANSMISSION OF DECISIONS*					
IA-10	**Adaptive Identification and Authentication**					
IA-11	**Re-authentication**					

TABLE D-10: SUMMARY — INCIDENT RESPONSE CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
IR-1	**Incident Response Policy and Procedures**		X	X	X	X
IR-2	**Incident Response Training**		X	X	X	X

MA-6 (3)	*TIMELY MAINTENANCE | AUTOMATED SUPPORT FOR PREDICTIVE MAINTENANCE*					

TABLE D-12: SUMMARY — MEDIA PROTECTION CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
MP-1	**Media Protection Policy and Procedures**		x	x	x	x
MP-2	**Media Access**			x	x	x
MP-2 (1)	*MEDIA ACCESS | AUTOMATED RESTRICTED ACCESS*	x	Incorporated into MP-4 (2).			
MP-2 (2)	*MEDIA ACCESS | CRYPTOGRAPHIC PROTECTION*	x	Incorporated into SC-28 (1).			
MP-3	**Media Marking**				x	x
MP-4	**Media Storage**				x	x
MP-4 (1)	*MEDIA STORAGE | CRYPTOGRAPHIC PROTECTION*	x	Incorporated into SC-28 (1).			
MP-4 (2)	*MEDIA STORAGE | AUTOMATED RESTRICTED ACCESS*					
MP-5	**Media Transport**				x	x
MP-5 (1)	*MEDIA TRANSPORT | PROTECTION OUTSIDE OF CONTROLLED AREAS*	x	Incorporated into MP-5.			
MP-5 (2)	*MEDIA TRANSPORT | DOCUMENTATION OF ACTIVITIES*	x	Incorporated into MP-5.			
MP-5 (3)	*MEDIA TRANSPORT | CUSTODIANS*					
MP-5 (4)	*MEDIA TRANSPORT | CRYPTOGRAPHIC PROTECTION*				x	x
MP-6	**Media Sanitization**			x	x	x
MP-6 (1)	*MEDIA SANITIZATION | REVIEW / APPROVE / TRACK / DOCUMENT / VERIFY*					x
MP-6 (2)	*MEDIA SANITIZATION | EQUIPMENT TESTING*					x
MP-6 (3)	*MEDIA SANITIZATION | NONDESTRUCTIVE TECHNIQUES*					x
MP-6 (4)	*MEDIA SANITIZATION | CONTROLLED UNCLASSIFIED INFORMATION*	x	Incorporated into MP-6.			
MP-6 (5)	*MEDIA SANITIZATION | CLASSIFIED INFORMATION*	x	Incorporated into MP-6.			
MP-6 (6)	*MEDIA SANITIZATION | MEDIA DESTRUCTION*	x	Incorporated into MP-6.			
MP-6 (7)	*MEDIA SANITIZATION | DUAL AUTHORIZATION*					
MP-6 (8)	*MEDIA SANITIZATION | REMOTE PURGING / WIPING OF INFORMATION*					
MP-7	**Media Use**			x	x	x
MP-7 (1)	*MEDIA USE | PROHIBIT USE WITHOUT OWNER*				x	x
MP-7 (2)	*MEDIA USE | PROHIBIT USE OF SANITIZATION-RESISTANT MEDIA*					
MP-8	**Media Downgrading**					
MP-8 (1)	*MEDIA DOWNGRADING | DOCUMENTATION OF PROCESS*					
MP-8 (2)	*MEDIA DOWNGRADING | EQUIPMENT TESTING*					
MP-8 (3)	*MEDIA DOWNGRADING | CONTROLLED UNCLASSIFIED INFORMATION*					
MP-8 (4)	*MEDIA DOWNGRADING | CLASSIFIED INFORMATION*					

TABLE D-13: SUMMARY — PHYSICAL AND ENVIRONMENTAL PROTECTION CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
PE-1	**Physical and Environmental Protection Policy and Procedures**		x	x	x	x
PE-2	**Physical Access Authorizations**			x	x	x
PE-2 (1)	*PHYSICAL ACCESS AUTHORIZATIONS | ACCESS BY POSITION / ROLE*					
PE-2 (2)	*PHYSICAL ACCESS AUTHORIZATIONS | TWO FORMS OF IDENTIFICATION*					
PE-2 (3)	*PHYSICAL ACCESS AUTHORIZATIONS | RESTRICT UNESCORTED ACCESS*					
PE-3	**Physical Access Control**			x	x	x
PE-3 (1)	*PHYSICAL ACCESS CONTROL | INFORMATION SYSTEM ACCESS*					x
PE-3 (2)	*PHYSICAL ACCESS CONTROL | FACILITY / INFORMATION SYSTEM BOUNDARIES*					
PE-3 (3)	*PHYSICAL ACCESS CONTROL | CONTINUOUS GUARDS / ALARMS / MONITORING*					
PE-3 (4)	*PHYSICAL ACCESS CONTROL | LOCKABLE CASINGS*					
PE-3 (5)	*PHYSICAL ACCESS CONTROL | TAMPER PROTECTION*					
PE-3 (6)	*PHYSICAL ACCESS CONTROL | FACILITY PENETRATION TESTING*					
PE-4	**Access Control for Transmission Medium**				x	x
PE-5	**Access Control for Output Devices**				x	x
PE-5 (1)	*ACCESS CONTROL FOR OUTPUT DEVICES | ACCESS TO OUTPUT BY AUTHORIZED INDIVIDUALS*					
PE-5 (2)	*ACCESS CONTROL FOR OUTPUT DEVICES | ACCESS TO OUTPUT BY INDIVIDUAL IDENTITY*					
PE-5 (3)	*ACCESS CONTROL FOR OUTPUT DEVICES | MARKING OUTPUT DEVICES*					
PE-6	**Monitoring Physical Access**		x	x	x	x
PE-6 (1)	*MONITORING PHYSICAL ACCESS | INTRUSION ALARMS / SURVEILLANCE EQUIPMENT*		x		x	x
PE-6 (2)	*MONITORING PHYSICAL ACCESS | AUTOMATED INTRUSION RECOGNITION / RESPONSES*		x			
PE-6 (3)	*MONITORING PHYSICAL ACCESS | VIDEO SURVEILLANCE*		x			
PE-6 (4)	*MONITORING PHYSICAL ACCESS | MONITORING PHYSICAL ACCESS TO INFORMATION SYSTEMS*		x			x
PE-7	**Visitor Control**	x	Incorporated into PE-2 and PE-3.			
PE-8	**Visitor Access Records**		x	x	x	x
PE-8 (1)	*VISITOR ACCESS RECORDS | AUTOMATED RECORDS MAINTENANCE / REVIEW*					x
PE-8 (2)	*VISITOR ACCESS RECORDS | PHYSICAL ACCESS RECORDS*	x	Incorporated into PE-2.			
PE-9	**Power Equipment and Cabling**				x	x
PE-9 (1)	*POWER EQUIPMENT AND CABLING | REDUNDANT CABLING*					
PE-9 (2)	*POWER EQUIPMENT AND CABLING | AUTOMATIC VOLTAGE CONTROLS*					
PE-10	**Emergency Shutoff**				x	x
PE-10 (1)	*EMERGENCY SHUTOFF | ACCIDENTAL / UNAUTHORIZED ACTIVATION*	x	Incorporated into PE-10.			
PE-11	**Emergency Power**				x	x
PE-11 (1)	*EMERGENCY POWER | LONG-TERM ALTERNATE POWER SUPPLY - MINIMAL OPERATIONAL CAPABILITY*					x
PE-11 (2)	*EMERGENCY POWER | LONG-TERM ALTERNATE POWER SUPPLY - SELF-CONTAINED*					

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
PE-12	**Emergency Lighting**			x	x	x
PE-12 (1)	*EMERGENCY LIGHTING | ESSENTIAL MISSIONS / BUSINESS FUNCTIONS*					
PE-13	**Fire Protection**			x	x	x
PE-13 (1)	*FIRE PROTECTION | DETECTION DEVICES / SYSTEMS*					x
PE-13 (2)	*FIRE PROTECTION | SUPPRESSION DEVICES / SYSTEMS*					x
PE-13 (3)	*FIRE PROTECTION | AUTOMATIC FIRE SUPPRESSION*				x	x
PE-13 (4)	*FIRE PROTECTION | INSPECTIONS*					
PE-14	**Temperature and Humidity Controls**			x	x	x
PE-14 (1)	*TEMPERATURE AND HUMIDITY CONTROLS | AUTOMATIC CONTROLS*					
PE-14 (2)	*TEMPERATURE AND HUMIDITY CONTROLS | MONITORING WITH ALARMS / NOTIFICATIONS*					
PE-15	**Water Damage Protection**			x	x	x
PE-15 (1)	*WATER DAMAGE PROTECTION | AUTOMATION SUPPORT*					x
PE-16	**Delivery and Removal**			x	x	x
PE-17	**Alternate Work Site**				x	x
PE-18	**Location of Information System Components**					x
PE-18 (1)	*LOCATION OF INFORMATION SYSTEM COMPONENTS | FACILITY SITE*					
PE-19	**Information Leakage**					
PE-19 (1)	*INFORMATION LEAKAGE | NATIONAL EMISSIONS / TEMPEST POLICIES AND PROCEDURES*					
PE-20	**Asset Monitoring and Tracking**					

TABLE D-14: SUMMARY — PLANNING CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
PL-1	**Security Planning Policy and Procedures**		x	x	x	x
PL-2	**System Security Plan**		x	x	x	x
PL-2 (1)	*SYSTEM SECURITY PLAN | CONCEPT OF OPERATIONS*	x	Incorporated into PL-7.			
PL-2 (2)	*SYSTEM SECURITY PLAN | FUNCTIONAL ARCHITECTURE*	x	Incorporated into PL-8.			
PL-2 (3)	*SYSTEM SECURITY PLAN | PLAN / COORDINATE WITH OTHER ORGANIZATIONAL ENTITIES*		x		x	x
PL-3	**System Security Plan Update**	x	Incorporated into PL-2.			
PL-4	**Rules of Behavior**		x	x	x	x
PL-4 (1)	*RULES OF BEHAVIOR | SOCIAL MEDIA AND NETWORKING RESTRICTIONS*		x		x	x
PL-5	**Privacy Impact Assessment**	x	Incorporated into Appendix J, AR-2.			
PL-6	**Security-Related Activity Planning**	x	Incorporated into PL-2.			
PL-7	**Security Concept of Operations**					
PL-8	**Information Security Architecture**		x		x	x
PL-8 (1)	*INFORMATION SECURITY ARCHITECTURE | DEFENSE-IN-DEPTH*		x			
PL-8 (2)	*INFORMATION SECURITY ARCHITECTURE | SUPPLIER DIVERSITY*		x			
PL-9	**Central Management**		x			

TABLE D-15: SUMMARY — PERSONNEL SECURITY CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
PS-1	**Personnel Security Policy and Procedures**		x	x	x	x
PS-2	**Position Risk Designation**			x	x	x
PS-3	**Personnel Screening**			x	x	x
PS-3 (1)	*PERSONNEL SCREENING | CLASSIFIED INFORMATION*					
PS-3 (2)	*PERSONNEL SCREENING | FORMAL INDOCTRINATION*					
PS-3 (3)	*PERSONNEL SCREENING | INFORMATION WITH SPECIAL PROTECTION MEASURES*					
PS-4	**Personnel Termination**			x	x	x
PS-4 (1)	*PERSONNEL TERMINATION | POST-EMPLOYMENT REQUIREMENTS*					
PS-4 (2)	*PERSONNEL TERMINATION | AUTOMATED NOTIFICATION*					x
PS-5	**Personnel Transfer**			x	x	x
PS-6	**Access Agreements**		x	x	x	x
PS-6 (1)	*ACCESS AGREEMENTS | INFORMATION REQUIRING SPECIAL PROTECTION*	x	Incorporated into PS-3.			
PS-6 (2)	*ACCESS AGREEMENTS | CLASSIFIED INFORMATION REQUIRING SPECIAL PROTECTION*		x			
PS-6 (3)	*ACCESS AGREEMENTS | POST-EMPLOYMENT REQUIREMENTS*		x			
PS-7	**Third-Party Personnel Security**		x	x	x	x
PS-8	**Personnel Sanctions**			x	x	x

TABLE D-16: SUMMARY — RISK ASSESSMENT CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
RA-1	**Risk Assessment Policy and Procedures**		x	x	x	x
RA-2	**Security Categorization**			x	x	x
RA-3	**Risk Assessment**		x	x	x	x
RA-4	**Risk Assessment Update**	x	Incorporated into RA-3.			
RA-5	**Vulnerability Scanning**		x	x	x	x
RA-5 (1)	*VULNERABILITY SCANNING | UPDATE TOOL CAPABILITY*		x		x	x
RA-5 (2)	*VULNERABILITY SCANNING | UPDATE BY FREQUENCY / PRIOR TO NEW SCAN / WHEN IDENTIFIED*		x		x	x
RA-5 (3)	*VULNERABILITY SCANNING | BREADTH / DEPTH OF COVERAGE*		x			
RA-5 (4)	*VULNERABILITY SCANNING | DISCOVERABLE INFORMATION*		x			x
RA-5 (5)	*VULNERABILITY SCANNING | PRIVILEGED ACCESS*		x		x	x
RA-5 (6)	*VULNERABILITY SCANNING | AUTOMATED TREND ANALYSES*		x			
RA-5 (7)	*VULNERABILITY SCANNING | AUTOMATED DETECTION AND NOTIFICATION OF UNAUTHORIZED COMPONENTS*	x	Incorporated into CM-8.			
RA-5 (8)	*VULNERABILITY SCANNING | REVIEW HISTORIC AUDIT LOGS*		x			
RA-5 (9)	*VULNERABILITY SCANNING | PENETRATION TESTING AND ANALYSES*	x	Incorporated into CA-8.			
RA-5 (10)	*VULNERABILITY SCANNING | CORRELATE SCANNING INFORMATION*		x			
RA-6	**Technical Surveillance Countermeasures Survey**		x			

TABLE D-17: SUMMARY — SYSTEM AND SERVICES ACQUISITION CONTROLS

CNTL NO.	CONTROL NAME *Control Enhancement Name*	WITHDRAWN	ASSURANCE	CONTROL BASELINES		
				LOW	MOD	HIGH
SA-1	**System and Services Acquisition Policy and Procedures**		x	x	x	x

ADJUSTMENTS TO SECURITY CONTROL BASELINES

ALLOCATION OF SECURITY CONTROLS AND ASSIGNMENT OF PRIORITY SEQUENCING CODES

With each revision to SP 800-53, minor adjustments may occur with the security control baselines including, for example, allocating additional controls and/or control enhancements, eliminating selected controls/enhancements, and changing sequencing priority codes (P-codes). These changes reflect: (i) the ongoing receipt and analysis of threat information; (ii) the periodic reexamination of the initial assumptions that generated the security control baselines; (iii) the desire for common security control baseline starting points for national security and non-national security systems to achieve community-wide convergence (relying subsequently on specific overlays to describe any adjustments from the common starting points); and (iv) the periodic reassessment of priority codes to appropriately balance the workload of security control implementation. Over time, as the security control catalog expands to address the continuing challenges from a dynamic and growing threat space that is increasingly sophisticated, organizations will come to rely to a much greater degree on overlays to provide the needed specialization for their security plans.

APPENDIX E

ASSURANCE AND TRUSTWORTHINESS

MEASURES OF CONFIDENCE FOR INFORMATION SYSTEMS

Security assurance is a critical aspect in determining the trustworthiness of information systems. Assurance is the measure of confidence that the security functions, features, practices, policies, procedures, mechanisms, and architecture of organizational information systems accurately mediate and enforce established security policies.[94] The objective of this appendix is:

- To encourage organizations to include assurance requirements in procurements of information systems, system components, and services;
- To encourage hardware, software, and firmware developers to employ development practices that result in more trustworthy information technology products and systems;
- To encourage organizations to identify, select, and use information technology products that have been built with appropriate levels of assurance and to employ sound systems and security engineering techniques and methods during the system development life cycle process;
- To reduce information security risk by deploying more trustworthy information technology products within critical information systems or system components; and
- To encourage developers and organizations to obtain on an ongoing basis, assurance evidence for maintaining trustworthiness of information systems.

Minimum security requirements for federal information and information systems are defined in FIPS Publication 200. These requirements can be satisfied by selecting, tailoring, implementing, and obtaining assurance evidence for the security controls in the low, moderate, or high baselines in Appendix D.[95] The baselines also include the assurance-related controls for the minimum assurance requirements that are generally applicable to federal information and information systems.[96] However, considering the current threat space and the increasing risk to organizational operations and assets, individuals, other organizations, and the Nation, posed by the advanced persistent threat (APT), organizations may choose to implement additional assurance-related controls from Appendix F. These additional controls can be selected based on the tailoring guidance provided in Section 3.2. Organizations can also consider developing high-assurance overlays for critical missions/business functions, specialized environments of operation, and/or information technologies (see Section 3.3 and Appendix I). When assurance-related controls cannot be satisfied, organizations can propose compensating controls (e.g., procedural/operational

[94] Section 2.6 provides an introduction to the concepts of assurance and trustworthiness and how the two concepts are related. A trustworthiness model is illustrated in Figure 3.

[95] CNSS Instruction 1253 provides security control baselines for national security systems. Therefore, the assurance-related controls in the baselines established for the national security community, if so designated, may differ from those controls designated in Tables E-1 through E-3.

[96] It is difficult to determine if a given security control baseline from Appendix D provides the assurance needed across all information technologies, users, platforms, and organizations. For example, while the use of formal methods might be appropriate in a cross-domain product, different assurance techniques might be appropriate for a complex air traffic control system or for a web server providing emergency preparedness information from the Department of Homeland Security. Still, the existing baselines do have assurance aspects that reflect the minimum assurance that is anticipated to be common across all technologies, users, platforms, and organizations.

solutions to compensate for insufficient technology-based solutions) or assume a greater degree of risk with regard to the actual security capability achieved.

The New Look for Assurance

While previous versions of Special Publication 800-53 addressed minimum assurance requirements, the focus was on higher-level, more abstract requirements applied to the low, moderate, and high baselines. This revision takes a fundamentally different approach to assurance by defining specific assurance-related security controls in Appendix F that can be implemented by organizations based on the security categorizations of their information systems—making the assurance requirements more *actionable* and providing opportunities for increasing the levels of assurance based on mission and business needs, current/projected threats, unique operating environments, or the use of new technologies. The identification of specific assurance-related controls in the low, moderate, and high baselines in easy-to read tables (Tables E-1, E-2, E-3) helps organizations to quickly define controls necessary to satisfy minimum assurance requirements. The optional assurance-related controls in Table E-4 provide organizations with specification language to use in acquisitions targeted at the developers of information systems, system components, and information system services. The controls address specific methodologies, techniques, design, and architectural considerations as well as sound system and security engineering principles to fundamentally improve the quality of hardware, software, and firmware components that will be integrated into organizational information systems or the critical infrastructure. The designation of assurance-related controls is not intended to imply a greater level of importance for such controls. Achieving adequate security for organizational information systems requires the correct combination of both functionality- and assurance-related security controls. Only by understanding the importance of the concept of assurance and recognizing which security controls are more assurance-oriented versus functionality-oriented can organizations select the most appropriate combination of controls to protect their organizational operations and assets, individuals, other organizations, and the Nation.

The following sections provide a description of the assurance-related controls that are included in each of the security control baselines in Appendix D. The criteria for whether a security control is assurance-related or functionality-related is based on the overall characteristics of the control. In general, assurance-related controls are controls that: (i) define processes, procedures, techniques, or methodologies for designing and developing information systems and system components (i.e., hardware, software, firmware); (ii) provide supporting operational processes including improving the quality of systems/components/processes; (iii) produce security evidence from developmental or operational activities; (iv) determine security control effectiveness or risk (e.g., audit, testing, evaluation, analysis, assessment, verification, validation, monitoring); or (v) improve personnel skills, expertise, and understanding (e.g., security awareness/training, incident response training, contingency training).

Security controls may be designated as assurance-related controls even when the controls exhibit some functional characteristics or properties (e.g., SI-4, Information System Monitoring). The distinction between functionality and assurance is less important when describing the assurance-related controls in the baselines—primarily because the security controls in the three baselines after the tailoring process is applied, become part of the security plans for information systems and for organizations.[97] However, the distinction becomes more important when organizations exercise the option of selecting additional security controls to increase the level of assurance (or the degree of confidence) in the security functionality and security capability.

[97] Organizations are cautioned to carefully examine the assurance-related controls in the baselines during the tailoring process, including the development of overlays, to help ensure that controls are not being inadvertently eliminated that provide the measures of confidence in the security functionality needed for mission/business protection.

Minimum Assurance Requirements – Low-Impact Systems

Assurance Requirement: The organization, based on its security requirements, security policies, and needed security capabilities, has an expectation of: (i) a **limited** strength of security functionality; and (ii) a **limited** degree of confidence supported by the depth and coverage of associated security evidence, that the security functionality is complete, consistent, and correct.

Supplemental Guidance: Security functionality and assurance for low-impact systems are achieved by the implementation of security controls from the tailored low baseline in Appendix D. Assurance requirements for low-impact systems (including the information technology components that are part of those systems), align with that which is readily achievable with unmodified, commercial off-the-shelf (COTS) products and services. Due to the limited strength of functionality expected for low-impact systems, the depth/coverage of security evidence[98] produced is minimal and is not expected to be more than what is routinely provided by COTS manufacturers, vendors, and resellers. The depth/coverage evidence is further supplemented by the results of security control assessments and the ongoing monitoring of organizational information systems and environments in which the systems operate. For other than technology-based functionality, the emphasis is on a limited degree of confidence in the completeness, correctness, and consistency of procedural and/or operational security functionality (e.g., policies, procedures, physical security, and personnel security). Assurance requirements specified in the form of developmental and operational assurance controls for low-impact systems are listed in Table E-1. Organizations, through the tailoring process (including an organizational assessment of risk), may choose to add other assurance-related controls and/or control enhancements to the set included in Table E-1.

TABLE E-1: ASSURANCE-RELATED CONTROLS FOR LOW-IMPACT SYSTEMS[99]

[98] NIST Special Publication 800-53A provides additional information on depth and coverage in security control assessments.

[99] The assurance-related controls in Table E-1 are a *subset* of the security controls contained in the security control baseline for low-impact systems in Appendix D. Implementing the assurance-related controls in Table E-1 (including depth/coverage security evidence from NIST Special Publication 800-53A) will satisfy the minimum assurance requirements for low-impact systems mandated by FIPS Publication 200.

Minimum Assurance Requirements – Moderate-Impact Systems

Assurance Requirement: The organization, based on its security requirements, security policies, and needed security capabilities, has an expectation of: (i) a **moderate** strength of security functionality; and (ii) a **moderate** degree of confidence supported by the depth and coverage of associated security evidence, that the security functionality is complete, consistent, and correct.

Supplemental Guidance: Security functionality and assurance for moderate-impact systems are achieved by the implementation of security controls from the tailored moderate baseline in Appendix D. Assurance requirements for moderate-impact systems (including the information technology components that are part of those systems) add to the expectations at the low-assurance level by: (i) incorporating COTS security functionality with greater strength of mechanism and capability than the strength of mechanism and capability achieved in low-impact systems; (ii) requiring perhaps, some special development; (iii) establishing more secure configuration settings; and (iv) requiring some additional assessment of the implemented capability. Due to the moderate strength of functionality expected for moderate-impact systems, the depth/coverage of security evidence[100] produced is more substantial than the minimal evidence produced for low-impact systems but still in the range of what can be provided by COTS manufacturers, vendors, and resellers. The depth/coverage evidence is further supplemented by the results of additional security control assessments and the ongoing monitoring of organizational information systems and environments of operation. For other than technology-based functionality, the emphasis is on a moderate degree of confidence in the completeness, correctness, and consistency of procedural and/or operational security functionality (e.g., policies, procedures, physical security, and personnel security). Assurance requirements in the form of developmental and operational assurance controls for moderate-impact systems are listed in Table E-2. Organizations, through the tailoring process (including an organizational assessment of risk), may choose to add other assurance-related controls and/or control enhancements to the set included in Table E-2.

MA	MA-1		

[100] NIST Special Publication 800-53A provides additional information on depth and coverage in security control assessments.

[101] The assurance-related controls in Table E-2 are a *subset* of the security controls contained in the security control baseline for moderate-impact systems in Appendix D. Implementing the assurance-related controls in Table E-2 (including depth/coverage security evidence from NIST Special Publication 800-53A) will satisfy the minimum assurance requirements for moderate-impact systems mandated by FIPS Publication 200. The **bold** text indicates the *delta* from the low baseline (i.e., the assurance-related controls added to the low baseline to produce the increased level of assurance in the moderate baseline).

Minimum Assurance Requirements – High-Impact Systems

Assurance Requirement: The organization, based on its security requirements, security policies, and needed security capabilities, has an expectation of: (i) a **high** strength of security functionality; and (ii) a **high** degree of confidence supported by the depth and coverage of associated security evidence, that the security functionality is complete, consistent, and correct.

Supplemental Guidance: Security functionality and assurance for high-impact systems are achieved by the implementation of security controls from the tailored high baseline in Appendix D. Assurance requirements for high-impact systems (including the information technology components that are part of those systems), add to the expectations at the moderate assurance level by: (i) incorporating higher-end COTS security capabilities that result from the application of commonly accepted best commercial development practices for reducing latent flaw rates, some special development, and additional assessment of the implemented capability. Due to the high strength of functionality expected for high-impact systems, the depth/coverage of security evidence[102] produced is more comprehensive than the evidence produced for moderate-impact systems. Although the evidence may still be in the range of what can be provided by COTS manufacturers, vendors, and resellers, greater assurance from independent assessment providers may be required. The depth/coverage evidence is supplemented by the results of additional security control assessments and the ongoing monitoring of organizational information systems/environments of operation. For other than technology-based functionality, there is a high degree of confidence in the completeness, correctness, and consistency of procedural and/or operational security functionality (e.g., policies, procedures, physical security, and personnel security). Assurance requirements in the form of developmental and operational assurance controls for high-impact information systems are listed in Table E-3. Organizations, through the tailoring process (including an organizational assessment of risk), may choose to add other assurance-related controls and/or control enhancements to the set included in Table E-3.

TABLE E-3: ASSURANCE-RELATED CONTROLS FOR HIGH-IMPACT SYSTEMS[103]

ID	CONTROLS	ID	CONTROLS
AC	AC-1	MP	MP-1

MA	MA-1		

[102] NIST Special Publication 800-53A provides additional information on depth and coverage in security control assessments.

[103] The assurance-related controls in Table E-3 are a *subset* of the security controls contained in the security control baseline for high-impact systems in Appendix D. Implementing the assurance-related controls in Table E-3 (including depth/coverage security evidence from NIST Special Publication 800-53A) will satisfy the minimum assurance requirements for high-impact systems mandated by FIPS Publication 200. The **bold** text indicates the *delta* from the moderate baseline (i.e., the assurance-related controls added to the moderate baseline to produce the increased level of assurance in the high baseline).

Security Controls to Achieve Enhanced Assurance

While the assurance-related controls allocated to the low, moderate, and high baselines in the previous sections, represent minimum assurance requirements, organizations can, over time, choose to raise the level of assurance in their information systems—increasing the level of trustworthiness accordingly. This is accomplished by adding assurance-related controls to the controls in the baselines to increase both the strength of security functionality and degree of confidence that the functionality is correct, complete, and consistent—making the functionality highly resistant to penetration, tamper, or bypass. Security functionality that is highly resistant to penetration, tamper, and bypass requires a significant work factor on the part of adversaries to compromise the confidentiality, integrity, or availability of the information system or system components where that functionality is employed.

Since high-assurance information technology products may be more costly and difficult to obtain, organizations may choose to partition their information systems into distinct subsystems to isolate the critical components and focus the high-assurance efforts on a more narrowly defined subset of information resources. Organizations that find it difficult to achieve high-assurance information technology solutions may have to rely to a greater extent on procedural or operational protections to ensure mission and business success. This includes, for example, reengineering critical mission and business processes to be less susceptible to high-end threats. Table E-4 provides additional developmental and operational activities (e.g., in the SA, SI, and CM security control families), that organizations can select to achieve an enhanced level of assurance (up to and including high assurance). The list of assurance-related controls is not intended to be exhaustive. Organizations, during the tailoring process, may choose to designate other security controls as assurance-related and add to the exemplar set in Table E-4.

TABLE E-4: SECURITY CONTROLS FOR ENHANCED ASSURANCE[104]

ID	CONTROLS	ID	CONTROLS
AC	AC-25	MP	No additional controls.
AT	AT-2 (1), AT-3 (all enhancements)	PE	PE-6 (2), PE-6 (3)
AU	AU-6 (4), AU-6 (7), AU-6 (8), AU-6 (9), AU-6 (10), AU-10 (all enhancements), AU-11 (1), AU-13 (plus enhancements), AU-14 (plus enhancements)	PL	PL-8 (all enhancements), PL-9
CA	CA-2 (3), CA-5 (1), CA-7 (3), CA-8 (all enhancements), CA-9 (1)	PS	PS-6 (2), PS-6 (3)
CM	CM-2 (6), CM-4 (2), CM-8 (6), CM-8 (7), CM-8 (8), CM-8 (9)	RA	RA-5 (3), RA-5 (6), RA-5 (8), RA-5 (10), RA-6
CP	CP-3 (2), CP-4 (3), CP-4 (4), CP-12	SA	SA-4 (3), SA-4 (5), SA-4 (6), SA-4 (7), SA-4 (8), SA-9 (1), SA-9 (3), SA-9 (4), SA-9 (5), SA-10 (all enhancements), SA-11 (all enhancements), SA-12 (all enhancements), SA-13, SA-14, SA-15 (all enhancements), SA-17 (all enhancements), SA-18 (plus enhancements), SA-19 (plus enhancements), SA-20, SA-21 (plus enhancement), SA-22 (plus enhancement)
IA	No additional controls.	SC	SC-2 (1), SC-3 (all enhancements), SC-6, SC-7 (22), SC-11 (plus enhancement), SC-29 (plus enhancement), SC-30 (plus enhancements), SC-31 (plus enhancements), SC-32, SC-34 (plus enhancements), SC-36 (plus enhancement), SC-37 (plus enhancement), SC-38, SC-39 (all enhancements)
IR	IR-3 (1)	SI	SI-4 (1), SI-4 (3), SI-4 (7), SI-4 (9), SI-4 (10), SI-4 (11), SI-4 (12), SI-4 (13), SI-4 (14), SI-4 (15), SI-4 (16), SI-4 (17), SI-4 (18), SI-4 (19), SI-4 (20), SI-4 (21), SI-4 (22), SI-4 (23), SI-4 (24), SI-7 (3), SI-7 (6), SI-7 (8), SI-7 (9), SI-7 (10), SI-7 (11), SI-7 (12), SI-7 (13), SI-7 (15), SI-7 (16), SI-10 (all enhancements), SI-13 (plus enhancements), SI-14 (plus enhancement), SI-15, SI-17
MA	No additional controls.		

[104] The assurance-related controls in Table E-4 represent the additional security controls needed to achieve enhanced levels of assurance (i.e., the controls needed to go beyond the minimum assurance levels that are represented by the assurance-related controls in Tables E-1, E-2, and E-3). When an assurance-related control is allocated to a baseline (i.e., listed in Tables E-1, E-2, or E-3), but all of its control enhancements are in Table E-4, it is designated in the table as **Control** (*all enhancements*). When an assurance-related control and all of its control enhancements are not allocated to baselines, it is designated in the table as **Control** (*plus enhancements*). When assurance-related control enhancements from a particular control are allocated to one of the baselines, the remaining unselected control enhancements are listed individually in Table E-4.

APPENDIX F

SECURITY CONTROL CATALOG

SECURITY CONTROLS, ENHANCEMENTS, AND SUPPLEMENTAL GUIDANCE

The catalog of security controls in this appendix provides a range of safeguards and countermeasures for organizations and information systems.[105] The security controls have been designed to facilitate compliance with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidelines.[106] The organization of the security control catalog, the structure of the security controls, and the concept of allocating security controls and control enhancements to the initial baselines in Appendix D are described in Chapter Two. The security controls in the catalog with few exceptions, have been designed to be policy- and technology-neutral. This means that security controls and control enhancements focus on the fundamental safeguards and countermeasures necessary to protect information during processing, while in storage, and during transmission. Therefore, it is beyond the scope of this publication to provide guidance on the application of security controls to specific technologies, communities of interest, environments of operation, or missions/business functions. These areas are addressed by the use of the tailoring process described in Chapter Three and the development of overlays described in Appendix I.

In the few cases where specific technologies are called out in security controls (e.g., mobile, PKI, wireless, VOIP), organizations are cautioned that the need to provide adequate security goes well beyond the requirements in a single control associated with a particular technology. Many of the needed safeguards/countermeasures are obtained from the other security controls in the catalog allocated to the initial control baselines as the starting point for the development of security plans and overlays using the tailoring process. In addition to the organization-driven development of specialized security plans and overlays, NIST Special Publications and Interagency Reports may provide guidance on recommended security controls for specific technologies and sector-specific applications (e.g., Smart Grid, healthcare, Industrial Control Systems, and mobile).

Employing a policy- and technology-neutral security control catalog has the following benefits:

- It encourages organizations to focus on the *security capabilities* required for mission/business success and the protection of information, irrespective of the information technologies that are employed in organizational information systems;
- It encourages organizations to analyze each security control for its applicability to specific technologies, environments of operation, missions/business functions, and communities of interest; and

[105] An online version of the catalog of security controls is also available at http://web.nvd.nist.gov/view/800-53/home.

[106] Compliance necessitates organizations executing *due diligence* with regard to information security and risk management. Information security due diligence includes using all appropriate information as part of an organization-wide risk management program to effectively use the tailoring guidance and inherent flexibility in NIST publications so that the selected security controls documented in organizational security plans meet the specific mission and business requirements of organizations. Using the risk management tools and techniques that are available to organizations is essential in developing, implementing, and maintaining the safeguards and countermeasures with the necessary and sufficient strength of mechanism to address the current threats to organizational operations and assets, individuals, other organizations, and the Nation. Employing effective risk-based processes, procedures, and technologies will help ensure that all federal information systems and organizations have the necessary resilience to support ongoing federal responsibilities, critical infrastructure applications, and continuity of government.

- It encourages organizations to specify security policies as part of the tailoring process for security controls that have variable parameters.

For example, organizations using smart phones, tablets, or other types of mobile devices would start the tailoring process by assuming that *all* security controls and control enhancements in the appropriate baseline (low, moderate, or high) are needed. The tailoring process may result in certain security controls being eliminated for a variety of reasons, including, for example, the inability of the technology to support the implementation of the control. However, the elimination of such controls without understanding the potential adverse impacts to organizational missions and business functions can significantly increase information security risk and should be carefully analyzed. This type of analysis is essential in order for organizations to make effective risk-based decisions including the selection of appropriate compensating security controls, when considering the use of these emerging mobile devices and technologies. The specialization of security plans using the tailoring guidance and overlays, together with a comprehensive set of technology- and policy-neutral security controls, promotes cost-effective, risk-based information security for organizations—in any sector, for any technology, and in any operating environment.

The security controls in the catalog are expected to change over time, as controls are withdrawn, revised, and added. In order to maintain stability in security plans and automated tools supporting the implementation of Special Publication 800-53, security controls will not be renumbered each time a control is withdrawn. Rather, notations of security controls that have been withdrawn are maintained in the catalog for historical purposes. Security controls are withdrawn for a variety of reasons including, for example: the security capability provided by the withdrawn control has been incorporated into another control; the security capability provided by the withdrawn control is redundant to an existing control; or the security control is deemed to be no longer necessary.

There may, on occasion, be repetition in requirements that appear in the security controls and control enhancements that are part of the security control catalog. This repetition in requirements is intended to reinforce the security requirements from the perspective of multiple controls and/or enhancements. For example, the requirement for strong identification and authentication when conducting remote maintenance activities appears in the MA family in the specific context of systems maintenance activities conducted by organizations. The identification and authentication requirement also appears in a more general context in the IA family. While these requirements appear to be redundant (i.e., overlapping), they are, in fact, mutually reinforcing and not intended to require additional effort on the part of organizations in the development and implementation of security programs.

Implementation Tip

New security controls and control enhancements will be developed on a regular basis using state-of-the-practice information from national-level threat and vulnerability databases as well as information on the tactics, techniques, and procedures employed by adversaries in launching cyber attacks. The proposed modifications to security controls and security control baselines will be carefully weighed during each revision cycle, considering the desire for stability of the security control catalog and the need to respond to changing threats, vulnerabilities, attack methods, and information technologies. The overall objective is to raise the basic level of information security over time. Organizations may choose to develop new security controls when there is a specific security capability required and the appropriate controls are not available in Appendices F or G.

SECURITY CONTROL CLASS DESIGNATIONS

MANAGEMENT, OPERATIONAL, AND TECHNICAL REFERENCES

Because many security controls within the security control families in Appendix F have various combinations of *management*, *operational*, and *technical* properties, the specific class designations have been removed from the security control families. Organizations may still find it useful to apply such designations to individual security controls and control enhancements or to individual sections within a particular control/enhancement. Organizations may find it beneficial to employ class designations as a way to group or refer to security controls. The class designations may also help organizations with the process of allocating security controls and control enhancements to: (i) responsible parties or information systems (e.g., as common or hybrid controls); (ii) specific roles; and/or (iii) specific components of a system. For example, organizations may determine that the responsibility for system-specific controls they have placed in the management class belong to the information system owner, controls placed in the operational class belong to the Information System Security Officer (ISSO), and controls placed in the technical class belong to one or more system administrators. This example is provided to illustrate the potential usefulness of designating classes for controls and/or control enhancements; it is not meant to suggest or require additional tasks for organizations.

CAUTIONARY NOTE

DEVELOPMENT OF SYSTEMS, COMPONENTS, AND SERVICES

With the renewed emphasis on trustworthy information systems and supply chain security, it is essential that organizations have the capability to express their information security requirements with clarity and specificity in order to engage the information technology industry and obtain the systems, components, and services necessary for mission and business success. To ensure that organizations have such capability, Special Publication 800-53 provides a set of security controls in the System and Services Acquisition family (i.e., SA family) addressing requirements for the development of information systems, information technology products, and information system services. Therefore, many of the controls in the SA family are directed at developers of those systems, components, and services. It is important for organizations to recognize that the scope of the security controls in the SA family includes all system/component/service development and the developers associated with such development whether the development is conducted by internal organizational personnel or by external developers through the contracting/acquisition process. Affected controls include SA-8, SA-10, SA-11, SA-15, SA-16, SA-17, SA-20, and SA-21.

Fundamentals of the Catalog

Security controls and control enhancements in Appendices F and G are generally designed to be policy-neutral and technology/implementation-independent. Organizations provide information about security controls and control enhancements in two ways:

- By specifying security control implementation details (e.g., platform dependencies) in the associated security plan for the information system or security program plan for the organization; and
- By establishing specific values in the variable sections of selected security controls through the use of *assignment* and *selection* statements.

Assignment and selection statements provide organizations with the capability to specialize security controls and control enhancements based on organizational security requirements or requirements originating in federal laws, Executive Orders, directives, policies, regulations, standards, or guidelines. Organization-defined parameters used in assignment and selection statements in the basic security controls apply also to all control enhancements associated with those controls. Control enhancements strengthen the fundamental security capability in the base control but are not a substitute for using assignment or selection statements to provide greater specificity to the control. Assignment statements for security controls and control enhancements do not contain minimum or maximum values (e.g., testing contingency plans *at least annually*). Organizations should consult specific federal laws, Executive Orders, directives, regulations, policies, standards, or guidelines as the definitive sources for such information. The absence of minimum and maximum values from the security controls and control enhancements does not obviate the need for organizations to comply with requirements in the controlling source publications.

The first security control in each family (i.e., the dash-1 control) generates requirements for specific policies and procedures that are needed for the effective implementation of the other security controls in the family. Therefore, individual controls and control enhancements in a particular family do not call for the development of such policies and procedures. Supplemental guidance sections of security controls and control enhancements do not contain any requirements or references to FIPS or NIST Special Publications. NIST publications are, however, included in a *references* section for each security control.

In support of the Joint Task Force initiative to develop a unified information security framework for the federal government, security controls and control enhancements for national security systems are included in this appendix. The inclusion of such controls and enhancements is not intended to impose security requirements on organizations that operate national security systems. Rather, organizations can use the security controls and control enhancements on a voluntary basis with the approval of federal officials exercising policy authority over national security systems. In addition, the security control priorities and security control baselines listed in Appendix D and in the priority and baseline allocation summary boxes below each security control in Appendix F, apply to non-national security systems *only* unless otherwise directed by the federal officials with national security policy authority.

Using the Catalog

Organizations employ security controls[107] in federal information systems and the environments in which those systems operate in accordance with FIPS Publication 199, FIPS Publication 200, and NIST Special Publications 800-37 and 800-39. Security categorization of federal information and information systems, as required by FIPS Publication 199, is the first step in the RMF.[108] Next, organizations select the appropriate security control baselines for their information systems by satisfying the minimum security requirements set forth in FIPS Publication 200. Appendix D includes three security control baselines that are associated with the designated impact levels of information systems as determined during the security categorization process.[109] After baseline selection, organizations tailor the baselines by: (i) identifying/designating common controls; (ii) applying scoping considerations; (iii) selecting compensating controls, if needed; (iv) assigning control parameter values in selection and assignment statements; (v) supplementing the baseline controls with additional controls and control enhancements from the security control catalog; and (vi) providing additional information for control implementation. Organizations can also use the baseline tailoring process with the overlay concept that is described in Section 3.2 and Appendix I. Risk assessments, as described in NIST Special Publication 800-30, guide and inform the security control selection process.[110]

CAUTIONARY NOTE

USE OF CRYPTOGRAPHY

If cryptography is required for the protection of information based on the selection of security controls in Appendix F and subsequently implemented by organizational information systems, the cryptographic mechanisms comply with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance. This includes, for NSA-approved cryptography to protect classified information, FIPS-validated cryptography to protect unclassified information, and NSA-approved and FIPS-compliant key management technologies and processes. Security controls SC-12 and SC-13 provide specific information on the selection of appropriate cryptographic mechanisms, including the strength of such mechanisms.

[107] The security controls in Special Publication 800-53 are available online and can be downloaded in various formats from the NIST web site at: http://web.nvd.nist.gov/view/800-53/home.

[108] CNSS Instruction 1253 provides guidance for *security categorization* of national security systems.

[109] CNSS Instruction 1253 provides guidance on *security control baselines* for national security systems and specific tailoring requirements associated with such systems.

[110] There are additional security controls and control enhancements that appear in the catalog that are not used in any of the initial baselines. These additional controls and control enhancements are available to organizations and can be used in the tailoring process to achieve the needed level of protection in accordance with organizational risk assessments.

FAMILY: ACCESS CONTROL

AC-1 ACCESS CONTROL POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. An access control policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the access control policy and associated access controls; and

b. Reviews and updates the current:

   1. Access control policy [*Assignment: organization-defined frequency*]; and

   2. Access control procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the AC family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** AC-1	**MOD** AC-1	**HIGH** AC-1

AC-2 ACCOUNT MANAGEMENT

Control: The organization:

a. Identifies and selects the following types of information system accounts to support organizational missions/business functions: [*Assignment: organization-defined information system account types*];

b. Assigns account managers for information system accounts;

c. Establishes conditions for group and role membership;

d. Specifies authorized users of the information system, group and role membership, and access authorizations (i.e., privileges) and other attributes (as required) for each account;

e. Requires approvals by [*Assignment: organization-defined personnel or roles*] for requests to create information system accounts;

f. Creates, enables, modifies, disables, and removes information system accounts in accordance with [*Assignment: organization-defined procedures or conditions*];

g. Monitors the use of information system accounts;

h. Notifies account managers:

1. When accounts are no longer required;

2. When users are terminated or transferred; and

3. When individual information system usage or need-to-know changes;

i. Authorizes access to the information system based on:

1. A valid access authorization;

2. Intended system usage; and

3. Other attributes as required by the organization or associated missions/business functions;

j. Reviews accounts for compliance with account management requirements [*Assignment: organization-defined frequency*]; and

k. Establishes a process for reissuing shared/group account credentials (if deployed) when individuals are removed from the group.

Supplemental Guidance: Information system account types include, for example, individual, shared, group, system, guest/anonymous, emergency, developer/manufacturer/vendor, temporary, and service. Some of the account management requirements listed above can be implemented by organizational information systems. The identification of authorized users of the information system and the specification of access privileges reflects the requirements in other security controls in the security plan. Users requiring administrative privileges on information system accounts receive additional scrutiny by appropriate organizational personnel (e.g., system owner, mission/business owner, or chief information security officer) responsible for approving such accounts and privileged access. Organizations may choose to define access privileges or other attributes by account, by type of account, or a combination of both. Other attributes required for authorizing access include, for example, restrictions on time-of-day, day-of-week, and point-of-origin. In defining other account attributes, organizations consider system-related requirements (e.g., scheduled maintenance, system upgrades) and mission/business requirements, (e.g., time zone differences, customer requirements, remote access to support travel requirements). Failure to consider these factors could affect information system availability. Temporary and emergency accounts are accounts intended for short-term use. Organizations establish temporary accounts as a part of normal account activation procedures when there is a need for short-term accounts without the demand for immediacy in account activation. Organizations establish emergency accounts in response to crisis situations and with the need for rapid account activation. Therefore, emergency account activation may bypass normal account authorization processes. Emergency and temporary accounts are not to be confused with infrequently used accounts (e.g., local logon accounts used for special tasks defined by organizations or when network resources are unavailable). Such accounts remain available and are not subject to automatic disabling or removal dates. Conditions for disabling or deactivating accounts include, for example: (i) when shared/group, emergency, or temporary accounts are no longer required; or (ii) when individuals are transferred or terminated. Some types of information system accounts may require specialized training. Related controls: AC-3, AC-4, AC-5, AC-6, AC-10, AC-17, AC-19, AC-20, AU-9, IA-2, IA-4, IA-5, IA-8, CM-5, CM-6, CM-11, MA-3, MA-4, MA-5, PL-4, SC-13.

Control Enhancements:

(1) *ACCOUNT MANAGEMENT | AUTOMATED SYSTEM ACCOUNT MANAGEMENT*

The organization employs automated mechanisms to support the management of information system accounts.

Supplemental Guidance: The use of automated mechanisms can include, for example: using email or text messaging to automatically notify account managers when users are terminated or transferred; using the information system to monitor account usage; and using telephonic notification to report atypical system account usage.

(2) *ACCOUNT MANAGEMENT | REMOVAL OF TEMPORARY / EMERGENCY ACCOUNTS*

The information system automatically [*Selection: removes; disables*] temporary and emergency accounts after [*Assignment: organization-defined time period for each type of account*].

Supplemental Guidance: This control enhancement requires the removal of both temporary and emergency accounts automatically after a predefined period of time has elapsed, rather than at the convenience of the systems administrator.

(3) *ACCOUNT MANAGEMENT | DISABLE INACTIVE ACCOUNTS*

The information system automatically disables inactive accounts after [*Assignment: organization-defined time period*].

(4) *ACCOUNT MANAGEMENT | AUTOMATED AUDIT ACTIONS*

The information system automatically audits account creation, modification, enabling, disabling, and removal actions, and notifies [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Related controls: AU-2, AU-12.

(5) *ACCOUNT MANAGEMENT | INACTIVITY LOGOUT*

The organization requires that users log out when [*Assignment: organization-defined time-period of expected inactivity or description of when to log out*].

Supplemental Guidance: Related control: SC-23.

(6) *ACCOUNT MANAGEMENT | DYNAMIC PRIVILEGE MANAGEMENT*

The information system implements the following dynamic privilege management capabilities: [*Assignment: organization-defined list of dynamic privilege management capabilities*].

Supplemental Guidance: In contrast to conventional access control approaches which employ static information system accounts and predefined sets of user privileges, dynamic access control approaches (e.g., service-oriented architectures) rely on run time access control decisions facilitated by dynamic privilege management. While user identities may remain relatively constant over time, user privileges may change more frequently based on ongoing mission/business requirements and operational needs of organizations. Dynamic privilege management can include, for example, the immediate revocation of privileges from users, as opposed to requiring that users terminate and restart their sessions to reflect any changes in privileges. Dynamic privilege management can also refer to mechanisms that change the privileges of users based on dynamic rules as opposed to editing specific user profiles. This type of privilege management includes, for example, automatic adjustments of privileges if users are operating out of their normal work times, or if information systems are under duress or in emergency maintenance situations. This control enhancement also includes the ancillary effects of privilege changes, for example, the potential changes to encryption keys used for communications. Dynamic privilege management can support requirements for information system resiliency. Related control: AC-16.

(7) *ACCOUNT MANAGEMENT | ROLE-BASED SCHEMES*

The organization:

(a) Establishes and administers privileged user accounts in accordance with a role-based access scheme that organizes allowed information system access and privileges into roles;

(b) Monitors privileged role assignments; and

(c) Takes [*Assignment: organization-defined actions*] when privileged role assignments are no longer appropriate.

Supplemental Guidance: Privileged roles are organization-defined roles assigned to individuals that allow those individuals to perform certain security-relevant functions that ordinary users are not authorized to perform. These privileged roles include, for example, key management, account management, network and system administration, database administration, and web administration.

(8) *ACCOUNT MANAGEMENT | DYNAMIC ACCOUNT CREATION*

The information system creates [*Assignment: organization-defined information system accounts*] dynamically.

Supplemental Guidance: Dynamic approaches for creating information system accounts (e.g., as implemented within service-oriented architectures) rely on establishing accounts (identities) at

run time for entities that were previously unknown. Organizations plan for dynamic creation of information system accounts by establishing trust relationships and mechanisms with the appropriate authorities to validate related authorizations and privileges. Related control: AC-16.

(9) *ACCOUNT MANAGEMENT | RESTRICTIONS ON USE OF SHARED GROUPS / ACCOUNTS*

The organization only permits the use of shared/group accounts that meet [*Assignment: organization-defined conditions for establishing shared/group accounts*].

(10) *ACCOUNT MANAGEMENT | SHARED / GROUP ACCOUNT CREDENTIAL TERMINATION*

The information system terminates shared/group account credentials when members leave the group.

(11) *ACCOUNT MANAGEMENT | USAGE CONDITIONS*

The information system enforces [*Assignment: organization-defined circumstances and/or usage conditions*] for [*Assignment: organization-defined information system accounts*].

Supplemental Guidance: Organizations can describe the specific conditions or circumstances under which information system accounts can be used, for example, by restricting usage to certain days of the week, time of day, or specific durations of time.

(12) *ACCOUNT MANAGEMENT | ACCOUNT MONITORING / ATYPICAL USAGE*

The organization:

(a) Monitors information system accounts for [*Assignment: organization-defined atypical use*]; and

(b) Reports atypical usage of information system accounts to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Atypical usage includes, for example, accessing information systems at certain times of the day and from locations that are not consistent with the normal usage patterns of individuals working in organizations. Related control: CA-7.

(13) *ACCOUNT MANAGEMENT | DISABLE ACCOUNTS FOR HIGH-RISK INDIVIDUALS*

The organization disables accounts of users posing a significant risk within [*Assignment: organization-defined time period*] of discovery of the risk.

Supplemental Guidance: Users posing a significant risk to organizations include individuals for whom reliable evidence or intelligence indicates either the intention to use authorized access to information systems to cause harm or through whom adversaries will cause harm. Harm includes potential adverse impacts to organizational operations and assets, individuals, other organizations, or the Nation. Close coordination between authorizing officials, information system administrators, and human resource managers is essential in order for timely execution of this control enhancement. Related control: PS-4.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AC-2	**MOD** AC-2 (1) (2) (3) (4)	**HIGH** AC-2 (1) (2) (3) (4) (5) (11) (12) (13)

AC-3 ACCESS ENFORCEMENT

Control: The information system enforces approved authorizations for logical access to information and system resources in accordance with applicable access control policies.

Supplemental Guidance: Access control policies (e.g., identity-based policies, role-based policies, control matrices, cryptography) control access between active entities or subjects (i.e., users or processes acting on behalf of users) and passive entities or objects (e.g., devices, files, records, domains) in information systems. In addition to enforcing authorized access at the information system level and recognizing that information systems can host many applications and services in support of organizational missions and business operations, access enforcement mechanisms can also be employed at the application and service level to provide increased information security.

Related controls: AC-2, AC-4, AC-5, AC-6, AC-16, AC-17, AC-18, AC-19, AC-20, AC-21, AC-22, AU-9, CM-5, CM-6, CM-11, MA-3, MA-4, MA-5, PE-3.

Control Enhancements:

(1) *ACCESS ENFORCEMENT | RESTRICTED ACCESS TO PRIVILEGED FUNCTIONS*

[Withdrawn: Incorporated into AC-6].

(2) *ACCESS ENFORCEMENT | DUAL AUTHORIZATION*

The information system enforces dual authorization for [*Assignment: organization-defined privileged commands and/or other organization-defined actions*].

Supplemental Guidance: Dual authorization mechanisms require the approval of two authorized individuals in order to execute. Organizations do not require dual authorization mechanisms when immediate responses are necessary to ensure public and environmental safety. Dual authorization may also be known as two-person control. Related controls: CP-9, MP-6.

(3) *ACCESS ENFORCEMENT | MANDATORY ACCESS CONTROL*

The information system enforces [*Assignment: organization-defined mandatory access control policies*] over all subjects and objects where the policy specifies that:

(a) The policy is uniformly enforced across all subjects and objects within the boundary of the information system;

(b) A subject that has been granted access to information is constrained from doing any of the following;

(1) Passing the information to unauthorized subjects or objects;

(2) Granting its privileges to other subjects;

(3) Changing one or more security attributes on subjects, objects, the information system, or information system components;

(4) Choosing the security attributes and attribute values to be associated with newly created or modified objects; or

(5) Changing the rules governing access control; and

(c) [*Assignment: Organized-defined subjects*] may explicitly be granted [*Assignment: organization-defined privileges (i.e., they are trusted subjects)*] such that they are not limited by some or all of the above constraints.

Supplemental Guidance: Mandatory access control as defined in this control enhancement is synonymous with nondiscretionary access control, and is not constrained only to certain historical uses (e.g., implementations using the Bell-LaPadula Model). The above class of mandatory access control policies constrains what actions subjects can take with information obtained from data objects for which they have already been granted access, thus preventing the subjects from passing the information to unauthorized subjects and objects. This class of mandatory access control policies also constrains what actions subjects can take with respect to the propagation of access control privileges; that is, a subject with a privilege cannot pass that privilege to other subjects. The policy is uniformly enforced over all subjects and objects to which the information system has control. Otherwise, the access control policy can be circumvented. This enforcement typically is provided via an implementation that meets the reference monitor concept (see AC-25). The policy is bounded by the information system boundary (i.e., once the information is passed outside of the control of the system, additional means may be required to ensure that the constraints on the information remain in effect). The trusted subjects described above are granted privileges consistent with the concept of least privilege (see AC-6). Trusted subjects are only given the minimum privileges relative to the above policy necessary for satisfying organizational mission/business needs. The control is most applicable when there is some policy mandate (e.g., law, Executive Order, directive, or regulation) that establishes a policy regarding access to sensitive/classified information and some users of the information system are not authorized access to all sensitive/classified information resident in the information system. This control can operate in conjunction with AC-3 (4). A subject that is constrained in its operation by policies governed by this control is still able to operate under the less rigorous constraints of AC-3 (4), but policies governed by this control take precedence over the less rigorous constraints of AC-3 (4). For example,

while a mandatory access control policy imposes a constraint preventing a subject from passing information to another subject operating at a different sensitivity label, AC-3 (4) permits the subject to pass the information to any subject with the same sensitivity label as the subject. Related controls: AC-25, SC-11.

(4) *ACCESS ENFORCEMENT | DISCRETIONARY ACCESS CONTROL*

The information system enforces [*Assignment: organization-defined discretionary access control policies*] over defined subjects and objects where the policy specifies that a subject that has been granted access to information can do one or more of the following:

(a) Pass the information to any other subjects or objects;

(b) Grant its privileges to other subjects;

(c) Change security attributes on subjects, objects, the information system, or the information system's components;

(d) Choose the security attributes to be associated with newly created or revised objects; or

(e) Change the rules governing access control.

Supplemental Guidance: When discretionary access control policies are implemented, subjects are not constrained with regard to what actions they can take with information for which they have already been granted access. Thus, subjects that have been granted access to information are not prevented from passing (i.e., the subjects have the discretion to pass) the information to other subjects or objects. This control enhancement can operate in conjunction with AC-3 (3). A subject that is constrained in its operation by policies governed by AC-3 (3) is still able to operate under the less rigorous constraints of this control enhancement. Thus, while AC-3 (3) imposes constraints preventing a subject from passing information to another subject operating at a different sensitivity level, AC-3 (4) permits the subject to pass the information to any subject at the same sensitivity level. The policy is bounded by the information system boundary. Once the information is passed outside of the control of the information system, additional means may be required to ensure that the constraints remain in effect. While the older, more traditional definitions of discretionary access control require identity-based access control, that limitation is not required for this use of discretionary access control.

(5) *ACCESS ENFORCEMENT | SECURITY-RELEVANT INFORMATION*

The information system prevents access to [*Assignment: organization-defined security-relevant information*] except during secure, non-operable system states.

Supplemental Guidance: Security-relevant information is any information within information systems that can potentially impact the operation of security functions or the provision of security services in a manner that could result in failure to enforce system security policies or maintain the isolation of code and data. Security-relevant information includes, for example, filtering rules for routers/firewalls, cryptographic key management information, configuration parameters for security services, and access control lists. Secure, non-operable system states include the times in which information systems are not performing mission/business-related processing (e.g., the system is off-line for maintenance, troubleshooting, boot-up, shut down). Related control: CM-3.

(6) *ACCESS ENFORCEMENT | PROTECTION OF USER AND SYSTEM INFORMATION*

[Withdrawn: Incorporated into MP-4 and SC-28].

(7) *ACCESS ENFORCEMENT | ROLE-BASED ACCESS CONTROL*

The information system enforces a role-based access control policy over defined subjects and objects and controls access based upon [*Assignment: organization-defined roles and users authorized to assume such roles*].

Supplemental Guidance: Role-based access control (RBAC) is an access control policy that restricts information system access to authorized users. Organizations can create specific roles based on job functions and the authorizations (i.e., privileges) to perform needed operations on organizational information systems associated with the organization-defined roles. When users are assigned to the organizational roles, they inherit the authorizations or privileges defined for those roles. RBAC simplifies privilege administration for organizations because privileges are not assigned directly to every user (which can be a significant number of

individuals for mid- to large-size organizations) but are instead acquired through role assignments. RBAC can be implemented either as a mandatory or discretionary form of access control. For organizations implementing RBAC with mandatory access controls, the requirements in AC-3 (3) define the scope of the subjects and objects covered by the policy.

(8) *ACCESS ENFORCEMENT | REVOCATION OF ACCESS AUTHORIZATIONS*

The information system enforces the revocation of access authorizations resulting from changes to the security attributes of subjects and objects based on [*Assignment: organization-defined rules governing the timing of revocations of access authorizations*].

Supplemental Guidance: Revocation of access rules may differ based on the types of access revoked. For example, if a subject (i.e., user or process) is removed from a group, access may not be revoked until the next time the object (e.g., file) is opened or until the next time the subject attempts a new access to the object. Revocation based on changes to security labels may take effect immediately. Organizations can provide alternative approaches on how to make revocations immediate if information systems cannot provide such capability and immediate revocation is necessary.

(9) *ACCESS ENFORCEMENT | CONTROLLED RELEASE*

The information system does not release information outside of the established system boundary unless:

(a) The receiving [*Assignment: organization-defined information system or system component*] provides [*Assignment: organization-defined security safeguards*]; and

(b) [*Assignment: organization-defined security safeguards*] are used to validate the appropriateness of the information designated for release.

Supplemental Guidance: Information systems can only protect organizational information within the confines of established system boundaries. Additional security safeguards may be needed to ensure that such information is adequately protected once it is passed beyond the established information system boundaries. Examples of information leaving the system boundary include transmitting information to an external information system or printing the information on one of its printers. In cases where the information system is unable to make a determination of the adequacy of the protections provided by entities outside its boundary, as a mitigating control, organizations determine procedurally whether the external information systems are providing adequate security. The means used to determine the adequacy of the security provided by external information systems include, for example, conducting inspections or periodic testing, establishing agreements between the organization and its counterpart organizations, or some other process. The means used by external entities to protect the information received need not be the same as those used by the organization, but the means employed are sufficient to provide consistent adjudication of the security policy to protect the information. This control enhancement requires information systems to employ technical or procedural means to validate the information prior to releasing it to external systems. For example, if the information system passes information to another system controlled by another organization, technical means are employed to validate that the security attributes associated with the exported information are appropriate for the receiving system. Alternatively, if the information system passes information to a printer in organization-controlled space, procedural means can be employed to ensure that only appropriately authorized individuals gain access to the printer. This control enhancement is most applicable when there is some policy mandate (e.g., law, Executive Order, directive, or regulation) that establishes policy regarding access to the information, and that policy applies beyond the realm of a particular information system or organization.

(10) *ACCESS ENFORCEMENT | AUDITED OVERRIDE OF ACCESS CONTROL MECHANISMS*

The organization employs an audited override of automated access control mechanisms under [*Assignment: organization-defined conditions*].

Supplemental Guidance: Related controls: AU-2, AU-6.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AC-3	**MOD** AC-3	**HIGH** AC-3

AC-4 INFORMATION FLOW ENFORCEMENT

Control: The information system enforces approved authorizations for controlling the flow of information within the system and between interconnected systems based on [*Assignment: organization-defined information flow control policies*].

Supplemental Guidance: Information flow control regulates where information is allowed to travel within an information system and between information systems (as opposed to who is allowed to access the information) and without explicit regard to subsequent accesses to that information. Flow control restrictions include, for example, keeping export-controlled information from being transmitted in the clear to the Internet, blocking outside traffic that claims to be from within the organization, restricting web requests to the Internet that are not from the internal web proxy server, and limiting information transfers between organizations based on data structures and content. Transferring information between information systems representing different security domains with different security policies introduces risk that such transfers violate one or more domain security policies. In such situations, information owners/stewards provide guidance at designated policy enforcement points between interconnected systems. Organizations consider mandating specific architectural solutions when required to enforce specific security policies. Enforcement includes, for example: (i) prohibiting information transfers between interconnected systems (i.e., allowing access only); (ii) employing hardware mechanisms to enforce one-way information flows; and (iii) implementing trustworthy regrading mechanisms to reassign security attributes and security labels.

Organizations commonly employ information flow control policies and enforcement mechanisms to control the flow of information between designated sources and destinations (e.g., networks, individuals, and devices) within information systems and between interconnected systems. Flow control is based on the characteristics of the information and/or the information path. Enforcement occurs, for example, in boundary protection devices (e.g., gateways, routers, guards, encrypted tunnels, firewalls) that employ rule sets or establish configuration settings that restrict information system services, provide a packet-filtering capability based on header information, or message-filtering capability based on message content (e.g., implementing key word searches or using document characteristics). Organizations also consider the trustworthiness of filtering/inspection mechanisms (i.e., hardware, firmware, and software components) that are critical to information flow enforcement. Control enhancements 3 through 22 primarily address cross-domain solution needs which focus on more advanced filtering techniques, in-depth analysis, and stronger flow enforcement mechanisms implemented in cross-domain products, for example, high-assurance guards. Such capabilities are generally not available in commercial off-the-shelf information technology products. Related controls: AC-3, AC-17, AC-19, AC-21, CM-6, CM-7, SA-8, SC-2, SC-5, SC-7, SC-18.

Control Enhancements:

(1) *INFORMATION FLOW ENFORCEMENT | OBJECT SECURITY ATTRIBUTES*

The information system uses [*Assignment: organization-defined security attributes*] associated with [*Assignment: organization-defined information, source, and destination objects*] to enforce [*Assignment: organization-defined information flow control policies*] as a basis for flow control decisions.

Supplemental Guidance: Information flow enforcement mechanisms compare security attributes associated with information (data content and data structure) and source/destination objects, and respond appropriately (e.g., block, quarantine, alert administrator) when the mechanisms encounter information flows not explicitly allowed by information flow policies. For example, an information object labeled *Secret* would be allowed to flow to a destination object labeled *Secret*, but an information object labeled *Top Secret* would not be allowed to flow to a

destination object labeled *Secret*. Security attributes can also include, for example, source and destination addresses employed in traffic filter firewalls. Flow enforcement using explicit security attributes can be used, for example, to control the release of certain types of information. Related control: AC-16.

(2) *INFORMATION FLOW ENFORCEMENT | PROCESSING DOMAINS*

The information system uses protected processing domains to enforce [*Assignment: organization-defined information flow control policies*] as a basis for flow control decisions.

Supplemental Guidance: Within information systems, protected processing domains are processing spaces that have controlled interactions with other processing spaces, thus enabling control of information flows between these spaces and to/from data/information objects. A protected processing domain can be provided, for example, by implementing domain and type enforcement. In domain and type enforcement, information system processes are assigned to domains; information is identified by types; and information flows are controlled based on allowed information accesses (determined by domain and type), allowed signaling among domains, and allowed process transitions to other domains.

(3) *INFORMATION FLOW ENFORCEMENT | DYNAMIC INFORMATION FLOW CONTROL*

The information system enforces dynamic information flow control based on [*Assignment: organization-defined policies*].

Supplemental Guidance: Organizational policies regarding dynamic information flow control include, for example, allowing or disallowing information flows based on changing conditions or mission/operational considerations. Changing conditions include, for example, changes in organizational risk tolerance due to changes in the immediacy of mission/business needs, changes in the threat environment, and detection of potentially harmful or adverse events. Related control: SI-4.

(4) *INFORMATION FLOW ENFORCEMENT | CONTENT CHECK ENCRYPTED INFORMATION*

The information system prevents encrypted information from bypassing content-checking mechanisms by [*Selection (one or more): decrypting the information; blocking the flow of the encrypted information; terminating communications sessions attempting to pass encrypted information;* [*Assignment: organization-defined procedure or method*]].

Supplemental Guidance: Related control: SI-4.

(5) *INFORMATION FLOW ENFORCEMENT | EMBEDDED DATA TYPES*

The information system enforces [*Assignment: organization-defined limitations*] on embedding data types within other data types.

Supplemental Guidance: Embedding data types within other data types may result in reduced flow control effectiveness. Data type embedding includes, for example, inserting executable files as objects within word processing files, inserting references or descriptive information into a media file, and compressed or archived data types that may include multiple embedded data types. Limitations on data type embedding consider the levels of embedding and prohibit levels of data type embedding that are beyond the capability of the inspection tools.

(6) *INFORMATION FLOW ENFORCEMENT | METADATA*

The information system enforces information flow control based on [*Assignment: organization-defined metadata*].

Supplemental Guidance: Metadata is information used to describe the characteristics of data. Metadata can include structural metadata describing data structures (e.g., data format, syntax, and semantics) or descriptive metadata describing data contents (e.g., age, location, telephone number). Enforcing allowed information flows based on metadata enables simpler and more effective flow control. Organizations consider the trustworthiness of metadata with regard to data accuracy (i.e., knowledge that the metadata values are correct with respect to the data), data integrity (i.e., protecting against unauthorized changes to metadata tags), and the binding of metadata to the data payload (i.e., ensuring sufficiently strong binding techniques with appropriate levels of assurance). Related controls: AC-16, SI-7.

(7) *INFORMATION FLOW ENFORCEMENT | ONE-WAY FLOW MECHANISMS*

The information system enforces [*Assignment: organization-defined one-way flows*] using hardware mechanisms.

(8) *INFORMATION FLOW ENFORCEMENT | SECURITY POLICY FILTERS*

The information system enforces information flow control using [*Assignment: organization-defined security policy filters*] as a basis for flow control decisions for [*Assignment: organization-defined information flows*].

Supplemental Guidance: Organization-defined security policy filters can address data structures and content. For example, security policy filters for data structures can check for maximum file lengths, maximum field sizes, and data/file types (for structured and unstructured data). Security policy filters for data content can check for specific words (e.g., dirty/clean word filters), enumerated values or data value ranges, and hidden content. Structured data permits the interpretation of data content by applications. Unstructured data typically refers to digital information without a particular data structure or with a data structure that does not facilitate the development of rule sets to address the particular sensitivity of the information conveyed by the data or the associated flow enforcement decisions. Unstructured data consists of: (i) bitmap objects that are inherently non language-based (i.e., image, video, or audio files); and (ii) textual objects that are based on written or printed languages (e.g., commercial off-the-shelf word processing documents, spreadsheets, or emails). Organizations can implement more than one security policy filter to meet information flow control objectives (e.g., employing clean word lists in conjunction with dirty word lists may help to reduce false positives).

(9) *INFORMATION FLOW ENFORCEMENT | HUMAN REVIEWS*

The information system enforces the use of human reviews for [*Assignment: organization-defined information flows*] under the following conditions: [*Assignment: organization-defined conditions*].

Supplemental Guidance: Organizations define security policy filters for all situations where automated flow control decisions are possible. When a fully automated flow control decision is not possible, then a human review may be employed in lieu of, or as a complement to, automated security policy filtering. Human reviews may also be employed as deemed necessary by organizations.

(10) *INFORMATION FLOW ENFORCEMENT | ENABLE / DISABLE SECURITY POLICY FILTERS*

The information system provides the capability for privileged administrators to enable/disable [*Assignment: organization-defined security policy filters*] under the following conditions: [*Assignment: organization-defined conditions*].

Supplemental Guidance: For example, as allowed by the information system authorization, administrators can enable security policy filters to accommodate approved data types.

(11) *INFORMATION FLOW ENFORCEMENT | CONFIGURATION OF SECURITY POLICY FILTERS*

The information system provides the capability for privileged administrators to configure [*Assignment: organization-defined security policy filters*] to support different security policies.

Supplemental Guidance: For example, to reflect changes in security policies, administrators can change the list of "dirty words" that security policy mechanisms check in accordance with the definitions provided by organizations.

(12) *INFORMATION FLOW ENFORCEMENT | DATA TYPE IDENTIFIERS*

The information system, when transferring information between different security domains, uses [*Assignment: organization-defined data type identifiers*] to validate data essential for information flow decisions.

Supplemental Guidance: Data type identifiers include, for example, filenames, file types, file signatures/tokens, and multiple internal file signatures/tokens. Information systems may allow transfer of data only if compliant with data type format specifications.

(13) *INFORMATION FLOW ENFORCEMENT | DECOMPOSITION INTO POLICY-RELEVANT SUBCOMPONENTS*

The information system, when transferring information between different security domains, decomposes information into [Assignment: organization-defined policy-relevant subcomponents] for submission to policy enforcement mechanisms.

Supplemental Guidance: Policy enforcement mechanisms apply filtering, inspection, and/or sanitization rules to the policy-relevant subcomponents of information to facilitate flow enforcement prior to transferring such information to different security domains. Parsing transfer files facilitates policy decisions on source, destination, certificates, classification, attachments, and other security-related component differentiators.

(14) *INFORMATION FLOW ENFORCEMENT | SECURITY POLICY FILTER CONSTRAINTS*

The information system, when transferring information between different security domains, implements [*Assignment: organization-defined security policy filters*] requiring fully enumerated formats that restrict data structure and content.

Supplemental Guidance: Data structure and content restrictions reduce the range of potential malicious and/or unsanctioned content in cross-domain transactions. Security policy filters that restrict data structures include, for example, restricting file sizes and field lengths. Data content policy filters include, for example: (i) encoding formats for character sets (e.g., Universal Character Set Transformation Formats, American Standard Code for Information Interchange); (ii) restricting character data fields to only contain alpha-numeric characters; (iii) prohibiting special characters; and (iv) validating schema structures.

(15) *INFORMATION FLOW ENFORCEMENT | DETECTION OF UNSANCTIONED INFORMATION*

The information system, when transferring information between different security domains, examines the information for the presence of [*Assignment: organized-defined unsanctioned information*] and prohibits the transfer of such information in accordance with the [*Assignment: organization-defined security policy*].

Supplemental Guidance: Detection of unsanctioned information includes, for example, checking all information to be transferred for malicious code and dirty words. Related control: SI-3.

(16) *INFORMATION FLOW ENFORCEMENT | INFORMATION TRANSFERS ON INTERCONNECTED SYSTEMS*

[Withdrawn: Incorporated into AC-4].

(17) *INFORMATION FLOW ENFORCEMENT | DOMAIN AUTHENTICATION*

The information system uniquely identifies and authenticates source and destination points by [*Selection (one or more): organization, system, application, individual*] for information transfer.

Supplemental Guidance: Attribution is a critical component of a security concept of operations. The ability to identify source and destination points for information flowing in information systems, allows the forensic reconstruction of events when required, and encourages policy compliance by attributing policy violations to specific organizations/individuals. Successful domain authentication requires that information system labels distinguish among systems, organizations, and individuals involved in preparing, sending, receiving, or disseminating information. Related controls: IA-2, IA-3, IA-4, IA-5.

(18) *INFORMATION FLOW ENFORCEMENT | SECURITY ATTRIBUTE BINDING*

The information system binds security attributes to information using [*Assignment: organization-defined binding techniques*] to facilitate information flow policy enforcement.

Supplemental Guidance: Binding techniques implemented by information systems affect the strength of security attribute binding to information. Binding strength and the assurance associated with binding techniques play an important part in the trust organizations have in the information flow enforcement process. The binding techniques affect the number and degree of additional reviews required by organizations. Related controls: AC-16, SC-16.

(19) *INFORMATION FLOW ENFORCEMENT | VALIDATION OF METADATA*

The information system, when transferring information between different security domains, applies the same security policy filtering to metadata as it applies to data payloads.

Supplemental Guidance: This control enhancement requires the validation of metadata and the data to which the metadata applies. Some organizations distinguish between metadata and data payloads (i.e., only the data to which the metadata is bound). Other organizations do not make such distinctions, considering metadata and the data to which the metadata applies as part of the payload. All information (including metadata and the data to which the metadata applies) is subject to filtering and inspection.

(20) *INFORMATION FLOW ENFORCEMENT | APPROVED SOLUTIONS*

The organization employs [*Assignment: organization-defined solutions in approved configurations*] to control the flow of [*Assignment: organization-defined information*] across security domains.

Supplemental Guidance: Organizations define approved solutions and configurations in cross-domain policies and guidance in accordance with the types of information flows across

classification boundaries. The Unified Cross Domain Management Office (UCDMO) provides a baseline listing of approved cross-domain solutions.

(21) *INFORMATION FLOW ENFORCEMENT | PHYSICAL / LOGICAL SEPARATION OF INFORMATION FLOWS*

The information system separates information flows logically or physically using [*Assignment: organization-defined mechanisms and/or techniques*] to accomplish [*Assignment: organization-defined required separations by types of information*].

Supplemental Guidance: Enforcing the separation of information flows by type can enhance protection by ensuring that information is not commingled while in transit and by enabling flow control by transmission paths perhaps not otherwise achievable. Types of separable information include, for example, inbound and outbound communications traffic, service requests and responses, and information of differing security categories.

(22) *INFORMATION FLOW ENFORCEMENT | ACCESS ONLY*

The information system provides access from a single device to computing platforms, applications, or data residing on multiple different security domains, while preventing any information flow between the different security domains.

Supplemental Guidance: The information system, for example, provides a desktop for users to access each connected security domain without providing any mechanisms to allow transfer of information between the different security domains.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** AC-4	**HIGH** AC-4

AC-5 SEPARATION OF DUTIES

Control: The organization:

a. Separates [*Assignment: organization-defined duties of individuals*];

b. Documents separation of duties of individuals; and

c. Defines information system access authorizations to support separation of duties.

Supplemental Guidance: Separation of duties addresses the potential for abuse of authorized privileges and helps to reduce the risk of malevolent activity without collusion. Separation of duties includes, for example: (i) dividing mission functions and information system support functions among different individuals and/or roles; (ii) conducting information system support functions with different individuals (e.g., system management, programming, configuration management, quality assurance and testing, and network security); and (iii) ensuring security personnel administering access control functions do not also administer audit functions. Related controls: AC-3, AC-6, PE-3, PE-4, PS-2.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** AC-5	**HIGH** AC-5

AC-6 LEAST PRIVILEGE

Control: The organization employs the principle of least privilege, allowing only authorized accesses for users (or processes acting on behalf of users) which are necessary to accomplish assigned tasks in accordance with organizational missions and business functions.

Supplemental Guidance: Organizations employ least privilege for specific duties and information systems. The principle of least privilege is also applied to information system processes, ensuring that the processes operate at privilege levels no higher than necessary to accomplish required organizational missions/business functions. Organizations consider the creation of additional processes, roles, and information system accounts as necessary, to achieve least privilege. Organizations also apply least privilege to the development, implementation, and operation of organizational information systems. Related controls: AC-2, AC-3, AC-5, CM-6, CM-7, PL-2.

Control Enhancements:

(1) *LEAST PRIVILEGE | AUTHORIZE ACCESS TO SECURITY FUNCTIONS*

The organization explicitly authorizes access to [*Assignment: organization-defined security functions (deployed in hardware, software, and firmware) and security-relevant information*].

Supplemental Guidance: Security functions include, for example, establishing system accounts, configuring access authorizations (i.e., permissions, privileges), setting events to be audited, and setting intrusion detection parameters. Security-relevant information includes, for example, filtering rules for routers/firewalls, cryptographic key management information, configuration parameters for security services, and access control lists. Explicitly authorized personnel include, for example, security administrators, system and network administrators, system security officers, system maintenance personnel, system programmers, and other privileged users. Related controls: AC-17, AC-18, AC-19.

(2) *LEAST PRIVILEGE | NON-PRIVILEGED ACCESS FOR NONSECURITY FUNCTIONS*

The organization requires that users of information system accounts, or roles, with access to [*Assignment: organization-defined security functions or security-relevant information*], use non-privileged accounts or roles, when accessing nonsecurity functions.

Supplemental Guidance: This control enhancement limits exposure when operating from within privileged accounts or roles. The inclusion of roles addresses situations where organizations implement access control policies such as role-based access control and where a change of role provides the same degree of assurance in the change of access authorizations for both the user and all processes acting on behalf of the user as would be provided by a change between a privileged and non-privileged account. Related control: PL-4.

(3) *LEAST PRIVILEGE | NETWORK ACCESS TO PRIVILEGED COMMANDS*

The organization authorizes network access to [*Assignment: organization-defined privileged commands*] only for [*Assignment: organization-defined compelling operational needs*] and documents the rationale for such access in the security plan for the information system.

Supplemental Guidance: Network access is any access across a network connection in lieu of local access (i.e., user being physically present at the device). Related control: AC-17.

(4) *LEAST PRIVILEGE | SEPARATE PROCESSING DOMAINS*

The information system provides separate processing domains to enable finer-grained allocation of user privileges.

Supplemental Guidance: Providing separate processing domains for finer-grained allocation of user privileges includes, for example: (i) using virtualization techniques to allow additional privileges within a virtual machine while restricting privileges to other virtual machines or to the underlying actual machine; (ii) employing hardware and/or software domain separation mechanisms; and (iii) implementing separate physical domains. Related controls: AC-4, SC-3, SC-30, SC-32.

(5) *LEAST PRIVILEGE | PRIVILEGED ACCOUNTS*

The organization restricts privileged accounts on the information system to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Privileged accounts, including super user accounts, are typically described as system administrator for various types of commercial off-the-shelf operating systems. Restricting privileged accounts to specific personnel or roles prevents day-to-day users from having access to privileged information/functions. Organizations may differentiate in the application of this control enhancement between allowed privileges for local accounts and for domain accounts provided organizations retain the ability to control information

system configurations for key security parameters and as otherwise necessary to sufficiently mitigate risk. Related control: CM-6.

(6) *LEAST PRIVILEGE | PRIVILEGED ACCESS BY NON-ORGANIZATIONAL USERS*

The organization prohibits privileged access to the information system by non-organizational users.

Supplemental Guidance: Related control: IA-8.

(7) *LEAST PRIVILEGE | REVIEW OF USER PRIVILEGES*

The organization:

(a) Reviews [*Assignment: organization-defined frequency*] the privileges assigned to [*Assignment: organization-defined roles or classes of users*] to validate the need for such privileges; and

(b) Reassigns or removes privileges, if necessary, to correctly reflect organizational mission/business needs.

Supplemental Guidance: The need for certain assigned user privileges may change over time reflecting changes in organizational missions/business function, environments of operation, technologies, or threat. Periodic review of assigned user privileges is necessary to determine if the rationale for assigning such privileges remains valid. If the need cannot be revalidated, organizations take appropriate corrective actions. Related control: CA-7.

(8) *LEAST PRIVILEGE | PRIVILEGE LEVELS FOR CODE EXECUTION*

The information system prevents [*Assignment: organization-defined software*] from executing at higher privilege levels than users executing the software.

Supplemental Guidance: In certain situations, software applications/programs need to execute with elevated privileges to perform required functions. However, if the privileges required for execution are at a higher level than the privileges assigned to organizational users invoking such applications/programs, those users are indirectly provided with greater privileges than assigned by organizations.

(9) *LEAST PRIVILEGE | AUDITING USE OF PRIVILEGED FUNCTIONS*

The information system audits the execution of privileged functions.

Supplemental Guidance: Misuse of privileged functions, either intentionally or unintentionally by authorized users, or by unauthorized external entities that have compromised information system accounts, is a serious and ongoing concern and can have significant adverse impacts on organizations. Auditing the use of privileged functions is one way to detect such misuse, and in doing so, help mitigate the risk from insider threats and the advanced persistent threat (APT). Related control: AU-2.

(10) *LEAST PRIVILEGE | PROHIBIT NON-PRIVILEGED USERS FROM EXECUTING PRIVILEGED FUNCTIONS*

The information system prevents non-privileged users from executing privileged functions to include disabling, circumventing, or altering implemented security safeguards/countermeasures.

Supplemental Guidance: Privileged functions include, for example, establishing information system accounts, performing system integrity checks, or administering cryptographic key management activities. Non-privileged users are individuals that do not possess appropriate authorizations. Circumventing intrusion detection and prevention mechanisms or malicious code protection mechanisms are examples of privileged functions that require protection from non-privileged users.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** AC-6 (1) (2) (5) (9) (10)	**HIGH** AC-6 (1) (2) (3) (5) (9) (10)

AC-7 UNSUCCESSFUL LOGON ATTEMPTS

Control: The information system:

a. Enforces a limit of [*Assignment: organization-defined number*] consecutive invalid logon attempts by a user during a [*Assignment: organization-defined time period*]; and

b. Automatically [*Selection: locks the account/node for an* [*Assignment: organization-defined time period*]; *locks the account/node until released by an administrator; delays next logon prompt according to* [*Assignment: organization-defined delay algorithm*]] when the maximum number of unsuccessful attempts is exceeded.

Supplemental Guidance: This control applies regardless of whether the logon occurs via a local or network connection. Due to the potential for denial of service, automatic lockouts initiated by information systems are usually temporary and automatically release after a predetermined time period established by organizations. If a delay algorithm is selected, organizations may choose to employ different algorithms for different information system components based on the capabilities of those components. Responses to unsuccessful logon attempts may be implemented at both the operating system and the application levels. Related controls: AC-2, AC-9, AC-14, IA-5.

Control Enhancements:

(1) *UNSUCCESSFUL LOGON ATTEMPTS | AUTOMATIC ACCOUNT LOCK*

[Withdrawn: Incorporated into AC-7].

(2) *UNSUCCESSFUL LOGON ATTEMPTS | PURGE / WIPE MOBILE DEVICE*

The information system purges/wipes information from [*Assignment: organization-defined mobile devices*] based on [*Assignment: organization-defined purging/wiping requirements/techniques*] after [*Assignment: organization-defined number*] consecutive, unsuccessful device logon attempts.

Supplemental Guidance: This control enhancement applies only to mobile devices for which a logon occurs (e.g., personal digital assistants, smart phones, tablets). The logon is to the mobile device, not to any one account on the device. Therefore, successful logons to any accounts on mobile devices reset the unsuccessful logon count to zero. Organizations define information to be purged/wiped carefully in order to avoid over purging/wiping which may result in devices becoming unusable. Purging/wiping may be unnecessary if the information on the device is protected with sufficiently strong encryption mechanisms. Related controls: AC-19, MP-5, MP-6, SC-13.

References: None.

Priority and Baseline Allocation:

P2	**LOW** AC-7	**MOD** AC-7	**HIGH** AC-7

AC-8 SYSTEM USE NOTIFICATION

Control: The information system:

a. Displays to users [*Assignment: organization-defined system use notification message or banner*] before granting access to the system that provides privacy and security notices consistent with applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance and states that:

1. Users are accessing a U.S. Government information system;

2. Information system usage may be monitored, recorded, and subject to audit;

3. Unauthorized use of the information system is prohibited and subject to criminal and civil penalties; and

4. Use of the information system indicates consent to monitoring and recording;

b. Retains the notification message or banner on the screen until users acknowledge the usage conditions and take explicit actions to log on to or further access the information system; and

c. For publicly accessible systems:

1. Displays system use information [*Assignment: organization-defined conditions*], before granting further access;

2. Displays references, if any, to monitoring, recording, or auditing that are consistent with privacy accommodations for such systems that generally prohibit those activities; and

3. Includes a description of the authorized uses of the system.

Supplemental Guidance: System use notifications can be implemented using messages or warning banners displayed before individuals log in to information systems. System use notifications are used only for access via logon interfaces with human users and are not required when such human interfaces do not exist. Organizations consider system use notification messages/banners displayed in multiple languages based on specific organizational needs and the demographics of information system users. Organizations also consult with the Office of the General Counsel for legal review and approval of warning banner content.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AC-8	**MOD** AC-8	**HIGH** AC-8

AC-9 PREVIOUS LOGON (ACCESS) NOTIFICATION

Control: The information system notifies the user, upon successful logon (access) to the system, of the date and time of the last logon (access).

Supplemental Guidance: This control is applicable to logons to information systems via human user interfaces and logons to systems that occur in other types of architectures (e.g., service-oriented architectures). Related controls: AC-7, PL-4.

Control Enhancements:

(1) *PREVIOUS LOGON NOTIFICATION | UNSUCCESSFUL LOGONS*

The information system notifies the user, upon successful logon/access, of the number of unsuccessful logon/access attempts since the last successful logon/access.

(2) *PREVIOUS LOGON NOTIFICATION | SUCCESSFUL / UNSUCCESSFUL LOGONS*

The information system notifies the user of the number of [*Selection: successful logons/accesses; unsuccessful logon/access attempts; both*] during [*Assignment: organization-defined time period*].

(3) *PREVIOUS LOGON NOTIFICATION | NOTIFICATION OF ACCOUNT CHANGES*

The information system notifies the user of changes to [*Assignment: organization-defined security-related characteristics/parameters of the user's account*] during [*Assignment: organization-defined time period*].

(4) *PREVIOUS LOGON NOTIFICATION | ADDITIONAL LOGON INFORMATION*

The information system notifies the user, upon successful logon (access), of the following additional information: [*Assignment: organization-defined information to be included in addition to the date and time of the last logon (access)*].

Supplemental Guidance: This control enhancement permits organizations to specify additional information to be provided to users upon logon including, for example, the location of last logon. User location is defined as that information which can be determined by information systems, for example, IP addresses from which network logons occurred, device identifiers, or notifications of local logons.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

AC-10 CONCURRENT SESSION CONTROL

Control: The information system limits the number of concurrent sessions for each [*Assignment: organization-defined account and/or account type*] to [*Assignment: organization-defined number*].

Supplemental Guidance: Organizations may define the maximum number of concurrent sessions for information system accounts globally, by account type (e.g., privileged user, non-privileged user, domain, specific application), by account, or a combination. For example, organizations may limit the number of concurrent sessions for system administrators or individuals working in particularly sensitive domains or mission-critical applications. This control addresses concurrent sessions for information system accounts and does not address concurrent sessions by single users via multiple system accounts.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P3	**LOW** Not Selected	**MOD** Not Selected	**HIGH** AC-10

AC-11 SESSION LOCK

Control: The information system:

a. Prevents further access to the system by initiating a session lock after [*Assignment: organization-defined time period*] of inactivity or upon receiving a request from a user; and

b. Retains the session lock until the user reestablishes access using established identification and authentication procedures.

Supplemental Guidance: Session locks are temporary actions taken when users stop work and move away from the immediate vicinity of information systems but do not want to log out because of the temporary nature of their absences. Session locks are implemented where session activities can be determined. This is typically at the operating system level, but can also be at the application level. Session locks are not an acceptable substitute for logging out of information systems, for example, if organizations require users to log out at the end of workdays. Related control: AC-7.

Control Enhancements:

(1) *SESSION LOCK | PATTERN-HIDING DISPLAYS*

The information system conceals, via the session lock, information previously visible on the display with a publicly viewable image.

Supplemental Guidance: Publicly viewable images can include static or dynamic images, for example, patterns used with screen savers, photographic images, solid colors, clock, battery life indicator, or a blank screen, with the additional caveat that none of the images convey sensitive information.

References: OMB Memorandum 06-16.

Priority and Baseline Allocation:

P3	**LOW** Not Selected	**MOD** AC-11 (1)	**HIGH** AC-11 (1)

AC-12 SESSION TERMINATION

Control: The information system automatically terminates a user session after [*Assignment: organization-defined conditions or trigger events requiring session disconnect*].

Supplemental Guidance: This control addresses the termination of user-initiated logical sessions in contrast to SC-10 which addresses the termination of network connections that are associated with communications sessions (i.e., network disconnect). A logical session (for local, network, and remote access) is initiated whenever a user (or process acting on behalf of a user) accesses an organizational information system. Such user sessions can be terminated (and thus terminate user access) without terminating network sessions. Session termination terminates all processes associated with a user's logical session except those processes that are specifically created by the user (i.e., session owner) to continue after the session is terminated. Conditions or trigger events requiring automatic session termination can include, for example, organization-defined periods of user inactivity, targeted responses to certain types of incidents, time-of-day restrictions on information system use. Related controls: SC-10, SC-23.

Control Enhancements:

(1) *SESSION TERMINATION | USER-INITIATED LOGOUTS / MESSAGE DISPLAYS*

The information system:

(a) Provides a logout capability for user-initiated communications sessions whenever authentication is used to gain access to [*Assignment: organization-defined information resources*]; and

(b) Displays an explicit logout message to users indicating the reliable termination of authenticated communications sessions.

Supplemental Guidance: Information resources to which users gain access via authentication include, for example, local workstations, databases, and password-protected websites/web-based services. Logout messages for web page access, for example, can be displayed after authenticated sessions have been terminated. However, for some types of interactive sessions including, for example, file transfer protocol (FTP) sessions, information systems typically send logout messages as final messages prior to terminating sessions.

AC-13 SUPERVISION AND REVIEW — ACCESS CONTROL

[Withdrawn: Incorporated into AC-2 and AU-6].

AC-14 PERMITTED ACTIONS WITHOUT IDENTIFICATION OR AUTHENTICATION

Control: The organization:

a. Identifies [*Assignment: organization-defined user actions*] that can be performed on the information system without identification or authentication consistent with organizational missions/business functions; and

b. Documents and provides supporting rationale in the security plan for the information system, user actions not requiring identification or authentication.

Supplemental Guidance: This control addresses situations in which organizations determine that no identification or authentication is required in organizational information systems. Organizations may allow a limited number of user actions without identification or authentication including, for example, when individuals access public websites or other publicly accessible federal information systems, when individuals use mobile phones to receive calls, or when facsimiles are received. Organizations also identify actions that normally require identification or authentication but may under certain circumstances (e.g., emergencies), allow identification or authentication mechanisms to be bypassed. Such bypasses may occur, for example, via a software-readable physical switch that commands bypass of the logon functionality and is protected from accidental or unmonitored use. This control does not apply to situations where identification and authentication have already occurred and are not repeated, but rather to situations where identification and authentication have not yet occurred. Organizations may decide that there are no user actions that can be performed on organizational information systems without identification and authentication and thus, the values for assignment statements can be *none*. Related controls: CP-2, IA-2.

Control Enhancements: None.

(1) *PERMITTED ACTIONS WITHOUT IDENTIFICATION OR AUTHENTICATION | NECESSARY USES*
[Withdrawn: Incorporated into AC-14].

P3	**LOW** AC-14	**MOD** AC-14	**HIGH** AC-14

AC-15 AUTOMATED MARKING

[Withdrawn: Incorporated into MP-3].

AC-16 SECURITY ATTRIBUTES

Control: The organization:

a. Provides the means to associate [*Assignment: organization-defined types of security attributes*] having [*Assignment: organization-defined security attribute values*] with information in storage, in process, and/or in transmission;

b. Ensures that the security attribute associations are made and retained with the information;

c. Establishes the permitted [*Assignment: organization-defined security attributes*] for [*Assignment: organization-defined information systems*]; and

d. Determines the permitted [*Assignment: organization-defined values or ranges*] for each of the established security attributes.

Supplemental Guidance: Information is represented internally within information systems using abstractions known as data structures. Internal data structures can represent different types of entities, both active and passive. Active entities, also known as *subjects*, are typically associated with individuals, devices, or processes acting on behalf of individuals. Passive entities, also known as *objects*, are typically associated with data structures such as records, buffers, tables, files, inter-process pipes, and communications ports. Security attributes, a form of metadata, are abstractions representing the basic properties or characteristics of active and passive entities with respect to safeguarding information. These attributes may be associated with active entities (i.e., subjects) that have the potential to send or receive information, to cause information to flow among objects,

or to change the information system state. These attributes may also be associated with passive entities (i.e., objects) that contain or receive information. The association of security attributes to subjects and objects is referred to as *binding* and is typically inclusive of setting the attribute value and the attribute type. Security attributes when bound to data/information, enables the enforcement of information security policies for access control and information flow control, either through organizational processes or information system functions or mechanisms. The content or assigned values of security attributes can directly affect the ability of individuals to access organizational information.

Organizations can define the types of attributes needed for selected information systems to support missions/business functions. There is potentially a wide range of values that can be assigned to any given security attribute. Release markings could include, for example, US only, NATO, or NOFORN (not releasable to foreign nationals). By specifying permitted attribute ranges and values, organizations can ensure that the security attribute values are meaningful and relevant. The term *security labeling* refers to the association of security attributes with subjects and objects represented by internal data structures within organizational information systems, to enable information system-based enforcement of information security policies. Security labels include, for example, access authorizations, data life cycle protection (i.e., encryption and data expiration), nationality, affiliation as contractor, and classification of information in accordance with legal and compliance requirements. The term security marking refers to the association of security attributes with objects in a human-readable form, to enable organizational process-based enforcement of information security policies. The AC-16 base control represents the requirement for user-based attribute association (marking). The enhancements to AC-16 represent additional requirements including information system-based attribute association (labeling). Types of attributes include, for example, classification level for objects and clearance (access authorization) level for subjects. An example of a value for both of these attribute types is *Top Secret*. Related controls: AC-3, AC-4, AC-6, AC-21, AU-2, AU-10, SC-16, MP-3.

Control Enhancements:

(1) *SECURITY ATTRIBUTES | DYNAMIC ATTRIBUTE ASSOCIATION*

The information system dynamically associates security attributes with [*Assignment: organization-defined subjects and objects*] in accordance with [*Assignment: organization-defined security policies*] as information is created and combined.

Supplemental Guidance: Dynamic association of security attributes is appropriate whenever the security characteristics of information changes over time. Security attributes may change, for example, due to information aggregation issues (i.e., the security characteristics of individual information elements are different from the combined elements), changes in individual access authorizations (i.e., privileges), and changes in the security category of information. Related control: AC-4.

(2) *SECURITY ATTRIBUTES | ATTRIBUTE VALUE CHANGES BY AUTHORIZED INDIVIDUALS*

The information system provides authorized individuals (or processes acting on behalf of individuals) the capability to define or change the value of associated security attributes.

Supplemental Guidance: The content or assigned values of security attributes can directly affect the ability of individuals to access organizational information. Therefore, it is important for information systems to be able to limit the ability to create or modify security attributes to authorized individuals. Related controls: AC-6, AU-2.

(3) *SECURITY ATTRIBUTES | MAINTENANCE OF ATTRIBUTE ASSOCIATIONS BY INFORMATION SYSTEM*

The information system maintains the association and integrity of [*Assignment: organization-defined security attributes*] to [*Assignment: organization-defined subjects and objects*].

Supplemental Guidance: Maintaining the association and integrity of security attributes to subjects and objects with sufficient assurance helps to ensure that the attribute associations can be used as the basis of automated policy actions. Automated policy actions include, for example, access control decisions or information flow control decisions.

(4) *SECURITY ATTRIBUTES | ASSOCIATION OF ATTRIBUTES BY AUTHORIZED INDIVIDUALS*

The information system supports the association of [*Assignment: organization-defined security attributes*] with [*Assignment: organization-defined subjects and objects*] by authorized individuals (or processes acting on behalf of individuals).

Supplemental Guidance: The support provided by information systems can vary to include: (i) prompting users to select specific security attributes to be associated with specific information objects; (ii) employing automated mechanisms for categorizing information with appropriate attributes based on defined policies; or (iii) ensuring that the combination of selected security attributes selected is valid. Organizations consider the creation, deletion, or modification of security attributes when defining auditable events.

(5) *SECURITY ATTRIBUTES | ATTRIBUTE DISPLAYS FOR OUTPUT DEVICES*

The information system displays security attributes in human-readable form on each object that the system transmits to output devices to identify [*Assignment: organization-identified special dissemination, handling, or distribution instructions*] using [*Assignment: organization-identified human-readable, standard naming conventions*].

Supplemental Guidance: Information system outputs include, for example, pages, screens, or equivalent. Information system output devices include, for example, printers and video displays on computer workstations, notebook computers, and personal digital assistants.

(6) *SECURITY ATTRIBUTES | MAINTENANCE OF ATTRIBUTE ASSOCIATION BY ORGANIZATION*

The organization allows personnel to associate, and maintain the association of [*Assignment: organization-defined security attributes*] with [*Assignment: organization-defined subjects and objects*] in accordance with [*Assignment: organization-defined security policies*].

Supplemental Guidance: This control enhancement requires individual users (as opposed to the information system) to maintain associations of security attributes with subjects and objects.

(7) *SECURITY ATTRIBUTES | CONSISTENT ATTRIBUTE INTERPRETATION*

The organization provides a consistent interpretation of security attributes transmitted between distributed information system components.

Supplemental Guidance: In order to enforce security policies across multiple components in distributed information systems (e.g., distributed database management systems, cloud-based systems, and service-oriented architectures), organizations provide a consistent interpretation of security attributes that are used in access enforcement and flow enforcement decisions. Organizations establish agreements and processes to ensure that all distributed information system components implement security attributes with consistent interpretations in automated access/flow enforcement actions.

(8) *SECURITY ATTRIBUTES | ASSOCIATION TECHNIQUES / TECHNOLOGIES*

The information system implements [*Assignment: organization-defined techniques or technologies*] with [*Assignment: organization-defined level of assurance*] in associating security attributes to information.

Supplemental Guidance: The association (i.e., binding) of security attributes to information within information systems is of significant importance with regard to conducting automated access enforcement and flow enforcement actions. The association of such security attributes can be accomplished with technologies/techniques providing different levels of assurance. For example, information systems can cryptographically bind security attributes to information using digital signatures with the supporting cryptographic keys protected by hardware devices (sometimes known as hardware roots of trust).

(9) *SECURITY ATTRIBUTES | ATTRIBUTE REASSIGNMENT*

The organization ensures that security attributes associated with information are reassigned only via re-grading mechanisms validated using [*Assignment: organization-defined techniques or procedures*].

Supplemental Guidance: Validated re-grading mechanisms are employed by organizations to provide the requisite levels of assurance for security attribute reassignment activities. The validation is facilitated by ensuring that re-grading mechanisms are single purpose and of limited function. Since security attribute reassignments can affect security policy enforcement actions (e.g., access/flow enforcement decisions), using trustworthy re-grading mechanisms is necessary to ensure that such mechanisms perform in a consistent/correct mode of operation.

(10) *SECURITY ATTRIBUTES | ATTRIBUTE CONFIGURATION BY AUTHORIZED INDIVIDUALS*

The information system provides authorized individuals the capability to define or change the type and value of security attributes available for association with subjects and objects.

Supplemental Guidance: The content or assigned values of security attributes can directly affect the ability of individuals to access organizational information. Therefore, it is important for information systems to be able to limit the ability to create or modify security attributes to authorized individuals only.

References: None.

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

AC-17 REMOTE ACCESS

Control: The organization:

a. Establishes and documents usage restrictions, configuration/connection requirements, and implementation guidance for each type of remote access allowed; and

b. Authorizes remote access to the information system prior to allowing such connections.

Supplemental Guidance: Remote access is access to organizational information systems by users (or processes acting on behalf of users) communicating through external networks (e.g., the Internet). Remote access methods include, for example, dial-up, broadband, and wireless. Organizations often employ encrypted virtual private networks (VPNs) to enhance confidentiality and integrity over remote connections. The use of encrypted VPNs does not make the access non-remote; however, the use of VPNs, when adequately provisioned with appropriate security controls (e.g., employing appropriate encryption techniques for confidentiality and integrity protection) may provide sufficient assurance to the organization that it can effectively treat such connections as internal networks. Still, VPN connections traverse external networks, and the encrypted VPN does not enhance the availability of remote connections. Also, VPNs with encrypted tunnels can affect the organizational capability to adequately monitor network communications traffic for malicious code. Remote access controls apply to information systems other than public web servers or systems designed for public access. This control addresses authorization prior to allowing remote access without specifying the formats for such authorization. While organizations may use interconnection security agreements to authorize remote access connections, such agreements are not required by this control. Enforcing access restrictions for remote connections is addressed in AC-3. Related controls: AC-2, AC-3, AC-18, AC-19, AC-20, CA-3, CA-7, CM-8, IA-2, IA-3, IA-8, MA-4, PE-17, PL-4, SC-10, SI-4.

Control Enhancements:

(1) *REMOTE ACCESS | AUTOMATED MONITORING / CONTROL*

The information system monitors and controls remote access methods.

Supplemental Guidance: Automated monitoring and control of remote access sessions allows organizations to detect cyber attacks and also ensure ongoing compliance with remote access policies by auditing connection activities of remote users on a variety of information system components (e.g., servers, workstations, notebook computers, smart phones, and tablets). Related controls: AU-2, AU-12.

(2) *REMOTE ACCESS | PROTECTION OF CONFIDENTIALITY / INTEGRITY USING ENCRYPTION*

The information system implements cryptographic mechanisms to protect the confidentiality and integrity of remote access sessions.

Supplemental Guidance: The encryption strength of mechanism is selected based on the security categorization of the information. Related controls: SC-8, SC-12, SC-13.

(3) *REMOTE ACCESS | MANAGED ACCESS CONTROL POINTS*

The information system routes all remote accesses through [*Assignment: organization-defined number*] managed network access control points.

Supplemental Guidance: Limiting the number of access control points for remote accesses reduces the attack surface for organizations. Organizations consider the Trusted Internet Connections (TIC) initiative requirements for external network connections. Related control: SC-7.

(4) *REMOTE ACCESS | PRIVILEGED COMMANDS / ACCESS*

The organization:

(a) Authorizes the execution of privileged commands and access to security-relevant information via remote access only for [*Assignment: organization-defined needs*]; and

(b) Documents the rationale for such access in the security plan for the information system.

Supplemental Guidance: Related control: AC-6.

(5) *REMOTE ACCESS | MONITORING FOR UNAUTHORIZED CONNECTIONS*

[Withdrawn: Incorporated into SI-4].

(6) *REMOTE ACCESS | PROTECTION OF INFORMATION*

The organization ensures that users protect information about remote access mechanisms from unauthorized use and disclosure.

Supplemental Guidance: Related controls: AT-2, AT-3, PS-6.

(7) *REMOTE ACCESS | ADDITIONAL PROTECTION FOR SECURITY FUNCTION ACCESS*

[Withdrawn: Incorporated into AC-3 (10)].

(8) *REMOTE ACCESS | DISABLE NONSECURE NETWORK PROTOCOLS*

[Withdrawn: Incorporated into CM-7].

(9) *REMOTE ACCESS | DISCONNECT / DISABLE ACCESS*

The organization provides the capability to expeditiously disconnect or disable remote access to the information system within [*Assignment: organization-defined time period*].

Supplemental Guidance: This control enhancement requires organizations to have the capability to rapidly disconnect current users remotely accessing the information system and/or disable further remote access. The speed of disconnect or disablement varies based on the criticality of missions/business functions and the need to eliminate immediate or future remote access to organizational information systems.

References: NIST Special Publications 800-46, 800-77, 800-113, 800-114, 800-121.

Priority and Baseline Allocation:

P1	**LOW** AC-17	**MOD** AC-17 (1) (2) (3) (4)	**HIGH** AC-17 (1) (2) (3) (4)

AC-18 WIRELESS ACCESS

Control: The organization:

a. Establishes usage restrictions, configuration/connection requirements, and implementation guidance for wireless access; and

b. Authorizes wireless access to the information system prior to allowing such connections.

Supplemental Guidance: Wireless technologies include, for example, microwave, packet radio (UHF/VHF), 802.11x, and Bluetooth. Wireless networks use authentication protocols (e.g., EAP/TLS, PEAP), which provide credential protection and mutual authentication. Related controls: AC-2, AC-3, AC-17, AC-19, CA-3, CA-7, CM-8, IA-2, IA-3, IA-8, PL-4, SI-4.

Control Enhancements:

(1) *WIRELESS ACCESS | AUTHENTICATION AND ENCRYPTION*

The information system protects wireless access to the system using authentication of [*Selection (one or more): users; devices*] and encryption.

Supplemental Guidance: Related controls: SC-8, SC-13.

(2) *WIRELESS ACCESS | MONITORING UNAUTHORIZED CONNECTIONS*

[Withdrawn: Incorporated into SI-4].

(3) *WIRELESS ACCESS | DISABLE WIRELESS NETWORKING*

The organization disables, when not intended for use, wireless networking capabilities internally embedded within information system components prior to issuance and deployment.

Supplemental Guidance: Related control: AC-19.

(4) *WIRELESS ACCESS | RESTRICT CONFIGURATIONS BY USERS*

The organization identifies and explicitly authorizes users allowed to independently configure wireless networking capabilities.

Supplemental Guidance: Organizational authorizations to allow selected users to configure wireless networking capability are enforced in part, by the access enforcement mechanisms employed within organizational information systems. Related controls: AC-3, SC-15.

(5) *WIRELESS ACCESS | ANTENNAS / TRANSMISSION POWER LEVELS*

The organization selects radio antennas and calibrates transmission power levels to reduce the probability that usable signals can be received outside of organization-controlled boundaries.

Supplemental Guidance: Actions that may be taken by organizations to limit unauthorized use of wireless communications outside of organization-controlled boundaries include, for example: (i) reducing the power of wireless transmissions so that the transmissions are less likely to emit a signal that can be used by adversaries outside of the physical perimeters of organizations; (ii) employing measures such as TEMPEST to control wireless emanations; and (iii) using directional/beam forming antennas that reduce the likelihood that unintended receivers will be able to intercept signals. Prior to taking such actions, organizations can conduct periodic wireless surveys to understand the radio frequency profile of organizational information systems as well as other systems that may be operating in the area. Related control: PE-19.

References: NIST Special Publications 800-48, 800-94, 800-97.

Priority and Baseline Allocation:

P1	**LOW** AC-18	**MOD** AC-18 (1)	**HIGH** AC-18 (1) (4) (5)

AC-19 ACCESS CONTROL FOR MOBILE DEVICES

Control: The organization:

a. Establishes usage restrictions, configuration requirements, connection requirements, and implementation guidance for organization-controlled mobile devices; and

b. Authorizes the connection of mobile devices to organizational information systems.

Supplemental Guidance: A mobile device is a computing device that: (i) has a small form factor such that it can easily be carried by a single individual; (ii) is designed to operate without a physical connection (e.g., wirelessly transmit or receive information); (iii) possesses local, non-removable or removable data storage; and (iv) includes a self-contained power source. Mobile devices may also include voice communication capabilities, on-board sensors that allow the device to capture information, and/or built-in features for synchronizing local data with remote locations. Examples include smart phones, E-readers, and tablets. Mobile devices are typically associated with a single individual and the device is usually in close proximity to the individual; however, the degree of proximity can vary depending upon on the form factor and size of the device. The

processing, storage, and transmission capability of the mobile device may be comparable to or merely a subset of desktop systems, depending upon the nature and intended purpose of the device. Due to the large variety of mobile devices with different technical characteristics and capabilities, organizational restrictions may vary for the different classes/types of such devices. Usage restrictions and specific implementation guidance for mobile devices include, for example, configuration management, device identification and authentication, implementation of mandatory protective software (e.g., malicious code detection, firewall), scanning devices for malicious code, updating virus protection software, scanning for critical software updates and patches, conducting primary operating system (and possibly other resident software) integrity checks, and disabling unnecessary hardware (e.g., wireless, infrared). Organizations are cautioned that the need to provide adequate security for mobile devices goes beyond the requirements in this control. Many safeguards and countermeasures for mobile devices are reflected in other security controls in the catalog allocated in the initial control baselines as starting points for the development of security plans and overlays using the tailoring process. There may also be some degree of overlap in the requirements articulated by the security controls within the different families of controls. AC-20 addresses mobile devices that are not organization-controlled. Related controls: AC-3, AC-7, AC-18, AC-20, CA-9, CM-2, IA-2, IA-3, MP-2, MP-4, MP-5, PL-4, SC-7, SC-43, SI-3, SI-4.

Control Enhancements:

(1) *ACCESS CONTROL FOR MOBILE DEVICES | USE OF WRITABLE / PORTABLE STORAGE DEVICES*

[Withdrawn: Incorporated into MP-7].

(2) *ACCESS CONTROL FOR MOBILE DEVICES | USE OF PERSONALLY OWNED PORTABLE STORAGE DEVICES*

[Withdrawn: Incorporated into MP-7].

(3) *ACCESS CONTROL FOR MOBILE DEVICES | USE OF PORTABLE STORAGE DEVICES WITH NO IDENTIFIABLE OWNER*

[Withdrawn: Incorporated into MP-7].

(4) *ACCESS CONTROL FOR MOBILE DEVICES | RESTRICTIONS FOR CLASSIFIED INFORMATION*

The organization:

(a) Prohibits the use of unclassified mobile devices in facilities containing information systems processing, storing, or transmitting classified information unless specifically permitted by the authorizing official; and

(b) Enforces the following restrictions on individuals permitted by the authorizing official to use unclassified mobile devices in facilities containing information systems processing, storing, or transmitting classified information:

(1) Connection of unclassified mobile devices to classified information systems is prohibited;

(2) Connection of unclassified mobile devices to unclassified information systems requires approval from the authorizing official;

(3) Use of internal or external modems or wireless interfaces within the unclassified mobile devices is prohibited; and

(4) Unclassified mobile devices and the information stored on those devices are subject to random reviews and inspections by [*Assignment: organization-defined security officials*], and if classified information is found, the incident handling policy is followed.

(c) Restricts the connection of classified mobile devices to classified information systems in accordance with [*Assignment: organization-defined security policies*].

Supplemental Guidance: Related controls: CA-6, IR-4.

(5) *ACCESS CONTROL FOR MOBILE DEVICES | FULL DEVICE / CONTAINER-BASED ENCRYPTION*

The organization employs [*Selection: full-device encryption; container encryption*] to protect the confidentiality and integrity of information on [*Assignment: organization-defined mobile devices*].

Supplemental Guidance: Container-based encryption provides a more fine-grained approach to the encryption of data/information on mobile devices, including for example, encrypting selected data structures such as files, records, or fields. Related controls: MP-5, SC-13, SC-28.

References: OMB Memorandum 06-16; NIST Special Publications 800-114, 800-124, 800-164.

Priority and Baseline Allocation:

P1	**LOW** AC-19	**MOD** AC-19 (5)	**HIGH** AC-19 (5)

AC-20 USE OF EXTERNAL INFORMATION SYSTEMS

Control: The organization establishes terms and conditions, consistent with any trust relationships established with other organizations owning, operating, and/or maintaining external information systems, allowing authorized individuals to:

a. Access the information system from external information systems; and

b. Process, store, or transmit organization-controlled information using external information systems.

Supplemental Guidance: External information systems are information systems or components of information systems that are outside of the authorization boundary established by organizations and for which organizations typically have no direct supervision and authority over the application of required security controls or the assessment of control effectiveness. External information systems include, for example: (i) personally owned information systems/devices (e.g., notebook computers, smart phones, tablets, personal digital assistants); (ii) privately owned computing and communications devices resident in commercial or public facilities (e.g., hotels, train stations, convention centers, shopping malls, or airports); (iii) information systems owned or controlled by nonfederal governmental organizations; and (iv) federal information systems that are not owned by, operated by, or under the direct supervision and authority of organizations. This control also addresses the use of external information systems for the processing, storage, or transmission of organizational information, including, for example, accessing cloud services (e.g., infrastructure as a service, platform as a service, or software as a service) from organizational information systems.

For some external information systems (i.e., information systems operated by other federal agencies, including organizations subordinate to those agencies), the trust relationships that have been established between those organizations and the originating organization may be such, that no explicit terms and conditions are required. Information systems within these organizations would not be considered external. These situations occur when, for example, there are pre-existing sharing/trust agreements (either implicit or explicit) established between federal agencies or organizations subordinate to those agencies, or when such trust agreements are specified by applicable laws, Executive Orders, directives, or policies. Authorized individuals include, for example, organizational personnel, contractors, or other individuals with authorized access to organizational information systems and over which organizations have the authority to impose rules of behavior with regard to system access. Restrictions that organizations impose on authorized individuals need not be uniform, as those restrictions may vary depending upon the trust relationships between organizations. Therefore, organizations may choose to impose different security restrictions on contractors than on state, local, or tribal governments.

This control does not apply to the use of external information systems to access public interfaces to organizational information systems (e.g., individuals accessing federal information through www.usa.gov). Organizations establish terms and conditions for the use of external information systems in accordance with organizational security policies and procedures. Terms and conditions address as a minimum: types of applications that can be accessed on organizational information systems from external information systems; and the highest security category of information that can be processed, stored, or transmitted on external information systems. If terms and conditions with the owners of external information systems cannot be established, organizations may impose restrictions on organizational personnel using those external systems. Related controls: AC-3, AC-17, AC-19, CA-3, PL-4, SA-9.

Control Enhancements:

(1) *USE OF EXTERNAL INFORMATION SYSTEMS | LIMITS ON AUTHORIZED USE*

The organization permits authorized individuals to use an external information system to access the information system or to process, store, or transmit organization-controlled information only when the organization:

(a) Verifies the implementation of required security controls on the external system as specified in the organization's information security policy and security plan; or

(b) Retains approved information system connection or processing agreements with the organizational entity hosting the external information system.

Supplemental Guidance: This control enhancement recognizes that there are circumstances where individuals using external information systems (e.g., contractors, coalition partners) need to access organizational information systems. In those situations, organizations need confidence that the external information systems contain the necessary security safeguards (i.e., security controls), so as not to compromise, damage, or otherwise harm organizational information systems. Verification that the required security controls have been implemented can be achieved, for example, by third-party, independent assessments, attestations, or other means, depending on the confidence level required by organizations. Related control: CA-2.

(2) *USE OF EXTERNAL INFORMATION SYSTEMS | PORTABLE STORAGE DEVICES*

The organization [*Selection: restricts; prohibits*] the use of organization-controlled portable storage devices by authorized individuals on external information systems.

Supplemental Guidance: Limits on the use of organization-controlled portable storage devices in external information systems include, for example, complete prohibition of the use of such devices or restrictions on how the devices may be used and under what conditions the devices may be used.

(3) *USE OF EXTERNAL INFORMATION SYSTEMS | NON-ORGANIZATIONALLY OWNED SYSTEMS / COMPONENTS / DEVICES*

The organization [*Selection: restricts; prohibits*] the use of non-organizationally owned information systems, system components, or devices to process, store, or transmit organizational information.

Supplemental Guidance: Non-organizationally owned devices include devices owned by other organizations (e.g., federal/state agencies, contractors) and personally owned devices. There are risks to using non-organizationally owned devices. In some cases, the risk is sufficiently high as to prohibit such use. In other cases, it may be such that the use of non-organizationally owned devices is allowed but restricted in some way. Restrictions include, for example: (i) requiring the implementation of organization-approved security controls prior to authorizing such connections; (ii) limiting access to certain types of information, services, or applications; (iii) using virtualization techniques to limit processing and storage activities to servers or other system components provisioned by the organization; and (iv) agreeing to terms and conditions for usage. For personally owned devices, organizations consult with the Office of the General Counsel regarding legal issues associated with using such devices in operational environments, including, for example, requirements for conducting forensic analyses during investigations after an incident.

(4) *USE OF EXTERNAL INFORMATION SYSTEMS | NETWORK ACCESSIBLE STORAGE DEVICES*

The organization prohibits the use of [*Assignment: organization-defined network accessible storage devices*] in external information systems.

Supplemental Guidance: Network accessible storage devices in external information systems include, for example, online storage devices in public, hybrid, or community cloud-based systems.

References: FIPS Publication 199.

P1	**LOW** AC-20	**MOD** AC-20 (1) (2)	**HIGH** AC-20 (1) (2)

AC-21 INFORMATION SHARING

Control: The organization:

a. Facilitates information sharing by enabling authorized users to determine whether access authorizations assigned to the sharing partner match the access restrictions on the information for [*Assignment: organization-defined information sharing circumstances where user discretion is required*]; and

b. Employs [*Assignment: organization-defined automated mechanisms or manual processes*] to assist users in making information sharing/collaboration decisions.

Supplemental Guidance: This control applies to information that may be restricted in some manner (e.g., privileged medical information, contract-sensitive information, proprietary information, personally identifiable information, classified information related to special access programs or compartments) based on some formal or administrative determination. Depending on the particular information-sharing circumstances, sharing partners may be defined at the individual, group, or organizational level. Information may be defined by content, type, security category, or special access program/compartment. Related control: AC-3.

Control Enhancements:

(1) *INFORMATION SHARING | AUTOMATED DECISION SUPPORT*

The information system enforces information-sharing decisions by authorized users based on access authorizations of sharing partners and access restrictions on information to be shared.

(2) *INFORMATION SHARING | INFORMATION SEARCH AND RETRIEVAL*

The information system implements information search and retrieval services that enforce [*Assignment: organization-defined information sharing restrictions*].

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** AC-21	**HIGH** AC-21

AC-22 PUBLICLY ACCESSIBLE CONTENT

Control: The organization:

a. Designates individuals authorized to post information onto a publicly accessible information system;

b. Trains authorized individuals to ensure that publicly accessible information does not contain nonpublic information;

c. Reviews the proposed content of information prior to posting onto the publicly accessible information system to ensure that nonpublic information is not included; and

d. Reviews the content on the publicly accessible information system for nonpublic information [*Assignment: organization-defined frequency*] and removes such information, if discovered.

Supplemental Guidance: In accordance with federal laws, Executive Orders, directives, policies, regulations, standards, and/or guidance, the general public is not authorized access to nonpublic information (e.g., information protected under the Privacy Act and proprietary information). This control addresses information systems that are controlled by the organization and accessible to the general public, typically without identification or authentication. The posting of information on non-organization information systems is covered by organizational policy. Related controls: AC-3, AC-4, AT-2, AT-3, AU-13.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P3	**LOW** AC-22	**MOD** AC-22	**HIGH** AC-22

AC-23 DATA MINING PROTECTION

Control: The organization employs [*Assignment: organization-defined data mining prevention and detection techniques*] for [*Assignment: organization-defined data storage objects*] to adequately detect and protect against data mining.

Supplemental Guidance: Data storage objects include, for example, databases, database records, and database fields. Data mining prevention and detection techniques include, for example: (i) limiting the types of responses provided to database queries; (ii) limiting the number/frequency of database queries to increase the work factor needed to determine the contents of such databases; and (iii) notifying organizational personnel when atypical database queries or accesses occur. This control focuses on the protection of organizational information from data mining while such information resides in organizational data stores. In contrast, AU-13 focuses on monitoring for organizational information that may have been mined or otherwise obtained from data stores and is now available as open source information residing on external sites, for example, through social networking or social media websites.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

AC-24 ACCESS CONTROL DECISIONS

Control: The organization establishes procedures to ensure [*Assignment: organization-defined access control decisions*] are applied to each access request prior to access enforcement.

Supplemental Guidance: Access control decisions (also known as authorization decisions) occur when authorization information is applied to specific accesses. In contrast, access enforcement occurs when information systems enforce access control decisions. While it is very common to have access control decisions and access enforcement implemented by the same entity, it is not required and it is not always an optimal implementation choice. For some architectures and distributed information systems, different entities may perform access control decisions and access enforcement.

Control Enhancements:

(1) *ACCESS CONTROL DECISIONS | TRANSMIT ACCESS AUTHORIZATION INFORMATION*

The information system transmits [*Assignment: organization-defined access authorization information*] using [*Assignment: organization-defined security safeguards*] to [*Assignment: organization-defined information systems*] that enforce access control decisions.

Supplemental Guidance: In distributed information systems, authorization processes and access control decisions may occur in separate parts of the systems. In such instances, authorization information is transmitted securely so timely access control decisions can be enforced at the appropriate locations. To support the access control decisions, it may be necessary to transmit as part of the access authorization information, supporting security attributes. This is due to the fact that in distributed information systems, there are various access control decisions that need to be made and different entities (e.g., services) make these decisions in a serial fashion, each requiring some security attributes to make the decisions. Protecting access authorization

information (i.e., access control decisions) ensures that such information cannot be altered, spoofed, or otherwise compromised during transmission.

(2) *ACCESS CONTROL DECISIONS | NO USER OR PROCESS IDENTITY*

The information system enforces access control decisions based on [*Assignment: organization-defined security attributes*] that do not include the identity of the user or process acting on behalf of the user.

Supplemental Guidance: In certain situations, it is important that access control decisions can be made without information regarding the identity of the users issuing the requests. These are generally instances where preserving individual privacy is of paramount importance. In other situations, user identification information is simply not needed for access control decisions and, especially in the case of distributed information systems, transmitting such information with the needed degree of assurance may be very expensive or difficult to accomplish.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

AC-25 REFERENCE MONITOR

Control: The information system implements a reference monitor for [*Assignment: organization-defined access control policies*] that is tamperproof, always invoked, and small enough to be subject to analysis and testing, the completeness of which can be assured.

Supplemental Guidance: Information is represented internally within information systems using abstractions known as data structures. Internal data structures can represent different types of entities, both active and passive. Active entities, also known as *subjects*, are typically associated with individuals, devices, or processes acting on behalf of individuals. Passive entities, also known as *objects*, are typically associated with data structures such as records, buffers, tables, files, inter-process pipes, and communications ports. Reference monitors typically enforce mandatory access control policies—a type of access control that restricts access to objects based on the identity of subjects or groups to which the subjects belong. The access controls are mandatory because subjects with certain privileges (i.e., access permissions) are restricted from passing those privileges on to any other subjects, either directly or indirectly—that is, the information system strictly enforces the access control policy based on the rule set established by the policy. The *tamperproof* property of the reference monitor prevents adversaries from compromising the functioning of the mechanism. The *always invoked* property prevents adversaries from bypassing the mechanism and hence violating the security policy. The *smallness* property helps to ensure the completeness in the analysis and testing of the mechanism to detect weaknesses or deficiencies (i.e., latent flaws) that would prevent the enforcement of the security policy. Related controls: AC-3, AC-16, SC-3, SC-39.

Control Enhancements: None.

FAMILY: AWARENESS AND TRAINING

AT-1 SECURITY AWARENESS AND TRAINING POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A security awareness and training policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the security awareness and training policy and associated security awareness and training controls; and

b. Reviews and updates the current:

   1. Security awareness and training policy [*Assignment: organization-defined frequency*]; and

   2. Security awareness and training procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the AT family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

Priority and Baseline Allocation:

P1	**LOW** AT-1	**MOD** AT-1	**HIGH** AT-1

AT-2 SECURITY AWARENESS TRAINING

Control: The organization provides basic security awareness training to information system users (including managers, senior executives, and contractors):

a. As part of initial training for new users;

b. When required by information system changes; and

c. [*Assignment: organization-defined frequency*] thereafter.

Supplemental Guidance: Organizations determine the appropriate content of security awareness training and security awareness techniques based on the specific organizational requirements and the information systems to which personnel have authorized access. The content includes a basic understanding of the need for information security and user actions to maintain security and to respond to suspected security incidents. The content also addresses awareness of the need for operations security. Security awareness techniques can include, for example, displaying posters, offering supplies inscribed with security reminders, generating email advisories/notices from

senior organizational officials, displaying logon screen messages, and conducting information security awareness events. Related controls: AT-3, AT-4, PL-4.

Control Enhancements:

(1) *SECURITY AWARENESS | PRACTICAL EXERCISES*

The organization includes practical exercises in security awareness training that simulate actual cyber attacks.

Supplemental Guidance: Practical exercises may include, for example, no-notice social engineering attempts to collect information, gain unauthorized access, or simulate the adverse impact of opening malicious email attachments or invoking, via spear phishing attacks, malicious web links. Related controls: CA-2, CA-7, CP-4, IR-3.

(2) *SECURITY AWARENESS | INSIDER THREAT*

The organization includes security awareness training on recognizing and reporting potential indicators of insider threat.

Supplemental Guidance: Potential indicators and possible precursors of insider threat can include behaviors such as inordinate, long-term job dissatisfaction, attempts to gain access to information not required for job performance, unexplained access to financial resources, bullying or sexual harassment of fellow employees, workplace violence, and other serious violations of organizational policies, procedures, directives, rules, or practices. Security awareness training includes how to communicate employee and management concerns regarding potential indicators of insider threat through appropriate organizational channels in accordance with established organizational policies and procedures. Related controls: PL-4, PM-12, PS-3, PS-6.

References: C.F.R. Part 5 Subpart C (5 C.F.R. 930.301); Executive Order 13587; NIST Special Publication 800-50.

Priority and Baseline Allocation:

P1	**LOW** AT-2	**MOD** AT-2 (2)	**HIGH** AT-2 (2)

AT-3 ROLE-BASED SECURITY TRAINING

Control: The organization provides role-based security training to personnel with assigned security roles and responsibilities:

a. Before authorizing access to the information system or performing assigned duties;

b. When required by information system changes; and

c. [*Assignment: organization-defined frequency*] thereafter.

Supplemental Guidance: Organizations determine the appropriate content of security training based on the assigned roles and responsibilities of individuals and the specific security requirements of organizations and the information systems to which personnel have authorized access. In addition, organizations provide enterprise architects, information system developers, software developers, acquisition/procurement officials, information system managers, system/network administrators, personnel conducting configuration management and auditing activities, personnel performing independent verification and validation activities, security control assessors, and other personnel having access to system-level software, adequate security-related technical training specifically tailored for their assigned duties. Comprehensive role-based training addresses management, operational, and technical roles and responsibilities covering physical, personnel, and technical safeguards and countermeasures. Such training can include for example, policies, procedures, tools, and artifacts for the organizational security roles defined. Organizations also provide the training necessary for individuals to carry out their responsibilities related to operations and supply chain security within the context of organizational information security programs. Role-

based security training also applies to contractors providing services to federal agencies. Related controls: AT-2, AT-4, PL-4, PS-7, SA-3, SA-12, SA-16.

Control Enhancements:

(1) *SECURITY TRAINING | ENVIRONMENTAL CONTROLS*

The organization provides [*Assignment: organization-defined personnel or roles*] with initial and [*Assignment: organization-defined frequency*] training in the employment and operation of environmental controls.

Supplemental Guidance: Environmental controls include, for example, fire suppression and detection devices/systems, sprinkler systems, handheld fire extinguishers, fixed fire hoses, smoke detectors, temperature/humidity, HVAC, and power within the facility. Organizations identify personnel with specific roles and responsibilities associated with environmental controls requiring specialized training. Related controls: PE-1, PE-13, PE-14, PE-15.

(2) *SECURITY TRAINING | PHYSICAL SECURITY CONTROLS*

The organization provides [*Assignment: organization-defined personnel or roles*] with initial and [*Assignment: organization-defined frequency*] training in the employment and operation of physical security controls.

Supplemental Guidance: Physical security controls include, for example, physical access control devices, physical intrusion alarms, monitoring/surveillance equipment, and security guards (deployment and operating procedures). Organizations identify personnel with specific roles and responsibilities associated with physical security controls requiring specialized training. Related controls: PE-2, PE-3, PE-4, PE-5.

(3) *SECURITY TRAINING | PRACTICAL EXERCISES*

The organization includes practical exercises in security training that reinforce training objectives.

Supplemental Guidance: Practical exercises may include, for example, security training for software developers that includes simulated cyber attacks exploiting common software vulnerabilities (e.g., buffer overflows), or spear/whale phishing attacks targeted at senior leaders/executives. These types of practical exercises help developers better understand the effects of such vulnerabilities and appreciate the need for security coding standards and processes.

(4) *SECURITY TRAINING | SUSPICIOUS COMMUNICATIONS AND ANOMALOUS SYSTEM BEHAVIOR*

The organization provides training to its personnel on [*Assignment: organization-defined indicators of malicious code*] to recognize suspicious communications and anomalous behavior in organizational information systems.

Supplemental Guidance: A well-trained workforce provides another organizational safeguard that can be employed as part of a defense-in-depth strategy to protect organizations against malicious code coming in to organizations via email or the web applications. Personnel are trained to look for indications of potentially suspicious email (e.g., receiving an unexpected email, receiving an email containing strange or poor grammar, or receiving an email from an unfamiliar sender but who appears to be from a known sponsor or contractor). Personnel are also trained on how to respond to such suspicious email or web communications (e.g., not opening attachments, not clicking on embedded web links, and checking the source of email addresses). For this process to work effectively, all organizational personnel are trained and made aware of what constitutes suspicious communications. Training personnel on how to recognize anomalous behaviors in organizational information systems can potentially provide early warning for the presence of malicious code. Recognition of such anomalous behavior by organizational personnel can supplement automated malicious code detection and protection tools and systems employed by organizations.

AT-5 CONTACTS WITH SECURITY GROUPS AND ASSOCIATIONS

[Withdrawn: Incorporated into PM-15].

FAMILY: AUDIT AND ACCOUNTABILITY

AU-1 AUDIT AND ACCOUNTABILITY POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. An audit and accountability policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the audit and accountability policy and associated audit and accountability controls; and

b. Reviews and updates the current:

   1. Audit and accountability policy [*Assignment: organization-defined frequency*]; and

   2. Audit and accountability procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the AU family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** AU-1	**MOD** AU-1	**HIGH** AU-1

AU-2 AUDIT EVENTS

Control: The organization:

a. Determines that the information system is capable of auditing the following events: [*Assignment: organization-defined auditable events*];

b. Coordinates the security audit function with other organizational entities requiring audit-related information to enhance mutual support and to help guide the selection of auditable events;

c. Provides a rationale for why the auditable events are deemed to be adequate to support after-the-fact investigations of security incidents; and

d. Determines that the following events are to be audited within the information system: [*Assignment: organization-defined audited events (the subset of the auditable events defined in AU-2 a.) along with the frequency of (or situation requiring) auditing for each identified event*].

Supplemental Guidance: An event is any observable occurrence in an organizational information system. Organizations identify audit events as those events which are significant and relevant to

the security of information systems and the environments in which those systems operate in order to meet specific and ongoing audit needs. Audit events can include, for example, password changes, failed logons, or failed accesses related to information systems, administrative privilege usage, PIV credential usage, or third-party credential usage. In determining the set of auditable events, organizations consider the auditing appropriate for each of the security controls to be implemented. To balance auditing requirements with other information system needs, this control also requires identifying that subset of *auditable* events that are *audited* at a given point in time. For example, organizations may determine that information systems must have the capability to log every file access both successful and unsuccessful, but not activate that capability except for specific circumstances due to the potential burden on system performance. Auditing requirements, including the need for auditable events, may be referenced in other security controls and control enhancements. Organizations also include auditable events that are required by applicable federal laws, Executive Orders, directives, policies, regulations, and standards. Audit records can be generated at various levels of abstraction, including at the packet level as information traverses the network. Selecting the appropriate level of abstraction is a critical aspect of an audit capability and can facilitate the identification of root causes to problems. Organizations consider in the definition of auditable events, the auditing necessary to cover related events such as the steps in distributed, transaction-based processes (e.g., processes that are distributed across multiple organizations) and actions that occur in service-oriented architectures. Related controls: AC-6, AC-17, AU-3, AU-12, MA-4, MP-2, MP-4, SI-4.

Control Enhancements:

(1) *AUDIT EVENTS | COMPILATION OF AUDIT RECORDS FROM MULTIPLE SOURCES*

[Withdrawn: Incorporated into AU-12].

(2) *AUDIT EVENTS | SELECTION OF AUDIT EVENTS BY COMPONENT*

[Withdrawn: Incorporated into AU-12].

(3) *AUDIT EVENTS | REVIEWS AND UPDATES*

The organization reviews and updates the audited events [*Assignment: organization-defined frequency*].

Supplemental Guidance: Over time, the events that organizations believe should be audited may change. Reviewing and updating the set of audited events periodically is necessary to ensure that the current set is still necessary and sufficient.

(4) *AUDIT EVENTS | PRIVILEGED FUNCTIONS*

[Withdrawn: Incorporated into AC-6 (9)].

References: NIST Special Publication 800-92; Web: http://idmanagement.gov.

Priority and Baseline Allocation:

P1	**LOW** AU-2	**MOD** AU-2 (3)	**HIGH** AU-2 (3)

AU-3 CONTENT OF AUDIT RECORDS

Control: The information system generates audit records containing information that establishes what type of event occurred, when the event occurred, where the event occurred, the source of the event, the outcome of the event, and the identity of any individuals or subjects associated with the event.

Supplemental Guidance: Audit record content that may be necessary to satisfy the requirement of this control, includes, for example, time stamps, source and destination addresses, user/process identifiers, event descriptions, success/fail indications, filenames involved, and access control or flow control rules invoked. Event outcomes can include indicators of event success or failure and event-specific results (e.g., the security state of the information system after the event occurred). Related controls: AU-2, AU-8, AU-12, SI-11.

Control Enhancements:

(1) *CONTENT OF AUDIT RECORDS | ADDITIONAL AUDIT INFORMATION*

The information system generates audit records containing the following additional information: [*Assignment: organization-defined additional, more detailed information*].

Supplemental Guidance: Detailed information that organizations may consider in audit records includes, for example, full text recording of privileged commands or the individual identities of group account users. Organizations consider limiting the additional audit information to only that information explicitly needed for specific audit requirements. This facilitates the use of audit trails and audit logs by not including information that could potentially be misleading or could make it more difficult to locate information of interest.

(2) *CONTENT OF AUDIT RECORDS | CENTRALIZED MANAGEMENT OF PLANNED AUDIT RECORD CONTENT*

The information system provides centralized management and configuration of the content to be captured in audit records generated by [*Assignment: organization-defined information system components*].

Supplemental Guidance: This control enhancement requires that the content to be captured in audit records be configured from a central location (necessitating automation). Organizations coordinate the selection of required audit content to support the centralized management and configuration capability provided by the information system. Related controls: AU-6, AU-7.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-3	**MOD** AU-3 (1)	**HIGH** AU-3 (1) (2)

AU-4 AUDIT STORAGE CAPACITY

Control: The organization allocates audit record storage capacity in accordance with [*Assignment: organization-defined audit record storage requirements*].

Supplemental Guidance: Organizations consider the types of auditing to be performed and the audit processing requirements when allocating audit storage capacity. Allocating sufficient audit storage capacity reduces the likelihood of such capacity being exceeded and resulting in the potential loss or reduction of auditing capability. Related controls: AU-2, AU-5, AU-6, AU-7, AU-11, SI-4.

Control Enhancements:

(1) *AUDIT STORAGE CAPACITY | TRANSFER TO ALTERNATE STORAGE*

The information system off-loads audit records [*Assignment: organization-defined frequency*] onto a different system or media than the system being audited.

Supplemental Guidance: Off-loading is a process designed to preserve the confidentiality and integrity of audit records by moving the records from the primary information system to a secondary or alternate system. It is a common process in information systems with limited audit storage capacity; the audit storage is used only in a transitory fashion until the system can communicate with the secondary or alternate system designated for storing the audit records, at which point the information is transferred.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-4	**MOD** AU-4	**HIGH** AU-4

AU-5 RESPONSE TO AUDIT PROCESSING FAILURES

Control: The information system:

a. Alerts [*Assignment: organization-defined personnel or roles*] in the event of an audit processing failure; and

b. Takes the following additional actions: [*Assignment: organization-defined actions to be taken (e.g., shut down information system, overwrite oldest audit records, stop generating audit records)*].

Supplemental Guidance: Audit processing failures include, for example, software/hardware errors, failures in the audit capturing mechanisms, and audit storage capacity being reached or exceeded. Organizations may choose to define additional actions for different audit processing failures (e.g., by type, by location, by severity, or a combination of such factors). This control applies to each audit data storage repository (i.e., distinct information system component where audit records are stored), the total audit storage capacity of organizations (i.e., all audit data storage repositories combined), or both. Related controls: AU-4, SI-12.

Control Enhancements:

(1) *RESPONSE TO AUDIT PROCESSING FAILURES | AUDIT STORAGE CAPACITY*

The information system provides a warning to [*Assignment: organization-defined personnel, roles, and/or locations*] within [*Assignment: organization-defined time period*] when allocated audit record storage volume reaches [*Assignment: organization-defined percentage*] of repository maximum audit record storage capacity.

Supplemental Guidance: Organizations may have multiple audit data storage repositories distributed across multiple information system components, with each repository having different storage volume capacities.

(2) *RESPONSE TO AUDIT PROCESSING FAILURES | REAL-TIME ALERTS*

The information system provides an alert in [*Assignment: organization-defined real-time period*] to [*Assignment: organization-defined personnel, roles, and/or locations*] when the following audit failure events occur: [*Assignment: organization-defined audit failure events requiring real-time alerts*].

Supplemental Guidance: Alerts provide organizations with urgent messages. Real-time alerts provide these messages at information technology speed (i.e., the time from event detection to alert occurs in seconds or less).

(3) *RESPONSE TO AUDIT PROCESSING FAILURES | CONFIGURABLE TRAFFIC VOLUME THRESHOLDS*

The information system enforces configurable network communications traffic volume thresholds reflecting limits on auditing capacity and [*Selection: rejects; delays*] network traffic above those thresholds.

Supplemental Guidance: Organizations have the capability to reject or delay the processing of network communications traffic if auditing such traffic is determined to exceed the storage capacity of the information system audit function. The rejection or delay response is triggered by the established organizational traffic volume thresholds which can be adjusted based on changes to audit storage capacity.

(4) *RESPONSE TO AUDIT PROCESSING FAILURES | SHUTDOWN ON FAILURE*

The information system invokes a [*Selection: full system shutdown; partial system shutdown; degraded operational mode with limited mission/business functionality available*] in the event of [*Assignment: organization-defined audit failures*], unless an alternate audit capability exists.

Supplemental Guidance: Organizations determine the types of audit failures that can trigger automatic information system shutdowns or degraded operations. Because of the importance of ensuring mission/business continuity, organizations may determine that the nature of the audit failure is not so severe that it warrants a complete shutdown of the information system supporting the core organizational missions/business operations. In those instances, partial information system shutdowns or operating in a degraded mode with reduced capability may be viable alternatives. Related control: AU-15.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-5	**MOD** AU-5	**HIGH** AU-5 (1) (2)

AU-6 AUDIT REVIEW, ANALYSIS, AND REPORTING

Control: The organization:

a. Reviews and analyzes information system audit records [*Assignment: organization-defined frequency*] for indications of [*Assignment: organization-defined inappropriate or unusual activity*]; and

b. Reports findings to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Audit review, analysis, and reporting covers information security-related auditing performed by organizations including, for example, auditing that results from monitoring of account usage, remote access, wireless connectivity, mobile device connection, configuration settings, system component inventory, use of maintenance tools and nonlocal maintenance, physical access, temperature and humidity, equipment delivery and removal, communications at the information system boundaries, use of mobile code, and use of VoIP. Findings can be reported to organizational entities that include, for example, incident response team, help desk, information security group/department. If organizations are prohibited from reviewing and analyzing audit information or unable to conduct such activities (e.g., in certain national security applications or systems), the review/analysis may be carried out by other organizations granted such authority. Related controls: AC-2, AC-3, AC-6, AC-17, AT-3, AU-7, AU-16, CA-7, CM-5, CM-10, CM-11, IA-3, IA-5, IR-5, IR-6, MA-4, MP-4, PE-3, PE-6, PE-14, PE-16, RA-5, SC-7, SC-18, SC-19, SI-3, SI-4, SI-7.

Control Enhancements:

(1) *AUDIT REVIEW, ANALYSIS, AND REPORTING | PROCESS INTEGRATION*

The organization employs automated mechanisms to integrate audit review, analysis, and reporting processes to support organizational processes for investigation and response to suspicious activities.

Supplemental Guidance: Organizational processes benefiting from integrated audit review, analysis, and reporting include, for example, incident response, continuous monitoring, contingency planning, and Inspector General audits. Related controls: AU-12, PM-7.

(2) *AUDIT REVIEW, ANALYSIS, AND REPORTING | AUTOMATED SECURITY ALERTS*

[Withdrawn: Incorporated into SI-4].

(3) *AUDIT REVIEW, ANALYSIS, AND REPORTING | CORRELATE AUDIT REPOSITORIES*

The organization analyzes and correlates audit records across different repositories to gain organization-wide situational awareness.

Supplemental Guidance: Organization-wide situational awareness includes awareness across all three tiers of risk management (i.e., organizational, mission/business process, and information system) and supports cross-organization awareness. Related controls: AU-12, IR-4.

(4) *AUDIT REVIEW, ANALYSIS, AND REPORTING | CENTRAL REVIEW AND ANALYSIS*

The information system provides the capability to centrally review and analyze audit records from multiple components within the system.

Supplemental Guidance: Automated mechanisms for centralized reviews and analyses include, for example, Security Information Management products. Related controls: AU-2, AU-12.

(5) *AUDIT REVIEW, ANALYSIS, AND REPORTING | INTEGRATION / SCANNING AND MONITORING CAPABILITIES*

The organization integrates analysis of audit records with analysis of [*Selection (one or more): vulnerability scanning information; performance data; information system monitoring information;* [*Assignment: organization-defined data/information collected from other sources*]] to further enhance the ability to identify inappropriate or unusual activity.

Supplemental Guidance: This control enhancement does not require vulnerability scanning, the generation of performance data, or information system monitoring. Rather, the enhancement requires that the analysis of information being otherwise produced in these areas is integrated with the analysis of audit information. Security Event and Information Management System tools can facilitate audit record aggregation/consolidation from multiple information system components as well as audit record correlation and analysis. The use of standardized audit record analysis scripts developed by organizations (with localized script adjustments, as necessary) provides more cost-effective approaches for analyzing audit record information collected. The correlation of audit record information with vulnerability scanning information is important in determining the veracity of vulnerability scans and correlating attack detection events with scanning results. Correlation with performance data can help uncover denial of service attacks or cyber attacks resulting in unauthorized use of resources. Correlation with system monitoring information can assist in uncovering attacks and in better relating audit information to operational situations. Related controls: AU-12, IR-4, RA-5.

(6) *AUDIT REVIEW, ANALYSIS, AND REPORTING | CORRELATION WITH PHYSICAL MONITORING*

The organization correlates information from audit records with information obtained from monitoring physical access to further enhance the ability to identify suspicious, inappropriate, unusual, or malevolent activity.

Supplemental Guidance: The correlation of physical audit information and audit logs from information systems may assist organizations in identifying examples of suspicious behavior or supporting evidence of such behavior. For example, the correlation of an individual's identity for logical access to certain information systems with the additional physical security information that the individual was actually present at the facility when the logical access occurred, may prove to be useful in investigations.

(7) *AUDIT REVIEW, ANALYSIS, AND REPORTING | PERMITTED ACTIONS*

The organization specifies the permitted actions for each [*Selection (one or more): information system process; role; user*] associated with the review, analysis, and reporting of audit information.

Supplemental Guidance: Organizations specify permitted actions for information system processes, roles, and/or users associated with the review, analysis, and reporting of audit records through account management techniques. Specifying permitted actions on audit information is a way to enforce the principle of least privilege. Permitted actions are enforced by the information system and include, for example, read, write, execute, append, and delete.

(8) *AUDIT REVIEW, ANALYSIS, AND REPORTING | FULL TEXT ANALYSIS OF PRIVILEGED COMMANDS*

The organization performs a full text analysis of audited privileged commands in a physically distinct component or subsystem of the information system, or other information system that is dedicated to that analysis.

Supplemental Guidance: This control enhancement requires a distinct environment for the dedicated analysis of audit information related to privileged users without compromising such information on the information system where the users have elevated privileges including the capability to execute privileged commands. Full text analysis refers to analysis that considers the full text of privileged commands (i.e., commands and all parameters) as opposed to analysis that considers only the name of the command. Full text analysis includes, for example, the use of pattern matching and heuristics. Related controls: AU-3, AU-9, AU-11, AU-12.

(9) *AUDIT REVIEW, ANALYSIS, AND REPORTING | CORRELATION WITH INFORMATION FROM NONTECHNICAL SOURCES*

The organization correlates information from nontechnical sources with audit information to enhance organization-wide situational awareness.

Supplemental Guidance: Nontechnical sources include, for example, human resources records documenting organizational policy violations (e.g., sexual harassment incidents, improper use of organizational information assets). Such information can lead organizations to a more directed analytical effort to detect potential malicious insider activity. Due to the sensitive nature of the information available from nontechnical sources, organizations limit access to such information to minimize the potential for the inadvertent release of privacy-related information to individuals that do not have a need to know. Thus, correlation of information

from nontechnical sources with audit information generally occurs only when individuals are suspected of being involved in a security incident. Organizations obtain legal advice prior to initiating such actions. Related control: AT-2.

(10) *AUDIT REVIEW, ANALYSIS, AND REPORTING | AUDIT LEVEL ADJUSTMENT*

The organization adjusts the level of audit review, analysis, and reporting within the information system when there is a change in risk based on law enforcement information, intelligence information, or other credible sources of information.

Supplemental Guidance: The frequency, scope, and/or depth of the audit review, analysis, and reporting may be adjusted to meet organizational needs based on new information received.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-6	**MOD** AU-6 (1) (3)	**HIGH** AU-6 (1) (3) (5) (6)

AU-7 AUDIT REDUCTION AND REPORT GENERATION

Control: The information system provides an audit reduction and report generation capability that:

a. Supports on-demand audit review, analysis, and reporting requirements and after-the-fact investigations of security incidents; and

b. Does not alter the original content or time ordering of audit records.

Supplemental Guidance: Audit reduction is a process that manipulates collected audit information and organizes such information in a summary format that is more meaningful to analysts. Audit reduction and report generation capabilities do not always emanate from the same information system or from the same organizational entities conducting auditing activities. Audit reduction capability can include, for example, modern data mining techniques with advanced data filters to identify anomalous behavior in audit records. The report generation capability provided by the information system can generate customizable reports. Time ordering of audit records can be a significant issue if the granularity of the timestamp in the record is insufficient. Related control: AU-6.

Control Enhancements:

(1) *AUDIT REDUCTION AND REPORT GENERATION | AUTOMATIC PROCESSING*

The information system provides the capability to process audit records for events of interest based on [*Assignment: organization-defined audit fields within audit records*].

Supplemental Guidance: Events of interest can be identified by the content of specific audit record fields including, for example, identities of individuals, event types, event locations, event times, event dates, system resources involved, IP addresses involved, or information objects accessed. Organizations may define audit event criteria to any degree of granularity required, for example, locations selectable by general networking location (e.g., by network or subnetwork) or selectable by specific information system component. Related controls: AU-2, AU-12.

(2) *AUDIT REDUCTION AND REPORT GENERATION | AUTOMATIC SORT AND SEARCH*

The information system provides the capability to sort and search audit records for events of interest based on the content of [*Assignment: organization-defined audit fields within audit records*].

Supplemental Guidance: Sorting and searching of audit records may be based upon the contents of audit record fields, for example: (i) date/time of events; (ii) user identifiers; (iii) Internet Protocol (IP) addresses involved in the event; (iv) type of event; or (v) event success/failure.

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** AU-7 (1)	**HIGH** AU-7 (1)

AU-8 TIME STAMPS

Control: The information system:

a. Uses internal system clocks to generate time stamps for audit records; and

b. Records time stamps for audit records that can be mapped to Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT) and meets [*Assignment: organization-defined granularity of time measurement*].

Supplemental Guidance: Time stamps generated by the information system include date and time. Time is commonly expressed in Coordinated Universal Time (UTC), a modern continuation of Greenwich Mean Time (GMT), or local time with an offset from UTC. Granularity of time measurements refers to the degree of synchronization between information system clocks and reference clocks, for example, clocks synchronizing within hundreds of milliseconds or within tens of milliseconds. Organizations may define different time granularities for different system components. Time service can also be critical to other security capabilities such as access control and identification and authentication, depending on the nature of the mechanisms used to support those capabilities. Related controls: AU-3, AU-12.

Control Enhancements:

(1) *TIME STAMPS | SYNCHRONIZATION WITH AUTHORITATIVE TIME SOURCE*

The information system:

(a) Compares the internal information system clocks [*Assignment: organization-defined frequency*] with [*Assignment: organization-defined authoritative time source*]; and

(b) Synchronizes the internal system clocks to the authoritative time source when the time difference is greater than [*Assignment: organization-defined time period*].

Supplemental Guidance: This control enhancement provides uniformity of time stamps for information systems with multiple system clocks and systems connected over a network.

(2) *TIME STAMPS | SECONDARY AUTHORITATIVE TIME SOURCE*

The information system identifies a secondary authoritative time source that is located in a different geographic region than the primary authoritative time source.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-8	**MOD** AU-8 (1)	**HIGH** AU-8 (1)

AU-9 PROTECTION OF AUDIT INFORMATION

Control: The information system protects audit information and audit tools from unauthorized access, modification, and deletion.

Supplemental Guidance: Audit information includes all information (e.g., audit records, audit settings, and audit reports) needed to successfully audit information system activity. This control focuses on technical protection of audit information. Physical protection of audit information is addressed by media protection controls and physical and environmental protection controls. Related controls: AC-3, AC-6, MP-2, MP-4, PE-2, PE-3, PE-6.

Control Enhancements:

(1) *PROTECTION OF AUDIT INFORMATION | HARDWARE WRITE-ONCE* MEDIA

The information system writes audit trails to hardware-enforced, write-once media.

Supplemental Guidance: This control enhancement applies to the initial generation of audit trails (i.e., the collection of audit records that represents the audit information to be used for detection, analysis, and reporting purposes) and to the backup of those audit trails. The enhancement does not apply to the initial generation of audit records prior to being written to an audit trail. Write-once, read-many (WORM) media includes, for example, Compact Disk-Recordable (CD-R) and Digital Video Disk-Recordable (DVD-R). In contrast, the use of switchable write-protection media such as on tape cartridges or Universal Serial Bus (USB) drives results in write-protected, but not write-once, media. Related controls: AU-4, AU-5.

(2) *PROTECTION OF AUDIT INFORMATION | AUDIT BACKUP ON SEPARATE PHYSICAL SYSTEMS / COMPONENTS*

The information system backs up audit records [*Assignment: organization-defined frequency*] onto a physically different system or system component than the system or component being audited.

Supplemental Guidance: This control enhancement helps to ensure that a compromise of the information system being audited does not also result in a compromise of the audit records. Related controls: AU-4, AU-5, AU-11.

(3) *PROTECTION OF AUDIT INFORMATION | CRYPTOGRAPHIC PROTECTION*

The information system implements cryptographic mechanisms to protect the integrity of audit information and audit tools.

Supplemental Guidance: Cryptographic mechanisms used for protecting the integrity of audit information include, for example, signed hash functions using asymmetric cryptography enabling distribution of the public key to verify the hash information while maintaining the confidentiality of the secret key used to generate the hash. Related controls: AU-10, SC-12, SC-13.

(4) *PROTECTION OF AUDIT INFORMATION | ACCESS BY SUBSET OF PRIVILEGED USERS*

The organization authorizes access to management of audit functionality to only [*Assignment: organization-defined subset of privileged users*].

Supplemental Guidance: Individuals with privileged access to an information system and who are also the subject of an audit by that system, may affect the reliability of audit information by inhibiting audit activities or modifying audit records. This control enhancement requires that privileged access be further defined between audit-related privileges and other privileges, thus limiting the users with audit-related privileges. Related control: AC-5.

(5) *PROTECTION OF AUDIT INFORMATION | DUAL AUTHORIZATION*

The organization enforces dual authorization for [*Selection (one or more): movement; deletion*] of [*Assignment: organization-defined audit information*].

Supplemental Guidance: Organizations may choose different selection options for different types of audit information. Dual authorization mechanisms require the approval of two authorized individuals in order to execute. Dual authorization may also be known as two-person control. Related controls: AC-3, MP-2.

(6) *PROTECTION OF AUDIT INFORMATION | READ ONLY ACCESS*

The organization authorizes read-only access to audit information to [*Assignment: organization-defined subset of privileged users*].

Supplemental Guidance: Restricting privileged user authorizations to read-only helps to limit the potential damage to organizations that could be initiated by such users (e.g., deleting audit records to cover up malicious activity).

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-9	**MOD** AU-9 (4)	**HIGH** AU-9 (2) (3) (4)

AU-10 NON-REPUDIATION

Control: The information system protects against an individual (or process acting on behalf of an individual) falsely denying having performed [*Assignment: organization-defined actions to be covered by non-repudiation*].

Supplemental Guidance: Types of individual actions covered by non-repudiation include, for example, creating information, sending and receiving messages, approving information (e.g., indicating concurrence or signing a contract). Non-repudiation protects individuals against later claims by: (i) authors of not having authored particular documents; (ii) senders of not having transmitted messages; (iii) receivers of not having received messages; or (iv) signatories of not having signed documents. Non-repudiation services can be used to determine if information originated from a particular individual, or if an individual took specific actions (e.g., sending an email, signing a contract, approving a procurement request) or received specific information. Organizations obtain non-repudiation services by employing various techniques or mechanisms (e.g., digital signatures, digital message receipts). Related controls: SC-12, SC-8, SC-13, SC-16, SC-17, SC-23.

Control Enhancements:

(1) *NON-REPUDIATION | ASSOCIATION OF IDENTITIES*

The information system:

(a) Binds the identity of the information producer with the information to [*Assignment: organization-defined strength of binding*]; and

(b) Provides the means for authorized individuals to determine the identity of the producer of the information.

Supplemental Guidance: This control enhancement supports audit requirements that provide organizational personnel with the means to identify who produced specific information in the event of an information transfer. Organizations determine and approve the strength of the binding between the information producer and the information based on the security category of the information and relevant risk factors. Related controls: AC-4, AC-16.

(2) *NON-REPUDIATION | VALIDATE BINDING OF INFORMATION PRODUCER IDENTITY*

The information system:

(a) Validates the binding of the information producer identity to the information at [*Assignment: organization-defined frequency*]; and

(b) Performs [*Assignment: organization-defined actions*] in the event of a validation error.

Supplemental Guidance: This control enhancement prevents the modification of information between production and review. The validation of bindings can be achieved, for example, by the use of cryptographic checksums. Organizations determine if validations are in response to user requests or generated automatically. Related controls: AC-3, AC-4, AC-16.

(3) *NON-REPUDIATION | CHAIN OF CUSTODY*

The information system maintains reviewer/releaser identity and credentials within the established chain of custody for all information reviewed or released.

Supplemental Guidance: Chain of custody is a process that tracks the movement of evidence through its collection, safeguarding, and analysis life cycle by documenting each person who handled the evidence, the date and time it was collected or transferred, and the purpose for the transfer. If the reviewer is a human or if the review function is automated but separate from the release/transfer function, the information system associates the identity of the reviewer of the information to be released with the information and the information label. In the case of human reviews, this control enhancement provides organizational officials the means to identify who reviewed and released the information. In the case of automated reviews, this control enhancement ensures that only approved review functions are employed. Related controls: AC-4, AC-16.

(4) *NON-REPUDIATION | VALIDATE BINDING OF INFORMATION REVIEWER IDENTITY*

The information system:

(a) Validates the binding of the information reviewer identity to the information at the transfer or release points prior to release/transfer between [*Assignment: organization-defined security domains*]; and

(b) Performs [*Assignment: organization-defined actions*] in the event of a validation error.

Supplemental Guidance: This control enhancement prevents the modification of information between review and transfer/release. The validation of bindings can be achieved, for example, by the use of cryptographic checksums. Organizations determine validations are in response to user requests or generated automatically. Related controls: AC-4, AC-16.

(5) *NON-REPUDIATION | DIGITAL SIGNATURES*

[Withdrawn: Incorporated into SI-7].

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** Not Selected	**HIGH** AU-10

AU-11 AUDIT RECORD RETENTION

Control: The organization retains audit records for [*Assignment: organization-defined time period consistent with records retention policy*] to provide support for after-the-fact investigations of security incidents and to meet regulatory and organizational information retention requirements.

Supplemental Guidance: Organizations retain audit records until it is determined that they are no longer needed for administrative, legal, audit, or other operational purposes. This includes, for example, retention and availability of audit records relative to Freedom of Information Act (FOIA) requests, subpoenas, and law enforcement actions. Organizations develop standard categories of audit records relative to such types of actions and standard response processes for each type of action. The National Archives and Records Administration (NARA) General Records Schedules provide federal policy on record retention. Related controls: AU-4, AU-5, AU-9, MP-6.

Control Enhancements:

(1) *AUDIT RECORD RETENTION | LONG-TERM RETRIEVAL CAPABILITY*

The organization employs [*Assignment: organization-defined measures*] to ensure that long-term audit records generated by the information system can be retrieved.

Supplemental Guidance: Measures employed by organizations to help facilitate the retrieval of audit records include, for example, converting records to newer formats, retaining equipment capable of reading the records, and retaining necessary documentation to help organizational personnel understand how to interpret the records.

References: None.

Priority and Baseline Allocation:

P3	**LOW** AU-11	**MOD** AU-11	**HIGH** AU-11

AU-12 AUDIT GENERATION

Control: The information system:

a. Provides audit record generation capability for the auditable events defined in AU-2 a. at [*Assignment: organization-defined information system components*];

b. Allows [*Assignment: organization-defined personnel or roles*] to select which auditable events are to be audited by specific components of the information system; and

c. Generates audit records for the events defined in AU-2 d. with the content defined in AU-3.

Supplemental Guidance: Audit records can be generated from many different information system components. The list of audited events is the set of events for which audits are to be generated. These events are typically a subset of all events for which the information system is capable of generating audit records. Related controls: AC-3, AU-2, AU-3, AU-6, AU-7.

Control Enhancements:

(1) *AUDIT GENERATION | SYSTEM-WIDE / TIME-CORRELATED AUDIT TRAIL*

The information system compiles audit records from [*Assignment: organization-defined information system components*] into a system-wide (logical or physical) audit trail that is time-correlated to within [*Assignment: organization-defined level of tolerance for relationship between time stamps of individual records in the audit trail*].

Supplemental Guidance: Audit trails are time-correlated if the time stamps in the individual audit records can be reliably related to the time stamps in other audit records to achieve a time ordering of the records within organizational tolerances. Related controls: AU-8, AU-12.

(2) *AUDIT GENERATION | STANDARDIZED FORMATS*

The information system produces a system-wide (logical or physical) audit trail composed of audit records in a standardized format.

Supplemental Guidance: Audit information that is normalized to common standards promotes interoperability and exchange of such information between dissimilar devices and information systems. This facilitates production of event information that can be more readily analyzed and correlated. Standard formats for audit records include, for example, system log records and audit records compliant with Common Event Expressions (CEE). If logging mechanisms within information systems do not conform to standardized formats, systems may convert individual audit records into standardized formats when compiling system-wide audit trails.

(3) *AUDIT GENERATION | CHANGES BY AUTHORIZED INDIVIDUALS*

The information system provides the capability for [*Assignment: organization-defined individuals or roles*] to change the auditing to be performed on [*Assignment: organization-defined information system components*] based on [*Assignment: organization-defined selectable event criteria*] within [*Assignment: organization-defined time thresholds*].

Supplemental Guidance: This control enhancement enables organizations to extend or limit auditing as necessary to meet organizational requirements. Auditing that is limited to conserve information system resources may be extended to address certain threat situations. In addition, auditing may be limited to a specific set of events to facilitate audit reduction, analysis, and reporting. Organizations can establish time thresholds in which audit actions are changed, for example, near real-time, within minutes, or within hours. Related control: AU-7.

References: None.

Priority and Baseline Allocation:

P1	**LOW** AU-12	**MOD** AU-12	**HIGH** AU-12 (1) (3)

AU-13 MONITORING FOR INFORMATION DISCLOSURE

Control: The organization monitors [*Assignment: organization-defined open source information and/or information sites*] [*Assignment: organization-defined frequency*] for evidence of unauthorized disclosure of organizational information.

Supplemental Guidance: Open source information includes, for example, social networking sites. Related controls: PE-3, SC-7.

Control Enhancements:

(1) *MONITORING FOR INFORMATION DISCLOSURE | USE OF AUTOMATED TOOLS*

The organization employs automated mechanisms to determine if organizational information has been disclosed in an unauthorized manner.

Supplemental Guidance: Automated mechanisms can include, for example, automated scripts to monitor new posts on selected websites, and commercial services providing notifications and alerts to organizations.

(2) *MONITORING FOR INFORMATION DISCLOSURE | REVIEW OF MONITORED SITES*

The organization reviews the open source information sites being monitored [*Assignment: organization-defined frequency*].

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

AU-14 SESSION AUDIT

Control: The information system provides the capability for authorized users to select a user session to capture/record or view/hear.

Supplemental Guidance: Session audits include, for example, monitoring keystrokes, tracking websites visited, and recording information and/or file transfers. Session auditing activities are developed, integrated, and used in consultation with legal counsel in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, or standards. Related controls: AC-3, AU-4, AU-5, AU-9, AU-11.

Control Enhancements:

(1) *SESSION AUDIT | SYSTEM START-UP*

The information system initiates session audits at system start-up.

(2) *SESSION AUDIT | CAPTURE/RECORD AND LOG CONTENT*

The information system provides the capability for authorized users to capture/record and log content related to a user session.

(3) *SESSION AUDIT | REMOTE VIEWING / LISTENING*

The information system provides the capability for authorized users to remotely view/hear all content related to an established user session in real time.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

AU-15 ALTERNATE AUDIT CAPABILITY

Control: The organization provides an alternate audit capability in the event of a failure in primary audit capability that provides [*Assignment: organization-defined alternate audit functionality*].

Supplemental Guidance: Since an alternate audit capability may be a short-term protection employed until the failure in the primary auditing capability is corrected, organizations may determine that the alternate audit capability need only provide a subset of the primary audit functionality that is impacted by the failure. Related control: AU-5.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

AU-16 CROSS-ORGANIZATIONAL AUDITING

Control: The organization employs [*Assignment: organization-defined methods*] for coordinating [*Assignment: organization-defined audit information*] among external organizations when audit information is transmitted across organizational boundaries.

Supplemental Guidance: When organizations use information systems and/or services of external organizations, the auditing capability necessitates a coordinated approach across organizations. For example, maintaining the identity of individuals that requested particular services across organizational boundaries may often be very difficult, and doing so may prove to have significant performance ramifications. Therefore, it is often the case that cross-organizational auditing (e.g., the type of auditing capability provided by service-oriented architectures) simply captures the identity of individuals issuing requests at the initial information system, and subsequent systems record that the requests emanated from authorized individuals. Related control: AU-6.

Control Enhancements:

(1) *CROSS-ORGANIZATIONAL AUDITING | IDENTITY PRESERVATION*

The organization requires that the identity of individuals be preserved in cross-organizational audit trails.

Supplemental Guidance: This control enhancement applies when there is a need to be able to trace actions that are performed across organizational boundaries to a specific individual.

(2) *CROSS-ORGANIZATIONAL AUDITING | SHARING OF AUDIT INFORMATION*

The organization provides cross-organizational audit information to [*Assignment: organization-defined organizations*] based on [*Assignment: organization-defined cross-organizational sharing agreements*].

Supplemental Guidance: Because of the distributed nature of the audit information, cross-organization sharing of audit information may be essential for effective analysis of the auditing being performed. For example, the audit records of one organization may not provide sufficient information to determine the appropriate or inappropriate use of organizational information resources by individuals in other organizations. In some instances, only the home organizations of individuals have the appropriate knowledge to make such determinations, thus requiring the sharing of audit information among organizations.

References: None.

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

FAMILY: SECURITY ASSESSMENT AND AUTHORIZATION

CA-1 SECURITY ASSESSMENT AND AUTHORIZATION POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

1. A security assessment and authorization policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

2. Procedures to facilitate the implementation of the security assessment and authorization policy and associated security assessment and authorization controls; and

b. Reviews and updates the current:

1. Security assessment and authorization policy [*Assignment: organization-defined frequency*]; and

2. Security assessment and authorization procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the CA family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-37, 800-53A, 800-100.

Priority and Baseline Allocation:

P1	**LOW** CA-1	**MOD** CA-1	**HIGH** CA-1

CA-2 SECURITY ASSESSMENTS

Control: The organization:

a. Develops a security assessment plan that describes the scope of the assessment including:

1. Security controls and control enhancements under assessment;

2. Assessment procedures to be used to determine security control effectiveness; and

3. Assessment environment, assessment team, and assessment roles and responsibilities;

b. Assesses the security controls in the information system and its environment of operation [*Assignment: organization-defined frequency*] to determine the extent to which the controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting established security requirements;

c. Produces a security assessment report that documents the results of the assessment; and

d. Provides the results of the security control assessment to [*Assignment: organization-defined individuals or roles*].

Supplemental Guidance: Organizations assess security controls in organizational information systems and the environments in which those systems operate as part of: (i) initial and ongoing security authorizations; (ii) FISMA annual assessments; (iii) continuous monitoring; and (iv) system development life cycle activities. Security assessments: (i) ensure that information security is built into organizational information systems; (ii) identify weaknesses and deficiencies early in the development process; (iii) provide essential information needed to make risk-based decisions as part of security authorization processes; and (iv) ensure compliance to vulnerability mitigation procedures. Assessments are conducted on the implemented security controls from Appendix F (main catalog) and Appendix G (Program Management controls) as documented in System Security Plans and Information Security Program Plans. Organizations can use other types of assessment activities such as vulnerability scanning and system monitoring to maintain the security posture of information systems during the entire life cycle. Security assessment reports document assessment results in sufficient detail as deemed necessary by organizations, to determine the accuracy and completeness of the reports and whether the security controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting security requirements. The FISMA requirement for assessing security controls at least annually does not require additional assessment activities to those activities already in place in organizational security authorization processes. Security assessment results are provided to the individuals or roles appropriate for the types of assessments being conducted. For example, assessments conducted in support of security authorization decisions are provided to authorizing officials or authorizing official designated representatives.

To satisfy annual assessment requirements, organizations can use assessment results from the following sources: (i) initial or ongoing information system authorizations; (ii) continuous monitoring; or (iii) system development life cycle activities. Organizations ensure that security assessment results are current, relevant to the determination of security control effectiveness, and obtained with the appropriate level of assessor independence. Existing security control assessment results can be reused to the extent that the results are still valid and can also be supplemented with additional assessments as needed. Subsequent to initial authorizations and in accordance with OMB policy, organizations assess security controls during continuous monitoring. Organizations establish the frequency for ongoing security control assessments in accordance with organizational continuous monitoring strategies. Information Assurance Vulnerability Alerts provide useful examples of vulnerability mitigation procedures. External audits (e.g., audits by external entities such as regulatory agencies) are outside the scope of this control. Related controls: CA-5, CA-6, CA-7, PM-9, RA-5, SA-11, SA-12, SI-4.

Control Enhancements:

(1) *SECURITY ASSESSMENTS | INDEPENDENT ASSESSORS*

The organization employs assessors or assessment teams with [*Assignment: organization-defined level of independence*] to conduct security control assessments.

Supplemental Guidance: Independent assessors or assessment teams are individuals or groups who conduct impartial assessments of organizational information systems. Impartiality implies that assessors are free from any perceived or actual conflicts of interest with regard to the development, operation, or management of the organizational information systems under assessment or to the determination of security control effectiveness. To achieve impartiality, assessors should not: (i) create a mutual or conflicting interest with the organizations where the assessments are being conducted; (ii) assess their own work; (iii) act as management or employees of the organizations they are serving; or (iv) place themselves in positions of advocacy for the organizations acquiring their services. Independent assessments can be obtained from elements within organizations or can be contracted to public or private sector entities outside of organizations. Authorizing officials determine the required level of independence based on the security categories of information systems and/or the ultimate risk to organizational operations, organizational assets, or individuals. Authorizing officials also determine if the level of assessor independence provides sufficient assurance that the results

are sound and can be used to make credible, risk-based decisions. This includes determining whether contracted security assessment services have sufficient independence, for example, when information system owners are not directly involved in contracting processes or cannot unduly influence the impartiality of assessors conducting assessments. In special situations, for example, when organizations that own the information systems are small or organizational structures require that assessments are conducted by individuals that are in the developmental, operational, or management chain of system owners, independence in assessment processes can be achieved by ensuring that assessment results are carefully reviewed and analyzed by independent teams of experts to validate the completeness, accuracy, integrity, and reliability of the results. Organizations recognize that assessments performed for purposes other than direct support to authorization decisions are, when performed by assessors with sufficient independence, more likely to be useable for such decisions, thereby reducing the need to repeat assessments.

(2) *SECURITY ASSESSMENTS | SPECIALIZED ASSESSMENTS*

The organization includes as part of security control assessments, [*Assignment: organization-defined frequency*], [*Selection: announced; unannounced*], [*Selection (one or more): in-depth monitoring; vulnerability scanning; malicious user testing; insider threat assessment; performance/load testing;* [*Assignment: organization-defined other forms of security assessment*]].

Supplemental Guidance: Organizations can employ information system monitoring, insider threat assessments, malicious user testing, and other forms of testing (e.g., verification and validation) to improve readiness by exercising organizational capabilities and indicating current performance levels as a means of focusing actions to improve security. Organizations conduct assessment activities in accordance with applicable federal laws, Executive Orders, directives, policies, regulations, and standards. Authorizing officials approve the assessment methods in coordination with the organizational risk executive function. Organizations can incorporate vulnerabilities uncovered during assessments into vulnerability remediation processes. Related controls: PE-3, SI-2.

(3) *SECURITY ASSESSMENTS | EXTERNAL ORGANIZATIONS*

The organization accepts the results of an assessment of [*Assignment: organization-defined information system*] performed by [*Assignment: organization-defined external organization*] when the assessment meets [*Assignment: organization-defined requirements*].

Supplemental Guidance: Organizations may often rely on assessments of specific information systems by other (external) organizations. Utilizing such existing assessments (i.e., reusing existing assessment evidence) can significantly decrease the time and resources required for organizational assessments by limiting the amount of independent assessment activities that organizations need to perform. The factors that organizations may consider in determining whether to accept assessment results from external organizations can vary. Determinations for accepting assessment results can be based on, for example, past assessment experiences one organization has had with another organization, the reputation that organizations have with regard to assessments, the level of detail of supporting assessment documentation provided, or mandates imposed upon organizations by federal legislation, policies, or directives.

References: Executive Order 13587; FIPS Publication 199; NIST Special Publications 800-37, 800-39, 800-53A, 800-115, 800-137.

Priority and Baseline Allocation:

P2	**LOW** CA-2	**MOD** CA-2 (1)	**HIGH** CA-2 (1) (2)

CA-3 SYSTEM INTERCONNECTIONS

Control: The organization:

a. Authorizes connections from the information system to other information systems through the use of Interconnection Security Agreements;

b. Documents, for each interconnection, the interface characteristics, security requirements, and the nature of the information communicated; and

c. Reviews and updates Interconnection Security Agreements [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control applies to dedicated connections between information systems (i.e., system interconnections) and does not apply to transitory, user-controlled connections such as email and website browsing. Organizations carefully consider the risks that may be introduced when information systems are connected to other systems with different security requirements and security controls, both within organizations and external to organizations. Authorizing officials determine the risk associated with information system connections and the appropriate controls employed. If interconnecting systems have the same authorizing official, organizations do not need to develop Interconnection Security Agreements. Instead, organizations can describe the interface characteristics between those interconnecting systems in their respective security plans. If interconnecting systems have different authorizing officials within the same organization, organizations can either develop Interconnection Security Agreements or describe the interface characteristics between systems in the security plans for the respective systems. Organizations may also incorporate Interconnection Security Agreement information into formal contracts, especially for interconnections established between federal agencies and nonfederal (i.e., private sector) organizations. Risk considerations also include information systems sharing the same networks. For certain technologies (e.g., space, unmanned aerial vehicles, and medical devices), there may be specialized connections in place during preoperational testing. Such connections may require Interconnection Security Agreements and be subject to additional security controls. Related controls: AC-3, AC-4, AC-20, AU-2, AU-12, AU-16, CA-7, IA-3, SA-9, SC-7, SI-4.

Control Enhancements:

(1) *SYSTEM INTERCONNECTIONS | UNCLASSIFIED NATIONAL SECURITY SYSTEM CONNECTIONS*

The organization prohibits the direct connection of an [*Assignment: organization-defined unclassified, national security system*] to an external network without the use of [*Assignment: organization-defined boundary protection device*].

Supplemental Guidance: Organizations typically do not have control over external networks (e.g., the Internet). Approved boundary protection devices (e.g., routers, firewalls) mediate communications (i.e., information flows) between unclassified national security systems and external networks. This control enhancement is required for organizations processing, storing, or transmitting Controlled Unclassified Information (CUI).

(2) *SYSTEM INTERCONNECTIONS | CLASSIFIED NATIONAL SECURITY SYSTEM CONNECTIONS*

The organization prohibits the direct connection of a classified, national security system to an external network without the use of [*Assignment: organization-defined boundary protection device*].

Supplemental Guidance: Organizations typically do not have control over external networks (e.g., the Internet). Approved boundary protection devices (e.g., routers, firewalls) mediate communications (i.e., information flows) between classified national security systems and external networks. In addition, approved boundary protection devices (typically managed interface/cross-domain systems) provide information flow enforcement from information systems to external networks.

(3) *SYSTEM INTERCONNECTIONS | UNCLASSIFIED NON-NATIONAL SECURITY SYSTEM CONNECTIONS*

The organization prohibits the direct connection of an [*Assignment: organization-defined unclassified, non-national security system*] to an external network without the use of [*Assignment; organization-defined boundary protection device*].

Supplemental Guidance: Organizations typically do not have control over external networks (e.g., the Internet). Approved boundary protection devices (e.g., routers, firewalls) mediate communications (i.e., information flows) between unclassified non-national security systems and external networks. This control enhancement is required for organizations processing, storing, or transmitting Controlled Unclassified Information (CUI).

(4) *SYSTEM INTERCONNECTIONS | CONNECTIONS TO PUBLIC NETWORKS*

The organization prohibits the direct connection of an [*Assignment: organization-defined information system*] to a public network.

Supplemental Guidance: A public network is any network accessible to the general public including, for example, the Internet and organizational extranets with public access.

(5) *SYSTEM INTERCONNECTIONS | RESTRICTIONS ON EXTERNAL SYSTEM CONNECTIONS*

The organization employs [*Selection: allow-all, deny-by-exception; deny-all, permit-by-exception*] policy for allowing [*Assignment: organization-defined information systems*] to connect to external information systems.

Supplemental Guidance: Organizations can constrain information system connectivity to external domains (e.g., websites) by employing one of two policies with regard to such connectivity: (i) allow-all, deny by exception, also known as *blacklisting* (the weaker of the two policies); or (ii) deny-all, allow by exception, also known as *whitelisting* (the stronger of the two policies). For either policy, organizations determine what exceptions, if any, are acceptable. Related control: CM-7.

References: FIPS Publication 199; NIST Special Publication 800-47.

Priority and Baseline Allocation:

P1	**LOW** CA-3	**MOD** CA-3 (5)	**HIGH** CA-3 (5)

CA-4 SECURITY CERTIFICATION

[Withdrawn: Incorporated into CA-2].

CA-5 PLAN OF ACTION AND MILESTONES

Control: The organization:

a. Develops a plan of action and milestones for the information system to document the organization's planned remedial actions to correct weaknesses or deficiencies noted during the assessment of the security controls and to reduce or eliminate known vulnerabilities in the system; and

b. Updates existing plan of action and milestones [*Assignment: organization-defined frequency*] based on the findings from security controls assessments, security impact analyses, and continuous monitoring activities.

Supplemental Guidance: Plans of action and milestones are key documents in security authorization packages and are subject to federal reporting requirements established by OMB. Related controls: CA-2, CA-7, CM-4, PM-4.

Control Enhancements:

(1) *PLAN OF ACTION AND MILESTONES | AUTOMATION SUPPORT FOR ACCURACY / CURRENCY*

The organization employs automated mechanisms to help ensure that the plan of action and milestones for the information system is accurate, up to date, and readily available.

References: OMB Memorandum 02-01; NIST Special Publication 800-37.

Priority and Baseline Allocation:

P3	**LOW** CA-5	**MOD** CA-5	**HIGH** CA-5

CA-6 SECURITY AUTHORIZATION

Control: The organization:

a. Assigns a senior-level executive or manager as the authorizing official for the information system;

b. Ensures that the authorizing official authorizes the information system for processing before commencing operations; and

c. Updates the security authorization [*Assignment: organization-defined frequency*].

Supplemental Guidance: Security authorizations are official management decisions, conveyed through authorization decision documents, by senior organizational officials or executives (i.e., authorizing officials) to authorize operation of information systems and to explicitly accept the risk to organizational operations and assets, individuals, other organizations, and the Nation based on the implementation of agreed-upon security controls. Authorizing officials provide budgetary oversight for organizational information systems or assume responsibility for the mission/business operations supported by those systems. The security authorization process is an inherently federal responsibility and therefore, authorizing officials must be federal employees. Through the security authorization process, authorizing officials assume responsibility and are accountable for security risks associated with the operation and use of organizational information systems. Accordingly, authorizing officials are in positions with levels of authority commensurate with understanding and accepting such information security-related risks. OMB policy requires that organizations conduct ongoing authorizations of information systems by implementing continuous monitoring programs. Continuous monitoring programs can satisfy three-year reauthorization requirements, so separate reauthorization processes are not necessary. Through the employment of comprehensive continuous monitoring processes, critical information contained in authorization packages (i.e., security plans, security assessment reports, and plans of action and milestones) is updated on an ongoing basis, providing authorizing officials and information system owners with an up-to-date status of the security state of organizational information systems and environments of operation. To reduce the administrative cost of security reauthorization, authorizing officials use the results of continuous monitoring processes to the maximum extent possible as the basis for rendering reauthorization decisions. Related controls: CA-2, CA-7, PM-9, PM-10.

Control Enhancements: None.

References: OMB Circular A-130; OMB Memorandum 11-33; NIST Special Publications 800-37, 800-137.

Priority and Baseline Allocation:

P2	**LOW** CA-6	**MOD** CA-6	**HIGH** CA-6

CA-7 CONTINUOUS MONITORING

Control: The organization develops a continuous monitoring strategy and implements a continuous monitoring program that includes:

a. Establishment of [*Assignment: organization-defined metrics*] to be monitored;

b. Establishment of [*Assignment: organization-defined freq*uencies] for monitoring and [*Assignment: organization-defined freq*uencies] for assessments supporting such monitoring;

c. Ongoing security control assessments in accordance with the organizational continuous monitoring strategy;

d. Ongoing security status monitoring of organization-defined metrics in accordance with the organizational continuous monitoring strategy;

e. Correlation and analysis of security-related information generated by assessments and monitoring;

f. Response actions to address results of the analysis of security-related information; and

g. Reporting the security status of organization and the information system to [*Assignment: organization-defined personnel or roles*] [*Assignment: organization-defined frequency*].

Supplemental Guidance: Continuous monitoring programs facilitate ongoing awareness of threats, vulnerabilities, and information security to support organizational risk management decisions. The terms *continuous* and *ongoing* imply that organizations assess/analyze security controls and information security-related risks at a frequency sufficient to support organizational risk-based decisions. The results of continuous monitoring programs generate appropriate risk response actions by organizations. Continuous monitoring programs also allow organizations to maintain the security authorizations of information systems and common controls over time in highly dynamic environments of operation with changing mission/business needs, threats, vulnerabilities, and technologies. Having access to security-related information on a continuing basis through reports/dashboards gives organizational officials the capability to make more effective and timely risk management decisions, including ongoing security authorization decisions. Automation supports more frequent updates to security authorization packages, hardware/software/firmware inventories, and other system information. Effectiveness is further enhanced when continuous monitoring outputs are formatted to provide information that is specific, measurable, actionable, relevant, and timely. Continuous monitoring activities are scaled in accordance with the security categories of information systems. Related controls: CA-2, CA-5, CA-6, CM-3, CM-4, PM-6, PM-9, RA-5, SA-11, SA-12, SI-2, SI-4.

Control Enhancements:

(1) *CONTINUOUS MONITORING | INDEPENDENT ASSESSMENT*

The organization employs assessors or assessment teams with [*Assignment: organization-defined level of independence*] to monitor the security controls in the information system on an ongoing basis.

Supplemental Guidance: Organizations can maximize the value of assessments of security controls during the continuous monitoring process by requiring that such assessments be conducted by assessors or assessment teams with appropriate levels of independence based on continuous monitoring strategies. Assessor independence provides a degree of impartiality to the monitoring process. To achieve such impartiality, assessors should not: (i) create a mutual or conflicting interest with the organizations where the assessments are being conducted; (ii) assess their own work; (iii) act as management or employees of the organizations they are serving; or (iv) place themselves in advocacy positions for the organizations acquiring their services.

(2) *CONTINUOUS MONITORING | TYPES OF ASSESSMENTS*

[Withdrawn: Incorporated into CA-2.]

(3) *CONTINUOUS MONITORING | TREND ANALYSES*

The organization employs trend analyses to determine if security control implementations, the frequency of continuous monitoring activities, and/or the types of activities used in the continuous monitoring process need to be modified based on empirical data.

Supplemental Guidance: Trend analyses can include, for example, examining recent threat information regarding the types of threat events that have occurred within the organization or across the federal government, success rates of certain types of cyber attacks, emerging vulnerabilities in information technologies, evolving social engineering techniques, results from multiple security control assessments, the effectiveness of configuration settings, and findings from Inspectors General or auditors.

References: OMB Memorandum 11-33; NIST Special Publications 800-37, 800-39, 800-53A, 800-115, 800-137; US-CERT Technical Cyber Security Alerts; DoD Information Assurance Vulnerability Alerts.

Priority and Baseline Allocation:

P2	**LOW** CA-7	**MOD** CA-7 (1)	**HIGH** CA-7 (1)

CA-8 PENETRATION TESTING

Control: The organization conducts penetration testing [*Assignment: organization-defined frequency*] on [*Assignment: organization-defined information systems or system components*].

Supplemental Guidance: Penetration testing is a specialized type of assessment conducted on information systems or individual system components to identify vulnerabilities that could be exploited by adversaries. Such testing can be used to either validate vulnerabilities or determine the degree of resistance organizational information systems have to adversaries within a set of specified constraints (e.g., time, resources, and/or skills). Penetration testing attempts to duplicate the actions of adversaries in carrying out hostile cyber attacks against organizations and provides a more in-depth analysis of security-related weaknesses/deficiencies. Organizations can also use the results of vulnerability analyses to support penetration testing activities. Penetration testing can be conducted on the hardware, software, or firmware components of an information system and can exercise both physical and technical security controls. A standard method for penetration testing includes, for example: (i) pretest analysis based on full knowledge of the target system; (ii) pretest identification of potential vulnerabilities based on pretest analysis; and (iii) testing designed to determine exploitability of identified vulnerabilities. All parties agree to the rules of engagement before the commencement of penetration testing scenarios. Organizations correlate the penetration testing rules of engagement with the tools, techniques, and procedures that are anticipated to be employed by adversaries carrying out attacks. Organizational risk assessments guide decisions on the level of independence required for personnel conducting penetration testing. Related control: SA-12.

Control Enhancements:

(1) *PENETRATION TESTING | INDEPENDENT PENETRATION AGENT OR TEAM*

The organization employs an independent penetration agent or penetration team to perform penetration testing on the information system or system components.

Supplemental Guidance: Independent penetration agents or teams are individuals or groups who conduct impartial penetration testing of organizational information systems. Impartiality implies that penetration agents or teams are free from any perceived or actual conflicts of interest with regard to the development, operation, or management of the information systems that are the targets of the penetration testing. Supplemental guidance for CA-2 (1) provides additional information regarding independent assessments that can be applied to penetration testing. Related control: CA-2.

(2) *PENETRATION TESTING | RED TEAM EXERCISES*

The organization employs [*Assignment: organization-defined red team exercises*] to simulate attempts by adversaries to compromise organizational information systems in accordance with [*Assignment: organization-defined rules of engagement*].

Supplemental Guidance: Red team exercises extend the objectives of penetration testing by examining the security posture of organizations and their ability to implement effective cyber defenses. As such, red team exercises reflect simulated adversarial attempts to compromise organizational mission/business functions and provide a comprehensive assessment of the security state of information systems and organizations. Simulated adversarial attempts to compromise organizational missions/business functions and the information systems that support those missions/functions may include technology-focused attacks (e.g., interactions with hardware, software, or firmware components and/or mission/business processes) and social engineering-based attacks (e.g., interactions via email, telephone, shoulder surfing, or personal conversations). While penetration testing may be largely laboratory-based testing, organizations use red team exercises to provide more comprehensive assessments that reflect

real-world conditions. Red team exercises can be used to improve security awareness and training and to assess levels of security control effectiveness.

References: None.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** Not Selected	**HIGH** CA-8

CA-9 INTERNAL SYSTEM CONNECTIONS

Control: The organization:

a. Authorizes internal connections of [*Assignment: organization-defined information system components or classes of components*] to the information system; and

b. Documents, for each internal connection, the interface characteristics, security requirements, and the nature of the information communicated.

Supplemental Guidance: This control applies to connections between organizational information systems and (separate) constituent system components (i.e., intra-system connections) including, for example, system connections with mobile devices, notebook/desktop computers, printers, copiers, facsimile machines, scanners, sensors, and servers. Instead of authorizing each individual internal connection, organizations can authorize internal connections for a class of components with common characteristics and/or configurations, for example, all digital printers, scanners, and copiers with a specified processing, storage, and transmission capability or all smart phones with a specific baseline configuration. Related controls: AC-3, AC-4, AC-18, AC-19, AU-2, AU-12, CA-7, CM-2, IA-3, SC-7, SI-4.

Control Enhancements:

(1) *INTERNAL SYSTEM CONNECTIONS | SECURITY COMPLIANCE CHECKS*

The information system performs security compliance checks on constituent system components prior to the establishment of the internal connection.

Supplemental Guidance: Security compliance checks may include, for example, verification of the relevant baseline configuration. Related controls: CM-6.

References: None.

Priority and Baseline Allocation:

P2	**LOW** CA-9	**MOD** CA-9	**HIGH** CA-9

FAMILY: CONFIGURATION MANAGEMENT

CM-1 CONFIGURATION MANAGEMENT POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A configuration management policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the configuration management policy and associated configuration management controls; and

b. Reviews and updates the current:

   1. Configuration management policy [*Assignment: organization-defined frequency*]; and

   2. Configuration management procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the CM family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** CM-1	**MOD** CM-1	**HIGH** CM-1

CM-2 BASELINE CONFIGURATION

Control: The organization develops, documents, and maintains under configuration control, a current baseline configuration of the information system.

Supplemental Guidance: This control establishes baseline configurations for information systems and system components including communications and connectivity-related aspects of systems. Baseline configurations are documented, formally reviewed and agreed-upon sets of specifications for information systems or configuration items within those systems. Baseline configurations serve as a basis for future builds, releases, and/or changes to information systems. Baseline configurations include information about information system components (e.g., standard software packages installed on workstations, notebook computers, servers, network components, or mobile devices; current version numbers and patch information on operating systems and applications; and configuration settings/parameters), network topology, and the logical placement of those components within the system architecture. Maintaining baseline configurations requires creating new baselines as organizational information systems change over time. Baseline configurations of information systems reflect the current enterprise architecture. Related controls: CM-3, CM-6, CM-8, CM-9, SA-10, PM-5, PM-7.

Control Enhancements:

(1) *BASELINE CONFIGURATION | REVIEWS AND UPDATES*

The organization reviews and updates the baseline configuration of the information system:

(a) [*Assignment: organization-defined frequency*];

(b) When required due to [*Assignment organization-defined circumstances*]; and

(c) As an integral part of information system component installations and upgrades.

Supplemental Guidance: Related control: CM-5.

(2) *BASELINE CONFIGURATION | AUTOMATION SUPPORT FOR ACCURACY / CURRENCY*

The organization employs automated mechanisms to maintain an up-to-date, complete, accurate, and readily available baseline configuration of the information system.

Supplemental Guidance: Automated mechanisms that help organizations maintain consistent baseline configurations for information systems include, for example, hardware and software inventory tools, configuration management tools, and network management tools. Such tools can be deployed and/or allocated as common controls, at the information system level, or at the operating system or component level (e.g., on workstations, servers, notebook computers, network components, or mobile devices). Tools can be used, for example, to track version numbers on operating system applications, types of software installed, and current patch levels. This control enhancement can be satisfied by the implementation of CM-8 (2) for organizations that choose to combine information system component inventory and baseline configuration activities. Related controls: CM-7, RA-5.

(3) *BASELINE CONFIGURATION | RETENTION OF PREVIOUS CONFIGURATIONS*

The organization retains [*Assignment: organization-defined previous versions of baseline configurations of the information system*] to support rollback.

Supplemental Guidance: Retaining previous versions of baseline configurations to support rollback may include, for example, hardware, software, firmware, configuration files, and configuration records.

(4) *BASELINE CONFIGURATION | UNAUTHORIZED SOFTWARE*

[Withdrawn: Incorporated into CM-7].

(5) *BASELINE CONFIGURATION | AUTHORIZED SOFTWARE*

[Withdrawn: Incorporated into CM-7].

(6) *BASELINE CONFIGURATION | DEVELOPMENT AND TEST ENVIRONMENTS*

The organization maintains a baseline configuration for information system development and test environments that is managed separately from the operational baseline configuration.

Supplemental Guidance: Establishing separate baseline configurations for development, testing, and operational environments helps protect information systems from unplanned/unexpected events related to development and testing activities. Separate baseline configurations allow organizations to apply the configuration management that is most appropriate for each type of configuration. For example, management of operational configurations typically emphasizes the need for stability, while management of development/test configurations requires greater flexibility. Configurations in the test environment mirror the configurations in the operational environment to the extent practicable so that the results of the testing are representative of the proposed changes to the operational systems. This control enhancement requires separate configurations but not necessarily separate physical environments. Related controls: CM-4, SC-3, SC-7.

(7) *BASELINE CONFIGURATION | CONFIGURE SYSTEMS, COMPONENTS, OR DEVICES FOR HIGH-RISK AREAS*

The organization:

(a) Issues [*Assignment: organization-defined information systems, system components, or devices*] with [*Assignment: organization-defined configurations*] to individuals traveling to locations that the organization deems to be of significant risk; and

(b) Applies [*Assignment: organization-defined security safeguards*] to the devices when the individuals return.

Supplemental Guidance: When it is known that information systems, system components, or devices (e.g., notebook computers, mobile devices) will be located in high-risk areas, additional security controls may be implemented to counter the greater threat in such areas coupled with the lack of physical security relative to organizational-controlled areas. For example, organizational policies and procedures for notebook computers used by individuals departing on and returning from travel include, for example, determining which locations are of concern, defining required configurations for the devices, ensuring that the devices are configured as intended before travel is initiated, and applying specific safeguards to the device after travel is completed. Specially configured notebook computers include, for example, computers with sanitized hard drives, limited applications, and additional hardening (e.g., more stringent configuration settings). Specified safeguards applied to mobile devices upon return from travel include, for example, examining the device for signs of physical tampering and purging/reimaging the hard disk drive. Protecting information residing on mobile devices is covered in the media protection family.

References: NIST Special Publication 800-128.

Priority and Baseline Allocation:

P1	**LOW** CM-2	**MOD** CM-2 (1) (3) (7)	**HIGH** CM-2 (1) (2) (3) (7)

CM-3 CONFIGURATION CHANGE CONTROL

Control: The organization:

a. Determines the types of changes to the information system that are configuration-controlled;

b. Reviews proposed configuration-controlled changes to the information system and approves or disapproves such changes with explicit consideration for security impact analyses;

c. Documents configuration change decisions associated with the information system;

d. Implements approved configuration-controlled changes to the information system;

e. Retains records of configuration-controlled changes to the information system for [*Assignment: organization-defined time period*];

f. Audits and reviews activities associated with configuration-controlled changes to the information system; and

g. Coordinates and provides oversight for configuration change control activities through [*Assignment: organization-defined configuration change control element (e.g., committee, board)*] that convenes [*Selection (one or more):* [*Assignment: organization-defined frequency*]; [*Assignment: organization-defined configuration change conditions*]].

Supplemental Guidance: Configuration change controls for organizational information systems involve the systematic proposal, justification, implementation, testing, review, and disposition of changes to the systems, including system upgrades and modifications. Configuration change control includes changes to baseline configurations for components and configuration items of information systems, changes to configuration settings for information technology products (e.g., operating systems, applications, firewalls, routers, and mobile devices), unscheduled/unauthorized changes, and changes to remediate vulnerabilities. Typical processes for managing configuration changes to information systems include, for example, Configuration Control Boards that approve proposed changes to systems. For new development information systems or systems undergoing major upgrades, organizations consider including representatives from development organizations on the Configuration Control Boards. Auditing of changes includes activities before and after changes are made to organizational information systems and the auditing activities required to implement such changes. Related controls: CA-7, CM-2, CM-4, CM-5, CM-6, CM-9, SA-10, SI-2, SI-12.

Control Enhancements:

(1) *CONFIGURATION CHANGE CONTROL | AUTOMATED DOCUMENT / NOTIFICATION / PROHIBITION OF CHANGES*

The organization employs automated mechanisms to:

(a) Document proposed changes to the information system;

(b) Notify [*Assignment: organized-defined approval authorities*] of proposed changes to the information system and request change approval;

(c) Highlight proposed changes to the information system that have not been approved or disapproved by [*Assignment: organization-defined time period*];

(d) Prohibit changes to the information system until designated approvals are received;

(e) Document all changes to the information system; and

(f) Notify [*Assignment: organization-defined personnel*] when approved changes to the information system are completed.

(2) *CONFIGURATION CHANGE CONTROL | TEST / VALIDATE / DOCUMENT CHANGES*

The organization tests, validates, and documents changes to the information system before implementing the changes on the operational system.

Supplemental Guidance: Changes to information systems include modifications to hardware, software, or firmware components and configuration settings defined in CM-6. Organizations ensure that testing does not interfere with information system operations. Individuals/groups conducting tests understand organizational security policies and procedures, information system security policies and procedures, and the specific health, safety, and environmental risks associated with particular facilities/processes. Operational systems may need to be taken off-line, or replicated to the extent feasible, before testing can be conducted. If information systems must be taken off-line for testing, the tests are scheduled to occur during planned system outages whenever possible. If testing cannot be conducted on operational systems, organizations employ compensating controls (e.g., testing on replicated systems).

(3) *CONFIGURATION CHANGE CONTROL | AUTOMATED CHANGE IMPLEMENTATION*

The organization employs automated mechanisms to implement changes to the current information system baseline and deploys the updated baseline across the installed base.

(4) *CONFIGURATION CHANGE CONTROL | SECURITY REPRESENTATIVE*

The organization requires an information security representative to be a member of the [*Assignment: organization-defined configuration change control element*].

Supplemental Guidance: Information security representatives can include, for example, senior agency information security officers, information system security officers, or information system security managers. Representation by personnel with information security expertise is important because changes to information system configurations can have unintended side effects, some of which may be security-relevant. Detecting such changes early in the process can help avoid unintended, negative consequences that could ultimately affect the security state of organizational information systems. The configuration change control element in this control enhancement reflects the change control elements defined by organizations in CM-3.

(5) *CONFIGURATION CHANGE CONTROL | AUTOMATED SECURITY RESPONSE*

The information system implements [*Assignment: organization-defined security responses*] automatically if baseline configurations are changed in an unauthorized manner.

Supplemental Guidance: Security responses include, for example, halting information system processing, halting selected system functions, or issuing alerts/notifications to organizational personnel when there is an unauthorized modification of a configuration item.

(6) *CONFIGURATION CHANGE CONTROL | CRYPTOGRAPHY MANAGEMENT*

The organization ensures that cryptographic mechanisms used to provide [*Assignment: organization-defined security safeguards*] are under configuration management.

Supplemental Guidance: Regardless of the cryptographic means employed (e.g., public key, private key, shared secrets), organizations ensure that there are processes and procedures in place to effectively manage those means. For example, if devices use certificates as a basis for

identification and authentication, there needs to be a process in place to address the expiration of those certificates. Related control: SC-13.

References: NIST Special Publication 800-128.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** CM-3 (2)	**HIGH** CM-3 (1) (2)

CM-4 SECURITY IMPACT ANALYSIS

Control: The organization analyzes changes to the information system to determine potential security impacts prior to change implementation.

Supplemental Guidance: Organizational personnel with information security responsibilities (e.g., Information System Administrators, Information System Security Officers, Information System Security Managers, and Information System Security Engineers) conduct security impact analyses. Individuals conducting security impact analyses possess the necessary skills/technical expertise to analyze the changes to information systems and the associated security ramifications. Security impact analysis may include, for example, reviewing security plans to understand security control requirements and reviewing system design documentation to understand control implementation and how specific changes might affect the controls. Security impact analyses may also include assessments of risk to better understand the impact of the changes and to determine if additional security controls are required. Security impact analyses are scaled in accordance with the security categories of the information systems. Related controls: CA-2, CA-7, CM-3, CM-9, SA-4, SA-5, SA-10, SI-2.

Control Enhancements:

(1) *SECURITY IMPACT ANALYSIS | SEPARATE TEST ENVIRONMENTS*

The organization analyzes changes to the information system in a separate test environment before implementation in an operational environment, looking for security impacts due to flaws, weaknesses, incompatibility, or intentional malice.

Supplemental Guidance: Separate test environment in this context means an environment that is physically or logically isolated and distinct from the operational environment. The separation is sufficient to ensure that activities in the test environment do not impact activities in the operational environment, and information in the operational environment is not inadvertently transmitted to the test environment. Separate environments can be achieved by physical or logical means. If physically separate test environments are not used, organizations determine the strength of mechanism required when implementing logical separation (e.g., separation achieved through virtual machines). Related controls: SA-11, SC-3, SC-7.

(2) *SECURITY IMPACT ANALYSIS | VERIFICATION OF SECURITY FUNCTIONS*

The organization, after the information system is changed, checks the security functions to verify that the functions are implemented correctly, operating as intended, and producing the desired outcome with regard to meeting the security requirements for the system.

Supplemental Guidance: Implementation is this context refers to installing changed code in the operational information system. Related control: SA-11.

References: NIST Special Publication 800-128.

Priority and Baseline Allocation:

P2	**LOW** CM-4	**MOD** CM-4	**HIGH** CM-4 (1)

CM-5 ACCESS RESTRICTIONS FOR CHANGE

Control: The organization defines, documents, approves, and enforces physical and logical access restrictions associated with changes to the information system.

Supplemental Guidance: Any changes to the hardware, software, and/or firmware components of information systems can potentially have significant effects on the overall security of the systems. Therefore, organizations permit only qualified and authorized individuals to access information systems for purposes of initiating changes, including upgrades and modifications. Organizations maintain records of access to ensure that configuration change control is implemented and to support after-the-fact actions should organizations discover any unauthorized changes. Access restrictions for change also include software libraries. Access restrictions include, for example, physical and logical access controls (see AC-3 and PE-3), workflow automation, media libraries, abstract layers (e.g., changes implemented into third-party interfaces rather than directly into information systems), and change windows (e.g., changes occur only during specified times, making unauthorized changes easy to discover). Related controls: AC-3, AC-6, PE-3.

Control Enhancements:

(1) *ACCESS RESTRICTIONS FOR CHANGE | AUTOMATED ACCESS ENFORCEMENT / AUDITING*

The information system enforces access restrictions and supports auditing of the enforcement actions.

Supplemental Guidance: Related controls: AU-2, AU-12, AU-6, CM-3, CM-6.

(2) *ACCESS RESTRICTIONS FOR CHANGE | REVIEW SYSTEM CHANGES*

The organization reviews information system changes [*Assignment: organization-defined frequency*] and [*Assignment: organization-defined circumstances*] to determine whether unauthorized changes have occurred.

Supplemental Guidance: Indications that warrant review of information system changes and the specific circumstances justifying such reviews may be obtained from activities carried out by organizations during the configuration change process. Related controls: AU-6, AU-7, CM-3, CM-5, PE-6, PE-8.

(3) *ACCESS RESTRICTIONS FOR CHANGE | SIGNED COMPONENTS*

The information system prevents the installation of [*Assignment: organization-defined software and firmware components*] without verification that the component has been digitally signed using a certificate that is recognized and approved by the organization.

Supplemental Guidance: Software and firmware components prevented from installation unless signed with recognized and approved certificates include, for example, software and firmware version updates, patches, service packs, device drivers, and basic input output system (BIOS) updates. Organizations can identify applicable software and firmware components by type, by specific items, or a combination of both. Digital signatures and organizational verification of such signatures, is a method of code authentication. Related controls: CM-7, SC-13, SI-7.

(4) *ACCESS RESTRICTIONS FOR CHANGE | DUAL AUTHORIZATION*

The organization enforces dual authorization for implementing changes to [*Assignment: organization-defined information system components and system-level information*].

Supplemental Guidance: Organizations employ dual authorization to ensure that any changes to selected information system components and information cannot occur unless two qualified individuals implement such changes. The two individuals possess sufficient skills/expertise to determine if the proposed changes are correct implementations of approved changes. Dual authorization may also be known as two-person control. Related controls: AC-5, CM-3.

(5) *ACCESS RESTRICTIONS FOR CHANGE | LIMIT PRODUCTION / OPERATIONAL PRIVILEGES*

The organization:

(a) Limits privileges to change information system components and system-related information within a production or operational environment; and

(b) Reviews and reevaluates privileges [*Assignment: organization-defined frequency*].

Supplemental Guidance: In many organizations, information systems support multiple core missions/business functions. Limiting privileges to change information system components with respect to operational systems is necessary because changes to a particular information

system component may have far-reaching effects on mission/business processes supported by the system where the component resides. The complex, many-to-many relationships between systems and mission/business processes are in some cases, unknown to developers. Related control: AC-2.

(6) *ACCESS RESTRICTIONS FOR CHANGE | LIMIT LIBRARY PRIVILEGES*

The organization limits privileges to change software resident within software libraries.

Supplemental Guidance: Software libraries include privileged programs. Related control: AC-2.

(7) *ACCESS RESTRICTIONS FOR CHANGE | AUTOMATIC IMPLEMENTATION OF SECURITY SAFEGUARDS*

[Withdrawn: Incorporated into SI-7].

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** CM-5	**HIGH** CM-5 (1) (2) (3)

CM-6 CONFIGURATION SETTINGS

Control: The organization:

a. Establishes and documents configuration settings for information technology products employed within the information system using [*Assignment: organization-defined security configuration checklists*] that reflect the most restrictive mode consistent with operational requirements;

b. Implements the configuration settings;

c. Identifies, documents, and approves any deviations from established configuration settings for [*Assignment: organization-defined information system components*] based on [*Assignment: organization-defined operational requirements*]; and

d. Monitors and controls changes to the configuration settings in accordance with organizational policies and procedures.

Supplemental Guidance: Configuration settings are the set of parameters that can be changed in hardware, software, or firmware components of the information system that affect the security posture and/or functionality of the system. Information technology products for which security-related configuration settings can be defined include, for example, mainframe computers, servers (e.g., database, electronic mail, authentication, web, proxy, file, domain name), workstations, input/output devices (e.g., scanners, copiers, and printers), network components (e.g., firewalls, routers, gateways, voice and data switches, wireless access points, network appliances, sensors), operating systems, middleware, and applications. Security-related parameters are those parameters impacting the security state of information systems including the parameters required to satisfy other security control requirements. Security-related parameters include, for example: (i) registry settings; (ii) account, file, directory permission settings; and (iii) settings for functions, ports, protocols, services, and remote connections. Organizations establish organization-wide configuration settings and subsequently derive specific settings for information systems. The established settings become part of the systems configuration baseline.

Common secure configurations (also referred to as security configuration checklists, lockdown and hardening guides, security reference guides, security technical implementation guides) provide recognized, standardized, and established benchmarks that stipulate secure configuration settings for specific information technology platforms/products and instructions for configuring those information system components to meet operational requirements. Common secure configurations can be developed by a variety of organizations including, for example, information technology product developers, manufacturers, vendors, consortia, academia, industry, federal agencies, and other organizations in the public and private sectors. Common secure configurations include the

United States Government Configuration Baseline (USGCB) which affects the implementation of CM-6 and other controls such as AC-19 and CM-7. The Security Content Automation Protocol (SCAP) and the defined standards within the protocol (e.g., Common Configuration Enumeration) provide an effective method to uniquely identify, track, and control configuration settings. OMB establishes federal policy on configuration requirements for federal information systems. Related controls: AC-19, CM-2, CM-3, CM-7, SI-4.

Control Enhancements:

(1) *CONFIGURATION SETTINGS | AUTOMATED CENTRAL MANAGEMENT / APPLICATION / VERIFICATION*

The organization employs automated mechanisms to centrally manage, apply, and verify configuration settings for [*Assignment: organization-defined information system components*].

Supplemental Guidance: Related controls: CA-7, CM-4.

(2) *CONFIGURATION SETTINGS | RESPOND TO UNAUTHORIZED CHANGES*

The organization employs [*Assignment: organization-defined security safeguards*] to respond to unauthorized changes to [*Assignment: organization-defined configuration settings*].

Supplemental Guidance: Responses to unauthorized changes to configuration settings can include, for example, alerting designated organizational personnel, restoring established configuration settings, or in extreme cases, halting affected information system processing. Related controls: IR-4, SI-7.

(3) *CONFIGURATION SETTINGS | UNAUTHORIZED CHANGE DETECTION*

[Withdrawn: Incorporated into SI-7].

(4) *CONFIGURATION SETTINGS | CONFORMANCE DEMONSTRATION*

[Withdrawn: Incorporated into CM-4].

References: OMB Memoranda 07-11, 07-18, 08-22; NIST Special Publications 800-70, 800-128; Web: http://nvd.nist.gov, http://checklists.nist.gov, http://www.nsa.gov.

Priority and Baseline Allocation:

P1	**LOW** CM-6	**MOD** CM-6	**HIGH** CM-6 (1) (2)

CM-7 LEAST FUNCTIONALITY

Control: The organization:

a. Configures the information system to provide only essential capabilities; and

b. Prohibits or restricts the use of the following functions, ports, protocols, and/or services: [*Assignment: organization-defined prohibited or restricted functions, ports, protocols, and/or services*].

Supplemental Guidance: Information systems can provide a wide variety of functions and services. Some of the functions and services, provided by default, may not be necessary to support essential organizational operations (e.g., key missions, functions). Additionally, it is sometimes convenient to provide multiple services from single information system components, but doing so increases risk over limiting the services provided by any one component. Where feasible, organizations limit component functionality to a single function per device (e.g., email servers or web servers, but not both). Organizations review functions and services provided by information systems or individual components of information systems, to determine which functions and services are candidates for elimination (e.g., Voice Over Internet Protocol, Instant Messaging, auto-execute, and file sharing). Organizations consider disabling unused or unnecessary physical and logical ports/protocols (e.g., Universal Serial Bus, File Transfer Protocol, and Hyper Text Transfer Protocol) on information systems to prevent unauthorized connection of devices, unauthorized transfer of information, or unauthorized tunneling. Organizations can utilize network scanning tools, intrusion detection and prevention systems, and end-point protections such as firewalls and host-based intrusion detection

systems to identify and prevent the use of prohibited functions, ports, protocols, and services. Related controls: AC-6, CM-2, RA-5, SA-5, SC-7.

Control Enhancements:

(1) *LEAST FUNCTIONALITY | PERIODIC REVIEW*

The organization:

(a) Reviews the information system [*Assignment: organization-defined frequency*] to identify unnecessary and/or nonsecure functions, ports, protocols, and services; and

(b) Disables [*Assignment: organization-defined functions, ports, protocols, and services within the information system deemed to be unnecessary and/or nonsecure*].

Supplemental Guidance: The organization can either make a determination of the relative security of the function, port, protocol, and/or service or base the security decision on the assessment of other entities. Bluetooth, FTP, and peer-to-peer networking are examples of less than secure protocols. Related controls: AC-18, CM-7, IA-2.

(2) *LEAST FUNCTIONALITY | PREVENT PROGRAM EXECUTION*

The information system prevents program execution in accordance with [*Selection (one or more): [Assignment: organization-defined policies regarding software program usage and restrictions]; rules authorizing the terms and conditions of software program usage*].

Supplemental Guidance: Related controls: CM-8, PM-5.

(3) *LEAST FUNCTIONALITY | REGISTRATION COMPLIANCE*

The organization ensures compliance with [*Assignment: organization-defined registration requirements for functions, ports, protocols, and services*].

Supplemental Guidance: Organizations use the registration process to manage, track, and provide oversight for information systems and implemented functions, ports, protocols, and services.

(4) *LEAST FUNCTIONALITY | UNAUTHORIZED SOFTWARE / BLACKLISTING*

The organization:

(a) Identifies [*Assignment: organization-defined software programs not authorized to execute on the information system*];

(b) Employs an allow-all, deny-by-exception policy to prohibit the execution of unauthorized software programs on the information system; and

(c) Reviews and updates the list of unauthorized software programs [*Assignment: organization-defined frequency*].

Supplemental Guidance: The process used to identify software programs that are not authorized to execute on organizational information systems is commonly referred to as *blacklisting*. Organizations can implement CM-7 (5) instead of this control enhancement if whitelisting (the stronger of the two policies) is the preferred approach for restricting software program execution. Related controls: CM-6, CM-8, PM-5.

(5) *LEAST FUNCTIONALITY | AUTHORIZED SOFTWARE / WHITELISTING*

The organization:

(a) Identifies [*Assignment: organization-defined software programs authorized to execute on the information system*];

(b) Employs a deny-all, permit-by-exception policy to allow the execution of authorized software programs on the information system; and

(c) Reviews and updates the list of authorized software programs [*Assignment: organization-defined frequency*].

Supplemental Guidance: The process used to identify software programs that are authorized to execute on organizational information systems is commonly referred to as *whitelisting*. In addition to whitelisting, organizations consider verifying the integrity of white-listed software programs using, for example, cryptographic checksums, digital signatures, or hash functions. Verification of white-listed software can occur either prior to execution or at system startup. Related controls: CM-2, CM-6, CM-8, PM-5, SA-10, SC-34, SI-7.

References: DoD Instruction 8551.01.

Priority and Baseline Allocation:

P1	**LOW** CM-7	**MOD** CM-7 (1) (2) (4)	**HIGH** CM-7 (1) (2) (5)

CM-8 INFORMATION SYSTEM COMPONENT INVENTORY

Control: The organization:

a. Develops and documents an inventory of information system components that:

1. Accurately reflects the current information system;
2. Includes all components within the authorization boundary of the information system;
3. Is at the level of granularity deemed necessary for tracking and reporting; and
4. Includes [*Assignment: organization-defined information deemed necessary to achieve effective information system component accountability*]; and

b. Reviews and updates the information system component inventory [*Assignment: organization-defined frequency*].

Supplemental Guidance: Organizations may choose to implement centralized information system component inventories that include components from all organizational information systems. In such situations, organizations ensure that the resulting inventories include system-specific information required for proper component accountability (e.g., information system association, information system owner). Information deemed necessary for effective accountability of information system components includes, for example, hardware inventory specifications, software license information, software version numbers, component owners, and for networked components or devices, machine names and network addresses. Inventory specifications include, for example, manufacturer, device type, model, serial number, and physical location. Related controls: CM-2, CM-6, PM-5.

Control Enhancements:

(1) *INFORMATION SYSTEM COMPONENT INVENTORY | UPDATES DURING INSTALLATIONS / REMOVALS*

The organization updates the inventory of information system components as an integral part of component installations, removals, and information system updates.

(2) *INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED MAINTENANCE*

The organization employs automated mechanisms to help maintain an up-to-date, complete, accurate, and readily available inventory of information system components.

Supplemental Guidance: Organizations maintain information system inventories to the extent feasible. Virtual machines, for example, can be difficult to monitor because such machines are not visible to the network when not in use. In such cases, organizations maintain as up-to-date, complete, and accurate an inventory as is deemed reasonable. This control enhancement can be satisfied by the implementation of CM-2 (2) for organizations that choose to combine information system component inventory and baseline configuration activities. Related control: SI-7.

(3) *INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED UNAUTHORIZED COMPONENT DETECTION*

The organization:

(a) Employs automated mechanisms [*Assignment: organization-defined frequency*] to detect the presence of unauthorized hardware, software, and firmware components within the information system; and

(b) Takes the following actions when unauthorized components are detected: [*Selection (one or more): disables network access by such components; isolates the components; notifies* [*Assignment: organization-defined personnel or roles*]].

Supplemental Guidance: This control enhancement is applied in addition to the monitoring for unauthorized remote connections and mobile devices. Monitoring for unauthorized system components may be accomplished on an ongoing basis or by the periodic scanning of systems for that purpose. Automated mechanisms can be implemented within information systems or in other separate devices. Isolation can be achieved, for example, by placing unauthorized information system components in separate domains or subnets or otherwise quarantining such components. This type of component isolation is commonly referred to as sandboxing. Related controls: AC-17, AC-18, AC-19, CA-7, SI-3, SI-4, SI-7, RA-5.

(4) *INFORMATION SYSTEM COMPONENT INVENTORY | ACCOUNTABILITY INFORMATION*

The organization includes in the information system component inventory information, a means for identifying by [*Selection (one or more): name; position; role*], individuals responsible/accountable for administering those components.

Supplemental Guidance: Identifying individuals who are both responsible and accountable for administering information system components helps to ensure that the assigned components are properly administered and organizations can contact those individuals if some action is required (e.g., component is determined to be the source of a breach/compromise, component needs to be recalled/replaced, or component needs to be relocated).

(5) *INFORMATION SYSTEM COMPONENT INVENTORY | NO DUPLICATE ACCOUNTING OF COMPONENTS*

The organization verifies that all components within the authorization boundary of the information system are not duplicated in other information system component inventories.

Supplemental Guidance: This control enhancement addresses the potential problem of duplicate accounting of information system components in large or complex interconnected systems.

(6) *INFORMATION SYSTEM COMPONENT INVENTORY | ASSESSED CONFIGURATIONS / APPROVED DEVIATIONS*

The organization includes assessed component configurations and any approved deviations to current deployed configurations in the information system component inventory.

Supplemental Guidance: This control enhancement focuses on configuration settings established by organizations for information system components, the specific components that have been assessed to determine compliance with the required configuration settings, and any approved deviations from established configuration settings. Related controls: CM-2, CM-6.

(7) *INFORMATION SYSTEM COMPONENT INVENTORY | CENTRALIZED REPOSITORY*

The organization provides a centralized repository for the inventory of information system components.

Supplemental Guidance: Organizations may choose to implement centralized information system component inventories that include components from all organizational information systems. Centralized repositories of information system component inventories provide opportunities for efficiencies in accounting for organizational hardware, software, and firmware assets. Such repositories may also help organizations rapidly identify the location and responsible individuals of system components that have been compromised, breached, or are otherwise in need of mitigation actions. Organizations ensure that the resulting centralized inventories include system-specific information required for proper component accountability (e.g., information system association, information system owner).

(8) *INFORMATION SYSTEM COMPONENT INVENTORY | AUTOMATED LOCATION TRACKING*

The organization employs automated mechanisms to support tracking of information system components by geographic location.

Supplemental Guidance: The use of automated mechanisms to track the location of information system components can increase the accuracy of component inventories. Such capability may also help organizations rapidly identify the location and responsible individuals of system components that have been compromised, breached, or are otherwise in need of mitigation actions.

(9) *INFORMATION SYSTEM COMPONENT INVENTORY | ASSIGNMENT OF COMPONENTS TO SYSTEMS*

The organization:

(a) Assigns [*Assignment: organization-defined acquired information system components*] to an information system; and

(b) Receives an acknowledgement from the information system owner of this assignment.

Supplemental Guidance: Organizations determine the criteria for or types of information system components (e.g., microprocessors, motherboards, software, programmable logic controllers, and network devices) that are subject to this control enhancement. Related control: SA-4.

References: NIST Special Publication 800-128.

Priority and Baseline Allocation:

P1	**LOW** CM-8	**MOD** CM-8 (1) (3) (5)	**HIGH** CM-8 (1) (2) (3) (4) (5)

CM-9 CONFIGURATION MANAGEMENT PLAN

Control: The organization develops, documents, and implements a configuration management plan for the information system that:

a. Addresses roles, responsibilities, and configuration management processes and procedures;

b. Establishes a process for identifying configuration items throughout the system development life cycle and for managing the configuration of the configuration items;

c. Defines the configuration items for the information system and places the configuration items under configuration management; and

d. Protects the configuration management plan from unauthorized disclosure and modification.

Supplemental Guidance: Configuration management plans satisfy the requirements in configuration management policies while being tailored to individual information systems. Such plans define detailed processes and procedures for how configuration management is used to support system development life cycle activities at the information system level. Configuration management plans are typically developed during the development/acquisition phase of the system development life cycle. The plans describe how to move changes through change management processes, how to update configuration settings and baselines, how to maintain information system component inventories, how to control development, test, and operational environments, and how to develop, release, and update key documents. Organizations can employ templates to help ensure consistent and timely development and implementation of configuration management plans. Such templates can represent a master configuration management plan for the organization at large with subsets of the plan implemented on a system by system basis. Configuration management approval processes include designation of key management stakeholders responsible for reviewing and approving proposed changes to information systems, and personnel that conduct security impact analyses prior to the implementation of changes to the systems. Configuration items are the information system items (hardware, software, firmware, and documentation) to be configuration-managed. As information systems continue through the system development life cycle, new configuration items may be identified and some existing configuration items may no longer need to be under configuration control. Related controls: CM-2, CM-3, CM-4, CM-5, CM-8, SA-10.

Control Enhancements:

(1) *CONFIGURATION MANAGEMENT PLAN | ASSIGNMENT OF RESPONSIBILITY*

The organization assigns responsibility for developing the configuration management process to organizational personnel that are not directly involved in information system development.

Supplemental Guidance: In the absence of dedicated configuration management teams assigned within organizations, system developers may be tasked to develop configuration management processes using personnel who are not directly involved in system development or integration. This separation of duties ensures that organizations establish and maintain a sufficient degree of independence between the information system development and integration processes and configuration management processes to facilitate quality control and more effective oversight.

References: NIST Special Publication 800-128.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** CM-9	**HIGH** CM-9

CM-10 SOFTWARE USAGE RESTRICTIONS

Control: The organization:

a. Uses software and associated documentation in accordance with contract agreements and copyright laws;

b. Tracks the use of software and associated documentation protected by quantity licenses to control copying and distribution; and

c. Controls and documents the use of peer-to-peer file sharing technology to ensure that this capability is not used for the unauthorized distribution, display, performance, or reproduction of copyrighted work.

Supplemental Guidance: Software license tracking can be accomplished by manual methods (e.g., simple spreadsheets) or automated methods (e.g., specialized tracking applications) depending on organizational needs. Related controls: AC-17, CM-8, SC-7.

Control Enhancements:

(1) *SOFTWARE USAGE RESTRICTIONS | OPEN SOURCE SOFTWARE*

The organization establishes the following restrictions on the use of open source software: [*Assignment: organization-defined restrictions*].

Supplemental Guidance: Open source software refers to software that is available in source code form. Certain software rights normally reserved for copyright holders are routinely provided under software license agreements that permit individuals to study, change, and improve the software. From a security perspective, the major advantage of open source software is that it provides organizations with the ability to examine the source code. However, there are also various licensing issues associated with open source software including, for example, the constraints on derivative use of such software.

References: None.

Priority and Baseline Allocation:

P2	**LOW** CM-10	**MOD** CM-10	**HIGH** CM-10

CM-11 USER-INSTALLED SOFTWARE

Control: The organization:

a. Establishes [*Assignment: organization-defined policies*] governing the installation of software by users;
b. Enforces software installation policies through [*Assignment: organization-defined methods*]; and
c. Monitors policy compliance at [*Assignment: organization-defined frequency*].

Supplemental Guidance: If provided the necessary privileges, users have the ability to install software in organizational information systems. To maintain control over the types of software installed, organizations identify permitted and prohibited actions regarding software installation. Permitted software installations may include, for example, updates and security patches to existing software and downloading applications from organization-approved "app stores." Prohibited software installations may include, for example, software with unknown or suspect pedigrees or software that organizations consider potentially malicious. The policies organizations select

governing user-installed software may be organization-developed or provided by some external entity. Policy enforcement methods include procedural methods (e.g., periodic examination of user accounts), automated methods (e.g., configuration settings implemented on organizational information systems), or both. Related controls: AC-3, CM-2, CM-3, CM-5, CM-6, CM-7, PL-4.

Control Enhancements:

(1) *USER-INSTALLED SOFTWARE | ALERTS FOR UNAUTHORIZED INSTALLATIONS*

The information system alerts [*Assignment: organization-defined personnel or roles*] when the unauthorized installation of software is detected.

Supplemental Guidance: Related controls: CA-7, SI-4.

(2) *USER-INSTALLED SOFTWARE | PROHIBIT INSTALLATION WITHOUT PRIVILEGED STATUS*

The information system prohibits user installation of software without explicit privileged status.

Supplemental Guidance: Privileged status can be obtained, for example, by serving in the role of system administrator. Related control: AC-6.

References: None.

Priority and Baseline Allocation:

P1	**LOW** CM-11	**MOD** CM-11	**HIGH** CM-11

FAMILY: CONTINGENCY PLANNING

CP-1 CONTINGENCY PLANNING POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A contingency planning policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the contingency planning policy and associated contingency planning controls; and

b. Reviews and updates the current:

   1. Contingency planning policy [*Assignment: organization-defined frequency*]; and

   2. Contingency planning procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the CP family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: Federal Continuity Directive 1; NIST Special Publications 800-12, 800-34, 800-100.

Priority and Baseline Allocation:

P1	**LOW** CP-1	**MOD** CP-1	**HIGH** CP-1

CP-2 CONTINGENCY PLAN

Control: The organization:

a. Develops a contingency plan for the information system that:

   1. Identifies essential missions and business functions and associated contingency requirements;

   2. Provides recovery objectives, restoration priorities, and metrics;

   3. Addresses contingency roles, responsibilities, assigned individuals with contact information;

   4. Addresses maintaining essential missions and business functions despite an information system disruption, compromise, or failure;

   5. Addresses eventual, full information system restoration without deterioration of the security safeguards originally planned and implemented; and

   6. Is reviewed and approved by [*Assignment: organization-defined personnel or roles*];

b. Distributes copies of the contingency plan to [*Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements*];

c. Coordinates contingency planning activities with incident handling activities;

d. Reviews the contingency plan for the information system [*Assignment: organization-defined frequency*];

e. Updates the contingency plan to address changes to the organization, information system, or environment of operation and problems encountered during contingency plan implementation, execution, or testing;

f. Communicates contingency plan changes to [*Assignment: organization-defined key contingency personnel (identified by name and/or by role) and organizational elements*]; and

g. Protects the contingency plan from unauthorized disclosure and modification.

Supplemental Guidance: Contingency planning for information systems is part of an overall organizational program for achieving continuity of operations for mission/business functions. Contingency planning addresses both information system restoration and implementation of alternative mission/business processes when systems are compromised. The effectiveness of contingency planning is maximized by considering such planning throughout the phases of the system development life cycle. Performing contingency planning on hardware, software, and firmware development can be an effective means of achieving information system resiliency. Contingency plans reflect the degree of restoration required for organizational information systems since not all systems may need to fully recover to achieve the level of continuity of operations desired. Information system recovery objectives reflect applicable laws, Executive Orders, directives, policies, standards, regulations, and guidelines. In addition to information system availability, contingency plans also address other security-related events resulting in a reduction in mission and/or business effectiveness, such as malicious attacks compromising the confidentiality or integrity of information systems. Actions addressed in contingency plans include, for example, orderly/graceful degradation, information system shutdown, fallback to a manual mode, alternate information flows, and operating in modes reserved for when systems are under attack. By closely coordinating contingency planning with incident handling activities, organizations can ensure that the necessary contingency planning activities are in place and activated in the event of a security incident. Related controls: AC-14, CP-6, CP-7, CP-8, CP-9, CP-10, IR-4, IR-8, MP-2, MP-4, MP-5, PM-8, PM-11.

Control Enhancements:

(1) *CONTINGENCY PLAN | COORDINATE WITH RELATED PLANS*

The organization coordinates contingency plan development with organizational elements responsible for related plans.

Supplemental Guidance: Plans related to contingency plans for organizational information systems include, for example, Business Continuity Plans, Disaster Recovery Plans, Continuity of Operations Plans, Crisis Communications Plans, Critical Infrastructure Plans, Cyber Incident Response Plans, Insider Threat Implementation Plan, and Occupant Emergency Plans.

(2) *CONTINGENCY PLAN | CAPACITY PLANNING*

The organization conducts capacity planning so that necessary capacity for information processing, telecommunications, and environmental support exists during contingency operations.

Supplemental Guidance: Capacity planning is needed because different types of threats (e.g., natural disasters, targeted cyber attacks) can result in a reduction of the available processing, telecommunications, and support services originally intended to support the organizational missions/business functions. Organizations may need to anticipate degraded operations during contingency operations and factor such degradation into capacity planning.

(3) *CONTINGENCY PLAN | RESUME ESSENTIAL MISSIONS / BUSINESS FUNCTIONS*

The organization plans for the resumption of essential missions and business functions within [*Assignment: organization-defined time period*] of contingency plan activation.

Supplemental Guidance: Organizations may choose to carry out the contingency planning activities in this control enhancement as part of organizational business continuity planning including, for example, as part of business impact analyses. The time period for resumption of essential missions/business functions may be dependent on the severity/extent of disruptions to the information system and its supporting infrastructure. Related control: PE-12.

(4) *CONTINGENCY PLAN | RESUME ALL MISSIONS / BUSINESS FUNCTIONS*

The organization plans for the resumption of all missions and business functions within [*Assignment: organization-defined time period*] of contingency plan activation.

Supplemental Guidance: Organizations may choose to carry out the contingency planning activities in this control enhancement as part of organizational business continuity planning including, for example, as part of business impact analyses. The time period for resumption of all missions/business functions may be dependent on the severity/extent of disruptions to the information system and its supporting infrastructure. Related control: PE-12.

(5) *CONTINGENCY PLAN | CONTINUE ESSENTIAL MISSIONS / BUSINESS FUNCTIONS*

The organization plans for the continuance of essential missions and business functions with little or no loss of operational continuity and sustains that continuity until full information system restoration at primary processing and/or storage sites.

Supplemental Guidance: Organizations may choose to carry out the contingency planning activities in this control enhancement as part of organizational business continuity planning including, for example, as part of business impact analyses. Primary processing and/or storage sites defined by organizations as part of contingency planning may change depending on the circumstances associated with the contingency (e.g., backup sites may become primary sites). Related control: PE-12.

(6) *CONTINGENCY PLAN | ALTERNATE PROCESSING / STORAGE SITE*

The organization plans for the transfer of essential missions and business functions to alternate processing and/or storage sites with little or no loss of operational continuity and sustains that continuity through information system restoration to primary processing and/or storage sites.

Supplemental Guidance: Organizations may choose to carry out the contingency planning activities in this control enhancement as part of organizational business continuity planning including, for example, as part of business impact analyses. Primary processing and/or storage sites defined by organizations as part of contingency planning may change depending on the circumstances associated with the contingency (e.g., backup sites may become primary sites). Related control: PE-12.

(7) *CONTINGENCY PLAN | COORDINATE WITH EXTERNAL SERVICE PROVIDERS*

The organization coordinates its contingency plan with the contingency plans of external service providers to ensure that contingency requirements can be satisfied.

Supplemental Guidance: When the capability of an organization to successfully carry out its core missions/business functions is dependent on external service providers, developing a timely and comprehensive contingency plan may become more challenging. In this situation, organizations coordinate contingency planning activities with the external entities to ensure that the individual plans reflect the overall contingency needs of the organization. Related control: SA-9.

(8) *CONTINGENCY PLAN | IDENTIFY CRITICAL ASSETS*

The organization identifies critical information system assets supporting essential missions and business functions.

Supplemental Guidance: Organizations may choose to carry out the contingency planning activities in this control enhancement as part of organizational business continuity planning including, for example, as part of business impact analyses. Organizations identify critical information system assets so that additional safeguards and countermeasures can be employed (above and beyond those safeguards and countermeasures routinely implemented) to help ensure that organizational missions/business functions can continue to be conducted during contingency operations. In addition, the identification of critical information assets facilitates the prioritization of organizational resources. Critical information system assets include technical and operational aspects. Technical aspects include, for example, information

technology services, information system components, information technology products, and mechanisms. Operational aspects include, for example, procedures (manually executed operations) and personnel (individuals operating technical safeguards and/or executing manual procedures). Organizational program protection plans can provide assistance in identifying critical assets. Related controls: SA-14, SA-15.

References: Federal Continuity Directive 1; NIST Special Publication 800-34.

Priority and Baseline Allocation:

P1	**LOW** CP-2	**MOD** CP-2 (1) (3) (8)	**HIGH** CP-2 (1) (2) (3) (4) (5) (8)

CP-3 CONTINGENCY TRAINING

Control: The organization provides contingency training to information system users consistent with assigned roles and responsibilities:

a. Within [*Assignment: organization-defined time period*] of assuming a contingency role or responsibility;

b. When required by information system changes; and

c. [*Assignment: organization-defined frequency*] thereafter.

Supplemental Guidance: Contingency training provided by organizations is linked to the assigned roles and responsibilities of organizational personnel to ensure that the appropriate content and level of detail is included in such training. For example, regular users may only need to know when and where to report for duty during contingency operations and if normal duties are affected; system administrators may require additional training on how to set up information systems at alternate processing and storage sites; and managers/senior leaders may receive more specific training on how to conduct mission-essential functions in designated off-site locations and how to establish communications with other governmental entities for purposes of coordination on contingency-related activities. Training for contingency roles/responsibilities reflects the specific continuity requirements in the contingency plan. Related controls: AT-2, AT-3, CP-2, IR-2.

Control Enhancements:

(1) *CONTINGENCY TRAINING | SIMULATED EVENTS*

The organization incorporates simulated events into contingency training to facilitate effective response by personnel in crisis situations.

(2) *CONTINGENCY TRAINING | AUTOMATED TRAINING ENVIRONMENTS*

The organization employs automated mechanisms to provide a more thorough and realistic contingency training environment.

References: Federal Continuity Directive 1; NIST Special Publications 800-16, 800-50.

Priority and Baseline Allocation:

P2	**LOW** CP-3	**MOD** CP-3	**HIGH** CP-3 (1)

CP-4 CONTINGENCY PLAN TESTING

Control: The organization:

a. Tests the contingency plan for the information system [*Assignment: organization-defined frequency*] using [*Assignment: organization-defined tests*] to determine the effectiveness of the plan and the organizational readiness to execute the plan;

b. Reviews the contingency plan test results; and

c. Initiates corrective actions, if needed.

Supplemental Guidance: Methods for testing contingency plans to determine the effectiveness of the plans and to identify potential weaknesses in the plans include, for example, walk-through and tabletop exercises, checklists, simulations (parallel, full interrupt), and comprehensive exercises. Organizations conduct testing based on the continuity requirements in contingency plans and include a determination of the effects on organizational operations, assets, and individuals arising due to contingency operations. Organizations have flexibility and discretion in the breadth, depth, and timelines of corrective actions. Related controls: CP-2, CP-3, IR-3.

Control Enhancements:

(1) *CONTINGENCY PLAN TESTING | COORDINATE WITH RELATED PLANS*

The organization coordinates contingency plan testing with organizational elements responsible for related plans.

Supplemental Guidance: Plans related to contingency plans for organizational information systems include, for example, Business Continuity Plans, Disaster Recovery Plans, Continuity of Operations Plans, Crisis Communications Plans, Critical Infrastructure Plans, Cyber Incident Response Plans, and Occupant Emergency Plans. This control enhancement does not require organizations to create organizational elements to handle related plans or to align such elements with specific plans. It does require, however, that if such organizational elements are responsible for related plans, organizations should coordinate with those elements. Related controls: IR-8, PM-8.

(2) *CONTINGENCY PLAN TESTING | ALTERNATE PROCESSING SITE*

The organization tests the contingency plan at the alternate processing site:

(a) To familiarize contingency personnel with the facility and available resources; and

(b) To evaluate the capabilities of the alternate processing site to support contingency operations.

Supplemental Guidance: Related control: CP-7.

(3) *CONTINGENCY PLAN TESTING | AUTOMATED TESTING*

The organization employs automated mechanisms to more thoroughly and effectively test the contingency plan.

Supplemental Guidance: Automated mechanisms provide more thorough and effective testing of contingency plans, for example: (i) by providing more complete coverage of contingency issues; (ii) by selecting more realistic test scenarios and environments; and (iii) by effectively stressing the information system and supported missions.

(4) *CONTINGENCY PLAN TESTING | FULL RECOVERY / RECONSTITUTION*

The organization includes a full recovery and reconstitution of the information system to a known state as part of contingency plan testing.

Supplemental Guidance: Related controls: CP-10, SC-24.

References: Federal Continuity Directive 1; FIPS Publication 199; NIST Special Publications 800-34, 800-84.

Priority and Baseline Allocation:

P2	**LOW** CP-4	**MOD** CP-4 (1)	**HIGH** CP-4 (1) (2)

CP-5 CONTINGENCY PLAN UPDATE

[Withdrawn: Incorporated into CP-2].

CP-6 ALTERNATE STORAGE SITE

Control: The organization:

a. Establishes an alternate storage site including necessary agreements to permit the storage and retrieval of information system backup information; and

b. Ensures that the alternate storage site provides information security safeguards equivalent to that of the primary site.

Supplemental Guidance: Alternate storage sites are sites that are geographically distinct from primary storage sites. An alternate storage site maintains duplicate copies of information and data in the event that the primary storage site is not available. Items covered by alternate storage site agreements include, for example, environmental conditions at alternate sites, access rules, physical and environmental protection requirements, and coordination of delivery/retrieval of backup media. Alternate storage sites reflect the requirements in contingency plans so that organizations can maintain essential missions/business functions despite disruption, compromise, or failure in organizational information systems. Related controls: CP-2, CP-7, CP-9, CP-10, MP-4.

Control Enhancements:

(1) *ALTERNATE STORAGE SITE | SEPARATION FROM PRIMARY SITE*

The organization identifies an alternate storage site that is separated from the primary storage site to reduce susceptibility to the same threats.

Supplemental Guidance: Threats that affect alternate storage sites are typically defined in organizational assessments of risk and include, for example, natural disasters, structural failures, hostile cyber attacks, and errors of omission/commission. Organizations determine what is considered a sufficient degree of separation between primary and alternate storage sites based on the types of threats that are of concern. For one particular type of threat (i.e., hostile cyber attack), the degree of separation between sites is less relevant. Related control: RA-3.

(2) *ALTERNATE STORAGE SITE | RECOVERY TIME / POINT OBJECTIVES*

The organization configures the alternate storage site to facilitate recovery operations in accordance with recovery time and recovery point objectives.

(3) *ALTERNATE STORAGE SITE | ACCESSIBILITY*

The organization identifies potential accessibility problems to the alternate storage site in the event of an area-wide disruption or disaster and outlines explicit mitigation actions.

Supplemental Guidance: Area-wide disruptions refer to those types of disruptions that are broad in geographic scope (e.g., hurricane, regional power outage) with such determinations made by organizations based on organizational assessments of risk. Explicit mitigation actions include, for example: (i) duplicating backup information at other alternate storage sites if access problems occur at originally designated alternate sites; or (ii) planning for physical access to retrieve backup information if electronic accessibility to the alternate site is disrupted. Related control: RA-3.

References: NIST Special Publication 800-34.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** CP-6 (1) (3)	**HIGH** CP-6 (1) (2) (3)

CP-7 ALTERNATE PROCESSING SITE

Control: The organization:

a. Establishes an alternate processing site including necessary agreements to permit the transfer and resumption of [*Assignment: organization-defined information system operations*] for essential missions/business functions within [*Assignment: organization-defined time period*

consistent with recovery time and recovery point objectives] when the primary processing capabilities are unavailable;

b. Ensures that equipment and supplies required to transfer and resume operations are available at the alternate processing site or contracts are in place to support delivery to the site within the organization-defined time period for transfer/resumption; and

c. Ensures that the alternate processing site provides information security safeguards equivalent to that of the primary site.

Supplemental Guidance: Alternate processing sites are sites that are geographically distinct from primary processing sites. An alternate processing site provides processing capability in the event that the primary processing site is not available. Items covered by alternate processing site agreements include, for example, environmental conditions at alternate sites, access rules, physical and environmental protection requirements, and coordination for the transfer/assignment of personnel. Requirements are specifically allocated to alternate processing sites that reflect the requirements in contingency plans to maintain essential missions/business functions despite disruption, compromise, or failure in organizational information systems. Related controls: CP-2, CP-6, CP-8, CP-9, CP-10, MA-6.

Control Enhancements:

(1) *ALTERNATE PROCESSING SITE | SEPARATION FROM PRIMARY SITE*

The organization identifies an alternate processing site that is separated from the primary processing site to reduce susceptibility to the same threats.

Supplemental Guidance: Threats that affect alternate processing sites are typically defined in organizational assessments of risk and include, for example, natural disasters, structural failures, hostile cyber attacks, and errors of omission/commission. Organizations determine what is considered a sufficient degree of separation between primary and alternate processing sites based on the types of threats that are of concern. For one particular type of threat (i.e., hostile cyber attack), the degree of separation between sites is less relevant. Related control: RA-3.

(2) *ALTERNATE PROCESSING SITE | ACCESSIBILITY*

The organization identifies potential accessibility problems to the alternate processing site in the event of an area-wide disruption or disaster and outlines explicit mitigation actions.

Supplemental Guidance: Area-wide disruptions refer to those types of disruptions that are broad in geographic scope (e.g., hurricane, regional power outage) with such determinations made by organizations based on organizational assessments of risk. Related control: RA-3.

(3) *ALTERNATE PROCESSING SITE | PRIORITY OF SERVICE*

The organization develops alternate processing site agreements that contain priority-of-service provisions in accordance with organizational availability requirements (including recovery time objectives).

Supplemental Guidance: Priority-of-service agreements refer to negotiated agreements with service providers that ensure that organizations receive priority treatment consistent with their availability requirements and the availability of information resources at the alternate processing site.

(4) *ALTERNATE PROCESSING SITE | PREPARATION FOR USE*

The organization prepares the alternate processing site so that the site is ready to be used as the operational site supporting essential missions and business functions.

Supplemental Guidance: Site preparation includes, for example, establishing configuration settings for information system components at the alternate processing site consistent with the requirements for such settings at the primary site and ensuring that essential supplies and other logistical considerations are in place. Related controls: CM-2, CM-6.

(5) *ALTERNATE PROCESSING SITE | EQUIVALENT INFORMATION SECURITY SAFEGUARDS*

[Withdrawn: Incorporated into CP-7].

(6) *ALTERNATE PROCESSING SITE | INABILITY TO RETURN TO PRIMARY SITE*

The organization plans and prepares for circumstances that preclude returning to the primary processing site.

References: NIST Special Publication 800-34.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** CP-7 (1) (2) (3)	**HIGH** CP-7 (1) (2) (3) (4)

CP-8 TELECOMMUNICATIONS SERVICES

Control: The organization establishes alternate telecommunications services including necessary agreements to permit the resumption of [*Assignment: organization-defined information system operations*] for essential missions and business functions within [*Assignment: organization-defined time period*] when the primary telecommunications capabilities are unavailable at either the primary or alternate processing or storage sites.

Supplemental Guidance: This control applies to telecommunications services (data and voice) for primary and alternate processing and storage sites. Alternate telecommunications services reflect the continuity requirements in contingency plans to maintain essential missions/business functions despite the loss of primary telecommunications services. Organizations may specify different time periods for primary/alternate sites. Alternate telecommunications services include, for example, additional organizational or commercial ground-based circuits/lines or satellites in lieu of ground-based communications. Organizations consider factors such as availability, quality of service, and access when entering into alternate telecommunications agreements. Related controls: CP-2, CP-6, CP-7.

Control Enhancements:

(1) *TELECOMMUNICATIONS SERVICES | PRIORITY OF SERVICE PROVISIONS*

The organization:

(a) Develops primary and alternate telecommunications service agreements that contain priority-of-service provisions in accordance with organizational availability requirements (including recovery time objectives); and

(b) Requests Telecommunications Service Priority for all telecommunications services used for national security emergency preparedness in the event that the primary and/or alternate telecommunications services are provided by a common carrier.

Supplemental Guidance: Organizations consider the potential mission/business impact in situations where telecommunications service providers are servicing other organizations with similar priority-of-service provisions.

(2) *TELECOMMUNICATIONS SERVICES | SINGLE POINTS OF FAILURE*

The organization obtains alternate telecommunications services to reduce the likelihood of sharing a single point of failure with primary telecommunications services.

(3) *TELECOMMUNICATIONS SERVICES | SEPARATION OF PRIMARY / ALTERNATE PROVIDERS*

The organization obtains alternate telecommunications services from providers that are separated from primary service providers to reduce susceptibility to the same threats.

Supplemental Guidance: Threats that affect telecommunications services are typically defined in organizational assessments of risk and include, for example, natural disasters, structural failures, hostile cyber/physical attacks, and errors of omission/commission. Organizations seek to reduce common susceptibilities by, for example, minimizing shared infrastructure among telecommunications service providers and achieving sufficient geographic separation between services. Organizations may consider using a single service provider in situations where the service provider can provide alternate telecommunications services meeting the separation needs addressed in the risk assessment.

(4) *TELECOMMUNICATIONS SERVICES | PROVIDER CONTINGENCY PLAN*

The organization:

(a) Requires primary and alternate telecommunications service providers to have contingency plans;

(b) Reviews provider contingency plans to ensure that the plans meet organizational contingency requirements; and

(c) Obtains evidence of contingency testing/training by providers [*Assignment: organization-defined frequency*].

Supplemental Guidance: Reviews of provider contingency plans consider the proprietary nature of such plans. In some situations, a summary of provider contingency plans may be sufficient evidence for organizations to satisfy the review requirement. Telecommunications service providers may also participate in ongoing disaster recovery exercises in coordination with the Department of Homeland Security, state, and local governments. Organizations may use these types of activities to satisfy evidentiary requirements related to service provider contingency plan reviews, testing, and training.

(5) *TELECOMMUNICATIONS SERVICES | ALTERNATE TELECOMMUNICATION SERVICE TESTING*

The organization tests alternate telecommunication services [*Assignment: organization-defined frequency*].

References: NIST Special Publication 800-34; National Communications Systems Directive 3-10; Web: http://www.dhs.gov/telecommunications-service-priority-tsp.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** CP-8 (1) (2)	**HIGH** CP-8 (1) (2) (3) (4)

CP-9 INFORMATION SYSTEM BACKUP

Control: The organization:

a. Conducts backups of user-level information contained in the information system [*Assignment: organization-defined frequency consistent with recovery time and recovery point objectives*];

b. Conducts backups of system-level information contained in the information system [*Assignment: organization-defined frequency consistent with recovery time and recovery point objectives*];

c. Conducts backups of information system documentation including security-related documentation [*Assignment: organization-defined frequency consistent with recovery time and recovery point objectives*]; and

d. Protects the confidentiality, integrity, and availability of backup information at storage locations.

Supplemental Guidance: System-level information includes, for example, system-state information, operating system and application software, and licenses. User-level information includes any information other than system-level information. Mechanisms employed by organizations to protect the integrity of information system backups include, for example, digital signatures and cryptographic hashes. Protection of system backup information while in transit is beyond the scope of this control. Information system backups reflect the requirements in contingency plans as well as other organizational requirements for backing up information. Related controls: CP-2, CP-6, MP-4, MP-5, SC-13.

Control Enhancements:

(1) *INFORMATION SYSTEM BACKUP | TESTING FOR RELIABILITY / INTEGRITY*

The organization tests backup information [*Assignment: organization-defined frequency*] to verify media reliability and information integrity.

Supplemental Guidance: Related control: CP-4.

(2) *INFORMATION SYSTEM BACKUP | TEST RESTORATION USING SAMPLING*

The organization uses a sample of backup information in the restoration of selected information system functions as part of contingency plan testing.

Supplemental Guidance: Related control: CP-4.

(3) *INFORMATION SYSTEM BACKUP | SEPARATE STORAGE FOR CRITICAL INFORMATION*

The organization stores backup copies of [*Assignment: organization-defined critical information system software and other security-related information*] in a separate facility or in a fire-rated container that is not collocated with the operational system.

Supplemental Guidance: Critical information system software includes, for example, operating systems, cryptographic key management systems, and intrusion detection/prevention systems. Security-related information includes, for example, organizational inventories of hardware, software, and firmware components. Alternate storage sites typically serve as separate storage facilities for organizations. Related controls: CM-2, CM-8.

(4) *INFORMATION SYSTEM BACKUP | PROTECTION FROM UNAUTHORIZED MODIFICATION*

[Withdrawn: Incorporated into CP-9].

(5) *INFORMATION SYSTEM BACKUP | TRANSFER TO ALTERNATE STORAGE SITE*

The organization transfers information system backup information to the alternate storage site [*Assignment: organization-defined time period and transfer rate consistent with the recovery time and recovery point objectives*].

Supplemental Guidance: Information system backup information can be transferred to alternate storage sites either electronically or by physical shipment of storage media.

(6) *INFORMATION SYSTEM BACKUP | REDUNDANT SECONDARY SYSTEM*

The organization accomplishes information system backup by maintaining a redundant secondary system that is not collocated with the primary system and that can be activated without loss of information or disruption to operations.

Supplemental Guidance: Related controls: CP-7, CP-10.

(7) *INFORMATION SYSTEM BACKUP | DUAL AUTHORIZATION*

The organization enforces dual authorization for the deletion or destruction of [*Assignment: organization-defined backup information*].

Supplemental Guidance: Dual authorization ensures that the deletion or destruction of backup information cannot occur unless two qualified individuals carry out the task. Individuals deleting/destroying backup information possess sufficient skills/expertise to determine if the proposed deletion/destruction of backup information reflects organizational policies and procedures. Dual authorization may also be known as two-person control. Related controls: AC-3, MP-2.

References: NIST Special Publication 800-34.

Priority and Baseline Allocation:

P1	**LOW** CP-9	**MOD** CP-9 (1)	**HIGH** CP-9 (1) (2) (3) (5)

CP-10 INFORMATION SYSTEM RECOVERY AND RECONSTITUTION

Control: The organization provides for the recovery and reconstitution of the information system to a known state after a disruption, compromise, or failure.

Supplemental Guidance: Recovery is executing information system contingency plan activities to restore organizational missions/business functions. Reconstitution takes place following recovery and includes activities for returning organizational information systems to fully operational states. Recovery and reconstitution operations reflect mission and business priorities, recovery point/time and reconstitution objectives, and established organizational metrics consistent with contingency plan requirements. Reconstitution includes the deactivation of any interim information system

capabilities that may have been needed during recovery operations. Reconstitution also includes assessments of fully restored information system capabilities, reestablishment of continuous monitoring activities, potential information system reauthorizations, and activities to prepare the systems against future disruptions, compromises, or failures. Recovery/reconstitution capabilities employed by organizations can include both automated mechanisms and manual procedures. Related controls: CA-2, CA-6, CA-7, CP-2, CP-6, CP-7, CP-9, SC-24.

Control Enhancements:

(1) *INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | CONTINGENCY PLAN TESTING*
[Withdrawn: Incorporated into CP-4].

(2) *INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | TRANSACTION RECOVERY*
The information system implements transaction recovery for systems that are transaction-based.

Supplemental Guidance: Transaction-based information systems include, for example, database management systems and transaction processing systems. Mechanisms supporting transaction recovery include, for example, transaction rollback and transaction journaling.

(3) *INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | COMPENSATING SECURITY CONTROLS*
[Withdrawn: Addressed through tailoring procedures].

(4) *INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | RESTORE WITHIN TIME PERIOD*
The organization provides the capability to restore information system components within [*Assignment: organization-defined restoration time-periods*] from configuration-controlled and integrity-protected information representing a known, operational state for the components.

Supplemental Guidance: Restoration of information system components includes, for example, reimaging which restores components to known, operational states. Related control: CM-2.

(5) *INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | FAILOVER CAPABILITY*
[Withdrawn: Incorporated into SI-13].

(6) *INFORMATION SYSTEM RECOVERY AND RECONSTITUTION | COMPONENT PROTECTION*
The organization protects backup and restoration hardware, firmware, and software.

Supplemental Guidance: Protection of backup and restoration hardware, firmware, and software components includes both physical and technical safeguards. Backup and restoration software includes, for example, router tables, compilers, and other security-relevant system software. Related controls: AC-3, AC-6, PE-3.

References: Federal Continuity Directive 1; NIST Special Publication 800-34.

Priority and Baseline Allocation:

P1	**LOW** CP-10	**MOD** CP-10 (2)	**HIGH** CP-10 (2) (4)

CP-11 ALTERNATE COMMUNICATIONS PROTOCOLS

Control: The information system provides the capability to employ [*Assignment: organization-defined alternative communications protocols*] in support of maintaining continuity of operations.

Supplemental Guidance: Contingency plans and the associated training and testing for those plans, incorporate an alternate communications protocol capability as part of increasing the resilience of organizational information systems. Alternate communications protocols include, for example, switching from Transmission Control Protocol/Internet Protocol (TCP/IP) Version 4 to TCP/IP Version 6. Switching communications protocols may affect software applications and therefore, the potential side effects of introducing alternate communications protocols are analyzed prior to implementation.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

CP-12 SAFE MODE

Control: The information system, when [*Assignment: organization-defined conditions*] are detected, enters a safe mode of operation with [*Assignment: organization-defined restrictions of safe mode of operation*].

Supplemental Guidance: For information systems supporting critical missions/business functions including, for example, military operations and weapons systems, civilian space operations, nuclear power plant operations, and air traffic control operations (especially real-time operational environments), organizations may choose to identify certain conditions under which those systems revert to a predefined safe mode of operation. The safe mode of operation, which can be activated automatically or manually, restricts the types of activities or operations information systems could execute when those conditions are encountered. Restriction includes, for example, allowing only certain functions that could be carried out under limited power or with reduced communications bandwidth.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

CP-13 ALTERNATIVE SECURITY MECHANISMS

Control: The organization employs [*Assignment: organization-defined alternative or supplemental security mechanisms*] for satisfying [*Assignment: organization-defined security functions*] when the primary means of implementing the security function is unavailable or compromised.

Supplemental Guidance: This control supports information system resiliency and contingency planning/continuity of operations. To ensure mission/business continuity, organizations can implement alternative or supplemental security mechanisms. These mechanisms may be less effective than the primary mechanisms (e.g., not as easy to use, not as scalable, or not as secure). However, having the capability to readily employ these alternative/supplemental mechanisms enhances overall mission/business continuity that might otherwise be adversely impacted if organizational operations had to be curtailed until the primary means of implementing the functions was restored. Given the cost and level of effort required to provide such alternative capabilities, this control would typically be applied only to critical security capabilities provided by information systems, system components, or information system services. For example, an organization may issue to senior executives and system administrators one-time pads in case multifactor tokens, the organization's standard means for secure remote authentication, is compromised. Related control: CP-2.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

FAMILY: IDENTIFICATION AND AUTHENTICATION

IA-1 IDENTIFICATION AND AUTHENTICATION POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. An identification and authentication policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the identification and authentication policy and associated identification and authentication controls; and

b. Reviews and updates the current:

   1. Identification and authentication policy [*Assignment: organization-defined frequency*]; and

   2. Identification and authentication procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the IA family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: FIPS Publication 201; NIST Special Publications 800-12, 800-63, 800-73, 800-76, 800-78, 800-100.

Priority and Baseline Allocation:

P1	**LOW** IA-1	**MOD** IA-1	**HIGH** IA-1

IA-2 IDENTIFICATION AND AUTHENTICATION (ORGANIZATIONAL USERS)

Control: The information system uniquely identifies and authenticates organizational users (or processes acting on behalf of organizational users).

Supplemental Guidance: Organizational users include employees or individuals that organizations deem to have equivalent status of employees (e.g., contractors, guest researchers). This control applies to all accesses other than: (i) accesses that are explicitly identified and documented in AC-14; and (ii) accesses that occur through authorized use of group authenticators without individual authentication. Organizations may require unique identification of individuals in group accounts (e.g., shared privilege accounts) or for detailed accountability of individual activity. Organizations employ passwords, tokens, or biometrics to authenticate user identities, or in the case multifactor authentication, or some combination thereof. Access to organizational information systems is defined as either local access or network access. Local access is any access to organizational information systems by users (or processes acting on behalf of users) where such access is obtained by direct connections without the use of networks. Network access is access to

organizational information systems by users (or processes acting on behalf of users) where such access is obtained through network connections (i.e., nonlocal accesses). Remote access is a type of network access that involves communication through external networks (e.g., the Internet). Internal networks include local area networks and wide area networks. In addition, the use of encrypted virtual private networks (VPNs) for network connections between organization-controlled endpoints and non-organization controlled endpoints may be treated as internal networks from the perspective of protecting the confidentiality and integrity of information traversing the network.

Organizations can satisfy the identification and authentication requirements in this control by complying with the requirements in Homeland Security Presidential Directive 12 consistent with the specific organizational implementation plans. Multifactor authentication requires the use of two or more different factors to achieve authentication. The factors are defined as: (i) something you know (e.g., password, personal identification number [PIN]); (ii) something you have (e.g., cryptographic identification device, token); or (iii) something you are (e.g., biometric). Multifactor solutions that require devices separate from information systems gaining access include, for example, hardware tokens providing time-based or challenge-response authenticators and smart cards such as the U.S. Government Personal Identity Verification card and the DoD common access card. In addition to identifying and authenticating users at the information system level (i.e., at logon), organizations also employ identification and authentication mechanisms at the application level, when necessary, to provide increased information security. Identification and authentication requirements for other than organizational users are described in IA-8. Related controls: AC-2, AC-3, AC-14, AC-17, AC-18, IA-4, IA-5, IA-8.

Control Enhancements:

(1) *IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO PRIVILEGED ACCOUNTS*

The information system implements multifactor authentication for network access to privileged accounts.

Supplemental Guidance: Related control: AC-6.

(2) *IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS*

The information system implements multifactor authentication for network access to non-privileged accounts.

(3) *IDENTIFICATION AND AUTHENTICATION | LOCAL ACCESS TO PRIVILEGED ACCOUNTS*

The information system implements multifactor authentication for local access to privileged accounts.

Supplemental Guidance: Related control: AC-6.

(4) *IDENTIFICATION AND AUTHENTICATION | LOCAL ACCESS TO NON-PRIVILEGED ACCOUNTS*

The information system implements multifactor authentication for local access to non-privileged accounts.

(5) *IDENTIFICATION AND AUTHENTICATION | GROUP AUTHENTICATION*

The organization requires individuals to be authenticated with an individual authenticator when a group authenticator is employed.

Supplemental Guidance: Requiring individuals to use individual authenticators as a second level of authentication helps organizations to mitigate the risk of using group authenticators.

(6) *IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO PRIVILEGED ACCOUNTS - SEPARATE DEVICE*

The information system implements multifactor authentication for network access to privileged accounts such that one of the factors is provided by a device separate from the system gaining access and the device meets [*Assignment: organization-defined strength of mechanism requirements*].

Supplemental Guidance: Related control: AC-6.

(7) *IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS - SEPARATE DEVICE*

The information system implements multifactor authentication for network access to non-privileged accounts such that one of the factors is provided by a device separate from the system gaining access and the device meets [*Assignment: organization-defined strength of mechanism requirements*].

(8) *IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO PRIVILEGED ACCOUNTS - REPLAY RESISTANT*

The information system implements replay-resistant authentication mechanisms for network access to privileged accounts.

Supplemental Guidance: Authentication processes resist replay attacks if it is impractical to achieve successful authentications by replaying previous authentication messages. Replay-resistant techniques include, for example, protocols that use nonces or challenges such as Transport Layer Security (TLS) and time synchronous or challenge-response one-time authenticators.

(9) *IDENTIFICATION AND AUTHENTICATION | NETWORK ACCESS TO NON-PRIVILEGED ACCOUNTS - REPLAY RESISTANT*

The information system implements replay-resistant authentication mechanisms for network access to non-privileged accounts.

Supplemental Guidance: Authentication processes resist replay attacks if it is impractical to achieve successful authentications by recording/replaying previous authentication messages. Replay-resistant techniques include, for example, protocols that use nonces or challenges such as Transport Layer Security (TLS) and time synchronous or challenge-response one-time authenticators.

(10) *IDENTIFICATION AND AUTHENTICATION | SINGLE SIGN-ON*

The information system provides a single sign-on capability for [*Assignment: organization-defined list of information system accounts and services*].

Supplemental Guidance: Single sign-on enables users to log in once and gain access to multiple information system resources. Organizations consider the operational efficiencies provided by single sign-on capabilities with the increased risk from disclosures of single authenticators providing access to multiple system resources.

(11) *IDENTIFICATION AND AUTHENTICATION | REMOTE ACCESS - SEPARATE DEVICE*

The information system implements multifactor authentication for remote access to privileged and non-privileged accounts such that one of the factors is provided by a device separate from the system gaining access and the device meets [*Assignment: organization-defined strength of mechanism requirements*].

Supplemental Guidance: For remote access to privileged/non-privileged accounts, the purpose of requiring a device that is separate from the information system gaining access for one of the factors during multifactor authentication is to reduce the likelihood of compromising authentication credentials stored on the system. For example, adversaries deploying malicious code on organizational information systems can potentially compromise such credentials resident on the system and subsequently impersonate authorized users. Related control: AC-6.

(12) *IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS*

The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials.

Supplemental Guidance: This control enhancement applies to organizations implementing logical access control systems (LACS) and physical access control systems (PACS). Personal Identity Verification (PIV) credentials are those credentials issued by federal agencies that conform to FIPS Publication 201 and supporting guidance documents. OMB Memorandum 11-11 requires federal agencies to continue implementing the requirements specified in HSPD-12 to enable agency-wide use of PIV credentials. Related controls: AU-2, PE-3, SA-4.

(13) *IDENTIFICATION AND AUTHENTICATION | OUT-OF-BAND AUTHENTICATION*

The information system implements [*Assignment: organization-defined out-of-band authentication*] under [*Assignment: organization-defined conditions*].

Supplemental Guidance: Out-of-band authentication (OOBA) refers to the use of two separate communication paths to identify and authenticate users or devices to an information system. The first path (i.e., the in-band path), is used to identify and authenticate users or devices, and generally is the path through which information flows. The second path (i.e., the out-of-band path) is used to independently verify the authentication and/or requested action. For example, a user authenticates via a notebook computer to a remote server to which the user desires access, and requests some action of the server via that communication path. Subsequently, the server contacts the user via the user's cell phone to verify that the requested action originated

from the user. The user may either confirm the intended action to an individual on the telephone or provide an authentication code via the telephone. This type of authentication can be employed by organizations to mitigate actual or suspected man-in the-middle attacks. The conditions for activation can include, for example, suspicious activities, new threat indicators or elevated threat levels, or the impact level or classification level of information in requested transactions. Related controls: IA-10, IA-11, SC-37.

Priority and Baseline Allocation:

P1	**LOW** IA-2 (1) (12)	**MOD** IA-2 (1) (2) (3) (8) (11) (12)	**HIGH** IA-2 (1) (2) (3) (4) (8) (9) (11) (12)

IA-3 DEVICE IDENTIFICATION AND AUTHENTICATION

Control: The information system uniquely identifies and authenticates [*Assignment: organization-defined specific and/or types of devices*] before establishing a [*Selection (one or more): local; remote; network*] connection.

Supplemental Guidance: Organizational devices requiring unique device-to-device identification and authentication may be defined by type, by device, or by a combination of type/device. Information systems typically use either shared known information (e.g., Media Access Control [MAC] or Transmission Control Protocol/Internet Protocol [TCP/IP] addresses) for device identification or organizational authentication solutions (e.g., IEEE 802.1x and Extensible Authentication Protocol [EAP], Radius server with EAP-Transport Layer Security [TLS] authentication, Kerberos) to identify/authenticate devices on local and/or wide area networks. Organizations determine the required strength of authentication mechanisms by the security categories of information systems. Because of the challenges of applying this control on large scale, organizations are encouraged to only apply the control to those limited number (and type) of devices that truly need to support this capability. Related controls: AC-17, AC-18, AC-19, CA-3, IA-4, IA-5.

Control Enhancements:

(1) *DEVICE IDENTIFICATION AND AUTHENTICATION | CRYPTOGRAPHIC BIDIRECTIONAL AUTHENTICATION*

The information system authenticates [*Assignment: organization-defined specific devices and/or types of devices*] before establishing [*Selection (one or more): local; remote; network*] connection using bidirectional authentication that is cryptographically based.

Supplemental Guidance: A local connection is any connection with a device communicating without the use of a network. A network connection is any connection with a device that communicates through a network (e.g., local area or wide area network, Internet). A remote connection is any connection with a device communicating through an external network (e.g., the Internet). Bidirectional authentication provides stronger safeguards to validate the identity of other devices for connections that are of greater risk (e.g., remote connections). Related controls: SC-8, SC-12, SC-13.

(2) *DEVICE IDENTIFICATION AND AUTHENTICATION | CRYPTOGRAPHIC BIDIRECTIONAL NETWORK AUTHENTICATION*

[Withdrawn: Incorporated into IA-3 (1)].

(3) *DEVICE IDENTIFICATION AND AUTHENTICATION | DYNAMIC ADDRESS ALLOCATION*

The organization:

(a) Standardizes dynamic address allocation lease information and the lease duration assigned to devices in accordance with [*Assignment: organization-defined lease information and lease duration*]; and

(b) Audits lease information when assigned to a device.

Supplemental Guidance: DHCP-enabled clients obtaining *leases* for IP addresses from DHCP servers, is a typical example of dynamic address allocation for devices. Related controls: AU-2, AU-3, AU-6, AU-12.

(4) *DEVICE IDENTIFICATION AND AUTHENTICATION | DEVICE ATTESTATION*

The organization ensures that device identification and authentication based on attestation is handled by [*Assignment: organization-defined configuration management process*].

Supplemental Guidance: Device attestation refers to the identification and authentication of a device based on its configuration and known operating state. This might be determined via some cryptographic hash of the device. If device attestation is the means of identification and authentication, then it is important that patches and updates to the device are handled via a configuration management process such that the those patches/updates are done securely and at the same time do not disrupt the identification and authentication to other devices.

References: None.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** IA-3	**HIGH** IA-3

IA-4 IDENTIFIER MANAGEMENT

Control: The organization manages information system identifiers by:

a. Receiving authorization from [*Assignment: organization-defined personnel or roles*] to assign an individual, group, role, or device identifier;

b. Selecting an identifier that identifies an individual, group, role, or device;

c. Assigning the identifier to the intended individual, group, role, or device;

d. Preventing reuse of identifiers for [*Assignment: organization-defined time period*]; and

e. Disabling the identifier after [*Assignment: organization-defined time period of inactivity*].

Supplemental Guidance: Common device identifiers include, for example, media access control (MAC), Internet protocol (IP) addresses, or device-unique token identifiers. Management of individual identifiers is not applicable to shared information system accounts (e.g., guest and anonymous accounts). Typically, individual identifiers are the user names of the information system accounts assigned to those individuals. In such instances, the account management activities of AC-2 use account names provided by IA-4. This control also addresses individual identifiers not necessarily associated with information system accounts (e.g., identifiers used in physical security control databases accessed by badge reader systems for access to information systems). Preventing reuse of identifiers implies preventing the assignment of previously used individual, group, role, or device identifiers to different individuals, groups, roles, or devices. Related controls: AC-2, IA-2, IA-3, IA-5, IA-8, SC-37.

Control Enhancements:

(1) *IDENTIFIER MANAGEMENT | PROHIBIT ACCOUNT IDENTIFIERS AS PUBLIC IDENTIFIERS*

The organization prohibits the use of information system account identifiers that are the same as public identifiers for individual electronic mail accounts.

Supplemental Guidance: Prohibiting the use of information systems account identifiers that are the same as some public identifier such as the individual identifier section of an electronic mail address, makes it more difficult for adversaries to guess user identifiers on organizational information systems. Related control: AT-2.

(2) *IDENTIFIER MANAGEMENT | SUPERVISOR AUTHORIZATION*

The organization requires that the registration process to receive an individual identifier includes supervisor authorization.

(3) *IDENTIFIER MANAGEMENT | MULTIPLE FORMS OF CERTIFICATION*

The organization requires multiple forms of certification of individual identification such as documentary evidence or a combination of documents and biometrics be presented to the registration authority.

Supplemental Guidance: Requiring multiple forms of identification reduces the likelihood of individuals using fraudulent identification to establish an identity, or at least increases the work factor of potential adversaries.

(4) *IDENTIFIER MANAGEMENT | IDENTIFY USER STATUS*

The organization manages individual identifiers by uniquely identifying each individual as [*Assignment: organization-defined characteristic identifying individual status*].

Supplemental Guidance: Characteristics identifying the status of individuals include, for example, contractors and foreign nationals. Identifying the status of individuals by specific characteristics provides additional information about the people with whom organizational personnel are communicating. For example, it might be useful for a government employee to know that one of the individuals on an email message is a contractor. Related control: AT-2.

(5) *IDENTIFIER MANAGEMENT | DYNAMIC MANAGEMENT*

The information system dynamically manages identifiers.

Supplemental Guidance: In contrast to conventional approaches to identification which presume static accounts for preregistered users, many distributed information systems including, for example, service-oriented architectures, rely on establishing identifiers at run time for entities that were previously unknown. In these situations, organizations anticipate and provision for the dynamic establishment of identifiers. Preestablished trust relationships and mechanisms with appropriate authorities to validate identities and related credentials are essential. Related control: AC-16.

(6) *IDENTIFIER MANAGEMENT | CROSS-ORGANIZATION MANAGEMENT*

The organization coordinates with [*Assignment: organization-defined external organizations*] for cross-organization management of identifiers.

Supplemental Guidance: Cross-organization identifier management provides the capability for organizations to appropriately identify individuals, groups, roles, or devices when conducting cross-organization activities involving the processing, storage, or transmission of information.

(7) *IDENTIFIER MANAGEMENT | IN-PERSON REGISTRATION*

The organization requires that the registration process to receive an individual identifier be conducted in person before a designated registration authority.

Supplemental Guidance: In-person registration reduces the likelihood of fraudulent identifiers being issued because it requires the physical presence of individuals and actual face-to-face interactions with designated registration authorities.

References: FIPS Publication 201; NIST Special Publications 800-73, 800-76, 800-78.

Priority and Baseline Allocation:

P1	**LOW** IA-4	**MOD** IA-4	**HIGH** IA-4

IA-5 AUTHENTICATOR MANAGEMENT

Control: The organization manages information system authenticators by:

a. Verifying, as part of the initial authenticator distribution, the identity of the individual, group, role, or device receiving the authenticator;

b. Establishing initial authenticator content for authenticators defined by the organization;

c. Ensuring that authenticators have sufficient strength of mechanism for their intended use;

d. Establishing and implementing administrative procedures for initial authenticator distribution, for lost/compromised or damaged authenticators, and for revoking authenticators;

e. Changing default content of authenticators prior to information system installation;

f. Establishing minimum and maximum lifetime restrictions and reuse conditions for authenticators;

g. Changing/refreshing authenticators [*Assignment: organization-defined time period by authenticator type*];

h. Protecting authenticator content from unauthorized disclosure and modification;

i. Requiring individuals to take, and having devices implement, specific security safeguards to protect authenticators; and

j. Changing authenticators for group/role accounts when membership to those accounts changes.

Supplemental Guidance: Individual authenticators include, for example, passwords, tokens, biometrics, PKI certificates, and key cards. Initial authenticator content is the actual content (e.g., the initial password) as opposed to requirements about authenticator content (e.g., minimum password length). In many cases, developers ship information system components with factory default authentication credentials to allow for initial installation and configuration. Default authentication credentials are often well known, easily discoverable, and present a significant security risk. The requirement to protect individual authenticators may be implemented via control PL-4 or PS-6 for authenticators in the possession of individuals and by controls AC-3, AC-6, and SC-28 for authenticators stored within organizational information systems (e.g., passwords stored in hashed or encrypted formats, files containing encrypted or hashed passwords accessible with administrator privileges). Information systems support individual authenticator management by organization-defined settings and restrictions for various authenticator characteristics including, for example, minimum password length, password composition, validation time window for time synchronous one-time tokens, and number of allowed rejections during the verification stage of biometric authentication. Specific actions that can be taken to safeguard authenticators include, for example, maintaining possession of individual authenticators, not loaning or sharing individual authenticators with others, and reporting lost, stolen, or compromised authenticators immediately. Authenticator management includes issuing and revoking, when no longer needed, authenticators for temporary access such as that required for remote maintenance. Device authenticators include, for example, certificates and passwords. Related controls: AC-2, AC-3, AC-6, CM-6, IA-2, IA-4, IA-8, PL-4, PS-5, PS-6, SC-12, SC-13, SC-17, SC-28.

Control Enhancements:

(1) *AUTHENTICATOR MANAGEMENT | PASSWORD-BASED AUTHENTICATION*

The information system, for password-based authentication:

(a) Enforces minimum password complexity of [*Assignment: organization-defined requirements for case sensitivity, number of characters, mix of upper-case letters, lower-case letters, numbers, and special characters, including minimum requirements for each type*];

(b) Enforces at least the following number of changed characters when new passwords are created: [*Assignment: organization-defined number*];

(c) Stores and transmits only cryptographically-protected passwords;

(d) Enforces password minimum and maximum lifetime restrictions of [*Assignment: organization-defined numbers for lifetime minimum, lifetime maximum*];

(e) Prohibits password reuse for [*Assignment: organization-defined number*] generations; and

(f) Allows the use of a temporary password for system logons with an immediate change to a permanent password.

Supplemental Guidance: This control enhancement applies to single-factor authentication of individuals using passwords as individual or group authenticators, and in a similar manner, when passwords are part of multifactor authenticators. This control enhancement does *not* apply when passwords are used to unlock hardware authenticators (e.g., Personal Identity

Verification cards). The implementation of such password mechanisms may not meet all of the requirements in the enhancement. Cryptographically-protected passwords include, for example, encrypted versions of passwords and one-way cryptographic hashes of passwords. The number of changed characters refers to the number of changes required with respect to the total number of positions in the current password. Password lifetime restrictions do not apply to temporary passwords. To mitigate certain brute force attacks against passwords, organizations may also consider salting passwords. Related control: IA-6.

(2) *AUTHENTICATOR MANAGEMENT | PKI-BASED AUTHENTICATION*

The information system, for PKI-based authentication:

(a) Validates certifications by constructing and verifying a certification path to an accepted trust anchor including checking certificate status information;

(b) Enforces authorized access to the corresponding private key;

(c) Maps the authenticated identity to the account of the individual or group; and

(d) Implements a local cache of revocation data to support path discovery and validation in case of inability to access revocation information via the network.

Supplemental Guidance: Status information for certification paths includes, for example, certificate revocation lists or certificate status protocol responses. For PIV cards, validation of certifications involves the construction and verification of a certification path to the Common Policy Root trust anchor including certificate policy processing. Related control: IA-6.

(3) *AUTHENTICATOR MANAGEMENT | IN-PERSON OR TRUSTED THIRD-PARTY REGISTRATION*

The organization requires that the registration process to receive [*Assignment: organization-defined types of and/or specific authenticators*] be conducted [*Selection: in person; by a trusted third party*] before [*Assignment: organization-defined registration authority*] with authorization by *[Assignment: organization-defined personnel or roles*].

(4) *AUTHENTICATOR MANAGEMENT | AUTOMATED SUPPORT FOR PASSWORD STRENGTH DETERMINATION*

The organization employs automated tools to determine if password authenticators are sufficiently strong to satisfy [*Assignment: organization-defined requirements*].

Supplemental Guidance: This control enhancement focuses on the creation of strong passwords and the characteristics of such passwords (e.g., complexity) prior to use, the enforcement of which is carried out by organizational information systems in IA-5 (1). Related controls: CA-2, CA-7, RA-5.

(5) *AUTHENTICATOR MANAGEMENT | CHANGE AUTHENTICATORS PRIOR TO DELIVERY*

The organization requires developers/installers of information system components to provide unique authenticators or change default authenticators prior to delivery/installation.

Supplemental Guidance: This control enhancement extends the requirement for organizations to change default authenticators upon information system installation, by requiring developers and/or installers to provide unique authenticators or change default authenticators for system components prior to delivery and/or installation. However, it typically does not apply to the developers of commercial off-the-shelve information technology products. Requirements for unique authenticators can be included in acquisition documents prepared by organizations when procuring information systems or system components.

(6) *AUTHENTICATOR MANAGEMENT | PROTECTION OF AUTHENTICATORS*

The organization protects authenticators commensurate with the security category of the information to which use of the authenticator permits access.

Supplemental Guidance: For information systems containing multiple security categories of information without reliable physical or logical separation between categories, authenticators used to grant access to the systems are protected commensurate with the highest security category of information on the systems.

(7) *AUTHENTICATOR MANAGEMENT | NO EMBEDDED UNENCRYPTED STATIC AUTHENTICATORS*

The organization ensures that unencrypted static authenticators are not embedded in applications or access scripts or stored on function keys.

Supplemental Guidance: Organizations exercise caution in determining whether embedded or stored authenticators are in encrypted or unencrypted form. If authenticators are used in the

manner stored, then those representations are considered unencrypted authenticators. This is irrespective of whether that representation is perhaps an encrypted version of something else (e.g., a password).

(8) *AUTHENTICATOR MANAGEMENT | MULTIPLE INFORMATION SYSTEM ACCOUNTS*

The organization implements [*Assignment: organization-defined security safeguards*] to manage the risk of compromise due to individuals having accounts on multiple information systems.

Supplemental Guidance: When individuals have accounts on multiple information systems, there is the risk that the compromise of one account may lead to the compromise of other accounts if individuals use the same authenticators. Possible alternatives include, for example: (i) having different authenticators on all systems; (ii) employing some form of single sign-on mechanism; or (iii) including some form of one-time passwords on all systems.

(9) *AUTHENTICATOR MANAGEMENT | CROSS-ORGANIZATION CREDENTIAL MANAGEMENT*

The organization coordinates with [*Assignment: organization-defined external organizations*] for cross-organization management of credentials.

Supplemental Guidance: Cross-organization management of credentials provides the capability for organizations to appropriately authenticate individuals, groups, roles, or devices when conducting cross-organization activities involving the processing, storage, or transmission of information.

(10) *AUTHENTICATOR MANAGEMENT | DYNAMIC CREDENTIAL ASSOCIATION*

The information system dynamically provisions identities.

Supplemental Guidance: Authentication requires some form of binding between an identity and the authenticator used to confirm the identity. In conventional approaches, this binding is established by pre-provisioning both the identity and the authenticator to the information system. For example, the binding between a username (i.e., identity) and a password (i.e., authenticator) is accomplished by provisioning the identity and authenticator as a pair in the information system. New authentication techniques allow the binding between the identity and the authenticator to be implemented outside an information system. For example, with smartcard credentials, the identity and the authenticator are bound together on the card. Using these credentials, information systems can authenticate identities that have not been pre-provisioned, dynamically provisioning the identity after authentication. In these situations, organizations can anticipate the dynamic provisioning of identities. Preestablished trust relationships and mechanisms with appropriate authorities to validate identities and related credentials are essential.

(11) *AUTHENTICATOR MANAGEMENT | HARDWARE TOKEN-BASED AUTHENTICATION*

The information system, for hardware token-based authentication, employs mechanisms that satisfy [*Assignment: organization-defined token quality requirements*].

Supplemental Guidance: Hardware token-based authentication typically refers to the use of PKI-based tokens, such as the U.S. Government Personal Identity Verification (PIV) card. Organizations define specific requirements for tokens, such as working with a particular PKI.

(12) *AUTHENTICATOR MANAGEMENT | BIOMETRIC AUTHENTICATION*

The information system, for biometric-based authentication, employs mechanisms that satisfy [*Assignment: organization-defined biometric quality requirements*].

Supplemental Guidance: Unlike password-based authentication which provides exact matches of user-input passwords to stored passwords, biometric authentication does not provide such exact matches. Depending upon the type of biometric and the type of collection mechanism, there is likely to be some divergence from the presented biometric and stored biometric which serves as the basis of comparison. There will likely be both false positives and false negatives when making such comparisons. The rate at which the false accept and false reject rates are equal is known as the crossover rate. Biometric quality requirements include, for example, acceptable crossover rates, as that essentially reflects the accuracy of the biometric.

(13) *AUTHENTICATOR MANAGEMENT | EXPIRATION OF CACHED AUTHENTICATORS*

The information system prohibits the use of cached authenticators after [*Assignment: organization-defined time period*].

(14) *AUTHENTICATOR MANAGEMENT | MANAGING CONTENT OF PKI TRUST STORES*

The organization, for PKI-based authentication, employs a deliberate organization-wide methodology for managing the content of PKI trust stores installed across all platforms including networks, operating systems, browsers, and applications.

(15) *AUTHENTICATOR MANAGEMENT | FICAM-APPROVED PRODUCTS AND SERVICES*

The organization uses only FICAM-approved path discovery and validation products and services.

Supplemental Guidance: Federal Identity, Credential, and Access Management (FICAM)-approved path discovery and validation products and services are those products and services that have been approved through the FICAM conformance program, where applicable.

References: OMB Memoranda 04-04, 11-11; FIPS Publication 201; NIST Special Publications 800-73, 800-63, 800-76, 800-78; FICAM Roadmap and Implementation Guidance; Web: http://idmanagement.gov.

Priority and Baseline Allocation:

IA-6 AUTHENTICATOR FEEDBACK

Control: The information system obscures feedback of authentication information during the authentication process to protect the information from possible exploitation/use by unauthorized individuals.

Supplemental Guidance: The feedback from information systems does not provide information that would allow unauthorized individuals to compromise authentication mechanisms. For some types of information systems or system components, for example, desktops/notebooks with relatively large monitors, the threat (often referred to as shoulder surfing) may be significant. For other types of systems or components, for example, mobile devices with 2-4 inch screens, this threat may be less significant, and may need to be balanced against the increased likelihood of typographic input errors due to the small keyboards. Therefore, the means for obscuring the authenticator feedback is selected accordingly. Obscuring the feedback of authentication information includes, for example, displaying asterisks when users type passwords into input devices, or displaying feedback for a very limited time before fully obscuring it. Related control: PE-18.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P2	**LOW** IA-6	**MOD** IA-6	**HIGH** IA-6

IA-7 CRYPTOGRAPHIC MODULE AUTHENTICATION

Control: The information system implements mechanisms for authentication to a cryptographic module that meet the requirements of applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance for such authentication.

Supplemental Guidance: Authentication mechanisms may be required within a cryptographic module to authenticate an operator accessing the module and to verify that the operator is authorized to assume the requested role and perform services within that role. Related controls: SC-12, SC-13.

Control Enhancements: None.

References: FIPS Publication 140; Web: http://csrc.nist.gov/groups/STM/cmvp/index.html.

Priority and Baseline Allocation:

P1	**LOW** IA-7	**MOD** IA-7	**HIGH** IA-7

IA-8 IDENTIFICATION AND AUTHENTICATION (NON-ORGANIZATIONAL USERS)

Control: The information system uniquely identifies and authenticates non-organizational users (or processes acting on behalf of non-organizational users).

Supplemental Guidance: Non-organizational users include information system users other than organizational users explicitly covered by IA-2. These individuals are uniquely identified and authenticated for accesses other than those accesses explicitly identified and documented in AC-14. In accordance with the E-Authentication E-Government initiative, authentication of non-organizational users accessing federal information systems may be required to protect federal, proprietary, or privacy-related information (with exceptions noted for national security systems). Organizations use risk assessments to determine authentication needs and consider scalability, practicality, and security in balancing the need to ensure ease of use for access to federal information and information systems with the need to protect and adequately mitigate risk. IA-2 addresses identification and authentication requirements for access to information systems by organizational users. Related controls: AC-2, AC-14, AC-17, AC-18, IA-2, IA-4, IA-5, MA-4, RA-3, SA-12, SC-8.

Control Enhancements:

(1) *IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV CREDENTIALS FROM OTHER AGENCIES*

The information system accepts and electronically verifies Personal Identity Verification (PIV) credentials from other federal agencies.

Supplemental Guidance: This control enhancement applies to logical access control systems (LACS) and physical access control systems (PACS). Personal Identity Verification (PIV) credentials are those credentials issued by federal agencies that conform to FIPS Publication 201 and supporting guidance documents. OMB Memorandum 11-11 requires federal agencies to continue implementing the requirements specified in HSPD-12 to enable agency-wide use of PIV credentials. Related controls: AU-2, PE-3, SA-4.

(2) *IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF THIRD-PARTY CREDENTIALS*

The information system accepts only FICAM-approved third-party credentials.

Supplemental Guidance: This control enhancement typically applies to organizational information systems that are accessible to the general public, for example, public-facing websites. Third-party credentials are those credentials issued by nonfederal government entities approved by the Federal Identity, Credential, and Access Management (FICAM) Trust Framework Solutions initiative. Approved third-party credentials meet or exceed the set of minimum federal government-wide technical, security, privacy, and organizational maturity requirements. This allows federal government relying parties to trust such credentials at their approved assurance levels. Related control: AU-2.

(3) *IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-APPROVED PRODUCTS*

The organization employs only FICAM-approved information system components in [*Assignment: organization-defined information systems*] to accept third-party credentials.

Supplemental Guidance: This control enhancement typically applies to information systems that are accessible to the general public, for example, public-facing websites. FICAM-approved information system components include, for example, information technology products and software libraries that have been approved by the Federal Identity, Credential, and Access Management conformance program. Related control: SA-4.

(4) *IDENTIFICATION AND AUTHENTICATION | USE OF FICAM-ISSUED PROFILES*

The information system conforms to FICAM-issued profiles.

Supplemental Guidance: This control enhancement addresses open identity management standards. To ensure that these standards are viable, robust, reliable, sustainable (e.g., available in commercial information technology products), and interoperable as documented, the United States Government assesses and scopes identity management standards and technology implementations against applicable federal legislation, directives, policies, and requirements. The result is FICAM-issued implementation profiles of approved protocols (e.g., FICAM authentication protocols such as SAML 2.0 and OpenID 2.0, as well as other protocols such as the FICAM Backend Attribute Exchange). Related control: SA-4.

(5) *IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV-I CREDENTIALS*

The information system accepts and electronically verifies Personal Identity Verification-I (PIV-I) credentials.

Supplemental Guidance: This control enhancement: (i) applies to logical and physical access control systems; and (ii) addresses Non-Federal Issuers (NFIs) of identity cards that desire to interoperate with United States Government Personal Identity Verification (PIV) information systems and that can be trusted by federal government-relying parties. The X.509 certificate policy for the Federal Bridge Certification Authority (FBCA) addresses PIV-I requirements. The PIV-I card is suitable for Assurance Level 4 as defined in OMB Memorandum 04-04 and NIST Special Publication 800-63, and multifactor authentication as defined in NIST Special Publication 800-116. PIV-I credentials are those credentials issued by a PIV-I provider whose PIV-I certificate policy maps to the Federal Bridge PIV-I Certificate Policy. A PIV-I provider is cross-certified (directly or through another PKI bridge) with the FBCA with policies that have been mapped and approved as meeting the requirements of the PIV-I policies defined in the FBCA certificate policy. Related control: AU-2.

IA-9 SERVICE IDENTIFICATION AND AUTHENTICATION

Control: The organization identifies and authenticates [*Assignment: organization-defined information system services*] using [*Assignment: organization-defined security safeguards*].

Supplemental Guidance: This control supports service-oriented architectures and other distributed architectural approaches requiring the identification and authentication of information system services. In such architectures, external services often appear dynamically. Therefore, information systems should be able to determine in a dynamic manner, if external providers and associated services are authentic. Safeguards implemented by organizational information systems to validate provider and service authenticity include, for example, information or code signing, provenance graphs, and/or electronic signatures indicating or including the sources of services.

Control Enhancements:

(1) *SERVICE IDENTIFICATION AND AUTHENTICATION | INFORMATION EXCHANGE*

The organization ensures that service providers receive, validate, and transmit identification and authentication information.

(2) *SERVICE IDENTIFICATION AND AUTHENTICATION | TRANSMISSION OF DECISIONS*

The organization ensures that identification and authentication decisions are transmitted between [*Assignment: organization-defined services*] consistent with organizational policies.

Supplemental Guidance: For distributed architectures (e.g., service-oriented architectures), the decisions regarding the validation of identification and authentication claims may be made by services separate from the services acting on those decisions. In such situations, it is necessary

Supplemental Guidance: This control enhancement addresses open identity management standards. To ensure that these standards are viable, robust, reliable, sustainable (e.g., available in commercial information technology products), and interoperable as documented, the United States Government assesses and scopes identity management standards and technology implementations against applicable federal legislation, directives, policies, and requirements. The result is FICAM-issued implementation profiles of approved protocols (e.g., FICAM authentication protocols such as SAML 2.0 and OpenID 2.0, as well as other protocols such as the FICAM Backend Attribute Exchange). Related control: SA-4.

(5) *IDENTIFICATION AND AUTHENTICATION | ACCEPTANCE OF PIV-I CREDENTIALS*

The information system accepts and electronically verifies Personal Identity Verification-I (PIV-I) credentials.

Supplemental Guidance: This control enhancement: (i) applies to logical and physical access control systems; and (ii) addresses Non-Federal Issuers (NFIs) of identity cards that desire to interoperate with United States Government Personal Identity Verification (PIV) information systems and that can be trusted by federal government-relying parties. The X.509 certificate policy for the Federal Bridge Certification Authority (FBCA) addresses PIV-I requirements. The PIV-I card is suitable for Assurance Level 4 as defined in OMB Memorandum 04-04 and NIST Special Publication 800-63, and multifactor authentication as defined in NIST Special Publication 800-116. PIV-I credentials are those credentials issued by a PIV-I provider whose PIV-I certificate policy maps to the Federal Bridge PIV-I Certificate Policy. A PIV-I provider is cross-certified (directly or through another PKI bridge) with the FBCA with policies that have been mapped and approved as meeting the requirements of the PIV-I policies defined in the FBCA certificate policy. Related control: AU-2.

IA-9 SERVICE IDENTIFICATION AND AUTHENTICATION

Control: The organization identifies and authenticates [*Assignment: organization-defined information system services*] using [*Assignment: organization-defined security safeguards*].

Supplemental Guidance: This control supports service-oriented architectures and other distributed architectural approaches requiring the identification and authentication of information system services. In such architectures, external services often appear dynamically. Therefore, information systems should be able to determine in a dynamic manner, if external providers and associated services are authentic. Safeguards implemented by organizational information systems to validate provider and service authenticity include, for example, information or code signing, provenance graphs, and/or electronic signatures indicating or including the sources of services.

Control Enhancements:

(1) *SERVICE IDENTIFICATION AND AUTHENTICATION | INFORMATION EXCHANGE*

The organization ensures that service providers receive, validate, and transmit identification and authentication information.

(2) *SERVICE IDENTIFICATION AND AUTHENTICATION | TRANSMISSION OF DECISIONS*

The organization ensures that identification and authentication decisions are transmitted between [*Assignment: organization-defined services*] consistent with organizational policies.

Supplemental Guidance: For distributed architectures (e.g., service-oriented architectures), the decisions regarding the validation of identification and authentication claims may be made by services separate from the services acting on those decisions. In such situations, it is necessary

to provide the identification and authentication decisions (as opposed to the actual identifiers and authenticators) to the services that need to act on those decisions. Related control: SC-8.

IA-10 ADAPTIVE IDENTIFICATION AND AUTHENTICATION

Control: The organization requires that individuals accessing the information system employ [*Assignment: organization-defined supplemental authentication techniques or mechanisms*] under specific [*Assignment: organization-defined circumstances or situations*].

Supplemental Guidance: Adversaries may compromise individual authentication mechanisms and subsequently attempt to impersonate legitimate users. This situation can potentially occur with any authentication mechanisms employed by organizations. To address this threat, organizations may employ specific techniques/mechanisms and establish protocols to assess suspicious behavior (e.g., individuals accessing information that they do not typically access as part of their normal duties, roles, or responsibilities, accessing greater quantities of information than the individuals would routinely access, or attempting to access information from suspicious network addresses). In these situations when certain preestablished conditions or triggers occur, organizations can require selected individuals to provide additional authentication information. Another potential use for adaptive identification and authentication is to increase the strength of mechanism based on the number and/or types of records being accessed. Related controls: AU-6, SI-4.

Control Enhancements: None.

IA-11 RE-AUTHENTICATION

Control: The organization requires users and devices to re-authenticate when [*Assignment: organization-defined circumstances or situations requiring re-authentication*].

Supplemental Guidance: In addition to the re-authentication requirements associated with session locks, organizations may require re-authentication of individuals and/or devices in other situations including, for example: (i) when authenticators change; (ii), when roles change; (iii) when security categories of information systems change; (iv), when the execution of privileged functions occurs; (v) after a fixed period of time; or (vi) periodically. Related control: AC-11.

Control Enhancements: None.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

FAMILY: INCIDENT RESPONSE

IR-1 INCIDENT RESPONSE POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. An incident response policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the incident response policy and associated incident response controls; and

b. Reviews and updates the current:

   1. Incident response policy [*Assignment: organization-defined frequency*]; and

   2. Incident response procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the IR family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-61, 800-83, 800-100.

Priority and Baseline Allocation:

P1	**LOW** IR-1	**MOD** IR-1	**HIGH** IR-1

IR-2 INCIDENT RESPONSE TRAINING

Control: The organization provides incident response training to information system users consistent with assigned roles and responsibilities:

a. Within [*Assignment: organization-defined time period*] of assuming an incident response role or responsibility;

b. When required by information system changes; and

c. [*Assignment: organization-defined frequency*] thereafter.

Supplemental Guidance: Incident response training provided by organizations is linked to the assigned roles and responsibilities of organizational personnel to ensure the appropriate content and level of detail is included in such training. For example, regular users may only need to know who to call or how to recognize an incident on the information system; system administrators may require additional training on how to handle/remediate incidents; and incident responders may receive more specific training on forensics, reporting, system recovery, and restoration. Incident response training includes user training in the identification and reporting of suspicious activities, both from external and internal sources. Related controls: AT-3, CP-3, IR-8.

Control Enhancements:

(1) *INCIDENT RESPONSE TRAINING | SIMULATED EVENTS*

The organization incorporates simulated events into incident response training to facilitate effective response by personnel in crisis situations.

(2) *INCIDENT RESPONSE TRAINING | AUTOMATED TRAINING ENVIRONMENTS*

The organization employs automated mechanisms to provide a more thorough and realistic incident response training environment.

References: NIST Special Publications 800-16, 800-50.

Priority and Baseline Allocation:

P2	**LOW** IR-2	**MOD** IR-2	**HIGH** IR-2 (1) (2)

IR-3 INCIDENT RESPONSE TESTING

Control: The organization tests the incident response capability for the information system [*Assignment: organization-defined frequency*] using [*Assignment: organization-defined tests*] to determine the incident response effectiveness and documents the results.

Supplemental Guidance: Organizations test incident response capabilities to determine the overall effectiveness of the capabilities and to identify potential weaknesses or deficiencies. Incident response testing includes, for example, the use of checklists, walk-through or tabletop exercises, simulations (parallel/full interrupt), and comprehensive exercises. Incident response testing can also include a determination of the effects on organizational operations (e.g., reduction in mission capabilities), organizational assets, and individuals due to incident response. Related controls: CP-4, IR-8.

Control Enhancements:

(1) *INCIDENT RESPONSE TESTING | AUTOMATED TESTING*

The organization employs automated mechanisms to more thoroughly and effectively test the incident response capability.

Supplemental Guidance: Organizations use automated mechanisms to more thoroughly and effectively test incident response capabilities, for example: (i) by providing more complete coverage of incident response issues; (ii) by selecting more realistic test scenarios and test environments; and (iii) by stressing the response capability. Related control: AT-2.

(2) *INCIDENT RESPONSE TESTING | COORDINATION WITH RELATED PLANS*

The organization coordinates incident response testing with organizational elements responsible for related plans.

Supplemental Guidance: Organizational plans related to incident response testing include, for example, Business Continuity Plans, Contingency Plans, Disaster Recovery Plans, Continuity of Operations Plans, Crisis Communications Plans, Critical Infrastructure Plans, and Occupant Emergency Plans.

References: NIST Special Publications 800-84, 800-115.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** IR-3 (2)	**HIGH** IR-3 (2)

IR-4 INCIDENT HANDLING

Control: The organization:

a. Implements an incident handling capability for security incidents that includes preparation, detection and analysis, containment, eradication, and recovery;

b. Coordinates incident handling activities with contingency planning activities; and

c. Incorporates lessons learned from ongoing incident handling activities into incident response procedures, training, and testing/exercises, and implements the resulting changes accordingly.

Supplemental Guidance: Organizations recognize that incident response capability is dependent on the capabilities of organizational information systems and the mission/business processes being supported by those systems. Therefore, organizations consider incident response as part of the definition, design, and development of mission/business processes and information systems. Incident-related information can be obtained from a variety of sources including, for example, audit monitoring, network monitoring, physical access monitoring, user/administrator reports, and reported supply chain events. Effective incident handling capability includes coordination among many organizational entities including, for example, mission/business owners, information system owners, authorizing officials, human resources offices, physical and personnel security offices, legal departments, operations personnel, procurement offices, and the risk executive (function). Related controls: AU-6, CM-6, CP-2, CP-4, IR-2, IR-3, IR-8, PE-6, SC-5, SC-7, SI-3, SI-4, SI-7.

Control Enhancements:

(1) *INCIDENT HANDLING | AUTOMATED INCIDENT HANDLING PROCESSES*

The organization employs automated mechanisms to support the incident handling process.

Supplemental Guidance: Automated mechanisms supporting incident handling processes include, for example, online incident management systems.

(2) *INCIDENT HANDLING | DYNAMIC RECONFIGURATION*

The organization includes dynamic reconfiguration of [*Assignment: organization-defined information system components*] as part of the incident response capability.

Supplemental Guidance: Dynamic reconfiguration includes, for example, changes to router rules, access control lists, intrusion detection/prevention system parameters, and filter rules for firewalls and gateways. Organizations perform dynamic reconfiguration of information systems, for example, to stop attacks, to misdirect attackers, and to isolate components of systems, thus limiting the extent of the damage from breaches or compromises. Organizations include time frames for achieving the reconfiguration of information systems in the definition of the reconfiguration capability, considering the potential need for rapid response in order to effectively address sophisticated cyber threats. Related controls: AC-2, AC-4, AC-16, CM-2, CM-3, CM-4.

(3) *INCIDENT HANDLING | CONTINUITY OF OPERATIONS*

The organization identifies [*Assignment: organization-defined classes of incidents*] and [*Assignment: organization-defined actions to take in response to classes of incidents*] to ensure continuation of organizational missions and business functions.

Supplemental Guidance: Classes of incidents include, for example, malfunctions due to design/implementation errors and omissions, targeted malicious attacks, and untargeted malicious attacks. Appropriate incident response actions include, for example, graceful degradation, information system shutdown, fall back to manual mode/alternative technology whereby the system operates differently, employing deceptive measures, alternate information flows, or operating in a mode that is reserved solely for when systems are under attack.

(4) *INCIDENT HANDLING | INFORMATION CORRELATION*

The organization correlates incident information and individual incident responses to achieve an organization-wide perspective on incident awareness and response.

Supplemental Guidance: Sometimes the nature of a threat event, for example, a hostile cyber attack, is such that it can only be observed by bringing together information from different sources including various reports and reporting procedures established by organizations.

(5) *INCIDENT HANDLING | AUTOMATIC DISABLING OF INFORMATION SYSTEM*

The organization implements a configurable capability to automatically disable the information system if [*Assignment: organization-defined security violations*] are detected.

(6) *INCIDENT HANDLING | INSIDER THREATS - SPECIFIC CAPABILITIES*

The organization implements incident handling capability for insider threats.

Supplemental Guidance: While many organizations address insider threat incidents as an inherent part of their organizational incident response capability, this control enhancement provides additional emphasis on this type of threat and the need for specific incident handling capabilities (as defined within organizations) to provide appropriate and timely responses.

(7) *INCIDENT HANDLING | INSIDER THREATS - INTRA-ORGANIZATION COORDINATION*

The organization coordinates incident handling capability for insider threats across [*Assignment: organization-defined components or elements of the organization*].

Supplemental Guidance: Incident handling for insider threat incidents (including preparation, detection and analysis, containment, eradication, and recovery) requires close coordination among a variety of organizational components or elements to be effective. These components or elements include, for example, mission/business owners, information system owners, human resources offices, procurement offices, personnel/physical security offices, operations personnel, and risk executive (function). In addition, organizations may require external support from federal, state, and local law enforcement agencies.

(8) *INCIDENT HANDLING | CORRELATION WITH EXTERNAL ORGANIZATIONS*

The organization coordinates with [*Assignment: organization-defined external organizations*] to correlate and share [*Assignment: organization-defined incident information*] to achieve a cross-organization perspective on incident awareness and more effective incident responses.

Supplemental Guidance: The coordination of incident information with external organizations including, for example, mission/business partners, military/coalition partners, customers, and multitiered developers, can provide significant benefits. Cross-organizational coordination with respect to incident handling can serve as an important risk management capability. This capability allows organizations to leverage critical information from a variety of sources to effectively respond to information security-related incidents potentially affecting the organization's operations, assets, and individuals.

(9) *INCIDENT HANDLING | DYNAMIC RESPONSE CAPABILITY*

The organization employs [*Assignment: organization-defined dynamic response capabilities*] to effectively respond to security incidents.

Supplemental Guidance: This control enhancement addresses the deployment of replacement or new capabilities in a timely manner in response to security incidents (e.g., adversary actions during hostile cyber attacks). This includes capabilities implemented at the mission/business process level (e.g., activating alternative mission/business processes) and at the information system level. Related control: CP-10.

(10) *INCIDENT HANDLING | SUPPLY CHAIN COORDINATION*

The organization coordinates incident handling activities involving supply chain events with other organizations involved in the supply chain.

Supplemental Guidance: Organizations involved in supply chain activities include, for example, system/product developers, integrators, manufacturers, packagers, assemblers, distributors, vendors, and resellers. Supply chain incidents include, for example, compromises/breaches involving information system components, information technology products, development processes or personnel, and distribution processes or warehousing facilities.

References: Executive Order 13587; NIST Special Publication 800-61.

Priority and Baseline Allocation:

P1	**LOW** IR-4	**MOD** IR-4 (1)	**HIGH** IR-4 (1) (4)

IR-5 INCIDENT MONITORING

Control: The organization tracks and documents information system security incidents.

Supplemental Guidance: Documenting information system security incidents includes, for example, maintaining records about each incident, the status of the incident, and other pertinent information necessary for forensics, evaluating incident details, trends, and handling. Incident information can be obtained from a variety of sources including, for example, incident reports, incident response teams, audit monitoring, network monitoring, physical access monitoring, and user/administrator reports. Related controls: AU-6, IR-8, PE-6, SC-5, SC-7, SI-3, SI-4, SI-7.

Control Enhancements:

(1) *INCIDENT MONITORING | AUTOMATED TRACKING / DATA COLLECTION / ANALYSIS*

The organization employs automated mechanisms to assist in the tracking of security incidents and in the collection and analysis of incident information.

Supplemental Guidance: Automated mechanisms for tracking security incidents and collecting/analyzing incident information include, for example, the Einstein network monitoring device and monitoring online Computer Incident Response Centers (CIRCs) or other electronic databases of incidents. Related controls: AU-7, IR-4.

References: NIST Special Publication 800-61.

Priority and Baseline Allocation:

P1	**LOW** IR-5	**MOD** IR-5	**HIGH** IR-5 (1)

IR-6 INCIDENT REPORTING

Control: The organization:

a. Requires personnel to report suspected security incidents to the organizational incident response capability within [*Assignment: organization-defined time period*]; and

b. Reports security incident information to [*Assignment: organization-defined authorities*].

Supplemental Guidance: The intent of this control is to address both specific incident reporting requirements within an organization and the formal incident reporting requirements for federal agencies and their subordinate organizations. Suspected security incidents include, for example, the receipt of suspicious email communications that can potentially contain malicious code. The types of security incidents reported, the content and timeliness of the reports, and the designated reporting authorities reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Current federal policy requires that all federal agencies (unless specifically exempted from such requirements) report security incidents to the United States Computer Emergency Readiness Team (US-CERT) within specified time frames designated in the US-CERT Concept of Operations for Federal Cyber Security Incident Handling. Related controls: IR-4, IR-5, IR-8.

Control Enhancements:

(1) *INCIDENT REPORTING | AUTOMATED REPORTING*

The organization employs automated mechanisms to assist in the reporting of security incidents.

Supplemental Guidance: Related control: IR-7.

(2) *INCIDENT REPORTING | VULNERABILITIES RELATED TO INCIDENTS*

The organization reports information system vulnerabilities associated with reported security incidents to [*Assignment: organization-defined personnel or roles*].

(3) *INCIDENT REPORTING | COORDINATION WITH SUPPLY CHAIN*

The organization provides security incident information to other organizations involved in the supply chain for information systems or information system components related to the incident.

Supplemental Guidance: Organizations involved in supply chain activities include, for example, system/product developers, integrators, manufacturers, packagers, assemblers, distributors, vendors, and resellers. Supply chain incidents include, for example, compromises/breaches involving information system components, information technology products, development processes or personnel, and distribution processes or warehousing facilities. Organizations determine the appropriate information to share considering the value gained from support by external organizations with the potential for harm due to sensitive information being released to outside organizations of perhaps questionable trustworthiness.

References: NIST Special Publication 800-61; Web: http://www.us-cert.gov.

Priority and Baseline Allocation:

P1	**LOW** IR-6	**MOD** IR-6 (1)	**HIGH** IR-6 (1)

IR-7 INCIDENT RESPONSE ASSISTANCE

Control: The organization provides an incident response support resource, integral to the organizational incident response capability that offers advice and assistance to users of the information system for the handling and reporting of security incidents.

Supplemental Guidance: Incident response support resources provided by organizations include, for example, help desks, assistance groups, and access to forensics services, when required. Related controls: AT-2, IR-4, IR-6, IR-8, SA-9.

Control Enhancements:

(1) *INCIDENT RESPONSE ASSISTANCE | AUTOMATION SUPPORT FOR AVAILABILITY OF INFORMATION / SUPPORT*

The organization employs automated mechanisms to increase the availability of incident response-related information and support.

Supplemental Guidance: Automated mechanisms can provide a push and/or pull capability for users to obtain incident response assistance. For example, individuals might have access to a website to query the assistance capability, or conversely, the assistance capability may have the ability to proactively send information to users (general distribution or targeted) as part of increasing understanding of current response capabilities and support.

(2) *INCIDENT RESPONSE ASSISTANCE | COORDINATION WITH EXTERNAL PROVIDERS*

The organization:

(a) Establishes a direct, cooperative relationship between its incident response capability and external providers of information system protection capability; and

(b) Identifies organizational incident response team members to the external providers.

Supplemental Guidance: External providers of information system protection capability include, for example, the Computer Network Defense program within the U.S. Department of Defense. External providers help to protect, monitor, analyze, detect, and respond to unauthorized activity within organizational information systems and networks.

References: None.

Priority and Baseline Allocation:

P2	**LOW** IR-7	**MOD** IR-7 (1)	**HIGH** IR-7 (1)

IR-8 INCIDENT RESPONSE PLAN

Control: The organization:

a. Develops an incident response plan that:

1. Provides the organization with a roadmap for implementing its incident response capability;
2. Describes the structure and organization of the incident response capability;
3. Provides a high-level approach for how the incident response capability fits into the overall organization;
4. Meets the unique requirements of the organization, which relate to mission, size, structure, and functions;
5. Defines reportable incidents;
6. Provides metrics for measuring the incident response capability within the organization;
7. Defines the resources and management support needed to effectively maintain and mature an incident response capability; and
8. Is reviewed and approved by [*Assignment: organization-defined personnel or roles*];

b. Distributes copies of the incident response plan to [*Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements*];

c. Reviews the incident response plan [*Assignment: organization-defined frequency*];

d. Updates the incident response plan to address system/organizational changes or problems encountered during plan implementation, execution, or testing;

e. Communicates incident response plan changes to [*Assignment: organization-defined incident response personnel (identified by name and/or by role) and organizational elements*]; and

f. Protects the incident response plan from unauthorized disclosure and modification.

Supplemental Guidance: It is important that organizations develop and implement a coordinated approach to incident response. Organizational missions, business functions, strategies, goals, and objectives for incident response help to determine the structure of incident response capabilities. As part of a comprehensive incident response capability, organizations consider the coordination and sharing of information with external organizations, including, for example, external service providers and organizations involved in the supply chain for organizational information systems. Related controls: MP-2, MP-4, MP-5.

Control Enhancements: None.

References: NIST Special Publication 800-61.

Priority and Baseline Allocation:

P1	**LOW** IR-8	**MOD** IR-8	**HIGH** IR-8

IR-9 INFORMATION SPILLAGE RESPONSE

Control: The organization responds to information spills by:

a. Identifying the specific information involved in the information system contamination;

b. Alerting [*Assignment: organization-defined personnel or roles*] of the information spill using a method of communication not associated with the spill;

c. Isolating the contaminated information system or system component;

d. Eradicating the information from the contaminated information system or component;

e. Identifying other information systems or system components that may have been subsequently contaminated; and

f. Performing other [*Assignment: organization-defined actions*].

Supplemental Guidance: Information spillage refers to instances where either classified or sensitive information is inadvertently placed on information systems that are not authorized to process such information. Such information spills often occur when information that is initially thought to be of lower sensitivity is transmitted to an information system and then is subsequently determined to be of higher sensitivity. At that point, corrective action is required. The nature of the organizational response is generally based upon the degree of sensitivity of the spilled information (e.g., security category or classification level), the security capabilities of the information system, the specific nature of contaminated storage media, and the access authorizations (e.g., security clearances) of individuals with authorized access to the contaminated system. The methods used to communicate information about the spill after the fact do not involve methods directly associated with the actual spill to minimize the risk of further spreading the contamination before such contamination is isolated and eradicated.

Control Enhancements:

(1) *INFORMATION SPILLAGE RESPONSE | RESPONSIBLE PERSONNEL*

The organization assigns [*Assignment: organization-defined personnel or roles*] with responsibility for responding to information spills.

(2) *INFORMATION SPILLAGE RESPONSE | TRAINING*

The organization provides information spillage response training [*Assignment: organization-defined frequency*].

(3) *INFORMATION SPILLAGE RESPONSE | POST-SPILL OPERATIONS*

The organization implements [*Assignment: organization-defined procedures*] to ensure that organizational personnel impacted by information spills can continue to carry out assigned tasks while contaminated systems are undergoing corrective actions.

Supplemental Guidance: Correction actions for information systems contaminated due to information spillages may be very time-consuming. During those periods, personnel may not have access to the contaminated systems, which may potentially affect their ability to conduct organizational business.

(4) *INFORMATION SPILLAGE RESPONSE | EXPOSURE TO UNAUTHORIZED PERSONNEL*

The organization employs [*Assignment: organization-defined security safeguards*] for personnel exposed to information not within assigned access authorizations.

Supplemental Guidance: Security safeguards include, for example, making personnel exposed to spilled information aware of the federal laws, directives, policies, and/or regulations regarding the information and the restrictions imposed based on exposure to such information.

References: None.

Priority and Baseline Allocation:

P0	**LOW** Not Selected	**MOD** Not Selected	**HIGH** Not Selected

IR-10 INTEGRATED INFORMATION SECURITY ANALYSIS TEAM

Control: The organization establishes an integrated team of forensic/malicious code analysts, tool developers, and real-time operations personnel.

Supplemental Guidance: Having an integrated team for incident response facilitates information sharing. Such capability allows organizational personnel, including developers, implementers, and operators, to leverage the team knowledge of the threat in order to implement defensive measures that will enable organizations to deter intrusions more effectively. Moreover, it promotes the rapid detection of intrusions, development of appropriate mitigations, and the deployment of effective defensive measures. For example, when an intrusion is detected, the integrated security analysis team can rapidly develop an appropriate response for operators to implement, correlate the new incident with information on past intrusions, and augment ongoing intelligence development. This

enables the team to identify adversary TTPs that are linked to the operations tempo or to specific missions/business functions, and to define responsive actions in a way that does not disrupt the mission/business operations. Ideally, information security analysis teams are distributed within organizations to make the capability more resilient.

Control Enhancements: None.

FAMILY: MAINTENANCE

MA-1 SYSTEM MAINTENANCE POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A system maintenance policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the system maintenance policy and associated system maintenance controls; and

b. Reviews and updates the current:

   1. System maintenance policy [*Assignment: organization-defined frequency*]; and

   2. System maintenance procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the MA family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** MA-1	**MOD** MA-1	**HIGH** MA-1

MA-2 CONTROLLED MAINTENANCE

Control: The organization:

a. Schedules, performs, documents, and reviews records of maintenance and repairs on information system components in accordance with manufacturer or vendor specifications and/or organizational requirements;

b. Approves and monitors all maintenance activities, whether performed on site or remotely and whether the equipment is serviced on site or removed to another location;

c. Requires that [*Assignment: organization-defined personnel or roles*] explicitly approve the removal of the information system or system components from organizational facilities for off-site maintenance or repairs;

d. Sanitizes equipment to remove all information from associated media prior to removal from organizational facilities for off-site maintenance or repairs;

e. Checks all potentially impacted security controls to verify that the controls are still functioning properly following maintenance or repair actions; and

f. Includes [*Assignment: organization-defined maintenance-related information*] in organizational maintenance records.

Supplemental Guidance: This control addresses the information security aspects of the information system maintenance program and applies to all types of maintenance to any system component (including applications) conducted by any local or nonlocal entity (e.g., in-contract, warranty, in-house, software maintenance agreement). System maintenance also includes those components not directly associated with information processing and/or data/information retention such as scanners, copiers, and printers. Information necessary for creating effective maintenance records includes, for example: (i) date and time of maintenance; (ii) name of individuals or group performing the maintenance; (iii) name of escort, if necessary; (iv) a description of the maintenance performed; and (v) information system components/equipment removed or replaced (including identification numbers, if applicable). The level of detail included in maintenance records can be informed by the security categories of organizational information systems. Organizations consider supply chain issues associated with replacement components for information systems. Related controls: CM-3, CM-4, MA-4, MP-6, PE-16, SA-12, SI-2.

Control Enhancements:

(1) *CONTROLLED MAINTENANCE | RECORD CONTENT*

[Withdrawn: Incorporated into MA-2]**.**

(2) *CONTROLLED MAINTENANCE | AUTOMATED MAINTENANCE ACTIVITIES*

The organization:

(a) Employs automated mechanisms to schedule, conduct, and document maintenance and repairs; and

(b) Produces up-to date, accurate, and complete records of all maintenance and repair actions requested, scheduled, in process, and completed.

Supplemental Guidance: Related controls: CA-7, MA-3.

References: None.

Priority and Baseline Allocation:

P2	**LOW** MA-2	**MOD** MA-2	**HIGH** MA-2 (2)

MA-3 MAINTENANCE TOOLS

Control: The organization approves, controls, and monitors information system maintenance tools.

Supplemental Guidance: This control addresses security-related issues associated with maintenance tools used specifically for diagnostic and repair actions on organizational information systems. Maintenance tools can include hardware, software, and firmware items. Maintenance tools are potential vehicles for transporting malicious code, either intentionally or unintentionally, into a facility and subsequently into organizational information systems. Maintenance tools can include, for example, hardware/software diagnostic test equipment and hardware/software packet sniffers. This control does not cover hardware/software components that may support information system maintenance, yet are a part of the system, for example, the software implementing "ping," "ls," "ipconfig," or the hardware and software implementing the monitoring port of an Ethernet switch. Related controls: MA-2, MA-5, MP-6.

Control Enhancements:

(1) *MAINTENANCE TOOLS | INSPECT TOOLS*

The organization inspects the maintenance tools carried into a facility by maintenance personnel for improper or unauthorized modifications.

Supplemental Guidance: If, upon inspection of maintenance tools, organizations determine that the tools have been modified in an improper/unauthorized manner or contain malicious code,

the incident is handled consistent with organizational policies and procedures for incident handling. Related control: SI-7.

(2) *MAINTENANCE TOOLS | INSPECT MEDIA*

The organization checks media containing diagnostic and test programs for malicious code before the media are used in the information system.

Supplemental Guidance: If, upon inspection of media containing maintenance diagnostic and test programs, organizations determine that the media contain malicious code, the incident is handled consistent with organizational incident handling policies and procedures. Related control: SI-3.

(3) *MAINTENANCE TOOLS | PREVENT UNAUTHORIZED REMOVAL*

The organization prevents the unauthorized removal of maintenance equipment containing organizational information by:

(a) Verifying that there is no organizational information contained on the equipment;

(b) Sanitizing or destroying the equipment;

(c) Retaining the equipment within the facility; or

(d) Obtaining an exemption from [*Assignment: organization-defined personnel or roles*] explicitly authorizing removal of the equipment from the facility.

Supplemental Guidance: Organizational information includes all information specifically owned by organizations and information provided to organizations in which organizations serve as information stewards.

(4) *MAINTENANCE TOOLS | RESTRICTED TOOL USE*

The information system restricts the use of maintenance tools to authorized personnel only.

Supplemental Guidance: This control enhancement applies to information systems that are used to carry out maintenance functions. Related controls: AC-2, AC-3, AC-5, AC-6.

References: NIST Special Publication 800-88.

Priority and Baseline Allocation:

P3	**LOW** Not Selected	**MOD** MA-3 (1) (2)	**HIGH** MA-3 (1) (2) (3)

MA-4 NONLOCAL MAINTENANCE

Control: The organization:

a. Approves and monitors nonlocal maintenance and diagnostic activities;

b. Allows the use of nonlocal maintenance and diagnostic tools only as consistent with organizational policy and documented in the security plan for the information system;

c. Employs strong authenticators in the establishment of nonlocal maintenance and diagnostic sessions;

d. Maintains records for nonlocal maintenance and diagnostic activities; and

e. Terminates session and network connections when nonlocal maintenance is completed.

Supplemental Guidance: Nonlocal maintenance and diagnostic activities are those activities conducted by individuals communicating through a network, either an external network (e.g., the Internet) or an internal network. Local maintenance and diagnostic activities are those activities carried out by individuals physically present at the information system or information system component and not communicating across a network connection. Authentication techniques used in the establishment of nonlocal maintenance and diagnostic sessions reflect the network access requirements in IA-2. Typically, strong authentication requires authenticators that are resistant to replay attacks and employ multifactor authentication. Strong authenticators include, for example, PKI where certificates are stored on a token protected by a password, passphrase, or biometric.

Enforcing requirements in MA-4 is accomplished in part by other controls. Related controls: AC-2, AC-3, AC-6, AC-17, AU-2, AU-3, IA-2, IA-4, IA-5, IA-8, MA-2, MA-5, MP-6, PL-2, SC-7, SC-10, SC-17.

Control Enhancements:

(1) *NONLOCAL MAINTENANCE | AUDITING AND REVIEW*

The organization:

(a) Audits nonlocal maintenance and diagnostic sessions [*Assignment: organization-defined audit events*]; and

(b) Reviews the records of the maintenance and diagnostic sessions.

Supplemental Guidance: Related controls: AU-2, AU-6, AU-12.

(2) *NONLOCAL MAINTENANCE | DOCUMENT NONLOCAL MAINTENANCE*

The organization documents in the security plan for the information system, the policies and procedures for the establishment and use of nonlocal maintenance and diagnostic connections.

(3) *NONLOCAL MAINTENANCE | COMPARABLE SECURITY / SANITIZATION*

The organization:

(a) Requires that nonlocal maintenance and diagnostic services be performed from an information system that implements a security capability comparable to the capability implemented on the system being serviced; or

(b) Removes the component to be serviced from the information system and prior to nonlocal maintenance or diagnostic services, sanitizes the component (with regard to organizational information) before removal from organizational facilities, and after the service is performed, inspects and sanitizes the component (with regard to potentially malicious software) before reconnecting the component to the information system.

Supplemental Guidance: Comparable security capability on information systems, diagnostic tools, and equipment providing maintenance services implies that the implemented security controls on those systems, tools, and equipment are at least as comprehensive as the controls on the information system being serviced. Related controls: MA-3, SA-12, SI-3, SI-7.

(4) *NONLOCAL MAINTENANCE | AUTHENTICATION / SEPARATION OF MAINTENANCE SESSIONS*

The organization protects nonlocal maintenance sessions by:

(a) Employing [*Assignment: organization-defined authenticators that are replay resistant*]; and

(b) Separating the maintenance sessions from other network sessions with the information system by either:

(1) Physically separated communications paths; or

(2) Logically separated communications paths based upon encryption.

Supplemental Guidance: Related control: SC-13.

(5) *NONLOCAL MAINTENANCE | APPROVALS AND NOTIFICATIONS*

The organization:

(a) Requires the approval of each nonlocal maintenance session by [*Assignment: organization-defined personnel or roles*]; and

(b) Notifies [*Assignment: organization-defined personnel or roles*] of the date and time of planned nonlocal maintenance.

Supplemental Guidance: Notification may be performed by maintenance personnel. Approval of nonlocal maintenance sessions is accomplished by organizational personnel with sufficient information security and information system knowledge to determine the appropriateness of the proposed maintenance.

(6) *NONLOCAL MAINTENANCE | CRYPTOGRAPHIC PROTECTION*

The information system implements cryptographic mechanisms to protect the integrity and confidentiality of nonlocal maintenance and diagnostic communications.

Supplemental Guidance: Related controls: SC-8, SC-13.

(7) *NONLOCAL MAINTENANCE | REMOTE DISCONNECT VERIFICATION*

The information system implements remote disconnect verification at the termination of nonlocal maintenance and diagnostic sessions.

Supplemental Guidance: Remote disconnect verification ensures that remote connections from nonlocal maintenance sessions have been terminated and are no longer available for use. Related control: SC-13.

References: FIPS Publications 140-2, 197, 201; NIST Special Publications 800-63, 800-88; CNSS Policy 15.

Priority and Baseline Allocation:

MA-5 MAINTENANCE PERSONNEL

Control: The organization:

a. Establishes a process for maintenance personnel authorization and maintains a list of authorized maintenance organizations or personnel;

b. Ensures that non-escorted personnel performing maintenance on the information system have required access authorizations; and

c. Designates organizational personnel with required access authorizations and technical competence to supervise the maintenance activities of personnel who do not possess the required access authorizations.

Supplemental Guidance: This control applies to individuals performing hardware or software maintenance on organizational information systems, while PE-2 addresses physical access for individuals whose maintenance duties place them within the physical protection perimeter of the systems (e.g., custodial staff, physical plant maintenance personnel). Technical competence of supervising individuals relates to the maintenance performed on the information systems while having required access authorizations refers to maintenance on and near the systems. Individuals not previously identified as authorized maintenance personnel, such as information technology manufacturers, vendors, systems integrators, and consultants, may require privileged access to organizational information systems, for example, when required to conduct maintenance activities with little or no notice. Based on organizational assessments of risk, organizations may issue temporary credentials to these individuals. Temporary credentials may be for one-time use or for very limited time periods. Related controls: AC-2, IA-8, MP-2, PE-2, PE-3, PE-4, RA-3.

Control Enhancements:

(1) *MAINTENANCE PERSONNEL | INDIVIDUALS WITHOUT APPROPRIATE ACCESS*

The organization:

(a) Implements procedures for the use of maintenance personnel that lack appropriate security clearances or are not U.S. citizens, that include the following requirements:

(1) Maintenance personnel who do not have needed access authorizations, clearances, or formal access approvals are escorted and supervised during the performance of maintenance and diagnostic activities on the information system by approved organizational personnel who are fully cleared, have appropriate access authorizations, and are technically qualified;

(2) Prior to initiating maintenance or diagnostic activities by personnel who do not have needed access authorizations, clearances or formal access approvals, all volatile information storage components within the information system are sanitized and all nonvolatile storage media are removed or physically disconnected from the system and secured; and

(b) Develops and implements alternate security safeguards in the event an information system component cannot be sanitized, removed, or disconnected from the system.

Supplemental Guidance: This control enhancement denies individuals who lack appropriate security clearances (i.e., individuals who do not possess security clearances or possess security clearances at a lower level than required) or who are not U.S. citizens, visual and electronic access to any classified information, Controlled Unclassified Information (CUI), or any other sensitive information contained on organizational information systems. Procedures for the use of maintenance personnel can be documented in security plans for the information systems. Related controls: MP-6, PL-2.

(2) *MAINTENANCE PERSONNEL | SECURITY CLEARANCES FOR CLASSIFIED SYSTEMS*

The organization ensures that personnel performing maintenance and diagnostic activities on an information system processing, storing, or transmitting classified information possess security clearances and formal access approvals for at least the highest classification level and for all compartments of information on the system.

Supplemental Guidance: Related control: PS-3.

(3) *MAINTENANCE PERSONNEL | CITIZENSHIP REQUIREMENTS FOR CLASSIFIED SYSTEMS*

The organization ensures that personnel performing maintenance and diagnostic activities on an information system processing, storing, or transmitting classified information are U.S. citizens.

Supplemental Guidance: Related control: PS-3.

(4) *MAINTENANCE PERSONNEL | FOREIGN NATIONALS*

The organization ensures that:

(a) Cleared foreign nationals (i.e., foreign nationals with appropriate security clearances), are used to conduct maintenance and diagnostic activities on classified information systems only when the systems are jointly owned and operated by the United States and foreign allied governments, or owned and operated solely by foreign allied governments; and

(b) Approvals, consents, and detailed operational conditions regarding the use of foreign nationals to conduct maintenance and diagnostic activities on classified information systems are fully documented within Memoranda of Agreements.

Supplemental Guidance: Related control: PS-3.

(5) *MAINTENANCE PERSONNEL | NONSYSTEM-RELATED MAINTENANCE*

The organization ensures that non-escorted personnel performing maintenance activities not directly associated with the information system but in the physical proximity of the system, have required access authorizations.

Supplemental Guidance: Personnel performing maintenance activities in other capacities not directly related to the information system include, for example, physical plant personnel and janitorial personnel.

References: None.

Priority and Baseline Allocation:

P2	**LOW** MA-5	**MOD** MA-5	**HIGH** MA-5 (1)

MA-6 TIMELY MAINTENANCE

Control: The organization obtains maintenance support and/or spare parts for [*Assignment: organization-defined information system components*] within [*Assignment: organization-defined time period*] of failure.

Supplemental Guidance: Organizations specify the information system components that result in increased risk to organizational operations and assets, individuals, other organizations, or the Nation when the functionality provided by those components is not operational. Organizational actions to obtain maintenance support typically include having appropriate contracts in place. Related controls: CM-8, CP-2, CP-7, SA-14, SA-15.

Control Enhancements:

(1) *TIMELY MAINTENANCE | PREVENTIVE MAINTENANCE*

The organization performs preventive maintenance on [*Assignment: organization-defined information system components*] at [*Assignment: organization-defined time intervals*].

Supplemental Guidance: Preventive maintenance includes proactive care and servicing of organizational information systems components for the purpose of maintaining equipment and facilities in satisfactory operating condition. Such maintenance provides for the systematic inspection, tests, measurements, adjustments, parts replacement, detection, and correction of incipient failures either before they occur or before they develop into major defects. The primary goal of preventive maintenance is to avoid/mitigate the consequences of equipment failures. Preventive maintenance is designed to preserve and restore equipment reliability by replacing worn components before they actually fail. Methods of determining what preventive (or other) failure management policies to apply include, for example, original equipment manufacturer (OEM) recommendations, statistical failure records, requirements of codes, legislation, or regulations within a jurisdiction, expert opinion, maintenance that has already been conducted on similar equipment, or measured values and performance indications.

(2) *TIMELY MAINTENANCE | PREDICTIVE MAINTENANCE*

The organization performs predictive maintenance on [*Assignment: organization-defined information system components*] at [*Assignment: organization-defined time intervals*].

Supplemental Guidance: Predictive maintenance, or condition-based maintenance, attempts to evaluate the condition of equipment by performing periodic or continuous (online) equipment condition monitoring. The goal of predictive maintenance is to perform maintenance at a scheduled point in time when the maintenance activity is most cost-effective and before the equipment loses performance within a threshold. The predictive component of predictive maintenance stems from the goal of predicting the future trend of the equipment's condition. This approach uses principles of statistical process control to determine at what point in the future maintenance activities will be appropriate. Most predictive maintenance inspections are performed while equipment is in service, thereby minimizing disruption of normal system operations. Predictive maintenance can result in substantial cost savings and higher system reliability. Predictive maintenance tends to include measurement of the item. To evaluate equipment condition, predictive maintenance utilizes nondestructive testing technologies such as infrared, acoustic (partial discharge and airborne ultrasonic), corona detection, vibration analysis, sound level measurements, oil analysis, and other specific online tests.

(3) *TIMELY MAINTENANCE | AUTOMATED SUPPORT FOR PREDICTIVE MAINTENANCE*

The organization employs automated mechanisms to transfer predictive maintenance data to a computerized maintenance management system.

Supplemental Guidance: A computerized maintenance management system maintains a computer database of information about the maintenance operations of organizations and automates processing equipment condition data in order to trigger maintenance planning, execution, and reporting.

References: None.

P2	**LOW** Not Selected	**MOD** MA-6	**HIGH** MA-6

FAMILY: MEDIA PROTECTION

MP-1 MEDIA PROTECTION POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A media protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the media protection policy and associated media protection controls; and

b. Reviews and updates the current:

   1. Media protection policy [*Assignment: organization-defined frequency*]; and

   2. Media protection procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the MP family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

References: NIST Special Publications 800-12, 800-100.

Priority and Baseline Allocation:

P1	**LOW** MP-1	**MOD** MP-1	**HIGH** MP-1

MP-2 MEDIA ACCESS

Control: The organization restricts access to [*Assignment: organization-defined types of digital and/or non-digital media*] to [*Assignment: organization-defined personnel or roles*].

Supplemental Guidance: Information system media includes both digital and non-digital media. Digital media includes, for example, diskettes, magnetic tapes, external/removable hard disk drives, flash drives, compact disks, and digital video disks. Non-digital media includes, for example, paper and microfilm. Restricting non-digital media access includes, for example, denying access to patient medical records in a community hospital unless the individuals seeking access to such records are authorized healthcare providers. Restricting access to digital media includes, for example, limiting access to design specifications stored on compact disks in the media library to the project leader and the individuals on the development team. Related controls: AC-3, IA-2, MP-4, PE-2, PE-3, PL-2.

Control Enhancements:

(1) *MEDIA ACCESS | AUTOMATED RESTRICTED ACCESS*

[Withdrawn: Incorporated into MP-4 (2)].

(2) *MEDIA ACCESS | CRYPTOGRAPHIC PROTECTION*
[Withdrawn: Incorporated into SC-28 (1)].

Priority and Baseline Allocation:

P1	**LOW** MP-2	**MOD** MP-2	**HIGH** MP-2

MP-3 MEDIA MARKING

Control: The organization:

a. Marks information system media indicating the distribution limitations, handling caveats, and applicable security markings (if any) of the information; and

b. Exempts [*Assignment: organization-defined types of information system media*] from marking as long as the media remain within [*Assignment: organization-defined controlled areas*].

Supplemental Guidance: The term *security marking* refers to the application/use of human-readable security attributes. The term *security labeling* refers to the application/use of security attributes with regard to internal data structures within information systems (see AC-16). Information system media includes both digital and non-digital media. Digital media includes, for example, diskettes, magnetic tapes, external/removable hard disk drives, flash drives, compact disks, and digital video disks. Non-digital media includes, for example, paper and microfilm. Security marking is generally not required for media containing information determined by organizations to be in the public domain or to be publicly releasable. However, some organizations may require markings for public information indicating that the information is publicly releasable. Marking of information system media reflects applicable federal laws, Executive Orders, directives, policies, regulations, standards, and guidance. Related controls: AC-16, PL-2, RA-3.

Control Enhancements: None.

References: FIPS Publication 199.

Priority and Baseline Allocation:

P2	**LOW** Not Selected	**MOD** MP-3	**HIGH** MP-3

MP-4 MEDIA STORAGE

Control: The organization:

a. Physically controls and securely stores [*Assignment: organization-defined types of digital and/or non-digital media*] within [*Assignment: organization-defined controlled areas*]; and

b. Protects information system media until the media are destroyed or sanitized using approved equipment, techniques, and procedures.

Supplemental Guidance: Information system media includes both digital and non-digital media. Digital media includes, for example, diskettes, magnetic tapes, external/removable hard disk drives, flash drives, compact disks, and digital video disks. Non-digital media includes, for example, paper and microfilm. Physically controlling information system media includes, for example, conducting inventories, ensuring procedures are in place to allow individuals to check out and return media to the media library, and maintaining accountability for all stored media. Secure storage includes, for example, a locked drawer, desk, or cabinet, or a controlled media library. The type of media storage is commensurate with the security category and/or classification of the information residing on the media. Controlled areas are areas for which organizations

provide sufficient physical and procedural safeguards to meet the requirements established for protecting information and/or information systems. For media containing information determined by organizations to be in the public domain, to be publicly releasable, or to have limited or no adverse impact on organizations or individuals if accessed by other than authorized personnel, fewer safeguards may be needed. In these situations, physical access controls provide adequate protection. Related controls: CP-6, CP-9, MP-2, MP-7, PE-3.

Control Enhancements:

(1) *MEDIA STORAGE | CRYPTOGRAPHIC PROTECTION*

[Withdrawn: Incorporated into SC-28 (1)].

(2) *MEDIA STORAGE | AUTOMATED RESTRICTED ACCESS*

The organization employs automated mechanisms to restrict access to media storage areas and to audit access attempts and access granted.

Supplemental Guidance: Automated mechanisms can include, for example, keypads on the external entries to media storage areas. Related controls: AU-2, AU-9, AU-6, AU-12.

References: FIPS Publication 199; NIST Special Publications 800-56, 800-57, 800-111.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** MP-4	**HIGH** MP-4

MP-5 MEDIA TRANSPORT

Control: The organization:

a. Protects and controls [*Assignment: organization-defined types of information system media*] during transport outside of controlled areas using [*Assignment: organization-defined security safeguards*];

b. Maintains accountability for information system media during transport outside of controlled areas;

c. Documents activities associated with the transport of information system media; and

d. Restricts the activities associated with the transport of information system media to authorized personnel.

Supplemental Guidance: Information system media includes both digital and non-digital media. Digital media includes, for example, diskettes, magnetic tapes, external/removable hard disk drives, flash drives, compact disks, and digital video disks. Non-digital media includes, for example, paper and microfilm. This control also applies to mobile devices with information storage capability (e.g., smart phones, tablets, E-readers), that are transported outside of controlled areas. Controlled areas are areas or spaces for which organizations provide sufficient physical and/or procedural safeguards to meet the requirements established for protecting information and/or information systems.

Physical and technical safeguards for media are commensurate with the security category or classification of the information residing on the media. Safeguards to protect media during transport include, for example, locked containers and cryptography. Cryptographic mechanisms can provide confidentiality and integrity protections depending upon the mechanisms used. Activities associated with transport include the actual transport as well as those activities such as releasing media for transport and ensuring that media enters the appropriate transport processes. For the actual transport, authorized transport and courier personnel may include individuals from outside the organization (e.g., U.S. Postal Service or a commercial transport or delivery service). Maintaining accountability of media during transport includes, for example, restricting transport activities to authorized personnel, and tracking and/or obtaining explicit records of transport activities as the media moves through the transportation system to prevent and detect loss,

destruction, or tampering. Organizations establish documentation requirements for activities associated with the transport of information system media in accordance with organizational assessments of risk to include the flexibility to define different record-keeping methods for the different types of media transport as part of an overall system of transport-related records. Related controls: AC-19, CP-9, MP-3, MP-4, RA-3, SC-8, SC-13, SC-28.

Control Enhancements:

(1) *MEDIA TRANSPORT | PROTECTION OUTSIDE OF CONTROLLED AREAS*

[Withdrawn: Incorporated into MP-5].

(2) *MEDIA TRANSPORT | DOCUMENTATION OF ACTIVITIES*

[Withdrawn: Incorporated into MP-5].

(3) *MEDIA TRANSPORT | CUSTODIANS*

The organization employs an identified custodian during transport of information system media outside of controlled areas.

Supplemental Guidance: Identified custodians provide organizations with specific points of contact during the media transport process and facilitate individual accountability. Custodial responsibilities can be transferred from one individual to another as long as an unambiguous custodian is identified at all times.

(4) *MEDIA TRANSPORT | CRYPTOGRAPHIC PROTECTION*

The information system implements cryptographic mechanisms to protect the confidentiality and integrity of information stored on digital media during transport outside of controlled areas.

Supplemental Guidance: This control enhancement applies to both portable storage devices (e.g., USB memory sticks, compact disks, digital video disks, external/removable hard disk drives) and mobile devices with storage capability (e.g., smart phones, tablets, E-readers). Related control: MP-2.

References: FIPS Publication 199; NIST Special Publication 800-60.

Priority and Baseline Allocation:

P1	**LOW** Not Selected	**MOD** MP-5 (4)	**HIGH** MP-5 (4)

MP-6 MEDIA SANITIZATION

Control: The organization:

a. Sanitizes [*Assignment: organization-defined information system media*] prior to disposal, release out of organizational control, or release for reuse using [*Assignment: organization-defined sanitization techniques and procedures*] in accordance with applicable federal and organizational standards and policies; and

b. Employs sanitization mechanisms with the strength and integrity commensurate with the security category or classification of the information.

Supplemental Guidance: This control applies to all information system media, both digital and non-digital, subject to disposal or reuse, whether or not the media is considered removable. Examples include media found in scanners, copiers, printers, notebook computers, workstations, network components, and mobile devices. The sanitization process removes information from the media such that the information cannot be retrieved or reconstructed. Sanitization techniques, including clearing, purging, cryptographic erase, and destruction, prevent the disclosure of information to unauthorized individuals when such media is reused or released for disposal. Organizations determine the appropriate sanitization methods recognizing that destruction is sometimes necessary when other methods cannot be applied to media requiring sanitization. Organizations use discretion on the employment of approved sanitization techniques and procedures for media containing information deemed to be in the public domain or publicly releasable, or deemed to have no adverse impact on organizations or individuals if released for reuse or disposal.

Sanitization of non-digital media includes, for example, removing a classified appendix from an otherwise unclassified document, or redacting selected sections or words from a document by obscuring the redacted sections/words in a manner equivalent in effectiveness to removing them from the document. NSA standards and policies control the sanitization process for media containing classified information. Related controls: MA-2, MA-4, RA-3, SC-4.

Control Enhancements:

(1) *MEDIA SANITIZATION | REVIEW / APPROVE / TRACK / DOCUMENT / VERIFY*

The organization reviews, approves, tracks, documents, and verifies media sanitization and disposal actions.

Supplemental Guidance: Organizations review and approve media to be sanitized to ensure compliance with records-retention policies. Tracking/documenting actions include, for example, listing personnel who reviewed and approved sanitization and disposal actions, types of media sanitized, specific files stored on the media, sanitization methods used, date and time of the sanitization actions, personnel who performed the sanitization, verification actions taken, personnel who performed the verification, and disposal action taken. Organizations verify that the sanitization of the media was effective prior to disposal. Related control: SI-12.

(2) *MEDIA SANITIZATION | EQUIPMENT TESTING*

The organization tests sanitization equipment and procedures [*Assignment: organization-defined frequency*] to verify that the intended sanitization is being achieved.

Supplemental Guidance: Testing of sanitization equipment and procedures may be conducted by qualified and authorized external entities (e.g., other federal agencies or external service providers).

(3) *MEDIA SANITIZATION | NONDESTRUCTIVE TECHNIQUES*

The organization applies nondestructive sanitization techniques to portable storage devices prior to connecting such devices to the information system under the following circumstances: [*Assignment: organization-defined circumstances requiring sanitization of portable storage devices*].

Supplemental Guidance: This control enhancement applies to digital media containing classified information and Controlled Unclassified Information (CUI). Portable storage devices can be the source of malicious code insertions into organizational information systems. Many of these devices are obtained from unknown and potentially untrustworthy sources and may contain malicious code that can be readily transferred to information systems through USB ports or other entry portals. While scanning such storage devices is always recommended, sanitization provides additional assurance that the devices are free of malicious code to include code capable of initiating zero-day attacks. Organizations consider nondestructive sanitization of portable storage devices when such devices are first purchased from the manufacturer or vendor prior to initial use or when organizations lose a positive chain of custody for the devices. Related control: SI-3.

(4) *MEDIA SANITIZATION | CONTROLLED UNCLASSIFIED INFORMATION*

[Withdrawn: Incorporated into MP-6].

(5) *MEDIA SANITIZATION | CLASSIFIED INFORMATION*

[Withdrawn: Incorporated into MP-6].

(6) *MEDIA SANITIZATION | MEDIA DESTRUCTION*

[Withdrawn: Incorporated into MP-6].

(7) *MEDIA SANITIZATION | DUAL AUTHORIZATION*

The organization enforces dual authorization for the sanitization of [*Assignment: organization-defined information system media*].

Supplemental Guidance: Organizations employ dual authorization to ensure that information system media sanitization cannot occur unless two technically qualified individuals conduct the task. Individuals sanitizing information system media possess sufficient skills/expertise to determine if the proposed sanitization reflects applicable federal/organizational standards, policies, and procedures. Dual authorization also helps to ensure that sanitization occurs as

intended, both protecting against errors and false claims of having performed the sanitization actions. Dual authorization may also be known as two-person control. Related controls: AC-3, MP-2.

(8) *MEDIA SANITIZATION | REMOTE PURGING / WIPING OF INFORMATION*

The organization provides the capability to purge/wipe information from [*Assignment: organization-defined information systems, system components, or devices*] either remotely or under the following conditions: [*Assignment: organization-defined conditions*].

Supplemental Guidance: This control enhancement protects data/information on organizational information systems, system components, or devices (e.g., mobile devices) if such systems, components, or devices are obtained by unauthorized individuals. Remote purge/wipe commands require strong authentication to mitigate the risk of unauthorized individuals purging/wiping the system/component/device. The purge/wipe function can be implemented in a variety of ways including, for example, by overwriting data/information multiple times or by destroying the key necessary to decrypt encrypted data.

References: FIPS Publication 199; NIST Special Publications 800-60, 800-88; Web: http://www.nsa.gov/ia/mitigation_guidance/media_destruction_guidance/index.shtml.

Priority and Baseline Allocation:

P1	**LOW** MP-6	**MOD** MP-6	**HIGH** MP-6 (1) (2) (3)

MP-7 MEDIA USE

Control: The organization [*Selection: restricts; prohibits*] the use of [*Assignment: organization-defined types of information system media*] on [*Assignment: organization-defined information systems or system components*] using [*Assignment: organization-defined security safeguards*].

Supplemental Guidance: Information system media includes both digital and non-digital media. Digital media includes, for example, diskettes, magnetic tapes, external/removable hard disk drives, flash drives, compact disks, and digital video disks. Non-digital media includes, for example, paper and microfilm. This control also applies to mobile devices with information storage capability (e.g., smart phones, tablets, E-readers). In contrast to MP-2, which restricts user access to media, this control restricts the use of certain types of media on information systems, for example, restricting/prohibiting the use of flash drives or external hard disk drives. Organizations can employ technical and nontechnical safeguards (e.g., policies, procedures, rules of behavior) to restrict the use of information system media. Organizations may restrict the use of portable storage devices, for example, by using physical cages on workstations to prohibit access to certain external ports, or disabling/removing the ability to insert, read or write to such devices. Organizations may also limit the use of portable storage devices to only approved devices including, for example, devices provided by the organization, devices provided by other approved organizations, and devices that are not personally owned. Finally, organizations may restrict the use of portable storage devices based on the type of device, for example, prohibiting the use of writeable, portable storage devices, and implementing this restriction by disabling or removing the capability to write to such devices. Related controls: AC-19, PL-4.

Control Enhancements:

(1) *MEDIA USE | PROHIBIT USE WITHOUT OWNER*

The organization prohibits the use of portable storage devices in organizational information systems when such devices have no identifiable owner.

Supplemental Guidance: Requiring identifiable owners (e.g., individuals, organizations, or projects) for portable storage devices reduces the risk of using such technologies by allowing organizations to assign responsibility and accountability for addressing known vulnerabilities in the devices (e.g., malicious code insertion). Related control: PL-4.

(2) *MEDIA USE | PROHIBIT USE OF SANITIZATION-RESISTANT MEDIA*

The organization prohibits the use of sanitization-resistant media in organizational information systems.

Supplemental Guidance: Sanitation-resistance applies to the capability to purge information from media. Certain types of media do not support sanitize commands, or if supported, the interfaces are not supported in a standardized way across these devices. Sanitation-resistant media include, for example, compact flash, embedded flash on boards and devices, solid state drives, and USB removable media. Related control: MP-6.

References: FIPS Publication 199; NIST Special Publication 800-111.

Priority and Baseline Allocation:

P1	**LOW** MP-7	**MOD** MP-7 (1)	**HIGH** MP-7 (1)

MP-8 MEDIA DOWNGRADING

Control: The organization:

a. Establishes [*Assignment: organization-defined information system media downgrading process*] that includes employing downgrading mechanisms with [*Assignment: organization-defined strength and integrity*];

b. Ensures that the information system media downgrading process is commensurate with the security category and/or classification level of the information to be removed and the access authorizations of the potential recipients of the downgraded information;

c. Identifies [*Assignment: organization-defined information system media requiring downgrading*]; and

d. Downgrades the identified information system media using the established process.

Supplemental Guidance: This control applies to all information system media, digital and non-digital, subject to release outside of the organization, whether or not the media is considered removable. The downgrading process, when applied to system media, removes information from the media, typically by security category or classification level, such that the information cannot be retrieved or reconstructed. Downgrading of media includes redacting information to enable wider release and distribution. Downgrading of media also ensures that empty space on the media (e.g., slack space within files) is devoid of information.

Control Enhancements:

(1) *MEDIA DOWNGRADING | DOCUMENTATION OF PROCESS*

The organization documents information system media downgrading actions.

Supplemental Guidance: Organizations can document the media downgrading process by providing information such as the downgrading technique employed, the identification number of the downgraded media, and the identity of the individual that authorized and/or performed the downgrading action.

(2) *MEDIA DOWNGRADING | EQUIPMENT TESTING*

The organization employs [*Assignment: organization-defined tests*] of downgrading equipment and procedures to verify correct performance [*Assignment: organization-defined frequency*].

(3) *MEDIA DOWNGRADING | CONTROLLED UNCLASSIFIED INFORMATION*

The organization downgrades information system media containing [*Assignment: organization-defined Controlled Unclassified Information (CUI)*] prior to public release in accordance with applicable federal and organizational standards and policies.

(4) *MEDIA DOWNGRADING | CLASSIFIED INFORMATION*

The organization downgrades information system media containing classified information prior to release to individuals without required access authorizations in accordance with NSA standards and policies.

Supplemental Guidance: Downgrading of classified information uses approved sanitization tools, techniques, and procedures to transfer information confirmed to be unclassified from classified information systems to unclassified media.

FAMILY: PHYSICAL AND ENVIRONMENTAL PROTECTION

PE-1 PHYSICAL AND ENVIRONMENTAL PROTECTION POLICY AND PROCEDURES

Control: The organization:

a. Develops, documents, and disseminates to [*Assignment: organization-defined personnel or roles*]:

   1. A physical and environmental protection policy that addresses purpose, scope, roles, responsibilities, management commitment, coordination among organizational entities, and compliance; and

   2. Procedures to facilitate the implementation of the physical and environmental protection policy and associated physical and environmental protection controls; and

b. Reviews and updates the current:

   1. Physical and environmental protection policy [*Assignment: organization-defined frequency*]; and

   2. Physical and environmental protection procedures [*Assignment: organization-defined frequency*].

Supplemental Guidance: This control addresses the establishment of policy and procedures for the effective implementation of selected security controls and control enhancements in the PE family. Policy and procedures reflect applicable federal laws, Executive Orders, directives, regulations, policies, standards, and guidance. Security program policies and procedures at the organization level may make the need for system-specific policies and procedures unnecessary. The policy can be included as part of the general information security policy for organizations or conversely, can be represented by multiple policies reflecting the complex nature of certain organizations. The procedures can be established for the security program in general and for particular information systems, if needed. The organizational risk management strategy is a key factor in establishing policy and procedures. Related control: PM-9.

Control Enhancements: None.

P1	**LOW** PE-1	**MOD** PE-1	**HIGH** PE-1

PE-2 PHYSICAL ACCESS AUTHORIZATIONS

Control: The organization:

a. Develops, approves, and maintains a list of individuals with authorized access to the facility where the information system resides;

b. Issues authorization credentials for facility access;

c. Reviews the access list detailing authorized facility access by individuals [*Assignment: organization-defined frequency*]; and

d. Removes individuals from the facility access list when access is no longer required.

Supplemental Guidance: This control applies to organizational employees and visitors. Individuals (e.g., employees, contractors, and others) with permanent physical access authorization credentials are not considered visitors. Authorization credentials include, for example, badges, identification cards, and smart cards. Organizations determine the strength of authorization credentials needed (including level of forge-proof badges, smart cards, or identification cards) consistent with federal

standards, policies, and procedures. This control only applies to areas within facilities that have not been designated as publicly accessible. Related controls: PE-3, PE-4, PS-3.

Control Enhancements:

(1) *PHYSICAL ACCESS AUTHORIZATIONS | ACCESS BY POSITION / ROLE*

The organization authorizes physical access to the facility where the information system resides based on position or role.

Supplemental Guidance: Related controls: AC-2, AC-3, AC-6.

(2) *PHYSICAL ACCESS AUTHORIZATIONS | TWO FORMS OF IDENTIFICATION*

The organization requires two forms of identification from [*Assignment: organization-defined list of acceptable forms of identification*] for visitor access to the facility where the information system resides.

Supplemental Guidance: Acceptable forms of government photo identification include, for example, passports, Personal Identity Verification (PIV) cards, and drivers' licenses. In the case of gaining access to facilities using automated mechanisms, organizations may use PIV cards, key cards, PINs, and biometrics. Related controls: IA-2, IA-4, IA-5.

(3) *PHYSICAL ACCESS AUTHORIZATIONS | RESTRICT UNESCORTED ACCESS*

The organization restricts unescorted access to the facility where the information system resides to personnel with [*Selection (one or more): security clearances for all information contained within the system; formal access authorizations for all information contained within the system; need for access to all information contained within the system;* [*Assignment: organization-defined credentials*]].

Supplemental Guidance: Due to the highly sensitive nature of classified information stored within certain facilities, it is important that individuals lacking sufficient security clearances, access approvals, or need to know, be escorted by individuals with appropriate credentials to ensure that such information is not exposed or otherwise compromised. Related controls: PS-2, PS-6.
